Course focuses on digital music creation and composition using audio sequencing software. Topics include song writing, synthesizers, recording, editing, mixing, and film scoring. Course is open to music majors, minors, and non-majors with sufficient musical background. Emphasis on group work, creativity, and imagination. All work done on Macintosh computers in The Core, the Department of Music's multimedia classroom.

MUGN 309. Audio Production in Pro Tools. 3 Units.
Audio Production in Pro Tools. Practical training in contemporary audio production methods using the industry standard software, Pro Tools. Also covers the use of Pro Tools for musical analysis and evaluation of music copyright issues.

MUGN 399. Undergraduate Independent Studies. 1 - 3 Unit.
Each student develops a topic of interest to be explored with a faculty member.

MUGN 501. Special Reading (M.A. and M.M.). 1 - 18 Unit.

MUGN 751. Recital Document I-D.M.A.. 1 - 3 Unit.

MUGN 752. Recital Document II - D.M.A.. 1 - 3 Unit.

MUHI Courses

MUHI 301. History of Western Music I. 3 Units.
Developments in Western music from early Christian times to c1700. Prereq: MUTH 102 or MUTH 104 or (Prereq or Coreq) MUTH 108.

MUHI 302. History of Western Music II. 3 Units.
Developments in Western music from c1700 to c1900. Prereq: MUTH 102 or MUTH 104 or MUTH 108.

MUHI 303. History of Western Music III. 3 Units.
Music of the twentieth century, covering history, analysis, and aesthetic issues. Prereq: MUTH 102 or MUTH 104 or MUTH 108, MUHI 301 or MUHI 302.

MUHI 310. Music Cultures of the World: Music of Asia and Africa. 3 Units.

MUHI 312. History and Analysis of Rock and Roll. 3 Units.
This course surveys American popular song from the 1890s to the present, with an emphasis on rock ‘n’ roll and pop music of the last sixty years. The relationship of popular song to important currents in American life and culture will be examined. The origins of various styles of song in the cultures of different ethnic and national groups will be discussed, along with the subsequent diffusion and transformation of such music through mass mediation. The characteristics and meanings of music, lyrics, and images will be discussed with the aid of sound recordings, music videos and films. Students taking this course may not receive credit for MUPM 212. Prereq: For Music Majors only.

MUHI 313. American Popular Song to 1950. 3 Units.
Survey of popular music practices from the nineteenth century until the emergence of rock and roll. Counts for CAS Global & Cultural Diversity Requirement.

MUHI 314. Blues Histories and Cultures. 3 Units.
An investigation of the blues as a musical and lyrical form as well as a set of social and cultural practices. Beginning in the Mississippi Delta with the country blues, the course moves roughly chronologically, looking at classic and urban blues, the role of blues language and culture during the Harlem Renaissance, and their 'revival' in Britain in the 1960s. Our aim will be to open up questions surrounding blues transformations and black authenticities, the relationship between blues cultures and the rise of modernism, the racial and sexual coding of both black and white blues, and the ways in which blues sounds and aesthetics have permeated American popular music since the 1920s. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

MUHI 315. History of Jazz and American Popular Music. 3 Units.

MUHI 320. Global Pop. 3 Units.
Exploration of popular music practices, particularly rock, pop, and hip hop, outside the United States. Counts for CAS Global & Cultural Diversity Requirement.

MUHI 341. Introduction to Historical Performance Practice. 3 Units.
Summary and perspective of the problems and issues associated with the field of historical performance practices. Offered as MUHI 341 and MUHI 441. Prereq: MUHI 301 and MUHI 302.

MUHI 342. Seminar in Historical Performance Practice. 3 Units.
Seminar in a specific instrument and/or vocal area of historical performance practices, such as baroque vocal, instrumental, or keyboard practices. May be repeated because topics vary. Offered as MUHI 342 and MUHI 442. Prereq: MUHI 341 or MUHI 441
MUHI 350. Topics in Music History. 3 Units.
Close study of a theme or aspect of music such as "Music and Gender," "Symphonies of Mahler," and "Wagner's Ring." Offered as MUHI 350 and MUHI 450.

MUHI 390. Undergraduate Seminar in Music History. 3 Units.
An intensive research seminar in music history for music majors. Counts as SAGES Departmental Seminar.

MUHI 395A. Capstone for Music Majors A. 1 Unit.
Not required for the music major, but intended for music majors in concentrations other than Audio Recording who choose to complete a capstone project in music. Course consists of projects varying according to the students’ area of study and interests, but each must include a document of appropriate length and scope and must be presented publicly in an appropriate forum. MUHI 395A guides students through the preliminary stages of the project and preparation of a formal Capstone proposal. Prereq: Successful completion of two of the following courses: MUHI 301, MUHI 302 or MUHI 303; and successful completion of SAGES Writing Portfolio.

MUHI 395B. Capstone for Music Majors B. 2 - 5 Units.
Not required for the music major, but intended for music majors in concentrations other than Audio Recording who choose to complete a capstone project in music. Course consists of projects varying according to students’ area of study and interests, but each must include a document of appropriate length and scope and must be presented publicly in an appropriate forum. MUHI 395B guides students through completion of the project, including the document and public presentation. Prereq: Successful completion of MUHI 395A.

MUHI 399. Undergraduate Independent Studies. 1 - 3 Unit.
Each student develops a topic of interest to be explored with a faculty member.

MUHI 401. Methodologies of Music History. 3 Units.
Introduction to the scholarly study of music, including principles of music bibliography, techniques of library research, and evaluation of editions. Special emphasis given to the relationship between musical performance and research in the history and criticism of music. Attention will also be given to design of program notes and essays. Required of first-year students in the Master of Music degree program.

MUHI 430. Music History for Educators. 3 Units.
Examines the intersections of composers’ musical output as it overlaps with theories of general education, music education, and pedagogy.

MUHI 431. Medieval Music: Early Christian to 1425. 3 Units.
The mass, liturgical drama, and early polyphony through the Ars Nova.

MUHI 432. Music of the Renaissance. 3 Units.
Vocal polyphonic music from the Burgundian school through the Elizabethan madrigal.

MUHI 433. Music of the Baroque. 3 Units.
Musical developments from Monteverdi to Bach and Handel.

MUHI 434. Viennese Classicism. 3 Units.
Development of the symphony, concerto, chamber music, and opera in the works of the Mannheim composers, Haydn, Mozart, and Beethoven.

MUHI 435. Nineteenth Century Music. 3 Units.
Romanticism and other 19th century trends in music up to impressionism.

MUHI 436. Twentieth Century Music. 3 Units.
Critical and analytical study of music since 1900. Examination and discussion of stylistic characteristics and aesthetic aims of contemporary composers.

MUHI 437. Popular Music Studies. 3 Units.
Introduction to the interdisciplinary field of popular music studies, with emphasis on musicological approaches. Analysis of musical signification within the complex cultural contexts shaped by place, history, commerce, and technology.

MUHI 441. Introduction to Historical Performance Practice. 3 Units.
Summary and perspective of the problems and issues associated with the field of historical performance practices. Offered as MUHI 341 and MUHI 441.

MUHI 442. Seminar in Historical Performance Practice. 3 Units.
Seminar in a specific instrument and/or vocal area of historical performance practices, such as baroque vocal, instrumental, or keyboard practices. May be repeated because topics vary. Offered as MUHI 342 and MUHI 442. Prereq: MUHI 341 or MUHI 441

MUHI 443. Medieval/Renaissance Notation. 3 Units.
Theory of chant, modal, mensural, and tablature notations. Practice in making literal transcriptions, editing, and preparing scores for performances.

MUHI 450. Topics in Music History. 3 Units.
Close study of a theme or aspect of music such as "Music and Gender," "Symphonies of Mahler," and "Wagner's Ring." Offered as MUHI 350 and MUHI 450.

MUHI 501. Special Reading (M.A. and M.M.). 1 - 18 Unit.

MUHI 590. Seminar in Musicology. 3 Units.
Problems in musical criticism, aesthetics, and analysis, as well as interdisciplinary methodologies.

MUHI 610. Bibliography and Research Methods in Music. 3 Units.
Seminar in research methods and techniques, stressing the analytic and functional approaches to bibliography.

MUHI 611. Doctor of Musical Arts Seminar. 3 Units.
Recommended preparation: MUHI 610.

MUHI 612. Analysis for Music Historians. 3 Units.
This seminar will be required of all first-year graduate students in Musicology and Historical Performance Practices. It seeks to develop the analytical skills of music historians, deepening their earlier technical training and teaching them how to approach repertories (music before 1700, after 1900, popular music) they are unlikely to have studied in depth previously. In contrast to the instruction offered at CIM, this seminar will present a range of ways in which to bridge between the details of a musical composition and the historical context within which it first appeared. The seminar deals with five case studies, one representative of each of the following repertories: Before 1700 (e.g., Josquin motets, Monteverdi madrigals, Frescobaldi toccatas) 1700-1820 (e.g., Rameau keyboard suites, Beethoven sonatas, Schubert string quartets) 1820-1910 (e.g., Berlioz Symphonie Fantastique, Brahms symphonies, Mahler songs) After 1910 (e.g., Stravinsky Sacre du Printemps, Webern Symphony, Ruth Crawford Seeger String Quartet, Ligeti Etudes) Popular Music (e.g. 12-bar blues, “rhythm changes,” “Round Midnight”) Of these, most students will have received training only in the analysis of music 1700-1820, and that training will have concentrated strictly on harmony and structure, without engagement with cultural context. Each unit of this seminar will proceed from basic grammatical norms for the repertory in question to formal criticism to cultural interpretation.

Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

MUHI 751. Recital Document I-D.M.A.. 1 - 3 Unit.
MUHI 752. Recital Document II - D.M.A.. 1 - 3 Unit.
MUHI 753. Recital Document III-D.M.A.. 1 - 6 Unit.

MUPM Courses

MUPM 312. History of Rock and Roll. 3 Units.
This course surveys the musical practices of the rock and roll era, broadly defined to include much popular music since the 1950s. Music majors are to enroll in MUHI 312. Counts for CAS Global & Cultural Diversity Requirement. Prereq: For Non-Music Majors only.

MUPM 215. History and Styles of Jazz. 3 Units.

MUPM 319. Jazz Skills I. 3 Units.
This class is designed to teach students basic skills in jazz improvisation, jazz keyboard, arranging/composition and pedagogy. Basic theory is required. Students will eventually arrange their own composition for big band, which will feature them as the improvising soloist. Prereq: (MUTH 102 and MUTH 106) or MUTH 108 or permission of instructor.

MUPM 320. Jazz Skills II. 3 Units.
This course will build on the foundational skills developed in Jazz Skills I, providing a more intensive study of jazz harmony, improvisation and melodic construction. It is designed to give students an advanced experiential understanding of the theory and performance of jazz.

MUTH Courses

MUTH 101. Harmony-Keyboard I. 2 Units.
Scales, intervals, triads, seventh chords, and their inversions. Harmonization of melodies and basses, chorale study, modulation, analysis. Creative use of material. Correlated and taken concurrently with MUTH 105 and 106. Both aspects of the course must be passed in order to complete requirements.

MUTH 102. Harmony-Keyboard II. 2 Units.
(See MUTH 101.)

MUTH 103. Theory I. 3 Units.
Music theory for the nonmusic major. Intervals, scales, rhythmic drill, sight singing, eartraining, keyboard work, and harmony through inversions of triads and seventh chords. Not open to music majors.

MUTH 104. Theory II. 3 Units.
(See MUTH 103.) Recommended preparation: MUTH 103 or consent of department.

MUTH 107. Theory for Music Majors I. 4 Units.
This course is the first of four semesters of music theory requirements for Case music majors. It will include the study of harmony, analysis, eartraining, and keyboard skills. Recommended preparation: Placement exam through department.

MUTH 108. Theory for Music Majors II. 4 Units.
This course is the second of four semesters of music theory for Case music majors. It includes further study of harmony, analysis, eartraining, sight singing, and keyboard. Recommended preparation: MUTH 107 or placement exam through department.

MUTH 201. Harmony-Keyboard III. 2 Units.
Continuation of MUTH 101 and 102. Chromatically altered triads and 7th chords; 9th, 11th, 13th. Neapolitan and augmented 6th chords, regular and irregular solutions. Correlated and taken concurrently with MUTH 205 and 206. Both aspects of the course must be passed in order to complete requirements. Students cannot earn credit for both MUTH 201/205 and MUTH 207. Recommended preparation: MUTH 102 or placement examination.

MUTH 202. Harmony-Keyboard IV. 4 Units.
(See MUTH 201.) Recommended preparation: MUTH 102 or placement examination.

MUTH 207. Theory for Music Majors III. 4 Units.
This course is the third of four semesters of music theory for music majors. Continued study of harmony, analysis, eartraining, sight singing, and keyboard, including use of dissonance and chromaticism, diatonic modulation. Students cannot earn credit for both MUTH 201/205 and MUTH 207. Recommended preparation: MUTH 108 or placement exam through department.

MUTH 208. Theory for Music Majors IV. 4 Units.
This course is the fourth of four semesters of music theory for CWRU music majors. Continued study of harmony, analysis, ear-training, sight-singing, and keyboard. Use of dissonance and chromaticism, chromatic voice leading technique, tonal and post-tonal topics. Recommended preparation: MUTH 207 or placement exam through department.

MUTH 311. 16th Century Counterpoint. 2 Units.
Sixteenth century modal counterpoint. Exercises in the five species. Writing of short compositions and motets in two, three and four voices. Recommended preparation: MUTH 202 or MUTH 206.

MUTH 312. Eighteenth Century Counterpoint. 3 Units.
Analysis and writing of inventions in two parts, and fugues in three and four parts. Recommended preparation: MUTH 202 or MUTH 206.

MUTH 399. Undergraduate Independent Studies. 1 - 3 Unit.
Each student develops a topic of interest to be explored with a faculty member.

MUTH 400A. Review of Musical Structure. 3 Units.
Introduction of fundamentals of form, counterpoint, and four-part harmony. Designed for graduate students; credit not applicable toward degree requirements.

MUTH 400B. Sightsinging and Eartraining Review. 2 Units.
Background in fundamentals of sight singing in four clefs; melodic and harmonic dictation including chromatic harmony and modulation. Designed for graduate students; credit not applicable toward degree requirements.

MUTH 416. Pre-common Practice Theory and Analysis. 3 Units.
An exploration of treatises and analytical methods appropriate to music of the Medieval and Renaissance eras.

MUTH 422. Musical Analysis for Educators. 3 Units.
Musical Analysis for Educators is designed to strengthen the analysis skills of music educators and explore practical application of these skills. Recommended preparation: Placement exam.
MUTH 424. Introduction to Schenkerian Analysis. 3 Units.

MUTH 495. Seminar in Music Theory. 3 Units.

MUTH 501. Special Reading (M.A. and M.M.). 1 - 18 Unit.

Department of Philosophy

The Department of Philosophy offers an undergraduate major leading to the Bachelor of Arts degree. It also offers minor programs for undergraduates as well as graduate-level courses for candidates for the Master of Arts degree in such fields as biomedical ethics, history, English, mathematics, and the sciences.

The department’s course offerings are designed not only to provide knowledge and skills required for students whose main interest is in philosophy, but also to educate students in general about the intellectual issues that a reflective person is likely to encounter in various contexts of civilized life. The department emphasizes the relevance of philosophy to mathematics, computer science, the natural sciences, the social sciences, the humanities and arts, and law.

The major program in philosophy, besides offering a solid foundation for advanced study in philosophy and enriching programs in other disciplines, develops the skills for analytical and critical thinking, effective communication, and rational decision making needed in a wide range of endeavors. The program thus provides majors with unusual flexibility in the choice of subsequent careers, including law, medicine, and management, while complementing the pursuit of career objectives with a greater perspective and a richer quality of intellectual life.

In collaboration with the Department of History, the department participates in an interdisciplinary major in the History and Philosophy of Science Program (p. 445), leading to the Bachelor of Arts degree. The department also participates in, and contributes courses to, the interdisciplinary minor in artificial intelligence.

Undergraduate Programs

Major

The major consists of 30 hours (ten 3-credit courses) in philosophy, including PHIL 101 Introduction to Philosophy, PHIL 201 Introduction to Logic, PHIL 205 Contemporary Moral Problems, PHIL 301 Ancient Philosophy, PHIL 302 Modern Philosophy, and six other elective philosophy courses to be determined in consultation with the department’s undergraduate advisor. However, a student may request permission to take up to 6 hours (two 3-credit courses) of the required 18 hours of philosophy electives in another field or other fields. Such a request should be supported by considerations showing how the substitution(s) would strengthen the student’s major in philosophy. The advisor must approve the substitution(s) in advance.

Six philosophy electives chosen in consultation with advisor. With permission of advisor, up to 6 hours may be taken outside the department. Only 3 units are permitted to be from a University Seminar. Please contact the department for a current list of University Seminars that may be taken for credit towards the Philosophy major.

Total Units: 30

Departmental Honors

The department offers an honors program for students pursuing a major in philosophy. Students in this program must complete a substantial thesis, pass an oral examination on the thesis, and maintain a B average in philosophy courses. To be eligible for admission, a student should have an overall grade point average of B or better, and a grade of B or better in each philosophy course already taken. A student normally should have taken at least four, and at most seven, philosophy courses at the time of application for admission. An honors student should register for PHIL 399 Directed Study to do honors work. Interested students should apply for admission to the program during the first semester of junior year.

Minor in Philosophy

The department offers a range of possible minor programs, each of which must include PHIL 101 Introduction to Philosophy and four other courses in philosophy at the 200 or 300 level (excluding PHIL 390 Senior Research Seminars in History and Philosophy of Science and PHIL 399 Directed Study), chosen to meet the specific needs of students majoring in other fields. The undergraduate advisor will assist students in devising minor programs.

Minor in Ethics

The minor in ethics allows undergraduate students in any field to pursue a concentration of studies in ethics from multiple perspectives: theoretical and practical, philosophical and empirical/interdisciplinary. The goal is to encourage analytical reflection on the principles and situations of ethical action, social, interpersonal, or individual, in historical and contemporary contexts. The ethics minor requires PHIL 101 Introduction to Philosophy, PHIL 205 Contemporary Moral Problems or PHIL 206 Contemporary Moral Issues: Experiential, PHIL 305 Ethics, one other PHIL course at the 200-300 level, and one of several identified courses in a field other than philosophy.

PHIL 317  War and Morality
PHIL 334  Political and Social Philosophy
PHIL 356  Comparative Philosophy
PHIL 399  Directed Study

One course from the following interdisciplinary list:
BETH 315  International Bioethics: Policy and Practice
RLGN 325  Justice, Religion, and Society
RLGN 330  Classical Jewish Religious Thought
RLGN 350  Jewish Ethics
COGS 272  Morality and Mind
COGS 305  Departmental Seminar: Moral Boundaries and Limits of Science
COGS 365  Advanced Topics in Cognitive Neuroscience
SOCI 349  Social Inequality

Philosophy Capstone
Students may fulfill their SAGES capstone requirement in philosophy by registering for PHIL 399 Directed Study after devising a suitable project in consultation with the undergraduate advisor and the supervising faculty member.

Department Faculty
Laura E. Hengehold, PhD
(Loyola University of Chicago)
Associate Professor and Chair
Political and social philosophy; philosophy of feminism; Foucault; contemporary continental philosophy

Jeremy Bendik-Keymer, PhD
(University of Chicago)
Emil G. Beamer-Hubert H. Schneider Professor in Ethics; Associate Professor
Ethics and moral philosophy; environmental philosophy; philosophy of education; meta-philosophy; history of ethics and moral philosophy

Shannon D. French, PhD
(Brown University)
Inamori Professor of Ethics; Associate Professor
Military ethics; leadership ethics; professional ethics; moral psychology; biomedical and environmental ethics

Chris Haufe, PhD
(Columbia University)
Assistant Professor
Philosophy of science, philosophy of biology

Chin-Tai Kim, PhD
(Harvard University)
Professor
History of philosophy (17th, 18th, and 19th centuries); theory of knowledge; metaphysics; foundations of ethics; phenomenology; comparative philosophy

Colin McLarty, PhD
(Case Western Reserve University)
Truman P. Handy Professor of Philosophy
Logic; philosophy of logic; philosophy of mathematics; philosophy of science; contemporary French philosophy

Adjunct Faculty
Joel Levin, DPhil
(University of Oxford, U.K.)
Adjunct Associate Professor; Adjunct Professor, Case Western Reserve University School of Law
Philosophy of law; political philosophy; ethical theory

Shannon Lundeen, PhD
(Stony Brook University)
Adjunct Associate Professor; Director, Flora Stone Mather Center for Women
Feminist theory; bioethics; sexuality studies; social and political philosophy

Secondary Faculty
Insoo Hyun, PhD
(Brown University)
Associate Professor, Department of Bioethics
Bioethics; moral and political philosophy

Anthony Jack, PhD
(University College London)
Associate Professor, Department of Cognitive Science
Cross-cultural study of theory of mind and moral reasoning

Deepak Sarma, PhD
(University of Chicago)
Professor, Department of Religious Studies
Hinduism; Indian philosophy; philosophy of religion; method and theory

Courses
PHIL 101. Introduction to Philosophy. 3 Units.
Basic problems of philosophy and methods of philosophical thinking. Problems raised by science, morality, religion, politics, and art. Readings from classical and contemporary philosophers. Normally given in multiple sections with different instructors and possibly with different texts. All sections share core materials in theory of knowledge, metaphysics, and ethics despite differences that may exist in emphasis.

PHIL 201. Introduction to Logic. 3 Units.

PHIL 203. Natural Philosophy I. 3 Units.
Historical and philosophical interpretation of some epochal events in development of science. Copernican revolution, Newtonian mechanics, Einstein’s relativity physics, quantum mechanics, and evolutionary theory; patterns of scientific growth; structure of scientific “revolutions;” science and “pseudo-science.” First half of a year-long sequence. Offered as HSTY 203 and PHIL 203.
PHIL 205. Contemporary Moral Problems. 3 Units.
Examination of selected contemporary moral problems and contemporary faces of perennial moral problems such as: when, if ever, lying is justified; the value of honesty and of confidentiality; under what circumstances, if any, various types of killing (suicide, execution, in war, euthanasia, killing of lower animals or ecosystems) are justified. Additional moral problems raised by new knowledge (such as genetic information) or new technology (such as rights to digital information), and responsible uses of these and other sources of power. Clarification of the concepts of value, ethical evaluation and justification, ethical argument, moral relevance, and the notion of a moral problem itself. Readings will draw on classical and contemporary sources in philosophy.

PHIL 206. Contemporary Moral Issues: Experiential. 3 Units.
What is good and how is it different from evil? How do you know when you have done the right thing? Is there an absolute grounding to morality? What is the role of reason in our lives? What is human nature? Are human beings essentially creatures of emotion? What bearing do these questions have on our basic moral determinations of good and evil? How are all these questions related to concerns about personal identity? Using sources from different eras and schools of philosophic thought, students will become more informed about the intricacies involved in thinking clearly about these issues.

PHIL 221. Indian Philosophy. 3 Units.
A survey of Indian philosophical thought with emphasis on the Vedas, early Hindu, and Jain literature. Offered as PHIL 221 and RLGN 221. Counts for CAS Global & Cultural Diversity Requirement.

PHIL 225. Evolution. 3 Units.
Multidisciplinary study of the course and processes of organic evolution provides a broad understanding of the evolution of structural and functional diversity, the relationships among organisms and their environments, and the phylogenetic relationships among major groups of organisms. Topics include the genetic basis of micro- and macro-evolutionary change, the concept of adaptation, natural selection, population dynamics, theories of species formation, principles of phylogenetic inference, biogeography, evolutionary rates, evolutionary convergence, homology, Darwinian medicine, and conceptual and philosophic issues in evolutionary theory. Offered as ANTH 225, BIOL 225, EEPS 225, HSTY 225, and PHIL 225.

PHIL 270. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

PHIL 271. Bioethics: Dilemmas. 3 Units.
We have the genetic technology to change nature and human nature, but should we? We have the medical technology to extend almost any human life, but is this always good? Should we clone humans? Should we allow doctor-assisted suicide for the terminally ill? This course invites students from all academic disciplines and fields to examine current and future issues in bioethics—e.g., theory and methods in bioethics; death and dying; organ transplantation; genetics; aging and dementia; fertility and reproduction; distributive justice in health care access. The course will include guest lecturers from nationally-known Bioethics faculty. Offered as BETH 271, PHIL 271.
PHIL 315. Selected Topics in Philosophy. 3 Units.
Examination of views of a major philosopher or philosophical school, a significant philosophical topic, or a topic that relates to philosophy and other discipline. Recommended preparation: PHIL 101. Offered as PHIL 315 and PHIL 415. Counts as SAGES Departmental Seminar.

PHIL 316. African Political Thought. 3 Units.
Introduction to select themes in the work of contemporary African philosophers, with special emphasis on political thought. In this course, students will learn something about factors affecting the creation and flow of knowledge and ideas about Africa and discuss the relative importance of the "nation-state" as an idea in Europe, pre-colonial Africa, and postcolonial Africa. Offered as PHIL 316/416 and ETHS 316/416. Counts for CAS Global & Cultural Diversity Requirement. Prereq: PHIL 101.

PHIL 317. War and Morality. 3 Units.
The aim of this course is to explore a wide range of ethical issues relating to the decision to take a nation to war, how wars are conducted, and efforts to establish order in the wake of a conflict. Topics include the Just War tradition, pacifism, humanitarian intervention, moral repair and the establishment of a just peace, conduct of war, warrior codes, warrior transitions, and civil-military relations. We will be examining the ethics of war from the perspectives of both states and individuals. War is a crucible that strips those caught up in its horrors down to their fundamental selves inspiring acts of both inhuman depravity and seemingly superhuman nobility. This course is presented in a seminar format with lively discussions centering on contemporary readings in military ethics from texts and journals. Offered as PHIL 317, PHIL 417, and LAWS 5135.

PHIL 320. The Phenomenological Tradition. 3 Units.
The background of phenomenology: Descartes, Kant, and Brentano. The epistemological rationale of Husserl's phenomenology and its ontological implications; the powers and limits of the phenomenological method. Heidegger's transformation of phenomenology to interpretive ontology of human existence. The development of interpretation theory as the foundation of all human existence. The development of interpretation theory as the foundation of all human sciences in Gadamer and Ricoeur. Recommended preparation: PHIL 101. Offered as PHIL 320 and PHIL 420.

PHIL 321. Advanced Indian Philosophy. 3 Units.
We will closely examine a limited number of texts in Jain, Hindu, and/or Buddhist philosophy. Our concern will be the methods, presuppositions, arguments, and goals of these schools and trajectories of thought. What were their theories on the nature of the person, the nature of reality, and the nature and process of knowing? What were the debates between the schools and the major points of controversy? We will spend the majority of time analyzing the arguments or positions as they are found in primary texts (in translation). We will rely on the primary sources found in Sarma Introduction to Classical Indian Philosophy as well as PDFs provided by the instructor. Students will read texts out loud in class and will be expected to comment on the passage or passages. Students are expected to use outside sources in their preparations. The goal of the class is to continue to learn how to make and write arguments against (or in support of) the various positions using the prasangika (reductio ad absurdum) method. The papers are rigorous ones and require the student to present the position and then to posit arguments against it, finding internal incoherences. This is a writing-intensive class. Students will continue to learn how to write as per the genre of Indian philosophy. Offered as RLGN 321 and PHIL 321. Prereq: RLGN 221 or PHIL 221.

PHIL 325. Philosophy of Feminism. 3 Units.

PHIL 330. Topics in Ethics. 3 Units.
Examination of views in ethics of a major philosopher or philosophical school, a significant philosophical topic in ethics, or a topic that relates ethics to philosophy and another discipline. Recommended preparation: PHIL 101, PHIL 102, or PHIL 205. Offered as PHIL 330 and PHIL 430.

PHIL 332. Classical Jewish Religious Thought. 3 Units.
The thought of some major biblical and Rabbinic writings and of the classic age of medieval Jewish philosophy. Offered as JDST 330, PHIL 332, and RLGN 330.

PHIL 333. Philosophy of Religion. 3 Units.
Topics include: classical and contemporary arguments for God's existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 333, and RLGN 433.

PHIL 334. Political and Social Philosophy. 3 Units.
Justification of social institutions, primarily political ones. Such distinctions as that between de facto and legitimate authority; analysis of criteria for evaluation, such as social justice and equality; inquiry into theories of justification of the state; theory of democratic government and its alternatives. Readings from classical and contemporary sources. Recommended preparation: PHIL 101. Offered as PHIL 334, POSC 354, PHIL 434, and POSC 454.

PHIL 335. Philosophy of Law. 3 Units.
This is an examination of the general nature of law, the broad concerns of jurisprudence, the study of comparative law, and many of the issues raised in the literature of legal philosophy. Students will examine the principles of legal positivism, mitigated natural law, and rights theory. Selected readings and cases will illustrate these theories, which will also be examined in the context of rule selection by new governments in developing or revolutionary societies. The course also looks at the general nature of legal systems: how politics, morality, and individual views of justice and rights affect particular court cases and the course and development of law generally. Topics will include abortion, obscenity and sin, civil disobedience, affirmative action, surrogacy, and the death penalty. This is unlike any other of the legal theory or jurisprudence courses, and those who have sampled legal theory elsewhere in a different form are welcome and encouraged to enroll. Recommended preparation: PHIL 101. Offered as LAWS 353, PHIL 335, and PHIL 435.

PHIL 345. Epistemology and Metaphysics. 3 Units.
Traditional problems of epistemology, such as definition of knowledge, justification of belief, nature of evidence and foundationalism, skepticism, the a priori, and the role of sense perception in knowledge. Metaphysical presuppositions and implications of epistemological views. Forms of realism and anti-realism. Recommended preparation: PHIL 101. Offered as PHIL 345 and PHIL 445.
PHIL 355. 19th and Early 20th Century Philosophy. 3 Units.
History of philosophy after Kant up to and including logical empiricism. Interpretation and comparison of important philosophers and philosophical schools of the period in terms of common methods, problems, themes, doctrines, and ideologies. Emphasis on Schopenhauer, Hegel, Kierkegaard, Marx, and Nietzsche. Recommended preparation: PHIL 101. Offered as PHIL 355 and PHIL 455.

PHIL 356. Comparative Philosophy. 3 Units.
Philosophy in the etymological sense of the term, love of wisdom, subsumes ontological, ethical and epistemological inquires addressing fundamental questions about reality, the place of humans in that reality, the values of things and human obligations, and the sources of knowledge. The major purpose of this course is to discover, understand, explicate and articulate the affinities and differences in the way the fundamental questions are addressed in different cultural contexts, thereby to appreciate the cross-cultural kinship among human minds as well as to be challenged by the differences that may engender conflicts. We will explore the possibility of building a trans-cultural meta-cultural meta-discourse in which thinkers from many traditions can participate on equal footing. We will come to face up to the question whether truly universal philosophy is possible, upon what conditions. Representative texts from the Western, Chinese and Buddhist traditions including selected works of Plato, Aristotle, Augustine, Descartes, Kant, Nietzsche, Heidegger, Lao Tzu, Confucius, Chuang Tzu, Dhammapada of the Buddha and D. Suzuki's Zen Buddhism will be read. Offered as PHIL 356 and PHIL 456. Counts for CAS Global Cultural Diversity Requirement. Prereq: PHIL 101 or requisites not met permission.

PHIL 360. Science and Society. 3 Units.
This course examines the complex ethical and other value relationships that exist between science and society. Students will be encouraged to question the simplistic view that science proceeds independently of societal values and contentious ethical commitments. A range of other social factors, such as ethical belief systems, political forces, and large-scale financial interests all influence new scientific and technological developments. In order to illuminate each of these larger themes, this course focuses on three exciting areas of scientific inquiry: stem cell research; synthetic biology; and nanotechnology. Each of these contentious scientific fields provides an excellent view into the challenging ethical, cultural, social, political, and economic issues that will face students, both as scholars and as citizens. No prior technical knowledge is necessary for any of these scientific areas. All relevant scientific information will be provided during the course by the professor. Offered as BETH 360 and PHIL 360.

PHIL 367. Topics in Evolutionary Biology. 3 Units.
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/EEPS/PHIL/PHOL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation. Offered as ANTH 367, BIOL 368, EEPS 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, EEPS 467, PHIL 467 and PHOL 467. Prereq: PHIL 225 or equivalent.

PHIL 368. Evolutionary Biology Capstone. 3 Units.
This course focuses on a special topic of interest in evolutionary biology that will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. Students will participate in discussions and lead class seminars on evolutionary topics and in collaboration with an advisor or advisors, select a topic for a research paper or project. Each student will write a major research report or complete a major project and will make a public presentation of her/his findings. Offered as ANTH 368, BIOL 369, and PHIL 368. Counts as SAGES Senior Capstone.

PHIL 371. Advanced Bioethics. 3 Units.
This course offers upper-level instruction on many key bioethical issues introduced in BETH/PHIL 271. The class follows a discussion-intensive seminar format. Students begin with an in-depth analysis of ethical issues surrounding the conduct of clinical trials, both within the U.S. and through U.S.-sponsored research abroad. Next students examine the philosophical and practical challenges involved in medical decision making for adults and pediatric patients. This course concludes by addressing the broader ethical problem of what duties we owe to future generations in terms of our reproductive choices and the allocation of health-related public expenditures. Each of these general topic areas - clinical trials, medical decision making, and future generations - is of crucial importance for all students whether one plans to enter a career in biomedical research, the healthcare professions, or some other career path. Everyone is a potential patient or the family member of a potential patient. The topics covered in Advanced Bioethics will help prepare students to become responsible participants in an increasingly complex biomedical world. Offered as BETH 371 and PHIL 371. Prereq: BETH 271 or PHIL 271.

PHIL 373. Intelligence and Cognition. 3 Units.
This course will focus on the notion and meaning of intelligence. What is intelligence? How is it measured, and are these measures adequate to the task? Is there more than one kind of intelligence? What is the relationship between individuals, genetic factors, biological factors, and socio-cultural-economic factors in the development of intelligence? How are language and thought related to intelligence? What is the difference between intelligence and talent? Intelligence seems to be necessary for culture, art, religious belief, the creation of theories and the quest for knowledge, truth and morality; thus intelligence is a necessary condition for the study of itself. To attempt to understand intelligence is an undertaking in which we will ask questions about the self and the common nature of humanity, while simultaneously examining the abilities of animals and machines. What is the mark of intelligence? Recommended preparation: PHIL 101 or COGS 201. Offered as COGS 373 and PHIL 373.
PHIL 375. Issues in Aesthetics. 3 Units.
This course will seek to offer insight into the nature of artistic expression, the role of criticism in the arts, and the place of the arts in society. The term "arts" will be construed broadly to include painting, photography, theater, film, music, dance, poetry, etc. The following are examples of questions we will discuss. Does the term "beautiful" mean? Are there other measures of aesthetic value besides beauty? Do the arts, like the sciences, offer us knowledge of the world? What value do the arts have for society? Can aesthetic value conflict with moral value? Do artists have a responsibility to society? Should art ever be censored? What is the relationship between art and entertainment? Is the meaning and value of an artistic work a matter of individual opinion? What is the purpose of art criticism? How are interpretations and evaluations of art influenced by race, gender, class, etc.? What is creativity in the arts? Does it differ from creativity in the sciences? How important is originality in art? Offered as PHIL 375 and PHIL 475. Prereq: PHIL 101 or requisite not met permission.

PHIL 381. Philosophy and Cognitive Neuroscience. 3 Units.
This course will focus on the various methodologies used in the cognitive neurosciences, and explore their strengths and weaknesses from scientific and philosophical standpoints. We will begin by examining baseline measures (including IQ tests, tasks of cognitive flexibility, verbal and visual memory, causal/sequential thinking and narrative tasks) and their experimental design. Lesion methods will follow, with an eye toward understanding the strength of inferences that can be drawn from such data. The course will also focus on imaging techniques (CAT, PET, SPECT, IMRI, TMS, etc.) as well as measures of electrical activity such as EEG and single-cell recordings. Students will become familiar with many fundamental assumptions necessary for the implementation of each method, and philosophical questions associated with these endeavors and their potential impact on our knowledge and society. Recommended preparation: PHIL 101 or COGS 201. Offered as COGS 381 and PHIL 381.

PHIL 385. Philosophy of Language. 3 Units.

PHIL 390. Senior Research Seminars in History and Philosophy of Science. 3 Units.
Directed independent research seminar for seniors who are majors in the History and Philosophy of Science program. The goal of the course is to develop and demonstrate command of B.A.-level factual content, methodologies, research strategies, historiography, and theory relevant to the field of history of science and/or philosophy of science. The course includes both written and oral components. Offered as HSTY 380 and PHIL 390. Counts as SAGES Senior Capstone.

PHIL 394. Seminar in Evolutionary Biology. 3 Units.
This seminar investigates 20th-century evolutionary theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners' conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History. Offered as ANTH 394, BIOL 394, EEPS 394, HSTY 394, PHIL 394, ANTH 494, BIOL 494, EEPS 494, HSTY 494, and PHIL 494.

PHIL 396. Undergraduate Research in Evolutionary Biology. 3 Units.
Students propose and conduct guided research on an aspect of evolutionary biology. The research will be sponsored and supervised by a member of the CASE faculty or other qualified professional. A written report must be submitted to the Evolutionary Biology Steering Committee before credit is granted. Offered as ANTH 396, BIOL 396, EEPS 396, and PHIL 396.

PHIL 399. Directed Study. 3 Units.
Under faculty supervision, students will undertake a project that demonstrates critical thinking, has clear goals, features periodic reporting of progress, and will result in a final report and public presentation. Counts as SAGES Senior Capstone.

PHIL 403. Topics in Philosophy of Science. 3 Units.
In-depth study of selected topics in general philosophy of science or philosophy of physical, biological, or social science. Topics may include: theories of explanation, prediction, and confirmation; semantics of scientific language; reductionism; space, time and relativity; philosophical issues about quantum mechanics; philosophical issues about life sciences (e.g., evolution, teleology, and functional explanation); explanation and understanding in social sciences; value in social science. Recommended preparation: PHIL 101 or PHIL 201 or PHIL 203. Offered as PHIL 303 and PHIL 403.

PHIL 404. Science and Engineering Ethics. 3 Units.
This course prepares students to recognize ethical problems that commonly arise in the scientific and engineering workplace, to understand ethical concepts, to evaluate ethical arguments, and to critically examine responses to problems and their ethical ramifications. It addresses questions such as: What are the criteria of fairness in crediting contributions to research? How safe is safe enough? What are professional responsibilities, and how do they change over time? What is research misconduct? When is ignorance culpable? What is intellectual property and what protections does it deserve? When is biological testing of workers justified? What are responsible ways of raising concerns, and what supports do good organizations give for raising them? What treatment counts as harassment or as an expression of prejudice? What are good means for controlling it? What are scientists' and engineers' responsibilities for environmental protection? What is a "conflict of interest" and how is it controlled? What protections for human research subjects are warranted? What, if any, use of animals in research is justified? Recommended preparation: PHIL 101 or PHIL 201 or PHIL 205. Offered as PHIL 304 and PHIL 404.

PHIL 405. Ethics. 3 Units.
Analysis of ethical theories and concepts of goodness, right, and obligation. Discussion of nature of justice, problem of justification of moral principles, and relation between facts and values. Recommended preparation: PHIL 101, PHIL 102 or PHIL 205. Offered as PHIL 305 and PHIL 405.

PHIL 406. Mathematical Logic and Model Theory. 3 Units.
Propositional calculus and quantification theory; consistency and completeness theorems; Gödel incompleteness results and their philosophical significance; introduction to basic concepts of model theory; problems of formulation of arguments in philosophy and the sciences. Offered as PHIL 306, MATH 406 and PHIL 406.

PHIL 413. Philosophy of Mathematics. 3 Units.
Logical paradoxes and their effects on foundations of mathematics. Status of mathematical entities and nature of mathematical truths. Formalist, logicalist, and intuitionist positions. Recommended preparation: PHIL 101 or PHIL 201. Offered as PHIL 313 and PHIL 413.
PHIL 415. Selected Topics in Philosophy. 3 Units.
Examination of views of a major philosopher or philosophical school, a significant philosophical topic, or a topic that relates to philosophy and other discipline. Recommended preparation: PHIL 101. Offered as PHIL 315 and PHIL 415. Counts as SAGES Departmental Seminar.

PHIL 416. African Political Thought. 3 Units.
Introduction to select themes in the work of contemporary African philosophers, with special emphasis on political thought. In this course, students will learn something about factors affecting the creation and flow of knowledge and ideas about Africa and discuss the relative importance of the "nation-state" as an idea in Europe, pre-colonial Africa, and postcolonial Africa. Offered as PHIL 316/416 and ETHS 316/416. Counts for CAS Global & Cultural Diversity Requirement.

PHIL 417. War and Morality. 3 Units.
The aim of this course is to explore a wide range of ethical issues relating to the decision to take a nation to war, how wars are conducted, and efforts to establish order in the wake of a conflict. Topics include the Just War tradition, pacifism, humanitarian intervention, moral repair and the establishment of a just peace, conduct of war, warrior codes, warrior transitions, and civil-military relations. We will be examining the ethics of war from the perspectives of both states and individuals. War is a crucible that strips those caught up in its horrors down to their fundamental selves inspiring acts of both inhuman depravity and seemingly superhuman nobility. This course is presented in a seminar format with lively discussions centering on contemporary readings in military ethics from texts and journals. Offered as PHIL 317, PHIL 417, and LAWS 5135.

PHIL 420. The Phenomenological Tradition. 3 Units.
The background of phenomenology: Descartes, Kant, and Brentano. The epistemological rationale of Husserl's phenomenology and its ontological implications; the powers and limits of the phenomenological method. Heidegger's transformation of phenomenology to interpretive ontology of human existence. The development of interpretation theory as the foundation of all human existence. The development of interpretation theory as the foundation of all human sciences in Gadamer and Ricoeur. Recommended preparation: PHIL 101. Offered as PHIL 320 and PHIL 420.

PHIL 425. Philosophy of Feminism. 3 Units.
Dimensions of gender difference. Definition of feminism. Critical examination of feminist critiques of culture, including especially politics, ideology, epistemology, ethics, and psychology. Readings from traditional and contemporary sources. Offered as PHIL 325, PHIL 425 and WGST 325. Counts for CAS Global & Cultural Diversity Requirement.

PHIL 430. Topics in Ethics. 3 Units.
Examination of views in ethics of a major philosopher or philosophical school, a significant philosophical topic in ethics, or a topic that relates ethics to philosophy and another discipline. Recommended preparation: PHIL 101, PHIL 102, or PHIL 205. Offered as PHIL 330 and PHIL 430.

PHIL 433. Philosophy of Religion. 3 Units.
Topics include: classical and contemporary arguments for God's existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433.

PHIL 434. Political and Social Philosophy. 3 Units.
Justification of social institutions, primarily political ones. Such distinctions as that between de facto and legitimate authority; analysis of criteria for evaluation, such as social justice and equality; inquiry into theories of justification of the state; theory of democratic government and its alternatives. Readings from classical and contemporary sources. Recommended preparation: PHIL 101. Offered as PHIL 334, POSC 354, PHIL 434, and POSC 454.

PHIL 435. Philosophy of Law. 3 Units.
This is an examination of the general nature of law, the broad concerns of jurisprudence, the study of comparative law, and many of the issues raised in the literature of legal philosophy. Students will examine the principles of legal positivism, mitigated natural law, and rights theory. Selected readings and cases will illustrate these theories, which will also be examined in the context of rule selection by new governments in developing or revolutionary societies. The course also looks at the general nature of legal systems: how politics, morality, and individual views of justice and rights affect particular court cases and the course and development of law generally. Topics will include abortion, obscenity and sin, civil disobedience, affirmative action, surrogatehood, and the death penalty. This is unlike any other of the legal theory or jurisprudence courses, and those who have sampled legal theory elsewhere in a different form are welcome and encouraged to enroll. Recommended preparation: PHIL 101. Offered as LAWS 353, PHIL 335, and PHIL 435.

PHIL 445. Epistemology and Metaphysics. 3 Units.
Traditional problems of epistemology, such as definition of knowledge, justification of belief, nature of evidence and foundationalism, skepticism, the a priori, and the role of sense perception in knowledge. Metaphysical presuppositions and implications of epistemological views. Forms of realism and anti-realism. Recommended preparation: PHIL 101. Offered as PHIL 345 and PHIL 445.

PHIL 455. 19th and Early 20th Century Philosophy. 3 Units.
History of philosophy after Kant up to and including logical empiricism. Interpretation and comparison of important philosophers and philosophical schools of the period in terms of common methods, problems, themes, doctrines, and ideologies. Emphasis on Schopenhauer, Hegel, Kierkegaard, Marx, and Nietzsche. Recommended preparation: PHIL 101. Offered as PHIL 355 and PHIL 455.

PHIL 456. Comparative Philosophy. 3 Units.
Philosophy in the etymological sense of the term, love of wisdom, subsumes ontological, ethical and epistemological inquires addressing fundamental questions about reality, the place of humans in that reality, the values of things and human obligations, and the sources of knowledge. The major purpose of this course is to discover, understand, explicate and articulate the affinities and differences in the way the fundamental questions are addressed in different cultural contexts, thereby to appreciate the cross-cultural kinship among human minds as well as to be challenged by the differences that may engender conflicts. We will explore the possibility of building a trans-cultural meta-cultural meta-discourse in which thinkers from many traditions can participate on equal footing. We will come to face up to the question whether truly universal philosophy is possible, upon what conditions. Representative texts from the Western, Chinese and Buddhist traditions including selected works of Plato, Aristotle, Augustine, Descartes, Kant, Nietzsche, Heidegger, Lao Tzu, Confucius, Chuang Tzu, Dhammapada of the Buddha and D. Suzuki's Zen Buddhism will be read. Offered as PHIL 356 and PHIL 456. Counts for CAS Global & Cultural Diversity Requirement.
PHIL 467. Topics in Evolutionary Biology. 3 Units.
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/EEPS/PHIL/PHOL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation. Offered as ANTH 367, BIOL 368, EEPS 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, EEPS 467, PHIL 467, PHIL 467.

PHIL 475. Issues in Aesthetics. 3 Units.
This course will seek to offer insight into the nature of artistic expression, the role of criticism in the arts, and the place of the arts in society. The term "arts" will be construed broadly to include painting, photography, theater, film, music, dance, poetry, etc. The following are examples of questions we will discuss. What does the term "beautiful" mean? Are there other measures of aesthetic value besides beauty? Do the arts, like the sciences, offer us knowledge of the world? What value do the arts have for society? Can aesthetic value conflict with moral value? Do artists have a responsibility to society? Should art ever be censored? What is the relationship between art and entertainment? Is the meaning and value of an artistic work a matter of individual opinion? What is the purpose of art critics? How are interpretations and evaluations of art influenced by race, gender, class, etc.? What is creativity in the arts? Does it differ from creativity in the sciences? How important is originality in art? Offered as PHIL 375 and PHIL 475.

PHIL 485. Philosophy of Language. 3 Units.
Nature of language; problems of meaning, reference, and truth. Offered as PHIL 385 and PHIL 485.

PHIL 494. Seminar in Evolutionary Biology. 3 Units.
This seminar investigates 20th-century evolutionary theory, especially the Modern Evolutionary synthesis and subsequent expansions of and challenges to that synthesis. The course encompasses the multidisciplinary nature of the science of evolution, demonstrating how disciplinary background influences practitioners’ conceptualizations of pattern and process. This course emphasizes practical writing and research skills, including formulation of testable theses, grant proposal techniques, and the implementation of original research using the facilities on campus and at the Cleveland Museum of Natural History. Offered as ANTH 394, BIOL 394, EEPS 394, HSTY 394, PHIL 394, ANTH 494, BIOL 494, EEPS 494, HSTY 494, and PHIL 494.

PHIL 499. Independent Study MA Level. 1 - 3 Unit.
This course enables graduate students in departments or interdisciplinary programs with an MA to pursue intensive directed study with a faculty member in Philosophy. Students should consult with the Instructor and with their MA director or graduate program director before enrolling. Prereq: Graduate Standing.

PHIL 699. Advanced Tutorial and Dissertation for Candidates in fields related to Philosophy. 1 - 3 Unit.
This course enables students in departments offering the Ph.D. to pursue intensive directed study with a faculty member in Philosophy, on philosophical aspects of their dissertation topic. Students should consult with the instructor and with their dissertation director before enrolling.

Department of Physics

The Department of Physics offers programs leading to the following undergraduate degrees: Bachelor of Arts, Bachelor of Science in physics, Bachelor of Science in mathematics and physics, and Bachelor of Science in engineering with an engineering physics major. Associated with the Bachelor of Science in physics degree are optional concentrations in mathematical physics and in biophysics. The department also offers the graduate degrees Master of Science and Doctor of Philosophy, as well as a unique master’s degree in entrepreneurship.

All of these programs involve the study of the basic laws of nature and the properties of energy and matter in their various forms. The curriculum reflects the varied interests of the faculty and will prepare students for a wide range of future activities. At the undergraduate level, open electives and engineering physics concentration area courses tailor the programs to the student’s interests and career plans. Employment opportunities at the bachelor’s level include research, development, and technical assistance (engineering, computer programming, management) in industrial, government, and university settings.

A similar flexibility exists in the first few years of graduate study. The research leading to the PhD degree normally centers on a specific area of physics. However, even at this stage, the broad background and training characteristic of a physics degree are emphasized.

BA in Physics (p. 357) | BS in Physics (p. 357) | BSE in Engineering Physics (p. 357) | BS Math and Physics (p. 358) | Minor (p. 358)

Undergraduate Programs

Majors

Course requirements and typical schedules for the majors are summarized in the Plan of Study Grids (click the button above).

Bachelor of Arts in Physics

The BA physics major includes a large number of elective courses, making it easy for the student to pursue other interests or complete a second major while earning a degree in physics.

Teacher Licensure Option

The Physics Department offers a special option for undergraduate students who wish to pursue a physics major and a career in teaching. The Adolescent to Young Adult (AYA) Teacher Education Program in Physical Sciences prepares CWRU students to receive an Ohio Teaching License for grades 7-12. Students declare a second major in education - which involves 34 hours in Education and practicum requirements - and complete a planned sequence of physics courses within the context of the BA Physics major. The program is designed to offer several unique features not found in other programs and to place students in mentored teaching situations throughout their teacher preparation career. This small, rigorous program is designed to capitalize on the strengths of CWRU’s Physics Department, its Teacher Education Program, and the relationships the university has built with area schools. (For details on education course work, see the program description for Teacher Licensure (p. 453) elsewhere in this bulletin.)

Bachelor of Science in Physics

The BS degree has two alternatives to the standard program: a mathematical physics concentration and a biophysics concentration.

BSE Degree in Engineering Physics

The BSE degree in engineering physics supplies an excellent background for graduate studies in physics, but is also designed for students who value an engineering credential and who are considering a career in engineering, either through employment following the BSE or through engineering graduate studies. This degree is awarded by
the Case School of Engineering and includes the Engineering Core Curriculum. The technical electives in this program are concentrated in any of sixteen specific engineering areas.

**BS in Mathematics and Physics**

The BS in mathematics and physics is a single degree for students interested in advanced mathematics and theoretical physics. This degree is distinct from the mathematical physics concentration in the BS in physics degree. The program is jointly administered by the Department of Physics and the Department of Mathematics, Applied Mathematics, and Statistics. Students may be advised by faculty members from either department.

All BS, BA, and BSE candidates complete a year-long senior project in which they work one-on-one with a faculty researcher, write a senior thesis, and present their work in public.

**Minor**

Course requirements for the minor in physics are as follows:

* The Case School of Engineering has a policy stating that “no more than two courses taken for the minor may be used simultaneously to satisfy the requirements of the student’s major field, including departmental requirements, technical electives and the Engineering Core.” Thus, engineering students may have to choose between using physics courses as technical electives or counting them as part of a minor in physics.

**Graduate Programs**

The Department of Physics offers programs of study and research leading to both the Master of Science and the Doctor of Philosophy degrees. Graduate assistantships are available for the full-time support of qualified students. All MS programs in physics, with or without a thesis, normally can be completed in less than two years. The requirements for the PhD degree in physics include a flexible program of courses that typically is completed within three years, and a concurrent program of directed research with less course work and more research in each succeeding year.

**Master of Science in Entrepreneurship**

In addition to a traditional physics program, the department has created a Physics Entrepreneurship master’s degree program, which is part of the university’s larger Science and Technology Entrepreneurship Program. This two-year program is designed to empower physicists as entrepreneurs. It enables students and graduates to build on their physics skills to start new high-tech businesses or to launch new product lines in existing companies. The program provides top-level academic instruction and real-world entrepreneurial experience while connecting students with the business executives and leaders, experts, and venture capitalists who are crucial to success in start-up and growing ventures.

**Doctor of Philosophy**

For the PhD degree, the student is required to pass a general qualifying examination in physics, which is normally taken after the first year of study, and a topical oral examination within one year of joining a research group. The student must then prepare a dissertation based on the results of independent research. There is no foreign language requirement. Research pursuant to any of the graduate degree programs in physics may be carried out in five areas:

- **Condensed Matter Physics.** An extensive experimental and theoretical program in the electronic properties of solids; quantum liquids; mesoscopic physics; localization and quantum Hall effect; the physics of polymers, liquid crystals, and complex fluids; thin films; fluids dynamics; materials synthesis; the physics of surfaces and interfaces; electronic structure of materials and their defects; vibrational properties of solids (phonons); magnetism and magnetic materials; nano- and organic electronics.

- **Particle/Astrophysics and Cosmology.** The experimental efforts in this area include the study of the nature of dark matter in the universe, observations of high-energy gamma rays and cosmic rays, and measurements of the cosmic microwave background. Theoretical studies include the cosmic microwave background, gravitational lensing, dark matter, dark energy, structure formation, neutrino astrophysics, topological defects, phase transitions, inflation, non-gaussianities, gravitational waves, black holes, extra dimensions, modified gravity, and tests of General Relativity.

The Center for Education and Research in Cosmology and Astrophysics (CERCA) comprises groups from the Departments of Physics and Astronomy and the Cleveland Museum of Natural History. The center organizes international conferences, hosts visitors and lectures, and supports students and faculty in their research. As it grows, it will provide postdoctoral research positions and will also prepare public programs on cosmology and astrophysics.

- **Elementary Particle Physics.** Theoretical studies in the strong, weak, and electromagnetic interactions of the elementary particles, and in all areas of particle theory, gravitation, and cosmology.

- **Optics and Optical Materials.** Both experimental and theoretical programs in nonlinear optics, integrated optics, ultrastar optics, and the optical properties of fluids, liquid crystals, polymers, and crystals, including semiconductors, semiconductor mesoscopic systems, photonic crystals, and nanoscopic systems.
Imaging Physics, Biophysics, and Inverse Problems. An experimental and theoretical program in aspects of non-invasive imaging, including magnetic resonance imaging and ultrasound; medical diagnostic techniques to measure iron in the liver; and industrial and medical applications in electromagnetic field modeling.

Requirements Tables for Physics Programs

Bachelor of Arts in Physics

The Bachelor of Arts degree with a physics major requires completion of the Arts and Sciences General Education Requirements (GER) and 120 total credits, of which 56 are specified by the physics department as shown below. Courses specified for this major satisfy the 6-credit Arts and Sciences GER in Sciences and Mathematics.

Total Units 120

1 PHYS 303 Advanced Laboratory Physics Seminar + PHYS 352 Senior Physics Project Seminar satisfy the SAGES departmental seminar requirement. PHYS 351 Senior Physics Project is an approved SAGES capstone course.

2 Students may choose only one of these two courses to satisfy the requirements of the BA degree.

3 A two-course science sequence chosen from CHEM 105 Principles of Chemistry I and CHEM 106 Principles of Chemistry II; CHEM 111 Principles of Chemistry for Engineers and ENGR 145 Chemistry of Materials; BIOL 214 Genes, Evolution and Ecology and BIOL 215 Cells and Proteins; or another two-course sequence totaling 6 or more credits in a quantitative science (other than physics), with written approval of the physics undergraduate curriculum committee.

4 Or other approved computational course.

5 The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the BA in Physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

6 The BA degree requires a minimum of 30 semester hours at the 300-400 level, of which only 22 are specified as PHYS courses.

Total Units in Sequence: 117

Bachelor of Science in Physics

The Bachelor of Science in physics requires completion of the courses listed in the table below as well as the Arts and Sciences General Education Requirements, for a total of 127 credits. Many courses may be taken at times other than those shown in the "Typical Schedule" tables below.

PHYS 121 General Physics I - Mechanics 4
PHYS 122 General Physics II - Electricity and Magnetism 4
PHYS 221 Introduction to Modern Physics 3
PHYS 203 Analog and Digital Electronics 4
PHYS 204 Advanced Instrumentation Laboratory 4
PHYS 250 Computational Methods in Physics 3
PHYS 310 Classical Mechanics 3
PHYS 301 Advanced Laboratory Physics I 3
PHYS 303 Advanced Laboratory Physics Seminar 1
PHYS 313 Thermodynamics and Statistical Mechanics 3
PHYS 331 Introduction to Quantum Mechanics I 3
PHYS 332 Introduction to Quantum Mechanics II 3
PHYS 302 Advanced Laboratory Physics II 4
PHYS 324 Electricity and Magnetism I 3
PHYS 325 Electricity and Magnetism II 3
PHYS 351 Senior Physics Project (PHYS 351 is taken twice for 2 credit hours each) 1
PHYS 352 Senior Physics Project Seminar (PHYS 352 is taken twice for 1 credit hour each) 1

Choose one of the following: 3

PHYS 315 Introduction to Solid State Physics

PHYS 326 Physical Optics

PHYS 327 Laser Physics

Choose one of the following: 3

PHYS 316 Introduction to Nuclear and Particle Physics

PHYS 328 Cosmology and the Structure of the Universe

PHYS 336 Modern Cosmology

PHYS 365 General Relativity

CHEM 105 Principles of Chemistry I 3-4
CHEM 111 Principles of Chemistry for Engineers 3-4
CHEM 106 Principles of Chemistry II 3-4
ENGR 145 Chemistry of Materials

ENGR 131 Elementary Computer Programming 2 3
MATH 121 Calculus for Science and Engineering I 4
MATH 122 Calculus for Science and Engineering II 4
MATH 124 Calculus II
MATH 223 Calculus for Science and Engineering III 3
MATH 227 Calculus III
MATH 224 Elementary Differential Equations 3

PHED Physical Education (2 semesters) 0

SAGES First and University Seminars 10

Breadth Requirements 3 12

Open Electives 4 22

Total Units 127-129

1 PHYS 303 Advanced Laboratory Physics Seminar + PHYS 352 Senior Physics Project Seminar satisfy the SAGES departmental seminar requirement. PHYS 351 Senior Physics Project is an approved SAGES capstone course.

2 Or other approved computational course.
The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the BS in physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

The number of open electives may vary, depending on how many credits a student needs to reach the required total of 127.

1. M-group 1, 2 and 3 are to be chosen from among approved advanced mathematics or statistics courses.
2. PHYS 303 Advanced Laboratory Physics Seminar + PHYS 352 Senior Physics Project Seminar satisfy the SAGES departmental seminar requirement. PHYS 351 Senior Physics Project is an approved SAGES capstone course.
3. Or other approved computational course.
4. The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the BS in physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.
5. The number of open electives may vary, depending on the number of credits a student needs to reach the required total of 127.
## Bachelor of Science in Physics with Biophysics Concentration

This concentration is directed towards students interested in the combined study of biology and physics. The degree is a track within the standard BS in physics, in which four physics courses and certain open electives are replaced by a “biogroup” of five courses and a technical elective. All substitutions must be approved by a physics faculty committee.

The following table illustrates the requirements for the Bachelor of Science in physics with biophysics concentration.

**Total Units in Sequence:** 130-132

1. PHYS 303 Advanced Laboratory Physics Seminar + PHYS 352 Senior Physics Project Seminar satisfy the SAGES departmental seminar requirement. PHYS 351 Senior Physics Project is an approved SAGES capstone course.

2. Suggested technical electives include PHYS 315 Introduction to Solid State Physics, PHYS 316 Introduction to Nuclear and Particle Physics, PHYS 326 Physical Optics, PHYS 327 Laser Physics, PHYS 328 Cosmology and the Structure of the Universe, PHYS 336 Modern Cosmology, PHYS 365 General Relativity.

3. Or other approved computational course.

4. B-group 1-5 are to be chosen from among approved biology, biophysics, biochemistry, and biomedical engineering courses, including certain prerequisites as needed (e.g., chemistry). BIOL 214 Genes, Evolution and Ecology and BIOL 215 Cells and Proteins are suggested for B-group 1 and 2. The listing of credits includes numbers for the most likely choices of courses and, in parentheses, possible alternatives.

5. The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the B.S. in physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

6. The number of open electives may vary, depending on the number of credits a student needs to reach the required total of 127.

### Bachelor of Science in Engineering with Engineering Physics Major

The engineering physics major allows students with strong interests in both physics and engineering to concentrate their studies in the common areas of these disciplines. The major prepares students to pursue careers in industry, either directly after undergraduate studies, or following graduate study in engineering or physics. Many employers value the unique problem-solving approach of physics, especially in industrial research and development.

Students majoring in engineering physics complete the Engineering Core as well as a rigorous course of study in physics. Students select a concentration area from an engineering discipline, and must complete a sequence of at least four courses in this discipline. In addition, a senior research project under the guidance of a faculty member is required. The project includes a written report and participation in the senior seminar and symposium.

**Total Units in Sequence:** 129

1. Selected students may be invited to take MATH 123, 124, 227, and 228 in place of MATH 121, 122, 223, and 224.
2. Selected students may be invited to take PHYS 123, 124 (Physics and Frontiers I, II Honors) in place of PHYS 121, 122.
3. Engineering physics concentration courses are flexible, but they must be in a specific engineering discipline or study area and approved by an advisor. Possible concentration areas include aerospace engineering, biomedical engineering “hardware,” biomedical engineering “software,” chemical engineering, civil engineering (solid mechanics, structural and geotechnical, environmental), computer science, computer systems hardware, computer systems software, control systems and automation, electrical engineering, macromolecular science, materials science and engineering, mechanical engineering, signal processing, systems analysis and decision making.

3. MATH 124 Calculus II
4. PHYS 121 General Physics I - Mechanics
5. PHYS 123 Physics and Frontiers I - Mechanics
6. PHYS 122 General Physics II - Electricity and Magnetism
7. PHYS 124 Physics and Frontiers II - Electricity and Magnetism

**Senior Physics Project Seminar (PHYS 352)**

**Senior Engineering Physics Project (PHYS 353)**

**Advanced Physics Elective**
Breadth Requirements  

- Other science sequence courses may be substituted if approved by the mathematics and physics (MP) committee.
- Or other approved computational course
- The “MP group” of four courses corresponds to two physics courses and two mathematics courses. The physics courses are chosen from PHYS 250 Computational Methods in Physics, PHYS 349 Methods of Mathematical Physics I, and PHYS 350 Methods of Mathematical Physics II. The mathematics courses are subject to approval by the MP committee and are hence referred to as “approved electives.” They may be chosen from the general list of mathematics courses at the 300 level or higher. It may also be possible to choose a course outside the mathematics and physics departments as a substitute in the MP group, subject to approval by the committee.

- An advanced physics course to be selected from the following list: PHYS 315 Introduction to Solid State Physics, PHYS 316 Introduction to Nuclear and Particle Physics, PHYS 326 Physical Optics, PHYS 327 Laser Physics, PHYS 328 Cosmology and the Structure of the Universe, PHYS 336 Modern Cosmology, PHYS 365 General Relativity.
- PHYS 303 Advanced Laboratory Physics Seminar + PHYS 352 Senior Physics Project Seminar satisfy the SAGES departmental seminar requirement. PHYS 351 Senior Physics Project is an approved SAGES capstone course.
- Students may take either the math or physics SAGES departmental seminar, but must take their SAGES capstone course from the same department. The physics option consists of 1 credit of PHYS 303 Advanced Laboratory Physics Seminar plus two credits of PHYS 352 Senior Physics Project Seminar.
- The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the BS in mathematics and physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

- The number of open electives may vary, depending on how many credits the student needs to reach the required total of 126.

Open Elective 3
Year Total: 16 12
Total Units in Sequence: 126-128

Department Faculty

Kathleen Kash, PhD
(Massachusetts Institute of Technology)
Professor and Chair
Experimental condensed matter and mesoscopic physics; synthesis of novel semiconductors

Jesse Berezovsky, PhD
(University of California, Santa Barbara)
Assistant Professor
Imaging coherent transport in mesoscopic graphene; optical readout of single spin dynamics in a quantum dot; spin dynamics in layered core/shell nanocrystal quantum dots; measurements of nuclear and electron spin at a ferromagnetic/semiconductor interface; spatio-temporal imaging and simulation of magnetization dynamics in ferromagnetic structures

Robert W. Brown, PhD
(Massachusetts Institute of Technology)
Distinguished University Professor and Institute Professor
Medical imaging; industrial physics; particle physics theory; cosmology

Edward M. Caner, MS
(Case Western Reserve University)
Instructor
Science entrepreneurship

Gary S. Chottiner, PhD
(University of Maryland)
Professor and Director of Undergraduate Studies
Experimental physics of surfaces and thin films

Craig Copi, PhD
(University of Chicago)
Instructor
Theoretical cosmology; particle physics; astrophysics

Corbin E. Covault, PhD
(Harvard University)
Professor
Experimental high-energy astrophysics

Claudia de Rham, PhD
(University of Cambridge)
Assistant Professor
Massive gravity and degravitation; Supersymmetric Large Extra Dimensions (SLED); physics of codimension-2 objects; cosmological perturbations

Diana I. Driscoll, PhD
(Case Western Reserve University)
Instructor
Introductory physics

Xuan Gao, PhD
(Columbia University)
Associate Professor
Experimental condensed matter physics; nanomaterials; electron transport in nanostructures; correlated electrons in low dimensions

Michael Hinczewski, PhD
(Massachusetts Institute of Technology)
Assistant Professor
Theoretical Biophysics

Peter J. Kernan, PhD
(Ohio State University)
Instructor
Cosmology; Astrophysics

Kenneth L. Kowalski, PhD
(Brown University)
Professor
Theoretical and experimental particle physics

Walter R. Lambrecht, PhD
(University of Ghent)
Professor
Theoretical condensed matter physics; electronic structure-based physics of materials

Michael A. Martens, PhD
(Case Western Reserve University)
Associate Professor
Medical imaging physics, high energy particle physics, accelerator physics

Harsh Mathur, PhD
(Yale University)
Associate Professor
Condensed matter theory, particle-astrophysics theory

Rolfe G. Petschek, PhD
(Harvard University)
Professor
Theoretical condensed matter; optical materials

Charles Rosenblatt, PhD
(Harvard University)
Professor and Ohio Eminent Scholar in Condensed Matter Physics
Experimental condensed matter; liquid crystals and complex fluids

John E. Ruhl, PhD
(Princeton University)
Professor
Experimental astrophysics and cosmology

Kenneth D. Singer, PhD
(University of Pennsylvania)
Ambrose Swasey Professor of Physics; Director, Engineering Physics
Experimental condensed matter physics; nonlinear optics

Glenn D. Starkman, PhD
(Stanford University)
Professor; Director, Center for Education and Research in Cosmology and Astrophysics (CERCA)
Theoretical cosmology, particle physics, astrophysics

Giuseppe Strangi, PhD
(University of Calabria, Italy)
Professor and The Ohio Research Scholar in Surfaces of Advanced Materials
Opto-Plasmonics of Soft Composite Metamaterials; Liquid Crystal Photonics
Cyris C. Taylor, PhD  
(Massachusetts Institute of Technology)  
*Albert A. Michelson Professor in Physics; Dean, College of Arts and Sciences*  
Theoretical and experimental particle physics; physics entrepreneurship

Philip L. Taylor, PhD  
(University of Cambridge)  
*Distinguished University Professor and Perkins Professor of Physics*  
Theory of solids, polymers and other materials

Andrew J. Tolley, PhD  
(University of Cambridge)  
*Assistant Professor*  
Early universe cosmology; dark energy; gravity; extra dimensions; branes

### Secondary Faculty

J. Iwan Alexander, PhD  
(Washington State University)  
*Professor, Department of Mechanical and Aerospace Engineering, Case School of Engineering*  
Fluid dynamics, energy research

Roger H. French, PhD  
(Massachusetts Institute of Technology)  
*F. Alex Nason Professor, Department of Materials Science and Engineering, Case School of Engineering*  
Optical materials and technologies; experimental VIS/UV/VUV optical properties and long range interactions

Mark A. Griswold, PhD  
(University of Wuerzburg)  
*Associate Professor, Department of Radiology, School of Medicine*  
Medical imaging, MRI

Eckhard Jankowsky, PhD  
(Dresden Institute of Technology)  
*Associate Professor, Department of Biochemistry, School of Medicine*  
Proteins and enzymes; structural biology; regulation of gene expression

R. Earle Luck, PhD  
(University of Texas at Austin)  
*Worcester R. and Cornelia B. Warner Professor of Astronomy*  
Stellar and galactic chemical evolution; stellar spectrophotometry

J. Christopher Mihos, PhD  
(University of Michigan)  
*Professor, Department of Astronomy*  
Galaxy formation and evolution; galaxy interactions; clusters of galaxies; observational and computational astrophysics

Heather Morrison, PhD  
(Australian National University)  
*Professor, Department of Astronomy*  
Galactic structure; stellar populations; dark matter

Idit Zehavi, PhD  
(Hebrew University of Jerusalem)  
*Associate Professor, Department of Astronomy*  
Astrophysics

### Adjunct Faculty

James H. Andrews, PhD  
(Case Western Reserve University)  
*Adjunct Professor; Professor of Physics, Youngstown State University*  
Optical materials

Pierre Carlès, PhD, Habilitation  
(National Polytechnic Institute, Toulouse)  
*Adjunct Associate Professor; Associate Professor, Université Pierre et Marie Curie, Paris*  
Fluid mechanics; critical behavior; stability

Michael R. Dragowsky, PhD  
(Oregon State University)  
*Adjunct Associate Professor*  
Nuclear and particle astrophysics experiment

Jeffrey S. Dyck, PhD  
(Case Western Reserve University)  
*Adjunct Associate Professor; Associate Professor, John Carroll University*  
Experimental condensed matter physics

Karsten Eggert, PhD  
(RWTH Aachen University)  
*Adjunct Professor*  
Experimental particle physics; cosmic ray physics; diffractive physics; TOTEM experiment at CERN

Hiroyuki Fujita, PhD  
(Case Western Reserve University)  
*Adjunct Professor; President and CEO, Quality Electrodynamics and eQED*  
Hardware technology in imaging and renewable energies

Evalyn Gates, PhD  
(Case Western Reserve University)  
*Adjunct Professor; Executive Director and CEO, Cleveland Museum of Natural History*  
Cosmology and particle astrophysics

John T. Giblin, Jr., PhD  
(Yale University)  
*Adjunct Assistant Professor*  
Theoretical cosmology; high energy physics and particle physics; high performance computing and gravitational waves

E. Mark Haacke, PhD  
(University of Toronto)  
*Adjunct Professor; Professor, Wayne State University*  
Physics of imaging; experimental biophysics

Daeseung Kang, PhD  
(Case Western Reserve University)  
*Adjunct Associate Professor*  
Experimental condensed matter; liquid crystal

Gerald T. Mearini, PhD  
(Case Western Reserve University)  
*Adjunct Associate Professor; Genvac Aerospace Corporation*
The laboratory portion of first semester introductory physics.

PHYS 113A. Principles of Physics Laboratory - Mechanics. 1 Unit.
Recommended preparation: PHYS 100, PHYS 115, PHYS 121, or PHYS 123.
Preparation: PHYS 100, PHYS 115, PHYS 121, or PHYS 123.

PHYS 113B. Principles of Physics Laboratory - Electricity and Magnetism. 1 Unit.
The laboratory portion of the second semester of physics.

PHYS 115. Introductory Physics I. 4 Units.
First part of a two-semester sequence directed primarily towards students working towards a B.A. in science, with an emphasis on the life sciences. Kinematics; Newton's laws; gravitation; simple harmonic motion; mechanical waves; fluids; ideal gas law; heat and the first and second laws of thermodynamics. This course has a laboratory component.

PHYS 116. Introductory Physics II. 4 Units.
Electrostatics, Coulomb's law, Gauss's law; capacitance and resistance; DC circuits; magnetic fields; electromagnetic induction; RC and RL circuits; light; geometrical optics; interference and diffraction; special relativity; introduction to quantum mechanics; elements of atomic, nuclear and particle physics. This course has a laboratory component.

PHYS 121. General Physics I - Mechanics. 4 Units.
Particle dynamics, Newton's laws of motion, energy and momentum conservation, rotational motion, and angular momentum conservation. This course has a laboratory component. Recommended preparation: MATH 121 or MATH 123 or MATH 125 or one year of high school calculus.

PHYS 122. General Physics II - Electricity and Magnetism. 4 Units.
Electricity and magnetism, emphasizing the basic electromagnetic laws of Gauss, Ampere, and Faraday. Maxwell's equations and electromagnetic waves, interference, and diffraction. This course has a laboratory component. Prereq: PHYS 121 or PHYS 123. Prereq or Coreq: MATH 122 or MATH 124 or MATH 126.

PHYS 123. Physics and Frontiers I - Mechanics. 4 Units.
The Newtonian dynamics of a particle and of rigid bodies. Energy, momentum, and angular momentum conservation with applications. A selection of special frontier topics as time permits, including fractals and chaos, special relativity, fluid mechanics, cosmology, quantum mechanics. This course has a laboratory component. Admission to this course is by invitation only.

PHYS 124. Physics and Frontiers II - Electricity and Magnetism. 4 Units.
Time-independent and time-dependent electric and magnetic fields. The laws of Coulomb, Gauss, Ampere, and Faraday. Microscopic approach to dielectric and magnetic materials. Introduction to the usage of vector calculus; Maxwell's equations in integral and differential form. The role of special relativity in electromagnetism. Electromagnetic radiation. This course has a laboratory component. Prereq: PHYS 123. Prereq or Coreq: MATH 122 or MATH 124.

PHYS 166. Physics Today and Tomorrow. 1 Unit.
This course will provide students with an opportunity to learn about the most exciting and timely research areas in physics, as well as other topics germane to being a professional physicist. These discussions will cover fields such as nanoscience, ultrafast optics, exotic materials, biophysics, cosmology, string theory and the role of physicists in developing new technologies. Each week a member of the faculty will meet with students to discuss a topic of current interest, how a physicist approaches the problem, and how physicists interact with others to find a solution. Other topics germane to being a professional physicist also will be discussed, including the relationship among academic, industrial, and governmental laboratories; ethics, and non-traditional careers for students trained in physics.

Visiting Faculty
Cory Christenson, PhD
(University of Arizona)
Visiting Assistant Professor
Experimental condensed matter physics; Quantum optics

Research Professors
Ina Martin, PhD
(Colorado State University)
Senior Research Associate; Director of Operations, MORE Center
Thermal management materials; photovoltaic materials

Courses
PHYS 101. Distinguishing Science from Pseudo-Science. 3 Units.
There are many current issues arising in popular discourse, ranging from the believability of ESP to reincarnation, to “free energy” machines, which can benefit from simple physical analyses. This course will provide an introduction to the use of basic principles of physics to explore the viability of these ideas. A seminar format will be utilized with specific topics presented by students and by the instructor. Recommended preparation: PHYS 100, PHYS 115, PHYS 121, or PHYS 123.

PHYS 113A. Principles of Physics Laboratory - Mechanics. 1 Unit.
The laboratory portion of first semester introductory physics.
PHYS 203. Analog and Digital Electronics. 4 Units.
Elements of both analog and digital electronics from the practical viewpoint of the experimental scientist; AC circuits, linear and non-linear operation of op-amps, logic gates, flip-flops, counters, display, memory, transducers, A/D and D/A conversion. Laboratory work involves quantitative investigation of the operation of all these elements, together with projects that explore their combination. Recommended preparation: PHYS 122 or PHYS 124.

PHYS 203A. Analog and Digital Electronics for B.A.. 2 Units.
This course is the first half of the laboratory requirement for the B.A. degree in Physics and is the first half of PHYS 203. Elements of both analog and digital electronics from the practical viewpoint of the experimental scientist; AC circuits, linear and non-linear operation of op-amps, digital circuits including logic gates. This course includes weekly lecture and laboratory work in electronics; it may also include an additional weekly lecture, associated with PHYS 301, on topics such as error analysis, technical writing and oral presentations. Recommended preparation: PHYS 116, PHYS 122, or PHYS 124.

PHYS 204. Advanced Instrumentation Laboratory. 4 Units.
Principles of experimental design; limits of resolution via band-width, thermal noise, background signals; data acquisition and control by computer; computer simulation; signal processing techniques in frequency and time domains, FFT, correlations, and other transform methods; counting techniques. Applications include lock-in amplifiers, digitizing oscilloscopes and data acquisition systems. Recommended preparation: PHYS 203 and PHYS 221.

PHYS 208. Instrumentation and Signal Analysis Laboratory. 4 Units.
AC circuit theory, Fourier series, discrete Fourier series. Fourier integral, discrete Fourier integral; analysis in time and frequency domains, correlation, cross-correlation and other transform techniques; computer control of experiments via IEEE488 interface; advanced instrumentation; DMM, arbitrary waveform generator, multiplexing and digitizing oscilloscopes; experimental design, noise; design, construction, and testing of a lock-in amplifier. Recommended preparation: PHYS 203.

PHYS 221. Introduction to Modern Physics. 3 Units.
Concepts in special relativity, statistical mechanics and quantum mechanics. Applications to atomic structure, and selected topics in nuclear, condensed matter physics, particle physics, and cosmology. Prereq: PHYS 116 or PHYS 122 or PHYS 124.

PHYS 250. Computational Methods in Physics. 3 Units.

PHYS 301. Advanced Laboratory Physics I. 3 Units.
Problem solving approach with a range of available experiments in classical and modern physics. Emphasis on experimental techniques, data and error analysis, and the formal presentation of the work performed. Recommended preparation: PHYS 204. Coreq: PHYS 303.

PHYS 301B. Advanced Laboratory Physics for B.A.. 2 Units.
This course is the second half of the laboratory requirement for the B.A. degree in Physics and is the second half of PHYS 301. Problem solving approach with a range of available experiments in classical and modern physics. Emphasis on experimental technique and data and error analysis, and the formal presentation of the work performed. Recommended preparation: PHYS 203 or PHYS 203A and concurrent enrollment in PHYS 303.

PHYS 302. Advanced Laboratory Physics II. 4 Units.
Several projects using research-quality equipment in contemporary fields of experimental physics. Each requires reading appropriate literature, choosing appropriate instrumentation, performing data acquisition and analysis, and writing a technical paper. Topics include particle counting techniques, neutron activation, gamma-ray spectroscopy, a range of condensed matter experiments including temperature dependent properties between 10 and 350 K, modern optics, ultrahigh vacuum surface science. Recommended preparation: PHYS 301.

PHYS 303. Advanced Laboratory Physics Seminar. 1 Unit.
Students will discuss various issues associated with physics research. These include how to judge the quality of an experiment and data (error analysis), how to present your work in written and oral formats, safety and ethical concerns in the laboratory. Recommended preparation: PHYS 250. Counts as SAGES Departmental Seminar.

PHYS 310. Classical Mechanics. 3 Units.
Lagrangian formulation of mechanics and its application to central force motion, scattering theory, rigid body motion, and systems of many degrees of freedom. Recommended preparation: PHYS 221 and either MATH 223 or MATH 227.

PHYS 313. Thermodynamics and Statistical Mechanics. 3 Units.

PHYS 315. Introduction to Solid State Physics. 3 Units.
Characterization and properties of solids; crystal structure, thermal properties of lattices, quantum statistics, electronic structure of metals and semiconductors. PHYS 415 for graduate students in engineering and science. (May not be taken for departmental credit by graduate students in the Department of Physics.) Prerequisite may be waived with consent of department. Recommended preparation for PHYS 415: PHYS 331. Offered as PHYS 315 and PHYS 415. Prereq: PHYS 331 or PHYS 481.

PHYS 316. Introduction to Nuclear and Particle Physics. 3 Units.
The physics of nuclei and elementary particles; experimental methods used to determine their properties; models and theories developed to describe their structure. Prereq: PHYS 331 or PHYS 481.

PHYS 317. Engineering Physics Laboratory I. 3 Units.
Laboratory course for engineering physics majors. Emphasis is on experimental techniques, data and error analysis, and written and oral presentation of work. Four experiments drawn from classical and modern physics are carried out. These emphasize condensed matter, material and optical physics. Experiments include electric fields, resistivity of materials, optical interference, chaotic systems, and spectroscopy. Design of data analysis systems and software is required. Prereq: PHYS 208. Coreq: PHYS 303.

PHYS 318. Engineering Physics Laboratory II. 4 Units.
Laboratory course for engineering physics majors. Several projects using research-quality equipment in contemporary fields of experimental physics. Open-ended experiments each require reading appropriate literature, designing the experiment, performing data analysis, and writing a technical paper. Topics are drawn from areas of modern physics, and concentrate on condensed matter, material, and optical physics. Prereq: PHYS 317.
PHYS 324. Electricity and Magnetism I. 3 Units.
First half of a sequence that constitutes a detailed study of the basics of electromagnetic theory and many of its applications. Electrostatics and magnetostatics of free space, conductors, dielectric and magnetic materials; basic theory illustrated with applications drawn from condensed matter physics, optics, plasma physics, and physical electronics. Prereq: PHYS 116 or PHYS 122 or PHYS 124.

PHYS 325. Electricity and Magnetism II. 3 Units.
(Continuation of PHYS 324.) Electrodynamics, Maxwell’s equations, electromagnetic waves, electromagnetic radiation and its interaction with matter, potential formulation of electromagnetism, and relativity. Prereq: PHYS 324.

PHYS 326. Physical Optics. 3 Units.
Geometrical optics and ray tracing, wave propagation, interaction of electromagnetic radiation with matter, interference, diffraction, and coherence. Supplementary current topics from modern optics such as nonlinear optics, holography, optical trapping and optical computing. Prerequisite(s) may be waived with consent of department. Offered as PHYS 326 and PHYS 426. Prereq: PHYS 122 or PHYS 124.

PHYS 327. Laser Physics. 3 Units.
An introduction to theoretical and practical quantum electronics covering topics in quantum optics, laser physics, and nonlinear optics. Topics to be addressed include the physics of two-level quantum systems including the density matrix formalism, rate equations, and semiclassical radiation theory; laser operation including oscillation, gain, resonator optics, transverse and longitudinal modes, Q-switching, mode-locking, and coherence; and nonlinear optics including the nonlinear susceptibility, parametric interactions, stimulated processes, and self-action. Recommended preparation for PHYS 427. PHYS 331 or PHYS 481. Offered as PHYS 327 and PHYS 427. Prereq: PHYS 331 or PHYS 481.

PHYS 328. Cosmology and the Structure of the Universe. 3 Units.

PHYS 329. Independent Study. 1 - 4 Unit.
An individual reading course in any topic of mutual interest to the student and the faculty supervisor.

PHYS 331. Introduction to Quantum Mechanics I. 3 Units.
Quantum nature of energy and angular momentum, wave nature of matter, Schroedinger equation in one and three dimensions; matrix methods; Dirac notation; quantum mechanical scattering. Two particle wave functions. Prereq: PHYS 221.

PHYS 332. Introduction to Quantum Mechanics II. 3 Units.
Continuation of PHYS 331. Spin and fine structure; Dirac equation; symmetries; approximation methods; atomic and molecular spectra; time dependent perturbations; quantum statistics; applications to electrons in metals and liquid helium. Prereq: PHYS 331.

PHYS 336. Modern Cosmology. 3 Units.
An introduction to modern cosmology and an exploration of current topics in the field. The first half of the course will cover the mathematical and physical basis of cosmology, while the second will delve into current questions and the observations that constrain them. Offered as PHYS 336 and PHYS 436. Prereq: PHYS 221.

PHYS 339. Seminar. 1 - 3 Unit.
Conducted in small sections with presentation of papers by students and informal discussion. Special problem seminars and research seminars offered according to interest and need, often in conjunction with one or more research groups.

PHYS 349. Methods of Mathematical Physics I. 3 Units.
Analysis of complex functions: singularities, residues, contour integration; evaluation and approximation of sums and integrals; exact and approximate solution of ordinary differential equations; transform calculus; Sturm-Liouville theory; calculus of variations. Additional work required for graduate students. Offered as PHYS 349 and PHYS 449. Prereq: MATH 224.

PHYS 350. Methods of Mathematical Physics II. 3 Units.
(Continuation of PHYS 349/449.) Special functions, orthogonal polynomials, partial differential equations, linear operators, group theory, tensors, selected specials topics. Additional work required for graduate students. Prereq: PHYS 349.

PHYS 351. Senior Physics Project. 2 Units.
A two semester course required for senior BS and BA physics majors. Students pursue a project based on experimental, theoretical or teaching research under the supervision of a physics faculty member, a faculty member from another CWRU department or a research scientist or engineer from another institution. A departmental Senior Project Committee must approve all project proposals and this same committee will receive regular oral and written progress reports. Final results are presented at the end of the second semester as a paper in a style suitable for publication in a professional journal as well as an oral report in a public symposium. Counts as SAGES Senior Capstone. Prereq: PHYS 303. Coreq: PHYS 352.

PHYS 352. Senior Physics Project Seminar. 1 Unit.
This two semester seminar is taken concurrently with the student's two semester senior project. Students meet weekly to discuss their projects and the research experience. The class will include dialogues about professional issues such as ethics, graduate school, jobs, funding, professional organizations, public obligations, writing and speaking. Assignments include proposals, progress reports and posters. Counts as SAGES Departmental Seminar. Coreq: PHYS 351 or PHYS 353.

PHYS 353. Senior Engineering Physics Project. 2 Units.
A two semester course required for BS/EE Engineering Physics majors. Students are expected to complete a research project in their concentration area under the supervision of a faculty member in science, engineering, or, with approval, a researcher at another institution or company. The project may be computational, experimental or theoretical, and will address both the underlying physics and appropriate engineering and design principles. A program Senior Project Committee must approve all project proposals and will receive regular oral and written progress reports. Final results are presented at the end of the second semester as a paper in a style suitable for publication in a professional journal as well as an oral report in a public symposium. Counts as SAGES Senior Capstone. Prereq: PHYS 318. Coreq: PHYS 352.

PHYS 365. General Relativity. 3 Units.
This is an introductory course in general relativity. The techniques of tensor analysis will be developed and used to describe the effects of gravity and Einstein's theory. Consequences of the theory as well as its experimental tests will be discussed. An introduction to cosmology will be given. Additional work required for graduate students. Offered as PHYS 365 and PHYS 465.
PHYS 390. Undergraduate Research in Physics. 3 - 6 Units.
Research conducted under the supervision of a faculty member in the Department of Physics. Arrangements must be made with a faculty member and a written description of these arrangements must be submitted to and approved by the department before a permit will be issued to register for this course. A final report must be supplied to the department at the end of the semester.

PHYS 413. Classical and Statistical Mechanics I. 3 Units.
An integrated approach to classical and statistical mechanics. Lagrangian and Hamiltonian formulations, conservation laws, kinematics and dynamics, Poisson brackets, continuous media, derivation of laws of thermodynamics, the development of the partition function. To be followed by PHYS 414.

PHYS 414. Classical and Statistical Mechanics II. 3 Units.
A continuation of PHYS 413. Noninteracting systems, statistical mechanics of solids, liquids, gases, fluctuations, irreversible processes, phase transformations. Recommended preparation: PHYS 413 or consent of department.

PHYS 415. Introduction to Solid State Physics. 3 Units.
Characterization and properties of solids; crystal structure, thermal properties of lattices, quantum statistics, electronic structure of metals and semiconductors. PHYS 415 for graduate students in engineering and science. (May not be taken for departmental credit by graduate students in the Department of Physics.) Prerequisite may be waived with consent of department. Recommended preparation for PHYS 415: PHYS 315 and PHYS 415.

PHYS 423. Classical Electromagnetism. 3 Units.

PHYS 426. Physical Optics. 3 Units.
Geometrical optics and ray tracing, wave propagation, interaction of electromagnetic radiation with matter, interference, diffraction, and coherence. Supplementary current topics from modern optics such as nonlinear optics, holography, optical trapping and optical computing. Prerequisite(s) may be waived with consent of department. Offered as PHYS 326 and PHYS 426.

PHYS 427. Laser Physics. 3 Units.
An introduction to theoretical and practical quantum electronics covering topics in quantum optics, laser physics, and nonlinear optics. Topics to be addressed include the physics of two-level quantum systems including the density matrix formalism, rate equations, and semiclassical radiation theory; laser operation including oscillation, gain, resonator optics, transverse and longitudinal modes, Q-switching, mode-locking, and coherence; and nonlinear optics including the nonlinear susceptibility, parametric interactions, stimulated processes, and self-action. Recommended preparation for PHYS 427: PHYS 331 or PHYS 481. Offered as PHYS 327 and PHYS 427.

PHYS 428. Cosmology and the Structure of the Universe. 3 Units.

PHYS 431. Physics of Imaging. 3 Units.
Description of physical principles underlying the spin behavior in MR and Fourier imaging in multi-dimensions. Introduction of conventional, fast, and chemical-shift imaging techniques. Spin echo, gradient echo, and variable flip-angle methods. Projection reconstruction and sampling theorems. Bloch equations, T1 and T2 relaxation times, rf penetration, diffusion and perfusion. Flow imaging, MR angiography, and functional brain imaging. Sequence and coil design. Prerequisite may be waived with consent of instructor. Recommended preparation: PHYS 122 or PHYS 124 or EBME 410. Offered as EBME 431 and PHYS 431.

PHYS 436. Modern Cosmology. 3 Units.
An introduction to modern cosmology and an exploration of current topics in the field. The first half of the course will cover the mathematical and physical basis of cosmology, while the second will delve into current questions and the observations that constrain them. Offered as PHYS 336 and PHYS 436.

PHYS 441. Physics of Condensed Matter I. 3 Units.
Crystal structure, x-ray diffraction, band theory and applications. Free electron theory of metals and electrons in magnetic fields.

PHYS 442. Physics of Condensed Matter II. 3 Units.
Continuation of PHYS 441. Lattice vibrations, thermal properties of solids, semiconductors, magnetic properties of solids, and superconductivity. Prerequisite may be waived with consent of department. Recommended preparation: PHYS 441.

PHYS 449. Methods of Mathematical Physics I. 3 Units.
Analysis of complex functions: singularities, residues, contour integration; evaluation and approximation of sums and integrals; exact and approximate solution of ordinary differential equations; transform calculus; Sturm-Liouville theory; calculus of variations. Additional work required for graduate students. Offered as PHYS 349 and PHYS 449.

PHYS 451. Empirical Foundations of the Standard Model. 3 Units.
The experimental basis for modeling the electroweak and strong interactions in terms of fundamental fermions, quarks and leptons, and gauge bosons, photons, the weak bosons, and gluons; particle accelerators and detection techniques; phenomenology of particle reactions, decays and hadronic structure; space, time and internal symmetries; symmetries; symmetry breaking.

PHYS 460. Advanced Topics in NMR Imaging. 3 Units.
Frontier issues in understanding the practical aspects of NMR imaging. Theoretical descriptions are accompanied by specific examples of pulse sequences, and basic engineering considerations in MRI system design. Emphasis is placed on implications and trade-offs in MRI pulse sequence design from real-world versus theoretical perspectives. Recommended preparation: EBME 431 or PHYS 431. Offered as EBME 460 and PHYS 460. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

PHYS 465. General Relativity. 3 Units.
This is an introductory course in general relativity. The techniques of tensor analysis will be developed and used to describe the effects of gravity and Einstein's theory. Consequences of the theory as well as its experimental tests will be discussed. An introduction to cosmology will be given. Additional work required for graduate students. Offered as PHYS 365 and PHYS 465.
PHYS 472. Graduate Physics Laboratory. 3 Units.
A series of projects designed to introduce the student to modern research techniques such as automated data acquisition. Students will be assessed as to their individual needs and a sequence of projects will be established for each individual. Topics may include low temperature phenomena, nuclear gamma ray detection and measurement and optics.

PHYS 481. Quantum Mechanics I. 3 Units.
Quantum mechanics with examples of applications. Schrödinger method; matrix and operator methods. Approximation methods including WKB, variational and various perturbation methods. Applications to atomic, molecular and nuclear physics including both bound states and scattering problems. Applications of group theory to quantum mechanics.

PHYS 482. Quantum Mechanics II. 3 Units.
Continuation of PHYS 481, including quantum field theory. Prerequisite may be waived with consent of department. Recommended preparation: PHYS 481 or consent of department.

PHYS 491. Modern Physics for Innovation I. 3 Units.
The first half of a two-semester sequence providing an understanding of physics as a basis for successfully launching new high-tech ventures. The course will examine physical limitations to present technologies, and the use of physics to identify potential opportunities for new venture creation. The course will provide experience in using physics for both identification of incremental improvements, and as the basis for alternative technologies. Case studies will be used to illustrate recent commercially successful (and unsuccessful) physics-based venture creation, and will illustrate characteristics for success.

PHYS 492. Modern Physics for Innovation II. 3 Units.
Continuation of PHYS 491, with an emphasis on current and prospective opportunities for Physics Entrepreneurship. Longer term opportunities for Physics Entrepreneurship in emerging areas including, but not limited to, nanoscale physics and nanotechnology; biophysics and applications to biotechnology; physics-based opportunities in the context of information technology. Recommended preparation: PHYS 491.

PHYS 493. Feasibility and Technology Analysis. 3 Units.
This course provides the tools scientists need to determine whether a technology is ready for commercialization. These tools include (but are not limited to): financial analysis, market analysis, industry analysis, technology analysis, intellectual property protection, the entrepreneurial process and culture, an introduction to entrepreneurial strategy and new venture financing. Deliverables will include a technology feasibility analysis on a possible application in the student's scientific area. Offered as BIOL 493, CHEM 493, and PHYS 493.

PHYS 494. Technology-Based Venture Creation. 3 Units.
This course provides the advanced tools needed to develop, articulate, and launch a venture plan for a technology identified as likely to be successful through a feasibility analysis. Additional topics include: entrepreneurial strategy, communication, sales, negotiation, entrepreneurial finance, and leadership in an entrepreneurial environment. Guest speakers will be featured in nearly every class session. Prereq: BIOL 493 or CHEM 493 or PHYS 493.

PHYS 539. Special Topics Seminar. 1 - 3 Unit.
Individual or small group instruction on topics of interest to the department. Topics include, but are not limited to, particle physics, astrophysics, optics, condensed matter physics, biophysics, imaging. Several such courses may run concurrently.

PHYS 566. Cosmology. 3 Units.
Introduction to our current understanding of the origin and evolution of the Universe and connection between our understanding of elementary particle physics and cosmology. Specific topics will include: General Parameters of Cosmology: Expansion, Lifetime, and Density of the Universe. The Early Universe, Constraints on Elementary Particles, Dark Matter and Dark Energy, Nucleosynthesis, Cosmic Microwave Background, Inflation, Stellar Evolution, Gravitational Waves, Baryogenesis. Some background in general relativity and particle physics phenomenology is recommended.

PHYS 581. Quantum Mechanics III. 3 Units.

PHYS 591. Gauge Field Theory I. 3 Units.
Noether's theorem, symmetries and conserved currents, functional integral techniques, quantization, Feynman rules, anomalies, QED, electroweak interactions, QCD, renormalization, renormalization group, asymptotic freedom and assorted other topics. Prereq: PHYS 581.

PHYS 592. Gauge Field Theory II. 3 Units.
(See PHYS 591.) Recommended preparation: PHYS 591.

PHYS 601. Research in Physics. 1 - 9 Unit.

PHYS 651. Thesis M.S.. 1 - 9 Unit.

PHYS 666. Frontiers in Physics. 0 Units.
Weekly colloquia given by eminent physicists from around the world on topics of current interest in physics.

PHYS 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Political Science

The study of political science is primarily concerned with how governments act and how they are controlled; and so how governments relate to each other, citizen-state relations, and the exercise of political power. Faculty specialties in the department include American politics and governmental institutions; elections and political parties in the United States and abroad; how political systems are created and revolutionized; public policy analysis, especially environmental, economic, budget and health policies; international relations with special focuses on international political economy and international organizations; religious and ethnic conflict; the politics of gender; political strategies; research methods; and comparative politics, with various regional concentrations. In its programs leading to the B.A., MA, and Ph.D., the department makes a strong effort to relate the study of politics to students' needs and concerns and to reflect in its courses both the excitement and seriousness of real-world politics.

The study of political science can build a foundation for many types of future employment. Many political science majors are preparing for graduate study or law school. Others intend to pursue careers in journalism, teaching, or public administration, or in private industry and business. Both the public and private sectors hold career possibilities for the political science major.
Undergraduate Programs

Major

The major in political science leads to the Bachelor of Arts degree. The major requires 30 hours of course work, distributed as follows:

Required Courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>POSC 109</td>
<td>The U.S. Political System</td>
<td>3</td>
</tr>
<tr>
<td>POSC 160</td>
<td>Introduction to Comparative Politics</td>
<td>3</td>
</tr>
<tr>
<td>POSC 172</td>
<td>Introduction to International Relations</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>Six POSC courses at the 300 level</td>
<td>18</td>
</tr>
<tr>
<td>POSC 396</td>
<td>Senior Project SAGES Capstone</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>Total Units</td>
<td>30</td>
</tr>
</tbody>
</table>

Students select courses based on their specific interests, with approval of the faculty advisor. No more than six hours of independent study (i.e., POSC 395 Special Projects and/or POSC 396 Senior Project SAGES Capstone) may count toward the major. Independent study completed through the Washington Center program is excluded from this limitation.

Departmental Honors

Majors who maintain a grade point average of at least 3.3 overall on completion of senior year and 3.7 in political science courses, and who earn a grade of A in POSC 396, will be eligible to be nominated to receive their degrees “with Honors in Political Science.”

Integrated Graduate Studies

The Integrated Graduate Studies (IGS) Program (http://bulletin.case.edu/undergraduates/gradprofessional/acceleratetowardgraduatedegreestext) in political science offers students the opportunity to earn an M.A. in addition to their B.A., within the usual period of undergraduate study or with a small amount of extra time. Students should notify the department of their interest no later than the beginning of the first semester of the junior year. Further application procedures are posted on the department’s website. Upon completion of 90 undergraduate hours, the student must have satisfied all general requirements for the BA, including at least 21 hours in the political science major and the General Education Requirements, and must have a 3.5 grade point average in political science courses and 3.3 overall. If admitted to the IGS program, the student will take 30 hours of graduate-level political science courses during the senior year, adhering to the departmental regulations governing the master’s degree program. If completed successfully, these hours will count simultaneously toward both degrees in political science.

The BA will be awarded upon completion of all requirements for that degree, including total hours. The MA will be awarded upon successful completion of the 30 hours of graduate-level courses and the MA examination or thesis.

Minor

Political Science

A minor in political science consists of 15 hours (five courses) in the department, of which 9 hours must be at the 300 level. An elected minor sequence must be approved by a political science faculty advisor.

Public Policy

A minor in public policy is available to undergraduates in the College of Arts and Sciences and to undergraduates in the economics and management programs in the Weatherhead School of Management. Please see the Public Policy Program’s (p. 452) section of the bulletin for details.

Graduate Programs

Master of Arts

Applicants to the Master of Arts program in political science are required to submit their undergraduate transcripts and three letters of recommendation from former instructors. The admission requirements also include a minimum score of 500 on the verbal and quantitative segments of the Graduate Record Examination (GRE) and 4.5 on the analytical section. The department strongly prefers that applicants have a minimum GPA of 3.2 overall and a minimum GPA of 3.4 in political science courses. For students from other countries, the requirements are a minimum score of 550 on the paper version of the Test of English as a Foreign Language (TOEFL), or at least 215 on the computer version of the TOEFL; the minimum GRE scores indicated above; and transcripts of all undergraduate study, indicating completion of a Bachelor of Arts or Bachelor of Science degree program.

In addition to coursework, students complete the Master of Arts program in political science either through a thesis, Graduate School Plan A, or a comprehensive examination, Graduate School Plan B, as described below.

The Master of Arts in political science is a broadly based program in which the student is expected to acquire and exhibit general knowledge and skills. Therefore, within the 30 hours of graduate-level course work (400 level and above) required for the master’s, 12 hours must be distributed as follows:

A class in the area of American government and politics 3
A class in the area of comparative politics 3
A class in the area of international relations 3
POSC 449 Political Science Research Methods 3

Total Units 12

Students who receive permission (due to special circumstances) from the graduate coordinator may take an alternative research methods course outside the department.

Among the remaining 18 hours of electives, the student will select courses to fit a plan to complete a thesis (in Plan A below) or complete an examination in two fields (Plan B below), as approved by the graduate studies director. A maximum of 9 hours may be taken outside the Department of Political Science, with prior approval from the graduate studies director, for specialized work related to the master’s degree for which no political science course is appropriate. A maximum of nine hours of independent study (POSC 601 Individual Investigation) may count toward the degree.

A minimum grade point average of 3.0 must be maintained throughout the Master of Arts program. A master’s student who fails to maintain a GPA of 3.0 will be placed on academic probation for one semester. If the GPA is not returned to the 3.0 minimum by the end of the probationary semester, the student will be separated from further study in the department.

Plan A: MA Thesis

An MA Thesis should be a major research paper equivalent to at least six hours of registration. Students shall register for POSC 651 Thesis
M.A., which will count towards the 30 hours of coursework required for completion of the MA. An MA Thesis will be read by a committee of three members of the faculty, and defended in an oral examination with the faculty committee. The committee shall vote on approval of the thesis after the oral defense. A majority vote will suffice to approve the thesis.

Students must define their thesis topic no later than the last week of the semester before the semester in which they expect to defend the thesis. The thesis supervisor will be selected by mutual agreement between the student and the faculty member who agrees to supervise. The topic must be defined before the student registers for POSC 651 Thesis M.A., and a permit for the course must be issued by the faculty supervisor. The student must prepare a prospectus describing the research question and research plans before the permit can be issued. The prospectus must be approved by both the faculty supervisor and the department’s graduate studies director. The director shall appoint the two other members of the examination committee. The graduate studies director will also schedule the oral defense, with assistance from the department staff.

Plan B: MA Examination

For the MA Examination, students should be able to explain, critique, integrate and apply the arguments of leading works in two out of the three fields of American Politics and Government, Comparative Politics, and International Relations. The examination is a written test of five hours’ duration, with 150 minutes for each of the chosen subfields. A student who chooses Plan B must request scheduling of the examination upon completion of no fewer than 30 hours and no more than 42 hours of master’s-level course work.

The examination is administered in a controlled, closed-book setting. The department maintains, on its website, MA reading lists of major scholarly works within the three fields listed above, and test questions will be based upon an expectation that the student has thoroughly studied — whether in or outside of classes — the works designated on those lists. Faculty members within each subfield write the questions for that subfield, which are then assembled by the graduate studies director, who is responsible for scheduling the exam.

The student must notify his or her faculty advisor and the graduate studies director of intent to take the exam, and the two subfields chosen, at least six weeks before he or she wishes to take it. Each section of the examination will be graded by two members of the faculty. The two faculty members must agree that the student has performed acceptably on that section of the examination in order for the student to pass on that section. The student must pass both sections to pass the exam.

Grading for the exam is Honors, Pass, or Fail. If the exam is failed, a student will have one calendar year in which to retake the exam. We expect the student will need at least one semester to prepare for retaking the exam. During the interim, the political science faculty may require the student to take additional classes to help address the concerns raised by the failed exam segment or segments. If the student does not pass the exam on a second attempt then, regrettfully, she or he will be separated from the department. Please note that university regulations require that students be registered for coursework during any semester during which the MA Exam is taken. A student who does not enroll in other courses should enroll for one hour of EXAM 600, “Comprehensive Exam” (noncredit).

Doctor of Philosophy

Requirements for admission to the Doctor of Philosophy program in political science are the same as for admission to the Master of Arts program, with the following additions. The department strongly prefers that applicants without an MA in political science have a minimum GPA of 3.2 overall and a minimum GPA of 3.4 in undergraduate political science courses, and that applicants with an MA degree in political science have a minimum GPA of 3.4 overall in their MA work. Because the department faculty is small, applicants should determine, prior to applying, whether one or more members of the department faculty are active in the applicant’s field of interest. PhD applications must specify the applicant’s field(s) of interest, as the Graduate Studies Committee will not recommend the admission of an applicant where the department faculty cannot support the applicant’s proposed course of study. Students who are accepted into the department’s MA program and then decide they would like to earn the PhD are expected to apply to the PhD program and meet the admission requirements. All PhD students must complete 45 hours of graduate-level courses, plus at least 18 hours of POSC 701 Dissertation Ph.D. credit. The required 45 hours of doctoral courses taken before dissertation credits must be distributed as follows:

12 hours in a primary subfield (American, comparative, or international relations)
9 hours in secondary subfield (one of the remaining two fields)
6 hours in the remaining subfield
6 hours in Research Methods:
POSC 449 Political Science Research Methods
12 hours of electives

Total Units 45

A maximum of 9 hours of independent study (POSC 601 Individual Investigation) may be undertaken. University regulations require PhD students to spend at least one academic year in full-time residence (two consecutive regular semesters with a minimum of 9 hours’ registration each semester).

Doctoral students whose MA in political science has been certified, and doctoral students with an MA in political science from Case Western Reserve, need complete only 18 of the 45 hours of doctoral coursework. The graduate studies director will set distribution requirements on an individual basis, reflecting the coursework completed for the MA. Doctoral students without a completed MA must pass the MA examination. They must take the examination upon completion of no fewer than 30 hours and no more than 36 hours of coursework. A student who does not pass this examination may not continue in the PhD program. See the description of the MA examination above for further information.

Upon completion of 45 hours of coursework, the student must pass the PhD comprehensive examinations in his or her primary and secondary subfields. After passing the examinations, a student must complete a dissertation, typically 150-400 pages in length, that draws on the student’s original research to make a contribution to the field of political science.

Dual JD/MA

Students accepted to the School of Law may pursue a Master of Arts in Political Science in conjunction with their JD degree. Completion of the program requires 97 hours of coursework, and so would be expected to require seven semesters. Students wishing to enroll in the dual-degree program must be separately admitted to each program, but the department will waive the GRE requirement and accept the LSAT within the admissions process. Students must complete a total of 21 hours of credit within the political science department, including at least three credit hours in American politics, comparative politics,
international relations, and research methods. Dual-degree students will normally begin study in the law school and defer enrollment in the MA program until their second year. They must pass the MA comprehensive examination upon completion of their political science coursework.

**Department Faculty**

Joseph White, PhD  
(University of California, Berkeley)  
*Luxenberg Family Professor of Public Policy and Chair; Director, Center for Policy Studies and Public Policy Program; Professor of Epidemiology and Biostatistics, School of Medicine*  
American government; Congress; public policy; health and welfare policy; comparative politics of rich democracies

Karen Beckwith, PhD  
(Syracuse University)  
*Flora Stone Mather Professor*  
Politics of gender; mass political participation; comparative political movements; democracy and representation

Justin Buchler, PhD  
(University of California, Berkeley)  
*Associate Professor*  
Congress; redistricting; political strategy; parties and elections

Jessica F. Green, PhD  
(Princeton University)  
*Assistant Professor*  
Global governance; international environmental law and policy; international law; international organizations; transnational regulation; qualitative methods

Kathryn C. Lavelle, PhD  
(Northwestern University)  
*Ellen and Dixon Long Professor in World Affairs*  
International relations; international organizations; Congress in world politics; politics of stock markets; governing institutions of national and international finance; U.S. foreign economic policy; Congress and banking policy

Kelly M. McMann, PhD  
(University of Michigan)  
*Associate Professor; Director, International Studies Program*  
Comparative politics; Central Asia; Russia and former East Bloc; democratization

Peter W. Moore, PhD  
(McGill University)  
*M. A. Hanna Professor of Political Science; Associate Professor*  
Comparative politics and political economy of the Middle East and Africa

Elliot Posner, PhD  
(University of California, Berkeley)  
*Associate Professor*  
International relations; international and comparative political economy; politics of finance; international organizations; European Union

Laura Y. Tartakoff, JD, MA  
(Case Western Reserve University School of Law; Tufts University)  
*Instructor*  
Constitutional law; civil liberties; comparative constitutionalism

**Secondary Faculty**

Jonathan L. Entin, JD  
(Northwestern University)  
*Professor, School of Law*  
American constitutional law; social science and the law

**Adjunct Faculty**

Lev Gomnick, PhD  
(York University, Toronto)  
*Adjunct Professor*  
Comparative historical international political economy; technology and government

Karl Kaltenhauser, PhD  
(Washington University)  
*Adjunct Professor*  
Comparative politics, political behavior/public opinion, political extremism and violence, political economy, Europe

Andrew M. Lucker, PhD  
(Case Western Reserve University)  
*Adjunct Assistant Professor*  
American government; state politics and government; history of political science

**Courses**

**POSC 109. The U.S. Political System. 3 Units.**  
This course provides an overview of governmental institutions and processes in the United States, the political forces that combine to shape them, and how we might best understand the system that government and politics create.

**POSC 160. Introduction to Comparative Politics. 3 Units.**  
Comparative politics is the study of processes and institutions within countries. Prompted by real-world puzzles, comparativists investigate broad, theoretical questions such as: What constitutes a revolution, and why do revolutions occur? How does one country become more democratic than another? Why do relations between some ethnic groups turn violent? This course introduces students to some of the central puzzles and theories of comparative politics in order to help them better understand world events. Counts for CAS Global & Cultural Diversity Requirement.

**POSC 172. Introduction to International Relations. 3 Units.**  
Why do countries fight wars? Can nuclear proliferation be curtailed? Does trade help developing countries or harm them? This survey of the field of International Relations examines "big questions" in world politics. It introduces themes including the rise, development and changes of the nation-state system; patterns and causes of international conflict and cooperation; international law, organizations, and transnational institutions; the roles of both state and non-state actors in international politics; and the methods used to understand this field.

**POSC 301. Decision-Making in American Cities. 3 Units.**  
Localities are the primary interface with government and provide the basic psychological place identification for most Americans. The course will explore this assertion in the context of urban America today. How are decisions made in cities? Who shapes these decisions and why? What role is played by shifting demographics, race, and poverty? What can the individual do to influence local decision-making? Offered as POSC 301 and POSC 401.
POSC 302. State Politics and Policy. 3 Units.
State governments may make more decisions that affect the life of an average citizen than does the federal government. The study of state politics and policy includes the different ways states organize the basic parts of American political systems (such as legislatures, executives, courts and parties); how state cultures, economies, and other factors shape how political institutions work; institutions of state governance that do not exist at the national level (such as the initiative and referendum); and the continual contest between state and federal governments to control policy, shift costs, and avoid blame. Offered as POSC 302 and POSC 402.

POSC 306. Interest Groups in the Policy Process. 3 Units.
Introduction to the institutions and processes that make up the political environment of nonprofit and other organizations in the United States, beginning with an examination of the role of civil society in a democracy and continuing with the framing of issues, role of political entrepreneurs and organized interests, elections, the legislative process and strategies for influencing it, and the roles of executive institutions and the courts. Offered as POSC 306 and POSC 406.

POSC 308. The American Presidency. 3 Units.
The sources of, strategies of, and restraints on presidential leadership in the United States. Emphasis on problems of policy formation, presidential relations with Congress and executive agencies, and the electoral process. Offered as POSC 308 and POSC 408.

POSC 310. The Legislative Process. 3 Units.
Legislative, representative, and other functions of Congress and state legislatures; legislative relations with the executive and with private interests; powers and limitations of the legislature as a policy-making institution. Offered as POSC 310 and POSC 410.

POSC 319. Politics and Money. 3 Units.
One of the most famous definitions of politics comes from Harold Laswell, who described it as the struggle over “who gets what, when, how.” Money is at the center of most political conflict. It is a resource, a motivation, and an end unto itself. This course will examine the role of money in politics, with particular emphasis on American politics. We will discuss the role of money in elections, in the policy-making process, and what it means for representation. The course will begin with the question of the role that financial consideration play in public opinion and voting behavior. We will then address the role that money plays in election results, both in terms of its role in financing campaigns, and the relationship between the state of the economy and election results. Finally, we will discuss the policy-making process. In that context, we will address the role that interest groups play in the process, and how the quest for economic benefits for one's constituency motivates the behavior of elected officials. We will conclude by discussing how policy changes at the systematic level occur and the influence that various groups have on policy outcomes. Offered as POSC 319 and POSC 419.

POSC 320B. The U.S. Midterm Elections. 3 Units.
Analysis of the midterm elections in the United States. Covers congressional and state elections in all regions, focusing on the issues, personalities, campaign strategies, and voter trends in this key electoral battle held between presidential elections. Offered every four years in conjunction with the election cycle. Offered as POSC 320B and POSC 420B.

POSC 320C. The Presidential Election. 3 Units.
Analysis of the upcoming presidential election in the United States. Focuses on the issues and personalities, polls and public opinion, campaign strategies, and electoral behavior. Offered every four years in conjunction with the United States presidential election cycle. Offered as POSC 320C and POSC 420C.

POSC 321. News Media and Politics. 3 Units.
Analysis of the political role of the news media in American government and politics. Examines the fascinating relationship between reporters and politicians. Covers the overall structure and legal position of the media as well as the media’s impact on the American political system. Offered as POSC 321 and POSC 421.

POSC 322. Political Movements and Political Participation. 3 Units.
Political Movements and Political Participation is concerned with the variety of ways citizens engage in collective activism in the United States and across national boundaries, and with the conditions under which citizens identify common concerns and join together in political movements to bring about change. The course begins with an examination of three general bodies of theory and research on political movements: resource mobilization, political opportunity structures, and cultural framing. We will also investigate frameworks of political participation for understanding the relationships among different expressions of collective activism and representation. In the context of these sometimes competing theories, we will consider 1) the conditions under which political movements are likely to emerge, as well as the circumstances in which collective political action is precluded; 2) how citizens come to recognize collective grievances and shared political identities; 3) the strategies and tactics of organized movements, and their likelihood of political success; and 4) the relationship between political movements, political parties, and the state. Offered as POSC 322 and POSC 422.

POSC 323. Judicial Politics. 3 Units.
Rejecting the view that judges mechanically apply the law, the study of judicial politics seeks to understand the behavior of judges as political actors with policy goals. Topics include judicial selection and socialization, judicial policy change, judicial strategy (especially the strategic interaction of judges on multi-judge panels), the interaction of courts in hierarchical judicial systems, the policy impact of judicial decisions, and the courts’ interactions with coordinate branches of government (the executive, Congress, state governments, state courts). Primary focus will be on the federal judiciary, with some discussion of state judicial systems. Offered as POSC 323 and POSC 423.

POSC 325. American Constitutional Law. 3 Units.
An introductory survey of U.S. constitutional law. Special attention given to the historical, philosophical, and political dimensions of landmark Supreme Court cases. Judicial review, federalism, separation of powers, due process, and equal protection. Supreme Court's involvement in major political controversies: the New Deal, abortion, physician-assisted suicide, school desegregation, and affirmative action. Offered as POSC 325 and POSC 425.

POSC 326. Constitutions in Practical Politics. 3 Units.
Overview of ancient Greek and Roman constitution-making, medieval principles, emergence of modern constitutionalism, and the constitutionalist vision of the American and French Revolutions. Examination of contemporary constitutional issues and developments in countries such as Canada, France, Germany, Great Britain, Ethiopia, India, and the United States. Offered as POSC 326 and POSC 426. Counts for CAS Global & Cultural Diversity Requirement.
POSC 327. Civil Liberties in America. 3 Units.
Supreme Court's interpretation of the First Amendment: liberty of religion through the establishment and free exercise clauses, freedoms of speech and the press, of assembly and association. The "pure tolerance" view examined against subversive speech, "fighting words," libel, and obscenity. Survey of content-neutral regulation, symbolic expression, and current efforts to limit expression (campus speech codes and the feminist anti-pornography movement). Offered as POSC 327 and POSC 427.

POSC 328. Topics in Civil Liberties. 3 Units.
Rights of the accused as outlined in the Fourth, Fifth, Sixth, and Eighth Amendments. Topics covered are (1) arrests, searches, and seizures, (2) the privilege against compelled self-incrimination, (3) the rights to counsel, confrontation, and jury trial, and (4) the prohibition against cruel and unusual punishments. Case-specific approach but presents interplay of history, philosophy, and politics as background of each topic. Offered as POSC 328 and POSC 428.

POSC 334. Violence and the Political System. 3 Units.
Empirical analysis of various theories advanced in the cross-cultural explanation of factors which cause and mediate the occurrence of violence--revolutions, terrorism, and civil disorder--within the political system. Offered as POSC 334 and POSC 434.

POSC 341. Elections, Voters, and Political Parties. 3 Units.
Examination of American political parties, their activities, organization, characteristics, and functions. Candidate strategies and electoral history viewed within the context of voter orientations and predispositions, stressing linkages between citizen and party and between party and government. Offered as POSC 341 and POSC 441.

POSC 342. Water. 3 Units.
This seminar will explore the history of the meaning of water—that is, the social, cultural, and/or political significance placed on water by individuals and governments in different times and places. It will also examine how humans have acted upon water, and how it has acted upon humans, with great consequences for human life. This seminar will look at the history of water in the context of science, technology and society; public health; political science; and environmental history. Case studies will be drawn from a wide chronological and geographical range; from the ancient world to Renaissance Italy, nineteenth century India, modern Britain, Egypt, and the U.S. The course provides a wide perspective on the themes of the history of human-water interactions, but will also focus closely on some critical cases. Seminar participants will write a research paper on the topic of their choice in the environmental history of water. Offered as: HSTY 342, HSTY 442, POSC 342, POSC 442. Counts for CAS Global & Cultural Diversity Requirement.

POSC 343. Public Opinion and American Democracy. 3 Units.
Examination of theories, concepts and empirical research related to attitudes and the political behavior of mass publics. Offered as POSC 343 and POSC 443.

POSC 346. Women and Politics. 3 Units.
Women and Politics involves a critical examination of the impact of gender on the forms and distributions of power and politics, with primary reference to the experience of women in the United States. Major concerns of the course include what we mean by "sex," "gender," and "politics"; the relationship between women and the state; how women organize collectively to influence state policies; and how the state facilitates and constrains women's access to and exercise of political power. The course is organized around four foci central to the study of women and politics. The first section of the course focuses on what we mean by "women," "gender," and "politics." In this section, we will consider how these concepts intersect and the ways in which each may be used to deepen our understanding of the workings of governments and political systems, and of women's relative political powerlessness. The second section of the course employs these concepts to understand the (re) emergence of the US feminist movement, its meanings, practices, and goals, and its transformation across US political history. In the third section, we turn to conventional electoral politics, focusing on women's candidacies, their campaigns, and women's voting behavior. In the final section of the course, we consider those general factors that might provide for increased gender equality and improved life status for women, in global, comparative perspective. Offered as POSC 346 and POSC 446 and WGST 346. Counts as SAGES Departmental Seminar.

POSC 348. History of Modern Political and Social Thought. 3 Units.
This course explores the responses of philosophers, economic theorists, culture critics, and public policy makers to changes in western society wrought by industrialization by focusing on their concerns with technological change. Offered as HSTY 348, HSTY 448 and POSC 348.

POSC 349. Political Science Research Methods. 3 Units.
This course examines approaches that political scientists use to understand events and processes. In doing so, the course provides students with skills helpful to completing senior projects, such as the ability to evaluate and conduct research. Through exercises and projects, students will take part in the research process from constructing a question to developing a research design to interpreting results. Students will learn and apply key techniques, including inductive and deductive reasoning, hypothesis construction, operationalization of concepts, measurements, sampling and probability, causal inference, and the logic of controls. They will produce materials common to the discipline, such as research designs. Offered as POSC 349 and POSC 449. Counts as SAGES Departmental Seminar.

POSC 351. Modern Political Thought. 3 Units.
Examination of a limited topic in the study of modern political thought. Topics vary. Offered as POSC 351 and POSC 451.

POSC 352. American Political Thought. 3 Units.
Examination of the unique contribution to the science of government made by American political thinkers. Offered as POSC 352 and POSC 452.

POSC 354. Political and Social Philosophy. 3 Units.
Justification of social institutions, primarily political ones. Such distinctions as that between de facto and legitimate authority; analysis of criteria for evaluation, such as social justice and equality; inquiry into theories of justification of the state; theory of democratic government and its alternatives. Readings from classical and contemporary sources. Recommended preparation: PHIL 101. Offered as PHIL 334, POSC 354, PHIL 434, and POSC 454.
POSC 355. Modern Political Ideologies. 3 Units.
Substance and nature of ideological thinking in the contemporary world via a survey of political "isms"—for example, liberalism, libertarianism, conservatism, fascism, socialism, and even more recent trends such as feminism, environmentalism, etc. Offered as POSC 355 and POSC 455.

POSC 357. Democratic Politics: Theory and Practice. 3 Units.
Study of the theory and application of democracy. The concept of democracy will be examined from the Athenian model to contemporary debates over participatory and deliberative models. Then the concept will be applied to understanding issues of democratic practice and the study of politics in American, comparative, and international arenas. Finally, the course will address the potential effects, both good and ill, of technological innovation on democratic practices, such as "distance" participation, the Internet, and other communication technology. Offered as POSC 357 and POSC 457.

POSC 358. Political Strategy. 3 Units.
This course examines practical applications of prominent political science theories. It is partly a how-to course covering a broad range of political activities, but the primary objective is to link practical issues with theories to help you understand why events happen the way they do. The course focuses on American politics, but the materials will be applicable to a wide range of situations. The course is a seminar requiring regular student presentations that will generate discussion about the readings and current events. Papers consist of analysis of current events, and require students to analyze the strategies used by prominent figures in the context of the theories we discuss in class. Offered as POSC 358 and POSC 458. Counts as SAGES Departmental Seminar.

POSC 361. State-Building and State Collapse. 3 Units.
Are nation-states the most effective means of organizing society? This course explores this question by examining the historical rationales behind the development of the nation-state, contemporary challenges to the nation-state, and potential alternatives to the nation-state. Possible challenges to the nation-state include multinational corporations, international humanitarian intervention, and regional integration. Alternative providers of state services include charities, companies, and mercenaries. Offered as POSC 361 and POSC 461. Counts as CAS Global & Cultural Diversity Requirement.

POSC 362. Politics of Central Asia. 3 Units.
Once an unfamiliar region to many people of the world, Central Asia took center stage in the fall of 2001 as a result of the U.S. campaign against terrorism. This course will introduce students to the politics of Central Asia, focusing on the region today composed of Uzbekistan, Turkmenistan, Tajikistan, Kyrgyzstan, and Kazakhstan. We will review the nationalism, foreign relations, religion, ethnicity, and economics of the region. Offered as ETHS 362, POSC 362, and POSC 462. Counts for CAS Global & Cultural Diversity Requirement.

POSC 363. Comparative Analysis of Elections and Electoral Systems. 3 Units.
Elections involve more than a simple act of voting to express individual preferences. The rules under which worldwide elections are held determine who controls the executive and how votes are converted into legislative seats. The mechanics of various electoral arrangements will be examined in detail and the consequences for the political system discussed in terms of strategies and desired outcomes on the part of contestants. Students will research individual countries and analyze recent elections from both qualitative and quantitative perspectives, including introduction to geospatial data for mapping variations in electoral behavior. Offered as POSC 363 and POSC 463. Counts as SAGES Departmental Seminar.

POSC 364. Dictatorship and Democracy in Modern Latin America. 3 Units.
Examination of political leadership in 20th-century Latin America, exploring the nature, causes, and consequences of dictatorship and democracy in the region, moving from the collapse of oligarchic rule and the emergence of populism in the 1930s and 1940s, to the end of democracy and establishment of military regimes in the 1960s and 1970s, and ultimately to the contemporary processes of democratization and economic liberalization. Offered as ETHS 364, POSC 364, and POSC 464. Counts for CAS Global & Cultural Diversity Requirement.

POSC 365. Science, Technology, and Government. 3 Units.
Traces the development and influence of federal technology and science policies from colonial times to the present, with emphasis on the 20th century. Offered as HSTY 366 and POSC 365.

POSC 366. Government and Politics of Africa. 3 Units.
Comparative analysis of the political forces and organizations currently functioning in Africa, as well as a survey of the formal government institutions. Special emphasis on single-party rule, military rule, and the political ramifications of African socialism, tribalism and the problems of national integration. Offered as ETHS 366, POSC 366, and POSC 466. Counts for CAS Global & Cultural Diversity Requirement.

POSC 367. Western European Political Systems. 3 Units.
Comparative analysis of sociopolitical systems of selected Western European industrial democracies, using North American systems as a point of comparison. Offered as POSC 367 and POSC 467.

POSC 369. Current Controversies in Latin American Politics and Society. 3 Units.
In addition to questions about race, religion, abortion, the drug industry, immigration, democracy, private property, and free trade, the course will tackle Latin America's apparent shift to the political and ideological left, Chavez's "Imperialism," and Cuba's humanitarian aid. Offered as ETHS 369, POSC 369 and POSC 469. Counts for CAS Global & Cultural Diversity Requirement.

POSC 370A. Political Economy. 3 Units.
Focus on debates concerning the proper relationship between political and economic systems, including conservative, liberal, and radical perspectives. The politics of international economics and the economics of international politics receive separate attention. The course concludes with study of "modern" political economy and the application of economic theory to the study of political systems. Offered as POSC 370A and POSC 470A.

POSC 370C. The United States and Asia. 3 Units.
Survey and analysis of U.S.-Asia relations in the post-World War II period. Focus specifically is on the interaction of politics and economics in the United States' relations with Japan, China, and Southeast Asian countries. Topics will include the role of Asia in U.S. Cold War policies, the dynamics of U.S.-Japan alliance politics, post-Cold War issues involving U.S. foreign policy toward Asia, a history and analysis of economic conflict cooperation, and an examination of the move toward Asia-Pacific "regionalism." Offered as POSC 370C and POSC 470C. Counts for CAS Global & Cultural Diversity Requirement.
POSC 370D. The Politics of China. 3 Units.
Now more than ever, the Chinese state and society are facing tremendous economic, social, and political challenges. This course presents an overview of current issues facing the People's Republic, including a changing (or not) political culture, policy processes and outcomes at the national and local levels, reform and economic growth, the resultant societal changes and pressures, and the consequent challenges the Communist Party faces as demand for political reform grows. The class involves a mixture of lectures and discussion and draws on a combination of primary and secondary sources, including current news reports and films. Offered as POSC 370D and POSC 470D. Counts for CAS Global & Cultural Diversity Requirement.

POSC 370F. Financial Politics in the United States and the World. 3 Units.
This course explores how political institutions make policy in the financial area with particular emphasis on the United States. Using a bureaucratic politics framework, it examines money, banks and the securities industry by integrating a wide range of literature in economics and political science. Specific objectives include familiarizing students with different approaches to the political economy of finance from different disciplines, exploring the historical evolution of finance, examining the changing relationship between public and private authority within the financial system, considering how politics operates in a crisis, and evaluating the role of international financial institutions in the global economy. By taking this course, students will equip themselves for further research into politics and economics, as well as offer them tools to analyze future policy developments as they unfold. Offered as POSC 370F and POSC 470F.

POSC 370G. U.S. Intelligence and National Security. 3 Units.
Examination of the impact of the intelligence process on foreign policy making and superpower relations. Covers the life cycle of United States strategic intelligence from the collection of data to formulation of analytic judgments and the policy-level uses of intelligence. Emphasis on contemporary intelligence issues and processes, but includes the formative period of modern American intelligence in the World War II era. Offered as POSC 370G and POSC 470G.

POSC 370H. China's Foreign Policy. 3 Units.
The rise of China is evident in the country's more forward and robust foreign policy that began in 1979. At every turn, nations throughout the world must now consider China wherever their interests are at stake, be it Korea and Northeast Asia, Indochina and Southeast Asia, India/Pakistan and South Asia, or Afghanistan and Iran in the Middle East, not to mention the many African states that welcome Chinese investment but chafe at China's presence. Further, China is increasingly aggressive in international trade, a major determinant of its foreign policy. This course describes the key factors that make up Chinese foreign policy, including its cultural tradition, policy-making institutions, the role of the military, and domestic determinants of foreign policy. The course also examines China's ever-changing foreign policy strategies, from an aggressive posture to charming its neighbors only to become more strident once again. The course will also examine China's role involving possible mercantilism, currency manipulation, and the hunt for traditional and alternative energy sources. Throughout the course, we will pay attention to how China's foreign policy relates to international relations theories and what strategies might be used to manage China's growing role in international affairs. Offered as POSC 370H and POSC 470H. Counts for CAS Global & Cultural Diversity Requirement.

POSC 370J. International Law and Organizations. 3 Units.
Study of international organizations and international law as two means for regulating and coordinating nation-state behavior. History of the two techniques will be traced, covering 19th century efforts at cooperation, the League of Nations and the United Nations, regional and specialized global organization. The functions of international law in global politics will be stressed, with primary focus on the evolving role of law in dealing with global problems, e.g., war, the environment, economic cooperation, and human rights. Offered as POSC 370J and POSC 470J.

POSC 370K. Nationalism, Ethnicity, and Religion in World Politics. 3 Units.
Examination of the post-Cold War surge in conflicts among nationalisms, ethnic groups, and religions with particular attention to the former Yugoslavia, Ireland, India, Africa, and the Middle East. Offered as ETHS 370K, POSC 370K, and POSC 470K. Counts for CAS Global & Cultural Diversity Requirement.

POSC 370M. Theories of Political Economy. 3 Units.
This course is a SAGES departmental seminar in political economy that brings a wide range of theoretical perspectives to bear on the relations between market and state in the contemporary world. It focuses on three questions: What have been the major debates concerning the role of the government in the economy? How were these debates resolved in the compromise of embedded liberalism, and What experiences have individual states had with these questions of political economy? To answer these questions, we will read original literature to uncover the connections among politics, economics, and the world of ideas that has resulted in the political debates we confront today. Offered as POSC 370M and POSC 470M. Counts as SAGES Departmental Seminar.

POSC 371. Natural Resources and World Politics. 3 Units.
Examination of the political causes and ramifications of the uneven distribution of the valuable natural resources for modern industrial societies. Strategic and military issues and the exploitation of the seabed. Examination in some detail of selected commodity issues, including petroleum, copper and uranium. Offered as POSC 371 and POSC 471.

POSC 373. Politics of the European Union. 3 Units.
Study of the origins, operations, and prospects for the European Union. This can include the historical context for the effort to restrict national rivalries (which fueled two world wars) and create common interests; the diplomatic challenges in finding common ground; the tasks and processes of governance within the EU, including its governing institutions, enforcement of terms for European Monetary Union and the operations of its bureaucracies; the social pressures that create policy challenges (such as agriculture policy and immigration); broad tensions within the enterprise (e.g., "broadening" vs. "deepening"), and the EU's potential place in international politics, especially the efforts to create a common foreign and security policy and the possible implications of the Euro for international political economy. Offered as POSC 373 and POSC 473.

POSC 374. Politics of Development in the Global South. 3 Units.
Exploration of the post-World War II emergence of the Global South nations of Africa, Asia, the Middle East, Latin America, and the Eastern Europe arena. Offered as ETHS 374, POSC 374, and POSC 474. Counts for CAS Global & Cultural Diversity Requirement.
POSC 375. The International Politics of Technology. 3 Units.
Technology is deeply political. Nowhere is this statement more evident than in the realm of international relations, where governments perceive technology as a source of power and wealth and a symbol of relative position and modernity. Yet for centuries skeptics have questioned the economic rationale of government technology policies. Still, to this day, countries support emulation, innovation and a host of other strategies as means for catching up with leading nations or locking in current advantages. What lies behind such policies? What do they accomplish? And what are the domestic and international politics surrounding them? After reading classic arguments, including texts by Adam Smith, Alexander Hamilton and Friedrich List, students will consider 20th and 21st century debates and an array of experiments tried by poor, middle-income and rich countries. Cases include the development of new industries; the imposition of sanctions; the dilemma of dual technologies and military spillovers; the forging of national champions; the reorganization of banks and the creation of international financial centers; the copying of regional clusters (e.g. Silicon Valley) and stock markets (e.g. the Nasdaq); and the extraterritorial extension of domestic regulation and governance techniques. There are no prerequisites and first year students are welcome. Offered as POSC 375 and POSC 475.

POSC 376. United States Foreign Policy. 3 Units.
Focus on U.S. foreign policy making with a dynamic network of executive and congressional actors and organizations; analysis of traditional and contemporary U.S. foreign policies from nuclear defense to current economic resource issues; future role of the United States in world affairs. Offered as POSC 376 and POSC 476.

POSC 377. Politics of Russia. 3 Units.
Russia faces three problems: the creation of a sovereign state, the development of a new political system, and the restructuring of its economy. In this course we will challenge the assumption that the outcome of these three transitions will be a strong, democratic, capitalist country. We will ask whether civil war, organized crime, an immature party system, poor social services, and nomenklatura privatization bode poorly for these three transformations. Offered as POSC 377 and POSC 477. Counts for CAS Global & Cultural Diversity Requirement.

POSC 378. International Relations Theory. 3 Units.
This course is a seminar in international relations theory. As such, we will bring a wide range of theoretical perspectives to bear on issues and debates in the area of international relations by systematically studying the evolution of the world system. The seminar is roughly divided into a first half focusing on war and the political system, and a second half focusing on trade, finance and the economic system. Each section devotes particular attention to ethical problems associated with political and economic issues. This course should develop students’ ability to read and critically evaluate academic literature in the field of international relations, and enable students to produce a scholarly paper on one substantive area of the field. Offered as POSC 378 and POSC 478. Counts as SAGES Departmental Seminar.

POSC 379. Introduction to Middle East Politics. 3 Units.
This is an introductory course about Middle East Politics, in regional as well as international aspects. In this course we will explore broad social, economic, and political themes that have defined the region since the end of World War Two. Since this is an introductory course, a major goal will be to gain comparative knowledge about the region’s states and peoples. The countries that comprise the modern Middle East are quite diverse; therefore, we will only be able to focus on a few cases in depth. A second goal is to use the tools and theories social scientists employ to answer broad questions related to the region, such as: How have colonial legacies shaped political and economic development in the Middle East? How do oil, religion, and identity interact with politics? How have external powers affected the region’s political development? What do the uprisings of 2011 hold for the region’s future? Offered as POSC 379 and POSC 479. Counts for CAS Global & Cultural Diversity Requirement.

POSC 380. State and War in Africa and the Middle East. 3 Units.
The Middle East, North Africa, and Sub-Saharan Africa remain the most volatile and conflict prone regions of the world. Traditional approaches to war and state conflict have emphasized systemic variables, such as balance of power, military capabilities, perceptions, the security dilemma, and of course anarchy. While these concepts have generated much academic interest, their ability to explain and understand conflict in the developing world is severely limited. This is due to the basic fact that nearly all conflict in the world today is not between states but is taking place within state boundaries. What drives these conflicts? Are there common factors and patterns within the Middle East and Africa? How does sub-state conflict affect political and economic development? What are the most likely resolution strategies? Recommended preparation: POSC 379. Counts as SAGES Departmental Seminar.

POSC 381. City as Classroom. 3 Units.
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface—both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481. Counts for CAS Global & Cultural Diversity Requirement.

POSC 382A. Child Policy. 3 Units.
This course introduces students to issues in public policy that impact children and families. Local, state, and federal child policy will be considered, and topics will include, for example, policies related to child poverty, education, child welfare, juvenile justice, and children’s physical and mental health. Students will learn how policy is developed, how research informs policy and vice versa, and a framework for analyzing social policy. Recommended preparation: One social sciences course or consent. Offered as ANTH 305, CHST 301, and POSC 382A.

POSC 383. Health Policy and Politics in the United States. 3 Units.
Overview of the principal institutions, processes, social forces, and ideas shaping the U.S. health system. Historical, political, economic, and sociological perspectives on the health system are explored as well as the intellectual context of recent policy changes, challenges, and developments. Students will acquire a sense of how health services are financed and delivered in the U.S. They will also learn how to assess its performance compared to that of other similar countries. Offered as POSC 383 and POSC 483.
POSC 384. Ethics and Public Policy. 3 Units.
Evaluation of ethical arguments in contemporary public policymaking discourse. That is, approaches to evaluating not only the efficiency of policy (Will this policy achieve its end for the least cost?) but also the ethics of policy (Are a policy's intended ends ethically justified or "good," and are our means to achieve those ends moral or "just"?). Overview of political ideologies that supply U.S. political actors with their ethical or moral arguments when proposing and implementing public policy, followed by an application of these differing perspectives to selected policy areas such as welfare, euthanasia, school choice, drug laws, censorship, or others. Offered as POSC 384 and POSC 484.

POSC 385. U.S. Bureaucratic Politics. 3 Units.
Bureaucracy is one of civilization's most important inventions. It is a way of coordinating very large numbers of people so as to do work, make decisions, and exercise power. Without it, much of modern life would be impossible. Yet "bureaucracy" is normally seen, in public discussion, as a problem, instead of as a solution. This course will consider both the reasons for and pathologies of bureaucratic organization. Its special focus is bureaucracy in American government. The course therefore will provide some introduction to the study of American public administration, but with special emphasis on how the work and performance of public bureaucracies in the United States is shaped by the specific tasks they are given and the distribution of power in the American political arena. Offered as POSC 385 and POSC 485. Counts as SAGES Departmental Seminar.

POSC 386. Making Public Policy. 3 Units.
Politics is about who wins, who loses, and why. Policy, by contrast, is often depicted as more "neutral"; policies are the means through which political decisions are carried out. In this class, we examine the notion that policy is the rational, impartial counterpart to the political arena. We will ask: How are public policies made? Why do some issues make it on to the agenda, while others do not? Can we separate facts from values, or are both always contested? We will examine how decision-making in a group introduces distinct challenges for policymaking. The course focuses on widely applicable themes of policymaking, drawing on both domestic and international examples. Offered as POSC 386 and POSC 486.

POSC 388. Politics, Policy, and the Global Environment. 3 Units.
This course examines the law, politics and policy surrounding global environmental challenges such as climate change. The course aims to provide a broad overview of the key concepts, actors, debates, and issues in global environmental politics. It aims to illustrate the complexities of addressing environmental problems—from the proliferation of global institutions and international actors, to the absence of central enforcement mechanisms. We examine the causes of environmental degradation and competing views on the gravity of the problem. Using concepts from political science and economics, we investigate the challenges in getting states to act jointly to address environmental problems. We examine the actors and institutions of global environmental politics, to understand how conditions are defined as problems and responses are chosen and implemented. The course concludes by applying the tools and concepts to the case of climate change. Offered as POSC 388, ESTD 388, POSC 488.

POSC 389. Special Topics in American Politics and Policy. 3 Units.
Specific topic will vary but will consist of an in-depth investigation of a particular policy area or political phenomenon. Topics will involve policy controversies of some current interest. Offered as POSC 389 and POSC 489.

POSC 395. Special Projects. 1 - 6 Unit.
Study of a topic of particular interest, or an approved internship. The student must submit to the departmental office a project prospectus form, approved and signed by the faculty supervisor, no later than the end of the second week of classes. The prospectus must outline the goals of the project and the research methodology to be used and is part of the basis for grading. The prospectus form is available from the departmental office of from the department's Web page.

POSC 396. Senior Project SAGES Capstone. 3 Units.
Capstone experience for political science majors or senior POSC minors as part of the SAGES program, providing opportunity to do an in-depth paper on a topic of particular interest to them. Students must obtain approval from a faculty project advisor and list that advisor on the registration form. The advisor must sign and student submit to department a prospectus including goals, schedule, and research methodology. This paper should demonstrate, and ideally even extend, the skills and expertise developed over the course of study in the department. Upon completion of the capstone, students will be expected to present their work in a public forum. Recommended preparation: Junior or Senior political science major or senior political science minor and departmental prospectus form. Counts as SAGES Senior Capstone.

POSC 401. Decision-Making in American Cities. 3 Units.
Localities are the primary interface with government and provide the basic psychological place identification for most Americans. The course will explore this assertion in the context of urban America today. How are decisions made in cities? Who shapes these decisions and why? What role is played by shifting demographics, race, and poverty? What can the individual do to influence local decision-making? Offered as POSC 301 and POSC 401.

POSC 402. State Politics and Policy. 3 Units.
State governments may make more decisions that affect the life of an average citizen than does the federal government. The study of state politics and policy includes the different ways states organize the basic parts of American political systems (such as legislatures, executives, courts and parties); how state cultures, economies, and other factors shape how political institutions work; institutions of state governance that do not exist at the national level (such as the initiative and referendum); and the continual contest between state and federal governments to control policy, shift costs, and avoid blame. Offered as POSC 302 and POSC 402.

POSC 406. Interest Groups in the Policy Process. 3 Units.
Introduction to the institutions and processes that make up the political environment of nonprofit and other organizations in the United States, beginning with an examination of the role of civil society in a democracy and continuing with the framing of issues, role of political entrepreneurs and organized interests, elections, the legislative process and strategies for influencing it, and the roles of executive institutions and the courts. Offered as POSC 306 and POSC 406.

POSC 408. The American Presidency. 3 Units.
The sources of, strategies of, and restraints on presidential leadership in the United States. Emphasis on problems of policy formation, presidential relations with Congress and executive agencies, and the electoral process. Offered as POSC 308 and POSC 408.

POSC 410. The Legislative Process. 3 Units.
Legislative, representative, and other functions of Congress and state legislatures; legislative relations with the executive and with private interests; powers and limitations of the legislature as a policy-making institution. Offered as POSC 310 and POSC 410.
POSC 419. Politics and Money. 3 Units.
One of the most famous definitions of politics comes from Harold Laswell, who described it as the struggle over “who gets what, when, how.” Money is at the center of most political conflict. It is a resource, a motivation, and an end unto itself. This course will examine the role of money in politics, with particular emphasis on American politics. We will discuss the role of money in elections, in the policy-making process, and what it means for representation. The course will begin with the question of the role that financial consideration play in public opinion and voting behavior. We will then address the role that money plays in election results, both in terms of its role in financing campaigns, and the relationship between the state of the economy and election results. Finally, we will discuss the policy-making process. In that context, we will address the role that interest groups play in the process, and how the quest for economic benefits for one’s constituency motivates the behavior of elected officials. We will conclude by discussing how policy changes at the systematic level occur and the influence that various groups have on policy outcomes. Offered as POSC 319 and POSC 419.

POSC 420B. The U.S. Midterm Elections. 3 Units.
Analysis of the midterm elections in the United States. Covers congressional and state elections in all regions, focusing on the issues, personalities, campaign strategies, and voter trends in this key electoral battle held between presidential elections. Offered every four years in conjunction with the election cycle. Offered as POSC 320B and POSC 420B.

POSC 420C. The Presidential Election. 3 Units.
Analysis of the upcoming presidential election in the United States. Focuses on the issues and personalities, polls and public opinion, campaign strategies, and electoral behavior. Offered every four years in conjunction with the United States presidential election cycle. Offered as POSC 320C and POSC 420C.

POSC 421. News Media and Politics. 3 Units.
Analysis of the political role of the news media in American government and politics. Examines the fascinating relationship between reporters and politicians. Covers the overall structure and legal position of the media as well as the media’s impact on the American political system. Offered as POSC 321 and POSC 421.

POSC 422. Political Movements and Political Participation. 3 Units.
Political Movements and Political Participation is concerned with the variety of ways citizens engage in collective activism in the United States and across national boundaries, and with the conditions under which citizens identify common concerns and join together in political movements to bring about change. The course begins with an examination of three general bodies of theory and research on political movements: resource mobilization, political opportunity structures, and cultural framing. We will also investigate frameworks of political participation for understanding the relationships among different expressions of collective activism and representation. In the context of these sometimes competing theories, we will consider 1) the conditions under which political movements are likely to emerge, as well as the circumstances in which collective political action is precluded; 2) how citizens come to recognize collective grievances and shared political identities; 3) the strategies and tactics of organized movements, and their likelihood of political success; and 4) the relationship between political movements, political parties, and the state. Offered as POSC 322 and POSC 422.

POSC 423. Judicial Politics. 3 Units.
Rejecting the view that judges mechanically apply the law, the study of judicial politics seeks to understand the behavior of judges as political actors with policy goals. Topics include judicial selection and socialization, judicial policy change, judicial strategy (especially the strategic interaction of judges on multi-judge panels), the interaction of courts in hierarchical judicial systems, the policy impact of judicial decisions, and the courts’ interactions with coordinate branches of government (the executive, Congress, state governments, state courts). Primary focus will be on the federal judiciary, with some discussion of state judicial systems. Offered as POSC 323 and POSC 423.

POSC 425. American Constitutional Law. 3 Units.
An introductory survey of U.S. constitutional law. Special attention given to the historical, philosophical, and political dimensions of landmark Supreme Court cases. Judicial review, federalism, separation of powers, due process, and equal protection. Supreme Court’s involvement in major political controversies: the New Deal, abortion, physician-assisted suicide, school desegregation, and affirmative action. Offered as POSC 325 and POSC 425.

POSC 426. Constitutions in Practical Politics. 3 Units.
Overview of ancient Greek and Roman constitution-making, medieval principles, emergence of modern constitutionalism, and the constitutionalist vision of the American and French Revolutions. Examination of contemporary constitutional issues and developments in countries such as Canada, France, Germany, Great Britain, Ethiopia, India, and the United States. Offered as POSC 326 and POSC 426. Counts for CAS Global & Cultural Diversity Requirement.

POSC 427. Civil Liberties in America. 3 Units.
Supreme Court’s interpretation of the First Amendment: liberty of religion through the establishment and free exercise clauses, freedoms of speech and the press, of assembly and association. The “pure tolerance” view examined against subversive speech, “fighting words,” libel, and obscenity. Survey of content-neutral regulation, symbolic expression, and current efforts to limit expression (campus speech codes and the feminist anti-pornography movement). Offered as POSC 327 and POSC 427.

POSC 428. Topics in Civil Liberties. 3 Units.
Rights of the accused as outlined in the Fourth, Fifth, Sixth, and Eighth Amendments. Topics covered are (1) searches, seizures, (2) the privilege against compelled self-incrimination, (3) the rights to counsel, confrontation, and jury trial, and (4) the prohibition against cruel and unusual punishments. Case-specific approach but presents interplay of history, philosophy, and politics as background of each topic. Offered as POSC 328 and POSC 428.

POSC 429. Courts, Public Policy, and Social Change. 2 Units.
Examines the social impact of law and use of social research in the legal process, assesses efforts to use law to effect social reform, and empirical studies of legal processes and institutions. Recommended preparation: Graduate standing or consent of department. Offered as LAWS 285 and POSC 429.

POSC 434. Violence and the Political System. 3 Units.
Empirical analysis of various theories advanced in the cross-cultural explanation of factors which cause and mediate the occurrence of violence—revolutions, terrorism, and civil disorder—within the political system. Offered as POSC 334 and POSC 434.
POSC 441. Elections, Voters, and Political Parties. 3 Units.
Examination of American political parties, their activities, organization, characteristics, and functions. Candidate strategies and electoral history viewed within the context of voter orientations and predispositions, stressing linkages between citizen and party and between party and government. Offered as POSC 341 and POSC 441.

POSC 442. Water. 3 Units.
This seminar will explore the history of the meaning of water—that is, the social, cultural, and/or political significance placed on water by individuals and governments in different times and places. It will also examine how humans have acted upon water, and how it has acted upon humans, with great consequences for human life. This seminar will look at the history of water in the context of science, technology and society; public health; political science; and environmental history. Case studies will be drawn from a wide chronological and geographical range; from the ancient world to Renaissance Italy, nineteenth century India, modern Britain, Egypt, and the U.S. The course provides a wide perspective on the themes of the history of human-water interactions, but will also focus closely on some critical cases. Seminar participants will write a research paper on the topic of their choice in the environmental history of water. Offered as: HSTY 342, HSTY 442, POSC 342, POSC 442. Counts for CAS Global & Cultural Diversity Requirement.

POSC 443. Public Opinion and American Democracy. 3 Units.
Examination of theories, concepts and empirical research related to attitudes and the political behavior of mass publics. Offered as POSC 343 and POSC 443.

POSC 446. Women and Politics. 3 Units.
Women and Politics involves a critical examination of the impact of gender on the forms and distributions of power and politics, with primary reference to the experience of women in the United States. Major concerns of the course include what we mean by "sex," "gender," and "politics"; the relationship between women and the state; how women organize collectively to influence state policies; and how the state facilitates and constrains women's access to and exercise of political power. The course is organized around four foci central to the study of women and politics. The first section of the course focuses on what we mean by "women," "gender," and "politics." In this section, we will consider how these concepts intersect and the ways in which each may be used to deepen our understanding of the workings of governments and political systems, and of women's relative political powerlessness. The second section of the course employs these concepts to understand the (re) emergence of the US feminist movement, its meanings, practices, and goals, and its transformation across US political history. In the third section, we turn to conventional electoral politics, focusing on women's candidacies, their campaigns, and women's voting behavior. In the final section of the course, we consider those general factors that might provide for increased gender equality and improved life status for women, in global, comparative perspective. Offered as POSC 346 and POSC 446 and WGST 346. Counts as SAGES Departmental Seminar.

POSC 449. Political Science Research Methods. 3 Units.
This course examines approaches that political scientists use to understand events and processes. In doing so, the course provides students with skills helpful to completing senior projects, such as the ability to evaluate and conduct research. Through exercises and projects, students will take part in the research process from constructing a question to developing a research design to interpreting results. Students will learn and apply key techniques, including inductive and deductive reasoning, hypothesis construction, operationalization of concepts, measurements, sampling and probability, causal inference, and the logic of controls. They will produce materials common to the discipline, such as research designs. Offered as POSC 349 and POSC 449. Counts as SAGES Departmental Seminar.

POSC 451. Modern Political Thought. 3 Units.
Examination of a limited topic in the study of modern political thought. Topics vary. Offered as POSC 351 and POSC 451.

POSC 452. American Political Thought. 3 Units.
Examination of the unique contribution to the science of government made by American political thinkers. Offered as POSC 352 and POSC 452.

POSC 454. Political and Social Philosophy. 3 Units.
Justification of social institutions, primarily political ones. Such distinctions as that between de facto and legitimate authority; analysis of criteria for evaluation, such as social justice and equality; inquiry into theories of justification of the state; theory of democratic government and its alternatives. Readings from classical and contemporary sources. Recommended preparation: PHIL 101. Offered as PHIL 354, POSC 354, PHIL 454, and POSC 454.

POSC 455. Modern Political Ideologies. 3 Units.
Substance and nature of ideological thinking in the contemporary world via a survey of political "isms"—for example, liberalism, libertarianism, conservatism, fascism, socialism, and even more recent trends such as feminism, environmentalism, etc. Offered as POSC 355 and POSC 455.

POSC 457. Democratic Politics: Theory and Practice. 3 Units.
Study of the theory and application of democracy. The concept of democracy will be examined from the Athenian model to contemporary debates over participatory and deliberative models. Then the concept will be applied to understanding issues of democratic practice and the study of politics in American, comparative, and international arenas. Finally, the course will address the potential effects, both good and ill, of technological innovation on democratic practices, such as "distance" participation, the Internet, and other communication technology. Offered as POSC 357 and POSC 457.

POSC 458. Political Strategy. 3 Units.
This course examines practical applications of prominent political science theories. It is partly a how-to course covering a broad range of political activities, but the primary objective is to link practical issues with theories to help you understand why events happen the way they do. The course focuses on American politics, but the materials will be applicable to a wide range of situations. The course is a seminar requiring regular student presentations that will generate discussion about the readings and current events. Papers consist of analysis of current events, and require students to analyze the strategies used by prominent figures in the context of the theories we discuss in class. Offered as POSC 358 and POSC 458. Counts as SAGES Departmental Seminar.
POSC 461. State-Building and State Collapse. 3 Units.
Are nation-states the most effective means of organizing society? This course explores this question by examining the historical rationales behind the development of the nation-state, contemporary challenges to the nation-state, and potential alternatives to the nation-state. Possible challenges to the nation-state include multinational corporations, international humanitarian intervention, and regional integration. Alternative providers of state services include charities, companies, and mercenaries. Offered as POSC 361 and POSC 461. Counts for CAS Global & Cultural Diversity Requirement.

POSC 462. Politics of Central Asia. 3 Units.
Once an unfamiliar region to many people of the world, Central Asia took center stage in the fall of 2001 as a result of the U.S. campaign against terrorism. This course will introduce students to the politics of Central Asia, focusing on the region today composed of Uzbekistan, Turkmenistan, Tajikistan, Kyrgyzstan, and Kazakhstan. We will review the nationalism, foreign relations, religion, ethnicity, and economics of the region. Offered as ETHS 362, POSC 362, and POSC 462. Counts for CAS Global & Cultural Diversity Requirement.

POSC 463. Comparative Analysis of Elections and Electoral Systems. 3 Units.
Elections involve more than a simple act of voting to express individual preferences. The rules under which worldwide elections are held determine who controls the executive and how votes are converted into legislative seats. The mechanics of various electoral arrangements will be examined in detail and the consequences for the political system discussed in terms of strategies and desired outcomes on the part of contestants. Students will research individual countries and analyze recent elections from both qualitative and quantitative perspectives, including introduction to geospatial data for mapping variations in electoral behavior. Offered as POSC 363 and POSC 463. Counts as SAGES Departmental Seminar.

POSC 464. Dictatorship and Democracy in Modern Latin America. 3 Units.
Examination of political leadership in 20th-century Latin America, exploring the nature, causes, and consequences of dictatorship and democracy in the region, moving from the collapse of oligarchic rule and the emergence of populism in the 1930s and 1940s, to the end of democracy and establishment of military regimes in the 1960s and 1970s, and ultimately to the contemporary processes of democratization and economic liberalization. Offered as ETHS 364, POSC 364, and POSC 464. Counts for CAS Global & Cultural Diversity Requirement.

POSC 466. Government and Politics of Africa. 3 Units.
Comparative analysis of the political forces and organizations currently functioning in Africa, as well as a survey of the formal government institutions. Special emphasis on single-party rule, military rule, and the political ramifications of African socialism, tribalism and the problems of national integration. Offered as ETHS 366, POSC 366, and POSC 466. Counts for CAS Global & Cultural Diversity Requirement.

POSC 467. Western European Political Systems. 3 Units.
Comparative analysis of sociopolitical systems of selected Western European industrial democracies, using North American systems as a point of comparison. Offered as POSC 367 and POSC 467.

POSC 469. Current Controversies in Latin American Politics and Society. 3 Units.
In addition to questions about race, religion, abortion, the drug industry, immigration, democracy, private property, and free trade, the course will tackle Latin America's apparent shift to the political and ideological left, Chavez's "Imperialism," and Cuba's humanitarian aid. Offered as ETHS 369, POSC 369 and POSC 469. Counts for CAS Global & Cultural Diversity Requirement.

POSC 470A. Political Economy. 3 Units.
Focus on debates concerning the proper relationship between political and economic systems, including conservative, liberal, and radical perspectives. The politics of international economics and the economics of international politics receive separate attention. The course concludes with study of "modern" political economy and the application of economic theory to the study of political systems. Offered as POSC 370A and POSC 470A.

POSC 470C. The United States and Asia. 3 Units.
Survey and analysis of U.S.-Asia relations in the post-World War II period. Focus specifically is on the interaction of politics and economics in the United States' relations with Japan, China, and Southeast Asian countries. Topics will include the role of Asia in U.S. Cold War policies, the dynamics of U.S.-Japan alliance politics, post-Cold War issues involving U.S. foreign policy toward Asia, a history and analysis of economic conflict cooperation, and an examination of the move toward Asia-Pacific "regionalism." Offered as POSC 370C and POSC 470C. Counts for CAS Global & Cultural Diversity Requirement.

POSC 470D. The Politics of China. 3 Units.
Now more than ever, the Chinese state and society are facing tremendous economic, social, and political challenges. This course presents an overview of current issues facing the People's Republic, including a changing (or not) political culture, policy processes and outcomes at the national and local levels, reform and economic growth, the resultant societal changes and pressures, and the consequent challenges the Communist Party faces as demand for political reform grows. The class involves a mixture of lectures and discussion and draws on a combination of primary and secondary sources, including current news reports and films. Offered as POSC 370D and POSC 470D. Counts for CAS Global & Cultural Diversity Requirement.

POSC 470F. Financial Politics in the United States and the World. 3 Units.
This course explores how political institutions make policy in the financial area with particular emphasis on the United States. Using a bureaucratic politics framework, it examines money, banks and the securities industry by integrating a wide range of literature in economics and political science. Specific objectives include familiarizing students with different approaches to the political economy of finance from different disciplines, exploring the historical evolution of finance, examining the changing relationship between public and private authority within the financial system, considering how politics operates in a crisis, and evaluating the role of international financial institutions in the global economy. By taking this course, students will equip themselves for further research into politics and economics, as well as offer them tools to analyze future policy developments as they unfold. Offered as POSC 370F and POSC 470F.
POSC 470G. U.S. Intelligence and National Security. 3 Units.
Examination of the impact of the intelligence process on foreign policy making and superpower relations. Covers the life cycle of United States strategic intelligence from the collection of data to formulation of analytic judgments and the policy-level uses of intelligence. Emphasis on contemporary intelligence issues and processes, but includes the formative period of modern American intelligence in the World War II era. Offered as POSC 370G and POSC 470G.

POSC 470H. China’s Foreign Policy. 3 Units.
The rise of China is evident in the country’s more forward and robust foreign policy that began in 1979. At every turn, nations throughout the world must now consider China wherever their interests are at stake, be it Korea and Northeast Asia, Indochina and Southeast Asia, India/ Pakistan and South Asia, or Afghanistan and Iran in the Middle East, not to mention the many African states that welcome Chinese investment but chafe at China’s presence. Further, China is increasingly aggressive in international trade, a major determinant of its foreign policy. This course describes the key factors that make up Chinese foreign policy, including its cultural tradition, policy-making institutions, the role of the military, and domestic determinants of foreign policy. The course also examines China’s ever-changing foreign policy strategies, from an aggressive posture to charming its neighbors only to become more strident once again. The course will also examine China’s role involving possible mercantilism, currency manipulation, and the hunt for traditional and alternative energy sources. Throughout the course, we will pay attention to how China’s foreign policy relates to international relations theories and what strategies might be used to manage China’s growing role in international affairs. Offered as POSC 370H and POSC 470H. Counts for CAS Global & Cultural Diversity Requirement.

POSC 470J. International Law and Organizations. 3 Units.
Study of international organizations and international law as two means for regulating and coordinating nation-state behavior. History of the two techniques will be traced, covering 19th century efforts at cooperation, the League of Nations and the United Nations, regional and specialized global organization. The functions of international law in global politics will be stressed, with primary focus on the evolving role of law in dealing with global problems, e.g., war, the environment, economic cooperation, and human rights. Offered as POSC 370J and POSC 470J.

POSC 470K. Nationalism, Ethnicity, and Religion in World Politics. 3 Units.
Examination of the post-Cold War surge in conflicts among nationalisms, ethnic groups, and religions with particular attention to the former Yugoslavia, Ireland, India, Africa, and the Middle East. Offered as ETHS 370K, POSC 370K, and POSC 470K. Counts for CAS Global & Cultural Diversity Requirement.

POSC 470M. Theories of Political Economy. 3 Units.
This course is a SAGES departmental seminar in political economy that brings a wide range of theoretical perspectives to bear on the relations between market and state in the contemporary world. It focuses on three questions: What have been the major debates concerning the role of the government in the economy? How were these debates resolved in the compromise of embedded liberalism, and What experiences have individual states had with these questions of political economy? To answer these questions, we will read original literature to uncover the connections among politics, economics, and the world of ideas that has resulted in the political debates we confront today. Offered as POSC 370M and POSC 470M. Counts as SAGES Departmental Seminar.

POSC 471. Natural Resources and World Politics. 3 Units.
Examination of the political causes and ramifications of the uneven distribution of the valuable natural resources for modern industrial societies. Strategic and military issues and the exploitation of the seabed. Examination in some detail of selected commodity issues, including petroleum, copper and uranium. Offered as POSC 371 and POSC 471.

POSC 473. Politics of the European Union. 3 Units.
Study of the origins, operations, and prospects for the European Union. This can include the historical context for the effort to restrict national rivalries (which fueled two world wars) and create common interests; the diplomatic challenges in finding common ground; the tasks and processes of governance within the EU, including its governing institutions, enforcement of terms for European Monetary Union and the operations of its bureaucracies; the social pressures that create policy challenges (such as agriculture policy and immigration); broad tensions within the enterprise (e.g., “broadening” vs. “deepening”), and the EU’s potential place in international politics, especially the efforts to create a common foreign and security policy and the possible implications of the Euro for international political economy. Offered as POSC 373 and POSC 473.

POSC 474. Politics of Development in the Global South. 3 Units.
Exploration of the post-World War II emergence of the Global South nations of Africa, Asia, the Middle East, Latin America, and the Eastern Europe arena. Offered as ETHS 374, POSC 374, and POSC 474. Counts for CAS Global & Cultural Diversity Requirement.

POSC 475. The International Politics of Technology. 3 Units.
Technology is deeply political. Nowhere is this statement more evident than in the realm of international relations, where governments perceive technology as a source of power and wealth and a symbol of relative position and modernity. Yet for centuries skeptics have questioned the economic rationale of government technology policies. Still, to this day, countries support emulation, innovation and a host of other strategies as means for catching up with leading nations or locking in current advantages. What lies behind such policies? What do they accomplish? And what are the domestic and international politics surrounding them? After reading classic arguments, including texts by Adam Smith, Alexander Hamilton and Friedrich List, students will consider 20th and 21st century debates and an array of experiments tried by poor, middle-income and rich countries. Cases include the development of new industries; the imposition of sanctions; the dilemma of dual technologies and military spillovers; the forging of national champions; the reorganization of banks and the creation of international financial centers; the copying of regional clusters (e.g. Silicon Valley) and stock markets (e.g. the Nasdaq); and the extraterritorial extension of domestic regulation and governance techniques. There are no prerequisites and first year students are welcome. Offered as POSC 375 and POSC 475.

POSC 476. United States Foreign Policy. 3 Units.
Focus on U.S. foreign policy making with a dynamic network of executive and congressional actors and organizations; analysis of traditional and contemporary U.S. foreign policies from nuclear defense to current economic resource issues; future role of the United States in world affairs. Offered as POSC 376 and POSC 476.
POSC 477. Politics of Russia. 3 Units.
Russia faces three problems: the creation of a sovereign state, the development of a new political system, and the restructuring of its economy. In this course we will challenge the assumption that the outcome of these three transitions will be a strong, democratic, capitalist country. We will ask whether civil war, organized crime, an immature party system, poor social services, and nomenklatura privatization bode poorly for these three transformations. Offered as POSC 377 and POSC 477. Counts for CAS Global & Cultural Diversity Requirement.

POSC 478. International Relations Theory. 3 Units.
This course is a seminar in international relations theory. As such, we will bring a wide range of theoretical perspectives to bear on issues and debates in the area of international relations by systematically studying the evolution of the world system. The seminar is roughly divided into a first half focusing on war and the political system, and a second half focusing on trade, finance and the economic system. Each section devotes particular attention to ethical problems associated with political and economic issues. This course should develop students' ability to read and critically evaluate academic literature in the field of international relations, and enable students to produce a scholarly paper on one substantive area of the field. Offered as POSC 378 and POSC 478. Counts as SAGES Departmental Seminar.

POSC 479. Introduction to Middle East Politics. 3 Units.
This is an introductory course about Middle East Politics, in regional as well as international aspects. In this course we will explore broad social, economic, and political themes that have defined the region since the end of World War Two. Since this is an introductory course, a major goal will be to gain comparative knowledge about the region's states and peoples. The countries that comprise the modern Middle East are quite diverse; therefore, we will only be able to focus on a few cases in depth. A second goal is to use the tools and theories social scientists employ to answer broad questions related to the region, such as: How have colonial legacies shaped political and economic development in the Middle East? How do oil, religion, and identity interact with politics? How have external powers affected the region's political development? What do the uprisings of 2011 hold for the region's future? Offered as POSC 379 and POSC 479. Counts for CAS Global & Cultural Diversity Requirement.

POSC 481. City as Classroom. 3 Units.
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface—both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroot struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481. Counts for CAS Global & Cultural Diversity Requirement.

POSC 483. Health Policy and Politics in the United States. 3 Units.
Overview of the principal institutions, processes, social forces, and ideas shaping the U.S. health system. Historical, political, economic, and sociological perspectives on the health system are explored as well as the intellectual context of recent policy changes, challenges, and developments. Students will acquire a sense of how health services are financed and delivered in the U.S. They will also learn how to assess its performance compared to that of other similar countries. Offered as POSC 383 and POSC 483.

POSC 484. Ethics and Public Policy. 3 Units.
Evaluation of ethical arguments in contemporary public policymaking discourse. That is, approaches to evaluating not only the efficiency of policy (Will this policy achieve its end for the least cost?) but also the ethics of policy (Are a policy's intended ends ethically justified or "good," and are our means to achieve those ends moral or "just"?). Overview of political ideologies that supply U.S. political actors with their ethical or moral arguments when proposing and implementing public policy, followed by an application of these divergent perspectives to selected policy areas such as welfare, euthanasia, school choice, drug laws, censorship, or others. Offered as POSC 384 and POSC 484.

POSC 485. U.S. Bureaucratic Politics. 3 Units.
Bureaucracy is one of civilization's most important inventions. It is a way of coordinating very large numbers of people so as to do work, make decisions, and exercise power. Without it, much of modern life would be impossible. Yet "bureaucracy" is normally seen, in public discussion, as a problem, instead of as a solution. This course will consider both the reasons for and pathologies of bureaucratic organization. Its special focus is bureaucracy in American government. The course therefore will provide some introduction to the study of American public administration, but with special emphasis on how the work and performance of public bureaucracies in the United States is shaped by the specific tasks they are given and the distribution of power in the American political arena. Offered as POSC 385 and POSC 485. Counts as SAGES Departmental Seminar.

POSC 486. Making Public Policy. 3 Units.
Politics is about who wins, who loses, and why. Policy, by contrast, is often depicted as more "neutral;" policies are the means through which political decisions are carried out. In this class, we examine the notion that policy is the rational, impartial counterpart to the political arena. We will ask: How are public policies made? Why do some issues make it on the agenda, while others do not? Can we separate facts from values, or are both always contested? We will examine how decision-making in a group introduces distinct challenges for policymaking. The course focuses on widely applicable themes of policymaking, drawing on both domestic and international examples. Offered as POSC 386 and POSC 486.

POSC 488. Politics, Policy, and the Global Environment. 3 Units.
This course examines the law, politics and policy surrounding global environmental challenges such as climate change. The course aims to provide a broad overview of the key concepts, actors, debates, and issues in global environmental politics. It aims to illustrate the complexities of addressing environmental problems—from the proliferation of global institutions and international actors, to the absence of central enforcement mechanisms. We examine the causes of environmental degradation and competing views on the gravity of the problem. Using concepts from political science and economics, we investigate the challenges in getting states to act jointly to address environmental problems. We examine the actors and institutions of global environmental politics, to understand how conditions are defined as problems and responses are chosen and implemented. The course concludes by applying the tools and concepts to the case of climate change. Offered as POSC 388, ESTD 388, POSC 488.

POSC 489. Special Topics in American Politics and Policy. 3 Units.
Specific topic will vary but will consist of an in-depth investigation of a particular policy area or political phenomenon. Topics will involve policy controversies of some current interest. Offered as POSC 389 and POSC 489.

POSC 495. Independent Study. 3 Units.
Graduate level independent study taken for a grade.
The Department of Psychological Sciences combines the areas of study found in many psychology departments with those typically found in communication sciences departments. Our distinctive department offers undergraduate majors and minors in communication sciences and in psychology. We also offer a minor in health communications. For graduate students, our Psychology Program offers accredited doctoral training in clinical psychology and in experimental psychology. Our accredited Communication Sciences Program offers a master's degree in speech-language pathology as well as a doctorate in communication sciences.

Communication Sciences

The Department of Psychological Sciences offers courses of study in communication sciences leading to Bachelor of Arts, Master of Arts, and Doctor of Philosophy degrees. The Communication Sciences Program prepares undergraduate and graduate students to address broad issues of human communication processes and disorders through the application of cutting-edge technology and rigorous clinical training. We provide a comprehensive foundation in normal and disordered human communication and combine it with innovative interdisciplinary experiences that capitalize on the extensive resources of the university and the surrounding medical community. The department enjoys a particularly close relationship with Cleveland Hearing & Speech Center (http://www.chsc.org), an outstanding independent, nonprofit provider of care in speech-language pathology and audiology; in fact, the program is housed within the center.

Many students pursue undergraduate study in communication disorders as preparation for further study in other fields or in conjunction with study in other fields. For example, one might study the word learning of children with normal language as well as that of children with language impairment.

Psychology

The Psychology Program offers the combined advantages of a strong liberal arts college and a major university. There are classes in all major areas of the psychology field. We encourage close student-faculty relationships and offer many opportunities for individualized study and research.

Psychology is the study of the mind and behavior. The discipline embraces all aspects of the human experience: from the functions of the brain to the actions of neurons, from child development to care for the aged. In settings ranging from scientific research centers to mental health care services, "the understanding of behavior" is the enterprise of psychologists. An undergraduate major in psychology offers a student preparation for a wide variety of careers. Many majors find psychology to be an excellent preparation for such service-oriented professions as social work, counseling and guidance, special education, and management. Those who pursue graduate work in one of the many fields of psychology often seek positions in teaching and research or applied human services. In addition, the study of psychology provides a knowledge and an understanding of behavior that has applications in professions such as nursing, medicine, law, teaching, business, and public relations.

Communication Sciences Program (p. 388) | Psychology Program (p. 388)

Communication Sciences

The major in communication sciences leads to the Bachelor of Arts degree. For many students, a BA in communication sciences is a pre-professional degree in preparation for graduate study in speech-language pathology or audiology. The undergraduate course work emphasizes the basic processes and acquisition of normal communication in children and adults. Graduate study then focuses on the study of disordered communication. (Please see the description of the Integrated Graduate Studies Program below.)

Students pursuing the BA are required to take 45 credit hours of course work which includes study in communication sciences and disorders, psychology, and English/linguistics, as well as in statistics and research design. A recommended course sequence is shown below. Please note, however, that an individual student’s sequence may differ from this one. For example, undergraduate students may elect to take 400- or 500-level graduate courses with departmental/instructor permission.

Suggested Sequence of Required Courses for the Bachelor of Arts Degree (45 credits)

* Please note that this course is required for the communication sciences major.

POSC 601. Individual Investigation. 1 - 6 Unit.
The student must submit to the departmental office a project prospectus form, approved and signed by the faculty project supervisor, no later than the end of the second week of classes. The prospectus must outline the goals of the project and the research methodology to be used and is part of the basis for grading. The prospectus form is available from the departmental office. Prereq: Departmental prospectus form, graduate standing, and consent of department.

POSC 651. Thesis M.A.. 3 - 6 Units.
Independent study of a research question and completion of a major research paper. An approved prospectus is required. Prereq: Graduate standing.

POSC 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Fourth Year

Units
Fall Spring
Introduction to Clinical Practice in Speech-Language Pathology (COSI 352) 3
Introduction to Audiology (COSI 370) 3
Communication and Aging (COSI 345) 3
Year Total: 6 3
Total Units in Sequence: 45

* COSI 109 Introduction to Communication Disorders is offered in the fall and spring semesters. All other COSI courses are offered only one semester per year, as indicated above.

Departmental Honors

Juniors with a 3.0 overall grade point average and a 3.25 average in communication sciences are encouraged to apply to the honors program. The honors program consists of one three-credit course, COSI 395 Capstone and Honors Program, in which the student carries out an independent project in an area of interest, under the direction of a COSI faculty member. Satisfactory completion of the project qualifies the student to receive the Bachelor of Arts degree with departmental honors noted on the transcript. Admission to the honors program is by faculty approval.

The following are prerequisites to COSI 395 Capstone and Honors Program:

- STAT 201 or PSCL 282: Basic Statistics for Social and Life Sciences or Quantitative Methods in Psychology 3
- PSCL 375: Research Design and Analysis 3

Additional information is available from the academic advisor.

Integrated Graduate Studies

The Integrated Graduate Studies (IGS) Program (p. 563) is intended for undergraduate students who are interested in obtaining a graduate degree in communication disorders (speech-language pathology). Qualified students may be accepted for admission to the School of Graduate Studies after completing 90 hours of undergraduate course work.

Typically, a master's degree requires two additional years of study beyond the bachelor's degree. Through the IGS Program, however, a student can complete an undergraduate degree in communication disorders and a master's degree in communication disorders in five years. The recommended undergraduate sequence for students interested in the IGS Program is somewhat different from the recommended sequence presented above. Students should consult their academic advisor and the Office of Undergraduate Studies for additional information concerning IGS requirements.

Minor in Communication Sciences

The minor in communication sciences requires a minimum of 15 credit hours. It focuses on normal processes of speech, language, and hearing, as well as on the speech, language, and hearing disorders that result from breakdowns in these processes. Interested students should meet with an advisor for specific course requirements.

- COSI 109 Introduction to Communication Disorders 3
- COSI 313 Language Development 3
- COSI 325 Anatomy and Physiology of Speech and Hearing Mechanism 3

Two of the following courses:
- COSI 211 Phonetics and Phonology
- COSI 220 Introduction to American Sign Language I
- COSI 321 Speech and Hearing Science
- COSI 345 Communication and Aging

Total Units 15

Minor in Health Communication

The minor in health communication offers introductory and advance study in theoretical and practical application of communication within a health context. It includes a variety of additional courses that students can choose according to their specific areas of interest. The course work is designed to appeal to students in such fields as pre-med, nursing, pre-law, public policy, public health, communication disorders, gerontological studies, nutrition, health management, and social work.

The minor requires 15 credit hours of course work, of which 9 credit hours come from required courses:

- COSI 101 Introduction to Health Communication 3
- COSI 109 Introduction to Communication Disorders 3
- COSI 340 Health Communication 3

Two of the following:
- COSI 200 Interpersonal Communication
- COSI 260 Multicultural Aspects of Human Communication
- COSI 280 Organizational Communication
- COSI 332 Persuasion
- COSI 345 Communication and Aging

Total Units 15
Psychology

Undergraduate Programs

Major in Psychology

(Effective July 1, 2014 for those students who matriculate Fall 2014 or later)

An undergraduate major in psychology provides preparation for graduate training in psychology, medicine, social work, allied health professions, education, business, computer science, or law. The undergraduate degree directly prepares students for careers that require knowledge and understanding of behavior, research design, and the ability to collect, analyze, and interpret data.

Requirements for a Psychology Major

Beginning with Allport (1937), scientific psychology has historically relied on two broad complementary traditions in the study of human behavior. The nomothetic or experimental approach focuses on identifying general laws about human behavior. The idiographic approach is concerned with the uniqueness of people and focuses on differences among individuals. Although all psychology courses apply both perspectives to specific topics in psychology, subsets of psychology courses rely more heavily on one or the other; therefore, the major requirements below ensure training that reflects a balance of nomothetic and idiographic approaches.

The psychology major requires a total of 30 credit hours comprised of PSCL 101 General Psychology I and PSCL 282 Quantitative Methods in Psychology; 2 nomothetic courses; and 2 idiographic courses. The remaining 12 credits of elective course work can be taken as any combination of PSCL courses.

Psychology majors must complete 30 hours of course work in the department.

Take the 2 required core courses below (total of 6 credit hours)

Select Elective Courses (any combination of additional PSCL courses, total of 12 credit hours) *

* Although not required for the Psychology Major, PSCL 375 (Research Design and Analysis) is a prerequisite for most of the senior capstone courses in psychology.

Psychology majors should work closely with their major advisors to customize the selection of required and elective courses to provide them with courses suited to their own individual career goals.

Declaring a Major

Students who wish to major in psychology must complete a Major Declaration form, available from the Office of Undergraduate Studies (http://www.case.edu/provost/ugstudies/undstud.htm) (Sears 357), and then meet with the department chair, Dr. Lee Thompson, who will assign them an advisor and review the degree requirements.

Special Programs for Psychology Majors

Psychology Honors Program: Qualified psychology majors are encouraged to consider the department's honors program, which leads to a BA with honors in psychology. The program's purpose is to provide intensive, supervised research experience. Completion of the honors program also satisfies the SAGES capstone graduation requirement.

The program consists of PSCL 375 Research Design and Analysis, which students take in their junior year, and PSCL 395 Capstone and Honors Program, which they take as seniors. By the end of the senior year, students design and execute a research project, write it up in scholarly form, and present it in a public setting. Psychology majors who successfully complete PSCL 395, and who attain at least a 3.25 GPA in psychology course work and an overall GPA of at least 3.0, will graduate with honors in psychology.

The selection of a faculty advisor is an important part of the honors program. The first step is to identify a faculty member whose interests are as close as possible to the research area the student wishes to pursue. Students should contact a potential advisor as early as possible (junior year is recommended) and ask about the possibility of registering for PSCL 395. Each section of PSCL 395 is assigned to a specific faculty member, and registration is by permit only.

Because the honors program requires significant time and commitment, only psychology majors with a serious interest in the behavioral sciences should consider completing it.

Integrated Graduate Studies Program: The IGS Program enables qualified undergraduates to complete the academic work for a BA and MA degree in four years. Students accepted into the program must complete at least 27 credit hours of graduate course work during their senior year, plus a thesis or comprehensive exam, for a Master of Arts in General Psychology. The minimum standards for acceptance are:

- an overall GPA of 3.2
- completion of the Arts and Sciences General Education or SAGES Requirements and two semesters of physical education
- 90 semester hours of undergraduate credit (the last 60 hours must have been earned while the student was in residence at CWRU)
- completion of the psychology major requirements with at least a 3.2 GPA

Students should meet with their major advisor and with Dean Claudia Anderson in the Office of Undergraduate Studies during the fall semester of their junior year to receive pre-approval for eligibility for the IGS Program.

Students seeking admission to the IGS Program complete the same application process as those seeking admission to the graduate program in experimental psychology; instructions are provided on the department's website (http://psychology.case.edu/experimental/checklist.html). However, prospective IGS Program students are not required to submit GRE scores. The application deadline each year is January 15.
Participation in the IGS Program does not preclude involvement in the department's honors program. For more information, consult the IGS Program section of this bulletin (p. 563) or contact Dr. Lee Thompson (lee.thompson@case.edu).

Communication Sciences Program (p. 388) | Psychology Program (p. 388)

**Communication Sciences**

**Master of Arts**

The principal goal of the Master of Arts program is to develop clinical scientists who are skilled in the management of individuals with speech and language disorders. The master's program is accredited by the Council on Academic Accreditation of the American Speech-Language-Hearing Association (ASHA). Upon successful completion of the Master of Arts degree, students will also meet the academic and clinical practicum requirements for certification by ASHA and licensure in the State of Ohio.

Degree requirements include completion of 42 credit hours of course work, including a clinical practicum in communication disorders. In addition, students must satisfactorily complete a clinical research project or write a master's thesis.

**Clinical Opportunities in Speech, Language, and Hearing Disorders**

The program is affiliated with, and located in, Cleveland Hearing & Speech Center (CHSC), a nonprofit agency that serves children and adults with communication disorders. CHSC serves as the primary training site for graduate students enrolled in clinical practice. Its personnel and facilities provide exceptional clinical experiences for students seeking clinical certification in speech-language pathology.

The program also draws on clinical resources in University Circle and the Greater Cleveland area. In addition to clinical practicum experiences at CHSC, graduate students complete at least two externships at sites including University Hospitals of Cleveland, Rainbow Babies and Children’s Hospital, MetroHealth Medical Center, Cuyahoga County Board of Mental Retardation and Developmental Disabilities, Cleveland Clinic Center for Autism, Legacy Health Services, and Western Reserve Speech and Language Partners.

**Doctor of Philosophy**

The Doctor of Philosophy is awarded in recognition of (1) mastery, at an advanced level, of a body of knowledge in the disciplines of communication sciences and speech-language pathology, and (2) a demonstrated ability to perform independent research and communicate the results of that research. With the major advisor, the student designs an individual plan of study based on his/her professional goals and previous experience. Doctoral students choose a content area (such as communication and aging, medically based speech disorders, or child language development and disorders) as their primary focus of study. However, they are also encouraged to enhance their scholarly preparation by completing course work outside of their primary content area.

In addition to course work within the department, doctoral students may choose courses from graduate programs in other departments of the College of Arts and Sciences, as well as from several professional schools at the university, including the School of Medicine (e.g., neuroscience, genetics), the Case School of Engineering (e.g., biomedical engineering), the School of Dental Medicine, the Weatherhead School of Management, and the Mandel School of Applied Social Sciences.

Requirements for the doctoral program include course work, research rotations, a supervised classroom teaching experience, written and oral comprehensive examinations, and a dissertation.

- A minimum of 36 hours of course work is required, including 9 credit hours in statistics and research design and 3 credit hours of directed study and research. Fifteen credit hours in the primary content area are required.
- Two research rotations are required. One rotation is completed in the primary content area with the major advisor. The second rotation is completed with a faculty member other than the major advisor. The dissertation research is not included in either of the two research rotations.
- A supervised classroom teaching experience is completed under the guidance of a faculty member in the program.
- Written and oral examinations are taken after all course work and research rotations are completed.
- A dissertation prospectus is prepared under the guidance of a committee consisting of the dissertation advisor and two additional faculty members. A defense of the dissertation prospectus is required prior to commencing the dissertation study.
- An oral defense of the dissertation takes place at the end of the doctoral program.

Additional information about graduate work in communication sciences is available on the program's website (http://www.case.edu/artsci/cosi).

**Psychology**

The Department of Psychological Sciences offers full-time programs leading to a PhD in clinical or experimental psychology. These programs give students a thorough grounding in basic areas of psychological fact and theory and prepare them for careers as researchers, teachers, and practitioners. The Master of Arts degree can be earned in the department as part of work toward a doctorate.

**Clinical Psychology**. The department’s program in clinical psychology, which has been approved by the American Psychological Association, emphasizes the scientist-practitioner model. Students participate in an integrated curriculum of basic and applied courses, research activities, and practicum and pre-internship placements. The program’s goal is to prepare students to make meaningful contributions to the science and profession of psychology by instructing them in broad applications of clinical skills and research methods.

**Experimental Psychology**. Doctoral training in experimental psychology prepares the student for an academic career in teaching and research. It offers concentrations in developmental psychology, adulthood and aging, cognitive psychology, mental retardation research, and social psychology. Faculty members help students develop flexible programs of study, according to individual interests.

Additional information about graduate work in psychology is available on the program's website (http://psychology.case.edu).
Department Faculty

Lee A. Thompson, PhD  
(University of Colorado, Boulder)  
Professor; Chair  
Human behavior genetics; child development

Angela Hein Ciccia, PhD  
(Case Western Reserve University)  
Assistant Professor  
Neuroscience of communication and communication disorders in adolescents/adults, with focus on traumatic brain injury

Arin M. Connell, PhD  
(Emory University)  
Associate Professor  
Internalizing problems; coping skills during adolescence

Heath A. Demaree, PhD  
(Virginia Tech)  
Professor  
Cerebral and psychophysiological bases of emotion

Anastasia Dimitropoulos, PhD  
(Vanderbilt University)  
Associate Professor  
Genetic syndromes involving intellectual disabilities; compulsive behavior in MR/DD; functional neuroimaging

Julie J. Exline, PhD  
(State University of New York, Stony Brook)  
Armington Professor  
Social relationships; transgression; moral and religious issues

Norah C. Feery, PhD  
(Bryn Mawr College)  
Professor  
Evaluation of interventions for anxiety (e.g., post-traumatic stress disorder) and mood disorders

Grover C. Gilmore, PhD  
(Johns Hopkins University)  
Professor; Dean, Mandel School of Applied Social Sciences  
Perceptual development and aging; visual information processing; memory; psychophysics

Robert L. Greene, PhD  
(Yale University)  
Professor  
Human memory and cognition

Barbara Lewis, PhD  
(Case Western Reserve University)  
Professor  
Familial and genetic bases of speech/language

Brooke Macnamara, PhD  
(Princeton University)  
Assistant Professor  
Cognitive psychology, skill acquisition, learning, human performance, working memory, cognitive control, bilingualism, and communication

T. J. McCallum, PhD  
(University of Southern California)  
Associate Professor  
Older adults; caregiving; ethnicity; stress and coping

James C. Overholser, PhD  
(Ohio State University)  
Professor  
Adult psychopathology; depression; suicide; personality disorders

Amy Przeworski, PhD  
(Pennsylvania State University)  
Assistant Professor  
Anxiety disorders; emotion regulation; cultural factors in family interactions

Kathryn (Kyra) Rothenberg, PhD  
(Kent State University)  
Instructor  
Health communication

Sandra W. Russ, PhD  
(University of Pittsburgh)  
Distinguished University Professor and Louis D. Beaumont University Professor  
Creativity; affective development in children; personality assessment; coping mechanisms in children

Elizabeth J. Short, PhD  
(University of Notre Dame)  
Professor  
Cognitive psychology; applied developmental; learning disabilities

Jennell Vick, PhD  
(University of Washington)  
Assistant Professor  
Study of movements of the face, lips, and tongue that generate speech; acquisition and development of speech in typically developing infants and children; impact of various disorders on speech acquisition, development, and production

Lecturers

Jennifer L. Butler, PhD  
(Case Western Reserve University)  
Full-time Lecturer  
Social psychology

Patrice O. Carothers, MS, CCC-A  
(Ithaca College)  
Part-time Lecturer  
Fluency disorders

Kathryn (Kay) McNeal, MS, CCC-SLP  
(Purdue University)  
Full-time Lecturer  
Speech-language pathology

Jean Nisenboum, MA  
(Miami University)  
Full-time Lecturer  
Dysphagia, Diagnosis of speech
Adjunct Faculty

Melissa Baker, MS, CCC-SLP
(Bowling Green State University)
Adjunct Instructor; Monarch Center for Autism
Speech-language pathology

Rachel Berkowitz, MA, CCC-SLP
(University of Cincinnati)
Adjunct Instructor, Mayfield Schools
Speech-language pathology

Laura Brady, MA, CCC-A
(Kent State University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Audiology

Lisa Bruening, MS, CCC-SLP
(University of Wisconsin)
Adjunct Instructor; ALS Association, Northern Ohio Chapter
Speech-language pathology

Jane R. Buder-Shapiro, PhD
Adjunct Assistant Professor; private practice

Michelle Burnett, MA, CCC-SLP
(Michigan State University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Speech-language pathology

Cameron Camp, PhD
Adjunct Professor; Myers Research Institute

Sandra Caramela-Miller, PhD
Adjunct Assistant Professor; Cuyahoga County Coroner’s Office

Barbara Choudhury, MA, CCC-SLP
(Case Western Reserve University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Speech-language pathology

Michael Christie, PhD
(University of Akron)
Adjunct Assistant Professor

Joseph Dittmer, PhD
(Kent State University)
Adjunct Assistant Professor

Margaret Duff, MA, CCC-SLP
(Kent State University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Speech-language pathology

Barbara Ekelman, PhD
Adjunct Assistant Professor
Pediatrics

Thomas Ference, PhD
(University of Kansas)
Adjunct Assistant Professor

Michelle Foye, MA, CCC-SLP
(Kent State University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Speech-language pathology

Thomas Frazier, PhD
(Case Western Reserve University)
Adjunct Assistant Professor
Autism

Nicole Gerami, MA, CCC-SLP
(Case Western Reserve University)
Adjunct Instructor; private practice
Speech-language pathology

Robert Goldberg, PhD
Adjunct Associate Professor; Louis Stokes Cleveland VA Medical Center

Bernard P. Henri, PhD
(Northwestern University)
Adjunct Associate Professor; Director, Cleveland Hearing & Speech Center
Fluency disorders; professional issues in speech-language pathology; health care management

Douglas Hicks, PhD
(Vanderbilt University)
Adjunct Professor; Cleveland Clinic Foundation
Voice disorders

Vanessa Jensen, PhD
Adjunct Assistant Professor; Cleveland Clinic

Karen Kantzes, AuD, CCC-A
(A.T. Stills University)
Adjunct Instructor, Cleveland Hearing & Speech Center
Audiology

Susan M. Knell, PhD
Adjunct Assistant Professor; Spectrum Psychological Associates

Bonnie Lawrence, Ph.D.
(Washington University)
Adjunct Assistant Professor

Marilyn Malkin, PhD
Adjunct Assistant Professor; private practice

Michael Manos, PhD
(University of Arizona)
Adjunct Assistant Professor

Lauren Masuga, MA, CCC-SLP
(Miami University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Speech-language pathology

Darlene Moenter-Rodriguez, PhD
(Ohio State University)
Adjunct Assistant Professor; Louis Stokes Cleveland VA Medical Center
Auditory potentials

Shirley Prok
Adjunct Instructor; Sign Language Instructor, Cleveland Hearing & Speech Center
Philip Safford, PhD
Adjunct Professor; Emeritus, Kent State University

Ethan Schafer, PhD
Adjunct Assistant Professor; Spectrum Psychological Associates

Jes Sellers, PhD
Adjunct Assistant Professor; Director, University Counseling Services

Jeremy Shapiro, PhD
Adjunct Assistant Professor; Advanced Therapy Center

Harry Sivec, PhD
Adjunct Assistant Professor; Northcoast Behavioral Healthcare

Kevin Smith, PhD
(University of Akron)
Adjunct Assistant Professor

Kenneth Weiss, PhD
Adjunct Assistant Professor; Louis Stokes Cleveland VA Medical Center

Brigid Whitford, AuD, CCC-A
(A.T. Still University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Audiology

Stacy Williams, PhD
Adjunct Assistant Professor

Lucene Wisniewski, PhD
Adjunct Assistant Professor; Cleveland Center for Eating Disorders

Secondary Faculty

Richard E. Boyatzis, PhD
Professor of Organizational Behavior, Weatherhead School of Management

Alan Castro, PhD
Senior Instructor; University Hospitals Case Medical Center

Howard Hall, PsyD, PhD
Associate Professor, School of Medicine/Rainbow Babies and Children's Hospital

Rebecca Hazen, PhD
Assistant Professor, School of Medicine/Rainbow Babies and Children's Hospital

Leslie L. Heinberg, PhD
Associate Professor, The Cleveland Clinic Lerner College of Medicine

Anthony Jack, PhD
(University College London)
Associate Professor, Department of Cognitive Science

Gunnar Karakurt, PhD
(Purdue University)
Assistant Professor
Family Medicine

Carolyn Landis, PhD
Associate Professor, School of Medicine/Rainbow Babies and Children's Hospital

Britt A. Nielsen, PhD
Assistant Professor, Department of Psychiatry, School of Medicine

Lynn Singer, PhD
Professor, School of Medicine/University Hospitals

Terry Stancin, PhD
Professor, School of Medicine/MetroHealth Medical Center

Thomas P. Swales, PhD
Assistant Professor, School of Medicine/MetroHealth Medical Center

Gerry Taylor, PhD
Professor, Department of Pediatrics, School of Medicine

Abraham Wolf, PhD
Professor, Department of Psychiatry, School of Medicine

James M. Yokely, PhD
Assistant Professor, Department of Psychiatry, School of Medicine

Clinical Faculty

Jennifer Anderson, PhD
(University of Toledo)
Clinical Instructor
Pediatrics

Kathleen Ashton, PhD
(Ohio State University)
Clinical Instructor
Bariatics

Karen Kernberg Bardenstein, PhD
Adjunct Assistant Professor; private practice

Karen Broer, PhD
(Kent State University)
Clinical Instructor

Richard A. Cirillo, PhD
Clinical Assistant Professor; Cuyahoga County Board of Mental Health and Developmental Disabilities

Sandra L. Curry, PhD
Clinical Assistant Professor; Department of Psychiatry, School of Medicine

Lori L. D’Angelo, PhD
Clinical Instructor; International Center for Clubhouse Development

Lisa Damour, PhD
Clinical Instructor; private practice

Mathew A. Fuller, PhD
Clinical Instructor; Louis Stokes Cleveland VA Medical Center

Thomas Hagesfeld, Ph.D.
(Case Western Reserve University)
Clinical Assistant Professor

Gerald Hayes, PhD
(Wright State University)
Clinical Instructor
An introductory examination of the influences associated with the functions of human life, communication processes, and research related to health and the health care industry from interpersonal, cultural, and organizational communication perspectives. The course will include a review of the history and development of communication theories and how application of theories enhances our understanding of various types of organizations. COSI 109 addresses the communication challenges faced by contemporary organizational leaders and members. Knowledge of the theories and development of analytical skills should improve students' chances for successful interactions in diverse organizational situations and cultures.
COSI 301. Professional Speaking. 3 Units.
This course is designed to introduce students to theories and practices and to develop their abilities to speak effectively in public. Students will develop skills in organization and presentation of ideas for public and conference forums, in critical listening, and in proper use of technology. Students demonstrate abilities via written assignments, skill building exercises, oral presentations, rhetorical analysis, and group projects. The expectations in this course include high levels of participation and interaction. This is a departmental seminar course with a focus on formal presentation in settings related to health care. This course will be beneficial to students planning professions in the health sciences where responsibilities include public instruction and exposition and for those preparing for capstone presentations in the Department of Psychological Sciences programs. Activities include: 1. Readings from McKerrow et al. text, 2. Class discussions related to communication competence in differing communication settings, 3. Application opportunities to give speeches, to work in groups, and relate with others in one-on-one situations, 4. Written assignments. Counts as SAGES Departmental Seminar. Prereq: Completion of 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, or FSCS and either COSI 109 or PSCL 101.

COSI 302. Instrumental Measurements in Speech Sciences. 3 Units.
This course will provide hands on experience on techniques for instrumental measurements of speech and voice parameters, for applications to assessment and diagnosis of speech and voice disorders, to linguistic analysis of speech parameters (prosodic and segmental), and to speech production modeling. In particular, instrumental measures of voice parameters will be carried out by Electroglottography; evaluation of Voice Range Profile and of perturbation of frequency (jitter) and amplitude (shimmer) of the laryngeal waveform, by dedicated KayPentax software (Visi-pitch and Voice Range Profile) and by Praat software; spectrographic analyses will be carried out by Praat software, and articulographic measurements will be performed by an AG200 Electromagnetic Articulograph. Nasalance will be measured by a KapyPentax nasometer. Emphasis on use rather than theory. All instrumentation is available at the Case Speech Production Lab. Recommended preparation: COSI 211, COSI 321/421, and COGS 203, or bases in phonetics, linguistics and speech science; and Physics and Engineering instrumentation courses are good preliminaries to this course. Offered as COSI 302 and COSI 402.

COSI 313. Language Development. 3 Units.
Language acquisition theory and stages of development of syntax, semantics, pragmatics, and phonology in children. Contributions of biological, social, cognitive and environmental factors to process of language development. Information on language variation in multicultural populations. Open to majors and non-majors. Recommended prerequisite: Child Psychology. Offered as COSI 313 and COSI 413.

COSI 321. Speech and Hearing Science. 3 Units.
The course will focus on the aspects of normal speech production and perception and hearing perception. The purpose of this course is to provide a foundation in normal aspects of oral communication that will prepare students for advance study in the assessment and management of disorders of speech and hearing perception. Topics to be covered include motor speech control, aeromechanics, basic acoustics, phonatory acoustics, speech and hearing acoustics, psychoacoustics, and speech and hearing perception. Recommended preparation: COSI 325. Offered as COSI 321 and COSI 421.

COSI 325. Anatomy and Physiology of Speech and Hearing Mechanism. 3 Units.
The course will focus on normal anatomy and physiology of the body systems involved in the processes of speech, language, hearing, and swallowing including the following: the auditory, respiratory, phonatory, articulatory, resonatory, and nervous systems. In part, the course material will be presented in a problem-based learning format. That is, normal aspects of human anatomy and physiology will be discussed in the context of the disorders that affect the processes of human communication and swallowing.

COSI 332. Persuasion. 3 Units.
This survey course explores the history, theories, and dynamics of persuasion. There is an extensive focus on theoretical models of attitude change. Persuasion also plays a strong role in everyday aspects of our culture. Along these lines, we will investigate persuasion activities in everyday life from compliance gaining to media campaigns. Learning is conveyed through lecture, activities, and observation of the student's everyday life. At the end of the semester, the astute student will literate in a variety of persuasion strategies and dynamics.

COSI 340. Health Communication. 3 Units.
Various communication processes assume a central role in the acquisition and enactment of health care. This course examines communication activity across a broad range of health care contexts. Attention will be given to provider-client communication, communication, and ethical concerns, persuasive health promotion efforts, media impact on health, and basics in health communication methodology and research. Students will consider source, message, and receiver aspects of health communication as well as cultural and illness-specific issues. Prerequisite of COSI 101 for 300 - level only. Offered as COSI 340 and COSI 440. Prereq: COSI 101.

COSI 345. Communication and Aging. 3 Units.
The normal and abnormal psychobiological changes that occur during aging and their effects on communication are addressed, as are communicative interaction styles, disordered communication, and rehabilitation practices. Graduate students are given an opportunity to incorporate information from their own disciplines in a special project, where appropriate. Offered as COSI 345 and COSI 445. Counts as SAGES Departmental Seminar.

COSI 352. Introduction to Clinical Practice in Speech-Language Pathology. 3 Units.
Clinical assessment and teaching procedures as well as the role of research/theory in clinical practice. Procedures to observe, measure, analyze communication skills. Practical application through case studies. Students complete 25 hours of observation of speech/language assessment and intervention. Prereq: COSI 211 or COSI 313.

COSI 355. Introduction to Linguistics. 3 Units.
This course provides an introduction to linguistics, with application to clinical assessment, diagnosis and therapy of language disorders. In particular, the course provides an introduction to theory and methods of linguistics: universal properties of human language; phonetic, phonological, morphological, syntactic, and semantic structures and analysis; nature and form of grammar.
COSI 357. Acquired Neurogenic Communication Disorders. 3 Units.
This course is designed to provide knowledge about the theoretical foundations, etiologies, and characterizations of acquired language-based and cognitive-communication disorders in adults. The organization of the course is designed so that we will discuss communication disorders typically associated with left hemisphere lesions (e.g., aphasia), right hemisphere lesions (e.g., RHD), frontal lobe lesions (e.g., traumatic brain injury) and mesial temporal lesions (e.g., dementia). This course is intended to provide students with a framework for considering communication disorders of diverse medical etiologies rather than specific impairment types. The course is meant to provide information that can be used as a foundation for a clinically applied course in acquired language disorders. The course will focus on critical thinking, professional presentation (both oral and written), and critical consumption of research. Recommended preparation: Instructor consent for COSI 457 only. Offered as COSI 357 and COSI 457. Prereq: COSI 109.

COSI 370. Introduction to Audiology. 3 Units.
Disorders of hearing, assessment of hearing; including behavioral and objective measures; intervention strategies; and identification programs. Offered as COSI 370 and COSI 470. Prereq: COSI 325.

COSI 390. Independent Study. 1 - 6 Unit.
Individual study, under the guidance of a faculty member, involving specific programs of reading, research and special projects.

COSI 395. Capstone and Honors Program. 3 Units.
Supervision in carrying out an independent research study in the student's area of interest. Offered every semester. Any student majoring in communication sciences (COSI) may take this course to fulfill the capstone requirement AND to graduate with honors. During their Junior year, qualified COSI majors are encouraged to apply to the department’s Honors Program, which leads to a B.A. with Honors. The program’s purpose is to provide students with an intensive, supervised research experience in areas of their choice. The program consists of PSCL 375 and COSI 295 and begins in the junior year, when students receive instruction in research design and methodology. This provides the foundation for students to work under close supervision with a department faculty member during the senior year. At the end of the semester, the research project is written in scholarly form, and presented for consideration of graduation with Honors. Junior majors with a minimum 3.25 average in COSI major courses are a 3.0 overall GPA may apply. The Honors Program requires a great deal of work, and only students with a serious interest in behavioral sciences should apply. Counts as SAGES Senior Capstone. Prereq: (STAT 201 or PSCL 282) and PSCL 375.

COSI 402. Instrumental Measurements in Speech Sciences. 3 Units.
This course will provide hands on experience on techniques for instrumental measurements of speech and voice parameters, for applications to assessment and diagnosis of speech and voice disorders, to linguistic analysis of speech parameters (prosodic and segmental), and to speech production modeling. In particular, instrumental measurements of voice parameters will be carried out by Electroglottography; evaluation of Voice Range Profile and of perturbation of frequency (jitter) and amplitude (shimmer) of the laryngeal waveform, by dedicated KayPentax software (Visi-pitch and Voice Range Profile) and by Praat software; spectrographic analyses will be carried out by Praat software, and articulographic measurements will be performed by an AG200 Electromagnetic Articulograph. Nasalance will be measured by a KapyPentax nasometer. Emphasis on use rather than theory. All instrumentation is available at the Case Speech Production Lab. Recommended preparation: COSI 211, COSI 321/421, and COGS 203, or bases in phonetics, linguistics and speech science; also Physics and Engineering instrumentation courses are good preliminaries to this course. Offered as COSI 302 and COSI 402.

COSI 413. Language Development. 3 Units.
Language acquisition theory and stages of development of syntax, semantics, pragmatics, and phonology in children. Contributions of biological, social, cognitive and environmental factors to process of language development. Information on language variation in multicultural populations. Open to majors and non-majors. Recommended prerequisite: Child Psychology. Offered as COSI 313 and COSI 413.

COSI 421. Speech and Hearing Science. 3 Units.
The course will focus on the aspects of normal speech production and perception and hearing perception. The purpose of this course is to provide a foundation in normal aspects of oral communication that will prepare students for advance study in the assessment and management of disorders of speech and hearing perception. Topics to be covered include motor speech control, aeromechanics, basic acoustics, phonatory acoustics, speech and hearing acoustics, psychoacoustics, and speech and hearing perception. Recommended preparation: COSI 325. Offered as COSI 321 and COSI 421.

COSI 440. Health Communication. 3 Units.
Various communication processes assume a central role in the acquisition and enactment of health care. This course examines communication activity across a broad range of health care contexts. Attention will be given to provider-client communication, communication, and ethical concerns, persuasive health promotion efforts, media impact on health, and basics in health communication methodology and research. Students will consider source, message, and receiver aspects of health communication as well as cultural and illness-specific issues. Prerequisite of COSI 101 for 300 - level only. Offered as COSI 340 and COSI 440.

COSI 444. Evidence Based Practice in Communication Disorders. 4 Units.
Evidence-based practice is the conscientious, explicit and judicious use of current best evidence in making decisions about the care of individual clients. Having its origins in the fields of medicine and clinical epidemiology, EBP is now an essential component to clinical practice in speech-language pathology. The goal of COSI 444 is to instill in you a career-long desire to seek out high-quality relevant evidence pertinent to the clinical questions that affect your practice. To do this, you must first know how to find the evidence and evaluate the quality of evidence available. This course is intended to demystify the research process so that you can become critical consumers of the research literature in our field.
COSI 445. Communication and Aging. 3 Units.
The normal and abnormal psychobiological changes that occur during aging and their effects on communication are addressed, as are communicative interaction styles, disordered communication, and rehabilitation practices. Graduate students are given an opportunity to incorporate information from their own disciplines in a special project, where appropriate. Offered as COSI 345 and COSI 445. Counts as SAGES Departmental Seminar.

COSI 452A. Graduate Clinical Practicum I: Case Management. 1 Unit.
Addresses professional issues in speech-language pathology including case management, clinical effectiveness, counseling and working with families from diverse backgrounds. Four to ten hours of clinic contact per week at the Cleveland Hearing and Speech Center. (Maximum of 2 credits.) Recommended preparation: COSI 352 and COSI 413.

COSI 452B. Graduate Clinical Practicum II: Professional Issues. 1 Unit.
Addresses professional issues in speech-language pathology including case management, managed health care, ethics and interviewing. Four to ten hours of clinic contact per week at the Cleveland Hearing and Speech Center. (Maximum of 2 credits.) Recommended preparation: COSI 352, COSI 413, COSI 452A, and COSI 453.

COSI 452C. Graduate Clinical Practicum III: Special Populations. 1 Unit.
Addresses professional issues in speech-language pathology including case management, special clinical populations, collaborating with other professionals, teaming, leadership, and use of technology. Fifteen to thirty hours of clinic contact per week at area skilled nursing facilities, hospitals, rehab centers, early intervention centers, centers for developmentally disabled, private practices, etc. (Maximum of 2 credits.) Recommended preparation: COSI 352, COSI 452, COSI 452A, and COSI 453.

COSI 452E. Graduate Clinical Practicum V: Medical Speech Pathology. 1 Unit.
Addresses professional issues in speech-language pathology including case management, special clinical populations, collaborating with other professionals, documentation, managed health care, and use of technology. Fifteen to thirty hours of clinic contact per week at area skilled nursing facilities, hospitals. (Maximum of 2 credits.) Recommended preparation: COSI 352, COSI 452, COSI 452A, and COSI 452.

COSI 464. Case Studies in Communication Disorders: Diagnosis and Treatment. 3 Units.
Diagnosis as a clinical skill involving scientific hypothesis testing with clinical problem solving. The course includes academic learning combined with diagnostic clinic experiences. Overview of psychometric principles, survey of psychological communication tests, and measurements. Section on non-biased assessment. Instruction and practice in effective family interviewing techniques. Prereq: COSI 453 and COSI 456

COSI 470. Introduction to Audiology. 3 Units.
Disorders of hearing, assessment of hearing; including behavioral and objective measures; intervention strategies; and identification programs. Offered as COSI 370 and COSI 470. Prereq: COSI 325.

COSI 556. Language Disorders 2: Language and Literacy. 3 Units.
This course focuses on research-based theories of reading, cognition, language, and learning disorders in the school-age and adolescent student. Language development of the older child during the school age and adolescent years will be reviewed. Topics include the development of metalinguistic skills, the expanding lexicon, narration and discourse, and advances in syntax and morphology. The relationship of spoken language to literacy will be discussed. The course will examine common language, literacy and learning disabilities during the school age years. The student will explore interventions for word skills, reading decoding and comprehension, oral expression, vocabulary, and written languages as they apply to the Speech Language Pathologist. Assessment and intervention strategies for the school-age child and adolescent with a language/learning disorder are included. The class format includes lectures, discussions of case studies, and experiential learning through the observation of therapy with the school age/adolescent student. Prereq: COSI 456.

COSI 457. Acquired Neurogenic Communication Disorders. 3 Units.
This course is designed to provide knowledge about the theoretical foundations, etiologies, and characterizations of acquired language-based and cognitive-communication disorders in adults. The organization of the course is designed so that we will discuss communication disorders typically associated with left hemisphere lesions (e.g., aphasia), right hemisphere lesions (e.g., RHD), frontal lobe lesions (e.g., traumatic brain injury) and mesial temporal lesions (e.g., dementia). This course is intended to provide students with a framework for considering communication disorders of diverse medical etiologies rather than specific impairment types. The course is meant to provide information that can be used as a foundation for a clinically applied course in acquired language disorders. The course will focus on critical thinking, professional presentation (both oral and written), and critical consumption of research. Recommended preparation: Instructor consent for COSI 457 only. Offered as COSI 357 and COSI 457.

COSI 456. Child Language Disorders. 3 Units.

COSI 450. Medical Aspects of Speech Pathology I: Voice Disorders. 3 Units.
Aspects of normal and abnormal voice production, evaluation and management of various voice and resonance disorders.
COSI 561. Med Aspects of Speech Path II: Neumotor and Craniofacial Anomalies. 4 Units.
Speech disorders resulting from conditions acting on motor speech production including dysarthria and apraxia will be discussed. The speech production system, diseases and acquired and congenital neuropathological conditions that affect motor process and resulting speech disorders of phonation, articulation, resonance and prosody will be reviewed. Also covered will be the speech, language and hearing disorders stemming from craniofacial anomalies; cleft lip and palate. Principles and methods of assessment and treatment within an interdisciplinary rehabilitation framework will be reviewed for both types of disorders. Prereq: COSI 321 or COSI 421 and COSI 405 or equivalent.

COSI 562. Medical Aspects of Speech Pathology III: Dysphagia. 3 Units.
Course relates to medical speech-language pathology and includes analysis of clinical problems involving dysphagia in high risk populations. Course focus is on the anatomy and physiology of the normal swallow, dysphagia, early identification and prevention, the clinical swallow assessment, instrumental assessment and intervention in pediatric and adult populations.

COSI 580. Aural Rehabilitation. 3 Units.
The effects of hearing impairment, especially related to speech perception and language processing. Remediation and intervention strategies for hearing impaired children and adults, including speech reading, auditory training, and the use of hearing aids.

COSI 600. Special Problems and Topics. 1 - 3 Unit.
Topics and instructors by arrangement of the department chair.

COSI 601. Directed Study and Research. 1 - 6 Unit.
Individual study and research under the direction of a faculty member.

COSI 651. Thesis M.A.. 1 - 6 Unit.
Individual study and research under the direction of a faculty member.

COSI 690. Supervised Classroom Teaching. 3 Units.
Required of all doctoral students. Teaching of an undergraduate course planned in conjunction with a supervising faculty member. Follows the doctoral student's earlier experience of observing and assisting a faculty member in classroom teaching.

Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

PSCL Courses

PSCL 101. General Psychology I. 3 Units.
Methods, research, and theories of psychology. Basic research from such areas as psychophysiology, sensation, perception, development, memory, learning, psychopathology, and social psychology.

PSCL 102. General Psychology II. 3 Units.
The applications of psychological research in normal problems of adjustment. Topics include: coping with anxiety, romance and marriage, and interpersonal behavior.

PSCL 230. Child Psychology. 3 Units.
Basic facts and principles of psychological development from the prenatal period through adolescence. Recommended preparation: PSCL 101.

PSCL 282. Quantitative Methods in Psychology. 3 Units.
The theory and application of basic methods used in the analysis of psychological data. Not available for credit to students who have completed STAT 201 or ANTH 319. Counts for CAS Quantitative Reasoning Requirement.

PSCL 313. Psychology of Personality. 3 Units.
The development and organization of personality; theories of personality and methods for assessing the person; problems of personal adjustment.

PSCL 315. Social Psychology. 3 Units.

PSCL 317. Health Psychology. 3 Units.
Examines psychological processes that affect physical health. Covers the physiological factors affecting the immune system, chronic physical disorders, pain, compliance with prescribed medical treatments, the effects of stress and coping, the effects of the patient-physician interaction, and the psychological aspects of the hospital and the health care systems. Recommended preparation: PSCL 101.

PSCL 321. Abnormal Psychology. 3 Units.

PSCL 325. Psychotherapy and Personality Change. 3 Units.
Three methods of psychotherapy (behavioral, psychoanalytic, and client-centered) are discussed. The therapy techniques and the manner by which personality change is effected are examined. Recommended preparation: PSCL 101.

PSCL 329. Adolescence. 3 Units.
Psychological perspectives on physical, cognitive, and social development. Recommended preparation: PSCL 101.

PSCL 334C. Seminar and Practicum: Hospitalized Children. 3 Units.
Supervised field placement and attendance at staff conferences in various child and adolescent settings. Regular seminar meetings. Prereq: PSCL 230.

PSCL 335C. Seminar and Practicum: Hospitalized Child. 3 Units.
Supervised field placement and attendance at staff conferences in various child and adolescent settings. Regular seminar meetings. Prereq: PSCL 230 and Junior or Senior Status.

PSCL 338. Seminar and Practicum in Adolescents. 3 Units.
Supervised field placement and attendance in early childhood, child, and adolescent settings including preschools, schools, hospitals, and neighborhood centers. This class is used to fulfill requirements by the Ohio Department of Education teacher licensure program. Recommended preparation: PSCL 101, EDUC 301, EDUC 304, and permission of program director. Offered as EDUC 338, PSCL 338, and SOCI 338.

PSCL 344. Developmental Psychopathology. 3 Units.
This course will focus on the interplay of biological, psychological, familial, and social determinants of disorders ranging from autism to delinquency and bulimia. Recommended preparation: PSCL 230 or PSCL 321. Offered as PSCL 344 and PSCL 444.

PSCL 350. Behavior Genetics. 3 Units.
Examines the impact of both nature and nurture on human behavior. Basic quantitative genetic methodology will be covered. Current family, twin and adoption studies in the areas of personality, intelligence, alcoholism, criminality, and psychopathology will be reviewed. Recommended preparation: PSCL 101.
PSCL 352. Physiological Psychology. 3 Units.
This course is designed to teach the fundamentals of neural communication and central nervous system structure. Special attention is placed on common neurological illnesses and their psychopharmacological treatments. Neural systems underlying sensory/perceptual, motor, and higher-order cognitive processes are also explored. Prereq: PSCL 101.

PSCL 353. Psychology of Learning. 3 Units.
The basic methods in the study of learning. The major theories proposed to account for the learning process. Development of the fundamental concepts and principles governing the learning process in both humans and lower animal. Recommended preparation: PSCL 101.

PSCL 355. Sensation and Perception. 3 Units.

PSCL 357. Cognitive Psychology. 3 Units.

PSCL 369. Adult Development and Aging. 3 Units.
An overview of concepts and research relating to adult development and aging. The lifespan perspective will be used in examining major developmental paradigms. Personality and cognitive lines of development will be traced across the lifespan. Data from both longitudinal and cross-sectional studies will be analyzed. Both normal and pathological aging will be discussed. Special emphasis will be given to areas of cognitive deterioration in aging. Implications for optimal adult development and aging will also be discussed.

PSCL 370. Human Intelligence. 3 Units.
Survey of individual differences in human intellect including construction and administration of intelligence tests, theories and models of intelligence, and the role of heredity and environment in intelligence and the development of intelligence. This course will also examine the relationships of cognitive abilities to intelligence and human to artificial intelligence. Recommended preparation: PSCL 101.

PSCL 375. Research Design and Analysis. 3 Units.

PSCL 379. Neurodevelopmental Disabilities. 3 Units.
Ways in which neurobehavioral development can go awry, the causes of such deviations, and their consequences. The course builds on basic psychological and neuroscience concepts to explore the manner in which developmental disabilities occur, ways of preventing disabilities, and approaches to ameliorating and managing disabling conditions. Recommended preparation: PSCL 101 and PSCL 230.

PSCL 382. Psychological Measurement. 3 Units.

PSCL 388. Human Sexual Behavior. 3 Units.
Sex is approached as a form of personal and interpersonal behavior. A broad range of theories from social psychology will be used to explain human sexual behavior, and these will be evaluated by using facts and findings from recent research studies. Topics include sexual relationships, gender differences, promiscuity, rape and coercion, finding and choosing sex partners, sexual risk-taking, harassment, sexual identity and orientation, cultural influences and differences, evolution of sexual motivations, prostitution, pornography, and love. Prereq: PSCL 101 and PSCL 315.

PSCL 389. Emotion and Emotion Regulation. 3 Units.
This course will focus on academic research associated with emotional processes and emotion regulation. Specifically, we will answer questions like: What are emotions, and why are they important? How are emotions communicated, and how do researchers measure them? How do emotions influence one’s thinking ability, and visa-versa? What is emotion regulation? How do people differ in terms of their overall happiness and well-being, the degree to which they seek/avoid positive/negative experiences, and how they try to control their emotions? And what brain mechanisms are involved in emotional processing and emotion regulation? This course is also intended to help students read research in a thorough, critical manner, which may have a positive impact on students considering an academic career. Prereq: PSCL 101 and PSCL 352.

PSCL 390. Seminars in Psychology. 1 - 3 Unit.
Seminars of special subject areas. Topics vary in response to faculty and student interests. Small group discussion. Prerequisite depends on content.

PSCL 391. Psychology Capstone Research Using Data Archives. 3 Units.
In this course, each student will derive and address a research question by identifying and analyzing archived publicly available data. Successful completion of the course will require: training in ethical research involving human participants; a critical review of the literature on a specific area of psychology with the goal of creating a research question; identification of a set of variables in a publicly available data set that can be used to address the research question, a final written research report in a format acceptable for publication in a psychological research journal, and an oral presentation of the research. Counts as SAGES Senior Capstone. Prereq: PSCL 101 and PSCL 282 or equivalent (ANTH 319, STAT 201), and PSCL 375.

PSCL 392. Capstone: Positive Psychology and Character Strengths. 3 Units.
This seminar-based course is designed to provide a senior capstone experience in the area of positive psychology and character strengths. Students will focus on one specific character strength or positive psychology concept for the class project. The project will include a literature review and critique as well as a self-reflective component. Students will present their projects in two formats: a classroom-based lecture presentation and a literature review (15-20 pages). Class periods will include a blend of lecture, discussion, and student presentations. All students will be assigned to small groups for classroom-based discussions. Assignments are designed to help students develop their projects and will focus on self-reflection, literature review skills, and effective strategies for writing, presenting, and evaluating the work of others. Counts as SAGES Senior Capstone. Prereq: Students must be seniors.
PSCL 393. Experimental Child Psychology. 3 Units.
The development of behavior from birth to adolescence. Growth of basic processes such as perception, learning, memory, intelligence, and language in the light of current theoretical models. Recommended preparation: PSCL 101.

PSCL 394. Psychology Capstone Seminar: Current Problems. 3 Units.
This seminar course will revolve around the identification and critical examination of current problems in society. Insights gained from psychological research will be applied to better understand these problems. Successful completion of the course will require critical analysis of published research, integration of information from different areas of psychology and from different disciplines, an oral presentation, and a final written research report including a literature review. Counts as SAGES Senior Capstone. Prereq: PSCL 375.

PSCL 395. Capstone and Honors Program. 3 Units.
Supervision in carrying out an independent research study in the student's area of interest. Counts as SAGES Senior Capstone. Prereq: PSCL 375.

PSCL 396. Anxiety and Depression: Symptoms, Etiology, and Treatment. 3 Units.
A research-based and writing-intensive presentation of current knowledge regarding the symptoms, etiology, and treatment of anxiety disorders and mood disorders. Counts as SAGES Departmental Seminar.

PSCL 397. Independent Study. 1 - 3 Unit.
Individual study involving specific programs of reading, research, and special projects. Prereq: PSCL 101.

PSCL 398C. Child Policy Externship and Capstone. 3 Units.
Externships offered through CHST/ANTH/PSCL 398C give students an opportunity to work directly with professionals who design and implement policies that impact the lives of children and their families. Agencies involved are active in areas such as public health, including behavioral health, education, juvenile justice, childcare and/or child welfare. Students apply for the externships, and selected students are placed in local public or nonprofit agencies with a policy focus. Each student develops an individualized learning plan in consultation with the Childhood Studies Program faculty and the supervisor in the agency. Offered as CHST 398C, ANTH 398C, and PSCL 398C. Counts as SAGES Senior Capstone. Prereq: CHST 301.

PSCL 402. Cognition and Information Processing. 3 Units.
Aspects of cognition beyond the area of sensation and perception, involving symbolic processes, especially problems of meaning, conceiving, reasoning, judging, and thinking.

PSCL 403. Physiological Foundations of Behavior. 3 Units.
Fundamental neurological processes controlling behavior.

PSCL 404. Learning Theory. 3 Units.
The research literature in learning; theoretical formulations of contemporary learning theorists. Limited to graduate students.

PSCL 405. Personality Theory. 3 Units.
General problems and systematic points of view in the analysis of personality. Limited to graduate students.

PSCL 407. Research Design and Quantitative Analysis I. 3 Units.
Intermediate research design and statistical analysis used in psychological research. Statistical inference from single variables, elementary principles of probability, correlation and regression. Recommended preparation: PSCL 282.

PSCL 408. Research Design and Quantitative Analysis II. 3 Units.

PSCL 409. Advanced Social Psychology. 3 Units.
This seminar-based course provides a broad, graduate-level overview of the field of social psychology. The course draws on theory and basic research in social and personality psychology to teach basic principles of human nature that can be applied to daily life, research, and clinical/applied work. Major topic areas include the self (e.g., self-regulation; self-assessment), social cognition and relationships (e.g., social comparison; transgression), and group processes (e.g., social influence; prejudice). The interface between social and personality psychology will also receive attention.

PSCL 410. Developmental Psychology. 3 Units.
The research literature and theoretical formulation in the area of developmental psychology. Limited to graduate students.

PSCL 412. Measurement of Behavior. 3 Units.

PSCL 418. History and Systems. 3 Units.
Historical antecedents of modern psychology.

PSCL 424. Clinical Interviewing. 3 Units.
Introduction to diagnostic and therapeutic interviewing.

PSCL 425. Methods of Assessment I. 3 Units.
Limited to graduate students in clinical psychology. Recommended preparation: Graduate standing in psychology with department permission.

PSCL 426. Methods of Assessment II. 3 Units.
Methods of psychological assessment, emphasizing personality and family function in childhood and adulthood. Recommended preparation: Limited to Grad students in Clinical Psychology. Requires approval of the Director of Clinical Training.

PSCL 429. Practicum in Assessment I. 1 Unit.

PSCL 430. Practicum in Assessment II. 1 Unit.
Recommended preparation: Approval of the Director of Clinical Training or concurrent enrollment in PSCL 426.

PSCL 431. Supervised Field Placement Year 2. 0 Units.
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all second year students in the clinical psychology training program. Recommended preparation: PSCL 425, PSCL 426.

PSCL 444. Developmental Psychopathology. 3 Units.
This course will focus on the interplay of biological, psychological, familial, and social determinants of disorders ranging from autism to delinquency and bulimia. Recommended preparation: PSCL 230 or PSCL 321. Offered as PSCL 344 and PSCL 444.
PSCL 451. Special Topics in Psychology. 1 Unit.
These 1 credit mini-courses should provide enjoyable opportunities for students to explore interesting material related to clinical psychology that has not been covered in other required courses. A primary goal is to stimulate interest and discussion in the area. Thus, students will not be expected to write term papers or take any exams. In terms of background reading, students should be provided with roughly one journal article per hour of class meeting. The course is graded pass/no pass, and grading will be based on class attendance and class participation.

PSCL 453. Seminars in Psychology. 1 - 3 Unit.
A special problem or topic. Content varies with student and faculty interest. Recent offerings: creative thinking in research, community psychological evaluation of community processes, experimental and computer methods, consultation, and psychoanalytic ego psychology.

PSCL 469. Psychology of Aging. 3 Units.
Normal psychological development in later life; psychological development in the oldest old; definitions and assessment of successful aging.

PSCL 497. Graduate Independent Study. 1 - 9 Unit.
Independent research and reading programs with individual members of the faculty.

PSCL 501. Seminar: Pediatric Psychology. 1 - 3 Unit.
Seminar on current research topics, research design and methodological issues related to pediatric psychology. Introductory lectures provide an overview of research populations, methods, and practical issues appropriate to research with pediatric populations.

PSCL 502. Seminar: Pediatric Psychology. 1 - 3 Unit.
Seminar examining specific topics in pediatric psychology. Topics will deal with issues of infant development. Infants at risk for disability, neuropsychology and learning disabilities, and childhood psychopathology. Recommended preparation: Limited to Graduate students in Psychology department.

PSCL 510. Psychology and Diversity. 3 Units.
Diversity and multiculturalism in psychological theory, research and practice.

PSCL 524. Advanced Psychopathology. 3 Units.
Theoretical issues and current research data bearing on major patterns of psychological disturbance.

PSCL 525. Ethical and Professional Issues in Psychology. 3 Units.
Consideration of legal and ethical principles in research and practice in clinical psychology and contemporary controversies in professional psychology. Recommended preparation: Graduate standing in Psychology

PSCL 529A. Practicum in Intervention I: Behavior Therapy. 1 Unit.
Recommended Preparation: Graduate standing in clinical psychology.

PSCL 529C. Practicum in Intervention I: Psychodynamic. 1 Unit.
Recommended preparation: Graduate standing in clinical psychology.

PSCL 530A. Practicum in Intervention II: Behavior Therapy. 1 Unit.
Recommended preparation: Graduate standing in clinical psychology.

PSCL 530C. Practicum in Intervention II: Psychodynamic. 1 Unit.
Recommended preparation: Graduate standing in clinical psychology.

PSCL 531A. Seminar in Intervention I: Behavior Therapy. 2 Units.
Theoretical issues and research on psychological interventions. Recommended preparation: Graduate standing in clinical psychology.

PSCL 531B. Seminar in Intervention I: Psychodynamic. 2 Units.
Theoretical issues and research on psychological interventions. Recommended preparation: Graduate standing in clinical psychology.

PSCL 532A. Seminar in Intervention II: Behavior Therapy. 2 Units.
Theoretical issues and research on psychological interventions. Recommended preparation: Graduate standing in clinical psychology.

PSCL 532C. Seminar in Intervention II: Psychodynamic. 2 Units.
Theoretical issues and research on psychodynamic intervention. Recommended preparation: PSCL 531C and graduate standing in clinical psychology.

PSCL 535. Child and Family Intervention. 2 Units.
A course for advanced clinical graduate students that covers psychodynamic and cognitive behavioral approaches for working with children and adolescents and systems approaches for working with families.

PSCL 536. Advanced Child and Family Intervention. 2 Units.
A course for advanced clinical graduate students that covers evidence-based approaches to child and family therapy as well as parent training. Special emphasis on empirically guided treatment planning and outcome evaluation.

PSCL 537. Child and Family Case Seminar I. 1 Unit.
Clinical graduate students in child and family field placements present and receive group supervision on ongoing cases.

PSCL 538. Child and Family Case Seminar II. 1 Unit.
Clinical graduate students in child and family field placements present and receive group supervision on ongoing cases.

PSCL 539. Supervised Field Placement Year 3. 0 Units.
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all third year students in the clinical psychology training program. Recommended preparation: PSCL 531A, PSCL 532A.

PSCL 540. Supervised Field Placement Year 4. 0 Units.
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all fourth year students in the clinical psychology training program. Recommended preparation: PSCL 531A, PSCL 532A.

PSCL 601. Special Problems. 1 - 18 Unit.
(Credit as arranged.)

PSCL 651. Thesis M.A.. 1 - 18 Unit.
(Credit as arranged.)

PSCL 700. Internship. 0 Units.
Full-time predoctoral internship in clinical psychology. Required of all students in clinical psychology program. Registration requires written consent of director of clinical psychology training and must be for one calendar year.

(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Religious Studies

The academic study of religion at Case Western Reserve University is multicultural, non-sectarian, and both disciplinary and interdisciplinary. Students examine a range of past and present cultures and societies using methods and approaches drawn from the humanities, arts, social sciences, and sciences, all of which sharpen critical and evaluative skills. Religious beliefs, institutions, and practices are studied with emphasis
placed on the critical problems and possibilities inherent in current theories, methods, and technologies.

The Department of Religious Studies offers both undergraduate (Bachelor of Arts) and graduate (Master of Arts) degrees. Undergraduates may pursue either a major or minor in the department; outstanding students may apply to the departmental honors program. Both the major and minor programs acquaint students with significant religious texts and traditions and with the cultures and societies in which these traditions are grounded. Majors are encouraged to participate in study abroad programs.

Where appropriate, courses are designed to utilize Internet and other technological resources, cultural institutions in University Circle, and the cultural diversity of Greater Cleveland. Several 300-level courses may be taken for graduate credit by fulfilling additional course requirements. The Department of Religious Studies also contributes courses to and supports a number of the college’s interdisciplinary programs and centers, such as Asian Studies, Environmental Studies, Ethnic Studies, Women’s and Gender Studies, International Studies, and Judaic Studies.

The academic study of religion, combined with appropriate courses in other fields, provides an excellent background for any professional career that involves interaction with diverse populations—including law, engineering, medicine and health care professions, journalism, and social work—and for graduate studies in a number of fields. A major in religious studies provides a well-rounded liberal arts education or can be combined conveniently with a second major. A minor in religious studies complements and broadens any field chosen as a major.

**Undergraduate Programs**

**Major**

Students majoring in religious studies must complete a minimum of 30 semester hours. Requirements for the major are as follows:

- **RLGN 102** Introduction to the Study of Religion * 3
- **RLGN 299** Method and Theory in the Study of Religion & RLGN 399 and Major/Minor Seminar 6

Seven courses dealing with the academic study of religion ** 21

| Total Units | 30 |

* RLGN 102 Introduction to the Study of Religion introduces students to various approaches to the academic study of religion, including (but not limited to) sociological approaches, cultural/anthropological approaches, and psychological approaches. It also introduces students to at least four different religious traditions.

** Subsequent course selections (totaling 21 credit hours) will be determined in consultation with the student’s major advisor and should display some diversity in themes and topics. Up to six of these credit hours may be taken outside the Department of Religious Studies, provided that the courses relate to the overall character of the major.

**Departmental Honors**

Majors who have an overall grade point average of 3.5 and a grade point average of 3.5 in religious studies courses may apply to the honors program. Such students should take RLGN 299 Method and Theory in the Study of Religion in the fall semester and RLGN 395 Honors Research II (instead of RLGN 399) in the spring semester of the senior year. During the fall semester, the student will work with an honors advisor to prepare a proposal to be approved by the department no later than the end of the first semester. Departmental honors are awarded upon completion and satisfactory defense of the senior project before a faculty committee, provided that the required grade point averages are maintained.

**Minor**

A minor in religious studies requires at least 18 credit hours, to include the following:

- **RLGN 102** Introduction to the Study of Religion 3
- **RLGN 299** Method and Theory in the Study of Religion & RLGN 399 and Major/Minor Seminar 6

Nine hours of elective credit * 9

| Total Units | 18 |

* The nine hours of elective credit hours are chosen in consultation with a departmental advisor. The courses should demonstrate study of diverse religious traditions.

**General Information**

The department offers a graduate program leading to a Master of Arts degree in Religious Studies. This two-year program concentrates on method and theory in the study of religion. The MA is designed to give students from a variety of backgrounds a solid foundation in the methods used in the contemporary study of religion.

Department Faculty

Peter J. Haas, PhD
(Brown University)
Abba Hillel Silver Professor of Jewish Studies and Chair; Director, Judaic Studies Program
Jewish literature and thought; Western religions; science and religion; religion and culture

Timothy K. Beal, PhD
(Emory University)
Florence Harkness Professor of Religion
Biblical studies; Near Eastern studies; environmental studies; religion and culture; gender studies

Joy R. Bostic, PhD
(Union Theological Seminary)
Associate Professor
African-American religion; women and religion; U.S. urban religion

William E. Deal, PhD
(Harvard University)
Severance Professor in the History of Religion
Buddhism; East Asian religions; method and theory; religion and culture; cognitive science of religion and ethics

Justine Howe, PhD
(Northwestern University)
Assistant Professor
Anthropology of religion; Islamic studies

Deepak Sarma, PhD
(University of Chicago)
Professor
Hinduism; Indian philosophy; philosophy of religion; method and theory

Lecturers

Ramez Islambouli, MA
(Case Western Reserve University)
Full-time Lecturer
Islam; Islamic thought, Islamic law

Judith Neulander, PhD
(Indiana University)
Full-time Lecturer
Folklore, mythology; Jewish popular culture

Courses

RLGN 102. Introduction to the Study of Religion. 3 Units.
Introduction to the academic study of religion and of the religious dimensions of life. Open to all students but prerequisite for majors and minors in religious studies. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 108. The History of Yoga: The Yoga of Transformation and the Transformation of Yoga. 3 Units.
In this class we will investigate the history and context of yoga. We will first examine yoga as a transformative disciplined practice through close study of primary sources. Next we will focus on Yoga as presented in Patanjali's Yoga Sutras. We will then examine the ways and extent to which yoga has been transformed in both India and outside of India. To this end we will scrutinize the development of American(ized) "Yoga." We will address the legal complexities concerning ownership and appropriation as well as those concerning the teaching of "Yoga" in public schools and the establishment clause of the First Amendment. We will also devote several classes to actual yoga experiences where the students can learn some asana (postures) and movements. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 190. Sacred Space in Western Religions. 3 Units.
A significant problem facing all three of the great western religious traditions -- Judaism, Christianity and Islam -- is how to establish a sacred space on earth for the worship of a deity which cannot be contained. In many ways, architectural and artistic decisions about the location, internal layout, orientation and other features of such sacred spaces reflect deep presuppositions in each religion about the divine and how worship is to be effected in a human context. This course will be based around visits to a number of religious buildings to examine how one might understand and interpret such spaces. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 204. Introduction to Asian Religions. 3 Units.
Principal Asian religious traditions based on a study of classical sources. Classical Chinese thought, Hinduism, and Buddhism. Readings include selections from the works of Confucius, Mencius, Mo Tzu, Lao Tzu, Chuang Tzu, the Mahabharata, the Bhagaavad Gita, and the early Buddhist canon. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 206. Religion and Ecology. 3 Units.
Historical and cross-cultural introduction to religious perspectives on nature and ecology, including Jewish, Christian, Hindu, Buddhist, and Native American texts and ritual practices. Themes include: ecology of chaos and complexity, urban ecology, wilderness, and ecological crises. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 207. Women and Religion. 3 Units.
Examination of feminist perspectives on religion, such as the status of women in Western and non-Western religions, the nature and purpose of religious beliefs and practices from the standpoints of religious and non-religious feminists, the current status of feminist philosophies of religion, and the efforts of feminists to transform traditional religions and to create new religions. Offered as RLGN 207 and WGST 207.

RLGN 208. Introduction to Western Religions. 3 Units.
Basic introduction to the three great monotheistic religions of the Western World: Christianity, Judaism, and Islam. All three of these religious traditions trace their roots to the faith of biblical Israel as revealed by a series of prophets including Noah, Abraham, and Moses. Each absorbed the philosophy and science of the Greco-Roman world and went on both to influence and struggle with each other. Many of the religious problems of the contemporary world, from Afghanistan to the Middle East to Yugoslavia, can be traced to tension within and between these religious groups. Offered as RLGN 208 and JDST 208. Counts for CAS Global & Cultural Diversity Requirement.
RLGN 209. Introduction to Biblical Literature. 3 Units.
This course is an introduction to the academic study of biblical literature, including Hebrew Scriptures ("Old Testament") and the New Testament. The literature will be studied in light of both ancient and contemporary historical contexts, with a particular emphasis on the roles it plays in American culture and politics today. Class sessions will be discussion oriented and will involve close, careful analysis and interpretation of texts. No background in religion is necessary. Evaluation will be based on class preparation and participation, regular short writing assignments, two exams, and a major paper.

RLGN 211. Great Books of Western Religion. 3 Units.
Students will engage with the major writings that have shaped Western religious traditions (Christianity, Judaism, Islam) from their earliest expressions until the present day. Readings include the foundational Scriptures (Hebrew Bible, New Testament, Quran) of each tradition, religious poetry and other writings from the Middle Ages, and modern writers on spirituality and religiousness within each of these traditions. The course will be conducted as a seminar, in which students will read the selected original texts and will discuss their religious and spiritual meaning and significance in class. Each student will also prepare a final project based on the assigned authors or readings. Offered as RLGN 211 and JDST 211.

RLGN 212. Introduction to Christianity. 3 Units.
An introduction to the history, thought and culture of Christianity and its diverse traditions. Course will include field research with local Christian religious institutions.

RLGN 214. Introduction to Islam. 3 Units.
This course is an introduction to the beliefs, practices, sacred texts, and intellectual traditions of Islam. We will approach the many dimensions of Islam from the perspectives of religious studies. Our goal is to develop a foundational understanding of the core aspects of Islam, while critically analyzing how these features have been understood in Western academic discourse. Throughout the term, we will examine major developments in the history of Islam, underscoring the dynamic changes that the tradition has undergone in its 1400+ year history. We will also investigate how Muslim institutions developed in relation to diverse socioeconomic and cultural conditions, including Africa, the Americas, the Middle East, and Europe. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 215. Religion In America. 3 Units.
Survey of religious histories in North America, from the trans-Bering migrations to the present. Drawing from a variety of approaches such as social history, ritual studies, and institutional and doctrinal histories, this course charts the religious development of various groups including Native Americans, African Americans, Euro-Americans, and others. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 216. Hinduism I: The Vedic, Epic and Puranic Periods. 3 Units.
This course will provide an introduction to the Vedic, Epic and Puranic periods in the development of Hinduism. We will read a range of primary sources produced during these times. These texts were composed between 1500 BCE and the 5th century CE. The course has an emphasis on research and writing. We will not be examining contemporary issues or practice. The goal of the class is to gain detailed understanding of the kind of world(s) that were envisioned in these forms of early "Hinduism." Counts for CAS Global & Cultural Diversity Requirement.

RLGN 217. Buddhism. 3 Units.
Buddhism is an important world religion that originated in India around 500 BCE. Subsequently, Buddhism spread to Central and East Asia. More recently, Buddhist traditions have been established in Europe and North America. Like Christianity and Islam, Buddhism is considered a "missionary" religion because its message has been actively propagated in cultural contexts outside its place of origin. Buddhist ideas and concepts have not only inspired religious practice, but have often provided the foundation for political, social, ethical, literary, artistic and other modes of cultural expression. It is, therefore, difficult to understand those Asian cultures in which Buddhism is or has been important without understanding this religious tradition itself. This course examines concepts, symbols, and institutions central to Buddhist religious practice throughout its 2500 year history. We will focus on the Theravada and Mahayana Buddhist traditions as they developed in India, on the development of Pure Land and Zen traditions in China and Japan, and on Tibetan Buddhist traditions. We will also consider Buddhist perspectives on contemporary ethical issues. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 218. Islam: Faith and Politics. 3 Units.
An overview of the relationship between Islam as a religion and Islam as a political system and the effect of this relationship on Islamic society from its origin to the present time. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 219. Islam in America. 3 Units.
The United States is home to one of the most diverse Muslim communities in the world. Using a variety of primary and secondary sources, this course examines the rich history of Islam in the United States, from the 18th century to the present, as it relates to key moments within American politics, religion and culture, and to transnational developments in Islamic thought and practice. We will also explore important issues within contemporary Muslim communities, including gender, shari'a, and religious pluralism. In addition to studying the experiences of Muslim immigrants, students will also investigate the vital role of African-American Muslims and converts in the development of American Muslim institutions, beliefs and rituals. This course will also introduce students to the history of Islam in Cleveland, and provide them with the opportunity to contribute to original research on Muslim communities in our city. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 221. Indian Philosophy. 3 Units.
A survey of Indian philosophical thought with emphasis on the Vedas, early Hindu, and Jain literature. Offered as PHIL 221 and RLGN 221. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 222. African-American Religions. 3 Units.
This course is an exploration of the rich diversity of African American religions from the colonial period to the present. Attention will be given to key figures, institutional expressions, and significant movements in African American religious history. Major themes include African traditions in American religions, slavery and religion, sacred music, social protest, Black Nationalism in religion, Islam, African American women and religion, and black and womanist theologies. Course requirements will include field trips to local religious sites. Offered as ETHS 222 and RLGN 222. Counts for CAS Global & Cultural Diversity Requirement.
RLGN 223. Religious Roots of Conflict in the Middle East. 3 Units.
The course is about the rhetoric and symbols used by various voices in the Middle East in the ongoing debate about the future shape of the region. For historical and cultural reasons, much of the discourse draws on religious symbolism, especially (although not exclusively) Islamic, Jewish, and Christian. Because of the long and complex history of the region and the religious communities in it, virtually every act and every place is fraught with meaning. The course examines the diverse symbols and rhetorical strategies used by the various sides in the conflict and how they are understood both by various audiences within each community and among the different communities. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 232. DESI: Diaspora, Ethnicity, Southasia(n), Interrogate. 3 Units.
In this class, we will interrogate the cultural identity(ies) and imagined community(ies) of the "South Asian" Diaspora. We will first examine taxonomy and categorization itself, as a methodological, philosophical, and political enterprise. We will then examine how such contradicted categories have been applied to the so-called desis, loosely and broadly understood as members of the South Asian Diaspora. To this end, we will scrutinize the development of American(ized) "Hinduism," the imagined location that desis have in North American racial and ethnic hierarchies, and the construction of assimilated, enculturated, and transnational imagined desi communities. Offered as RLGN 232, ETHS 232 and HSTY 232. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 233. Introduction to Jewish Folklore. 3 Units.
Exploration of a variety of genres, research methods and interpretations of Jewish folklore, from antiquity to the present. Emphasis on how Jewish folk traditions and culture give us access to the spirit and mentality of the many different generations of the Jewish ethnic group, illuminating its past and informing the direction of its future development. Offered as ANTH 233, RLGN 233, and JDST 233. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 235. Religion and Visual Culture. 3 Units.
Cross-cultural introduction to complex relations between religion and seeing. Study of visual culture, sacred iconography, calligraphy, film, mass media, and avant-garde fashion. Extensive use of cultural resources in University Circle. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 237. Religion and Dance in South Asia. 3 Units.
This is an experimental interdisciplinary course in religion, dance, and South Asian studies. We will explore the performance of religion in bharata natyam, one storytelling dance form from South Asia. This dance style draws upon Hindu devotional (bhakti) allegories of sacred and profane love in its choreography. Lover and beloved, as the ideal relationship between God and the human, becomes the model for the performed relationship between heroes and heroines (nayaka-nayaki) danced on stages and, more recently, Bollywood screens. To this end, we will examine primary and secondary sources on bharata natyam and aesthetic theory/classical dramatics. We will also observe dance performances in the greater Cleveland area. Offered as RLGN 237 and DANC 237.

RLGN 238. Alternative Altars: Folk Religion in America. 3 Units.
Taking a multidisciplinary approach, students will become familiar with the distinction between conventional and unconventional religions, with the history and personalities associated with new belief systems in America, and with the means, motivations and methods of generating faith communities. Students will come to understand the role of cultural anxieties, new technologies, changing roles, globalization and other social tensions in the formation and duration of alternative altars. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 240. The Heavens in Religion and Science. 3 Units.
Review of the relationships between scientific descriptions of the natural world and the religious and ethical implications drawn from those in Western civilizations. Introduction to the close cooperation between religion and science in the West until the modern period and review of the breakdown of that relationship in the past 200 years. Counts as SAGES Departmental Seminar.

RLGN 251. Perspectives in Ethnicity, Race, Religion and Gender. 3 Units.
This course is designed to introduce students to the study of ethnicity. Basic concepts such as race, gender, class, and identity construction will be examined. Students are encouraged to use the tools and perspectives of several disciplines to address the experiences of ethnic groups in the United States. Offered as ETHS 251 and RLGN 251. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 254. The Holocaust. 3 Units.
This class seeks to answer fundamental questions about the Holocaust: the German-led organized mass murder of nearly six million Jews and millions of other ethnic and religious minorities. It will investigate the origins and development of racism in modern European society, the manifestations of that racism, and responses to persecution. An additional focus of the course will be comparisons between different groups, different countries, and different phases during the Nazi era. Offered as HSTY 254, RLGN 254, ETHS 254, and JDST 254. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 260. Introduction to the Qur'an. 3 Units.
This course is an introduction to the Qur'an. For Muslims, the Qur'an is the inimitable word of God, and its influence has been both far-reaching and profound in various historical contexts. It introduces students to the text of the Qur'an, in English translation, providing a window into both Muslim interpretations of their scripture (from the early days of Islam to the present) and academic studies of the text. Students will approach the Qur'an as a living document, as text that is continually re-visited and re-interpreted by Muslims, and used in various ritual contexts and in daily life. This course will explore theological and legal dimensions of the Qur'an, touching on issues of God's nature, Islamic ethics, the foundations of Islamic law, and gender roles. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 265. Malcolm and Martin. 3 Units.
An examination of the lives, religious thought, and ideological frameworks of Malcolm X and Martin Luther King, Jr. The course will investigate Malcolm X and Martin King’s religious beliefs and activist strategies; the ideas and strategies of other civil rights and Black Nationalist leaders who influenced and challenged Martin and Malcolm’s ideas on race, gender, class, and sexuality; and the historical antecedents for these strategies within nineteenth-century black religious, social, and political movements. Their impact on modern African American religious thought, American political culture, and international human rights movements will also be explored. Offered as ETHS 265 and RLGN 265. Counts for CAS Global & Cultural Diversity Requirement.
RLGN 268. Women in the Bible: Ethnographic Approaches to Rite and Ritual, Story, Song, and Art. 3 Units.
Examination of women in Jewish and Christian Biblical texts, along with their Jewish, Christian (and occasionally Muslim) interpretations. Discussion of how these traditions have shaped images of, and attitudes toward, women in western civilization. Offered as RLGN 268, WGST 268, and JDST 268.

RLGN 270. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Counts for CAS Global & Cultural Diversity Requirement. Prerequisite: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

RLGN 272. Morality and Mind. 3 Units.
Recent research in cognitive science challenges ethical perspectives founded on the assumption that rationality is key to moral knowledge or that morality is the product of divine revelation. Bedrock moral concepts like free will, rights, and moral agency also have been questioned. In light of such critiques, how can we best understand moral philosophy and religious ethics? Is ethics primarily informed by nature or by culture? Or is ethics informed by both? This course examines 1) ways in which cognitive science--and related fields such as evolutionary biology--impact traditional moral perspectives, and 2) how the study of moral philosophy and comparative ethics forces reconsideration of broad cognitive science theories about the nature of ethics. The course examines the concept of free will as a case study in applying these interpretive viewpoints. Interdisciplinary readings include literature from moral philosophy, religious ethics, cognitive science, and evolutionary biology. Offered as COGS 272, RLGN 272.

RLGN 273. Religion and Healing in the United States. 3 Units.
A cross-cultural exploration of the relationships between religion, health and healing in the United States. Through an interdisciplinary approach that includes religious studies, medical anthropology and ethnic/gender studies, the course investigates how persons interpret illness and suffering. Attention is also paid to how different groups utilized, or are served by, the health care system. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 280. Religion and Politics in the Middle East. 3 Units.
An in-depth look at the relationship between politics and religion in the Middle East. Students will spend the first week on the CWRU campus and the last three weeks in Israel, where time will be divided between classroom teaching, guest lectures, and “field trips” to important sites. Students will have the opportunity to interact directly with members of the region’s diverse religious groups within the political, social, and cultural contexts in which they live. A final research paper will be required. Knowledge of Hebrew is not necessary. Offered as JDST 280 and RLGN 280. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 283. Muhammad: The Man and the Prophet. 3 Units.
The life of the Prophet Muhammad (c.470-632 CE) which was as crucial to the unfolding Islamic ideal as it is today. An examination of how he attempted to bring peace to war-torn Arabia by evolving an entirely new perspective of the human situation, guidance for human lives, and humans’ relationship with God. The course will include Western perceptions of Islam, especially in light of September 11, 2001. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 284. Jesus Through Islamic Lens. 3 Units.
An introduction to an image of Jesus little known outside Arabic Islamic culture. It is an image that might be of interest to those who wish to understand how Jesus was perceived by a religious tradition which greatly revered him but rejected his divinity. The course will draw from various Islamic texts to provide a comprehensive selection of excerpts pertaining to the life and moral teachings of Jesus. Approaching Christ from an Islamic perspective, this course will offer the students a rare opportunity to understand the significance of Jesus in Islam and to gain a better understanding of the Islamic faith, not only as it contrasts with Christianity but also as it compares. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 299. Method and Theory in the Study of Religion. 3 Units.
This is an advanced course in method and theory in the study of religion and is designed for majors in religious studies. The goal is to strengthen the foundation in religious studies first obtained in RLGN 102 and to prepare students for projects to be completed and presented during the second semester in RLGN 399. (or RLGN 395 for honors). Class time will be devoted to lectures and discussions of a variety of authors, methods and topics. Particular readings will be assigned by the designated instructor. Students are expected to attend class regularly, complete assigned reading and participate in class discussions. Prerequisite: RLGN 102 and 9 credits in other RLGN courses.

RLGN 301. Ritual in Religion. 3 Units.
Drawing from a broad range of approaches and academic fields, this seminar offers an introduction to the study of ritual. The course has three main goals: (1) to help students become familiar with important theories of and approaches to ritual studies; (2) to explore a number of ritual practices from different cultures, from ancient priestly rites in the Bible to contemporary cockfights in Bali; and (3) to study and discuss several representations of ritual in contemporary literature and film.

RLGN 304. Representations of Black Women and Religion in Film. 3 Units.
In this course we will explore cinematic representations of black women and religion in film. Each week we will view a film in class. We will begin the class with the film Imitation of Life and then the course with The Help. Throughout the course we will analyze the ways in which notions of gender, sexuality, intimate violence, and modern notions of race and color, have informed representations of black women and religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas about black women in the Americas. Offered as RLGN 304, RLGN 404, WGST 304, and ETHS 304. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 305. Sanskrit Religious Texts. 3 Units.
Introduction to the Sanskrit language and culture through the reading of selected texts taken from the ancient religions of South Asia. Offered as CLSC 305 and RLGN 305.

RLGN 306. Interpreting Buddhist Texts. 3 Units.
Readings in translation of major texts from the Buddhist tradition. Special emphasis on problems of textual interpretation, historical context, Buddhist conceptions of the sacred, and Buddhist ethics. Counts for CAS Global & Cultural Diversity Requirement.
RLGN 309. Advanced Sanskrit Religious Texts. 3 Units.
This class is a continuation of RLGN 305/CLSC 305, the introduction to the Sanskrit language and culture. In RLGN 309/CLSC 309 students will learn advanced Sanskrit grammar and syntax. Previous knowledge of Sanskrit is required. We will finish the lessons from Devavanipravesika that we began in the introductory course. We will then translate sections for the Bhagavad Gita. Offered as CLSC 309 and RLGN 309. Prereq: RLGN 305 or CLSC 305.

RLGN 310. Cognitive Science of Religion. 3 Units.
This course introduces theories and methods in the cognitive science of religion. Particular emphasis is placed on applying cognitive scientific concepts and theories to such religious issues as belief in deities, religious ritual, and morality. We examine such topics as the relationship of religious studies to evolution and cognition, cognitive theories or religious ritual, anthropomorphism and religious representation, religion as an evolutionary adaptation, and cognitive semantics and religious language. Course work includes student-led discussions, a research-intensive journal-length essay on a topic chosen in consultation with the Instructor, and presentation of research findings to the class. Course readings are taken from the humanities, the social sciences, and natural sciences. Offered as: COGS 310, COGS 410, RLGN 310, RLGN 410.

RLGN 311. Representations of Black Religion in Film. 3 Units.
In this course we will explore cinematic representations of black religion in the Americas and the Caribbean. Each week we will view a film representing diverse religious traditions such as Christianity, Candomble, Santeria, Vodou, and Islam. Films will include Cabin in the Sky, The Color Purple, Black Orpheus, The Serpent and the Rainbow, Malcolm X, Eve’s Bayou, and The Princess and the Frog. Throughout the course we will analyze the ways in which notions of gender, the history of colonialism, modern notions of race, and geographical landscapes have informed representations of black religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas of black religion in the Americas. Offered as RLGN 311, ETHS 311, and RLGN 411. Prereq: RLGN 222 or ETHS 251 or ENGL 367 or by permission of Instructor.

RLGN 312. The Mythical Trickster. 3 Units.
Few literary figures have as wide a distribution, and as long a history, as the mythical Trickster. He is at once sacred and profane, creator and destroyer; an incorrigible duper who is always duped. Free of social and moral restraints he is ruled instead by passions and appetites, yet it is through his unprincipled behavior that morals and values come into being. How are we to interpret this amazing creature? Using folkloristic theories and ethnographic methods, we will come to understand the social functions and symbolic meanings of the cross-cultural Trickster, over time and across space. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 313. Topics in Biblical Literature:. 3 Units.
A departmental "topics" seminar focused on advanced textual analysis and interpretation of particular biblical (including apocryphal) texts and the critical issues of method, theory, theology, and history that pertain to those texts. Reading assignments will be divided between close, exegetical analysis of small units of texts and the study of scholarly criticism of the same texts (commentaries, journal articles, critical notes). Evaluation will be based on class preparation and participation, weekly short papers, an exegetical paper focused on a particular pericope of the student's choice, and an interpretive paper based on exegesis of several related passages. Graduate students enrolled in the course as RLGN 413 will have the following additional requirements: (a) preliminary academic reading on the biblical material; (b) leadership/teaching of one seminar session on an academic theoretical or theological approach to the biblical text, including an additional meeting with the professor in preparation for that session; and (c) a longer final paper that critical engages the approach that was the focus of the seminar session s/he leads (15-20 pages, suitable for publication at an academic conference). Offered as RLGN 313 and RLGN 413. Prereq: RLGN 209 or permission of instructor.

RLGN 314. Mythologies of the Afterlife. 3 Units.
This course provides a multidisciplinary approach to the idea of an afterlife, and its manifestation in diverse cultures. We will examine the way varying views of the afterlife influence religion, popular culture and palliative care, and how human creativity has shaped the heavens, hells, hauntings and holidays of diverse populations over time and across space. Students will come to see the afterlife as an integral part of human history and experience, not only because it helps people die with better hope, but because it helps them to live more richly. Offered as RLGN 314 and JDST 314.

RLGN 315. Heresy and Dissidence in the Middle Ages. 3 Units.
Survey of heretical individuals and groups in Western Europe from 500-1500 A.D., focusing on popular rather than academic heresies. The development of intolerance in medieval society and the problems of doing history from hostile sources will also be explored. Offered as HSTY 315 and RLGN 315. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 319. The Crusades. 3 Units.
This course is a survey of the history of the idea of "crusade," the expeditions of Western Europeans to the East known as crusades, the Muslim and Eastern Christian cultures against which these movements were directed, as well as the culture of the Latin East and other consequences of these crusades. Offered as HSTY 319 and RLGN 319. Counts for CAS Global & Cultural Diversity Requirement.
RLGN 321. Advanced Indian Philosophy. 3 Units.
We will closely examine a limited number of texts in Jain, Hindu, and/or Buddhist philosophy. Our concern will be the methods, presuppositions, arguments, and goals of these schools and trajectories of thought. What were their theories on the nature of the person, the nature of reality, and the nature and process of knowing? What were the debates between the schools and the major points of controversy? We will spend the majority of time analyzing the arguments or positions as they are found in primary texts (in translation). We will rely on the primary sources found in Sarma Introduction to Classical Indian Philosophy as well as PDFs provided by the instructor. Students will read texts out loud in class and will be expected to comment on the passage or passages. Students are expected to use outside sources in their preparations. The goal of the class is to continue to learn how to make and write arguments against (or in support of) the various positions using the prasangika (reductio ad absurdum) method. The papers are rigorous ones and require the student to present the position and then to posit arguments against it, finding internal incoherences. This is a writing-intensive class. Students will continue to learn how to write as per the genre of Indian philosophy. 
Offered as RLGN 321 and PHIL 321. Prereq: RLGN 221 or PHIL 221.

RLGN 324. Landscapes and Pilgrimages: Spatial Theory in the Study of Religion. 3 Units.
This course employs spatial approaches and theories to examine the religious praxis and identities of individuals and communities. Working notions of space include physical, socio-political, cultural, imaginative, and ritual dimensions. We will examine the themes of mapping, memory and movement related to religious landscapes and geographies as well as issues related to social justice, gender, race, power, difference, and ecology. We will also investigate the spatial practices of individuals and communities. These practices may include pilgrimage to, and construction of, religious sites, ritual procession, walking, devotional practices, community activism, and artistic endeavors. Course requirements include student participation in field excursions to religious sites and spaces in the Cleveland area and the development of a photo essay or a mixed media project related to religious space. 
Offered as RLGN 324 and RLGN 424.

RLGN 325. Justice, Religion, and Society. 3 Units.
The ways in which several 20th-century American religious figures, both North and South American, have interpreted their religion as requiring them to struggle for a better society by using direct action to deal with issues of poverty, peace, and social justice. Introduction to writings of prominent social justice activists such as Dorothy Day, Daniel Berrigan, Thomas Merton, and others. Course includes service learning within the Cleveland area via association with structured institutions and programs engaged in social justice and urban poverty issues in order to investigate these from the inside.

RLGN 330. Classical Jewish Religious Thought. 3 Units.
The thought of some major biblical and Rabbinic writings and of the classic age of medieval Jewish philosophy. Offered as J DST 330, PHIL 332, and RLGN 330.

RLGN 333. Philosophy of Religion. 3 Units.
Topics include: classical and contemporary arguments for God’s existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433. 
Prereq: PHIL 101 or RLGN 102.

RLGN 338. Black Women and Religion. 3 Units.
This course is an exploration of the multidimensional religious experiences of black women in the United States. These experiences will be examined within particular historical periods and across diverse social and cultural contexts. Course topics and themes include black women and slave religion, spirituality and folk beliefs, religion and feminist/womanist discourse, perspectives on institutional roles, religion and activism, and spirituality and the arts. Offered as: ETHS 339 and RLGN 338 and WGST 339. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 342. Mysticism: Sources, Methods, and Traditions. 3 Units.
Through an interdisciplinary approach that includes literary, historical and sociological methods, the course examines the history of Christian mysticism and the selected writings of mystics from diverse Christian traditions. We will explore the social and religious contexts in which these mystics speak, write and act; their impact on social, religious and political movements; and how perceptions of gender, race and power legitimate or delegitimate their claims of mystic knowledge. The course will highlight specific themes, issues and concepts such as religious practice, ritual, mystical itinerary, monasticism, disease and distress, delification, healing, asceticism, art, music, dance, ecology and the role of the body.

RLGN 343. Mysticism. 3 Units.
This class is an introduction to a central issue in the philosophy of religion concerning the nature of mystical and ineffable experiences. Are all mystical experiences the same? Is it possible to have an experience outside of language? What is the ontological and epistemological status of drug induced mystical experiences? Students will learn to write and present arguments against positions using the methods of philosophers of religion(s).

RLGN 345. Religion and Horror. 3 Units.
This seminar explores relations among religion, horror, and the monstrous in ancient scripture and contemporary horror. Course readings, discussions, and research projects approach the subject from two distinct but related directions: first, a focus on elements of horror and the monstrous in biblical and related ancient mythic and ritual texts; second, an examination of religious dimensions in the modern horror, especially as found in representations of monstrosity in literature and film. Offered as RLGN 345 and RLGN 445. Prereq: RLGN 102.

RLGN 349. Biocultural Approaches to Religion. 3 Units.
This course studies religious beliefs and rituals from a biocultural perspective. A biocultural approach to religion is based on the idea that human religiosity is informed by both our evolutionary biological makeup and by our ability to construct culture to adapt to variable social worlds and environments. According to a biocultural view, humans are biologically constrained but have the cultural capacity to adapt to the world in a variety of ways. Thus, a biocultural approach to religion asserts that biology and culture operate in tandem and that both biological and cultural insights are required in order to understand and explain religious beliefs and practices. This course explores these assumptions and examines them against specific religious data. This course introduces students to major ideas, concepts, and questions that motivate biocultural approaches to religion. The course requires students to apply course material to a final research project that explores particular religious beliefs and/or practices in terms of the intersection of cultural choices and biological constraints. Students will present their research findings to the class. Students who take this course under the COGS designation are expected to engage substantively with the contemporary scientific study of the human mind in their research project and other course work. Offered as RLGN 349, RLGN 449 and COGS 349.
RLGN 350. Jewish Ethics. 3 Units.
An exploration of Jewish moral and ethical discourse. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abortion, euthanasia, and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of moral rhetoric in the Jewish community today. Readings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as JDST 350, RLGN 350, and RLGN 450. Counts as SAGES Departmental Seminar.

RLGN 352. Language, Cognition, and Religion. 3 Units.
This course utilizes theoretical approaches found in cognitive semantics -- a branch of cognitive linguistics -- to study the conceptual structures and meanings of religious language. Cognitive semiotics, guided by the notion that conceptual structures are embodied, examines the relationship between conceptual systems and the construction of meaning. We consider such ideas as conceptual metaphor theory, conceptual blending, image schemas, cross-domain mappings, metonymy, mental spaces, and idealized cognitive models. We apply these ideas to selected Christian, Buddhist, and Chinese religious texts in order to understand ways in which religious language categorizes and conceptualizes the world. We examine both the universality of cognitive linguistic processes and the culturally specific metaphors, conceptual blends, image schemas, and other cognitive operations that particular texts and traditions utilize. Offered as RLGN 352, RLGN 452, COGS 352 and COGS 452.

RLGN 353. Hindu and Jain Bioethics. 3 Units.
This course will provide both an introduction to basic Hinduism and Jainism and an introduction to Hindu and Jain bioethics. We will ask: How would a Hindu or a Jain respond to issues concerning euthanasia, abortion, and other topics of controversy. Are these answers altered in the North American context or in the light of recent technological changes? Offered as RLGN 353, RLGN 453, BETH 353, and BETH 453. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 357. Structuralism and Anthropology of Religion. 3 Units.
The anthropological study of religion attempts to understand individual religions as social constructs. As such, it investigates the phenomenon of religion as a general pattern of human behavior. It asks, among other things, why there are religions at all and what common characteristics, if any, religions share. Among the central concepts are notions of the sacred and the way the sacred is marked through individual behaviors and communal structures. This course introduces the philosophical and cognitive background to the anthropological study of religion and traces the ways in which this method has evolved and been applied over the last century and a half. Special emphasis will be placed on more recent developments, such as Structuralism, which focuses especially on the underlying structures of religions and religious organizations. Offered as RLGN 370 and RLGN 470.

RLGN 358. Jews under Islam and Christianity. 3 Units.
This course examines the social and political status of Jews under Muslim and Christian rule since the Middle Ages. Themes include interfaith relations, Islamic and Christian beliefs regarding the Jews, Muslim and Christian regulation of Jewry, and the Jewish response. Offered as HSTY 371, JDST 371 and RLGN 371. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 372. Anthropological Approaches to Religion. 3 Units.
The development of, and current approaches to, comparative religion from an anthropological perspective. Topics include witchcraft, ritual, myth, healing, religious language and symbolism, religion and gender, religious experience, the nature of the sacred, religion and social change, altered states of consciousness, and evil. Using material from a wide range of world cultures, critical assessment is made of conventional distinctions such as those between rational/irrational, natural/supernatural, magic/religion, and primitive/civilized. Recommended preparation: ANTH 102. Offered as ANTH 372, RLGN 372 and ANTH 472.

RLGN 373. History of the Early Church: First Through Fourth Centuries. 3 Units.
Explores the development of the diverse traditions of Christianity in the Roman Empire from the first through the fourth centuries C.E. A variety of New Testament and extra-Biblical sources are examined in translation. Emphasis is placed on the place of Christianity in the larger Roman society, and the variety of early Christian ideals of salvation, the Church, and Church leadership. Offered as HSTY 303 and RLGN 373. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 374. Reformation Europe, 1500-1650. 3 Units.
Origins and development of Protestantism, the Catholic Counter-Reformation, and the interaction between secular power and religious identity in Christian Europe. Offered as HSTY 309 and RLGN 374. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 375. Topics in Religion. 3 Units.
Critical assessment of selected topics of historical or current interest. Project must be accepted by a member of the department faculty prior to registration. Offered as RLGN 388 and RLGN 488.

RLGN 392. Independent Study. 1 - 3 Unit.
Up to three semester hours of independent study may be taken in a single semester. Must have prior approval of faculty member directing the project.

RLGN 394. Honors Research I. 3 Units.
Intensive study of a topic or problem leading to the writing of an honors thesis. Requires RLGN 102 plus 9 RLGN credits and department approval. Prereq: RLGN 102 plus 9 RLGN credits.

RLGN 395. Honors Research II. 3 Units.
Intensive study of a topic or problem leading to the writing of an honors thesis. By department approval only. Prereq: RLGN 394 and by departmental approval.

RLGN 399. Major/Minor Seminar. 3 Units.
Capstone course primarily for majors and minors in religious studies. Allows students to interact with peers and faculty, reflect critically, and integrate their learning experiences. Prepares students to continue their learning in the discipline and in the liberal arts. Subject matter varies according to student and faculty needs and perspectives. May be repeated once for up to six credit hours. Counts as SAGES Senior Capstone. Prereq: RLGN 299.

RLGN 401. Foundational Readings in Religious Studies. 3 Units.
Structured as an Independent Study, this course is meant to familiarize the student with the major classical works and thinkers that have shaped the modern field of Religious Studies. Students will meet on a regular basis with the Instructor to discuss the theories and methods described in the literature.
RLGN 404. Representations of Black Women and Religion in Film. 3 Units.
In this course we will explore cinematic representations of black women and religion in film. Each week we will view a film in class. We will begin the class with the film Imitation of Life and then the course with The Help. Throughout the course we will analyze the ways in which notions of gender, sexuality, intimacy, violence, and modern notions of race and color, have informed representations of black women and religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas about black women in the Americas. Offered as RLGN 304, RLGN 404, WGST 304, and ETHS 304. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 408. Problem of Historical Jesus. 3 Units.
Understanding of Jesus by nascent Christianity and by modern scholarship.

RLGN 410. Cognitive Science of Religion. 3 Units.
This course introduces theories and methods in the cognitive science of religion. Particular emphasis is placed on applying cognitive scientific concepts and theories to such religious issues as belief in deities, religious ritual, and morality. We examine such topics as the relationship of religious studies to evolution and cognition, cognitive theories or religious ritual, anthropomorphism and religious representation, religion as an evolutionary adaptation, and cognitive semantics and religious language. Course work includes student-led discussions, a research-intensive journal-length essay on a topic chosen in consultation with the Instructor, and presentation of research findings to the class. Course readings are taken from the humanities, the social sciences, and natural sciences. Offered as: COGS 310, COGS 410, RLGN 310, RLGN 410.

RLGN 411. Representations of Black Religion in Film. 3 Units.
In this course we will explore cinematic representations of black religion in the Americas and the Caribbean. Each week we will view a film representing diverse religious traditions such as Christianity, Candomble, Santeria, Voodoo, and Islam. Films will include Cabin in the Sky, The Color Purple, Black Orpheus, The Serpent and the Rainbow, Malcolm X, Eve's Bayou, and The Princess and the Frog. Throughout the course we will analyze the ways in which notions of gender, the history of colonialism, modern notions of race, and geographical landscapes have informed representations of black religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas of black religion in the Americas. Offered as RLGN 311, ETHS 311, and RLGN 411.

RLGN 413. Topics in Biblical Literature:. 3 Units.
A departmental "topics" seminar focused on advanced textual analysis and interpretation of particular biblical (including apocryphal) texts and the critical issues of method, theory, theology, and history that pertain to those texts. Reading assignments will be divided between close, exegetical analysis of small units of texts and the study of scholarly criticism of the same texts (commentaries, journal articles, critical notes). Evaluation will be based on class preparation and participation, weekly short papers, an exegetical paper focused on a particular pericope of the student's choice, and an interpretive paper based on exegesis of several related passages. Graduate students enrolled in the course as RLGN 413 will have the following additional requirements:(a) preliminary academic reading on the biblical material; (b) leadership/teaching of one seminar session on an academic theoretical or theological approach to the biblical text, including an additional meeting with the professor in preparation for that session; and (c) a longer final paper that critical engages the approach that was the focus of the seminar session s/he leads (15-20 pages, suitable for publication at an academic conference). Offered as RLGN 313 and RLGN 413.

RLGN 424. Landscapes and Pilgrimages: Spatial Theory in the Study of Religion. 3 Units.
This course employs spatial approaches and theories to examine the religious praxis and identities of individuals and communities. Working notions of space include physical, socio-political, cultural, imaginative, and ritual dimensions. We will examine the themes of mapping, memory and movement related to religious landscapes and geographies as well as issues related to social justice, gender, race, power, difference, and ecology. We will also investigate the spatial practices of individuals and communities. These practices may include pilgrimage to, and construction, of religious sites, ritual procession, walking, devotional practices, community activism, and artistic endeavors. Course requirements include student participation in field excursions to religious sites and spaces in the Cleveland area and the development of a photo essay or a mixed media project related to religious space. Offered as RLGN 324 and RLGN 424.

RLGN 430. Genealogies of Religious Otherness. 3 Units.
Concepts of otherness pervade recent theories of religion. More or less related to one another, many of these concepts are borrowed from fields other than academic religious studies. This seminar explores the genealogies of otherness in theoretical discourse as they relate to religion. In the course of this seminar, our researches and discussions will address several key issues in academic religious studies, including: psychological and sociological processes of projection and their roles in the construction and deconstruction of religious identity; the significance of gender, sexuality, and ethnicity to these projections; concepts of otherness in mystical religious thought and experience; and the interrelations of order and chaos, figuring and disfiguring within religious ideas, institutions, and practices, interrelations that challenge common theoretical perspectives that treat religion primarily if not exclusively as a means of establishing order against chaos and as a force of social and ideological structure legitimation.

RLGN 433. Philosophy of Religion. 3 Units.
Topics include: classical and contemporary arguments for God's existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433.

RLGN 440. Insiders and Outsiders in the Study of Religion. 3 Units.
This course will provide an introduction to one of the most important theoretical and methodological issues in the social sciences and in religious studies, namely, the epistemic authority of the insider and of the outsider. We will read books and articles, both classical and contemporary, on the topic. My goal is to place students at the center of a contemporary debate in the study of religion. We will also examine both hypothetical and actual communities that uphold insider epistemologies.

RLGN 445. Religion and Horror. 3 Units.
This seminar explores relations among religion, horror, and the monstrous in ancient scripture and contemporary horror. Course readings, discussions, and research projects approach the subject from two distinct but related directions: first, a focus on elements of horror and the monstrous in biblical and related ancient mythic and ritual texts; second, an examination of religious dimensions in the modern horror, especially as found in representations of monstrosity in literature and film. Offered as RLGN 345 and RLGN 445.
RLGN 449. Biocultural Approaches to Religion. 3 Units.
This course studies religious beliefs and rituals from a biocultural perspective. A biocultural approach to religion is based on the idea that human religiosity is informed by both our evolutionary biological makeup and by our ability to construct culture to adapt to variable social worlds and environments. According to a biocultural view, humans are biologically constrained but have the cultural capacity to adapt to the world in a variety of ways. Thus, a biocultural approach to religion asserts that biology and culture operate in tandem and that both biological and cultural insights are required in order to understand and explain religious beliefs and practices. This course explores these assumptions and examines them against specific religious data. This course introduces students to major ideas, concepts, and questions that motivate biocultural approaches to religion. The course requires students to apply course material to a final research project that explores particular religious beliefs and/or practices in terms of the intersection of cultural choices and biological constraints. Students will present their research findings to the class. Students who take this course under the COGS designation are expected to engage substantively with the contemporary scientific study of the human mind in their research project and other course work. Offered as RLGN 349, RLGN 449 and COGS 349.

RLGN 450. Jewish Ethics. 3 Units.
An exploration of Jewish moral and ethical discourse. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abortion, euthanasia, and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of moral rhetoric in the Jewish community today. Readings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as JDST 350, RLGN 350, and RLGN 450. Counts as SAGES Departmental Seminar.

RLGN 452. Language, Cognition, and Religion. 3 Units.
This course utilizes theoretical approaches found in cognitive semantics -- a branch of cognitive linguistics -- to study the conceptual structures and meanings of religious language. Cognitive semantics, guided by the notion that conceptual structures are embodied, examines the relationship between conceptual systems and the construction of meaning. We consider such ideas as conceptual metaphor theory, conceptual blending, Image schemas, cross-domain mappings, metonymy, mental spaces, and idealized cognitive models. We apply these ideas to selected Christian, Buddhist, and Chinese religious texts in order to understand ways in which religious language categorizes and conceptualizes the world. We examine both the universality of cognitive linguistic processes and the culturally specific metaphors, conceptual blends, image schemas, and other cognitive operations that particular texts and traditions utilize. Offered as RLGN 352, RLGN 452, COGS 352 and COGS 452.

RLGN 453. Hindu and Jain Bioethics. 3 Units.
This course will provide both an introduction to basic Hinduism and Jainism and an introduction to Hindu and Jain bioethics. We will ask: How would a Hindu or a Jain respond to issues concerning euthanasia, abortion, and other topics of controversy. Are these answers altered in the North American context or in the light of recent technological changes? Offered as RLGN 353, RLGN 453, BETH 353, and BETH 453. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 460. Approaches to the Study of Urban Religion. 3 Units.
This course will introduce students to basic concepts and tools used in sociology of religion drawing upon works from various theorists and sociologists of religion such as Nancy Ammerman, Peter Berger, and Robert Wuthnow. The course will analyze the relationship between the role and structure of religion in North America and the larger historical, cultural and social landscape. Utilizing the city of Cleveland as a resource, students will apply the tools and concepts learned to explicate how religious organizations impact, and are impacted by, urban environments.

RLGN 470. Structuralism and Anthropology of Religion. 3 Units.
The anthropological study of religion attempts to understand individual religions as social constructs. As such, it investigates the phenomenon of religion as a general pattern of human behavior. It asks, among other things, why there are religions at all and what common characteristics, if any, religions share. Among the central concepts are notions of the sacred and the way the sacred is marked through individual behaviors and communal structures. This course introduces the philosophical and cognitive background to the anthropological study of religion and traces the ways in which this method has evolved and been applied over the last century and a half. Special emphasis will be placed on more recent developments, such as Structuralism, which focuses especially on the underlying structures of religions and religious organizations. Offered as RLGN 370 and RLGN 470.

RLGN 488. Topics in Religion. 3 Units.
Critical assessment of selected topics of historical or current interest. Project must be accepted by a member of the department faculty prior to registration. Offered as RLGN 388 and RLGN 488.

RLGN 601. Special Research. 1 - 6 Unit.
Project must be accepted by a member of the department faculty prior to registration. Prereq: Graduate standing.

RLGN 651. Thesis M.A.. 1 - 9 Unit.
Project must be accepted by a member of the department faculty prior to registration.

Department of Sociology

The Department of Sociology offers programs leading to the Bachelor of Arts, Master of Arts, and Doctor of Philosophy degrees.

Sociologists investigate basic human and social processes and change in an increasingly complex world. Sociological research addresses important and fascinating questions about many aspects of social life, ranging from the “micro-level” of everyday experience to the “macro-level” of cross-societal comparisons. Our faculty research strengths include the areas of the sociology of health and medicine, the sociology of age and the life course and social inequalities. Our undergraduate program also offers concentrations in crime and delinquency; gender, work and family; health and aging; and social inequality.

Many sociology majors participate in field-based learning experiences, both through their classes and through their involvement in faculty research projects. The Department of Sociology encourages interaction between students and faculty by offering many opportunities for individualized study and research. Our department has a long history of combining academic excellence and leadership in research with a friendly, student-centered culture, for both graduate and undergraduate students.

Especially with the increase in diversity in our society, many employers look favorably on the breadth of knowledge and perspective provided.
by majors in sociology. Our program prepares students for rigorous graduate and professional programs as well as for working in interesting jobs. Graduates of our program are working in positions in research institutions, medicine, private industry, and the public sector. A sociology degree is also excellent preparation for graduate or professional study, whether in sociology or in such fields as medicine, law, public health, and social work.

**Undergraduate Programs**

**Major**
The major in sociology has been designed to serve the different educational goals of undergraduates: general education, pre-professional training, postgraduate employment, and preparation for graduate school. The major requires a minimum of 30 hours of course work. All majors complete the common core requirements, plus electives:

- **SOCI 101** Introduction to Sociology 3
- **SOCI 300** Modern Sociological Thought 3
- **SOCI 303** Social Research Methods 3
- **PSCL 282** Quantitative Methods in Psychology 3
- **or STAT 201** Basic Statistics for Social and Life Sciences 3
- An additional 18 hours of electives, consisting of any six courses in sociology 18

Total Units 33

**SOCI 375** Independent Study is available to selected majors in their junior or senior year.

Majors have the option of choosing a general sociology curriculum or one of four concentrations:

1. Crime and Delinquency
2. Gender, Work and Family
3. Health and Aging
4. Social Inequality

Students may choose four courses within any of the following specializations for a concentration in that area:

**Crime and Delinquency Concentration**

**SAGES Participation**

In conjunction with the SAGES program, the department offers two special seminars, SOCI 325 Departmental Seminar in Sociology: Great Books and SOCI 392 Senior Capstone Experience. These seminars fulfill SAGES requirements but are NOT requirements for the major. They may, however, be counted toward the 30 hours for the sociology major or the 15 hours for the minor.

**Departmental Honors**

Juniors majoring in sociology with a 3.4 overall GPA and a 3.6 GPA in sociology are invited to apply for the department’s honors program, which consists of an intensive, year-long investigation of a research problem under the guidance of a faculty member. Students will earn credit through registration in SOCI 397 Honors Studies and SOCI 398 Honors Studies. Admission to honors work is by faculty approval.

The opportunity to join Alpha Kappa Delta (AKD), the national sociology honors fraternity, is available to junior or senior sociology majors. Membership requires a 3.3 GPA in sociology and a 3.0 GPA overall.

**Integrated Graduate Studies**

The Department of Sociology participates in the Integrated Graduate Studies Program (p. 563). Students in the program are able to obtain BA and MA degrees simultaneously. Interested students should note the
general requirements and the admission procedures in the appropriate section of this bulletin and may consult the department for further information.

**Minor**

The minor consists of 15 credit hours in sociology, including:

<table>

</tbody>
</table>

**Graduate Programs**

The Department of Sociology offers graduate training leading to the Doctor of Philosophy degree. Students may petition for a Master of Arts degree once they fulfill the requirements outlined below. Sociology of Age and the Life Course, Medical Sociology, and Research Methods are the major areas of emphasis in the department.

**Master of Arts**

To receive the Master of Arts degree, a student must successfully complete 27 credit hours of course work.

<table>

In addition, the student must pass one written comprehensive examination in Sociology of Age and the Life Course, Medical Sociology, or Research Methods.

**Doctor of Philosophy**

The Doctor of Philosophy degree is awarded upon the completion of all requirements of the School of Graduate Studies and the following departmental requirements.

1. Completion of 63 credit hours beyond the Bachelor of Arts degree, including 18 credits of SOCI 701 Dissertation Ph.D. (dissertation hours).

2. In addition, the student must pass two written comprehensive examinations in Sociology of Age and the Life Course, Medical Sociology, or Research Methods and successfully defend the dissertation.

A predoctoral training program in Health Research and Aging, sponsored by the National Institute of Aging, has been offered in conjunction with the Elderly Care Research Center of the Department of Sociology.

**Research Programs**

**The Elderly Care Research Center**

The Elderly Care Research Center (ECRC) conducts research projects focusing on theory-based and public policy-relevant issues in aging and medical sociology. Current projects relate to physical and mental health outcomes of stress, coping, cancer survivorship, and adaptation to frailty in late life. Research projects have been funded by the National Institute of Aging (NIA), the National Cancer Institute (NCI), and the National Institute of Nursing Research. In addition to conducting quantitative surveys and in-depth qualitative interviews with community-dwelling elders, researchers at the ECRC are also engaged in an NCI-funded intervention to help elderly patients communicate more effectively with their doctors.

The Center has been the recipient of an NIA Merit Award for a long-term study of very old residents of a retirement community. This research seeks to understand health promotion, proactive adaptation, and maintenance of wellness in late life. ECRC serves as a laboratory for student research. Collaborative and cross-national research involves colleagues from multiple disciplines at universities in Israel, Hungary, Britain, and Germany.

**Cancer Survivors Research Program**

The Cancer Survivors Research Program (CSRP) investigates the quality of life of older adults who face the dual vulnerability of aging and the long term effects of having survived cancer. The research also focuses on the health disparities and the psycho-social factors related to race and gender. Formally started in September 1998, the CSRP has received nearly continuous funding from the National Cancer Institute. Gary Deimling serves as program director and is assisted by colleagues in the Department of Sociology and the Case School of Medicine. As with many other research programs within the department and the university at large, the CSRP also serves as a teaching facility, training graduate students in the many methodological and theoretical aspects of socio-medical research. The program enables graduate students in sociology to gain hands-on experience in a formal research setting while putting their course work into practice.

**Comparative-Historical Analysis of Children’s Rights**

The Children’s Rights Index (CRI), developed by Brian Gran, is an innovative measure of the status of children’s rights in more than 190 countries for 2004. With funding from the National Science Foundation, this project is now replicating the CRI for five-year intervals during the period 1984 to 2009.

Past studies of children’s rights have focused on violations of particular rights, and on specific countries where children’s rights are frequently or severely violated. What has been lacking is systematic scholarship on
the various kinds of children's rights that exist, across countries and over time. This project will examine factors that promote or hinder children's rights. A short-term objective is to provide evidence on the status of children's rights. A long-term objective is to use the CRI to determine whether stronger rights lead to superior outcomes for children.

**Cumulative Dis/Advantage Research Group: Trajectories of Inequality Across the Life Course**

Across societies, inequalities in well-being and health exist throughout the life course but tend to increase with age. How does such inequality come about? What are its manifestations and consequences? The Cumulative Dis/Advantage (CDA) Research Group analyzes the social processes that create inequalities across multiple dimensions of well-being and health, including physical function, mental health, and longevity. The group also examines social policies that are intended to ameliorate these inequalities, such as Medicare. Professor Montez investigates why educational attainment has become one of the strongest predictors of longevity in the United States and how U.S. state policies affect the health of their residents. Professor Kelley-Moore examines the influence of social and economic circumstances over the life course on later-life health disparities, particularly those related to race/ethnicity and disability. Professor Dannefer is interested in identifying basic sociological processes that contribute to CDA and understanding their interrelation at macro-, meso-, and micro-levels of analysis.

**Learning from Those Who Know: Action Research and Reform Efforts in Long-term Care**

This project responds to the need to reform and restructure long-term care by incorporating the perspectives, insights, and expertise of those whom such reforms are intended to serve, yet who often have little voice in the reform process: the residents themselves. Using the method of participatory action research, the project assembles research groups consisting of residents, staff, family members, and researchers who meet weekly to discuss life in the facility and to identify areas where change could benefit those who live (or work) there.

**Masculinities and Fatherhood in Marginalized Urban Communities**

This research project is an examination of the perceptions and practices of masculinity among a group of incarcerated fathers participating in a fatherhood program. Using observations and interviews in the first phases of the project, researchers are exploring a range of masculinities, including conventional forms of masculinity that emphasize, for instance, the provider role in the family; street/protest forms that attempt to preserve autonomy and mastery through criminal behavior, social distance, or appearances of control and strength; and alternative forms that promote family and community advocacy and solidarity.

**Department Faculty**

Dale Dannefer, PhD  
(Rutgers University)  
*Selah Chamberlain Professor of Sociology and Chair*  
Aging and the life course; theory; work and family; research methods

Timothy Black, PhD  
(University of Massachusetts-Amherst)  
*Associate Professor*  
Social inequality; poverty; urban sociology; qualitative research methods

Gary Deimling, PhD  
(Bowling Green State University)  
*Professor*  
Medical sociology; sociology of aging; family sociology

Mary Patrice Erdmans, PhD  
(Northwestern University)  
*Associate Professor*  
Social inequality; race and ethnicity; immigration; qualitative research methods; gender

Brian Gran, PhD, JD  
(Northwestern University; Indiana University-Bloomington)  
*Associate Professor*  
Sociology of law; comparative sociology; health care policy; human rights

Susan W. Hinze, PhD  
(Vanderbilt University)  
*Associate Professor*  
Medical sociology; social inequality, sex and gender; work and family

Eva Kahana, PhD  
(University of Chicago)  
*Distinguished University Professor and Pierce T. and Elizabeth D. Robson Professor of the Humanities*  
Sociology of aging; medical sociology; social factors in stress and coping

Jessica Kelley-Moore, PhD  
(Purdue University)  
*Associate Professor*  
Health disparities; sociology of disability; sociology of the life course; race/ethnicity

Jennifer Karas Montez, PhD  
(University of Texas at Austin)  
*Assistant Professor*  
Socioeconomic inequalities in health and mortality; women's health; aging and the life course

Cassi Pittman, PhD  
(Harvard University)  
*Assistant Professor*  
Race & Ethnic Relations, Social Stratification & Inequality, Sociology of Consumption, Economic Sociology, Consumption, and Qualitative Methods

**Secondary Faculty**

David E. Biegel, PhD  
(University of Maryland, Baltimore)  
*Henry Zucker Professor, Mandel School of Applied Social Sciences*  
Family; social networks; caregiving; mental health

Kurt Stange, MD, PhD  
(University of North Carolina)  
*Professor, Department of Epidemiology and Biostatistics, School of Medicine*  
Epidemiology; preventive health care; biostatistics; disability prevention in the elderly
SOCI 201. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

SOCI 222. Gender in U.S. Society. 3 Units.
The focus of this course is on unique and convergent experiences of men and women in U.S. society. Different social expectations and opportunities encountered by men and women in the context of marriage and the family, work settings, and in informal organizations will be addressed. Legislation and social policy dealing with gender issues will be considered. Offered as SOCI 222 and WGST 222.

SOCI 228. Sociology of Sexuality. 3 Units.
This course examines the issues of sex and sexuality from a sociological point of view. It is centered on the notion that what we consider to be 'normal' or 'natural' about sex and sexuality is, in reality, socially constructed. One's viewpoint on the issues surrounding sexuality are influenced by the social context in which they live, as opposed to the purely biological viewpoint that presupposes some sense of normalcy or naturalness regarding sexual relations. A range of topics will be covered, including readings that discuss the variations of sexuality and the notions of sexual "deviance" in order to explore the cultural and societal variation that exists along the lines of gender, race, ethnicity, sexual orientation, age and disability. Offered as SOCI 228 and WGST 228.

SOCI 255. Special Topics. 1 - 3 Unit.
Courses taught as special topics seminars focus on selected areas of study in sociology. They tend to be more specialized and emphasis is placed upon a sociological examination of one social institution (such as the media) or on one historical period (such as the '60s).

SOCI 264. Body, Culture and Disability. 3 Units.
This course examines the ways that the body is constructed through culture, media, and policy and how that, in turn, defines disability. Students will explore the socio-historical shifts in views and treatment of the body, as a way to understand how this is used to classify, marginalize and contain social differences. We trace these trends through the American Freak Show to present day Disability Determination Processes in the Social Security Administration. We further explore how historical perspectives of the body "carry forward" through social institutions such as health care, religion and education.
SOCI 269. Young and Old Face the 21st Century. 3 Units.
Examines prospects and problems of the young and old as a window into the 21st century. An intergenerational perspective is used to highlight opportunities for cooperation and conflict between young and old who face the future together. This approach represents a shift in thinking about aging as relevant only to the old, to a view that aging is relevant to the future of all individuals, families, and societies.

SOCI 275. Lives in Medicine: Becoming and Being a Physician. 3 Units.
This course applies a sociological approach to medical profession. Medical sociology emerged as a distinct field of study in the 1950s in part due to prominent studies of medical education such as The Student Physician by Robert K. Merton and Howard Becker's Boys in White. Since then, sociologists and other social scientists have written extensively about how issues of race, gender, aging and ethnicity are tied to issues of medical education, medical training, medical socialization and physician decision-making. Using a life course perspective, this course will examine how lives in medicine change over time; in particular, we'll study changing workforce patterns, physician satisfaction, and burnout. Other topics to be covered include contemporary ethical issues and alternative professional health careers. The course provides an overview of how medicine and medical practice have a profound influence on-- and are influenced by--social, cultural, political and economic forces. In short, you'll become familiar with how scholars outside of medicine cast a sociological gaze on the profession.

SOCI 300. Modern Sociological Thought. 3 Units.
The most profound commentary of industrial society began in the middle of the nineteenth century with thinkers such as Durkheim, Marx, and Max Weber. Students will read the work of these scholars as it appeared in the original sources. They thoughtfully address concepts such as social integration and alienation, crime and punishment, and the social impact of modernization. The course is of special relevance to students in the social sciences, but is also recommended for students in other fields who wish to understand the social context in which professional lives will be conducted. Prereq: SOCI 101 and Sophomore standing.

SOCI 302. Race and Ethnic Minorities in American Society. 3 Units.
Has the United States become a melting pot of ethnic groups or does it remain a salad bowl? American society is uniquely diverse in its ethnic and racial composition. This diversity has influenced much of American history and had substantial impact on the structure of social organization of present day society. This course familiarizes students with basic concepts of race and ethnicity, relevant theories and their applications to critical issues. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SOCI 101.

SOCI 303. Social Research Methods. 3 Units.
Principles of making causal inferences about human behavior; problem formulation and research design; measurement of sociological concepts; data collection and analysis methods; evaluation of research findings. Prereq: SOCI 101 and Sophomore standing.

SOCI 310. The Individual in Society. 3 Units.
This course focuses on the relationship between individuals and the societies in which they live. Influences of values and culture on individuals' selves and identities are discussed as well as how individuals attach meaning to personal life experiences and histories in the context of society at large. Offered as SOCI 310 and SOCI 410. Prereq: SOCI 101.

SOCI 311. Health, Illness, and Social Behavior. 3 Units.
This course considers the role of social factors (e.g., poverty, occupational and family structure) on health and illness. Discussion will concentrate on the role of health promotion (e.g., anti-smoking campaigns), social behavior and lifestyle in health and health care use. Considerable attention is given to understanding health careers and professions and their role in the health of societies and individuals. Offered as SOCI 311 and SOCI 411. Prereq: SOCI 101 and Sophomore standing.

SOCI 313. Sociology of Stress and Coping. 3 Units.
This course will focus attention on human stress throughout the lifespan and its role in personal health and well-being. There have been exciting advances in recent years in understanding the nature of stress in everyday life as well as elements of extreme stress. Trauma is experienced by many people due to normative events such as illness and bereavement or natural and man-made disasters such as crime or war. Coping strategies and social supports which ameliorate negative impact of stress will be considered. Offered as SOCI 313 and SOCI 413. Prereq: SOCI 101 and Sophomore standing.

SOCI 319. Sociology of Institutional Care. 3 Units.
This course focuses on converging issues of theory, research, and practice in general hospitals, mental hospitals, nursing homes, hospices, and correctional institutions. The ecology of institutions and the adaptation of individuals within institutions will also be considered. There will be field trips to institutional facilities. Offered as SOCI 319 and SOCI 419. Prereq: SOCI 101 and Sophomore standing.

SOCI 320. Delinquency and Juvenile Justice. 3 Units.
The primary focus of this course is on acquainting the student with the nature and the extent of juvenile delinquency. Accordingly, theoretical approaches to delinquency causation and the prevention, control, and treatment of delinquent behavior in society are addressed. Important aspects of juvenile justice procedures, policy, and practice are examined, and the early history of the juvenile justice system and the many changes occurring over the years are discussed. Prereq: SOCI 101.

SOCI 325. Departmental Seminar in Sociology: Great Books. 3 Units.
This course fulfills the SAGES requirement of a Departmental Seminar. It focuses on close readings of contemporary classics in sociology, analytical writing and intensive seminar-type discussion. The course examines theoretical perspectives and methodological issues in sociology such that students are able to investigate, analyze and present research findings in written form. Research is always an inherently collaborative process and thus the course will utilize seminar-style discussions to formulate and examine ideas. The seminar will focus on topics germane to a critical reading of books that inform our understanding of large and small group processes as well as individual experiences. Students will be introduced to the sociological imagination as an overarching frame work to examine groundbreaking classical and contemporary books on topics such as health and aging, gender, work and family, social inequality and crime and delinquency, guided by the instructor of record. Readings will provide a sociological perspective for understanding and assessing macro- and micro-level interactions as well as encourage and stimulate critical thinking. Counts as SAGES Departmental Seminar.
**SOCI 326. Gender, Inequality, and Globalization. 3 Units.**

Using a sociological perspective, this course examines how major societal institutions, including the economy, politics, medicine, religion, education and family, are structured to reproduce gendered inequalities across the globe. Attention is given to the intersections of race/ethnicity, social class, gender and sexuality in social systems of power and privilege. Of critical importance is how gender figures in the relationship between Economic North and Economic South countries. We will elucidate how gender norms vary by culture and exert profound influence on the daily, lived experiences of women and men. The course will be informed by recent scholarship on feminism, women’s movements, and globalization. Offered as SOCI 326 and WGST 326. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SOCI 101 or permission of program director.

**SOCI 328. Urban Sociology. 3 Units.**

The goal of this course is to acquaint the student with the realities and the possibilities of our urban society. Theories and applications of urban sociology interpreting city life and structure are reviewed. The transformation of the urban landscape, the emergence of cities, urban life, urban problems, and urban planning are explored. Issues related to finances, schooling, transportation, the infrastructure of the city, growth and decline, urban poverty, the homeless, crime, pollution, as well as the policy issues and questions such concerns provoke are studied. Key aspects of social science theories and research findings about the nature of spatial, economic and social relationships in cities in developed and developing countries will be analyzed, illuminating some of the processes of urban growth, social transition, and change. Offered as SOCI 328 and SOCI 428. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SOCI 101.

**SOCI 333. Sociology of Deviant Behavior. 3 Units.**

Sociological approaches to causes of deviant behavior, and social psychology of deviance are studied. Illustrations range from juvenile delinquency to scientific misconduct and cover both criminal and noncriminal forms of deviance. Prereq: SOCI 101.

**SOCI 336. Institutional Care: Research and Reform. 3 Units.**

This course is designed to provide an introduction to the nature of long term care in the USA and to contemporary issues of reform and culture change. It also provides an introduction to techniques for studying nursing home culture, and for assessing culture changes. The issues and problems of long term care are well documented and the need for changing practices of long term care is so widely recognized and deeply felt that several initiatives for “changing the culture” of long term care have gained national notoriety and rapid momentum. While laudatory, such efforts are inevitable criticized on numerous grounds, including cost, philosophy and vision, and lack of research evidence to support claims of success. The course is designed to provide an introduction to these debates in the scientific literature and in popular culture, and will provide an opportunity to develop skills in structured observation and action research. Offered as SOCI 336 and SOCI 436.

**SOCI 338. Seminar and Practicum in Adolescents. 3 Units.**

Supervised field placement and attendance in early childhood, child, and adolescent settings including preschools, schools, hospitals, and neighborhood centers. This class is used to fulfill requirements by the Ohio Department of Education teacher licensure program. Recommended preparation: PSCL 101, EDUC 301, EDUC 304, and permission of program director. Offered as EDUC 338, PSCL 338, and SOCI 338.

**SOCI 345. Sociology of Mental Illness. 3 Units.**

Focus is on social construction of mental health and illness and sociology of emotions. Social determinants of psychological distress will be discussed along with social stigma associated with mental illness. Institutional and community options for care of the mentally ill will be considered along with the impact of recent social movements of deinstitutionalization and independent living. Offered as SOCI 345 and SOCI 445. Prereq: SOCI 101 and junior/senior standing.

**SOCI 347. Sociology of Education. 3 Units.**

This course provides an introduction to the field of sociology of education, which might be more properly called sociology of schooling. We will examine the development of schools historically and competing paradigms for understanding the place of school in society. Major theoretical perspectives concerning the nature and consequences of schools for individuals and for societies will be reviewed. Issues of individual opportunity - including how it is organized by race, class, and gender - will be covered, as well as issues institutional dynamics - including tracking, testing and so-called crisis and reform. Offered as SOCI 347 and SOCI 447. Prereq: SOCI 101 and junior or senior standing.

**SOCI 349. Social Inequality. 3 Units.**

This course discusses classical theory and contemporary research on the mechanisms of power that produce inequalities in income, wealth, education, privilege, and occupational prestige and are manifest in racial, ethnic, gender, age, health, and sexual hierarchies. Offered as SOCI 349 and SOCI 449. Prereq: SOCI 101 and Sophomore standing.

**SOCI 355. Special Topics. 3 Units.**

One or more sections each semester focusing on selected areas of study in sociology. Offered as SOCI 355 and SOCI 455.

**SOCI 360. The Sociology of Law. 3 Units.**

This course will focus on the role of rights in the U.S. legal system and society. In particular, we will consider three questions. The first is how do rights fit in the legal system and society? Second, how have different social groups used and thought about rights? Third, how do legal actors like judges and lawyers think about rights compared to non-lawyers? Offered as SOCI 360 and SOCI 460. Prereq: SOCI 101 and Sophomore standing.

**SOCI 361. The Life Course. 3 Units.**

Individual experiences and transitions over the life course are considered as the result of societal, cultural, psychological, biological, and historical influences. Developmental issues of childhood, adolescence, young adulthood, middle years and late life are discussed in the context of social expectations, challenges, and opportunities. Emphasis is placed on theoretical readings. Offered as SOCI 361 and SOCI 461. Prereq: SOCI 101 and Sophomore standing.

**SOCI 364. Disability and Society. 3 Units.**

This course considers and examines the relationship between disability and society. The course covers how we define, represent, and react to disability in modern society. This includes an analysis of stigma and discrimination. We also explore the timing and experience of disability from a life-course perspective. Finally, we examine the political, social, and economic influences on disability, including the Disability Rights movement. Offered as SOCI 364 and SOCI 464. SOCI 101 and sophomore standing.
SOCI 365. Health Care Delivery. 3 Units.
Health care in the U.S. may be approaching a critical cross-road. Limiting care to older persons and the chronically ill has been proposed as a means to combat rising costs and limited access to health care. What are the alternatives to health care rationing? Socialized medicine? National health insurance? This course deals with issues of cost, quality, and access to health care in the United States and other societies. It considers how solutions by other societies can provide directions for the organization of health care in the U.S. Offered as SOCI 355 and SOCI 455. Prereq: SOCI 101 and Sophomore standing.

SOCI 369. Aging in American Society. 3 Units.
Considers the position and participation of aged adults in American society. Sociological perspectives through which to interpret the aging process and old age; social policies; intergenerational relations; lifestyles and how they affect participation of the aged in American society; dying and death serve as major themes. Offered as SOCI 369 and SOCI 469. Prereq: SOCI 101 and Sophomore standing.

SOCI 370. Sociology of the Family. 3 Units.
This course provides the theoretical and methodological foundation for conducting family research. It also reviews the most current research in the sociology of the family arena such as intergenerational issues, ethnicity and gender, and family transitions. Offered as SOCI 370 and SOCI 470. Prereq: SOCI 101 and Sophomore standing.

SOCI 372. Work and Family: U.S. and Abroad. 3 Units.
Covers the impact on human lives of the interface between work and family; the different ways gender structures the experience of work and family depending upon racial and ethnic background, social class, age, and partner preference; the impact of historical context on work-family experiences; work-family policies in the United States and other countries. Offered as SOCI 372, WGST 372, and SOCI 472. Prereq: SOCI 101 and Sophomore standing.

SOCI 374. Using Law to Designate Public-Private Boundaries for Social Policies. 3 Units.
This course studies law and the public-private dichotomy. With a basis in important research on the sociology of law, it considers three questions: 1) What is the impact of "law" on the boundary separating the public and private sectors? 2) How does "law" designate which actors and institutions belong to the public and private sectors? 3) Is the public-private dichotomy adequate for sociological analyses of law and its influences? If not, what alternatives to the public-private dichotomy can we offer? Offered as SOCI 374 and SOCI 474. Prereq: SOCI 101.

SOCI 375. Independent Study. 1 - 3 Unit.
Prereq: SOCI 101 and SOCI 300.

SOCI 377. Population Dynamics and Changing Societies. 3 Units.
Population and social structure are inextricably linked, as changes in one elicit changes in the other. Social demography, as a discipline, examines these linkages through the systematic study of the size, composition and distribution of populations and their relationship to the social, political and economic organization of societies. This course will pay particular attention to mortality, morbidity and health, fertility, family and household organization, and migration as the major processes of population change. The population dynamics of the United States will be emphasized, with select comparisons to developing and developed countries. Offered as SOCI 377 and SOCI 477. Prereq: SOCI 101 or equivalent; 9 hours in SOCI, ANTH, or ECON.

SOCI 381. City as Classroom. 3 Units.
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface--both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481. Counts for CAS Global & Cultural Diversity Requirement.

SOCI 392. Senior Capstone Experience. 3 Units.
SOCI 392 represents the completion of an independent study paper involving exploration of a sociology topic to be chosen in consultation with the student's capstone advisor. The student will interact regularly with the faculty advisor who will review their progress on the project. This project allows for original thought and for the tailoring of the research to the student's interests. The student will integrate theory, methods and social issues as he/she applies critical thinking skills and insights to the analysis of some aspects of a subject chosen from any of the following subfields and concentrations: Gerontology, Social Inequality, Medical Sociology, Crime and Delinquency, The Life Course, Education, Work and Family, Sociology of Law, and Deviance. The Capstone Project has both a written and an oral component. Following the submission of the Capstone paper, the student will give a presentation of the project at the Senior Capstone fair, or another forum chosen by the department. Counts as SAGES Senior Capstone. Prereq: SOCI 101, SOCI 300, SOCI 303, and STAT 201 or PSCL 282.

SOCI 397. Honors Studies. 3 Units.
Intensive investigation of research or conceptual problem; original work under supervision of faculty member. Limited to senior majors. Prereq: Senior status.

SOCI 398. Honors Studies. 3 Units.
Intensive investigation of research on conceptual problem; original work under supervision of faculty member. Limited to senior majors.

SOCI 400. Development of Sociological Theory. 3 Units.
This course examines in detail the works of the major social theorists of the 19th and 20th centuries. It is intended to integrate their ideas with the social and historical milieu from which they were born. Questions of intergroup conflict vs. cooperation, interactions between economic, familial, religious, and political institutions, and the development of the self as a function of larger social processes are addressed. Such celebrated figures as Marx, Weber, and Durkheim, as well as modern thinkers will be presented and discussed. Prereq: Graduate standing.

SOCI 401. Contemporary Sociological Theory. 3 Units.
Current viewpoints in sociological theory are explored using contrasting theoretical perspectives.

SOCI 406. Logic of Social Inquiry. 3 Units.
The first of a two-semester series in social research methodology. Students will learn how to interpret and conduct social science research. The two-semester course covers problem formulation, the logic of causal inference, measurement models, research designs, sampling, data collection, and data analysis.

SOCI 407. Social Statistics. 3 Units.
The second of a two-semester series in social research methodology. (See SOCI 406.) Prereq: SOCI 406.
SOCI 410. The Individual in Society. 3 Units.
This course focuses on the relationship between individuals and the societies in which they live. Influences of values and culture on individuals' selves and identities are discussed as well as how individuals attach meaning to personal life experiences and histories in the context of society at large. Offered as SOCI 310 and SOCI 410.

SOCI 411. Health, Illness, and Social Behavior. 3 Units.
This course considers the role of social factors (e.g., poverty, occupational and family structure) on health and illness. Discussion will concentrate on the role of health promotion (e.g., anti-smoking campaigns), social behavior and lifestyle in health and health care use. Considerable attention is given to understanding health careers and professions and their role in the health of societies and individuals. Offered as SOCI 311 and SOCI 411.

SOCI 413. Sociology of Stress and Coping. 3 Units.
This course will focus attention on human stress throughout the lifespan and its role in personal health and well-being. There have been exciting advances in recent years in understanding the nature of stress in everyday life as well as elements of extreme stress. Trauma is experienced by many people due to normative events such as illness and bereavement or natural or man-made disasters such as crime or war. Coping strategies and social supports which ameliorate negative impact of stress will be considered. Offered as SOCI 313 and SOCI 413.

SOCI 419. Sociology of Institutional Care. 3 Units.
This course focuses on converging issues of theory, research, and practice in general hospitals, mental hospitals, nursing homes, hospices, and correctional institutions. The ecology of institutions and the adaptation of individuals within institutions will also be considered. There will be field trips to institutional facilities. Offered as SOCI 319 and SOCI 419.

SOCI 428. Urban Sociology. 3 Units.
The goal of this course is to acquaint the student with the realities and the possibilities of our urban society. Theories and applications of urban sociology interpreting city life and structure are reviewed. The transformation of the urban landscape, the emergence of cities, urban life, urban problems, and urban planning are explored. Issues related to finances, schooling, transportation, the infrastructure of the city, growth and decline, urban poverty, the homeless, crime, pollution, as well as the policy issues and questions such concerns provoke are studied. Key aspects of social science theories and research findings about the nature of spatial, economic and social relationships in cities in developed and developing countries will be analyzed, illuminating some of the processes of urban growth, social transition, and change. Offered as SOCI 328 and SOCI 428. Counts for CAS Global & Cultural Diversity Requirement.

SOCI 436. Institutional Care: Research and Reform. 3 Units.
This course is designed to provide an introduction to the nature of long term care in the USA and to contemporary issues of reform and culture change. It also provides an introduction to techniques for studying nursing home care, and for assessing culture changes. The issues and problems of long term care are well documented and the need for changing practices of long-term care is so widely recognized and deeply felt that several initiatives for “changing the culture” of long term care have gained national notoriety and rapid momentum. While laudatory, such efforts are inevitable criticized on numerous grounds, including cost, philosophy and vision, and lack of research evidence to support claims of success. The course is designed to provide an introduction to these debates in the scientific literature and in popular culture, and will provide an opportunity to develop skills in structured observation and action research. Offered as SOCI 336 and SOCI 436.

SOCI 443. Medical Sociology. 3 Units.
Course covers theories, research methods, and problems in sociology of medicine. Topics include social epidemiology, health and illness behavior, and sick role. Structures and functions of delivery systems and their interrelationships with other social institutions are discussed.

SOCI 445. Sociology of Mental Illness. 3 Units.
Focus is on social construction of mental health and illness and sociology of emotions. Social determinants of psychological distress will be discussed along with social stigma associated with mental illness. Institutional and community options for care of the mentally ill will be considered along with the impact of recent social movements of deinstitutionalization and independent living. Offered as SOCI 345 and SOCI 445.

SOCI 447. Sociology of Education. 3 Units.
This course provides an introduction to the field of sociology of education, which might be more properly called sociology of schooling. We will examine the development of schools historically and competing paradigms for understanding the place of school in society. Major theoretical perspectives concerning the nature and consequences of schools for individuals and for societies will be reviewed. Issues of individual opportunity - including how it is organized by race, class, and gender - will be covered, as well as issues institutional dynamics - including tracking, testing and so-called crisis and reform. Offered as SOCI 347 and SOCI 447.

SOCI 449. Social Inequality. 3 Units.
This course discusses classical theory and contemporary research on the mechanisms of power that produce inequalities in income, wealth, education, privilege, and occupational prestige and are manifest in racial, ethnic, gender, age, health, and sexual hierarchies. Offered as SOCI 349 and SOCI 449.

SOCI 455. Special Topics. 3 Units.
One or more sections each semester focusing on selected areas of study in sociology. Offered as SOCI 355 and SOCI 455.

SOCI 460. The Sociology of Law. 3 Units.
This course will focus on the role of rights in the U.S. legal system and society. In particular, we will consider three questions. The first is how do rights fit in the legal system and society? Second, how have different social groups used and thought about rights? Third, how do legal actors like judges and lawyers think about rights compared to non-lawyers? Offered as SOCI 360 and SOCI 460.

SOCI 461. The Life Course. 3 Units.
Individual experiences and transitions over the life course are considered as the result of societal, cultural, psychological, biological, and historical influences. Developmental issues of childhood, adolescence, young adulthood, middle years and late life are discussed in the context of social expectations, challenges, and opportunities. Emphasis is placed on theoretical readings. Offered as SOCI 361 and SOCI 461.

SOCI 464. Disability and Society. 3 Units.
This course considers and examines the relationship between disability and society. The course covers how we define, represent, and react to disability in modern society. This includes an analysis of stigma and discrimination. We also explore the timing and experience of disability from a life-course perspective. Finally, we examine the political, social, and economic influences on disability, including the Disability Rights movement. Offered as SOCI 364 and SOCI 464.
SOCI 465. Health Care Delivery. 3 Units.
Health care in the U.S. may be approaching a critical cross-road. Limiting care to older persons and the chronically ill has been proposed as a means to combat rising costs and limited access to health care. What are the alternatives to health care rationing? Socialized medicine? National health insurance? This course deals with issues of cost, quality, and access to health care in the United States and other societies. It considers how solutions by other societies can provide directions for the organization of health care in the U.S. Offered as SOCI 355 and SOCI 455.

SOCI 466. Promoting Health Across Boundaries. 3 Units.
This course examines the concepts of health and boundary spanning and how the synergy of the two can produce new, effective approaches to promoting health. Students will explore and analyze examples of individuals and organizations boundary spanning for health to identify practice features affecting health, compare and contrast practices and approaches, and evaluate features and context that promote or inhibit boundary spanning and promoting health. Offered as MPH 466, EPBI 466, SOCI 466, NURS 466 and BETH 466. Prereq: Graduate student status or instructor consent.

SOCI 469. Aging in American Society. 3 Units.
Considers the position and participation of aged adults in American society. Sociological perspectives through which to interpret the aging process and old age: social policies; intergenerational relations; lifestyles and how they affect participation of the aged in American society; dying and death serve as major themes. Offered as SOCI 369 and SOCI 469.

SOCI 470. Sociology of the Family. 3 Units.
This course provides the theoretical and methodological foundation for conducting family research. It also reviews the most current research in the sociology of the family arena such as intergenerational issues, ethnicity and gender, and family transitions. Offered as SOCI 370 and SOCI 470.

SOCI 472. Work and Family: U.S. and Abroad. 3 Units.
Covers the impact on human lives of the interface between work and family; the different ways gender structures the experience of work and family depending upon racial and ethnic background, social class, age, and partner preference; the impact of historical context on work-family experiences; work-family policies in the United States and other countries. Offered as SOCI 372, WGST 372, and SOCI 472.

SOCI 474. Using Law to Designate Public-Private Boundaries for Social Policies. 3 Units.
This course studies law and the public-private dichotomy. With a basis in important research on the sociology of law, it considers three questions: 1) What is the impact of "law" on the boundary separating the public and private sectors? 2) How does "law" designate which actors and institutions belong to the public and private sectors? 3) Is the public-private dichotomy adequate for sociological analyses of law and its influences? If not, what alternatives to the public-private dichotomy can we offer? Offered as SOCI 374 and SOCI 474. Prereq: SOCI 101.

SOCI 477. Population Dynamics and Changing Societies. 3 Units.
Population and social structure are inextricably linked, as changes in one elicit changes in the other. Social demography, as a discipline, examines these linkages through the systematic study of the size, composition and distribution of populations and their relationship to the social, political and economic organization of societies. This course will pay particular attention to mortality, morbidity and health, fertility, family and household organization, and migration as the major processes of population change. The population dynamics of the United States will be emphasized, with select comparisons to developing and developed countries. Offered as SOCI 377 and SOCI 477. Prereq: SOCI 101 or equivalent; 9 hours in SOCI, ANTH, or ECON.

SOCI 481. City as Classroom. 3 Units.
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface—both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481. Counts for CAS Global & Cultural Diversity Requirement.

SOCI 509. Advanced Statistical Analysis. 3 Units.
Research in social epidemiology, health service research and other applied fields increasingly demands an understanding of social research methodology. This seminar exposes students to state of the art analyses of social science data including: data preparation, factor analysis, regression and structural equation modeling. Students are provided the opportunity to interpret and critically evaluate the methodology used in journal articles, with an emphasis on data analytical techniques. Students will analyze data sets using SPSS and EQS. Prereq: STAT 401 or SOCI 406, and SOCI 407.

SOCI 514. Qualitative Methods/Field Research. 3 Units.
Students explore the theoretical foundations of qualitative social research. The course is designed to introduce and provide experience with a range of data generation strategies and analytic skills. The ethnographic techniques of semi-structured interviewing and participant-observation receive particular attention.

SOCI 601. Reading and Research. 1 - 9 Unit.
Individual study and/or project work.

Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Theater

The Department of Theater offers education and participation in all aspects of drama, with course offerings in acting, stagecraft, costume, scene design, directing, screenwriting, and playwriting. Students have the opportunity to perform on stage as well as to serve on the technical crews in main-stage theatrical productions each year. The high ratio of faculty to students ensures that students will be able to work closely with highly skilled professionals. The department treats all performances as educational experiences and welcomes the participation of all students regardless of their academic majors and career goals.
Actor education in the theater program prepares majors for acting career opportunities in the American theater. Graduates are currently employed nationally and regionally. The MFA Acting Program, a collaboration between the university and The Cleveland Play House, represents a unique alliance between one of the oldest theater programs in the United States and the nation's first regional theater.

The department is partnered with London's prestigious Royal Academy of Dramatic Art (RADA) for a unique spring semester Study Abroad opportunity for sophomores and juniors. The RADA "Time Lines" program is an exciting combination of history and performance developed specifically for CWRU students. For more information on this opportunity, consult Ron Wilson, Chair of the Department of Theater, or Jeffrey Ullom, Director of Undergraduate Theater Studies.

**Undergraduate Programs**

**Theater Major**

The Bachelor of Arts program in theater offers concentrations in acting, design/technical theater, dramatic writing, history, and directing. Students intending to major in theater must complete 40 hours of course work. Most students will opt to take many classes beyond the requirements in order to enhance their knowledge and improve their skills. Students interested in declaring a specific concentration of study can satisfy the additional requirements listed below in order to fulfill a Bachelor of Arts with a specific concentration. Students who do not declare a concentration will receive the designation of "General Theater" on their transcript.

The basic course requirements for all theater majors are as follows:

Performance courses: Students must take all four of the following:

- THTR 110 Introduction to Theater
- THTR 102 Acting I for Majors
- THTR 103 Acting II
- THTR 330 Play Directing I

Design courses: Students must take one of the following:

- THTR 223 Introduction to Scenic Design
- THTR 224 Introduction to Lighting Design
- THTR 225 Costume Design

Theater history courses: Students must take all four of the following:

- THTR 228 Development of Theater: Beginnings to English Renaissance
- THTR 229 Development of Theater: Renaissance to Romanticism
- THTR 327 American Theater and Playwrights
- THTR 329 Modern and Contemporary Drama

Tech credit hours (minimum of 3 hours)

Concentration in Design/Technical Theater

The two remaining design courses (excluding the course taken to fulfill the core requirements) from THTR 223, THTR 224, and THTR 225

Either THTR 226 or THTR 227

Total Units 3

Total Units 9

Concentration in Dramatic Writing

THTR 312  Playwriting  3
THTR 314  Advanced Playwriting  3
THTR 316  Screenwriting  3

Total Units 9

Concentration in Directing

THTR 331  Play Directing II  3
THTR 227  Stage Management  3
Either THTR 314 (Advanced Playwriting) or an additional design course (THTR 223, THTR 224, or THTR 225) not taken to fulfill the core requirements of the major.

Total Units 9

Departmental Honors in Theater

Majors wishing to take a Bachelor of Arts degree with honors in theater must make written application to the director of undergraduate theater studies no later than May 1 of their junior year. Students must have a minimum 3.25 overall grade point average and a minimum 3.75 grade point average in theater. Acceptance into the honors program is contingent upon faculty support and recommendation by the director of undergraduate theater studies and the department chair.

Those accepted register for THTR 397 Honors Studies I and THTR 398 Honors Studies II during their senior year, for a total of 6 hours. The honors project is defined as a production project in acting, design, playwriting, directing, or management/outreach. A supporting paper discussing the concept, execution, and performance of the project must be filed with the director of undergraduate theater studies no later than one week following the project presentation. Preparation of the project will be supervised by a department faculty member.

This project may be accepted for honors only if it receives a grade of A from both the project advisor and the Director of Undergraduate Theater Studies. The grade of A must be received both semesters. Students who qualify will receive the notation “Departmental Honors in Theater” on their diplomas. Information about the structure and specific requirements of the honors project is available from the director of undergraduate theater studies.

Minor

A minor in theater requires 18 hours. The requirements for each concentration are as follows:

General Theater

Graduate Programs

Master of Fine Arts in Acting

In 1996, The Cleveland Play House and Case Western Reserve University joined forces to create a new Master of Fine Arts program in acting. The students begin their involvement with the Play House in their first semester, and their level of involvement steadily increases until, in the third year, they become professional interns at the Cleveland Play House.

The MFA in acting is a terminal pre-professional degree. Candidacy for the program requires an undergraduate degree with (ideally) a major in theater, equivalent training and experience, or demonstrable potential for work at the MFA level. In addition, candidates must provide evidence of technical skill and creative ability.

At the end of each semester in residence, the student’s skill and creative ability are evaluated in light of his or her work in the department. Only students who have clearly demonstrated growth and excellence are permitted to remain in the program. The award of the MFA degree is contingent upon the student’s academic progress and upon the assessment on the part of the faculty that the candidate possesses the potential to work in the field of theater on a professional level.

Requirements for the MFA degree include:

1. A minimum of 60 semester hours of graduate work beyond the bachelor’s degree
2. A cumulative grade point average of 3.0 for all course work on the graduate level
3. Completion of the course requirements for the MFA Thesis Portfolio
4. Successful completion of the Third Year Internship at The Cleveland Play House

Course requirements for the MFA in acting are as follows:

Courses in acting, including script analysis, implementation of acting theory, characterization, modernist playwrights, and Shakespeare 18
Courses in movement, chosen from mask work, period styles, stage combat, and commedia 12
Courses in voice, chosen from voice production, articulation, and interpretation 9
Courses in speech, using Edith Skinner techniques, dialects, verse and lyric drama, and Shakespeare 6
Courses in performance theory, projects, and professional seminars 6-9

Two of the following courses in creative thesis: 6

Department Faculty

Ron Wilson, BGS
(Wichita State University)
Katharine Bakeless Nason Professor of Theater and Drama and Chair; Director, CWRU/Cleveland Play House MFA Acting Program
Movement for the actor; acting; acting for the camera; playwriting; performance theory

Jill Davis, MFA
(Temple University)
Assistant Professor
Scene design; scene painting; stage management

Angelina M. Herin, MFA
(University of South Carolina)
Assistant Professor; Co-Director of Recruitment
Costume, hair and makeup design

Shanna Beth McGee, MFA
(University of Georgia)
Associate Professor
Voice

Jerrold Scott, MFA
(University of South Carolina)
Professor; Artistic Director, Eldred Theater
Directing; acting; speech

Jeffrey Ullom, PhD
(University of Illinois, Champaign-Urbana)
Assistant Professor; Director of Undergraduate Theater Studies
Dramatic literature, history

David Vegh, MFA
(California State University-Long Beach)
Assistant Professor
Acting; audition laboratory; acting for the camera
**Visiting Faculty**

Christopher Bohan, MFA  
(Wayne State University)  
Visiting Assistant Professor; Co-Director of Recruitment  
Acting; Voice; Movement

**Adjunct Faculty**

Donald Carrier  
(Webber Douglas Academy of Dramatic Art)  
Adjunct Associate Professor; Associate Director, MFA Acting Program  
Acting; script analysis

Laura Kepley  
Artistic Director, Cleveland Play House

Kevin Moore  
Managing Director, Cleveland Play House

**Courses**

**THTR 100. Introduction to Acting. 3 Units.**
A course designed to provide the non-major or undeclared liberal arts major experience with a basic understanding of acting and performance. Fundamentals in improvisation, vocabulary, and scene study are stressed. This course fulfills THTR 101 or THTR 102 should the undeclared student select theater as his or her major or minor. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 101. Acting I For Minors. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 102. Acting I for Majors. 3 Units.**
This course is designed to expose the theater major to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 103. Acting II. 3 Units.**
This course continues the work begun in THTR 101 or THTR 102 with emphasis on action, emotional life, and text analysis as the essential elements of the actor's work. Prereq: THTR 100, THTR 101, or THTR 102.

**THTR 105. Introduction to Stagecraft. 3 Units.**
An introduction to scenic construction and painting, hands-on oriented to workshop skills.

**THTR 106. Fundamentals in Movement. 3 Units.**
Encompass development of flexibility, strength building, alignment, motor skills, and concentration. Prereq: THTR 101 or THTR 102.

**THTR 107. Acting in the Theatre. 3 Units.**
This course offers the opportunity to learn, develop, and practice the art of set, costume, and lighting design by concentrates specifically on the processes, skills, and disciplines of design for performance. Furthermore, students will read several plays and examine ways in which theater design can suggest meaning and interpretation of the script. Students will learn basic design elements and principles of composition through interactive, collaborative projects and exercises in addition to critically analyzing other designers' works from a broad spectrum of design styles. Emphasis will be placed on creativity, discovery, analysis, and collaboration.

**THTR 108. Acting; Voice; Movement. 3 Units.**
This course is designed to expose the theater major to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 109. Movement and Voice. 3 Units.**
This course is designed to expose the theater major to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 110. Introduction to Theater. 3 Units.**
THTR 110 is a fundamental study of theatre from the standpoint of developing the critical acumen of a potential audience. It covers each ingredient of the theatrical experience—audience, playwriting, acting, directing, theatre architecture, design and technology—and attempts to help students define a reasonable set of standards to judge that part of the experience as an audience member and to clearly communicate their feelings and thoughts regarding that experience. The primary textbook is Edward Wilson's The Theatre Experience, former theatre critic for The Wall Street Journal. Readings in this text are augmented by the reading of specific plays that represent different periods, genres, conventions, and dramatic styles. Representative plays (typically six each semester) include Oedipus Rex (Sophocles), Hamlet (Shakespeare), Tartuffe (Moliere), Uncle Vanya (Chekhov), Waiting for Godot (Beckett), and Angels in America (Kushner). Many of these plays are supplemented by short films prepared by Films for the Humanities so that students can see examples of various dramatic and theatrical styles in performance. In addition to class discussions, lectures, and readings, students are also required to attend two live theatre productions offered by Case Western Reserve University's Department of Theater each semester. The students write critical essays about their experience as an audience member in relation to a particular aspect of the performance. Students also have an opportunity to complete in-class projects in which they gain experience functioning as a theatre practitioner. These projects and the accompanying written assignment are designed to increase the student's understanding of the function and interdependence of various theatre artists.

**THTR 111. Introduction to Design. 3 Units.**
This Practicum is designed to provide students with hands-on experience in a variety of positions, both on stage and behind the scenes. Students will register for one credit-hour per semester unless directed otherwise by the Director of Undergraduate Theater Studies. Each student will meet with the Director of Undergraduate Theater Studies to determine his/her position for the semester. Credit will be awarded on a P/NP basis.

**THTR 114. Introduction to Acting. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 115. Exercise and Movement. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 120. Acting for the Deaf. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 121. Shakespeare. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 122. Modern Theater. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 123. Musical Theater. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 124. Women in the Theatre. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 125. Musical Theatre. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 126. Shakespeare. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 127. Musical Theater. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 128. Women in the Theatre. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 129. Musical Theatre. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 130. Shakespeare. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 131. Musical Theater. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 132. Women in the Theatre. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

**THTR 133. Musical Theatre. 3 Units.**
This course is designed to expose the theater minor to the development of the actor's basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.
THTR 206. Mr. Kiss Kiss Bang Bang - James Bond and Popular Culture. 3 Units.
The twenty-one films of James Bond have become part of popular culture, and the figure of the superspy has become mythic in proportion. This series, from its first installment in 1963 to the latest reinvention of James Bond in 2006, not only depicts one dashing man's efforts to save the world from disaster again and again, but also traces the development of our popular culture. Issues of violence, sex, the presentation and treatment of women, racial stereotypes, and spectacle among other topics can be discussed after viewing each film, providing an opportunity to explore the changing expectations of American audiences and the developing form of contemporary cinema. Students who have taken USSO 286D may not receive credit for this class.

THTR 223. Introduction to Scenic Design. 3 Units.
An introduction to visual design for the stage through established theories and knowledge of the theater as a physical space. Approaches practical problems of scenic design as well as professional potential of the field.

THTR 224. Introduction to Lighting Design. 3 Units.
A "grounds up" guide to theatrical lighting for the stage. Focus made upon instrumentation, choices made in the design process, aesthetics of presentation. Combines theory with practical application.

THTR 225. Costume Design. 3 Units.
This course is designed to introduce costume design techniques, approaches, and tools. Students will learn the process of costume design through application of skill and theories - from script analysis through post-production. In addition, students will participate in a costume history and drawing/rendering skills will be taught. This course will culminate in a project designed to incorporate skills and techniques acquired during the semester. Prereq: THTR 111 or instructor permission.

THTR 226. Stage Makeup. 3 Units.
An introductory hands-on course in theatrical makeup techniques and tools. Students will study the history of stage makeup, its application, and the relationship between stage makeup and developing a character. The course will explore a variety of makeup applications from basic corrective makeup to special effects including prosthetics, crepe hair, and blood effects.

THTR 227. Stage Management. 3 Units.
Designed to acquaint student with the numerous aspects of stage management.

THTR 228. Development of Theater: Beginnings to English Renaissance. 3 Units.
Theater 228/World Literature 228 explores the foundations of theater in Western civilization, beginning with Greece and then charting and analyzing the developments in playwriting, design, acting and theater architecture. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater I explores developments from Aeschylus to the English Renaissance. Offered as THTR 228 and WLIT 228. Prereq: Sophomore standing.

THTR 229. Development of Theater: Renaissance to Romanticism. 3 Units.
THTR 229 explores the many developments in playwriting, design, acting, and theater architecture across the world. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater II not only explores the development of theatrical conventions in Spain, England, Italy, France and other European countries that lead to the creation of modern drama, but the course also offers an in-depth look at the history and conventions of theater in India, Korea, China, and Japan. Offered as THTR 229 and WLIT 229. Counts as SAGES Departmental Seminar. Prereq: Sophomore standing.

THTR 231. Acting III: Contemporary Technique. 3 Units.
An exploration of advanced contemporary acting technique based on the work of Michael Chekhov. Provides advanced acting students with the tools necessary to work effectively and consistently with contemporary texts, with emphasis placed on psychological gesture and geste. Counts as SAGES Departmental Seminar. Prereq: THTR 101 and THTR 102.

THTR 232. Acting IV: Classical Technique. 3 Units.
An exploration of techniques to approach classical theater, with emphasis on the works of Shakespeare. Presents the challenges of working with heightened language in classical texts, and provides skills necessary to transfer modern acting methods to these more poetic plays. Prereq: THTR 102.

THTR 306. Acting V: Camera Technique. 3 Units.
Acting for the Camera class with emphasis on how it differs from onstage work. Interviews, scenes, and exercises will be used to highlight the differences and similarities. Emphasis on contemporary works. Prereq: THTR 231 or THTR 232.

THTR 311. Audition Laboratory. 1 Unit.
A discussion and practicum exploring the problems faced by an actor in various audition situations. Development of an audition repertory for the actor for stage, video and film. Prereq: Senior Theater major.

THTR 312. Playwriting. 3 Units.
Theory and practice of dramatic writing, in the context of examples, classic and contemporary. Recommended preparation: ENGL 203 or ENGL 213 or ENGL 214 or ENGL 303 or ENGL 304. Offered as ENGL 305 and THTR 312.

THTR 314. Advanced Playwriting. 3 Units.
Theory and practice of dramatic writing with special focus on the craft of writing a full-length play. Offered as ENGL 314 and THTR 314. Prereq: ENGL 305 or THTR 312.

THTR 316. Screenwriting. 3 Units.
A critical exploration of the craft of writing for film, in which reading and practicum assignments will culminate in the student submitting an original full-length screenplay. Offered as ENGL 316 and THTR 316. Prereq: THTR 312.

THTR 323. Topics in Design. 3 Units.
This course will examine various topics relating to theatre design and technology not covered in other design courses. Students will be provided with practical and theoretical knowledge on a specific topic in order to increase their design and/or technical skills. In addition, each course offering will have its own stated objectives. This course may be repeated by students with each new topic. Prereq: THTR 111 or instructor permission.
THTR 327. American Theater and Playwrights. 3 Units.
Designed to provide students an overview of the development of theater in the United States and to familiarize them with the work and themes of selected American playwrights. Offered as AMST 327 and THTR 327.

THTR 329. Modern and Contemporary Drama. 3 Units.
Theatre 329 explores the development of western drama and theatre from 1860 through present-day productions. The course emphasizes the relationship between different theatrical representations and their historical and social context. Shakespeare's well-known dictum that "theatre holds a mirror up to nature" is expanded when one examines who is holding that mirror, and how their actions participate in the constantly shifting construction of culture. Given this premise, the course investigates the development of specific European cultures (England, France, Germany, and Italy) as well as other regions (the United States, South America, and Russia) through the - live and literary - representations they make of themselves. Offered as THTR 329 and WLT 329. Prereq: Sophomore standing.

THTR 330. Play Directing I. 3 Units.
This course will begin a two-semester study of the art and craft of stage direction of plays. Topics covered will include history of the profession, directorial theory and practice, development of skills such as text analysis, design and concept, and general problem solving. Prereq: THTR 101 and THTR 102, and upperclass status.

THTR 331. Play Directing II. 3 Units.
This course will continue with the basic concepts learned in THTR 330 and will expand them in regard to actual production. Topics will include directing mechanics, ground planning, blocking, and visualization, staging and working with actors. The course will culminate in a faculty supervised directing project for public performance. There are three evening labs for this course. Counts as SAGES Senior Capstone. Prereq: THTR 330, and upperclass status.

THTR 334. Shakespeare: Histories and Tragedies. 3 Units.
Close reading of a selection of Shakespeare's tragedies and history plays (e.g., "Richard the Third," "Julius Caesar," "Hamlet," "King Lear"). Topics of discussion may include Renaissance drama as a social institution, the nature of tragedy, national history, gender roles, sexual politics, the state and its opponents, theatrical conventions. Assessment may include opportunities for performance. Offered as ENGL 324, ENGL 424, and THTR 334. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

THTR 335. Shakespeare: Comedies and Romances. 3 Units.
Close reading of selected plays of Shakespeare in the genres of comedy and romance (e.g., "The Merchant of Venice," "Twelfth Night," "Measure for Measure," "The Tempest"). Topics of discussion may include issues of sexual desire, gender roles, marriage, the family, genre conventions. Assessment may include opportunities for performance. Offered as ENGL 325, ENGL 425, and THTR 335. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

THTR 375. Voice for the Stage I. 3 Units.
Development of the actor's vocal instrument. Work in articulation, range, and flexibility. Prereq: Theater major or consent of department.

THTR 376. Voice for the Stage II. 3 Units.
Continuation of THTR 375. Prereq: THTR 375.

THTR 382. Crossing Bridges: The Public Role of Artist in Understanding Disease. 3 Units.
An in-depth look at the role of the artist in public life and in creating theatrical performance from life experience. The students interact with patients in medical treatment for catastrophic illness and as they understand the experience of disease, they help transform that experience into a performance that gives a voice to the unvoiced in our society. The approved service learning course is offered only as a Senior Capstone and is a demanding challenge for the serious student of theater. Prereq: Acting concentration or consent of department. Counts as SAGES Senior Capstone.

THTR 385. Rehearsal and Production. 1 - 3 Unit.
Practicum for students participating in production work in the Department of Theater and Dance. Supervised, laboratory experience in technical theater, construction techniques, scenery, costumes, lighting, and props; production; ticket office operations, promotion, publicity and public relations; house management; wardrobe responsibilities; stage management; assistant directing; and other production positions relating to the mainstage performances in Eldred Theater. Students are recommended to take one credit hour per production, with a maximum of 8 credit hours allowed during their undergraduate career.

THTR 386. Rehearsal and Performance. 1 Unit.
Practicum for students participating in performance in the Department of Theater and Dance, relating to the mainstage productions at Eldred Theater. This course may be repeated, for a maximum total of 2 credits.

THTR 390. Theater Design and Technology Capstone. 3 Units.
This is a SAGES Capstone course designed to provide an opportunity for advanced Design/Technical Theater Undergraduates to undergo a thorough theatrical design experience as would expected in the professional theater. The project requires a specific play or performance piece to be chosen or assigned and researched thoroughly. The research would culminate in a production concept which should be presented in written and oral form with a great deal of visual support. The production concept leads to the design, either scenic, costume, lighting or sound, which then must be executed. In professional theater, execution first means preparing all of the drafting, renderings, and paperwork necessary for a production team to create the set or costumes, or prepare the necessary lighting or sounds equipment in the venue. The final portion of the design execution will be the performance of the actual piece on stage. It could be appropriate for a scenic or costume design project to be complete at this stage as the vast majority of the work must be done before the actual performance and the realization of the design is executed by a production team. Lighting and sounds designers must finish the execution of their designs in the technical rehearsal phase of production. Their work is dependent on integration with the other elements of production. However, theater is a collaborative art form, and the final execution of every design on stage is the ultimate goal of the designers, and when possible, it would be preferable to have every capstone project culminate in a fully realized production. Due to budget constraints and the logistics of allowing every design/technical senior to be able to participate in a fully realized production, students can choose to pursue a more research intensive project in which the student could study specific designers, movements in design or the development of technology in theatrical design. These projects would be presented in a more traditional oral presentation with visual support. Counts as SAGES Senior Capstone.
THTR 393. Senior Capstone: Dramaturgy. 3 Units.
This course introduces students to theories of textual analysis and contextual research within the framework of theatrical performance. Students will investigate the history and methodologies of dramaturgy, and then apply the best practices of the profession to the study and production of contemporary plays. Because dramaturgy is a collaborative endeavor, students will participate with others in the production of a theoretical adaptation from a non-dramatic source, as well as the creation of an interdisciplinary theatre event and a multi-media performance project. By course end, students will be able to support their theatrical interests with dramaturgical insights and to work collaboratively to create productions that reflect the cultural and aesthetic diversity of the 21st century. Counts as SAGES Senior Capstone. Prereq: Senior standing.

THTR 396. Non-Verbal Theatrical Text. 3 Units.
This is a SAGES capstone course. It has been constructed to provide an opportunity for advanced Design/Technical Theater Undergraduates to examine and explore the roots and current trends of post-modern, contemporary theater as well as to investigate current design outside of its traditional decorative role. Rather, as in current movements described as “action design” or “affective space theory”, design will be used to create a text which combines with the spoken word in production for the purpose of audience perception of meaning. As a starting point, this course will examine the advent of realism on stage and follow this study by subsequent significant movements departing from realism. Through extensive use of video and live presentation, students will select movements in theater production for written and oral analysis. As a class, we will define post-modern as a term to describe contemporary theater and further explore the possibilities of theatrical presentation form a written dramatic source. This course will culminate in the production, whether group or individualized, of a creative design, based on a work written for the stage, but exploring non-verbal communication of an author’s or director’s intent. This exploration of theater language might combine non-verbal characteristics inclusive of images, relationships, activity, song, music, properties, objects, color, costume, movement, light, silence, sounds, presence or gesture. Goals of the seminar will be to find a process for textual analysis through an in-depth examination of the chosen text, to create a focus upon the action which drives this text, to discover a process for imagery that will give the text dimension and finally, to embody and realize ideas which impart to that text its intellectual content. A public presentation within Eldred’s black box, Mather’s dance studio space, or a public performing space within the CWRU campus will be integral to this process. Weekly participatory assignments will also be prescribed from a mandatory and suggested reading list. Counts as SAGES Senior Capstone. Prereq: Theater Majors with Design Tech Emphasis.

THTR 397. Honors Studies I. 3 Units.
Individual projects in acting, dance, and directing.

THTR 398. Honors Studies II. 3 Units.
Individual projects in acting, dance, playwriting, and directing.

THTR 399. Independent Study in Theater Arts. 1 - 3 Unit.
Independent research and project work in areas of acting, design, voice, theater history, playwriting, directing, or theater management.

THTR 401. Advanced Stage Movement I. 3 Units.
This beginning class focuses on developing flexibility, alignment, strength, concentration and basic motor skills and serves as a base for the remaining three semesters. Yoga and Tai Chi exercises are used to develop flexibility and a relaxation of the breath. Elements of Decroux based corporeal mime technique will strengthen the student’s physical instrument as well as address alignment problems. Motor skills (articulations, inclinations and design work) will be developed with Decroux, as well as LeCoq based exercises. Prereq: Must be candidate in M.F.A. Acting program.

THTR 402. Advanced Stage Movement II. 3 Units.
Continuation of THTR 401. The course focuses on simplifying and empowering the physical actor by continuing to connect breath to action to discover relaxation within the given task, and beginning work in characterization. Strength, flow, energy and the shedding of intrusive mannerisms will be gained from a study of Tai Chi form, and LeCoq based neutral mask work. Following the neutral mask work, students will progress to character work through the use of Physical Acting techniques. Stage combat work continues. Prereq: THTR 401.

THTR 403. Advanced Stage Movement III. 3 Units.
The class focuses on expanding the actor’s physical and imaginative range which will enable students to support larger and bolder physical choices in characterization. Building upon the Neutral Mask work from the previous semester, the student will experience, through LeCoq based techniques, Basel and Expressive Masks. Stage combat work continues. Prereq: THTR 402.

THTR 404. Advanced Stage Movement IV. 3 Units.
This class gives the actor the advanced physical skills and techniques needed to encompass the demands of historical dramatic texts. The work will center around period movement for the theater. The actor will experience the philosophies of carriage and deportment; religious, scientific thought and art from particular historic periods most often encountered in the professional theater. Stage combat work continues. Prereq: THTR 403.

THTR 473. Graduate Voice Technique I. 3 Units.
Assessment of students’ current vocal and alignment skills. Laboratory for exploring new vocal and alignment habits supportive of healthy vocal functioning. Exploration of the body and voice as it relates to breath, resonance, and the healthy exhalation of sound. Prereq: Must be candidate in M.F.A. Acting program.

THTR 474. Graduate Voice Technique II. 3 Units.
Continued laboratory for the exploration of alignment and vocal skills supportive of healthy vocal functioning. Continued exploration of the body and voice as it relates to breath, articulation, resonance, and the healthy exhalation of sound. Prereq: THTR 473.

THTR 475. Voice for Stage: Shakespeare. 3 Units.
Development of skills needed to address the specific needs of Shakespeare and Classical texts in performance, including vocal skills, the use of breath, using imagery, and textual studies. Prereq: THTR 473.

THTR 479. American Stage Speech. 2 Units.
Designed to evaluate the graduate student actors’ current speech skills, to teach them a stage-appropriate dialect using the Skinner narrow IPA set, and to achieve a level of mastery over articulation and diction. Prereq: Course limited to first-year M.F.A. candidates in Acting Program.
THTR 501. Text Analysis for the Actor. 2 Units.
An introduction to the craft of reading a theatrical text from an actor's point of view. Methods for analyzing the action and dialogue of a play will be applied to dramatic text so that the actor can learn to transform a one-dimensional text into a three-dimensional performance.

THTR 509. Seminar: Introduction to Performance Theory. 2 Units.
Research seminar designed to acquaint the theater student with the major theoretical writings of performance theory. Readings on the creative process and archetypal mythology. Exploration of anthropological, psychological, and cultural sources of art and the theatrical impulse.

THTR 512. Graduate Audition Lab. 1 - 2 Unit.

THTR 530. Ensemble Technique. 1 - 2 Unit.
A practicum course structured to explore the use of ensemble dynamic techniques in a rehearsal/performance environment, as well as to develop a set of exercises which encourage and sustain the actor's channels of interpersonal communication during a range of rehearsal and performance situations. Prereq: Must be candidate in M.F.A. Acting program.

THTR 531. Acting: Research and Performance I. 3 Units.
The various elements of the actor's process considered on advanced levels. Integration of rehearsal discoveries into a practical performance situation. Limited to M.F.A. candidates.

THTR 532. Acting: Research and Performance II. 3 Units.
The various elements of the actor's process considered on advanced levels. Exploration of rehearsal techniques for characterization. Limited to M.F.A. candidates.

THTR 533. Acting: Research and Performance III. 3 Units.
Sequential courses designed to explore the various elements of the actor's process on advanced levels and to integrate the discoveries made into a practical performance situations. Limited to M.F.A. candidates. Prereq: THTR 531 or THTR 532.

THTR 534. Acting: Research and Performance IV. 3 Units.
Sequential courses designed to explore the various elements of the actor's process on advanced levels and to integrate the discoveries made into a practical performance situation. Prereq: THTR 531 or THTR 532 or THTR 533.

THTR 540. The Business of the Business. 2 Units.
This course covers the basic knowledge needed for an actor to plan and manage a career in the theater. Included is discussion of union rules and applications for AEA, AFTRA, and SAG. Discussion of basic marketing techniques, including development of an individual marketing plan for each student. Guest lecturers might include IRS experts on the actor's special needs, casting directors, and commercial agents.

THTR 579. American Stage Speech II. 3 Units.
This course will continue the work begun in THTR 479 American Stage Speech, continuing the work on IPA, articulation, and general speech clarity for the stage. Exercises from the Berry and Rodenberg Schools of thought will be used in addition to the speech basics of Skinner. Prereq: THTR 479.

THTR 580. Stage Dialects. 2 Units.
This survey course will examine the use and application of major stage dialects in the American theatre using a phonetic tool set as a basis for understanding sound substitutions. The student will also study the ways in which rhythmic changes and resonance and tension shifts affect the dialects. Prereq: Graduate standing.

THTR 581. Classical Speech and Text. 2 Units.
This course will study ways in which the actor's speech instrument is used differently in classical texts, particularly those of Shakespeare. Students will study tools for analyzing a line of text in order of understand how to use the words and sound of the line.

THTR 601. Special Projects. 1 - 3 Unit.
(Credit as arranged.)

THTR 610. Professional Internship. 1 - 4 Unit.
Involvement in intensive internships with professional theaters in the Cleveland area bridging academic and professional lives. Internships range from six weeks to one semester.

THTR 630. Performance Studio. 3 Units.
A performance laboratory, ensemble-based practicum in which the student works to integrate effectively a wide range of performance skills culminating in a studio production. May be taken two times in the last two semesters of graduate study. Prereq: THTR 534.

THTR 642. Thesis Portfolio I. 1 Unit.
Course designed specifically for candidates in the Master of Fine Arts program in Acting. Graduate students enroll for the course during their third year of study, although work spans three years of study, based on roles the M.F.A. actor has created. A portfolio is prepared, according to requirements set forth in the department's M.F.A. Handbook, and is presented to the faculty during the spring semester of the third year, in a formal oral defense. Satisfactory completion of the portfolio and its oral defense are among the requirements for awarding the Master of Fine Arts degree. Course limited to M.F.A. candidates in the Acting program.

THTR 643. Thesis Portfolio II. 1 Unit.
Course designed specifically for candidates in the Master of Fine Arts program in Acting. Graduate students enroll for the course during their third year of study, although work spans three years of study, based on roles the M.F.A. actor has created. A portfolio is prepared, according to requirements set forth in the department's M.F.A. Handbook, and is presented to the faculty during the spring semester of the third year, in a formal oral defense. Satisfactory completion of the portfolio and its oral defense are among the requirements for awarding the Master of Fine Arts degree. Course limited to M.F.A. candidates in the Acting program.

THTR 644. M.A. Project. 1 - 12 Unit.
Research and development of a Master of Arts project in Theater.

Environmental Studies Program

Environmental studies is a multidisciplinary program that introduces students to the societal determinants and implications of environmental problems. The program emphasizes the moral, cultural, and political dimensions of environmental problems and solutions that arise from scientific understanding of the environment, bringing to bear the issues and methods of the humanities and social sciences as well as those of the sciences and the professions. The program is designed to serve the needs of students seeking a liberal education or a broad intellectual base for more technical training in environmental sciences. Students can pursue a major or a minor in environmental studies.

Undergraduate Programs
Major
The Environmental Studies Program offers a major (30 credit hours) leading to the Bachelor of Arts degree. However, it may be elected only as a second major. The double major is required so that the program's multidisciplinary perspective will be complemented by a concentrated
disciplinary major. Students may apply up to six credits from required and elective courses in their first major to the environmental studies major. None of the required courses may be taken pass/no pass.

The required courses are:

### Required courses

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>

<tr>
<td>or ESTD 399</td>
<td>Departmental Seminar in Environmental Studies</td>
<td>3</td>
</tr>
</tbody>
</table>

One course from each of the following disciplinary groups:

#### Humanities

- RLGN 206: Religion and Ecology
- HSTY 292: Energy and Environment in American History 1750-2010
- HSTY 327: Comparative Environmental History
- HSTY 378: North American Environmental History
- PHIL 330: Topics in Ethics

#### Social Policy

- ESTD 303: Environmental Law
- ESTD 388: Politics, Policy, and the Global Environment
- ECON 368: Environmental Economics

#### Science and Engineering

- ESTD 202: Global Environmental Problems
- BIOL 351: Principles of Ecology
- EECS 342: Introduction to Global Issues

Fifteen additional hours chosen in consultation with the departmental advisor. An approved Washington Study internship or summer field course may be used to satisfy part or all of the elective requirement. All programs of study must be approved by the director.

Total Units: 30

If a required course is not offered, substitution of a course to fulfill the distribution requirement is possible only with permission of the program director.

### Minor

The minor in environmental studies (15 credit hours) consists of:

#### Required course:

- ESTD 101: Introduction to Environmental Thinking 3

One course each from two of the following disciplinary groups: 6

#### Humanities

- RLGN 206: Religion and Ecology
- HSTY 292: Energy and Environment in American History 1750-2010
- HSTY 327: Comparative Environmental History
- HSTY 378: North American Environmental History
- PHIL 330: Topics in Ethics

#### Social Policy

- ESTD 303: Environmental Law
- ESTD 388: Politics, Policy, and the Global Environment
- ECON 368: Environmental Economics

#### Science and Engineering

- ESTD 202: Global Environmental Problems
- BIOL 351: Principles of Ecology

Six additional hours chosen in consultation with the departmental advisor. 6

Total Units: 15

### Program Faculty

- Peter L. McCall, JD, PhD  
  Professor, Department of Earth, Environmental, and Planetary Sciences; Director, Environmental Studies Program
- Jeremy Bendik-Keymer, PhD  
  Elmer G. Beamer-Hubert H. Schneider Professor in Ethics; Associate Professor, Department of Philosophy
- John Broich, PhD  
  Associate Professor, Department of History
- Jessica Green, PhD  
  Assistant Professor, Department of Political Science
- Gerald Matisoff, PhD  
  Professor, Department of Earth, Environmental, and Planetary Sciences
- John Ruhl, PhD  
  Professor, Department of Physics
- Peter Shulman, PhD  
  Assistant Professor, Department of History
- Theodore Steinberg, PhD  
  Adeline Barry Davee Distinguished Professor of History

### Courses

#### ESTD 101. Introduction to Environmental Thinking. 3 Units.

Critical comparison of scientific, historical, religious, and literary conceptions of nature. Theories of environmental ethics, legal, and economic conceptions of environmental goods. Current controversies concerning human population growth, energy use, the consumer society, and attitudes towards animals.

#### ESTD 202. Global Environmental Problems. 3 Units.

Global Environmental Problems is a course designed to provide students with an understanding of, and an appreciation for, human-influenced environmental changes that are global in scope. Accordingly, much of the material will focus on the nature and structure of natural global systems, how and where in those systems human influences occur, and will delve deeply into a few particular problems and solutions of current interest, such as population growth, climate change, ozone depletion, and fisheries, from a variety of viewpoints. Offered as ESTD 202 and EEPS 202.

#### ESTD 303. Environmental Law. 3 Units.

Introduction to treatment of environmental issues in legal proceedings. Sources of environmental law, legal procedure, common law remedies (tort actions and human health, nuisance, contract law), statutes and regulations, endangered species, public lands, toxics regulation, nuclear power, coal. The course employs the case method of reading and recitation of appellate judicial opinions. We read both classic cases in environmental law as well as current controversies. Offered as ESTD 303 and EEPS 303.
ESTD 388. Politics, Policy, and the Global Environment. 3 Units.
This course examines the law, politics and policy surrounding global environmental challenges such as climate change. The course aims to provide a broad overview of the key concepts, actors, debates, and issues in global environmental politics. It aims to illustrate the complexities of addressing environmental problems—from the proliferation of global institutions and international actors, to the absence of central enforcement mechanisms. We examine the causes of environmental degradation and competing views on the gravity of the problem. Using concepts from political science and economics, we investigate the challenges in getting states to act jointly to address environmental problems. We examine the actors and institutions of global environmental politics, to understand how conditions are defined as problems and responses are chosen and implemented. The course concludes by applying the tools and concepts to the case of climate change. Offered as POSC 388, ESTD 388, POSC 488.

ESTD 398. Seminar in Environmental Studies. 3 Units.
Small group discussion and student presentations concerning the cultural determinants of environmental attitudes and policies. Each student participates in all weekly discussions and leads at least one seminar. Prereq: ESTD 101 or previous credit for ESTD 398.

ESTD 399. Departmental Seminar in Environmental Studies. 3 Units.
Discussion and critique of recent publications in Environmental Studies. Students write weekly short essays on readings and participate in weekly group discussion. Reading list changes annually and is typically comprised of 7-9 books that center on a few unifying themes for that year (food, energy, futures, toxic torts, attitudes toward animals, consumer culture, climate crises for example). Students research, write, and defend a critical review of academic literature concerning some topic contained in the readings. Prior enrollment in ESTD 101 is recommended but not required. Students may not enroll in both ESTD 399 and 398 in the same year.

Ethnic Studies Program

The goal of the Ethnic Studies Program is to expand and enhance the university’s course offerings on ethnicity and race in the United States and around the world. The program’s objectives are:

1. to examine relationships among racial/ethnic groups, the processes of racial/ethnic formation, and their intersections with class, gender, and sexuality at the personal and collective levels
2. to foster the development of research skills in a broad range of disciplines in the humanities
3. to contribute to an interdisciplinary knowledge of the challenges and contributions of ethnic minorities in the United States
4. to impart to students a deep knowledge of the cultures of Africa and Latin America
5. to help students develop competencies for working with people of different racial/ethnic backgrounds and to foster an understanding of racial/ethnic diversity
6. to support students and faculty in the transmission of knowledge, in the discovery and development of new ideas, and in research and writing in the field of ethnic studies
7. to inculcate in students an understanding of the complexity and challenges of multietnic societies, and to prepare them for careers in education, business, law, government service, social work, social welfare, health care, teaching, public policy, law enforcement, urban and community development, and the arts.

Ethnic Studies is an interdisciplinary program. The program aims to develop fundamental skills in critical and global thinking and in comparative analysis, as well as an understanding of the interactions of race, class, gender, and sexuality in the experiences of a range of social groups. It is designed to bring together a community of students, faculty, and staff devoted to the transmission of knowledge and the discovery of new ideas in the field of ethnic studies. Ethnic Studies also offers diverse perspectives that challenge monolithic thinking about the formation of identities and societies.

The program’s core courses focus on the exploration and comparison of the cultures, history, politics, and economics of Africa, Latin America, and their diasporas. Program offerings explore ethnicity and cross-cultural exchange globally and in postcolonial frames. Ethnic Studies supports research pertinent to the field and encourages cultural and academic exchange among scholars and students.

The program is part of the university’s mission to enhance the recruitment, retention, and excellence of a diverse faculty and student body. Our long-term goals are to extend program offerings to encompass other ethnic minority groups and to develop a center that will foster an appreciation of ethnic diversity and difference in the learning and research communities of Case Western Reserve University.

Undergraduate Program

Minor

The Ethnic Studies minor is open to all undergraduate students. It requires a minimum of 15 credit hours. Students are required to take 6 credits from among Ethnic Studies core courses and 9 credits in their chosen areas of concentration. Community projects are strongly recommended, and students are encouraged to carry out field research in their areas of concentration.

The core courses are designed to introduce students to the interdisciplinary field of ethnic studies. Courses may be individually or team taught and will sometimes be conducted in seminar format. Students are encouraged to use the tools and perspectives of several disciplines (history, literature, art history, anthropology, film, sociology, and political science, for example) to address the experiences of African-Americans and Latino/a Americans. Courses center on the examination of social, cultural, political, and economic structures that shape the life of these ethnic minorities in the United States. They examine how race, class, and gender have impacted their identities as well as their economic, social, political, and cultural productions. Assignments and courses make maximum use of the archives and collections of University Circle institutions.

Courses

ETHS 218. Jews in Early Modern Europe. 3 Units.
This course surveys the history of Jews in Europe and the wider world from the Spanish expulsion through the French Revolution. Tracking peregrinations out of the Iberian Peninsula to the British Isles, France, Holland, Italy, Germany, Poland-Lithuania, the Ottoman Empire, and the American colonies, it examines the diverse ways Jews organized their communities, interacted with their non-Jewish neighbors, and negotiated their social, economic, and legal status within different states and empires. What role did Jews play and what symbolic place did they occupy during a period of European expansion, technological innovation, artistic experimentation, and religious and political turmoil? What internal and external dynamics affected Jewish experiences in the sixteenth, seventeenth, and eighteenth centuries? Through a selection of inquisitorial transcripts, government records, memoirs, and historical literature, we will explore topics such as persecution, conversion, messianism, toleration, emancipation, and assimilation. Offered as HSTY 218, JDST 218, and ETHS 218. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 220. The Early Modern Mediterranean. 3 Units.
For centuries before Columbus crossed the Atlantic Ocean, travelers and traders, pirates and pilgrims, mercenaries and missionaries explored the contours of the Mediterranean Sea—and engaged in commerce, as well as religious, economic and military competition. If religion and ethnicity divided Muslims, Christians and Jews from Algiers to Athens, did shared geography, foodstuffs, and cultural values bind them together? This course examines the unity and diversity of this maritime region by considering the peoples, beliefs, commodities and diseases that circulated through it during the sixteenth, seventeenth, and eighteenth centuries. Does the early modern Mediterranean showcase a clash of civilizations or provide an enduring model for coexistence? Topics include merchant culture, diplomacy, honor and shame, slavery and colonization. Offered as ETHS 220, HSTY 220. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 222. African-American Religions. 3 Units.
This course is an exploration of the rich diversity of African American religions from the colonial period to the present. Attention will be given to key figures, institutional expressions, and significant movements in African American religious history. Major themes include African traditions in American religions, slavery and religion, sacred music, social protest, Black Nationalism in religion, Islam, African American women and religion, and black and womanist theologies. Course requirements will include field trips to local religious sites. Offered as ETHS 222 and RLGN 222. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 232. DESI: Diaspora, Ethnicity, Southasia(n), Interrogate. 3 Units.
In this class we will interrogate the cultural identity(ies) and imagined community(ies) of the “South Asian” Diaspora. We will first examine taxonomy and categorization itself, as a methodical, philosophical, and political enterprise. We will then examine how such contrived categories have been applied to the so-called desis, loosely and broadly understood as members of the South Asian Diaspora. To this end we will scrutinize the development of American(ized) “Hinduism.” the imagined location that desis have in North American racial and ethnic hierarchies, and the construction of assimilated, enculturated, and transnational imagined desi communities. Offered as RLGN 232, ETHS 232 and HSTY 232 Counts for CAS Global & Cultural Diversity Requirement.

ETHS 234. France and Islam. 3 Units.
This seminar examines French encounters with the Muslim world from the Middle Ages to the present. Over the last millennium, France has viewed Saracens, Moriscos, Turks, Berbers, and Arabs with admiration and fear, disdain and incomprehension. Between the eleventh and thirteenth centuries, French soldiers battled in the Holy Land; for several hundred years after that, France and the Ottoman Empire exchanged diplomats, traders and slaves. The colonial occupation of Algeria that began in 1830 ended violently in 1962. By then, the empire that struck back had also come home through large waves of immigration. Today, the social and economic status, religious affiliation, political significance and cultural impact of French citizens of North African descent are the subject of burning national debate. Taking a long view on Franco-Muslim relations, the course will explore such topics as the Crusades, Mediterranean piracy and captivity, Napoleon’s Egyptian campaign, the Algerian War of Independence, the “veil affair,” riots in the suburbs of Paris and World Cup soccer. Offered as ETHS 234, HSTY 234. Counts as SAGES Departmental Seminar, Counts for CAS Global & Cultural Diversity Requirement.

ETHS 235. Theater and Identity. 3 Units.
This course aims at surveying identities in dramatic and performance texts in the modern era. It will help students develop skills to study plays and related theatrical forms, to analyze images for their social and political meanings, to investigate issues of identity, to appreciate the complexities of identity and images of self and other as related in theater, media and the larger political and social contests. African and African-American identities, Latina/o-American and Latin American identities, Native-American identities, Asian-American and Asian identities, Gender identities will be examined. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 251. Perspectives in Ethnicity, Race, Religion and Gender. 3 Units.
This course is designed to introduce students to the study of ethnicity. Basic concepts such as race, gender, class, and identity construction will be examined. Students are encouraged to use the tools and perspectives of several disciplines to address the experiences of ethnic groups in the United States. Offered as ETHS 251 and RLGN 251. Counts for CAS Global & Cultural Diversity Requirement.
ETHS 253A. Introduction to African-American Studies. 3 Units.
This course is designed to introduce students to the study of Black History, cultures, economics, and politics. Students will learn about the development of the field by exploring theoretical questions, methodological approaches, and major themes that have shaped the study of black people, primarily in the U.S. context. This is a seminar-style, discussion-based course that emphasizes critical analysis and expository writing. Offered as ETHS 252A and HSTY 252A. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 252B. Introduction to Latin American History. 3 Units.
This course provides an introduction to the historical and cultural development of Latin America, in an attempt to identify the forces, both internal and external, which shape the social, economic and political realities in present day Latin America. Beginning with its pre-Columbian civilizations, the course moves through the conquest and colonial period of the Americas, the wars of independence and the emergence of nation-states in the nineteenth century, and the issues confronting the region throughout the turbulent twentieth century, such as migration and urbanization, popular protest and revolution, environmental degradation, great power intervention, the drug trade and corruption, and the integration of the region into the global economy. Offered as ETHS 253B and HSTY 136. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 254. The Holocaust. 3 Units.
This class seeks to answer fundamental questions about the Holocaust: the German-led organized mass murder of nearly six million Jews and millions of other ethnic and religious minorities. It will investigate the origins and development of racism in modern European society, the manifestations of that racism, and responses to persecution. An additional focus of the course will be comparisons between different groups, different countries, and different phases during the Nazi era. Offered as HSTY 254, RLGN 254, ETHS 254, and JDST 254. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 260. U.S. Slavery and Emancipation. 3 Units.
Explores the fashioning of a modern African-American culture between emancipation and the end of World War II. Emergence of a northern-based leadership, the challenge of segregation, emergence of bourgeois culture, the fashioning of racial consciousness and black nationalism, the shift from a primarily southern and rural population to one increasingly northern and urban, the creation and contours of a modern African-American culture, the construction of racial/gender and racial/class consciousness. Offered as ETHS 261 and HSTY 261. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 261. African-American History 1865-1945. 3 Units.
Explores the fashioning of a modern African-American culture between emancipation and the end of World War II. Emergence of a northern-based leadership, the challenge of segregation, emergence of bourgeois culture, the fashioning of racial consciousness and black nationalism, the shift from a primarily southern and rural population to one increasingly northern and urban, the creation and contours of a modern African-American culture, the construction of racial/gender and racial/class consciousness. Offered as ETHS 261 and HSTY 261. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 262. African-American History Since 1945. 3 Units.
Completes the three-term sequence of the African-American history survey (although the first two courses are not prerequisites for this course). Explores some of the key events and developments shaping African-American social, political, and cultural history since 1945. Offered as HSTY 262 and ETHS 262. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 265. Malcolm and Martin. 3 Units.
An examination of the lives, religious thought, and ideological frameworks of Malcolm X and Martin Luther King, Jr. The course will investigate Malcolm X and Martin's religious beliefs and activist strategies; the ideas and strategies of other civil rights and Black Nationalist leaders who influenced and challenged Martin and Malcolm's ideas on race, gender, class, and sexuality; and the historical antecedents for these strategies within nineteenth-century black religious, social, and political movements. Their impact on modern African American religious thought, American political culture, and international human rights movements will also be explored. Offered as ETHS 265 and RLGN 265. Counts for CAS Global & Cultural Diversity Requirement.
ETHS 280. History of Modern Mexico. 3 Units.
This course explores the major issues that have influenced the formation of modern Mexico. This class is organized around three major themes. First, we will examine Mexican identity formation and its political implications. Second, we will assess Mexican life in relation to the development of the Mexican economy. Finally, we will survey how elite and popular forms of violence have affected Mexican society. Throughout the course, we will discuss the significance of the colonial heritage, regional distinctions, racial and gender stratification, and the creation and reconfiguration of various types of borders. Offered as HSTY 280 and ETHS 280. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 287. State, War, Drugs, and Coffee in Colombia: History of Modern Colombia. 3 Units.
This course will analyze the major forces that have shaped Colombian history from the 19th century to the present. Colombia is one of the largest and most fascinating countries in Latin America. It has been intricately linked to the U.S. market as a major coffee producer and, more recently, as a major supplier of illicit drugs. Colombia has always been one of the wealthier Latin American countries, and it has a high degree of electoral democracy. Paradoxically, however, Colombia has also experienced rather high levels of regionalism and political violence. This course seeks to explore the history of these paradoxes. It will situate Colombia’s contemporary conflicts within a larger historical perspective. Offered as ETHS 287 and HSTY 287. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 295. The Francophone World. 3 Units.
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (and where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle East (Lebanon, Syria); the Caribbean (Martinique, Guadeloupe, Haiti); Southeast Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg). FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. Offered as ETHS 295, FRCH 295, and WLIT 295. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 301. Women, Creativity and the Arts. 3 Units.
WGST301/ETHS301 is one of two core courses for the program in Women’s and Gender Studies and an elective course for the ETHS minor. All WGST majors are to take one course concentrating on the subject of women and the arts specifically. This course also fulfills the cultural diversity requirement. In this course, students will focus on two areas of study: a) women and creativity and b) women and activism through the arts. A history of women in the arts will be covered, but the general focus of the course is on women in the arts since the 1960s in particular, and on artwork that reflects or provokes social change. “Arts” are defined in the broadest of sense. That is , students will study women’s production in painting, photography, graphic design, sculpture, dance, film, music, and theater. A variety of learning techniques will be applied: Students will look at feminist theories on art, be introduced to the notion of cyberfeminism, study actual artwork and its reproductions, understand the role of are in feminist activism and how women “create” differently from men, and work closely with several feminist artists/ activists through various programs on campus and the community in order to facilitate the planning and carrying out of artistic production. Subsequently, students will interact with children in Cleveland schools in conjunction with these artists giving master classes, and be exposed to art exhibits abroad through videoconferencing with the Algerian Cultural Center in Paris and locally through University Circle Institutions. Offered as WGST 301 and ETHS 301. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 304. Representations of Black Women and Religion in Film. 3 Units.
In this course we will explore cinematic representations of black women and religion in film. Each week we will view a film in class. We will begin the class with the film Imitation of Life and then the course with The Help. Throughout the course we will analyze the ways in which notations of gender, sexuality, intimate violence, and modern notions of race and color, have informed representations of black women and religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas about black women in the Americas. Offered as RLGN 304, RLGN 404, WGST 304, and ETHS 304. Counts for CAS Global & Cultural Diversity Requirement.
ETHS 306. The Cuban Experience: an immersion in its culture and society. 3 Units.
This is a three week study-abroad intensive course that takes place at Editorial Vigía, in Matanzas, Cuba. The course combines the unique advantages of a total immersion environment in Spanish with a classroom curriculum that includes conversation practice and study of relevant cultural, literary and historical issues. Students complete three hours of classroom instruction and an hour and a half of publishing workshop four days per week. In this workshop, they work in the edition of a bilingual book. In addition, they participate in organized visits to historic sites and museums connected to the culture curriculum. The focus of the culture curriculum is the study of Cuban history and culture through its literature, visual arts, films, and music. After applying and being accepted in the program, students meet for personal advising with the program director and attend four different one hour orientation-information meetings in the spring semester. After successful completion of the study-abroad program, students receive 3 upper-level credits in Spanish. The course is interdisciplinary in approach and provides students with the tools they need to analyze and understand the complexities of modern Cuba. Students will have formal classes taught by their professor and talks and meetings with specialists on Cuban literature, art, architecture, history and other aspects of culture and society. In addition, they will attend lectures, participate in discussions, and take field trips that will expose them to many aspects of Cuban culture, such as art, architecture, music, dance, film, literature, artisan work, folklore, history and urban growth. Offered as SPAN 306, SPAN 406, and ETHS 306. Prereq: SPAN 202.

ETHS 311. Representations of Black Religion in Film. 3 Units.
In this course we will explore cinematic representations of black religion in the Americas and the Caribbean. Each week we will view a film representing diverse religious traditions such as Christianity, Candomble, Santería, Vodoun, and Islam. Films will include Cabin in the Sky, The Color Purple, Black Orpheus, The Serpent and the Rainbow, Malcolm X, Eve's Bayou, and The Princess and the Frog. Throughout the course we will analyze the ways in which notions of gender, the history of colonialism, modern notions of race, and geographical landscapes have informed representations of black religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas of black religion in the Americas. Offered as RLGN 311, ETHS 311, and RLGN 411. Prereq: RLGN 222 or ETHS 251 or ENGL 367 or by permission of Instructor.

ETHS 314. Cultures of the United States. 3 Units.
This course considers the rich ethnic diversity of the U.S. from the perspective of social/cultural anthropology. Conquest, immigration, problems of conflicts and accommodation, and the character of the diverse regional and ethnic cultures are considered as are forms of racism, discrimination, and their consequences. Groups of interest include various Latina/o and Native peoples, African-American groups, and specific ethnic groups of Pacific, Mediterranean, European, Asian, and Caribbean origin. Offered as ANTH 314, ETHS 314, and ANTH 414. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 316. African Political Thought. 3 Units.
Introduction to select themes in the work of contemporary African philosophers, with special emphasis on political thought. In this course, students will learn something about factors affecting the creation and flow of knowledge and ideas about Africa and discuss the relative importance of the "nation-state" as an idea in Europe, pre-colonial Africa, and post-colonial Africa. Offered as PHIL 316/416 and ETHS 316/416. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 318. History of Black Women in the U.S.. 3 Units.
Chronologically arranged around specific issues in black women's history organizations, participation in community and political movements, labor experiences, and expressive culture. The course will use a variety of materials, including autobiography, literature, music, and film. Offered as ETHS 318, HSTY 318, and WGST 318.

ETHS 325. Hispanic Intellectuals and Society: A Critical Approach. 3 Units.
This course offers an overview of the most important critical approaches to Spanish American culture and literature, with a socio-historical emphasis. Some of the authors we will discuss are Angel Rama, Jose Antonio Cornejo Polar and Nestor Garcia Canclini. We will analyze how the Latin American intellectuals had thought about specific issues such as identity, race, ideology, colonial and post-colonial relations with the metropolis and the process of formation of the nations in the continent. The class, the discussions, exams, oral presentations and papers will be in Spanish. Some of the readings must be in English, but most of them will be in Spanish. Offered as SPAN 325, SPAN 425, ETHS 325, WLIT 325 and WLIT 425. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 333. Contemporary Caribbean Literature. 3 Units.
In addition to developing a general familiarity with the literature and history of this region, students will acquire an awareness of the interrelation of national identity, memory, and language in the texts produced by contemporary Caribbean authors, and of the cultural hybridity characteristic of this production. The themes treated by these authors include colonialism and postcolonialism, cultural and religious syncretism, and sexual politics. Offered as SPAN 333, SPAN 433, ETHS 333, WLIT 333 and WLIT 433. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 335. Women in Developing Countries. 3 Units.
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondichery), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper. Offered as ETHS 335, FRCH 335, WLIT 335, WGST 335, FRCH 435 and WLIT 435. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 336. The Struggle for Justice in Latin America. 3 Units.
This course looks at how indigenous peoples, women, students, workers, peasants, and Afro-Latin Americans struggled for justice in Latin America. It will study how notions of justice have changed from colonial times to the present. It will also examine how different sectors of Latin American society understood the meaning of justice and how that understanding evolved through time. This class seeks to familiarize students with the history of the idea of justice in Latin America. At the end of this course students will understand the complex intellectual and political differences behind Latin America's apparent chaotic and tumultuous political history. Second, it seeks to develop students' critical thinking by examining how an abstract term, such as justice, changes across time and space. Offered as ETHS 336 and HSTY 336. Counts for CAS Global & Cultural Diversity Requirement.
ETHS 337. Women in the Arab World. 3 Units.
The purpose of this course is twofold: It is a course that allows students an in-depth look at the diverse women who represent a number of cultures in the Arab world in nations from the Mashrek to the Maghreb. The second primary goal of the course is to study such women through the eyes of leading Arab women theorists who have made an impact not only in their own countries, but also on disciplines intersecting with women's studies worldwide. We will study the Arab woman's place in her respective society, in political and economic systems, in education, and in the family. We will also analyze her contributions to art and literature as well as to the sciences. The course will provide an overview of the Arab woman throughout history, from her origins to her place within recent movements within the Arab Spring and other current world events. As Arab women are Muslim, Christian, and Jewish, views of women within these major world religions will also be taken into account as we study the Arab woman as well as religion's impact on culture in the Middle East and in the Maghreb in particular. In the course, we will utilize theoretical texts, but also case studies as well as examples from media and the arts. During the semester, we will take advantage of teleconferencing opportunities between CWRU and two major academic units for Women's Studies in the Arab world: The Institute for Women's Studies in the Arab World (IWSAW) in Beirut, Lebanon, and the University of Jordan's Center for Women's Studies in Amman. Offered as FRCH 337, FRCH 437, ARAB 337, ETHS 337 and WGST 337. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 338. The Cameroon Experience. 3 Units.
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Coursework is in French. To do coursework in English, students should enroll in WLIT 338/438 or ETHS 338/438. Offered as ETHS 338, FRCH 338, WLIT 338, ETHS 438, FRCH 438, and WLIT 438. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 339. Black Women and Religion. 3 Units.
This course is an exploration of the multidimensional religious experiences of black women in the United States. These experiences will be examined within particular historical periods and across diverse social and cultural contexts. Course topics and themes include black women and slave religion, spirituality and folk beliefs, religion and feminist/womanist discourse, perspectives on institutional roles, religion and activism, and spirituality and the arts. Offered as: ETHS 339 and RLGN 338 and WGST 339. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 340. A History of Workers in the United States. 3 Units.
This course examines the experience of working people in the United States with an emphasis on twentieth-century social movements. It explores the lives of the women and men, skilled and unskilled, and rural and urban laborers that produce the goods and provide the services that society consumes. At crucial moments, working people have created or helped sustain national social movements in an effort to improve some aspect of their lives. We therefore will assess laborers in relation to several known and less known American social movements, such as the eight-hour day movement during the late nineteenth century, the peace movement during WWII, and the Civil Rights movement in the wake of WWII. Throughout the course we will also discuss the politics of time-managed work; the influence of public policy and government institutions; the role of unions within a competitive market economy; the relationship between industrial economies and functional blue-collar communities; and the correlation between immigration and globalization. Offered as HSTY 340, HSTY 430, and ETHS 340. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 342. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in the literary production of Latin American women writers, particularly from the 1920s to the present. Close attention paid to the dominant themes of love and dependency; imagination as evasion; alienation and rebellion; sexuality and power; the search for identity and the self-preservation of subjectivity. Readings include prose, poetry, and dramatic texts of female Latin American writers contributing to the emerging of feminist ideologies and the mapping of feminist identities. Offered as SPAN 342, SPAN 442, ETHS 342, WGST 342, WLIT 342, and WLIT 442. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 343. The New Drama in Latin American. 3 Units.
Representative works of contemporary Latin American drama. Critical examination of selected dramatic works of twentieth-century Latin America provides students insight into the nature of drama and into the structural and stylistic strategies utilized by Latin American dramatists to create the "new theater," one which is closely related to Latin American political history. Offered as SPAN 343, SPAN 434, ETHS 343, WLIT 343 and WLIT 434. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 349. The Arab World Experience. 3 Units.
Taught and led by Case faculty, The Arab World Experience is a spring semester course with a spring break study abroad component in a Middle Eastern or North African country supplemented by course meetings before and after travel. It will rotate among countries such as Jordan, Lebanon, Morocco, etc. and be taught by faculty with appropriate area expertise in Arabic, Women's and Gender Studies, and/or Ethnic Studies. The course focuses on topics such as history, politics, culture, and gender relations within the society of study. Workload and learning outcomes are commensurate with a semester-long three credit hour course. Guest lectures in the host country are an important component of the course as they bring a fresh, authentic perspective to the aforementioned topics discussed. There will be three three-hour meetings prior to travel, required reading, and one three-hour meeting after travel. In the host country, students will spend seven days (five-eight hours per day) in seminars, discussions, and site visits. Student grades are determined on the basis of participation, attendance, a daily experiential learning journal, interviews with guest speakers, and a final exam. Offered as ARAB 349, ETHS 349 and WGST 349.
ETHS 352. African Feminisms. 3 Units.
This course traces the history of African feminism from its origins within traditions through to a more contemporary theoretical analysis of gender, marriage, and motherhood seen from an Afrocentric perspective. Approaches studied are those that pertain to anthropology, history, literature, sociology, and culture. African feminist theory of scholars such as Filomina Steady, Cheikh Anta Diop, Buchi Emecheta, Ifi Amadiume, Obioma Nnameka, Oyeronko Oyewumi, and Calixthe Beyala will be studied and there will be some comparative analysis of Western theories to show how African feminisms are clearly distinct. Theories on these feminisms will be presented, and in the process, students will look at cases of women in Cameroon, Nigeria, Ghana, Kenya, and Senegal. It is commonly believed that African women were defined for a long time according to constructs of Western anthropology. This course will thus look at social institutions such as woman-to-woman marriage, matriarchy, and various women's rituals in order to identify African constructs of gender, family, kinship, marriage, and motherhood. Offered as ETHS 352 and WGST 352. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 356. Afro-Hispanic Literature. 3 Units.
This course will survey the literary and cultural production of writers and artists of African descent in Latin America and the Caribbean, paying attention to both their creative and theoretical texts. Discussion of questions of race and ethnicity will allow students to explore the ways in which these texts rework the idea of national identity and cultural belonging in the context of the nation-state, whose traditional centrality is being weakened through the effects of migration and exile. Readings include works by writers from Cuba, Puerto Rico, Dominican Republic, Costa Rica, Colombia, Panama, Ecuador, and Peru. Offered as SPAN 356, SPAN 456, ETHS 356, WLIT 356 and WLIT 456. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 358. Latin American Cinema. 3 Units.
This course is designed to introduce students to the basic tools of film analysis as well as to the major trends and movements in Latin American cinema from the 1960s to the present. Through the analysis of representative films from Latin America, the course will examine the development of a variety of cinematic styles, paying particular attention to the historical contexts in which the films were produced and to the political, cultural, and aesthetic debates that surrounded their production. Offered as SPAN 358, SPAN 458, ETHS 358, WLIT 358 and WLIT 458. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 362. Politics of Central Asia. 3 Units.
Once an unfamiliar region to many people of the world, Central Asia took center stage in the fall of 2001 as a result of the U.S. campaign against terrorism. This course will introduce students to the politics of Central Asia, focusing on the region today composed of Uzbekistan, Turkmenistan, Tajikistan, Kyrgyzstan, and Kazakhstan. We will review the nationalism, foreign relations, religion, ethnicity, and economics of the region. Offered as ETHS 362, POSC 362, and POSC 462. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 363H. African-American Literature. 3 Units.
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature of protest and assimilation. Maximum 6 credits. Offered as ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

ETHS 364. Dictatorship and Democracy in Modern Latin America. 3 Units.
Examination of political leadership in 20th-century Latin America, exploring the nature, causes, and consequences of dictatorship and democracy in the region, moving from the collapse of oligarchic rule and the emergence of populism in the 1930s and 1940s, to the end of democracy and establishment of military regimes in the 1960s and 1970s, and ultimately to the contemporary processes of democratization and economic liberalization. Offered as ETHS 364, POSC 364, and POSC 464. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 365N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Offered as ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

ETHS 365Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Offered as ENGL 365Q, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

ETHS 366. Government and Politics of Africa. 3 Units.
Comparative analysis of the political forces and organizations currently functioning in Africa, as well as a survey of the formal government institutions. Special emphasis on single-party rule, military rule, and the political ramifications of African socialism, tribalism and the problems of national integration. Offered as ETHS 366, POSC 366, and POSC 466. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 369. Current Controversies in Latin American Politics and Society. 3 Units.
In addition to questions about race, religion, abortion, the drug industry, immigration, democracy, private property, and free trade, the course will tackle Latin America's apparent shift to the political and ideological left, Chavez's "Imperialism," and Cuba's humanitarian aid. Offered as ETHS 369, POSC 369 and POSC 469. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 370K. Nationalism, Ethnicity, and Religion in World Politics. 3 Units.
Examination of the post-Cold War surge in conflicts among nationalisms, ethnic groups, and religions with particular attention to the former Yugoslavia, Ireland, India, Africa, and the Middle East. Offered as ETHS 370K, POSC 370K, and POSC 470K. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 374. Politics of Development in the Global South. 3 Units.
Exploration of the post-World War II emergence of the Global South nations of Africa, Asia, the Middle East, Latin America, and the Eastern Europe arena. Offered as ETHS 374, POSC 374, and POSC 474. Counts for CAS Global & Cultural Diversity Requirement.
ETHS 385. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 391. Advanced Readings in Black History. 3 Units.
This is an advanced readings course that may change from semester to semester. This course will provide students with an opportunity to more deeply explore special themes and theoretical issues in the field of black history that are often quickly and briefly covered in broad survey courses. Readings may be organized around specific topics such as resistance and social protest, black intellectual history, black nationalism and identity, black film and historical literacy black cultural forms and politics, black urban history, or some such other combination. Students may take this course more than once and receive credit as long as the course topic differs. Students should contact the History Department for more details on course content during any given semester. Offered as ETHS 391, HSTY 399 and HSTY 499.

ETHS 393. Advanced Readings in the History of Race. 3 Units.
This course examines the concept of race as a social construction that carries political and economic implications. We begin by examining the histories of the early racial taxonomists (e.g., Bernier, Linnaeus, and Blumenbach among others) and the contexts that informed their writings. We then assess how the concept of race changed from the nineteenth to the twentieth century in the United States. We conclude by evaluating how the ideology of race has influenced U.S. domestic life and foreign policy at specific historical moments. Offered as HSTY 393, HSTY 493, and ETHS 393. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 394. The Subaltern and The Poetics of War in Africa. 3 Units.
This course is a seminar on major war writers and filmmakers in Africa such as Chinua Achebe, Ngugi wa Thiongo, Emmanuel Dongola, Iweala Uzodinma, Ismael Beah, Semebene Ousmane, Ingrid Sinclair etc. Students will be asked to use postcolonial theory to critically read and view films and texts on war in Africa. They will engage in discussion with guest scholars in the field of African studies. In addition to a final research paper, students are also required to write short papers on selected books and films read and/or viewed during the semester. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 399. Independent Study. 0 - 3 Units.
This course focuses on topics in ethnicity. In consultation with the program director and instructors, students pick topics in their concentrations and make a list of books and films for personal and intensive reading. Some of these projects might be Arts and Identity in post-independent Africa [African Concentration], films, literatures and human rights in Latin America [Latin America and Caribbean Concentration], civil rights through music and songs [African-American Concentration] etc. Travel may be a component of this course depending on the nature of the students' interests. Weekly reports are required for the instructors to measure the students' progress.

ETHS 416. African Political Thought. 3 Units.
Introduction to select themes in the work of contemporary African philosophers, with special emphasis on political thought. In this course, students will learn something about factors affecting the creation and flow of knowledge and ideas about Africa and discuss the relative importance of the "nation-state" as an idea in Europe, pre-colonial Africa, and postcolonial Africa. Offered as PHIL 316/416 and ETHS 316/416. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 438. The Cameroon Experience. 3 Units.
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Coursework is in French. To do coursework in English, students should enroll in WLIT 338/438 or ETHS 338/438. Offered as ETHS 338, FRCH 338, WLIT 338, ETHS 438, FRCH 438, and WLIT 438. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 485. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Counts for CAS Global & Cultural Diversity Requirement.

**Evolutionary Biology Program**

The Evolutionary Biology Program is designed to provide students with knowledge of macro- and micro-evolutionary processes underlying the evolution and diversification of life on Earth and an understanding of the meta-scientific issues involved in this unique field of study.

The program includes grounding in the history and philosophy of evolutionary thought and alternative conceptualizations of the mechanisms, patterns, and processes of evolution. It emphasizes evolutionary theory, foundations of ecology and genetics, focused study of particular organisms or groups of organisms, and the dynamics of evolutionary principles in scientific inquiry.

**Undergraduate Programs**

**Major**

Evolutionary biology is a second major, to be pursued in conjunction with a conventional disciplinary major. Up to 12 credits in required and elective courses taken by students for their first major may be applied to their evolutionary biology major.

The 30-credit interdisciplinary major in evolutionary biology consists of:

1. Three foundation courses
2. One course in ecology
3. One course in the philosophy/history of science
4. Four approved electives
The approved electives may include additional philosophy/history of science courses from the list below. In consultation with a major advisor, students will tailor intensive study to suit particular interests within the major.

**Required courses:**

Peter McCall, JD, PhD  
*Professor, Department of Earth, Environmental, and Planetary Sciences*
French and Francophone Studies Program

Designed to develop cross-cultural awareness and to foster international understanding, the French and Francophone Studies (FFS) Program adds an exciting dimension to the traditional liberal arts curriculum. The French and Francophone Studies major differs from the traditional French major in two respects: its interdisciplinary nature and its greater flexibility in accommodating students’ areas of interest. The FFS major answers the needs of students with a strong interest in cultural issues in general and in French and Francophone history and society in particular. By allowing students to take course work in English, the FFS major allows them to profit from the many courses in various departments that focus on France and the Francophone world.

The FFS Program is an interdisciplinary, integrated program that understands the term “French” in its broadest sense. It thus reflects the diversity of the field of French studies, which explores varied cultures of Francophone expression: Canada, the Caribbean, North and West Africa, the Middle East, and Southeast Asia. Reaching beyond disciplinary and national boundaries, the program encourages students to choose from a large selection of courses in the humanities, the arts, and the social sciences. In this way, it provides both a meaningful course of study and an outstanding preparation for graduate or professional schools and for careers in international business and finance, law, journalism, diplomatic service, nonprofit and other international organizations, health, teaching, or the arts.

Major (p. 441) | Study Abroad (p. 442) | Minor (p. 442)

Undergraduate Programs

Major

Each student prepares a program of study in close consultation with a faculty advisor drawn from the advisory committee. Students should also discuss their choice of a minor or a second major with their advisor.

French and Francophone Studies (FFS) majors should demonstrate French language ability by completing French 201-202 or the equivalent. They will also take at least one 300-level FRCH course (see Foundations in Culture courses below).

The major in French and Francophone Studies requires a minimum of 33 credit hours in the following areas:

1. Foundations in Language (8 hours)

For students entering at the 200-level of French language:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>FRCH 201</td>
<td>Intermediate French I</td>
<td>4</td>
</tr>
<tr>
<td>FRCH 202</td>
<td>Intermediate French II</td>
<td>4</td>
</tr>
</tbody>
</table>

Students entering at the 300-level of language study complete 21 credits in Electives section below:

Total Units   8

2. Foundations in Culture: Introduction to French and Francophone cultures (9 hours)

<table>
<thead>
<tr>

<td></td>
</tr>
</tbody>
</table>

Total Units   9

3. Electives: Related Courses in French and Other Disciplines (15-21 hours)

Students select from courses that focus on French and Francophone cultures in FRCH and other disciplines (art history, political science, history, etc.). These are chosen from the approved list (see below) and in conjunction with a program advisor. No more than 9 of these credits may be chosen from FRCH courses.

WLIT 211  World Literature I  3  
WLIT 212  World Literature II  3  
WLIT/THTR 229  Development of Theater: Renaissance to Romanticism  3  
WLIT/ENGL 290  Masterpieces of Continental Fiction  3  
WLIT 300  The City in Literature  3  
WLIT/ENGL 368C  Topics in Film  3  
WLIT 390  Topics in World Literature  3  
WLIT 399  Independent Study  1 - 3  

Courses offered in a given semester with a French and Francophone Studies component are posted in Guilford House at registration time and on the French and Francophone Studies (http://www.case.edu/artsci/fr_studies) website.

**Study Abroad**

Study abroad in France, Belgium, Switzerland, French Canada, the Francophone Caribbean, or a Francophone African or Middle Eastern country is strongly encouraged but not required for FFS majors. The Department of Modern Languages and Literatures offers a summer study abroad program in Paris (FRCH 308 The Paris Experience / WLIT 308 The Paris Experience) in even-numbered years. A summer study abroad program in Cameroon (FRCH 308 The Paris Experience / WLIT 308 The Paris Experience / ETHS 338 The Cameroon Experience) is offered in odd-numbered years. FRCH 208 The Montreal Experience is a spring break service-learning excursion to Montreal.

**Minor**

The minor requires 15-17 credits. Students entering at the 200 level of language competence take:

FRCH 201  Intermediate French I  4  
FRCH 202  Intermediate French II  4  
Three courses in FRCH from the approved list  9  
Total Units  17  

At least 6 credits should be taken in disciplines other than FRCH. Students entering at the 300 level of language competence take five courses at the 200 and 300 levels in FRCH and from the approved list. At least 3 credits should be in courses from FRCH taught in the French language, and at least 6 credits should be taken in disciplines other than FRCH.

Associate Professor, Department of Modern Languages and Literatures  
Laura E. Hengehold, PhD  
Associate Professor and Chair, Department of Philosophy  
Marie Lathers, PhD  
Elizabeth M. and William C. Treuhaft Professor of Humanities,  
Department of Modern Languages and Literatures
German Studies Program

In its reconstituted form, Germany has again become a major player in European and global affairs. Germany has always been considered important to European development—at various times it has been called the crossroads of the entire continent—but the economic might of modern Germany and the integration of the European Union have now made American understanding of German culture and civilization more important to—and worthy of study by—American students than at any time since 1945.

German Studies, an integrated program of study leading to the BA degree, offers students the freedom to develop an interdisciplinary sequence of courses to meet their particular needs and interests. It builds the foundation for graduate work in many academic fields that call for a thorough knowledge of German language, culture, and history. It also prepares students for careers in international business or for future study in professional programs such as law and business administration.

German Studies administers a summer immersion program, The Munich Experience, which allows students to spend four weeks in Munich and experience the city’s vibrant culture and breathtaking surroundings. After graduation, many German and German Studies majors (most of whom have a second major in another field) return to Germany to study or work. Our majors have returned to Germany on Fulbright scholarships, through internships administered by the Carl-Duisberg-Gesellschaft, or as interns for the German parliament.

Undergraduate Programs

Major

The major in German Studies, which includes a German language requirement, concentrates on the study of the German cultural tradition in history, philosophy, the fine arts, music, film studies, politics, and culture. The major is particularly suited to students wishing to combine interests in German language and culture with a major in another discipline.

The major requires 30 hours, to be distributed as follows:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>GRMN 303</td>
<td>German Culture &amp; Civilization</td>
<td>3</td>
</tr>
<tr>
<td>GRMN 311</td>
<td>Advanced Conversation</td>
<td>3</td>
</tr>
<tr>
<td>GRMN 396</td>
<td>Senior Capstone - German (or equivalent)</td>
<td>3</td>
</tr>
<tr>
<td>Twenty-one additional hours approved by one of the co-directors</td>
<td>21</td>
<td></td>
</tr>
</tbody>
</table>

Total Units 30

Possible concentrations for the German Studies major include history and philosophy; German literature and theater history; political science and history; art history; music history; and religious studies. Within the program requirements, students are free to shape the major as they wish, based on their own intellectual interests.

Minor

The course requirements for the minor (15 hours) are as follows:

<table>
<thead>
<tr>
<th>Requirement</th>

Susanne Vees-Gulani, PhD
Associate Professor, Department of Modern Languages and Literatures; Co-Director, Max Kade Center for German Studies

Gerontological Studies Program

The Gerontological Studies Program is a multidisciplinary program designed to integrate research and theory from multiple disciplines about aging and the life course. Prompted in part by broad social and technological changes that include the “graying” of the world’s population, humanists, scientists, social scientists, and professionals have become interested in understanding the position of older adults in society, age-related processes in various contexts, and variations in the cultural meaning of age. The program draws on the most recent thinking and research in a variety of disciplines to provide students with a background that will be helpful after graduation, both in work and in graduate or professional school.

In keeping with the interdisciplinary nature of the program, the core courses are drawn from three departments: Anthropology, Psychological Sciences, and Sociology. Students may choose from a variety of courses according to their own interests. Most of the electives are not specifically gerontology courses but cover topics that contribute to the understanding of aging and the life course. The perspectives gained in the core courses will provide the student with the background needed to relate the material in the more general courses to gerontological issues. The program is firmly grounded in the liberal arts and thus provides the student with the challenge to think and communicate effectively and to integrate diverse information, theories, and practice.

Gerontological Studies is an appropriate major or minor for students with a wide variety of career goals. The aging of the population has made available entry-level positions for persons with baccalaureate degrees in organizations that provide services to older people and that formulate policy related to aging and older adults. Many graduate programs now include an emphasis on aging for which a degree in Gerontological Studies would serve as a useful background. Students planning to pursue professional degrees will find that an increasing number of their clients or patients will be older adults and that problems with which they must deal will be related to aging. The perspective provided by participating in the Gerontological Studies program provides students with excellent background for working with older populations.
Faculty members associated with the program are engaged in a variety of funded research projects. These include studies of Alzheimer’s disease; cancer survivorship; health disparities and cumulative dis/advantage over the life course; patterns of care for the elderly; visual perception changes that accompany aging; the impact of high levels of physical activity on the biological aging process; grandparent-grandchild relationships; and stress, coping, and adaptation among urban community and institutionalized elderly.

**Undergraduate Programs**

**Major**

The interdisciplinary program in Gerontological Studies offers a major as part of the Bachelor of Arts degree. Gerontological Studies may be selected only as a second major, since the primary major must be based in a traditional academic department. The major consists of a minimum of 30 credits; 15 are in required core courses and 15 are in approved elective courses.

**Required core courses:**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANTH 304</td>
<td>Introduction to the Anthropology of Aging</td>
<td>3</td>
</tr>

Diana L. Morris, PhD, RN, FAAN, FGSA, Executive Director
diana.morris@case.edu

The University Center on Aging and Health (http://fpb.case.edu/Centers/UCAH/program.shtm) is dedicated to the premise that aging is a developmental process spanning the entire life cycle, and brings together social and behavioral sciences, health sciences, and the humanities to encourage teaching and research activities in every unit of the University. The Center sponsors a certificate program in gerontology for graduate and professional students and for those who already hold graduate degrees.

A student interested in a graduate certificate in gerontology must be enrolled in a master’s or doctoral program, or be a special non-degree student with at least a master’s degree (or equivalent). To receive a certificate in gerontology, a student must submit a formal application, be approved by the University Center on Aging and Health, and take 12 credit hours of course work.

The student must complete the following courses:

1. Two three-credit courses in gerontology within the student's discipline, one of which can be an independent study.
2. One three-credit course in gerontology or independent study outside the student’s discipline.
3. A three-credit seminar in gerontology offered by the center.

Any departures from the requirements must be approved by the center director. For further information, contact the University Center on Aging and Health.

Courses

GERO 498. Seminar in Gerontological Studies. 3 Units.  
Major themes in gerontology. Seminar members choose a problem area, explore the relevant literature from a multi-disciplinary perspective, and develop a research project using knowledge gained through community observation and library exploration.

GERO 601. Independent Study. 1 - 3 Unit.  
For students enrolled in the graduate certificate program in gerontology.

History and Philosophy of Science Program

The Department of Philosophy and the Department of History together offer an undergraduate major in the history and philosophy of science. The purpose of the major is to develop a humanistic understanding of the nature and development of science through the combined use of philosophical and historical methods. The major provides a foundation for graduate study in a range of academic disciplines and for careers in such areas as business, medicine, law, public policy, and science journalism. It also may be profitably combined with a program in one of the sciences. Within the major, a student may seek an emphasis on the philosophy of science, the history of the physical sciences, or the history of the biological and medically related sciences.

Undergraduate Programs

Major

The history and philosophy of science major requires 30 credit hours from courses in philosophy and in history of science and technology:

Any four of the following seven classes:  
PHIL 101  Introduction to Philosophy  
HSTY 151  Technology in European Civilization  
HSTY 201  Science in Western Thought I  
HSTY 202  Science in Western Thought II  
HSTY/PHIL 203  Natural Philosophy I

Students who major in the history and philosophy of science are not permitted to take a second major in philosophy or to minor in philosophy.

Minor

Students who minor in history and philosophy of science are required to complete 15 credit hours, as follows:

Any three of the following five classes:  
PHIL 101  Introduction to Philosophy  
HSTY 202  Science in Western Thought II  
HSTY/PHIL 203  Natural Philosophy I  
PHIL 302  Modern Philosophy  
Two electives approved by the minor advisor

Total Units 15

Miriam R. Levin, PhD  
Professor, Department of History

Alan J. Rocke, PhD  
Distinguished University Professor and Henry Eldridge Bourne Professor of History

Jonathan Sadowsky, PhD  
Theodore J. Castele Professor; Associate Professor, Department of History

International Studies Program

The International Studies Program is a multidisciplinary program leading to the BA degree. Study in the program provides students with the ability to read beyond the headlines—to understand how world situations and events came about, how they fit into broader issues and systems, and how they might shape the future. To attain this goal, students are introduced to methods of conceptualizing international and global issues, and to the study of a society other than their own. They learn to think critically about contending and complementary methods and theories, developing an appreciation of both traditional disciplinary approaches and newer, cross-disciplinary approaches. Students also acquire skills in a language other than English (or other than their native language).

It is strongly recommended that all international studies students participate in at least one of several off-campus programs that facilitate
the international perspective: study abroad, summer internships overseas or in Washington, D.C., or professional, practicum-type work experiences in Cleveland that involve an international context.

In addition to forming the basis for an evolving understanding of and lifelong engagement with the modern world, a background in international studies provides excellent, practical preparation for careers that deal with the world’s emerging needs. International studies majors go on to careers in international marketing and management, diplomatic service, health, law, social services, and journalism, as well as careers within the academic disciplines. The professional schools of business, medicine, nursing, law, and applied social sciences at Case Western Reserve all have significant international foci, and our students can explore careers in these areas during their undergraduate years. The skills, analytic abilities, and critical approaches of international studies should equip students as well for new employment patterns which may not fit into existing career descriptions.

Undergraduate Program

Major

The major in international studies requires a minimum of 33 credit hours, chosen from approved topical and area studies courses, plus satisfaction of a language competency requirement. Each student will prepare a program of study that includes course selections meeting the seven requirements below. Normally, no more than two courses taken for international studies credit may count simultaneously toward a minor or another major. Courses taken to satisfy the language competency requirement are exempted from this rule, and several international studies courses contribute to the completion of general education requirements.

Requirements for the Major

1. Multidisciplinary Foundations (required courses; 12 hours). These courses provide an introduction to understandings of society and culture, principles of economics, change over time, and interactions among countries, while exposing students to a variety of world societies and issues. International studies majors will be expected to have completed the multidisciplinary foundations courses before embarking on a study abroad program. These courses are:

   ANTH 102 Being Human: An Introduction to Social and Cultural Anthropology 3
   ECON 103 Principles of Macroeconomics (*) 3
   HSTY 113 Introduction to Modern World History 3
   POSC 172 Introduction to International Relations 3

(*) Students who matriculated prior to Fall 2014 can use ECON 102 Principles of Microeconomics, rather than ECON 103 Principles of Macroeconomics, for the economics course, in accordance with the previous major requirements.

2. Area Focus (6 hours): Two courses that concentrate on a single region of the world. Such courses are offered in many departments and programs. In order to count toward the area focus, courses from the Department of Modern Languages and Literatures must include content other than exclusively language learning, such as the study of literature or cinema. Area foci include Africa, Asia, Europe, Latin America, and the Middle East.

3. Topical Focus (6 hours): A related pair of courses that examine a transnational topic. Topical foci include, but are not limited to, international security and diplomacy, global environment, international trade and finance, global health, international development, and global arts.

4. Elective Area or Topical Courses (6 hours): Two additional courses toward the area focus or topical focus.

5. Students must include courses from at least two different departments or programs among their six area, topical, and elective courses. (This is highly recommended, but not required, for students who matriculated prior to Fall 2014.) These courses should be selected in consultation with the international studies director.

6. Senior Project (required course, 3 hours): The senior project offers students the opportunity to demonstrate their understanding of the complexity and dynamics of the human world as a result of majoring in international studies. Students who matriculated Fall 2014 or later complete INTL 399 International Studies Colloquium, contingent on it being offered their senior fall. Otherwise those students must complete INTL 398 International Studies Senior Research Project. Students who matriculated before Fall 2014 must complete INTL 398.

INTL 398 International Studies Senior Research Project: Students work individually with a faculty project advisor to research and write a major paper, typically in their senior year. Students should identify their faculty project advisors and topics no later than the semester before they intend to complete INTL 398. Students must complete a prospectus no later than the second week of the semester. Upon request to the international studies director, who seeks approval from the director of SAGES, this course can meet the requirements of a SAGES capstone.

INTL 399 International Studies Colloquium: Students analyze topics relevant to the foreign geographic area and broad theme they have chosen for their major foci. To do so, they draw on their international experience, knowledge acquired through a foreign language, and prior coursework for the major. Students share their conclusions in the seminar itself and in a public presentation. This course meets the requirements of a SAGES capstone.

7. Language Competency (0 to 16 credit hours): In addition to the 33 credit hours of international studies course work, students must demonstrate competency in a language other than their native language. This may be done by:

   1. completing a language course at the 300 level or above
   2. completing four semesters in a single language
   3. demonstrating to the Department of Modern Languages and Literatures a non-native language competency equivalent to that attained by completing a 300-level or above course

Honors: Honors are awarded to students who meet three requirements—an exceptional senior project (grade of A), a 3.3 overall GPA, and a 3.7 GPA in international studies courses (area focus, topic focus, and electives).

There is no minor in international studies.

Faculty

Kelly McMann, PhD
(University of Michigan)
Associate Professor, Department of Political Science; Director, International Studies Program
Courses

INTL 396. International Independent Study. 1 - 3 Unit.
Study of a topic within the scope of international studies. The student must complete a prospectus form, approved and signed by the supervising faculty member, no later than the second week of classes. The prospectus must outline the goals of the project and the research methodology to be used and is part of the basis for grading. Open to juniors and seniors majoring in international studies.

INTL 398. International Studies Senior Research Project. 3 Units.
Individual work with a faculty tutor leading to the writing of a major research paper. Open only to seniors majoring in international studies.

INTL 399. International Studies Colloquium. 3 Units.
This course offers seniors the opportunity to demonstrate their understanding of the complexity and dynamics of the human world as a result of majoring in International Studies. Students analyze topics relevant to the foreign geographic areas and broad themes they have chosen for their major foci. To do so, they draw on their international experiences, knowledge acquired through foreign languages, and prior coursework for the major. Students share their conclusions in the seminar itself and in a public presentation. This course meets the requirements of a SAGES capstone.

Japanese Studies Program

Today’s students find themselves in a world of increasingly multi-ethnic, multi-religious, multicultural contexts. Through a long history of receiving, reworking, and incorporating influences from nearby cultural centers on the Asian mainland and surrounding Pacific islands and from the world beyond, including Europe and the Americas, Japan has developed a tradition of multiculturalism—a tradition that is best understood through interdisciplinary study. Following this thread, the Japanese Studies Program seeks to foster the student’s global and interdisciplinary perspectives, while at the same time maintaining a flexibility that allows individuals to pursue their own areas of interest. To further foster the students’ linguistic and cultural development, the Japanese Studies Program strongly encourages study abroad in Japan for a year, a semester, or a summer.

</tbody>
</table>

Total Units 40

* JAPN 450/451, if not taken as replacement(s) for JAPN 350/351, can be counted toward the four Asian studies, world literature, or other related courses.
** This course requires a substantial research paper in Japanese or English. Students are required to identify their faculty advisors and the topic of their paper by the end of the junior year. Exceptional papers may be considered for honors.
*** “Other related courses” may include courses in Japanese literature, film, theater, art history, anthropology, philosophy, religion, sociology, political science, or history.

Students beginning the major at the 300 level do not take JAPN 201 Intermediate Japanese I and JAPN 202 Intermediate Japanese II, but do take one “directed reading” in Japanese in an area related to their major research. All other requirements for the BA are the same.

Courses in other disciplines also form an important component of the Japanese Studies Program. They provide an international, as well as interdisciplinary, perspective on Japanese culture. A faculty advisor supervises each student’s selection of these courses.

In addition to the courses required for the major, the following courses are offered in the Japanese Studies Program:

<table>
<thead>
<tr>

<td>3</td>
</tr>
<tr>
<td>JAPN 399</td>
<td>Independent Study</td>
<td>1 - 3</td>
</tr>
</tbody>
</table>

Program Honors

Exceptional papers written for the senior thesis may qualify for program honors. In addition, to qualify for the BA with honors in Japanese, students must achieve a minimum GPA of 3.5 in courses taken for the Japanese major.

Study Abroad

A year of study in Japan is highly recommended, as is additional study in another language. All efforts are made to grant appropriate credit for courses taken at a Japanese university during the year abroad.
Minor

For students beginning Japanese at the introductory level, the course requirements for the minor are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>JAPN 101</td>
<td>Elementary Japanese I</td>
<td>4</td>

William E. Deal, PhD  
(Harvard University)  
Severance Professor in the History of Religion, Department of Religious Studies; Department of Cognitive Science

Courses

JAPN 101. Elementary Japanese I. 4 Units.
Introduction to understanding, speaking, reading, and writing Japanese. Students learn to read and write hiragana and katakana syllabaries and 50 kanji characters. Students are expected to achieve control of the sound system and basic structure of the language. Emphasizes aural comprehension and speaking.

JAPN 102. Elementary Japanese II. 4 Units.

JAPN 201. Intermediate Japanese I. 4 Units.
Further study of fundamental structures of Japanese. Students improve aural comprehension, speaking, reading, and writing abilities and learn approximately 100 new characters. Recommended preparation: JAPN 102 or equivalent.

JAPN 202. Intermediate Japanese II. 4 Units.
Continuation of JAPN 201. Students learn an additional 100 kanji characters. With the completion of JAPN 201 - 202, students should have control of the fundamentals of modern Japanese and a firm foundation in the writing system. Recommended preparation: JAPN 201 or equivalent.

JAPN 225. Japanese Popular Culture. 3 Units.
This course highlights salient aspects of modern Japanese popular culture as expressed in animation, comics and literature. The works examined include films by Hayao Miyazaki, writings by Kenji Miyazawa, Haruki Murakami and Banana Yoshimoto, among others. The course introduces students to essential aspects of modern Japanese popular culture and sensibility. Offered as JAPN 225 and WLIT 225. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 245. Classical Japanese Literature in Translation. 3 Units.
Readings, in English translation, of classical Japanese poetry, essays, narratives, and drama to illustrate essential aspects of Japanese culture and sensibility before the Meiji Restoration (1868). Lectures explore the sociohistorical contexts and the character of major literary genres; discussions focus on interpreting the central images of human value within each period. Japanese sensibilities compared to and contrasted with those of Western and other cultures. Offered as JAPN 245 and WLIT 245.

JAPN 255. Modern Japanese Literature in Translation. 3 Units.
Focus on the major genres of modern Japanese literature, including poetry, short story, and novel (shosetsu). No knowledge of Japanese language or history is assumed. Lectures, readings, and discussions are in English. Films and slides complement course readings. Offered as JAPN 255 and WLIT 255.

JAPN 301. Advanced Japanese I. 4 Units.
Emphasizes conversational proficiency and reading. Students must use the course material offered by the Online Language Learning Center in addition to class meetings. Recommended preparation: JAPN 202 or equivalent.

JAPN 302. Advanced Japanese II. 4 Units.
Continuation of JAPN 301; emphasizes conversational proficiency and reading. Japanese life and culture introduced through supplemental materials and activities. Students must use the course material offered by the Online Language Learning Center in addition to class meetings. Recommended preparation: JAPN 301 or equivalent.

JAPN 345. Japanese Women Writers. 3 Units.
Contributions of women writers to the literature of pre-modern and modern Japan; investigations of how their works exemplify and diverge from "mainstream" literary practices. Emphasis on the social and cultural contexts of the texts. Offered as JAPN 345 and WLIT 345.
JAPN 350. Contemporary Japanese Texts I. 3 Units.
The primary aim of this course is to develop communication skills in Japanese based on those that the students have acquired in JAPN 302 or equivalent. The students will read and discuss various texts such as daily conversations, essays, and news scripts with the assistance of vocabulary and kanji (Chinese character) lists and formal grammar explanations. Attention also will be given to enhancing the students' writing and aural/oral proficiencies through regularly assigned homework, presentations, tape listening, video viewing, and classroom discussion. Recommended preparation: JAPN 302 or equivalent.

JAPN 351. Contemporary Japanese Texts II. 3 Units.
This course is a continuation of JAPN 350 and its primary aim overlaps with that of JAPN 350: to develop more sophisticated communication skills in Japanese. Students will read and discuss various texts such as daily conversations, essays, and news scripts largely with the assistance of vocabulary and kanji (Chinese character) lists. Attention will be given to enhancing the students' writing and aural/oral proficiencies through regularly assigned homework, presentations, tape listening, video viewing, and classrooms discussion. Prereq: JAPN 350 or consent of instructor.

JAPN 355. Modern Japanese Novels and the West. 3 Units.
This course will compare modern Japanese and Western novelists, drama, and novels. Comparisons will focus on the themes of family, gender and alienation, which subsume a number of interrelated sub-themes such as marriage, home, human sexuality, amae (dependence), innocence, experience, death, God/gods, and nature (the ecosystem). Offered as JAPN 355, WLIT 355. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 356. Senior Capstone - Japanese. 3 Units.
The Senior Capstone in Japanese is an independent study project chosen in consultation with a capstone advisor. The capstone project should reflect both the student's interest within Japanese and the courses he or she has taken to fulfill the major. The project requires independent research using an approved bibliography and plan of action. In addition to written research, the student will also present the capstone project in a public forum that is agreed upon by the project advisor and the student. Counts as SAGES Senior Capstone. Prereq: Senior status required. Major in Japanese required.

JAPN 357. Senior Thesis I. 3 Units.
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper in English or Japanese. Limited to senior majors. Permit required.

JAPN 358. Senior Thesis II. 3 Units.
Continuation of JAPN 357. Limited to senior majors. Prereq: JAPN 357.

JAPN 359. Independent Study. 1 - 3 Unit.
Directed study for students who have progressed beyond available course offerings.

JAPN 450. Japanese in Cultural Context I. 3 Units.
The primary aim of this graduate course is to develop sophisticated communication skills (listening, speaking, reading, and writing) in Japanese. The students will read and discuss various texts in the original, such as essays, news scripts, and literary works. Classroom instruction and discussion will be conducted in Japanese. The students also will be required to write a research paper of 4000-6000 letters/characters (10-15 genkoyoshi pages) in Japanese on a topic related to Japan and the student's specialty. Recommended preparation: JAPN 351 or equivalent.

JAPN 451. Japanese in Cultural Context II. 3 Units.
This course is a continuation of JAPN 450 and it aims at a further development of sophisticated communication skills (listening, speaking, reading, and writing) in Japanese. The students will read and discuss various texts in the original, such as essays, news scripts, and literary works both classical and modern. Classroom instruction and discussion will be conducted in Japanese. The students also will be required to write a research paper of 6000-8000 letters/characters (15-20 genkoyoshi pages) in Japanese on a topic related to Japan and the student's specialty. Recommended preparation: JAPN 450 or equivalent.

Judaic Studies Program

The Judaic Studies Program offers an interdisciplinary approach to the study of the history, religion, social experience, and culture of the Jewish people. By bringing a variety of fields and disciplines to bear on its subject, the program intends to convey to students the complex interaction of forces that create and express Jewish ethnic and religious identity. Students completing the program will have a broad knowledge of the field along with the tools necessary for continued study of Jewish civilization in all its manifestations.

Undergraduate Program

Minor

The minor consists of a minimum of five or six courses, according to the following scheme, to be chosen in consultation with the program director.

Required Courses:
A. Introduction to Judaic Studies 3
   JDST 201 Introduction to Judaic Studies
B. Nine additional credit hours of courses that have a JDST cross-listing. Alternatively, students may take six credit hours of JDST courses plus three credit hours from one course on the following list:
   ENGL 365E The Immigrant Experience
   HBRW 201 Intermediate Modern Hebrew I
   HBRW 202 Intermediate Modern Hebrew II
   HBRW 301 Advanced Modern Hebrew I
   HBRW 302 Advanced Modern Hebrew II
   HBRW 399 Independent Studies
   HSTY 257 Immigrants in America
   POSC 370K Nationalism, Ethnicity, and Religion in World Politics
   POSC 379 Introduction to Middle East Politics
C. Two semesters of Hebrew (HBRW 101 and HBRW 102). 8

Students who place out of the 100-level HBRW courses must take an additional course from B as specified above.

Total Units 20

Program Faculty

Peter J. Haas, PhD
Abba Hillel Silver Professor of Jewish Studies, Department of Religious Studies; Director, Judaic Studies Program

Judith Neulander, PhD
Full-time Lecturer, Department of Religious Studies
Courses

JDST 201. Introduction to Judaic Studies. 3 Units.
An introduction to the academic study of Judaic religion and culture, this course does not presuppose any previous study of, or experience with, Judaism. The course takes an interdisciplinary approach, drawing on a variety of methods to examine the diverse issues that make up the current field of Judaic Studies. The course will examine the Jewish experience across time and space, and may include some "field" experience, such as a visit to a synagogue or to the Maltz Museum of Jewish Heritage. Required for the minor in Judaic Studies. Counts for CAS Global & Cultural Diversity Requirement.

JDST 208. Introduction to Western Religions. 3 Units.
Basic introduction to the three great monotheistic religions of the Western World: Christianity, Judaism, and Islam. All three of these religious traditions trace their roots to the faith of biblical Israel as revealed by a series of prophets including Noah, Abraham, and Moses. Each absorbed the philosophy and science of the Greco-Roman world and went on both to influence and struggle with each other. Many of the religious problems of the contemporary world, from Afghanistan to the Middle East to Yugoslavia, can be traced to tension within and between these religious groups. Offered as RLGN 208 and JDST 208. Counts for CAS Global & Cultural Diversity Requirement.

JDST 211. Great Books of Western Religion. 3 Units.
Students will engage with the major writings that have shaped Western religious traditions (Christianity, Judaism, Islam) from their earliest expressions until the present day. Readings include the foundational Scriptures (Hebrew Bible, New Testament, Quran) of each tradition, religious poetry and other writings from the Middle Ages, and modern writers on spiritually and religiously significant works of literature. The course will be conducted as a seminar, in which students will read the selected original texts and will discuss their religious and spiritual meaning and significance in class. Each student will also prepare a final project based on the assigned authors or readings. Offered as RLGN 211 and JDST 211.

JDST 218. Jews in Early Modern Europe. 3 Units.
This course surveys the history of Jews in Europe and the wider world from the Spanish expulsion through the French Revolution. Tracking peregrinations out of the Iberian Peninsula to the British Isles, France, Holland, Italy, Germany, Poland-Lithuania, the Ottoman Empire, and the American colonies, it examines the diverse ways Jews organized their communities, interacted with their non-Jewish neighbors, and negotiated their social, economic, and legal status within different states and empires. What role did Jews play and what symbolic place did they occupy during a period of European expansion, technological innovation, artistic experimentation, and religious and political turmoil? What internal and external dynamics affected Jewish experiences in the sixteenth, seventeenth, and eighteenth centuries? Through a selection of inquisitorial transcripts, government records, memoirs, and historical literature, we will explore topics such as persecution, conversion, messianism, toleration, emancipation, and assimilation. Offered as HSTY 218, JDST 218, and ETHS 218. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

JDST 220. Jewish Traditional Art and Architecture. 3 Units.
Tradition and transformation in Jewish artistic expression over time and across space. Course will begin with biblical period and continue down to the present day in Israel and America. Examination of how concepts such as "Jewish" and "art" undergo change within the Jewish community over this period. Offered as ARTH 220 and JDST 220. Counts for CAS Global & Cultural Diversity Requirement.

JDST 228. The Jewish Image in Popular Film. 3 Units.
Explores film as social practice for its makers and its audience from the silent era through Hollywood's Golden Age, to the technological dazzle of the present day. Notes views of the Jews as stereotypical "Racial Other," not only capable of Jewish self-representation, but also capable of representing any group widely believed to be non-white, non-Christian or otherwise "alien." By studying select films in historical context, the course will trace changes in this stereotype. By the end of the semester, students will understand how film is shaped by, and how it actively shapes, our construction of American Selves vs. Ethnic Others. Counts for CAS Global & Cultural Diversity Requirement.

JDST 233. Introduction to Jewish Folklore. 3 Units.
Exploration of a variety of genres, research methods and interpretations of Jewish folklore, from antiquity to the present. Emphasis on how Jewish folklore traditions and culture give us access to the spirit and mentality of the many different generations of the Jewish ethnic group, illuminating its past and informing the direction of its future development. Offered as ANTH 233, RLGN 233, and JDST 233. Counts for CAS Global & Cultural Diversity Requirement.

JDST 254. The Holocaust. 3 Units.
This course seeks to answer fundamental questions about the Holocaust: the German-led organized mass murder of nearly six million Jews and millions of other ethnic and religious minorities. It will investigate the origins and development of racism in modern European society, the manifestations of that racism, and responses to persecution. An additional focus of the course will be comparisons between different groups, different countries, and different phases during the Nazi era. Offered as HSTY 254, RLGN 254, ETHS 254, and JDST 254. Counts for CAS Global & Cultural Diversity Requirement.
JDST 268. Women in the Bible: Ethnographic Approaches to Rite and Ritual, Story, Song, and Art. 3 Units.
Examination of women in Jewish and Christian Biblical texts, along with their Jewish, Christian (and occasionally Muslim) interpretations. Discussion of how these traditions have shaped images of, and attitudes toward, women in western civilization. Offered as RLGN 268, WGST 268, and JDST 268.

JDST 280. Religion and Politics in the Middle East. 3 Units.
An in-depth look at the relationship between politics and religion in the Middle East. Students will spend the first week on the CWRU campus and the last three weeks in Israel, where time will be divided between classroom teaching, guest lectures, and “field trips” to important sites. Students will have the opportunity to interact directly with members of the region’s diverse religious groups within the political, social, and cultural contexts in which they live. A final research paper will be required. Knowledge of Hebrew is not necessary. Offered as JDST 280 and RLGN 280. Counts for CAS Global & Cultural Diversity Requirement.

JDST 314. Mythologies of the Afterlife. 3 Units.
This course provides a multidisciplinary approach to the idea of an afterlife, and its manifestation in diverse cultures. We will examine the way varying views of the afterlife influence religion, popular culture and palliative care, and how human creativity has shaped the heavens, hells, hauntings and holidays of diverse populations over time and across space. Students will come to see the afterlife as an integral part of human history and experience, not only because it helps people die with better hope, but because it helps them to live more richly. Offered as RLGN 314 and JDST 314.

JDST 330. Classical Jewish Religious Thought. 3 Units.
The thought of some major biblical and Rabbinic writings and of the classic age of medieval Jewish philosophy. Offered as JDST 330, PHIL 332, and RLGN 330.

JDST 341. Jewish Urban History. 3 Units.
This course examines the relationship between Jews and the modern urban environment. It seeks to answer questions such as: How did the modernization of cities affect Jews and Jewish communities? In what ways did Jews contribute to modern urban cultural and social forms? What is Jewish urban space, is it unique, and how is it remembered later on? Are there differences between the patterns in Europe, the Middle East, and the Americas? Offered as HSTY 341 and JDST 341. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

JDST 350. Jewish Ethics. 3 Units.
An exploration of Jewish moral and ethical discourse. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abortion, euthanasia, and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of moral rhetoric in the Jewish community today. Readings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as JDST 350, RLGN 350, and RLGN 450. Counts as SAGES Departmental Seminar.

JDST 371. Jews under Islam and Christianity. 3 Units.
This course examines the social and political status of Jews under Muslim and Christian rule since the Middle Ages. Themes include interfaith relations, Islamic and Christian beliefs regarding the Jews, Muslim and Christian regulation of Jewry, and the Jewish response. Offered as HSTY 371, JDST 371 and RLGN 371. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.
Astronomy
One of the following sequences: 6
ASTR 201 The Sun and its Planets (& Any other 200-level ASTR course)
ASTR 221 Stars and Planets
& ASTR 222 and Galaxies and Cosmology

Total Units 6

Biology
Two of the following sequences: 8
BIOL 214 Genes, Evolution and Ecology
& 214L and Genes, Evolution and Ecology Lab
BIOL 215 Cells and Proteins
& 215L and Cells and Proteins Laboratory
BIOL 216 Development and Physiology
& 216L and Development and Physiology Lab

Total Units 8

Chemistry
One of the following sequences: 8-10
CHEM 105 Principles of Chemistry I
& CHEM 106 and Principles of Chemistry II
& CHEM 113 and Principles of Chemistry Laboratory
CHEM 111 Principles of Chemistry for Engineers
& CHEM 113 and Principles of Chemistry Laboratory
& ENGR 145 and Chemistry of Materials

Total Units 8-10

Earth, Environmental, and Planetary Sciences
One of the following: 3
EEPS 101 The Earth and Planets
EEPS 110 Physical Geology
EEPS 115 Introduction to Oceanography
EEPS 117 Weather and Climate
EEPS 119 Geology Laboratory
One additional EEPS course

Total Units 3

Mathematics
One of the following sequences: 8
MATH 125 Math and Calculus Applications for Life, Managerial, and Social Sci I
& MATH 126 and Math and Calculus Applications for Life, Managerial, and Social Sci II
MATH 121 Calculus for Science and Engineering I
& MATH 122 and Calculus for Science and Engineering II

Total Units 8

Physics
One of the following sequences: 8-11
PHYS 115 Introductory Physics I
& PHYS 116 and Introductory Physics II

PHYS 121 General Physics I - Mechanics
& PHYS 122 and General Physics II - Electricity and Magnetism
& PHYS 221 and Introduction to Modern Physics

Total Units 8-11

Nutrition
The College of Arts and Sciences awards the Bachelor of Arts and Bachelor of Science degrees in nutrition and nutritional biochemistry and metabolism. The required courses for the majors and minor are offered by the Department of Nutrition in the School of Medicine. For details about the department’s undergraduate programs, please consult the Department of Nutrition (p. 760) section of this bulletin.

Public Policy Program
A minor in public policy is available to undergraduates in the College of Arts and Sciences and in the economics and management programs in the Weatherhead School of Management. The course requirements are in four categories: the public policy process; economic analysis; policy or political institutions or history; and a specific policy field. Courses are listed in the "Undergraduate" section (see link above). Substitutions can be made under exceptional circumstances, at the discretion of the program director.

Undergraduate or graduate courses with public policy content are offered through the Departments of Anthropology, Earth, Environmental and Planetary Sciences, History, Political Science, and Sociology in the College of Arts and Sciences; through the Department of Economics and other departments in the Weatherhead School of Management; through the School of Law, the School of Medicine, and the Frances Payne Bolton School of Nursing; and through the Jack, Joseph and Morton Mandel School of Applied Social Sciences. Students can engage with policy issues both through courses and through the extracurricular programming of the Center for Policy Studies and other university bodies.

Undergraduate Programs
Minor
One of the following: 3
POSC 386 Making Public Policy
POSC 383 Health Policy and Politics in the United States
POSC 306 Interest Groups in the Policy Process

The following: 3
ECON 102 Principles of Microeconomics

One of the following: 3
HSTY 256 American Political History
HSTY 400 Graduate Topical Seminar
POSC 308 The American Presidency
POSC 310 The Legislative Process
POSC 323 Judicial Politics
POSC 384 Ethics and Public Policy
POSC 385 U.S. Bureaucratic Politics

Two courses on a particular field of public policy * 6

Total Units 15
Selected with the approval of the program director. A list of courses that have been approved in the past is available on the Public Policy Program’s Web site (http://www.case.edu/artsci/public_policy/specialization.html).

**Program Advisory Committee**

Joseph White, PhD  
Luxenberg Family Professor of Public Policy and Chair, Department of Political Science; Director, Center for Policy Studies; Director, Public Policy Program

Brian Gran, JD  
Associate Professor, Department of Sociology

David C. Hammack, PhD  
Hiram C. Haydn Professor of History

Susan Helper, PhD  
AT&T Professor of Regional Economic Development, Department of Economics, Weatherhead School of Management

**Teacher Licensure Program**

Case Western Reserve University offers several programs leading to the Ohio teaching license. Teacher Licensure programs are offered in Art Education and Music Education at the undergraduate (Bachelor of Science) and graduate (Master of Arts) level. A unique feature of these programs is that each is offered in cooperation with a University Circle Institution—the Cleveland Institute of Art and the Cleveland Institute of Music.

In addition, several departments within the College of Arts and Sciences offer undergraduate majors leading to the following Ohio teaching licenses: Adolescent to Young Adult (grades 7-12) in Integrated Language Arts (English major), Integrated Social Studies (history major), Integrated Mathematics (math major), Life Science (biology major) and Physical Science (chemistry and physics majors). A Multi-Age license is offered for Pre-Kindergarten through grade twelve in French, Spanish and Latin. Students wishing to pursue a teaching license in one of these areas declare education as a second major and follow the appropriate course sequences leading to licensure.

Teacher Licensure programs at Case Western Reserve University are accredited by the Ohio Department of Education and the Ohio Board of Regents, and nationally by the Teacher Education Accreditation Council (TEAC). In addition, the National Association of Schools of Music (NASM) accredits the Music Education Program.

**Undergraduate Programs**

**Ohio Teacher Education Programs**

Students interested in pursuing a teaching career will pursue a primary major in the field of licensure (for which CWRU has received approval from the Ohio Board of Regents and the Ohio Department of Education), and must choose education as a second major. The teacher education major requires 34 credit hours in professional education.

Adolescence/Young Adult teacher licensure (grades 7-12) is available in integrated language arts, integrated social studies, integrated mathematics, life sciences, chemistry, and physics. Multi-Age licensure (grades PreK-12) is available in French, Spanish and Latin. For information concerning specific subject area requirements, go to the departmental descriptions for Biology (p. 453), Chemistry (p. 221), English (p. 256), History (p. 273), Mathematics (p. 294), Physics (p. 357), Classics (http://classics.case.edu) or Modern Languages and Literatures (http://dlm.c谯se.edu).

The education course requirements are as follows:

Students must maintain a 3.0 GPA in all professional education courses, a 2.7 GPA in the specific content area, and a cumulative overall GPA of 2.7 to be recommended for Ohio teacher licensure.

As noted above, Case Western Reserve University also offers teacher licensure programs in Art Education and Music Education at the undergraduate (Bachelor of Science) and graduate (Master of Arts) levels. For further information on Art Education, see the Department of Art History and Art (p. 170) description in this bulletin; for Music Education, see the Department of Music (p. 333) description.

*Assistant Professor, Department of Music*

Coordinator, Undergraduate Studies in Music Education
EDUC 301. Introduction to Education. 3 Units.
The historical, sociological, and philosophical role of education in a diverse society. Contemporary practices and issues are introduced, researched, and debated. Issues of professional development. Application of research to instructional methodologies. Clinical/Field experiences required. Research project required for graduate students. Offered as EDUC 301 and EDUC 401.

EDUC 304. Educational Psychology. 3 Units.

EDUC 325. Content Area Special Methods I. 2 Units.
This methods course, designed for licensure candidates in secondary or multi-age areas, specifically emphasizes the methods inherent in teaching the subject area of licensure. The first of two courses, EDUC 325 builds on the student's previous understanding of the methods involved in teaching their particular subject. The course will consist of weekly guided observations in a local high school classroom under the mentoring of a master teacher, various forms of exploring content and pedagogy, and monthly discussions in a special format called the "Reflective Triad" - composed of each CWRU student, his/her master teacher in the high school, and a CWRU faculty member in the content area. Additionally, the course involves introductory lesson design and teaching. Prereq: EDUC 301, EDUC 304.

EDUC 326. Content Area Special Methods II. 2 Units.
This methods course, designed for licensure candidates in secondary or multi-age areas, specifically emphasizes the methods inherent in teaching the subject area of licensure. This course is a continuation of the sequence and is the second of two courses. EDUC 326 continues students' work in the first seminar to understand, design and teach their content. The course consists of weekly guided observations in a local high school classroom under the mentoring of a master teacher, various forms of exploring content and pedagogy, and monthly discussions in a special format called the "Reflective Triad" - composed of each CWRU student, his/her master teacher in the high school, and a CWRU faculty member in the content area. Additionally, the course involves more sophisticated lesson design in the content area, content integration, an introduction to designing instruction to meet the needs of diverse learners, and teaching. Prereq: EDUC 301, EDUC 304, EDUC 325.
EDUC 386. Introduction to Instructional Technology. 3 Units.
This course is designed to address the basic technology skills, which are required of all teachers. The course uses both concept and project based learning activities. Each of the projects is centered on a set of activities designed to allow students to demonstrate a particular subset of competencies. The course will not always provide step-by-step directions for completing projects; instead it will promote the use of existing information and help resources to allow students to develop the ability to learn new technology independently. Each of the projects will also contain the opportunity for the student to reflect on how technology impacts their teaching. Course projects are designed to assess both a basic comfort level with learning and using technology tools and the student's ability to apply technology to improve teaching and learning. The nature of the course is a mix of technology and should engage teachers in thinking about ways to improve their teaching. Offered as EDUC 386 and EDUC 486.

EDUC 390. Student Teaching & Professional Development Seminar. 3 Units.
This course is taken in conjunction with student teaching and provides a forum for processing what students experience throughout the semester. Additionally, the course guides the professional development of each student. The course helps students integrate state and national standards in their teaching. The Teacher Performance Assessment (TPA) is addressed in this course and becomes part of the student teaching portfolio. Individual advisement is a critical component and involves resume writing, interview skills, job placement information and preparation for state mandated licensure exams. Prereq: EDUC 301, EDUC 304, EDUC 325, EDUC 326, EDUC 340. Coreq: EDUC 394 - Student Teaching Practicum - is taken in conjunction with the Student Teaching Seminar.

EDUC 394. Student Teaching Practicum. 9 Units.
This practicum represents a fifteen week student teaching experience involving curriculum design and implementation. Each student teacher plans and teaches a comprehensive unit, moving from guided practice to assuming full teacher responsibility within the school culture. Video analysis, pre- and post-teaching lesson analyses, problem-solving, and reflective dialogue are key emphases of the practicum. The Teacher Performance Assessment is a component of the student teaching.

EDUC 395. Independent Study in Education. 1 - 3 Unit.
Independent Study in Education is offered for students with special interests and/or commitments that are not fully addressed in other education courses and who wish to work independently. Offered as EDUC 395 and EDUC 495.

EDUC 401. Introduction to Education. 3 Units.
The historical, sociological, and philosophical role of education in a diverse society. Contemporary practices and issues are introduced, researched, and debated. Issues of professional development, Application of research to instructional methodologies. Clinical/Field experiences required. Research project required for graduate students. Offered as EDUC 301 and EDUC 401.

EDUC 404. Educational Psychology. 3 Units.

EDUC 486. Introduction to Instructional Technology. 3 Units.
This course is designed to address the basic technology skills, which are required of all teachers. The course uses both concept and project based learning activities. Each of the projects is centered on a set of activities designed to allow students to demonstrate a particular subset of competencies. The course will not always provide step-by-step directions for completing projects; instead it will promote the use of existing information and help resources to allow students to develop the ability to learn new technology independently. Each of the projects will also contain the opportunity for the student to reflect on how technology impacts their teaching. Course projects are designed to assess both a basic comfort level with learning and using technology tools and the student's ability to apply technology to improve teaching and learning. The nature of the course is a mix of technology and should engage teachers in thinking about ways to improve their teaching. Offered as EDUC 386 and EDUC 486.

EDUC 495. Independent Study in Education. 1 - 3 Unit.
Independent Study in Education is offered for students with special interests and/or commitments that are not fully addressed in other education courses and who wish to work independently. Offered as EDUC 395 and EDUC 495.

Washington Study Program
The Washington Study Program provides students with the opportunity to complete a full-time, research-intensive internship in Washington, D.C. By participating in a semester-length program during the fall or spring (WASH 2A Washington Center Internship), students earn 9 credit hours; for a summer internship (WASH 2D Washington Center Summer Internship), they earn 3 credit hours. In addition, students earn 3 credit hours by developing a portfolio based on their internship experiences (WASH 2C Washington Center - Portfolio). The credits earned can be counted as general electives or applied to a student's major or minor, with the prior consent of the individual department(s). Finally, as part of the Washington Study Program, students participate in a seminar and attend a weekly lecture/discussion group (WASH 2B Washington Center - Politics and Public Policy Course).

To be eligible for the program, a student is expected to be a junior or senior and have at least a 3.0 GPA. The program director, the student's major advisor, and the appropriate dean must approve each application. Students must ensure that their participation will not prevent them from meeting on-campus residency or other university requirements.

Women's and Gender Studies Program
The goal of the Women's and Gender Studies Program is to educate students in interdisciplinary approaches to feminist theories of women, gender, culture, and society. Students are exposed to a variety of forms of critical thinking in relation to:

1. the social construction of knowledge and philosophy
2. approaches to science and medicine informed by “feminist empiricism” and “feminist standpoint” theories
3. historiciaced and cross-cultural accounts of gender and gender inequality
4. literary criticism
5. contemporary theories of art, performance, language, jurisprudence, social science, and religion in the context of women's experience
Women's and Gender Studies is an interdisciplinary program that prepares students to think critically and creatively within a framework employing gender as a central category of analysis. The program is set up to test and challenge the technologies and limitations of gender roles in a multitude of cultural and historical settings. It is designed to familiarize students with the analytical and hermeneutic tools of research and interpretation, and to create awareness of the ethical, political, and aesthetic dimensions of gender in history and culture.

**Undergraduate Program**

**Major**

The Women's and Gender Studies Program offers a major leading to the Bachelor of Arts degree. The program offers a sound course of study with a disciplinary concentration grounding the program's interdisciplinary objectives. Up to six credit hours in required or elective courses for another major may also be applied to the Women's and Gender Studies major. In the two required courses, students become fluent in current tools of research and interpretation employed in women's and gender studies. These two "core" courses are 201 and one from the list below:

- **WGST 201/HSTY Introduction to Gender Studies**  
  270/ENGL/PHIL/RLGN 270

One of the following:

- **WGST 301** Women, Creativity and the Arts
- **WGST 318** History of Black Women in the U.S.
- **WGST 326** Gender, Inequality, and Globalization
- **WGST 353** Women in American History I
- **WGST 365** Gender and Sex Differences: Cross-cultural Perspective

Elective courses: WGST majors must distribute their courses among the Arts, Humanities, and Social Sciences. They must take at least one course in each of these three areas. In two of the areas, they must take two courses. Consult one of the program's academic representatives with questions about the curriculum. Majors and minors in WGST may also conduct an Independent Study (WGST 399) and/or a SAGES Capstone (WGST 396) with program faculty.

**Minor**

Fulfillment of the minor requires completion of 18 credit hours according to the following course distribution:

- **Required Courses:**
  - **WGST 201** Introduction to Gender Studies  
    3
  - Five approved electives  
    15

To help ensure a comprehensive course of study in a particular area of interest, each student's combination of courses and the structure of an independent study must be approved by one of the program's academic representatives.

**Program Faculty**

- Cheryl Toman, PhD  
  Associate Professor, Department of Modern Languages and Literatures; Director and Academic Representative, Women's and Gender Studies Program

- Athena Vrettos, PhD  
  Associate Professor, Department of English; Academic Representative, Women's and Gender Studies Program

- Karen Beckwith, PhD  
  Flora Stone Mather Professor, Department of Political Science

- Joy Bostic, PhD  
  Associate Professor, Department of Religious Studies

- Susan S. Case, PhD  
  Associate Professor, Department of Organizational Behavior, Weatherhead School of Management

- Margaretmary Daley, PhD  
  Associate Professor, Department of Modern Languages and Literatures

- Ananya Dasgupta, PhD  
  Assistant Professor, Department of History

- Gilbert Doho, PhD  
  Associate Professor, Department of Modern Languages and Literatures

- T. Kenny Fountain, PhD  
  Associate Professor, Department of English

- Elina Gertsman, PhD  
  Associate Professor, Department of Art History and Art

- Laura E. Hengehold, PhD  
  Associate Professor, Department of Philosophy

- Susan W. Hinze, PhD  
  Associate Professor, Department of Sociology

- Justine Howe, PhD  
  Assistant Professor, Department of Religious Studies

- Megan Swihart Jewell, PhD  
  Instructor, Department of English; Director, Writing Resource Center

- Shannon Lundeen, PhD  
  Adjunct Associate Professor, Department of Philosophy; Director, Flora Stone Mather Center for Women

- Michelle McGowan, PhD  
  Assistant Professor, Department of Bioethics, School of Medicine

- Marilyn Sanders Mobley, PhD  
  Professor, Department of English; Vice President of Inclusion, Diversity, and Equal Opportunity

- Jennifer Karas Montez, PhD  
  Assistant Professor; Department of Sociology

- Jacqueline C. Nanfito, PhD  
  Associate Professor, Department of Modern Languages and Literatures
Courses

WGST 201. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WGST 207. Women and Religion. 3 Units.
Examination of feminist perspectives on religion, such as the status of women in Western and non-Western religions, the nature and purpose of religious beliefs and practices from the standpoints of religious and non-religious feminists, the current status of feminist philosophies of religion, and the efforts of feminists to transform traditional religions and to create new religions. Offered as RLGN 207 and WGST 207.

WGST 222. Gender in U.S. Society. 3 Units.
The focus of this course is on unique and convergent experiences of men and women in U.S. society. Different social expectations and opportunities encountered by men and women in the context of marriage and the family, work settings, and in informal organizations will be addressed. Legislation and social policy dealing with gender issues will be considered. Offered as SOCI 222 and WGST 222.

WGST 228. Sociology of Sexuality. 3 Units.
This course analyzes the issues of sex and sexuality from a sociological point of view. It is centered on the notion that what we consider to be 'normal' or 'natural' about sex and sexuality is, in reality, socially constructed. One's viewpoint on the issues surrounding sexuality are influenced by the social context in which they live, as opposed to the purely biological viewpoint that presupposes some sense of normalcy or naturalness regarding sexual relations. A range of topics will be covered, including readings that discuss the variations of sexuality and the notions of sexual "deviance" in order to explore the cultural and societal variation that exists along the lines of gender, race, ethnicity, sexual orientation, age and disability. Offered as SOCI 228 and WGST 228.

WGST 257. Women's Histories in South Asia. 3 Units.
This course traces the history of women in South Asia from pre-colonial times to the present. Themes explored in the course will include (but not be limited to): the historical transformations of institutions shaping women's lives such as state, family, religious and legal traditions; the impact of colonialism, nationalism, and decolonization on women, as well as the history of women's movements in various parts of South Asia. As we acquaint ourselves with the vibrant historiography on women in South Asia, we will also examine the theoretical and methodological challenges involved in writing histories using the analytical lens of gender. While a significant portion of the readings will focus on South Asia, we will occasionally bring in insights from histories of women in other parts of the world to help develop comparative perspectives and evaluate the South Asian cases and examples within the broader field of women's history. Offered as HSTY 157 and WGST 257. Counts for CAS Global & Cultural Diversity Requirement.

WGST 268. Women in the Bible: Ethnographic Approaches to Rite and Ritual, Story, Song, and Art. 3 Units.
Examination of women in Jewish and Christian Biblical texts, along with their Jewish, Christian (and occasionally Muslim) interpretations. Discussion of how these traditions have shaped images of, and attitudes toward, women in western civilization. Offered as RLGN 268, WGST 268, and JDST 268.

WGST 301. Women, Creativity and the Arts. 3 Units.
WGST301/ETHS301 is one of two core courses for the program in Women's and Gender Studies and an elective course for the ETHS minor. All WGST majors are to take one course concentrating on the subject of women and the arts specifically. This course also fulfills the cultural diversity requirement. In this course, students will focus on two areas of study: a) women and creativity and b) women and activism through the arts. A history of women in the arts will be covered, but the general focus of the course is on women in the arts since the 1960s in particular, and on artwork that reflects or provokes social change. "Arts" are defined in the broadest of sense. That is, students will study women's production in painting, photography, graphic design, sculpture, dance, film, music, and theater. A variety of learning techniques will be applied: Students will look at feminist theories on art, be introduced to the notion of cyberfeminism, study actual artwork and its reproductions, understand the role of are in feminist activism and how women "create" differently from men, and work closely with several feminist artists/ activists through various programs on campus and the community in order to facilitate the planning and carrying out of artistic production. Subsequently, students will interact with children in Cleveland schools in conjunction with these artists giving master classes, and be exposed to art exhibits abroad through videoconferencing with the Algerian Cultural Center in Paris and locally through University Circle Institutions. Offered as WGST 301 and ETHS 301. Counts for CAS Global & Cultural Diversity Requirement.

WGST 304. Representations of Black Women and Religion in Film. 3 Units.
In this course we will explore cinematic representations of black women and religion in film. Each week we will view a film in class. We will begin the class with the film Imitation of Life and then the course with The Help. Throughout the course we will analyze the ways in which notations of gender, sexuality, intimate violence, and modern notions of race and color, have informed representations of black women and religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas about black women in the Americas. Offered as RLGN 304, RLGN 404, WGST 304, and ETHS 304. Counts for CAS Global & Cultural Diversity Requirement.
WGST 312. Women in the Ancient World. 3 Units.
The course offers a chronological survey of women's lives in Greece, Hellenistic Egypt, and Rome. It focuses on primary sources as well as scholarly interpretations of the ancient record with a view to defining the construction of gender and sexuality according to the Greco-Roman model. Additionally, the course aims to demonstrate how various methodological approaches have yielded significant insights into our own perception of sex and gender. Specific topics include matriarchy and patriarchy; the antagonism between male and female in myth; the legal, social, economic, and political status of women; the ancient family; women's role in religion and cult; ancient theories of medicine regarding women; pederasty and homosexuality. Offered as CLSC 312 and WGST 312.

WGST 315A. International Bioethics Policy and Practice: Women's Health in the Netherlands. 3 Units.
This 3-credit course allows students to familiarize themselves with social policies and practices related to women's health in the United States and the Netherlands. Issues covered in the course include birth control and family planning, abortion, prenatal testing, childbirth, health care disparities, cosmetic surgery, prostitution and trafficking in women. This course also addresses the US and Dutch national policies regarding the public provision of health care for women. The course places an emphasis on the ways in which social norms shape policies over time, which political actors are involved in shaping women's health policy, and the balance between women's health as a matter of the public good or individual responsibility. This course substantively explores gender-specific cultural values and practices in relation to women's health in the United States and the Netherlands and will help students develop the analytical skills necessary for evaluating social policy and ethical issues related to women's health. Offered as BETH 315A and BETH 415A. Counts for CAS Global & Cultural Diversity Requirement.

WGST 318. History of Black Women in the U.S.. 3 Units.
Chronologically arranged around specific issues in black women's history organizations, participation in community and political movements, labor experiences, and expressive culture. The course will use a variety of materials, including autobiography, literature, music, and film. Offered as ETHS 318, HSTY 318, and WGST 318.

WGST 325. Philosophy of Feminism. 3 Units.
Dimensions of gender difference. Definition of feminism. Critical examination of feminist critiques of culture, including especially politics, ideology, epistemology, ethics, and psychology. Readings from traditional and contemporary sources. Offered as PHIL 325, PHIL 425 and WGST 325. Counts for CAS Global & Cultural Diversity Requirement.

WGST 326. Gender, Inequality, and Globalization. 3 Units.
Using a sociological perspective, this course examines how major societal institutions, including the economy, polity, medicine, religion, education and family, are structured to reproduce gendered inequalities across the globe. Attention is given to the intersections of race/ethnicity, social class, gender and sexuality in social systems of power and privilege. Of critical importance is how gender figures in the relationship between Economic North and Economic South countries. We will elucidate how gender norms vary by culture and exert profound influence on the daily, lived experiences of women and men. The course will be informed by recent scholarship on feminism, women's movements, and globalization. Offered as SOCI 326 and WGST 326. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SOCI 101 or permission of program director.

WGST 335. Women in Developing Countries. 3 Units.
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondichery), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper. Offered as ETHS 335, FRCH 335, WLIT 335, WGST 335, FRCH 435 and WLIT 435. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

WGST 337. Women in the Arab World. 3 Units.
The purpose of this course is twofold: It is a course that allows students an in-depth look at the diverse women who represent a number of cultures in the Arab world in nations from the Mashrek to the Maghreb. The second primary goal of the course is to study such women through the eyes of leading Arab women theorists who have made an impact not only in their own countries, but also on disciplines intersecting with women's studies worldwide. We will study the Arab woman's place in her respective society, in political and economic systems, in education, and in the family. We will also analyze her contributions to art and literature as well as to the sciences. The course will provide an overview of the Arab woman throughout history, from her origins to her place within recent movements within the Arab Spring and other current world events. As Arab women are Muslim, Christian, and Jewish, views of women within these major world religions will also be taken into account as we study the Arab woman as well as religion's impact on culture in the Middle East and in the Maghreb in particular. In the course, we will utilize theoretical texts, but also case studies as well as examples from media and the arts. During the semester, we will take advantage of teleconferencing opportunities between CWRU and two major academic units for Women's Studies in the Arab world: The Institute for Women's Studies in the Arab World (IWASAW) in Beirut, Lebanon, and the University of Jordan's Center for Women's Studies in Amman. Offered as FRCH 337, FRCH 437, ARAB 337, ETHS 337 and WGST 337. Counts for CAS Global & Cultural Diversity Requirement.

WGST 339. Black Women and Religion. 3 Units.
This course is an exploration of the multidimensional religious experiences of black women in the United States. These experiences will be examined within particular historical periods and across diverse social and cultural contexts. Course topics and themes include black women and slave religion, spirituality and folk beliefs, religion and feminist/womanist discourse, perspectives on institutional roles, religion and activism, and spirituality and the arts. Offered as ETHS 339 and RLGN 338 and WGST 339. Counts for CAS Global & Cultural Diversity Requirement.
WGST 342. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in the literary production of Latin American women writers, particularly from the 1920s to the present. Close attention paid to the dominant themes of love and dependency; imagination as evasion; alienation and rebellion; sexuality and power; the search for identity and the self-preservation of subjectivity. Readings include prose, poetry, and dramatic texts of female Latin American writers contributing to the emerging of feminist ideologies and the mapping of feminist identities. Offered as SPAN 342, SPAN 442, ETHS 342, WGST 342, WLIT 342, and WLIT 442. Counts for CAS Global & Cultural Diversity Requirement.

WGST 343. Language and Gender. 3 Units.
This course introduces students to the study of language and gender by exploring historical and theoretical trends, methods, and research findings on the ways gender, sexuality, language, and discourse interact with and even shape each other. Topics may include "grammatical" versus "biological" gender, feminine écriture, the women and language debate, speech acts and queer performativity, nonsexist language policy, discourses of gender and sexuality, feminist stylistics, and LGBT sociolinguistics. Offered as: ENGL 343, ENGL 443, and WGST 343. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WGST 346. Women and Politics. 3 Units.
Women and Politics involves a critical examination of the impact of gender on the forms and distributions of power and politics, with primary reference to the experience of women in the United States. Major concerns of the course include what we mean by "sex," "gender," and "politics"; the relationship between women and the state; how women organize collectively to influence state policies; and how the state facilitates and constrains women's access to and exercise of political power. The course is organized around four foci central to the study of women and politics. The first section of the course focuses on what we mean by "women," "gender," and "politics." In this section, we will consider how these concepts intersect and the ways in which each may be used to deepen our understanding of the workings of governments and political systems, and of women's relative political powerlessness. The second section of the course employs these concepts to understand the (re) emergence of the US feminist movement, its meanings, practices, and goals, and its transformation across US political history. In the third section, we turn to conventional electoral politics, focusing on women's candidacies, their campaigns, and women's voting behavior. In the final section of the course, we consider those general factors that might provide for increased gender equality and improved life status for women, in global, comparative perspective. Offered as POSC 346 and POSC 446 and WGST 346. Counts as SAGES Departmental Seminar.

WGST 349. The Arab World Experience. 3 Units.
Taught and led by Case faculty, The Arab World Experience is a spring semester course with a spring break study abroad component in a Middle Eastern or North African country supplemented by course meetings before and after travel. It will rotate among countries such as Jordan, Lebanon, Morocco, etc. and be taught by faculty with appropriate area expertise in Arabic, Women's and Gender Studies, and/or Ethnic Studies. The course focuses on topics such as history, politics, culture, and gender relations within the society of study. Workload and learning outcomes are commensurate with a semester-long three credit hour course. Guest lectures in the host country are an important component of the course as they bring a fresh, authentic perspective to the aforementioned topics discussed. There will be three three-hour meetings prior to travel, required reading, and one three-hour meeting after travel. In the host country, students will spend seven days (five-eight hours per day) in seminars, discussions, and site visits. Student grades are determined on the basis of participation, attendance, a daily experiential learning journal, interviews with guest speakers, and a final exam. Offered as ARAB 349, ETHS 349 and WGST 349.

WGST 352. African Feminisms. 3 Units.
This course traces the history of African feminism from its origins within traditions through to a more contemporary theoretical analysis of gender, marriage, and motherhood seen from an Afrocentric perspective. Approaches studied are those that pertain to anthropology, history, literature, sociology, and culture. African feminist theory of scholars such as Filomina Steady, Cheikh Anta Diop, Buchi Emecheta, Ili Amadiume, Obioma Nnamaka, Oyeronke Oyewumi, and Calixthe Beyala will be studied and there will be some comparative analysis of Western theories to show how African feminisms are clearly distinct. Theories on these feminisms will be presented, and in the process, students will look at cases of women in Cameroon, Nigeria, Ghana, Kenya, and Senegal. It is commonly believed that African women were defined for a long time according to constructs of Western anthropology. This course will thus look at social institutions such as woman-to-woman marriage, matriarchy, and various women's rituals in order to identify African constructs of gender, family, kinship, marriage, and motherhood. Offered as ETHS 352 and WGST 352. Counts for CAS Global & Cultural Diversity Requirement.

WGST 353. Women in American History I. 3 Units.
The images and realities of women's social, political, and economic lives in early America. Uses primary documents and biographers to observe individuals and groups of women in relation to legal, religious, and social restrictions. Offered as HSTY 353, WGST 353, and HSTY 453. Counts for CAS Global & Cultural Diversity Requirement.

WGST 354. Women in American History II. 3 Units.
With HSTY 353, forms a two-semester introduction to women's studies. The politics of suffrage and the modern woman's efforts to balance marriage, motherhood, and career. (HSTY 353 not a prerequisite.) Offered as HSTY 354, WGST 354, and HSTY 454. Counts for CAS Global & Cultural Diversity Requirement.
WGST 359. Visual Culture of Medieval Women. 3 Units.
This course will consider the roles of women as patrons, subjects, producers and consumers of visual culture, focusing particularly on the twelfth through fifteenth centuries. Throughout the course, we will study the different ways medieval men and women perceived, read, figured, and interacted with the female body, which was frequently seen as a fraught site of desire and repulsion, fear and fascination. Students will be asked to read primary sources as well as critical materials that address contradictory constructions of gender and sex in medieval images and texts. The course, therefore, will not simply focus on artistic production, but will include readings and discussions of social and political history, theology, and literature of the Middle Ages. Offered as ARTH 359 and ARTH 459; cross-listed as WGST 359 since it focuses on the role of women in visual culture and so can satisfy a requirement in the program for the course on women in the arts. Offered as ARTH 359, ARTH 459 and WGST 359. Counts for CAS Global & Cultural Diversity Requirement.

WGST 363. Gender and Sexuality in America. 3 Units.
This multicultural seminar uses a mixture of historical text, gender theory, personal biography, and artistic expression to explore changing notions of gender and sexuality over the past two centuries in the United States. Offered as HSTY 363, HSTY 463 and WGST 363. Counts for CAS Global & Cultural Diversity Requirement.

WGST 365. Gender and Sex Differences: Cross-cultural Perspective. 3 Units.
Gender roles and sex differences throughout the life cycle considered from a cross-cultural perspective. Major approaches to explaining sex roles discussed in light of information from both Western and non-Western cultures. Offered as ANTH 365, ANTH 465 and WGST 365.

WGST 370. Women in Organizations. 3 Units.
The purpose of this course is to explore the unique challenges of life for women in their twenties as they increase understanding of the issues surrounding women, ambition, and success in a variety of organizations and professions. At this stage of life there are many choices women can make regarding careers and relationships. This course will broaden understanding of the context of work in women's lives and help women and men understand the leadership and managerial issues that will surround them in organizations. Offering more complex understandings of issues women face in the workplace related to race and gender, the course will help increase self knowledge about personal identity and direction, values, and abilities including the enhancement of leadership capabilities. It will also facilitate career development, improving the ability of individual women to be choiceful about the quality of integration of both a personal and professional life. Offered as ORBH 370 and WGST 370. Counts for CAS Global & Cultural Diversity Requirement.

WGST 372. Work and Family: U.S. and Abroad. 3 Units.
Covers the impact on human lives of the interface between work and family; the different ways gender structures the experience of work and family depending upon racial and ethnic background, social class, age, and partner preference; the impact of historical context on work-family experiences; work-family policies in the United States and other countries. Offered as SOCI 372, WGST 372, and SOCI 472.

WGST 373. Advanced Topics in American Women's History. 3 Units.
This advanced seminar is designed to allow students to investigate aspects of American women's history that are not deeply explored in other courses. The two central purposes of the course are to move students forward in their study of American women's history and to provide advanced study for graduate students and other students interested in women-focused topics. The topic is subject to change, but may be any of the following or something similar: women and medicine, images of women in popular culture, growing up female, women and political movements, women and war, etc. Recommended preparation: HSTY 353/453 or HSTY 354/454. Offered as HSTY 373, WGST 373, and HSTY 473.

WGST 383. Gender Issues in Feminist Art: The 20th/21st Century. 3 Units.
This course aims at understanding the myriad ways issues of gender have been encoded and/or played out in 20th and early 21st century art. A variety of paintings, sculpture, photographs and performances by women, gays and other marginalized groups, especially those that engage in "the discourse of the body," will be examined through a gender-oriented focus. Analysis of a variety of provocative readings will provide methodologies useful for assessing aesthetic and political meanings in modern and contemporary art across national boundaries. Special emphasis will be placed on women artists who have recently begun to integrate gender and ethnicity. Offered as ARTH 383, WGST 383 and ARTH 483. Counts for CAS Global & Cultural Diversity Requirement.

WGST 396. SAGES Capstone. 3 Units.
Capstone experience in the fields of Women's and Gender Studies for an in-depth, independent project of particular interest to the student. Students are strongly encouraged to work with a WGST program faculty member, but some projects may be supervised by faculty in other areas or by other qualified professionals. All capstones require a WGST faculty advisor's approval of the proposal prior to registration. Open to juniors and seniors majoring in Women's and Gender Studies. Counts as SAGES Senior Capstone. Prereq: WGST 201; Junior or Senior standing with major/minor in WGST.

WGST 399. Independent Study. 1 - 3 Unit.
Independent research project in the fields of Women's and Gender Studies. Project proposals must be approved by a WGST faculty advisor. Students are strongly encouraged to work with a WGST program faculty member, but some projects may be supervised by faculty in other areas for by other qualified professionals with a WGST faculty advisor's approval. Credit varies with the scope and depth of the project. Prereq: WGST 201.

World Literature Program

World literature is a discipline that draws together literatures and cultures of a wide variety of countries and regions, including Western and non-Western ones. It emphasizes literatures and cultures of the past (ancient Greece and Rome, for example) as well as the present. It understands “minority” or “third world” literatures as being just as worthy of study as European literatures, and it recognizes the importance of the “classics” of both the West and the East.

The World Literature Program offers comparative courses as well as courses on individual authors, periods, and literatures. The major in world literature requires study in a language other than English, thus emphasizing that literature and language are intimately related. Students learn to examine literature from a truly multi-cultural and multi-lingual...
standpoint, and they become conversant in the major schools of literary criticism and theory.

In addition, students in the program take courses that investigate visual arts, film, and music. These courses reflect a belief that literature and the arts must be in permanent dialogue, and they provide students with an interdisciplinary perspective in which cultural history and aesthetic history necessarily coexist.

The World Literature Program is associated with several departments in the College of Arts and Sciences, including classics, cognitive science, modern languages and literatures, philosophy, history, and religious studies.

Undergraduate Programs

Major

The World Literature Program offers a major leading to the Bachelor of Arts degree. Requirements for the major are as follows:

Required Courses:
- WLIT 211 World Literature I 3
- WLIT 212 World Literature II 3
- One of the following: 3
  - ENGL/WLIT 290 Masterpieces of Continental Fiction
  - ENGL/WLIT 291 Masterpieces of Modern Fiction
- One of the following: 3
  - WLIT/CLSC 203 Gods and Heroes in Greek Literature
  - WLIT/CLSC 204 Heroes and Hustlers in Latin Literature
- ENGL/WLIT 387 Literary and Critical Theory
- Two courses in literature at the 300 level in a language other than English 6
- WLIT 390 Topics in World Literature 3
- Twelve hours of electives 12

Total Units 33

All literature courses at the 200 and 300 levels offered by the Departments of Modern Languages and Literatures, Classics, and English are approved as world literature courses.

Undergraduate Honors

The honors program in world literature is for especially talented and dedicated majors. Requirements for honors are: 1) a GPA of at least 3.5 in the major, and 2) an honors thesis completed over the course of two semesters in the senior year, devoted to the investigation of a literary or cultural topic. Honors students enroll in WLIT 397 Honors Thesis I and WLIT 398 Honors Thesis II and write their thesis under the supervision of a WLIT faculty advisor. The thesis must be approved by a second faculty member and receive a grade of B or better. Students who qualify receive their degrees "with Honors in World Literature." A registration/proposal form for students electing honors must be completed by the end of the second week of classes in each of the two semesters.

Minor

The minor in world literature requires:

Required Courses:
- WLIT 211 World Literature I 3
- WLIT 212 World Literature II 3
- Nine credits of electives chosen in consultation with a program advisor 9

Total Units 15

BA in Classics: Classical Tradition Concentration

Students interested in world literature may also be interested in the new Classical Tradition Concentration, one of three tracks for a BA in Classics. For course information, please visit the Department of Classics page (p. 232).

Graduate Program

The World Literature Program offers a master of arts degree. Students pursuing the MA take courses that investigate visual arts, film, and music as well as literature, reflecting a belief that literature and the arts are in permanent dialogue. The program takes an interdisciplinary perspective in which cultural history and aesthetic history coexist.

Along with the Department of Classics, which hosts the program, World Literature is associated with other departments in the College of Arts and Sciences, including cognitive science, modern languages and literatures, philosophy, history, and religious studies.

The program offers tuition waivers and teaching assistant stipends to qualified students.

Program Director

Florin Berindeanu, PhD
Instructor, Department of Classics; Director, World Literature Program

Steering Committee

Sarah Gridley, MFA
Associate Professor, Department of English

Takao Hagiwara, PhD
Associate Professor, Department of Modern Languages and Literatures

William Siebenschuh, PhD
Oviatt Professor of English, Department of English

Timothy Wutrich, PhD
Instructor, Department of Classics

Courses

WLIT 203. Gods and Heroes in Greek Literature. 3 Units.
This course examines major works of Greek literature and sets them in their historical and cultural context. Constant themes are war, wandering, tyranny, freedom, community, family, and the role of men and women within the household and the ancient city-state. Parallels with modern life and politics will be explored. Lectures and discussions. Offered as CLSC 203 and WLIT 203.
WLIT 204. Heroes and Hustlers in Latin Literature. 3 Units.
This course constitutes the second half of a sequence on Classical literature. Its main themes are heroism vs. self-promotion, love vs. lust, and the struggle between democracy and tyranny. These topics are traced in a variety of literary genres from the period of the Roman republic well into the empire. Parallels with modern life and politics will be drawn. Offered as CLSC 204 and WLIT 204.

WLIT 211. World Literature I. 3 Units.
Survey of literature from antiquity to 1600. May include Western and non-Western texts by Homer, Vergil, Ovid, St. Augustine, Dante, Boccaccio, Rabelais, Cervantes, Sei Shonagon, Basho, and the Baghavad Gita.

WLIT 212. World Literature II. 3 Units.
Survey of literature from 1600 to present. May include Western and non-Western texts by Swift, Voltaire, Tolstoi, Baudelaire, Austen, Mann, Kafka, Lispector, Marmon Silko, Soyinka.

WLIT 220. Art & Literature in the Classical Tradition, Pt 1: Renaissance and Baroque (14th to 17th centuries). 3 Units.
Through lectures, varied assignments, and visits to the Cleveland Museum of Art this course will introduce students to the major issues in the study of early modern art and literatures. The emphasis will inevitably be on Italy, as the place where the physical remains of ancient Rome confronted and inspired such remarkable masters as Michelangelo (as poet and artist), Palladio, Gian Lorenzo Bernini, Nicholas Poussin (Bernini and Poussin are represented in the CMAI), though some artists -- notably Leonardo -- resisted the lure of the classical past. From Italy new ideas spread to the rest of Europe and beyond. We will not have much time to study Shakespeare in the course, but we will not be able to ignore the greatest author of the Renaissance period. Like Shakespeare we will move between the court and the city, between scenes of often-endangered order and scenes of sometimes-productive disorder, in which classical models provided a key cultural and even psychological resource in challenging times. Recommended preparation: CLSC 112. Offered as CLSC 220 and WLIT 220.

WLIT 222. Classical Tradition 2: Birth of Archaeology. 3 Units.
The course will focus on the history of diverse methods for studying societies remote in time and space; i.e., on the formation of the distinct disciplines of archaeology and anthropology, and the interest in the origins of human society and cultural practices. The birth of archaeology occurred in the context of the profound transformation of European cultural life in the eighteenth century, the era of the Enlightenment. On the basis of a range of cultural productions (literary and historical texts, objects of luxury and use, etc.), we will study visual and literary works and consider the relationship between different modes of artistic production and expression, as well as the marketing and display of prestigious objects, whether ancient or modern. We will consider the eighteenth-century model of experiential education, the “Grand Tour,” and the formation of private and public collections, as well as the emergence of the museum as institution. Finally, we will also consider important recent work on the relationship between the production of luxury commodities (sugar, coffee, tea, etc.) through the plantation economy in the Americas and beyond and the development of attitudes and ideas in Europe. Offered as CLSC 222 and WLIT 222.

WLIT 224. Sword and Sandal: The Classics in Film. 3 Units.
Gladiator. Alexander. The 300. Contemporary society’s continuing fascination with putting the ancient world on the big screen is undeniable; and yet the causes underlying this phenomenon are not quite so readily apparent. In this course we will watch and discuss a number of movies about the ancient world, running the gamut from Hollywood classics such as Ben-Hur and Spartacus to more recent treatments (the aforementioned 300 and Gladiator, for starters), and from the mainstream and conventional (Clash of the Titans, Disney's Hercules) to the far-out and avant-garde (Fellini's Satyricon, anyone?). As we do so we’ll learn quite a bit about the art and economics of film, on one hand, and the ancient world, on the other. And yet what we’ll keep coming back to are the big questions: what does our fascination with the ancient Mediterranean tell us about ourselves as a society? Why do such movies get made, and what kinds of agendas do they serve? To what extent can we recapture the past accurately? And if we can’t, are we doomed to just endlessly projecting our own concerns and desires onto a screen, and dressing them in togas? No knowledge of ancient languages is required for this course. Offered as CLSC 224 and WLIT 224.

WLIT 225. Japanese Popular Culture. 3 Units.
This course highlights salient aspects of modern Japanese popular culture as expressed in animation, comics and literature. The works examined include films by Hayao Miyazaki, writings by Kenji Miyazawa, Haruki Murakami and Banana Yoshimoto, among others. The course introduces students to essential aspects of modern Japanese popular culture and sensibility. Offered as JAPN 225 and WLIT 225. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 228. Development of Theater: Beginnings to English Renaissance. 3 Units.
Theater 228/World Literature 228 explores the foundations of theater in Western civilization, beginning with Greece and then charting and analyzing the developments in playwriting, design, acting and theater architecture. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater I explores developments from Aeschylus to the English Renaissance. Offered as THTR 228 and WLIT 228. Prereq: Sophomore standing.

WLIT 229. Development of Theater: Renaissance to Romanticism. 3 Units.
THTR 229 explores the many developments in playwriting, design, acting, and theater architecture across the world. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater II not only explores the development of theatrical conventions in Spain, England, Italy, France and other European countries that lead to the creation of modern drama, but the course also offers an in-depth look at the history and conventions of theater in India, Korea, China, and Japan. Offered as THTR 229 and WLIT 229. Counts as SAGES Departmental Seminar. Prereq: Sophomore standing.

WLIT 235. Asian Cinema and Drama. 3 Units.
Introduction to major Asian film directors and major traditional theatrical schools of India, Java/Bali, China, and Japan. Focus on the influence of traditional dramatic forms on contemporary film directors. Development of skills in cross-cultural analysis and comparative aesthetics. Offered as ASIA 235 and WLIT 235. Counts for CAS Global & Cultural Diversity Requirement.
WLIT 245. Classical Japanese Literature in Translation. 3 Units.
Readings, in English translation, of classical Japanese poetry, essays, narratives, and drama to illustrate essential aspects of Japanese culture and sensibility before the Meiji Restoration (1868). Lectures explore the sociohistorical contexts and the character of major literary genres; discussions focus on interpreting the central images of human value within each period. Japanese sensibilities compared to and contrasted with those of Western and other cultures. Offered as JAPN 245 and WLIT 245.

WLIT 255. Modern Japanese Literature in Translation. 3 Units.
Focus on the major genres of modern Japanese literature, including poetry, short story, and novel (shosetsu). No knowledge of Japanese language or history is assumed. Lectures, readings, and discussions are in English. Films and slides complement course readings. Offered as JAPN 255 and WLIT 255.

WLIT 285. The Hispanophone World. 3 Units.
A survey of the imaginative literatures in a variety of genres from the Spanish-speaking world, including texts authored by Hispanics living in the United States. The selections will help students gain a greater understanding and appreciation of the impact and adaptation of Spanish language and culture among widely diverse populations of the world over the past centuries. Counts towards Spanish major as related course. No knowledge of Spanish required. Offered as SPAN 285 and WLIT 285.

WLIT 290. Masterpieces of Continental Fiction. 3 Units.
Major works of fiction from the 19th century and earlier. Offered as ENGL 290 and WLIT 290.

WLIT 291. Masterpieces of Modern Fiction. 3 Units.
Major works of fiction of the 20th century. Offered as ENGL 291 and WLIT 291.

WLIT 295. The Francophone World. 3 Units.
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (and where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle-East (Lebanon, Syria); the Caribbean (Martinique, Guadeloupe, Haiti); Southeast Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg). FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. Offered as ETHS 295, FRCH 295, and WLIT 295. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 300. The City in Literature. 3 Units.
Focus on major cities of the world as catalysts and reflections of cultural and historical change. Interdisciplinary approach utilizing the arts, literature, social sciences. Examples include Berlin at the turn of the century; Paris in literature and film; Tokyo in history and literature. Offered as WLIT 300 and WLIT 400.

WLIT 308. The Paris Experience. 3 Units.
Three-week immersion learning experience living and studying in Paris. The focus of the course is the literature and culture of the African, Arab, and Asian communities of Paris. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308/408 do coursework in French. WLIT 308/408 students have the option of completing coursework in English. Graduate students have additional course requirements. Offered as FRCH 308, WLIT 308, FRCH 408, and WLIT 408. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 314. The Poetics of Eros: Love Poetry from Sappho to Shakespeare and Beyond. 3 Units.
This course will explore the theme of love in all its multiplicity of meanings and changes over time from its first appearances in Near Eastern poetry (Song of Songs) and Greek lyric (the titular Sappho) through its various elaborations, Roman, Medieval, Renaissance, and Romantic. It will also address theoretical inquiries into the nature and purpose of erotic desire and its evaluation as an aesthetic phenomenon, including Freudian theory and modern contributions such as Roland Barthes and Georges Bataille. No knowledge of the original languages required. Offered as CLSC 314 and WLIT 314.

WLIT 315. Mysticism and Literature. 3 Units.
This co-taught seminar will explore and compare mystical elements in selected literary and theoretical works from the West and the East. Comparisons will focus on a number of interrelated sub-themes such as mind, language, alienation, innocence, experience, life, death, cosmogony, cosmology, good, evil, God/gods, and nature (the ecosystem). Offered as MLIT 315, WLIT 315, MLIT 415 and WLIT 415.

WLIT 316. Greek Tragedy. 3 Units.
This course provides students the opportunity to read a significant number of ancient Greek tragedies in modern English translations. We shall read, study, and discuss selected works by Aeschylus, Sophocles, and Euripides, and attempt to understand the plays as literature composed for performance. We shall study literary elements within the plays and theatrical possibilities inherent in the texts. As we read the plays, we shall pay close attention to the historical context and look for what each play can tell us about myth, religion, and society in ancient Athens. Finally, we shall give occasional attention to the way these tragic dramas and the theater in which they were performed have continued to inspire literature and theater for thousands of years. Lectures will provide historical background on the playwrights, the plays, the mythic and historical background, and possible interpretation of the texts as literature and as performance pieces. Students will discuss in class the plays that they read. The course has three examinations and a final project that includes a short essay and a group presentation. Offered as CLSC 316, WLIT 316, WLIT 416.
WLIT 322. Roman Drama and Theater. 3 Units.
This course is designed as a continuation of and companion to CLSC/ WLIT 316/416 Greek Tragedy in English Translation, although it may be taken without having taken, or before having taken, that course. Students in Roman Drama and Theater will read a significant number of ancient Roman plays in modern English translation and study non-literary theatrical entertainment of the Roman Republic and Empire, including mime and pantomime, gladiatorial shows, political speeches, courtroom drama, and various other spectacles. The dramatic texts that we shall study include the fragments of early Latin drama, selected comedies by Plautus and Terence, and the tragedies of Seneca, and the forensic speeches of statesman such as Cicero. We shall also consider Greek and Roman literature that comments on Roman theatrical practices. These works will be read for their literary merits and theatrical possibilities, while at the same time examining them for what they can tell us about Roma culture and society. Similarly, when studying the non-literary theatrical works we shall examine historical and theatrical context including archaeological evidence from theaters and amphitheaters and material remains (masks, depictions of actors and gladiators on vases, terra cotta lamps, mosaics, etc.). Finally, while the majority of the course focuses on drama originally written in Latin and theatrical entertainments performed in ancient Rome, the course will conclude with a survey of selected post-classical works indebted to the tradition of Roman drama and theater. Authors to be studied include Hrotsvitha, Marlowe, Shakespeare, Racine, Molière, and the legacy of Roman drama and theater in contemporary stage and cinema such as Sondelm's A Funny Thing Happened on the Way to the Forum. Thus a secondary concern will be to consider how and in what ways the legacy of Roman drama and theater has continued to shape the dramatic arts since antiquity. Offered as CLSC 322, CLSC 422, WLIT 322, and WLIT 422.

WLIT 323. Inspiration: The Topic of Creativity in Art and Literature--Ancient to Medieval. 3 Units.
Inspiration is an inextricably essential part of the aesthetic genesis, and it has instantly become one of the most frequent themes of artistic creation. Where does inspiration come from? Are artists “chosen ones” that implicitly stand out from the “non-inspired” rest? Trying to answer these questions and others related to the phenomenon of creation, one direction that this course should take and focus on is the theme of “divine” or “transcendent” as a source of inspiration in art and literature. The course will start with the mystical teaching and theories of Pseudo-Dionysius, Gregory Palamas, Jacopone da Todi, Caterina da Siena, Dante, Petrarch, and Meister Eckhart. Offered as: CLSC, CLSC 423, WLIT 323 and WLIT 423.

WLIT 324. Epic: The Sublime and Terrible in Literature. 3 Units.
The course focuses on the epic genre that dominates the dawn of Western literature as well as the literary traditions of much of the rest of the world. From the Homeric epic to the Middle Ages and deep into the Renaissance, there was a collective urge to record both in verse and prose extraordinary adventures with exceptional heroes as central figures. Thus, the epic genre typically encouraged variations in the aesthetic treatment of the hero that eventually came to define distinct categories within the genre. “Sublime” and “terrible” are common notions in the aesthetics of classicism, from antiquity to the early modern period. Authors studied in the course include such key figures in the creation and development of epic as Homer, Virgil, Ovid, Gotthfried von Strassburg, Dante, and Cervantes. The works of these authors exemplify, on the one hand, the aesthetic directions mentioned above and, on the other hand, provide opportunities for using the close engagement with particular texts to illuminate wider cultural fields, in which various aesthetic perceptions of social, political, and religious reality coexist and therefore stimulate remarkable innovations in the standard epic narrative. Offered as CLSC 324, CLSC 424, WLIT 324 and WLIT 424.

WLIT 325. Hispanic Intellectuals and Society: A Critical Approach. 3 Units.
This course offers an overview of the most important critical approaches to Spanish American culture and literature, with a socio-historical emphasis. Some of the authors we will discuss are Angel Rama, Jose Antonio Cornejo Poliar and Nestor Garcia Canclini. We will analyze how the Latin American intellectuals had thought about specific issues such as identity, race, ideology, colonial and post-colonial relations with the metropolis and the process of formation of the nations in the continent. The class, the discussions, exams, oral presentations and papers will be in Spanish. Some of the readings must be in English, but most of them will be in Spanish. Offered as SPAN 325, SPAN 425, ETHS 325, WLIT 325 and WLIT 425. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 329. Modern and Contemporary Drama. 3 Units.
Theatre 329 explores the development of western drama and theatre from 1860 through present-day productions. The course emphasizes the relationship between different theatrical representations and their historical and social context. Shakespeare’s well-known dictum that “theatre holds a mirror up to nature” is expanded when one examines who is holding that mirror, and how their actions participate in the constantly shifting construction of culture. Given this premise, the course investigates the development of specific European cultures (England, France, Germany, and Italy) as well as other regions (the United States, South America, and Russia) through the - live and literary - representations they make of themselves. Offered as THTR 329 and WLIT 329. Prereq: Sophomore Standing

WLIT 333. Contemporary Caribbean Literature. 3 Units.
In addition to developing a general familiarity with the literature and history of this region, students will acquire an awareness of the interrelationship of national identity, memory, and language in the texts produced by contemporary Caribbean authors, and of the cultural hybridity characteristic of this production. The themes treated by these authors include colonialism and postcolonialism, cultural and religious syncretism, and sexual politics. Offered as SPAN 333, SPAN 433, ETHS 333, WLIT 333 and WLIT 433. Counts for CAS Global & Cultural Diversity Requirement.
WLIT 335. Women in Developing Countries. 3 Units.
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondichery), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper. Offered as ETHS 335, FRCH 335, WLIT 335, WGST 335, FRCH 435 and WLIT 435. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 338. The Cameroon Experience. 3 Units.
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Coursework is in French. To do coursework in English, students should enroll in WLIT 338/438 or ETHS 338/438. Offered as ETHS 338, FRCH 338, WLIT 338, ETHS 438, FRCH 438, and WLIT 438. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 339. Latin American Poetic Revolt. 3 Units.
Introduction to some of the most significant poets in contemporary Latin America, a region home to a significant number of eminent poets, including Nobel Laureates from Chile, Gabriela Mistral and Pablo Neruda. The course focuses on detailed textual analysis of pivotal works, combined with historical-literary perspective, so students gain insight into the diverse styles and tendencies that reflect the tumultuous history of poetry's development in a relentless search for a Latin American cultural identity. Offered as SPAN 339, SPAN 439, WLIT 339 and WLIT 439. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 340. Seminar in Enlightenment Art and Literature: Piranesi and Vico. 3 Units.
This course explores aspects of the European eighteenth century as a transformative epoch in the history of western culture. Though the Enlightenment is usually associated especially with France, in this course we will focus on Italy, as the irresistible goal of travelers taking part in the "Grand Tour," and as a landscape of powerful ancient and modern architecture and artworks universally recognized as exemplary. In particular we will study one of the strangest and most fascinating visual artists of the period, the self-proclaimed architect Giovanni Battista Piranesi (1720-1778) famous no less now than in his own time for his fantastic prison engravings as well as his views of Rome, involving a radical rethinking of the city as a particular kind of inhabited as well as imagined space. Piranesi's polemical response to the advocates of the Greek revival, then coming into fashion, will lead into discussion of the key philosophical debates and aesthetic shifts of the time, notably the emergence of the notion of the sublime as a category eventually subversive of western ideals of rationality and still present -- and potent -- in our own culture. Finally we will place Piranesi within a current of discussion of the origins and nature of language and of human society in general, not least as manifested in architecture and other symbolic practices. The leading figure here is the Neapolitan G.B. Vico, whose New Science of 1725 remains one of the most stimulating texts in the western intellectual tradition. Offered as CLSC 340, COGS 340, WLIT 340, CLSC 440, and WLIT 440.

WLIT 342. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in the literary production of Latin American women writers, particularly from the 1920s to the present. Close attention paid to the dominant themes of love and dependency; imagination as evasion; alienation and rebellion; sexuality and power; the search for identity and the self-preservation of subjectivity. Readings include prose, poetry, and dramatic texts of female Latin American writers contributing to the emerging of feminist ideologies and the mapping of feminist identities. Offered as SPAN 342, SPAN 442, ETHS 342, WGST 342, WLIT 342, and WLIT 442. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 343. The New Drama in Latin American. 3 Units.
Representative works of contemporary Latin American drama. Critical examination of selected dramatic works of twentieth-century Latin America provides students insight into the nature of drama and into the structural and stylistic strategies utilized by Latin American dramatists to create the "new theater," one which is closely related to Latin American political history. Offered as SPAN 343, SPAN 433, ETHS 433, WLIT 343 and WLIT 434. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 345. Japanese Women Writers. 3 Units.
Contributions of women writers to the literature of pre-modern and modern Japan; investigations of how their works exemplify and diverge from "mainstream" literary practices. Emphasis on the social and cultural contexts of the texts. Offered as JAPN 345 and WLIT 345.

WLIT 355. Modern Japanese Novels and the West. 3 Units.
This course will compare modern Japanese and Western novelettes, drama, and novels. Comparisons will focus on the themes of family, gender and alienation, which subsume a number of interrelated sub-themes such as marriage, home, human sexuality, amae (dependence), innocence, experience, death, God/gods, and nature (the ecosystem). Offered as JAPN 355, WLIT 355. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.
WLIT 356. Afro-Hispanic Literature. 3 Units.
This course will survey the literary and cultural production of writers and artists of African descent in Latin America and the Caribbean, paying attention to both their creative and theoretical texts. Discussion of questions of race and ethnicity will allow students to explore the ways in which these texts reformulate the idea of national identity and cultural belonging in the context of the nation-state, whose traditional centrality is being weakened through the effects of migration and exile. Readings include works by writers from Cuba, Puerto Rico, Dominican Republic, Costa Rica, Colombia, Panama, Ecuador, and Peru. Offered as SPAN 356, SPAN 456, ETHS 356, WLIT 356 and WLIT 456. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 358. Latin American Cinema. 3 Units.
This course is designed to introduce students to the basic tools of film analysis as well as to the major trends and movements in Latin American cinema from the 1960s to the present. Through the analysis of representative films from Latin America, the course will examine the development of a variety of cinematic styles, paying particular attention to the historical contexts in which the films were produced and to the political, cultural, and aesthetic debates that surrounded their production. Offered as SPAN 358, SPAN 458, ETHS 358, WLIT 358 and WLIT 458. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 363H. African-American Literature. 3 Units.
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature of protest and assimilation. Maximum 6 credits. Offered as ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WLIT 365. German Literature in Translation. 3 Units.
Goethe defined “World Literature” (Weltliteratur) as “Intellektuelle Handelsverkehr.” This course gives students the opportunity to study German literary works in translation and thus to trade intellectual relations with a literary culture previously unknown to them. Counts toward the German major only as a related course. No knowledge of German required. Offered as GRMN 365 and WLIT 365.

WLIT 365E. The Immigrant Experience. 3 Units.
Study of fictional and/or autobiographical narrative by authors whose families have experienced immigration to the U.S. Among the ethnic groups represented are Asian-American, Jewish-American, Hispanic-American. May include several ethnic groups or focus on a single one. Attention is paid to historical and social aspects of immigration and ethnicity. Maximum 6 credits. Offered as ENGL 365E, WLIT 365E, ENGL 465E, and WLIT 465E. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WLIT 365N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Offered as ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WLIT 365Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Offered as ENGL 365Q, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WLIT 366G. Minority Literatures. 3 Units.
A course dealing with literature produced by ethnic and racial minority groups within the U.S. Individual offerings may include works from several groups studied comparatively, or focus on a single group, such as Native Americans, Chicanos/Chicanas, Asian-Americans, Caribbean-Americans. African-American works may also be included. May cover the entire history of the U.S. or shorter periods. Maximum 6 credits. Offered as ENGL 366G, WLIT 366G, ENGL 466G, and WLIT 466G. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WLIT 366C. Topics in Film. 3 Units.
Individual topics in film, such as a particular national cinema, horror films, films of Alfred Hitchcock, images of women in film, film comedy, introduction to film genres, Asian-cinema and drama, dance on screen, science fiction films, storytelling and cinema, and literature and film. Maximum 12 credits. Offered as ENGL 366C, WLIT 366C, ENGL 466C, and WLIT 466C.

WLIT 375. Russian Literature in Translation. 3 Units.
Topics vary according to student and faculty interest. May include Russian classical and modern literature, cinema, women writers, individual authors. May count towards Russian minor. No knowledge of Russian required. Offered as RUSN 375 and WLIT 375.

WLIT 385. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 387. Literary and Critical Theory. 3 Units.
A survey of major schools and texts of literary and critical theory. May be historically or thematically organized. Maximum 6 credits. Offered as ENGL 387, WLIT 387, ENGL 487, and WLIT 487. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WLIT 390. Topics in World Literature. 3 Units.
In-depth examination of specific critical and literary theories and of their relevance for literature and culture studies. Authors, works and instructor may vary. Offered as WLIT 390 and WLIT 490.
WLIT 391. Introduction to Text Semiotics. 3 Units.
Introduction to Text Semiotics addresses both students of Literature and students in Cognitive Science. Most of the authors included in the reading list extend their linguistic approach towards fields that intersect literature, psychology, philosophy, aesthetics, and anthropology. The scholarly traditions of text analysis and structural theory of meaning, including authors from classical formalism, structuralism, structural semiotics, and new criticism will be connected to cognitive theories of meaning construction in test, discourse, and cultural expressions in general. The focus of this course, taught as a seminar, is on empirical studies, specific text analyses, discourse analyses, speech act analyses, and other studies of speech, writing, and uses of language in cultural contexts. This course thus introduces to a study of literature and cultural expressions based on cognitive science and modern semiotics—the new view that has been coined Cognitive Semiotics. Offered as COGS 391 and WLIT 391.

WLIT 395. French Literature in Translation. 3 Units.
Topics vary according to student and faculty interest. May include Francophone literature, literature and cinema, women writers, contemporary literature. Counts toward French major only as related course. No knowledge of French required. Offered as FRCH 395, WLIT 395, FRCH 495, and WLIT 495.

WLIT 397. Honors Thesis I. 3 Units.
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper. Prereq: Senior status.

WLIT 398. Honors Thesis II. 3 Units.
Continuation of WLIT 397. Prereq: WLIT 397 and senior status.

WLIT 399. Independent Study. 1 - 3 Unit.
For majors and advanced students under special circumstances.

WLIT 400. The City in Literature. 3 Units.
Focus on major cities of the world as catalysts and reflections of cultural and historical change. Interdisciplinary approach utilizing the arts, literature, social sciences. Examples include Berlin at the turn of the century; Paris in literature and film; Tokyo in history and literature. Offered as WLIT 300 and WLIT 400. Prereq: Graduate standing.

WLIT 408. The Paris Experience. 3 Units.
Three-week immersion learning experience living and studying in Paris. The focus of the course is the literature and culture of the African, Arab, and Asian communities of Paris. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308/408 do coursework in French. WLIT 308/408 students have the option of completing coursework in English. Graduate students have additional course requirements. Offered as FRCH 308, WLIT 308, FRCH 408, and WLIT 408. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

WLIT 415. Mysticism and Literature. 3 Units.
This co-taught seminar will explore and compare mystical elements in selected literary and theoretical works from the West and the East. Comparisons will focus on a number of interrelated sub-themes such as mind, language, alienation, innocence, experience, life, death, cosmogony, cosmology, good, evil, God/gods, and nature (the ecosystem). Offered as MLIT 315, WLIT 315, MLIT 415 and WLIT 415.

WLIT 416. Greek Tragedy. 3 Units.
This course provides students the opportunity to read a significant number of ancient Greek tragedies in modern English translations. We shall read, study, and discuss selected works by Aeschylus, Sophocles, and Euripides, and attempt to understand the plays as literature composed for performance. We shall study literary elements within the plays and theatrical possibilities inherent in the texts. As we read the plays, we shall pay close attention to the historical context and look for what each play can tell us about myth, religion, and society in ancient Athens. Finally, we shall give occasional attention to the way these tragic dramas and the theater in which they were performed have continued to inspire literature and theater for thousands of years. Lectures will provide historical background on the playwrights, the plays, the mythic and historical background, and possible interpretation of the texts as literature and as performance pieces. Students will discuss in class the plays that they read. The course has three examinations and a final project that includes a short essay and a group presentation. Offered as CLSC 316, WLIT 316, WLIT 416.

WLIT 422. Roman Drama and Theater. 3 Units.
This course is designed as a continuation of and companion to CLSC/WLIT 316/416 Greek Tragedy in English Translation, although it may be taken without having taken, or before having taken, that course. Students in Roman Drama and Theater will read a significant number of ancient Roman plays in modern English translation and study non-literary theatrical entertainment of the Roman Republic and Empire, including mime and pantomime, gladiatorial shows, political speeches, courtroom drama, and various other spectacles. The dramatic texts that we shall study include the fragments of early Latin drama, selected comedies by Plautus and Terence, and the tragedies of Seneca, and the forensic speeches of statesman such as Cicero. We shall also consider Greek and Roman literature that comments on Roman theatrical practices. These works will be read for their literary merits and theatrical possibilities, while at the same time examining them for what they can tell us about Roma culture and society. Similarly, when studying the non-literary theatrical works we shall examine historical and theatrical context including archaeological evidence from theaters and amphitheaters and material remains (masks, depictions of actors and gladiators on vases, terra cotta lamps, mosaics, etc.). Finally, while the majority of the course focuses on drama originally written in Latin and theatrical entertainments performed in ancient Rome, the course will conclude with a survey of selected post-classical works indebted to the tradition of Roman drama and theater. Authors to be studied include Hrotsvitha, Marlowe, Shakespeare, Racine, Mollère, and the legacy of Roman drama and theater in contemporary stage and cinema such as Sondelm's A Funny Thing Happened on the Way to the Forum. Thus a secondary concern will be to consider how and in what ways the legacy of Roman drama and theater has continued to shape the dramatic arts since antiquity. Offered as CLSC 322, CLSC 422, WLIT 322, and WLIT 422.
WLIT 423. Inspiration: The Topic of Creativity in Art and Literature--Ancient to Medieval. 3 Units.
Innovation is an inextricably essential part of the aesthetic genesis, and it has instantly become one of the most frequented themes of artistic creation. Where does inspiration come from? Are artists “chosen ones” that implicitly stand out from the “non-inspired” rest? Trying to answer these questions and others related to the phenomenon of creativity, one direction that this course should take and focus on is the theme of “divine” or “transcendent” as a source of inspiration in art and literature. The course will start with the mystical teaching and theories of Pythagoras that influenced Plato and the Neo-Platonists that will be carried on further in the general tradition of Christian literature. In this respect, the course will examine creativity in readings that include both Ancient and Medieval writers whose writings place the subject of inspiration at the center of their own aesthetic invention. Among the authors included in the course will be Pseudo-Dionysius, Gregory Palamas, Jacopone da Todi, Caterina da Siena, Dante, Petrarch, and Meister Eckhart. Offered as: CLSC 423, WLIT 323 and WLIT 423.

WLIT 424. Epic: The Sublime and Terrible in Literature. 3 Units.
The course focuses on the epic genre that dominates the dawn of Western literature as well as the literary traditions of much of the rest of the world. From the Homeric epic to the Middle Ages and deep into the Renaissance, there was a collective urge to record both in verse and in prose extraordinary adventures with exceptional heroes as central figures. Thus, the epic genre typically encouraged variations in the aesthetic treatment of the hero that eventually came to define distinct categories within the genre. “Sublime” and “terrible” are common notions in the aesthetics of classicism, from antiquity to the early modern period. Authors studied in the course include such key figures in the creation and development of epic as Homer, Virgil, Ovid, Gottfried von Strassburg, Dante, and Cervantes. The works of these authors exemplify, on the one hand, the aesthetic directions mentioned above and, on the other hand, provide opportunities for using the close engagement with particular texts to illuminate wider cultural fields, in which various aesthetic perceptions of social, political, and religious reality coexist and therefore stimulate remarkable innovations in the standard epic narrative. Offered as CLSC 324, CLSC 424, WLIT 324 and WLIT 424.

WLIT 425. Hispanic Intellectuals and Society: A Critical Approach. 3 Units.
This course offers an overview of the most important critical approaches to Spanish American culture and literature, with a socio-historical emphasis. Some of the authors we will discuss are Angel Rama, Jose Antonio Cornejo Polar and Nestor Garcia Canclini. We will analyze how the Latin American intellectuals had thought about specific issues such as identity, race, ideology, colonial and post-colonial relations with the metropolis and the process of formation of the nations in the continent. The class, the discussions, exams, oral presentations and papers will be in Spanish. Some of the readings must be in English, but most of them will be in Spanish. Offered as SPAN 325, SPAN 425, ETHS 325, WLIT 325 and WLIT 425. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 433. Contemporary Caribbean Literature. 3 Units.
In addition to developing a general familiarity with the literature and history of this region, students will acquire an awareness of the interrelation of national identity, memory, and language in the texts produced by contemporary Caribbean authors, and of the cultural hybridity characteristic of this production. The themes treated by these authors include colonialism and postcolonialism, cultural and religious syncretism, and sexual politics. Offered as SPAN 333, SPAN 433, ETHS 333, WLIT 333 and WLIT 433. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 435. Women in Developing Countries. 3 Units.
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondichery), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETSH, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper. Offered as ETSH 335, FRCH 435, WLIT 335, WGST 335, FRCH 435 and WLIT 435. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 438. The Cameroon Experience. 3 Units.
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Coursework is in French. To do coursework in English, students should enroll in WLIT 338/438 or ETSH 338/438. Offered as ETSH 338, FRCH 338, WLIT 338, ETSH 438, FRCH 438, and WLIT 438. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 439. Latin American Poetic Revolt. 3 Units.
Introduction to most important poets in contemporary Latin America, a region home to a significant number of eminent poets, including Nobel Laureates from Chile, Gabriela Mistral and Pablo Neruda. The course focuses on detailed textual analysis of pivotal works, combined with historical-literary perspective, so students gain insight into the diverse styles and tendencies that reflect the tumultuous history of poetry’s development in a relentless search for a Latin American cultural identity. Offered as SPAN 339, SPAN 439, WLIT 339 and WLIT 439. Counts for CAS Global & Cultural Diversity Requirement.
WLIT 440. Seminar in Enlightenment Art and Literature: Piranesi and Vico. 3 Units.
This course explores aspects of the European eighteenth century as a
transformative epoch in the history of western culture. Though the
Enlightenment is usually associated especially with France, in this
course we will focus on Italy, as the irresistible goal of travelers taking
part in the “Grand Tour,” and as a landscape of powerful ancient and
modern architecture and artworks universally recognized as exemplary.
In particular we will study one of the strangest and most fascinating
visual artists of the period, the self-proclaimed architect Giovanni Battista
Piranesi (1720-1778) famous no less now than in his own time for his
fantastic prison engravings as well as his views of Rome, involving
a radical rethinking of the city as a particular kind of inhabited as well as
imaginative space. Piranesi’s polemical response to the advocates of
the Greek revival, then coming into fashion, will lead into discussion of
the key philosophical debates and aesthetic shifts of the time, notably
the emergence of the notion of the sublime as a category eventually
subversive of western ideals of rationality and still present -- and potent
-- in our own culture. Finally we will place Piranesi within a current of
discussion of the origins and nature of language and of human society
in general, not least as manifested in architecture and other symbolic
practices. The leading figure here is the Neapolitan G.B. Vico, whose
New Science of 1725 remains one of the most stimulating texts in the
western intellectual tradition. Offered as CLSC 340, COGS 340, WLIT
340, CLSC 440, and WLIT 440.

WLIT 442. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in
the literary production of Latin American women writers, particularly from
the 1920s to the present. Close attention paid to the dominant themes of
love and dependency; imagination as evasion; alienation and rebellion;
sexuality and power; the search for identity and the self-preservation of
subjectivity. Readings include prose, poetry, and dramatic texts of female
Latin American writers contributing to the emerging of feminist ideologies and
the mapping of feminist identities. Offered as SPAN 342, SPAN 442,
ETHS 342, WGST 342, WLIT 342, and WLIT 442. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 443. The New Drama in Latin America. 3 Units.
Representative works of contemporary Latin American drama. Critical
examination of selected dramatic works of twentieth-century Latin
America provides students insight into the nature of drama and into
the structural and stylistic strategies utilized by Latin American dramatists to
create the “new theater,” one which is closely related to Latin American
political history. Offered as SPAN 343, SPAN 434, ETHS 343, WLIT 343
and WLIT 434. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 456. Afro-Hispanic Literature. 3 Units.
This course will survey the literary and cultural production of writers and artists of African descent in Latin America and the Caribbean,
paying attention to both their creative and theoretical texts. Discussion of
questions of race and ethnicity will allow students to explore the ways in
which these texts reformulate the idea of national identity and cultural
belonging in the context of the nation-state, whose traditional centrality
is being weakened through the effects of migration and exile. Readings
include works by writers from Cuba, Puerto Rico, Dominican Republic,
Costa Rica, Colombia, Panama, Ecuador, and Peru. Offered as SPAN
356, SPAN 456, ETHS 356, WLIT 356 and WLIT 456. Counts for CAS
Global & Cultural Diversity Requirement.

WLIT 458. Latin American Cinema. 3 Units.
This course is designed to introduce students to the basic tools of
film analysis as well as to the major trends and movements in Latin American cinema from the 1960s to the present. Through the analysis of
representative films from Latin America, the course will examine the
development of a variety of cinematic styles, paying particular attention to
the historical contexts in which the films were produced and to the
political, cultural, and aesthetic debates that surrounded their production.
Offered as SPAN 358, SPAN 458, ETHS 358, WLIT 358 and WLIT 458.
Counts for CAS Global & Cultural Diversity Requirement.

WLIT 463H. African-American Literature. 3 Units.
A historical approach to African-American literature. Such writers as
Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright,
Baldwin, Ellison, Morrison. Topics covered may include slave narratives,
African-American autobiography, the Harlem Renaissance, the Black
Aesthetic, literature of protest and assimilation. Maximum 6 credits.
Offered as ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and
WLIT 463H. Counts for CAS Global & Cultural Diversity Requirement.
Prereq: Graduate standing.

WLIT 465E. The Immigrant Experience. 3 Units.
Study of fictional and/or autobiographical narrative by authors whose
families have experienced immigration to the U.S. Among the ethnic
groups represented are Asian-American, Jewish-American, Hispanic-
American. May include several ethnic groups or focus on a single one.
Attention is paid to historical and social aspects of immigration and
equality. Maximum 6 credits. Offered as ENGL 365E, WLIT 365E,
ENGL 465E, and WLIT 465E. Counts for CAS Global & Cultural Diversity Requirement.
Prereq: Graduate standing.

WLIT 465N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first
century African-American literature. May focus on a genre, a single
author or a group of authors, a theme or themes. Maximum 6 credits.
Offered as ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and
WLIT 465N. Counts for CAS Global & Cultural Diversity Requirement.
Prereq: Graduate standing.

WLIT 465Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European
colonies such as Australia and African countries. Maximum 6 credits.
Offered as ENGL 365Q, ETHS 365Q, WLIT 365Q, ENGL 465Q, and
WLIT 465Q. Counts for CAS Global & Cultural Diversity Requirement.
Prereq: Graduate standing.

WLIT 466G. Minority Literatures. 3 Units.
A course dealing with literature produced by ethnic and racial minority
groups within the U.S. Individual offerings may include works from
several groups studied comparatively, or focus on a single group, such as
Native Americans, Chicanos/Chicanas, Asian-Americans, Caribbean-
Americans. African-American works may also be included. May cover
the entire history of the U.S. or shorter periods. Maximum 6 credits.
Offered as ENGL 366G, WLIT 366G, ENGL 466G, and WLIT 466G. Counts for
CAS Global & Cultural Diversity Requirement.
Prereq: Graduate standing.

WLIT 468C. Topics in Film. 3 Units.
Individual topics in film, such as a particular national cinema, horror
films, films of Alfred Hitchcock, images of women in film, film comedy,
introduction to film genres, Asian-cinema and drama, dance on screen,
science fiction films, storytelling and cinema, and literature and film.
Maximum 12 credits. Offered as ENGL 368C, WLIT 368C, ENGL 468C,
and WLIT 468C. Prereq: Graduate standing.
WLIT 485. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

WLIT 487. Literary and Critical Theory. 3 Units.
A survey of major schools and texts of literary and critical theory. May be historically or thematically organized. Maximum 6 credits. Offered as ENGL 387, WLIT 387, ENGL 487, and WLIT 487. Prereq: Graduate standing.

WLIT 490. Topics in World Literature. 3 Units.
In-depth examination of specific critical and literary theories and of their relevance for literature and culture studies. Authors, works and instructor may vary. Offered as WLIT 390 and WLIT 490. Prereq: Graduate standing.

WLIT 495. French Literature in Translation. 3 Units.
Topics vary according to student and faculty interest. May include Francophone literature, literature and cinema, women writers, contemporary literature. Counts toward French major only as related course. No knowledge of French required. Offered as FRCH 395, WLIT 395, FRCH 495, and WLIT 495. Prereq: Graduate standing.

WLIT 590. Seminar in World Literature. 3 Units.
Topics vary depending on student and instructor interests; may include Postcolonial literature; Latin American literature and film; African Anglophone and Francophone literature. Prereq: Graduate standing.

WLIT 595. Independent Research. 1 - 3 Unit.
For graduate students under special circumstances. Prereq: Graduate standing.

WLIT 601. Independent Study. 1 - 18 Unit.
For graduate students under special circumstances. Prereq: Graduate standing.

WLIT 651. Thesis MA. 1 - 18 Unit.
Frances Payne Bolton School of Nursing

History
The Frances Payne Bolton School of Nursing (http://fpb.case.edu) (FPB) has a proud history beginning with the Lakeside Hospital Training School for Nurses established in 1898. With a generous endowment from Frances Payne Bolton (http://fpb.case.edu/Visitors/bolton.shtm), who was the first congresswoman from Ohio, FPB was established in 1923 as a school within Western Reserve University. In 1969, Western Reserve University and Case Institute of Technology merged forming the current university, Case Western Reserve University. Consistently, FPB is ranked among the leading schools in U.S. News and World Report and in funding from the National Institutes of Health. Graduate-level specialty majors have been in the top 10.

FPB is noted for its innovation, leadership and excellence in education, research and practice. To support this mission, the school has fifteen endowed chairs, among the largest number in the world for a school of nursing. FPB also houses one of only 10 World Health Organization Collaborating Centers (http://fpb.case.edu/Centers/WHOCC) for nursing in the country. The Sarah Cole Hirsh Center for Best Nursing Practices Based on Evidence (http://fpb.case.edu/Centers/Hirsh) was established in 1998 was the first national center of its kind.

Strategic Vision
Mission
The Frances Payne Bolton School of Nursing at Case Western Reserve University provides leadership in innovative research, education, and practice to promote health and reduce the burden of disease. Dedicated to interdisciplinary scholarship, we are committed to the pursuit of excellence in service to local and global communities.

Vision
Our vision is to create and nurture a learning environment that builds on our tradition of scientific inquiry and commitment to the highest standards of excellence in research, education, and practice in the world community, and to continue our rich history of innovation and global contributions.

Purpose
The purpose of the Frances Payne Bolton School of Nursing is to provide an environment that permits individuals to develop their personal and professional capabilities, including the sense of responsibility for continued learning; to learn as efficiently and effectively as possible; to find enjoyment, excitement, and challenge in the pursuit of knowledge and its application; and to develop behaviors that enable them to function in a changing, complex society. As an integral component of Case Western Reserve University, the school assumes responsibility for the preparation of individuals committed to excellence and leadership in professional nursing. The faculty of the school accepts the responsibility for teaching and scholarly inquiry as integral parts of the educational process.

Philosophy
FPB has set forth the following philosophy to accomplish the stated mission.

Nursing is an academic discipline and profession. Nursing as an academic discipline is a distinctive branch of human knowledge fundamental to nursing practice, nursing education, and nursing administration, and to the continuous development of the profession. The distinctive perspective of nursing includes a focus on the metaparadigm concepts of persons, environment and nursing. The specific conceptual focus within FPB is the health-seeking mechanisms and behaviors of human beings. Some of those mechanisms and behaviors are innate; others are learned or developed and may be subject to the influence of nurses’ knowledgeable ministrations. The body of nursing knowledge is continuously advanced, structured, and restructured as a consequence of a range of methods including scientific inquiry, philosophic inquiry, historical inquiry, and clinical evaluation.

Scientific inquiry within nursing is designed to discover, advance, and clarify knowledge about determinants and correlates of optimal biological, psychological, and social functioning; physical, emotional and spiritual comfort; and individual and group attainment of health goals in multiple environments and under a variety of circumstances (including illness and injury) attendant to birth, living, development, decline and death. Philosophic inquiry is undertaken to clarify the values that underlie consumers’ and nurses’ responsibilities for human health promotion, the ethics of nursing practice, and the nature of the body of knowledge known as nursing. Historical inquiry is undertaken to document significant influences (by events and individuals) on the development of nursing over time as a body of knowledge and as a profession. Clinical evaluation is designed to test and verify the relative efficacy of strategies used in nursing administration, consultation, education, and practice, and the means employed to advance nursing knowledge.

Professional nurses have mastery over a body of scientific and humanistic knowledge that is fundamental to their particular kinds of practice. They selectively use this knowledge in the execution of their professional responsibilities and in the attainment of professional goals. Those involved in differentiated nursing practices employ nursing technologies (skills and approaches that represent the application of scientific knowledge), using artistry in the execution of their professional responsibilities. Professional nurses’ several, particular practices are guided by a code of professional ethics and also by knowledge about the individuals and groups whom they serve. The nurse’s professional goal is to appraise accurately and to enhance effectively the health status, health assets, and health potentials of individuals, groups, families, and communities and to promote the initiative and independence of those they serve in the attainment of reasonable health goals, mutually agreed upon by consumers and by nurses as their health care providers. Nursing practice includes assisting persons in the maintenance of health, detecting deviations from health, assisting persons in the restoration of health, and supporting persons during life. These responsibilities are accomplished through a systematic and deliberative process. Nursing practice includes independent and interdependent functions and nurses are an integral part of the health care system.

Other beliefs essential to nursing that are shared by the faculty are stated below:

Nursing Strategies
Nursing strategies can be categorized according to the function they serve in facilitating clients’ health-seeking behaviors. A tentative
classification scheme according to the function strategies is set forth below. Within each category there are multiple behaviors from which the nurse can select depending on the nature of the clients' assets and deficits. Also, each category is open to the discovery of more activities than are presently known. Each category focuses on facilitating health-seeking behaviors.

- **Compensating**: Performing selected activities or measures (including monitoring) for clients when they are unable to do these activities.
- **Teaching**: Performing actions intended to induce learning.
- **Counseling**: Assisting clients to examine alternative course of action.
- **Supporting**: Promoting clients' ability to cope, adapt and change.
- **Stimulating**: Promoting clients' desire to perform health-seeking behaviors.
- **Advocating**: Intervening on behalf of the client to overcome obstacles that are interfering with health-seeking behaviors.
- **Comforting**: Providing an environment that promotes ease and well being.

The choice of nursing strategies for enhancing client's health-seeking behaviors is based on assessment of these behaviors and the intervening variables to determine the assets and deficits and potential for engaging in behaviors that are directed toward attaining, maintaining or regaining an optimal level of health.

**FPB Accreditation and Approvals**

**Approved Programs**

The Bachelor of Science in Nursing (BSN) (http://fpb.case.edu/BSN) and Master of Nursing (MN) (http://fpb.case.edu/GradEntry) programs are approved by the Ohio Board of Nursing. The last visit for the BSN program was in 2010 and the next visit is due in fall 2015. The last visit for the MN program was in 2012, and the next visit is due in 2017.

The university is chartered as an educational institution under the laws of the State of Ohio and holds a Certificate of Authorization from the Ohio Board of Regents.

**Facilities**

**Instructional Facilities**

With a highly qualified faculty engaged in teaching, research, and community service, FPB offers high quality academic programs. Instruction includes lectures, seminars, individual conferences and small group discussions, and clinical experiences. Modern research and educational facilities include computer and skills laboratories.

**Clinical Facilities**

Instructional facilities are abundant and varied. University Hospitals of Cleveland/Case Medical Center is a 947-bed academic medical center and is an aggregate of specialized hospitals that includes Alfred and Norma Lerner Tower, Samuel Mather Pavilion and Lakeside Hospital for adult medical/surgical care; Rainbow Babies and Children's Hospital; University MacDonald Women’s Hospital; Seidman Cancer Center; skilled nursing and rehabilitation services and home health care.
University Hospitals is part of the University Hospitals Health System with services provided at 100 locations in 40 northern communities.

The Cleveland Clinic Health System has 2,957 beds and is comprised of the Cleveland Clinic Foundation and Fairview Hospital, Health Hill Hospital for Children, Lakewood Hospital, Lutheran Hospital, Marymount Hospital, Euclid Hospital, Hillcrest Hospital, Huron Hospital, and South Pointe Hospital. The system also includes skilled nursing, rehabilitation and home health care.

MetroHealth Medical Center is a regional referral center with 690-beds for medical/surgical care to adults and children. It is a trauma I center with a burn center and 143-bed rehabilitation facility specializing in spinal cord injuries, only one of 19 in the nation. MetroHealth also has the Clement Center for Family Care, a neighborhood outpatient center, and a 291 bed skilled nursing care center. These hospitals are major clinical resources.

The Louis Stokes Cleveland Veterans Administration Medial Center (VAMC) is the third largest VA hospital in the US. In addition to inpatient services, the Cleveland VAMC has extensive outpatient and primary care, a domiciliary unit, hospice, and a variety of other services.

Additional opportunities are available in a variety of health, social, and educational agencies. These include, for example, Benjamin Rose Institute, Hospice of the Western Reserve, Cleveland Psychiatric Institute, Kenneth W. Clement Center for Family Health Care, Judson Park Retirement Community, The Cleveland Visiting Nurses Association, Cleveland Public Health Department, and many others.

Libraries

The Kelvin Smith Library, a 144,000 square foot building completed in 1996, houses most of the collections of Case Western Reserve University. This includes over 1,290,000 monographs, 7,363 serial titles, U.S. Government publications, company annual reports, newspapers, CDs, technical reports, over 12,000 DVDs and videos, and more. The library enables users to integrate both traditional resources and state-of-the-art technology into teaching, research, and learning. A variety of seating styles accommodates 900 people and provide electrical ports for connecting personal laptop computers. Case Western Reserve’s wireless network enables personal laptops to have internet access throughout the library. Two multimedia rooms include scanners and sound and video digitizers. Available are individual study spaces, meeting rooms, conference areas, and social gathering places. Thirty miles of compact movable shelving allows the library to keep much of its collection onsite for immediate access to print materials. The user-friendly interface to the online catalog, databases, and other resources allows library staff to focus their attention on working in-depth with faculty and students.

In addition to the Kelvin Smith Library, students and faculty have access to the following libraries located on campus: the Cleveland Health Sciences Libraries, supporting programs in dentistry, medicine and nursing; the School of Law Library; the Lillian and Milford Harris Library in the Mandel School of Applied Social Sciences; the Kulas Music Library; and the Astronomy Library. Altogether, collections at the Case Western Reserve libraries encompass more than 1.8 million volumes, nearly 14,000 serials and periodicals, and a wide range of electronic information resources, including a CD-ROM reference database that is accessible through the Case Western Reserve network. These include OhioLINK, a state-funded network that links the libraries of 17 public universities, 23 community/technical colleges, 44 private colleges, and the State Library of Ohio and also offers access to research databases and other information resources.

The Health Sciences Libraries, which consist of the Health Center Library and the Allen Memorial Library, serve as the major libraries for holdings related to nursing, medicine, dentistry, nutrition, and biology. The Health Center Library adjacent to the School of Nursing houses nearly 350,000 volumes, 2,780 current periodicals, and audiovisual materials. Approximately 8,800 volumes are specifically nursing texts, and more than 100 journals are nursing publications. The library also houses a historical collection of nursing materials. The most current and heavily used books are placed on reserve to insure their availability to students. Faculty also place materials on reserve for use in the library. There are 18 public workstations to access the internet, and the library also provides wireless access for those with properly-equipped laptop computers.

FPB School of Nursing Information Technology Services

The Frances Payne Bolton School of Nursing has its own Information Technology Services department (http://fpb.case.edu/CurrentStudents/technology.shtml). This department manages and oversees all computer related operations within the school. Furthermore, the team assists faculty, staff and students with any computer problems, issues, needs, or equipment purchase. FPB has its own Help Desk and provides troubleshooting of problems and repairs to all school-owned equipment. There are two computer laboratories including a Cyber-Café where students have access to computers and network-access connection for hooking up their laptops along with wireless network access. The main computer lab is located on the second floor and the Cyber-Café is located on the ground floor. These two areas are available during the weekdays, evenings, and weekend on a 24 hours basis. The second lab (Center for Bioinformatics) is located within the Learning Resource Center (LRC) on the ground floor and is only available when not used for classroom activities during weekdays from 9:00 a.m. to 5:00 p.m.

Learning Resource Center (LRC)

The Learning Resource Center (LRC) (http://fpbrc.cwru.edu) is a state of the art facility comprised of four academic support units, the Cyber Café, the Center for Bioinformatics and Health Promotion, the Multimedia Simulation Center and the Clinical Teaching Center. FPB students have the opportunity to advance their nursing skills by active participation in hands-on training sessions that demonstrate the real-life aspects of nursing. The staff is available by appointment to meet with students individually in order to review a particular skill, practice with SimMan, CathSim, SimBaby, SimChild, or utilize the Bioinformatics lab to work with various nursing software packages. SimMan, SimBaby, and SimChild are high-tech human patient simulators that breathe, have a pulse, and maintain heart-rhythm and blood pressure. They simulate almost any patient emergency situation and are programmable to provide the most life-like responses with immediate feedback for student learning. CathSim is an intravenous trainer, which uses virtual reality-based patients to teach intravenous (IV) catheterization. They give students the ability to choose the patient they will start an IV on, depending on their particular clinical setting. The program offers immediate feedback and opportunities for review to enhance the nursing skills needed in real life environments.

FPB is equipped with four technology-enhanced classrooms, which allow our faculty to use powerful tools in teaching to engage the students with learning. The classrooms are equipped with computers, VHS DVD combo player, a ceiling mounted video projection system, a document camera, wall-mounted speakers, and a touch panel-controlled LCD
monitor. Selected classrooms have the ability to support in-person videoconferencing using high speed Internet connections.

**Administration**

Mary E. Kerr, PhD, RN, FAAN  
(Case Western Reserve University)  
*Dean and the May L. Wykle Endowed Professor*

Shirley Moore, PhD, RN, FAAN  
(Case Western Reserve University)  
*Associate Dean for Research; Edward J. and Louise Mellen Professor in Nursing*

Elizabeth A. Madigan, PhD, RN, FAAN  
(Case Western Reserve University)  
*Associate Dean for Academic Programs; Independence Foundation Professorship in Nursing Education; Head, WHO Collaboration Center*

Vicki J. Stouffer, BA, MBA  
(University of Findlay)  
*Associate Dean of Development & Alumni Relations*

Jaclene A. Zauszniewski, PhD, RN-BC, FAAN  
(Case Western Reserve University)  
*Kate Hanna Harvey Professor in Community Health Nursing; PhD Program Director*

Deborah Lindell, DNP, RN, CNE  
(Case Western Reserve University)  
*Assistant Professor; Director, MN Program*

Carol Savrin, DNP, CPNP, FNP, BC, FAANP  
(Case Western Reserve University)  
*Associate Professor; Director of the MSN Program*

Donna A. Dowling, PhD, RN  
(University of Illinois)  
*Associate Professor; Director of the Post-Master's DNP Program*

Diana L. Morris, PhD, RN, FAAN, FGSA  
(Case Western Reserve University)  
*Florence Cellar Associate Professor in Gerontological Nursing; Executive Director of the University Center on Aging & Health*

Evelyn G. Duffy, DNP, ANP/GNP-BC, FAANP  
(Case Western Reserve University)  
*Associate Professor; Associate Director of the University Center on Aging and Health*

Celeste M. Alfes, MSN, DNP, RN  
(Case Western Reserve University)  
*Assistant Professor; Director, Learning Resource Center*

Barbara Daly, PhD, RN, FAAN  
(Bowling Green State University)  
*Gertrude Perkins Oliva Professor in Oncology Nursing*

Teona C. Griggs, M.Ed., MA  
(Cleveland State University)  
*Director of Student Services, Diversity, and Inclusion*

Brigid L. Mercer, BS  
(Ohio State University)  
*Senior Director, Alumni Relations and Development*

Sarah Ott-Hansen, BA, MBA  
(Yale University and University of Chicago)  
*Director of Development*

Samira Hussney, MPH  
(Case Western Reserve University)  
*Director, International Programs & WHO Collaborating Center*

(Cleveland State University)  
*Assistant Dean for Administrative Services*

Caron Baldwin, MCSE  
(Ohio Wesleyan University)  
*Information Services Manager*

Kathleen O’Linn, BS  
(Ursuline College)  
*Manager, Human Resources and Facilities*

Helen Jones-Toms, MNO  
(Case Western Reserve University)  
*Director of Marketing*

Tiffany Cooper, MBA  
(Ursuline College)  
*Executive Aide*

---

**Bachelor of Science in Nursing (BSN)**

**Bachelor of Science in Nursing**

The BSN program emphasizes intensive and early clinical experience, a strong foundation in acute and critical care nursing and a commitment to service to our community. Our students begin their clinical experience in the first term of the freshman year and complete their program with a 336-hour clinical preceptorship in the senior year. Students graduate with over 1600 hours of clinical experience, far exceeding that of other schools of nursing. In addition, students provide healthcare services to children and families—collectively amassing approximately 16,000 hours of service to local schools alone each year.

The student-learning environment includes traditional classrooms, world-class clinical facilities, community settings and the Learning Resource Center (LRC). The LRC consists of four activity centers: the Clinical Teaching Center; the Center for Bio-informatics and Health Promotion; the Multimedia Simulation Center; and the Cyber Café. Clinical experiences occur in Cleveland’s nationally and internationally renowned health care facilities including the University Hospitals of Cleveland, the Cleveland Clinic and the MetroHealth System. Students also have extensive experience in community health departments, community centers and the Cleveland Municipal School District.

The opportunities available to students are limitless. Students are encouraged to participate in interdisciplinary research projects with senior faculty. They have the opportunity to explore health issues in the global arena, to study in international sites as part of their standard curriculum. International activities are supported by FPB’s World Health Organization (WHO) Collaborating Center.

Graduates have a foundation in the discipline of nursing, demonstrate leadership in clinical practice, use clinical inquiry to advance practice,
become involved in research, and assume responsibility for their own professional development.

**Characteristics of the Graduate**

- Teaches and counsels individuals, families and other groups about health, illness and health seeking behaviors
- Critiques and applies research findings to clinical practice
- Provides direct patient care and assumes leadership role in directing nursing care to individuals, groups and families
- Participates and assumes beginning leadership roles
- Uses principles of ethics and the professional code as a framework for decision making
- Works effectively as a member of an interdisciplinary health care team
- Uses effective communication techniques with diverse clients, colleagues, and information systems
- Describes process of health care policy development

**Degree Requirements** ([http://fpb.case.edu/BSN/degree.shtm](http://fpb.case.edu/BSN/degree.shtm))

Candidates for the Bachelor of Science in Nursing degree must complete the following:

1. Minimum of 126 hours as specified by the requirements with a 2.000 GPA
2. A minimum of C for all courses taken in nursing and science courses counting toward the major
3. A minimum of 50 credit hours in 300 and 400 level courses
4. The SAGES General Education Requirements for the School of Nursing

For those with experience in the armed forces of the United States, or in the National Guard or in a reserve component, the Graduate Entry/MN or BSN program will (a) Review the individual's military education and skills training; (b) Determine whether any of the military education or skills training is substantially equivalent to the curriculum established in Chapter 4723-5 of the Ohio Administrative Code; and (c) Award credit to the individual for any substantially equivalent military education or skills training. (In accordance with Ohio Revised Code 4723-5)

**Progression in the BSN Program**

Progression in the Bachelor of Science in Nursing program is contingent upon satisfactory academic achievement in all required courses. To maintain satisfactory academic standing, students must attain a GPA of 2.000 or above by the end of their junior year and must obtain a C or above in all nursing and science courses counting toward the major. Students who receive two unsatisfactory grades (D or F) in nursing and/or natural and behavioral science courses may be subject to separation from the school of nursing. See the Undergraduate Student Handbook ([http://fpb.case.edu/CurrentStudents/handbook.shtm](http://fpb.case.edu/CurrentStudents/handbook.shtm)) for a description of the criteria for academic standing.

Students who receive a grade of Incomplete (I), given at the discretion of the instructor for the course, must complete course requirements by the eleventh week of the following semester. It is the student's responsibility to notify the instructor of the circumstances preventing completion of all assigned work. In the absence of notification or adequate justification, the instructor may give the student a final grade that assumes a failing grade for the missing work. If a student fails to submit the work required for removing the Incomplete by the date established or by the eleventh week of the following semester, the instructor will give a failing grade (F). The grade will convert from I to F when the deadline for making up incomplete grades from a previous semester has passed.

Students who receive a grade below C for a nursing course must register for that course the next semester that it is offered. If the student fails to meet the University's requirement for good academic standing, the student is placed on academic probation. If the GPA does not improve the next semester, the Academic Standing Board of the Faculty Senate Committee on Undergraduate Education will review the student's record to determine whether extenuating circumstances warrant an additional semester of probation or separation from the university.

**Curriculum** ([http://fpb.case.edu/BSN/curriculum.shtm](http://fpb.case.edu/BSN/curriculum.shtm))

This four-year generic program for high school graduates leads to a BSN degree. Upon successful completion of the program, graduates will be eligible to sit for the NCLEX examination ([http://www.ncsbn.org](http://www.ncsbn.org)) for licensure as a Registered Nurse (RN). A sample study plan ([http://fpb.case.edu/BSN/sampleplan.shtm](http://fpb.case.edu/BSN/sampleplan.shtm)) also demonstrates how a BSN student might schedule the required courses.

The FPB School of Nursing has the right to determine a student's readiness to sit for the NCLEX-RN examination and the right to restrict testing until the student demonstrates a readiness to pass this examination. This examination is given by State Boards of Nursing, and satisfactory completion of this examination enables the graduate to practice as an RN in the state for which the examination was written.

The BSN program includes nursing, science and liberal arts courses. A minimum of 126 credit hours, with at least 50 credits from upper division courses, are required for award of the BSN degree. Students must meet the University requirements for graduation. The ratio of clinical hours to credit hours is 4 to 1, and for laboratory hours, it is 2 to 1. The program plan for entry-level students to the BSN program is as follows:

**Freshman**

This four-year program leads to a Bachelor of Science in Nursing degree. Courses are required for award of the BSN degree, and satisfactory completion of this examination enables the graduate to practice as an RN in the state for which the examination was written.
### 40 General Education Requirements

**86 Nursing Requirements**

**Doctor of Nursing Practice**

The Doctor of Nursing Practice Program (DNP) is an innovative academic program designed to prepare nurses for leadership positions in advanced nursing practice roles. The Post-Master’s DNP program is flexible in meeting the needs of distance education students, with an innovative executive format and cohort program that has partnerships with numerous academic institutions and hospitals around the country. The DNP program admits students at three different stages in order to accommodate students with diverse educational backgrounds.

- **Graduate Entry Program (Pre-Licensure stage; MN degree awarded):** The Graduate Entry program is a pre-licensure stage designed for individuals with baccalaureate (or above) degrees from an accredited college or university in a discipline other than nursing. Students admitted to the Graduate Entry program prepare for licensure as a registered nurse. A generalist Master of Nursing (MN) degree is awarded at successful completion of the program, and students can then apply to a Board of Nursing for licensure as a Registered Nurse and practice as a beginning staff nurse. They are also encouraged to proceed to the next phase of the DNP program to attain their MSN degree.

- **Post-Licensure (Advanced Nursing Practice stage; MSN degree awarded):** This phase of the DNP program is designed for registered nurses who have received the Master of Nursing (MN) degree. It awards a Master of Science in Nursing (MSN) degree and allows students to apply to a professional organization for certification in the advanced nursing specialty and to a Board of Nursing for credentials to practice in the advanced nursing specialty.

- **Post-Master’s DNP (Practice Doctorate stage; DNP degree awarded):** This stage of the DNP program prepares nurses with MSN degrees to be clinical leaders at the absolute pinnacle of their field. Students acquire in-depth knowledge in nursing theory, research, policy, and education or management. Most DNP students at the post-master’s level are already practicing in roles as advanced practice nurses, administrators, or educators. Once they are admitted to this phase of the program, they choose one of two elective sequences: education leadership or practice leadership.

### Characteristics of the Graduate

1. **Scientific Underpinnings for Practice**

   - Integrate nursing science and theory with knowledge and theory from ethics, the biophysical, psychosocial, cultural, and organizational sciences to develop and evaluate new practice approaches.

2. **Organizational and Systems Leadership for Quality Improvement and Systems Thinking**

   - Demonstrate leadership in the development and evaluation of care delivery approaches that meet current and future needs of patient populations from findings of nursing and other clinical sciences, as well as organizational, political and economic sciences.

   - Develop and evaluate effective strategies and ensure accountability for leading organizations, addressing quality improvement and patient safety initiatives, and managing ethical dilemmas inherent in patient care and research.
3. Clinical Scholarship and Analytical Methods for Evidence-Based Practice
   - Use analytic methods critically appraise existing evidence to
determine best practices.
   - Apply relevant findings and use quality improvement methods to
develop recommendations to improve practice and the practice
environment.
   - Disseminate findings from evidence-based practice and research to
improve health care outcomes.

4. Information Systems/Technology and Patient Care Technology for the
   Improvement and Transformation of Health Care
   - Evaluate programs that monitor outcomes of care, care systems,
and quality improvement including consumer use of health care
information systems.
   - Provide leadership in the evaluation and resolution of ethical and
legal issues within health care systems relating to use of information,
information technology, communication networks and patient care
technology.

5. Health Care Policy and Advocacy in Health Care
   - Demonstrate leadership in the critical appraisal, development, and/or
implementation of institutional, local, state, federal, and international
health policy.

6. Interprofessional Collaboration for Improving Patient and Population
   Health Outcomes
   - Collaborate using communication, consultative, and leadership skills,
with intraprofessional and interprofessional teams to improve quality
and safety in health care.

7. Clinical Prevention and Population Health for Improving the Nation’s
   Health
   - Analyze scientific data and synthesize concepts related to clinical
prevention and population health in developing, implementing, and
evaluating interventions to address health promotion and disease
prevention efforts.

Degree Requirements
   - Post-master’s entry students must complete the DNP program within
five years. Students who do not complete the DNP program within
the above timeframe should send a letter to the Director of the Doctor
of Nursing Practice Program with a request for an extension and a
proposed plan for completing of remaining requirements.
   - Records of students who do not complete the program within the
specified timeframe will be re-evaluated in terms of the curriculum
in effect at the time of review. The student may be required to take
additional course work to graduate.

Academic Performance
Progression in the Doctor of Nursing Practice degree program is
contingent upon satisfactory academic achievement in all required
courses.

Doctor of Nursing Practice students must achieve a cumulative grade
point average of 3.0 or above in all courses taken for credit as a DNP
student at the Frances Payne Bolton School of Nursing to be awarded
the DNP degree. All DNP students must successfully defend their
scholarly project.

The grade of incomplete (I) will be given at the discretion of the instructor
for work not completed in the semester. A grade of I must be removed
by the end of the semester following the one in which the course was
taken or before the student enrolls in a course for which the initial course
is a prerequisite. No credit is given for an I grade. The I will remain a
permanent part of the transcript if the student fails to complete course
requirements within the next year and the student will be required to
retake the course.

Scholarly Project
The DNP program culminates in successful completion of a scholarly
project. The scholarly project is designed by the student in collaboration
with a 3-member committee approved by the Program Director. The
scholarly project must focus on an issue related to improving patient
outcomes. The scholarly project can take the form of a five chapter
written project or a manuscript suitable for publication. The procedures
and written product must conform to the regulations of the FPB School of
Nursing.

Students must successfully defend their completed scholarly project in
an “oral examination” with their committee members who are responsible
for certifying that it meets acceptable scholarly standards. The defense is
open to faculty and students and to those outside of the University. The
committee determines the adequacy of the oral examination and written
product. A student will pass if two or more of the committee members
agree that the student successfully responded to questions during the
defense and the written product met scholarly standards.

Post-Master’s DNP Curriculum
Most classes are held in an intensive format (http://fpb.case.edu/
Programs/intensives.shtml), meeting for a specified number of days with
additional meetings held online. A 3-credit course will meet for 5-6 days.
Two courses are held online across the semester. Intensive sessions
are given three times a year (January, May, and August) for at least
two weeks. Papers and projects are due in the semester following the
intensive session.

Graduate Entry Nursing Program

The Graduate Entry Nursing Program is designed for individuals who hold at least a BA/BS in a non-nursing major and whose career and educational goals include nursing practice at the advanced specialty level. All applicants are admitted to three stages of the program (http://fpb.case.edu/GradEntry/pathways.shtm): pre-licensure stage (leading to the Master of Nursing, or MN), advanced nursing practice stage (leading to the Master of Science in Nursing, or MSN), and practice doctorate stage (leading to the Doctor of Nursing Practice, or DNP).

Following completion of the MN degree, students may apply for the PhD program. However, if they are interested in applying to the combined DNP/PhD program, they must first complete the MSN degree. Certain MSN majors have separate RN experience requirements and/or admission process.

During the pre-licensure (MN) stage, students earn approximately 14 credits applicable to most MSN majors. The Graduate Entry Nursing program has an innovative quality and safety component (http://fpb.case.edu/QualSafe) woven throughout the curriculum, emphasizing the importance of the patient experience.

Characteristics of the Graduate

The MN (Master of Nursing) is a generalist nursing degree awarded to those who satisfactorily complete the pre-licensure stage of the Graduate Entry program. MN graduates possess the following characteristics:

- Teaching/Learning: Provides opportunities for individuals, other professionals, populations and communities to enhance their knowledge about health, illness, and health seeking behaviors through consultation and education conceived in partnership with the learner
- Research/Inquiry: Integrates best current evidence to continuously improve the delivery of care and identify areas where further evidence is needed
- Nature of Practice: Provides and directs nursing care for individuals, groups, families and populations, that focuses on safety, quality, and the recipients' needs, preferences and values
- Leadership: Assumes beginning nursing leadership roles that are directed toward outcomes evaluation and implementation of care improvement initiatives
- Ethics: Applies ethical principles in complex nursing situations
- Collaboration: Promotes nursing and inter-professional collaboration to achieve safe, quality healthcare
- Communication: Integrates technology and interpersonal techniques in communication, knowledge management, error mitigation, and decision-making with diverse clients and colleagues

- Policy Development: Actively participates in policy development at local, unit, and state levels to promote safe, quality healthcare

Degree Requirements

Time Frame for Completion of Degree

- Completion of MN degree. Graduate Entry Nursing Program students (non-nurses) must complete the MN program within 4 years of initial enrollment. Students who do not complete the MN curriculum within 4 years are required to reapply for the program.
- Completion of the MSN, DNP, or PhD; refer to policies for those programs.
- Records of students who do not complete their program within the specified timeframe will be re-evaluated in terms of the curriculum in effect at the time of review. The student may be required to take additional course work to graduate.

For those with experience in the armed forces of the United States, or in the National Guard or in a reserve component, the Graduate Entry/MN or BSN program will (a) Review the individual's military education and skills training; (b) Determine whether any of the military education or skills training is substantially equivalent to the curriculum established in Chapter 4723-5 of the Ohio Administrative Code; and (c) Award credit to the individual for any substantially equivalent military education or skills training. (In accordance with Ohio Revised Code 4723-5)

Progression in the Program

Satisfactory Academic Standing

Progression in the Graduate Entry Nursing Program is contingent upon satisfactory achievement in all required courses. To maintain satisfactory academic standing, students enrolled for the pre-licensure (Master of Nursing-MN) component of the Graduate Entry Nursing Program must attain and maintain a GPA of 3.0 or above. C, the lowest passing grade, is viewed as borderline performance. An overall GPA of 3.0 is required to progress to the post-licensure component of the Graduate Entry Nursing Program. If a student's semester GPA is less than 3.0 or the overall GPA is less than 3.0, the student will be placed on probation and an individualized plan will be developed and documented. The student will be removed from probation when the overall GPA is 3.0 or higher. If the student is on probation for two semesters, the student's record will be reviewed by the Executive Committee to determine whether extenuating circumstances warrant an additional semester of probation or whether the student should be separated from the program.

When a student receives a grade of F for a required course, the student must register for that course the next semester in which the course is available. Refer to the Student Handbook (http://fpb.case.edu/programs/handbook.shtm) for more information on repeating a course with an F grade and the GPA. Graduate Entry students who receive two failing grades indicating unsatisfactory performance (F, NP, or U) in required courses will be separated from Frances Payne Bolton. Progression from one semester to the next in the pre-licensure (MN) component of the Graduate Entry Nursing Program is contingent upon passing grades in all courses taken in the preceding semester.

The grade of Incomplete (I) will be given at the discretion of the instructor for work not completed in the semester. The "Arrangement to Resolve a Grade of Incomplete" form must be completed prior to the end of the semester, or the instructor may assign a grade of U or F. A grade of Incomplete must be removed by the end of the semester following the one in which the courses was taken or the next semester that the course is given or before the student enrolls in a course for which the initial
course is a prerequisite. No credit is given for a grade of Incomplete. The grade of Incomplete will remain a permanent part of the transcript if the student fails to complete course requirements within the next semester, unless alternative arrangements are approved in writing.

Graduate Entry students in the post-licensure component must meet all progression requirements of the degree program in which they are enrolled (MSN (p. 479), DNP (p. 476), or PhD (p. 488)). Refer to those sections of the Bulletin for further information.

Curriculum

Applicants admitted to the Graduate Entry Nursing Program are admitted for the MN, MSN and DNP degrees (certain MSN majors have separate experience requirements and/or admission process). On completion of the MN or MSN degrees, students may apply for the PhD or DNP/PhD programs.

Successful completion requires a grade of at least C in each course and successful completion of all courses in the MN curriculum (see below). On completion of required courses.

The MN curriculum (below) includes 72 credit hours of required courses. Students must meet the University requirements for graduation. The ratio of credit hours to clock hours is: didactic and seminar, 1:1; lab, 1:2; and clinical, 1:4.

Approval of RN Licensure Applications

The School of Nursing has the right to determine a student’s readiness to sit for the NCLEX-RN exam and also reserves the right to restrict testing until the student demonstrates a readiness to pass the examination.

In order to have the “Program Completion” section of the application for RN licensure approved by the Program Director, students must meet the following criteria:

1. Have been awarded the Master of Nursing (MN) degree.

2. Demonstrate readiness to take the NCLEX-RN examination by achieving at least a minimum score on a faculty-selected, standardized CLEX-RN predictor exam.

Master of Science in Nursing (MSN)

The Master of Science in Nursing program prepares registered nurses for advanced practice specialization either as a nurse practitioner, clinical nurse specialist, nurse midwife, or nurse anesthetist. Dual degree programs are offered in bioethics (MSN/MA), anthropology (MSN/MA), and public health (MSN/MPH). Post-master’s certificates can be provided for all programs and are crafted according to individual needs and background education.
Characteristics of the Graduate
• Teaching/Learning: Develops and teaches educational offerings and provides consultation with other professionals/populations and communities about health, illness and health-seeking behavior
• Research/Inquiry: Identifies clinical research problems, initiates utilization of research and participates in scientific inquiry
• Nature of Practice: Assumes functions and role of the Advanced Practice Nurse
• Leadership: Assumes leadership positions in employment or community organizations at the local/state/national level
• Ethics: Applies ethical principals in Advanced Practice Nursing
• Collaboration: Initiates interdisciplinary teams to enhance practice
• Communication: Establishes effective communication systems among clients and colleagues
• Policy Development: Contributes, implements and influences health policy development through work and professional organizations

Degree Requirements
The MSN program itself requires a minimum of 36 credit hours to graduate, but most majors require an average of 40 credit hours of graduate credit for the student who enters with a BSN degree. Other degree requirements must be fulfilled for those entering with the portfolio option. A maximum of nine (9) semester hours of credit in approved graduate courses, where the student obtained a grade of B or above, may be transferred to meet program requirements, and three (3) credits may be waived for a total of 12 credits. To be awarded an MSN degree, the student must have a cumulative GPA of 3.0 and received satisfactory grades in all nursing courses taken for credit as a MSN student. Degree requirements must be completed within 5 years of initial enrollment.

Path to the MSN
Students in the MSN program choose from several different majors, but virtually all students must take at least ten core courses (http://fpb.case.edu/MSN/program.shtm). Student must complete a required number of credit hours as well as clinical hours. Most majors require an average of 40 credit hours, usually completed in three or four semesters (including summer). Most MSN majors also require at least 500 clinical hours; the anesthesia, midwifery, and flight nursing programs require more.

Students can choose either a part-time or full-time program, with full-time consisting of 9 or more credits per semester and part-time being anything less.

Course Grades
Progression in the MSN program is contingent on a cumulative GPA of 3.0 and passing grades in all courses (A, B, C, P, or S). If the cumulative GPA falls below 3.0 during any semester, the student will be placed on academic probation. To be removed from probation, the student must have a cumulative GPA of 3.0 or higher in the next academic semester he/she is registered. If the student fails to be removed from academic probation at this time, he/she may be separated from the FPB School of Nursing.

The grade of Incomplete (I) will be given at the discretion of the instructor for work not completed in the semester. The “Arrangement to Resolve a Grade of Incomplete” form must be completed prior to the end of the semester, or the instructor may assign a grade of U or F. A grade of I must be removed by the end of the semester following the one in which the course was taken or the next time the course is offered and before the student enrolls in a course for which the initial course is a prerequisite. No credit is given for an I grade. The I will remain a permanent part of the transcript if the student fails to complete course requirements within the next semester, unless alternative arrangements are approved in writing.

A student who receives a grade of F or U for a required course must register for the course the next semester it is offered to continue in the MSN program. If the grade of U or F is in a course that is not required for the MSN program, the student may register for the same course or a substitute course and achieve a passing grade to continue in the MSN program. MSN students who receive 2 failing grades (F, U, NP) will be separated from FPB.

Majors and Sample Full-Time Curriculum
Virtually all MSN students must take at least ten core courses in Professional Development, Scientific Inquiry, and Nursing Practice (for nurse practitioner majors). Although the MSN program itself requires a minimum of 36 credit hours to graduate, most majors require an average of 40 credit hours, usually completed between 18 and 24 months, though the nurse anesthesia program requires 28 months of study. Students also need to put in at least 500 clinical hours for most MSN majors; the anesthesia, midwifery, cardiovascular, and flight nursing programs require even more. Post-master's certificates can be provided for all programs and are crafted according to individual needs and background education.

Nurse Practitioner Majors
Acute Care Nurse Practitioner (http://fpb.case.edu/MSN/ACNP.shtm) (ACNP)
• Subspecialty: Flight Nursing (http://fpb.case.edu/MSN/ACNPFlight.shtm)
• Subspecialty: Cardiovascular Nursing (http://fpb.case.edu/MSN/ACNPCardio.shtm)

Acute care nurse practitioners (ACNPs) often serve as first responders in a variety of healthcare settings that include community and academic hospitals, intensive care units, outpatient clinics, and specialty practices like medical cardiology, subacute care, or trauma.

As part of FPB’s MSN program, the ACNP major requires at least 39 credit hours of coursework and 600 hours of clinical experience. A recent year of adult intensive care (ICU) nursing experience is required prior to beginning this program.

## Adult-Gerontology Nurse Practitioner ([http://fpb.case.edu/MSN/adultgero.shtm](http://fpb.case.edu/MSN/adultgero.shtm))

- Subspecialty: Cardiovascular Nursing ([http://fpb.case.edu/MSN/adultgerocardio.shtm](http://fpb.case.edu/MSN/adultgerocardio.shtm))
- Subspecialty: Gerontology

Adult-gerontology NPs provide comprehensive care, including wellness and acute and chronic illness care, to patients from late-adolescence through adulthood to the elderly. They specifically emphasize health promotion, disease prevention, and comprehensive gerontological assessment. They practice in a wide variety of locations that include hospitals, urgent and primary care settings, community clinics, long-term care facilities, and private practice.

As part of FPB's MSN program, the adult-gero NP major requires 41 hours of coursework, plus about 600 hours of clinicals. The coursework is usually completed within 18 months (four semesters) for full-time students, and courses are offered in a distance-friendly format that requires about eight trips to Cleveland.

## Pediatric Nurse Practitioner ([http://fpb.case.edu/MSN/PNP.shtm](http://fpb.case.edu/MSN/PNP.shtm)) (PNP)

- Subspecialty: Cardiovascular Nursing ([http://fpb.case.edu/MSN/PNPcardio.shtm](http://fpb.case.edu/MSN/PNPcardio.shtm))

Pediatric nurse practitioners (PNPs) are advanced degree nurses who provide primary health care for children from infancy to 21 years of age, including physical, psychosocial, and family dimensions of health. They diagnose and treat childhood illnesses, provide immunizations, perform developmental screenings and physical assessments, and much more in their objective to protect and enhance the health of children. Along with pediatricians and other providers, PNPs practice in settings such as private practice, primary care clinics, community health centers, and hospitals.

As part of FPB's MSN program, the PNP major requires 40 credit hours of coursework, plus about 600 hours of clinicals. The coursework is usually completed within 18 months (four semesters) for full-time students, and courses are offered in a distance-friendly format.

**Neonatal Nurse Practitioner (http://fpb.case.edu/MSN/NNP.shtm) (NNP)**

Neonatal nurse practitioners (NNPs) are advanced practice nurses who focus on the management and care of fragile, critically ill, and premature infants and their parents. Their role encompasses activities that promote optimal health, detect illness, and facilitate restoration and maintenance of the health of neonates. NNPs practice in neonatal intensive care units (NICUs), which are found in children’s and large general hospitals.

Two years of NICU nursing are needed prior to beginning the NNP major. As part of FPB’s MSN program, the major requires 40 credit hours of coursework, plus about 600 hours of clinicals in NICUs. Full-time coursework is completed within 18 months (4 semesters).

**Family Nurse Practitioner (http://fpb.case.edu/MSN/FNP.shtm) (FNP)**

• Subspecialty: Cardiovascular Nursing (http://fpb.case.edu/MSN/FNPcardio.shtm)
• Subspecialty: Gerontology

Family nurse practitioners (FNPs) are advanced nurses who offer care, promote health, and treat disease in patients ranging from children to elders. They provide comprehensive wellness care as well as management of acute and chronic illnesses. FNPs practice in hospitals, urgent care and primary care settings, federally-qualified health centers, and private practice offices.

As part of the MSN program, the FNP major requires 40 credit hours of coursework, plus about 600 hours of clinicals. The coursework is usually completed within 18 months (four semesters) for full-time students, and courses are offered in a distance-friendly format.

### Women's Health Nurse Practitioner (http://fpb.case.edu/MSN/WHNP.shtm) (WHNP)

Women's health nurse practitioners (WHNPs) are experts in woman-focused health promotion and disease prevention. As specialists, WHNPs deliver comprehensive health care to women, with emphasis on reproductive and gynecologic health needs. They provide well-woman care, care during and after pregnancy, and care before and after menopause. They also care for women experiencing episodic acute or chronic illnesses. WHNPs see a broad range of patients in practice settings that include primary care centers, adolescent health centers, and private practice.

The WHNP major, as part of FPB's MSN program, requires 38 credit hours of coursework, plus about 600 hours of clinicals. With full-time enrollment, coursework is usually completed within 12 months (four semesters). Core MSN courses are offered in an intensive format (http://fpb.case.edu/Courses/intensive.shtml) that requires limited trips to Cleveland.

### Blended Role (NP/CNS) Majors

**Advanced Practice Adult Oncology/Palliative Care (http://fpb.case.edu/MSN/OncologyPalliativeCare.shtm)**

Advanced practice adult oncology/palliative care nurses provide expert care to patients undergoing cancer treatment and those focusing on the management of complex symptoms. These advanced practice nurses...
care for both inpatients and outpatients, within hospitals and clinics as well as via hospice and palliative care programs.

At FPB, this innovative, versatile major prepares graduates to practice in a variety of oncology or hospice and palliative care settings. Students may select either nurse practitioner or clinical nurse specialist tracks. Graduates of the program will be eligible for the adult nurse practitioner certification and/or oncology nurse practitioner certification, oncology clinical nurse specialist certification, or certification in palliative care, assuming other examination and practice requirements are met. The program can be done on either a full-time or part-time basis. One year of oncology nursing experience is required. The major requires 40-41 credit hours of coursework, plus about 500 hours of clinicals. The coursework is usually completed within 24 months (four semesters) for full-time students.

Opportunities to obtain post-Master’s certification in oncology or palliative care are also available. Palliative care courses (Symptom Management I and II) may be taken as electives as part of any other APN major, or by non-degree students seeking additional preparation for their practice.

### Family Systems Psychiatric Mental Health Nursing (http://fpb.case.edu/MSN/familysystems-psych.shtm)

In addition to the shortage of advanced practice psychiatric nurses, healthcare systems are challenged to address the needs of an increasing elderly population; stressed military families; families impacted by the economy, loss of employment, home foreclosure, and other stressors; and a population facing an increase in reported rates of domestic and youth violence.

The work of an advanced practice psychiatric nurse practitioner or clinical nurse specialist is dynamic in scope, ranging from prevention and health promotion to early detection and assessment to integration and culturally appropriate, client-centered intervention. Similarly, they can practice in a multitude of environments, including community mental health clinics; hospitals systems; private physician offices; prison systems; military bases and Veteran’s Affairs Hospitals; treatment facilities; and psychiatric mental health community centers, among others.

The Family Systems Psychiatric Mental Health Nursing major, as part of the MSN program, requires 45 credit hours of coursework and 720 hours of clinicals. The coursework is usually completed within four semesters.

## Other Majors

### Nurse Anesthesia ([http://fpb.case.edu/MSN/anesthesia.shtm](http://fpb.case.edu/MSN/anesthesia.shtm))

Nurse anesthetists are advanced practice nurses who administer all types of anesthetic for every kind of surgery or procedure. As expert clinicians primarily responsible for direct patient care, they focus on preoperative evaluation, intraoperative management, and postoperative anesthesia care.

Clinical courses for MSN nurse anesthesia students at FPB provide them with the opportunity to give direct patient care, participate in staff education programs, and identify clinical topics for research. Students work one-on-one with a clinical preceptor with expertise in nurse anesthesia. They will also take part in administering general and regional anesthesia in persons of all ages. The management of emergency operations, obstetrics, pediatrics, and neurosurgery are an integral part of the clinical experience. Graduates will be eligible to take the certification examination administered by the Council on Certification of Nurse Anesthetists.

All applicants must have at least two years of recent experience in one of the following acute care settings: recovery room, emergency room, or medical, surgical, neonatal, or pediatric intensive care or one year’s experience with certification in their respective nursing specialty (CCRN, CEN, CPAN).

### Nurse Midwifery ([http://fpb.case.edu/MSN/midwifery.shtm](http://fpb.case.edu/MSN/midwifery.shtm))

Certified nurse-midwives (CNMs) are educated in the two disciplines of nursing and midwifery and are certified according to the requirements of the American Midwifery Certification Board. CNMs manage women’s health care, focusing on common primary care issues, family planning and gynecologic needs including menopause related issues, pregnancy, childbirth, the postpartum period, and care of the newborn. They practice within a healthcare system that provides for consultation, collaboration, or referral as indicated by the health status of the client, in accordance with the Standards for the Practice of Midwifery, as defined by the American College of Nurse-Midwives (ACNM).

Nurse midwife students must complete 48 credit hours of coursework as well as work individually with a clinical preceptors in a variety of outpatient, in-patient, and out-of-hospital settings to provide optimal care to women in the antepartum, intrapartum, (and) postpartum and non childbirth bearing periods. Graduates will be eligible to take the certification examination administered by the American Midwifery Certification Board.
By taking NURS 559, Advanced Practice in Nursing Care of Women, students are eligible for dual certification in Women's Health.

Certification Board. With the addition of the 4 credit NURS 559 Advanced Practice in Nursing Care of Women, students are eligible for dual certification in Women's Health.

### Joint Degrees

**MSN/PhD Dual Degree Program (p. 486)**

The Master of Science in Nursing / PhD combined degree program provides the opportunity for students with a BSN or MN degree to pursue the PhD while earning an MSN degree in a selected major or clinical specialty along the way. Application involves a dual submission process and applicants must be accepted into both programs. For the combined MSN/PhD program, up to 8 credits of course overlap are allowed depending on the selected clinical major.

**Master of Science in Nursing/Master of Arts in Anthropology (MSN/MA Anthropology) (http://fpb.case.edu/MSN/MSNMA.shtm)**

The Master of Science in Nursing/Master of Arts in Anthropology joint degree program provides students with the unique combination of cross-cultural expertise in medical anthropology and clinical expertise in nursing. Students must complete a minimum of 19 credits in nursing core courses, 12 to 22 credits in clinical major courses, and a minimum of 18 credits in anthropology courses, distributed as indicated below. The actual number of credits depends upon the major selected. This curriculum plan reflects clinical nursing majors other than nurse anesthesia and community health. Choice of electives should guarantee that minimum credit requirements are met. All students must pass the Masters Qualifying Examination in Anthropology.

### Required Nursing Courses

- NURS 443A Collaboration, Consultation, & Credentialing in Advanced Practice Nurs 1
- NURS 443B Role Development in Advanced Practice 1
- NURS 443C Teaching and Learning in Advanced Practice 1
- NURS 444A Ethical and End of Life Issues in Advanced Nursing Practice 1
- NURS 444B Health Care Delivery and Finance in Advanced Practice 1
- NURS 444C Health Policy Legislation and Legal Issues in Advanced Practice 1
- NURS 453 Advanced Pathophysiology 4
- NURS 459 Advanced Health Assessment 3
- NURS 430 Pharmacology and Therapeutics 3
- NURS 405 Inquiry I - Theoretical Foundations 3
- Clinical major selected 12-22

### Required Anthropology Courses

- ANTH 480 Medical Anthropology and Global Health I 3
- ANTH 481 Medical Anthropology and Global Health II 3
- ANTH 462 Contemporary Theory in Anthropology 3
- Anthropology electives (health-related) 6-9

### Required Research Courses

- NURS 425 Inquiry II - Research Process 3
- NURS 502 Inquiry III - Evidence-Based Nursing Practice 2
- NURS 503 Inquiry Practicum 1 - 2
- or ANTH 504 Anthropological Research Design
- 500-level medical anthropology course 3

### Required Elective

Approved Elective course in Anthropology OR Nursing 3

**Master of Science in Nursing/Master of Arts in Bioethics (MSN/MA Bioethics) (http://fpb.case.edu/MSN/MSNMBIO.shtm)**

The Master of Science in Nursing/Master of Art in Bioethics joint degree program is designed to provide nurses with the concepts essential to
ethics and ethical decision-making. This program is relevant for nurses who are family advocates within health care systems. The total MSN/MA degree requirements are 53-63 credits.

**Nursing Centers of Excellence**

**Unparalleled Opportunities**

The Centers of Excellence at the Frances Payne Bolton School of Nursing expose students first-hand to nursing research, global health care systems, evidence-based practice, initiatives in aging care, self-management, end-of-life science, inclusion of persons with disabilities into research, and flight nursing.

**WHO Collaborating Center for Research and Clinical Training in Home Care Nursing (WHOCC)**

The WHOCC is affiliated with the World Health Organization, which was established in 1948 by the United Nations as its specialized agency for health. The WHO’s objective, as set out in its Constitution, is the attainment by all peoples of the highest possible level of health. WHO Collaborating Centers are national institutions around the world designated by the WHO to collect and disseminate information on world health issues, provide education and training, and participate in collaborative research. The WHO Collaborating Center at FPB is charged with research and clinical training in home care nursing and is one of only 10 designated centers for nursing in the United States.

**Sarah Cole Hirsh Institute for Best Nursing Practices Based on Evidence**

Evidence-based practice in nursing is the integration of best research evidence with clinical expertise and patient values. As one of only a few such centers in the country, the Hirsh Institute was established in 1998 to disseminate evidence-based practice information through printed and online publications. It also conducts certification training programs and consulting services and has awarded numerous certificates in evidence-based practice to nurses from within and outside Ohio.

**The University Center on Aging and Health (UCAH)**

By the year 2020, a staggering number (approximately 17%) of the US population will be considered elderly. In addition, almost 40% of a physician’s time will be spent treating the elderly by that year. UCAH at Case Western Reserve University serves international, national, and local communities by providing an interdisciplinary platform for gerontological education, research, and services. A key objective of UCAH is to increase the number of students in the role of gerontology and utilize its partnerships to promote interdisciplinary collaboration.

**Center of Excellence for Self-Management Advancement through Research and Translation (SMART)**

The SMART Center is an NIH-funded research center designed to address the science of self-management at the levels of individual, family, organization, and community. Its goals are to expand knowledge related to self-management through interdisciplinary investigations of self-management, serve as a national leader in research and dissemination of research findings to the scientific community, and diffuse knowledge into clinical practice and policy to enhance the use of self-management strategies to improve the health, function, and quality of life of individuals.

**Building End-of-life Science through Positive Human Strengths and Traits (BEST) Center**

The BEST Center is funded by the National Institute of Nursing Research/National Institute of Health. It focuses on quality of life research for seriously ill people, including those who are at the end of life. The Center’s mission is to radically shift the direction of quality of life research.

**Full Inclusion of Persons with Disabilities in Self-Management Research (FIND) Lab**

The FIND Lab’s mission is to promote the full inclusion of persons with disabilities in mainstream health care research through use of Universal Design of Research and to encourage research on the general health care needs of persons with disabilities. It is funded by the National Institutes of Nursing Research/National Institute of Health.

**The Dorothy Ebersbach Academic Center for Flight Nursing**

The Dorothy Ebersbach Academic Center for Flight Nursing, formerly the National Flight Nurse Academy, serves as part of the MSN program’s Adult-Gerontology Acute Care Nurse Practitioner Flight Nursing subspecialty. It is the first formal training program of its kind to prepare nurses at the advanced practice level to provide care to individuals outside of hospitals, but at a hospital level of care.

**Quality and Safety Education for Nurses (QSEN) Institute**

Funded by the Robert Wood Johnson Foundation, the QSEN Institute addresses the challenge of preparing future nurses so that they will have the knowledge, skills, and attitudes (KSAs) necessary to continuously improve the quality and safety of the healthcare systems within which they work. This website is a central repository of information on the core QSEN competencies, KSAs, teaching strategies, and faculty development resources designed to best support this goal.
Other Student Categories

Non-Degree Students

An applicant with basic preparation in nursing may apply to register as a non-degree student for up to 9 credits. After your application is received and approved, you will receive further instructions via e-mail on how to register via the Student Information System (SIS).

For those wishing to take PhD courses, the applicant must obtain written permission from the faculty teaching the course and the PhD Program Director in the FPB School of Nursing for those taking PhD courses. Contact the Graduate Studies Office at 216-368-4390.

For those wishing to take MSN or post-MSN DNP courses, the applicant must complete our online application and receive permission from the appropriate program director before being permitted to enroll in the course. Once the application has been submitted, the student will be notified if permitted to enroll into the course.

Clinical courses may not be taken as a non-degree student. Continuation of this status is at the discretion of FPB's administrative officer. Status as a non-degree student does not imply acceptance into FPB. If the non-degree student applies for admission to FPB, course work completed as a non-degree student will be evaluated on an individual basis for its applicability to degree requirements within the time frame for the degree.

Special Students

Special students are those who take a specified course of study designed to meet an individual's needs. They must meet the admission requirements for the program where the majority of class work will be done. Their status and satisfactory performance will be reviewed after one year. Students completing MSN courses to obtain a certificate in any advanced practice nursing major will be admitted as special students.

If a special student decides to pursue a graduate degree, the approval of the Associate Dean of Academic Programs must be obtained. Entrance into the degree program will be considered the date when the student enrolled in the first course work as a special student. These courses must have been taken within the last five years. If more than five years have elapsed since the course work as special student was done, the student must meet the current academic requirements for the major selected.

International Students

International students may enroll in any educational program. They must meet the admission requirements for the program that they select. In addition, application should be submitted approximately one year before the desired date of enrollment. English translations of transcripts are required.

Each applicant must document the ability to speak, read, and write English as evidenced by satisfactory performance on the Test of English as a Foreign Language (TOEFL). The International English Language Testing System (IELTS) is also accepted.

Test information can be obtained at: www.toefl.org (http://www.toefl.org) and www.ielts.org (http://www.ielts.org)

Students whose native language is English are exempt. For those whose native language is not English, the minimum acceptable scores are:

- Internet-based TOEFL: 90
- Paper-based TOEFL: 577

Additional requirements for international students:

- International students must present evidence of adequate financial resources to meet the expenses of full-time study and travel expenses to and from Cleveland. Financial assistance is not available from FPB. The student must arrange for a sponsor who will provide full financial support. The sponsor must document their ability to financially support the student, including costs of tuition and fees, room and meals, books, incidentals, and travel expenses.
- For some programs (e.g. MSN) students applying must be eligible for licensure as a registered nurse (RN) before enrollment in the program. To obtain RN licensure, the student can either 1) obtain licensure in a state other than Ohio and apply for reciprocity in Ohio; or, 2) sit for the licensure examination (NCLEX-RN) in Ohio. For information on how to become licensed in any state, you must obtain information from the specific state where you wish to become licensed. For the individual addresses of each State Board of Nursing, go to the National Council of State Boards of Nursing website (http://www.ncsbn.org) and then go to “Boards of Nursing.”

Students may also write to:

National Council of State Boards of Nursing
111 East Wacker Dr.
Suite 2900
Chicago, IL 60601-4277
Telephone: 312.525.3600

Once admitted to FPB, an application form for a student visa will be sent to the student. Upon enrollment at the university, the student must subscribe to the Student Medical Insurance Plan or have proof of other medical insurance coverage.

PhD in Nursing

The PhD program is a post baccalaureate degree program designed to prepare scientists who initiate and conduct research relevant to nursing. Expertise in clinical nursing and competence in research are required to prepare scholars to disseminate knowledge into clinical practice and nursing education. To achieve excellence in the academic program, students engage in activities consistent with the areas of research excellence of the faculty. Moreover, the faculty is committed to the intellectual growth of the student, which is achieved through mentorship and collaboration in scholarship.

The PhD student concentrates on the organization and development of knowledge requisite to nursing practice for service to a population. The population may include: age group (children, adults), focus of service (individual, family, or community) and position on the continuum of health (health and wellness, acute and chronic disruptions in health). PhD students are culturally diverse, and many develop and apply knowledge relevant to global health needs.

Characteristics of the Graduate

<table>
<thead>
<tr>
<th>Themes/Roles</th>
<th>Characteristics/Expected outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td>- IELTS: 7.0</td>
<td></td>
</tr>
</tbody>
</table>
Research/Knowledge Development

- Conduct original research
- Critique and integrate different scientific perspectives in the conduct of original research
- Lead interdisciplinary research teams and participate in team science

Leadership

- Understand the evolving roles and responsibilities of a nurse scholar
- Assume leadership in the conduct of culturally and linguistically appropriate scholarship
- Lead in advancing the discipline through scholarly contributions and science in the global community
- Provide career and research mentorship to others

Dissemination

- Communicate research through publications and presentations for professional, interdisciplinary, and lay audiences

Policy

- Generate and disseminate knowledge relevant to health care policy
- Understand the influence of politics and policy on knowledge generation

Values

- Appreciate the history and philosophy of science
- Understand the evolving nature of the nursing discipline
- Utilize professional and research ethics and judgment in the conduct of research

Substantive Area of Specialization

- Demonstrate mastery of in-depth knowledge in a substantive area

Degree Requirements

Our PhD in Nursing program prepares students for careers as researchers, scientists, or university-level faculty members. They have the opportunity to participate in the research that has a profound effect on the science of nursing and changing nursing practices. PhD students concentrate on the organization and development of knowledge requisite to nursing practice for service to a particular population. PhD students are culturally diverse, and many develop and apply knowledge relevant to global health needs.

The PhD requires a minimum of 57 semester hours of course work, which includes the foundation for the student’s dissertation as well as dissertation completion. The program is individualized, taking into account student interests, aspirations, and work experience. Students entering the program with a BSN who do not wish to obtain an MSN degree will have an option to take NURS 507 Clinical Knowledge and NURS 508 Context of Care; or to take 6 credits of MSN courses to ease their transition from BSN to PhD. A dual degree MSN/PhD program is available for those who also want an MSN degree.

The general program requirements are listed below. Additional coursework may also be required or recommended, as determined by the faculty advisor.

### Knowledge Development/Theory Core (6 credit hours)

Dissertation Fellowship (upon recommendation to the School of Graduate Studies) for a maximum of 4 consecutive semesters after completion of NURS 701

### Optional PhD Education Courses

To insure that graduates from our PhD in Nursing program are prepared to assume the full faculty role upon graduation, including preparation for teaching and mentoring others, students are encouraged to take optional courses that specifically address the development of their teaching skills.

While two of these courses are taught in an intensive format, between semesters, the third course consists of a 60-hour teaching practicum.

### Preparation for Nursing Education Coursework

- Curriculum and Instruction (3 credits)
- Theoretical Foundations of Testing and Evaluation (2 credits)
- Teaching Practicum (1-6 credits)
It is recommended that courses within this education track be integrated within the student's planned program of study within the first two years of the program.

The courses and teaching practicum must be completed before the student will be advanced to candidate status.

Opportunities for undergraduate and graduate clinical and didactic teaching during paid teaching assistantships are available to those who qualify.

Sample Curriculum Plans
See the website for details. (http://fpb.case.edu/PhD/sampleplans.shtm)

Traditional Format Sample Plan
Students who already have earned the MSN degree can enter the PhD program directly and complete the PhD core coursework during fall and spring semesters.

• A minimum of 3 credits of proposal development is required; however, students may need more time to complete their candidacy exam and proposal development and may therefore need to take more credits of proposal development.
• Concurrent enrollment in proposal development credits and dissertation credits is not permitted.
• Full time status is defined as 9 credits per semester ONLY while students are enrolled in their coursework prior to proposal development. However, enrollment in even a single credit of or constitutes full time study.
• Total required credit hours for the nursing PhD (post MSN) = 57 credits

Fast-Track Sample Plan
Students with a BSN or equivalent can pursue the PhD degree without earning an MSN. In addition to PhD core requirements, they must complete transition courses to gain clinical knowledge and be able to develop a research focus pertinent to nursing in the context of care.

• A minimum of 3 credits of proposal development is required; however, students may need more time to complete their candidacy exam and proposal development and may therefore need to take more credits of proposal development.
• Concurrent enrollment in proposal development credits and dissertation credits is not permitted.
• Full time status is defined as 9 credits per semester ONLY while students are enrolled in their coursework prior to proposal development. However, enrollment in even a single credit of or constitutes full time study.
• Total required credit hours for the nursing PhD (post BSN or equivalent) = 63 credits

Dual Degree Programs

MSN/PhD Dual Degree Program
Students are accepted into both programs. They select an MSN major or clinical specialty and may take MSN and PhD courses concurrently. Up to 8 credits of course overlap are allowed, depending on the clinical major.

DN/P/PhD Dual Degree Program
Students are accepted into both programs and meet course requirements for both doctorates with an overlap of 11 credits. Students develop proposals for the DNP thesis project and PhD dissertation concurrently in order to facilitate timely completion of both degrees.

Advanced Standing for DNP Graduates
Students who have earned a DNP degree within the past five years may be granted advanced standing in the PhD nursing program and qualify for a waiver of up to 9 credits.

Other Programs

Summers-Only Plan
Depending on the number of registrants, PhD courses may be offered during the summer months to enable students to earn the degree in six summers.

Accelerated Option Plan
Students who want to attain their PhD as soon as possible may accelerate their doctoral studies by taking PhD courses year round, including summers (minimum registration required). This option is contingent on whether the summer PhD program is offered.

School of Nursing Courses

NUAN Courses

NUAN 449. Chemical and Physical Properties of Anesthesia. 1 Unit.
Introduction and elaboration of basic chemical and physical principles as they relate to clinical nurse anesthesia practice. An in-depth study of organic and biochemical principles, structure/activity, relationships and their significance in pharmacology. Emphasis will be on the integration and practical application of these principles to clinical nurse anesthesia practice.

NUAN 450. Pharmacological Strategies in Anesthesia Practice. 1 Unit.
Application of pharmaco-kinetic and pharmaco-dynamic principles as they relate to specific anesthetic and adjunct drugs used in anesthesia practice. Integration of this information into clinical area regarding anesthetic uses, dosages, and side effects of these classes of drugs is emphasized. Coreq: NUAN 449.

NUAN 451. Physiological Variables and Responses I: Respiratory System. 1 Unit.
A detailed study of the anatomic structures and related physiochemical mechanisms governing respiratory function in health and disease. Assess the functional integrity of this system utilizing all pertinent objective and subjective data. Consider the impact of anesthetic agents and techniques on this system and how one can plan an anesthetic to facilitate health-seeking behaviors as a patient attempts to attain, maintain or regain optimal health. The effects of anesthesia, implications and for all types of surgery, and the impact on the respiratory system will be discussed. Prereq: NUAN 459 and NURS 453.
NUAN 452. Physiological Variables and Responses: The Cardiovascular System. 1 Unit.
A detailed study of the anatomic structures and related physicochemical mechanisms governing cardiovascular function in health and disease. Assess the functional integrity of this system utilizing all pertinent objective and subjective data. Consider the impact of anesthetic agents and techniques on this system and how one can plan anesthetic to facilitate health-seeking behaviors as patients attempt to attain, maintain, or regain optimal health. Implications for all types of surgery in view of effect of anesthesia on cardiovascular system, however, special attention on surgery involving this specific system. Coreq: NUAN 459 and NURS 453.

NUAN 453. Physiological Variables and Responses III: Peds, OB, Endo & Geriatrics. 1 - 5 Unit.
Study of health-seeking behaviors and intervening variables with special consideration of the anatomy, physiology, and pathophysiology of the pediatric and obstetric, endocrine and geriatric patient. Focus will be on the integration of this information into the nurse anesthesia care to support the health-seeking behaviors of these patients. Prereq: NUAN 451 and NUAN 452.

NUAN 454. Physiological Variables and Responses IV: Renal and Neurologic Systems. 3 Units.
Systematic investigation of the physiologic factors related to health-seeking behaviors with special emphasis on pathophysiology of the renal and neurologic systems. Focus will be on the integration of this knowledge into the planning, implementation, and evaluation of patients requiring nurse anesthesia intervention. Prereq: NUAN 453.

NUAN 455. Anesthesia Nursing I. 1 Unit.
An introduction to the art and science of nurse anesthesia including basic anesthetic principles and beginning clinical practicum to introduce the student to anesthetic equipment and operating room environment. This course is designed to give the student practical information regarding administration of safe anesthesia.

NUAN 456. Anesthesia Nursing I. 1 Unit.
Progressive, guided instruction on the clinical and ethical management of clients undergoing all forms of anesthesia. This course is designed to prepare the nurse in the administration of a safe, routine anesthetic with a moderate amount of instructor intervention. Prereq: NUAN 458 and NUAN 459.

NUAN 457. Anesthesia Nursing III. 1 Unit.
Graduated, guided instruction in clinical management of clients receiving various types of anesthesia. Focus is on the preparation and planning for anesthesia utilizing Schotfeld paradigm. Includes actual administration of anesthesia for clients exhibiting more complicated pathophysiology. More advanced technical instruction and experience. Correlation of didactic and clinical materials, as well as continuous evaluation of student progress are integral to this course. Prereq: NUAN 456.

NUAN 458. Principles of Anesthesia I. 2 Units.
An introduction to the art and science of nurse anesthesia, Including basic anesthetic principles, chemical and physical properties of anesthesia, and basic Anesthetic pharmacology. This course is designed to introduce students to basic anesthesia safety, Anesthesia practice, and the operating room environment. Coreq: NURS 459.

NUAN 459. Principles of Anesthesia II. 2 Units.
In-depth study of principles of regional anesthesia and pain management. Emphasis is placed on relevant anatomy and physiology, preoperative assessment and appropriate patient selection, appropriate use of equipment, pharmacology of commonly used medications, techniques for administration, and physiologic alterations/complications. Prereq: NUAN 458.

NUAN 551A. Nurse Anesthesia: Advanced Practice I. 2 Units.
Individual, in-depth study of advanced clinical nurse anesthesia in such specialty areas as neurosurgical, cardiovascular, obstetric and pediatric anesthesia. The nurse learns to handle more difficult, specialized patients who are at a higher risk. Emphasis is on more complex management with advanced monitoring techniques, use of pharmacological agents and handling higher stress situations. Students develop and utilize practical clinical applications of nurse anesthesia theory. Prereq: NUAN 457.

NUAN 551B. Nurse Anesthesia: Advanced Practice I. 2 Units.
(See NUAN 551A.) Prereq: NUAN 551A.

NUAN 551C. Nurse Anesthesia: Advanced Practice I. 1 - 5 Unit.
(See NUAN 551A.) Prereq: NUAN 551B.

NUAN 552. Nurse Anesthesia: Advanced Practice II. 1 - 5 Unit.
The continuation of advanced, independent clinical nurse anesthesia administration. Emphasis is on management of higher risk patients for more difficult procedures, performing total anesthetic care with minimum of anesthesiologist supervision, and readiness for transition from student to graduate status. Prereq: NUAN 551A and NUAN 551B and NUAN 551C.

NUND Courses

NUND 400. Guided Study. 1 - 6 Unit.
Selected topics in basic nursing. May include clinical experiences.

NUND 401. Introduction to the Discipline and Practice of Nursing. 7.5 Units.
This course is an introduction to the discipline and practice of nursing. Factors influencing health and illness will be explored. Selected nursing strategies and interventions designed to support the maximum health potential of the adult client will be incorporated into lab sessions and practiced in a variety of settings. Small group seminars will be used to examine historical, societal, and legal influences on nursing and the role of functions of the professional nurse. Coreq: NUND 402 and NUND 410.

NUND 402. Introduction to Pharmacology. 3 Units.
This course introduces basic principles of pharmacology and pharmacotherapeutics. A survey of characteristics and uses of major drug groups with an emphasis on nursing implications is presented. Coreq: NUND 401 and NUND 410.

NUND 403A. Introduction to Nursing Informatics. 1 Unit.
This course will introduce students to the concept of health informatics and the role nurses play in the management of information in supporting all areas of nursing including clinical practice, education, research, and administration. Using case studies, lecture and class discussion. Students will develop an awareness of the importance of nursing involvement in the design, implementation, and use of information systems and other technologies. Coreq: NUND 401.
NUND 403B. Nursing and Health Informatics. 1 Unit.
This is the second of a two part course sequence in Nursing Informatics. The focus of this course is the transdisciplinary nature of informatics in health care and the use of advanced information technologies (IT) to support decision-making, promote safety, and ensure quality in patient care. Current issues in health care policy and legislation relating to health information technology will be discussed. Prereq: NUND 403A.

NUND 404A. Inquiry A for the Graduate Entry DNP. 2 Units.
This course provides an introduction to conceptual and theoretical thinking. Students will examine knowledge development in nursing, conceptual structures, and the use of theory in nursing practice and research. Coreq: NUND 401.

NUND 404B. Inquiry B for the Graduate Entry DNP. 2 Units.
This course is a continuation of NUND 404A GE Inquiry A. It completes the introduction to conceptual and theoretical thinking and begins examination of the research process in nursing. The student will examine scientific inquiry and scientific investigation, including the research process. Prereq: NUND 404A

NUND 404C. Inquiry C for the Graduate Entry DNP. 2 Units.
This course is a continuation of NUND 404B GE DNP Inquiry B. It expands the examination of scientific investigation in nursing and includes data management, analysis, and interpretation; critique of existing research; and implications for nursing practice. Coreq: NUND 404B.

NUND 405. Altered Human Functioning. 3 Units.
Introduction to basic pathophysiological outcomes of selected intervening variables that alter human physiologic and cognitive functioning. This course builds on the student’s foundation of normal anatomy and physiology. Recommended preparation: completion of first semester of D.N.P. program. Prereq: NUND 407.

NUND 406. Aging in Health and Illness. 2 Units.
This course will explore the concept of aging in health and illness with an emphasis on the older adult as an individual with the capacity to grow and develop. Prereq or Coreq: NUND 401 and NUND 410.

NUND 407. Acute Care Nursing of the Adult. 8.5 Units.
The focus of this course is the integration of the nursing process in clinical practice. Human responses to significant health events and alterations are analyzed. Application of relevant physiology, psychosocial dimensions, and pharmacology are included. Particular emphasis is placed on nursing strategies, interventions, and the evaluation of their effectiveness in the care of the acutely ill adult. Prereq; NUND 401 and NUND 410.

NUND 408. Introduction to Concepts of Genetics in Nursing. 1 Unit.
Introduction to the theories and concepts relevant to human genetics and genomics and their applications in health care. Coreq: NUND 407.

NUND 409A. Professional Role Development: Leadership. 1 Unit.
This seminar is the second in a series designed to address professional role development. The seminar focuses specifically on leadership development in nursing Prereq: NUND 407.

NUND 409B. Professional Role Development: Health Policy, Advocacy and Delegation. 1.5 Unit.
This seminar is the third in a series designed to address professional role development. The seminar content focuses specifically on health policy, delegation and advocacy. Prereq: NUND 409A.

NUND 410. Health Assessment. 2.5 Units.
Comprehensive introduction to the assessment skills required for a successful nursing practice. Basic skills, such as vital signs, are taught along with a system by system approach to physical examination. Taking a health and psychosocial history is integrated into the course. The course is taught concurrently with anatomy and physiology, concepts of nursing practice, and strategies and interventions for alterations in functioning. Coreq: NUND 401 and NUND 402.

NUND 411A. Public Health Nursing A. 2.5 Units.
This is the first of a two course sequence in public health nursing - health promotion-disease prevention for groups, populations, and communities. This course will focus on enhancing the health and health-seeking behaviors of groups and populations. Adult teaching-learning theories and processes will be explored. Coreq: NUND 407.

NUND 411B. Public Health Nursing B. 2 Units.
This is the second of a two course sequence in public nursing - health promotion-disease prevention for groups, populations, and communities. This course will focus on enhancing the health and health-seeking behaviors of a selected community Coreq: NUND 411A.

NUND 413. Issues and Ethics in Health Care. 2 Units.
This course introduces students to the principles underlying ethical issues and methods of rational decision making. Fundamental theories will be reviewed and applied through case analyses to address ethical dilemmas common to modern health care. Coreq: NUND 407.

NUND 414. Concepts in Nursing Management. 2 Units.
This course focuses on the study of basic concepts related to management and working with groups in the provision of nursing care. Concepts of nursing management including: planning, organizing, staffing, directing, and controlling within healthcare settings will be discussed. Coreq: NUND 417 or permission of course faculty.

NUND 415. Parents and Neonates in Health and Illness. 4.5 Units.
This course introduces biological, psychosocial, and developmental concepts applicable to the nursing care of women, newborns, and families during the childbearing cycle. Emphasis is placed on assessment and identification of health needs as parents and neonates respond to the changes inherent in the childbearing cycle. Strategies related to nursing care of parents and neonates are discussed. The clinical experience focuses on the direct application of these concepts and strategies in the care of patients in various perinatal settings. Prereq: NUND 405, NUND 407, NUND 408, NUND 409A, NUND 411A.

NUND 416. Children and Families in Health and Illness. 4.5 Units.
This course is the study of children from infancy through adolescence and their health status from a developmental perspective. Emphasis is on healthy children as well as those with common acute and chronic illness within the context of their family environment. Nursing strategies focus on interventions to promote, restore, and maintain health and foster growth and development. These strategies are based on understanding advanced concepts of children's and families' responses in health and illness. Prereq: NUND 405 and NUND 407 and NUND 408 and NUND 409A and NUND 411A.

NUND 417. Psychiatric Mental Health Nursing. 4 Units.
This course is designed to address psychiatric and mental health nursing concepts. The focus is on clients with acute and chronic psychiatric disorders and their mental health. Nursing strategies that are appropriate for assessment and intervention with individuals, families, and groups to facilitate optimal mental health will be discussed and practiced. Prereq: NUND 407 and NUND 408.
NUND 418. Integrated Nursing Practice. 5.5 Units.
The focus of this course is implementation of the nursing process in the
care of clients with increasingly complex issues of health and illness.
Emphasis is placed on integrating principles of safe and quality nursing
care. The didactic component includes contemporary topics of relevance
to all specialties and settings of nursing practice. The clinical component
will allow the student to collaborate with faculty to shape the experience
based on the student’s identified learning needs. Prereq: NUND 404C,
NUND 409B, NUND 411B, NUND 417.

NUND 450. Applied Statistics. 3 Units.
This course provides an advanced overview of the assumptions and
applications necessary to analyze and interpret questions and research
related to clinical practice. Emphasis will be on statistical interpretation
of research. During the course, data management, statistical analysis,
and data interpretation, as well as univariate, bivariate, and multivariate
statistics such as ANOVA and ANCOVA will be examined. The data
analysis process will be examined and deconstructed throughout the
course. Prereq: STAT 201 or equivalent within past 5 years.

NUND 480. Action Research and Program Evaluation. 1 Unit.
This course introduces the student to the concept of purposeful
evaluation. The applicability of action research and evaluation to the
change process and to continuous improvement within various venues
will be explored. The iterative, participative, and emergent nature of
generation of new knowledge and practice innovations will be discussed.
Offered as NUND 480 and NURS 620. Prereq or Coreq: NUND 479.

NUND 500. D.N.P. Thesis. 1 - 6 Unit.
Systematic investigation of a clinically based research problem selected
by the student for independent study. This includes proposal refinement
and acceptance, data analysis and thesis completion under thesis
committee supervision. Prereq: NURS 521.

NUND 504. Theories for Nursing Practice and Scholarship. 3 Units.
This initial course in the Doctor of Nursing Practice program examines
the nature of theory, theory development in nursing, and significant
conceptualizations of nursing. Application of mid-range theory to
practice, practice change, and scholarship is explored. Recommended
preparation: Post Masters graduate standing or permission of faculty.

NUND 505. D.N.P. Project. 1 - 6 Unit.
Systematic completion of a project based on existing educational
or clinical research. The project could include: (1) program needs
assessment, (2) development and testing of an assessment instrument/protocol
for clients, (3) implementation and evaluation of a new program;
or evaluation of a major existing program. The evaluation may include
financial, clinical, or educational components as appropriate to the
project. The project will be developed under the supervision of the
student’s N.D. project committee. Prereq: NURS 521.

NUND 506. Leadership in Organizations and Systems. 3 Units.
This course introduces the student to organizational design and
leadership. The focus is developing skills to effectively lead individuals
and teams toward maximizing organizational effectiveness. Elements of
this course will include: organization culture, systems, communication,
innovation and change. Prereq: NUND 504.

NUND 507. Management in Advanced Nursing Practice. 3 Units.
This course is focused on management entrepreneurial concepts and
issues related to advanced nursing practice. Seminars will focus on
integrating legal, fiscal, quality improvement, and other intervening
variables that affect environments of care. Prereq: NUND 506.

NUND 508. Health Care Policy and Planning. 3 Units.
The primary focus of this course is to explore the leadership role of
nurses in health policy development and implementation as well as the
role of research in health care policy formation and planning. Special
emphasis is placed on selected national and international health policy
issues that form the socio-political and economic context of nursing
care and practice. Ethical dimensions of public policy formulations and
implementation are highlighted. Offered as NUND 508 and NURS 609.

NUND 509. Curriculum and Instruction. 3 Units.
The purpose of this course is to explore the theoretical underpinnings
of education and to examine innovative approaches to critical thinking.
Students are provided the opportunity to analyze philosophies and
principles of education along with teaching and learning styles. The focus
of this course is on curriculum planning and development congruent
with the philosophy and objectives of a nursing program. Curriculum
development includes determination of program and course objectives,
along with selection and organization of appropriate learning experiences
to meet these objectives. Effective techniques for instruction in the
classroom, laboratory, and clinical settings are explored.

NUND 510. Application of Health Information Technology and
Systems. 1 Unit.
In this course, an overview of health information technology (HIT) is
provided with focus on use of HIT in health care settings and among
consumers. Course content includes use and evaluation of HIT by health
care providers and patients.

NUND 530. Research Principles and Methods. 3 Units.
This course provides an overview of the components of the research
process. Application of these principles to traditional as well as non-
traditional research problems will be explored. Prereq: NUND 504.

NUND 531. Approaches to Practice Focused Research. 3 Units.
This course considers a variety of methods used for practice
improvement and research. The applicability of these methods, such
as action research, program evaluation and quality improvement, to the
change process and to continuous improvement within various venues
will be explored. The iterative, participative, and emergent nature of
knowledge and practice innovations will be discussed. Prereq: NUND
530.

NUND 540. Practice Focused Inquiry I. 3 Units.
This course introduces the student to a variety of approaches that can be
used for practice-focused inquiry. Applications of beginning elements of
the scholarly process to practice-focused inquiry are reviewed. Elements
include development of a problem statement and literature review.
Prereq: NUND 504. Coreq: NUND 450.

NUND 541. Practice-Focused Inquiry II. 3 Units.
This course builds on Practice-Focused Inquiry I. The content expands
student understanding of practice-focused methodology, including aims,
a conceptual or theoretical framework, setting, sample, sources of data,
measures and instruments. The student applies appropriate methodology
to the development of a plan for their scholarly practice-focused project.
Ethical issues and mechanisms for dissemination of the project results
are included. Prereq: NUND 540.

NUND 607. Advanced Leadership and Management in Healthcare. 2
Units.
Leadership strategies and competencies for adapting to strategic
advances in knowledge, technology, and organizational processes are
explored. Emphasis is placed on developing strategic capacity within the
dynamics of the competitive healthcare environment. Prereq: NUND 507.
NUND 609. Theoretical Foundations of Educational Testing and Evaluation. 2 Units.
In this course an overview of theories on educational measurement and evaluation is provided. Methods of evaluating teaching effectiveness, student learning, and student performance are explored with particular emphasis being placed on test construction and analysis. Prereq or Coreq: NUND 509.

NUND 610. Translating Evidence into Nursing Practice. 3 Units.
This course focuses on methods for developing best practice protocols, and translating them into practice. Prereq: NUND 504.

NUND 611. Practicum. 1 - 2 Unit.
Under the guidance of the faculty advisor and designated mentor(s), the student will develop, implement and evaluate a specific clinical practice experience that strengthens and expands current expertise. This practicum will synthesize previous coursework. Prereq or Coreq: NUND 504.

NUND 615. Teaching Practicum. 1 - 6 Unit.
In this preceptored teaching practicum, the student may engage in classroom, laboratory, and clinical teaching assignments in nursing. The student will be expected to use current educational theory and nursing knowledge in completing the practicum experience (minimum 60 hours). Offered as NUND 615 and NURS 621. Prereq: NUND 509 and NUND 609.

NUND 619. Proposal Development. 1 - 2 Unit.
Under guidance of the student's chair, the student will develop a proposal addressing a practice-based research problem for acceptance by the proposal committee and IRB. Prereq: NUND 610.

NUND 620. Scholarly Project. 1 - 3 Unit.
Under the guidance of their advisor and committee, the student will complete a systematic investigation of a identified previously problem. The experience will culminate with a written report of the findings. Prereq: NUND 619.

NUNI Courses

NUNI 421. Theoretical Foundations of Nursing Informatics. 4 Units.
This course focuses on the practice of Nursing Informatics through the examination of concepts, theories, models, and phenomena relevant to the discipline. Conceptual and functional components of information management will be discussed along with their application within the health care setting. Nursing language concepts will be discussed including the Nursing Minimum Data Set, NIC, NOC, NANDA, as well as various specialized data sets used in health care.

NUNI 431. Advanced Nursing Informatics. 4 Units.
This course emphasizes the information needs of clinical users and the flow of information within the health care environment. General systems theory concepts and their applicability to health care information systems will be discussed. Diagnosis of information management problems, formulation of user-friendly solutions, implementation of those solutions, and their subsequent evaluation will be emphasized. Evolving/emerging information technologies will be discussed as well as the role of human- technology interactions in health care. Prereq: NUNI 421, MIDS 409, and NURS 471.

NUNI 432. Health Care Information Systems. 3 Units.
This course covers concepts, techniques and technologies for providing information systems to enhance the effectiveness and efficiency of health care organizations. Offered as HSMC 432, MIDS 432, MPHP 532 and NUNI 432.

NUNI 499. Internship in Nursing Informatics. 1 - 5 Unit.
This capstone experience consists of four components: the precepted internship in an external health care setting, an outline discussion experience, a leadership seminar, and a comprehensive program examination. This internship is designed to provide the Nursing Informatics student with the opportunity to apply the knowledge and skills acquired through the program to the management of health care information activities. Recommended preparation: Completion of first year of M.S.N.

NUNP Courses

NUNP 401. Health Promotion in Children and Adolescents. 3 Units.
This course introduces the concepts of pediatric primary health care from a developmental perspective. Concepts and theories from nursing and other related disciplines associated with the assessment and care of well children and their families are explored. Clinical application of theories and nursing strategies to optimize the health of children and their families are emphasized in the professional role development of students. Coreq: NUNP 410.

NUNP 402. Common and Acute Health Problems of Children. 6 Units.
This course introduces the common and acute health problems occurring in infancy through adolescence using a bio/psycho/social/cultural approach. Pathophysiology, assessment and diagnostic strategies specific to acute and common problems in children will be emphasized. Nursing strategies used to enhance, maintain and restore health will be discussed. Prereq: NURS 453, NURS 459 and NUNP 410. Prereq or Coreq: NURS 430.

NUNP 403. Advanced Management in Pediatric Primary Care. 5 Units.
This course focuses on the primary rehabilitative health care concepts specific to the management of complex, multidimensional health problems experienced by infants, children and adolescents within the context of their family and community environments. Pathophysiology, assessment and diagnostic strategies specific to complex health problems in children are emphasized. The selection of clinical interventions, clinical decision making and evaluation of strategies used to enhance the health outcomes of children and their families will be stressed. Emphasis will be placed on the consultation and referral processes within interdisciplinary and multidisciplinary teams. Prereq: NUNP 402.

NUNP 405. Neonatal Nurse Practitioner I. 3 Units.
This course introduces the role of the Neonatal Nurse Practitioner and concepts relevant to the management of the well or ill neonate. Analysis of nursing strategies to optimize health-seeking behaviors in families with well or ill neonates is highlighted. Prereq or Coreq: NUNP 416.

NUNP 410. Health Promotion Across the Life Span. 2 Units.
This course introduces health promotion fundamental to advanced practice nursing. Epidemiological principles and international, national and local health promotion goals are examined with emphasis on cultural and environmental principles, individual assessment and evidence based practice. Diagnostic reasoning and intervention strategies to optimize health-seeking behaviors in clients and to foster therapeutic relationships are examined.
NUNP 412. Neonatal Nurse Practitioner II. 4 Units.
This course focuses on the health problems of the high-risk neonate in the context of family, culture, and community. Nursing strategies that enhance, maintain, and restore health in ill neonates and their families. Principles identified for advanced diagnostic and therapeutic approaches specific to the neonate, including pharmacology, are emphasized. Prereq: NUNP 405.

NUNP 413. Neonatal Nurse Practitioner III. 3 Units.
Pathophysiology, assessment, and diagnostic approaches specific to neonates with acute problems will be examined. Concepts related to discharge planning collaboration and long-term follow-up will be introduced. Prereq: NUNP 412.

NUNP 414. Neonatal Nurse Practitioner IV. 5 Units.
This course focuses on the acute and on-going habilitative care specific to the management of neonates with complex health problems. Pathophysiology, assessment, and diagnostic approaches specific to complex health problems of preterm infants, infants with chromosomal aberrations, and infants with multidimensional health problems will be emphasized within the context of their family and community environments. Community-based service learning will be stressed along with follow-up of the infant and family during the first year of life. Emphasis will be placed on consultation and referral processes within multidisciplinary teams. Prereq: NUNP 405, NUNP 412 and NUNP 413.

NUNP 416. Integrated Assessment of the Neonate. 2.5 Units.
This course introduces principles fundamental to the integrated assessment of the neonate. It stresses perinatal history taking, gestational age assessment, physical assessment skills, and assessment of genetic risks. The course provides the basis for problem identification, decision making, advanced therapeutics, and case management. Coreq: NUNP 405.

NUNP 419. Family Health Nursing: Health of Adults and Older Adults. 5 Units.
This course introduces the student to the practice of primary health care of adults and older adults. The course includes the principles of growth and development, health promotion, disease prevention, and management of common acute and chronic health problems. Emphasis is placed on the biological, psychological, social and cultural aspects of care. Pathophysiology, assessment and diagnostic techniques specific to the acute and common problems are stressed. Nursing strategies related to health problems used to enhance, maintain, and restore health are emphasized; health-seeking behaviors and the impact on family are stressed. Prereq: NURS 453, NURS 459 and NUNP 410. Prereq or Coreq: NURS 430.

NUNP 421. Symptom Management I. 1 Unit.
The emphasis of this course is on holistic care for persons and families, addressing symptoms that interfere with quality of life at all phases: during active-cure-oriented treatment of reversible illness, during life limiting illnesses, and at the end of life.

NUNP 422. Symptom Management II. 1 Unit.
The emphasis of this course includes the holistic care of persons and families, addressing symptoms that interfere with quality of life at all phases: during active cure-oriented treatment of reversible illness, during life limiting illnesses, and at the end of life. Contextual factors influencing care delivery will also be addressed. These include interdisciplinary collaborative practice models, financial, ethical, cultural, and legal considerations. The role of advanced practice nurse in promoting quality and safety in the provision of palliative care will be emphasized. Prereq: NUNP 421.

NUNP 429. Family Health Nursing: Health of the Family During Childbearing Years. 4 Units.
This course introduces the influence of family dynamics on the care of women and their families before pregnancy, during pregnancy and within the interconceptional period. Assessment of physical and psychosocial health and deviations is central to the course. Content also includes principles of education for childbearing, parenting and conception control. Nursing strategies to optimize health-seeking behaviors of the family during the childbearing years are emphasized. Prereq: NUNP 410 and NUNP 419.

NUNP 431. Advanced Oncology Nursing. 4 Units.
The emphasis of this course is on the genetic basis and pathophysiology of cancer, and common treatment modalities. Advanced practice nursing responsibilities in all phases of cancer care (prevention, detection, diagnosis, treatment, survivorship, and end of life) will be discussed. Traditional, experimental, and complementary treatment modalities will be explored in relation to mechanisms of action, efficacy, and short and long-term side effects. Strategies for addressing health promotion and problem management in promoting quality of life for patients with cancer will be critically evaluated. Prereq: NUNP 419.

NUNP 432. Common & Acute Health Problems of the Adult and Older Adult. 5 Units.
This course introduces the common and acute health problems occurring across the adult life span. A problem-oriented approach is used with emphasis on the biological, psychological, social, and cultural aspects of care. Pathophysiology, pharmacology, assessment, and diagnostic strategies specific to the acute and common problems of adults and older adults will be included. Nursing strategies used to enhance, maintain, and restore health will be emphasized. Prereq: NURS 453, NURS 459 and NUNP 410. Prereq or Coreq: NURS 430.

NUNP 433. Common and Acute Health Problems of the Adult II. 3 Units.
This course is a continuation of NUNP 432. Emphasis is on the pathophysiology, assessment and diagnostic approaches specific to the adolescent and adult client. Health-seeking behaviors will be stressed within the context of the family and community.

NUNP 434. Advanced Management in Adult and Older Adult Primary Care. 5 Units.
This course focuses on health care concepts specific to the management of complex multidimensional health problems experienced by adults and older adults within the context of their family and community environments. Pathophysiology, assessment, and diagnostic strategies specific to complex health problems are emphasized. The selection of evaluation strategies used to enhance the outcomes will be stressed. Prereq: NUNP 449.

NUNP 438. Foundations for Adult-Gerontology Acute Care Nursing. 4 Units.
The course focuses on establishing elements of advanced nursing practice assessment and diagnostic reasoning across the continuum of healthcare services to meet the specialized physiologic and psychological needs of adults and older adults with complex acute and/or chronic health conditions. Prereq or Coreq: NURS 453 and NURS 459 or students with an MSN and NP certification, permission of faculty.
NUNP 439. Family Health Nursing: Health of Children and Adolescents. 4 Units.
This course introduces the influence of family dynamics and the
information necessary for the practice of primary health care of children
and adolescents. The course includes application of the principles of
growth and development, disease prevention, and management of
common acute and chronic health problems. The impact of the family
on child and adolescent development and health is explored. Clinical
application of nursing strategies to optimize health-seeking behaviors is
emphasized. Prereq: NUNP 429.

NUNP 441. Comprehensive Care of the Chronically Ill Adult and Older Adult. 4 Units.
The focus of this course is on implementation of advanced practice for
patients with cancer and other life limiting conditions. Health promotion,
health protection, disease prevention, and treatment of patients with
cancer and other life-limiting conditions and their families will be included.
An interdisciplinary approach to the care of patients and families across
the cancer disease trajectory will be addressed. Cultural considerations
for diverse populations will be incorporated in the implementation of
advanced practice strategies.

NUNP 443. Acute Health Problems of Adults and Older Adults. 6 Units.
Emphasis in this second of sequenced Adult-Gerontology Acute Care Nursing clinical courses is on the pathophysiology, assessment, and
diagnostic approaches to adults and older adults with complex acute
and chronic health disorders that manifest with physiologic instability.
The clinical practicum focuses on further development of diagnostic
reasoning, clinical judgment, caring practices, and collaboration in health
care systems that deliver acute and critical advanced practice nursing.
Prereq or Coreq: NURS 430 and NUNP 438.

NUNP 444. Advanced Management of Acutely Ill Adults and Older Adults. 4 Units.
This course focuses on concepts specific to complex, multidimensional
health problems of acute and critically ill adults and older adults. Clinical
practice focuses on management of patients with complex health
problems and life-threatening conditions across the entire adult spectrum.
Students with a MSN and NP experience can request permission for
enrollment. Prereq: NUNP 443.

NUNP 449. Primary Care of Older Adults. 4 Units.
This course will focus on the assessment of the older adults. These
factors are analyzed in various environments. Epidemiological and health
behavior models are used to assess health risks, assist with problem
identification, primary, secondary, and tertiary prevention strategies.
Cultural, ethnic, and developmental issues are addressed. Concepts,
assessment strategies, interventions and evaluation approaches specific
for older adults are identified. Prereq: NUNP 432.

NUNP 454. Advanced Management of Complex Problems in the Older Adult. 4 Units.
This course focuses on the management of complex multidimensional
health problems experienced by older adults and their families in multiple
environments of care. Pathophysiology, assessment, and diagnostic
strategies specific to complex health problems in older adults are
emphasized. Evidence-based management strategies used to enhance
the outcomes in older adults to promote health and prevent disability will
be stressed. The role of the GNP on care giving teams will be included.

NUNP 455. Management of Complex Acute Problems in Children I. 5 Units.
Application of knowledge, research findings, advanced skills and
interventions, including pharmacotherapy, in the management of children
with acute, chronic and critical conditions. Critical assessment strategies
and management principals will be addressed. Prereq: NUNP 402.

NUNP 456. Management of Complex Acute Problems in Children II. 5 Units.
Integration of knowledge, research and advanced skills and interventions
in acute care nursing with children with complex, acute, critical
and chronic health conditions. Critical assessment strategies and
management principals will be addressed including knowledge and skills
with technological assessment modalities and procedures commonly
associated with care of the acutely ill child. Interpretations, indications,
contraindications, and complications will be addressed. Prereq: NUNP
455.

NURS Courses

NURS 110. Foundations of the Discipline. 1 Unit.
The course is designed to introduce the student to the practice,
profession and discipline of nursing. A futuristic perspective will provide
a framework for discussion of the foundation of contemporary nursing
practice within a variety of health care settings. Critical historical
influences that affected the development of contemporary nursing will be
discussed. Selected trends and issues that will guide future nursing
practice will conclude this course.

NURS 111. Foundations of Practice. 3 Units.
This course is designed as a foundation for clinical nursing practice
with a focus on communication, safety, and comfort. The relationship
among evidence, theory, and nursing care will be explored. The basic
components of the nursing process are presented as a framework for
beginning clinical practice.

NURS 120. Nursing Informatics I: Introduction. 2 Units.
This course focuses on the application of mathematics for nursing,
including algebra and biostatistics. Microcomputer, word processing and
information concepts for nursing practice will be introduced.

NURS 122. Foundations of Practice II. 3 Units.
This course builds on the concepts essential to the foundations of
nursing practice presented in previous nursing courses. It is designed
to focus on strategies, skills, and techniques to obtain a comprehensive
individual health history, family health history, and physical examination.
Therapeutic interventions based on assessment and scientific knowledge
will be performed. BIOL 114, BIOL 116, NURS 110, NURS 111, all with
grades of C or better.

NURS 160. Community Engagement Seminar I. 1 Unit.
This is the first in a series of public health nursing courses designed
to develop student knowledge, skills, and attitudes in assessing
culturally component health care in diverse populations using a service
learning model. This course explores the relationships between cultural
competency, health and wellness, and patient-centered care. Utilizing
a balance between knowledge-centered and skill-centered approaches
to assessing culturally competent care, students will engage in both
traditional classroom and transcultural experiential learning encounters.
Coreq: NURS 122.
NURS 201. Applied Nutrition in Health and Disease. 2 Units.
This course builds upon the student's knowledge of human physiology and metabolism. Nutrient requirements are highlighted as well as changes related to different stages in the lifespan. Contemporary nutritional issues will be addressed. Prereq: BIOL 114 and BIOL 116, both with grades of C or better. Coreq: BIOL 117 and CHEM 119.

NURS 210. Community Engagement Seminar II. 1 Unit.
This course expands on foundational public health nursing concepts to develop student knowledge, skills, and attitudes in providing culturally competent health care to diverse populations using the service learning model. This course explores the relationships between, learning needs, health literacy, teaching/learning interventions and evaluation of learning. Utilizing a balance between knowledge-centered and skill-centered approaches to delivering culturally competent care, students will engage in both traditional classroom and transcultural experiential learning encounters. Prereq: NURS 160 with a grade of C or better. Coreq: NURS 230 and NURS 250.

NURS 211. Introduction to Pharmacology. 2 Units.
Introduction to basic principles of pharmacology and pharmacotherapeutics. Review of characteristics and use of major drug groups with emphasis on nursing implications. Prereq: BIOL 117, CHEM 119, NURS 122, all with grades of C or better. Coreq: CHEM 121, NURS 230, NURS 250.

NURS 230. Nursing Care of the Adult I. 5 Units.
This is the first of two courses focusing on the application of the nursing process to adults and older adults experiencing common acute and chronic health alterations. Special emphasis is placed on patient assessment, diagnostic testing, beginning medication teaching and administration, and other nursing interventions as they relate to caring for adults and older adults with alterations in fluid/electrolyte and acid/base balance, and respiratory, cardiac, genitourinary, and endocrine (diabetes) functioning. Care of the patient in the perioperative setting and care of the patient with cancer are also emphasized. Prereq: CHEM 119, BIOL 117, NURS 122, all with grades of C or better. Coreq: CHEM 121, NURS 211, and NURS 250.

NURS 240. Nursing Care of the Adult II. 5 Units.
This course builds upon the knowledge and skills mastered in NURS 230. Course content and learning opportunities provide students with the information necessary to collaborate with other members of the health care team in providing comprehensive care to adults and older adults. Students are expected to collaborate with members of the health care team to plan and implement interventions and to evaluate patient responses to selected interventions. Special emphasis is placed on patients experiencing co-morbid conditions which include alterations in immunologic, hematologic, gastrointestinal, musculoskeletal, and neurologic functioning. Prereq: CHEM 121 and NURS 230, both with grades of C or better. Coreq: NURS 342, NURS 317 and NURS 260.

NURS 250. Aging in Health and Illness. 2 Units.
This course will explore the concept of aging as a healthy developmental process with a particular focus on older adults as active, independent and contributing members of the community. Content will include the process of healthy aging, major health problems for which older adults are at risk, and policy issues. Prereq: CHEM 119, BIOL 117, NURS 122, all with grades of C or better. Coreq: CHEM 121, NURS 211 and NURS 230.

NURS 260. Community Engagement Seminar III. 1 Unit.
This course expands on foundational public health nursing concepts to develop student knowledge, skills, and attitudes in providing culturally competent health care to diverse populations using the service learning model. Utilizing a balance between knowledge centered and skill centered approaches students will apply concepts of team work and collaboration to experiential learning outcomes. Prereq: NURS 210 with grade of C or better. Coreq: NURS 240, NURS 317, NURS 342.

NURS 277. BCLS and First Aid for Health Care Providers. 0 Units.
Designed for healthcare professional students, this course follows the American Heart Association Basic Life Support (BLS) for Healthcare Providers Course objectives. It provides a variety of healthcare professional students the ability to recognize several life-threatening emergencies, provide CPR, use an AED, and relieve choking in a safe, timely and effective manner. Basic first aid skills are also included in this course.

NURS 310. Community Engagement Seminar IV. 1 Unit.
This public health course is designed to develop student knowledge, skills and attitudes in providing culturally competent health care to diverse populations, using the service learning model. Students will explore nursing's role as a community health advocate in the promotion of health and the elimination of health disparities. Utilizing a balance between knowledge-centered and skill centered approaches to delivering culturally competent care, students will apply leadership concepts in both traditional classroom and transcultural experiential learning encounters. Prereq: NURS 260 and NURS 240, both with grades of C or better.

NURS 315. Parents and Neonates in Health and Illness. 4.5 Units.
This course focuses on the study of child bearing families and their health-seeking behaviors from a developmental perspective. Content includes nursing knowledge and skills related to assessment of health status of parents and neonates. Nursing strategies focusing on interventions to promote, restore, and maintain health are discussed. Prereq: NURS 240, NURS 317, NURS 342, SOCI 203, all with grades of C or better. Coreq: NURS 316.

NURS 316. Infants, Children, and Adolescents in Health and Illness. 4.5 Units.
The study of infants, children, and adolescents, and the health-seeking behaviors from a developmental perspective. Emphasis is on healthy infants, children, and adolescents as well as infants, children, and adolescents with common, acute, and chronic illness within the context of their family environment. Nursing strategies focus on interventions to promote, restore, and maintain health and foster growth and development. Prereq: NURS 240, NURS 317, NURS 342, all with grades of C or better. Coreq: NURS 315.

NURS 317. Psychiatric-Mental Health Nursing. 4 Units.
The course is designed to address health-seeking behavior patterns within the context of psychiatric and mental health nursing concepts. The focus is on clients with psychiatric disorders and their mental health. Nursing strategies that are appropriate for assessment and intervention with individuals, families, and groups to facilitate optimal mental health will be discussed and practiced. Prereq: CHEM 121 NURS 230, both with grades of C or better. Coreq: NURS 240, NURS 260, NURS 342.
NURS 318. Nursing in the Community. 4 Units.
The study of the promotion of health and the primary, secondary, and tertiary prevention of health problems of a population. Focuses on the community as client with nursing care of individuals, families, and groups. The clinical component focuses upon developing and evaluating health promotion programs, family assessment, community assessment, and community-based home care within the context of the community. Recommended preparation: RN license.

NURS 320. Theoretical and Evidence Bases for Best Practice in Nursing. 3 Units.
This course explores the theoretical and evidence bases for best practices in nursing. The course begins with an overview of the theoretical and philosophical underpinnings of nursing practice and nursing science. The course includes an intensive focus on the concept of evidence based practice and the process of evaluation supporting practice. Additionally, the course introduces evaluation models used to determine the effectiveness and quality of existing practice and to recommend improvements. Counts as SAGES Departmental Seminar. Prereq: NURS 345 and NURS 360.

NURS 338. Care of the Adult and Older Adult with Complex Health Alterations. 4.5 Units.
The purpose of this course is to provide the student with the knowledge and skills to care for one or more complex, acutely ill adult patients, who presents with co-morbid conditions and may be dependent on technologies. This complexity encompasses the physical, psychological, social, spiritual, and ethical domains of care and includes both patient and the family. Prereq: NURS 211 and NURS 240 and NURS 342.

NURS 339. Care of the Perioperative Patient. 3.5 Units.
The purpose of this course is to provide the student with a dynamic learning experience in a perioperative environment to enhance the knowledge, cognitive and psychomotor skills to care for one or more patients undergoing operative or invasive procedures. The Perioperative Patient-Focused Model (AORN, 2008) will provide the framework for this course. This Model addresses patient centered care, patient safety, physiologic responses, and behavioral responses of the patient and family. In addition, content will cover issues of quality and safety, informatics, and identification of evidence based practice within the perioperative context. The clinical setting is interdisciplinary and multidisciplinary with other members of the perioperative team. As a member of this team, the student will develop strategies to inspire team work and collaboration with emphasis on communication, patient advocacy and leadership skills. Prereq: NURS 211, NURS 230, NURS 240, NURS 342, all with grades of C or better. Coreq: NURS 338.

NURS 341. Concepts of Management and Leadership. 3 Units.
This course focuses on the study of basic concepts related to leadership and management in the provision of nursing care. Highlighted units of instruction include organizational culture and structure, leading high performing teams, human and capital resource management, delegation and outcome evaluation. The management functions of planning, organizing, directing and evaluating are explored. Prereq: NURS 315, NURS316, NURS 338, NURS 339, all with grades of C or better. Coreq: NURS 343 and one of the following: NURS 350 or 352 or 354 or 356.

NURS 342. Medical Microbiology, Immunity, and Infectious Disease. 4 Units.

NURS 343. Issues and Ethics in Health Care. 2 Units.
This course is designed to introduce the student to the principles underlying ethical issues and methods of rational decision making. Fundamental theories will be reviewed and opportunity provided, using case analysis, to apply the theories in addressing ethical dilemmas common to modern health care. Prereq: NURS 315, NURS 316, NURS 338, and NURS 339, all with grades of C or better. Coreq: NURS 341 and one of the following: NURS 350 or NURS 352 or NURS 354 or NURS 356.

NURS 345. Nursing Informatics III: Clinical NIS. 2 Units.
The focus of this course is directed toward the understanding and use of information technologies and systems that support decision making in nursing practice, administration, research and education. Tools such as list servers, the World Wide Web, e-mail and databases may be used to augment the knowledge base in the course. Recommended preparation: RN license. Prereq: NURS 120 with grade of C or better. Coreq: NURS 320 and NURS 360.

NURS 346. Nursing Informatics IV: Applications. 2 Units.
The focus of this course is directed toward the advanced informatics concepts and the implementation of selected applications within the health care setting. Systems analyzed and implemented may range from those used for patient care within the inpatient environment to those used in community or outpatient environments. Affected users of the systems may be clients, families, nursing or other health care professionals. Prereq: NURS 345 or permission.

NURS 350. Concepts and Management in Geriatric Nursing. 9 Units.
This course will introduce concepts of rehabilitation, family nursing, geriatric nursing, and geriatric mental health and assist students in applying these concepts in a long-term care setting. Content will focus on assessment and intervention strategies for health problems common in the older adult. This will include a focus on developmental issues in the elderly, the assessment and management of depression. The course will also include content on assessment and intervention to improve the physical and functional capacities of the elderly, exercise interventions to improve cardiovascular and muscular capacity required for daily activities. Prereq: NURS 250, NURS 370, NURS 371, NURS 372, NURS 373, all with grades of C or better. Coreq: NURS 341 and NURS 343.

NURS 352. Acute Care III. 9 Units.
This course focuses on the knowledge and skills necessary to provide nursing care for patients with complex problems. Emphasis is on nursing strategies designed to provide comprehensive care to patients and their families affected by acute illness. Clinical practice is directed toward the care of acutely ill adults. Prereq: NURS 370, NURS 371, NURS 372, NURS 373, all with grades of C or better. Coreq: NURS 341 and NURS 343.

NURS 354. Nursing Care of Critically Ill Adults. 9 Units.
This course focuses on the integration of knowledge and skills to provide effective and efficient nursing care to critically ill adults. Emphasis is on nursing strategies directed towards the care of the critically ill patient with a focus on use of biomedical technology, planning and managing patient care, and beginning care of patients with complex care needs. Prereq: NURS 338, NURS 370, NURS 371, NURS 372 and NURS 373, all with grades of C or better. Coreq: NURS 341 and NURS 343.
NURS 356. Nursing Care of Critically Ill Neonates, Infants, and Children. 9 Units.
This course focuses on the knowledge and skills necessary for beginning practice in the nursing care of critically ill neonates, infants, and children. Emphasis is on nursing strategies directed toward the application of basic principles of critical care nursing with attention to special needs of critically ill neonates, infants, and children and their families. Prereq: NURS 370, NURS 371, NURS 372, NURS 373.

NURS 360. Community Engagement Seminar V. 1 Unit.
This public health nursing course is designed to develop student knowledge, skills, and attitudes in providing culturally competent health care to diverse populations, using the service learning model, by analyzing key community components that influence health and wellness. Students will explore nursing's role as a community health advocate in the promotion of health and the elimination of health disparities. Utilizing a balance between knowledge-centered and skill-centered approaches to delivering culturally competent care, students will engage in both traditional classroom and transcultural experiential learning encounters. Prereq: NURS 310 with grade of C or better.

NURS 370. Information Technologies in Health. 1 Unit.
The focus of this course is the application of advanced information and communication technologies in the health care of communities and populations. Building on a base of consumer informatics, the course will explore Geographic Information Systems (GIS), data mining techniques, telemedicine technology, and advanced communication technologies in the context of global health. Prereq: NURS 315, NURS 316, NURS 338, NURS 339, all with grades of C or better. Coreq: NURS 371, NURS 372 and NURS 373.

NURS 371. Public Health Nursing. 3 Units.
In this course, students will utilize a problem-based approach to develop knowledge and specific competencies in applying key concepts of public health, public health nursing and epidemiology. Through guided observation and classroom experiences, students will discover strategies to assess, plan, implement and evaluate population-focused programs for health promotion and disease prevention. Prereq: NURS 315, NURS 316, NURS 338, NURS 339, all with grades of C or better. Coreq: NURS 370, NURS 372 and NURS 373.

NURS 372. Health in the Global Community. 3 Units.
This course focuses on an analysis of the forces shaping community and global health patterns. Drawing on multidisciplinary sources, this course explores the impact of these global processes as they manifest in the health of our own and other societies. Emphasis is placed on analysis of the broad cultural, environmental, social-economic, and political systems that contribute to health status and outcomes, health policies, and health care delivery around the world. Counts as CAS Global & Cultural Diversity Requirement. Prereq: NURS 315, NURS 316, NURS 338, NURS 339, all with grades of C or better. Coreq: NURS 370, NURS 371 and NURS 373.

NURS 373. Global Health Practicum. 5 Units.
The purpose of this practicum is to provide students with the opportunity to analyze the concepts of health and health care, health policy and finance, culture and ethics through a preceptored, 10-week community-based immersion experience in local, national, or international settings. Students will apply epidemiological techniques, the skills of negotiation, partnership building, community assessment and nursing science in the identification and analysis of a health problem leading to the development of an intervention. Counts as SAGES Senior Capstone. Prereq: NURS 315, NURS 316, NURS 338, NURS 339, all with grades of C or better. Coreq: NURS 370, NURS 371 and NURS 372.

NURS 379. Independent Study. 1 - 12 Unit.
Independent guided study for undergraduate students with special needs or interests.

NURS 400. Guided Study in Nursing. 1 - 18 Unit.
Independent study for students with special needs and interests.

NURS 401. Statistics for Health Sciences. 3 Units.
This course examines statistical methods of analyses of variance and multiple linear regression. Content includes ANOVA, repeated measures analysis of variances, correlation analysis, and multiple linear regression. Learning statistical theories is coupled with practice of data analysis using statistical software. This course is for graduate students in nursing and health sciences. It is not for credit toward any undergraduate or graduate degrees in Statistics. Recommended preparation: completion of basic statistics within five years of admission to program. Prereq: STAT 201.

NURS 404. Emergent Care of the Child. 2 Units.
This course incorporates biological, developmental, psychological, emotional, social, and cultural aspects of care. The emphasis is on pathophysiology, assessment, diagnostic approaches, and interventions specific to emergent care of infants, children, and adolescents. Advanced therapeutics are introduced. Recommended preparation: Certification in PALS and neonatal resuscitation or concurrent enrollment in NUNP 444. Prereq or Coreq: NUNP 444.

NURS 405. Inquiry I - Theoretical Foundations. 3 Units.
This course provides an introduction to conceptual and theoretical thinking. Students will examine knowledge development in nursing, conceptual structures, and their uses as a basis for nursing practice and research.

NURS 406. Flight Nursing Seminar I. 1 Unit.
This seminar course provides a forum for preparing students to care for patients requiring air transfer to specialty care facilities. Special emphasis is placed on advanced procedures, flight physiology, and environmental influences on the clinical approach in order to apply acute care competencies to flight nursing practice. Prereq or Coreq: NUNP 443.
NURS 407. Flight Nursing Seminar II. 1 Unit.
This seminar continues to prepare students to care for patients requiring air transfer to specialty care facilities. Special emphasis is placed on clinical approaches to patient management across the lifespan. Recommended preparation: ACLS, PALS, and neonatal resuscitation certification. Recommended preparation or concurrent enrollment in NUNP 444, NURS 406, NURS 404.

NURS 409. Specialty Assessment and Diagnostics in Cardiovascular Nursing. 2 Units.
This course provides the basis for the selection and interpretation of assessment and testing strategies during the process of differential diagnosis of cardiovascular problems. Lecture is supplemented with specific clinical lab experiences.

NURS 410. Cardiovascular Nursing Seminar I. 1 Unit.
This seminar course focuses on cardiac rhythm abnormalities and their management. Prereq or Coreq: NURS 430. Coreq: NURS 409.

NURS 411. Cardiovascular Nursing Seminar II. 1 Unit.
This seminar course focuses on the management of complex cardiovascular disease. Prereq: NURS 410.

NURS 416. Integrated Assessment of the Neonate for Midwives. 1 Unit.
This course introduces principles fundamental to the integrated assessment of the neonate. Gestational age assessment, assessment of genetic risks, and physical assessment skills are developed.

NURS 425. Inquiry II - Research Process. 3 Units.
This course emphasizes scholarly inquiry, scientific integrity and scientific investigation. It includes study of the research process, particularly design, sampling, data collection and analysis, and interpretation and reporting of findings. Recommended preparation: NUND 201 or STAT 201. Prereq: NURS 405.

NURS 430. Pharmacology and Therapeutics. 3 Units.
Examination of the major categories of pharmacologic agents and application of pharmacologic concepts in the clinical setting. Emphasis is placed on understanding the physiologic action of the drugs, expected patient responses, and major side effects. Major-specific seminars integrate knowledge of pharmacology into clinical practice. Recommended preparation: NURS 453, RN license or consent of instructor.

NURS 431. Psychosocial and Spiritual Dimensions of Advanced Nursing Practice. 2 Units.
This course will focus on psychosocial and spiritual dimensions of care. Psychosocial aspects of care will address interviewing, counseling and coaching skills. In addition, skill in assessing depression, suicidal ideation and substance abuse issues will be addressed. The spiritual domain of health will be emphasized.

NURS 440. The Challenge of Suffering: Meaning, Responses, and Potential for Growth. 3 Units.
The interdisciplinary course will address the multiple facets of suffering, including the meaning of suffering, potential for growth and transformation, policies and practices that influence suffering, and those factors that affect quality of life and quality of death. Concepts and theories will be drawn from the social sciences and humanities, as well as from the health disciplines. The influence of socio-political, cultural, and economic forces of suffering will be addressed. Graduate standing or permission of instructor is required. Offered as: ANTH 442 and MEDS 9440 and NURS 440.

NURS 441. Mental Health of Older Adults. 1 Unit.
This course focuses on discussion of the consultative, investigative, and planning skills to meet the special mental health needs of the elderly. Concepts of mental health promotion, mental illness prevention, knowledge development, implementation, and evaluation of psychotherapeutic nursing strategies are examined. The examination of diverse mental health disorders in the aged mental health service delivery are included.

NURS 442. Mental Health Interventions with Older Adults. 1 Unit.
This course focuses on the theoretical basis of psychosocial assessment and intervention with older adults and their families, with an emphasis on individual, group, and family interventions. Concepts from individual, family, and group modalities and the process of consultation and education are examined. Students will also learn the components of individual and family assessment in "well elders" and the identification of mental disorders, including problems with memory and cognition. This knowledge base serves as the foundation for developing and applying interventions in practice to meet the mental health needs of older adults. Prereq or Coreq: NURS 441.

NURS 443. Collaboration, Consultation, & Credentialing in Advanced Practice Nurs. 1 Unit.
The focus of this course is the process of consultation and collaboration in advanced practice nursing. The organizations that are involved in promoting and assisting advanced practice nurses (APNs) will be addressed. The similarities and differences in the roles of the APN will be explored. The process of credentialing APNs will also be examined.

NURS 443A. Role Development in Advanced Practice. 1 Unit.
The focus of this course is the study of the multiple roles integrated into advanced practice nursing including principles of management and leadership. Strategies to market the value of the advanced practice nurse (APN) role and the individual APN are addressed.

NURS 443B. Role Development in Advanced Practice. 1 Unit.
The focus of this course is the examination of the process of teaching, learning, and evaluation. A variety of teaching modalities applicable across the lifespan will be explored.

NURS 444. Ethics and End of Life Issues in Advanced Nursing Practice. 1 Unit.
The focus of this course is ethical decision-making for advanced nursing practice. The interaction between the health care delivery system and ethical decision making is explored. The role of the nurse in advance practice in providing end of life care to patients and families is emphasized.

NURS 444A. Health Care Delivery and Finance in Advanced Practice. 1 Unit.
The focus of this course is the study of the financial and business factors related to the health care delivery system and advanced practice nursing. Students will discuss strategies related to reimbursement, business practices, billing, and coding.

NURS 444C. Health Policy Legislation and Legal Issues in Advanced Practice. 1 Unit.
The focus of this course is the critical analysis of health policy and legal issues. Strategies for influencing the regulatory process will be explored.

NURS 453. Advanced Pathophysiology. 4 Units.
This course focuses on the alterations produced by injury and disease across the lifespan to distinguish normal physiology from pathophysiologic process. Biologic concepts and relationships that contribute to capacity for health and vulnerability to illness are examined.
NURS 454. Well Woman Health Care. 3 Units.
Study of selected theoretical formulations and models applied by professional nurses in the promotion of growth and wellness in adolescent and adult women. Emphasis on conception, decision making, sexuality and health teaching. Acquisition of knowledge and skill related to physical and psychosocial health assessment of pregnant and nonpregnant clients. Individually planned experiences with nurse faculty who are serving as primary care givers in maternity, family planning and gynecologic care settings. Prereq or Coreq: NURS 453 and NURS 459.

NURS 455. The Childbearing Family. 4 Units.
This course will focus on analysis and applications of the nursing strategies to enhance health-seeking behaviors of the pregnant family during the maternity cycle and on the education of parents about the childbearing year. The normal aspects of the pregnant woman and the identification of any deviations from the normal are central to the content. The course will also emphasize the enhancement of the pregnant family's childbirth experience through utilization of the teaching-learning process. The student will learn to evaluate and apply techniques relative to childbirth education. Clinical experiences will be planned in antepartum, neonatal, childbirth education and home settings. Prereq: NURS 454. Coreq: NURS 430.

NURS 457. Labor and Birth. 5 Units.
The art, theory, and the science for nurse-midwifery practice is expanded through research, critical analysis of disseminated research, quality assurance, and other scholarly activities. The focus of this course is the application of theory, practice and research by advanced practice nurses in the promotion of health and wellness of women, newborns and their families during intrapartum and the immediate postpartum period. Emphasis is placed on the health-seeking behaviors of the mother and her family using a holistic approach which respects cultural, ethnic, and racial diversity in the provision and evaluation of care. Supervised clinical experience focuses on achieving the foundation for competent practice as a beginning practitioner. This includes anticipating and identifying complications and participating in consultations, referrals, and collaborative management. Prereq: NURS 430.

NURS 459. Advanced Health Assessment. 3 Units.
This course is designed to prepare the student to refine history taking and physical examination skills for individuals across the lifespan. It incorporates diagnostic reasoning skills and interpretation of data which provides the basis for advanced nursing practice.

NURS 460A. Theoretical Basis for Individual Counseling. 1 Unit.
This course emphasizes the ongoing development of the counseling relationship across the life span. The professional encounter between the individual and advanced practice nurse will be formulated based on the Helping Model for problem management. Students will differentiate counseling and therapy. Students will also develop and apply crisis intervention skills, interviewing skills and alternative adjunct therapies.

NURS 460B. Theoretical Basis for Individual Psychotherapy. 1 Unit.
This course will build therapeutic skills for the advanced practice nurse specializing in mental health. Students will master Helping Skills in their interventions with individuals with psychopathology. Prereq: NURS 460A. Prereq or Coreq: SSBT 548 or PSCL 524.

NURS 465. Psychopharmacology. 2 Units.
Course content will focus on drugs commonly used to treat psychiatric disorders and clinical implications for patient and family.

NURS 466. Promoting Health Across Boundaries. 3 Units.
This course examines the concepts of health and boundary spanning and how the synergy of the two can produce new, effective approaches to promoting health. Students will explore and analyze examples of individuals and organizations boundary spanning for health to identify practice features affecting health, compare and contrast practices and approaches, and evaluate features and context that promote or inhibit boundary spanning and promoting health. Offered as EPBI 468, MPHP 468, NURS 468.

NURS 473. Advanced Psychopathology Across the Lifespan: Part I (Infant through Young Adult). 2 Units.
The course focuses on the assessment and diagnosis of psychopathology in children of all ages, infants through young adults. Behavioral deviations from normal growth and development will be assessed while considering age, social, cultural, and economic differences. The responses of family members to psychopathology in these age groups will be discussed.

NURS 474. Advanced Psychopathology Across the Lifespan Part II (Adult and Older Adult). 2 Units.
The course focuses on the assessment and diagnosis of psychopathology in adults and older adults. Behavioral/cognitive deviations from normal growth and development will be evaluated while considering socio-cultural differences and age-appropriate behavior. Responses of family members in relation to adults or older adults' psychopathology will be discussed. Prereq: NURS 473.

NURS 475. General Systems Theory: Foundations for Practice. 2 Units.
This foundational seminar introduces General Systems Theory as a framework for understanding complex entities comprised of component parts that are in constant and mutual interaction. The concepts covered will emphasize the openness and flexibility of a system by attending to its entirety as opposed to focusing on separate parts. The focus is on the organizational structure and processes of that system that are circular in nature through cybernetics processes such as feedback loops which allow system adaptation and transformation. These changes enable systems to become more organized and efficient and to develop the capacity to repair themselves. Students will apply General Systems Theory to their disciplines.

NURS 476. Advanced Practice Seminar: Blended Role of Psychiatric-Mental Health APRN. 1 Unit.
Within the context of family and community, students will explore the blended role of the Psychiatric Mental Health Nurse Practitioner and Psychiatric Mental Health Clinical Nurse Specialist. A focus of the course is boundaries and professional development in the blended role. Students will examine ethical, legal, cultural and professional standards as they relate to micro and macro systems.
NURS 481. Family Systems Theoretical Foundations. 2 Units.
This course focuses on the major contemporary theoretical approaches and therapies for conceptualizing and working with families across the lifespan. Attention is given to families challenged by situations such as stress, trauma, violence, psychiatric disorders, and substance abuse. Prereq: NURS 453 and NURS 473 and NURS 475 and NURS 476 or requisites not met permission.

NURS 482. Family Systems Integration and Application. 1 Unit.
This practicum experience in the application of family theory addresses the professional encounter between the advanced practice nurse (APN) and the family system with attention to health promotion and psychiatric disorder management. Special consideration is given to policy, legal, cultural, and ethical issues regarding family care and practice. Group supervision of the practicum experience is an expectation. Prereq: NURS 473 and NURS 475 and NURS 476. Coreq: NURS 474 and NURS 481.

NURS 484. Individual and Group Modalities for Family Systems Practice Across the Lifespan. 3 Units.
This seminar addresses therapeutic modalities and their foundation as they are applied to families across the lifespan. Brief, individual, and group modalities will be studied in the context of Family Systems Theory with a focus on differences in family constellations and developmental stages. The selection of modalities for families will consider the implications of cultural and gender differences, vulnerable populations, and the stigma of psychiatric illness. Prereq: NURS 481 and NURS 482.

NURS 485. Practicum and Supervision: Family Systems Practice Across the Lifespan. 2 Units.
This practicum experience involves the professional encounter between the individual, group members, and nurse therapist within the context of family systems theory. The nurse therapist employs nursing strategies and concepts from psychiatry and behavioral and social sciences related to the promotion of mental health and biopsychosocial treatment in individual and group members across the life span. Attention will be given to situations such as stress, loneliness, trauma, violence, and substance abuse. Group supervision of the practicum experience is an expectation. Prereq: NURS 481 and NURS 482. Coreq: NURS 484.

NURS 486. Modalities for Family Systems Practice: Vulnerable Family Populations. 3 Units.
Within the context of family and community in urban and rural settings, students will explore the special needs of families who are currently manifesting mental health and substance abuse disorders. Examples of vulnerable families include those who have been exposed to acute and chronic stress, natural and man-made disasters, and military-related and other forms of trauma. The needs of youth and adults who are incarcerated will be addressed. Students will encounter the diverse nature of family relationships, including blended, migrant, and immigrant families; relationships that are defined by choice; and families residing on reservations and in religious enclaves. A variety of treatment modalities will be discussed. Prereq: NURS 482 and NURS 485.

NURS 488. Theoretical Basis of Practice and Supervision in Consultation, Collaboration. 2 - 3 Units.
This course focuses on the professional encounter between the nurse consultant-educator and families, work groups, and communities within the context of an environment of care. The nurse consultant-educator applies general systems and family systems theory to enhance the capacity of families to learn, adapt, and develop through mutual interaction and cybernetic processes based on systems theory. The roles of the nurse, educator, researcher, administrator, and therapist supervisor are explored. The theories and processes of consultation, collaboration, and adult education are discussed relative to mental health and community education. Prereq: NURS 484 and NURS 485.

NURS 489. Practicum and Supervision in Role of Family Systems Psych-Mental Health Advanced Practice Nurse. 3 Units.
This practicum course emphasizes the professional encounter between the psychiatric mental health nurse practitioner/clinical nurse specialist (NP/CNS), families, organizations, communities, and agency personnel providing mental health services in the context of an environment of care. Systems variables that influence the learning, adaptation, and development of families, organizations and systems are emphasized. The psychiatric nurse clinician functions as a change agent in direct and indirect care through the role of practitioner, educator, consultant, planner, evaluator, and researcher. Prereq: NURS 484 and NURS 485. Coreq: NURS 487

NURS 491. Public Health Nursing I: Foundations of Advanced Public Health Nursing. 3 Units.
This is the first course in the Public Health Nursing major. It is designed to introduce students to the role and functions of the advanced public health nurse and emphasizes the importance of population/community-based focused practice. Synthesizing knowledge from the discipline of nursing and public health sciences, students will examine the historical, philosophical, legal, and ethical foundations of community health nursing practice. This course requires a 60 hour community engagement experience in an existing population focused program. Coreq: NURS 405.

NURS 494. Global Health Seminar. 3 Units.
The focus of this course is the issues and trends in global health from both a nursing and a trans-disciplinary perspective. The course covers how international social, political, economic, environmental, and cultural issues affect health and health care. Particular emphasis is placed on nursing’s contribution to global health issues and outcomes. Offered as: NURS 394 and NURS 494. Coreq: INTH 301/401.

NURS 495. Public Health Nursing II: Assessment and Planning for the Health of Communities. 2 Units.
This is the second course in the Advanced Public Health Nursing major. Students will be introduced to assessment and program planning models based on theoretical underpinnings. Students will learn to identify appropriate evidence-based interventions based on primary, secondary, and tertiary prevention strategies to attain expected outcomes. Prereq: NURS 491.

NURS 496. Public Health Nursing III: Program Evaluation and Dissemination. 3 Units.
This course completes the Advanced Public Health Nursing major didactic content. A case method approach will be used to develop strategies for program evaluation. This course will explore approaches to encourage program dissemination, sustainability, community empowerment, coalition building, and collaborative activities with stakeholders. Prereq: NURS 495.

NURS 497. Public Health Nursing Clinical. 1.5 - 4.5 Unit.
The clinical hours for the Advanced Public Health Nurse major include population assessment, planning, implementation, and evaluation. The clinical content integrates the didactic content from the NURS 491, 495, and 496 courses. Students, in consultation with faculty and partnership with a community-based organization, identify a population, complete needs assessment, identify health assets and needs, develop and implement a program in consultation with stakeholders, and systematically evaluate the effectiveness of the program. Students can only implement the clinical aspects concurrent with or following the successful completion of the didactic content. For example, students may enroll for clinical hours for assessment while or after they have completed NURS 491 content. Coreq: NURS 491, NURS 495, or NURS 496.
NURS 499. The Nurse Executive-Personal & Professional Challenges in Health Care. 3 Units.
Offered toward end of the M.S.N./M.B.A. program and prepares the graduate for entry into a nurse management role. The focus will be on contemporary role demands in nursing management, ranging from head nurses to vice presidents of nursing to heads of community health and mental health agencies, and taking account of all regions of the U.S. Emphasis will be placed on exploring knowledge and skill requirements of nursing management, current developments (such as nursing values, goals, and tasks), and the strategic and operational configuration of hospitals and other health care agencies.

NURS 500. Master's Thesis. 1 - 4 Unit.
Systematic investigation of a research problem selected by the student for independent study. Prereq: NURS 415.

NURS 501. Clinical Knowledge. 3 Units.
This course examines the nature of theory and strategies for theory development in nursing. Students will explore a variety of strategies and select an approach for beginning theory development that addresses nursing phenomena in their area of interest.

NURS 502. Inquiry III - Evidence-Based Nursing Practice. 2 Units.
This course focuses on linking research evidence to nursing practice. Processes for implementation and evaluation of evidence-based nursing practice will be included. Prereq: NURS 425 or NUND 404C.

NURS 503. Inquiry Practicum. 1 - 2 Unit.
This course focuses on the development of competencies in scientific inquiry. Such competencies are achieved through participation in a research study or evidence-based project related to nursing science with dissemination of the experience. Prereq or Coreq: NURS 502.

NURS 504. Nursing Epistemology. 3 Units.
This course involves the study of knowledge shared among members of the discipline, the patterns of knowing and knowledge development, criteria for evaluating knowledge claims and philosophy of science. The course is a search and discussion experience aimed at enabling graduate students to become knowledgeable about approaches to the study of disciplines and scientific knowledge development. Forces affecting the development of knowledge, the origins of key terms and concepts, and identification of major themes in nursing will be explored.

NURS 505. Clinical Knowledge. 3 Units.
This course is structured to allow students to develop clinical knowledge about their area of interest and to begin the process of identifying clinical research questions. Supervision for this experience will be twofold. Students will be placed with an expert clinician with a minimum of a master's degree (in nursing) to identify and arrange relevant clinical experiences. The student and the clinician will work with the course faculty to create opportunities for the student to experience the clinical phenomena of interest, which may include actual "hands-on" experience. Students will also meet regularly with the other students in the course and the course faculty for group supervision that focuses on linking clinical practice issues to research questions. Course requirements would include eight hours of practicum experiences per week.

NURS 506. Context of Care. 3 Units.
This course is designed to allow students to explore the social, political, economic, and health care issues that form the context for their clinical phenomena of interest. The intent of this course is for the student to become knowledgeable about the broader forces that affect their clinical problem. Topics might include current research in their field, as well as health policy related to their phenomena, political entities that affect funding, and the regulation of practice in their area of interest. The student will need a content expert to help them plan and coordinate their practicum experiences, which should be multiple and varied, and include exposure to both local and state level entities. Prereq: NURS 507 or equivalent.

NURS 507. Context of Care. 3 Units.
This course focuses on conceptualization of a research problem within a nursing perspective, threats to validity, sampling, measurement, and survey, quasi-experimental, and experimental designs. The emphasis is on the application of these strategies while encouraging flexibility in conceptualizing a study using different research methods. Students will develop a research study using methods consistent with theoretical and empirical knowledge and the nursing perspective. Coreq: NURS 532.

NURS 508. Health Disparities. 3 Units.
This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, EPBI 510, MPHP 510, NURS 510, and SASS 510.

NURS 511. Strategies for Theory Development. 3 Units.
This course examines the nature of theory and strategies for theory development in nursing. Students will explore a variety of strategies and select an approach for beginning theory development that addresses nursing phenomena in their area of interest.

NURS 512. Qualitative Nursing Research. 3 Units.
This course is a study of qualitative research approaches directed toward the development of nursing knowledge. This course will include methods and issues in data collection, analysis, and critique of research findings. It will focus on the philosophical and epistemological foundations of qualitative research, present an overview of various methodological approaches, examine in depth the criteria for rigor, and analyze ethical issues in qualitative methodologies.

NURS 513. Advanced Nursing Research II. 3 Units.
The discussion of research designs and their rationale for use will be continued. Principles of measurement, study implementation and data analysis will be discussed. The development of a research proposal will be the expected outcome of this two-semester sequence. Prereq: NURS 401 or STAT 401 and NURS 520.

NURS 522. Advanced Internship in Cardiovascular Nursing. 1 - 5 Unit.
This 600-hour internship is designated to provide the master's prepared ACNP-Cardiovascular Nursing Program graduate with the experience needed to enter practice as an APN caring for patients with complex cardiac disorders. Recommended preparation: completion of appropriate NP program. Prereq: NURS 411.

NURS 523. Advanced Internship in Flight Nursing. 1 - 5 Unit.
This internship is designed to provide the Master's prepared ACNP-flight nurse concentration graduate with experience needed to qualify for the Certification Examination in Flight Nursing. This experience consists of a 600 hour precepted internship in a flight nursing setting. Recommended preparation: Completion of M.S.N. program focus in Flight Nursing and ACNP certification, certification in ACLS, PALS, and neonatal resuscitation.

NURS 530. Advanced Nursing Research Methods I. 3 Units.
This course focuses on conceptualization of a research problem within a nursing perspective, threats to validity, sampling, measurement, and survey, quasi-experimental, and experimental designs. The emphasis is on the application of these strategies while encouraging flexibility in conceptualizing a study using different research methods. Students will develop a research study using methods consistent with theoretical and empirical knowledge and the nursing perspective. Coreq: NURS 532.
NURS 531. Advanced Nursing Research II. 3 Units.
This course is the second in a two-course sequence of research methods. It focuses on power analysis, data management, experimental and epidemiological designs and designs to assess change. Included is a discussion of ethics and concerns regarding human subjects. The emphasis is on the application of research strategies while encouraging flexibility in conceptualizing a study using different methods. The development of a research proposal is the outcome of this two-semester sequence. Prereq: NURS 530 and NURS 532 or consent of instructor.

NURS 532. Basic Statistics: Fundamentals for Analysis. 3 Units.
The purpose of this course is to provide the student with the fundamentals needed for analysis of research problems. It will review theoretical foundations of statistical analysis and inference, probability theory, and hypothesis testing. Use of measures of central tendency, basic parametric and non-parametric tests will be discussed, with specific application to health problems. Use of SPSS will be included. Prereq: Graduate standing or permission of instructor.

NURS 557. Advanced Midwifery. 6 Units.
In consultation with faculty, students select a nurse-midwifery service where they assume the responsibilities of beginning practitioner for a minimum of 10 weeks of intensive supervised clinical practice. Students synthesize the nurse-midwifery management process while providing continuity of care and integrating all core competency areas. Students explore the professional aspects of nurse-midwifery practice. Historical development of the profession will be emphasized as a framework for understanding current issues related to nurse-midwifery education and practice in the United States. Prereq: NURS 457.

NURS 559. Advanced Practice in Nursing Care of Women. 4 Units.
Integration of concepts, theories, conceptual, and theoretical models, focused on supporting the health-seeking of women and their families as they contend with intervening factors. Emphasis on psychosomatic, acute and long-term illnesses and their interplay with psychosocial problems encountered by women. Clinical practice and seminars will include providing nursing care to women and their families in all stages of life cycle. Prereq: NURS 455.

NURS 577. M.S.N./M.B.A. Management Practicum. 3 Units.
The student will enter the M.S.N./M.B.A. program with a minimum of two years of recent clinical nursing experience, and may or may not have had any management experience. This practicum is designed to provide a guided experience in a management context. NURS 577 will be offered in the spring semester of the second year of the M.S.N./M.B.A. program, after the student has completed nearly all basic courses in both schools. The management practicum will provide onsite experience in management activities. Most practicum sites will be area health care agencies. In some cases, students may alternate opportunities addressing health-related policies in area businesses or corporations. Typical practicum experiences will engage students in management projects, special assignments and/or research. Students are expected to use current management and nursing knowledge and will often use the research process in completing the practicum experience. They will work closely with nurse executives and managers within their organizations. Prereq: NURS 468 and NURS 471.

NURS 578. Curriculum and Instruction. 3 Units.
The purpose of this course is to explore the theoretical underpinnings of education and to examine innovative approaches to critical thinking. Students are provided the opportunity to analyze philosophies and principles of education along with teaching and learning styles. The course will focus on curriculum planning and development congruent with the philosophy and objectives of a nursing program. Curriculum development includes determination of program and course objectives, along with selection and organization of appropriate learning experiences to meet these objectives. Techniques for instruction in the classroom, laboratory, and clinical settings are explored.

NURS 601. Special Problems. 1 - 12 Unit.
This course is offered, with permission, to Ph.D. students in Nursing undertaking reading in a field of special interest.

NURS 609. Health Care Policy and Planning. 3 Units.
The primary focus of this course is to explore the leadership role of nurses in health policy development and implementation as well as the role of research in health care policy formation and planning. Special emphasis is placed on selected national and international health policy issues that form the socio-political and economic context of nursing care and practice. Ethical dimensions of public policy formulations and implementation are highlighted. Offered as NUND 508 and NURS 609.

NURS 615. Topical Seminar in Health Science Research. 3 Units.
This Ph.D. course is designed to provide in-depth knowledge of research in a given area. Opportunities are provided to apply knowledge for further development of the student's research interests and ideas. An in-depth examination of selected theoretical and methodological approaches to the development of research related to human science will be emphasized. Interrelationships among theory, research, and knowledge from nursing and related disciplines will be explored.

NURS 619. Theoretical Foundations of Educational Testing and Evaluation. 2 Units.
In this course, an overview of educational measurement and evaluation is provided. Methods of evaluating teaching effectiveness, student learning, and student performance are explored, with particular emphasis placed on test construction and analysis. Prereq: NURS 578.

NURS 620. Action Research and Program Evaluation. 1 Unit.
This course introduces the student to the concept of purposeful evaluation. The applicability of action research and evaluation to the change process and to continuous improvement within various venues will be explored. The iterative, participative, and emergent nature of generation of new knowledge and practice innovations will be discussed. Offered as NUND 480 and NURS 620. Prereq: NURS 619.

NURS 621. Teaching Practicum. 1 - 6 Unit.
In this preceptored teaching practicum, the student may engage in classroom, laboratory, and clinical teaching assignments in nursing. The student will be expected to use current educational theory and nursing knowledge in completing the practicum experience (minimum 60 hours). Offered as NUND 615 and NURS 621. Prereq: NURS 578, NURS 619, NURS 620. Coreq: NURS 578, NURS 619.

NURS 630. Advanced Statistics: Linear Models. 3 Units.
This course is focused on advanced procedures for data analysis and statistical inference in health research. The course is devoted to discussion of linear models, including simple and multiple regression, logistic regression and application to study design. The role of assumptions and theory in guiding the analysis plan is emphasized through lecture, readings, and critical evaluation of published research in the student's area of interest. Prereq: NURS 532.
NURS 631. Advanced Statistics: Multivariate Analysis. 3 Units.
This course focuses on selected advanced multivariate topics and procedures in health research. Topics will be covered through lecture, readings, computer analysis as well as critical analysis of published research in the health sciences fields. Topics to be covered in this course include: survival analysis, factor analysis, path analysis, repeated measures ANOVA and advanced regression techniques (logistic, loglinear, mixed models). Prereq: NURS 530 and NURS 531 and NURS 532 and NURS 630.

NURS 632. Advanced Statistics: Structural Equation Modeling. 3 Units.
This course focuses on advanced data analytic procedures using structural equation modeling (SEM) in health research. Content will be explored through lecture, computer analysis, and critical analysis of relevant research. Topics covered in this course include: SEM with latent variables, path analysis adjusting for measurement error, nested models, and advanced SEM techniques, e.g., exploratory SEM, autoregressive models, latent growth curves, and latent class analysis using mixture modeling. Prereq: NURS 630 or Instructor Consent

NURS 671. Proposal Development. 1 - 6 Unit.
Provides an opportunity for guided development of a candidacy proposal through planned contact with a designated committee of faculty members. The aim is to assist the student in the development of a refined proposal with strong scientific merit. The course should be utilized only by those with a candidacy proposal statement. Minimum 3 hours required for progression in program.

Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

School of Nursing Faculty

Professors
Barbara J. Daly, PhD, RN, FAAN
(Bowling Green University)
The Gertrude Perkins Oliva Professorship in Oncology Nursing; Professor of Nursing
Joyce J. Fitzpatrick, PhD, MBA, RN, FAAN
(New York University)
Elizabeth Brooks Ford Professor of Nursing
Faye A. Gary, EdD, RN, FAAN
(University of Florida, Gainesville)
The Medical Mutual of Ohio Kent W. Clapp Chair & Professor of Nursing
Mary E. Kerr, PhD, RN, FAAN, FCCM
(Case Western Reserve University)
May L. Wykle Professor of Nursing; Dean of Nursing
Susan M. Ludington, PhD, CNM, FAAN
(Texas Woman’s University)
Carl W. & Margaret Davis Walter Professor of Pediatric Nursing
Elizabeth A. Madigan, PhD, RN, FAAN
(Case Western Reserve University)
The Independence Foundation Professor in Nursing Education; Associate Dean for Academic Programs

Associate Professors
Elizabeth G. Damato, PhD, RN, CPNP-PC
(Boston College)
Associate Professor of Nursing; Assistant Director, DNP Program
Michael Decker, PhD, RN, RRT
(Case Western Reserve University)
Associate Professor of Nursing
Marguerite DiMarco, PhD, RN
(Case Western Reserve University)

Mandel School of Applied Social Sciences

The Jack, Joseph and Morton Mandel School of Applied Social Sciences (http://msass.case.edu) offers curricula leading to the Master of Science in Social Administration (MSSA) degree in social work, and to the Doctor of Philosophy (PhD) degree in social welfare. The school also operates a continuing education program for social work practitioners in the community.

Mission Statement

The mission of the Mandel School is to provide and integrate professional social work education, research, and service to promote social justice and empowerment in communities through social work practices locally, nationally and internationally.

A History of Innovation

Ranked among the nation’s top ten graduate schools of social work by U.S. News and World Report, and ranked number one in Ohio, the Jack, Joseph and Morton Mandel School of Applied Social Sciences has always committed itself to learning from and fostering the best in social work practice and to building social work’s knowledge base. Since its founding in 1915 as the nation’s first university-affiliated professional graduate school of social work, the Mandel School has been an innovator in professional education, where educators, researchers and practitioners work side-by-side to investigate, study and disseminate knowledge to bridge the gap between the classroom and communities in which social workers practice.

The Mandel School provides students with a solid foundation designed to build core competencies with its innovative Ability-Based Learning Environment, which allows graduates a great degree of flexibility and portability. Students choose concentrations in either Community and Social Development or Direct Practice, which offers specializations in Aging; Alcohol and Other Drug Abuse; Children, Youth and Families; Health; and Mental Health. Certificate programs include gerontology, global health, management and leadership, and school social work. Dual-degree programs enable Mandel School students to obtain their social work degree concurrently with a master’s degree in bioethics, law, management and public health.

The Mandel School believes that advanced practitioners are strategists of change, working in partnership with others to enhance the caring capacity of communities. The concentrations structure cross-trains Mandel School students, who build foundations in both areas that bring a breadth of knowledge to their work lives, allowing them the flexibility to pursue their interests even as they change over time. The school prepares advanced practitioners who become lifelong learners with the abilities needed to practice ethically and effectively with diverse populations and with systems of various sizes and types. Students learn to understand the dynamics of problematic social situations and to identify the strengths and resources in individuals, families and communities that offer the best solutions. The school is committed to a vision of social work practice as a force of social justice, empowerment, and the building of healthy communities. That commitment extends beyond our national borders with the Mandel School’s award-winning program of international study options.

The Mandel School counts among its alumni many prominent educators, government officials, accomplished practitioners, researchers, advocates, public-policy-makers, and chief executives of national and regional agencies. Faculty achievements in professional organizations, research, and agency consultation further extend the school’s reputation as an active participant in the advancement of social work practice.

A Mandel School education is more than preparation. It is an opportunity to join a national network of scholars and practitioners who are shaping the course of social work in communities throughout the world. The Mandel School is ranked seventh in faculty productivity among social work schools by Academic Analytics.

For nearly one hundred years, the Jack, Joseph and Morton Mandel School of Applied Social Sciences has stood at the forefront of social work education, introducing innovations in teaching, research, and practice at every step of the way, with an approach that integrates theory and practice like no other.

At the heart of the Mandel difference is experience – not just the in-depth experience of our distinguished faculty – but the experience students obtain working in the real world of social work from the time they start their education here. The Mandel School is unique among social work schools for its students’ paid field placements, providing invaluable work experience, and, by making the education more affordable, extending the opportunity to an even broader range of students. Students learn through the Mandel School’s teaching and by their own doing. What they discover in a classroom can be applied to real life at their placements. Graduates leave the Mandel School prepared to handle the demands of social work.

Mandel students take their places alongside long-time professionals in a variety of social work fields in placements at one of the more than 350 agencies with which the Mandel School collaborates, understanding firsthand the challenges of social work and sharing in its rewards. In a broad spectrum of local and regional organizations, students develop skills in direct practice, policy analysis and development, research, management and community development.

Accreditation and Licensure

The Jack, Joseph and Morton Mandel School of Applied Social Sciences is accredited by the Council on Social Work Education and the Ohio Chemical Dependency Professionals Board of Ohio.

The Master of Science in Social Administration (MSSA), the social work master’s degree program (MSW for many other programs), at the Jack, Joseph and Morton Mandel School of Applied Social Sciences is accredited by the Council on Social Work Education, a nationally recognized professional accrediting association for social work graduate and undergraduate programs.

The Jack, Joseph and Morton Mandel School of Applied Social Sciences’ Alcohol and Other Drug Abuse (AODA) curriculum is accredited by the Ohio Chemical Dependency Professionals Board of Ohio. The accreditation indicates that the AODA curriculum meets the formal master’s degree education requirements for the top level of licensed independent chemical dependency counselors in Ohio.

The Master of Science in Social Administration (MSSA) degree fulfills part of the requirements of social work licensure in fifty (50) states in the United States. For further information about various licensing requirements by state, visit the website of the Association of Social Work Boards (ASWB) (http://www.aswb.org).

The Master of Nonprofit Organizations (MNO) Degree Program is a recognized member of Nonprofit Academic Centers Council (NACC).

**Academic Regulations**

**Non-Degree Study**

Foundation courses may be taken on a non-degree basis with the permission of the assistant dean for academic affairs. A maximum of 12 hours earned on a non-degree basis may be counted toward requirements for the master’s degree if the student is subsequently admitted as a degree candidate.

**Admissions and Application Information**

Admission to the master’s degree program at the Jack, Joseph, and Morton Mandel School of Applied Social Sciences is granted on a selective basis determined by the quality of the total application. An applicant for admission is expected to meet the following minimum requirements:

1. A bachelor’s degree from an accredited college or university.
2. Evidence of capacity to succeed in graduate level education based on undergraduate work and any previous graduate work. Previous work must include courses strong enough to ensure the applicant’s ability to do creditable work at the graduate level.
3. A minimum undergraduate grade-point average is 2.7. A Miller Analogies Test or Graduate Record Exam is required for applicants with less than a 2.7 grade point average. In exceptional cases,
applicants who lack the required academic credentials but whose other qualifications are outstanding may be admitted on a probationary basis. Students who enter on probation may not carry more than 15 credit hours in their first semester. Probationary students must achieve at least a 3.0 grade point average in their first semester of course work (minimum of six credits) to have their probationary status removed and continue in the program.

4. Evidence of a combination of personal qualities and values that are considered essential for the professional practice of social work and/or the non profit sector: strong moral character; strong analytical and verbal skills; a caring and compassionate nature; and a personal commitment to social justice, empowering individuals, and serving vulnerable and under-represented groups, communities and organizations.

5. The school may request a personal interview or additional information about an applicant if necessary.

Admission Procedures

Application materials for admission to the Jack, Joseph, and Morton Mandel School of Applied Social Sciences can be secured from the Office of Student Services, Jack, Joseph, and Morton Mandel School of Applied Social Sciences, Case Western Reserve University, 10900 Euclid Avenue, Cleveland, Ohio 44106-7164; by calling 800.863.6772; or by visiting the school’s website (http://rmsass.case.edu).

Students applying for full-time study in the social work program are admitted in the fall semester. Applications are accepted on a rolling admissions basis but the latest application date is May 15. The deadline for Intensive Weekend Program applications is May 30.

Students pursuing the MSSA in the online format are admitted in fall, spring, and summer semesters. Deadlines for completed applications are as follows: Spring semester: December 1; Summer semester: March 15; and Fall semester: June 15.

Students seeking admission to the Management of Nonprofit Organization degree program are admitted in summer, fall and spring. Deadlines for completed applications for Summer semester: March 15; Fall semester: June 15; and Spring semester: December 1.

Although applications are accepted for all programs on a rolling admission basis, applicants are strongly encouraged to apply early.

Advanced Standing (Social Work Students Only)

Advanced standing may be granted to students who have earned a bachelor’s degree in social work within the past seven years from an institution accredited by the Council on Social Work Education. Students must have earned a grade of B or better in each social work foundation course for which advanced standing credit hours are given.

Proficiency Examinations (Non-BSW Social Work Students Only)

Students without a bachelor’s degree in social work may waive the foundation courses in policy, socio-behavioral theory, and research by passing a proficiency examination. Successful completion of the exam(s) exempts the student from the requirement to complete the course(s). Elective course(s) may be substituted in order to fulfill graduation requirements. There is no fee or penalty associated with taking the proficiency exams. However, each exam may be taken only once. Exams are offered prior to the start of fall and spring semesters. Students must make reservations to take those exams with the Mandel School Office of Student Services.

Transfer

Students who are transferring to the Mandel School from another accredited graduate school of social work may apply for transfer credit for up to one full year of academic work and field education. Transfer students from social work programs must submit field work evaluations, official transcripts, and course syllabi.

Transfer credit (6 hour limit) may be given for related, but non-social work, coursework completed within the past five years. Credit hours must not have been applied toward a previous graduate degree. Students must have received a grade of B or better in any course for which transfer credit is sought. Course syllabi, request for transfer form and official transcript must be submitted to the Mandel School Office of Student Services.

International Students

Applicants from other countries follow the regular application procedure. International students must have completed available social work training in their own countries, and have had paid experience in the social welfare or nonprofit field prior to entering the professional degree program.

International students are required to furnish results of the Test of English as a Foreign Language (TOEFL) administered by the Educational Testing Service (http://www.ets.org/toefl). Results of this test must be forwarded to the Office of Student Services. A student from abroad whose native language is English, who has completed his or her work in a foreign university where English is the language of instruction, or who has studied at or graduated from an American institution, is exempt from this requirement. Federal requirements mandate that all international students on J-1 visas purchase the medical insurance. No exceptions are allowed. All other students are strongly urged to carry health insurance of some kind.

All international applicants must submit to the university’s Office of International Students evidence of funding sources to fully finance the cost of education, housing, and transportation (approximately $13,000) for one year. Living expenses for dependents, if applicable, must also be included, i.e. spouse $6,000 and child $3,000.

All international applicants must submit to the Case Western Reserve Office of International Students evidence of funding sources to fully finance the cost of education, housing, and transportation. Applicants from other countries will be sent an additional form requiring them to provide evidence of financial resources sufficient to cover their anticipated expenses before acceptance can be finalized.

Students holding a BSW from their country of origin may be eligible for advanced standing. Applicants should contact the Council on Social Work Education (CSWE) (http://www.cswe.org) directly and ask to have their program reviewed.

An international applicant who holds a Master of Social Work (MSW) degree for his or her country may request a credit review for transfer credit. However, the student must complete at least 27 hours of academic credit and three semesters of field credit (9 hours) at the Mandel School.

Please note that material submitted for application cannot be returned to the applicant.
Financial Information

Tuition

In the 2014-2015 academic year, tuition for the Jack, Joseph, and Morton Mandel School of Applied Social Sciences in the full-time master’s degree program (12-16 credit hours) is a flat rate of $39,950, or $1322, per credit hour.

A non-refundable tuition deposit of $100 is required of all master’s degree candidates at the time of acceptance. This deposit will be applied toward tuition for the degree program. Complete information about academic policies, procedures, and financial aid is available by contacting the Office of Student Services, Jack, Joseph, and Morton Mandel School of Applied Social Sciences by calling 800.863.6772 or by visiting the school's website (http://msass.case.edu).

Doctoral Program

Doctor of Philosophy in Social Welfare

The purpose of the Doctor of Philosophy (PhD) in Social Welfare degree program is the preparation of scholars, teachers, and leaders to generate new knowledge on the policies and programs of social welfare and the practice of social work. Accordingly, we emphasize the creative and evaluative skills necessary for independent inquiry. The program prepares students to be knowledgeable in the following:

• Relevant areas of the social and behavioral sciences
• Research design, statistics, qualitative methods, mixed methods, and the philosophy of science
• Theory-building and theories of social welfare
• Methods for the application and transmission of knowledge in the human services

In addition to this foundation knowledge, students develop specialized expertise in policy analysis and program planning or social work practice theory and in one or more substantive areas of social welfare. Effort is made to provide an educational climate in which critical analysis and creative thinking flourish. The program core emphasizes philosophical and scientific approaches to theory development, the content and boundaries of theoretical social welfare, statistics, and advanced research methodologies, and the social and behavioral science foundations underpinning social welfare programs and social work practice.

The area of specialization enables the student to apply social science theory, analytical approaches, and research tools to a social problem or issue in either social welfare policy or social work practice. Students are encouraged to focus on a substantive policy or practice area during the period of specialization. This facilitates the development of a dissertation proposal. Permeating the content of the entire program is a focus on the development and transmission of knowledge as a part of an educational process.

To prepare students for academic careers in social work education is an integral part of the educational plan. Teaching mentorships are available.

Students can pursue special interests through individual reading and research projects. In addition, regular course offerings in other departments of the university are available to students. Practical experiences on faculty-conducted research projects are made available to doctoral students.

A total of 36 credit hours of course work is required, plus 18 hours of dissertation credit. A qualifying examination, given after completion of course work, determines each student’s eligibility for degree candidacy. The degree is awarded following successful completion of the dissertation.

The school reserves the right to require additional courses, which may not be credited toward the doctoral requirements, if the faculty believes the student has insufficient knowledge in core areas of the curriculum, or to assist students in their intellectual and professional development.

In response to the different needs and interests of potential PhD students, the Mandel School offers two formats for meeting course and degree requirements. Program requirements under both formats include taking 12 courses (36 credit hours), passing a qualifying exam, and completing a dissertation. The Alternative Program Structures are:

Full-Time Program

Under this format, full-time students can complete course requirements and individualized research fellowships over two academic years.

Part-Time Program
The part-time format accommodates social work professionals who must maintain their employment commitments but wish to pursue PhD study through the completion of a minimum of four courses per year.

Faculty Advisors
Each doctoral student is assigned a faculty advisor to assist in the planning of his or her educational experience. At the appropriate time, a dissertation advisor is appointed after consultation with the student.

Qualifying Examination
The qualifying examination for doctoral candidates is taken after completion of coursework. The exam is intended to test the student’s ability to critically analyze and integrate knowledge.

Admission to Candidacy
Students are admitted to candidacy for the PhD degree upon the successful completion of the qualifying examination. To be admitted to candidacy, the candidate also must have maintained a grade point average of 3.0 and received not more than one course grade of C or lower. To remain in the program, students must maintain a minimum of a cumulative 3.0 average and receive no more than one grade of C or lower.

Dissertation Requirements
Each candidate for the PhD degree must submit a written dissertation as evidence of his or her ability to conduct independent research at an advanced level. The dissertation must present a significant contribution to knowledge in the student’s field, and at least a portion of the content must be suitable for publication in a reputable professional journal or as a book or monograph.

The dissertation prospectus must be completed and accepted within two calendar years after the student has been admitted to candidacy, and the dissertation must be completed and accepted within five calendar years after admission to candidacy. It is to the student’s advantage to make steady progress in his or her research and aim for early completion of the dissertation.

Once a student registers for SASS 701 Dissertation Ph.D., he or she must continue to register each succeeding regular semester (fall and spring) until the dissertation is complete unless granted a leave of absence. The minimum requirement for the dissertation is 18 hours.

All requirements for the PhD degree must be completed within a period of five consecutive calendar years after a student is admitted to candidacy, including periods of leaves of absence.

Admission and Financial Aid
Information about admission and financial aid for the PhD in Social Welfare (http://msass.case.edu/doctorate) can be found on the Jack, Joseph, and Morton Mandel School of Applied Social Sciences website.

Dual Degree Programs
Dual and Interdisciplinary Degree Programs
Dual and interdisciplinary degree programs are available to full-time students only.

Master of Science in Social Administration and Law (MSSA/JD)
The dual-degree program established by the Jack, Joseph and Morton Mandel School of Applied Social Sciences and the university’s School of Law makes it possible for selected full-time students to pursue an integrated program of studies to receive the Master of Science in Social Administration (MSSA) and Juris Doctor (JD) degrees within four years rather than the normal five years. Applicants for the dual-degree program must apply to and meet the admission requirements of both professional schools and are encouraged to apply for admission to both programs simultaneously. Dual-degree students must receive the MSSA and JD degrees simultaneously to be granted credit for specific courses taken in the other program.

Master of Science in Social Administration and Business (MSSA/MBA)
The Jack, Joseph and Morton Mandel School of Applied Social Sciences and the Weatherhead School of Management offer a dual-degree program leading to the Master of Science in Social Administration (MSSA) with the Master of Science in Business Administration (MBA). The program is designed for candidates who wish to prepare for advanced social work practice in a variety of direct practice and community and social development settings, while developing the skills to assume management responsibility within those settings. Candidates must apply separately to each program.

MSSA/MBA students may begin the dual-degree in either Jack, Joseph and Morton Mandel School of Applied Social Sciences or Weatherhead School of Management. Students will continue to register in the school at which they began the program, regardless of the school they are attending. There are 102 credit hours in the dual MSSA/MBA Program (51 credit hours at MSASS, 51 credit hours at Weatherhead), compared with 124 credit hours if both degrees were completed separately. By integrating the course work, completing some course work over the summer, and reducing the elective requirements in each program, dual-degree students may complete the MSSA/MBA in three years, instead of the four years required if both degrees were to be completed separately. Dual-degree students must receive the MSSA and MBA degrees simultaneously to be granted credit for specific courses taken in the other program.

Master of Science in Social Administration and Bioethics (MSSA/MA)
A dual degree established by the Jack, Joseph and Morton Mandel School of Applied Social Sciences and the Department of Bioethics (http://www.case.edu/med/bioethics) in the university’s School of Medicine makes it possible for selected students to pursue an integrated program of studies to earn the Master of Science in Social Administration (MSSA) and the Master of Arts (MA) in Bioethics. In a full-time format both degrees may be earned in two years plus one summer semester.
As the number and complexity of ethical dilemmas continue to increase, there is a growing need for social workers knowledgeable of the principles and practices fundamental to bioethics. Graduates of this program may help counsel clients and care providers as well pursuing careers related to policy and practice.

Applicants must apply separately and meet the admission requirement of the both professional programs and are encouraged to apply simultaneously to both schools. Dual-degree students must receive the MSSA and MA degrees simultaneously to be granted credit for specific courses taken in the other program.

**Master of Science in Social Administration and Public Health (MSSA/MPH)**

The “Side by Side” Dual Degree Program leads to both the Masters of Science in Social Administration (MSSA) and the Masters in Public Health (MPH). The MSSA/MPH program will prepare graduates with flexibility for professional leadership in a broad range of health and social services within communities and organizations. Areas of study will include prevention, program planning, development and evaluation.

The impetus for this dual program arises from a growing societal recognition that issues once thought to represent individual-level interventions, such as family violence, substance use, and mental illness, are multi-level problems demanding multi-level interventions for their amelioration. The MSSA/MPH Degree Program will equip students with a broader set of skills and perspectives to address such issues.

This degree option is open to full-time students only due to the sequencing of courses. Applicants must apply separately and meet the admission requirement of the both professional programs and are encouraged to apply simultaneously to both schools. This dual degree can be completed in 36 months. Dual-degree students must receive the MSSA and MPH degrees simultaneously to be granted credit for specific courses taken in the other program.

**Master of Science in Social Administration and Master of Nonprofit Organization (MSSA/MNO)**

The dual degree in social work and non-profit organization offered by the Jack, Joseph and Morton Mandel School of Applied Social Sciences prepares students for leadership and management positions in human service organizations. Students may pursue either the Community Practice in Social Change concentration or the Direct Practice concentration. Further, this dual degree will place graduates into nonprofit management, administration, leadership, and research positions, which promises a great potential to influence the well-being of vulnerable groups and improve lives on a greater scale.

**Undergraduate Minor in Social Work**

**Undergraduate Social Work Minor**

The Social Work Minor offers interdisciplinary collaborative learning that includes service, community engagement, and an exploration of values. Students experience active learning that is practical and applied to real-world settings. The minor integrates social work theory and practice, social policy, socio-behavioral theory and research to understand and address complex social problems of our time, domestically and internationally. Some issues covered in the courses include oppression and privilege, poverty, violence, social justice, alcohol and other drug abuse, social welfare, community development, children, youth, and families. Courses can be taken on campus or through the MSASS international study and travel courses.

**Jack, Joseph and Morton Mandel School of Applied Social Sciences Courses**

**SASS Courses**

**SASS 284. Oppression and Privilege in a Multicultural Society. 3 Units.**

Privilege flings open the doors of opportunity in a multicultural society. Oppression jams those doors tightly shut. This course provides students with understandings of how oppression and privilege operate in a multicultural society to restrict the life chances of minority and disenfranchised group members. Increasing knowledge about the nature and dynamics of oppression and privilege are fundamental dimensions of the ability to value a diverse world. This undertaking requires self-assessment and reflection on discrimination, oppression, and privilege as components of individual awareness. Such insight will help students to live, work, study, and play well with “others” who are culturally different from themselves with respect to race/ethnicity, religion, class, gender, sexual orientation/gender identity, ability, and age. Beyond increasing respectful social interaction, it is hoped that students will be motivated to work towards dismantling systems that perpetuate de-valuing, exploitation, marginalization, and violence against members of subordinate groups. Major consideration will be given to structures of oppression and privilege related to racism, classism, religious bigotry, sexism, heterosexism/transgenderism, ableism, and ageism. Note: A student cannot receive degree credit for both SASS 284 and SOCI 349.

**SASS 315. Adoption Practice and Policy. 3 Units.**

This course covers the concepts, knowledge, skills, and policies associated with contemporary adoption practice. The practice method reflects a constellation perspective, meaning that adoption is examined from the viewpoints of birth families, adoptees, and adoptive families. Exemplars and case studies are presented for illustration purposes. Consideration of constellation members’ needs at different life cycle stages are presented. Ethical issues and dilemmas related to adoption are emphasized throughout the course in each content area. Course content is covered via lectures and classroom discussions, as well as appropriate guest speakers. Students are expected to participate fully through field trips and classroom discussions.
SASS 318. Death, Grief, and Loss. 3 Units.
This course provides students the opportunity to become informed, aware citizens understanding human issues related to end of-life decision making, dying, and experiencing grief and loss. Topics focus on death and grief across the lifespan; the role of death in American culture; understanding individual and family challenges with decision making at the end of life; and the experience of grieving across life stages, cultures, gender, and spiritual difference. The course provides exposure to the experience of death as it relates to the self of the student; the terminally ill person, and the bereaved. Students will gain insight into their own values and beliefs in this area, as well as understanding the needs of terminally ill people, those who need support in their grief and mourning, and persons dealing with challenging life and death decisions regarding self or loved ones. Creation of a personal learning objective is an additional focus. Course content is implemented via lectures, class discussion, individual and small group work, audio-visuals, and guest speakers.

SASS 325. The Netherlands Social Justice: Health and Violence. 3 Units.
Social justice issues including violence prevention and health care services/policies will be explored via agency visits, lectures, and discussion with Dutch experts. The pervasive use of a harm reduction policy in the Netherlands will be examined. The course will help students develop the analytical skills necessary for evaluating social policy and practice issues related to a range of health care services as well as social justice issues that pertain to health care, prostitution and substance use. Students will familiarize themselves with the United States and Dutch social policies and practices related to issues such as: right to die; euthanasia for terminally ill, those in chronic pain or severely ill newborns; access to healthcare and health disparities; addictions; and prostitution. The manner in which a society treats its citizens least capable of taking care of themselves reveals many of the core values of its cultural system of social justice and approaches to health care. Counts for CAS Global & Cultural Diversity Requirement.

SASS 350. Seminars in Applied Social Sciences. 3 Units.
Survey of special subject areas. Topics vary in response to faculty and student interests. Small group discussion. Prerequisite depends on content.

SASS 355. Drugs and Youth. 3 Units.
Drug abuse is a more acute problem and more widespread than in any previous era of our country. Just as technology continues to evolve, drug use follows similar paths of evolution. Today, there are thousands of new drugs available that are used for medicinal purposes, recreational purposes, and other uses that affect the health of our citizens. The impact of drug use and/or abuse on the lives of ordinary people will be explored both through academic readings as well as biographies of young people who have dealt with the problem of drug abuse. Material will be presented from a wide range of disciplines and theoretical perspectives highlighting the bio-psycho-social nature of the problem—both the etiology as well as the effects of addiction. The impact of both macro (society) and micro (family and friends) on drug use of both licit (alcohol, over the counter drugs, and prescription) and illicit (marijuana, hallucinogens, and cocaine) on various subcultures such as sports/athletics, college students, women, adolescents, etc. will be explored. Course content will be covered via lectures, classroom discussions as well as appropriate guest speakers.

SASS 367. Poverty, Wealth Building, and Social Entrepreneurship. 3 Units.
With poor communities and individuals across the world aspiring for higher standards of living and quality of life, monolithic development strategies are proving to be insufficient. Microenterprise and social entrepreneurship are among the latest strategies for poverty alleviation. New strategies that are grass-roots, multi-dimensional, entrepreneurial, and engage stakeholders as partners are gaining ground. They seek to fundamentally transform the roles and relationships of the stakeholders in the economy. While social entrepreneurship is revolutionizing the practice of development work, the micro-enterprise sector plays an important role for some of the poorest sectors of society who gain employment, connection to the market, and opportunities for innovation through it. In this course, we will examine social entrepreneurship, the change it brought about in how development is viewed, conceived, and implemented. Some of the examples that will provide core content include economic development strategies that promote asset building among the poor; Mandragon in Spain (and other similar institutions from across the world), Greyston Bakery (and other similar examples from around the United States) and Evergreen Cooperative (and other relevant local examples).

SASS 366. Whatever It Takes: Creating Paths Out of Poverty for Children. 3 Units.
This course will examine current community based strategies for providing young people living in high poverty, multiple needs, urban areas with the educational, social and economic support they need for a stronger future. The course will begin with a review of the debated root causes of poverty in the United States and an exploration of the short and long term effects of poverty on children. Students will understand how poverty differentially affects different populations and geographic areas across the United States and globally. Special attention will be given to the complexity of urban poverty issues and the corresponding need for holistic Interventions. The course will further explore the concepts and strategies underlying innovative community-based initiatives being implemented across the country including the theories, programming content, inclusion criteria and outcomes of these efforts. Students will have to critically think through the cost/benefits of this programming considering economic, political and social justice issues. Special attention will be given to the Harlem Children Zone’s (HCZ) model. The HCZ has achieved successes in boosting college attendance and closing the racial and socioeconomic achievement gap among youth in a high-poverty target area in New York City. The HCZ is the model for the Obama Administration’s Promise Neighborhoods Initiative to support comprehensive neighborhood development programs for children and youth. It includes efforts for social, educational and medical support designed sequentially to keep up with youth’s developmental needs. Students will critically analyze this model and its applicability across other geographic areas and populations. Students will also learn from local best practice Initiatives in education attempting to provide a path out of poverty for Cleveland’s children through site visits at local schools. This will include experiential opportunities for firsthand contact with program staff and youth.
SASS 369. Social Networking and Community Organizing in the 21st Century. 3 Units.
This course will examine the changing nature of place, given increased mobility and diversity in communities within the United States and the emergence of a truly global economy and communication network due to the revolution in information technology. Community itself is being redefined as many members of society consider their most important relationships are primarily virtual in nature. The forms of engaging citizens are also changing as old models of community organizing give way to new approaches that focus on connectivity through social networks. This course will examine various new approaches to engagement, from political or campaign organizing to social networking around mutual interest to mobilizing people for a cause. We will examine the Obama presidential campaign as an example of a new mobilization strategy that emphasizes choice, flexibility, value, and the ability to influence through organic informal networks. The course will also explore case studies, such as network centric organizing as developed by Bill Traynor and Lawrence (MA) Community Works. Special attention will be given to controversial efforts criticized by the right or the left, such as the ACORN voter registration initiative. Students will also explore the changing nature of community in Northeast Ohio and how this new approach might lead to social change and economic development for greater Cleveland.

SASS 375. International Travel and Study Seminar. 3 Units.
The course provides an intensive experiential learning experience that take students to a Non-Western European country for appropriately 10-12 days to explore social and community development issues, policies and practices. There will be at least 42 hours of contact time with the instructors in Cleveland and the Non-Western European country. The program explores innovative approaches to social development and draws parallels to that of the United States. The purpose of the trip is to familiarize students with social development and social policy issues. Topics appropriate to the targeted country, such as poverty alleviation, non-formal education, prostitution, HIV/AIDS, multicultural aspects of healthcare, international adoption, and possible application of information communication technologies in addressing social problems will be addressed. The trip will include guided tours to neighborhoods, field-action project workers, healthcare professionals, government officials, scholars, and researchers will further enhance students’ understanding. Students are required to attend a minimum of two pre-trip seminars, write and/or present pre-trip assignment(s), attend a post-trip meeting, and complete a final written assignment. The course requires an additional cost for travel. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375A. International Travel & Study Abroad: Health, Human and Social Development in Urban & Rural Ecuador. 3 Units.
The study abroad program to Quito, Ecuador and surrounding rural areas will acquaint students with the history and culture of Ecuador, its social, political and economic development, and the impact it has on the delivery of social services. Ecuador’s historical and current relationship with the United States will also be explored. This course is designed for students and professionals who are interested in developing an international perspective for the study of social work and related health services. It will expose students to helping modalities within a cultural context and provide opportunities for cross cultural comparison. The course will be taught using both lecture and experiential modalities. Along with interaction with a variety of social service agencies, students will visit historical sites and attend cultural events. They will be introduced to the art and culture of the area and explore the region’s economic development. Lectures by guest speakers on topics regarding family systems, culture, and history, social and political issues will provide students with learning opportunities. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375B. International Travel & Study Abroad: Mental Health Issues & Practice Netherlands. 3 Units.
This 3-credit course will be at least 42 hours of contact time, and include a trip to the Netherlands over Spring Break. The course will acquaint the participant (undergraduate and graduate) with the socio-political factors that influence policy development and the delivery of mental health care and services to the citizens of the Netherlands. The role of the social work profession in mental health care and service delivery will be explored via agency visits, lectures, and discussion with Dutch consumers and experts in the area of mental healthcare. This course will help students develop the analytical skills necessary for evaluating social policy and practice issues related to mental health. Students will familiarize themselves with the United States and Dutch social policies and practices related to specific mental health issues such as: treatment of severe mental illness, community mental health systems and community reintegration of the those with mental illness, psychosocial rehabilitation, the treatment of people with dual diagnoses of substance dependence and abuse and mental illness, homelessness and the mentally ill, psychiatric hospitalization, employment, education and issues of quality of life for people living with mental illness. Prior to the trip, students will attend a pre-trip session, will be expected to become familiar with the literature on concepts in social policy and practices relevant to mental health issues in both countries, and following the trip, meet for a post-trip session. Counts for CAS Global & Cultural Diversity Requirement.
SASS 375C. International Travel & Study Abroad: Invisible Groups in a New Poland. 3 Units.
This 3 hour Spring Break for the undergraduate and graduate students introduces students and faculty to Polish culture and Polish social policies and practices concerning those social groups that are disenfranchised, stigmatized, and disempowered, including the poor, the unemployed, the homeless, the elderly, victims of domestic violence, and people affected by substance abuse and mental health problems. In cooperation with the Institute of Sociology at the University of Poznan, students and faculty will examine the issues of multiculturalism, social integration, feminism studies, and determinants of social exclusion in the context of the economic and social forces that are shaping a new Poland. The trip includes guided tours of neighborhoods and social institutions and daily lectures and workshops with government officials, practicing social workers, and many of Poland's most prominent scholars in residence at the University of Poznan. The experience will challenge students to recognize how the recent political and economic transformation of the country has affected the entire society and how certain groups have paid a higher price. Students and faculty will also participate in cultural events to gain a greater understanding of Polish society. Prior to the trip, students will attend two pre-trip sessions, will be expected to become familiar with the literature on concepts in social policy and practices relevant to social welfare issues in both countries, and following the trip, meet for a post trip session. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375D. International Travel & Study Abroad: Child Welfare in Guatemala. 3 Units.
This program is designed to familiarize participants with child welfare issues, social services, and indigenous community development, particularly women cooperatives. The plan is for participants to learn Spanish each morning, followed by guided tours of various programs. The experience challenges participants to compare Guatemala with the United States, and to understand the strengths and weaknesses of social policies and human services in both countries. This course acquaints participants with the socio-political factors that influence the development of child welfare programs in the nongovernmental sector (private, nonprofit) and governmental sector in Guatemala. The role of the helping professions in child welfare are explored via agency visits, lectures, and collaboration with Guatemalan professionals. The program is an intense small group experience in living, learning, traveling, and studying. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375E. International Travel & Study Abroad: Microcredit, Microfinance, and Social Development in Bangladesh. 3 Units.
This International travel/study course to Bangladesh is taught by SUIC School of Social Work, Case Western Reserve's Mandel School of Applied Social Sciences (MSASS), and Independent University, Bangladesh. Many international scholars and leaders will be involved, including 2006 Nobel Peace Prize winner Muhammad Yunus, as well as other officials in Bangladesh. The program will provide an intensive learning experience that will take students to Bangladesh for 12 days. The course to Bangladesh will be focusing on the role of Micro-credit and Microfinance and Social Developments to alleviate poverty and nurture social entrepreneurship. Students will spend 8 days in Dhaka, the Bangladesh capital, and 4 days in the villages visiting field projects. The program will provide lectures and field trips involving social, political, economic and developmental aspects of Micro-Credit and Micro-Finance. The trip will explore the basic ideas behind the Microcredit revolution in Bangladesh, its historical precedence, and will study it’s relation to health, finance, management, politics, social entrepreneurship and development. Student will learn about the mechanisms of micro-credit in social development and execute the knowledge in their own practice. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375F. Gender and Sexuality Justice: LGBTQ life in Contemporary Dutch Culture. 3 Units.
This experiential and hands-on course explores the Dutch concept of "tolerance" through the lenses of sexuality, gender identity and gender expression. The course will investigate the Dutch concept of "tolerance" as it applies to non-heteronormative sexualities, as well as the range of gender identities and expressions outside of a binary of male/female, man/woman. Focusing on, but not limited to, the lesbian, gay, bisexual, transgender, queer (LGBTQ) community, the course will interrogate the ways in which the social discourse of acceptance is complicated by other salient sociopolitical factors present in the Netherlands such as historical and contemporary realities about immigration, religious diversity, age, ethnicity and race. Counts for CAS Global & Cultural Diversity Requirement.
SASS 375i. Global Issues, Health, & Sustainability in India. 3 Units.
Global Issues, Health, & Sustainability in India is an interdisciplinary social work and engineering collaboration that includes a short-term cross-cultural immersion. This course brings together social work (knowledge, values, and skills) and health care (promotion, education, and community) perspectives to the understanding of technical project assessment, selection, planning and implementation in India. The course is also designed to help students understand culturally relevant community engagement strategies to ensure project acceptance in underserved and developing communities. Many field sites will be visited in order to observe first-hand the community assessment and development of projects that engineers implement. An example of these projects could include infrastructure to support green energy and water (resource planning, development, conservation, and sanitation). This study abroad course will acquaint students with history and culture of India, its social, political and economic development and the impact it has on health and the delivery of social services. Participants will learn about factors affecting the abilities to reach, treat, educate, and equip communities to improve health outcomes. Engineering students will learn the quantitative aspects using a paradigm of hierarchical systems, mathematical modeling, and scenario analysis using a ‘reasoning support’ system. Together the engineering, social work, and health sciences students in disciplinary-balanced teams will jointly work on real and meaningful projects marrying the descriptive scenarios (that is the ‘subjective’ aspect) with the numerical scenario analysis based on mathematical modeling (or ‘objective’ aspect) to form a coherent view of the future. The course will be taught using both lecture and experiential modalities. Engineering students will conduct computer modeling work. Along with visiting a variety of governmental and non-governmental institutions, organizations and projects, students will visit historical sites and attend cultural events. Offered as EECS 342I and SASS 375I Counts for CAS Global & Cultural Diversity Requirement.

SASS 385. Social Welfare Capstone Seminar. 3 Units.
This seminar course will revolve around the identification and critical investigation of current social problems. Insights gained from social welfare research will be applied to better understand these problems. Successful completion of the course will require critical analysis of published research, integration of information from social work and different disciplines, an oral presentation and a final written research report including a literature review. Counts as SAGES Senior Capstone.

SASS 390. Independent Study for Undergraduates. 1 - 3 Unit.
Individual study in Applied Social Sciences involving specific programs of reading, research, and special projects. Requires prior approval of faculty member directing the project. Recommended preparation: 12 hours of social science courses; approval of MSASS Associate Dean.

SASS 401. History of the Nonprofit Sector. 3 Units.
An examination of the social history of nonprofit organizations in the United States, to develop an historical perspective and a sense of magnitude, scope, and functions of the nonprofit sector and its relationships with business and government. This course will explore the theoretical bases upon which social scientists have sought to understand the role of the nonprofit sector in our economy and in our political and social systems, and will explore the issues that will shape the future of the sector.

SASS 405. Nonprofit Ethics and Professionalism. 3 Units.
This course is an application of ethical frameworks and analysis to nonprofit organizations. Using cases and essays, the course will help nonprofit managers become better equipped to address ethical problems and dilemmas in their work in the following areas: ethics of boards, ethics and leadership, ethics and organizational culture, professional ethics, and ethics and fundraising.

SASS 406. Nonprofit Public Policy and Advocacy. 3 Units.
This course is an introduction to the institutions and processes that make up the political environment of nonprofit organizations in the United States. The course will examine the role of civil society in a democracy, take a general overview of American political institutions and the cultural beliefs that undergird them, and examine the important elements of the public policy process: the framing of issues, the role of political entrepreneurs and organized interests, elections, the legislative process and strategies for influencing it, and the roles of executive institutions and the courts. Emphasis will be placed on the ways that nonprofit advocates can advance their goals in the public policy process.

SASS 407. Nonprofit Revenue Planning and Development. 3 Units.
Revenue strategy and development are critical in advancing the mission and core work of a nonprofit organization, and are among the most strategic responsibilities held by an executive director and his/her board. Nonprofits face a myriad of revenue options which could be pursued but each of these has implications for how the organization advances it mission and its sustainability. The course will examine how to assess these revenue sources and evaluate how they can contribute to an organization's overall financial vitality.

SASS 408. Nonprofit Philanthropic Fundraising. 3 Units.
This course will provide current and future nonprofit leaders with a detailed survey of the practices, principles, and process of fundraising, enabling them to effectively create, participate in, and manage fund development programs and staff. Successful fundraising is shown to be communication-based and built upon solid relationships with defined constituencies of donors and potential donors.

SASS 409. Nonprofit Strategic Planning. 3 Units.
This is an integrated practicum designed to provide “hands-on” experience in planning for, designing, and conducting strategic planning in nonprofit organizations. Students will learn to assess organizational readiness, facilitate the design of strategic planning processes, create a variety of approaches involving key stakeholders, and finalize a planning design suited to organizational culture.

SASS 410. Nonprofit Databased Decision-Making. 3 Units.
This course is designed to give students basic understanding and working knowledge of data analysis, statistical concepts, use of computers, research designs for program planning and evaluation, and quantitative techniques for problem solving. The intent is to ensure that executives and leaders are able to effectively utilize and interpret statistical data, technical reports, research findings, and evaluation studies, and employ basic quantitative methods in their own analysis of problems and policies.

SASS 411. Nonprofit Leadership Dialogs. 1 Unit.
This course is intended to enable students to learn about major nonprofit leadership issues and trends through interaction and dialog with successful nonprofit leaders. It is also designed to provide outside nonprofit leaders with the opportunity to learn about the quality of the Mandel Center's student body.
SASS 412. Nonprofit Leadership. 3 Units.
This course examines leadership from nonprofit political, managerial, and sociological perspectives. Concepts of leadership will be applied to nonprofit organizations through case discussion, student experience, and class exercises. The course integrates theory-based and practice-based approaches and prepares students to participate in leader-follower dynamics in the nonprofit setting.

SASS 420. Nonprofit Organization and Management. 3 Units.
This course will focus on theories of organizations and general concepts and principles of management, governance, and leadership. Organizational design, behavior, performance, and effectiveness will be studied, and the special character and management problems of nonprofit organizations will be highlighted and analyzed.

SASS 422. Nonprofit Assessment and Program Evaluation. 3 Units.
The course is designed to introduce students to the approach to organizational assessment and evaluation of organizational issues and problems. The class will explore a variety of ways of viewing organizations, assessing their stage of development, look at factors that influence or interfere with their forward progress, review the dimensions essential to nonprofit organizations and explore some processes useful to enable change. In addition, the course will focus on the process of creating and measuring program outcomes.

SASS 424. Nonprofit Economics. 3 Units.
This course is designed to familiarize students with basic ideas of microeconomic analysis so that they may apply this reasoning to important resource-related decisions facing contemporary nonprofit organizations. This introductory course will orient the student to the role of nonprofit organizations in a market economy, familiarizing the student with basic concepts of microeconomic analysis and how they apply to resource-related decisions, and provide the student with tools and concepts for analyzing pricing, compensation, outsourcing, investment of funds, and engaging in partnerships.

SASS 425. Nonprofit Financial Management. 3 Units.
This course focuses on techniques and principles of financial management including budgeting, finance and investment decision making. Topics include budget formulation, analysis and planning, present value analysis, cost-effectiveness, cash flow analysis, portfolio management, and venture planning. Special emphasis will be given to the unique problems of nonprofits in capital formation, generating earned income, managing endowments, gifts and grants, and tax planning.

SASS 426. Research Methods in Social Work. 3 Units.
This course provides an overview of the basic concepts used in the conduct of scientific inquiry and the tools of research methodology. It introduces students to the issues involved in the design, implementation, analysis and utilization of social research. Students are encouraged to focus on a practice-related research problem in their individual or group research projects, as well as to focus on research issues relevant to their specialization, field of practice, or field of practicum setting. Students are alerted to the risks of cultural bias in research throughout the course, as well as to focus on research issues relevant to their specialization, field of practice, or field of practicum setting. Students are alerted to the risks of cultural bias in research throughout the course, as well as to focus on research issues relevant to their specialization, field of practice, or field of practicum setting. Students are alerted to the risks of cultural bias in research throughout the course, as well as to focus on research issues relevant to their specialization, field of practice, or field of practicum setting.

SASS 427. International Non-Governmental Organizations. 3 Units.
This course examines the role of voluntary associations in the international arena and, in particular, the multiple roles of international non-governmental organizations in affecting international political and economic outcomes. The course also examines the theoretical issues surrounding NGOs and international relations, particularly the relationship between global civil society and international political outcomes.

SASS 428. Trusteeship: Nonprofit Governance. 3 Units.
This elective course deals with the definition, history and concept of trusteeship, the areas of responsibilities of Boards of Trustees, the authority of Boards and the limits on its exercise, the organization of Boards and their committees, and the Board’s relationships with the Executive Director, the staff and the organization’s constituencies. Eligible for M.B.A. credit.

SASS 430. Nonprofit Human Resources. 3 Units.
Theories and principles of managing people in organizations are addressed in this course, including motivation theory and human resource development strategies. Particular attention is devoted to issues critical to nonprofit organizations, such as the management of volunteers, management of professionals, working with trustees, and staff/board relationships.

SASS 440. Human Development I: Child and Adolescent. 3 Units.
This course offers an overview of normal individual development throughout the life cycle. Psychosocial theory, learning theories, and social role theory constitute the theoretical base for this foundation course. Developmentally determined objectives and tasks for every life stage are examined in the context of biological, genetic, psychological, familial, and sociocultural factors. Special emphasis is placed on the impact of gender, health, and minority status, and on community institutions of human development. This course supports the foundation social work methods course by introducing substantive content on human development as a framework for assessment, prevention, and intervention with psychosocial problems. Curricularly related to the advanced socio-behavioral courses on human development and developmental dysfunction, this course provides a basic understanding of normal human development, which can serve as a contextual framework for developmental deviations from the norm.

SASS 441. Human Development II: Adult. 3 Units.
This course builds on SASS 440 Human Development I (child & adolescent) by compassing the general themes of feeling (emotion), thinking (cognition), and acting (behavior) with adult emotional, cognitive, and behavioral development. Students will understand the differences and similarities between earlier (child and adolescent) and later (adult, including older adult) emotional, cognitive, and behavioral development by examining, across the life-span, the idea/concept of: (1) adult development as gains/losses, (2) adult development as plasticity and variation (i.e., development can take many forms and can change), (3) adult development as risks, conflicts, protective factors, and resilience and (4) adult development as context (e.g., family, society, gender culture, ethnicity, social class, discrimination, sexual orientation, and socio-historical (i.e., cohort contexts). Prereq: SASS 440.

SASS 450. Nonprofit Law. 3 Units.
This course provides the student with a basic grounding in the laws and regulations governing nonprofit organizations. Content will include the procedures for incorporating, reporting, and maintaining tax-exempt status as a nonprofit organization, a familiarity with legal principles and research methods, and an overview of the legal, regulatory, and policy issues facing contemporary nonprofit organizations.

SASS 470. Social Policy. 3 Units.
This course provides basic perspectives on social policies related to poverty, health, aging, mental health, substance abuse, and discrimination. An analytical framework is used to systematically identify, define, and analyze social problems and policies. The course also introduces the student to social planning and service delivery.
SASS 477. Direct Practice Foundation Methods Skills. 3 Units.
The goal of this course is to develop culturally competent social work generalist practitioners who are armed with the knowledge and skills necessary to practice ethically with individuals and families in diverse social work practice settings. The course introduces major social work theories (i.e., systems-ecological theory) and intervention approaches (i.e., problem-solving). Understanding and practicing the skills necessary to carry out generalist practice will be a major focus on both lectures and skills lab.

SASS 478. Macro and Policy Practice Skills. 3 Units.
This course focuses on the development and application of practice skills in work with task groups, communities, and social policy institutions. It includes both didactic and experiential teaching and learning. The course is built on first semester foundation learning, particularly in the areas of social policy, diversity, discrimination, and oppression, and the direct practice skills lab. It will also draw on knowledge taught in the second semester course on theories of groups, organizations, and communities. Finally, there will be interaction with the field seminar and the field practicum. Prereq: SASS 477.

SASS 484. Theories of Oppression and Social Justice. 3 Units.
This course provides students with a basis for developing their ability to value a diverse world and to understand how discrimination and oppression operate to limit the life opportunities of members of minority and disenfranchised groups. Students will have the opportunity to develop and enhance their personal and professional awareness of their own cultural identity and to use this as a basis for developing their competence to work with individuals and groups different from themselves. Selected theoretical perspectives will provide a descriptive and explanatory framework for critically analyzing the manifestation of discrimination and oppression and their impact on the affected populations. Social work’s response to discrimination and oppression within the profession and in society at large will also be examined.

SASS 495. Field Education Seminar. 1 Unit.
This seminar prepares students for entry into field education. The course introduces students to a number of topics that are considered basic to beginning the social work field practicum.

SASS 500. Special Topics in Applied Social Sciences. 1 - 6 Unit.
SASS 501. Nonprofit Practicum. 0 - 3 Units.
The overall goal of this course is to provide MNO students the opportunity to develop a practicum experience in a non-profit organizational setting. The course is designed to enhance knowledge acquired in the classroom by allowing students the flexibility to develop an individualized plan that will integrate professional practice skill development. The students will work closely with their Academic Advisor to determine whether a practicum meets the student's learning needs. The student will also be assigned a Practicum Instructor, who is based at the non-profit setting and provides the direct instruction of the student. Finally, the student will work with the Faculty Advisor, who is based at the School and serves as a link between all parties, oversees the requirements and standards of the School, and participates and consults in the design of the student's learning experience. The Student, Practicum Instructor, and Faculty Advisor all participate in various ways in the evaluation of student's practicum; the Faculty Advisor is responsible for assigning the grade.

SASS 502. Infant and Toddler Development. 3 Units.
In this course, students will focus on that segment of the human life span called infancy and toddlerhood, a period of development from conception to age three years. Students will be introduced to the major theories of development and will integrate theory and research as they relate to children's physical and motor development, perception, intelligence, language and communication development, and social and emotional development. The impact of the family and sociocultural contexts that affect development will be discussed. Discussion, case studies, and observations will be used to facilitate learning. Prereq: SASS 440 or SASS 400-TR.

SASS 505. Adoption: Practice and Policy. 3 Units.
This course covers the concepts, knowledge, skills, and policies associated with contemporary adoption practice. The practice method reflects a triad perspective, meaning that adoption is examined from the viewpoints of birth parents, adoptees, and adoptive parents. For each topic area, social work roles, activities, tasks, and skills are explored along with policy issues. Exemplars and case studies are presented for illustration purposes. Consideration of triad needs at different life cycle stages are presented. The issues of ethnically competent adoption practice are emphasized throughout the course in each content area.

SASS 506. Perspectives on Management and Leadership. 0 Units.
This course is designed to explore management and leadership capabilities. The class explores personal and organizational aspects of leadership and management examining theoretical perspectives and models, governance, communication, advocacy, ethics and accountability. In addition, the course examines key tools for effective management and leadership to manage risk, challenges, building consensus and collaboration. The course also guides students through a personal leadership development journey. The classroom will serve as an interactive learning environment. Students will learn management and leadership abilities from readings, lecture, group discussion, reflection, assessment, planning and application. The content of the course integrates research across social work, business, the nonprofit sector, and literature to inform a solid perspective to enhance management and leadership capabilities. This course includes activities and feedback for students to facilitate growth and development, and is appropriate for students who want to become effective managers and leaders, growing related abilities and knowledge.

SASS 510. Health Disparities. 3 Units.
This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, EPBI 510, MPHP 510, NURS 510, and SASS 510.
SASS 511. Issues in Health Policy and Service Delivery. 3 Units.
This course examines health care policy issues and options, and highlights the development of health care policy in the U.S., the influence of health policy development, and the role of social work. It also examines the problems, policy, and program issues in the subsidy, financing, reorganization, and regulatory capacity of health policy. National, state, and local issues will be stressed. The course is for students in the health concentration but also welcomes students from other areas. Prereq: SASS 470 or SASS 400-TR.

SASS 512. Legislative and Political Process. 3 Units.
This course focuses on how to deal effectively with legislators, their staff, and legislative systems. The roles of money and information in legislative and political systems are examined. The process through which a bill moves to become law is explored, including critical points of intervention in that process. Lobbying legislators, including presentation of testimony and use of coalitions, is featured. Prereq: SASS 470 or SASS 400-TR.

SASS 513. Aging Policy and Service Delivery. 3 Units.
This course reviews current income, health, and social service policies for older Americans. It also investigates patterns and levels of care for the elderly. Trends and issues in policies and programs for seniors are analyzed in the context of the dimensions and differential characteristics of the aging population in the country. Some cross-national comparisons of services for the elderly are included in this analysis. Prereq: SASS 470 or SASS 400-TR.

SASS 514. Mental Health Policy and Service Delivery. 3 Units.
This course is designed for students preparing for careers as social workers in the mental health field with an understanding of mental health policy and service delivery at the federal, state, and local levels. Through readings, lectures, discussion, and written assignments, the course will aid students in developing a macro-level perspective of mental health policies and programs. Prereq: SASS 470 or SASS 400-TR.

SASS 515. Family Caregiving. 3 Units.
The purpose of this interdisciplinary graduate-level seminar is to explore the theoretical research, policy, and practice issues related to informal caregiving of the elderly. Topics will include the historical and cultural context of family caregiving, theoretical paradigms (i.e., adult development, stress and coping), characteristics of caregivers (i.e., gender, relationship, race, ethnicity, employment status, geographical setting), characteristics of the elderly care-receiver (i.e., type of cognitive and physical impairments), ethics, physical and mental health outcomes, service delivery issues, institutionalization, and bereavement. Through readings, discussions, guest lectures, and paper presentations, students will learn about the complexities of informal caregiving of the elderly from a range of disciplinary perspectives in order to improve assessment and practice skills in a variety of settings. Students are encouraged to focus on issues relevant to their discipline, specialization, or field of practice for their seminar papers.

SASS 516. Alcohol and Other Drug Abuse Policy and Service Delivery. 3 Units.
This course explores selected current alcohol and other drug abuse (AODA) problems using a problem analysis framework. Emphasis is placed on current and past AODA problem definitions as they affect policy and program development. Conceptualization of the problems resulting from AODA patterns of use and abuse, causation theories, the impact of cultural and social diversity as well as discrimination upon all client systems, and the role of local and national institutions which advocate for this population group are reviewed. Prereq: SASS 470 or SASS 400-TR.

SASS 517. Family System Interventions. 3 Units.
This course covers the knowledge, concepts, and skills associated with working families. The practice method will reflect a family systems approach, integrating theories and approaches within a systemic perspective. It will build practice skills in assessing, interviewing, and intervening with families and emphasize a strength-based perspective on intervention with families. Considerations of family issues at different developmental stages will be presented. The issue of ethically competent and community-based social work practice with families will be stressed throughout the course for each content area. Prereq: SASS 477 or SASS 400-TR.

SASS 518. Social Work with Death, Grief and Loss. 3 Units.
This course focuses on the concept of death and related topics from a social work perspective. Such topics include the role of death in American culture; the dying process and its institutions; assessment and intervention strategies; life span and family life considerations; and end-of-life decisions. The course provides both theoretical and experiential exposure to the dying process as it relates to self, the dying person, and the bereaved. Students will gain insight into serving the terminally ill, those who need assistance with mourning and grief, and clients dealing with difficult life-and-death decisions regarding loved ones. Prereq: SASS 477 or SASS 400-TR.

SASS 519. Children and Families in the School Setting. 3 Units.
This course prepares students to be certified school social workers. The course addresses major issues in American schools; a theoretical framework for school social work services; design, deliverance, and evaluation of school social work services; legal and ethical issues; and the roles and intervention strategies of school social workers. It covers student and family problems and areas of need such as disability, truancy, divorce, teen pregnancy, youth depression and suicide, substance abuse, violence, and dropping out of school. This course is required for those participating in a planned program of study leading to state certification as a school social worker. If space permits, other students may enroll if they have or have had school social work experience. Prereq: SASS 477 or SASS 400-TR.

SASS 520. Homelessness Policy and Service Delivery. 3 Units.
This course provides an understanding of homelessness and its incidence and prevalence, its origins, both historical and social, its consequences, and policy-based strategies for its prevention. The course investigates the impact of homelessness on single individuals, families with children, minorities, and vulnerable populations such as the mentally ill and alcoholics. Students, organized into a task force, examine a range of professional and community-based responses to the problem. The task force method enables students to assess the effects of public policy on homeless people, critique the effectiveness and adequacy of local shelter and service programs, and propose community-based strategies to prevent, stop, and better homelessness. Prereq: SASS 470 or SASS 400-TR.

SASS 521. Supervision. 3 Units.
The course focuses on the role of strength-based supervision in improving outcomes clients served in the various social service and nonprofit systems, and on developing the skills necessary for effective supervision and leadership. The course examines the context of contemporary supervision, and presents models of supervision grounded in systems theory, developmental theory, and social justice theory. This course is also designed to build practical skills for organizational leadership, focusing on adaptive leadership.
SASS 522. Motivational Interviewing. 3 Units.
This advanced methods course provides a basic orientation to the concepts in Motivational Interviewing, which is a collaborative, person-centered form of eliciting and strengthening motivation for change. It is a way of working with persons to assist them in accessing their intrinsic motivation to change behaviors that contradict their essential values and interfere with the achievement of their life goals. Motivational Interviewing is both a philosophy and a set of strategic techniques. It is an evidence-based treatment with a broad range of applications. The course will place an emphasis on individuals with severe and persistent mental illness and/or substance use disorders. Specific techniques to recognize, elicit and strengthen change talk, as well as responding to resistance and consolidating a person's commitment to change will be explored. Exercises and examples specific to the unique practice setting of participants will be incorporated. Students will have an opportunity to practice these techniques in role/real-play and other group exercises as well as measure skill application and provide meaningful feedback to their peers. Prereq: SASS 477 or SASS 400-TR.

SASS 525. AIDS Seminar. 3 Units.
This course is designed to provide an understanding of HIV/AIDS. The nature and prevalence of the disease, including its impact upon vulnerable populations such as children and youth, women, gay and lesbian populations, people of color, prisoners, IV drug users, and street people are examined. The course focuses on public policies, programs, and service delivery for HIV/AIDS at local, state, and national levels. Topics include the policy-making role of advocacy groups, the function of AIDS service organizations, and the design of educational and preventive programs. Prereq: SASS 470 or SASS 400-TR.

SASS 527. The Theory and Practice of Leadership. 3 Units.
This course assists students preparing for management and leadership roles in social service organizations to understand theories of leadership and translate them into effective leadership practices. The class explores leadership definitions, tasks and responsibilities, and the development of leadership capabilities. Students also examine their personal values, beliefs, skills, and understanding of ethical principles underlying leadership. Prereq: SASS 440 or SASS 400-TR.

SASS 529. Child and Family Policy and Service Delivery. 3 Units.
This course focuses on major federal legislation impacting children, youth, and families, examined in the context of community-based social work policy/practice. It builds upon the foundation course in social welfare policy and enables students to use an advocacy approach to provide policy-informed services and to participate in policy and implementation and change. Prereq: SASS 470 or SASS 400-TR.

SASS 530. Practice Evaluation. 3 Units.
This advanced course prepares direct practice students to examine their own practice with individuals, families, and groups. Attention is given to basic principles of measurement and selection of appropriate measurement instruments for use in direct practice settings. The course is intended to provide students with the technical skills necessary to investigate the components of social work practice and contribute to an empirically validated social work knowledge base. The student is asked to determine the efficacy of his/her practice intervention in field placement by using a suitable design and method. A hands-on project is required using clinical experience from field practice. Prereq: SASS 426 and SRCH 426 or SASS 400-TR.

SASS 531. Collaboration & Strategic Partnerships. 3 Units.
The development of strategic alliances is being used increasingly as a key for nonprofit organizations to carry out their missions. This course is designed to provide students with the conceptual and practical resources necessary for leadership in the formation and maintenance of such alliances. Various models and strategies for creating and sustaining local, community-based, and national relationships are explored. The course is based on "practical theory," builds on current knowledge about creating mulch-organizational partnerships, and expands capabilities to participate in these efforts. The overarching goals of this course are that students, as members of this "learning community," will (a) develop a deeper understanding of the core knowledge required for successful collaboration, (b) deepen their appreciation of the values and ethics involved in creating strategic alliances, and (c) enhance their ability to apply acquired skills in the area of inter-organizational relations. Prereq: SASS 477 and SASS 478 or SASS 400-TR.

SASS 532. Needs Assessment and Program Evaluation. 3 Units.
This course covers research methods and analytic tools that are used in communities and organizations to plan, monitor and evaluate programs, projects and initiatives. It builds upon the research methods course in the foundation curriculum and deepens and expands this content at the advanced level. The content prepares students to use quantitative and qualitative research methods to plan and evaluate programs, policies and practices. The class covers the conceptual and technical aspects of conducting needs assessment in and applying the tools and findings to the community, program and organizational development process. The course employs a circle perspective with the goal that students will be able to judge the strengths and weaknesses of various tools and approaches and the degree to which ethical standards have been met. Students are introduced to a variety of methods for community and needs assessment, demographic, statistical and geographic analysis, qualitative and quantitative data gathering methods, and program and policy evaluation designs. The importance of conducting research in ways that respect cultural diversity and are valid across diverse populations is emphasized. The practical aspects of using data to drive decision making, quality improvement, outcomes management and the engagement of partners and stakeholders are also covered in the course. This course is structured to have a strong emphasis on skill development in data gathering, analysis and application. Prereq: SASS 426 or SRCH 426 or SASS 400-TR.

SASS 534. Theoretical Contexts Shaping Community Practice. 3 Units.
The aim of the course is to provide students in the Community Practice for Social Change concentration with a thorough overview and analysis of the range of individual, group, organizational and community-level theories that inform our practice with organizations, neighborhoods, communities, social institutions and policies. The course seeks to help students: (1) develop an appreciation of the main traditions, theoretical debates, experiences and research findings in community practice both as a change process and as an interdisciplinary field; (2) identify the key ideological assumptions underlying these theories with attention to the broader historical, economic, social, demographic, institutional and political influences that affect these assumptions as well as resultant practice both in the United States and internationally; (3) identify, articulate and apply theories of change through the practice of theorizing; and (4) understand and apply logic models for community problem solving. The course emphasizes application of theory to practice settings and developing skills and competencies for community work in diverse settings.
SASS 535. Human Sexuality. 3 Units.
The course addresses sexuality as an integral part of human functioning and human relationships throughout the life cycle. The formation of sexual identity is addressed, including gender identity, sexual orientation, and sexual intention. The physiological and psychological aspects of sexual behavior are covered, including the effects of aging, chronic illness, and sexually transmitted diseases. The course concludes with practical applications for social work, including an overview of assessment and treatment of sexual dysfunction. Prereq: SASS 440 or SASS 400-TR.

SASS 536. Individual Research Practicum. 3 Units.
With instructor and research sequence chair approval, an individual program of supervised research experience may be undertaken. This course allows the student to tailor a program of applied research to a specific practice issue or program. Prereq: SASS 426 or SASS 400-TR

SASS 538. Evidence-Based Practice: Selection, Implementation, and Practice Issues. 3 Units.
This course prepares students to critically assess and reflect on evidence-based practice theory, principles, and practice issues as they relate to social work. Students will integrate knowledge of assessment and clinical treatment theories with the growing research and science base of evidence-based practice. The course will focus on multiple levels of evidence-based practice promotion including the individual level, the programmatic and agency level, and the broader market place contexts. In the beginning of the course, students will be introduced to the history and background of the evidence-based practice movement, including definitions and terms. Students will also examine how to incorporate strategies optimizing client needs and circumstances into the EBP decision-making process, and to think critically about how to ensure that their practice adheres to social work values and ethics. Students will learn issues and strategies for locating, selecting, and evaluating EBP practice research, including the selection of EBPs tailored to a specific client or population. On the programmatic and agency levels, students will examine core implementation components and challenges (e.g., planning, educating, financing, restructuring, managing quality, attending to policy) commonly faced in agency practice by clinicians, supervisors and administrators. As students are exposed to the implementation science literature and research, they will appreciate how key multilevel implementation approaches can be designed and applied to promote health and behavioral health innovation on both the prevention and intervention levels. Finally, students will review that EBP landscape from a broader perspectives including prevention science, and the diffusion of innovations, examining important controversies and market trends that influence and impact contemporary evidence-based practice in social work. Prereq: SASS 477 and SASS 478.

SASS 539. Early Intervention: Theories and Practice. 1 - 3 Unit.
This course both describes the characteristics of young children with disabilities and examines the intervention models and practices that are used to address the developmental and social-emotional needs of these children. The course describes the legislative and philosophical foundations for contemporary early intervention practice. It discusses the meaning of evidence based practice and examines contemporary early intervention practices from this perspective. The readings and assignments for this course have been designed to reflect the course objectives.

SASS 539A. Early Intervention Practicum. 0 Units.
This practicum course is zero academic credit hour for students who have been selected for the Early Intervention Traineeship program. Students will work with the practicum instructor to complete 60 hours of experience in early intervention.

SASS 545. Program Design. 3 Units.
Program design and development are of critical importance in nonprofit organizations. In this course students will gain a practical, hands-on understanding of strategies for designing programs. The course focuses on program development approaches that attempt to maximize a program's relevance to the need being addressed and increase the likelihood that the program will attain its identified outcomes. Emphasis is placed on learning to understand a community's need/problem, reviewing evidence on potential strategies and identifying promising practices, anticipating potential implementation challenges and addressing them, and identifying potential funders. The link between program design and the development of effective program proposals is stressed. Through this course students will have the opportunity to design a program using a specific analytic framework. Students will learn: (1) to address the demands of multiple constituencies and competing values in program development process, (2) skills for developing and implementing programs in the nonprofit sector, and (3) to examine issues of diversity as they affect organizations and community efforts and explore personal values and ethics as these influence programs and interventions.

SASS 546. Poverty Strategies for Social Workers. 3 Units.
This course provides an understanding of poverty. It examines poverty through an exploration of its causes, theory, policy strategies for its amelioration and practice implications. The course investigates the impact of poverty on single individuals, families with children, minorities, and vulnerable populations. The course will examine welfare reform and its impact in bringing people out of poverty. Students, in teams, will examine one facet of poverty--its theories, policies, impacts on individuals and families, potential solutions, and our approaches to the issues as social workers. In addition to assigned texts and readings, the course will be supplemented by practitioners, organizers, and low-income persons addressing the issues of poverty. Prereq: SASS 440 or SASS 400-TR.

SASS 547. Problem Identification, Screening and Assessment/Diagnosis. 3 Units.
This course will provide a bio-psycho-social approach to identification, screening, assessment and diagnoses of common psychosocial problems/dysfunctions experienced clients. This course introduces the student to the etiology, recognition and diagnoses of these problems in the context of social work practice. Through use of a competency-based model, students will be introduced to techniques used to screen, assess and diagnose problems such as serious mental illness, suicidality, depression and anxiety, substance abuse, child abuse, elder abuse, and exposure trauma. Students will also become familiar with the use of the DSM IV TR in providing axis I diagnostic formulations. A skills-based approach will be used in presenting students with specific screening, assessment and diagnostic protocols. This course is designed to incorporate a range of issues associated with stages across the lifespan from childhood to late life. Prereq: SASS 477 or SASS 400-TR.

SASS 548. International Social Work. 3 Units.
This is an advanced seminar designed for students interested in the international dimensions of the social work profession and social work practice. The seminar focuses on commonalities and differences in the roles and functions of social workers in different nations. It also gives attention to social work as a global profession and social work practice on an international level. Prereq: SASS 477 or SASS 400-TR.
SASS 549. Theory/Practice Approaches in Direct Practice Social Work. 3 Units.
This required, three credit course introduces selected theories and practice approaches commonly used in social work with individuals, families and groups. The course is designed to provide students with knowledge of theoretical explanations and practice frameworks commonly used in direct social work practice. The course also encourages students to apply critical thinking skills to theory and its practical applications. Case presentations, class discussions and assignments will require students to apply various theoretical perspectives to common problems and issues in social work practice. The course will highlight the use of professional social work values and attention to human development issues, diversity and cultural perspectives as they apply in each theory or framework. Prereq: SASS 477 or SASS 400-TR.

SASS 550. Trauma Informed Social Work Practice with Children & Families. 3 Units.
This course builds on foundation direct practice courses and focuses specifically on children, adolescents and families affected by trauma. It uses both a developmental and an ecological systems perspective recognizing that in order to successfully treat trauma, it is important to not only focus on the individual but also on the family and the larger community environment of which the child or adolescent is a part. It is designed to foster an understanding of the neurobiology of trauma as well as to develop specific skills in interviewing children, child assessment including case formulation, selection of appropriate interventions, and using specific intervention strategies at different levels of the trauma system. Rather than teaching one specific intervention model, students will develop an understanding the importance of using the empirical literature, critical thinking skills, and clinical judgment to determine how to best intervene. The issues of ethically and culturally competent practice are emphasized throughout the course in each content area. Finally, the impact of secondary trauma on the practitioner is acknowledged and students develop plans for self-care.

SASS 555. Women’s Issues. 3 Units.
This course examines theories that are relevant to the development and socialization of women, and discusses issues that are relevant to women’s lives within the context of oppression based on sexism, racism, ageism, homophobia, and other forms of discrimination. Emphasis is placed on assisting students in becoming more aware of the issues that are specifically relevant to their own development and socialization, and preparing for effective and sensitive professional practice by increasing knowledge about the issues facing women. Prereq: SASS 440 or SASS 400-TR.

SASS 561. Community Practice Policy: Analyzing and Changing Social Policy. 3 Units.
This course teaches knowledge, values and skills for analyzing and changing social policy. The course uses a policy practice framework to examine the development and implementation of community and social policy and to prepare students to participate in policy change. A Policy Practice Project provides an opportunity for students to develop skills in planning, advocacy, and policy development. Students work in groups to develop and implement a change strategy targeted at the agency or community level. Course content includes policy analysis, logic models, and advocacy methods. The course will also cover essential social policies relevant to community practice including place based and population based policies for improving communities such as community development, employment and housing policies.

SASS 562. Social Work Intervent in Co-occuring Mental and Substance Abuse Disor. 3 Units.
This advanced methods course provides a basic orientation to substance use disorders in persons with mental illness (SAMI). A biopsychosocial framework will be used to explore the etiology, the maintenance and the recovery of both mental and substance use disorders. The historical background of practitioner, programmatic, and institutional barriers that impede the development and application of clinical skills to dually diagnosed individuals will be explored. Emphasis will be placed on strategies for the implementation of services to deal with individuals with co-occurring problems and their families using the evidence-based New Hampshire-Dartmouth Psychiatric Research Center Integrated Treatment (IT) Model. Current assessment techniques and treatment of special populations including, but not limited to: women, minorities, and adolescents will be discussed. Prereq: SASS 477 or SASS 400-TR.

SASS 563. Resources for Community And Social Development. 3 Units.
Students will be able to understand and utilize the methods to identify, garner, and effectively use resources that promote community and social development. These methods can be applied to expanding resources for individuals, families, communities, and society, as well as to generate resources for organizations. While primarily focusing on financial resources, the course will also consider the important means of positioning an agency or organization to attract and receive resources and collaborate with others to put those resources to their most effective use. The skills that students practice in the course will include fund raising, grant development, financing, strategic partnerships and business deals, marketing, etc. The course will introduce proven models, such as low income tax credits, micro-enterprise, individual development accounts, and revolving loan programs. Students will also learn how to analyze and understand key domestic and international policies and institutions (e.g., foundations, banks, businesses, governments, associations) that relate to resources for community and social development.

SASS 564. Social Work Practice in Alcohol and Other Drug Abuse. 3 Units.
SASS 564 is an advanced direct practice concentration course focused upon knowledge, skills and values important for social work practice with people who abuse and/or are dependent on alcohol and other drugs. The content of SASS 564 directly builds upon the foundation direct practice course (SASS 477) and the required advanced course in screening and assessment (SASS 576). SASS 564 takes a bio-psycho-social approach to prevention, assessment and treatment of alcohol and other drug abuse and dependency (AODA) problems. This course introduces the student to the etiology and treatment of alcohol and other drug abuse in the context of social work practice. The historical background and the development of the evidence base of alcohol and other drug treatment interventions, self-help groups, and conceptual models of addiction will be presented. Students will explore their own attitudes and values toward AODA problems and how these affect treatment outcome as well as commonly used prevention and treatment approaches in social work with people who abuse and/or are dependent upon alcohol and other drugs. The course will use case materials to illustrate similarities and differences among various populations including minority/ethnic identity groups. Prereq: SASS 477 or SASS 400-TR.
SASS 567. Assessing, Building & Organizing Community. 3 Units.
This course will examine strategies of community and social development, focusing on community as a means of impacting social change and improving the quality of life for individuals and families in low-income urban communities. Students will learn the history, frameworks and models of community building and community organizing. The course will include critical analysis of the goals, strategies, and the potential and the challenges that these efforts have faced and the lessons learned to date. Students will also learn practice skills in the related social processes in the United State and Internationally, such as strategic planning, participatory action research, consciousness-raising, and direct action. As community and social development models are presented, students will participate in a comparative analysis of the roles played by community organizers, community builders, community-based organizations, and community initiatives. Through real world experience and case studies, students will develop skills in neighborhood assessment, civic engagement, empowerment, leadership development, group work, relationship building, social capital formation, conflict resolution, democratic process, social policy analysis and change, and other methods.

SASS 569. Planning & Implementing Social Change. 3 Units.
This course builds skills for the design, planning and implementation of social change. The focus of this course is on promoting social change through more strategic and impactful planning, positioning and partnerships. The premise of this course is that the impact and sustainability of programs, initiatives and other change efforts can be strengthened through more effective planning, better strategic positioning and organizational adaptation to external circumstances and trends, and stronger collaborations and partnerships. Students will strengthen their ability to work effectively within organizations, in collaborations and coalitions, and within communities and systems. Course content includes the development of theories of change and action, logic, models, strategic planning, organizational assessment, strategic positioning, collaboration and coalition building, systems reform, and effective working relationships with funders and local intermediaries. A service learning assignment with a community partner. Prereq: SASS 567

SASS 574. Legal Issues in Social Work. 3 Units.
This course explores the legal issues that permeate the social work profession. Starting with a historical examination of our legal systems, the course will illustrate how social work is influenced and shaped by constitutional, statutory, and legal policy constructs. Students will learn about the skills necessary to provide testimony and to conduct forensic interviews, and we will discuss the legal foundation of ethical considerations and social work values. Students will also learn basic skills in how to utilize the law and legal processes to best advocate for clients and address larger social justice issues. By the end of the course, students will understand how social workers can competently navigate the choppy waters of the law in an interdisciplinary professional environment.

SASS 575. Travel and Study Seminar. 3 Units.
This course acquaints the student with the socio-political factors that influence the development of social welfare systems in a selected country and the impact of these systems on the development and functioning of individuals, families, groups, or communities. The role of the emerging social work profession in social change is explored via the social welfare system. Topics focus on the health care, mental health, aging, child, and/or educational systems and are oriented towards direct practice, management, or community development.

SASS 576. Integrative Seminar in Alcohol and Other Drug Abuse Treatment. 3 Units.
This course is an advanced level course in the Alcohol and Other Drug Abuse Specialization that provides opportunities for students to increase their knowledge of topics in the areas of assessment, diagnosis and treatment of alcohol and other drug disorders. The seminar builds upon course material in Foundation Methods (477) and in the advanced methods course (SASS 549 and SASS 564). The seminar is intended to help students understand the evidence base for the treatment of substance use disorders and to explore selected areas of social work practice in intervention in the context of that evidence. Community applications of theory and techniques are stressed. The integrative Seminar in AODA Treatment uses a seminar format and provides students the opportunity to interact with treatment professionals from various treatment and practice settings. The seminar format also facilitates individual learning: each student selects his or her own topic to pursue in depth. Each student is responsible for leading a minimum of one seminar presentation. Each student will select the topic for the seminar in consultation with the instructor. Coreq: SASS 477 and SSWM 564 or SASS 564.

SASS 577. Social Work With Persons with Serious Mental Illness. 3 Units.
This course focuses on people who have severe mental illnesses. Students learn primary and tertiary community-based treatment and rehabilitative approaches, services, and programs. In helping people achieve recovery, students learn the theory and practice skills that underscore the four major approaches to community-based service delivery: the assertive case management model; strengths case management model, psychosocial rehabilitation model, and the recovery model. Within each model, specific attention is placed on practice similarities and differences, especially interviewing assessment, and intervention. Within these practice skills, students learn how to identify social justice and empowerment values that are supported or undermined. Advocacy is highlighted as a central social work value and practice skill that cuts across community-based practice models. Finally, lectures, readings, and discussions examine how gender, ethnicity, and social class produce various experiences of mental illness and various social work interventions. Prereq: SASS 477 or SASS 400-TR.

SASS 579. Cognitive Behavioral Interventions. 3 Units.
This course acquaints students with the theoretical, conceptual, and skill bases of several cognitive-behavioral approaches to practice. Topics include assessment, use of tasks and homework, coping skills, cognitive restructuring, and problem solving approaches to practice. The course draws upon students’ field and work experiences to illustrate the application of the concepts and skills under discussion. Prereq: SASS 477 or SASS 400-TR.
SASS 580. Social Work Practice in Mental Health: Children and Adolescents. 3 Units.
This advanced methods course builds on the content from required foundation social work methods, policy and human development courses including Direct Practice Methods and Skills, Mental Health Policy and Service Delivery. This course complements the content of advanced methods courses including Social Work with People Who Have Chronic Mental Illness, Social Work in Child Abuse and Family Violence, and Interventions in Alcohol and Other Drug Abuse. This course develops biopsychosocial knowledge and intervention techniques related to professional settings specializing in child and adolescent mental health: hospitals, child guidance agencies, family service agencies, mental health centers, and residential treatment centers. Students learn to use development and clinical theory to guide interventions while, maximizing individual strengths, social work treatment centers. Students learn to use development and clinical theory to guide interventions while, maximizing individual strengths, social work values and ethics, and empowerment. Social and economic risk factors, such as poverty, discrimination, and oppression, are considered in the intervention process and in the utilization of mental health services. In addition, students learn to think critically about the myriad ways cultural diversity influences parenting, child and adolescent norms and expectations. Students utilize assessment skills, coupled with knowledge of development and clinical theory to explore clinical case studies. Prereq: SASS 440 and SASS 477 or SASS 400-TR.

SASS 581. Social Work Practice with Older Adults. 3 Units.
This course is an advanced methods course that builds on the knowledge gained in Foundation Methods. The content of SASS 581 directly builds upon the foundation direct practice course (SASS 477) and the required advanced course in screening and assessment (SASS 576). It is also a required course in the Aging Specialization for the MSSA. The course will focus on the persistent principles and emerging emphases in direct practice with older adults and their families. Students will be asked to develop a model of practice based on knowledge of this unique population, social work values, and practice concepts. The course includes special issues in assessment, strengths-base case management, and intervention approaches known to be effective with emotional disorders in older adults. Prereq: SASS 477 or SASS 400-TR.

SASS 582. Social Work in Child Abuse and Family Violence. 3 Units.
This course addresses the etiology, investigation, and treatment of child abuse including sexual abuse and the roles of child welfare, health, and mental health agencies. Particular attention is given to direct work with children and adults who have experienced abuse, and to interventions in instances of family violence. Prereq: SASS 440 and SASS 477 or SASS 400-TR.

SASS 583. Social Work Practice in Mental Health Adults. 3 Units.
This advanced methods course builds on the content from required foundation social work methods, policy, and advanced sociobehavioral theory courses including Direct Practice Methods and Skills, Mental Health Policy and Service Delivery, Advanced Child and Adolescent Development and Dysfunction, and Adult Psychopathology. This course complements the content of advanced methods courses including Social Work with People Who Have Chronic Mental Illness, Social Work in Child Abuse and Family Violence, and Interventions in Alcohol and Other Drug Abuse. This course develops biopsychosocial knowledge and intervention techniques related to professional settings specializing in child and adolescent mental health: hospitals, child guidance agencies, family service agencies, mental health centers, and residential treatment centers. Students learn to use development and clinical theory to guide interventions while, maximizing individual strengths, social work values and ethics, and empowerment. Social and economic risk factors, such as poverty, discrimination, and oppression, are considered in the intervention process and in the utilization of mental health services. In addition, students learn to think critically about the myriad ways cultural diversity influences parenting, child and adolescent norms and expectations. Students utilize assessment skills, coupled with knowledge of development and clinical theory to explore clinical case studies. Prereq: SASS 477 or SASS 400-TR.

SASS 584. Integrative Seminar in Mental Health: Children and Adolescents. 3 Units.
Integrative Seminar in Mental Health: Children and Adolescents is an advanced level course, a capstone course in the Mental Health Child and Adolescent Specialization, that provides opportunities for students to increase their knowledge of assessment, diagnosis and treatment. This course builds on the course material in SASS 580, SASS 477, SASS 549, and SASS 576. The seminar is intended to help students integrate theory and practice, especially in the context of public mental health and community-based, social service practice. The integrative Seminar in Social Work Practice with Children and Adolescents uses a seminar format facilitates individual learning and promotes a learning-to-practice, reflective approach. The seminar assumes there are numerous evidenced-based models and practices and focuses student learning on the role of the professional use of self in the implementation of theory, technique, model, or intervention.

SASS 585. Social Work with Groups. 3 Units.
A theoretical formulation of the social group work method as a problem solving process is addressed. Exercises are presented in the use of diagnostic skills to determine individual needs and problems for which groups may be helpful, the worker's role in facilitating group functioning through his/her use of various program media. Attention is given to the significance of goals, agency environment, and policy for direct work with groups. Prereq: SASS 477 or SASS 400-TR.

SASS 586. Social Work with Couples. 3 Units.
This course provides an overview of assessment and intervention methods for working with couples around issues of marriage, divorce, and remarriage. Alternate couple forms are discussed. The course emphasizes systems and social learning approaches, communication and negotiation in problem solving and its relevance to assessment, treatment structure, and techniques. Special attention will be given to problem areas such as commitment, sexual dysfunction, chemical dependency, and destructive communication patterns. Prereq: SASS 477 or SASS 400-TR.
SASS 587. Integrative Seminar in Mental Health: Adults. 3 Units.
The Integrative Seminar in Social Work Practice with Adults is an advanced level course, a capstone course in the Mental Health Adult Specialization, that provides opportunities for students to increase their knowledge of assessment, diagnosis and treatment. This course builds on course material in SASS 583, SASS 477, and SASS 576. The seminar is intended to help students integrate theory and practice, especially in the context of public mental health and community-based, social service practice. The Integrative Seminar in Social Work Practice with Adults uses a seminar format and provides students the opportunity to interact with professionals, from various treatment and practice settings. The seminar format facilitates individual learning and promotes a learning to practice, reflective approach. The seminar assumes there are numerous evidenced-based models and practices and focuses student learning on the role of the professional use of self in the implementation of theory, technique, model, or intervention. Prereq: SASS 583 or SASS 400-TR.

SASS 589. Advanced Social Work Practice In Integrated Healthcare. 3 Units.
The objective of this course is to introduce social work students to the direct practice of integrated behavioral health in primary care settings. Students will become knowledgeable of the roles of behavioral health providers working in healthcare settings, theories and models of care, and cross-cultural issues. They will develop skills in engagement, assessment, intervention, planning and implementation, and practice evaluation. Because the populations served in primary care settings span the continuum of severity in both the physical and behavioral health dimensions, students will develop competencies in engaging and supporting diverse patients across a range of health conditions. Prereq: SASS 477 or SASS 400-TR.

SASS 590. Field Practice. 1 - 12 Unit.
SASS 594. Independent Study Abroad. 1 - 12 Unit. (Credit as arranged.)
SASS 598. Individual Reading. 1 - 12 Unit.
Special written permission needed. See MSASS registrar.
SASS 601. Field Education I. 2 Units.
The overall goal of this course is to provide graduate level social work students with field related opportunities to develop foundation level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. The field instructor is based at the social service setting and provides the direct instruction of the student. The faculty advisor, who is based at the School, serves as a link between all parties, interprets the requirements and standards of the School, and participates and consults in the design of the student’s learning experience. The field instructor assigns tasks to the student according to the requirements of the School and the educational and experiential level of the student. Student, field instructor, and faculty field advisor all participate in various ways in the evaluation of the student's work; the faculty advisor is responsible for assigning the grade.

SASS 602. Field Education II. 3 Units.
This course is designed to be taken by entering Advanced Standing students in the first semester of their master's program and by Foundation level social work students in the second semester of their master's program. It consists of a field practicum and participation in professional development opportunities. For students entering the program with advanced standing, there is an additional requirement of four logs and an integrative assignment, and periodic meetings with a field faculty advisor in addition to the field conference. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop foundation level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values, and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Students spend 336 hours in field and professional development in SASS 602. Prereq: SASS 601 or SASS 400-TR.

SASS 603. Field Education III. 3 Units.
The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop advanced level competencies in their area of concentration in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Students spend 336 hours in field and professional development in SASS 603. Prereq: SASS 602 or equivalent.

SASS 604. Field Education IV. 3 Units.
This course is designed to be taken by students in their advanced course of study. It consists of a field practicum and participation in professional development opportunities. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop advanced level competencies in their area of concentration in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Students, field instructor, and field faculty advisor all participate in the evaluation of the student's work; the faculty advisor is responsible for assigning the grade. Students spend 336 hours in field and professional development in SASS 604. Prereq: SASS 603 or equivalent.

SASS 608. Philosophy of Science and Theory Building. 3 Units.
This is a required foundation course. The nature of theory is examined. Inductive and deductive methods for knowledge building are reviewed. Course content draws from philosophy of science as well as empirical and phenomenological research.
SASS 609. Theories of Social Welfare and Social Justice. 3 Units.
This is a foundation course required for all students. Theories of social welfare and social justice are examined. Course content draws from moral philosophy, economics, political science, cultural anthropology, sociology, history, psychology, and social welfare theory and provides students with a broad orientation to the field of theoretical social welfare.

SASS 610. Theories of Human Behavior: Macro and Micro Dimensions. 3 Units.
This is a required, foundation course and is designed to help students acquire a critical and reflective approach to theory in social work research and practice. The course provides a broad overview of theoretical perspectives at the individual, group, community, organizational and/or societal levels and addresses major theoretical perspectives used in social work and social welfare research.

SASS 613. Advanced Research Design. 3 Units.
This foundation course in research methods is required of all students. It is a prerequisite to the quantitative and qualitative courses. Topics covered include operationalization of variables, threats to validity, and experimental, quasi-experimental and non-experimental research design.

SASS 614. Models of Qualitative Research. 3 Units.
This required course introduces students to the principles, approaches, methods, and analytical techniques utilized when conducting qualitative research in the social sciences. Five models of qualitative research design and methodology are studied, including narrative analysis, case study, ethnography, and grounded theory and phenomenology. This course is designed to provide students with the tools to critically evaluate as well as to enhance the academic rigor or “quality” of qualitative data. Prereq: SASS 608 and SASS 613.

SASS 615. Social Statistics and Data Analysis. 3 Units.
This foundation course (or its equivalent) is required of all students. Content includes univariate, bivariate and inferential statistics, and the use of electronic data processing technology to manage and analyze data. Prereq: SASS 613.

SASS 616. Applied Regression and the Linear Model. 3 Units.
This is a required course in the research methods sequence for MSASS doctoral students. At the end of this course, students will be able to apply ordinary least squares regression and logistic regression in the analysis of social science data. They will learn to formulate research questions and hypotheses, specify statistical models, carry out the appropriate analyses, interpret their findings, and communicate their results clearly and effectively. Prereq: SASS 613 and SASS 615.

SASS 617. Specialization Seminar. 3 Units.
This elective course is a graduate level seminar; students and instructors share in the responsibility for presenting information and constructive criticism on the material. Topics include the selection and description of a social welfare topic, the theoretical explanations of that topic and the development of a focused, empirically-based literature review resulting in research questions and hypothesis.

SASS 618. Measurement Issues in Quantitative Research. 3 Units.
This required course covers the operationalization of social science concepts and development of methods for their measurement. Issues covered include index and scale construction, validity, reliability, questionnaire design, factor analysis, measurement error, and missing data. Prereq: SASS 613, SASS 615 and SASS 616.

SASS 620. Intervention Research for Social Work Practice. 3 Units.
This course provides a critical overview of the major theories and the body of research informing contemporary social work practice. Theories will include the foundational, such as psychodynamic, ego-psychological, ecological and systems, along with trans-theoretical and post-modern theories. The course will integrate a discussion of the history of scientific inquiry in social work, particularly focusing on practice or intervention studies, systematic reviews and meta-analyses. Criteria for evaluating individual studies and the evidence base in specific practice areas will be included, along with material on the current state of Evidence-Based Practice. Recommended preparation: SASS 610.

SASS 621. Social Welfare Policy. 3 Units.
This course focuses on the critical review and application of policy analysis frameworks related to social welfare policy. The conceptual, historical, ideological, and political foundations contributing to the development, formulation, implementation, and monitoring and evaluation of social welfare policies will be critiqued. Social welfare policies intended to ameliorate social ills (e.g., poverty, education, housing) will be analyzed using policy analysis frameworks in a critical and comparative fashion. Policy alternatives to respond to current and future social problems will be critically discussed for feasibility, viability and economic effects. Recommended preparation: SASS 610.

SASS 622. Designing Mixed Methods Research. 3 Units.
Prereq: SASS 608, SASS 613, and SASS 614 and SASS 615.

SASS 630. Seminar on Social Work Education. 3 Units.
This required seminar examines the structure and content of social work education within the context of higher education in American society. Emphasis is placed on curriculum design and course development. The course also is designed to help students develop a strategic approach to teaching based on learning theory. Finally, attention is given to current issues and future directions for social work education.

SASS 632. Research Project. 3 Units.
This elective course provides students with the opportunity to work with specific faculty engaged in research studies either on an individual or group basis. Prereq: 614 and SASS 615.

SASS 635. Methodological Issues in Qualitative Research. 3 Units.
This course focuses on the application of specific qualitative data-collection methods, data-analytic approaches, and strategies for representing findings from qualitative investigations. Prereq: SASS 614.

SASS 637. Individual Reading. 1 - 18 Unit.
This is an elective individual reading course permitting students to select areas of interest and pursue these interests with specific faculty.
SASS 651A. Field Education I-A. 1 Unit.
This course is designed to be taken by entering Non-Advanced Standing social work students in the first semester of their master's program. Students enrolled in SASS 651A take SASS 495, Field Education Seminar concurrently for the entire field period. The SASS 651A course is 16 weeks in duration. The overall goal of this course is to provide graduate level social work students with field related opportunities to develop foundation level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent developing practitioners. The field instructor assigns tasks to the student according to the requirement of the School and the educational and experiential level of the student. Student, field instructor, and faculty field advisor all participate in various ways in the evaluation if student's work; the faculty advisor is responsible for assigning the grade. Students spend 75 hours in field and professional development in SASS 651A.

SASS 651B. Field Education I-B. 1 Unit.
This course is designed to be taken by entering Non-Advanced Standing social work students in the second semester of their master's program. The SASS 651B course is 16 weeks in duration. The overall goal of this course is to provide graduate level social work students with field related opportunities to develop foundation level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. The field instructor assigns tasks to the student according to the requirements of the School and the educational and experiential level of the student. Student, field instructor, and faculty field advisor all participate in various ways in the evaluation if student's work; the faculty advisor is responsible for assigning the grade. Students spend 75 hours in field and professional development in SASS 651B. Prereq: SASS 651A.

SASS 652A. Field Education II-A. 1.5 Unit.
This course is designed to be taken by entering Advanced Standing students in the first semester of their master's program and by Non-Advanced Standing social work students in the third semester of their master's program. The SASS 652A course is 16 weeks in duration. It consists of a field practicum and participation in professional development opportunities. For students entering the program with advanced standing, there is an additional requirement of four logs and an integrative assignment, and periodic meetings with a field faculty advisor in addition to the field conference. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop foundation level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values, and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Students spend 150 hours in field and professional development in SASS 652A. Prereq: SASS 651A and SASS 651B or SASS 400-TR.

SASS 652B. Field Education II-B. 1.5 Unit.
This course is designed to be taken by entering Advanced Standing students in the second semesters of their master's program and by Non-Advanced Standing social work students in the fourth semester of their master's program. The SASS 652B course is 16 weeks in duration. It consists of a field practicum and participation in professional development opportunities. For students entering the program with advanced standing, there is an additional requirement of four logs and an integrative assignment, and periodic meetings with a field faculty advisor in addition to the field conference. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop foundation level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values, and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice and confront social injustice as self-reflective, competent, developing practitioners. Students spend 150 hours in field and professional development in SASS 652B. Prereq: SASS 652A.
SASS 653A. Field Education III-A. 1.5 Unit.
This course is designed to be taken by students in their advanced course of study. Advanced Standing social work students take this course in the third semester of their master's program. Non-Advanced Standing social work students take it in the fifth semester of their master's program. The SASS 653A course is 16 weeks in duration. It consists of a field practicum and participation in professional development opportunities. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop advanced level competencies in their area of concentration in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent, competent, developing practitioners. Students spend 150 hours in field and professional development in SASS 653A. Prereq: SASS 652A and SASS 652B.

SASS 653B. Field Education III-B. 1.5 Unit.
This course is designed to be taken by students in their advanced course of study. Advanced Standing social work students take this course in the fourth semester of their master's program. Non-Advanced Standing social work students take it in the sixth semester of their master's program. The SASS 653B course is 16 weeks in duration. It consists of a field practicum and participation in professional development opportunities. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop advanced level competencies in their area of concentration in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent, competent, developing practitioners. Students spend 150 hours in field and professional development in SASS 653B. Prereq: SASS 653A.

SASS 654A. Field Education IV-A. 1.5 Unit.
This course is designed to be taken by students in their advanced course of study. Advanced Standing social work students take this course in the fifth semester of their master's program. Non-Advanced Standing social work students take it in the seventh semester of their master's program. The SASS 654A course is 16 weeks in duration. It consists of a field practicum and participation in professional development opportunities. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop their advanced level competencies in their area of concentration in the eight abilities by helping students apply ethic acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Student, field instructor, and field faculty advisor all participate in the evaluation of the student's work; the faculty advisor is responsible for assigning the grade. Students spend 150 hours in field and professional development in SASS 654A. Prereq: SASS 653A and SASS 653B.

SASS 654B. Field Education IV-B. 1.5 Unit.
This course is designed to be taken by students in their advanced course of study. Advanced Standing social work students take this course in the sixth semester of their master's program. Non-Advanced Standing social work students take it in the eighth semester of their master's program. The SASS 654B course is 16 weeks in duration. It consists of a field practicum and participation in professional development opportunities. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop their advanced level competencies in their area of concentration in the eight abilities by helping students apply ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Student, field instructor, and field faculty advisor all participate in the evaluation of the student's work; the faculty advisor is responsible for assigning the grade. Students spend 150 hours in field and professional development in SASS 654B. Prereq: SASS 654A.
SASS 655. Dual Degree Field Practicum II. 3 Units.
This course is designed to be taken by MSSA/MPH joint degree students as the second field period of their master's program. It consists of a field practicum and participation in professional development opportunities. The Field Practicum is an integral component of the MSASS and MPH curriculums, allowing students to apply, develop, and refine their conceptual knowledge and skills as part of a planned, supervised, and evaluated community-based experience. The Practicum is designed to move students beyond the walls of academia, to understand the political, economic, social, and organizational contexts within which social work and public health activities are conducted. These collective experiences provide students with a forum to develop skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent developing practitioners. (EPAAS Program Objective M6 and EPAAS Content Area 4.7) The overall goal of this course is to provide graduate level MSSA/MPH joint degree students with field related opportunities to continue to develop foundation level competencies in the eight MSAS abilities by helping students apply knowledge of social work and public health theory, skills, values and ethics acquired in the classroom in an agency setting. Offered as MPHP 655 and SASS 655. Prereq: SASS 601.

SASS 656. Dual Degree Field Capstone III. 3 Units.
The Public Health Capstone Project is an integral component of the MPH curriculum, allowing students to apply, develop, and refine their conceptual knowledge and skills as part of a planned, mentored, and evaluated public health scholarly project. This course is designed to be taken by advanced level students. It consists of a 288 hour field based Capstone experience and participation in 12 hours of professional development opportunities. The overall goal of this course is designed to move students beyond the walls and constraints of the classroom, to understand the political, economic, social, and organizational contexts within which public health and social work activities are conducted. It is also designed to provide graduate level dual degree students with field related opportunities to begin to develop advanced level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. These collective experiences provide students with a forum to develop and hone social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent developing practitioners. (EPAAS Program Objective M6 and EPAAS Content Area 4.7) Offered as SASS 656 and MPHP 656. Prereq: SASS 655.

SASS 657. Dual Degree Field Capstone IV. 3 Units.
The Public Health Capstone Project is an integral component of the MPH curriculum, allowing students to apply, develop, and refine their conceptual knowledge and skills as part of a planned, mentored, and evaluated public health scholarly project. This course is designed to be taken by advanced level students. It consists of a 288 hour field based Capstone experience and participation in 12 hours of professional development opportunities. The overall goal of this course is designed to move students beyond the walls and constraints of the classroom, to understand the political, economic, social, and organizational contexts within which public health and social work activities are conducted. It is also designed to provide graduate level dual degree students with field related opportunities to begin to develop advanced level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. Offered as MPHP 657 and SASS 657. Prereq: SASS 656 or MPHP 656.

This course is intended for students who have passed the qualifying examination and are actively working on their dissertation. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

SPPP Courses
SPPP 500. Special Topics in Social Work Policy. 3 Units.
This seminar course is intended for students who are interested in exploring advanced topics in social policy.

SSBT Courses
SSBT 500. Special Topics in Sociobehavioral Theory. 1 - 3 Unit.
This seminar is intended for students who are interested in exploring advanced topics of current interest in sociobehavioral theory.

SSWM Courses
SSWM 500. Special Topics in Social Work Methods. 1 - 3 Unit.
This seminar course is intended for students who are interested in exploring advanced topics of current interest in methods. Prereq: SSWM 400 or SASS 477 or SASS 400-TR.

Jack, Joseph, and Morton Mandel School of Applied Social Sciences Faculty

Department Faculty
Sarah S. Andrews, MSSA
(Case Western Reserve University)
Assistant Dean for Academic Affairs; Senior Instructor, Social Work; Director, Twelve-Month Advanced Standing Program; Director, Virtual Online MSSA Program
Family development, death, loss & bereavement, women's issues

Mark P. Aulisio, PhD
(Bowling Green State University)
Associate Professor, Bioethics and Social Work; Director, MA Program in Bioethics; Director, Center for Biomedical Ethics, MetroHealth
Intersection of political philosophy and bioethics, consultation

David E. Biegel, PhD
(University of Maryland)
Henry L. Zucker Professor of Social Work Practice; Associate Dean for Research and Training; Co-director, Center on Substance Abuse and Mental Illness; Professor, Psychiatry and Sociology
Mental health, informal support systems, aging, caregiving

Merri Elizabeth Brindo, MSSA
(Case Western Reserve University)
Clinical Instructor, Social Work; Field Faculty Advisor
Child welfare

Mark G. Chupp, PhD
(Case Western Reserve University)
Assistant Professor, Social Work
Inter-group dialogue and conflict transformation, citizen participation, community building, community organizing, appreciative inquiry, service learning
Claudia J. Coulton, PhD  
(Case Western Reserve University)  
*Lillian F. Harris Professor of Urban Research and Social Change; Co-Director, Center on Urban Poverty and Community Development*  
Research in urban poverty, neighborhoods, community development

David Crampton, PhD  
(University of Michigan)  
*Associate Professor, Social Work*  
Child welfare, community and social development, program evaluation

Kathleen J. Farkas, PhD  
(Case Western Reserve University)  
*Associate Professor, Social Work*  
Co-occurring substance abuse and mental disorders, jail/prison-based treatment, women/elderly substance abuse assessment and treatment

Robert L. Fischer, PhD  
(Vanderbilt University)  
*Associate Professor of Research, Social Work; Co-Director, Center for Urban Poverty and Community Development; Director, Master of Nonprofit Organizations Degree Program*  
Program evaluation, social/behavioral intervention research, child/family interventions, nonprofit programming, policy studies

Daniel J. Flannery, PhD  
(The Ohio State University)  
*Semi J. and Ruth Begun Professor in Violence Research Prevention and Education; Director, Begun Center for Violence Prevention Research and Education*  
Violence prevention, mental health, program evaluation

Mark S. Fleisher, PhD  
(Washington State University)  
*Research Professor, Social Work*  
Gangs, prisoner violence, cultural resilience

Darcy A. Freedman, PhD  
(Vanderbilt University)  
*Associate Professor, Epidemiology and Biostatistics*  
Food access interventions, health equity, public health literacy, qualitative methods, primary prevention of chronic disease

Kirsten Holzheimer Gail, MSSA  
(Case Western Reserve University)  
*Clinical Instructor, Social Work*  
Community and social development

Kathi I. Overmier Gant, MSSA  
(Case Western Reserve University)  
*Clinical Instructor, Social Work; Field Faculty Advisor*  
Direct practice, adult and adolescent mental health, assessment and diagnosis, criminal justice

Grover C. Gilmore, PhD  
(Johns Hopkins University)  
*Dean of the Mandel School; Professor, Psychology and Social Work*  
Visual perception and aging, Alzheimer's disease, intelligence

Victor K. Groza, PhD  
(University of Oklahoma)  
*Grace G. Brody Professor of Parent-Child Studies*  
Child welfare workforce and systems, older child and sibling group adoptions, intercountry adoption, international child welfare

Peter J. Haas, PhD  
(Brown University)  
*Abba Hillel Silver Professor of Jewish Studies; Chair, Department of Religious Studies*  
Judaic studies, anthropology of religion

Timothy F. Hagan, Honorary Doctor of Law  
(Cleveland State University)  
*Distinguished Visiting Faculty for Public Policy*  
Politics and policy, children's issues

Megan Holmes, PhD  
(University of California, Los Angeles)  
*Assistant Professor, Social Work*  
Domestic violence, alcohol use and child maltreatment, research

David Hussey, PhD  
(Case Western Reserve University)  
*Associate Professor, Social Work*  
Substance abuse, violence, social and behavioral science, psychopathology

Meri C. Hokenstad Jr., PhD  
(Brandeis University)  
*Ralph S. and Dorothy P. Schmitt Professor; Distinguished University Professor; Professor, Global Health and Disease, School of Medicine*  
International social welfare, health and social services policy and programs for older people, social work education

Leila West Jackson, PhD  
(John Hopkins University)  
*Assistant Professor, Epidemiology and Biostatistics, Environmental Health Sciences, and Social Work*  
Lifestyle, environmental and occupational impacts on reproductive and prenatal health, endocrine disrupters, heavy metals exposure assessment

Deborah Regenbogen Jacobson, PhD  
(Tulane University)  
*Assistant Professor, Social Work; Director, International Education Programs*  
International education and administration, practice evaluation

Jeffrey Janata, PhD  
(Case Western Reserve University)  
*Associate Professor, Psychiatry UH*  
Behavioral Medicine, Health Psychology, Obsessive-Compulsive Spectrum Disorders, Pain Disorders, Outcomes Measurement

Mark L. Joseph, PhD  
(University of Chicago)  
*Associate Professor, Social Work*  
Urban poverty, community development, mixed-income development, comprehensive community initiatives

Eva Kahana, PhD  
(University of Chicago)  
*Pierce T. & Elizabeth D. Robson Professor of Humanities; Professor, Social Work; Director, Elderly Care Research Center*  
Sociology of aging, medical sociology, social factors in stress and coping
Lenore A. Kola, PhD
(Boston University)
Associate Professor, Social Work; Co-Director, Ohio Center for Evidence Based Practices
Alcohol and other drug abuse, co-occurring mental and substance use disorders

Jill E. Korbin, PhD
(University of California, Los Angeles)
Professor, Anthropology and Social Work; Director, Schubert Center for Child Studies; Co-Director, Childhood Studies Interdisciplinary Program; Associate Dean, College of Arts and Sciences
Culture and human development, child well-being and child maltreatment, cultural, medical and psychological anthropology

Siran M. Koroukian, PhD
(Case Western Reserve University)
Associate Professor, Social Work; Associate Professor, Epidemiology and Biostatistics
Methodological issues in the use of large databases in health services research, Medicare and Medicaid programs, cancer-related and other health disparities

Jeff M. Kretschmar, PhD
(Miami University of Florida)
Assistant Professor of Research, Social Work
Violence and aggression, suicide, victimization, mental health and substance abuse

Sana Loue, PhD
(University of Southern California at Los Angeles and Case Western Reserve University)
Professor, Department of Epidemiology and Biostatistics; Director for Minority Public Health, School of Medicine
Immigration law and health, impact of HIV on the family, HIV in underserved populations, ethics in research, public health and law

Gerald J. Mahoney, PhD
(Vanderbilt University)
Verna Houck Motto Professor of Families and Communities; Director, Center on Interventions for Children and Families
Early childhood mental health, early intervention, parent education, disabilities

Soad Mansour, MSSA
(Case Western Reserve University)
Clinical Instructor, Social Work; Director of International Affairs
Management, policy, international social work, community development

Gillian Marshall, PhD
(University of Washington, Seattle)
Assistant Professor, Social Work
Aging/social gerontology, mental health disparities, cultural factors and immigrant health

David B. Miller, PhD
(University of Pittsburgh)
Associate Professor, Social Work
African American fatherhood, violence as a public health problem, child maltreatment, adolescent resiliency factors, treatment of individuals exposed to violence

Sharon E. Milligan, PhD
(University of Pittsburgh)
Associate Dean for Academic Affairs; Chair, Master's Program; Associate Professor, Social Work; Associate Director, Center on Urban Poverty and Community Development
Evaluation of community-based initiatives, community and social development practice and urban poverty research

Meeyoung Oh Min, PhD
(Case Western Reserve University)
Research Assistant Professor, Social Work
Substance-using mothers and their children, childhood trauma and its correlates/consequences, research methods and statistics

Sonia Minnes, PhD
(Case Western Reserve University)
Associate Professor, Social Work
Behavioral and mental health outcomes of prenatally drug-exposed children

Diana Morris, PhD
(Case Western Reserve University)
Florence Cellar Associate Professor of Gerontological Nursing; Executive Director, Case Western Reserve University Center on Aging and Health
Geriatric mental health, aging and quality of life, family care giving, science of unitary human beings

Nancy V. Neuer, MSSA
(Case Western Reserve University)
Clinical Instructor, Social Work
Clinical social work, health

G. Regina Nixon, PhD
(Howard University)
Instructor, Social Work
Poverty/high-risk populations, cultural diversity

Lori Longs Painter, MSSA
(Case Western Reserve University)
Clinical Instructor, Social Work
Social work practice

Andrea Goodloe Porter, MSSA
(Case Western Reserve University)
Assistant Dean, Student Services; Director, Student Services; Clinical Instructor, Social Work
Child abuse and child welfare, domestic violence, sexual abuse identification, investigation and treatment, crisis intervention

Robert J. Ronis, MD
(Case Western Reserve University)
Douglas Danford Bond Professor and Chair, Psychiatry; Professor, Social Work
Addiction psychiatry, public health, community mental health, co-occurring disorders

Anna Marie Santiago, PhD
(University of Wisconsin-Milwaukee)
Leona Bevis and Margaret Haynam Professor of Community Development
Housing and urban policy, social capital formation, neighborhood effects on child health and well-being, community development
LaShon Sawyer, MSSA  
(Case Western Reserve University)  
As Education/Associate Director of Virtual Field Education, Clinical  
Instructor, Social Work  
Mental health, juvenile justice  

Mark I. Singer, PhD  
(Case Western Reserve University)  
Leonard W. Mayo Professor in Family and Child Welfare; Co-Director,  
Center on Substance Abuse and Mental Illness; Deputy Director, Begun  
Center for Violence Prevention Research and Education  
Adolescent mental health, adolescent substance abuse, youth-related  
violence  

Sree N. Sreenath, PhD  
(University of Maryland, College Park)  
Professor, Electrical Engineering and Computer Science, Director of Case  
Complex Systems Biology Center  
Sustainable development, population behavior, modeling and control of  
multibody systems  

Louis Stokes, JD  
(Cleveland Marshall Law School)  
Distinguished Visiting Professor  
Government, public policy, social change, community development  

Gerald Strom, MSW  
(Howard University)  
Senior Instructor, Social Work; Director, Intensive Weekend Program  
Child abuse, growth and development, sex abuse investigation and  
treatment, clinical practice  

Jody Timko, MSW  
(Cleveland State University)  
Clinical Instructor, Social Work  
Medical, residential and community services to children, families, and  
adults  

Aloen Townsend, PhD  
(University of Michigan)  
Professor, Social Work; Associate Professor, Sociology; Chair, Doctoral  
Program  
Adult development and aging, research methods and statistics, adult  
physical and mental health, families and formal service systems  

Elizabeth M. Tracy, PhD  
(University of Washington)  
Grace Longwell Coyle Professor of Social Work  
Co-occurring substance use and mental health disorders, social  
networks, social support  

James J. Werner, PhD  
(Case Western Reserve University)  
Assistant Professor of Family Medicine, School of Medicine  
Health behavior change, methods for mental health service delivery  
and direct practice in primary care, practice-based research networks,  
clinician education  

Scott A. Wilkes, PhD  
(Case Western Reserve University)  
Director of Field Education; Assistant Professor, Social Work  
Child welfare, mental health, nonprofit management, social work ethics  

Rhonda Y. Williams, PhD  
(University of Pennsylvania)  
Associate Professor, History; Director, CWRU Social Justice Institute  
Social justice, race/ethnicity, urban activism  

Zoe Breen Wood, PhD  
(Case Western Reserve University)  
Assistant Professor, Social Work  
Adoption, child welfare, policy and practice, social work methods,  
international travel and study, leadership, ability based learning  

Jaclene A. Zauszniewski, PhD  
(Case Western Reserve University)  
Kate Hanna Harvey Professor in Community Health Nursing  
Treatment and prevention of depression across the lifespan, maintaining  
health and functioning of elders and grandmothers, family caregiving of  
persons with serious mental illness, substance abuse and dementia  

Master of Science in Social Administration (MSSA) & Master of Nonprofit Organizations (MNO)  

Master of Science in Social Administration (MSSA)  
The Master of Science in Social Administration (MSSA) program  
prepares students for advanced social work practice in a variety of  
settings. The master’s curriculum is designed to address the wide range  
of skills and functions required of a professional social worker. Mandel  
School students are instructed on the various theories of individual and  
group behavior as well as community systems theory. The application  
of this knowledge, along with the appropriate use of practice principles and  
techniques, is a major educational objective.  

The curriculum is divided into two levels: foundation and advanced.  
The foundation curriculum (27 credit hours) includes the knowledge,  
values, processes, and skills essential for the general practice of  
social work. It consists of general courses in social work methods,  
human development theory, social policy, research methods, and an  
introductory semester of field education. The advanced curriculum (33  
credit hours) builds on the professional foundation and provides for  
advanced knowledge and practice skills in the concentration selected  
by the student. Concentrations include the following: aging; alcohol and  
other drug abuse; children, youth and families; health; mental health; and  
community development. School social work is available as a special  
emphasis.  

Ability Based Learning Environment (ABLE)  
The MSSA program incorporates an ability-based learning environment  
that enables students to develop and demonstrate mastery of eight core  
social work abilities. Classroom courses and field education are designed  
to help students develop each ability and continuously assess their  
learning throughout the educational experience. Mastery of the abilities  
is demonstrated in the field practicum and documented in a cumulative  
learning portfolio.  

• Identify as a Reflective Professional Social Worker: Students will  
demonstrate an awareness of the potential influence of their actions  
and words as a professional social worker upon individuals, families,  
groups, organizations and communities. Students will demonstrate  

the ability to reflect on practice decisions and activities, using self-correction to assure continual professional development.

- **Advocate for Social, Economic and Environmental Justice**: Graduates will advocate for human rights and social and economic justice as one of their primary responsibilities.

- **Apply Social Work Methods**: Graduates of the MSASS master’s program are prepared to function as advanced practitioners in a changing arena of social work and social welfare. They are able to engage clients and client systems, assess client needs and strengths, provide or help arrange needed services and support, weigh intervention alternatives, implement change strategies, and evaluate results.

- **Integrate Cultural, Economic and Global Diversity**: Students will integrate into their practice the knowledge, skills, and values needed for understanding and appreciation of a diverse world, and for ongoing development of competence in working with diverse populations and settings.

- **Think Critically About Theory and Research Knowledge**: Graduating students will be able to think critically about their practice and its knowledge base, and about the social problems and situations they encounter. Critical thinking in social work includes selecting appropriate theoretical approaches and strategies to apply in practice, using research findings to improve practice, evaluating one’s own practice, and making contributions to knowledge in the field.

- **Communicate Effectively**: Graduating students will have the oral, written, nonverbal, and information technology skills that will enable them to communicate effectively and appropriately in professional roles and settings.

- **Develop as a Social Work Leader**: Social workers recognize that the context of practice is dynamic, and use knowledge and skill to respond proactively. Social work leaders are informed, resourceful, and proactive in responding to evolving organizational, community, societal and global contexts at all levels of practice in ways that improve quality of life.

Mandel School faculty place a high priority on the integration of theory with practice. To facilitate this integration, field work is done concurrent with course work. Through field education, students have the opportunity to acquire new skills and apply their classroom learning in their practice setting. The school is affiliated with over 350 agencies in the Greater Cleveland area, creating a vast network of field education as well as employment opportunities. Students are required to complete over 1000 clock hours of field education. The school and the affiliated agency or field setting agree on the content and conditions of field education, including the qualifications of social workers who serve as field instructors. Field placement decisions are based on educational criteria, with student interests and career objectives taken into consideration.

**Concentrations**

- Community Practice for Social Change
- Direct Practice

**Direct Practice Specializations**

- Aging
- Alcohol and Other Drug Abuse
- Children, Youth and Families
- Mental Health

- Health*

*Health specialization is offered only in the full-time format.

**Program Options**

**Full -Time Program**

Approximately one-half of Mandel School students are enrolled in the Full-Time Program. This program takes four semesters to complete. Students enroll for fall and spring semesters and are scheduled concurrently for classes and field work on a full-time basis. This program is demanding in depth and scope of experience. It is not advisable for students to assume extensive employment during their semesters of enrollment.

**Advanced Standing Program**

Advanced standing may be granted to students who have earned an Bachelor’s degree in Social Work (BSW) within the last seven years from an institution accredited by the Council on Social Work Education. Students must have earned a B or better in any social work course for which advanced standing is sought.

**Intensive Weekend Program**

The Intensive Weekend Program is designed to provide graduate-level education toward the MSSA to employed professionals who are maintaining full-time employment. Classes meet one weekend per month throughout the calendar year. Students are required to attend all classes. Students complete five courses each year and all program requirements in three years. Those who have graduated from an accredited BSW program in the last seven (7) years can complete the Intensive Weekend Program in two years.

**Senior Year in Professional Studies Program**

Undergraduate students of superior ability and achievement may be admitted to the Mandel School at the end of their junior year. This program enables qualified college seniors who are majoring in social work related fields to begin their first year of graduate study during what would normally be their last year of undergraduate work. Exceptional undergraduate students who are firmly committed to social work as a profession can earn both their undergraduate and graduate degrees in five years.

A student in the Senior Year in Professional Studies Program is permitted to substitute the first year (31 semester hours) at the Mandel School for the last year of undergraduate work. The bachelor’s degree will be granted by the undergraduate college when the student has completed his or her first year at the Mandel School.

Students applying for this program must be interviewed by an admissions officer as part of the application process to explore the candidate’s level of maturity, knowledge of social work, and readiness for professional education. Application for this program should be made prior to the second semester of the junior year.

To qualify for this program, students must demonstrate superior academic ability and achievement during their first three years of undergraduate study. All applicants must (a) have sufficient coursework in the social and behavioral sciences by the end of their junior year; (b) hold a cumulative grade point average of at least 3.25; and (c) have successfully completed three-quarters of the major and minor courses in their area of concentration. Acceptance into the Senior Year in Professional Studies Program is contingent upon receipt of a written...
statement from the dean of the applicant's undergraduate college, outlining any remaining requirements.

Note: This program is available to students at Case Western Reserve University, Hiram College, College of Wooster, Baldwin Wallace University, John Carroll University, Fisk University, and Ohio Northern University by joint agreement with these institutions. Interested students from other institutions are encouraged to speak with the director of admissions.

Part-Time Degree Program
Students may opt to complete their degree work on a part-time basis during their first year. During the second, third, and fourth years students complete field education requirements and carry a full-time, or nearly full-time, load.

Part-time students select classes from the full-time weekday schedule. These classes meet once a week for two hours. Employed professionals may participate in this program if they can arrange a flexible work schedule.

The part-time program may be completed in three years. Students granted advanced standing may complete the program in fewer semesters. Part-time students are required to register for a minimum of six credit hours per semester. A student must complete all degree requirements in a maximum of five years.

Non-Degree Study
Some designated courses may be taken on a non-degree basis with the permission of the assistant dean of academic affairs and the course instructor. A maximum of 12 hours earned on a non-degree basis may be counted toward requirements for the master's degree if the student is subsequently admitted as a degree seeking candidate. A bachelor's degree is required for enrollment.

Online MSSA Program
The Online MSSA Program option is designed to provide online graduate social work education for employed professionals who plan to maintain full-time employment. Classes meet online to complete all program requirements in two years for advanced standing, and three years for non-advanced standing.

Undergraduate Social Work Minor
The Social Work minor offers interdisciplinary collaborative learning that includes service, community engagement, and an exploration of values. Students experience active learning that is practical and applied to real-world settings. The minor integrates social work theory and practice, social policy, socio-behavioral theory and research to understand and address complex social problems of our time, domestically and internationally. Some issues covered in the courses include oppression and privilege, poverty, violence, social justice, alcohol and other drug abuse, social welfare, community development, children, youth, and families. Courses can be taken on campus or through the MSASS international study and travel courses.

Master of Nonprofit Organizations Degree Program (MNO)
The Master of Nonprofit Organizations (MNO) degree program prepares students interested in the nonprofit sector for management and leadership positions, by building their skills, competencies, knowledge and capacity. The MNO degree has five program educational objectives for its graduates: (1) to bring contextual understanding to managerial decision-making; (2) to develop, analyze and apply relevant data; (3) to inspire and engage volunteers and professionals in the creation and implementation of ethically-grounded strategies to advance organizational mission; (4) to develop and implement revenue generation strategies; and (5) to manage human and financial resources effectively, efficiently and ethically.

The full time program consisting of thirty-nine (39) credit hours can be completed in twelve (12) months over three (3) consecutive semesters, with students beginning each year in the summer semester (June 1) and concluding at University graduation in the following May.

The curriculum will provide education that instills analytical skills, knowledge relevant to ethical and entrepreneurial decision-making, and expertise in acquiring and managing resources. Graduates will be trained to enhance organizational effectiveness, harness passion, dedication, and vision, make the best use of available resources and seek new resources. Graduates will gain hard and soft management skills and knowledge needed to address a wide range of issues confronting nonprofits and become professionals who work to influence political and social decisions, create stronger organizations, building the capacity, and advancing the mission.

Students accepted for the MNO degree program must possess a bachelor's degree from an accredited college or university. They must have a record of excellent academic performance and potential evidenced by grade point average. Applicants with a GPA below 2.7 must take the Graduate Record Examination (GRE) or the Miller Analogies Test (MAT) as a condition of admission. Students must also show evidence of a strong interest in the nonprofit sector through volunteer activities, internship experiences, or employment in a nonprofit organization.

Eighteen-Month Advanced Standing Program
Advanced Standing students who are not in the Twelve-Month program generally follow the Eighteen-Month program leading to a Master of Science in Social Administration (MSSA). Students follow a fall semester, spring semester, fall semester sequence of courses and they graduate in January. Up to 15 hours of advanced standing may be granted to students who have completed their bachelor's degree in social work (BSW) in the last seven years from an institution that is accredited by the Council on Social Work Education (CSWE). Students pursue this option for the following reasons:

- One of the multi-disciplinary certificate programs or special focus areas
- Electives not offered during the summer semester
- Retaking core BSW courses in which they earned a grade of B- or below

Twelve-Month Advanced Standing Program

The Twelve-Month Advanced Standing Program leading to a Master of Science in Social Administration (MSSA) is available to students who obtained a strong academic record in their bachelor of science (BSW) program.

Up to 15 hours of advanced standing may be granted to students who have completed their bachelor’s degree in social work (BSW). The Twelve-Month program follows a fall semester, spring semester, and summer session sequence of courses and is intended for students who have clear professional goals and can manage an accelerated program of study. Students complete their MSSA degree in August. Because of the short time frame for completing the Twelve-Month Program, dual degrees, individualized curricula, and the school social work emphasis are not available in this program.

Admission to the Twelve-Month Advanced Standing Program is open to students who have completed a bachelor’s degree in social work (BSW) in the last seven years from an institution which is accredited by the Council on Social Work Education (CSWE). Grades of B or better must have been attained in all foundation social work courses.

Intensive Weekend Program

The Intensive Weekend program offers human service professionals who are employed full time to pursue a Master of Science in Social Administration (MSSA). Classes meet one weekend per month through the calendar year and students are required to attend all classes. Students complete four courses each year (six during the first year), and complete all program requirements in three years.

Courses consists of four distinct components:

- A three-day weekend of classes (Friday, Saturday, and Sunday, 9:00 a.m.-5:00 p.m.)
- A four-week study period, during which additional readings and written assignments are completed
- A two-day weekend of classes (Saturday and Sunday, 9:00 a.m.-5:00 p.m.)
- A final study period of approximately three weeks, during which the final course assignment is completed and materials for the next course are received.

### Intensive Weekend Advanced Standing

The Intensive Weekend program offers human service professionals who are employed full-time to pursue a Master of Science in Social Administration (MSSA). Classes meet one weekend per month through the calendar year and students are required to attend all classes. Up to 15 hours of advanced standing may be granted to students who have completed their bachelor’s degree in social work (BSE) in the last seven years from an institution that is accredited by the Council on Social Work Education (CSWE).

Professional Development and Continuing Education

Professional Development and Continuing Education Program

Opportunities to increase practical knowledge and skills are offered to human services practitioners in a variety of seminars, institutes, conferences, and co-sponsored events. Programs are geared to provide practitioners with learning that is immediately applicable at their workplace, skills to help to advance their careers and opportunities for
Special Focus and Certificate Programs

Certificate Programs

Global Health

The Certificate in Global Health (http://www.case.edu/med/cfgh/Certificate.html) focuses on the broadest concept of public health, including international aspects of disease transmission, diagnosis, treatment, policy, and prevention. The overall objective of this interdisciplinary certificate is to support MSASS students with interests in health problems, issues, and concerns that (a) transcend national boundaries, (b) may be influenced by circumstances or experiences in other countries, and (c) are best addressed by cooperative actions and solutions. Current participating departments and schools at Case Western Reserve University include Mathematics, Medicine, Public Health, Anthropology, Nursing, Bioethics, Epidemiology, Biostatistics, Biology, and Engineering.

The requirements to receive the certificate differ by discipline and emphasize discipline-specific and interdisciplinary coursework. For MSASS students, this includes completion of two required interdisciplinary courses and an additional MSASS elective. The certificate is most appropriate for students who choose to complete the Community and Social Development program, or the Health or Aging specializations in the Direct Practice program.

Gerontology

Students with an interest in serving the needs of the aging population may pursue the multidisciplinary graduate certificate program offered through the Case Western Reserve University Center on Aging and Health (http://fpb.case.edu/Centers/UCAH). This program is designed for gerontological researchers, educators, and practitioners. Participating faculty are from the Mandel School and the Case Western Reserve University Schools of Medicine, Dental Medicine, Nursing and Arts and Sciences. Students must be enrolled in the Aging specialization at the Mandel School.
• Foster future leadership in community building, community
development, and housing.

**ADAMHS Board Fellowship**

The primary goal of the Alcohol, Drug Addiction and Mental Health Services Board program (ADAMHS) is to serve as an innovative and meaningful alternative for employed mental health and substance abuse social workers to pursue their graduate education objectives. Emphasis is placed on using evidence-based best practices to implement services that will assist individuals with mental health and substance abuse problems and their families. This weekend program makes it possible for employed individuals in Cuyahoga County to overcome the barriers of time and finances to pursue a degree in social work.

**Child Welfare Fellowship**

The primary goal of the Child Welfare Fellows program is to improve the public child welfare workforce in Northeast Ohio. Emphasis is placed on using evidence-based best practices in public child welfare and systems of care principles. The Mandel School's Intensive Weekend program makes it possible for employed individuals in public child welfare agencies in Northeast Ohio to overcome barriers of time and finances to pursue a Master's degree in social work.

**Leadership Fellows Program**

The Leadership Fellows Program focuses on exceptional students who want to assume leadership in clinical practice within an agency context. It is a two-year program of study for direct practice students in aging, alcohol and other drugs, children, youth and families, health or mental health.

**Paul D. Coverdell Fellows Program**

The Paul D. Coverdell Fellows Program for Returning Peace Corps Volunteers provides the option for students selecting concentrations in Community Practice for Social Change or Direct Practice. The Direct Practice concentration will allow students to select specializations in aging; alcohol and other drug abuse; children, youth and families; health; and mental health with children, adolescents and adults. Fellows will be able to integrate professional social work education, research and service to promote social justice and community empowerment domestically and around the world. Students also have the option of pursuing certificates and dual degrees in several interest areas.

**Global Practice Opportunities**

At the Mandel School, students have numerous opportunities to explore beyond our own borders. The Mandel School faculty includes experts in international social work and social policy research. The Mandel School also hosts numerous international full-time students, exchange students, visiting scholars and researchers.

Qualified students may choose to participate in a number of multi-disciplinary study abroad opportunities. Many trips occur during winter and spring break. Students are able to familiarize themselves with a variety of social policies of other countries, which have in the past included the Netherlands, Guatemala, China, Bangladesh, and Israel, among others.
Office of Undergraduate Studies

Case Western Reserve University confers baccalaureate degrees based on programs offered by the faculties of the Case School of Engineering, the College of Arts and Sciences, the Frances Payne Bolton School of Nursing, and the Weatherhead School of Management. Some major programs are offered in collaboration with the School of Medicine, the Cleveland Institute of Art, and the Cleveland Institute of Music. The faculties and administration are dedicated to offering educational programs that enable undergraduates to achieve disciplinary literacy in one or more major fields; to acquire educational breadth through study across the natural sciences, humanities and arts, and social sciences; and to learn to think critically and to communicate effectively. Overlap among the general education curricula for the various bachelor’s degree programs allows students flexibility in the choice of majors and degree program. Furthering the University mission, the educational programs aim to foster the development of qualities of integrity, creativity, leadership, and societal engagement.

Advisors for first-year students, major field advisors, other faculty, and deans assist students in selecting a field of study suited to each student's interests and qualifications. Students with broad educational interests and goals may pursue concurrently two or more majors for the Bachelor of Arts degree, two or more majors for the Bachelor of Science in Engineering degree, or two or more majors toward the Bachelor of Science in Management degree, or may earn two bachelor's degrees by completing both a Bachelor of Arts degree and a Bachelor of Science degree or by fulfilling the requirements for two Bachelor of Science degrees. The Bachelor of Music degree offered by the Cleveland Institute of Music may be combined with either a Bachelor of Arts or a Bachelor of Science degree at Case Western Reserve University. Qualified students who wish to accelerate their undergraduate and graduate or professional studies may earn the opportunity to begin in the senior year advanced study toward a graduate or professional degree.

The University provides undergraduates with a rich variety of experiential learning opportunities both on and off campus. Programs that engage students in curriculum-related employment include the Cooperative Education Program (http://engineering.case.edu/coop), the Practicum Program, and internships. Study abroad, the exchange program with Fisk University, and the Washington Semester immerse students in educational environments that build global and national knowledge and perspective. Research opportunities for undergraduates abound at the university, in University Circle institutions, and in Cleveland. Individual departments offer independent study opportunities to motivated and qualified students; some departments offer courses that incorporate practical field experience or community service. The location of the University in University Circle, with its outstanding array of cultural, educational, and health care institutions, and the proximity and accessibility of the university's various professional schools and their facilities enable undergraduates to draw upon diverse and distinctive resources to enrich their education.

Administration

Jeffrey Wolcowitz, PhD
(Harvard University)
Dean of Undergraduate Studies

Nancy A. Dilulio, PhD
(Pennsylvania State University College of Medicine)
Senior Associate Dean of Undergraduate Studies

Support for First-Year Students

Michael R. Mason, MEd
(Kent State University)
Associate Dean of Undergraduate Studies for First-Year Students

Nathan H. Fein, MEd
(University of Texas, Austin)
Coordinator of First-Year Residence Education in Juniper Residential College

Katherine E. Grooms, MEd
(University of South Carolina)
Coordinator of First-Year Residence Education in Cedar Residential College

Kimberly A. Scott, MEd
(University of Toledo)
Coordinator of First-Year Residence Education in Magnolia Residential College

Sueji M. Smith, MEd
(North Carolina State University)
Coordinator of First-Year Residence Education in Mistletoe Residential College

Support for Upperclass Students

Denise Butler, MA, MLIS
(Kent State University)
Assistant Dean of Undergraduate Studies
(students whose last names begin with S-Z)

Nancy A. Dilulio, PhD
(Pennsylvania State University College of Medicine)

(Case Western Reserve University)
Pre-Law Advisor

Case School of Engineering Undergraduate Degree Requirements

Bachelor of Science in Engineering Degree
(Case School of Engineering)
Candidates for the Bachelor of Science in Engineering (BSE) degree, in addition to meeting the general requirements for bachelor’s degrees, including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 128-133 credit-hours as specified by the requirements for each BSE program.
2. The General Education Requirements of the Case School of Engineering listed below.
3. The requirements for the specific engineering major listed below as presented in this Bulletin in the section devoted to each department or program.

Note that most students pursuing a degree from the Case School of Engineering will complete ENGR 398 and ENGL 398 to fulfill the SAGES Departmental Seminar requirement and will complete an engineering senior project in their major to fulfill the SAGES Senior Capstone requirement.

Major Fields Available for the Bachelor of Science in Engineering degree:
- Aerospace Engineering
- Biomedical Engineering
- Chemical Engineering
- Civil Engineering
- Computer Engineering
- Electrical Engineering
- Engineering Physics
- Materials Science and Engineering
- Mechanical Engineering
- Polymer Science and Engineering
- Systems and Control Engineering
- Engineering (undesignated)

With the exception of the undesignated major in engineering, all of the engineering programs listed above are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

General Education Requirements of the Case School of Engineering
These requirements provide a foundation in mathematics and sciences for programs in engineering leading to the Bachelor of Science degree. The CSE general education requirements are also designed to develop communication skills and to provide a body of work in the humanities and social sciences.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy Case School of Engineering general education requirements.

Other Courses that Meet this Requirement for CSE Degree Candidates: Applied Social Sciences (SASS), Bioethics (BETH)

Bachelor of Science in Computer Science Degree

(Case School of Engineering)
Candidates for the Bachelor of Science in Computer Science degree, in addition to meeting the general requirements for bachelor’s degrees (p. 613), including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 129 credit-hours.
2. The General Education Requirements of the Case School of Engineering as modified for the Bachelor of Science in Computer Science degree listed below.
3. The requirements for the computer science Bachelor of Science major as presented in this Bulletin.

Note that most students pursuing a degree from the Case School of Engineering will complete ENGR 398 and ENGL 398 to fulfill the SAGES Departmental Seminar requirement and will complete an engineering senior project in their major to fulfill the SAGES Senior Capstone requirement.

General Education Requirements of the Case School of Engineering, modified for the Bachelor of Science in Computer Science degree
These requirements provide a foundation in mathematics and sciences for the Bachelor of Science program in computer science. The CSE general education requirements are also designed to develop communication skills and to provide a body of work in the humanities and social sciences.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy Case School of Engineering general education requirements.

Mathematics, Sciences, and Engineering Requirements (33 credit-hours)

Mathematics, Science, and Engineering Requirements 14
MATH 121  Calculus for Science and Engineering I
MATH 122  Calculus for Science and Engineering II
or MATH 124  Calculus II
MATH 223  Calculus for Science and Engineering III
or MATH 227  Calculus III
MATH 224  Elementary Differential Equations
or MATH 228  Differential Equations
Chemistry* 4
CHEM 111  Principles of Chemistry for Engineers
Physics 8
PHYS 121  General Physics I - Mechanics
or PHYS 123  Physics and Frontiers I - Mechanics
PHYS 122  General Physics II - Electricity and Magnetism
or PHYS 124  Physics and Frontiers II - Electricity and Magnetism
Engineering 7
EECS 132  Introduction to Programming in Java
ENGR 145  Chemistry of Materials
or EMSE 146  Principles and Applications of Materials Chemistry

Total Units 33

* NOTE: The Chemistry-Materials course sequences CHEM 105-CHEM 106-ENGR 145/EMSE 146 or AP/IB credit in chemistry-ENGR 145/EMSE 146, or CHEM 105-CHEM 106-EMAC 276 may substitute for the sequence CHEM 111-ENGR 145/EMSE 146

Natural Sciences, Mathematics, or Statistics Requirement (3 credit-hours)
Course designated by major department.

Humanities and Social Sciences (15 credit-hours)
ENGL 398  Professional Communication for Engineers 2
ENGR 398  Professional Communication for Engineers 1
College of Arts and Sciences Undergraduate Degree Requirements

Bachelor of Arts Degree
(College of Arts and Sciences)

Candidates for the Bachelor of Arts (BA) degree, in addition to meeting the general requirements for bachelor's degrees (p. 613), including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 120 credit-hours.
2. No more than 42 credit-hours beyond the 100-level in any one department may be applied to the 120 credit-hour total.
3. At least 90 credit-hours in arts and sciences. These credits may be drawn from those offered by the College of Arts and Sciences, as well as those in economics, biochemistry, nutrition and computer science. (Students completing both a BA and BS degree are exempted from six hours of the 90 credit-hour arts and sciences requirement for the BA.)
4. A minimum of 30 credit-hours of courses at the 300- or 400-level.
5. The General Education Requirements of the College of Arts and Sciences listed below.
6. The requirements for a major listed below as specified in this bulletin for each department or program. A major requires a minimum of 30 credit-hours, at least 24 of which are taken in the major department or program.
7. For all courses taken in the major department and for which grades are averaged, and for all courses taken to satisfy major requirements and for which grades are averaged, a BA candidate must earn a minimum cumulative average of 2.000. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at Case Western Reserve University at least half the credit-hours required in the major department.

Major Concentrations Available for the Bachelor of Arts degree:

- American Studies*
- Anthropology
- Art History
- Asian Studies
- Astronomy
- Biochemistry
- Biology
- Chemical Biology
- Chemistry
- Classics
- Cognitive Science
- Communication Sciences
- Computer Science
- Dance
- Dean's Approved Major**
- Economics
- English
- Environmental Geology
- Environmental Studies*
- Evolutionary Biology*
- French
- French and Francophone Studies
- Geological Sciences
- German
- German Studies
- Gerontological Studies*
- History
- History and Philosophy of Science
- International Studies
- Japanese Studies
- Mathematics
- Music
- Natural Sciences*
- Nutrition
- Nutritional Biochemistry and Metabolism
- Philosophy
- Physics
- Political Science
- Pre-Architecture*
- Psychology
- Religious Studies
- Sociology
- Spanish
- Statistics
- Teacher Education*
- Theater Arts
- Women's and Gender Studies
- World Literature

* Humanities: Arabic (ARAB), Art History (ARTH), Art Studio (ARTS), Chinese (CHIN), Classics (CLSC), Dance (DANC), English (ENGL), French (FRCH), German (GRMN), Greek (GREK), Hebrew (HBRW), History (HSTY), Italian (ITAL), Japanese (JAPN), Latin (LATN), Music - General (MUGN), Music - History (MUHI), Music - Popular Music (MUPM), Music - Theory (MUTH), Philosophy (PHIL), Portuguese (PORT), Religious Studies (RLGN), Russian (RUSN), Spanish (SPAN), Theater (THTR), World Literature (WLIT)

** Social Sciences: Anthropology (ANTH), Cognitive Science (COGS), Communication Sciences (COSI), Economics (ECON), Political Science (POSC), Psychology (PSCL), Sociology (SOCI), and/or Other Courses that Meet this Requirement for CSE Degree Candidates: Applied Social Sciences (SASS), Bioethics (BETH)
May be taken only as a second major.

Any student interested in developing for the BA a major of his or her own design may submit, before the end of the sophomore year, a program proposal for a Dean's Approved Major to the Office of Undergraduate Studies. The Dean of Undergraduate Studies and the Dean of the College of Arts and Sciences must approve any proposed Dean's Approved Major.

General Education Requirements of the College of Arts and Sciences

These requirements provide a broad foundation for the Bachelor of Arts degree program.

Students pursuing a degree in the College of Arts and Sciences may not fulfill the Departmental Seminar requirement with a course that is being used to fulfill an Arts & Humanities, Social Sciences, or Natural & Mathematical Sciences breadth requirement. A course that has been designated as a Departmental Seminar and that also falls into the Global and Cultural Diversity category may be used to fulfill both requirements.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy general education requirements.

Breadth Requirements (minimum of six 3- or 4-credit-hour courses, totaling at least 18 credit-hours)

NOTE: Two courses used to fulfill requirements for the major may be used also to fulfill the breadth requirements.

Arts and Humanities (6 - 8 credit-hours)

Two 3- or 4-credit-hour Arts and Humanities courses selected from:

- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)
- Dance (DANC)
- English (ENGL)
- French (FRCH)
- German (GRMN)
- Greek (GREK)
- Hebrew (HBRW)
- History (HSTY)
- Italian (ITAL)
- Japanese (JAPN)
- Latin (LATN)
- Music - General (MUGN)
- Music - History (MUHI)
- Music - Popular (MUPM)
- Music - Theory (MUTH)
- Philosophy (PHIL)
- Portuguese (PORT)
- Religious Studies (RLGN)
- Spanish (SPAN)
- Theater (THTR)
- World Literature (WLIT)

Natural and Mathematical Sciences (6 - 8 credit-hours)

Two 3- or 4-credit-hour Natural and Mathematical Science courses selected from:

- Astronomy (ASTR)
- Biochemistry (BIOC)
- Biology (BIOL)
- Chemistry (CHEM)
- Earth, Environmental and Planetary Sciences (EEPS)
- Mathematics (MATH)
- Nutrition (NTRN)
- Physics (PHYS)
- Statistics (STAT)

Social Sciences (6 credit-hours)

Two 3-credit-hour Social Science courses selected from:

- Anthropology (ANTH)
- Cognitive Science (COGS)
- Communication Sciences (COSI)
- Economics (ECON)
- Political Science (POSC)
- Psychology (PSCL)
- Sociology (SOCI)

Quantitative Reasoning (3 - 4 credit-hours)

Each student must complete at least one 3- or 4-credit-hour course identified as a quantitative reasoning course selected from the list below. This course may also be used to fulfill a major, minor and/or breadth requirement.

Global and Cultural Diversity (3 - 4 credit-hours)

The goal of the Global and Cultural Diversity requirement is to provide students with the opportunity for academic reflection about the variation in human experience. Courses that satisfy this requirement must (1) substantively explore one or more cultures outside the United States, or (2) address in a substantive way ethnic, gender, sexual, religious, or
other cultural practices within the United States, so as to provide students with fresh perspectives on their own cultural assumptions, traditions, and experiences. This course may also be used to fulfill a major requirement and/or one of the breadth requirements.

Students who matriculate as undergraduate degree candidates in August 2012 or later must select a course from the list below; students who matriculated as degree candidates prior to August 2012 can find the list of options from which they may choose on their academic requirements report.

AMST 117 Exploring American History Through Biography 3
ANTH 233 Introduction to Jewish Folklore 3
ANTH 312 Ethnography of Southeast Asia 3
ANTH 349 Cultures of Latin America 3
ANTH 353 Chinese Culture and Society 3

### Bachelor of Science Degree (College of Arts and Sciences)

Candidates for the Bachelor of Science degrees, in addition to meeting the general requirements for bachelor's degrees (p. 613), including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 120-133 credit-hours as specified by the requirements for each BS program.
2. A minimum of 30 credit-hours of courses at the 300- or 400-level.
3. The General Education Requirements of the College of Arts and Sciences listed below. For some BS programs, the General Education Requirements of the College Arts and Sciences have been modified and incorporated into the degree requirements as presented in this bulletin in the section devoted to each department or program.
4. The requirements for a major field listed below as presented in this bulletin in the section devoted to each department or program.
5. For all courses taken in the major department and for which grades are averaged, and for all courses taken to satisfy major requirements and for which grades are averaged, a candidate for a BS from the College of Arts and Sciences must earn a minimum cumulative average of 2.000. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at least half the credit-hours required for the major.

#### Major Concentrations for the Bachelor of Science degree:

- Applied Mathematics
- Art Education
- Astronomy
- Biochemistry
- Biology
- Chemistry
- Geological Sciences
- Mathematics
- Mathematics and Physics
- Music Education
- Nutrition
- Nutritional Biochemistry and Metabolism
- Physics
- Statistics
- Systems Biology

### General Education Requirements of the College of Arts and Sciences

These requirements provide a broad foundation for the Bachelor of Arts and Bachelor of Science degree programs.

Students pursuing a degree in the College of Arts and Sciences may not fulfill the Departmental Seminar requirement with a course that is being used to fulfill an Arts & Humanities, Social Sciences, or Natural & Mathematical Sciences breadth requirement. A course that has been designated as a Departmental Seminar and that also falls in the Global and Cultural Diversity category may be used to fulfill both requirements.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy general education requirements.

#### Breadth Requirements (minimum of six 3- or 4-credit-hour courses, totaling at least 18 credit-hours)

NOTE: Two courses used to fulfill requirements for the major may be used also to fulfill the breadth requirements.

#### Arts and Humanities (6 - 8 credit-hours)

Two 3- or 4-credit-hour Arts and Humanities courses selected from:

- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)
- Dance (DANC)
- English (ENGL)
- French (FRCH)
- German (GRMN)
- Greek (GREK)
- Hebrew (HBRW)
- History (HSTY)
- Italian (ITAL)
- Japanese (JAPN)
- Latin (LATN)
- Music - General (MUGN)
- Music - History (MUHI)
- Music - Popular (MUPM)
- Music - Theory (MUTH)
- Philosophy (PHIL)
- Portuguese (PORT)
- Religious Studies (RLGN)
- Russian (RUSN)
- Spanish (SPAN)
- Theater (THTR)
Natural and Mathematical Sciences (6 - 8 credit-hours)

Two 3- or 4-credit-hour Natural and Mathematical Science courses selected from:

- Astronomy (ASTR)
- Biochemistry (BIOC)
- Biology (BIOL)
- Chemistry (CHEM)
- Earth, Environmental and Planetary Sciences (EEPS)
- Mathematics (MATH)
- Nutrition (NTRN)
- Physics (PHYS)
- Statistics (STAT)

Social Sciences (6 credit-hours)

Two 3-credit-hour Social Science courses selected from:

- Anthropology (ANTH)
- Cognitive Science (COGS)
- Communication Sciences (COSI)
- Economics (ECON)
- Political Science (POSC)
- Psychology (PSCL)
- Sociology (SOCI)

Quantitative Reasoning (3 - 4 credit-hours)

Each student must complete at least one 3- or 4-credit-hour course identified as a quantitative reasoning course selected from the list below. This course may also be used to fulfill a major, minor and/or breadth requirement.

- ANTH 319 Introduction to Statistical Analysis in the Social Sciences 3
- BIOL 321 Design and Analysis of Biological Experiments 3
- EECS 132 Introduction to Programming in Java 3
- ENGR 131 Elementary Computer Programming 3
- MATH 121 Calculus for Science and Engineering I 4
- MATH 125 Math and Calculus Applications for Life, Managerial, and Social Sci I 4
- MATH 150 Mathematics from a Mathematician’s Perspective 3
- PHIL 201 Introduction to Logic 3
- PSCL 282 Quantitative Methods in Psychology 3
- STAT 201 Basic Statistics for Social and Life Sciences 3

Global and Cultural Diversity (3 - 4 credit-hours)

The goal of the Global and Cultural Diversity requirement is to provide students with the opportunity for academic reflection about the variation in human experience. Courses that satisfy this requirement must (1) substantively explore one or more cultures outside the United States, or (2) address in a substantive way ethnic, gender, sexual, religious, or other cultural practices within the United States, so as to provide students with fresh perspectives on their own cultural assumptions, traditions, and experiences. This course may also be used to fulfill a major requirement and/or one of the breadth requirements.

Students who matriculate as undergraduate degree candidates in August 2012 or later must select a course from the list below; students who matriculated as degree candidates prior to August 2012 can find the list of options from which they may choose on their academic requirements report.

- AMST 117 Exploring American History Through Biography 3
- ANTH 233 Introduction to Jewish Folklore 3
- ANTH 312 Ethnography of Southeast Asia 3
- ANTH 349 Cultures of Latin America 3
- ANTH 353 Chinese Culture and Society 3
- ANTH 354 Health and Healing in East Asia 3
- ARAB 337 Women in the Arab World 3
- ARAB 349 The Arab World Experience 3
- ARTH 101 Art History I: Pyramids to Pagodas 3
- ARTH 102 Art History II: Michelangelo to Maya Lin 3
- ARTH 208 Arts of Japan 3
- ARTH 220 Jewish Traditional Art and Architecture 3
- ARTH 230 Ancient Roman Art and Architecture 3
- ARTH 241 Medieval Art 3
- ARTH 249 The Global Middle Ages: From Paris to Baghdad 3
- ARTH 260 Art in Early Modern Europe 3
- ARTH 274 Nineteenth-Century European Art 3
- ARTH 301 Museums and Globalization 3
- ARTH 302 Buddhist Art in Asia 3
- ARTH 307 Arts of China 3
- ARTH 325 Art at the Crossroads of Religion: Polytheistic, Christian, and Islamic Art in Antiquity 3
- ARTH 327 The Parthenon Then and Now: New Discoveries, Old Problems and Reception 3
- ARTH 342 Issues in Indian and Southeast Asian Art 3
- ARTH 349 Gothic Art: Vision and Matter 3
- ARTH 355 The Book in the Middle Ages: The Christian, Jewish, and Islamic Tradition 3
- ARTH 358 Medieval Body 3
- ARTH 359 Visual Culture of Medieval Women 3
- ARTH 360 Renaissance Art in Northern Europe 3
- ARTH 361 17th-Century Art in Belgium and The Netherlands 3
- ARTH 367 17th and 18th Century Art in France 3
- ARTH 382 Art, Eco-criticism, and the Environment 3
- ARTH 383 Gender Issues in Feminist Art: The 20th/21st Century 3
- ARTS 305 Study Abroad Paris Architecture: Design & Culture 3
- ASIA 288 Imperial China: The Great Qing 3
- ASIA 289 Reform, Revolution, Republics: China 1895 to Present 3
- BETH 315A International Bioethics Policy and Practice: Women's Health in the Netherlands 3
- BETH 315B International Bioethics Policy and Practice: Public Health in the Netherlands 3
- BETH 315C International Bioethics Policy and Practice: Health Care Costa Rica 3

**Frances Payne Bolton School of Nursing Undergraduate Degree Requirements**

**Bachelor of Science in Nursing Degree**

(Frances Payne Bolton School of Nursing)

Candidates for the Bachelor of Science in Nursing (BSN) degree, in addition to meeting the general requirements for bachelor's degrees (p. 613), including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 126 credit-hours.
2. The General Education Requirements of the Frances Payne Bolton School of Nursing listed below.
3. The requirements for the major in nursing as presented in this Bulletin.
4. For all courses specifically required for the major in nursing, a minimum grade of C.

Note that most Nursing students will complete NURS 320 Theoretical and Evidence Bases for Best Practice in Nursing to fulfill the SAGES Departmental Seminar requirement and will complete NURS 373 Global Health Practicum to fulfill the SAGES Senior Capstone requirement. Also, most Nursing students will complete NURS 277 upon matriculation to count as a half-semester of Physical Education credit; this course may be used again two years later for a second half-semester.

**General Education Requirements of the Frances Payne Bolton School of Nursing (minimum of ten 3- or 4-credit-hour courses, totaling at least 30 credit-hours)**

These requirements provide a broad educational foundation for the Bachelor of Science in Nursing program.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer credit may be used to satisfy School of Nursing general education requirements.

**Arts and Humanities (6 - 8 credit-hours)**

Two 3- or 4-credit-hour Arts and Humanities courses selected from:

- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
• Chinese (CHIN)
• Classics (CLSC)
• Dance (DANC)
• English (ENGL)
• French (FRCH)
• German (GRMN)
• Greek (GREK)
• Hebrew (HBRW)
• History (HSTY)
• Italian (ITAL)
• Japanese (JAPN)
• Latin (LATN)
• Music - General (MUGN)
• Music - History (MUHI)
• Music - Popular Music (MUPM)

Programs Toward Graduate or Professional Degrees

Acceleration Toward Professional Degrees

Senior Year in Professional Studies at Case Western Reserve University

Students of outstanding ability and attainment who are candidates for the BA and who are admitted to professional studies in Case Western Reserve University by the end of the junior year are offered an opportunity to shorten their entire course of studies by one year through the Senior Year in Professional Studies privilege. Application should be made during the second semester of the junior year through the dean of undergraduate studies. This privilege is extended to students who are candidates for the BA and who attend the School of Dental Medicine, the School of Medicine, the Frances Payne Bolton School of Nursing, or the Mandel School of Applied Social Sciences of Case Western Reserve University.

A student granted the senior year in professional studies privilege is permitted to substitute the work of the first year in a professional school for that required during the last year in the undergraduate college. Upon the satisfactory completion of the first year’s work in the professional school, the student will be granted the bachelor’s degree from the College of Arts and Sciences. To be eligible for the senior year in professional studies privilege, a student must:

1. Be accepted for admission to professional studies in Case Western Reserve University.
2. Meet the following degree requirements:
   a. Completion of the SAGES requirements, the General Education Requirements of the College of Arts and Sciences, and the physical education requirement.
   b. Completion of three-fourths of the courses required for the major, including three-fourths of the courses required in the major department.
   c. Completion of 84 credit-hours of arts and sciences courses. These credit-hours may be drawn from those offered by the College of Arts and Sciences, as well as those in economics, biochemistry, nutrition, or computer science.
   d. Completion of at least 90 credit-hours of academic work, of which the final 60 credit-hours must have been in residence. A student may include in that final 60 credit-hours no more than six credit-hours earned in courses completed in other institutions, either by cross-registration in regular sessions or by approved transient registration in summer sessions. (Note: Students applying for the Senior Year in Professional Studies in the School of Medicine will generally be expected to have completed at least 117 credit-hours towards the BA degree.)

Upon admission to the program, students register in the professional school to which they have been admitted and are subject to the policies, rules and regulations of the professional school. They may, however, continue to receive merit-based undergraduate scholarships and may
continue to reside in undergraduate housing during what would normally be their senior year of undergraduate work.

For information, contact the Office of Undergraduate Studies (ugstudies@case.edu), 357 Sears Bldg., 216.368.2928.

Senior Year in Absentia Privilege for Students of Medicine and Dentistry

Students of outstanding ability and attainment who are candidates for the BA degree and are offered admission to a medical or dental school other than those at Case Western Reserve University at the end of the junior year are eligible for an opportunity to shorten their entire course of studies by one year through the Senior Year in absentia privilege. Application for this privilege should be made during the second semester of the junior year through the dean of undergraduate studies.

A student granted the Senior Year in absentia privilege is permitted to substitute the work of the first year in a professional school for that required during the last year in the undergraduate college. Upon the satisfactory completion of the first year’s work in the professional school, the student will be granted the BA from the College of Arts and Sciences. The privilege is extended to qualified students who attend medical schools in the United States or Canada approved by the Association of American Medical Colleges or dental schools in the United States approved by the American Association of Dental Schools.

To be eligible for the Senior Year in absentia privilege, a student must:

1. Be accepted for admission to professional studies.
2. Attain a cumulative grade point average of at least 3.200 in all courses attempted from the date of admission as an undergraduate.
3. Meet the following degree requirements:
   a. Completion of the SAGES requirements, the General Education Requirements of the College of Arts and Sciences, and the physical education requirement.
   b. Completion of three-fourths of the courses required for the major, including three-fourths of the courses required in the major department.
   c. Completion of 84 credit-hours of arts and sciences courses. These credits may be drawn from those offered by the College of Arts and Sciences, as well as those in economics, biochemistry, nutrition, or computer science.
   d. Completion of at least 90 credit-hours of academic credit, of which the final 60 credit-hours must have been in residence. A student may include in that final 60 credit-hours no more than six credit-hours earned in courses completed in other institutions, either by cross-registration in regular sessions or by approved transient registration in summer sessions.

For information, contact the Office of Undergraduate Studies (ugstudies@case.edu), 357 Sears Bldg., 216.368.2928.

For Candidates for the BS in Accounting

There are two programs that enable attainment of a BS in Accounting and a Master of Accountancy (MAcc) (p. 990) degree in five years or less. These programs are strongly recommended for those individuals planning to become certified accounting professionals, particularly as CPAs (Certified Public Accountants).

Joint BS in Accounting/Master of Accountancy (MAcc)

The University policies regarding the Joint BS in Accounting/Master of Accountancy program permit such students an opportunity to work towards completion of the Master of Accountancy during their undergraduate studies. By doing so, students are able to lessen the course load in their fifth year. After completion of the senior year, these students then enroll as graduate students in the Weatherhead School of Management to complete the master’s degree. For information, see Assistant Dean Tiffany Welch (tiffany.welch@case.edu), 472 Peter B. Lewis Building, 216.368.2058.

Accelerated BS in Accounting/Master of Accountancy (MAcc) Program

This program allows motivated students to accelerate their pursuit of both the BS and MAcc degrees. The Accelerated BS/MAcc program allows students to complete both degrees within the eight academic semesters as an undergraduate student. In some cases, one additional semester of study is needed to complete both degrees, at which time the student would be considered a Weatherhead graduate student.

Because of the necessity for proper planning of coursework and programs, undergraduate students are strongly encouraged to apply for the Master of Accountancy in the junior year. Weatherhead students must apply for and be admitted to the Master of Accountancy program. The Graduate Management Admission Test (GMAT) is required for admission to the MAcc program, but may be waived if certain requirements are met. Once admitted, students in an integrated study program are required to design a comprehensive study plan with both their Weatherhead undergraduate adviser and the faculty director of the MAcc program. For information, see Assistant Dean Tiffany Welch (tiffany.welch@case.edu), 472 Peter B. Lewis Building, 216.368.2058.

Acceleration Toward Graduate Study

Integrated Graduate Studies Program

The Integrated Graduate Studies Program (IGS) is intended for highly motivated undergraduate students who are candidates for the BA degree and whose objective is a degree at the master’s or doctoral level. Qualified students may be admitted to graduate study for their senior year and pursue the simultaneous completion of requirements for both the master’s and bachelor’s degrees. The baccalaureate will normally be awarded upon completion of the requirements for both degrees, unless a student satisfies all BA requirements prior to completing the master’s degree requirements. Students in the IGS Program are exempted from the 42-hour restriction imposed on BA candidates for work above the 100-level in a single department. However, the exemption is granted only upon completion of the master’s degree requirements.

Eligibility requirements for participation in the Integrated Graduate Studies Program are:

1. 90 credit-hours earned of which the last 60 credit-hours must have been in residence at Case Western Reserve University.
2. Completion of the SAGES requirements, the General Education Requirements of the College of Arts and Sciences, and the physical education requirement; students who have fulfilled all SAGES
requirements except the Senior Capstone will be required to complete the capstone during their first year in the IGS program.

3. Completion of three-fourths of the requirements for the major concentration, including three-fourths of the courses required in the major department.

4. Admission to a master’s or doctoral program offered through the School of Graduate Studies.

Upon admission to the program, IGS students register as students in the School of Graduate Studies and are subject to the policies, rules and regulations of the School of Graduate Studies. They may, however, continue to receive merit-based undergraduate scholarships and may continue to reside in undergraduate housing during what would normally be their senior year of undergraduate work.

For information, contact the Office of Undergraduate Studies (ugstudies@case.edu), 357 Sears Bldg., 216.368.2928.

**Integrated BS/MS in Nutrition**

Admission to the Integrated BS/MS in Nutrition program is subject to the same process and requirements as admission to the Integrated Graduate Studies Program described above. Upon successful completion of the program, students earn the BS in Nutrition and the MS in Nutrition.

**BS/MS Program for Candidates for the BS in Engineering, Computer Science, Mathematics, Natural Sciences, and Statistics**

The Integrated BS/MS Program is intended for highly motivated candidates for the BS in engineering, computer science, mathematics, natural sciences, or statistics who wish to pursue an advanced degree. Application to the BS/MS program must be made after completion of 75 credit-hours of course work and prior to attaining senior status (completion of 90 semester hours). Generally, this means that a student will submit the application during his or her sixth semester of undergraduate course enrollment and will have no fewer than two semesters of remaining BS requirements to complete.

A student admitted to the program may, in the senior year, take up to nine credit-hours of graduate courses (400-level and above) that will count towards both BS and MS requirements. The courses to be double-counted must be specified at the time of application. Courses taken prior to admission to the program cannot count towards the MS unless they are in excess of BS degree requirements and permission to use them towards the MS has been granted by the dean of graduate studies and the dean of undergraduate studies.

To be considered for the BS/MS Program, a student must:

1. submit to the School of Graduate Studies an application for admission to the program, and
2. submit to the Office of Undergraduate Studies an MS Planned Program of Study Form, showing the courses to be double-counted.

Students for whom the master’s project or thesis is a continuation and development of the senior project should register for Exxx 651 Thesis (or the appropriate project course) during the senior year and are expected to complete all other courses for the BS before enrolling in further MS course work and thesis (continuing the senior project). Students for whom the master’s thesis or project is distinct from the senior project will be expected to complete the BS degree before taking further graduate courses for the master’s degree.

Applicants in engineering or computer science should consult their departmental BS/MS advisor in the Case School of Engineering. Applicants in mathematics, natural sciences, and statistics should consult the dean of undergraduate studies.

**Conditionally Guaranteed Admission to the University’s Professional Schools**

The Pre-Professional Scholars Programs in medicine, dentistry, law, and social work grant to a few outstanding, entering first-year undergraduates conditional commitments of admission to the appropriate professional school at Case Western Reserve University. These commitments are honored upon successful completion of the requirements established by each professional school. Students admitted to these programs are relieved of much of the anxiety and uncertainty associated with pre-professional studies. Consequently, they feel free to undertake challenging courses of study and pursue a variety of interests as they prepare for professional studies. Pre-Professional Scholars are free to choose any of the bachelor’s degrees available in the University. Participants who wish to change their career goals or apply for admission to other professional schools are free to do so.

The Six-Year Dental Program gives exceptionally able and committed entering first-year undergraduates the opportunity to accelerate their undergraduate and professional studies.

**Pre-Professional Scholars Program in Dentistry**

Each year, a small number of exceptionally well-qualified high school seniors who plan to pursue careers in dentistry are offered places in the Pre-Professional Scholars Program in Dentistry. This program requires eight years: four years of successful undergraduate study and four years at the School of Dental Medicine.

Pre-Professional Scholars in Dentistry are free to choose a major in an area of interest, but must take the following courses to fulfill admission requirements of the School of Dental Medicine:

**Chemistry:**

They are required to take the Dental Admission Test in the junior year and achieve an acceptable level of performance on the test.

Successful progress through the program and admission to dental studies will be based on the pre-professional scholar's continuing to fulfill expectations for outstanding personal and academic development and on the scholar's achievement of a cumulative grade point average of 3.250 or higher for his or her work overall, as well as for his or her work in the required sciences. Successful progress in the program will be determined individually and reviewed at regular intervals during the student's undergraduate career.

Pre-Professional Scholars in Dentistry who wish to accelerate their program may apply for the senior year in professional studies (http://case.edu/ugstud/programs/senior-year-professional-studies.html) privilege.

Six-Year Dental Program

Each year a few exceptionally well-qualified high school seniors who plan to pursue careers in dentistry are offered places in the Six-Year Dental Program.

The first two years of the program are spent pursuing undergraduate studies, advised by the director of health career advising. Students are required to earn a minimum of 60 credit-hours. They are required to take all of the science and mathematics courses listed above for the Pre-Professional Scholars Program in Dentistry. If Advanced Placement credit is used to satisfy some of these science requirements, a minimum of 30 credit-hours in biology, chemistry, physics, and mathematics must be taken during the two years of undergraduate study. Additionally, to meet general education requirements, students must take one year of physical education, First Seminar, two University Seminars, one course in the area of Arts and Humanities, and one course in the area of Social Sciences, and must complete a writing portfolio. To qualify for the place reserved in the School of Dental Medicine, a student in the program must achieve the following:

1. A cumulative grade point average of 3.250 or higher for all course work completed;
2. Grades of B or higher in the required courses in biology, chemistry, physics, and mathematics;
3. An average score of 18 or higher on both the academic and PAT portions of the Dental Admission Test of the American Dental Association. The test must be taken no later than April of the second year.

Pre-Professional Scholars Program in Law

Each year, a small number of exceptionally well-qualified high school seniors who plan to pursue careers in law will be offered places in the Pre-Professional Scholars Program in Law at Case Western Reserve University. Pre-Professional Scholars receive a conditional commitment of admission to the Case Western Reserve School of Law, to be honored upon completion of the bachelor's degree at the University.

The Pre-Professional Scholars in Law are encouraged to gain a wide cultural experience in their undergraduate studies, to major in the area that most interests them, and to choose courses in which they will learn habits of rigor and logical analysis. The law school encourages applications from all majors, including engineering and the sciences. The School of Law recommends that Pre-Professional Scholars in Law take courses in accounting, economics, history, and philosophy and that they gain as much writing experience as possible, because the ability to write effectively is critical to success in law school and legal practice.

Students admitted to the Pre-Professional Scholars Program in Law will be guaranteed a seat in the School of Law upon graduation from Case Western Reserve University if they satisfy the requirements set out at the time of admission to the program.

Pre-Professional Scholars Program in Medicine

Each year, 15 to 20 exceptionally well-qualified high school seniors who plan to pursue careers in medicine are offered places in the Pre-Professional Scholars Program in Medicine. Pre-Professional Scholars receive a conditional commitment of admission to the University Program of the Case Western Reserve University School of Medicine to be honored upon successful progress toward and completion of the bachelor's degree. The Pre-Professional Scholars Program in Medicine requires eight years: four years of successful undergraduate study leading to the bachelor's degree followed by four years in the University Program of the School of Medicine. Pre-Professional Scholars in Medicine who complete their undergraduate degree requirements in less than four years are required to pursue other experiences intended to enhance their professional and personal development during the period following the receipt of their bachelor's degree and until study at the School of Medicine begins.

Pre-Professional Scholars in Medicine are free to choose from among all of the degree and major programs offered in the university, but must complete the courses in biochemistry, biology, chemistry, physics, math/ statistics, and behavioral sciences listed in the Conditions of Admission letter they received when accepted to the program. They are also expected to continue to fulfill expectations for outstanding professional and personal development as outlined in the Condition of Admission letter. These expectations include, but are not limited to, maintaining academic integrity and adhering to the university's standards of conduct (all academic integrity and judicial offenses will be reported to the School of Medicine), clinical shadowing, and involvement in undergraduate activities and community programs.

Pre-Professional Scholars in Medicine are not required to take the Medical College Admission Test (MCAT) for the program. However, if they do take the MCAT, they are expected to achieve a score that is above the 94th percentile on the MCAT. Program participants who have an interest in applying to any other medical schools, or who wish to be considered for a dean's merit scholarship at the Case Western Reserve School of Medicine, should plan on taking this test.

Pre-Professional Scholars are expected to demonstrate successful academic progress by meeting the following level of performance: A CWRU cumulative GPA of 3.63 and a cumulative American Medical College Application Service (AMCAS) GPA and AMCAS Biology, Chemistry, Physics and MATH (BCPM) GPA of 3.63 at the time of application and maintained on final graduation transcripts.

Progress is reviewed with each student at regular intervals in the program. At the end of the third year, Pre-Professional Scholars in Medicine who have met the required levels of performance go through the normal admission procedures for the University Program
of the School of Medicine, including submitting an application through the American Medical College Application Service (AMCAS) and an interview. Participants who do not meet the required levels of performance may still be admitted into the University Program of the School of Medicine, but such admission will be subject to review and approval by the School of Medicine’s Admissions Committee.

Successful completion of the Pre-Professional Scholars Program in Medicine guarantees admission only to the University Program of the School of Medicine. Students seeking admission to the Cleveland Clinic Lerner College of Medicine of the Case Western Reserve University School of Medicine must complete a separate application and will be considered in competition with all applicants for that program.

Pre-Professional Scholars Program in Social Work

Each year, as many as ten high school seniors who plan to pursue careers in social work are offered places in the Pre-Professional Scholars Program in Social Work. The program gives a conditional commitment of admission to the Case Western Reserve University Jack, Joseph, and Morton Mandel School of Applied Social Sciences to be honored upon successful completion of the bachelor’s degree.

Admission to the master’s degree program in social work at MSASS is dependent upon the following requirements:

1. Graduation from the University with a cumulative grade point average of 3.000 in the junior and senior years.
2. Completion of a minimum of 24 credit-hours in the social and behavioral sciences.
3. Continued evidence of a combination of personal qualities which are considered essential for the professional practice of social work.

Pre-Professional Scholars in Social Work who wish to accelerate their program may apply for the senior year in professional studies privilege. Application Procedures for Pre-Professional Scholars and Six-Year Dental Programs

Prospective students who wish to apply to any of the Pre-Professional Scholars Programs or to the Six-Year Dental Program should apply for admission through the Office of Undergraduate Admission of Case Western Reserve University. All forms are included within the application materials.

The application for admission, supporting test scores and high school transcript, must be submitted to the Office of Undergraduate Admission as early as possible, but no later than December 1.

Students who are admitted to the University and are also deemed eligible for consideration for one of the Pre-Professional Scholars Programs or the Six-Year Dental Program will be notified by February 1 and will be invited for interviews at the appropriate professional schools. The basis for selection for these programs will be dedication to the pursuit of the particular profession, distinguished academic performance, a record of personal accomplishments that attests to a student’s maturity, leadership, and interpersonal skills, and an interview with an admissions officer from the appropriate professional school. Decisions on admission to the programs will be communicated on or about April 1.

Students who are not admitted to these special programs are encouraged to pursue their undergraduate studies and to apply in the normal course to the professional school of their choice, including the professional schools of Case Western Reserve University.

SAGES Courses

SAGES Courses

For a full description of the SAGES Program, see the section on General Degree Requirements (p. 613).

This list of courses includes only those courses offered directly by the SAGES Program that have been approved as permanent offerings. Not all of the First Seminars and University Seminars listed are offered every year, but the list of offerings in any given year will include courses that received one-term approval. All Department Seminars are offered through the academic departments and are listed among their course offerings. Most Senior Capstone courses are offered through the academic departments, though several are offered through the SAGES Program and are included here with the course prefix UCAP.

FSCC Courses

FSCC 100. First Seminar. 4 Units.

This four credit-hour course provides an introduction to various dimensions of academic life. It will be characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources, and will include practice in written and oral communication in small groups. Each seminar is led both by a faculty member and a writing co-instructor. The goals are to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to introduce basic information literacy skills; to provide a foundation for ethical decision-making; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive common intellectual experience for first-year students at Case.

FSCS Courses

FSCS 150. First Seminar Continuing Semester. 3 Units.

This is a continuation of the First Seminar experience for ESL students. The seminar will continue the introduction to various dimensions of academic life. It will be characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources, and will include practice in written and oral communication in small groups. The goals of the seminar are to continue to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to continue to introduce basic information literacy skills; to continue to provide a foundation for ethical decision-making; to continue to encourage a global and multidisciplinary perspective on the learning process; and to continue to facilitate faculty-student interactions. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, or FSCS. Prereq or Coreq: FSTS 100.
problems with language resulting from brain injury.

We'll use primary exercises, vitamins, and other habits such as reading) that are implicated in preventing or slowing down these disorders. The focus on a medical therapeutic approaches are limited and may not be suited to deal with the imminent problems. The seminar will examine lifestyle changes (i.e., diet, exercise, vitamins, and other habits such as reading) that are implicated in preventing or slowing down these disorders. The focus on a medical topic with important socioeconomic ramifications will provide a novel approach to enhancing critical thinking and communication skills.

FSNA 112. Talking Brains: The Neuroscience of Language. 4 Units.
J speaks both Italian and English. After suffering a stroke, he finds himself switching to Italian in the middle of a sentence, even when he knows the person he's talking to doesn't speak Italian! He can't stop himself no matter how hard he tries. In this discussion-based seminar, we'll use cases like J's to understand how a mass of cells can give rise to something as complicated as human language. We'll use primary source readings from neuroscience to study topics such as the typical organization of language in the brain, bilingualism, sign language, and problems with language resulting from brain injury.

FSNA 113. Facts and Values in Environmental Decisions. 4 Units.
This four-credit seminar will guide students to critically evaluate the evidence, uncertainties, and value judgments pertinent to some of the world's pressing environmental issues. We will begin by studying climate change. Students will decide the topics of exploration to follow. Through reading, field trips, discussions and writing we will investigate natural environmental processes and how they have changed with the growth in human population and technology. Students will learn about the scientific process and will consider the role of science and technology and their limits in making decisions about shared resources.

FSNA 116. Cities (Under Construction). 4 Units.
Based on the premise that cities are never "finished," and constantly being remade, we will look at the technological and cultural history of cities from the ancient world to the present day. Students will explore the history of building materials—wood, brick, steel, concrete, and glass—used in the construction of cities. We will also trace the development of city infrastructure such as water and sewage systems; streets, bridges, and subways; electricity, telephone and the internet. Specific technological innovations, such as the elevator and the automobile, will receive special consideration. We will move both geographically and temporally to visit the world's great cities, Athens, Mexico City, Tokyo, and New York City. As we do, we will study the examples of significant building projects, such as the Brooklyn Bridge, the Chicago World’s Fair, Washington, DC’s Metro, and Cleveland’s first skyscraper, the Rockefeller Building. The course will cover the history of the professions—engineering, architecture, and urban planning—that have contributed to the construction of cities, and will review the works of these practitioners, as well as that of artists, reformers, and utopians that have imagined new directions for the city. We will also explore first person narratives of the city, the impact of the city on personal and collective memory, and the possibilities and pitfalls of the "virtual" city. Through lecture, discussion, textual analysis, computer simulations, and writing assignments, Cities (Under Construction) will help students gain a deeper understanding of their role in remaking and sustaining the built environment.

FSNA 120. The Impact of Materials on Societal Development. 4 Units.
This four-credit-hour course provides an introduction to collegiate writing and to various dimensions of academic life, but will focus on the critical appreciation of the world of energy. Currently, most of the world runs on non-renewable resources; this course is designed to help students develop viewpoints about these issues, and to express themselves in a clear, coherent way. The class will involve both literacy and numeracy, and students will learn to become comfortable handling some of the quantitative measures of energy use. The class will be characterized by intense yet open-ended intellectual inquiry, guided by reading, lectures and discussion, and will include practice in written and oral communication individually and in small groups.

FSNA Courses

FSNA 103. Energy and Society. 4 Units.
This four-credit-hour course provides an introduction to collegiate writing and to various dimensions of academic life, but will focus on the critical appreciation of the world of energy. Currently, most of the world runs on non-renewable resources; this course is designed to help students develop viewpoints about these issues, and to express themselves in a clear, coherent way. The class will involve both literacy and numeracy, and students will learn to become comfortable handling some of the quantitative measures of energy use. The class will be characterized by intense yet open-ended intellectual inquiry, guided by reading, lectures and discussion, and will include practice in written and oral communication individually and in small groups.

FSNA 104. Archaeoastronomy: Monuments and Ideas. 4 Units.
The unifying theme of this course is how astronomical practice and knowledge is central to ancient civilizations and how that emphasis continues today as manifested through scientific endeavor and also as strongly through the power of unifying myth.

FSNA 109. Science and Race. 4 Units.
This four-credit seminar examines the development and impact of the concept of race. We will first focus on the causes of biological variability in species, leading to an evaluation of whether race is a useful device for understanding biological variability in humans. Second, we will examine how the understanding of race has changed over time within the biological sciences. Third, we will examine how scientific conceptualizations about race have influenced, and been influenced by, cultural beliefs. Through readings and open-ended discussion, we will critically examine the scientific process as it has been (and still is) being applied to the study of human races so that each student will ultimately be equipped to develop a scientifically sound conceptualization of race. Topics which will be covered include Social Darwinism, the eugenics movement, legislation to restrict immigration into the U.S., race-based medicine, and race and intelligence. Students are expected to enhance their skills at critical reading, thoughtful analysis, constructing logical arguments, and improving written and oral communication.

FSNA 111. Chemical Aspects of the Aging Mind. 4 Units.
This seminar will focus on three age-related neurological disorders: Alzheimer’s, Parkinson’s and Huntington disease. These diseases pose enormous social and economic impact, and current drug-based therapeutic approaches are limited and may not be suited to deal with the imminent problems. The seminar will examine lifestyle changes (i.e., diet, exercise, vitamins, and other habits such as reading) that are implicated in preventing or slowing down these disorders. The focus on a medical topic with important socioeconomic ramifications will provide a novel approach to enhancing critical thinking and communication skills.

FSNA 112. Talking Brains: The Neuroscience of Language. 4 Units.
J speaks both Italian and English. After suffering a stroke, he finds himself switching to Italian in the middle of a sentence, even when he knows the person he's talking to doesn't speak Italian! He can't stop himself no matter how hard he tries. In this discussion-based seminar, we'll use cases like J's to understand how a mass of cells can give rise to something as complicated as human language. We'll use primary source readings from neuroscience to study topics such as the typical organization of language in the brain, bilingualism, sign language, and problems with language resulting from brain injury.

FSNA 113. Facts and Values in Environmental Decisions. 4 Units.
This four-credit seminar will guide students to critically evaluate the evidence, uncertainties, and value judgments pertinent to some of the world's pressing environmental issues. We will begin by studying climate change. Students will decide the topics of exploration to follow. Through reading, field trips, discussions and writing we will investigate natural environmental processes and how they have changed with the growth in human population and technology. Students will learn about the scientific process and will consider the role of science and technology and their limits in making decisions about shared resources.

FSNA 116. Cities (Under Construction). 4 Units.
Based on the premise that cities are never “finished,” and constantly being remade, we will look at the technological and cultural history of cities from the ancient world to the present day. Students will explore the history of building materials—wood, brick, steel, concrete, and glass—used in the construction of cities. We will also trace the development of city infrastructure such as water and sewage systems; streets, bridges, and subways; electricity, telephone and the internet. Specific technological innovations, such as the elevator and the automobile, will receive special consideration. We will move both geographically and temporally to visit the world’s great cities, Athens, Mexico City, Tokyo, and New York City. As we do, we will study the examples of significant building projects, such as the Brooklyn Bridge, the Chicago World’s Fair, Washington, DC’s Metro, and Cleveland’s first skyscraper, the Rockefeller Building. The course will cover the history of the professions—engineering, architecture, and urban planning—that have contributed to the construction of cities, and will review the works of these practitioners, as well as that of artists, reformers, and utopians that have imagined new directions for the city. We will also explore first person narratives of the city, the impact of the city on personal and collective memory, and the possibilities and pitfalls of the “virtual” city. Through lecture, discussion, textual analysis, computer simulations, and writing assignments, Cities (Under Construction) will help students gain a deeper understanding of their role in remaking and sustaining the built environment.

FSNA 120. The Impact of Materials on Societal Development. 4 Units.
This four-credit-hour SAGES seminar provides an introduction to various dimensions of academic life through open-ended intellectual inquiry and guided by reading from primary and secondary sources. The course will require practice in written and oral communications in small groups. A primary focus of the seminar will be to examine the impact of engineering materials on societal development through human history using a few specific materials of interest as examples: concrete, steel, and semiconductors. At the conclusion of the course, students will be encouraged to explore the impact of other materials on the development of specific technologies as a group project.
FSNA 122. Science in the World of Harry Potter. 4 Units.
The Harry Potter books have attracted more readers than any other fantasy novel series. This seminar will discuss how science may account for or duplicate some of the magical endeavors described in the novels. We will assess the feasibility of certain means of transportation, such as traveling by the floo network, apparitions, and broomsticks, in the context of modern science and technology. Parallels between certain potions and contemporary drugs will be evaluated. The seminar's conceptual framework, integrating fantasy with technology, will loosely follow the format of Michio Kaku's nonfiction book "Visions: How Science Will Revolutionize the 21st Century." In "Visions," Professor Kaku offers the provocative thesis that many "fairy tale ideas" may be possible in the future thanks to advances in science and technology. A combination of Rowling and Kaku in one course should offer a unique opportunity for SAGES learning.

FSNA 123. The Automobile: Its Origins, Development, and Impact on American Society. 4 Units.
The automobile is without doubt one of the defining influences on American life and society. In 1900, most people lived in rural communities, and the main forms of personal transportation were walking and the horse and buggy. Half a century later, most Americans lived in cities or suburbs, there were millions of cars in garages, and roads and highways criss-crossed the nation. The car has transformed where we live and work, how we play, and the very nature of our cities. This course will examine the American automobile from several perspectives: its origins, evolution and effect on industry; its impact on American life and leisure; and the automobile as an art form and American icon. We will also discuss how we preserve examples of our automotive heritage. These topics will be explored in the context of the usual writing and discussion components of a first SAGES course.

FSNA 125. The Right Stuff. 4 Units.
This course will examine the Space Race. A key text for the course will be Tom Wolfe's The Right Stuff. By taking a historical approach to the study of the achievements and failures of NASA scientists and astronauts, it is possible to examine: 1) how individuals dedicated to achieving a particular scientific end draw on the scientific method, 2) the consequences of scientific inquiry, and 3) how science develops in specific historic contexts.

FSNA 126. Urban Ecology. 4 Units.
This course will explore the natural world in an urban context. Urban spaces are defined by the interaction between human creation (the built environment) and the natural world. We will explore how those definitions can be complicated by human innovation meant to re-create nature, such as engineered wetlands. We'll read some classical ecology to understand how ecological issues differ in cities. Some topics we'll cover include: wildlife management; human/organism conflict and interdependence; urban heat islands; watershed, stormwater, and sewer management; and how trees grow in urban conditions. We'll also explore ethical issues such as environmental justice and sustainable development. Our field trips are meant to illuminate how urban planners, park managers, and others deal with such issues to create positive and healthy environments for their communities. Students will apply arguments and concepts learned in the course readings to the sites we visit.

FSNA 128. Naturally Spicy: Spices, History, Culture, Health and Cuisine. 4 Units.
This course will delve into the world of spices. Each commercially important spice will be discussed with the goal of understanding the influence spices and the spice trade had on the history, culture, and cuisines of different parts of the world. The chemistry of some of the natural compounds present in the spices and their effect on various diseases will be explored by reading and discussing scientific literature. Finally, the class will cook with some of these spices and sample other distinctly spiced foods to learn more about various cuisines and cultures.

FSNA 129. Engineering Design for the World's Poorest. 4 Units.
Almost half (47%) of the people in Africa have incomes less than $1.25 per day. Most of these people live as subsistence farmers in small villages with no electricity, running water or automobiles (but with cell phones). Through readings, group discussions, writing assignments, and open-ended experiential learning activities, the course will address ways that engineering solutions can improve peoples' lives within these severe economic constraints. A hands-on component of the course will involve designing and building affordable devices to meet specific needs. We have developed interactions with villages in Senegal, Malawi, and Botswana, and the engineering solutions will be explored within the context of these villages.

FSNA 133. Engineering Innovation and Design. 4 Units.
Innovation and design are cornerstones of the engineering profession and are responsible for many of the improvements in the quality of life that have taken place over the last century. Innovation is also viewed as the essential skill that will drive economies and solve many of the challenges facing societies around the globe. This seminar-based course will provide a disciplined approach to engineering innovation and design. The course requires students to engage in written and oral communications as well as working in small teams to complete open-ended design/build-related assignments. The course will culminate in the design, fabrication and validation of a prototype product to meet an identified need. The design, fabrication and validation of these products will be carried out in think[box] 1.0 (Prentke-Romich Collaboratory), and the Reinberger Design Studio.

FSNA 134. Fuel Cells. 4 Units.
Fuel Cells convert hydrogen and other fuels directly to electricity and are viewed as a key technology for non-polluting, oil-independent energy in the future. In this course, we will study and critically analyze the prospects, technical and economic barriers, and impact of broad implementation of fuel cells, focusing on the transportation sector and portable power. Major topics of the course include: (i) World and US energy outlook; (ii) Potential role and impact of fuel-cells; their advantages, principles of operation, design and materials issues, limitations and prospects for improvements; (iii) Special focus on details of a polymer type fuel cells (PEMFCS) for transportation and portable power; (iv) Modeling fuel cell performance and evaluation of controlling mechanisms that limit performance. The course is designed for students from all disciplines. Students will be expected to read assigned texts and articles and critically analyze statements and points of view presented. Quantitative analysis will be encouraged and developed. Student teams will develop a hypothesis to improve fuel cell performance by modifying the design of a component of the fuel cell. The new component design with then be fabricated and tested in an operating prototype fuel cell. Data analysis, hypothesis conclusion, and reporting of results are expected.
BioDesign basics explores the art of finding patient needs. No prior clinical or medical education is required, as we focus on acquiring and refining the underpinning critical thinking skills needed to identify and articulate unmet clinical patient needs in contemporary healthcare settings. Many—if not a majority of—ideas leading to healthcare innovation are derived from issues that arise during the daily activities of caring for patients. Whether it is frustration with the use of a specific surgical instrument, processes that interfere with health care delivery, better waiting rooms for the family, designing more comfortable hospital gowns, or materials inadequate for intended outcomes, patient needs cover a broad range of physical and emotional states. Many students find the idea of identifying a “patient need” quite ambiguous at first, but the BioDesign process for defining patient need is a widely used national model developed at Stanford University that the student will find contains easy-to-follow steps that are simple and appealing. As an interactive and “hands-on” course, students will be engaged in discussions, events and activities to promote a first-hand understanding of “needs finding” to support individual mastery of writing and oral presentation skills.

The Fourth Hour will be centered on “walking tours” of local medical institutions around University Circle as well as actual use of medical devices (wheelchairs and crutches) on campus as ways to help your efforts identify a patient need based on those observations. In short, you will create your own experiences leading to stories that make writing fun. The course requires students to engage in written and oral communications as well as working in small teams to complete open-ended assignments.

FSNA 137. Volts, Amps, Bits, Bytes. 4 Units.
The electrical grid, the computer, biomedical devices, electric vehicles, interactive art, and smart homes are a few examples of the pervasiveness of electronics and computer technology. This seminar will introduce the engineering design process, and present the basics of electricity, electronic circuits, measurement, sensors, and microcomputers (the Arduino), and how to use them to design and build useful devices. Students will reverse-engineer products, learn electrical and mechanical prototyping and fabrication, and apply them in a variety of hands-on labs. The course will conclude with students proposing, designing, and prototyping innovative design projects. The course will make extensive use of the Sears Design Lab and Think[box] and is writing intensive.

FSNA 138. Light. 4 Units.
This course explores Light, otherwise know as visible electromagnetic radiation. We will examine what light is in its various forms; how it is created and detected; how we perceive it; and how it has influenced our evolutionary development, our technological, artistic, and religious cultures, and our conceptions of space and time. Students will discuss topics suggested by the course readings and by exposure to the many scientific activities, historical artifacts, and artistic works on the CWRU campus and at other local institutions that involve light in a significant way.

FSNA 142. Designed by Man, Built by Nature. 4 Units.
If you look at the structure of a human tendon, and at the reinforcement system in an automobile tire, they share many design elements in common. The eye of an octopus and a high performance surveillance lens can be similar as well. The structure of sea shell and of vehicular armor - again, these share common features. In this class we will examine how nature designs things for performance, and how mankind copies these to produce useful objects. Two general introductions to technology will be supplemented with specific readings from the technical literature to provide a broad introductory background. This writing-intensive seminar is tailored for incoming CWRU students with an interest in science, engineering and technology. Among other class activities this seminar will require the student to research, design and build prototype bio-inspired systems according to assignments made in class, with a competition held during the last week of the semester.

FSNA 143. Materials and Energy. 4 Units.
Manufacturing and using the materials of modern life—metals, polymers, ceramics, paper products, and others—play major roles in the world’s consumption of energy and natural resources. This course will objectively and (when applicable) quantitatively explore the technological and social forces that drive current levels of materials usage. Through readings, group discussions, writing assignments, and open-ended experiential learning activities, the course will address the following questions: What are the scale and geographical distribution of materials usage? How do the magnitude and impact of materials usage compare to those of other demands on energy and resources (such as agriculture, transportation, residential heating, and clean water)? What are the impacts—positive and negative—of materials consumption on society and the natural environment? How did the world get to its current situation, and what should, and can, be done in the future? Students successfully completing this course will be able to think critically and objectively about the role of materials in society’s use of energy and natural resources, and to articulate realistic, persuasive arguments based in quantifiable facts about these topics.

FSNA 148. Science or Pseudoscience? Exploring Extraordinary Claims. 4 Units.
In the contemporary world, extraordinary claims about ghosts, aliens, and the nature of the universe appear on popular television shows, on the Internet, and in the press. Many of these claims are framed as science. In this seminar, we critically examine the nature of these understandings of the world around us. We will ask if these claims are scientific and, if not, whether they constitute a form of pseudoscience. We will explore the role of demarcation, evidence, scientific progress, and fallacies of reasoning in pseudoscience. We will also consider the historical and sociocultural currents that give rise to these pseudoscientific claims as well as their social and political implications. Drawing on anthropological, philosophical, and historical case studies, we will consider topics such as cryptozoology, astrology, ancient aliens, parapsychology, the Nemesis theory of dinosaur extinctions, theories of intelligence, and other extraordinary claims.
FSSO Courses

FSSO 110. Conflict and Cooperation. 4 Units.
Why is it that when cooperation seems so likely, conflict breaks out? Or why at other times when conflict looms, cooperation wins out? This course explores the social and political complexities of this basic human condition. Through seminar discussions of classic readings, the course will introduce students to the basic social science concepts and theories used to explain conflict and cooperation. In addition to general knowledge, the course will also allow students hands on experience. Classroom time will be dedicated to simulating the decision making and negotiating dynamics which lead to cooperation or conflict. Studies will include individual, historical, and international cases. Graded projects will include small group negotiation and decision making exercises as well as individual writing tasks.

FSSO 111. The Ethnic/Racial Experience in America. 4 Units.
This four credit hour course focuses on the ethnic/racial experiences of Native, African, Latino and Asian Americans through representative works of fiction, nonfiction and film. We will look at the way racial and ethnic identities are produced through political struggle on a local/national/global scale and how they are maintained and transformed over time. We also pay close attention to the ways in which race and ethnicity intersect with gender, sexuality, class, parental pressure, and nation in order to better understand how systems of power and inequality are constructed, reinforced, and challenged.

FSSO 114. Music in Our Lives. 4 Units.
This seminar will examine the role, meaning, power, and influence of music in our lives. Readings, writing assignments, and fourth-hour events will focus on the following three themes: music is important, everyone is musical, and there are many uses of music and ways to be musical. Topics include the Cleveland music scene, the use of music in political movements, music in today's media, and the use of music to heal. This course will be characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources. It will also include practice in written and oral communication in small groups. The goals are to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to introduce basic information literacy skills; to provide a foundation for ethical decision-making; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive common intellectual experience for first-year students at Case.

FSSO 116. Working-Class Heroes. 4 Units.
This course will focus on the representation of the American laborer in literary and other cultural texts. Beginning our study with mid-to-late nineteenth-century works, we will concentrate on how particularly working-class figures, viewing films, listening to music, and analyzing visual arts both in class and on visits to Cleveland cultural institutions. Writing Requirements include short critical response papers, two longer papers, and a final project accompanied by class presentations.

FSSO 119. Philanthropy in America. 4 Units.
This four-credit course provides an introduction to various dimensions of philanthropy and volunteerism. Using the seminar format and an array of interactive activities, we will conduct a broad but intellectual inquiry into the systems and ethics of giving time and money to charitable causes. In four units of inquiry, we will consider the giving traditions that have influenced American culture and society since its colonial days. We will examine the role that the Third Sector (also known as the Independent or Nonprofit Sector) plays as an agent of social change in a functioning democratic republic. We will explore the nature of donors and volunteers and take a critical look at the missions and goals of a cross section of nonprofit organizations. We will wrestle with ethical issues related to philanthropy and consider the giving patterns of different social, religious, and ethnic groups. We will also turn our collective thinking to how the nonprofit sector might better serve the social needs of the nation and the world. At the end of the semester, we will reflect on how our ideas about philanthropy have changed over the course of fifteen weeks.

FSSO 120. Poverty and Social Policy. 4 Units.
This course has two major foci: poverty and social policies designed to ameliorate poverty. Sociologists in the United States and in other countries have made major contributions to studies of poverty. They have primarily focused on income-based poverty, but more recently, have also studied other forms of poverty. In this class, we will examine different conceptualizations and measures of poverty. We will then examine short-term and long-term poverty experiences and their potential consequences. We will then turn to explanations of poverty: why are some individuals more likely to experience periods of low income than others? While the United States will be the focus of the course, we will contrast the experiences of other countries. The second component will be an analysis of social policies designed to ameliorate poverty. In particular, we will examine the development and rethrenchment of welfare states and other social policies, the various goals of social policy, and the different impacts social policies have had on individuals, families, other groups, and the country overall. This discussion will reflect on experiences of other countries.

FSSO 122. China in Modernization. 4 Units.
This four-credit hour course provides an introduction to various dimensions of modernization in contemporary China, especially cultural and social changes such as consumption, education, migration, and tourism as a result of economic reforms, trade expansion, foreign investments and technology transfer, especially the development of information technology. The seminar will also assess the impacts of these changes on various aspects of globalization and vice versa. It will be characterized by intense yet open-ended intellectual inquiry, guided by reading relevant material, and will include practice in written and oral communication in discussion forums and small groups. The goals are to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to introduce basic information on literacy skills; to provide a foundation for ethical decision-making; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive common intellectual experience at CWRU.
FSSO 123. Ten Developments That Are Shaking The World. 4 Units.
This seminar is an introduction to some of the most important global developments of our times. We will examine these events through political, historical, economic, cultural, sociological, scientific and ethical lenses. Readings will come from a wide-range of sources, and assignments will include exercises in written and oral communication. The professor will choose the first three global developments to be investigated as well as the relevant readings. His topics will most likely be the proliferation of nuclear weapons, the rise of China as a great power and the fiftieth anniversary of the European Union. Each of the remaining seven will be chosen by small groups of students, who will assign the readings and run the sessions for their respective topic. Possible topics include the global food crisis, genocide and the failure of the world community to stop it, global warming and the growing gap between the world's rich and poor.

FSSO 126. Religion and the Ethics of War. 4 Units.
Although war is a highly rational, organized and purposeful affair, it also is the most destructive and bloody of human activities. For this reason, war and warfare has always been subject to various religious and moral restrictions. As technology has developed, the conduct of war has changed and the definitions of just and unjust war, as well as what it means to fight justly, have undergone profound changes. This course looks at war and warfare from a variety of angles and examines how various religious and moral thinkers have tried to define just war, and create guidelines for fighting a war justly. At the end of the semester, the course looks at the moral challenges presented by new technologies and new concepts of war.

FSSO 128. Movers and Shakers: Leadership. 4 Units.
"Never doubt that a small group of thoughtful, committed citizens can change the world. Indeed, it is the only thing that ever has" (Margaret Mead, 1901-1978). This seminar is about understanding what enables people to make a generative impact on the world. Students will explore the socio-emotional and motivational characteristics of effective leaders and their ability to create positive change. Students will also be encouraged to develop their own theories of leadership and to explore their personal approaches to making a difference. The seminar will profile leaders from different occupations and walks of life. Seminar sessions will feature assigned readings on leaders and change agents, class discussion on what drives movers and shakers, and individual and group presentations on class members' emergent leadership perspectives. A key objective of the seminar is the development of critical thinking skills, writing skills, and verbal skills. Consequently, the weekly class readings, reflection papers on class readings, class discussions, class presentations (individual and group), and final project are vital features of the seminar experience. Students will be expected to leave the seminar with a grounded perspective on leaders and leadership, and the ability to articulate their own personal views on making a difference in the world.

FSSO 129. Perspectives on Inequality. 4 Units.
We live in a world in which millions of people die every year in developing countries due to poverty-related conditions. Within the United States, where most commentators characterize the population as "middle class," at least 35 million people live in poverty. This course examines social inequality from multiple perspectives. We will discuss the concepts of poverty, discrimination, and social change on a global and national level. The first third of the course assesses several economic, cultural, and environmental theories of inequality. We will then survey a wide range of scholarship that has addressed various types of social inequalities from diverse viewpoints.

FSSO 131. Social, Political, Economic Environment of Cleveland Northeast Ohio Region. 4 Units.
This First Seminar will focus on the socio/political/economic environment of the Cleveland/Northeast Ohio Region. Students will be encouraged to explore the agents that create change in our region; major employers and start-up innovative businesses, politicians, philanthropic funds and grassroots activists. Our analysis will also include the topic of growth. Definitions of it, creation of it, measurement of it, equity of it and sustainability of it.

FSSO 132. Legal Lessons in Poems and Plays. 4 Units.
This First Seminar will focus on law-related practical and philosophical lessons learned through poems and plays. At its core is the belief that by studying law in literature, students can become better thinkers and writers, readers and speakers, as well as better participants in civic affairs. This seminar will broaden and deepen students' understanding of the presence of literature and human nature in law and society.

FSSO 140. Working-Class Literature. 4 Units.
In her volume, Silences (1978), writer Tillie Olson refers to the relationship between social class and literature as "the great unexamined." This statement still largely rings true, despite the continued production of novels, films, and poems depicting the working-class, and despite the unprecedented growth in recent years of America's working class. In this course, we will examine the relationship between social class and literature, reading narratives written by and about laborers in the hopes of understanding the complexities of working-class life in America, including the intricate ways in which economic status mediates one's sense of identity. Beginning our study with mid-to-late nineteenth-century works, we will consider ideas about economics, race, and gender that have shaped and that continue to influence the depiction of the working-class. Throughout the course, we will pair literary and historical readings with pop-cultural materials, viewing films, listening to music, and analyzing visual arts both in class and on visits to Cleveland cultural institutions such as the Western Reserve Historical Society and the Maltz Museum of Jewish History.

FSSO 143. Living With and Making Decisions Concerning Injustice. 4 Units.
Injustice. What do you think of when you hear that word? There are all types of injustice in this world, and chances are that during our lifetime we will either find ourselves in a position or system of power, perpetrating injustice on others; or in a position or system of supposed impotence, a subject of injustice. What are our choices? How will we respond? In this course we will examine the topic of living with and making decisions concerning injustice using, as an example, the specific injustice of slavery, examining the lives and decisions of both a famous slaveholder and two not-so-famous slaves; and learning from their lives and decisions how we might, ourselves, live with and make decisions concerning injustices we face in our lives.
FSSO 145. Berlin in History, History in Berlin. 4 Units.
From its emergence as a fishing village in the sandy marshes of the eastern frontier of Germany, to its 21st-century role as a cosmopolitan metropolis, Berlin has embodied the arc of change over time in human society. This course uses the history of the city of Berlin as the lens through which to contemplate the complexity of human social and cultural arrangements, their expression in economics and politics (including war), and the imbrication of human cultural and social constructions with the "natural" world. We will read books and articles about the history, culture, economy, and politics of Berlin, primarily from its establishment as the capital of new German Empire in 1871 to the present. We will view films that introduce us to the manic energy that Berlin represented in the transition to modernity. We will visit local museums that house examples of the material culture of Berlin, from the Cleveland Museum of Art to the Rock and Roll Hall of Fame and Museum. We will listen to the music of Berlin, from the baroque of the Brandenburg Concertos to the heavy metal of the Skorpions. And we will learn its history, from fishing village, to court city, to imperial metropolis and industrial engine, to divided symbol of the Cold War, to de-industrialized center of art, government, education, and incubator of high-technology. This First Seminar will prepare students to pursue their undergraduate degrees grounded in thinking about places in time, about change over time, and about human creativity, while preparing them to write and speak about their arguments with clarity and grace.

FSSY Courses

FSSY 106. Trauma and Memory: Modes of Remembrance and Representation. 4 Units.
The twentieth century has often been referred to as a traumatic century, characterized by unprecedented and unimaginable acts of violence. Traumatic events have engrained themselves into both individual and collective memory structures. Not surprisingly, trauma studies have become a central topic of investigation across disciplinary lines. Yet much of the field is still negotiated. We will try to recreate this ongoing discussion in our classroom, when learning, talking, and writing about trauma and its remembrance. The goal of this writing-intensive seminar is to give insight into the topic as well as introduce students to academic research, life, and expression. At first we will familiarize ourselves and take part in some fundamental debates: the distinction of memory and history, false memories, individual and collective memories, as well as the definitions of trauma across the disciplines. We will then have a closer look at the difficulty faced by researchers who grapple with trauma and its remembrance. In a final segment we will analyze representations of traumatic memories in public spaces, literature, and the visual arts.

FSSY 108. First Seminar: The Language of Sport. 4 Units.
This seminar explores, through the medium of sport literature, significant periods of life: maturing, playing, living, loving, aging, and dying. Through the genre of sport literature, the course explores sport as metaphor, fantasy, and myth in context (1) time and death, (2) religion and philosophy, and (3) the human condition. Literal, symbolic, euphonic, mythical and figurative interpretations of poetic sport in literature and the plot, point of view, characterization, symbolism, and emotion consideration when reading sport fiction serve as the framework for discussion concerning self, the meaning of sport and life, and the interaction of sport, culture, and self.

FSSY 110. The Greek Hero Since Antiquity. 4 Units.
The Greek Hero and Heroic Culture since Antiquity: the Classical Tradition in Literature and the Arts is the specific topic of this seminar. The influence of ancient Greece on subsequent Western civilization has been profound. This course focuses on the impact of Greek mythology on the literature and arts of five later periods: the Middle Ages, the Renaissance, the Baroque, the Revolutionary Age (1750-1848), and the Modern period. While there are many aspects of Greek mythology that we might investigate, the story of the Trojan War will serve as a central, unifying myth for exploration. The concept of the hero evolved considerably between the time of Homer and the time of Euripides; yet, the Homeric heroes continued to appear in literature and the arts from ancient times onward. How has the concept of the hero inherited from Homer changed in literature and art since antiquity? Does the word "hero" still have value? Are there relevant and meaningful applications of this very specific Greek word outside literature and art in our time? These are just some of the questions we shall consider in our study of the Greek Hero and Heroic Culture since Antiquity in literature and the arts.

FSSY 112. Shakespeare - Still a Hit. 4 Units.
What is the enduring appeal of the works of William Shakespeare? Not only are the plays themselves popular today; there are also many film versions and adaptations, some recent and some dating back to the early days of cinema. In this First Seminar, students will read approximately six Shakespeare plays, including at least one history, comedy, and tragedy. In addition, they will view at least one film version or adaptation of each play. With the help of Kelvin Smith Library, the films will be made available on streaming video with password-protected access, enabling students to view them when convenient and as often as necessary. Since this class (like all First Seminars) is writing-intensive, students will complete four formal essays as well as frequent in-class writing activities. There will also be in-class readings from the plays, discussions of the various film adaptations, and one or two short oral presentations or activities.

FSSY 113. Movies and Meaning. 4 Units.
This course explores methods for interpreting films. To interpret a film is a more aggressive and creative activity than is simply viewing one. How do critics and researchers of cinema "make meaning"? What strategies do they use? How does one mount a film interpretation that is both novel and persuasive? The course will emphasize close reading of films as, each week, we screen a film and together discuss what meanings we can infer from it. Also each week, we'll read an essay that offers an interpretation of the film. We'll analyze the reading in light of our sense of the film under consideration. Students will write short essays, approximately one every two weeks, in which they analyze the rhetorical and interpretive strategies of a given film analysis. Students will share their essays with the class, and these readings will serve as bases for class discussions. Final writing projects will consist of student interpretations of a film. At least twice during the semester, the class will, in substitution for the weekly required evening screening, attend a film off campus--either at the Cleveland Cinematheque or at the Cleveland Museum of Art. The course emphasizes writing instruction and discussion in a seminar format. There will be required evening screenings each week.
FSSY 119. Art, Music and The Museum. 4 Units.
This four credit-hour course provides an introduction to art, music, and the museum, particularly the intersections between and among these three subject areas. Formal training in these disciplines is not required. The course will be characterized by intense yet open-ended intellectual inquiry and guided by readings and the experience of artworks from a wide range of styles and cultures. A strong emphasis will be placed on academic writing. The goals are to enhance basic intellectual skills including critical reading, thoughtful analysis, and written and oral communication (including PowerPoint presentation); to introduce basic information literacy skills; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive intellectual experience for first-year students at Case.

FSSY 126. Fly Fishing: The Sport, the Metaphysics, and the Literature. 4 Units.
The seminar will explore the sport of fly-fishing--and an individual's relationship to the natural world surrounding them--as presented in both fiction and non-fiction. Selected texts will provide the impetus for posing such questions as: What is the fundamental nature of sport, how does it vary from other forms of recreation, and can a sport be considered an art? What prompts the various authors to often imbue the fly-fishing with metaphysical, spiritual, or aesthetic dimensions? How does the intent and style of this genre of writing differ from those of traditional academic research? How might these elements of craft be applied and integrated into an effective academic writing style? In addition to considering the stylistic and philosophical approaches to the topic, seminar participants will also engage in several experiential learning sessions involving certain skill aspects of fly casting and tying, and consider those experiences both in discussion and written assignments.

FSSY 127. The Music of New Orleans. 4 Units.
This course focuses on the musical landscape of New Orleans from the late 18th century to the present. We will look at the diverse musics of the city, including opera and orchestral music, slave song, Gospel, solo piano, ragtime, jazz, rhythm and blues, rock and roll, and Cajun and zydeco. Through the course, students will develop a better understanding of music and music history and a deeper knowledge about the history of New Orleans. The course spends considerable time on communication: public speaking, discussion, and writing. Fourth Hour trips will include visits to the Rock and Roll Hall of Fame and the Western Reserve Historical Society.

FSSY 131. Death and Representation. 4 Units.
This four credit-hour course will explore the ways death has been represented in visual culture, from ancient times to the contemporary epoch. Can death, something abstract and never directly experienced, ever be represented? Throughout the ages, how have artists, patrons, and viewers influenced the imagery of death, and how, in turn, have they been influenced by it? The course includes multiple visits to the Cleveland Museum of Art, the Natural History Museum, and the Museum of Contemporary Art.

FSSY 137. Cultural Representations: Ideologies, Images, and the World. 4 Units.
Narrative forms, such as myths, folktales, novels, films, and the media make significant contributions to the varied ways that people understand and imagine the spatial structures of the world. Specifically, this course will help you a) to develop an understanding of how narratives and the media have an impact on the ways we come to terms with geopolitical regions and how geopolitical regions are invented and imagined; b) to point out and address geopolitical assumptions, over-generalizations and to engage concepts such as the 'East' and 'West,' etc. critically; c) to analyze travel narratives, films, and current media representations of certain areas of the world and situate your observations into a wider set of theoretical problems; and d) to develop a set of reading skills that will help you to decipher texts (both primary and secondary) so that you can formulate productive questions and articulate your intellectual discoveries in a compelling way.

FSSY 141. "Renaissance" Men and Women: Polymaths from Late Antiquity to Leonardo Da Vinci. 4 Units.
The term "Renaissance man" is often used to refer to a polymath, someone whose expertise spans numerous and diverse subject areas. Leonardo da Vinci (1452-1519), perhaps the most famous polymath of all, was an artist, scientist, engineer, musician, and indeed a man who lived during the Renaissance. Yet already in late antiquity and the Middle Ages many of the great thinkers were polymaths, and they were not all men. This course examines the intellectual contributions of Leonardo da Vinci and two earlier polymaths: Saint Augustine (390-430CE), a north African bishop, philosopher, and theologian who became a Doctor of the Church; and Hildegard of Bingen (1098-1179), a German nun who was a composer, philosopher, herbalist, and mystic visionary. Through discussion of writings by these three figures and of secondary literature about them, the course explores their intellectual diversity and the cultural forces that shaped them. It also examines what it meant to be a polymath at various points in history, why polymaths have become associated with the Renaissance and with men specifically, and why there are relatively few polymaths today.

UCAP Courses

UCAP 390. Conservation of National Parks and Protected Areas: A Service Learning Capstone. 3 Units.
This capstone course explores environmental conservation with a focus on protected natural areas and community engagement. Limited to a small group that meets in weekly seminar, the course investigates the often competing interests of ecosystem protection, private development, historic preservation, and public use. A vital part of the capstone is a service learning trip during break when students travel to a National Park or other protected area to contribute to conservation efforts and to gain hands-on experience with environmental management activities. Each student chooses an issue relevant to protected areas to investigate throughout the semester and writes a significant paper about that issue, utilizing the service learning trip experience to deepen their understanding and analysis of the issue. At the end of the semester, each student makes a public presentation of his/her work. Counts as SAGES Senior Capstone. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS.
UCAP 395. SAGES Capstone Experience. 1 - 6 Unit.
UCAP 395 affords students the opportunity to pursue a capstone experience outside the constraints of SAGES capstone courses offered by individual academic departments. Students must identify a project, a mentor and an oversight committee. If the mentor is not a Case faculty member, then the student must also identify a faculty advisor who does hold such an appointment and who will serve as the instructor of record. A capstone experience can take various forms but must include certain elements: critical thinking, regular oversight by the project advisor(s), periodic written and oral reporting of progress, a final written report which describes the project activity (which may be a performance, experiment, student teaching, live case analysis, creative writing endeavor, etc.), and a final public presentation. More details about course policies, including procedures for registering, are available via the SAGES office and web site. UCAP 395 may be taken as a one-semester or a two-semester course for 1-6 credits in any given semester and 3-6 credits total. Permit from Director of SAGES required. Counts as SAGES Senior Capstone.

UCAP 395A. Engage Cleveland Capstone Experience. 3 Units.
This community-based capstone provides a unique opportunity for students to learn about and become involved in community issues in greater Cleveland. Limited to a small group of students, the capstone weaves together hands-on experience and academic inquiry through which students learn about urban issues, community engagement, and about themselves as leaders and advocates for social change. The capstone has two parts - a summer community-based experience (non-credit) followed by a fall semester academic capstone course (3-credit), which utilizes and builds upon the summer experience. Counts as SAGES Senior Capstone.

USNA Courses

USNA 204. The Evolution of Scientific Ideas. 3 Units.
Scientific understanding has evolved over the years. There are very few beliefs about the natural world that have remained intact over the past few centuries, or even the past few decades. The chief goal of the course will be to give students an understanding of how scientific ideas change and how newer ideas supersede the old. Questions to be investigated include: What is Science? How do disciplinary scientific communities (physicists, chemists, biologists, etc.) form and identify themselves? How does the community of scientists within a discipline come to a consensus that it is time to adopt a new paradigm: What scientific, social, political, and cultural factors come into play during the periods of transition? The course will be in seminar format. The students will be given opportunities to explicitly develop critical thinking skills (the specific skills to be developed will be selected by the class from an explicit list) and writing and speaking skills. Class meetings will be used to share their research results and to study the assigned texts and papers. The students will be required to demonstrate their understanding in a variety of ways. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 206. Land and Life in the Americas. 3 Units.
This course investigates the physical processes that shape the Earth's environments and how these environments have influenced, and been influenced by, human history. A principle focus will be the evolution of the Americas since the end of the last ice age. We will apply what we learn to the history of cultural development and to debate environmental issues facing us today. This class is limited to students participating in SAGES. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 211. Einstein, Space and Time. 3 Units.
This course will explore the profound changes in our conception of space and time brought about by Einstein's theories of special and general relativity. As a University Seminar, it will also integrate writing and discussion about these topics into the class and explore the philosophical and technological context in which the ideas were developed. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 216. Fuel Cells–Reality, Prospects and Myth. 3 Units.
Fuel cells have been recently identified as a key source for non-polluting, oil-independent energy in the future. In this course, we will study and critically analyze the prospects, barriers, and impact of broad implementation of fuel cells, focusing primarily on the transportation sector. Major topics of the course include: (i) World and U.S. energy outlook; (ii) Potential role and impact of fuel-cells, their advantages, limitations and prospects for improvements; (iii) Alternative fuels–source, availability, distribution and cost; (iv) Potential political, public policy, economic, and environmental impact of large-scale implementation of fuel-cells technology. The course is designed for students from all disciplines. Students will be expected to read assigned texts and articles and critically analyze statements and points of view presented. Quantitative analysis is expected where appropriate. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 220. Suburban Landscapes: Nature, Technology, and Culture. 3 Units.
This course will examine suburban neighborhoods by focusing on the design of technology and nature in these spaces. The way that people understand and operate in the world is so entangled with values and assumptions that the physical shape of the world cannot be separated from human culture. In this sense, suburban landscapes are not simply neighborhoods but also examples of culture. The form of the land and the technologies in the suburbs are continually reshaped to correspond with the cultures of the people occupying those spaces. By studying suburban landscapes we can see how the ideas in people's heads become part of the physical world in which we live. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 223. Critical Science Fiction. 3 Units.
The emphasis of this seminar will be on developing skills of critical analysis of science fiction. A goal of the course is that the students will be able to distinguish plausible from impossible when they read their next science fiction book or watch a sci-fi movie. Upon completion of the course, the students should be well equipped to recognize scientifically unrealistic assumptions and statements in pseudoscientific books, movies, TV programs and other mass media sources. The course will be sufficiently flexible to allow coverage of topics that are proposed by, and interesting to, students, or the topics which would arise during discussions. The course will encourage open-minded approach to understanding controversial areas, as well as emphasize the great achievements that humankind made in the short historical period of our civilization. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 224. Food, Farming, and Economic Prosperity. 3 Units.
Intended to challenge conventional thinking about “progress”, this course will examine the evolution of food production and consumption in the U.S. over the past 50 years. We will begin with the topic of food, itself. We will explore fundamental questions such as, What is food? Why should we care? Where does food come from? Why does it matter what we eat, and equally important, what we eat eats? Students will explore their own eating habits by keeping a journal of what, when, where, and how they eat. Discussions will focus on the social, cultural, nutritional, and technological aspects of food. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 226. Evolution of Human Behavior. 3 Units.
Human behavior is a result of the complex interplay between our genes and the environment, both of which have been shaped by evolutionary forces over millions of years. To what extent does natural selection shape our behavior today? Are humans naturally monogamous? Why do conflicts arise even in our most intimate relationships? Is human behavior ultimately in the service of reproductive success, ensuring that our genes are passed into the next generation? This course reviews the history of evolutionary theories of mind and behavior, as well as current ideas about the ecological and genetic components of behavior. We will examine key principles of neurobiology, sociobiology, and evolutionary psychology to critically evaluate evolutionary interpretations of human behaviors, including those comprising cultural traditions and social institutions. Specific topics to be addressed include human mate choice, parenting strategies, interpersonal conflict, and altruism. The course is structured as a seminar, with emphasis on discussion and formation of logical arguments. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 229. Astronomical Arguments: Pluto, Dark Matter, and Beyond. 3 Units.
This course explores how scientific controversies are resolved, using examples from astronomy and cosmology. We start with a discussion of the scientific process—both as an ideal and as a practical reality—and an overview of the scale of the universe in space and time. Then we address some historical controversies (with the benefit of scientific hindsight), made, the divergent ways in which thinkers such as Galileo and Kepler responded to official disapproval of their ideas, and the consequences of humanity's displacement when the model of a geocentric universe gave way to the current model of an expanding universe. Students will acquire historical and practical knowledge of such instruments in part through hands-on acquaintance with telescopes and other devices in the collection of the Cleveland Museum of Natural History. Students will also examine the historical context in which advances in astronomy were made, the divergent ways in which thinkers such as Galileo and Kepler responded to official disapproval of their ideas, and the consequences of humanity's displacement when the model of a geocentric universe gave way to the current model of an expanding universe. The seminar will include assignments in expository and persuasive writing, with an emphasis on improving and revising one's work and developing a well-researched final paper. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 231. Cholesterol: The Good, the Bad, and the Money. 3 Units.
Cholesterol molecules are essential building blocks of human cells and are required for biosynthesis of some hormones. The word “cholesterol” has, however, become notorious as several diseases are linked to improper bio-processing of the molecule. Indeed, all middle-aged people are encouraged to have their cholesterol checked and monitored as needed. This course will educate students with respect to the role of cholesterol in human health and in specific disease states. Students will learn the difference between “good” and “bad” cholesterol, and the rationale for these labels. Additional topics include dietary contributions to cholesterol, cholesterol lowering drugs, the continuing evolution of what is considered to be a healthy blood cholesterol level and the factors driving this changing scale. Reading assignments will range from News Paper articles to scientific publications. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 235. Exploring a Sense of Place. 3 Units.
Having a sense of place, or a rooted understanding of where we live, shapes our identity, actions, and commitment to community. In this course, we will go beyond the “campus bubble” to explore the concept and development of a sense of place by studying and photographing the Doan Brook, our local watershed. Course readings, writing, and discussion will focus on Doan Brook’s natural history, local environmental issues, and sustainability. We will utilize photography as a primary tool for investigating and connecting to place as we undertake a photography project documenting the Doan Brook, which will be shared with the community. We will also consider our responsibility to place and learn about community-based initiatives in which people have committed to place and taken action to make a difference. Throughout the course, we will develop a stronger understanding of Case’s ecological address and the intersection of sense of place, environmental issues, and engagement with the watershed. We will explore firsthand where we are--and why it matters. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 236. Upheavals in Astronomy. 3 Units.
Why the uproar over the invention of the telescope? How does the scientific method really work to advance knowledge? What do astronomers fear is the fate of the universe? This seminar begins with an introduction to the scientific instruments that brought about revolutionary changes in our understanding of the cosmos. Students will acquire historical and practical knowledge of such instruments in part through hands-on acquaintance with telescopes and other devices in the collection of the Cleveland Museum of Natural History. Students will also examine the historical context in which advances in astronomy were made, the divergent ways in which thinkers such as Galileo and Kepler responded to official disapproval of their ideas, and the consequences of humanity's displacement when the model of a geocentric universe gave way to the current model of an expanding universe. The seminar will include assignments in expository and persuasive writing, with an emphasis on improving and revising one's work and developing a well-researched final paper. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 237. Landscape History and Conservation. 3 Units.

Human history is intimately intertwined with the natural landscape on which it occurred. From coastal preserves and their beach communities to Midwestern farmland and the preserved site of Thoreau's Walden Pond cabin, and at places like the Grand Canyon, the American landscape itself holds many clues to our country's natural, ecological, and cultural history. This course will investigate the lived landscape in two ways (which have a multitude of shades to them): as a place where humans shape the natural for their own memorial, productive, and aesthetic uses, or as a natural place that humans set aside or conserve. We will read landscape history and conservation theory, and we will consider global practices of conservation through UNESCO's World Heritage Sites. Class work will entail a process-oriented project on the Cleveland landscape, which students are encouraged to approach through the lens of their major. We will visit the Wade Oval and the cultural gardens of Rockefeller Park as an example of current conservation practices working to protect the natural and cultural value of the local landscape. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 238. The Role of Materials Science in Emerging Technologies. 3 Units.

The development of engineering applications is, and has historically been, closely related to the development of new engineering materials. In fact, specific civilizations and time periods in the past are classified by the materials used for engineering applications, e.g., the Bronze Age. This university seminar will examine the role of materials developments in the past, as well as explore the needs and impact of new materials in emerging technologies; areas of focus will be (i) Power generation, transmission and storage, (ii) Electronic devices and electronic applications, and (iii) Biomedical engineering and medical imaging applications. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 240. Technologies of the City. 3 Units.

Based on the premise that cities are never "finished," and constantly being remade, the University Seminar, Technologies of the City, will look at the technological and cultural history of cities from the ancient world to the present day. Students will explore the history of building materials—wood, brick, steel, concrete, and glass—used in the construction of cities. We will also trace the development of city infrastructure such as electricity, water and sewage systems, streets bridges, and subways. Technological innovations, such as the automobile, will receive special consideration. We will move moth geographically and temporally to visit the world's great cities, studying examples of significant building projects, such as the Brooklyn Bridge, the Chicago World’s Fair, and Cleveland’s first skyscraper, the Rockefeller Building. The course will cover the history of the professions—engineering, architecture, and urban planning—that have contributed to the construction of cities, and will review the works of these practitioners, as well as that of artists, reformers, and utopians that have imagined new directions for the city. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 241. Urban Transportation. 3 Units.

The course is intended to examine the variety of issues associated with urban transportation. To provide focus the Cleveland metropolitan area will be used as the example urban environment. The issues that will be addressed include the perceived transportation needs, the mutual influences of perceived needs and the transportation system, the effect on business, residence, recreation and entertainment, the variety of approaches that have been used or suggested in the United States and abroad and the approaches that might be used, the resources needed, and the time needed to make changes. It is expected that the students will further develop the issues that should be addressed, do the necessary study of available information, discuss the issues, and finally report on their findings, conclusions and possibly recommendations. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 243. CWRU's Carbon Footprint. 3 Units.

CWRU has conducted dozens of energy efficiency projects addressing sustainability, energy, and climate issues. All of which aims at reducing the University's environmental footprint. A core component of CWRU's first carbon footprint inventory, is engaging in strategies for reducing greenhouse gas emissions. Using the campus as a living laboratory, participants will complete CWRU's first carbon footprint inventory, and will collectively write the University's first Climate Action Plan. Students will become familiar with general climate issues and will conduct an institutional greenhouse gas inventory using data on CWRU's energy consumption and other pertinent institutional practices. Complementing the practical aspects of the course, we will also explore organizational and economic opportunities in sustainability, energy, policy, and processes of organizational change for sustainability. Many examples from other campuses will be used in addition to expert guest speakers. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 245. The Impact of Technology on Society. 3 Units.

There is commonly a lack of understanding and appreciation of how the spread of advanced technologies (the artifacts of engineering) has led to economic, social, and political changes on a global scale. As a result, young people do not think that careers in science and engineering are rewarding and useful or do they think of technology as one of the most powerful forces for social change. Furthermore, in a world where advanced knowledge is widespread and low-cost labor is readily available, U.S. advantages in the marketplace and in science and engineering have begun to erode. We want to be able to compete in the world. Economic growth is driven by technological innovation. Societies that foster it lead the pack, while others lag behind. An enlightened citizenry is essential both to support and to engage in new developments in science and engineering. Insights will be given on how engineering innovations develop and have changed the world, both good and bad and, hopefully, it will be clear that engineering is essential to meet many of the major global challenges of the future. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 247. Epidemics in Human History. 3 Units.
This course will examine the role of epidemics (of all types) in human history. Disease has shaped our society in many ways and continues to do so. Despite the plethora of antibiotic and antiviral drugs since 1940, 90% of the decrease in (First World) infectious disease is due to simple public health measures and better hygiene. But overuse of antibiotics increasingly is causing the rapid evolution of "superbugs" that threaten new plagues and epidemics. Both historical and modern epidemics of plague, smallpox, Salmonella, cholera, tuberculosis, and HIV/AIDS will be examined. The interaction of these epidemics with societies and how the epidemics influence society, cultures, art, and literature will be major topics of discussion. The course is primarily discussion with short student presentations. In addition, 3-4 short "Front Lines" talks by and discussion with CWRU and University Hospital clinicians will explore today's realities of epidemics, infection, and antibiotic resistance in the United States, Uganda, South Africa and elsewhere. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 252. The Future of Food. 3 Units.
Since World War II, science and technology have transformed the way Americans produce and consume food. This transformation has been supported by government policies and accomplished through the application of industrial methods in agriculture, food processing, and food delivery. Such methods have allowed a tiny fraction of the American population to produce vast quantities of food products at very low prices for American consumers. But this American diet, while inexpensive, has turned out to be high in sugar, fat, and processed grains that are contributing to chronic disease such as diabetes and obesity. In addition, environmental impacts of confined animal feeding operations, vast monoculture grain production, and global food transport are raising questions about the sustainability of American agribusiness. This seminar will explore the evolution of food production in the United States since World War II and will ask the question: is it possible to nourish the world's population using nutrition and flavor as guiding principles rather than cost? What is the true meaning of "sustainability" in agriculture? The last third of the course will be devoted to creating a plan for using part of the University Farm to grow food for the University. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 258. Designing Urban Green Space. 3 Units.
In this course, we will investigate the history, theory and practical design of green space in cities. We will focus on types of green space and their community function, relationship to commerce, aesthetics, recreation, ecology, and health in particular. Students will engage in group projects where they locate all underused space in Cleveland (vacant space, gray or brown fields) and will propose a new use for it as green space of some kind. Individual research projects will be related to that site. Lively class discussion and frequent reading responses required. Mandatory field trip to sites in downtown Cleveland. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 259. Bring Out Your Dead. 3 Units.
This course examines the interplay between history and plague outbreaks. Course readings draw largely on the writings and experiences of scientists, physicians, and public health officials. By taking a historical approach to the study of the relationship between human history and the history of disease, students will learn about the development of the scientific method (namely the slow process by which humans learned to identify, categorize, and respond to disease), how science develops in specific historic contexts, the consequence of scientific inquiry, and what humans do when they are faced with imminent death. A tentative list of plagues includes: the Athenian Plague, Black Death, Yellow Fever, TB, Malaria, Influenza in 1918, and AIDS. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 260. Life in the Past. 3 Units.
This course will focus on how we learn, discover, and make conclusions about life in the deep past. What types of life were present? And how can we understand their extinction? A principal focus will be how extinctions in North and South America have affected both the land and its animals and, consequently, the course of human development. We will look at megafauna from the local area in conjunction with the "Extreme Mammals" exhibit at the Cleveland Museum of Natural History, read about the fossil boom, study the Dodo, and look at scientific ways in which animals are currently being completely re-imagined via technology (computer bone/muscle articulation, eating habits, climate models, etc.). We will also look at the cultural ways in which we view these "dinosaurs" (movies, children's books, museum exhibits) and see if it helps or hurts our scientific and historical understanding of them. At heart, our main question will be: can you really understand a time, space and creature that has been extinct for millions of years? How? Why? And why do these "monsters" hold such fascination for us? Does their disappearance bode well of the human race? Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 265. Thinking National Parks. 3 Units.
This seminar provides students an opportunity to explore U.S. national parks and their history of displaying both nature and culture. This discussion-based, writing- and research-focused class requires students to examine a park system that is both extraordinarily popular and rife with controversy. We begin with several recurring questions: Where did the national parks idea come from? How has the park mission evolved and adapted? Can parks be "read" as texts, and if so, how does our point of view determine what we see? How do parks arrange displays of cultural and natural worlds, and how do they display interactions therein? How can changing park philosophies be reflected in their physical apparatus and infrastructure? Students will participate in regular class discussions, occasionally lead these same discussions, complete formal writing assignments, and develop a final research project. The course readings will alternate between historical and present-day selections, so that we explore the history of U.S. national parks while simultaneously considering challenges and controversies that matter very much today. Early readings will include John Muir and Gifford Pinchot; current trends will be explored in the writings of William Cronon, Alfred Runte, and Jennifer Price, among many others. We will view significant portions of Ken Burns' recent PBS series The National Parks: America's Best Idea. The ultimate "text" for the class, however, is an actual national park. Each student will choose a national park as the basis for their semester-long project. Students will begin with description and history of their park, and then they will explore controversies or other issues in the park, developing their own argument. Next, students will have a chance to play architect/landscaper/park-superintendent, as they propose a change to the park that would address an existing problem or enhance the visitors' experience. Finally, students will gather these pieces into a single coherent project, submitting a 10-15 page final essay as well as producing an engaging class presentation. Prereq: Passing letter grade in a first year seminar in USNA 265. Requisites not met permission required if previous course completion in this subject group.

USNA 266. Life After the Death of Print. 3 Units.
Around 1439, Johannes Gutenberg invented the moveable type printing press, a technological development that altered the world by ushering in an era of mass, reproducible communication. For nearly 500 years, print technologies have dominated communications. Scholars have shown that print's ability to disseminate information led to revolutions in art, science and politics. In short, print technologies have largely defined what it means to be a thinking and communicating human being. The emergence of digital technologies has altered communications in ways that are only now being understood. This course examines how developments in digital technologies impact communication practices by threatening print's historic stronghold. Consequently, the course also explores what impact new technologies have on human identity. We will consider the historical development of display technologies (printed materials and digital screens) to understand what is at stake in the move from print to digital communication. We will then investigate current phenomena associated with Web 2.0, including blogs and social networks, in order to understand how our communication choices construct and allow for our public and private identities. Additionally, the course will examine new display technologies, such as iPhones and Kindles, that allow for the possibly constant dissemination of those identities. Finally, we will hypothesize about how digital technologies force us to conceive of human identity differently from the ways that print invites. Prereq: Passing letter grade in a first year seminar in USNA 266. Requisites not met permission required if previous course completion in this subject group.

USNA 270. Alternative Energy Sources. 3 Units.
Alternative energy sources are needed, because of limited fossil fuel resources, increased demand, and environmental impacts. This course will deal with the issues of alternative energy sources. Various sources such as solar (thermal and photovoltaic), hydroelectric, wind, geothermal, ocean thermal, wave, tidal and geothermal energy, as well as energy from biomass will be discussed in order to determine what is practical on a large scale, as well as on the scale of the individual homeowner. We will pay attention to the efficiency of each alternative energy source as well as what limitations exist in terms of extracting useable energy. Prereq: Passing letter grade in a first year seminar in USNA 270. Requisites not met permission required if previous course completion in this subject group.

USNA 271. Gene, Environment and Behavior. 3 Units.
The goal of this course is to encourage students to be well informed and critical consumers of the media reports about the influence of genes and environment on human behavior. This course involves the book by Matt Ridley titled, "Genome: The autobiography of a species in 23 chapters." Ridley has a Ph.D. in zoology, worked as a journalist, science editor, and national newspaper columnist. The book devotes a chapter to each pair of human chromosomes. Each chapter focuses on the role of a gene. Ridley's book was published in 1999; therefore, students will conduct their own research to update each of the chapters in Ridley's book. The first few weeks of class will be used to provide a background on genetics research through field trips and guest lectures from CWRU genetic researchers. We will have several writing workshops spread throughout the semester to offer "Just in Time" tips needed to write critical evaluations and literature reviews. Each student will present twice during the semester. The first oral presentation will revolve around a summary, critical evaluation, and an update of the human trait presented in the Ridley book on their assigned chromosome. The presentation will be about 15 minutes with 5 minutes left for questions. Students not presenting will be assigned one of the three chromosomes (chapters) covered that day and they will each write a seminar question to pose to the class. In addition, each student will also serve as a reviewer for one of the presentations to provide constructive feedback to the presenter. The second presentation will consist of new material found by each student about genes on their chromosome. They must find another trait on their chromosome and present the most current information available on that trait. In place of a final exam, each student will turn in a research paper on their assigned chromosome. We will build these papers throughout the semester with a series of graded "checkpoint" assignments. Prereq: Passing letter grade in a first year seminar in USNA 271. Requisites not met permission required if previous course completion in this subject group.
USNA 272. The Thames Watershed. 3 Units.
In this seminar, we will investigate the London, England-area Thames watershed and its associated concerns, like urban development, watershed management, aquatic species conservation, and habitat engineering and restoration. A critical part of this seminar will be a spring break field trip to London. On the field trip, we will focus on London’s rivers and their history and ecology. We will study the Lea River Valley (where the 2012 summer Olympic Village is located), the Fleet River and various water-related constructions, such as Docklands, Regent’s Canal, and the Wildfowl and Wetlands Nature Reserve, each from historical and ecological standpoints. Emphasis will be on how humans have treated the watershed historically, from using the rivers as sewers and transportation links, to restoring their ecosystems, as is the current case in the Lea River Valley. Course readings will be a mix of cultural history, London newspapers archives, and scientific studies on riparian corridor management. Students will keep field journals in London and will write an experiential learning essay about how the field trip intersected with the readings we've discussed in the seminar. They will also write a 10-12 page research paper on one of the ecological issues witnessed in London and its significance. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 283. Cultures of Science. 3 Units.
From the laboratory to the museum, science is a dominant way in which we make sense of the world. This seminar examines the cultures of science. Drawing on the fields of anthropology, sociology, history, and science and technology studies, we explore the interplay, exchange, and fertile ground between “culture” and “science.” We analyze the cultural practices of scientists, the relationship between scientific and indigenous ways of knowing, and ethics of scientific knowledge, as well as scientifically mediated understandings of personhood, nation, legality, and truth. We will consider case studies from the U.S., Latin America, Europe, Africa, and Asia that reflect on contemporary intellectual debates and public concerns. The course considers the following questions: Is science cultural? What does objectivity mean? How are scientific facts produced? Do our understandings of citizenship and the nation have any connection to science? Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 285. The Science of Madness: An Historical Investigation of Mental Illness. 3 Units.
Since antiquity the western world’s understanding of mental illness has continued to evolve. This course will examine the trajectory of that evolution, looking at the medical theories that have influenced assumptions about the causes and treatments of mental illness from the early modern era through the twenty-first century. Examples of questions we will investigate include: How have medicine and the pathological in human mental behavior over time? How do we explain the centuries-old correlation that medicine has made between creativity and mental illness? Which past and present psychiatric treatments have been beneficial and which harmful? How did Darwin’s theory of evolution affect theories of mental illness (and how does it continue to do so with the advent of evolutionary psychology)? How have changing philosophies of science affected the research and practice of psychology? How and why do the sciences of the mind—psychiatry, psychoanalysis, clinical psychology, psychopharmacology, the cognitive neurosciences—claim so much scientific authority and exert influence over our lives today? As a frame work for this inquiry, the class will use the concept of paradigm shifts as Thomas Kuhn defines in his classic work, the Structure of Scientific Revolutions. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 286. Science and the Paranormal. 3 Units.
From paranormal television programs to the academic study of parapsychology, claims about the “science” of the paranormal abound. This seminar examines the ways in which people have attempted to scientifically explore questions of life after death, the soul, and anomalous phenomena such as ghosts, telepathy, and ESP. The seminar begins by exploring the emergence of, psychological research and parapsychology in the late nineteenth century. We then critically analyze a variety of purportedly scientific approaches to the paranormal and analyze their understandings of nature and science. By exploring the claims of paranormal researchers, parapsychologists, and fringe scientists, we will analyze the science of the paranormal and its demarcation from pseudoscience. We consider a variety of methodological and heuristic tools to distinguish science from non-science such as falsifiability and Occam’s razor and apply them to paranormal claims. We also analyze the critiques leveled at paranormal research. We ask the following questions. What is science? What distinguishes it from "pseudoscience" or non-science? What is skepticism? Can there be a science of the paranormal? What understanding of the natural world is the paranormal grounded on? What is the relation between science, religion, and belief? Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 287A. Perspectives on the Cosmos: From the Ancient Philosophers to Modern Science. 3 Units.
For all of recorded history, and presumably well before that, people have asked the Big Questions: What is the nature of the Universe? How big is it? How old? What is our place in it? For just as long, we've been making up the answers. Cosmology is the subject that seeks to answer the big questions. As such, it is the nexus where science, philosophy, and religion collide. This course will explore the subject of cosmology, from both an historical and scientific perspective. In the process, we will examine the roles of faith, philosophy, and empirical knowledge. We will survey prevailing attitudes towards the nature of the world model over time, examining the impact of belief systems on the interpretation of physical evidence. Subjects to be covered include the first vital steps of the ancient philosophers, the tension between geocentric and heliocentric world models at the time of Copernicus and Galileo, and the modern scientific world view. Students will learn to critically examine evidence and its interpretation, and to appreciate the strengths and shortcomings of various forms of human knowledge. Emphasis will be placed on the importance and limitations of empirical evidence, and the dangers inherent in the interpretation of evidence within a preconceived framework. The student will gain an appreciation for the historical development of world models, culminating with modern cosmology. In the process comes a respect for the diverse paths to knowledge followed by humanity. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 287C. Animals and Humans: Making Sense of the Human-Animal Bond. 3 Units.
Humans have an incredibly complex relationship with (non-human) animals. We eat some animals and consider other animals members of our family. We worship some animals and vilify others. This class examines the complexities of our relationship with (non-human) animals. Through exploring human emotional, practical, and epistemological ties with animals, this course examines what it means to be animal as well as what it means to be human. We analyze the following questions. How do we come to know and understand animals? What are the issues surrounding the use of animals in scientific speculation, classification and experimentation, such as vivisection, cloning and the human-animal relationship in technoscience? Do some non-human animals possess material culture, social morality, and emotions such as grief and sadness? Why do animals populate our popular culture and art? Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 287E. Evolution and the Modern World. 3 Units.
Modern evolutionary theory has influenced all aspects of biology and the clinical sciences. It has, moreover, resulted in novel ways to think about many of the social sciences. This class will focus on how the concept of evolution has dramatically altered the way we view human anatomy, physiology, and behavior. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 287F. Environment and the Fates of Societies: Guns, Germs, and Steel. 3 Units.
This University Seminar deals with the connections between human societies and landscape, climate, pathogens, and plant and animal species. The main method for this exploration is a close reading of Jared Diamond's Guns, Germs, and Steel. Diamond explains that Western Europeans came to occupy and dominate large areas of the globe because of natural resources present in certain regions of the Old World since the end of the last Ice Age. For example, Diamond studies ancient patterns of plant diffusion or the place of mountain ranges and deserts in the development of technologies. Seminar participants will also study historical sources from specific times and places - namely North America from European contact to 1850 - and compare them to Diamond's general environmental explanations and models. Placing Diamond's broad explanations within specific historical contexts is revealing. A range of alternative methods, perspectives, primary sources from North America, and case studies (especially in environmental history) help develop a critical understanding of the complexities of the fates of societies. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO Courses

USSO 201. Society and Technology: How Do They Impact One Another?. 3 Units.
This course focuses on a systematic analysis of the relationships between society, and the specific institutional elements of technology and technological innovation. It describes the social aspects of computers and related technologies and explores the ways in which these technologies influence and impact organizations and individuals. The course explores the design, use and cultural significance of technologies and uses a historical focus to assess the integration of technology into all aspects of our society. The restructuring of traditional human interaction by information technology will provide a contemporary focus for the course. Offered in a seminar format, the course will provide opportunities for scholarly discussion, systematic inquiry and written communication. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 203. Law in Literature. 3 Units.
An interdisciplinary venture. This seminar will focus on law in literature by examining representations of the legal process in poems, plays, short stories, and novels. It will provide a taste of the vastness and variety of human life--and will broaden and deepen students' understanding of the role law plays in society. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 205. The Human Struggle Through the Lens of Sport. 3 Units.
This seminar explores, through the medium of sport literature, the interaction of sport, society, and self. Students will examine the social and psychological effects on participants, consumer, and society of sport through the study of fiction, research studies, essays, and poetry having a sport motif. Topics include racism and sexism (valuing diversity), love (cooperating), death (losing), transformation (aging), and achievement (winning). This class is limited to students participating in SAGES. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 209. Face First. 3 Units.
Human beings greet the world face first. In fact, the ability to process facial features seems to be innate. A baby easily recognizes its mother's face yet the most powerful computers have difficulty using facial features to identify people. This is because all human faces are similar while fine details make each face unique. This course will begin by studying the human face as an anatomic construction of hard and soft tissue skeletal components. We will discuss how we use anatomic facial features to recognize individuals. One homework exercise will be to construct faces using an FBI identikit. Each student will create an FBI composite sketch of their own face. Seminar time will then be used to view each sketch and try to match the sketch with the seminar participant. Discussion will focus on how facial anatomy is similar or different. Following this introduction, the seminar will shift focus from anatomy to sociology. We will discuss facial attractiveness and beauty. Seminar topics will also include manipulation of facial appearance i.e., cosmetics, body piercing, veils, and plastic surgery. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 222. Science and Society Through Literature. 3 Units.
This course will examine the interaction of scientific investigation and discovery within the context of the society it occurred in. What is the effect of science on society and, as importantly, what is the effect of society on science? An introduction will consider the heliocentric controversy with focus on Galileo. Two broad areas: tuberculosis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art and music will be examined to understand the changing views of society towards the disease, how society's perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and viewing several films, the transformation of the original story into a myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 228. Our Plastic World. 3 Units.
If one were to look around the general store of 1900, few man-made "synthetic" items would be evident. One hundred years later, the shelves of any Walmart would be filled with plastic items, plastic packaging, and clothing produced from synthetic fibers. Questions that might be posed include: 1) How did this change happen? 2) How are the historical events of the 20th century and the development of the U.S. chemicals/plastics industry interconnected? 3) What are the societal benefits and costs of this change? 4) What can we learn from the past 100 years, and how can we use these insights going forward into the coming century? These issues will be discussed at length. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 229. A Study of Power: Criteria Essential to Its Rise and Fall. 3 Units.
This SAGES seminar will coordinate examinations of major historical events and their influence on the future. Particular emphasis will focus on the development and/or demise of powerful countries and people, and political and religious infrastructures. Sample topics include: the rise and fall of the Roman empire, the Barbarian empires, the British empire, the National Socialists, the Soviet empire, etc. Development and practice of religious behavior from praying to pagan Gods and spiritual Gods may also be analyzed. The idea is to demonstrate the similarities and differences in each of these broad categories as they progressed. An examination of the impact of greater world "enlightenment" as civilization expanded over time is also discussed. The evolution and eventual demise or change and the continuing impact on contemporary civilization shall be explored. Conclusions shall be used to suggest a model for the future. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 231. Evolution as Metaphor and Model: Why Don't We Live Forever?. 3 Units.
Evolution will be used to examine biological, historical, and social issues associated with health, illness and aging. In this overview course, evolution is a paradigm that is used to understand how systems change over time. The readings and discussions will identify universal processes and patterns in order to understand the effect of disease on history and explain how and why humans remain vulnerable to aging. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 234. Questions of Identity. 3 Units.
Who we are informs the ways in which we act in the world. How we respond to society in the individual, local, and global community is impacted by the way we see ourselves, the way others see us, and the way we see others. Who am I? How do I look at myself in relationship to others? How does the way in which society views me affect the way I think of myself? How have writers, historians, and philosophers dealt with the challenges of self and group identity? We will explore these issues through readings from the Civil Rights Era, the Holocaust, and the period of decolonization in Africa. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 238. The First Amendment. 3 Units.
The First Amendment to the United States Constitution states that "Congress shall make no law ... abridging the freedom of speech." In this seminar we will explore what this right has meant in America and how it has been limited throughout American history. We will discuss the importance of free speech in a democratic society and how the government balances the freedom of speech with other government interests. This course is also designed to give you a glimpse of law school and what being a lawyer is like. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 239. Change Agents: Past, Present, and Future. 3 Units.
Though it is often said that we are living in a time of constant change, surprisingly few people take the time to understand who makes change happen and how. This seminar will explore the phenomenon of change on multiple levels. We begin by looking at change through an historical lens, examining social movements in the 1960's. We will then investigate organizational turnarounds of the late 20th century and today. In each instance, we will consider the role of the individual, groups, and organizations as change agents, and examine the influence of environmental factors on change processes. Throughout this course, we will study the dynamics of effective change, identify change strategies, and move to develop a personal understanding of how each one of us can initiate change. In addition to diagnosis and analysis, we will engage in creative thinking and writing about our own capacity to become change agents. We will apply what we read and learn to our current and future lives. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 243. The Art of Fact. 3 Units.
As evidenced by the tragedy that unfolded in New Orleans in the wake of Hurricane Katrina, we ignore the consequences of endemic poverty at our peril. How do you evacuate a city filled with thousands of people too poor to own cars? Where do you house them after they've been rescued from their drowned neighborhoods? Although Cleveland won't likely be erased by flood, it's one of the poorest big cities in the nation making it vulnerable to disaster in times of crisis and an incubator for a host of thorny social problems. Often, it's up to journalists to bring attention to these issues, give voice to the voiceless and force policymakers to come up with solutions to seemingly intractable problems. In this seminar, we'll read and dissect the works of journalists who've written stories about complex social problems and have done so using many of the conventions employed by writers of fiction. Writer Ben Yagoda described this literary journalism as "making facts dance." We'll spend our time researching numerous social issues and learn to write about them in a clear and compelling voice. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 255. Hinduism. 3 Units.
This course will provide an introduction to Hindu thought and culture. We will read a wide range of texts and secondary sources. Two readings, the Ramayana and Samskara, will focus on issues of ethics and proper dharma. We will also be watching Deepa Mehta's Fire. There will be a visit to the Shiva-Vishnu Temple in Parma. Heavy emphasis on research and writing. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 256. Cognitive Archaeology. 3 Units.
Have you ever wondered how it is that humans have developed self-reflecting minds capable of meta-representation and other cognitive capabilities? Have you ever pondered how the human mind operates in relation to its cultural context? These are the kinds of questions that cognitive archaeologists explore and the sorts of questions we will discuss in this course. Intersecting several fields including anthropology, psychology, and philosophy, cognitive archaeology is a truly multi-disciplinary field that has contributed significantly to our understanding of the human mind. Cognitive archaeology not only deals with how the mind works and how it evolved, but it also deals with how archaeologists utilize what is known of how the mind operates in order to interpret the archaeological record. Students are expected to enhance their skills at critical reading, thoughtful analysis, constructing logical arguments, and improving written and oral communication. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 260. Spin, P.R., and America Today. 3 Units.
We live today surrounded by spin--corporations don't fire, they downsize; government pronouncements are assumed to be cynically slanted and misleading; even scholarly medical articles are written by public relations (p.r.) flacks. The guiding principle isn't truth or reality but the right message and staying on it. How and why has p.r. become such a seemingly potent force in our time? What does this say about America and its values--about even the meaning of truth? In this seminar we will explore the role of public relations and image-making, in American society today. Our objectives are (1) Examine the users of p.r. today in business, politics and popular culture to shape images and define reality; (2) explore the tools used to construct and sell those messages and perceptions and (3) Analyze the values underlying these activities--to the end of deepening our understanding society today. This seminar explores these issues through reading, both academic and popular writing, discussion, and research. The writing assignments will be both academic and various forms of media and public relations formats. We will use class time to discuss and review student writing. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 264. Government and Race Relations. 3 Units.
Current debates over such issues as immigration and affirmative action raise core questions about the government's influence upon American race relations. What roles have various governmental entities--e.g., federal courts, state governors, and city councils--played in promoting racial equality or defending racial hierarchies? What roles should they play? And how much can the government (re)shape cultural attitudes and social practices? How much authority over race relations should remain with states and localities, and how much should be exercised by the federal government? This course offers a forum to investigate and debate such questions more thoroughly by examining a range of instances in the period from the late 19th century to the present day in which different kinds of government action have significantly influenced American race relations. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 266. Framing Our Legal System: Law in the Movies. 3 Units.
This course explores important themes in the study of law, lawyers, and legal institutions by regarding their representations in movies. We will cover such issues as race/class/gender and the law, legal ethics, legal education, the adversarial system, and the image and status of the lawyer in American culture. We will also look at the ways in which law and the legal profession affect popular culture and, conversely, the ways in which poplar views of legal problems and lawyers affect law. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 269. Create-A-College. 3 Units.
In seminar format, students will develop plans for a new institution of higher learning, shaping and communicating in several different formats its mission, goals, academic focus, and physical and financial needs. Supporting the course's research, writing, and presentation expectations will be documents from existing colleges, information on the policy and social environment for such a venture, and requirements imposed by external entities such as governmental and accrediting agencies. Course will include interactions among two sets of student teams and several intermediary presentations, culminating in a group presentation of plans for the new college to a panel of experts including current or former members of the University's Board of Trustees and the Ohio Board of Regents. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 270. The Geography of Wealth. 3 Units.
While many of us are familiar with thinking about wealth in social, political and economic terms, wealth can also be understood as a function of geography. This seminar will look at American history and culture to seek a deeper understanding of how place and wealth interact; some of the government policies that affect those interactions; and some of the grand experiments in philanthropy, law, and social policy that have tried to reverse the perceived evils of "concentrated poverty." The seminar will not require an advanced mathematical or statistical background. However, we will analyze how statistics can illuminate (and disguise) issues and problems. We will look at the business corporation as both an aggregator of wealth and as a wealth allocation system. Of necessity we will wander into matters of race, employment, power, class, culture, history, and government. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 271. Schoolhouse Rocked: Education Reform. 3 Units.
Today, the term "education reform" may bring to mind standardized tests and No Child Left Behind. Many believe that our schools must become more rigorous, with stricter rules and definable goals. "Reform," however, used to be defined differently. John Dewey, Maria Montessori, and Paulo-Freire, for example, struggled to make schools freer and more humane. They hoped not to make the classroom less challenging, but more child-centered. Some disciples of such reformers, discouraged by schools' resistance to change, eventually turned to homeschooling--pulling kids out of school and educating them with real-life learning experiences. In this seminar, we will explore progressive educational theory and connect it with contemporary alternative schools and homeschooling. Visits to nearby Montessori and Waldorf schools and discussions with homeschoolers will make real-life connections to seminar reading and classwork. Challenging assumptions about how well our schools work and raising questions such as, "How do we learn?" and "What is good teaching?" will provoke thought, conversation, and interesting writing. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 274. Passion, Insult, and Virtue in Ancient Athens. 3 Units.
Students explore the social fabric of Athens at its height--the various social and economic institutions that shaped households and the city--state in the fifth and fourth centuries BCE. Primary source material will include courtroom speeches, two comedies of Aristophanes, and Aristotle's Ethics. Topics: lust, love, marriage, prostitution, slavery, elite drinking parties, street life, hubristic violence, competition, feuding murder, the legal system, diverse concepts of virtue, and how ordinary people were expected to treat one another in good times and bad. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 275. Psychology of Creativity. 3 Units.
The purpose of this course is to explore how individuals become creative. What are the most important qualities, emotional and cognitive, that are related to creativity? Is there a creative personality? What is the difference between artistic and scientific creativity? How does creativity relate to mental illness? How can we foster creativity in people? The course will study creativity in children and adults and will include research studies as well as descriptions of creativity from creative individuals. We will also discuss how different cultures view and effect creativity and the ethical issues involved. This course is a seminar and will use a discussion format. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 280. Democracy?. 3 Units.
"Democracy?" poses democracy as a question, in two forms. First, what do we mean by democracy? Second, where should democracy be practiced? Although conventional understandings link democracy to political systems and issues of governance, the course will consider democracy in other institutions and locations. Course questions include: What is democracy? Why do we value democracy? Does democracy in the state require democracy in the economy? What would that look like? What are the potential conflicts between economic and political democracy with full citizen involvement? Is direct democracy democratic? Does democracy in the state require democracy in the family? In universities? In the workplace? In prisons? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 283. Life is a Contact Sport. 3 Units.
This class will take students places most people have never been. We'll come face-to-face with the homeless, explore the realities of prison life, and meet people who struggle to survive in the wealthiest country in the world. We'll also meet people who have demonstrated both the vision and commitment to be change agents making a difference in the world. The interdisciplinary course will examine the shadow-line between self-interest, greed, and the common good in a capitalist society. We will look at the needs and (sometimes competing) values in democracy. We will examine ethical systems and discuss the role that leaders, managers, and ordinary citizens play as moral agents in promoting integrity and social responsibility for a just society. From interactions with real people, readings, and class discussion, the course challenges assumptions and explores core values to stretch your intellectual, ethical, and social muscles. Life is a contact sport that asks you to engage, to participate in making your talents and presence felt, not merely sit on the sidelines watching. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 284. The Kaleidoscope of Birth. 3 Units.
The course will explore topics in science, technology and culture across time as they relate to the social construction of birth. Students and faculty will critically examine the seminar topics through an interdisciplinary approach. The learners will develop their own understanding of how science and technology related to birth have and continue to change. What happens when older ideas are revived? Students will be introduced to the influence of culture and technology. Methods of oral and written communication will be enhanced via assignments. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285A. Ethnicity and Local History. 3 Units.
This course will explore the many different kinds of ethnic communities to which we belong. Why have local ethnic groups formed arts and cultural organizations, sports clubs, charities, and other groups which highlight their difference? How have these local groups operated within larger, national ethnic groups and how have they helped us negotiate our identities as citizens, members of religious communities, and/or members of other nations? To what extent have these groups been successful in encouraging future generations to identify with the ethnic group? Our starting point and focus will be an examination of theories of civil society, ethnic identity formation, and nationalism. We will then turn to an examination of the ethnic communities in the Greater Cleveland area. This study of our own local context will then be followed by a consideration of ethnic organizations in other parts of the world. As we consider how ethnic communities have developed and changed throughout history, we will also examine our connections to these communities and, it is hoped, gain a better appreciation for the diversity which surrounds us. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285D. Advertising and the American Dream. 3 Units.
This SAGES seminar will explore advertising in America, its social and cultural roots, and its impact (or lack thereof) on our values, tastes, and behavior as consumers and citizens. It is hard to find a space in the contemporary world that is not plastered with ads—from the Coke cups next to the judges on “American Idol” to stencils on the sidewalks we walk on. This blizzard of advertising images may, in fact, define our age. We will examine the forces that created this giant American industry and ask: Why do we have advertising? How is it created? What social functions does it serve? How has it changed? Where is it going? Central to this seminar is discussion, research, and writing to analyze and critique this in-our-face, but little understood, social institution. Some of our discussions will flow from advertising industry news (e.g., the Super Bowl ads), a contemporary or early 20th century ad campaign, or the backstage insights of a guest from one of Cleveland’s major ad agencies. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285H. Music and Cultural Expression. 3 Units.
In this seminar, we will focus on the recent history of music and the role it plays in our culture today. Music is a form of cultural expression that creates meaning with narrative elements in a way similar to novels, poetry, drama, and other typically literary forms; we will consider various genres of music as well as various genres of literature that depend on music to complete their expression. But music is also one of the most obvious ways we participate in our culture, and musical taste can help define our sense of ourselves and where we belong in culture. We will read some identity theory to determine how and why music helps us create identity from and within the culture around us. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285I. Spectacle in American Culture. 3 Units.
This seminar will examine the topic of spectacle both chronologically and typologically to better understand the power of remarkable visual experiences to awe, entertain, persuade, and create meaning from the colonial period to the present day. In the 17th century, the religious beliefs of the New England community and its need to maintain social cohesiveness gave rise to the spectacle of witch trials and public punishments. As Americans moved westward, the natural world became the focus of the spectacular. In the nineteenth century, the campaigns and debates of presidential candidates became political theater. The latter half of the century gave rise to Consumption as Spectacle as exemplified in the may expositions and World’s Fairs. Today, spectacle has reached all facets of our lives. Americans are willing to expose the most intimate details of their personal relationships on television shows like Jerry Springer and The Real World. Although frequently used to maintain power, spectacle also has been employed as a tactic of resistance and as an instrument for creating alternative meaning by subcultures. More recently, spectacle has served as an instrument of terror. Through lectures, discussion, multimedia presentations, and writing assignments, we will have an opportunity to reflect on the many forms and uses of spectacle in American history. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 285K. The Economics of Global Poverty. 3 Units.
Developing countries make up at least three-fourths of the world population. This course focuses on international aspects of economics of the developing world. Questions we will ask include: why are the poorest countries failing to thrive, what can be done about it, and can the rich afford to help the poor? The term “developing country” means a country that exhibits low per capita income, high poverty level, little industrialization, or low life expectancy. However, these problems also affect developed countries. Why, then, do we study poor countries’ economies separately from those of industrialized nations? The answer lies not in the types of problems but in the severity and causes of these problems. It is these issues, the causes and consequences of global poverty, and solutions to help the world’s poorest, that concern us here. Raising people out of poverty requires economic growth, a more even income distribution, investment in education, health care, and infrastructure, social safety nets, honest political leaders, reliable social and financial institutions, and international aid from rich countries. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285O. Cities (Deconstructed). 3 Units.
This seminar will look at the history of cities, real and imagined, in terms of deconstruction, both in the sense of physical destruction and literary analysis. We will explore how societies have brought about, and reacted to, the destruction of buildings, neighborhoods, and entire cities at the hands of economic development, terrorism, war, neglect, decay, and natural disasters such and fire, flood, and earthquake. In addition we will read cities themselves as texts. Architecture, public parks, billboards, graffiti, surveillance cameras, sidewalks and alleys all contribute to the discourse of what a city means. Part of that discourse includes the depiction of cities in the creative arts. We will examine works of fiction, still photography and motion pictures, art installations, and music that imagine, or comment on, the deconstructed city. Through lecture, discussion, textual analysis, multimedia presentations, and writing assignments, including a research project in which students will be asked to write a cultural biography of a building, Cities (Deconstructed) will help students confront these questions, and will prepare them to make informed decisions about sustaining the built environment. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285Q. Paradigms, Ideologies, and World Views. 3 Units.
The purpose of this class is to analyze the different ways in which people view the world, and the consequences of adopting any particular perspective. Our first primary area of inquiry will be the degree to which the scientific community meets its ideals. We will explore how dominant paradigms develop and slowly change based on sociological and psychological principles that are far from the idealized notion of scientific process. Then, we will explore modern political ideologies in order to assess how fundamentally different assumptions about how the world works lead to fundamentally different conclusions about ideal policies. We will then discuss the degree to which ordinary citizens follow such ideologies. As an alternative to an ideological world view, we will then examine the concept from psychology known as the, “schema,” and we will discuss how schemata affect political perceptions. Finally, we will discuss how even so-called experts are subject to errors in judgment based on their assumptions about the world. This is a University Seminar, so the class will also set aside time to discuss writing. The schedule has several sessions set aside for writing instruction (labeled, writing day or, writing week). On these days, class will be led jointly by the professor and the writing liaison to discuss writing technique. For most of these sessions, you will be asked to participate in a writing exercise, to be discussed immediately afterwards. For some sessions you will be asked to bring in outlines, thesis statements, sample paragraphs, or other preparation work for course assignments. You will be informed the week prior when you will need to bring such a sample to the writing session. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
**USSO 285S. Correspondence. 3 Units.**
Correspondence will look at the practice of writing and reading letters, and explore the use of letters as biographical, historical, and forensic evidence. Students will read love letters, "Letters to the Editor," letters from the battlefield, and correspondence between scientists and theologians. We will gain access to the experience of tourism through post cards, and the world of the modern corporation through business letters, emails and text messages. We will read examples of fiction where the letter acts as a plot device, as in the epistolary novels of the 18th century. We will think about the function of the letter as an instrument of persuasion, as an opportunity to develop ideas in a private and informal manner, and as a forum for expressing emotion. In addition, we will study the communication systems and technologies, such as the post office, the telegraph, and the internet, that have facilitated, and changed the nature of, correspondence throughout history. Students will be asked to write letters based on their personal experiences and their political opinions, and write analytical essays based on topics related to the practice and history of correspondence. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

**USSO 285T. Why We Believe Weird Things. 3 Units.**
How, in such a skeptical age, can people maintain questionable beliefs regarding urban legends, alternative medicine, superstitions, and paranoid phenomena? How do cults manage to attract and maintain large memberships? How can so many seemingly normal people come to the conclusion that they have been abducted by aliens? We will explore the idea that these behaviors are not examples of pathological thought processes, but rather natural consequences of the biases that characterize everyday reasoning. Emphasis will be placed on critical examination of questionable phenomena with a goal of understanding why people might want to hold such beliefs. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

**USSO 285V. Travel Literature in the Age of Discovery. 3 Units.**
The discovery of the Americas in the 15th century challenged European constructions of the known world and tested assumptions about nature, culture, and the workings of intellectual inquiry. Although before 1492 Europeans traveled, they usually read new landscapes in light of familiar religious paradigms. The discoveries forced Europeans to draw the world anew, literally and metaphorically. Students will read works of travel fiction and real-life travelers' tales, and will address the following questions: how did travel literature reflect successive discoveries? What new maps (geographical or metaphorical) did this literature help draw? How did the discoveries bear on literary genres? After a brief foray into medieval literature, students will read The Tempest, Oroonoko, excerpts from The Persian Letters, excerpts from Gulliver's Travels, Robinson Crusoe, Candide, and A Sentimental Journey. Additionally, students will read brief accounts of actual travels. Students will write three papers and prepare presentations on topics such as pilgrimage routes, map making, the search for longitude, and America in the visual arts. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

**USSO 285Y. Quest for Perfection: Law as a Vehicle for Social Improvement. 3 Units.**
Americans often seek to use U.S. law to create "fairness" and "civility"--in a world that can sometimes be brutal and fundamentally unjust. Increasingly, we rely on courts and statutes to "fix" identified social problems and to achieve a more just society. This course will examine our reliance on law to improve human behavior and to achieve social goals. Can statutes and lawyers lead the way to a better world? What are the limits (if any) of our ability to improve society by passing new laws and mandates? Are there unforeseen, negative consequences that arise from our legal efforts to improve public and personal behavior? This course will examine those questions in the context of selected social issues. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

**USSO 285Z. Mastering the Masterpiece: Looking Closely at Great Works of Visual Art. 3 Units.**
Masterpiece: This oft (ab)used epithet, applied to everything from a pre-schooler's finger painting to a Picasso portrait, suggests a creative enterprise of unrivaled achievement and quality. Using some of the finest examples of human creative expression--specifically, work on view at the Cleveland Museum of Art--this SAGES seminar will celebrate, critique, and question the "masterpiece" designation. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

**USSO 286E. Global Tourism. 3 Units.**
Tourism can be viewed as a metaphor for contemporary existence in an increasingly globalizing world where attachments and ties to a concrete place are often temporary. Besides capturing the essence of present-day mobility, tourism is a phenomenon that can be researched both politically and economically. Indeed, 10 percent of global GNP comes from tourism and many poor countries rely on the tourism industry to sustain national economic development. In this class, we will touch on the economic and political significance of tourism, but will spend most of our time thinking of what happens in the tourist encounter, what tourists expect, what drives them, and who loses as well as benefits in the encounter. Some of the specific themes include: the nature of tourist destinations, quest for authentic sites, entertainment tourism (Disneyland, Dracula-Park, tourism to Auschwitz, culinary tourism, sex tourism, and eco-tourism). By reading theoretical works, travel blogs, and literature, we will gain insight to the motivations of tourists, the inhabitants of the places being visited, and international organizations as well as governments who oversee this industry. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 286F. Environment and Civic Culture in the Developing World. 3 Units.
Can the fight against environmental degradation lead to an improved civic culture and political reform in developing nations? Developing nations typically sacrifice environmental protection in favor of economic development. Only when the costs of environmental degradation become obvious do nations consider a sustainable development regime that includes environmental protection. This seminar addresses whether implementing a sustainable development model requires a new civic culture that encourages political reform. In doing so, students will examine and write about literature on economic development, environmental degradation, and several international initiatives that encourage reforms to aid sustainable development. The seminar will use the People’s Republic of China as a case study, but will also draw on evidence from other developing countries. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286G. Race in the Americas. 3 Units.
This course examines the history of race relations in the US and Latin America. Its premise is that modern race relations are not only the legacy of a distant slave past, but also the product of continuous cultural and political readjustments to new times and conditions. The class starts by examining the colonial development of race-based political and economic system in the Americas. It continues by exploring how racial hierarchies were re-created as nations in the Americas went through enormous political and economic changes in the 19th and 20th centuries. Students will conduct a small history research project on how race relations have affected a person, institution, city or neighborhood’s history. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286L. Exploring Non-Profit Organizations. 3 Units.
This seminar is structured to expose students to the opportunities and challenges of working in and running non-profit organizations. Students will explore the importance and significant roles non-profit organizations play in our society. The class will learn how non-profits are organized and regulated and the importance of the organization’s mission is to determine the impact of the non-profit organization in the community. Additionally, the students will learn how non-profits are funded and how these organizations maintain their financial stability and sustainability in the community. These goals will be accomplished through group analysis of non-profit organizational principles, and investigation of existing non-profit organizations. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq; FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286M. Hip-Hop Narrative in Film. 3 Units.
In this course we will discover and explore the interrelationships of self, technology, and society in the 21st century through digital video on the internet. We will watch online videos and read about social theory as part of a rigorous examination of media and society. This course will examine the intended and unintended consequences of mass information sharing and communication via online video. Students will work with the seminar leader and build upon existing academic knowledge to extend their understanding of the structure and meanings inherent in our video-active lives. In addition to completing regular writing assignments, students will learn about digital video production and produce a short digital video essay. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq; FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286J. Women’s Education at CWRU: The Flora Stone Mather Oral History Project. 3 Units.
This seminar will offer a discussion-based exploration of the history of women’s education in America. Much of the discussion will focus on the emergence of coordinate colleges, including the College for Women (later renamed Flora Stone Mather College) at Western Reserve University. The seminar will also give students an opportunity to contribute to the historical literature by conducting interviews with Flora Stone Mather alumnae. Students will be instructed in the basic principles and techniques of oral history and engage in the creation of primary source materials—tapes and transcriptions—essential for historical documentation. They will then reflect on the relationship between the stories they have collected and the present-day educational experiences of women at Case Western Reserve University. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq; FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286K. Environment and Civic Culture in the Developing World. 3 Units.
This seminar will consist of lots of film, yes, but also lots of reading and writing. Upon successful completion, the student should be able to recognize and define the Hip-Hop narrative in popular cinema, focus critical thinking skills, pull the narrative from certain films and discuss it, note and discuss the visual aesthetic and how it impacts the story, and discuss the marketing, packaging, and cultural impact of the Hip-Hop narrative. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq; FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 286N. Nazi Art Theft and Its Aftermath. 3 Units.
During World War II the German government perpetrated one of the most egregious and extensive art thefts in the history of human kind. The Nazi party's desire to gain control of Europe involved their prolific confiscation of the great art treasures of European public and private collections, particularly those belonging to European Jews. This seminar will explore the Nazi's deliberate war looting campaign, its aftermath, and the current issues surrounding the reclamation of stolen works and the restitution claims yet to be settled. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286O. Place, Religion, and Public Life. 3 Units.
What is the place of religion in everyday life? How do people contend with conflicting beliefs about the proper relationship between religion, politics, and personal conduct? How do they decide which kinds of religious behavior belong in public and which belong in private? How do they decide what counts as a "private" or "public" place to begin with? Where does religion belong? In this seminar, students will explore these questions at a range of scales, from the local to the global. They will ask how secular and religious thought interact to shape social life in a range of material and virtual spaces, from Case to Facebook. In so doing, they will learn to approach the religious/secular divide from a broadly ethnographic perspective. Focusing mostly on the United States but also considering case studies from other parts of the globe, students will examine how diverse groups practice their faiths, express their beliefs, and contend with secular institutions and expectations in everyday life. Coursework will include trips to local neighborhoods and institutions, readings from a broad range of fields in the social sciences and humanities, and a fieldwork-based research paper. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286P. Immigrant Entrepreneurs--Can They Drive Cleveland's Economy Once Again?. 3 Units.
This seminar will focus on the impact of immigrant entrepreneurs in Cleveland--past, present and future. The class will take a look back at the historic contributions immigrant entrepreneurs played in creating economic prosperity in Cleveland during the 20th century. While immigrant entrepreneurs once played a central role in driving Cleveland's economic success, in recent years the city has attracted much less foreign talent than other faster growing U.S. metropolitan areas. Cleveland's population is at its lowest level since 1903 and continues to shrink. Chicago, Philadelphia and Louisville, among other cities, have embarked on efforts to attract foreign talent to not only address the "brain drain" of young people leaving their cities but also to spur economic development. In a March 29, 2009 editorial, The Plain Dealer argued for a more proactive approach in Cleveland to attract foreign talent: "If Cleveland is to regain (its) lofty status--especially in a global economy that rewards intelligence, creativity and innovation--it needs to re-establish itself as a magnet for new Americans. We need their fresh ideas, entrepreneurial zeal and optimism. We need them to help reverse decades of migration away from the region's urban core." The culmination of the seminar will examine the question of whether Cleveland should proactively recruit foreign talent and look closely at the public policy, regulatory and political challenges that must be overcome in order to effectively do so. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286Q. History of Late 20th Century Popular Culture. 3 Units.
This course focuses on American popular culture of the late twentieth century (c. 1970 to 2001). Students will analyze this period using a variety of historical texts and primary sources (everything from more "traditional" sources such as printed materials to films, television episodes and clips, music and sound lyrics, fanzines ["zines"], graphic novels, and music videos). Secondary sources include history essays and monographs, as well as articles by scholars employing critical theory. Students will explore whether "products" of popular culture perpetuate power structures and help to shape the discourse of late twentieth century American culture. Moreover, they will examine how individuals contribute to and challenge the discourses as consumers and creators of pop culture. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 286U. Ideal Communities, Utopian Visions, and Totalitarian Nightmares. 3 Units.
This course will study communal attempts to form ideal societies and will offer a transcultural, transhistorical view of how various authors and filmmakers have imagined the best and worst possibilities of human society. Its central questions are: How can society be improved? What role does education play in improving society? How do you define freedom? How can we combine freedom with social order? How can social problems be critiqued through representations of ideal or dysfunctional societies? The course will be interdisciplinary by combining historical study with analysis of literature, film, art, and music. In studying and discussing utopian communities, students will examine the problems that each community attempted to solve, their philosophical approach to solving these problems, the success or failure of their solutions, and the similarities and differences among these communities. In studying utopian and dystopian literature and film, we will analyze the problems and solutions that each text or film examines and proposes, and will look at each text or film in its social and historical context. We will also explore how authors and filmmakers have used their utopian and dystopian visions to respond to the positive or negative trends in their own societies. In addition, we will discuss how each text or film coincides with or challenges our perceptions of the strengths and problems in our society and how we might solve those problems. This course will encourage students to think about the kind of world they would like to help bring about, as well as the various social problems that may darken the future of the human race. Students will write in class regularly about these issues as well as the assigned readings that raise these issues, and will write essays about ideal communities, utopian texts, and dystopian texts. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286V. Management of Chronic Illness in a Cultural Context. 3 Units.
This course will explore the cross cultural, self-care approaches to health problems. It covers substance-based (e.g., herbs, acupuncture), mind-body (e.g., yoga, qigong), spiritual (e.g., prayer) and social (e.g., communal, family) approaches that have been used to manage chronic diseases and promote wellness in various cultural settings. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286X. The Future of News. 3 Units.
The saying goes, "Strong Press, Strong Democracy." But what of strong democracy in the Internet Age when the traditional press seems weak? That's this seminar's big question. Can the "old" media, struggling to avoid financial collapse, still deliver the news necessary to be democracy's watchdog, as in the past? Can the new internet media--blogs, YouTube, viral videos, "hyperlocalism" experiments, pro publica investigations, crowd sourcing, instant news, Facebook, Gawker, True/Slant, Drudge and the proliferation of the other news and entertainment sources--take its place or complement traditional journalism? How do these new entrants change the nature of news and the role of the media in our society? These are uncharted developments, but they go to the heart of the continued success of America's democratic experiment. Our goal is to grasp more clearly the connections between media, news, citizenship and democracy in this new age. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286Y. The Holocaust and Local History. 3 Units.
The Holocaust and Local History will focus on how the events that make up the Holocaust affected communities in both Eastern Europe, where the most horrific crimes of the Holocaust occurred, and in the United States, where the Jewish community responded to the events with both astonishment and action. A focus on local histories will illustrate the legacy of the Holocaust and help students understand how history directly affects their own lives and the lives of those around them. The goal is to uncover the role that this complex history continues to play in our daily lives, whether in the small towns of Eastern Europe or the suburbs of greater Cleveland. Topics will include the course of the Holocaust in towns in Eastern Europe, the effects of the Holocaust in American communities like Cleveland, and the commemoration of the Holocaust and memory of local Jewish communities in Eastern Europe. Students will examine these topics with the help of primary and secondary sources, hear from local survivors of the Holocaust, and learn more about how the Holocaust is represented in local museums. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287B. Migration in Human History. 3 Units.
The movements of individuals and groups, along with the ideas, technologies, and diseases that accompanied them, have played an integral role in shaping human history. Migration has continually created, challenged and shaped societies from the most ancient periods through to the present. It has a transformative effect on communities at the points of origin, along migration routes, and at temporary and final destinations. This seminar will introduce students to several different ways of thinking about migration throughout history, from the contacts between nomadic and settled societies, to colonial settlement and diasporas and migration from rural towns and villages to industrial cities, as well as the ongoing mobility at the highest and lowest levels of modern society. Indeed, many contemporary conflicts of class and culture can be traced back to migration, in the interactions between those seen as migrants and those who consider themselves natives. This seminar will also encourage students to consider the importance of different forms of migration in their own lives, in the histories of their families, and in the city around them. Cleveland is a city founded by migrants from Connecticut (hence the 'Western Reserve' in the name of the university), populated by both transatlantic and internal American migration, and shaped by the local migrations that affected ethnic neighborhoods, suburbs, and smaller towns throughout the region. Compared to historical migrations of thousands and millions of people, such movements may seem minor, but they can be studied and understood in similar terms. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 287C. Murder in the Jazz Age. 3 Units.
Having lived through the devastation and consequences of World War I, you might think that Americans would have been appalled by the violent murders that marred the 1920s. To be sure, they were. Americans were also drawn to the infamous murders as though understanding these crimes would enable them to explain the changes in society, such as changes to gender rules and urbanization, brought about and accelerated by the war. In this class, we will examine the major crimes of the decade in the hopes of gaining the insight that the people at the time sought. The course readings include secondary sources that provide an analysis of the decade and primary sources from the murder cases themselves. In addition, students will become familiar with the historical context and scientific advancements that gave birth to modern forensics. Prerequisite: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prerequisite or Corequisite: FSTS 100. Requisite not met permission required if previous course completion in this subject group.

USSO 287E. Clash of the Titans: Economic, Industrial and Social Trends for the 21st Century. 3 Units.
Since the beginning of recorded human civilization, locally dominant societies have risen, prospered, decayed and finally ended, with new ones taking their place. Starting in the 15th century, however, Europe established global dominance and maintained it for four centuries, from the age of New World exploration through the Industrial Revolution of the 19th century. Then came the rise of the United States, which in the late 20th century became the world’s only superpower, economically, industrially, militarily and, increasingly, culturally. In the late 20th and early 21st centuries, we are witnessing the “flattening” of the world due to the technological revolution, a phenomenon brought about by the instant and worldwide generation of and access to information. Two major consequences of this evolution are: a) Individuals are more empowered than at any time in history and the traditional societal structure is under constant challenge; b) Companies have changed their business structures and practices and have begun to operate on a truly global scale. The main goal of the course is to help students learn the lessons of history and use them to develop an educated argument as to whether the US will continue in its prominent leadership role, or whether one or both of the emerging Asian economic powerhouses, China and India, will supplant it and become dominant. Prerequisite: Passing letter grade in a first-year seminar in FSCC, FSNA, FSSY or FSCS. Prerequisite or Corequisite: FSTS 100. Requisite not met permission required if previous course completion in this subject group.

USSO 287J. Education in sub-Saharan Africa. 3 Units.
The level of education in sub-Saharan Africa is much lower than in the United States. In some sub-Saharan countries, less than 20% of the adults are literate, less than 10% have a secondary school education, and less than 1% have a college education. The low level of education keeps the region in poverty—most households in sub-Saharan Africa have no electricity or running water. This seminar will address the barriers that hinder education in sub-Saharan Africa, and explore ways to overcome these barriers. The barriers have a broad range of origins, including economic (not enough money for teacher salaries, books, and school maintenance), societal (education not seen as important, especially for girls), technological (lack of electricity and transportation), institutional (widespread corruption in government), and medical (AIDS, malaria and diseases from unclean water cause student absences and orphan students). Prerequisite: Passing letter grade in a first-year seminar in FSCC, FSNA, FSSY or FSCS. Prerequisite or Corequisite: FSTS 100. Requisite not met permission required if previous course completion in this subject group.

USSO 287O. Utopia and Social Change in American Fiction. 3 Units.
The purpose of this course is to increase the students’ awareness of selected social constructs within the global society (i.e., vulnerability) that have the potential to generate circumstances that place some individuals or groups at risk for marginalization and diminished well-being. The course will be conducted within a seminar format and will provide opportunities for scholarly inquiry and debate regarding the nature of the constructs posited. Students will critique each other’s social constructs with intent to generate innovative strategies to reduce individual and global marginalization. Each student will prepare a formal written report of their findings related to their construct of interest. Prerequisite: Passing letter grade in a first-year seminar in FSCC, FSNA, FSSY or FSCS. Prerequisite or Corequisite: FSTS 100. Requisite not met permission required if previous course completion in this subject group.

USSO 287R. The Business of Sports—Content, Television, Social Media, Consumer Products, Advertising & Marketing. 3 Units.
The sports industry is experiencing rapid growth and is expected to become one of the nation’s top 25 industries by 2030. This seminar will explore five elements of the business model that is driving this growth: content, television, social media, advertising, and consumer products. In addition, it will examine the marketing of these five elements. Students will be graded on class participation, essays, and a final paper. They will be asked to read weekly articles on each aspect of the sports industry and to participate in social media sites in order to understand how powerful this platform is to the sports business. In addition, they will work together in groups to create their own sports marketing websites and present these sites for evaluation by the entire class. The results of the evaluation will contribute to their grade for this part of the course. Guest lecturers for the seminar will include nationally recognized experts and representatives of the sports industry, many of whom visit northeast Ohio for sporting events. Students in the course will acquire a unique perspective on a business that is projected to become one of the world’s leading growth industries in the 21st century. Prerequisite: Passing letter grade in a first-year seminar in FSCC, FSNA, FSSY or FSCS. Prerequisite or Corequisite: FSTS 100. Requisite not met permission required if previous course completion in this subject group.
USSO 287T. Gender, Visibility and Performance: The Courtesan. 3 Units.
Throughout history, the figure of the courtesan has embodied seduction, performance, and mystery; occupying the private spaces of the real and the imaginary across cultures. The impact of the courtesan on society can be seen in travelogues, poetry, and historical treatises, as well as in texts written specifically about courtesans themselves. Those cultures which had a courtesan class frequently experienced varying degrees of social discomfort. Within the culture, there was tension between those who patronized courtesans and those who considered them a social menace. From without, cultures which had courtesans were believed to be either excessively decadent or highly civilized, depending on the cultural standpoint of the observer. In this seminar, we will study real courtesans as well as examine the figure of the courtesan within the context of literature, religion, music history, and gender theory. The seminar will begin with an overview of the origins of the courtesan, focused on the roles of women and slave musicians in the court and temple in Egypt, India, Greece, and Mesopotamia starting in 3,000 BCE. Then, we will explore factors leading to the development of a courtesan class and compare the roles of courtesans and their place in their culture in Europe, India, Asia, and the Middle East. Readings and class discussion will encompass issues relating to the impact of gender on performance, literary genres, education, and social and legal status, as well as continuing questions related to translation of primary sources, colonialism, and religious movements. In addition to the readings, we will also study images of the courtesan from antiquity to the present, listen to music by and about courtesans, sample some of their writing, and watch films about "real" courtesans. The primary goal is not only to look at the impact of courtesans in history, but also to engage issues related to gender and performance from a variety of different disciplinary and cultural points of view. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287V. The Public and the Past: History in the Marketplace. 3 Units.
How does one or should one "sell" the past? Our primary encounters with the past are not in the university classroom, but via popular media, museums, theme parks, and historic sites; entities whose survival is increasingly dependent upon market economics. This dependency often demands attention to audience size and the need to avoid controversies that could alienate private and public funders. Complicating this is the issue of heritage—the somewhat mythic pasts which individuals, groups, and nations claim as their right, even when research challenges the underlying myths. What then are the consequences, in terms of ethics and accuracy, or in terms of civic value, when one turns history into the imaginary across cultures. The impact of the courtesan on society can be seen in travelogues, poetry, and historical treatises, as well as in texts written specifically about courtesans themselves. Those cultures which had a courtesan class frequently experienced varying degrees of social discomfort. Within the culture, there was tension between those who patronized courtesans and those who considered them a social menace. From without, cultures which had courtesans were believed to be either excessively decadent or highly civilized, depending on the cultural standpoint of the observer. In this seminar, we will study real courtesans as well as examine the figure of the courtesan within the context of literature, religion, music history, and gender theory. The seminar will begin with an overview of the origins of the courtesan, focused on the roles of women and slave musicians in the court and temple in Egypt, India, Greece, and Mesopotamia starting in 3,000 BCE. Then, we will explore factors leading to the development of a courtesan class and compare the roles of courtesans and their place in their culture in Europe, India, Asia, and the Middle East. Readings and class discussion will encompass issues relating to the impact of gender on performance, literary genres, education, and social and legal status, as well as continuing questions related to translation of primary sources, colonialism, and religious movements. In addition to the readings, we will also study images of the courtesan from antiquity to the present, listen to music by and about courtesans, sample some of their writing, and watch films about "real" courtesans. The primary goal is not only to look at the impact of courtesans in history, but also to engage issues related to gender and performance from a variety of different disciplinary and cultural points of view. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287Z. Concubines, Soldiers and Field Hands: World Slavery from Antiquity to the Present. 3 Units.
For many Americans, the most familiar type of slavery is plantation slavery of the Americas and the horrific consequences to the indigenous peoples and transplanted peoples from Africa. The longevity of the institution of slavery, and acceptance of the practice by many different cultures and belief systems, however, reaches from antiquity to the present day. In addition to providing physical labor and domestic services, slaves have been used as entertainers, civil servants, led armies and served in temples. Slavery is a complex legal, religious, moral and social institution, and the relationship between slave, state and owner/slater is equally complicated; so much so that understanding the bond between them, and what the actual boundary was between "free" and "un-free", is still difficult to determine in some cultures. In this seminar, we will use a chronological framework to examine the institution of slavery, uses for slaves, methodologies and sources for studying slavery and the slave trade in world history. Beginning with slavery in the Ancient Near East, Egypt, Greece and Rome, the class will include slavery and the feudal system in medieval Europe, indentured servitude and concubinage, slaves in the early Islamic courts, the Ottoman slave trade, the African slave trade and slavery in the Americas, and the current problem of human trafficking. Within each section, students will read primary texts and recent scholarship examining the social, economic and religious rationales behind slavery. We will also study different methodologies and the impact of gender, race and social class on the study of world slavery. As many slave cultures had different definitions for what it meant to be a slave, we will address questions related to translation, interpretation and perception when dealing with primary sources. The primary goal of the course is to provide a broader context for the institution of slavery in world history as a means not only to understand the impact of slavery has had on American culture, but on other cultures as well. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 288B. Doing Good: How Nonprofits Change Lives. 3 Units.
The American economy is made up of three sectors: government, business, and nonprofit. It's pretty obvious what government and business do, but the activity of nonprofits, while it is everywhere, is much more subtle. A nonprofit is most likely where you were born, went to school, attend church, or adopted your family dog. If you became an Eagle Scout, watched "Sesame Street," attended a benefit concert, or participated in a walk for a cause, you were engaged with a nonprofit. Perhaps you haven't given much thought to the way the organization was structured, where it gets its money, or what kind of an impact it's really having. In this seminar, students will learn what nonprofits are, how they operate, how they influence everyday lives, and their role in advancing social change and a civil society. We will consider the economic impact of nonprofits as well as their role in protecting culture, environment, values, and heritage. We will also look at the key challenges facing nonprofits today and how they are addressing them. Writing assignments will include a grant proposal for a new or existing nonprofit. The seminar will feature guest speakers and class visits to nonprofits in the Cleveland area. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 288C. Green Transformation and Globalization. 3 Units.
This seminar introduces students to the recent major green transformation in China and elsewhere in the world, focusing on the way the green changes took place in relation to globalization, environment and climate protection, technology innovation, income redistribution, domestic consumption, and education, to meet the challenges of financial crisis, climate change, energy insecurity, and international competition. The seminar will also assess the impacts of various aspects of green transformation and globalization on today's and future world and vice versa. This seminar promotes broad knowledge of and increased appreciation of the importance of diversity in China's cultural past, social frameworks, economic conditions, and natural environment. In a close connection to the primary readings, which include several recent relevant works, the students will be exposed to a variety of related primary and secondary materials (such as texts, photos, film clips, music, songs, and websites). In addition to receiving informative yet concise instruction, the student will also be involved in practice in critical reading and thinking, in writing and orally presenting research papers. In these activities, the students will be introduced to basic methods and concepts critical to the understanding of important economic, social, and cultural developments and changes as products of movements rather than isolated incidents. Prereq; Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY Courses

USSY 203. Myth, Ritual, and Society in the Ancient World. 3 Units.
This course introduces students to Greek, Roman, and some near Eastern myth as well as issues of interpreting these stories. The focus will be on myth as a concomitant feature of religious ritual. What do myths and rituals tell us about the society that generated it? What were its values, its collective memories and how do they compare to ours? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 204. System Thinking. 3 Units.
This is a seminar course in which students critically examine the way that language is used to model and analyze the social world and its organizations. System thinking is used by business leaders, economists, policy analysts and planners to represent the socio-economic world so that they can manage it. During the seminar, students will read and discuss key works that lay the foundations of system thinking and will apply system thinking techniques to a socio-economic situation of interest to them. The emphasis will be on questioning the premises of system thinking, surfacing its strengths and weaknesses, and grappling with its ethical implications. Some key ideas related to system thinking that will be explored include: information theory, cybernetics, system modeling, language, meta language, modeling and intervention in social systems. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 209. Art and Math. 3 Units.
Students in this University Seminar will explore relationships between art and mathematics. Topics include: pattern, symmetry and beauty in natural forms; symmetry and proportion in art, architecture, ornament and design; perspective and optics; number, iteration, and infinity; mathematical and computer techniques and themes in art, architecture and design. Note: This class is limited to students participating in SAGES. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 211. Beethoven and the Age of Revolution. 3 Units.
Beethoven's music is symbolic of the age and spirit of change which reached its zenith with the French Revolution. Fueled by political, social, and emotional reactions, his oeuvre was remarkable in every way. From the early works, imitative of Haydn and Mozart, through his truly unique later compositions, Beethoven was revolutionary in his person and in his music. The course will center around specific Beethoven masterworks which are being presented by University Circle Institutions, and student attendance at these concerts will be required. Class sessions will involve discussions concerning the historical and cultural setting, influences, and analytic investigation into these masterworks. Readings will be taken from Joseph Kaman and Alan Tyson (The New Grove Beethoven), Frida Knight (Beethoven and the Age of Revolution), and George Marek (Beethoven: Biography of a Genius). This course is directed towards the general university student, and no specialized knowledge of music is necessary, although certain rudimentary aspects of musical discourse will be covered. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 222. Writing Rock and Roll: From the Critical to the Ethnographic. 3 Units.
To write about music is finally an act of translation. When one writes about music, s/he attempts to bring a thing conceived in one symbolic world into another. The task is neither simple nor straightforward. As one musician, fed up with the critics who put pen to paper in the effort to capture his music, put it: “Writing about music is like dancing about architecture.” And for a moment, this musician’s point might seem apt. The experience of music, often intense, is arguably “beyond words.” Why try to tame it by putting it in the cage of language? This course considers the pitfalls and the possibilities of the symbolic translation that is at the heart of writing about music. Focusing on the writings associated with rock and roll culture (1954-2005), the class will consider the multiplicity of approaches and styles used to capture music. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 226. Probability in Modern Thought. 3 Units.
The idea of probability is ubiquitous in the modern world, appearing in everything from quantum physics to business decision theory, from DNA evidence in court to the insurance industry. Yet there is controversy about the very meaning of probability itself, and any person who encounters probability—which is everyone—should be familiar with that controversy. This seminar examines what we mean by probability ascriptions. Although there will be some computational work, especially early in the semester, the seminar is not primarily a course on the mathematics of probability. Most of our focus is philosophical, sociological, and psychological, attempting to answer questions like these: In what different ways do we use the concept of probability? To what domains of knowledge can it be rightly applied? Do all legitimate conceptions of probability obey the standard mathematical axioms? How good are people at estimating probabilities? Do all the coherent uses of probability have a common conceptual core? These and other questions will be explored through class discussions and experiments, two papers, and group presentations on a variety of topics. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 227. Travel Writing on Screen. 3 Units.
Through the image of the traveler in a wide range of films, we will examine such issues as border crossing, culture shock, and the nature of memory. Topics include: The Grand Tour, pilgrimage, exile, and imaginary journeys. A group presentation, 5 short-reaction papers, and a take-home final essay are required. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 228. Women in Outer Space. 3 Units.
We will study the history of women astronauts and the representation of women as aliens and astronauts in popular culture. We will see films such as Alien, Apollo 13, and Contact, and will also read two novels. Film and women's studies theory and criticism will be used to examine the texts. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 230. Sexualities, Citizenship, and Social Action. 3 Units.
This course will explore themes in both the symbolic and cultural domains. While sexuality and citizenship, in reality and in academic discourse, cuts across the areas, this course will consider methods and concepts (see syllabus for details) in the human sciences and humanities. In the humanities, students will learn fundamental ideas in the philosophy of social science. They will be taught how to recognize, in social theory(s) and theorizing, underlying arguments: ontological, epistemological, and methodological. It is not our purpose to add these ideas to our conceptual language within a discipline or to a specific topic; we will explore how they can be applied to other areas of learning and practice. They will then be applied to a current and highly controversial aspect of academic and political practice: to explore the relationship between sexuality and citizenship. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 235. Towards a New Museum. 3 Units.
How do you know a museum when you see one? How has our idea of a museum evolved, and where is it going? How do we go from mummies to multimedia? Museums are more popular than ever and include some of today's most exciting architectural designs. Explore the changing nature of museums as buildings, institutions, and cultural symbols. Uncover controversies in the museum community. Are museums sacred spaces or edutainment—or both? How does the architecture reflect what they are and who built them. Active discussion, critical thinking, local field trips, guests from local museums, and thoughtful writing are essential parts of this seminar. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 236. Romance--The Most Comic of Catastrophes. 3 Units.
From ancient Athens to Hollywood, romantic comedies have enjoyed continuous widespread popularity in the theater. In this course we will read a broad spectrum of romantic comedies, from the genre's beginnings with the Greek New Comic playwright Menander to the Roman Plautus, and on to Shakespeare. We will also watch a modern romantic comedy, Pretty Woman. We will begin the course with some ancient and modern literary theories of intertextuality and metatheatre that shed light upon the relationship between Comedy and Tragedy. Some questions we will ask in this course are: What's the historic relationship between Comedy and Tragedy? What's the connection between sex and comedy? What can Romantic Comedies tell us about the audience that is addressed from the space of the stage or screen? Does laughter depend on personal and cultural values and variables? Does comedy have a personal and social function? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 237. The Transformation of the American South. 3 Units.
The purpose of the course is to increase the student's understanding of the remarkable transformation of the American South from an isolated regional backwater committed to racial segregation to a vibrant, complex, rapidly growing, diverse biracial society that has rejoined the national mainstream. In fact, a quick look at where our national political leaders have come from recently—President Bill Clinton of Arkansas and President George W. Bush of Texas, to name the two most prominent examples—indicates how central the South has become to the nation. We will explore all aspects of the transformation of Dixie during our course. Central to the story will be political change, although, of course, politics cannot be easily isolated from social and economic life. Thus, it was a grassroots social development—the Civil Rights Movement—that gave important impetus to the key political changes that occurred in the mid-1960s and beyond, as we shall see. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 241. The Birth of the Modern: 1905-1925. 3 Units.
"The Birth of the Modern: 1905-1925" will attempt to answer the question "What is the modern?" by exploring some of the breakthrough works of literature, music, art, and scientific theory in the first decades of the twentieth century. We will study what characterizes the new modes of thinking or "language" of modernity, developed in experimental work across the arts, the sciences, and the social sciences. We will be examining some of the major manifestos of and statements about the nature of Modernism in order to see how they illuminate, for example, a novel by James Joyce or a painting by Picasso, a composition by Stravinsky, a scientific theory of Einstein's, or a psychological theory of Freud's. At the conclusion of the seminar, students will present their findings and write a research paper about "the modern" as it relates to a field of particular interest to them. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 246. How to Make a Leader. 3 Units.
Leaders are both born and made. Some seem to naturally know what to do and some need to study and practice to gain the necessary skills. Both groups can be successful and it usually requires a combination of natural ability and effort to become the very best. Leaders often point to role models as being important to the development of "natural" or acquired ability. This course is appropriate for both those who are intellectually curious about leadership. The course will be divided into three sections. The first part will involve reading and discussions to explore and identify what leaders are like and what they do. During the second part you will observe leaders in action and talk to them about what they think makes them successful. Some examples of what you may observe will include a surgeon in the operating room (theater), a coach with his/her players, an executive in the board room, a concertmaster with his/her musicians and a judge in a courtroom. The third part of the course will involve readings and discussions during which you will develop a personal approach to the level of leadership to which you aspire. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 250. Medical Narratives. 3 Units.
This course examines the relationship between medicine and narrative by exploring the representational structures and narrative conventions that have been used to understand and communicate the experience of illness, to tell stories about the human body, and to diagnose and treat disease. The course focuses on literary texts (including novels, plays, short stories and memoirs) written by doctors, patients, nurses and creative writers, as well as on medical case histories from different cultures and historical periods. It examines such topics as the uses of narrative in medical practice; the uses of metaphor in conceptualizing and representing disease; the ethical dilemmas posed by medical research and practice; the therapeutic value of narrative; the structural similarities (and historical links) between detective fiction and medical case histories; the imaginative function of illness in literature; the cultural myths and iconography of disease in different historical periods; the representation of physical and mental illness and the human body in language and art, and cultural responses to major health crises such as bubonic plague, syphilis, and AIDS. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 254. Nonverbal Communication. 3 Units.
Our purpose is to explore the nature of nonverbal communications and analysis in several different contexts. Because nonverbal communication is so closely related to emotional processes, we will also become acquainted with basic ideas surrounding communication and emotion. Within this framework, we will discuss and apply a variety of theoretical approaches to understanding this channel of human communication. Upon completion of this course, students will have a better understanding of decoding and encoding nonverbal messages. Additionally, the student will have a thorough understanding of the functions of nonverbal communication in social and rhetorical life. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 255. Nonverbal Communication. 3 Units.
How are new symbols created out of the ashes of the old? In this seminar we explore the history and interpretation of the destruction of images. We will consider several diverse world historical case studies: from Byzantium and the Reformation to Islamic art, the Modernist avant gardes, and attacks against monuments during the fall of the Soviet and apartheid ideologies in Russia and South Africa. We will read classic theoretical texts on the question of iconoclasm, and examine the connections between a number of categories of the "image" that often share symbolic destruction as one of their important aspects: propaganda, pornography, avant-garde art, and censorship. We will also explore how destruction is integral to the creation of new symbols, new ideas, and new ideologies. This seminar is reading-and writing-intensive. It is a student-led reading group whose object is to understand the symbolic life of destructive acts and the destructive life of symbolism. Individual students will be responsible for introducing readings and initiating class discussion several times during the semester. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 265. Nature Writing: From the Arctic to the Gulf Coast. 3 Units.
From the Galapagos to the Arctic, from the Laguna Pueblo to the barrier islands of Mississippi, the course explores the territory of “nature writing.” We’ll read Aldo Leopold’s account of life in a Wisconsin “sand county,” a short book nicknamed “the environmentalist’s Bible.” With Barry Lopez as our guide and interpreter, we’ll imagine visiting the frozen tundra. In a memoir of life with the artist and nature writer Walter Anderson, we’ll ponder the limits of passion and sacrifice. Through reading a poetic novel by Leslie Marmon Silko, we’ll experience an unforgettable vision of a journey toward salvation and harmony. Additional readings include essays, poems, and other short works, plus a survey of commentary from interdisciplinary fields like environmental ethics; ecocriticism; feminism; and biography. We’ll visit Cleveland nature centers and museums, and we’ll hope to have a few guest speakers. After several short assignments (both written and oral), each student’s individually designed research project will recommend a specific means of integrating nature writing into the activities of a local organization or school. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 267. Medieval Love Songs: Poetry, Music, Spirituality. 3 Units.
In the high and late Middle Ages (c1100-c1450), love songs accounted for much of the poetry and music composed at the secular courts and urban centers of Europe. At the same time, spiritual love songs were an important element of medieval Christian theology and worship. What may surprise a modern audience is that the worldly love songs were often intensely spiritual, while the religious ones were often highly sensual and erotic. This seminar investigates the convergence of worldly and spiritual elements in the poetry and music of medieval love songs. Students will learn basic tools for analyzing medieval poetry and music, and through such analysis, coupled with discussion of readings from the scholarly literature, they will explore the provocative interactions between literal and allegorical, sacred and profane, and ascetic and erotic elements in medieval culture. Primary texts will be drawn from Bernard of Clairvaux’s commentaries on the Song of Songs, the courtly lyrics and melodies of the troubadours and trouveres, and the lyric poetry of Dante, Petrarch, and Boccaccio. No prior musical training required. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 269. Intellectual Property: Pirates and Privateers. 3 Units.
We take it for granted that our cars and camels are our “property” but what about intangible objects like poems or songs on CDs? In this seminar we will examine the development of this relatively recent form of property through the lens of piracy. We will begin with piracy on the high seas. Through analysis of historical, literary, and cinematic representations of piratical activity in the early modern era we will develop a critical methodology to aid us when we turn our attention to the newer “intellectual” property. Intellectual property is rapidly becoming the linchpin of the burgeoning global “information economy,” and the U.S. is among its staunchest and most powerful enforcers. Yet only a century ago the U.S. was itself a pirate nation. After examining this piratical moment in the history of intellectual property we will turn for comparison to a selection of present-day transgressions—from peer-to-peer file sharing, to Asian software and CD/DVD bootlegging, and South American patent busting. Our aim will be to develop an informed position in the current public debate about the legitimacy and limits of private ownership of ideas in our globalizing information economy. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 275. Colors, Capes, and Characters: American Comics Symbolism. 3 Units.
The history of the comic book is a vital site for critical questions about intersections of art and popular culture in America. In this course we will not simply read “funny books,” but will examine a genre that is as unique as its many colorful protagonists: from Popeye to Superman, Wonder Woman to the X-men, comics have given us larger-than-life characters who are often caricatures of dominant (and sometimes subversive) American ideologies. We will learn not only the history of this unique genre, but will interrogate what it means to truly read comics artistically, politically, culturally, and symbolically. At heart, reading comics in an exercise in interpretation: given visual symbols, what meanings can we take from them? What can comics tell us? And how can we write about them in intelligent, critical ways? In this course we will learn to approach comics through critical thinking strategies; that is, questioning what they are, what they say, and where they come from. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 276. Philosophy of Art and Criticism: The Black Art. 3 Units.
Art has always had a shifting, complicated relationship to the general public. In today’s world, contemporary art is sometimes regarded as a detached, self-reflexive, and elite mystery reserved for in-the-know connoisseurs and aspiring scene-makers. Yet there are many points of entry for meaningful dialogue about the art, the artists, and the audience that comprise the world of contemporary art. This seminar will explore the critical and cultural contexts that can help foster this conversation. It will include visits to local museums, galleries, and artists’ studios, and culminate in a tour of the Progressive Art Collection. The goal of the seminar is to inspire a genuine interest in contemporary art and provide students with the tools required to think, speak, and write more clearly about it. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 280. Passport to Eastern Europe. 3 Units.
Images and texts shape rather than merely reflect the world and its geopolitical structures. Novels, films, and myths make significant contributions to the varied ways that people make sense of continents, nations, and other (often too conveniently used) geopolitical categories such as the East and West. After considering the ways in which the European continent has been imagined over the centuries, we will explore texts and films that have contributed to the invention of East Central Europe and the Balkans and continue to shape our understanding of the eastern parts of Europe. The class will include analyses of current news coverage of this area to unpack representations disseminated by the media and to reflect on the forces that aim to shape our understanding of geopolitical entities. Ultimately, the course hopes to address geopolitical assumptions, evaluate cultural contexts, and help you think critically about the constructed nature of geopolitical categories. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 281. Defining the Animal. 3 Units.
Since the Darwinian revolution of the mid-nineteenth century, the relationship between humans and animals has become an increasingly significant area of inquiry in fields as diverse as literature, the fine arts, anthropology, evolutionary theory, the biological sciences and philosophy. In this course, we will explore the way humans have sought to understand and explain the animal, beginning with several contemporary ethical debates surrounding animal treatment. Such works will lead us to a range of related social and institutional places and practices, such as the zoo, the insane asylum, biometrics, the treatment of women, and the concentration camp. At the same time, we will examine the way artists, writers and filmmakers explore the human/animal divide through painting (Franz Marc, Marc Chagall and Max Ernst), literature (Franz Kafka, D. H. Lawrence and Rainer Marie Rilke), and cinema, through representations of a donkey (Bresson, Au hasard Balthazar), a fly (Cronenberg, The Fly), a Great White shark (Spielberg, Jaws) and a grizzly bear (Herzog, The Grizzly Man). We will end with J.M. Coetzee’s The Lives of Animals, which moves seamlessly between cinema, through representations of a donkey (Bresson, Au hasard Balthazar), a fly (Cronenberg, The Fly), a Great White shark (Spielberg, Jaws) and a grizzly bear (Herzog, The Grizzly Man). We will end with J.M. Coetzee’s The Lives of Animals, which moves seamlessly between arts, anthropology, evolutionary theory, the biological sciences and philosophy. In this course, we will explore the way humans have sought to understand and explain the animal, beginning with several contemporary ethical debates surrounding animal treatment. Such works will lead us to a range of related social and institutional places and practices, such as the zoo, the insane asylum, biometrics, the treatment of women, and the concentration camp. At the same time, we will examine the way artists, writers and filmmakers explore the human/animal divide through painting (Franz Marc, Marc Chagall and Max Ernst), literature (Franz Kafka, D. H. Lawrence and Rainer Marie Rilke), and cinema, through representations of a donkey (Bresson, Au hasard Balthazar), a fly (Cronenberg, The Fly), a Great White shark (Spielberg, Jaws) and a grizzly bear (Herzog, The Grizzly Man). We will end with J.M. Coetzee’s The Lives of Animals, which moves seamlessly between moral philosophy and literature, tying together a wide variety of concerns and themes raised throughout the semester. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 284. The Art of Madness. 3 Units.
Taking a historical approach, this course will examine the relationship between the evolution of social and medical attitudes toward mental illness and fictional representations of madness in literature. Beginning with the early modern period, students will compare period sociological and medical narratives on mental illness to fiction works with representations of madness. In so doing, students will consider how the interactive dynamics of art and science contribute to cultural and social thought. Specific areas of inquiry will include: the development of psychology and its effect on societal perceptions of mental illness; cultural developments that occurred in response to changing perceptions of mental illness over the centuries; and the use of representational structures and narrative conventions in understanding and communicating the experience of mental illness. Other interrogations will include the imaginative function of mental illness in literature (e.g., melancholy’s role in creativity); the cultural myths in iconography of mental illness in different historical periods; and ethical dilemmas regarding mental illness as reflected in both medical and literary narratives. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285C. Conviction and Fiction. 3 Units.
How do our beliefs shape who we are? How do they shape how we tell others who we are? What can fiction tell us about our beliefs and about ourselves? This seminar will explore how authors reflect their beliefs through their writing—how fiction becomes a form of self expression, particularly of worldview, even when that is not the intent. Students will analyze 20th century fiction and the religious, cultural or psychological texts which influenced that fiction. Students will also be encouraged to think about how their own writing is influenced by belief systems, and to explore how our convictions cannot help but affect our writing and the way we understand our minds, our lives, our inner selves. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285D. The World of African Literature. 3 Units.
In this seminar, we will look at how a diverse number of African writers have responded, in both form and content, to three periods in Africa's literary history: the 1960s, or the decolonization period, which produced nationalist literature; the 1970s and 1980s, or the neocolonial period, which produced revolutionary novels; and the 1990s through the present, a period producing literature that contends with globalization. In an attempt to answer the riddle of what makes an African novel African, we shall grapple with fundamental questions concerning the origin of the novel; how it came to Africa; African literary traditions; and the language of the African novel. We will also use African literature to explore universal questions about politics and literature: What is a protest novel? What is the role of the writer and of art in society? The goal of the seminar is to increase your appreciation of African literature and literature in general, and at the same time sharpen your analytical, critical, oral and written skills. You will be expected to lead discussions, engage in peer critiques and, through scholarly essays, engage African literature. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 285F. Embattled Images of War. 3 Units.
Throughout history, from Pompeii to Abu Ghraib, images of war have captivated, inspired, shocked, and repulsed viewing audiences. As historical reflection, propaganda, documentation, a call-to-arms, a plea for peace, and/or personal creative expression, many of these images are fraught with controversy, questions of intentionality, integrity, and multiple agendas. From Poliailoalo to Ken Burns, this course will examine how artists have confronted large-scale human conflict over the centuries in paintings, sculptures, and prints, photographs and film as a way to consider the cultural and historical effect of war images within and outside the original context in which they were produced. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285H. Renaissance Figures. 3 Units.
This course explores the period of the Renaissance from 1400 to 1600. Is this period better understood as the European renaissance, the "rebirth" of Antiquity, or the Early Modern Period, the emergence of a world that leads directly to our own? We will look at the period and its famous figures from two different perspectives: Machiavelli in a bio-intro and in his work, The Prince; Luther as history's first best-selling author (the importance of the printing press) and in John Osborne's play; Elizabeth I in a short biography and a recent "Hollywood" bio-pic; Galileo in the historic accounts and in Bertolt Brecht's play; Joan of Arc in a short biography and Bernard Shaw's play; and Hamlet, the play and the character, in text and performance. Do the two different representations present two different people (characterizations) or a unified composite that we understand in greater depth? Do Shaw, Brecht, and Osborne depict three figures from the period to understand better the person, the history, or the 20th Century/Modernity? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285I. Representing the Immigrant. 3 Units.
For many the world over AMERICA is a dream, a powerful myth, whether imagined through TV and movies, metaphors such as The Gold Mountain, or as symbolized by the Statue of Liberty. Following those visions may lead to success or disenchantment or both. Through fiction, memoir, films, and photographs we will explore the experience of immigrants: the tensions, generational conflicts, and difficulties with communication and culture their families undergo. We will examine expressions of those varied and complex experiences, especially how language represents them. We will also look at the significance of language itself—think about what and how words mean, and the difficulties of linguistic and cultural translation. Students will share their reactions to what we read and see in class discussion and also in writing informally, even (if they wish) personally. Formal requirements: two shorter analytical papers and a longer paper using sources and possibly interviews, also to be presented in oral reports. There will be conferences on papers and revision. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285K. African American Performance. 3 Units.
The course is structured around a historical overview of documentary film from 1920 to the present. We begin with Robert Flaherty's Nanook of the North (1922) and focus on a different documentary style each week, from the city symphony films of the late 20s and early 30s (Jean Vigo, On the Subject of Nice, 1930) to avant-garde experiment (Dziga Vertov, The Man with a Movie Camera, 1929), to cinema verite (Rouch and Marin, Confessions of a Summer, 1955) and its effects on the French New Wave (Jean-Luc Godard, Breathless, 1959). Other style will include direct Cinema (Drew and Pennebaker, Primary, 1960), the improvisational style of John Cassavetes, the use of time-lapse photography (Reggio, Koyaanisqatsi, 1982), and, finally the documentary (Bob Roberts. 1992). The course will emphasize the importance of ideology, bias, and efforts to capture the "real" through the work of Leni Riefenstahl (Triumph of the Will, 1935), and 1970's examples of Third Cinema in Cuba, Brazil, and Argentina. Each student in The Documentary Impulse will be required to create on five-minute video using a particular documentary mode examined in class, paying attention to ideology, narrative structure, transitions, sounds, and video editing techniques. The final project will use either found stills, or newly shot filmed images, and will include a sound track either from the Freedman Center's archives, or of the student's own creation. Equal time will be devoted to written assignment that analyze the documentary style of particular films. The first half of the course will include a weekly film screening in KSL; after midterms, the location will alternate with the Freedman Center, where students will spend time creating and editing video projects. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285L. The American Dream: Real and Imagined. 3 Units.
What is meant when we or our leaders talk about "the American dream"? Is it a political cliché, a myth, or something fundamental to our national ethos? In this seminar students will explore what is meant by "the American dream." We will pose the questions: how it has been defined by artists, writers, political leaders, immigrants and the native-born; how it has changed over time; and to what extent the dream is real and/or imagined? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285Q. The Documentary Impulse. 3 Units.
The course is structured around a historical overview of documentary film from 1920 to the present. We begin with Robert Flaherty's Nanook of the North (1922) and focus on a different documentary style each week, from the city symphony films of the late 20s and early 30s (Jean Vigo, On the Subject of Nice, 1930) to avant-garde experiment (Dziga Vertov, The Man with a Movie Camera, 1929), to cinema verite (Rouch and Marin, Confessions of a Summer, 1955) and its effects on the French New Wave (Jean-Luc Godard, Breathless, 1959). Other style will include direct Cinema (Drew and Pennebaker, Primary, 1960), the improvisational style of John Cassavetes, the use of time-lapse photography (Reggio, Koyaanisqatsi, 1982), and, finally the documentary (Bob Roberts. 1992). The course will emphasize the importance of ideology, bias, and efforts to capture the "real" through the work of Leni Riefenstahl (Triumph of the Will, 1935), and 1970's examples of Third Cinema in Cuba, Brazil, and Argentina. Each student in The Documentary Impulse will be required to create on five-minute video using a particular documentary mode examined in class, paying attention to ideology, narrative structure, transitions, sounds, and video editing techniques. The final project will use either found stills, or newly shot filmed images, and will include a sound track either from the Freedman Center's archives, or of the student's own creation. Equal time will be devoted to written assignment that analyze the documentary style of particular films. The first half of the course will include a weekly film screening in KSL; after midterms, the location will alternate with the Freedman Center, where students will spend time creating and editing video projects. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 285R. Crime and Punishment in German Literature. 3 Units.
How societies define and punish crime is related to a web of interconnected considerations including the form of government, the legal code, social mores, evolving conceptions of justice, the purpose of punishment, and attitudes toward individual criminals and criminality in general. These social, historical, and ethical norms give rise to questions such as: What constitutes a crime? How is the violation of the law different from or similar to transgressions of morality or ethical norms? What is the purpose of punishment and why is this important? To what extent are we interested in the circumstances that lead to crime? In what ways is punishment an insufficient answer to crime? This course will explore the social and historical questions raised by the perpetrators and victims of crime as well as attending punishment in the literary works of Friedrich Schiller, Heinrich von Kleist, Annette von Droste-Hulshoff, Franz Kafka, Bertolt Brecht, Primo Levi, Hannah Arendt, and Bernhard Schlink. Focusing on short stories, detective fiction, novels, drama, and personal essay, we will pay particular attention to the way that criminal transgression is defined, the role of society and history in producing criminals, when and why punishment is justified or necessary, and the degree to which these resolutions are "just." Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285T. Art, Music and Culture. 3 Units.
This course uses the intersections of art and music as a way to understand how the arts reflect, interact with, and influence the cultures in which they develop. After an introduction to research and writing in the arts (week 1), the course continues with a survey of certain historical periods and masterpieces of European and American art and music from 1700 to the present (weeks 2-6). It then takes up a few important themes in the interaction of music and the visual: 1) the concert hall as the intersection of architecture and acoustics (week 7); 2) the art museum and its music (week 8); 3) music and film (week 9); 4) the Broadway musical (week 10), and 5) rock music and its artifacts (week 11). A full week (12) of instruction on writing and oral presentation then prepares students for a seminar paper and seminar report, the creation and refining of which constitutes the final phase (weeks 12-15) of the course. Requirements and activities include, in addition to the seminar paper and report, a series of activities including three optional and three required events centered on the Cleveland Museum of Art and its concerts, the Cleveland Orchestra at Severance Hall, and the Rock and Roll Hall of Fame Museum. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285U. Popular Music and Film. 3 Units.
This course takes an interdisciplinary approach to studying music in American film. Students will learn to analyze film and music with greater sophistication, to contextualize them in time and place, and to interpret their meanings. The films predominantly feature jazz and popular music. We will discuss several aspects of a film: filmmaking techniques, visual composition, the film's available interpretations, audience reception, and so on. We will also discuss musical composition and performance, artists' self-representation, the link between music and commerce, and so on. Course sources include films and critical literature. The primary focus of the class will be on the ways music and film intersect as entertainment and art. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285V. Castaways and Cannibals: Stories of Empire. 3 Units.
Through a study of texts that exploit "new world" images like the castaway, the cannibal, the wild man, and the exotic woman, this course explores the ideologies that propelled nineteenth-century imperialism, particularly regarding the British in Australia and South Africa. The class will consider how British settlers made "homes" in hostile and unfamiliar climates, how they addressed the problem of unfriendly and unequal contact with indigenous peoples, and how contemporary novelists reevaluate the historical past. The course will work under the premise that contemporary geopolitical realities have been shaped by the imaginative work of British colonialists who, under the principle of terra nullius or "no man's land," claimed the land and the resources of these southern territories and dismissed the very existence of the indigenous peoples that populated them. The scope of the course will be broadly historical, exploring works that participated in British imperialism, as well as those that take a modern perspective. Course materials will be drawn from a variety of genres, including fiction, poetry, film, ethnography, natural history, history, and criticism. Ultimately, students will consider how narratives participate in the shaping of reality and of real-world relationships of power. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285X. Living in the Digital Age. 3 Units.
Digital technologies have changed the world we live in. This brave new world is populated by new-media, video, games, and social networks. To survive this world we need a vocabulary of criticism and authorship, a "New Media Literacy" that we can use to effectively and efficiently embrace our roles as both artist and critic. This course explores a wide variety of New Media themes in both contemporary and historical contexts. Students in the course will analyze their ever-evolving relationship to New Media as both viewers and creators. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 285Z. The Ubiquitous Frankenstein. 3 Units.
This seminar will explore the birth, evolution, devolution, and undead nature of the Frankenstein myth in popular culture. Using Mary Shelley's novel, her source texts, 19th- and 20th-century critical accounts, and 19th- and 20th-century popular cultural manifestations, the seminar participants will discover how "Frankenstein" found its way into the Western mind and continues to provoke responses both in those familiar and in those completely unfamiliar with the novel. The course will touch on issues of literary influence, science/technology, religion, ethics, education, literary merit, popular culture relevance, and adaptation as art form. Central questions for the seminar include: (1) Does the Frankenstein myth as we perceive it today have anything to do with Mary Shelley's original novel? (2) What were the moral and ethical implications of Shelley's novel for her time and for the generations afterward? (3) Is an "accurate" film adaptation of a literary work possible or needed? (4) Is being ubiquitous a blessing or a blight for a literary work? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 286C. How Photos Shape What We See. 3 Units.
Because of both its special ability to convince and its ubiquity, photography has had a major impact on the way we view the world, and particularly in our view of "the other." Just like other major forms of discourse, photography should be approached with a thoughtful and critical attitude. Some of the techniques of critical looking are different from the techniques of critical reading, but the fundamental tasks are very similar. The aim of this seminar is to help students develop an awareness of why and how photographs are such effective media of communication, and to help them develop an ability to read photographs critically. This is, of course, set within a general context of developing critical reading and writing skills. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 286J. Creativity and Constraint. 3 Units.
The purpose of this course is to explore creative problem-solving as it relates to different disciplines and types of problems and to encourage a passion for finding best solutions, not merely obvious ones. We will use and evaluate case studies of real-world projects and complex decisions, readings about creativity, firsthand accounts from creative professionals, and in-class exercises to hone strategic thinking skills. The seminar is specifically concerned with how constraints--ranging from budgets and schedules to the laws of physics--can encourage, rather than inhibit, creative solutions. But we will also consider general questions about the process and psychology of problem-solving. Areas of investigation will include steps in establishing problem scope and defining and recognizing successful solutions; the dynamics of group versus individual problem-solving; and strategies for communicating complex ideas to teammates and leading the creative process. Students will be expected to participate actively in shaping class discussions and activities. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 286S. Shakesploitation of an Icon: Four Hundred Years of Shakespeare Marketing. 3 Units.
Following the interregnum in England, William Shakespeare began a long, sustained trajectory as a cultural icon, first in England, but eventually among all English-speaking cultures. In the process, Shakespeare's works have been reinterpreted, adapted, re-contexted, commoditized, and re-purposed for the sake of art, educational relevance, and entertainment. In the process, Shakespeare has often become the tool of unabashed commercialism, a practice which has come to be known as "Shakesploitation." But why is Shakespeare's work so frequently pilfered? Why are out of context references to him so ubiquitous? Why do people tend to equate the name of Shakespeare with qualities of genius? Why have his works been continually adapted (often shamelessly) not only for the stage, but into other genres, including operas, paintings, novels and films? How do we account for the proliferation of Shakespeare-based self-help books such as Shakespeare on Leadership? Why is the infant stimulation video Baby Shakespeare a best-seller? This course will explore these questions not only by reading a selection of Shakespeare's most enduring works, but also by examining criticism, adaptations, and marketing strategies that have been applied to Shakespeare's image and works over the last four centuries. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 286U. Puzzled. 3 Units.
"Puzzled" will look at the practice of puzzle making and puzzle-solving and explore the meaning of puzzles for different cultures throughout history. We will read works from the disciplines of math, history, anthropology, philosophy, and literature. We will explore why certain types of puzzles became popular and how puzzles have transferred from one culture to another. We will examine the role of code writing and code-breaking in the military and in the world of business. We will read examples of fiction and watch films that adopt the form of the puzzle as a narrative device. We will think about the function of puzzles as instruments to exercise the faculties of reason and logic and as a means of leisure or pleasant distraction. Students will be asked to both solve and create puzzles over the course of the semester. They will write analytical essays on topics related to the practice and history of puzzle making and puzzle solving, and they will pursue a research topic that revolves around an issue or problem that has "puzzled" them. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 286V. Food Craze: (No) Reservations. 3 Units.
The great number of food-related TV-shows indicate an unprecedented interest in questions about and fascination with food; in fact, these TV shows allure viewers with the appeal of a myth: eating involves discovery (Anthony Bourdain's No Reservations, On the Road Again with Mario Batali, Planet Food), thrill (Bizarre Foods), or "supernatural" competition (Man vs. Food, Top Chef). These television shows and food-related writings that accompany them in earnest "worship" food and often promote ideas of multiculturalism by which exciting and novel locales, foods, and meal preparatory techniques are discovered. The objective of this course is to "indulge" in these shows and food writings and scrutinize them: What explains such fascination with the viewing of and reading about food? In what ways can food-exploration trips expand on ideas and critiques of multiculturalism and globalization? What explains the centrality and "mythical" nature of food in the twenty-first century? To begin these conversations, we will touch on a plethora of food writing works including works motivated by environmental and health concerns such as Michael Pollan’s essays. Then we look at the world of cookbooks (including the cookbooks of Julia Child and Rachel Ray), food blogs and TV-shows, and essays by Bill Buford and Calvin Trillin among many others. Prereq: Passing letter grade in a first year seminar in FSNC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 287F. Telling True Stories: Literary Journalism in America. 3 Units.
Literary journalism is a genre of nonfiction writing that employs all of the reportorial and truth-telling covenants of traditional journalism, while employing rhetorical and storytelling techniques more commonly associated with fiction. In short, it is journalism as literature. This course will introduce you to major themes in American literary journalism, the genre’s representative writers, and the enduring questions of the field. For example, we will ask how these stories work as narratives, as scientific explanations, as political tools, and as entertainment. How do these categories overlap? How do they motivate us to act? Where are these stories published and who is the readership? How do historical and cultural contexts influence and appear in the works? What is the relationship between (literary) journalism and democracy? What is the relationship between form and content? Is there a difference between physical truth and emotional truth? In the process of answering these questions, this course will emphasize close reading, interdisciplinary thinking, and the writing process. Through reading assignments, class discussions and presentations, and paper writing we will have the opportunity to examine, analyze, and develop our own interpretations about these multifaceted writings and the diverse cultural experiences and meanings they chronicle. Prereq: Passing letter grade in a first year seminar in FSNC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 287G. Shadowplay/East and West. 3 Units.
Shadows flicker across the screen, drawing us back to the precursors of the cinema and forward to digital effects. To borrow Gorki’s phrase, the cinema is truly a “train of shadows.” This course focuses on interactions between shadow theatre, dance, visual arts, the cinema, and traditional forms of play. While the main focus is on traditional artistic forms, we also explore modern variants, including the use of shadows in contemporary photography. We will look at shadows in different (yet overlapping) contexts, and compare the effects of still and moving shadows. All of these contexts involve moments of narrative and silence. Through a series of short papers which will be integrated into a longer paper, each student will explore his/her approach to a central question: What does it mean to play with shadows? Prereq: Passing letter grade in a first year seminar in FSNC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 287H. Cityscapes in 20th-Century and Contemporary Visual Culture. 3 Units.
This seminar will explore the dynamic meanings of modern and contemporary urban environments through visual representation. What does a city look like? As great complex entities of constant change, we will see that cities have been portrayed in a myriad of ways. What social ideals have engaged the vision of architects, urban planners, and landscape designers in the making of the metropolis since the late 19th century? How have artists interpreted major cities as sites of modernity, technological advancement, civilization and cultural vanguard; or, in contrast as sites of failed experiment? How can forms of representation help us envision the entirety of urban spaces of diverse geographies, including typically un-aesthetic forms of fringe areas, the abandoned zones of prior use, and infrastructures? What recent developments in convergent media might be employed as catalyst for achieving an enhanced understanding of the interrelationship of urban structures, spaces, and human need? Our chief objective is to begin to comprehend the enormity of these questions. Thus, we will view and discuss selected examples of architecture, design, art, photography, film and video, in essence sampling the roles they have played in the process of conceiving and imagining the design and significance of cities. Our examination of visual material will be organized over the course of the semester according to three major overlapping themes: the utopian and visionary city, the visual culture of cities, and the emerging city. The methods by which we will seek to interpret the visual component of our studies in the three categories will be adapted from the perspectives of visual culture, urban studies, urban design and landscape urbanism, and architectural history. Prereq: Passing letter grade in a first year seminar in FSNC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 287M. Literature of 9/11. 3 Units.
Nearly 10 years after the September 11, 2001 terrorist attacks, politicians, economists, artists, and educators continue to use the umbrella term "post-9/11" to describe our general cultural sensibility. Yet, what does it mean, specifically, to live in a "post-9/11" America? How have the cataclysmic events of that day altered our political and intellectual points of view? In this course, we will explore these questions by considering how novelists, poets, and other writers have and continue to represent September 11th. We will analyze techniques used to narrate the story of 9/11, investigating how American cultural values—or critiques of such values—influence the aesthetic choices that writers make. Our course will begin chronologically at "Ground Zero," as we examine representations of the immediate urban trauma while exploring the tensions between memorial and commemoration, spectacle and commercial pursuits. We will then focus on works by both American and international authors addressing the days and months following the attacks. We will examine how America is depicted with respect to its foreign policy and domestic politics, paying particular attention to the space of the "home." In addition to novels, short fiction, and poetry, we will read cultural criticism and some philosophy. Students will be given additional opportunities to explore film and other visual or new media representations of 9/11. Prereq; Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 287N. Fantasy and Philosophy. 3 Units.
Fantasy novels and films can be philosophical catalysts. One can read philosophical arguments and debate ethical and epistemological issues. Or, one can become immersed in a work of art and imagination that presents a fiction expressing the same profound human issues. Such a work dramatizes philosophical debates and conflicts, and hurls readers and viewers into poignant, gripping, suspenseful, horrific, or beautiful stories that convey those very same struggles with truth and morality. Indeed, while many philosophical works are inaccessible to everyone but those with a specialized vocabulary (or prescient ability to discern tortured language), literary and cinematic works actually stimulate a different part of the brain. The ideas are conveyed and processed differently, and this is why works of fiction can have such poignant and lasting effects on the emotions, provoke us to meditate on the grave and constant in human sufferings, and revisit those works as we relive our own struggles with truth, morality, love, identity, conflict, violence, and death. In this course students will read short works of fiction and philosophy, and watch films that delve into philosophical issues. These include selections from The Seventh Seal, Dr. Strangelove, Lord of the Rings, Harry Potter and the Half-Blood Prince, Star Trek, Futurama, House, M.D., True Blood, Dexter, Woman in the Dunes, The Denial of Death, The Dharma of Dragons and Daemons, Death's Dream Kingdom, Thus Spake Zarathustra, Philosophy and the Mirror of Nature, Serial Killers and Philosophy, and The Bhagavad Gita. Students who have taken USSO 286W for credit may not take this course. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 287O. What is Art for?. 3 Units.
Together we will study a crucial and distinctive aspect of the human mind: the uniquely human ability to engage in the production and reception of art. This course will explore human responses to artistic works in a wide range of media: literature, music, painting, and performance. Some of the larger questions we will be addressing in this course are the following: What is art for? Is art simply a kind of cognitive play that refines behavioural options over time? How is art related to (or dependent on) simulation, empathy and aspects of social cognition? What precisely can science contribute to explaining the aesthetic response and the artistic impulse? What, given the inherent constraints on human creativity imposed by human cognitive abilities, are the unique artistic conventions that contribute to experiencing a work of art as a work of art? What are the conceptual, intentional, emotional dimensions of art, manifested as they are in artistic creativity, talent and appreciation? Like most big questions, these are addressed in different ways by the disciplines of psychology, neuroscience, evolutionary biology, philosophy, and aesthetics. By exploring some collisions among these multiple perspectives we will learn more than through any single perspective. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 287T. King Arthur's Days and Knights. 3 Units.
Few legends have remained popular and vital as long as the story of King Arthur has. Beginning with brief references in sixth-century histories, Arthur has risen again and again in medieval adventure stories, Victorian lyrics, and contemporary cinema. Over thirty-five films, in fact, have depicted the adventures of the Round Table. How can we explain this phenomenon? To investigate this question, this seminar will trace the development of the legend from its oldest remaining written manifestations to the present day. A chronological approach will allow us to see how Arthur's story accumulated new elements over time, including the famous love affair between Lancelot and Guinevere and the equally famous quest for the Holy Grail--neither of which appeared in the earliest versions of the story. We will discuss topics such as what Arthur has represented at different periods in time and how his story changes when it is retold in different genres and media. We will also consider how writers have adapted Round Table stories to suit political and social agendas. Finally, to broaden our perspective we will spend a unit exploring legends from a variety of cultures and comparing their presentation of heroism. Texts will include Sir Gawain and the Green Knight, pieces of Sir Thomas Malory's The Death of Arthur, the indispensable Monty Python and the Holy Grail, and portions of its new incarnation, Spamalot. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 287X. Paris in the Arts. 3 Units.
Since the late eighteenth century, Paris has been a favorite subject for visual artists and writers alike, as well as the birthplace of several seminal artistic movements, such as Impressionism, Cubism, and the New Wave. This course will use representations of Paris in the arts as lenses through which the identity and recent history of this major city will come into focus. Further, stories, photographs, and films that stage the city of Paris and its people will also allow us to explore the broader relationship between art, the city, and the plight of modern man. The course will include a wide range of artworks, from mid-nineteenth century photographs documenting the destruction of Medieval Paris and the advent of a rational capital, to stories chronicling the fate of hopeful newcomers, and films where the city is treated either as intimate landscape or impersonal grid. The course will be both discussion based and writing intensive: students will be encouraged to envision class participation and writing assignments as means to analyze collaboratively, as well as individually, the material at hand. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 288I. Diversions: Experimental Stories and New Media. 3 Units.
In this course, students will study works in which the authors and artists have experimented with traditional linear forms and created stories that are, for instance, labyrinthine, framed, collaged, geometrical, digressive, and even networked. While both print-based and digital texts offer spaces for diverse and deeply engaging written or visual performances, they also require further critical inquiry into the ways in which they create, reflect, or resist social and cultural values. Our focus in this course will be exploring how stories (and other texts) - in print, on screen, on canvas, in digital formats - that don't follow or that play with conventional rules of order encourage us to participate in making sense of our contemporary world. The goals of the course include: exploring the relationship between form and content in written and visual productions, developing a critical perspective from which to enjoy, assess, and respond creatively to traditional print and multimedia presentations, and making excellent use of research resources at CWRU and cultural resources at University Circle. In addition, students will work to develop their writing and presentation skills and to innovate novel models of research writing. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 288J. Cultural Representations of Violence. 3 Units.
The twentieth century was arguably the most violent in human history. That legacy has carried into our own time: from 9/11 to school shootings to the recent conflict in Libya, violence surrounds us. But what exactly is violence? How is it that we all recognize it when we see it? How do we represent it to ourselves? Most importantly, how do we make sense of it? Can we make sense of it? This class will explore these questions by studying the uneasy role violence plays in literature, film, performance art, and other cultural productions. As we do so, we will consider two central and potentially conflicting ideas. On the one hand, violence tends to resist our abilities to represent it; any depiction seems somehow inadequate to the real thing. At the same time, representations of violence surround us constantly, and for any number of political, cultural, and social reasons. Thus, violence in modern and contemporary culture is paradoxical, both permeating and resisting our imaginations. Through class discussions, written responses, presentations, and independent research projects, we will explore these and other ideas, considering how art attempts to comprehend violence and how artistic representations of violence relate to (implicate?) their audience. Although our focus will be largely on art, and primarily literature, our approach will be necessarily interdisciplinary. Be prepared to weigh in on topics as diverse as politics, aesthetics, philosophy, gender and sexuality, war, trauma, and colonialism. Undoubtedly, violence can be a painful subject, but the goal of our seminar is to pursue a rigorous intellectual and imaginative inquiry into one of the most pressing topics of our time. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 288K. Hiroshima: History, Memory, Representation. 3 Units.
On August 6, 1945, when the U.S. first used nuclear weapons against Japan, the name "Hiroshima" ceased to designate merely a place, and came to signify an event, an anxiety, and a prognosis for the future. This course seeks to interrogate the various and overlapping discourses which constitute the symbolic nexus around Hiroshima--and, to a lesser extent, Nagasaki. We will be asking how the event of the bombing has been understood according to different disciplinary perspectives (history, psychology, literature, and film) and how it is represented from both American and Japanese perspectives. Accordingly, our investigation will be an intensely comparative attempt to answer the question: if there is something like what Robert Lifton calls "the atomic bomb experience," then how is that experience captured in different forms of cultural expression? Or, perhaps more importantly, how do these cultural objects speak to an ongoing negotiation with historical trauma in the present? What differences and similarities do we find among different, cross-cultural encounters with the atomic bomb? Our investigation into the politics of representation around this event will lead us ultimately to ask whether it is even possible to capture the novelty and horror of an event that in many ways exceeds language altogether. After orienting ourselves to the history of the bombings and the psychological and philosophical issues at stake in them, we will turn to some of its canonical representations in John Hersey's Hiroshima and Masuji Ibuse's Black Rain. From there, we will look at Yoshihiro Tatsumi's graphic novel Goodbye. And we will conclude with the cinematic representations of Alain Resnais's Hiroshima mon amour and Ishiro Honda's Godzilla. As a University Seminar, the course will also include substantial instruction in research and writing, leading to students' production of a medium-length research paper which they will work on throughout the semester. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 288R. Cultural and Ethical Issues in American-Chinese Business Relations. 3 Units.
The American and Chinese economies are the two biggest economies in the world. The Chinese economy is the fastest growing large economy in the world. The dynamic American economy is unique in its combination of large multinational enterprises and small entrepreneurial firms. The American economy is characterized by a vast private sector, the rule of law, and the largest private capital markets in the world. The Chinese economy is 30 years into a period of reform from communist industrial organization to "socialism with Chinese characteristics", which includes a significant role for the private sector. The Chinese economy is still an experiment. The established American business system exists within a democratic political system, where corporate lobbying has a significant influence on the creation of laws and government policy. The Chinese economy is still under the tight control of the Chinese Communist Party, a one-party dictatorship. When Americans go to China to do business, they find the cultural, social, political, and moral systems vastly different than what they are familiar with. Transparency International Ranks China 27 out of 28 of the most corrupt large economies in the world. In China, bribery of government officials and kickbacks to sales and purchasing managers is common. Key questions we will investigate are: 1. In what ways are the two business systems similar and different? 2. What is the nature of Chinese social relations? How do they differ from American social relations? What effect do they have on business? 3. What is the nature of the Chinese political system? What impact does it have on business in China? 4. How do American business people negotiate the Chinese business system? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 288V. Seclusion, Gender and the Exotic: Imagining the Harem. 3 Units.
When the term "harem" is invoked, the first image that comes to mind is of scantily clad women living in sequestered opulence in some exotic, yet vaguely "Eastern" place. This image has been reproduced and perpetuated through art, literature and music to the degree that even today, familiar themes of seduction, passivity and mystery related to the harem can be found throughout popular culture. Historically, gender segregation reaches into antiquity and existed in a variety of forms, cross-culturally. The term "harem" was not used regularly until the 13th century, and then only referred to the specific form of gender segregation used by the Ottoman court. Application of the word "harem" to all women's quarters in other cultures was the result of European contact with the Ottoman Empire, despite the fact that other cultures often had their own, distinct, terminology for women's spaces. In this seminar, we will explore the history and practice of gender segregation as a means to examine how the idea of the harem was constructed in the Eastern and Western imagination. Under what circumstances did women live separately? How were gendered spaces created, justified and maintained? Where did our image of the harem come from? Using primary and secondary sources, we will examine a selection of histories and representations of the harem in literature, slave and travel narratives, and religion. As the Western idea of the harem is part of what Edward Said theorized as "Orientalism", we will explore Said's theory as well as subsequent theories related to gender and the exotic. In addition, we will look at images of women's quarters from antiquity to the present and listen to representations of the exotic in music. Our goal is not only to study the historical fact of the harem, but also to engage issues related to gender, the exotic and representation from different disciplinary and cultural points of view. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 288W. A History of Noise: Music and Politics from Beethoven to Jimi Hendrix. 3 Units.
This writing-intensive course examines the roles that noise has played in political discourses throughout the nineteenth and twentieth centuries. Its charged bookends - Beethoven and Jimi Hendrix - invite students to challenge supposed differences between "Art" and popular music and examine relationships between music and society. "Who does 'Art' serve?" "Is it possible to distinguish between 'Art' and noise?" and "Is sound capable of influence at all?" are among the chief questions this course explores. The curriculum's historical breadth allows students to consider these larger questions through a variety of case studies, including (among others) the bombast and nationalism of Beethoven's ninth symphony; the Marxist-inspired "emancipation" of sound, as presented by Arnold Schoenberg; the gender-bending metal of Eddie Van Halen; and the protest-by-distortion of Hendrix's national anthem at Woodstock. By the end of this course, students will gain more awareness of the ways in which the music surrounding them seeks to shape society. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 288X. 1939. 3 Units.
This course will examine the year 1939. At the time, people in the United States and Great Britain were investing in creating an active and lush fantasy world. There were debutant balls, the World's Fair, college sports, "The Big Sleep," "Gone With the Wind," and "The Wizard of Oz." Meanwhile Hitler was also conceiving of his dream world. The history of 1939 is the history of these competing fantasies and their collision. In addition to bettering their writing and research skills, students in this class will learn to understand the language and imagery of films, speeches, propaganda, social mores, diplomacy, and other various modes of communication that were used to construct and reinforce the sundry of imagined realities of 1939. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 289G. The American West on Film. 3 Units.
Few geographical areas in the United States contain as many tall tales and mythological figures as the American frontier. From an extreme point of view, the West is the only American myth because no other nation can claim the cowboy, the Native American, or the immigrant worker on the transcontinental railroad. And yet, each of these figures remains spectacularly diverse. We celebrate their variety and lionize their individuality in film, popular novels, and cultural criticism. From the visions of the New World to the conquest of the frontier, the color of the American West proliferates and transforms, defining our culture. In this course, we will investigate how critics have understood our fascination with the Western frontier. The class will broadly explore version of the frontier in novels, films, and historical accounts. Reading about the history of the actual west, the course will then examine how the films of the twentieth century alter history in order to express the fantasies and anxieties of their own time. By studying both history and film, we will be able to interrogate manifest destiny and the myth of American exceptionalism. What makes the West such an integral part of our understanding of America? How has its actual history become myth? What does the American fascination with the cowboy, the Native American, or the outlaw imply about our nation? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 289J. Beauty Myths Today. 3 Units.
Published just over 20 years ago, Naomi Wolf's influential study "The Beauty Myth" significantly influenced popular thinking about body image. Analyzing both cultural trends and empirical data, Wolf argued that as women made unprecedented advances in public life in the latter half of the 20th century, they were at the same time held to increasingly unrealistic standards of physical beauty. Wolf's study not only contributed to extant analyses of sexism in the media, but also introduced to mainstream readers the politics of the representation of women's bodies in popular culture. This course will examine to what extent Wolf's original claim hold true today. In other words, what physical standards must one meet in order to be considered professionally and personally successful? In exploring this question, we will look at the origins and current workings of the American beauty industry, considering the changing representation of the ideal body throughout the 20th century. We'll read texts by historians, philosophers, novelists, poets, cultural critics, and journalists who examine the politics of beauty. To both (re-)define and trace the continuing effects of beauty myths in the 21st century, we'll consider the rhetoric of ideal womanhood as it shows up in popular texts such as websites promoting anorexia, TV shows about plastic surgery, diet books, magazines, and guides for mothers. Students will have opportunities to define the beauty myth more broadly, exploring its effects on men and its mediating presence in other cultural sites. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
selection of courses. Advisors may refer students to other sources of information and assistance at Case Western Reserve.

The advising model at Case Western Reserve aims to balance generalist and field-specific advising, shifting the balance as students progress through their undergraduate careers. At the beginning, a student's First Seminar instructor provides generalist advising until the student declares a major. At the same time, representatives from each major and minor are available to provide field-specific advice as a student decides on an area of focus. Once a student declares a major, the emphasis shifts to major-focused advising with an advisor assigned in that field to guide the student in the construction of an academic plan and to monitor the student's progress in pursuit of that plan. Throughout a student's undergraduate career, the deans in Undergraduate Studies are available for generalist advising to address concerns that fall outside of the pursuit of a specific major.

Students are expected to initiate and maintain regular contact with their advisors to address the student's curricular and career concerns, and to review progress towards graduation. Students are expected to meet with advisors when declaring a major or minor, before registering for classes each semester, and when making corrections to their academic requirements reports.

Advising during the First Year

During a student's first year at Case Western Reserve University, the faculty member instructing the student's SAGES First Seminar serves as the student's academic advisor. Students and their advisors are expected to explore the student's academic interests and concerns, as well as educational and career goals, and to seek expert information and advice about academic policies and procedures and about specific academic programs from the General Bulletin, from newsletters and websites, from the academic representatives in the majors and minors designated as first year resources, and from other sources of advice and counseling on campus. Staff in the Office of Undergraduate Studies (http://case.edu/ugstudies) (including the coordinators of first-year residence education in the First-Year Residential Colleges), the University Career Center (http://studentaffairs.case.edu/careers), Educational Services for Students (http://studentaffairs.case.edu/education), the Office of Multicultural Affairs (http://studentaffairs.case.edu/multicultural), the University Counseling Service (http://studentaffairs.case.edu/counseling), and specialized programs such as Co-op (http://engineering.case.edu/coop) (co-operative education), SOURCE (http://www.case.edu/source) (research and creative projects), the Center for International Affairs (http://case.edu/international) (study abroad, international student services), and the Center for Civic Engagement and Learning (http://studentaffairs.case.edu/civicengagement) (community service) are available to support first year students and their advisors with publications, workshops, websites, experiential learning opportunities, and individual communications.

Advising in the Majors and Minors

Although some first year undergraduates enter with definite goals, they are not assigned to advisors in the majors until they have declared their major. Opportunities for exploration of majors and minors during the first and second semesters include a Choices Fair, departmental information sessions, and individual conversations with faculty and academic advisors. First year students who are ready to declare a major in their first year may do so beginning in November. Students engaging in further exploration of majors are expected to declare a major no later than the end of the second year (See Declaring a Major in the section on Academic Policies and Procedures). When a student selects a specific major or minor, the academic representative assigns a faculty advisor. A choice or change of major or minor is not recorded for any student until the major or minor declaration form, bearing the signature of the student, the name of the advisor, and the signature of the academic representative of the major or minor, has been completed and submitted to the Office of Undergraduate Studies, 357 Sears Bldg.

After the first year, students who have not declared a major should consult their assigned advisor (noted in their online student information) or the academic representative of an academic department of interest for advice and schedule approval.

Advising in the Office of Undergraduate Studies

The deans and advisors in the Office of Undergraduate Studies, including the coordinators of first-year residence education in the First-Year Residential Colleges, are available to answer student and faculty questions about University rules, practices, programs, and resources and to meet with students who are interested in accelerated undergraduate to graduate and professional school programs, academic awards, and fellowship and scholarship opportunities. All students who have not declared a major should consult with their first year advisor or with one of the deans in the Office of Undergraduate Studies for advising and schedule approval. Students with interests in health professions and/or law school are encouraged to seek advice from the director of health career advising, Steven Scherger (http://www.cwru.edu/provost/ugstudies/prehlth.htm), and the pre-law advisor, Terri Mester (http://www.case.edu/provost/ugstudies/prelaw.htm), in the Office of Undergraduate Studies.

Undergraduate Academic Policies and Procedures

Academic Policies and Procedures

All academic regulations governing undergraduates are administered by the Office of Undergraduate Studies. Academic regulations are subject to change by action of the Faculty Senate, its Committee on Undergraduate Education, and the various committees responsible for the oversight of curriculum and academic standing.

When circumstances so warrant, a student may submit to the Office of Undergraduate Studies a petition requesting an exception to a specific regulation. Petition forms are available in the Office of Undergraduate Studies, 357 Sears Bldg.

Academic Grievance Policy

A student who wants to register a complaint about course instruction or evaluation should first bring the matter to the direct attention of the professor or instructor involved. If the matter is not satisfactorily resolved, the student should go to the chair of the academic department in question and seek departmental review. If neither step resolves the complaint, the student may take the matter to the faculty member's college or school dean for final review and decision.
Academic Integrity Policy

See the Case Student Handbook for more information about the academic integrity policy.

Academic Standing

See section on Academic Standing Regulations (p. 616).

Attendance

Students are expected to attend classes regularly. Each instructor is free to determine the extent to which absences affect the final grades of students but should make the policy regarding attendance known at the start of the course. Instructors should report excessive absences to the Office of Undergraduate Studies. Instructors who judge a student’s absences from class to be excessive may drop the student from the course with a grade of F. Instructors taking such action must notify the student’s dean in writing.

Students unable to attend classes because of illness should notify their instructors and make the appropriate arrangements directly with the instructor. The University Health Service and the Office of Undergraduate Studies do not provide medical excuses for class absence. Information concerning the policy of the Health Service and the Office of Undergraduate Studies is available in those offices.

Any student who is unable to attend classes or participate in any examination, study, or work requirement on a particular day because of his or her religious beliefs is excused from any such activity. The student will be given the opportunity to make up the examination or work that is missed, provided the make-up work does not create any unreasonable burden upon the university. When possible, students should give notice to instructors early in the semester about missing classes because of religious observance.

Audit

A student may audit a course with the dean’s or advisor’s approval and the consent of the instructor of the course. An auditor receives no credit for the course. Registration in a course cannot be changed from audit to credit or the reverse after the end of the drop/add period. However, a student may take for credit a course he or she audited in an earlier semester. At the beginning of the course, the student and instructor should reach agreement regarding the requirements to be met for a grade of AD. The grade of AD is entered on the student’s transcript if approved by the instructor of the course. If the instructor does not approve the grade AD, the enrollment is not posted on the transcript.

Course Loads and Overloads

In order to be classified as a full-time student, a student must enroll for a minimum of 12 credit-hours by the end of the drop/add period. Eligibility for many forms of financial aid and for participation on intercollegiate varsity sports teams requires full-time status. Students registering for fewer than 12 semester hours are classified as part-time and charged tuition on the basis of the number of semester hours being taken.

The normal full-time load is 14-17 credit-hours. Students ordinarily may not enroll in more than 19 credit-hours in a semester. Any schedule of more than 19 credit-hours requires a dean’s approval. Continuing students may enroll for 20-21 hours in a semester if they have a cumulative grade point average of 3.200 or better. To register for 22 or 23 hours, a minimum grade point average of 3.500 is required. Graduating seniors may be approved for overloads if they need such a schedule in order to graduate at the end of the semester in question.

Course Placement

No credit will be allowed to count towards degree requirements for foreign language or mathematics courses which duplicate work taken earlier in high school or in another institution. First-year undergraduates who have questions regarding their eligibility to receive credit for foreign language or mathematics courses should see the associate dean for first year students in the Office of Undergraduate Studies.

Course Repetition

Students have the opportunity to repeat a course in order to improve their mastery of the course material. When a course is repeated, the student will earn credit for the course only once, but both the original grade and the grade for the repeated course will be included in the semester and cumulative grade point averages, each weighted by the credit-hours for the course. The student’s transcript will show the comment “REPEATED: NO CREDIT AWARDED” directly below the original grade. Similarly, if a student repeats a course for which he or she has already received either test (AP, IB, etc.) or transfer credit, the original credit will be removed and the transcript will show the comment “REPEATED: NO CREDIT AWARDED;” credit will instead be awarded for the course taken at Case Western Reserve University. However, if the first attempt of the course resulted in a passing grade but the second attempt results in a failing grade, the student will continue to earn credit for the first attempt; both grades will be included in the semester and cumulative grade point averages.

The course repeat option may not be exercised after a degree has been awarded.

CAUTION: Students who are the recipients of any form of federal financial aid (grants, loans, work study, etc.) and repeat a course that previously earned a passing grade must enroll for a minimum of 12 credit-hours for which credit had not been earned previously.

Credit by Examination

Advanced Placement/International Baccalaureate/French Baccalaureate/A-Level Examinations

Students may earn degree credit on the basis of advanced examinations taken while in secondary school. Examinations eligible for credit and/or advanced placement include, but are not limited to, College Board Advanced Placement Examinations, International Baccalaureate Higher Level Examinations, French Baccalaureate, and A-Levels. Determination of the criteria for granting credit and/or placement is made by the appropriate department.

Proficiency Examinations

Departments within each academic unit offering undergraduate programs may choose to offer students the opportunity to earn course credit in specific courses by proficiency examination. To qualify for proficiency examination credit for a course, the student’s examination performance must demonstrate knowledge and skills at a level no lower than that of an average student who successfully completes the course. Upon notification from the academic department, the Office of Undergraduate Studies will post credit for the course on the transcript. The grade will
be recorded as PR, and will not be included in a student's grade point average.

Declaring a Major or Minor

Students matriculating at Case Western Reserve University as first-year students may begin declaring their majors, though are not required to do so, on November 1 of the fall semester. Transfer students may begin declaring their majors at the start of their first semester at Case Western Reserve. A choice or change of major or minor is not recorded for any student until the major or minor declaration form, bearing the signature of the student, the name of the advisor, and the signature of the academic representative for the major or minor, has been completed and submitted to the Office of Undergraduate Studies, 357 Sears Bldg.

Students who enroll at Case Western Reserve University as first-year students are expected to declare a major before registering for their third semester at Case Western Reserve. Beyond that point, students who have not declared a major will have a registration hold placed on their accounts until they have done so. Those who will have earned fewer than 60 credit-hours (including transfer, AP, IB, and proficiency credit) by the end of the fourth semester for students who started as first year students, or by the end of their second semester for transfer students, may request that their dean in Undergraduate Studies allow them to register for the next semester by lifting the registration hold. Students may later change their majors should their academic interests change.

Enrollment Changes

Drop/Add

Changes in course schedules must be submitted to the Registrar’s Office using the Student Information System or a drop/add form before the end of the second week of classes during the fall and spring semesters. However, for courses that run for half of the semester, students are allowed only a one-week drop/add period at the start of those courses. Deadlines for dynamically-dated courses (i.e. those that meet on some alternative schedule) are set in a proportional manner. Similarly, the drop/add deadline for summer courses are set in a proportional manner, with the deadline ordinarily being the second day of classes.

Students who add a course after the start of the semester are responsible for any work missed and are expected to speak with the instructor to learn the consequences of any work missed and whether there are opportunities for making up missed work. In some cases, the instructor of a course may require his or her consent before a student may add a course during the second week of the drop/add period.

Withdrawal from a Course

The First Undergraduate Year:

For the first two semesters of enrollment, matriculated students who are beginning their college studies may withdraw from a course at any time during the semester, but no later than the last day of classes. Any course for which a grade of W is assigned will be deleted from the transcript at the end of the semester. This policy is not available for transfer students and does not apply to the summer session.

After the First Undergraduate Year:

A student may withdraw from a course no later than the end of the 11th week of the semester and receive a grade of W. In extenuating circumstances, a student may petition for permission to withdraw from a course after the final date and receive a W. The grade of W will be posted on the student’s transcript.

For all course withdrawals:

Students in good academic standing (i.e., not on probation, probation incomplete, or continued on probation) may withdraw from courses through the Student Information System, provided that they remain actively enrolled in at least 12 credit-hours. All other course withdrawals (those by students who are not in good standing and those that take a student below 12 credit-hours of active enrollments) must be transmitted by the student to the Registrar’s Office on the appropriate form, signed by a dean in the Office of Undergraduate Studies. Failure to attend class or providing notice only to the instructor does not constitute an official withdrawal from a course. Such an unofficial withdrawal normally will result in the student’s being assigned the grade of F.

Students are ordinarily not permitted to withdraw from a course after a grade has been posted.

Withdrawal from the University

To withdraw from the university during a semester or session, a student must complete an official withdrawal form in the Office of Undergraduate Studies. If unable to complete the withdrawal in person, the student must send written notification to the Office of Undergraduate Studies. Failure to attend classes or notification of instructors only does not constitute withdrawal from the university. A student who ceases to attend or otherwise participate in courses without officially withdrawing will be assigned the grade F for each course in which he or she is enrolled.

Students who do not plan to return for the following semester must notify the Office of Undergraduate Studies (ugstudies@case.edu), 357 Sears Bldg., 216.368.2928, in person or in writing.

Final Examinations

Final examinations normally are required in all courses and must be given during the final examination period at the time assigned by the Registrar; they may not be given during the final week of classes or on Reading Days. Any exception must be approved by the dean of undergraduate studies.

No student will be required to take more than two final examinations on a single day. A student who has three final examinations scheduled for a single day should go to the Office of Undergraduate Studies and obtain the assistance of the dean in arranging to take one of those examinations on an alternative day during the final examination period. Similarly, a student with conflicting examinations should seek the assistance of the dean of undergraduate studies in arranging to have the time of one examination changed.

A student must explain immediately and in writing to the dean of undergraduate studies an absence from a final examination. If the explanation is acceptable, the dean will authorize the assignment of the grade Incomplete and the administration of a make-up examination by the instructor. In the event of an unexcused absence from a final examination, the instructor should assign the student a final grade that...
assumes a grade of zero on the final examination and is consistent with
the grading policy established for the course.

Graduation and Commencement

Application for Graduation

A student who has completed all graduation requirements in fewer than
four years has the choice of graduating early or deferring graduation
in order to graduate with his or her class. A student who completes all
graduation requirements in four years or more must graduate at that time.
The student must file an on-line application for the degree through the
Student Information System by October 1 for January graduation, by
February 1 for May graduation, and by June 1 for August graduation.

A student must discharge all financial obligations to Case Western
Reserve University to receive a diploma and for the Registrar's Office to
release final transcripts.

Graduation Check

Students must ensure that their Academic Requirement reports reflect
accurately their progress toward their degrees. All requested corrections
and exceptions must be submitted to the Office of Undergraduate Studies
at least one semester prior to graduation. Academic Requirement reports
are available on-line through the Student Information System.

Participation in Commencement

Students are eligible to participate in May commencement activities
provided that they have completed all degree requirements during
that spring semester or the immediately preceding fall semester or
summer session, or have an appropriate plan to complete their degree
requirements in the upcoming summer session or fall semester. A student
may participate in Commencement only once as a bachelor’s degree
candidate, though exceptions are sometimes made for students receiving
a second bachelor's degree at least one year after the first.

Incompletes

See section on Grades.

Pass/No Pass

See section on Grades.

Promotion

The standards for promotion are:

• To the sophomore class, 27 credit-hours completed
• To the junior class, 60 credit-hours completed
• To the senior class, 90 credit-hours completed

Reading Days

Prior to and/or during the final examination period two weekdays are
set aside as Reading Days to be used by students for completing
assignments and preparing for final examinations. In the fall semester
there will be one reading day on Monday of the first exam week and one
reading day on Friday of the first exam week. In the spring semester, the
two days prior to the beginning of the final exam period are set aside as
reading days. These days are not to be used by faculty for scheduling
examinations or other course activities that require the attendance of
students. They may be used by faculty to schedule review sessions for
which attendance is optional.

Readmission After Separation

See section on Academic Standing (p. 610).

Re-Enrollment After Voluntary Withdrawal

Students who have voluntarily withdrawn from the university and have
not taken courses elsewhere following their withdrawal may petition to
re-enroll in any semester. Students who have taken courses elsewhere
following withdrawal must provide official transcripts of their work with
their request for re-enrollment. Upon re-enrollment following a voluntary
withdrawal, students retain the credit-hours earned and quality points
for courses completed prior to withdrawal. In the first semester of re-
enrollment, their academic status is the status in effect at the time of
withdrawal, unless that status is changed by action of the Academic
Standing Board.

Registration

For continuing students, registration for the fall semester begins in April,
and registration for the spring semester begins in November. Complete
registration instructions and regulations appear on-line on the web site of
the University Registrar (http://www.case.edu/registrar).

Scholarship Retention

See section on Criteria for Scholarship Retention (p. 610).

Student Access to Records

The academic records of all students are in the Office of Undergraduate
Studies, 357 Sears Building. Students may review their files in that office
by appointment. A student must sign a request and present his/her ID
card at the time of the appointment.

Study at Other Colleges and Transfer
Credit

Students may receive transfer credit for work completed at another
accredited college, university, or technological institute in the United
States or from institutions of higher education outside the United States.

At the time of admission to Case Western Reserve University and upon
presentation of an official transcript from each institution previously
attended, credit will be awarded for courses equivalent or comparable
to those offered by the University and completed with a grade of C or
better. Any such courses taken prior to the student's graduation from
high school must be listed in the college's catalog among courses
offered for degree credit to the college's undergraduates, taken in the
company of matriculated college students, and organized and taught
by college faculty. In addition, to be considered for transfer credit,
such courses must not have been used to fulfill high school graduation
requirements. The awarding of transfer credit is determined by the
Office of Undergraduate Studies in consultation with the appropriate
department.

After matriculation at Case Western Reserve University, students are
permitted to earn at other accredited colleges or universities or through
an approved program of study abroad no more than 38 credit-hours
toward the totals required for the degree, including courses taken through
the cross-registration program, with no more than 15 credit-hours taken
as part of domestic programs or as summer study in a student's home
country; any off-campus study credits beyond 15 may only be taken through approved programs of study abroad. Any additional credit earned at other institutions after matriculation at Case Western Reserve beyond 15 domestically or as summer study in a student’s home country and beyond a total of 38 including study abroad will raise the total number of credit-hours required for the degree by a corresponding number.

Permission of a dean in the Office of Undergraduate Studies must be obtained in advance if the student wishes to enroll elsewhere. Further, if a student wishes to take elsewhere a course to satisfy a major or minor requirement, it must also be approved by the department chair or academic representative. Upon presentation of an official transcript from each institution previously attended, credit will be awarded for courses equivalent or comparable to those offered by the University and completed with a grade of C or better. Credit earned elsewhere after matriculation at Case Western Reserve University is not applied toward the residence requirement of a minimum of 60 credit-hours, including at least 15 after a student has earned a total of 105 credit-hours, earned at Case Western Reserve. The Off-Campus Study Request Form is available in the Office of Undergraduate Studies, 357 Sears Bldg.

Credit is not awarded for work done at an unaccredited institution in the United States except by proficiency examination in those departments of Case Western Reserve University offering that opportunity. The awarding of transfer credit for work done at institutions outside the United States is subject to departmental evaluation.

A student separated for poor scholarship may not earn transfer credit for courses taken in the first two sessions after that dismissal.

Grades for courses taken at other institutions will not be entered on the student’s record nor will they be computed in the student’s grade point average.

In addition to the regulations concerning transfer credit outlined above, the following special restrictions apply to credit for summer courses taken at other colleges, universities, or technical institutes:

1. Students ordinarily will not be permitted to take elsewhere in Cuyahoga County courses offered at Case Western Reserve University. Exceptions to this policy will be permitted only in the event of significant extenuating circumstances. Students who desire the opportunity to take elsewhere in Cuyahoga County a course being offered at Case Western Reserve must petition the Office of Undergraduate Studies in advance for permission to do so.

2. Students must be in good standing. If a student is placed on probation between receiving permission and the start of off-campus enrollment, the student is no longer eligible to enroll for and receive transfer credit for this work. Students on probation require special approval and should contact a dean in the Office of Undergraduate Studies.

3. Students may register for no more than 12 credit-hours. One quarter-hour equals two-thirds of one credit-hour at CWRU.

4. Students may transfer credit only for courses in which a semester’s work is completed in a minimum of three weeks.

Undergraduate Collaborative Programs

Collaborative Programs with Other Colleges

Cross Registration in Northeast Ohio

Full-time undergraduates in good academic standing may cross-register for one course per semester at no additional tuition cost beyond their Case Western Reserve University tuition at the Cleveland Institute of Art, Cleveland State University, Cuyahoga Community College, or John Carroll University. Cross-registration at other local colleges and universities while enrolled full-time at Case Western Reserve will be considered on a case-by-case basis. Approval to participate in cross-registration is handled by the Office of Undergraduate Studies, and is normally limited to courses that are not offered at Case Western Reserve.

To cross-register for studio courses at the Cleveland Institute of Art, a student must have permission from Case Western Reserve University’s director of art studies, Mr. Timothy Shuckerow (timothy.shuckerow@case.edu), 2215 Adelbert Road, 216.368.2714.

Joint Program in Art Education

The joint program in art education of Case Western Reserve University and the Cleveland Institute of Art (CIA) enrolls students pursuing the BS in Art Education, combining studio art courses at the Cleveland Institute of Art with liberal arts and education courses at Case Western Reserve University. Admission to the program requires application to Case Western Reserve University and presentation of an art portfolio to the Cleveland Institute of Art; credentials must be acceptable to both institutions.

Joint Program in Music

All programs in music are conducted jointly by Case Western Reserve University and the Cleveland Institute of Music, and provide the intimacy and specialization of a professional conservatory, together with the resources of a comprehensive university.

Private music lessons can be arranged through the Department of Music in collaboration with the Cleveland Institute of Music. Students interested in pursuing this opportunity must obtain a permit at the Music Department in Haydn Hall to enroll for credit in Applied Music. Charges for private lessons will be covered by the full tuition rate for music and music education majors only. All other students will pay an additional fee.

Students pursuing a major in music or music education take music theory and lessons at the Cleveland Institute of Music, and take music history and other liberal arts and music education courses at Case Western Reserve University. Students pursuing the Bachelor or Arts degree with a major in music or the Bachelor of Science in Music Education degree apply to and enroll in Case Western Reserve University, while students seeking the Bachelor of Music degree apply to and enroll in the Cleveland Institute of Music.

Reserve Officer Training Corps (ROTC)

Reserve Officer Training Corps (ROTC) programs are available to Case Western Reserve University students through cooperative arrangements with Kent State University for Air Force ROTC and with John Carroll University for Army ROTC. Each of these universities offers military studies, leadership, and training courses. Participating students may
seek transfer credit at Case Western Reserve for these courses, and may be exempted from the undergraduate physical education requirement. Students who are not recipients of ROTC scholarships may enroll in the first- and second-year ROTC courses without incurring any military obligation. University students enrolling in ROTC programs are eligible to compete for ROTC scholarships awarded by the Air Force or the Army.

**Air Force ROTC**

The Air Force Reserve Officer Training Corps (http://www.kent.edu/afrotc) (AFROTC) program provided by Kent State University prepares students for service as officers in the United States Air Force. Through courses in history, management, and leadership, and through practical training, students acquire leadership and management skills, and learn about Air Force career opportunities, the role of the military in American society, the history of air power, and national defense policy.

An agreement between Case Western Reserve University and Kent State University allows full-time Case Western Reserve students to complete aerospace studies courses. Students cross-register for these courses through Cleveland State University, but the courses are held at Kent State University, which is approximately 35 miles from Case Western Reserve. Classes are usually scheduled on one or two afternoons during the week. This arrangement allows Case Western Reserve students to participate in either the four- or two-year AFROTC program. Students who wish to enter the two-year program in the junior year must contact the professor of aerospace studies no later than February prior to the academic year of planned entry.

Air Force ROTC scholarships are available on a competitive basis. Information about courses, registration, and scholarships may be obtained from the Air Force ROTC DET 630, 125 Terrace Drive, Kent State University, Kent, Ohio 44242; telephone: 330-672-2182. Case Western Reserve students planning to register for AFROTC courses at Kent State University should consult with the Office of Undergraduate Studies for information regarding registration procedures.

**Army ROTC**

The Army ROTC (http://www.jcu.edu/rotc) program is designed to prepare students for service as a commissioned Army officer in either the active duty U.S. Army or the reserve components of the Army Reserve or National Guard. Classes and practical training focus on military skills, officer professionalism, leadership training, and the development of military-related officer and management techniques and procedures.

Army ROTC is offered as part of a collaboration with John Carroll University with some of the first- and second-year courses ROTC classes being offered on the Case Western Reserve University campus. For those courses offered at Case Western Reserve (MLSC 101, MLSC 102, MLSC 201, and MLSC 202), students register in the ordinary way. For other Army ROTC classes, students enroll through cross-registration in the Department of Military Science at John Carroll University, which is approximately five miles from Case Western Reserve.

Army ROTC scholarships are available on a competitive basis. Information about courses, registration, and scholarships may be obtained from the Department of Military Science (ARMY-ROTC), John Carroll University, University Heights, OH 44118-4581; telephone: 216.397.4421. Case Western Reserve students planning to register for Army ROTC courses at John Carroll University should consult with the Office of Undergraduate Studies for information regarding registration procedures.

**Fisk University Exchange Program**

An exchange program between Fisk University and Case Western Reserve University enables up to four Case Western Reserve students to spend a semester as visiting students at Fisk each year. Up to four Fisk students may spend a semester at Case Western Reserve each year. Fisk University was founded in 1866 as the first integrated, coeducational school in the United States, and, at its founding, focused on providing a quality liberal arts education to the children of former slaves. Fisk University has a distinguished history as a liberal arts institution. It was the first historically black college to have chapters of the Phi Beta Kappa and Mortar Board national honorary societies.

Case Western Reserve students who participate in the Case Western Reserve-Fisk Exchange pay tuition to Case Western Reserve University, pay the Fisk room and board fees, and maintain their student status during the period of the exchange. Information about the exchange program is available from the Fisk exchange advisor in the Office of Undergraduate Studies.

**The Dual Degree (3-2) Program in Engineering**

Students of superior scholarship who have attended one of a group of select liberal arts colleges with which Case Western Reserve University has a dual degree agreement are eligible to participate in the Dual Degree (3-2) (http://engineering.case.edu/delpp/dualdegree) program at Case Western Reserve University. This program allows outstanding students to begin their studies at a liberal arts college for three years and pursue an engineering degree at Case Western Reserve University for two years. Once requirements at both institutions are completed, students will receive a degree from the liberal arts college and a degree from Case Western Reserve University in a designated engineering discipline. For additional information, contact Debbie Fatica (df3@case.edu), 304 Nord Hall, 216.368.4449.

**Undergraduate Criteria for Scholarship Retention**

Students who are awarded scholarships based on academic achievement or potential by Case Western Reserve University are expected to perform at an appropriate academic level and maintain good conduct in the community. These scholarships will be automatically renewed each semester, provided that the student meets the retention criteria established for his or her scholarship at the time of initial award.

The retention criteria for students who matriculated at Case Western Reserve University in August 2011 or later are outlined below, along with information about the duration of these scholarships and the appeal process for students who fail to meet the established retention criteria. Scholarship recipients who matriculated prior to August 2011 should consult the 2013-2014 General Bulletin.
Full-Tuition (Andrew Squire, Albert W. Smith, Adelbert Alumni, Alexander Treuhaft, and Warren E. Rupp), University, Michelson-Morley STEM, and Bolton Scholarships

The academic records of scholarship recipients are ordinarily reviewed at the end of each semester. To have a scholarship renewed for the following semester, the student must be in good academic and disciplinary standing.

In exceptional cases, Academic Standing Board will continue a scholarship for a student whose achievement or whose attendance does not meet the standards outlined above. It is the student’s responsibility to write to the Academic Standing Board, c/o the Office of Undergraduate Studies, within 7 business days of the end of the exam period each semester to request special consideration for continuation of a scholarship. This appeal should inform the committee of any special circumstances which may have affected performance and/or attendance during the preceding academic semester, provide any relevant documentation, and describe a plan for how academic performance will be improved in the future.

Students who lose their scholarships because of unsatisfactory academic or disciplinary standing will have their scholarships automatically reinstated at the start of the next semester if they return to good standing. These students lose a semester of scholarship eligibility for each semester that they fail to achieve good standing; that is, students will not receive these scholarships while on probation or during their first semester back from an academic separation, and the maximum number of semesters for which they can receive their scholarships will be reduced. However, students placed on probation at the end of their spring semester who return to good standing based on summer coursework at Case Western Reserve University (see Academic Standing Regulations in the section of Academic Policies and Procedures) will continue their scholarships for the fall semester without interruption or loss of a semester of eligibility.

Other Scholarships Awarded by Case Western Reserve University

Recipients of scholarships other than those listed above should refer to their scholarship award letter for specific scholarship retention criteria.

Duration

A student who meets the standards for scholarship retention may receive scholarship assistance for no more than eight semesters of full-time undergraduate study (less any semesters lost due to falling out of good academic or disciplinary standing, as described above). The scholarship is awarded for full-time enrollment in regular (fall and spring) semesters.

A scholarship recipient who does a complete withdrawal during a semester will have used up a semester of scholarship eligibility, but will be eligible to receive the scholarship again when he or she next enrolls, provided that his or her leave of absence does not last more than one semester (as described below). If a scholarship recipient completes a bachelor’s degree in fewer than eight semesters of full-time study at Case Western Reserve University, the scholarship will be terminated upon completion of the degree.

In the eighth semester (or in the final semester for a student completing the bachelor’s degree in fewer than eight semesters), a recipient may request permission for part-time enrollment with pro-rated scholarship support if completion of the degree does not require full-time enrollment in that final semester.

Semesters spent participating in the Cooperative Education Program or on a leave of absence are not counted against a student’s eight full-time semesters of scholarship eligibility.

Leave of Absence Policy

A scholarship recipient may take a one-semester leave of absence during the student’s undergraduate career and put his/her scholarship “on hold” for reactivation upon the student’s return to Case Western Reserve University. Requests for a one-semester leave of absence must be submitted in advance to the Office of Undergraduate Studies. Requests for leaves of absence longer than one semester must be submitted to the Academic Standing Board and will be reviewed on an individual basis.

A scholarship is automatically terminated upon a student's transfer to another institution or upon permanent separation from the University.

Undergraduate Experiential Learning

Experiential Learning

Case Western Reserve University offers undergraduates a variety of experiences inside and outside the classroom that are built on a process of guided inquiry, preparation, action and reflection. Many research, internship, and employment opportunities are aligned with academic programs. Linguistic and cultural immersion characterize the study abroad experience. Courses that incorporate community service or internships into the curriculum forge links between Case Western Reserve undergraduates and schools, neighborhoods, businesses, and governmental and health care institutions in Cleveland and elsewhere.

Course-Based Experiential Learning

In disciplines as diverse as psychology, journalism, engineering, Spanish, Russian, nursing, anthropology, history, and biology, Case Western Reserve students engage in experiential learning beyond the on-campus classrooms and laboratories. Experiences that form the basis for reflection and synthesis under the guidance of faculty include working with hospitalized children, designing engineering solutions for a problem presented by a municipality, interning at a local media outlet, tutoring in Cleveland’s Hispanic community, gaining experience in public health clinics, studying history with “the city as classroom,” or collecting aquatic specimens from the ponds at the university’s 389-acre farm.

International Experience

Case Western Reserve University encourages all students to study abroad. Students of all majors are able to study abroad without interfering with their graduation timeline. Many of the study abroad programs cost the same as studying in Cleveland, and financial aid can be used to supplement study abroad costs as needed. Students should visit www.case.edu/studyabroad or contact a study abroad advisor at studyabroad@case.edu to find a program that meets their needs.

Semester and Academic Year Programs

Case Western Reserve University partners with several overseas institutions in order to allow students to determine, in consultation with their academic advisor and study abroad advisor, study abroad programs that meet their academic and personal goals. Students can choose
from a list of approved study abroad partners (http://www.case.edu/international/edabroad/thinkStudyAbroadLongTerm.html).

Undergraduate students who have completed at least 24 credit-hours of coursework at Case Western Reserve University, have declared a major, and are in good academic and disciplinary standing, with no pending judicial actions, and are otherwise eligible to register on campus at Case Western Reserve University for the proposed semester(s) (no financial holds, e.g.) are eligible to participate in programs of study or practical experience that immerse them in the culture and language of another country.

After matriculation at Case Western Reserve University, students are permitted to earn at other accredited colleges or universities or through an approved program of study abroad no more than 38 credit-hours toward the totals required for the degree, including courses taken through the cross-registration program, with no more than 15 credit-hours taken as part of domestic programs or as summer study in a student’s home country; any off-campus study credits beyond 15 may only be taken through approved programs of study abroad. Any additional credit earned at other institutions after matriculation at Case Western Reserve beyond 15 domestically or as summer study in a student’s home country and beyond a total of 38 including study abroad will raise the total number of semester hours required for the degree by a corresponding number.

Case Western Reserve does not require students to complete any foreign language prerequisites before studying abroad, though students wishing to study in a country where the native language is not English are advised to develop their language skills to the extent possible. However, students studying for at least a semester in a single location where English is not an official language must take a course that advances their skills in a language of the host country during each semester of study abroad, provided such courses are available; this may be a course of language instruction or a course taught in a language of the host country. Students participating in study abroad experiences that are comparative in nature and visit several sites with the same semester are not required to include language study in their academic programs.

Students participating in semester or academic year study abroad pay tuition to Case Western Reserve University and maintain their student status during the period of study abroad. Case Western Reserve University will, in turn, pay the tuition costs for the student’s program, but the student will be responsible for all non-tuition costs associated with study abroad. Students eligible for financial aid continue their eligibility during study abroad.

CWRU in London at the Royal Academy of Dramatic Art

CWRU in London at the Royal Academy of Dramatic Art is organized by Case Western Reserve University to allow students to travel in a cohort to London to study theater and theater history. This theater/humanities program, offered in conjunction with the Royal Academy of Dramatic Art, allows students to sharpen their acting skills and gain a solid understanding or theatrical history while living and studying alongside some of the world’s best performing artists. Because students are formally enrolled in CWRU courses while participating in this program, their courses and grades appear on the CWRU transcript in the ordinary way rather than as transfer credit.

Short-Term Programs

Case Western Reserve University offers a robust portfolio of short-term study abroad options. These programs, which allow students to travel with a group of Case Western Reserve students, are often one to three weeks in duration and are offered over Spring Break, Winter Break, and Summer. Program offerings vary each year, but recent short-term study abroad locations included Botswana, China, Costa Rica, Cuba, Ecuador, France, Germany, Guatemala, Israel, the Netherlands, Poland, Spain, and the United Kingdom. All CWRU students in good standing are eligible to participate in short-term study abroad programs. For more information, contact the study abroad advisor in the Office of Educational Abroad, Tomlinson Hall 143.

Summer Programs

All Case Western Reserve University undergraduates in good academic and judicial standing are permitted to study abroad during the summer. With approval, up to 15 credit-hours of summer coursework can be transferred to Case Western Reserve University. In the summer, study abroad students pay tuition and fees directly to the school/provider overseas. A wide variety of summer programs is available through the Office of Education Abroad, Tomlinson Hall 143.

Research Opportunities Abroad

Case Western Reserve University partners with EuroScholars to offer CWRU students semester-long research abroad opportunities. EuroScholars is a network of 11 internationally-recognized European research institutions. All are ranked in the top 2% of the 4,000 universities throughout Europe. Projects are available in arts and humanities, performing arts, biology, chemistry, engineering, mathematics, physics, astronomy, computer science, medicine, biomedical sciences, law, economics, management, politics and social studies. The CWRU study abroad advisors can help students apply to this elite program. Students can also identify independent research projects abroad.

Research Experience

Undergraduate Research

Case Western Reserve University is a research-intensive community with a historic tradition of involving undergraduates in research and creative endeavors. Regardless of a student’s major or academic interests, there are numerous opportunities to engage in research either on campus with Case Western Reserve faculty or elsewhere during both the academic year and the summer. The SOURCE (http://www.case.edu/provost/source) (Support of Undergraduate Research and Creative Endeavors) Office provides assistance to students throughout the undergraduate educational experience, including:

- helping students identify research and creative project opportunities,
- providing funding for on-campus summer research,
- providing funding for travel for students presenting their work at regional and national conferences,
- providing educational research and informational seminars,
- sponsoring Intersections: SOURCE Symposium and Poster Session for students to present their work to our academic community, and
- sponsoring Discussions: The Undergraduate Research Journal of CWRU.

For more information, contact the SOURCE Director, Sheila Pedigo (sheila.pedigo@case.edu), Sears 451, 216.368.8508.

In many cases, students pursuing research under the guidance of a faculty member may earn degree credit by registering for “Undergraduate Research” or “Independent Study” in the appropriate department. These are advanced-level courses and require departmental approval. However,
students may not earn both degree credit and pay for the same work. Students may discuss academic credit for research with their major advisor.

Work Experience

The Center for Civic Engagement and Learning

The Center for Civic Engagement and Learning (https://students.case.edu/civcengagement) connects students and the community through service. The center coordinates both curricular and co-curricular activities that promote learning through service to communities locally, nationally, and internationally. Service learning venues include academic course work, work-study positions, residence hall and Greek Life programs, and weekly service opportunities.

The Center for Civic Engagement also offers regular, weekly and bi-monthly opportunities for community service through the Case SERVES projects; assists faculty and students in designing and implementing community-based courses and SAGES capstone projects; coordinates on-going volunteer and work-study tutoring; and schedules Days of Service for one-time community service projects.

Cooperative Education

Cooperative Education (Co-op) (http://engineering.case.edu/coop) is an academic program that enables students to alternate classroom studies with career-based experiences in industry. It is a learning experience designed to integrate classroom theory with practical experience and professional development. Co-op is a paid full-time work experience designed to enhance the student’s education. Case Western Reserve Co-op assignments are typically for two seven-month periods, each period consisting of a summer and a contiguous spring or fall semester. While participating in co-op, students maintain their full-time student status. This program is available to students pursuing degrees in engineering, biochemistry, biology, chemistry, engineering physics, geology, mathematics, physics, and statistics. For additional information, contact Ms. Mary Rose Tichar (mrt2@case.edu), 304B Nord Hall, 216.368.4447.

Professional Practicum

Practicum (http://students.case.edu/careers/students/jobs/practicums) is an experiential learning collaboration among a student, an employer, and a faculty member serving as the student’s practicum advisor that is coordinated by the Career Center’s Experiential Learning Specialist. The program is open to undergraduate students enrolled in the College of Arts and Sciences and/or the Weatherhead School of Management. The primary goal of a practicum is the intellectual, personal and professional growth of the student. In order to ensure that this goal is achieved, the collaborators establish learning objectives prior to the start of the practicum. These objectives are reviewed throughout the semester, and the student’s progress is evaluated at both the mid-point and end of the practicum.

While completing a practicum assignment, a student works full-time for a minimum of 14 weeks in a professional setting and does not take classes. The student will maintain full-time student status during the practicum period. Though credit is not awarded, students who successfully complete the practicum assignment will receive transcript notation. A student may participate in up to two practica, but it is recommended that at least one intervening semester be spent on campus. Students interested in participating in a practicum should contact the Career Center a semester prior to the intended practicum assignment.

Washington Study Program

The Washington Study Program (http://politicalscience.case.edu/undergraduate/washington-center-program) provides students with the opportunity to complete a full-time, research-intensive internship in Washington, D.C. By participating in a semester-length program during the fall or spring (WASH 2A (p. 455) Washington Center Internship), students earn 9 credit-hours; for a summer internship (WASH 2D (p. 455) Washington Center Summer Internship), they earn 3 credit-hours. In addition, students earn 3 credit-hours for participating in a seminar and attending a weekly lecture/discussion group (WASH 2B (p. 455) Washington Center - Politics and Public Policy Course) and 3 credit-hours by developing a portfolio based on their internship experiences (WASH 2C (p. 455) Washington Center - Portfolio). The credits earned can be counted as general electives or applied to a student’s major or minor, with the prior consent of the individual department(s).

To be eligible for the program, a student is expected to be a junior or senior and have at least a 3.00 GPA. The program director (Professor Justin Buchler (justin.buchler@case.edu), 111 Mather House, 216.368.2646), the student’s major advisor, and the appropriate dean must approve each application. Students must ensure that their participation will not prevent them from meeting on-campus residency or other university requirements.

Undergraduate General Degree Requirements

Case Western Reserve University offers a broad range of programs in the liberal arts and sciences, engineering, management, accountancy, and nursing leading to the Bachelor of Arts (BA) and the Bachelor of Science (BS) degrees. These programs provide depth through concentrated study in a major field, breadth through the fulfillment of general education requirements, and open electives.

The BA is available in more than forty fields in the humanities and arts, the social and behavioral sciences, and the natural sciences and mathematics. The BS in Engineering is available in twelve major fields. The BS in Management is available in two major fields. In addition, BS programs are offered in accounting, the natural sciences, mathematics, computer science, statistics, nutrition, art education, music education, and nursing.

The Bachelor of Music (BM) degree is offered by the Cleveland Institute of Music through a joint program with Case Western Reserve University.

General Requirements for all Bachelor’s Degrees

The bachelor’s degree programs require students to study one field in depth (the major) and to complete general education requirements as appropriate to the major field and degree program selected. There is overlap among general education requirements, which allows students flexibility in the choice of majors and degree programs.

Every candidate for a baccalaureate degree from the university must:

1. complete the requirements of the Seminar Approach to General Education and Scholarship (SAGES), as described below;
2. complete two semesters of physical education through a combination of half and/or full semesters in Physical Education activity courses, as described below;
3. complete the requirements of the major field of study, as described in the relevant sections of the Bulletin;
4. complete the general education requirements of the school and degree program in which the student's major field of study falls, as described in the relevant section of this chapter of the Bulletin (Arts and Sciences, Engineering, Management, Nursing);
5. complete a course of studies with a cumulative grade point average of no less than 2.000 for work taken at Case Western Reserve University; and
6. earn in residence at Case Western Reserve University a minimum of 60 semester hours, of which at least 15 must be earned after the student has earned a total of 105 semester hours.

SAGES

The Seminar Approach to General Education and Scholarship (SAGES) provides a foundation in critical thinking, written and oral communication, the use of information, quantitative reasoning, engagement with ethical issues and diversity, and exposure to experimental and theoretical approaches to understanding human culture and behavior, scientific knowledge, and methods of research.

The First Seminar

The First Seminar (4 credit-hours, taken in the first semester of enrollment) introduces students to the seminar format through reading, discussion, and intensive writing, and incorporates activities with University Circle institutions. The course focuses on the development of critical thinking and communication skills through the use of a variety of approaches, media, and perspectives to explore the human mind and the nature of inquiry. This course is designed to strengthen writing and analytical skills while building a foundation in ethics, information literacy, and cultural diversity.

Students select a course from:
• First Seminar: Natural World (FSNA 1xx)
• First Seminar: Social World (FSSO 1xx)
• First Seminar: Symbolic World (FSSY 1xx)

Based on test scores and a writing sample, some students will be placed in FSCC 100: The Life of the Mind, designed to provide additional writing support. Most students for whom English is a second language will continue their First Seminar experience in a second semester by enrolling in and completing FSCS 150 First Seminar Continuing Semester (3 credit-hours).

*Transfer Students only: Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC 100-TR (3 – 6 semester hours) and will be required to complete a supplemental 1-semester-hour SAGES introductory seminar – FSTS 100 SAGES Transfer Supplement.

University Seminars

After completion of the First Seminar with a passing evaluative grade and before the end of a student's second year, students must complete two University Seminars (totaling 6 credit-hours). University Seminars provide continued experience in critical reading, writing, and oral communication, as well as information literacy, ethics, and cultural diversity. Each University Seminar explores content determined according to the interests of the faculty. A student's First Seminar and two University Seminars must include a course from each of the three thematic areas: Natural World, Social World.

Students select courses from:
• University Seminar: Thinking About the Natural World (USNA 2xx)
• University Seminar: Thinking About the Social World (USSO 2xx)
• University Seminar: Thinking About the Symbolic World (USSY 2xx)

Students who complete their First Seminar requirement with FSCC 100, FSCS 150, or FSTS 100 may fulfill their University Seminar requirement by choosing courses from any two of the three thematic areas.

University Composition Requirement: The SAGES Writing Portfolio

Students develop a Writing Portfolio comprised of final graded writing assignments from the First Seminar and University Seminars. The Writing Portfolio is due the semester after completing the final University seminar.

Departmental Seminar

The Departmental Seminar (3 credit-hours), generally taken in the junior year after the completion of the University Seminars, focuses on discipline-specific methods and modes of inquiry and communication characteristic of the Departmental Seminar's discipline. The Departmental Seminar may be taken in the department of the student's major or in another department. A course used to fulfill the Departmental Seminar Requirement may not also be used to fulfill a Breadth Requirement. Courses meeting this requirement include the designation "Approved SAGES Departmental Seminar" in their course descriptions. Some majors include a specific Departmental Seminar as part of their requirements.

Senior Capstone

The Senior Capstone assimilates the knowledge and skills gained throughout the educational process. Students engage in a unique one- or two-semester experience (3 - 6 credit-hours) designed in consultation with a faculty member. Each Senior Capstone must include key elements:

1. Demonstration of critical thinking and writing skills;
2. Regular oversight by the Capstone advisor;
3. Periodic reporting of progress;
4. Regular writing (e.g. drafts, progress reports, critiques) throughout the project including a final written report which may be a thesis or equivalent document associated with the project or activity (e.g., such pursuits as performance, experiment, live case analysis, or creative writing), as approved by the department of capstone origin; and
5. Oral reports including a final public presentation at the Senior Capstone Fair, a conference, a performance, a public lecture, a teaching presentation, or another setting, as approved by the department of capstone origin.

Courses meeting this requirement include the designation "Approved SAGES Capstone" in their course descriptions. Some majors include a specific a Senior Capstone course as part of their requirements.
Physical Education

All students must complete two full semesters of Physical Education activity courses at zero credit hours. Students may choose from half-semester and full-semester course offerings. If possible, a student should begin meeting this requirement in the first semester and complete it early in his or her undergraduate years.

Requirements for Specific Degrees

Students are expected to complete a bachelor’s degree in a timely fashion and will ordinarily be subject to the degree requirements in place at the time of matriculation at Case Western Reserve University, although they may choose to update their requirements to those included in a later General Bulletin.

If a student extends study towards a bachelor’s degree beyond 10 years after first matriculating as an undergraduate student, the major-field department(s) will review the student’s academic record and may update major field requirements. Also, if the student has not already completed the applicable general education requirements in place at the time of matriculation, the appropriate dean in the school offering the major will also review the student’s academic record and may update general education requirements.

Dual Undergraduate Degree Programs

To qualify for two undergraduate degrees, i.e., a BA and a BS degree, or two BS degrees, a student must satisfy all requirements for each degree, and complete for the second degree thirty semester hours of study beyond the hours required for the first degree. A student may, however, complete two or more Arts and Sciences majors within the 120 hour minimum requirement for the BA degree, or two or more Engineering majors within the 128-133 hour minimum requirement for the BS in Engineering degree, or two or more Management majors within the 122 hour minimum requirement for the BS in Management degree. Students who seek a dual-degree program that involves the BM degree must meet Cleveland Institute of Music and Case Western Reserve admission requirements, and seek approval of both the Cleveland Institute of Music and Case Western Reserve University.

Students completing both a BA and a BS degree are exempted from six hours of the 90-hour requirement of arts and sciences courses for the BA.

A student pursuing two degrees is encouraged to meet with a dean in the Office of Undergraduate Studies, 357 Sears Bldg., to discuss requirements.

Undergraduate Grades

Grades

Grades at Case Western Reserve University are issued on the following scale, with good standing based on criteria presented in the section on Academic Standing Regulations and the requirement of a 2.000 average for graduation. Academic averages are computed by dividing the number of quality points earned by the number of hours completed, excluding transfer credit, credit based on examinations (AP, IB, proficiency, etc.), and courses graded P/NP.

<table>
<thead>

Grade of Incomplete

Assignment of the Incomplete Grade:

The Incomplete grade (I) is assigned by and at the discretion of the instructor when a) there are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justify an extension of time beyond the requirements established for and met by other students in the class, and b) the student has been passing the course and only a small segment of the course, such as a term paper, remains to be completed. It is the student’s responsibility to notify the instructor of the circumstances preventing completion of all assigned work. In the absence of notification or adequate justification, the instructor has the authority to assign the student a final grade that assumes a failing grade for the missing work. An Incomplete grade should not be assigned a) when a student has been absent for much of the semester and/or has done little of the work required for a course, or b) because a student is absent from a final examination, unless the dean of undergraduate studies has authorized the grade.

The amount of additional time allowed the student to make up incomplete work should serve to accommodate the student while being fair to other students in the course. It should be proportional to the duration of a student’s illness or absence and might be no more than a few days or weeks. At the extreme, it should not extend past the eleventh week of the session following the one in which the Incomplete grade was received. In certain cases (such as students on probation) the dean of undergraduate
Changing the Incomplete Grade:
When the student has completed the required work, the instructor shall enter in the Student Information System a final evaluative grade to replace the Incomplete. When a student fails to submit the work required for removing the Incomplete by the date established, the instructor shall enter a final grade that assumes a failing performance for the missing work. In the absence of the assignment of a grade by the instructor, the Registrar will convert the I to F when the deadline for making upIncomplete grades from a previous semester has passed.

Audit
See section on Academic Policies and Procedures

Pass/No Pass
Undergraduate students (degree candidates and non-degree students enrolled at the undergraduate level), other than students participating in the Pre-College Scholars program, may elect to take one course each fall and spring semester on a Pass/No Pass grading basis, provided they remain enrolled in at least 3 semester hours of courses for regular evaluative grades. Enrollment in courses that are graded on a Pass/No Pass basis (e.g., PHED 55A Cardio-Fitness (First Half)) does not preclude a student's use of the Pass/No Pass option in another courses taken that same term. The Pass/No Pass option is not available during the summer session or to undergraduate degree candidates enrolled at the graduate or professional levels through the IGS program or Senior Year in Professional Studies.

Instructors are not notified of a student's use of this option. They submit evaluative grades for all students, and these are converted to Pass/No Pass in the Registrar's Office. Courses elected on a Pass/No Pass basis and completed with a grade of D or higher will be entered with the grade P on the student's transcript. Courses taken Pass/No Pass for which a grade of F is earned will have NP entered on the transcript. Students who earn a P grade will earn credit for the course, while those who earn NP will not. Grades of P and NP are not included in computing the grade point average.

Students may submit an on-line Pass/No Pass Option form at any time in the fall or spring semester after the end of the drop/add period and before 5:00 p.m. on the day of the course withdrawal deadline for that semester (currently the 11th Friday of the semester for upperclass students, including new transfer students; and the last day of classes for first year students).

Use of the Pass/No Pass option is subject to the following restrictions:
1. All courses to be counted toward major, minor, or SAGES/general education/core requirements must be taken for regular evaluative grades. If a student opts for the Pass/No Pass option in a course, that course will not be counted toward any of these requirements.
2. Students majoring in any Weatherhead School of Management degree program (accounting or management) may not use the Pass/No Pass option for any Weatherhead School of Management courses (ACCT, BAFI, BLAW, ENTP, LHRP, MGMT, MIDS, MKMR, OPMT, ORBH, OPRE, PLCY), either required or elective.
3. A decision to use the Pass/No Pass option is irrevocable unless the student needs course to complete requirements for a major or minor declared in a subsequent semester. In that event, the student may request that the Office of Undergraduate Studies reveal the grade on the transcript at the start of the student's final term at Case Western Reserve University.

Course Repetition
See section on Academic Policies and Procedures.

Grade Reports and Transcripts
Students may view their grades on the Student Information System (https://sis.case.edu/psp/saprd/EMPLOYEE/PSFT_HR/c/CW_SR_MENU.CW_CONFID_AGREEMNT.GBL?&). Students can request official copies of their transcripts (http://www.case.edu/registrar/transcripts.html) from the Registrar's Office. The University considers the grades earned by a student and other information about the student's performance at the University confidential and will release such information only upon written request by the student. Transcripts will not be issued to or on behalf of students who have not discharged all obligations to the University.

Mid-Semester Grades
Mid-semesters grades are assigned in undergraduate courses at the end of the eighth week of each semester. Mid-semesters grades are advisory; the grades are not part of a student's official academic record or transcript. At mid-semester, an instructor may assign to undergraduates evaluative letter grades (A, B, C, D, or F) or grades of satisfactory (S) and unsatisfactory (U), with S corresponding to performance in the range of A through C and U corresponding to performance in the D or F range. (S and U may not be assigned as final course grades in undergraduate courses.) Students may view their mid-semesters grades on the Student Information System (https://sis.case.edu/psp/saprd/EMPLOYEE/PSFT_HR/c/CW_SR_MENU.CW_CONFID_AGREEMNT.GBL?&). Students who have any low or unreported mid-semesters grades should discuss their progress with their instructors and with their advisors.

Academic Standing Regulations

Academic Standing Regulations
The Academic Standing Board monitors the progress of all undergraduate degree candidates at the end of each fall and spring semester to ensure that they are making appropriate progress toward earning their degrees in terms of the grades and number of credit-hours earned each semester; see below for information about the summer session. All degree candidates begin their academic careers in good standing. Those who fail to meet the requirements to continue in good standing, as defined below, are automatically placed on academic probation for the following semester in order to signal the need to improve their academic performance. Those who fail to meet a minimum set of academic standards defined below or who do not return to good standing after a semester of academic probation are ordinarily separated from the university for a period of two academic sessions, including the summer session.

Good Academic Standing
Full-time First-Year and Transfer Students in the First Semester
In order to maintain good academic standing at the end of the first semester at Case Western Reserve University, a full-time (i.e., enrolled
in at least 12 credit-hours at the end of the drop/add period) first-year student or new transfer student must:

1. earn a semester grade point average of 2.000 or higher AND
2. earn a minimum of 9 credit-hours in that semester.

**Full-time Students After the First Semester**

Following the first semester of the first year, full-time students (i.e., those enrolled in at least 12 credit-hours at the end of the drop/add period) will be in good standing provided they:

1. earn a semester grade point average of 2.000 or higher AND
2. earn a minimum of 12 credit-hours in that semester.

**Part-time Students**

Part-time students (i.e., those enrolled in fewer than 12 credit-hours at the end of the drop/add period) will be in good standing if they earn a semester grade point average of 2.000 or higher.

**NOTE:** Any student with incomplete grades at the end of a semester may be placed on “probation (incomplete)” or made “ineligible to register,” as described below.

**Academic Probation**

Students who, at the end of any semester, fail to maintain the standard of performance required for good standing as specified above will be automatically placed on probation. Students placed on probation are ineligible to represent the university in intercollegiate activities and may not hold an elective or appointed office or chair a committee in any campus organization. In addition, they may not earn degree credit for work completed at another college or university during the period of probation without special permission.

When placed on academic probation students will be expected to perform at a level that will return them to good standing at the end of the next semester. If they fail to return to good standing at the end of the following semester, they will be considered for separation from the university for at least two academic sessions, including the summer session.

A full-time student placed on probation who subsequently enrolls as a part-time student will not be reviewed for further academic action until he or she has completed sufficient semesters to total at least 12 credit-hours. At that time, the student will be reviewed on the basis of a composite of those semesters.

Similarly, a student who goes on probation as a part-time student will not be reviewed for further academic action until he or she has completed sufficient semesters to total at least the number of credit-hours attempted in the semester for which the student was placed on probation. At that time, the student will be reviewed on the basis of a composite of those semesters and will be expected to have earned at least the number of credit-hours attempted in the semester for which he or she was placed on probation.

**Probation (Incomplete):**

A student’s status will be Probation (Incomplete) if he or she has Incomplete grades which would result in the student’s being placed on academic probation if those Incomplete grades were converted to F’s. Once the Incompletes are converted to grades, the student shall be restored to good standing or placed on academic probation as determined by the semester grade point average and the number of credit-hours earned.

**Separation**

Students on academic probation who fail to return to good standing at the end of the following semester will be considered for separation from the university for at least two academic sessions, including the summer session.

Also, full-time students at the end of their first semester at Case Western Reserve University will be considered for separation without a semester of probation if they:

1. earn a semester grade point average less than 1.000 OR
2. earn fewer than 9 credit-hours in that semester.

After the first semester, full-time students will be considered for separation without a semester of probation if they:

1. earn a semester grade point average less than 1.000 AND
2. earn fewer than 9 credit-hours in that semester.

Part-time students are not eligible for separation without already being on probation, but will be considered for separation if they fail to return to good standing after a period of probation.

Separation because of academic performance is not an automatic process. Students being considered for separation will be asked to prepare a statement explaining the difficulties that interfered with their ability to earn a satisfactory record. If a student thinks he or she should not be separated, the statement should include an explanation of why the Academic Standing Board should have confidence in the student’s ability to return to good standing at the end of the next semester and should outline the plan the student has established for ensuring academic success. The Academic Standing Board will decide to separate the student or to place or continue the student on academic probation based on a review of the student’s statement and the academic record.

Students separated for reasons of academic performance may not earn transfer credit for work completed elsewhere.

**Readmission from Separation**

Students who have been separated because of poor academic performance may petition for readmission after two academic sessions, including the summer session, have elapsed. Students readmitted after being separated for reasons of academic performance will retain all credits and quality points earned before separation, and the cumulative grade point average will be continued, including all grades earned before and after separation.

**Permanent Separation**

A second academic separation following review by the Academic Standing Board will ordinarily be permanent.

**Ineligible to Register**

Students will be declared “ineligible to register” when they have Incomplete grades which would result in the student’s being considered for separation if those Incomplete grades were converted to F’s. Such students will be required to finish the incomplete courses with grades that justify their retention before they will be allowed to continue for the
next academic session, unless they successfully petition the Academic Standing Board for permission to enroll.

Summer Enrollment at Case Western Reserve University

Students will not be reviewed for academic action at the end of the summer session except in the following two situations:

1. A student on academic probation as of the end of the spring semester will be returned to good standing at the end of the summer session if he or she has completed at least 6 credit-hours at Case Western Reserve University with a summer grade point average of at least 2.00.
2. Nursing students who enroll during the summer session for a full course load (at least 12 credit-hours) that includes the capstone course will be reviewed according to the standards of a regular fall or spring semester.

Undergraduate Honors and Awards

Dean's Honors Lists

The Dean's Honors Lists consist of the names of those undergraduate students who have distinguished themselves by achieving during the previous semester the grade point averages required with a minimum of 12 credit-hours earned and who have no Fs or NPs, during the same period. Students with a grade point average of 3.750 or higher will be placed on the Dean's High Honors List. Students with a grade point average of at least 3.500 but less than 3.750 will be placed on the Dean's Honors List. Students whose records include Incompletes become eligible for the Dean's Honors Lists once all Incompletes have been converted to final grades. Having earned a place on the Dean's Honors List or Dean's High Honors List is noted on the transcript.

Commencement Honors

Commencement Honors are awarded to the top 35 per cent of the graduating class.

- Top 10 per cent: summa cum laude
- Next 10 per cent: magna cum laude
- Next 15 per cent: cum laude

The specific GPA cutoffs are determined each year after the awarding of August degrees on the basis of the GPAs of students who graduated over the past five years. These cutoffs are then applied to degrees awarded in the following January, May, and August.

To be eligible for commencement honors, candidates must have:

1. Earned a minimum of 54 credit-hours for evaluative grades (A, B, C, D) in residence at the University.
2. Attained the required percentile ranking on the basis of all work for which grades are averaged at the University, including any grades earned before an academic separation.

Honors in the Major

Some majors offer outstanding students the opportunity to complete an honors program. Students who participate in an honors program in the major and satisfy the requirements for such a distinction, as specified by the major, may qualify to receive the degree "with honors in the major." The academic representative for the major can provide information regarding requirements for graduation with honors in the major.

Phi Beta Kappa

Phi Beta Kappa, a national honor society, recognizes outstanding scholarship in the arts and sciences. The Alpha Chapter of Ohio, established in Western Reserve College in 1847, was one of the first ten established nationally. Students may qualify for election to membership in the second semester of the senior year. A few outstanding students may be elected to membership as juniors.

Tau Beta Pi

Tau Beta Pi is a national honor society that recognizes full-time engineering students for outstanding scholarship, leadership, and service.

Mortar Board

Mortar Board is a national honor society that recognizes full-time senior students for outstanding scholarship, leadership, and service.

Fellowships and Scholarships

Outstanding students may obtain information about national competitive scholarships (Goldwater, Truman, Rhodes, etc.) in the Office of Undergraduate Studies, 357 Sears Building.

Departmental and Collegiate Awards

At academic awards assemblies at the end of each spring semester, the University presents awards recognizing the outstanding achievement of individual students. The departmental awards are based on achievement in specific academic disciplines. Some of the departmental and collegiate awards are based on a combination of leadership, scholarship, and service. The collegiate awards for students with the best academic records take into account credit load and grades; students who opt for the Pass/No Pass grading option in a course will not be eligible for best academic record awards unless the original grades submitted by the instructor to the Registrar's Office would qualify them.

Accountancy

- The Apple Growth Partners Scholarship Award to a junior, senior, or Master of Accountancy accounting major with a grade point average of 3.250 or higher and who has displayed high ethics and strong leadership in student organizations
- The Beta Alpha Psi Award for excellence in accounting
- The Beta Alpha Psi Scholars Recognition Award for outstanding scholarship among members of the Pi Chapter
- The Andrew D. Braden Award for Excellence in Auditing and Financial Reporting Studies to a student whose achievement as an undergraduate in auditing and financial reporting subjects is recognized as demonstrating attributes consistent with professionalism and leadership
- The Cashy Family Scholarship Award
- The Cohen & Co./Beta Alpha Psi Leadership Award
- The Dean's Achievement Award in Accounting
- The Dean's Award in Accounting
- The Dean's Award in Accounting/The Deloitte Award to an outstanding junior majoring in Accounting
- The Dean's Award in Accounting/The Meaden and Moore Award
• The Dean's Award in Accounting/The Plante Moran Award
• The Department of Accountancy Academic Achievement Award
• The Thomas Dickerson Award for Excellence in Professional Accountancy Studies to a student whose high academic achievement and leadership in the integrated studies program in accountancy is recognized as exemplary
• The Accounting Achievement Award/Ernst and Young Award
• The Louis E. Levy Scholars in Accountancy
• The Ohio Society of Certified Public Accountants Cleveland Endowment Scholarship
• Saltz, Shamis & Goldfarb/SS&G Scholarship Award
• The Dean's Award in Accounting/Skoda, Minotti & Company Award for an outstanding underclassman
• The Wallach-Lee Families Scholarship Award

Anthropology
• The Callender Memorial Award for outstanding achievement in anthropology
• The James Dysart Magee Award for the senior year to an outstanding student in social and behavioral sciences
• The Jonathan F. Plimpton Award to a graduating senior for outstanding achievement in anthropology
• The Ruth and Newbell Niles Puckett Award to a graduating senior for outstanding achievement in anthropology

Art History
• The Muriel S. Butkin Art History Prize for overall best performance and highest grade point average by an undergraduate art history major
• The Noah L. Butkin Award for the best term paper on an art history topic written by an undergraduate
• Friends of Art Prize awarded to an undergraduate senior art history major for distinction in the field of art history

Art Studio
• The Charles E. Clemens Prize for outstanding talent and accomplishment in art
• The William Grauer Award for excellence in art studio courses
• The Doris Young Hartsock Prize for excellence in art education
• The Hazel Gibbs Herbruck Prize for excellence in art education
• The Kennedy Prize for creative work in art
• The Arnold Philip Award for excellence in art

Astronomy
• The Jason J. Nassau Prize to an outstanding senior student in astronomy

Biochemistry
• The Merton F. Utter Prize to a candidate for the BA majoring in biochemistry for outstanding achievement
• The Harland G. Wood Prize for outstanding performance by a graduating senior majoring in biochemistry who is a candidate for the BS in Biochemistry

Biology
• The Daniel Burke Prize for excellence in both biology and chemistry
• The Francis Hobart Herrick Prize for outstanding biological research and academic excellence in biology
• The Russell M. Lawall Prize in Biological Sciences for excellence in biology
• The Flora Stone Mather Alumnae Award in Biology for outstanding academic performance in biology
• The Michelson-Morley Undergraduate Research Prize in the Biological Sciences for outstanding research presentation, funded by the Howard Hughes Medical Institute
• The Ralph A. Spengler, Jr. Award for excellence in plant science
• The J. Paul Vischer Memorial Award of the Cleveland Audubon Society to the senior or graduate student who demonstrates outstanding ability and promise in the field of ecology or environmental science

Biomedical Engineering
• The Jose Ricardo Alcala Memorial Award for biomedical engineering research
• The Mark Bernstein Memorial Award to a senior biomedical engineering major for outstanding achievement in academics and leadership, contributions to research, and service to the university, department or community
• The Biomedical Engineering Chairman's Award for outstanding academic achievement and service to the biomedical engineering community
• The Biomedical Engineering Faculty Award for outstanding academic achievement, and service to the biomedical engineering community
• The Biomedical Engineering Research and Engineering Award for outstanding performance in biomedical engineering research combined with outstanding academic achievement
• The Biomedical Engineering Scholarship Award
• The Cristina A. Camardo Award to a biomedical engineering student in recognition of his or her leadership and service within the university community
• The Srinivasa (Vasu) P. Gutti Chairman's Award to a biomedical engineering student for outstanding scholarship and leadership in biomedical engineering
• Outstanding Senior Project Presentation Award
• Outstanding Undergraduate Teaching Assistant Award
• The Gheorghe and Claudia Mateescu Award for Research in Imaging to an undergraduate biomedical engineering student with a sub-discipline in biomedical imaging
• The J. Thomas Mortimer Cooperative Education Award
• Outstanding Industrial Experience Award

Chemical and Biomolecular Engineering
• The Monroe J. Bahnsen Award to a senior for achievement in chemical engineering whose work in design and research projects has been outstanding.
• The Chemical Engineering Award for the outstanding junior student
• The Chemical Engineering Award for the outstanding sophomore student
• The Connie Ilcin Award to the student who exhibits outstanding performance in chemical engineering
• The Carl F. Prutton Chemical Engineering Award to the senior whose academic performance merits his or her selection as outstanding.
• The William H. Schuette Memorial Award to an outstanding senior in chemical engineering
• The A. W. Smith Prize to a senior for academic achievement in chemical engineering in the junior and senior years

Chemistry
• The Analytical Chemistry Award for excellence in analytical chemistry
• The Hippolyte Gruener Award to a student for merit in chemistry
• The Hypercube Scholar Award
• The Inorganic Chemistry Award for excellence in inorganic chemistry
• The Iota Sigma Pi/Frank Hovorka Prize to the woman chemistry major with the highest average after three semesters
• The Eli Lilly Award to a sophomore or junior chemistry major pursuing the B.S. degree
• The Charles F. Mabery Prize is awarded to the undergraduate or graduate student presenting the best thesis on a subject connected with research in the Department of Chemistry
• The Mateescu Citizenship Award
• The Merck Index Award to an outstanding organic chemistry student
• The Ignacio Ocasio Freshman Chemistry Achievement Award for the highest achievement in freshman chemistry
• Polymer Valley Chemical Undergraduate Research Award
• The Carl F. Prutton Prize for scholarship in chemistry to a student pursuing a BS degree
• The Olin Freeman Tower Prize for excellence in physical chemistry
• The W. R. Veazey Prize to a student with the highest academic achievement in physical chemistry courses

Civil Engineering
• The Kenneth M. Haber Award to the outstanding senior in civil engineering
• The Roy Harley Prize to a promising senior or graduate student in civil engineering
• The Craig J. Miller Memorial Award to a student who has shown outstanding academic achievement
• The Allison C. Neff Memorial Award in recognition of high proficiency in professional studies and participation in professional activities to a junior whose major field is civil engineering
• The Richard and Opal Vanderhoof Award to an outstanding senior in civil engineering

Classics
• The Crawford Summer Scholarship to the American School of Classical Studies in Athens
• The Abraham Lincoln Fuller Prizes for excellence in the study of Greek or Latin
• The Emma Maud Perkins Prize for excellence in classical studies

Cognitive Science
• The Cognitive Science Award to the graduating senior for outstanding academic achievement in cognitive science
• The Award in Cognition and Culture

Dance
• The Lily Dreyfuss Memorial Award for excellence in dance
• The Bradford W. Petot Award for Excellence in Dance to a student minoring in dance

Earth, Environmental and Planetary Sciences
• The Charles S. Bacon Award for outstanding contributions to the Department of Geological Sciences
• The Philip O. Banks Award for outstanding academic achievement in geological sciences
• The Carol W. Walker Award for an outstanding senior project in the Department of Geological Sciences

Economics
• The Robert N. Baird Award for academic excellence and leadership in extracurricular activities
• The Marvin J. Barloosh Book Award for outstanding performance in economics
• The Gardiner Scholarship to a junior majoring in economics and also interested in finance
• The H. W. Kniesner Prize to an outstanding senior in economics
• The James Dysart Magee Award to an outstanding student in economics for the senior year
• The Howard T. McMyler Award to an outstanding junior majoring in economics
• The WSOM Dean’s Achievement Award for scholarship and leadership in economics

Electrical Engineering and Computer Science
• The ACM Award to the senior judged by the student chapter of the Association for Computing Machinery most likely to have an outstanding professional career
• The Chairman’s Award to a student in the Department of Electrical Engineering and Computer Science who shows exceptional academic or leadership potential
• The Donald P. Eckman Award to the outstanding senior in systems and control engineering
• The Electrical Engineering and Computer Science Award for the best senior project in electrical and computer engineering
• The Electrical Engineering and Computer Science Award for the best senior project in computer science
• The Best Senior Project Award in Systems and Control Engineering
• The Electrical Engineering Service Award to the senior performing outstanding service to his or her class
• The IEEE/HKN Award to the senior judged by the student chapters of the Institute of Electrical and Electronics Engineers and Eta Kappa Nu to possess the qualities necessary for an outstanding professional career in a general field of electrical engineering
• The National Electrical Engineering Consortium William L. Everitt Award to a student who has excelled academically in communications or computers
• The Andrew R. Jennings Award to a senior for excellence in Computer Engineering and Sciences
• The Carolyn J. and John A. Massie ’66 Prize for Computer Engineering awarded to the outstanding junior in computer engineering with exceptional research and leadership potential
• The Carolyn J. and John A. Massie ’66 Prize for Computer Engineering awarded to the outstanding sophomore in computer engineering with exceptional research and leadership potential
• The Carolyn J. and John A. Massie ’66 Prize for Computer Science awarded to the outstanding junior in computer science with exceptional research and leadership potential
• The Carolyn J. and John A. Massie ’66 Prize for Computer Science awarded to the outstanding sophomore in computer science with exceptional research and leadership potential
• The W. Bruce Johnson Award to a senior for an outstanding project in the area of electrical sciences and applied physics
• The EECS Research Award to the senior demonstrating exceptional research potential
• The Undergraduate Alumni Capital Award in Systems and Control Engineering to a senior for academic excellence and professional promise.

English
• The Charles E. Clemens Award for talent and accomplishment in writing
• The Finley Foster/Emily M. Hills Poetry Prize for the best poem or group of poems
• The Emily M. Hills Award for the best poem or essay written by a woman in the College of Arts and Sciences
• The Holden Prize for the best English paper written by an upperclass student
• The Kennedy Prize for creative work in English
• The Edith Garber Krottinger Prize for excellence in creative writing
• The Karl Lemmerman Prize for the best paper by a first-year student
• The Eleanor Leuser Award for outstanding writing for or about children by a student enrolled in a creative writing course at the university
• The Nemet Scholarships for the demonstration of excellence in creative writing
• The Harriet Pelton Perkins Prize to an outstanding student majoring in English
• The Helen B. Sharnoff Award for formal poetry submitted by undergraduate students

Environmental Studies
• The Henry David Thoreau Award for an outstanding senior in environmental studies

History
• The Donald Grove Barnes Award to a senior for excellence in history
• The Clarence H. Cramer Award for excellence in research and writing of history
• The Annie Spencer Cutter Prize to a senior for outstanding achievement in history
• The History Department Award for outstanding achievement in history
• The Sigma Psi Prize for excellence in history
• The John Hall Stewart Prize for excellence in historical studies

Judaic Studies
• The Ira and Ruth Bressler Prize to a student who has done outstanding work in the area of Jewish studies
• The Eudese and Elmer Paull Prize to one or several undergraduate or graduate students who demonstrate an interest in Jewish studies or Jewish contemporary life

Macromolecular Science and Engineering
• The Hal Loranger Award to the outstanding senior in polymer science
• The Macromolecular Senior Achievement Award
• The Samuel Maron Memorial Award to an undergraduate for excellence in polymer research

Management
• The Robert O. Berger Jr. Award to a junior who demonstrates overall achievement in scholarship, as well as notable community participation and leadership
• The Nellie Chittenden Carlton Prize to a senior in management whose outstanding work in the general field of economics shows the greater promise of leadership
• The Dean’s Achievement Award for excellence in scholarship and leadership in management
• The Excellence in Finance Award
• The Excellence in Marketing Award
• The Financial Executive’s Institute Award/Outstanding Finance Student Award
• The Outstanding Marketing Student Award
• The Roulston Performance Award for outstanding performance in management
• The Kevin J. Semelsberger Prize for excellence in management
• The Iris Wolstein Award for Excellence in Business Venture History to a student whose work on projects and/or course work related to the study of Cleveland business venture history is determined to have made a significant contribution to the understanding of the business development in Northeast Ohio and related environs
• The Wolstein Family Award for Excellence in Business Venture Plan Development to a student enrolled in a major or minor in Weatherhead undergraduate programs whose business venture development plan is considered to have the highest promise to be successfully initiated

Materials Science and Engineering
• The Wesley P. Sykes Prize to a senior majoring in materials science and engineering who shows outstanding ability in scientific research, especially as evidenced by the quality of his or her senior project.
• The Professor Jack F. Wallace Award to the materials science and engineering student who embodies the dedication and spirit of Professor Wallace

Mathematics, Applied Mathematics, and Statistics
• The Case Alumni Award to an outstanding senior mathematics major
• The Chair’s Award to a student contributing to the intellectual life of the majors program
• The Max Morris Prize to an outstanding undergraduate student in mathematics who is pursuing the BS degree.
• The Webster Godman Simon Mathematics Award to a sophomore or junior pursuing a BA degree, for excellence in mathematics
Mechanical and Aerospace Engineering
- The Robert and Leona Garwin Prize to a student who has demonstrated theoretical scientific ability with experimental competence and inventive talent
- The Gustav Kuerti Award to the senior in mechanical and aerospace engineering who has demonstrated the highest level of scholarship
- The Anish Shah ’91 Award to an outstanding senior in mechanical and aerospace engineering based on academic achievement, extracurricular activities, and community service
- The Fred Hale Vose Prize to the senior in mechanical engineering who has demonstrated the greatest promise for professional leadership

Modern Languages and Literatures
- The Arabic Book Prize for high achievement in Arabic
- The Louise Burke French Prize to an outstanding French student
- The Chinese Book Prize for high achievement in Chinese
- The Susie Scott Christopher Prize for excellent contributions to the French program
- The Department of Modern Languages and Literatures Award for outstanding achievement
- The Emile B. DeSauze Award for attaining the highest honors in modern languages and literatures
- The Folberth German Prize for excellence in German language and literature
- The French Book Prize for high achievement in French
- The German Book Prize for high achievement in German
- The Hebrew Book Prize for high achievement in Hebrew
- The Italian Book Prize for high achievement in Italian
- The Japanese Book Prize high achievement in Japanese
- The Max Kade Excellence in German Award
- The Florence Keuerleber Prize to an undergraduate student who has seriously pursued and excelled in the study of a modern language while majoring in another area
- The Russian Book Prize for high achievement in Russian
- The Spanish Book Prize for high achievement in Spanish

Music
- The Arthur H. Benade Prize to a senior with a major other than music who has made a notable contribution to music on campus during his or her undergraduate years
- The Charles E. Clemens Prize for talent and accomplishment in music
- The Doris Young Hartsock Prize for outstanding performance in music education
- The Kennedy Prize for creative work in music
- The Lyman Piano Award
- The Ronis Recital Prize to an outstanding undergraduate majoring in music who has made an exceptional contribution to the musical life of the University and has been selected by audition to perform in the Leonard and Joan Ronis Annual Memorial Recital

Nursing
- The Bolton Scholar Award for Excellence in Acute Care Nursing
- The Bolton Scholar Award for Excellence in Community Health Nursing
- The Bolton Scholar Award for Excellence in Critical Care Nursing
- The Bolton Scholar Award for Excellence in Gerontology
- The Bolton Scholar Award for Excellence in Maternal-Child Nursing
- The Bolton Scholar Award for Excellence in Nursing Informatics
- The Bolton Scholar Award for Excellence in Nursing Research
- The Bolton Scholar Award for Excellence in Pediatric Nursing
- The Bolton Scholar Award for Excellence in Psychiatric/Mental Health Nursing
- The Dean’s Award for an outstanding capstone project
- The Director’s Award for the Outstanding BSN Graduate

Nutrition
- The Mary Eliza Parker Award for excellence in nutrition and dietetics

Philosophy
- The Truman P. Handy Philosophical Prizes to outstanding juniors or seniors for excellence in philosophy

Physical Education
- The Emily Russell Andrews Award to the senior woman who makes the greatest contribution to the physical education department through scholarship, leadership, participation, and service
- The Philip K. “Nip” Heim Award to the senior man who makes the most outstanding contribution to Case Western Reserve University through the athletic program
- The Dorothy L. Hoza Award to the outstanding freshman, sophomore or junior who has made a strong contribution to the women’s intercollegiate sports program, maintained a high level of academic achievement, shown leadership in the team, and contributed service to the department and university
- The Arthur P. Leary Award to the outstanding first-, second- or third-year student who has demonstrated leadership, good sportsmanship, maintained good academic standing, and made contributions to the department of physical education and the university

Physics
- The B.S. Chandrasekhar Prize awarded upon completion of the junior year to a physics major who has demonstrated superior performance
- The Leslie L. Foldy Award to the outstanding senior in physics
- The Dayton C. Miller Award to an outstanding senior in physics for the best thesis
- The Elmer C. Stewart Memorial Award to an outstanding senior in Engineering Physics
- The Senior Award for service and scholarship in physics

Political Science
- The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
- The Flora Stone Mather Alumnae Award for outstanding academic performance in political science

Psychological Sciences
- The Stephen Bednarik Memorial Award to an outstanding senior majoring in psychology
- The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
Awards for Study Abroad

- The Professor Edwin P. Hollander, Adelbert 1948, and Mrs. Patricia A. Hollander Capstone Research Award
- The Flora Stone Mather Alumnae Award for outstanding academic performance in psychology
- The National Student Speech-Language-Hearing Association Award for outstanding leadership and achievement in communication sciences

Religious Studies

- The Ratner Family Prize to a graduating senior for the highest academic achievement in the study of religion

Sociology

- The Stella Berkeley-Friedman Award to a graduating senior for the highest academic achievement in the study of sociology
- The Robert C. Davis Award for demonstrated commitment to sociological studies
- The Mark Lefton Award for excellence in sociological studies
- The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
- The Schermerhorn Award for an outstanding student in sociology

Theater

- The Dionysus Award for an outstanding contribution to theater for a student not majoring in theater arts
- The Barclay Leatham/Nadine Miles Award for creativity and general excellence in theater

Women’s and Gender Studies

- The George Sand Award in Women’s and Gender Studies to a graduating senior majoring or minoring in the field for excellence in academic performance
- The Sojourner Truth Award to an outstanding student who combines academic excellence in Women’s and Gender Studies with commitment to community service, advocacy of women’s and gender-related issues, and activism
- The Mary Wollstonecraft Award to a continuing undergraduate student for excellence in Women’s and Gender Studies courses

Awards for Study Abroad

- The Brookes Friebolin Award to an outstanding student for study in France
- The Eva L. Pancoast Memorial Fellowship for graduating senior women in the College of Arts and Sciences or women students in the School of Graduate Studies interested in extending their education by foreign travel or study
- The Alice Seagraves Award to outstanding students for study abroad

Collegiate Awards

- The Robert J. Adler Award to the undergraduate engineering student who, through high scholarship, technical creativity, and service to his or her peers, best exemplifies the ideals and talents of Professor Robert J. Adler
- The Army ROTC Professor of Military Science Award to the senior ROTC cadet who possesses the highest ideals of leadership, academics, and physical fitness
- The Baker-Nord Center for the Humanities Prize for excellence in a SAGES capstone project or senior paper in the humanities
- The Bolton Scholar Award for Academic Excellence
- The Bolton Scholar Award for excellence in leadership and community service
- The Bolton Scholar Award for Excellence in Nursing for the student who has attained the highest academic record at the junior level
- The Bolton Scholar Award for Excellence in Nursing for the student who has attained the highest academic record at the sophomore level
- The Carol and Edward Breznyak G’64 Cooperative Education Student of the Year Award to a student in the Case School of Engineering who has demonstrated outstanding performance in the Cooperative Education Program based on industry evaluations, written reports and student initiative
- The Case Alumni Association Prize for Achievement to the senior with the best academic record in the Case School of Engineering
- The Case Western Reserve University Women’s Club Prize for a student completing an outstanding Capstone Project
- The Edward J. “Ted” Corcoran Award to a senior for outstanding leadership, character and service
- The Dean’s Achievement Award for excellence in scholarship and leadership in accounting/management
- The Russell A. Griffin Award to a senior in the College of Arts and Sciences who has made the most significant contribution to campus life
- The George T. Hunt Awards to a junior and a senior outstanding in leadership, scholarship, and service
- The Matthew Leskiewicz Award to a senior in the Weatherhead School of Management for outstanding leadership and service
- The Louis K. Levy Prize for an outstanding junior in the College of Arts and Sciences
- The P. G. “Jerry” Lind Award for a graduating senior in engineering or science who has made a significant contribution to campus life
- The Flora Stone Mather Alumnae Award for outstanding academic performance in the humanities
- The Outstanding Junior Awards of the Case School of Engineering to juniors with the best academic records at the end of five semesters in the Case School of Engineering
- The Outstanding Junior Awards of the College of Arts and Sciences to juniors with the best academic records at the end of five semesters
- The Outstanding Sophomore Awards of the Case School of Engineering to the sophomores with the best academic record at the end of three semesters in the Case School of Engineering
- The Phi Beta Kappa Prize to sophomores with the best academic records in a liberal arts curriculum after three semesters
- The Alexandra Piepho Learning and Life Scholarship to the student who demonstrates enthusiasm for experiential learning and life, provides guidance to others, and exhibits a broad scope of learning interests
- The Harriet Levion Pullman Award to a sophomore outstanding in scholarship, leadership, and service
- The John Schoff Millis Award to the senior with the best academic record in the College of Arts and Sciences
- The Sylvia Green Rosenberg Award to a part-time or full-time non-traditional student
- The Joseph Skigin Memorial Award to an outstanding premedical student for the senior year
- The Stephanie Tubbs-Jones Award for significant contributions to campus life, scholarship and community service
• The Weatherhead School of Management Award to a senior, for outstanding achievement in the Weatherhead School of Management
• The Stanley E. Wertheim Prize for an outstanding junior in the Case School of Engineering who has demonstrated leadership skills through involvement in campus or co-op activities
• The Peter Witt Scholarship to a deserving student who demonstrates a vital and active interest in the improvement of life in Cleveland

</table>
records would make them eligible for separation as degree candidates. Transient students are expected to perform at the same academic requirements for prerequisites before being admitted to specific courses. Regulations of the student's college. Transient students must meet all the requirements for that degree/major (described in the sections of this chapter for the College of Arts and Sciences (CAS) BA degree, the College of Arts and Sciences (CAS) BS degrees, the Case School of Engineering (CSE) BS in Engineering degree, the Case School of Engineering (CSE) BS in Computer Science degree, the Weatherhead School of Management (WSOM), and the Francis Payne Bolton School of Nursing (FBP)).

Undergraduate Non Degree Students

Non-Degree Students

Transient (Visiting) Students

A transient student is one who has begun his or her education at another college or university and intends to return there. The university permits full- or part-time study as a transient student in the summer as well as during the fall and spring semesters. Enrollment must be for credit-bearing courses.

Applications for enrollment as a transient student may be obtained from the Office of Undergraduate Studies, 357 Sears Building. Before enrollment, the transient student must present a statement of good standing from the registrar of his or her home college. A degree candidate from another institution may not enroll as a transient student at Case Western Reserve University if the student would not be eligible to enroll for that semester at his or her home institution. Exceptions may be granted by appeal to the Academic Standing Board, c/o the Office of Undergraduate Studies.

Enrollment is limited to 30 semester hours and is subject to the regulations of the student's college. Transient students must meet all requirements for prerequisites before being admitted to specific courses. Transient students are expected to perform at the same academic standards as degree candidates. In particular, transient students whose records would make them eligible for separation as degree candidates may not continue as transient students unless they successfully petition the Academic Standing Board.

Transient students are not eligible to receive financial aid from Case Western Reserve University. If the student’s home institution has entered into a consortium agreement with Case Western Reserve University, the student should inquire of the home institution regarding eligibility to receive aid through the home institution.

Non-Degree Students

Adults who do not already hold a bachelor’s degree may apply through the Office of Undergraduate Studies to enroll for credit in courses for which their education or experience has qualified them, even though they are not pursuing a baccalaureate degree. Applicants are expected to provide a transcript from the most recent college or high school attended. Those who have been degree-seeking students at Case Western Reserve University or have been denied admission to Case Western Reserve as an undergraduate transfer student are not eligible to attend as non-degree undergraduates.

These non-degree students may study full- or part-time and enroll in the same classes as degree students. They are required to perform up to the same academic standards as degree students.

Non-degree students may be eligible for admission to candidacy for an undergraduate degree program if they meet the requirements for admission to the university. Courses taken for credit as a non-degree student may be applied toward the degree upon acceptance as a degree candidate. A non-degree student who wishes to become a degree candidate must apply through the Office of Undergraduate Admission.

Persons who already hold degrees and wish to continue their studies without actively pursuing an additional degree should apply to the School of Graduate Studies.

Pre-College Scholars

The Pre-College Scholars Program (http://case.edu/ugstudies/pre-professional/scholars-program.html) at Case Western Reserve University is designed to give highly motivated and able secondary school students the opportunity to enroll in challenging college courses prior to graduation from high school, either in the summer or during the academic year. Admission to the Pre-College Scholars Program is selective and competitive. Case Western Reserve University has limited seats available for this program and preference is given to qualified juniors and seniors who have exhausted academic options at their high schools and who are looking for unique educational opportunities. Students must have pursued a rigorous curriculum and achieved academic excellence in all course work. Additional factors considered in admission are the applicant’s standardized test scores (ACT, PSAT, SAT, or other tests of aptitude and/or academic achievement), and the applicant’s academic goals and level of maturity. Pre-College Scholars may take a maximum of two courses per term. They attend regularly-scheduled classes with undergraduate students at Case Western Reserve, and must be able to work well independently at the college level. Questions about the program should be directed to the Office of Undergraduate Studies at 216.368.2928.

Special Audit

The Special Audit Program provides the adult student with the opportunity to attend a regular university course as a serious but informal observer at half the regular tuition. This program is available only to those not enrolled in a degree program at Case Western Reserve University.
Special audit students receive no grades and no academic credit for the courses attended. No transcripts will be issued, but a certificate of attendance will be provided if requested.

Registration for this program is handled by the Office of Undergraduate Studies. No transcripts are necessary to register.

**Course Audit Program for Senior Citizens**

Case Western Reserve University's Course Audit Program for Senior Citizens (http://www.case.edu/provost/seniorauditprogram) (CAPSC) allows senior citizens (age 65 and older) to take on campus courses at a reduced tuition rate.

**Weatherhead School of Management Undergraduate Degree Requirements**

**Bachelor of Science Degree**

*(Weatherhead School of Management)*

Candidates for the Bachelor of Science in Accounting and the Bachelor of Science in Management degrees, in addition to meeting the general requirements for bachelor's degrees (p. 613), including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 122 credit-hours.
2. The General Education Requirements of the Weatherhead School of Management listed below.
3. The requirements for a major in accounting or management as presented in this Bulletin in the section devoted to each department or program.
4. For all courses taken in the major department and for which grades are averaged, and for all courses taken to satisfy major requirements and for which grades are averaged, a candidate for a BS from the Weatherhead School of Management must earn a minimum cumulative average of 2.000. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at Case Western Reserve University at least half the hours required for the major.
5. A minimum of 30 credit-hours of courses at the 300- or 400-level.

Note that most students pursuing a degree from the Weatherhead School of Management will complete three one-credit-hour MGMT 395 seminars to fulfill the SAGES Departmental Seminar requirement.

**Majors Available for the Bachelor of Science in Management degree:**

- Dean's Approved Major*
- Finance
- Marketing

*Any student interested in developing a major of his or her own design for the BS in Management should consult with the Office of Undergraduate and Integrated Study Programs in the Weatherhead School of Management.

**General Education Requirements of the Weatherhead School of Management**

*(minimum of eight 3- or 4 credit-hour courses, totaling at least 26 credit-hours)*

These requirements provide a broad educational foundation for programs in accounting and management, leading to the Bachelor of Science degree.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer credit may be used to satisfy Weatherhead School of Management general education requirements.

NOTE: Two courses used to fulfill requirements for the major may be used also to fulfill the breadth requirements.

**Arts and Humanities (6 - 8 credit-hours)**

Two 3- or 4-credit-hour Arts and Humanities courses selected from:

- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)
- Dance (DANC)
- English (ENGL)
- French (FRCH)
- German (GRMN)
- Greek (GREK)
- Hebrew (HBRW)
- History (HSTY)
- Italian (ITAL)
- Japanese (JAPN)
- Latin (LATN)
- Music - General (MUGN)
- Music - History (MUHI)
- Music - Popular Music (MUPM)
- Music - Theory (MUTH)
- Philosophy (PHIL)
- Portuguese (PORT)
- Religion (RLGN)
- Russian (RUSN)
- Spanish (SPAN)
- Theater (THTR)
- World Literature (WLIT)

**Natural and Mathematical Sciences (14 - 16 credit-hours)**

  Astronomy (ASTR), Biochemistry (BIOC), Biology (BIOL),
  Chemistry (CHEM), Earth, Environmental, and Planetary
  Sciences (EEPS), Nutrition (NTRN), Physics (PHYS)

Social Sciences (6 credit-hours)
Any two 3-semester hour Social Science courses except ECON
102 Principles of Microeconomics* or ECON 103 Principles of
Macroeconomics* selected from: Anthropology (ANTH), Cognitive
Science (COGS), Communication Sciences (COSI), Economics (ECON),
Political Science (POSC), Psychology (PSCL), Sociology (SOCI).

* ECON 102 Principles of Microeconomics and ECON 103
  Principles of Macroeconomics are included in Accounting and
  Management major requirements.
Physical Education and Athletics

The Department of Physical Education and Athletics (http://studentaffairs.case.edu/athletics/default.html) offers the student a variety of opportunities from challenging academic classes to vigorous recreational activities.

Case Western Reserve University sponsors 19 NCAA Division III varsity sports. Men's sports include football, soccer, cross country, basketball, wrestling, swimming, baseball, tennis and indoor/outdoor track & field. Women's sports include volleyball, basketball, swimming, indoor/outdoor track & field, tennis, cross country, soccer and softball.

CWRU is a charter member of the University Athletic Association (UAA), sharing in the belief that academic excellence and athletic excellence are not mutually exclusive. The Spartans are joined in the UAA by Brandeis University, Carnegie Mellon University, Emory University, New York University, University of Chicago, University of Rochester and Washington University in St. Louis.

The Spartan football team also maintains affiliate membership in the Presidents' Athletic Conference (PAC).

The department sponsors a variety of intramural and club sport activities, including archery, cheerleading, crew, cycling, fencing, ice hockey, lacrosse, kendo, kung fu, table tennis, ultimate frisbee, volleyball, and water polo. Sport clubs are available to all students, faculty, and staff. Intramural competition is available in more than 40 activities, and more than one-half of undergraduates participate for relaxation, physical fitness, and a chance to improve skills.

Lifetime Sports Program

The department has designed an instructional program of modern activities and lifetime sports. Each semester, fifteen to twenty-five co-educational lifetime sports classes are offered.

Undergraduates have a one-year physical education requirement to be completed in the first year. Required classes, for zero credits, are offered for either half-semester or full-semester. First year students have first priority in electing PHED 010-199. Others who have completed the requirement may audit classes.

A number of popular, advanced lifetime sports activities are also offered for one hour of academic credit. Advanced skills, strategy, and coaching are taught (PHED 200-299).

Recreational Activities and Intercollegiate Athletics

The intramural program provides a continuous schedule of activities throughout the year. Individual and team sports are available to students in several divisions: university housing, fraternity, women, coed, graduate, and open. Intercollegiate varsity athletic competition is available in ten sports for men and nine sports for women.

Courses

**PHED 100. Independent Activity. 0 - 10 Units.**
This course is designed to allow the student to write individual fitness goals, compose an individual fitness program specific to the goals and execute the individual program. Students are required to participate in a pre- and post-testing program and must achieve a minimum of 75% for each test component (national norms) in order to participate in Independent Activity. The course instructor must approve all programs. The student will be required to maintain a detailed activity log.

**PHED 108. Fencing. 0 Units.**
Fencing is the art of swordsmanship. Students will learn fencing skills such as on guard, lunge, attack, parry and touch. Students will learn the rules of competition and have the opportunity to compete during class time.

**PHED 10A. Cardio Games (First Half). 0 Units.**
Cardio Games emphasizes conditioning of the aerobic and anaerobic systems through fun and energetic games such as Ultimate Frisbee, Tag, Dodge Ball, Flicker Ball and more. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

**PHED 10B. Cardio Games (Second Half). 0 Units.**
Cardio Games emphasizes conditioning of the aerobic and anaerobic systems through fun and energetic games such as Ultimate Frisbee, Tag, Dodge Ball, Flicker Ball and more. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

**PHED 11A. Jump Rope Training (First Half). 0 Units.**
This class is designed to help students develop quickness, agility, balance, strength, power, and endurance through jump rope training. Students will learn rope-handling skills, jumping techniques and training routines to help supplement training for fitness and performance. Workouts and progressions are included for warm-up, cool-down, fitness components and sport-specific training. Prereq: Undergraduate degree seeking student.

**PHED 12A. Badminton (First Half). 0 Units.**
This class provides the student with the basic skills, footwork and strategies necessary to play the sport of badminton. Emphasis is placed on skill development through instruction and drills as well as singles and doubles match play. This class is appropriate for all students. Students with special needs can be accommodated. Prereq: Undergraduate degree seeking student.

**PHED 12B. Badminton (Second Half). 0 Units.**
This class provides the student with the basic skills, footwork and strategies necessary to play the sport of badminton. Emphasis is placed on skill development through instruction and drills as well as singles and doubles match play. This class is appropriate for all students. Students with special needs can be accommodated. Prereq: Undergraduate degree seeking student.
PHED 130. Wellness. 0 Units.
This lecture class teaches the components of physical fitness as well as evaluation techniques, fitness assessment, body composition, nutrition and weight control information. This class is appropriate for all students.

PHED 131. Personal Fitness. 0 Units.
Personal Fitness is a full semester class that teaches the components of physical fitness through both lecture and activity. Students will assess their fitness levels and learn conditioning activities to improve flexibility, cardiovascular endurance, muscular strength and endurance. Nutrition, weight control and concepts of wellness are covered in this class. This class is appropriate for most students.

PHED 13A. Rock Wall Climbing (First Half). 0 Units.
This course is designed to give students a comprehensive introduction to the skills, safely, terminology and equipment used in the sport of recreational activity of rock climbing. Prereq: Undergraduate degree seeking student.

PHED 13B. Rock Wall Climbing (Second Half). 0 Units.
This course is designed to give students a comprehensive introduction to the skills, safely, terminology and equipment used in the sport of recreational activity of rock climbing. Prereq: Undergraduate degree seeking student.

PHED 141. Dance. 0 Units.
This course is designed to introduce the student to dance. Students will be exposed to a variety of dances including contemporary, jazz, folk and formal dancing. Students will learn how choreography is mounted and how dancers remember it. The class is appropriate for beginners as well as students with dance experience.

PHED 14B. Indoor Rowing (Second Half). 0 Units.
This course introduces the student to basic indoor rowing techniques, skills, and equipment. Students will learn conditioning programs to prepare the student to continue in recreational, fitness or competitive rowing programs. Prereq: Undergraduate degree seeking student.

PHED 170. Varsity Baseball. 0 Units.

PHED 171. Varsity Basketball (Men). 0 Units.

PHED 172. Varsity Basketball (Women). 0 Units.

PHED 174. Varsity Cross Country (Men). 0 Units.

PHED 175. Varsity Cross Country (Women). 0 Units.

PHED 178. Varsity Football. 0 Units.

PHED 180. Varsity Soccer (Men). 0 Units.

PHED 181. Varsity Soccer (Women). 0 Units.

PHED 182. Varsity Swimming (Men). 0 Units.

PHED 183. Varsity Swimming (Women). 0 Units.

PHED 184. Varsity Tennis (Men). 0 Units.

PHED 185. Varsity Tennis (Women). 0 Units.

PHED 186. Varsity Track and Field (Men). 0 Units.

PHED 187. Varsity Track and Field (Women). 0 Units.

PHED 188. Varsity Volleyball. 0 Units.

PHED 189. Varsity Wrestling. 0 Units.

PHED 190. Varsity Softball (Women). 0 Units.

PHED 216. Weight Training II. 1 Unit.
This class is for the student with weight training experience and/or the student who has successfully completed the basic weight training program and wishes to continue training in an advanced program. Advanced skill development, program development and safety are emphasized. This class section does not satisfy the Physical Education requirement.

PHED 217. Life Guarding. 1 Unit.
Advanced physical education activities. Advanced instruction in sports, limited to upperclassmen. This course may lead to certification in lifeguarding. Recommended preparation: Advanced swimming skills.

PHED 218. Wellness. 1 Unit.

PHED 21A. Hatha Yoga (First Half). 0 Units.
This course provides an introduction to Hatha Yoga, presenting body awareness, basic philosophy, breathwork, postures and meditation techniques. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 21B. Hatha Yoga (Second Half). 0 Units.
This course provides an introduction to Hatha Yoga, presenting body awareness, basic philosophy, breathwork, postures and meditation techniques. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 22A. Intermediate Hatha Yoga (First Half). 0 Units.
This course utilizes the basics of Hatha Yoga including body awareness, philosophy, breathwork, and postures with emphasis on increased strengthening, increased aerobic segments, and more challenging postures. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 22B. Intermediate Hatha Yoga (Second Half). 0 Units.
This course utilizes the basics of Hatha Yoga including body awareness, philosophy, breathwork, and postures with emphasis on increased strengthening, increased aerobic segments, and more challenging postures. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 24A. Jogging (First Half). 0 Units.
Prereq: Undergraduate degree seeking student.

PHED 24B. Jogging (Second Half). 0 Units.
Prereq: Undergraduate degree seeking student.

PHED 25A. Power Volleyball (First Half). 0 Units.
This class introduces volleyball skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 25B. Power Volleyball (Second Half). 0 Units.
This class introduces volleyball skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 26A. Racquetball (First Half). 0 Units.
This course teaches racquetball skills and strategies for team and individual play. Course content includes terminology, skill development, scoring, etiquette and safety. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 26B. Racquetball (Second Half). 0 Units.
This course teaches racquetball skills and strategies for team and individual play. Course content includes terminology, skill development, scoring, etiquette and safety. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.
PHED 27A. Indoor Group Cycling (First Half). 0 Units.
A stationary cycling program set to motivational music. Students will learn how to use and set up the bike and how to create a challenging workout using sprints, jumps and climbs. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 27B. Indoor Group Cycling (Second Half). 0 Units.
A stationary cycling program set to motivational music. Students will learn how to use and set up the bike and how to create a challenging workout using sprints, jumps and climbs. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 28A. Squash (First Half). 0 Units.
Students will be introduced to the skills, techniques and strategies necessary to play the sport of squash. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 28B. Squash (Second Half). 0 Units.
Students will be introduced to the skills, techniques and strategies necessary to play the sport of squash. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 29A. Swimming - Beginning and Intermediate (First Half). 0 Units.
This class focuses on basic swimming skills and safety. This class is appropriate for non-swimmers to those students with mid-range swimming skills. Students with disabilities may be accommodated. Prereq: Undergraduate degree seeking student.

PHED 29B. Swimming - Beginning and Intermediate (Second Half). 0 Units.
This class focuses on basic swimming skills and safety. This class is appropriate for non-swimmers to those students with mid-range swimming skills. Students with disabilities may be accommodated. Prereq: Undergraduate degree seeking student.

PHED 30A. Swimming - Endurance (First Half). 0 Units.
This class is for individuals who have mastered intermediate swimming skills and wish to develop advanced swimming skills and greater swimming endurance. Prereq: Undergraduate degree seeking student.

PHED 30B. Swimming - Endurance (Second Half). 0 Units.
This class is for individuals who have mastered intermediate swimming skills and wish to develop advanced swimming skills and greater swimming endurance. Prereq: Undergraduate degree seeking student.

PHED 31A. Tennis (First Half). 0 Units.
Students will learn the tennis skills and strategies necessary for both singles and doubles play. Emphasis is placed on stroke development, rules, scoring and etiquette. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 31B. Tennis (Second Half). 0 Units.
Students will learn the tennis skills and strategies necessary for both singles and doubles play. Emphasis is placed on stroke development, rules, scoring and etiquette. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 325. Officiating Basketball. 2 Units.
Administrative procedures, promotion, managerial relationships, scheduling, tournaments, budgeting, scoring systems, and officiating.

PHED 332. Introduction to Sports Medicine. 3 Units.
This class provides a detailed introduction to the foundation of Sports Medicine. Students will understand the complexities of sports medicine and athletic training through classroom lecture, structured laboratory and clinical hours. Topics covered in this class include roles and responsibilities of the sports medicine team, injury pathology, injury prevention, evaluation and management of injury.

PHED 334. Orthopedic Assessment of the Upper Extremity. 3 Units.
This class provides students with hands on experience that prepares them to perform orthopedic assessments within the field of athletic training. Students learn to take medical histories, palpate bony and soft structures, perform range of motion, neurological and circulatory tests. Students will learn to perform orthopedic tests of the upper extremities, head, cervical spine and abdomen. This class involves lectures, laboratory and clinical hours. Prereq: PHED 332 and PHED 342.

PHED 339. Orthopedic Assessment of the Lower Extremity. 3 Units.
This class provides students with hands on experience that prepares them to perform orthopedic assessments within the field of athletic training. Students learn to take medical histories, palpate bony and soft structures, perform range of motion, neurological and circulatory tests; and perform orthopedic special test of the lower extremities, pelvis, and lumbar spine. This class involves lectures, labs, and clinical hours. Prereq: PHED 332 and PHED 342.

PHED 341. Physiology of Exercise. 3 Units.
The classroom and laboratory experiences in this class are intended to provide an understanding of physiological adaptations of the human body to acute and chronic exercise. The classroom portion will focus mainly on the response and adaptation of bodily systems to exercise and the relationship of physiology to sport, health and exercise programs. The laboratory portion will focus on evaluation of the physiological response to exercise. Prereq: PHED 332, PHED 342, PHED 334, PHED 339.

PHED 342. Kinesiology. 3 Units.
The purpose of this course is to present the conceptual ideas and general principles of the science of human movement. It reviews and applies the pertinent aspects of anatomy, physiology and mechanics. Subject matter is drawn from research and clinical findings of widely dispersed kinesiological subdisciplines and professional specializations. Prereq: PHED 332.

PHED 34A. Weight Training (First Half). 0 Units.
This class focuses on muscular strength and endurance training through individualized weight training programs. Emphasis is placed on appropriate use of equipment and safety procedures. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 34B. Weight Training (Second Half). 0 Units.
This class focuses on muscular strength and endurance training through individualized weight training programs. Emphasis is placed on appropriate use of equipment and safety procedures. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 350. Therapeutic Rehabilitation and Modalities. 3 Units.
Topics covered in this class include concepts and practices associated with the conditioning and reconditioning (rehabilitation) of athletic injuries. Principles and practical skills associated with therapeutic modalities used in the treatment and rehabilitation of athletic injuries are also covered. This class involves lectures, labs and clinical hours. Prereq: PHED 332, PHED 334, PHED 339, and PHED 342.
PHED 40A. Basketball (First Half). 0 Units.
This class introduces basketball skills, techniques, rules and basic offense and defense. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 40B. Basketball (Second Half). 0 Units.
This class introduces basketball skills, techniques, rules and basic offense and defense. This class is appropriate for most students.

PHED 42B. Indoor Soccer (Second Half). 0 Units.
Students will learn the skills, techniques and strategies to play the sport of indoor soccer. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 44A. Core Yoga (1st Half). 0 Units.
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 44B. Core Yoga (2nd Half). 0 Units.
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 45A. Introduction to Speed and Agility Training. 0 Units.
This introductory course is intended for the student with an interest in training of speed and agility specific to their sport interest. The course will focus on the aspects of physical training necessary for the development of speed and agility and improved athletic performance. Prereq: Undergraduate degree seeking student.

PHED 45B. Introduction to Speed and Agility Training. 0 Units.
This introductory course is intended for the student with an interest in training of speed and agility specific to their sport interest. The course will focus on the aspects of physical training necessary for the development of speed and agility and improved athletic performance. Prereq: Undergraduate degree seeking student.

PHED 50A. Personal Safety Awareness (First Half). 0 Units.
This class focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 50B. Personal Safety Awareness (Second Half). 0 Units.
This class focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 55A. Cardio-Fitness (First Half). 0 Units.
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 55B. Cardio-Fitness (Second Half). 0 Units.
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 60A. CPR/First Aid (1st half). 0 Units.
Students will learn the basic first aid and CPR skills necessary to act in an emergency. Automated external defibrillation training is included. This class involves both lecture and hands-on work. Students will have the opportunity to achieve Basic Rescuer certification at the completion of the class.

PHED 60B. CPR/First Aid (2nd half). 0 Units.
Students will learn the basic first aid and CPR skills necessary to act in an emergency. Automated external defibrillation training in included. This class involves both lecture and hands-on work. Students will have the opportunity to achieve Basic Rescuer certification at the completion of this class.

PHED 65B. Team Building, Leadership, and Creative Movement (2nd half). 0 Units.
The primary purpose of this course is to provide an opportunity for Orientation leaders to: work as a team and build transferable skills for collaboration, active listening, communication, and motivation; learn dance movement as a form of communication and stress reduction; create the Orientation Leader Boogie Dance (performed at Welcome Days tradition and football game halftime show); understand the value in personal decision making and awareness (stress reduction, drug/alcohol awareness, sexual assault, etc.); learn campus resources; build Orientation Leader esprit de corps and enhance school spirit. This course will develop more effective and competent university ambassadors. In addition, the course will facilitate the development of leadership skills.
The Case Western Reserve University School of Dental Medicine (http://dental.case.edu) is a professional school offering a curriculum leading to the Doctor of Dental Medicine degree (DMD). Advanced education programs in the dental specialties are also available.

The School of Dental Medicine was organized June 21, 1892, as the Dental Department of Western Reserve University. For the first 25 years of its existence, the school was located in downtown Cleveland. In 1917, the School of Dental Medicine became an integral part of the university and now occupies a building adjacent to the School of Medicine, the School of Nursing, and University Hospitals of Cleveland. In 2003, the name of the school officially changed from the School of Dental Surgery to the School of Dental Medicine, and the degree offered changed from Doctor of Dental Surgery to Doctor of Dental Medicine. Since its organization, it has conferred degrees on approximately 4,900 graduates.

The mission of dentistry is the protection and improvement of the health of individuals and society with a concentration on oral health. Professional activities encompass a wide variety of endeavors including the clinical care of individuals, the prevention of disease, the discovery of new knowledge, and the development of procedures and policies that protect and improve health, especially for those populations at risk for disease.

Because oral health is an important concern of society, the role of the dentist continues to be essential and rewarding. Men and women who are interested in scientific studies directly related to the welfare of people should find a strong appeal in dentistry as a life work. It offers an unusual opportunity for public service, community respect, and the use of originality, compassion, and substantial skill and independent judgment on a daily basis.

Mission Statement

The mission of the Case Western Reserve University School of Dental Medicine is to provide outstanding programs in oral health education, patient care, focused research and scholarship, and service that are of value to our constituents. We will accomplish this in an environment which fosters collegiality and professionalism, and that enables a diverse group of students to become competent practitioners of dentistry and contribute to the health and well-being of individuals and populations.

Dental Education Program

The students who enter the School of Dental Medicine are very carefully selected and have already had many opportunities for intellectual and social development. The years in dental school should permit the continued maturation of the individual and should emphasize the basic knowledge and skills which are common to all dentists. Graduates should continue their dental education during their professional careers and add to the basic concepts taught in dental school by studying the scientific literature and by attending continuing education courses. While in dental school, the student develops an attitude of professionalism and a sense of responsibility toward the patient’s welfare, which will provide optimal dental care.

License to Practice Dentistry in Ohio

Specific information about licensure in Ohio and other states should be obtained from the individual state boards of dentistry.

Accreditation

The School of Dental Medicine is an institutional member of the American Dental Education Association and the programs of the School of Dental Medicine are accredited by the Commission of Dental Accreditation.

Student Affairs

The University Office of Student Affairs serves as an ombudsman focusing attention on the rights and responsibilities of students within the university community. In addition, it serves as a central source of information about university policies and procedures that affect student life and extracurricular programs and services. Students may contact the University Office of Student Affairs for resolution of specific problems and for referral to other university offices or campus agencies.

Facilities

The entire Health Sciences Center has been designed so that students can travel from the School of Dental Medicine to the School of Medicine, the School of Nursing, the Health Sciences Library, and any component of University Hospitals without having to go outside.

The dental school building was designed to provide a modern teaching facility. The Multimedia Laboratories are designed and equipped so that the basic sciences (except for anatomy), technique and simulated clinical experience can be carried on by the student in his or her individual area. The 50,000 square foot dental clinic floor consists of two major clinical areas and five specialty clinics. The major clinics are made up of individual cubicles, fully equipped as private operatories. Each student clinician is assigned to one of the individual operatories for the academic year.

Drawing from a local population of more than one million, the clinics provide a broad spectrum of care to the population, affording the student substantial clinical experience. The school cooperates with various organizations of the city in caring for their clients, an arrangement that provides additional clinical experience for students.

Libraries

The Cleveland Health Sciences Library (CHSL) was formed in 1966 by an agreement between the Cleveland Medical Library Association (CMLA) and Western Reserve University. CHSL operates in two locations: the Allen Memorial Medical Library and the Health Center Library (HCL). The total collection currently numbers over 430,000 volumes, including print and electronic journal subscriptions numbering in excess of 60,000.

The Allen collection, strongly clinical, serves private and institutional members of the Cleveland Medical Library Association as well as faculty and students of Case Western Reserve University.

The Health Center Library collection of basic science materials is primarily for faculty and students of the schools of dental medicine, medicine, and nursing and the department of biology.

The Dittrick Museum of Medical History, located on the third floor of the Allen Library, contains nearly 20,000 objects related to the history of medicine, dentistry, and pharmacy, with special emphasis on Cleveland
and the Western Reserve. The museum also contains a medical archives collection and a rare book room.

Reference staff in both libraries help and instruct patrons in the use of the library and its bibliographic resources. Items not available on campus may be obtained through inter-library loan. Other services provided are quick telephone reference, citation verification, computerized or manual bibliographic searches, access to the internet, and online searching of a multitude of databases.

Hospital Affiliations
The School of Dental Medicine has working relationships with hospitals and health clinics in the Greater Cleveland community. Students have the opportunity to function as dentists and observe hospital routine and operating room techniques in these hospitals. Many members of the faculty hold staff appointments in these extramural health facilities.

University Hospitals is a 974-bed tertiary care facility located across the street from the School of Dental Medicine. Graduate departments in oral and maxillofacial surgery and pediatric dentistry are based at this facility. A variety of educational and research opportunities exist in relation to this affiliation.

Community Health Clinics
Dental students participate in clinical care at several community health clinics in and around the greater Cleveland area. As part of the curriculum, dental students spend two weeks at one of the community clinics and additionally may volunteer their services in their free time. An example of a community health clinic is The Free Medical Clinic of Greater Cleveland, at 12201 Euclid Avenue. It is a nonprofit community service organization that offers medical, dental, podiatric, and legal services, as well as family planning and psychological counseling programs for adults and children; provides a patient advocacy program and speakers for community education and training at other health agencies; and operates a hotline seven evenings a week.

Administration
Kenneth B. Chance, Sr., DDS
(Case Western Reserve University)
Dean of the School of Dental Medicine

Ronald L. Occhionero, DDS
(Case Western Reserve University)
Associate Dean for Administration; Professor of Comprehensive Care

Kristin Z. Victoroff, DDS (Dalhousie University), PhD (Case Western Reserve University)
Associate Dean for Education, Associate Professor of Community Dentistry

Aaron Weinberg, DMD (The Hebrew University of Jerusalem), PhD
Israel)
Associate Dean for Research, Professor of Biological Sciences and Chair

Sorin T. Teich, DMD, MBA
(Hebrew University of Jerusalem Israel; Northwestern University-Chicago/ Tel Aviv University-Israel)
Associate Dean of Clinical Operations, Associate Professor of Comprehensive Care

Director of Admissions

Advanced Education in General Dentistry (AEGD)

Advanced Education in General Dentistry (AEGD)

The AEGD program is a one-year experience with a major emphasis in clinical general dentistry designed to provide the resident with training beyond that received in the pre-doctoral curriculum.

Formal courses, seminars and literature review, as well as one week of “on call” per month, enhance the resident’s ability to handle dental and medical emergencies encountered in everyday practice.

The AEGD program provides the resident the opportunity to deliver the highest quality of comprehensive dental care to the broadest range of the population with a knowledge, comfort, and ease in treating the high risk patient and under-served segment of the population including: HIV/AIDS, medically compromised, physically handicapped, and geriatric populations with considerable experience in implantology and full mouth rehabilitation.

The AEGD program enables the resident to become proficient in diagnosis and treatment planning for the more challenging and complex cases to identify and treat many medical and/or dental emergencies encountered in every day dental practice. The AEGD program introduces the resident to the basic concepts of hospital dentistry and help them interact with their medical colleagues and other health care providers to integrate medical and dental

Goals and Objectives

• To provide the residents with the didactic knowledge and clinical experience to deliver multi disciplinary comprehensive oral health care to a wide range of the population beyond the level of predoctoral education. (This includes providing community services through the management of the medically and/or immunocompromised patient, the physically handicapped patient, as well as the geriatric and the under served segment of the population.)

• Enable the residents to identify and treat the most common medical and/or dental emergencies encountered in every day dental practice.

• To develop in the residents the values of professional ethics, and acceptance of cultural diversity in the practice of dentistry.

• To develop the skills of self evaluation and critical thinking.
• To provide the residents with experience to improve their ability to interact, function and communicate effectively with other health care professionals in the delivery of comprehensive treatment.
• To encourage the resident to continue the process of life long learning through continuing education, professional meetings, and review of literature.
• To provide the residents with training in patient, practice and risk management in order to manage a private dental practice.

Admission

Information about admission to the AEGD Program (http://dental.case.edu/aegd) can be found on the School of Dental Medicine website.

The didactic component of the AEGD program is conducted in both the formal courses as well as the departmental seminars.

Formal Courses

• Management of Medical Emergencies
• Pharmacology
• Orthodontic
• Interdisciplinary Seminars
• Occlusion
• Correlative Medical Sciences

Seminars

• Literature review
• Case Presentation
• Endodontics
• Periodontics
• Oral Surgery
• Implantology
• Oral Diagnosis and Treatment Planning
• Preventive Dentistry
• Pain and Anxiety Control in the Conscious Patient
• Geriatric Dentistry
• Special Care Patients including the Medically Compromised
• Asepsis and Infection Control
• Pediatric Dentistry
• Operative Dentistry
• Fixed and Removable Prosthodontics
• Oral Medicine
• Practice Management

Service: Pediatric Rotation

• Length of Rotation or Experience (in weeks): 12
• Number of Hours per week: 4

Objectives:

1. To provide residents with both clinical and didactic training in pediatric dentistry beyond that received in the pre-doctoral curriculum.
2. To improve the resident's ability in diagnosis, treatment planning, oral examination, and physical evaluation of the pediatric patient.
3. To improve the resident's ability to use non-pharmacologic management techniques to appropriately manage and guide the behavior of the child patient to accept needed treatment and to provide advice or guidance to the parent to enhance the child's acceptance.
4. To assist the resident in developing a working knowledge of preventive and corrective dental procedures relating to the growth and development of the stomatognathic system.
5. To increase both the confidence and competence of residents in meeting the general oral health needs of the pediatric patient.

Service: Geriatric Dentistry

• Length of Rotation or Experience (in weeks): 16
• Number of Hours per week: 8

Objectives:

1. See the variability of patient disability/ability/cognitive impairment in a diverse patient population.
2. Apply the principles of rational treatment planning to patients with limited access to dental care.
3. Practice behavioral management techniques for patients who are uncooperative.
4. Learn how to manage institutionalized patients and coordinate care with staff of the long-term care facilities.
5. Know how to deal with treatment of patients who cannot give informed consent.
6. Realize how much dental care is needed by older patients; and you will know what a significant positive impact that your work can have on the quality of life of older individuals.
7. Become a patient, empathetic caregiver.

Craniofacial, Surgical, and Special Care Orthodontics Fellowship Program

Fellows accepted into the Craniofacial, Surgical and Special Care Orthodontics Fellowship Program will be provided with advanced clinical, didactic, and research training during the 1 year program of study in the management of children with facial differences. We anticipate most fellows to go through a 1 year program of study. However, individuals who intend to devote the majority of their career in this area may be provided with the opportunity to enroll in a second year of study.

Graduates of the program will be exposed to the diagnoses, treatment planning, and clinical execution of orthodontic and dentofacial orthopedic services to a large clinical volume of pediatric, adolescent, and adult patients who have congenital and acquired craniofacial abnormalities. The goal of the Fellowship Program is to train the fellow to attain a level of competency that enables him or her to recognize, diagnosis and treat patients with craniofacial anomalies and special needs in a hospital-based, team care setting.

Fellows participate in the craniofacial and cleft conferences, review treatment plans and progress notes, and provide clinical care to the patients under direct supervision. All complex treatments are discussed with the attending on a case-by-case basis. New patient exams are done on regular basis and the fellows work up cases (clinical exam, study models analysis, CBCT evaluations) and reviews the treatment plans with the faculty. The fellows will perform all the surgical treatment plans, cephalometric prediction tracings, model surgery, and splint construction. The fellow will also scrub in and participate in the OR activities/surgical procedures.

Rotations with other services will form an integral part of the Fellowship Program. The principal rotations will be with the departments of plastic surgery, oral and maxillofacial surgery, and pediatric dentistry. In addition, the fellow will be exposed to speech pathology, pediatric otolaryngology, genetics, and occupational therapy.

The format of the program allows for constant one-on-one supervision that will allow for subjective assessments of the fellow’s understanding of the subject matter, clinical skills, and patient management skills. This will be supplemented by weekly sessions with the faculty, where the fellow’s understanding will be further tested. At the end of each semester, a written examination will form part of the assessment of the fellow’s progress.

Admission

More information about admission to the program can be obtained by contacting the following:

Manish Valiathan (manish.valiathan@case.edu), DDS, MSD, Program Director, at 216.368.0673; Olivia (stephanie.leasure@case.edu) Rasul, Craniofacial Clinic Assistant, at 216.368.4331; or Colleen Friday (colleen.friday@case.edu), Graduate Studies Administrator, at 216.368.1168.

Residency Program in Dental Public Health

Residency Program in Dental Public Health

The advanced education program in Dental Public Health is fully accredited by the Commission on Dental Accreditation and offers three tracks: 1) one-year full-time for dentists with a master’s degree in public health or equivalent; 2) two-year part-time for dentists with a master’s degree in public health or equivalent; and 3) two-year full-time for dentists WITHOUT a master’s in public health. Residents in the first two tracks earn a certificate, while residents in the third track will earn a residency certificate from the School of Dental Medicine as well as an accredited MPH degree through Case Western Reserve University (CWRU) School of Medicine.

The primary training site is the CWRU School of Dental Medicine, with extramural sites in other parts of Ohio. The didactic instruction for the residency program encompasses competencies of the American Board for Dental Public Health and concepts such as population health, cultural competency, and health literacy. The field experience sites have been carefully chosen to increase residents’ cultural sensitivity and understanding, particularly about underserved groups. Trainees have opportunities to work with indigent, homeless, and minority populations.

Admission

More information about admission to the dental public health residency program (http://dental.case.edu/community/residency/howtoapply) can be found on the School of Dental Medicine website.

DMD Special Programs for Undergraduates

DMD Special Programs for Undergraduates

The School of Dental Medicine offers two programs for high school seniors who plan to pursue careers in dentistry.
Pre-Professional Scholars in Dentistry

The Pre-Professional Scholars Program in Dentistry offers exceptionally well qualified high school students two options: the six-year program where students join the CWRU School of Dental Medicine after completing two years of undergraduate course work or the eight-year program that begins after the completion of the bachelor’s degree. For more information about the program, see Pre-Professional Scholars Program (p. 564) in the Office of Undergraduate Studies section of this bulletin. For more information about admission to the Pre-Professional Scholars Program, see the Office of Undergraduate Admission website (http://admission.case.edu/apply/ppsp.aspx).

Senior Year in Professional Studies

The Senior Year in Professional Studies offers Case Western Reserve undergraduate students, who are candidates for the Bachelor of Arts (BA) degree and who are admitted to Case Western Reserve University School of Dental Medicine by the end of the junior year, the opportunity to shorten their entire course of studies by one year. For more information about the program and admission, see Acceleration Toward Professional Degrees (p. 562) in the Office of Undergraduate Studies section of this bulletin.

DMD/MPH DMD and Master of Public Health

Dual-Degree Program

DMD and Master of Public Health

The Case School of Dental Medicine, in collaboration with the School of Medicine, offers a dual-degree program in dental medicine and public health (DMD/MPH). The program is funded by the Health Resources and Services Administration (HRSA), Predoctoral Training in Public Health Dentistry Training Grant.

Purpose

One of the primary goals of the American Dental Association (ADA) is to “Promote the oral health of the public.” Dental public health is one of the nine recognized specialties of the ADA, and is defined as “the art and science of preventing oral diseases and promoting oral health through organized community efforts.” The objective for the five-year dual degree program is to impart knowledge and skills necessary to expand the practice of dentistry into the community in a proactive way that fosters improved oral health, and as a direct result, yields improved overall health of the populations involved.

Curriculum

The DMD curriculum consists of 141.5 credit hours and the MPH curriculum consists of 42 credit hours: 24 credit hours of didactic MPH courses, 9 credit hours for DMD coursework, participation in a seminar series, and 9 credit hours for the “Culminating Experience”, a public health field practicum (3 credits) and public health Capstone project (6 credits). A total of 9 credits will be applied from the dental curriculum to the MPH degree. Of the 24 credit hours of didactic curriculum, 18 must be from core MPH courses. Dual degree students may choose to enroll in electives as well.

One of the five years of the dual degree program must be dedicated to MPH courses, which can be either before the first DMD year, between the 1st and 2nd DMD years, or between the 2nd and 3rd DMD years. Other possible options for the dedicated MPH year will be considered on a case-by-case basis. Information about the MPH program can be found here. (http://mph.case.edu)

Features

Each dual degree student will be assigned two advisors who will advise and guide them towards completing the MPH program. In addition to didactic courses, the DMD/MPH program requires a practicum/field experience at a public health agency including community health centers. The student will also be required to complete a capstone project and present the findings at the Innovations in Population Health conference, the School of Dental Medicine Professionals Day, and at a national conference.

Admission

Admission to the DMD program is required for consideration for the DMD/MPH program. Prospective students are eligible to apply to the MPH program at any time prior to the start of the third DMD year. Applicants must complete an online application form for the MPH program that includes a personal statement about the applicants’ interest in public health and professional goals; three letters of recommendation; GRE or DAT test scores, and TOEFL or IELTS if applicable; and official transcripts for all higher education degrees.

DMD/MS Clinical Research Training

Dual-Degree Program
DMD and Master of Science in Clinical Research Training

The Case School of Dental Medicine, in collaboration with the School of Medicine, presents a dual-degree program made possible by the National Institute of Health (NIH) Ruth L. Kirschstein National Research Service (T32) Training Grant.

Purpose

The objective for the five-year joint DMD and Master in Clinical Research Training (DMD-MCRT) at the School of Dental Medicine is to train dental scholars for an academic career and for utilizing scientific advances to solve clinical problems. Part of this goal is training in clinical research so that the dental graduate may promote progress in biomedical research and develop innovative and effective strategies for the oral health needs of the population.

Curriculum

The DMD curriculum consists of 141.5 credit hours and the MCRT curriculum consists of 36 credit hours. The MCRT curriculum consists of 15 graded hours of core curriculum, 6 graded hours of DMD coursework, 3-6 graded hours of elective course(s), participation in a seminar series, and 9-12 graded hours of research work culminating in a thesis project. Components of the dental curriculum are equivalent to clinical research material that is taught at the graduate level. Thus a total of 6 credits will be applied from the dental curriculum to the master’s degree.

A full year of research is a requirement. The student will be required to take one year off (either between the 2nd and 3rd or 3rd and 4th DMD years or immediately after DMD completion) for fulfillment of the master’s program. The one-year research training can also be accomplished in 2-3 month blocks between DMD years. A successful passing of the oral defense of the master’s research thesis is also required.

Features

Key features of this dual-degree program are that it is a five-year program where each student is assigned an advisor, a mentor, and the student will receive “protected time” to complete their master’s requirements. This program will highlight core dental and master’s courses as well as research rotations. The student will be required to complete a master’s thesis research project and make a scientific presentation at the International Association of Dental Research or the American Association of Dental Research conferences.

Admission

Prospective students are eligible to apply to the program anytime after their first year of DMD studies, but prior to the start of the fourth DMD year. Applicants must complete an online application form that includes a personal statement describing the reason for seeking admission along with a summary of career goals and submit a non-refundable application fee, three sealed recommendation letters or online recommendation forms, a recent curriculum vitae including previous research experience, letters of support from training director and research mentor ensuring protected time, and official transcripts for all higher education degrees. Applicants will also be required to submit a photograph and Visa/Permanent Resident Card/ECFMG (if applicable). Admission to the program is contingent upon good DMD academic standing and recommendation letters from the Associate Dean for Education and the Director of the DMD-MCRT program.

Doctor of Dental Medicine (DMD)

The program will accomplish its goals through academic work in four themes and two threads, which are woven throughout the four years of the program. The program includes a variety of educational formats to deliver the curricula, including problem-based learning sessions, team-based learning, independent study, seminars, experiential learning opportunities, traditional lectures, virtual reality clinical simulation, laboratories, standardized patient experiences, and patient-based comprehensive care. An important goal of the curriculum is to help students become better prepared in independent learning, critical thinking skills, and the use of evidence. The curriculum is a program of study that includes traditional and newly organized integrated educational modules in the following themes and threads:

Themes

Health and Well-Being
This theme contains all curricula -- both didactic and clinical -- that apply to health and the normal structure and functioning of the body and of the oral complex. The traditional content areas of physiology, biochemistry, anatomy, histology, among other dental science classes, are integrated through cases to form a better bridge between the basic sciences and the clinical sciences.

Disease Processes
The Disease Processes theme includes content related to general and oral diseases. These topics are often melded with healthy structure and function content to provide students with a global perspective of the implications of disease on usual functioning.

Restoration of Health
This theme contains content related to therapies necessary for treatment of medical disease and dental disease. A focus on restoring oral health is accomplished through virtual reality clinical skills training, training on models and progression to comprehensive dental care in conjunction with didactic knowledge.

Maintenance of Health
The Maintenance of Health theme focuses on curriculum which explores strategies for preserving health through general and oral health therapies, patient education, disease risk assessment, and disease prevention. This theme provides viewpoint from which students can develop life-long care plans for their patients.

Threads

Inquiry
This thread that runs throughout the four-year program supports student growth in skills in clinical decision making. Students develop an understanding of what scientific evidence is, how to make clinical decisions, and to value scientific discovery in all aspects of dentistry.

Leadership
This thread contains curriculum for the development of students as ethical, sensitive, caring practitioners who are stewards of oral health of the individual patient, the community, and society. An important focus in Leadership curriculum is content that helps students advance in their role as a professional. It also supports the integration of all students into the practice management curriculum centered within their clinical preceptor groups.

Years

Year 1
This year includes curriculum describing normal healthy functioning and disease processes. Basic science content is taught in the context of clinical cases. Foundational work in understanding human structure and function is paired with learning about disease. Dental clinical sciences study the foundational elements of oral health.

Year 2
This year continues with an integrated approach to curricula in health and disease with an emphasis on the development of dental clinical skills. Further development of students as clinicians proceeds with their involvement in the clinical preceptor groups. Students will make a transition to increasing patient-centered clinical care as they demonstrate competency in clinical skills and didactic knowledge.

Year 3
This year includes didactic work related to advancing levels of knowledge and clinical experience. Students spend time in didactic classes that are directly related to clinical practice and in rotations to specialty clinical areas while accomplishing comprehensive patient care.

Year 4
Students gain clinical experience in the Comprehensive Care Clinics and finish didactic work which may include enrichment courses. They participate in practice management activities of their preceptor group, developing critical skills for general practice dentistry.

Doctor of Dental Medicine (DMD)
The graduate endodontics program is a continuous 24-month master's degree (Master of Science in Dentistry) and certificate program.

The program will prepare specialists in the fields of diagnosis, all phases of treatment and prevention of pulpal and periapical dental disease. It will provide training in research design and methodology as it relates to pulpal, dentinal, periodontal, and related clinical areas, preparing the resident for teaching responsibilities in undergraduate, postgraduate, and graduate levels.

A top of the line surgical microscope with a complete and full documentation package is provided for teaching a variety of microscopic surgery techniques.

The curriculum includes bone grafting and guided tissue regeneration. The IV sedation and general anesthesia training are provided by University Hospitals of Cleveland for the second year resident. Presentation of multiple table clinics is required. The endodontic residents have placed first the last three years at the annual meeting of the Ohio Dental Association.

Admission

Information about admission to the endodontics program (http://dental.case.edu/endodontics/residency/howtoapply) can be found on the School of Dental Medicine website.

**Expanded Function Dental Auxiliary (EFDA)**

**Expanded Function Dental Auxiliary Program**

The School of Dental Medicine offers a non-degree certificate course in expanded dental functions to dental auxiliaries with requisite training and experience. This continuing education program prepares the student to take an examination administered by the Ohio Commission on Dental Testing for Expanded Function Dental Auxiliaries.

The Expanded Function Dental Auxiliary course is a less than part-time program and includes didactic, pre-clinical laboratory, and clinical training. It is affiliated with several hospitals and health agencies in the Cleveland metropolitan area, where a portion of the clinical training takes place. Students are selected for admission on the basis of their performance on an entrance examination administered by the program faculty.

Upon successful completion of this accredited program, an auxiliary is eligible to sit for the state certifying examination provided by the Commission on Dental Testing in Ohio.

**Admission**

Information about admission to the EFDA program (http://dental.case.edu/efda) can be found on the School of Dental Medicine website.

Students begin the program learning tooth anatomy, contour and contact using wax. Then students gradually advance through one, two, three, and complex surface restorations of amalgam and composite on the typodont. Rubber dam placement and sealant placement are also learned.

Part of the responsibility for being in the program will be for the employer dentist to allow the EFDA trainee to perform intra-oral procedures (restorations) in the office once the student has successfully passed one amalgam, composite, and sealant competencies.

Clinical/patient experience occurs during the second semester at MetroHealth Hospital/clinics, Case School of Dental Medicine Clinic, Rainbow Hospital Tapper Pedodontic Clinic, The Free Clinic of Cleveland, or St. Elizabeth Hospital Dental Clinic in Youngstown, Ohio, and the office in which the student is employed.

Mock board exams are given the second semester, simulating the testing atmosphere of the actual state examination.

After successful completion of the course, the student will be eligible to sit for the state board examination administered by the Commission on Dental Testing in Ohio (http://codtinohio.org). Examination candidates will be expected to bring their own instruments and materials (not school-owned) to the exam.

According to various sections of the Ohio Law and Regulations for Certification and Licensure Boards, persons convicted of any felony or misdemeanor may not be able to take the licensure or certification examinations; may be refused acceptance of placement by the clinical/practicum sites; or may have restrictions placed on their ability to practice. For more information, contact the Dean of Student Services and the applicable licensure/certification board.

Lecture and lab during the first semester

- All day lab / clinic second semester
- An optional state board review course is offered at the end of the second semester, after completion of the EFDA Program in May for an additional fee

**Lectures and labs**

- Nomenclature
- Caries classification
- Cavity preparation
- Oral anatomy
- Dental morphology
- Periodontium
- Histology
- Basics of occlusion
- Ergonomics
- Instrumentation
- Pulp protection
- Dental materials
- Matrix and wedge techniques
- Temporization
- Amalgam placement and carving
- Polishing amalgams
- Composite placement
- Composite finishing and polishing
- Posterior composites
- Pit and fissure sealant placement
- Rubber dam placement

Graduate Studies at School of Dental Medicine

Academic Regulations

Registration
Graduate studies programs operate on a twelve-month basis, from July 1 to June 30. The year is divided into two six-month semesters. The fall semester is from July 1 to December 31; and spring semester is from January 1 to June 30. The act of registration includes submission of a course schedule approved by the department, the payment of semester tuition, and the completion of the online registration form. Each semester, registration must be completed as scheduled. Students enrolled in fall and spring semesters may arrange to pay bills for tuition and fees in two installments. At least half of the total bill must be paid at registration; the remainder must be paid in accordance with university policy. Fees may be charged for late registration or late payment. Students who fail to register within 30 days after the published dates will be considered to have withdrawn from the program. In the School of Dental Medicine, students who are not registered are not considered students of record, lose the protections of the university in matters of liability, and therefore, may not treat patients. They can no longer attend class or receive grades and will have to formally reestablish their matriculation. In any circumstance, all lost course and/or clinical time will be added to the end of the program’s original completion date.

Under unusual circumstances, special arrangements for registration may be made with permission of the department chair and the associate dean for graduate studies. Social security numbers are used for all records and documents and must be provided at the time of registration. Foreign students will be issued a number for this purpose if they have not obtained a social security number prior to registration. New students and new residents who do not register as specified and who have failed to provide satisfactory reasons for the delay in advance will forfeit their right to admission. Vacancies which arise from such circumstances are filled from a list of alternate candidates at the discretion of the department.

Grading
The responsibility for assigning grades rests exclusively with the course director, who must announce the general method of grading at the beginning of the course. Course grades are reported to the registrar of the School of Dental Medicine at the end of the course or when a final grade has been determined, if prior to the scheduled completion time for the course. Incomplete or conditional grades can be changed only by the course director as described in the University Registrar (p. 976) section of this bulletin. Grading in the School of Dental Medicine Graduate Programs is A, B, C, or F and pass/no pass.

Transfer Credit
Transfer of credit from another university is limited to six semester hours of graduate-level courses. Such transfer requires approval from the student’s advisor, the department chair, and the Office of Graduate Studies. Courses must have been taken within five years prior or subsequent to matriculation in the graduate program at Case Western Reserve University, and only those with grades of “B” or better are transferable. No credit for a thesis may be transferred from another university.

Graduate credit is not awarded for 100- or 200-level courses or their equivalents.

Thesis Advisory Committee
Each master’s degree candidate is advised to consult with their Program Director as to when and how to form a thesis committee. The Graduate department chair, in consultation with the Program Director, chooses a faculty member to serve as the primary thesis advisor. This advisor also serves as the chair of the thesis committee. The primary thesis advisor will help identify other members of the faculty (at least two) to serve as secondary advisors and as members of the thesis committee. At least two members of the thesis committee must be from the department in which the student is enrolled, and one must be from another department. Additional membership is not restricted and may include persons from outside the university who have qualifications acceptable to the department chair. Members of the thesis committee continue in their capacity until the student graduates or leaves the program of study. The thesis committee will be responsible for guiding the student in the development of a thesis protocol. Once a protocol is acceptable, the thesis committee members advise the student on the conduct of the research and writing of the thesis document. Ultimately, the committee members will evaluate the student’s oral defense and final thesis document.

Research Project
For master’s degree programs, each student must carry out an original and meaningful research project acceptable to the department chair and the advisory committee. A written thesis, similarly acceptable, is to be prepared and must conform to the standard format determined by the Office of Graduate Studies of the School of Dental Medicine. The thesis must be submitted before the prescribed deadline. An oral examination (defense) of the thesis is required. This examination is administered by the student’s advisory committee before a standard date set by the Office of Graduate Studies of the School of Dental Medicine. Unanimous agreement of the committee is required to pass the thesis examination. A student must be registered for thesis credit or continuing graduate work during the semester in which the thesis examination is conducted. The thesis defense is ordinarily open to all members of the university faculty, student body, and guests.

Extra Courses
Individual students enrolled in an advanced education program, whether or not a master’s degree is involved, may be required to take courses beyond the general requirements set forth by the department in order to complete the program. In such instances, the student must be notified in writing by the department chair, with a copy filed in the Office of Graduate Studies of the School of Dental Medicine.

Time Limits
Each student is expected to maintain continuous registration and all requirements must be completed within five consecutive calendar years immediately following matriculation as an advanced education student, including approved periods of leave of absence. A student who fails to complete the requirements within five years must be formally readmitted with full standing in order to continue study, subject to terms of readmission, future time limits, and revised requirements for the award.
of the degree. Prior status in the program is no guarantee of readmission and should not be assumed.

**Leave of Absence**

A student may request a leave of absence for personal reasons or reasons of health when anticipated or actual absence is in excess of three weeks. A written request for a leave of absence must include the reason for the request and the length of time requested. A leave of absence cannot exceed one calendar year. It must be submitted to the program director and to the associate dean of graduate studies of the School of Dental Medicine. The program director will forward the request with his/her response to the Committee on Graduate Studies. In order to be eligible for such requests, the student must be currently enrolled and in regular attendance prior to the time or circumstances that necessitated the request. At the expiration of the leave, the student must resume registration unless formally granted an extension. A leave of absence does not extend the maximum time permitted for the completion of degree requirements. A student who fails to obtain an approved leave, or who fails to resume registration at the time expected, may be separated from the program. During the period of leave, it is expected that the student will not avail himself or herself of the teaching and research resources of the School of Dental Medicine or the university. At the end of an approved leave, reentry into the program is reviewed by the program director in concert with the Committee on Graduate Studies, and may not be at the same level attained at the time the leave was granted. Programs with a high patient case component may require that the clinical portion of the program be repeated in its entirety. Finally, the committee also reserves the right to place a student on leave of absence where it has been determined that the circumstances warrant, even in the absence of a formal request.

**Maintenance of Good Standing**

A minimum cumulative grade point average of 2.75 is required for good standing in a graduate program for all courses taken for graduate credit (excluding those graded Satisfactory/Unsatisfactory or Pass/No Pass).

The associate dean for graduate studies reviews student performance and may recommend a course of action to the Committee on Graduate Studies. The committee may require remedial work, place a student on academic review or probation, set conditions for continuation in the student’s course of study or program, and may require withdrawal for failure to meet the academic standards set by the department or school. A student who receives a grade deemed unsatisfactory in any course is placed on probation and must remove himself or herself from probation within a time period specified by the committee. It is expected that removal from probation will ordinarily require repetition of the course with an acceptable grade or the successful completion of work deemed equivalent by the student’s advisory committee and the departmental chair.

In this regard, a student may be separated from the university for any one of the following reasons:

1. Failure to correct probationary status within the specified time period.
2. Failure to achieve a minimum grade point average of 2.50 or above upon completion of 12 semester hours or a grade point average of 2.75 or higher upon completion of 21 semester hours of graduate study.
3. Failure to complete all requirements for the master’s degree within five consecutive calendar years from the term of matriculation, unless granted an extension of a maximum of one year upon recommendation of the advisor and chair and approved by the associate dean for graduate studies.

In calculating the grade point average, all courses for which quality points are given are counted, including courses which may be required to be repeated. In addition, on the recommendation of the student’s department, and with due process, the School of Dental Medicine may suspend or separate a student from the university for failure to maintain appropriate standards of conduct and integrity in discharging their responsibilities. Academic failure, moral delinquency, gross misconduct, or failure to meet the specific conditions of probation or academic review is sufficient reason for requiring withdrawal from the school.

**Graduation**

The minimum requirements for the master’s degree in the School of Dental Medicine are 36 semester hours of course work, including six or more semester hours of thesis/equivalent registration, and the submission of an accepted thesis. Individual departments may require additional semester hours of specific course work and/or thesis. Not less than 24 semester hours may be at the 500 level or higher.

A candidate for a Master of Science in Dentistry degree must make application for the degree to the Office of Graduate Studies of the School of Dental Medicine no later than three months before the commencement at which the degree is expected.

The awarding of the degree is dependent upon the satisfactory completion of all requirements, and the recommendations of department chair, Committee on Graduate Studies, and faculty of the School of Dental Medicine. The student must complete all requirements for both the master’s degree and certificate in order to receive either.

Degrees will not be awarded to candidates with delinquent financial accounts that include, but are not limited to, tuition payments, fees, and library fines.

**Delayed Graduation**

A candidate who has successfully defended his or her thesis, but who fails to meet the deadline for thesis submission for graduation in one semester, will be permitted to receive his or her degree at the next scheduled graduation, without further registration or payment of tuition if the completed thesis is submitted within fourteen days of the date originally scheduled for graduation. If all requirements are not met within this grace period, the candidate must register for the subsequent semester.

**Oral and Facial Maxillofacial Surgery**

**Oral and Maxillofacial Surgery**

The residency program at Case Western Reserve University in Oral and Maxillofacial Surgery is a joint program with the School of Medicine leading to an MD degree and certificate in oral and maxillofacial surgery. Case Western Reserve University is the only program in the country that enables residents to obtain their medical degree and certificate in five years.

Residents rotate through several institutions: the Department of Oral & Maxillofacial Surgery at University Hospitals of Cleveland, Cleveland's Veterans Administration Hospital, the School of Dental Medicine at Case Western Reserve University, the Department of Oral and Maxillofacial
Surgery at the Cleveland Clinic, Aultman Hospital in Canton, and the Cleveland Clinic Hospital. This diversity of institutions ensures that residents gain experience in the essential areas of clinical surgery in preparation for all types of practices.

Admission

More information about admission to the oral and maxillofacial surgery (http://dental.case.edu/omfs/residency/howtoapply) program can be found on the School of Dental Medicine website.

- The Cleveland Clinic/OMFS - 1 month
- Veteran's Admin/OMFS - 3 months
- University Hospitals/Anesthesia - 3 months
- Foreign Rotation (optional) - 1 month

PGY 4

General Surgery Internship:

- University Hospitals/OMFS - 2 months
- The Cleveland Clinic/OMFS - 1 month
- University Hospitals and MetroHealth/Surgery Rotations - 9 months
  - Plastic Surgery - 3 months
- ENT - 2 months
- Neurosurgery - 1 month
- SICU/Trauma - 2 months
- General Surgery/Pediatric Surgery - 1 month

PGY 5

- University Hospitals/OMFS Chief Resident - 6 months
- Aultman Hospital/Private Practice in Akron/Canton - 3 months
- University Hospitals/OMFS - 3 months

Orthodontics

The graduate program in orthodontics is a master's (Master of Science in Dentistry) and certificate program dedicated to advancing the art and science of orthodontics through research, teaching, and service.

The clinical training of orthodontic residents encompasses all aspects of current orthodontic practice including, full treatment cases with bands and brackets, early treatment, adult treatment, craniofacial anomalies, orthognathic surgery and TMD/occlusion. One of the strengths of this program is the clinical exposure during residency, with residents using a wide variety of techniques, and often having more than 100 patients under their care. The clinical outcome assessments in place help assure that the graduate is ready to become a competent orthodontist, and often all the patient cases required for board certification will be completed upon graduation. Since the 1990s, the Case Western Reserve University Orthodontic program has been a leader in craniofacial imaging and has a cutting edge approach in three dimensional imaging.

There is an option to extend the program to 36 months to satisfy European specialty training standards (ERASMUS).

Admission

More information about admission to the orthodontics program (http://dental.case.edu/orthodontics/grad/howtoapply) can be found on the School of Dental Medicine website.

There is an option to extend the program to 36 months to satisfy European specialty training standards (ERASMUS).

Admission

Pediatric Dentistry

The graduate program in pediatric dentistry is a master's (Master of Science in Dentistry) and certificate program that takes place at Case Western Reserve University School of Dental Medicine and Rainbow Babies and Children's Hospital.

The two-year post doctoral residency program follows closely the principles and policies as outlined in the Guidelines for Advanced Education in Pediatric Dentistry prepared by the American Academy of Pediatric Dentistry and the American Board of Pediatric Dentistry. It is fully accredited by the Commission on Dental Accreditation. Successful completion results in a certificate of specialty education in pediatric dentistry which qualifies the resident for examination by the American Board of Pediatric Dentistry.

Students who elect to complete the master's program pay full tuition. The MSD program is open to non-US citizens and foreign-trained dentists. Foreign-trained dentists must complete a US GPR or AEGD before applying to the program.

Our purpose is to train the specialist as a qualified practitioner, consultant and advocate for complete dental treatment of healthy and special needs children.

The acquired skills prepare the pediatric dental resident to prevent, diagnose and treat common and unusual oral problems that might arise during the physical, psychological and emotional development of the child and adolescent. In addition to the oral aspects of childcare, the resident becomes cognizant of the general health problems related to children.

Our program offers a balanced clinical and didactic curriculum in advanced infant, child and adolescent dental care.

The pediatric dentistry curriculum is designed to have the resident play an integral role in the health care of children, side by side with his/her medical colleagues, and to prepare the resident for successful entry into the contemporary practice setting while providing the foundation for future growth in the field.

Admission

More information about admission to the pediatric dentistry program (http://dental.case.edu/pediatrics/residency/howtoapply) can be found on the School of Dental Medicine website.

The following courses are required for the postdoctoral student:

- Behavioral Management
- Anatomy
- Epidemiology & Biostatistics
- Microbiology
- Facial Growth and Development
- Craniofacial Anomalies
- Hospital Dentistry
- Conscious Sedation
- Conferences
- Pediatric Dentistry Literature Review
- Preventive and Interceptive Orthodontics
- Genetics
• Pharmacology
• Hospital Rotations in the departments of Anesthesia, Pediatric, and Emergency Medicine

A research requirement must be fulfilled for certification in pediatric dentistry. Students enrolled in the MSD program must complete a formal thesis.

### Periodontics

**Periodontics**

The graduate program in periodontics is a thirty-six month, continuous course of study, leading to both a certificate in Periodontics and a Master of Science in Dentistry degree. It is a fully accredited program by the American Dental Association, and meets all the clinical and didactic requirements of the American Board of Periodontology.

The general goals of the program are to train expert clinicians in this specialty, and/or to prepare individuals for an academic (research-teaching) career in Periodontics.

**This postdoctoral program offers broad clinical experience and research training.**

Completion and defense of a research thesis is one of the requirements of this program. Limited teaching experience is offered to the graduate student so that his/her exposure to clinical, research, and teaching facets of periodontics is complete. All of the faculty of the Department of Periodontics involved in teaching graduate students in this program are educationally or board certified periodontists. Additional instruction within this program is by faculty members of the School of Dental Medicine and the School of Medicine. Because of the multiplicity of training programs our professors have completed, the student is exposed to diverse views of diagnosis, prevention, and treatment of periodontal diseases. A brief initial review of basic aspects of periodontology introduces the new graduate student to the specialty training during the summer session. Extensive contact with practicing periodontists, sufficient exposure to hospital periodontal practice, and clinical training in dental implants are additional features of this program.

**Admission**

More information about admission to the periodontics program (http://bulletin.case.edu/schoolofdentalmedicine/periodontics%20http://dental.case.edu/periodontics/residency/howtoapply) can be found on the School of Dental Medicine website.

The following courses are required for the postdoctoral student:

- Advanced Periodontal Seminar - ongoing for 3 years
- Literature Review in Periodontology- ongoing for 3 years
- Periodontal Conferences - ongoing for 3 years
- Clinical Periodontics- ongoing for 3 year
- Advanced Principles of Occlusion - 1 semester
- Conscious Sedation - 1 semester (didactic, 2nd year), ongoing for 2 years (clinical)
- Implant Dentistry - 1 semester (didactic, 2nd year), ongoing for 2 years (clinical)
- Research Thesis - ongoing for 2 year
- Periodontal Prosthesis - one semester
- Microbiology, Immunology and the Immune Response - 1 semester
- Management of Medical Emergencies - 1 summer session
- Anatomy of the Head and Neck - 1 summer session
- Limited Tooth Movement - 1 summer session
- Biological Aspects of the Stomatological System - 1 semester
School of Dental Medicine Courses

• Correlative Medical Science - 1 semester
• Introduction to Research Methods - one semester
• Advanced Oral Pathology - one semester
• Epidemiology and Biostatistics - 1 semester
• Interdisciplinary Seminar - one semester
• Clinical Pharmacology - one semester
• Creative Thinking in Research Development - 1 semester
• 2-week hospital rotation

School of Dental Medicine Courses

COMP Courses

COMP 200. Directed Clinical Experience. 0.5 - 6 Units.
Directed clinical experience under faculty supervision and with special permission of the Associate Dean for Education.

COMP 310. Summer Clinic. 0.5 - 6 Units.
Attendance is mandatory in the summer dental clinic of the third year. Students become acquainted with all aspects of clinical practice and begin providing clinical care for patients.

COMP 322. Surgical Periodontics. 1 Unit.
Companion clinical component to REHE 351. Clinical treatment in conjunction with residents and faculty.

COMP 328. Oral Diagnosis and Treatment Planning. 1 Unit.
Treatment planning based on the correlation of fundamentals taught in diagnosis, preventive dentistry and restorative dentistry. Clinical experience in the application of didactic training consists of four components; assignments in the admitting and radiology service where students carry out examinations of the newly admitted patients and evaluate their problems and needs; radiology seminars where the technique and interpretation of the radiographs taken by the students are discussed; assignments to the emergency service; and clinical conferences with a staff member.

COMP 348. Endodontics. 1 Unit.
Companion clinical component to DSRE 391. Clinical application of endodontic techniques.

COMP 358. Clinical Oral Surgery I. 1 Unit.

COMP 378. Pediatric Dentistry Clinic. 1 Unit.
Companion clinical component of REMA 341

COMP 384. General Dentistry Clinical Qualifying. 1 Unit.
This course consists of the successful completion of the recall clinical qualifying exam and two diagnosis and treatment planning clinical qualifying exams. It is also necessary for the student to successfully fulfill the recall needs of their assigned clinic patients in order to pass this course.

COMP 300. Directed Clinical Experience. 0.5 - 6 Units.
Directed clinical experience under faculty supervision and with special permission of the Associate Dean for Education.

COMP 310. Summer Clinic. 0.5 - 6 Units.
Attendance is mandatory in the summer dental clinic of the third year. Students become acquainted with all aspects of clinical practice and begin providing clinical care for patients.

COMP 322. Surgical Periodontics. 1 Unit.
Companion clinical component to REHE 351. Clinical treatment in conjunction with residents and faculty.

COMP 328. Oral Diagnosis and Treatment Planning. 1 Unit.
Treatment planning based on the correlation of fundamentals taught in diagnosis, preventive dentistry and restorative dentistry. Clinical experience in the application of didactic training consists of four components; assignments in the admitting and radiology service where students carry out examinations of the newly admitted patients and evaluate their problems and needs; radiology seminars where the technique and interpretation of the radiographs taken by the students are discussed; assignments to the emergency service; and clinical conferences with a staff member.

COMP 348. Endodontics. 1 Unit.
Companion clinical component to DSRE 391. Clinical application of endodontic techniques.

COMP 358. Clinical Oral Surgery I. 1 Unit.

COMP 378. Pediatric Dentistry Clinic. 1 Unit.
Companion clinical component of REMA 341

COMP 384. General Dentistry Clinical Qualifying. 1 Unit.
This course consists of the successful completion of the recall clinical qualifying exam and two diagnosis and treatment planning clinical qualifying exams. It is also necessary for the student to successfully fulfill the recall needs of their assigned clinic patients in order to pass this course.

COMP 300. Directed Clinical Experience. 0.5 - 6 Units.
Directed clinical experience under faculty supervision and with special permission of the Associate Dean for Education.

COMP 310. Summer Clinic. 0.5 - 6 Units.
Attendance is mandatory in the summer dental clinic of the third year. Students become acquainted with all aspects of clinical practice and begin providing clinical care for patients.

COMP 322. Surgical Periodontics. 1 Unit.
Companion clinical component to REHE 351. Clinical treatment in conjunction with residents and faculty.

COMP 328. Oral Diagnosis and Treatment Planning. 1 Unit.
Treatment planning based on the correlation of fundamentals taught in diagnosis, preventive dentistry and restorative dentistry. Clinical experience in the application of didactic training consists of four components; assignments in the admitting and radiology service where students carry out examinations of the newly admitted patients and evaluate their problems and needs; radiology seminars where the technique and interpretation of the radiographs taken by the students are discussed; assignments to the emergency service; and clinical conferences with a staff member.

COMP 348. Endodontics. 1 Unit.
Companion clinical component to DSRE 391. Clinical application of endodontic techniques.

COMP 358. Clinical Oral Surgery I. 1 Unit.

COMP 378. Pediatric Dentistry Clinic. 1 Unit.
Companion clinical component of REMA 341

COMP 384. General Dentistry Clinical Qualifying. 1 Unit.
This course consists of the successful completion of the recall clinical qualifying exam and two diagnosis and treatment planning clinical qualifying exams. It is also necessary for the student to successfully fulfill the recall needs of their assigned clinic patients in order to pass this course.
COMP 386. Quality Assurance. 1 Unit.
This course entails quality assurance issues including, but not limited to: providing students with the working knowledge of dental record keeping, as it relates to diagnosis and treatment of pathology; recognition and management of medical illness and disabilities; treatment planning; documentation of pre-existing conditions, current and past treatment; established laboratory protocols; evaluation of reasons for remakes and re-dos; post-treatment evaluation of care. Recommended preparation: LDRS 313.

COMP 387. General Practice Dentistry A. 1.5 Unit.
Comprehensive dental care. Each student is assigned for clinical training to a preceptor group led by a practicing general dentist. The preceptor guides the students in diagnosis, treatment planning, and actual patient treatment with consultation in various specialties as required. Experience in the provision of emergency dental care. The preceptor directs the total dental health care of the patients of each of his students. Biweekly seminars are provided for each preceptor group. Special topics, student cases, techniques, and journal articles are discussed. Recommended preparation: Concurrent enrollment in DENC 389.

COMP 389. General Practice Dentistry B. 1.5 Unit.
Comprehensive dental care. Each student is assigned for clinical training to a preceptor group led by a practicing general dentist. The preceptor guides the students in diagnosis, treatment planning, and actual patient treatment with consultation in various specialties as required. Experience in the provision of emergency dental care. The preceptor directs the total dental health care of the patients of each of his students. Biweekly seminars are provided for each preceptor group. Special topics, student cases, techniques, and journal articles are discussed. Recommended preparation: Concurrent enrollment in DENC 387.

COMP 390. General Practice Dentistry A. 1.5 Unit.
Clinical application of the principles of general practice dentistry. Recommended preparation: Concurrent enrollment in DENC 390.

COMP 394. General Practice Dentistry B. 1.5 Unit.
Clinical applications of the principles of general practice dentistry. Recommended preparation: Concurrent enrollment in DENC 390.

COMP 417. Community Oral Health Capstone Experience. 1.5 Unit.
The goals of this particular course are to provide experience delivering dental care to a population of patients in a community health center while working with and communicating with a dental health care team and to gain experience in cultural sensitivity.

COMP 422. Periodontics. 0.5 Units.
Clinical application of surgical and nonsurgical techniques used in the treatment of moderate periodontal disease. Students exposed to more advanced cases through clinical demonstrations by instructors. Students encouraged to gain additional experience and become more confident in the management of periodontal patients.

COMP 428. Oral Diagnosis and Radiology. 0.5 Units.
Clinical experience in the admitting and radiology service.

COMP 448. Endodontics. 1 Unit.
Clinical application of the principles of endodontics therapy. Diagnosis and treatment planning. Management of endodontic emergencies and prognosis of endodontic treatment.

COMP 458. Clinical Oral Surgery II. 1 Unit.
Clinical application of the principles of oral surgery.

COMP 464. Operative Dentistry. 2.5 Units.
Clinical application of the principles of operative dentistry.

COMP 468. Removable Prosthodontics. 1.5 Unit.
Clinical application of the principles of prosthodontic dentistry.

COMP 474. Fixed Prosthodontics. 2.5 Units.
Treatment of patients requiring simple and advanced fixed prostheses as an integrated part of total patient care.

COMP 478. Pediatric Dentistry. 2 Units.
Emphasizes comprehensive oral health care of the well child to provide experience in examining, diagnosing, treatment planning, and completing treatment of a selected number of children. Preventive aspects of pediatric dentistry emphasized. Additional voluntary experiences in clinical practice of pediatric dentistry available.

COMP 480. Clinical Geriatric Dentistry. 1.5 Unit.
This course focuses on the study of aging in the population and its effects on treatment planning and actual dental treatment of geriatric patient's. Clinical and didactic instruction would cover a wide variety of medically compromising conditions, physical disabilities and sensory impairments. Senior students will be trained in the delivery of comprehensive dental care to a broad range of older adults, from well to frail to functionally dependent in a variety of settings, while understanding the impact of physiological aging, systemic conditions, functional disabilities, and pharmacological interactions on delivering dental services to these vulnerable populations.

COMP 482. Clinical Orthodontics. 1 Unit.
Clinical application of the principles of orthodontics.

COMP 487. General Practice Dentistry A. 2.5 Units.
Comprehensive dental care. Each student is assigned for clinical training to a preceptor group led by a practicing general dentist. The preceptor guides the students in diagnosis, treatment planning, and actual patient treatment with consultation in various specialties as required. Experience in the provision of emergency dental care. The preceptor directs the total dental health care of the patients of each of his students. Biweekly seminars are provided for each preceptor group. Special topics, student cases, techniques, and journal articles are discussed. Recommended preparation: Concurrent enrollment in COMP 489.

COMP 489. General Practice Dentistry B. 2.5 Units.
Comprehensive dental care. Each student is assigned for clinical training to a preceptor group led by a practicing general dentist. The preceptor guides the students in diagnosis, treatment planning, and actual patient treatment with consultation in various specialties as required. Experience in the provision of emergency dental care. The preceptor directs the total dental health care of the patients of each of his students. Biweekly seminars are provided for each preceptor group. Special topics, student cases, techniques, and journal articles are discussed. Recommended preparation: Concurrent enrollment in COMP 487.

COMP 490. General Practice Dentistry A. 2.5 Units.
Clinical application of the principles of general practice dentistry. Recommended preparation: Concurrent enrollment in COMP 494.

COMP 492. General Dentistry Clinical Competency. 0.5 Units.
This course consists of the successful completion of the recall, emergency, diagnosis and treatment planning, and patient outcomes clinical competencies. It is also necessary for the student to successfully fulfill the recall needs of their assigned clinic patients in order to pass this course. Recommended preparation: Completion of Basic Core Program.

COMP 494. General Practice Dentistry B. 2.5 Units.
Clinical application of the principles of general practice dentistry. Recommended preparation: Concurrent enrollment in COMP 490.
COMP 495. Directed Clinical Studies. 1 Unit.
This course is intended to provide students with the opportunity to advance their dental clinical patient skills in the comprehensive care clinics of the School while also providing advanced opportunity for students who are so inclined to focus in individual areas of clinical skills development.

COMP 498. Quality Assurance. 1 Unit.
This course reinforces quality assurance skills and knowledge provided in the prerequisite course including, but not limited to: providing students with the working knowledge of dental record keeping, as it relates to diagnosis and treatment of pathology; recognition and management of medical illness and disabilities; treatment planning; documentation of pre-existing conditions, current and past treatment; established laboratory protocols; evaluation of reasons for remakes and re-dos; post-treatment evaluation of care. Recommended preparation: COMP 394.

DENF Courses

DENF 422. Comprehensive Periodontics. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the periodontic procedures associated with general dentistry.

DENF 428. Comprehensive Oral Medicine. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the radiologic and oral diagnostic procedures associated with general dentistry.

DENF 448. Comprehensive Endodontics. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the endodontic procedures associated with general dentistry.

DENF 455. Comprehensive Oral Surgery. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the oral surgery procedures associated with general dentistry.

DENF 464. Comprehensive Operative Dentistry. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the operative procedures associated with general dentistry.

DENF 468. Comprehensive Removable Prosthodontics. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the removable prosthodontics procedures associated with general dentistry.

DENF 474. Comprehensive Fixed Prosthodontics. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the fixed prosthodontic procedures associated with general dentistry.

DENF 478. Comprehensive Pedodontics and Orthodontics. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the pediatric and orthodontic procedures associated with general dentistry.

DENT Courses

DENT 501. Biological Aspects of the Stomatological System. 2 Units.
This course is a review of biochemistry, molecular and cellular biology, histology, and oral anatomy and an expansion of oral biological topics that underlie the disciplines of endodontics, orthodontics, periodontics, and pediatric dentistry.

DENT 502. Correlative Medical Science. 2 Units.
Case-based discussion of selected systemic disease commonly encountered by the dentist.

DENT 503. Facial Growth and Development. 1 Unit.
Emphasis on the qualitative, quantitative, and integrative changes during postnatal craniofacial growth and development.

DENT 504. Advanced Facial Growth. 1 Unit.
Student participation in seminar evaluation series dealing with problems and controversies apparent in the literature in regard to theories of growth, development, and aging. Emphasis on the craniofacial literature, but not exclusively.
DENT 505. Dentofacial Anomalies. 1 Unit.
This course is designed to provide the student with the practical experience regarding the multidisciplinary aspects of diagnosis and treatment of patients with craniofacial anomalies. Observation of team sessions and active participation in patient examinations, diagnosis, and treatment planning.

DENT 507. Dental Ethics for the Graduate. 1 Unit.
This 8 week course is given in group discussion format. Topics of ethical dilemmas, informed consent, professional (both national and local) codes of ethics, IRB introduction, patient autonomy, contractual obligations and purrery are discussed using case scenarios and student presentations.

DENT 508. Master’s Thesis Protocol. 2 Units.
The requirements for the degree of Master of Science in Dentistry include the successful completion of a suitable research experience, demonstration of scholarly attainment, and the ability to conduct directed research.

DENT 509. Temporomandibular Disorders, Orofacial Pain and Sleep Disorders. 0 - 3 Units.
This course will enable first year dental residents to learn the principles of pain mechanisms, types of OFP and Sleep Disorders, differential diagnosis and management of these conditions in adults and children. By the end of this course the residents should be able to identify the most common types of OFP and sleep disorders, be able to make the differential diagnosis, and manage simple OFP case and / or refer the most complex OFP cases. Recommended preparation: DMD, DDS or equivalent degree.

DENT 510. Epidemiology and Biostatistics. 3 Units.
A detailed presentation of epidemiological and biostatistical techniques designed to acquaint the student with a broad spectrum of scientific approaches and to prepare for a research project. Topics include design of observational and experimental studies, common biostatistical techniques encountered in the dental literature such as t-test, ANOVA, chi-square, correlation and regression, and assessing the validity of diagnostic tests. Instruction includes lectures, critique of selected literature and computer analysis of data.

DENT 512. Advanced Oral Pathology. 3 Units.
Lectures and seminars on the clinical and histopathologic characteristics of many of the common oral diseases. Special emphasis on developing a logical approach to clinical and histopathologic diagnosis. Participation is expected for in-class discussion of the clinical and histopathologic material presented.

DENT 513. Anatomy of the Head and Neck. 3 Units.
This course deals with the structural, functional, and clinical relationships of the many organs and organ systems which comprise the head, neck, and pharyngeal regions of the human body.

DENT 514. Research Methods: Preparation. 1 Unit.
The goal of this course is to facilitate a formal statement of the student’s research idea as preparation for working with a thesis committee or undertaking independent research.

DENT 516. Microbiology, Immunology, and Immune Systems. 1 Unit.
This course reviews bacterial structure and classification, provides insight into oral bacterial pathogenesis. Principles of antibiotic use and mechanisms of resistance are reviewed. Microbial diagnostic methodologies are discussed. Integration of periodontics, endodontics, and pediatric dentistry is stressed as it relates to the inflammatory process in the human host.

DENT 518. Behavioral Considerations in Oral Health Care. 1 Unit.
This course focuses on the behavioral knowledge and skills the oral health practitioner must possess in order to deliver effective, patient-centered care. Specifically, the course is designed to enhance graduate students’ existing knowledge and skills in relation to dentist-patient communication, management of diverse patient populations, and patient education and facilitation of health behavior change.

DENT 520. Skeletal Anchorage. 0.5 Units.
This course provides 1st year orthodontic residents with the theoretical knowledge and practical skills necessary to successfully treat orthodontic patients in need of absolute anchorage with orthodontic mini-implants. In addition, the most current articles in the orthodontic literature pertaining to this topic are read and discussed. The theory will be supplemented by practical exercises as necessary.

DENT 521. Manot Cave Dig, Israel. 0 - 1 Units.
This project is an ongoing collaboration between the CWRU School of Dental Medicine and Tel Aviv University. The newly discovered excavations have produced thousands of butchered deer bones, hundreds of stone tools, an one partial human skull. Traditionally CWRU faculty and students will be going in July to continue their work. Interested students are given the opportunity to learn basic archeotechnical techniques while working in a newly discovered cave in Northern Israel. The Manot cave was discovered in 2008 and after 6 field seasons has yielded thousands of artifacts shedding light on what life was like for our early ancestors. Each participant will rotate through several stations including wet and dry sieving, excavation, and how to pick through the processed remains. They will learn how to identify stone and bone tools, faunal and floral remains. In addition to the hands-on experience they also get to attend field lectures by some of the world’s most famous researchers in human prehistory. Lodging is in comfortable cabins within easy walking distance from the cave site. This two-week field and lab experience is not only educational but also presents the opportunity to travel around the beautiful country of Israel.

DENT 522. Orthodontic Biomechanics. 1 Unit.
This course provides first year orthodontic residents with the theoretical biomechanical knowledge necessary to successfully treat a wide range of orthodontic malocclusions using the preadjusted straight wire appliance, the segmented arch technique, treatment auxiliaries, and orthodontic mini-implants. In addition, the most current articles in the orthodontic literature pertaining to this topic are read and discussed. The theory will be supplemented by practical exercises as necessary.

DENT 550. Clinical Pharmacology. 1 Unit.
This course is designed to enable residents to obtain an understanding of the pharmacology of the most commonly prescribed medications; pharmacotherapeutic concepts in relationship to disease pathophysiology; rational drug therapy in the treatment of disease; drug-drug interactions and drug-disease interactions; adverse drug events. Residents will be expected to apply information on disease pathophysiology and pharmacotherapy to clinical cases. The ultimate goal is to provide relevant information to assist clinicians in practice.

DENT 555. Management of Medical Emergencies. 1 Unit.
This course covers the diagnosis and management of common medical emergencies, with special emphasis on patient evaluation and history taking to prevent such emergencies in the dental office. Venipuncture technique and the use of emergency equipment are demonstrated. Also included is a basic course in cardiopulmonary resuscitation, with practical demonstrations and examinations that lead to certification in basic CPR.
DENT 561. Orthodontics for Pediatric Dentists I. 1 Unit.
The course is designed to familiarize the pediatric dentistry residents with (1) the clinical evaluation of patients to determine appropriateness of orthodontic intervention, (2) record taking, (3) diagnosis, (4) treatment planning of cases in the mixed and permanent dentition, (5) treatment administration and (6) retention strategies. The primary focus will be on interceptive orthodontics including growth modification and corrective orthodontics in the permanent dentition. First in a series of four courses.

DENT 562. Orthodontics for Pediatric Dentists II. 1 Unit.
Second in a series of four courses. See DENT 561 Orthodontics for Pediatric Dentists.

DENT 564. Advanced Principles of Occlusion. 1 Unit.
This course is designed to provide in-depth knowledge of the structure and function of all anatomic components involved in occlusion, biomechanics of articulation and mastication; recording of mastication patterns; diagnosis of occlusal dysfunction; relationship to neuromuscular and temporomandibular joint anatomy and pathology; evidence based therapy used in the management of occlusal and temporomandibular disorders and its significance to inflammatory periodontal disease.

DENT 565. Practice Management I (Ortho). 1 Unit.
Seminar and demonstration course designed to prepare the student for all phases of the "business" of orthodontics as well as the responsibility of being a "professional." Management of the department clinic, private practice management, office visitations, and the business community, and ethics through the use of guest speakers on jurisprudence, personal and professional insurance, accounting, estate planning, risk management, informed consent, banking, office design, organized dentistry and investments. First in a series of four courses.

DENT 566. Practice Management II (Ortho). 1 Unit.
Third in a series of four courses. (See DENT 565.)

DENT 567. Practice Management III (Ortho). 1 Unit.
Fourth in a series of four courses. (See DENT 566.)

DENT 569. Orthodontic Literature Review I. 1 Unit.
The course will focus on contemporary and classic literature selected to cover a wide range of orthodontic topics. The selected literature includes the reading list suggested by the American Board of Orthodontics in preparation for the Part II of the ABO examination. Students will be required to discuss the articles and answer questions pertaining to the reviewed material.

DENT 570. Orthodontic Literature Review II. 1 Unit.
The course will focus on contemporary and classic literature selected to cover a wide range of orthodontic topics. The selected literature includes the reading list suggested by the American Board of Orthodontics in preparation for the Part II of the ABO examination. Students will be required to discuss the articles and answer questions pertaining to the reviewed material.

DENT 572. Pre-Clinical Principles in Orthodontics. 1 Unit.
This course is comprised of a series of seminars presented by orthodontic faculty covering topics that will prepare the first orthodontic resident for the initial phases of clinical training.

DENT 573. Advanced Specialty Principles: Clinical I. 2 Units.
Full fixed orthodontic appliance treatment of patients in an educational setting. First in a series of four courses.

DENT 574. Advanced Specialty Principles: Clinical II. 2 Units.
Second in a series of four courses. (See DENT 573.)

DENT 575. Advanced Specialty Principles: Clinical III. 2 Units.
Third in a series of four courses. (See DENT 573.)

DENT 576. Advanced Specialty Principles: Clinical IV. 1 Unit.
Fourth in a series of four courses. (See DENT 573.)

DENT 580. Orthodontics-Oral Surgery Conference. 0 Units.
A seminar series involving a multidisciplinary approach to the treatment of patients with severe craniofacial deformities. Begins in the fall of each year (continuing for four semesters) with a series of lectures, followed by assignment of patients supervised jointly by the departments of orthodontics and oral surgery. Meetings held bimonthly to review patient progress, plan treatment, and present cases for discussion. Each student involved in all phases of treatment: presurgical orthodontics, the surgical procedure, finishing orthodontics, and retention.

DENT 583. Orthodontic Diagnostic Seminar I. 1 Unit.
Series of lectures and seminars covering the science of orthodontic diagnosis. Course consists of lectures on techniques of diagnosis, treatment planning, and critique of cases from the department or from faculty private practices. Content also includes long-term follow-up of post retention cases. First in a series of three courses.

DENT 584. Orthodontic Diagnostic Seminar II. 1 Unit.
Second in a series of three courses. (See DENT 583.)

DENT 585. Orthodontic Diagnostic Seminar III. 1 Unit.
Third in a series of three courses. (See DENT 583.)

DENT 586. Limited Tooth Movement for the Dental Specialist. 1 Unit.
A review of the rationale for orthodontic treatment in periodontally diseased patients and in pre-restorative dentitions. Lectures, audio-visual programs, and technique sessions. Diagnosis, treatment planning, and various methods of tooth movement.

DENT 587. Periodontal Prosthesis. 1 Unit.
This course examines and defines the periodontal prosthetic interrelationships beginning with treatment planning and continuing with discussing the utilization of the combined treatment modalities. It focuses on provisionalization, furcation treatment, occlusion, aesthetics, removable appliances, and special advanced treatment problems.

DENT 588. Hospital Rotation. 2 Units.
Students are assigned full time to anesthesia service and perform such duties as directed by anesthesiology staff: preoperative evaluation of patients, indications and contraindications for specific methods of anesthesia, relationship of medical problems to anesthesia risks, assisting in preparation of patients for anesthesia, intubation and anesthesia management, assisting in the management of complications, and post-anesthetic recovery management including monitoring of vital signs, blood gases, EKG, etc., and participation in post-anesthesia rounds and conferences.

DENT 589. Orthodontic Diagnostic Seminar IV. 1 Unit.
The fourth course in a series which consists of weekly lectures and seminars covering the science of orthodontic diagnosis. Consists of lectures on the techniques of diagnosis, various diagnostic aids, and case planning. Also consists of seminars where the students perform diagnosis, plan treatment and critique cases from the department. This course is used for long-term follow-up clinic.

Subsections for each program area of study: endodontics, orthodontics, periodontics, or pediatric dentistry.

DENT 661. Conscious IV Sedation I. 2 Units.
Didactic portion covers physical evaluation, physiology, pharmacology, emergencies, and techniques. Cardiac monitoring, basic life support, and advanced cardiac life support.
DENT 662. Conscious IV Sedation II. 1 Unit.
(See DENT 661.) Supervised clinical experience in conscious IV sedation.

DENT 663. Implant Dentistry I Periodontics. 1 Unit.
Designed to enhance the understanding of current concepts and their role in the multidisciplinary treatment of the patient.

DENT 664. Implant Dentistry II Periodontics. 1 Unit.
(See DENT 663.) Clinical demonstration, participation, and case presentation in implant dentistry.

DENT 662. Cephalometrics. 1 Unit.
A lecture and laboratory course in cephalometric roentgenography leading to a thorough understanding of craniofacial radiographic techniques. Use of x-rays and radiation hygiene, and technical and interpretive proficiency.

DENT 663. Imaging and IT. 1 Unit.
This course is designed to give some basic computer knowledge and prepare the resident for the use of computers in the orthodontic office.

DENT 664. Radiology and Cephalometrics. 1 Unit.
Fundamentally related to cephalographic radiography, skeletal morphology, and cephalogram interpretations of historic analyses via the Krogman-Sassouni Syllabus. Also, clinical evaluations of hard and soft tissue relationships of the airway and skeletal maturation are presented. The use of Bolton Standards in craniofacial analysis is stressed.

DENT 690. Pediatric Dental Residency. 1 - 10 Unit.
Allows registration for non-degree-seeking students in graduate level courses at the direction of the department.

DENT 692. Restorative Fellowship. 6 Units.
Provides for 12 months of clinical and didactic training in all phases of general dentistry beyond the scope of predoctoral dental education. Areas of emphasis include advanced restorative techniques, proper selection of restorative materials, restoration of implants, fixed and removable prosthodontics, and esthetic dentistry. At the discretion of the course director, students may register for an additional 12 months, during which time the student will build on knowledge attained during the first year, continue with advanced didactic instruction, expand their clinical experience through continued patient care, participate in clinical research, and have teaching opportunities.

DENT 694. Fellowship in Dentistry. 6 Units.
The Fellowship in Dentistry provides for advanced clinical, didactic and research training beyond the scope of the pre-doctoral dental education.

DENT 695. Oral Surgery Residency. 1 - 10 Unit.
Allows registration for non-degree-seeking students in graduate level courses at the direction of the department.

DENT 696. Advanced Dental Training. 1 Unit.
This course is a one year advanced training in dental medicine at Case Western Reserve University School of Dental Medicine. Responsibilities may include clinical and didactic responsibilities. The course is designed to give students clinical experience in a defined focus area. Prereq: D.D.S. or equivalent.

DENT 697. Advanced Dental Training II. 1 Unit.
Continuation of Advanced Dental Training I. Prereq: D.D.S. or equivalent.

DENT 698. Multidisciplinary Seminar. 0 Units.
This seminar meets monthly to discuss multidisciplinary cases to develop treatment recommendations for the patients presented. Each graduate department selects a clinical case that requires the services of at least three dental specialties. Ideally, patients should be in the beginning stage of treatment planning so the input from the various specialties can be used to develop a comprehensive plan to establish a healthy oral environment. It is expected that several alternative treatments will be discussed and the relative merits of each approach evaluated. To maximize the benefit of this seminar to the student learning process, an attending faculty member should be present from each of the dental specialty programs. In addition, all seminars have a Prosthodontist to provide input on the restorative treatment options.

DENT 699. AEGD Residency Training. 1 - 8 Unit.
This is a multidisciplinary course that encompasses didactic and clinical training in general dentistry.

DSPR Courses
DSPR 136. Cariology. 1 Unit.
This course in cariology includes clinical features, etiology, risk assessment, and prevention of caries. The course will enable students to understand the etiology, pathophysiology, and clinical aspects of caries, which would complement the first Problem-Based-Learning module, Epidemiology for Public Health and Clinical Practice. In addition, this course will prepare the first-year students for their sealant rotation where they will be seeing clinical features of caries in children.

DSPR 232. Periodontics. 1 Unit.
A comprehensive course in periodontology including etiology, diagnosis, radiographic, interpretations and prognosis.

DSPR 234. Oral Pathology. 3.5 Units.
Diseases and abnormalities of the teeth and adjacent hard and soft tissues. Includes periodontal, pulpal, and periapical diseases as well as cysts, tumors, developmental anomalies, and oral aspects of systematic disease.

DSPR 236. Cariology. 1 Unit.
Etiology, clinical and radiologic features, risk assessment, and prevention of caries.

DSPR 239. Neoplasia. 1 Unit.
Topics covered in this educational module include tumor nomenclature, features of benign versus malignant tumors, cytologic characteristics of cancer cells, pathogenesis and prognosis.

DSPR 244. Principles of Medicine. 0.5 Units.
The didactic curriculum provides a general background and discussion of the risk assessment of medical conditions in an ever-increasing aging population. Within the setting of out-patient care, as well as those that are hospitalized, patients often present for dental procedures with co-existing medical systemic illness that provide an added challenge to the dental provider. Management of these medical problems within the context of dentistry and medicine will be covered.

DSPR 333. Management of Medical Emergencies. 1 Unit.
Patient evaluation, diagnosis and treatment of life-threatening emergencies that may arise in the course of dental treatment. Includes instruction in basic life support and cardiopulmonary resuscitation.

DSPR 341. Oral Diagnosis and Radiology. 2 Units.
This course helps the beginning clinician develop and understand the diagnostic process. It is designed to present to the student a method by which the common oral problems facing the dental practitioner can be recognized, diagnosed, evaluated and managed.
DSPR 342. Oral Cancer Diagnosis. 1 Unit.

DSPR 344. Principles of Medicine. 0.5 Units.
The didactic curriculum provides a general background and discussion of the risk assessment of medical conditions in an ever-increasing aging population. Within the setting of out-patient care, as well as those that are hospitalized, patients often present for dental procedures with co-existing medical systemic illness that provide an added challenge to the dental provider. Management of these medical problems within the context of dentistry and medicine will be covered.

DSPR 426. Oral Diagnosis Seminar. 1 Unit.
Case-based review of oral diagnosis, radiology, and medicine.

DSRE Courses

DSRE 335. Clinical Pharmacology. 2 Units.
This course is designed to review common pharmacologic agents encountered in the general population. Emphasis is placed on the prescription, action, and interaction of dental pharmacologic agents as well as the implication of medical prescriptions on dental therapy. The course culminates in the evaluation of case studies and problem solving in drug therapy.

DSRE 374. Fixed Prosthodontics. 1.5 Unit.
Diagnosis and treatment planning in fixed prosthodontics and construction of simple crowns and bridges. Lecture series concerning the discussions and demonstration of elementary and advanced methods of restoring occlusion, esthetics, and speech using fixed prosthesis.

DSRE 391. Endodontics. 1 Unit.
Recognition of endodontic pulpal health and the changes that occur in the transition from health to disease. The didactic component focuses on scientific basis for recognition of degenerative states of the dental pulp and the philosophy of endodontic therapy. The clinical component focuses on the treatment of diseased, pulppily-involved teeth of actual patients. It provides practical instruction on how to render endodontic therapy under the direct supervision of qualified endodontic personnel.

DSRE 392. Nitrous Oxide and Conscious Sedation. 0.5 Units.
Physiopharmacology of nitrous oxide use. Indications, contraindications, and complications.

DSRE 393. Principles of Oral and Maxillofacial Surgery I. 1 Unit.

DSRE 395. Introduction to Oral and Maxillofacial Surgery. 0.5 Units.
This didactic course is designed to prepare the student for oral surgery clinical rotations and is comprised of the following topics, review of local anesthesia, review of applied anatomy, infection control, patient assessment and case presentation, informed consent, oral surgical armamentarium, and principles of exodontia.

DSRE 397. Occlusion Seminar. 2 Units.
An introduction to gnathological principles: terminology, procedures and instrumentation. Correlation of history and clinical symptoms with treatment modalities emphasized. Use of bite planes, centric relation registration, and diagnostic waxup on mounted casts.

DSRE 397A. Occlusion Seminar for Nondegree Student. 2 Units.
The course describes anatomy, biomechanics, the maintenance of the pathology associated with and the restoration of the masticatory or stomatognathic system. It includes Temporomandibular Disorder and other types of Orofacial Pain such as Primary Headache Disorders, Neuropathic Orofacial Pain, Psychogenic Pain, and Dental Sleep Medicine. This version of the course is didactic and does not include any laboratory.

EFDA Courses

EFDA 111. Tooth Morphology for the EFDA. 1 Unit.
Instructional laboratory sessions provide experience with viewing models of teeth as well as reproducing teeth in wax. Mastery of terminology and basic facts of dental anatomy and tooth positions of permanent and primary teeth. Introduction of proper instrumentation begins.

EFDA 113. Dental Materials for the EFDA. 1 Unit.
Instructional laboratory sessions cover the physical and chemical properties and uses and manipulation of materials used in protection of the pulp and intracoronal temporization. Composition, properties and manipulation of dental amalgam, composite and pit and fissure sealant materials are also introduced. Isolation techniques and rubber dam placement lab.

EFDA 115. Restorative Dentistry for the EFDA I. 3 Units.
Skill development in the placement and carving of Class I, II, V and complex amalgam restorations on the typodont. Skill development in the placement and finishing and polishing of Class I, II, III, IV, and V composite restoration and amalgam restoration finishing and polishing on the typodont. Continued skill development in instrumentation, body positioning and ergonomics. Skill development in the use of low and high speed handpieces for rotary instrument use in finishing and polishing restorations. Skill development in self-evaluation using specific criteria. Pit and fissure sealant applications. **Student must show competency of skills acquired to be able to progress in Clinical Practicum for the EFDA**.

EFDA 116. Restorative Dentistry for the EFDA II. 2 Units.
Students begin preparation for the state board examination by demonstrating successful completion of amalgam and composite restorations with increasingly difficult grading evaluation, mastery of self evaluation skills, decreasing restoration placement time and by completing 3 mock board examinations. Students must pass a final clinical and didactic examination to pass the course. Emphasis on understanding Ohio EFDA Registration protocol.

EFDA 120. Clinical Practicum for the EFDA. 2 Units.
Students fulfill the Ohio State Dental Board requirement of having clinical experience on patients in CWRU approved dental clinics. Clinic sessions include a variety of restorative experiences on many patients. One 8 hour session is required for 4 weeks. Students will restore patients' teeth under the supervision of a licensed dentist and a clinical supervisor in clinics affiliated with CWRU. Emphasis is placed on restoring metallic and non-metallic restorations.
HEWB 124. Masticatory Dynamics. 2 Units.
Descriptive anatomy of masticatory structures with emphasis on deciduous and permanent teeth and the temporomandibular-temporal joint movements, and the fundamental concepts of the functional relationships between the dentition and the temporomandibular joint. Lectures on comparative anatomy and variations in tooth morphology.

HEWB 126. Masticatory Dynamics Lab. 1.5 Unit.
Companion pre-clinical component to HEWB 124. Laboratory exercises and assignments include drawings, waxups and tooth identification, and use of semi-adjustable articulator.

HEWB 128. Body as Host. 4.5 Units.
This educational module focuses on the role of bacteria, viruses, and fungi in immune function that preserves and maintains health and discusses host changes that occur during oral and systemic disease processes.

HEWB 130. Oral Histology. 1.5 Unit.
Development of teeth and supporting tissues. Histology and ultrastructure cytology of the oral region with emphasis on the calcified tissues.

HEWB 134. Head and Neck Structure and Function. 4.5 Units.
This course explores the developmental, cellular, physiologic, anatomic and biochemical components of the head and neck region. The focus is both healthy functioning and disease of the head and neck area.

HEWB 200. Directed Studies. 1 - 6 Unit.
Directed study under faculty supervision and with special permission of the Associate Dean for Education.

HEWB 349. Dentofacial Morphology. 1 Unit.
This course provides the dental student with an introduction to the assessment of dynamic faces and the relatively static dentition. The course details the etiologies and characteristics of various malocclusions including developmental disharmonies observed during the growth and development of a child. Primary emphasis is laid on empowering the student in the diagnoses of malocclusions employing study casts, intra and extra-oral photographs and, cephalograms.

HWDP Courses

HWDP 131. Heart and Lungs in Disease and Health. 4.5 Units.
This course provides students with the understanding of the structural and functional relationships of the cardiovascular and respiratory systems. This integrated approach serves as a foundation for understanding the health and well-being of these systems. This educational module also facilitates student recognition of cardiovascular and respiratory dysfunction that may be present in their patients and help students understand how such conditions may affect their patients' general and oral health.

HWDP 232. Health and Disease: Renal and Hematologic Systems. 2 Units.
This educational module focuses on the understanding of the structural and functional relationships of the renal and hematologic systems. This integrated approach serves as a foundation for understanding the maintenance of health and well-being as well as disease processes within the body.

HWDP 241. Gastrointestinal System in Health and Disease. 2 Units.
This educational module focuses on the understanding of the structural and functional relationships of the many components of the gastrointestinal system in health and disease.

HWDP 243. Endocrine and Reproductive Systems in Health and Disease. 1.5 Unit.
This educational module focuses on the understanding of the structural and functional relationships of the many components of the endocrine and reproductive systems in health and disease.

HWDP 245. Musculoskeletal System in Health and Disease. 1.5 Unit.
This educational module focuses on the understanding of the structural and functional relationships of the many components of the musculoskeletal system in health and disease.

HWDP 246. Neuroscience in Health and Disease. 2 Units.
An integrated approach to the anatomy and physiology of the human nervous system. Analyzes neuronal phenomena at both cellular and systems levels.

INQU Courses

INQU 102. ACE: Knowing the Patient. 2 Units.
This ACE introduces the student to professional patient interaction and evaluation in a simulated environment. Students will develop interview techniques, learn patient appraisal skills, and techniques for communicating effectively in a health care environment. Students will experience patient interviews and assessment in a simulated environment with live patients.

INQU 200. Directed Research. 0.5 - 6 Units.
Directed research activities under faculty supervision and with special permission of the Associate Dean for Education.

LDRS Courses

LDRS 111. Epidemiology for Public Health and Clinical Practice. 2.5 Units.
This 3 week intensive sequence provides the first experience with the problem-based learning format and focuses on the content foundation in epidemiology and skills for evidence-based practice in dentistry. Problem-based cases will use oral health topics to present the skills for critical appraisal of health literature. Small-group settings will permit students to gain experience in applying these skills to relevant dental literature.
LDRS 116. Promoting Evidence-based Dentistry I. 0.5 Units.
The course aims to enhance and apply the use of evidence-based practice skills and critical thinking in D1 and D2 in preparation for use in clinical training. Using diverse formats, students will enhance their skills to be efficient and effective in acquiring, appraising and applying scientific evidence in didactic, pre-clinical and early clinical coursework. The course topics and requirements will be integrated with concomitant course work to enhance relevance. Student assignments can be included in a portfolio to demonstrate progress and competency.

LDRS 310. Professional Development II. 1 Unit.
Major issues and trends that affect oral health and the mission of dentistry in the United States. Behavioral knowledge and skills essential to the oral health practitioner's ability to deliver effective patient-centered care.

LDRS 313. Dental Patient Management/Risk Management. 1 Unit.
Principles of patient management and risk management are reviewed. The primary focus is directed toward the skills associated with communication. A variety of examples of malpractice are reviewed and discussed. Other areas of risk are discussed such as infection and occupational hazards related to EPA and OSHA standards.

LDRS 316. Practice Management I. 1 Unit.
This course is designed to develop practical knowledge and skills in dental practice management. It is organized around initial topics that will lay the foundation for adequate planning for practice success after graduation. The subsequent courses build upon this foundation knowledge so that students will have a general perspective of where to begin their strategies for success in the future. This course discusses topics that include analysis of practice configurations, choosing the appropriate consultants, basic tools for fiscal management and evaluation, and identifying opportunities that match the student's life goals.

LDRS 317. Dental Auxiliary Management. 0.5 Units.
This course introduces students to each type of auxiliary personnel in the dental office and describes their training, testing, duties delegated legally and how their utilization in the office setting can be optimized. Basic management considerations and theories of leadership are presented and various leadership styles are recommended for situations presented. This course provides an understanding of interacting with auxiliary and the process of delegation. The course defines state dental board rules and regulations that guide dentists in the utilization of auxiliary personnel. Such items as overhead costs are explored in relation to each auxiliary category.

LDRS 415. Practice Management II. 1 Unit.
Students deal with entrepreneurship applications and experiences specific to dentistry and are introduced to the process of formulating a business plan. Personal finance and investment strategies are covered in this course, particularly as they pertain to developing a business plan for the students' careers. Each student constructs a business plan specific to the goals and situation of that student.

LDRS 416. Practice Management III. 1.5 Unit.
This course is designed to develop practical knowledge and skills in dental practice management. As the student prepares for clinical practice, topics surrounding negotiation of working contracts, insurance contract evaluation, policies, compliance, and marketing are among some of the most important issues to be familiar with. Skills acquired in the preceding course are applied to the student's "practice" (panel of patients) for evaluation of practice productivity and growth.

LDRS 420. Jurisprudence and Professional Ethical Responsibility. 0.5 Units.
Ethical and legal issues, civil and criminal law, contracts, malpractice and current ethical and legal dilemmas encountered in practice.

MAHE Courses

MAHE 141. Preventive Periodontics. 1 Unit.

MAHE 144. Preventive Periodontics Clinic. 1 Unit.
Companion clinical component to MAHE 143. Clinical application of methods for the prevention and maintenance of periodontal health in patients. The importance of patient education, motivation, and cooperation in present methods of prevention and plaque control.

MAHE 145. ACE: Outreach Preventive Dentistry. 1.5 Unit.
This ACE introduces the student to professional patient interaction and evaluation in a simulated environment. Students will develop interview techniques, learn patient appraisal skills, and techniques for communicating effectively in a health care environment. Students will experience patient interviews and assessment in a simulated environment with live patients.

MAHE 214. ACE: Family First. 1 Unit.
The overarching goal of the clinical experience (ACE) is to incorporate the concepts of risk assessment and the importance of the family unit to oral health. The Family First ACE will allow students to explore the interaction between genetic and environmental factors in oral diseases and certain systemic conditions (diabetes, hypertension, and asthma). At the end of the "Family First" rotation the students would have achieved certain didactic and clinical objectives and the experience is linked to the second year didactic courses: Cariology, Periodontology, and Oral Pathology. This experiential learning includes clinical experience, didactic lectures, and small group discussions. Risk assessment for common oral diseases such as caries and periodontal diseases as well as oral cancer is part of the clinical activities. Students will review the risk assessment and systemic health to delineate genetic and environmental factors through small group discussions.

MAHE 242. Periodontics. 1 Unit.
Companion clinical component to DSPR 232. Students observe and assist at periodontal surgical procedures on moderately advanced periodontal diseases. Treatment includes root planing, curettage, occlusal adjustment, minor tooth movement and case maintenance.

MAHE 340. Nutrition for Dentistry. 1 Unit.
General nutrition concepts are presented in addition to aspects pertinent to the practice of dentistry.

REHE Courses

REHE 151. Dental Anatomy. 3 Units.
Descriptive anatomy of masticatory structures with emphasis on deciduous and permanent teeth and the temporomandibular-mandibular movements, and the fundamental concepts of the functional relationships between the dentition and the temporomandibular joint. Lectures on comparative anatomy and variations in tooth morphology.
REHE 152. Basic Procedures in Fixed Prosthetics. 2 Units.
To introduce and familiarize the dental student to basic principles related to fixed prosthodontics. The introduction will emphasize principles of engineering and preparation designs, full coverage retains for both metal and ceramic restorations.

REHE 153. Dental Anatomy Laboratory. 1 Unit.
Companion preclinical component to REHE 151. Laboratory exercises and assignments include drawings, waxups, tooth identification, and use of semi-adjustable articulator.

REHE 154. Basic Procedures in Fixed Prosthetics Lab. 1.5 Unit.
Laboratory component of REHE 152.

REHE 156. DentSim Laboratory. 1 Unit.
This course covers the criteria, techniques and practice of preparing ‘ideal/standard’ operative preparations. The restorative procedures will be performed on typodont teeth mounted in a computer assisted simulator (DentSim).

REHE 158. Dental Materials I. 0.5 Units.
The primary goal is to introduce basic material science concepts needed to evaluate, compare and select materials for a specific application. Knowledge of properties, indications and limitations of different clinical and laboratory materials will be presented. The effect of manipulation variables on material properties will be emphasized.

REHE 162. Basic Procedures in Operative Dentistry I. 0.5 Units.
This course, together with REHE 172 introduces students to the criteria, the techniques for, and practice of preparing ‘ideal/standard’ Class I and V operative preparations. In this course, the emphasis will be on the more traditional posterior amalgam Class I and Class V Preparations. Students will be introduced to basic cariology and radiology as it relates to operative dentistry. In addition, the composition and properties of amalgam will be reviewed in the Dental Materials Course. The restorative procedures will be performed primarily on typodont teeth mounted in a simulator. The emphasis will be on traditional preparation design and execution.

REHE 172. Basic Procedures in Operative Dentistry I Lab. 0.5 Units.
Laboratory component of REHE 162.

REHE 229. Introduction to Radiography. 1.5 Unit.
Initial course consisting of lecture and laboratory covering basic principles of radiography. Included are: instructions on taking intraoral radiographs, radiation physics involved in x-ray generation and the parts and function of the x-ray unit, radiation biology of x-ray interaction with tissue, head and neck anatomy and pathology with regards to radiographic interpretation. Each student will have a clinic rotation.

REHE 252. Pain Control. 1 Unit.
Anatomy pertaining to local anesthesia. Drugs used in local anesthesia and technique of administration. Management of complications. Slides and clinical demonstrations.

REHE 253. Basic Procedures in Esthetics. 1 Unit.
REHE 254. Pharmacology. 4 Units.
This course introduces students to the principles of pharmacology and to the mechanisms of drug action in the context of common disease states.

REHE 256. Radiology. 0.5 Units.
This is a continuation of REHE 229. This course will explore alternative intraoral radiographic techniques, extraoral radiography techniques, their uses and limitation. Included is a discussion of radiation safety in the dental office and film processing. Each student will have an opportunity to gain "hands-on" experience in patient alignment for a panoramic radiograph and alternative tools for taking quality films. Each student will have a clinic rotation.

REHE 257. Prosthodontic Technology. 2 Units.
A lecture-demonstration-laboratory approach to complete denture prosthesis construction. Emphasis on certain fundamental biological considerations of the edentulous patient, such as the oral membranes, muscles, bones, and phonetics and how they relate to the technical aspects of denture constructions.

REHE 258. Principles of Treatment Planning I. 1 Unit.
This course provides lecture presentations to help prepare the student to develop skills in patient diagnosis and treatment planning. The lectures will guide the students through the thought processes necessary in the development of workable treatment plans. The emphasis will be on exposing the students to the approach used in our clinic of providing the patients with options of optimal, alternative and emergency diagnostic or recall treatment plans using decisional analysis.

REHE 259-1. Basic Procedures in Fixed Prosthodontics II. 0 Units.
This course builds upon those core elements covered in REHE 152/154. Emphasis on principles of engineering for fixed partial dentures, preparation and design of fixed partial dentures, considerations for the restoration of endodontically involved teeth, and definitive and provisional fixed partial denture restorations. Introduces dental material topics related to fabrication of a fixed partial denture restoration, including: chemomechanical soft tissue retraction, die spacers, investments, casting and casting alloys, ceramics, soldering, provisional materials, prefabricated and custom post and core systems. Emphasis on principles of engineering for fixed partial dentures, preparation and design of fixed partial dentures, considerations for the restoration of endodontically involved teeth, and definitive and provisional fixed partial denture restorations. Introduces dental material topics related to fabrication of a fixed partial denture restoration, including: chemomechanical soft tissue retraction, die spacers, investments, casting and casting alloys, ceramics, soldering, provisional materials, prefabricated and custom post and core systems.

REHE 259-2. Basic Procedures in Fixed Prosthodontics II. 2 Units.
This course builds upon those core elements covered in REHE 152/154. Emphasis on principles of engineering for fixed partial dentures, preparation and design of fixed partial dentures, considerations for the restoration of endodontically involved teeth, and definitive and provisional fixed partial denture restorations. Introduces dental material topics related to fabrication of a fixed partial denture restoration, including: chemomechanical soft tissue retraction, die spacers, investments, casting and casting alloys, ceramics, soldering, provisional materials, prefabricated and custom post and core systems. Emphasis on principles of engineering for fixed partial dentures, preparation and design of fixed partial dentures, considerations for the restoration of endodontically involved teeth, and definitive and provisional fixed partial denture restorations. Introduces dental material topics related to fabrication of a fixed partial denture restoration, including: chemomechanical soft tissue retraction, die spacers, investments, casting and casting alloys, ceramics, soldering, provisional materials, prefabricated and custom post and core systems.

REHE 260-1. Basic Procedure Fixed Prosthodontics II Lab. 0 Units.
Laboratory component of REHE 259.
REHE 260. Basic Procedure Fixed Prosthodontics II Lab. 2 Units. Laboratory component of REHE 259-1.

REHE 262. Basic Procedures in Operative Dentistry II. 1 Unit. This course, together with the first year Intro to BP Operative Dentistry and the BP Esthetic Dentistry Course covers the criteria, the techniques for, and practice of preparing 'ideal/standard' operative preparations and placement of operative restorations. In this portion of the course, the emphasis will be on posterior Class II amalgam preparations and restorations, as well as an introduction to cast gold inlay and onlays, and an introduction to CEREC (CEramic REConstruction) Onlays. Students will be introduced to basic cariology and radiology as it relates to operative dentistry. In addition, the composition and properties of the following materials will be reviewed: amalgam, liners and bases, and gold. The Dental Materials Course will provide the basic information regarding these materials. The restorative procedures will be performed primarily on typodont teeth mounted in a simulator. Extracted teeth with caries will also help students appreciate the different tactile responses of caries, dentin and enamel. There will be an emphasis on the following: the rationale for types of preparations and materials, indications and contraindications for different materials and types of restorations, and clinical problem solving related to operative dentistry in total treatment care.

REHE 263. Basic Procedure in Esthetics Lab. 0.5 Units. Preclinical component of REHE 253. Basic Procedures in Esthetic Dentistry.

REHE 264. Endodontics. 0.5 Units. Introduction to methods and materials necessary for successful root canal therapy.

REHE 266. Partial Denture Design. 2 Units. Recognition of clinical situations that require partial denture therapy are developed. Introduction to the terms used in removable partial prosthodontics. Partially edentulous casts diagnosed, designed, surveyed, contoured for path of insertion, prepared for rest seat areas, and finally tripoded for further orientation by each student on his or her own casts. Thus the design, surveying, and clinical applications for removable partial service are presented in order to maintain optimal oral health conditions and to provide a sound basis for the prosthesis.

REHE 267. Prosthodontic Technology Lab. 2 Units. Companion preclinical component to REHE 257. Each student constructs a complete set of dentures using laboratory manikin as patient. Although REHE 267 was conceived as a technique course, one of its principal objectives is to prepare the student for the clinical aspect of dental education.

REHE 268. Basic Procedures Competency. 1.5 Unit.

REHE 272. Basic Procedures in Operative Dentistry II Lab. 1 Unit. Laboratory component of REHE 262.

REHE 274. Endodontics Lab. 1 Unit. Companion laboratory component to REHE 264. Complete endodontic treatment performed by each student on extracted teeth using gutta percha.

REHE 276. Partial Denture Design Lab. 1.5 Unit. Theories of removable partial denture construction which enable the student to perform exercises that are associated with the techniques used to achieve a successful result. Students will be evaluated by various testing methods.

REHE 270. Basic Prosthodontic Technology. 1 Unit.

REHE 295. Basic Prosthodontic Laboratory. 1 Unit. Laboratory component of REHE 259-1.

REHE 300. Introduction to Dental Implantology for Nondegree. 1 Unit.

REHE 360. Implant Dentistry. 1 Unit. Didactic and laboratory instruction that introduces the concepts used in implantology. These include the scientific basis of implant tissue reactions, and the surgical and restorative protocols. Emphasis is placed on slide presentation of actual cases. An opportunity is given to students to place an implant in an artificial mandible and to manipulate implant components on a typodont.

REHE 360A. Introduction to Dental Implantology for Nondegree Student. 1 Unit. The course is designed to introduce the third year dental students to the concepts of dental implantology. Students will be introduced to computer guided dental implant treatment planning program NobelClinician and will have an opportunity to use it. This course will provide didactic instructions for the students to be able to diagnose and treatment plan.

REHE 361. Advanced Implant Dentistry I. 1 Unit. This course is designed to expose the student to advance implant therapies for the dentate and edentulous patient. Through lectures and discussions the student will discover the multitude of variations of care available for these patients and the restorative processes necessary to delivery that care. They should also more fully understand the limitations of each of these modalities within the scope of dental implant therapy allowing them to provide for their patients the most appropriate treatment direction.

REHE 362. Advanced Implant Dentistry II. 1 Unit. This course is a continuation of Advanced Implant Dentistry I and consists of a small group PBL Project where each group will be challenged with a patient requiring complex care. The group will be expected, utilizing all of their four years of training, to fully diagnosis the patient’s problems and create multiple treatment plans to assist the patient’s return to oral health. They will finally present and defend their decision to the entire class and instructors.
REHE 416. Basic Principles of Digital Radiology and Cone Beam CT Elective. 0.5 Units.
This is a Senior elective course. This course will be a continuation of REHE 256, Advanced Principles of Radiology. Students will be introduced to digital radiographic techniques, their uses and limitations. Principles of CBCT, anatomy, basic pathology, and working with CBCT volumetric dataset.

REHE 421. Periodontal Medicine and Cases. 1 Unit.
Further application of the knowledge and skills learned in prior periodontal courses. Focus is on how selective periodontal treatment can be integrated into a treatment plan considering the parameters presented by a special situation. Some examples are treatment related to endodontics, prosthodontics, geriatrics, esthetics, orthodontics and implantology.

REHE 455. General Anesthesia, Oral Surgery. 0.5 Units.

REHE 473. Introduction to CEREC Dentistry Elective. 1 Unit.
This is a Senior elective course. The didactic portion of the course will describe the use of CAD/CAM (computer-aided design/computer-aided manufacture) systems. The use of this chairside technology is readily available for the general dentist. An increase in public demand for esthetic procedures has made “all ceramic” restorations a popular treatment choice in restorative dentistry. This elective course will encompass the basic concepts of CAD/CAM dentistry, in particular utilizing the CEREC acquisition and milling machine by Sirona. The course will describe basic concepts of this technology including theoretical and clinical considerations of preparation and design. In the laboratory portion, students will learn the technique of tooth preparation, powdering and capturing an optical impression. In addition, the student will design, mill (manufacturing) and polish the restoration prior to cementation. This course will include both lecture and laboratory sessions. In the laboratory sessions, students will be able to apply the information gained in lecture material through laboratory projects. Following the completion of the lecture and laboratory portions, students will be eligible for clinical experience.

REHE 482. Orthodontics. 1 Unit.
Instruction through lectures and audio-visual programs enabling the student to gain judgment, knowledge, and skills to select and treat uncomplicated tooth irregularities in children and adults. Advanced topics in comprehensive orthodontics, such as surgical orthodontics and cleft-palate treatment.

REHE 488. Case Presentations I. 1 Unit.
First Semester of case presentation is dedicated to the review of comprehensive treatment planning slide material in preparation for National Boards part II and the Northeast Regional Board Dental Simulated Clinical Examination DSCE and the Case Based Examination (CBE) and the Western Regional Board (WREB) treatment planning examinations. Cases treated in the CASE SODM clinics will be reviewed by the preceptor faculty along with clinical specialty faculty and biological science faculty where appropriate. Diagnostic information will be on Blackboard preceding the schedule case review. During the case review questions will be presented for all students to interject through either the PRS format or Blackboard. In addition to the interactive format three disciplined based quizzes will be provided. The semester final will present a case based problem similar to the regional boards in which students identify the components of the diagnosis, treatment plan, treatment modifiers, treatment sequence and prognosis.

REHE 489. Case Presentations II. 1 Unit.
Second Semester. This course provides formal lecture presentations in the discipline of comprehensive dental care to assist students in the development of appropriate and successful diagnoses and treatment plans and the use of techniques and technology to achieve the goals of optimal dentistry. The course provides examples of cases in diagnosis and treatment planning in lecture, and include expertise from other departments in both the clinical and basic biological sciences. This course also provides the methodology for the treatment of moderate to severely mutilated dentitions and information regarding treatment modalities used related to the cases under discussion. The treatment plans are to be evidence based and used in concert with the outcomes of treatment. Techniques and Technology associated with the case shall be described as cases are reviewed. Both didactic lecture presentations and case reviews will utilize the interactive questioning and survey opportunities as needed through either the PRS format or Blackboard. The semester grade will be based on participation in the interactive sessions, a case based examination and each student is to turn in a fully documented senior case that is both diagnostic and treatment demanding. All cases will be approved prior to being considered as an acceptable senior case.

REMA Courses
REMA 261. Preclinical Orthodontics. 1 Unit.
Preclinical orthodontics includes relevant areas of applied growth and development, diagnostic methods and treatment planning. Topics included are: Histology and Physiology of Tooth movement and Laboratory Techniques related to the fabrication and use of suitable orthodontic appliances including material and biologic background necessary for proper clinical management of these appliances.

REMA 270. Introduction to Pediatrics. 1 Unit.
This course will provide instruction in the areas of preventive dentistry, restorative dentistry, pulp therapy, trauma, space maintenance and non-pharmacologic behavior management techniques for the pediatric patient. Particular attention will be paid to those areas that are essential in order to treat a pediatric patient appropriately. It is the hope that this course will communicate expectations and will provide significant preparation that will enhance the dental students’ clinical learning experience.

REMA 270A. Introduction to Pediatric Dentistry for Nondegree Student. 1 Unit.
Students will learn principles and practices of modern dental care for children including diagnostic, preventive, and treatment procedures applied to dental caries, periodontal disease, malocclusion, growth and development in children. In caring for the child patient, this course emphasizes current concepts of behavior guidance of children in the dental treatment setting.

REMA 380. Introduction to Geriatric Dentistry. 1 Unit.
The didactic curriculum provides a general background on the changing demographics of our population as well as knowledge about the medical, social, psychological, and dental problems many older Americans face today. Dental problems common to the elderly, approaches to treatment planning and the provision of care for this unique group in traditional and non-traditional settings are explored.
REMA 480. Introduction to Geriatric Dentistry. 1 Unit.
The didactic curriculum provides a general background on the changing demographics of our population as well as knowledge about the medical, social, psychological, and dental problems many older Americans face today. Dental problems common to the elderly, approaches to treatment planning and the provision of care for this unique group in traditional and non-traditional settings are explored.

School of Dental Medicine Faculty

Full-time Faculty

Anna Akkus, MS, PhD
(Case Western Reserve University)
Assistant Professor of Comprehensive Care

Aurelio Alonso, DDS, MS, PhD
(University of Ribeirão Preto School of Dentistry, Brazil; University of Minnesota)
Assistant Professor of Comprehensive Care
Certificate in Prosthodontics, Sao Paulo State University; MS/Certificate TMD and Orofacial Pain from the University of Minnesota

Anita Aminoshariae, DDS, MS
(Case Western Reserve University; Virginia Commonwealth University)
Assistant Professor of Endodontics

Hussein M. Assaf, DDS
(The Ohio State University)
Associate Professor of Comprehensive Care

Dale A. Baur, DDS
(Case Western Reserve University)
Associate Professor of Oral and Maxillofacial Surgery and Chair

Nabil F. Bissada, DDS, MSD, BDS
(Case Western Reserve University; University of Minnesota; University of Cairo)
Professor of Periodontics and Chair

Maya Chane, DDS
(Damascus University)
Senior Instructor of Comprehensive Care

Catherine Demko, PhD
(Case Western Reserve University)
Associate Professor of Community Dentistry

Fady F. Faddoul, DDS, MSD
(Case Western Reserve University)
Professor of Comprehensive Care

Zhimin Feng, PhD
(Chinese Academy of Sciences)
Senior Instructor of Biological Sciences

Gerald A. Ferretti, DDS, MS, MPH
(Georgetown University; University of Connecticut; University of Kentucky)
Professor of Pediatric Dentistry and Chair

Margaret Ferretti, DDS
(Case Western Reserve University)
Visiting Assistant Professor

Steven W. Fox, DDS
(Case Western Reserve University)
Associate Professor of Comprehensive Care

Sharon Freudenberger, DDS
(New York University)
Associate Professor of Pediatric Dentistry

Jerold S. Goldberg, DDS
(Case Western Reserve University)
Professor of Oral and Maxillofacial Surgery

Angela R. Graves, DDS, MS
(Meharry Medical College; Columbia University)
Assistant Professor of Comprehensive Care

Mark G. Hans, DDS, MS
(Case Western Reserve University)
Professor of Orthodontics and Chair

Masahiro Heima, DDS, PhD
(Okayama University Japan)
Assistant Professor of Pediatric Dentistry

Alfredo Hernandez, DDS, MS
(Javeriana University Columbia; The Ohio State University)
Assistant Professor of Comprehensive Care

Stanley A. Hirsch, DDS, MS
(Case Western Reserve University; Indiana University)
Associate Professor of Oral and Maxillofacial Medicine and Diagnostic Sciences

Jean M. Iannadrea, DDS
(Case Western Reserve University)
Assistant Professor of Comprehensive Care

T. Roma Jasinevicius, DDS, MEd
(Case Western Reserve University; Cleveland State University)
Associate Professor of Comprehensive Care

Ge Jin, PhD
(Case Western Reserve University)
Assistant Professor of Biological Sciences

Zinaida Kaleinikova, DDS, MS, DMD
(Kaunas Medical University College of Odontology, Lithuania; The Ohio State University; Case Western Reserve University)
Assistant Professor of Comprehensive Care
Graduate Prosthodontist Specialty Certificate; Implant Prosthodontic Fellowship from The Ohio State University

James A. Lalumandier, DDS, MPH
(Georgetown University; University of North Carolina)
Professor of Community Dentistry and Chair

Michael A. Landers, DDS, MA
(Case Western Reserve University; The Ohio State University)
Associate Professor of Oral and Maxillofacial Medicine and Diagnostic Sciences
Lisa A. Lang, DDS, MS  
(University of Michigan; University of Texas San Antonio)  
**Associate Professor of Comprehensive and Chair, Assistant Dean of Clinical Education**  
Certificate in Prosthodontics from the University of Texas Health Science Center at San Antonio; AEGD certificate from Columbia University

Charles J. Love, DDS  
(Case Western Reserve University)  
**Associate Professor of Comprehensive Care**

André K. Mickel, DDS, MSD  
(Case Western Reserve University)  
**Associate Professor of Endodontics and Chair**

Thomas A. Montagnese, DDS, MS  
(The Ohio State University)  
**Assistant Professor of Endodontics**

Anchal Malik, MHA, BDS  
(University of South Carolina Arnold School of Public Health; Rajiv Gandhi University of Health Sciences)  
**Assistant Professor of Pediatric Dentistry**

Sena Narendran, BDS, MS  
(University of Ceylon Sri-Lanka; University of London England)  
**Associate Professor of Community Dentistry**

Suchitra S. Nelson, PhD  
(Case Western Reserve University)  
**Professor of Community Dentistry**

Ronald L. Occhionero, DDS  
(Case Western Reserve University)  
**Professor of Comprehensive Care; Associate Dean for Administration**

Juan Martin Palomo, DDS, MSD  
(Ponta Grossa State University Brazil; Case Western Reserve University)  
**Associate Professor of Orthodontics**

Leena Palomo, DDS, MSD  
(Case Western Reserve University)  
**Assistant Professor of Periodontics**

Pushpa Pandiyan, PhD, MSc  
(Humboldt University, Berlin Germany; Bharathidasan University, India)  
**Assistant Professor of Biological Sciences**

Andres Pinto, DDS, DMS, MPH  
(Universidad Javeriana, Colombia; University of Pennsylvania)  
**Associate Professor of Oral and Maxillofacial Medicine and Diagnostic Sciences and Chair**

Faisal A. Quereshy, DDS, MD  
(State University of New York at Buffalo; Case Western Reserve University)  
**Associate Professor of Oral and Maxillofacial Surgery**

Renato Roperto, DDS, MSc, PhD  
(University of Ribeirão Preto; University of Sao Paulo; Sao Paulo State University, Brazil)  
**Associate Professor of Comprehensive Care**

Marco Rouman, DDS, MFDS RCS (Ed.), MFDS RCP SG  
(Dental School Cairo University, Egypt; Royal College of Surgeons of Edinburgh; Royal College of Surgeons of Glasgow)  
**Associate Professor of Geriatric Dentistry**

Benjamin L. Schechter, DDS  
(Case Western Reserve University)  
**Assistant Professor of Comprehensive Care**

Andre Paes B. da Silva, DDS, MSc, PhD  
(Universidade Federal do Ceara, Brazil; University of Toronto)  
**Assistant Professor of Periodontics**  
MSc/Certificate in Periodontology from the University of North Carolina

Robert C. Skillcorn, DDS, MS  
(Ohio State University; University of Michigan)  
**Associate Professor of Periodontics**

M. Louay Taifour, BDS  
(Beirut Arab University, School of Dental Medicine)  
**Clinical Instructor of Comprehensive Care**  
Fellowship in Restorative Dentistry; Advanced Education in General Dentistry Certificate from Case Western Reserve University

Sorin T. Teich, DMD, MBA  
(Hebrew University of Jerusalem Israel; Northwestern University-Chicago/Tel Aviv University-Israel)  
**Associate Professor of Comprehensive Care, Assistant Dean of Clinical Operations**

Ibrahim F. Tulunoglu, DDS, PhD  
(Hacettepe University, Ankara, Turkey)  
**Associate Professor of Comprehensive Care**  
Doctorate of Prosthodontics

Manish Valiathan, MSD, BDS  
(Case Western Reserve University; College of Dental Surgery-Manipal India)  
**Associate Professor of Orthodontics**

Lance Vernon, DMD, MPH  
(University of Pittsburgh)  
**Senior Instructor of Biological Sciences**

Kristin Z. Victoroff, DDS, PhD  
(Dalhousie University; Case Western Reserve University)  
**Associate Professor of Community Dentistry; Associate Dean for Education**

Russell Wang, DDS, PhD, MSD  
(PhD: University of Toronto; MSD: Indiana University)  
**Associate Professor of Comprehensive Care**

Aaron Weinberg, DMD (The Hebrew University of Jerusalem), PhD  
(Israel)  
**Professor of Biological Sciences and Chair, Associate Dean for Research**

Tim S. Whittingham, PhD, MBA  
(University of Wisconsin; Case Western Reserve University)  
**Associate Professor of Biological Sciences**

Kristin A. Williams, DDS, MPH  
(Case Western Reserve University; The Ohio State University)  
**Assistant Professor of Community Dentistry**
Fengchun Ye, PhD, MS, BS
(University of Bordeaux II, France; BS: Huazhong Agricultural University, Wuhan, China)
Assistant Professor of Biological Sciences
School of Graduate Studies

The Case Western Reserve University School of Graduate Studies (http://gradstudies.case.edu) (SGS) is the unit through which Case Western Reserve University offers graduate programs in the humanities and social sciences, biomedical and natural sciences, engineering, and selected disciplines related to professional fields. These programs lead to the degrees of Master of Arts, Master of Fine Arts (theater and dance), Master of Science, Master of Public Health, Master of Engineering and Management, Master of Engineering, Doctor of Musical Arts, and Doctor of Philosophy. Several programs offered jointly with the professional schools and local affiliated institutions lead to dual degrees such as MA/JD, MA/PhD, MA/MD, MA/MSN, MS/MBA MS/MD, MSSA/PhD, PhD/MPH, JD/MPH, MSN/MPH, MBA/MPH, MD/MPH, MPH/MA, and MD/PhD. There are also three combined undergraduate and graduate programs; IGs (Integrated Graduate Studies), BS/MS, and BS/ME, which allow undergraduate students to enter graduate study before they complete their undergraduate programs. A complete list of degree programs offered can be found on the Graduate Studies website (http://gradstudies.case.edu/prospect/degreesoffered.html). The School of Graduate Studies, overseeing university-wide standards of quality in admission and performance, presently awards graduate degrees in seventy-two departments: fifty-two with PhD programs and twenty others in which the highest degree is the MA, ME, MEM, MFA, MPH, MS, or DMA. Enrollment in the School of Graduate Studies for fall 2013, excluding non-degree registrants, totaled 2213, of which 53% were men, 47% were women, and 30% were international. During the academic year 2012-2013, the school awarded 397 master’s degrees and 190 doctorates.

Administration of the School

Charles E. Rozek, PhD
(Wayne State University)
Vice Provost and Dean of Graduate Studies

Lynnmarie Hamel, JD
(Case Western Reserve University)
Associate Dean of Graduate Studies

Faculty Senate Committee on Graduate Studies

General responsibility for overseeing postdoctoral affairs, programs of graduate study and for academic and other general regulations applicable to all graduate students and programs is delegated to the Faculty Senate Committee on Graduate Studies (http://case.edu/ president/facsen/committees/graduatetudies/graduatecom.html). Each department, school, or interdisciplinary committee is responsible for its particular graduate programs within the framework of the general regulations. The Committee on Graduate Studies consists of the dean of graduate studies, the associate vice president for research, nine faculty members elected by the University Faculty Senate, one appointed postdoc and four graduate students – three elected by the Graduate Student Senate and one appointed from the professional schools.

Graduate Student Senate

Students in the School of Graduate Studies are represented by a Graduate Student Senate (http://case.edu/gss), which consists of one student elected from each department that offers graduate programs. The officers of the senate are elected by the graduate student senators, who also select graduate student representatives to the University Faculty Senate and various campus committees.

School of Graduate Studies

Academic Policies

Graduate Academic Policies

Fellowship Tuition Policy for Graduate Students

The purpose of this policy is to allow students pursuing graduate degrees to take courses beyond their degree requirements without additional financial burden to the student and little or no cost to the university. Such courses, referred to as “fellowship” courses, can broaden the educational experience of graduate students by allowing them to pursue studies according to their own intellectual needs.

1. A student pursuing a graduate degree shall be charged tuition at the standard hourly rate for all of the credit hours which are intended to count toward the degree. In any semester for which students are registered for a minimum number (as determined by the school) of credits that will be applied toward the degree, fellowship courses will not incur a tuition charge.

2. In order to enroll in a fellowship course, the student must be in good standing, meet course prerequisites, and obtain consent of instructor. In addition, the student must obtain permission from his/her advisor and the School of Graduate Studies. Up to eight fellowship courses may be permitted in aggregate.

3. Thesis research (651 and 701) and similar courses cannot be taken as fellowship courses and prior rules for 701 (dissertation fellowship) are not changed by this policy.

4. Fellowship courses can not be audited. The grade that a student receives in the course will not count toward the degree program GPA.

5. Fellowship courses can not be used toward a degree program at Case Western Reserve University.

6. Notwithstanding any of the foregoing provisions and policies, the rules, regulations, and terms of tuition and credit enrollments for each school shall remain in full force and effect.

Guidelines for Multidisciplinary Graduate and Graduate Professional Studies

Multidisciplinary studies have as their goal the education of individuals who can make contributions to academic disciplines or professional endeavors that would be less likely to be accomplished by individuals with a background in a single discipline. Departments or faculty members may design a joint degree program, which will generally result in two degrees, or a multidisciplinary degree, which will generally result in a single degree which has a broader perspective than similar existing degrees. Such programs should meet challenges of new interdisciplinary knowledge and/or developments requiring new combinations of talent. In addition, such programs or degrees should enhance and not duplicate existing programs in the university. Individual students with specific multidisciplinary interests that desire to pursue them at Case Western Reserve University and faculty members who wish to run pilots for joint degree programs or multidisciplinary degrees are encouraged to do so, even if no official joint or multidisciplinary degree program currently exists, by organizing an individual joint degree or an individual
multidisciplinary degree. Such degrees require faculty and departmental support. Guidance for the design and approval of both such programs and such individual degrees is available from the School of Graduate Studies.

**Graduate Student Rights and Responsibilities**

It is the responsibility of the student to become familiar with the general rules and regulations of the university, not just those of the School of Graduate Studies. A member of the University community who is accused of violating any of these rules and regulations is subject to university disciplinary action. Due process procedures of adequate notice of all charges and a fair hearing will apply. Case Western Reserve University has established a mechanism whereby students may express a grievance against the actions of other students or members of the faculty and staff. A statement of the policies and procedures to be followed in the case of academic infractions by graduate students may be obtained through the School of Graduate Studies. The policies and procedures governing all other infractions are detailed in the university’s Case Student Handbook (http://studentaffairs.case.edu/handbook). The University Office of Student Affairs (http://studentaffairs.case.edu) should be consulted for non-academic infractions.

It is also the responsibility of the student to become acquainted with the general regulations and administrative procedures governing graduate study, together with the departmental or school regulations which apply to the student’s course of study, and, in consultation with the faculty advisor or advisory committee of the supervising unit, to plan the program and carry out the work in accordance with these regulations and procedures.

**Departmental Responsibility for Requirements**

Requirements for master’s and doctoral degrees beyond those set forth in these regulations may be established by departments or curricular program committees with the approval of the dean of graduate studies. Individual students may be required to take courses beyond the published requirements in order to successfully complete their degree programs. In such instances the student must be notified in writing upon matriculation by the chair of the department or curricular program, with a copy to be filed in the School of Graduate Studies.

**Maintenance of Good Standing**

A student maintains good standing in the School of Graduate Studies by registering each fall and spring semester unless on an official leave of absence which has been approved by the School of Graduate Studies. A student is in good standing who meets the standards set by the academic department and the School of Graduate Studies to ensure normal progress toward the fulfillment of the stated requirements at levels of quality without warning or probation or extension of the allowable time limit for degree completion. Students whose quality point averages fall below minimum standards (3.00 for doctoral students; 2.75 for master’s) will automatically be placed on probation until the minimum standards are achieved. In addition, a student will be subject to separation from the university for any of the following reasons:

1. Failure to achieve a quality-point average of 2.50 or higher at the completion of 12 semester hours or 2 semesters of graduate study.
2. Failure to achieve a quality-point average of 2.75 or higher at the completion of 21 semester hours or 4 semesters of graduate study.
3. Failure to receive a grade of S in thesis research 651 or dissertation research 701. A student who receives a grade of U in thesis (Course 651) or dissertation research (Course 701) will be placed on probation and be subject to separation. The probationary status will be recorded on the student’s transcript. The student must be removed from probation by the end of the semester immediately following receipt of the grade of U by repeating the course for the same number of credit hours, and achieving a grade of S. The tuition and associated fees for the repeated course may be the responsibility of the student. Although removal from probation restores the student’s good standing, the grade of U received will not be canceled or substituted by the grade of S subsequently received. Separation will occur if the student placed on probation receives another grade of U in the following semester; or, if the dean of graduate studies, in consultation with the academic unit, determines that the student is unlikely to be successful in working independently and productively toward the completion of the thesis or dissertation research.
4. Failure of a conditionally or provisionally admitted student to satisfy the conditions or provisions stated in the letter of acceptance by the end of the first academic year (2 semesters) or after 18 credits of course work.
5. Failure to make progress towards degree completion. If the student is not making progress towards degree completion, and it has been judged that the student is unlikely to be successful in working independently and productively toward the completion of clinical requirements, thesis or dissertation research the department and/or the dean of graduate studies (in consultation with the department) can recommend academic separation.
6. In addition to disciplinary actions based on academic standards, on recommendation of the student’s department or school, the dean of graduate studies can suspend or separate a student from the university for failure to maintain appropriate standards of conduct and integrity. Such a suspension or separation will be implemented only for serious breaches of conduct that threaten to compromise the standards of a department or create concern for the safety and welfare of others. In the event of such suspension or separation, the student will be entitled to an appeal through the grievance procedure of the Graduate School.

**Maintenance of Quality-Point Average**

In calculating the quality-point average, courses taken as a student in the School of Graduate Studies at the 400 level or above as well as any courses accepted toward fulfillment of degree requirements for which quality points are given will be counted, including courses which may need to be repeated. Unless otherwise stated by the department, a minimum cumulative quality-point average of 2.75 is required for the awarding of the master’s degree, and a minimum cumulative quality-point average of 3.00 is required for awarding of the doctoral degree. Any department, school, or curricular program committee may choose to establish quality standards higher than those stated above if such additional requirements are made known in writing to the students upon matriculation and are recorded with the dean of graduate studies. In that case, the departmental standards supersede the minimum standards. Students who do not maintain the minimum quality point average will be placed on academic probation until the minimum standard has been achieved.

**Course Repeat Policy**

Graduate students may petition their department chair to repeat a maximum of two courses during their degree program in order to improve
their performance. When a course is repeated, the first grade will remain visible on the transcript but will be removed from the calculation of the cumulative grade point average and the grade point average for the semester in which the course was first taken. The new grade will then be used for calculation of the cumulative grade point average and the grade point average for the semester in which it was earned, regardless of whether the new grade is higher or lower than the first grade. The student’s transcript will show the comment “Repeated: No credit awarded” directly below the original grade. However, if the first attempt of the course resulted in a passing grade, but the second attempt results in a failing grade, then the original grade will remain. Similarly, if a student withdraws from a course that is being repeated, the Course Repeat Option will not be applied and the original grade will stand. Course repetition may be exercised according to the following conditions:

1. The course repeat option can only be used on course in which a C or lower was earned. Courses with a grading basis of P/NP are not eligible under this policy.
2. A student may not use the Pass/No Pass Option on a course that is being repeated.
3. A student may only use the repeat option on the same course.
4. Research based courses 651, 601 and 701 are exempt from this repeat policy. Thesis research course 651 and dissertation research course 701 grading policies can be found in this bulletin.
5. The course repeat option may not be exercised after a degree has been awarded.
6. Approval from student’s advisor and department chair is required. Some departments may also require the signature of their director of graduate studies and/or graduate affairs committee.
7. The tuition and associated fees for a repeated course may be the responsibility of the student.

Residency Requirement

The doctoral residency requirement is intended to insure a period of intensive academic interaction with faculty and peers and of sustained independent research. Graduate students are considered to be in residence when they are fully engaged in academic work. As resident students they may teach at the university, take graduate courses, assist in course development, and engage in research or in other scholarly activities at the university. Regardless of the nature of the work, the student’s regular presence at the university is expected during fulfillment of the residency requirement.

The formal fulfillment of residency requires continuous registration in at least six consecutive academic terms (fall, spring and/or summer) from matriculation to a period not exceeding five years after the first credited hour(s) of dissertation research (701). The period while students are on a leave of absence do not count towards fulfilling the residency requirement. Within the context of continuity of registration, departments may enact other restrictions. In such instances, the departmental requirements take precedence and must formally be disclosed to the student at matriculation. This is meant to be a reflection of the appropriate reality that departments and fields have different norms and traditions of graduate study. For example, to fulfill the residency requirement, some departments may require the doctoral student to be registered for 9 or more semester hours of graduate credit in each of two consecutive semesters.

Time Limitation

All the requirements for the master’s degree must be completed within five consecutive calendar years after matriculation as a graduate student, including any leaves of absence. Doctoral students have five consecutive calendar years from the semester of the first credited 701 registration, including leaves of absence, to complete all requirements for the doctorate. Any graduate student who fails to complete the requirements within the five year limit for his or her degree program will be subject to separation from further study unless granted an extension by the dean of graduate studies with the recommendation of the faculty advisor or advisory committee and approval by the department chair. An extension may be granted if the student and his or her advisor work out a plan of action for degree completion within a specified time frame which must be endorsed by the department chair. Students will be expected to meet all the specified deadlines outlined in the plan of action. The minimum acceptable registration during this extended period for each semester until graduation is three credit hours of 651 or 701. Plan B master’s students must register for at least three credits of appropriate course work.

Graduate Student Holiday, Vacation, Parental Leave and Sick Leave Policies

These policies apply to graduate students in the School of Graduate Studies who receive stipends that support their effort toward earning a degree during the period when they receive support. They represent the minimum to which graduate students are entitled.

If a graduate student receives a stipend, they will receive support for holidays, vacations, sick leave, and parental leave as set forth below. The stipend support for those days will be at the same rate as for normal work days. For all anticipated leaves longer than two weeks, appropriate departmental approvals must be obtained and paperwork submitted to the dean of the school of graduate studies prior to the start of the leave.

These policies do not supersede other university policies concerning attendance or residence at the university (e.g. participating in classroom activities as a student or teaching assistant). These policies only apply to student effort toward earning a degree.

Holidays

Graduate students are entitled to observe all university closings for holidays and other recognized events.

Vacations

Graduate students are allowed two weeks of vacation per calendar year (10 traditional work days) if they receive full support during a 12-month period. Students who receive less than 12 months of support are not entitled to vacation during the period of support. Vacation is not provided during the supported period when students receive support for part of the year. The dates of vacations must be approved in advance by the student’s research mentor to ensure that time-sensitive work is not disrupted.

Vacation days can be accrued from one year to the next year only with the prior written approval of the Program and only up to a maximum of 20 traditional work days, to allow for international travel, for example. There is no terminal leave.

The times between academic terms and the summer are considered part of the active training period and are not to be regarded as vacation time.
Sick Leave

Graduate students are entitled to two weeks (10 traditional work days) of sick leave per year, with no year-to-year accrual. Sick leave may be used for medical conditions related to pregnancy and childbirth. Under exceptional circumstances, additional sick leave days may be granted following receipt of a written request from a physician, and prior written approval by the Program.

Parental Leave

Graduate students are entitled to paid parental leave for the adoption or birth of a child. The primary caregiver is entitled to 6 weeks leave and the other parent or domestic partner is entitled to 3 weeks leave. When both parents are supported graduate students, the leave may be used consecutively or together. The leave must be used within 12 months of birth or adoption. Parental leave must be approved in advance in writing by the Program. It is permissible to add parental leave and sick leave together for the adoption or birth of a child.

Unpaid Leave

Students who require additional leave beyond what is stipulated above must seek prior written approval from the School of Graduate Studies for an unpaid leave of absence. Approval for a leave of absence must be requested in advance by the student and the student should provide documentation for the leave request and obtain approval. Conditions for the leave and approval must be submitted to the School of Graduate Studies. Continued coverage of health insurance is allowable as permitted within the guidelines of University Health Services and with written approval by the Program and School of Graduate Studies.

Unused Leave

A student is not entitled to receive any form of compensation for any unused holidays, vacation days, sick leave, parental leave, and/or other accrued time off.

Disclaimers

These policies do not supersede any HR policy. In addition, these policies do not create a contractual relationship with any student and the policies may be amended at any time by the Faculty and the School of Graduate Studies.

The School of Graduate Studies policies regarding continuous registration and leave of absence still apply.

Maintenance of leave records is the responsibility of the academic department.

Leave of Absence from Graduate Study

Students undertaking graduate work are expected to pursue their studies according to a systematic plan each year whether registered for full or part-time study. Occasionally a student finds it necessary to interrupt his or her studies before completion of the graduate program. A leave of absence is not to be requested unless the circumstances are such that the student cannot continue graduate study. Under such circumstances the student must request in writing a leave of absence for a period not to exceed two consecutive regular academic semesters. Forms (http://gradstudies.case.edu/current/forms.html) can be found at the School of Graduate Studies website. In exceptional circumstances, the leave can be extended for another two semesters. However, the maximum amount of leave permitted per graduate program is four semesters. The reason for the leave must be stated clearly, and the request must be submitted to the School of Graduate Studies with the written endorsement of the student’s academic department. During a leave of absence the student must not seek aid from faculty members or use of the facilities of the university. This means that students may not take exams or defend theses and dissertations while on a leave. A leave of absence does not extend the maximum time permitted for the completion of degree requirements, and a leave cannot be taken while students are on extension of the five-year limit. At the expiration of the leave the student must resume registration unless formally granted an extension of the leave. Retroactive leaves are not permitted. A student who fails to obtain a leave of absence, or who fails to register following an official leave, must petition the School of Graduate Studies for reinstatement in order to resume work as a student in good standing at the university.

A student who is granted a maternity or paternity leave of absence related to infant care, as well as those who must fulfill military duty obligations, can petition to extend the five-year time limit associated with completion of the degree. The length of the extension may not exceed two years. International students must check with the Office of International Student Services before petitioning for a leave of absence, as such a leave can affect their visa status.

Withdrawal, Resignation, and Reinstatement

Students must maintain continuous registration throughout their degree programs unless granted an official leave of absence. Students who fail to register for any academic term will be automatically withdrawn from their programs. Students who are withdrawn from their programs must petition for reinstatement in order to continue graduate study. The petition must be approved by both the student’s department and the School of Graduate Studies before the student may register for further course work as a student in full standing. In each case of readmission with full standing, the official letter will state the terms of readmission, including future time limits for the degree program, and the past course work that will be credited toward the degree. If more than 24 months have elapsed since the last registration, students may have to resubmit file materials if requested by the School of Graduate Studies.

Transfer of Credit

Transfer of credit from another university toward master’s and doctoral degree requirements is awarded for appropriate course work (not applied to another degree program) taken prior to admission. Transfer of credit must be requested in the student’s first academic year and must be appropriate for the student’s planned program of study. For master’s candidates, transferred credit is limited to six semester hours of graduate-level courses, and no credit for master’s thesis may be transferred from another university. No transfer of credit will be awarded towards the PhD degree except by petition, and no credit for the doctoral dissertation may be transferred from another university.

Students who wish to receive credit for courses taken outside the university once they are enrolled must petition for approval. All transfer of credit requires approval from the student’s advisor, the departmental chair or graduate committee, and the dean of graduate studies. Such courses must have been taken within five years of first matriculation at Case Western Reserve University and passed with grades of B or better. Forms can be found at the School of Graduate Studies (http://gradstudies.case.edu/current/forms.html).

Transfer of credit does not include the transfer of grades and therefore cannot be used to fulfill GPA or percentage of graded coursework policies.
Internal Transfer of Credit

Students of exceptional ability in the undergraduate programs of Case Western Reserve University who have the approval of the Office of Undergraduate Studies and the School of Graduate Studies may apply to receive credit for graduate courses completed in excess of the undergraduate degree requirements.

Graduate students who internally transfer to another degree program may seek approval to transfer coursework from the original degree program by petition (http://gradstudies.case.edu/webfm_send/325).

Changes in Registration

To add or withdraw from courses or to change registration from credit to audit or the reverse, a student must obtain the appropriate official form to submit to the University Registrar in accordance with the dates published each academic term for such actions to be taken. Students must make appropriate changes to their schedules by the end of the first week of classes in order to avoid paying full tuition for courses withdrawn after the final drop/add date. Only complete withdrawal for the semester entitles a student to a percentage refund of the withdrawn courses after the first week of classes (see the “Financial Information” section of this Bulletin under Refunds). Failure to attend class or merely giving notice to the instructor will not be regarded as official notice of withdrawal or change. When making changes in registration, an international student must be aware of maintaining full-time status. Full-time status requires registration for a minimum of 9 semester hours per semester. Students financed by federal loans must remain registered for at least 6 semester hours (defined as half-time) each semester to maintain continued eligibility for that funding or to initiate such a loan.

Graduation

A candidate for a degree awarded by the School of Graduate Studies must make application for the degree to the School of Graduate Studies by the deadline established for that semester, which is approximately twelve weeks before the commencement date for which the degree is expected to be awarded. Students are encouraged to visit our website at the beginning of the semester in which they intend to graduate to obtain a packet of graduation materials for either the Master’s (http://gradstudies.case.edu/current/graduation/masters.html) or Doctorate (http://gradstudies.case.edu/current/graduation/phd.html) degree. The candidate must meet all the deadlines for completion of degree requirements set forth in the calendar. All candidates must be registered for credit and in good standing during the semester in which the degree is awarded. Payment of tuition, fees, and fines is a prerequisite to the awarding of a degree.

Delayed Graduation

It is a requirement of the School of Graduate Studies that a student be registered for credit in the semester in which he or she completes all the requirements to graduate in accordance with established deadlines for that semester. For a student engaged in thesis or dissertation research the completion of all requirements to graduate is not easily predicted, making it difficult to adhere to scheduled deadlines. If a student will not be able to meet the degree requirements to graduate in one semester, but will finish before the next semester begins, he or she can petition for a waiver of the requirement to be registered in the semester of graduation. To be granted a waiver of registration students must be registered for the appropriate thesis or dissertation credit hours in the semester (or summer session) immediately preceding the semester of graduation, complete all degree requirements including a current application to graduate, and submit all required materials to the School of Graduate Studies by the end of the Drop/Add period of the next semester.

A student who qualifies for the waiver will be awarded the degree at the next graduation without the need to be registered or to pay a special fee. If a student fails to meet the waiver deadline, he or she will be required to register for the appropriate thesis or dissertation credit hours in the next semester, and to reapply for graduation in that semester.

Exceptions to Regulations

Students have the right to petition for exceptions to these regulations. Such a petition should be addressed to the dean of graduate studies. In most cases the student’s department or program committee must endorse the petition.

Graduate Student Grievance Procedure

It is the responsibility of the School of Graduate Studies to ensure that all students enrolled for graduate credit at Case Western Reserve University have adequate access to faculty and administrative consideration of their grievances concerning academic issues. A three-step procedure has been established for graduate students to present complaints about academic actions they feel are unfair.

1. Students with complaints should first discuss their grievances with the person against whom the complaint is directed.
2. In those instances in which this discussion does not resolve a grievance to the student’s satisfaction, a complaint should be presented in writing to the department chairperson. If the complaint is against the department chair and is not resolved with this individual, the complaint should be presented to the dean of the school/college.
3. In the event that a decision still appears unfair to the student, the student may bring the matter to the attention of the dean of graduate studies. The dean may ask the student to put the complaint in writing. The dean will then discuss the case with the student and the department chair to evaluate the particulars and to make a ruling on it. As the situation warrants, the dean may appoint a Grievance Committee to recommend what action should be taken. In this event the Committee will be composed of two faculty members selected from the Committee on Graduate Studies of the Faculty Senate and two graduate students selected either from the Executive Committee of the Graduate Student Senate or from the student members of the Committee on Graduate Studies.

The dean of graduate studies has the responsibility for the final decision, and the ruling from the School of Graduate Studies will be considered final and binding on the persons involved in the grievance. Additional information about the grievance procedure can be obtained from the School of Graduate Studies.

It should be understood that this grievance procedure relates solely to graduate student complaints concerning academic issues. The procedure for handling complaints about other matters is detailed in the Graduate Student Handbook.

Procedures and Sanctions for Graduate Student Academic Infractions

Graduate students accused of violating the university’s standards of conduct, which are detailed in this Academic Integrity Policy (http://gradstudies.case.edu/webfm_send/248), are entitled to adequate notice of all charges and to a fair hearing and may subsequently be subject
to disciplinary action. The process that is outlined in the Academic Integrity Policy will apply to academic infractions, e.g., cheating on examinations, plagiarism, and other forms of dishonesty in academic activities. Additional information is available from the School of Graduate Studies.

School of Graduate Studies
Academic Requirements

Master Requirements (p. 668) I Doctoral Requirements (p. 668) I Grading (p. 670)

Academic Requirements for Master Degrees

In recognition that the objectives of master's degrees differ for various departments and for individual students, especially in the importance given to research, two general plans for master's degrees may be followed. Plan A is for MA or MS degrees with a thesis based on individual research and a final oral examination. Plan B is for MA, MFA, MPH, or MS degrees without a thesis but requiring a comprehensive examination and/or a major project to be administered by the academic unit.

Within the framework of these general regulations, it is expected that a relevant program of study will be planned for each candidate for the master's degree by the student and the faculty advisor or advisory committee. This planned program of study (PPOS) must be submitted to the School of Graduate Studies by the end of the second semester. Such a program should include appropriate courses, thesis, and/or project hours, and may also include, where relevant, such experiences as field work or practicum. Guides to submitting and updating the PPOS through the student information system are available from the University Registrar.

Master's Thesis (Plan A)

The minimum requirements for the master's degree under Plan A are 18 semester hours of course work plus a thesis equivalent to at least 9 semester hours of registration, or 21 semester hours of course work plus a thesis equivalent to at least 6 semester hours of registration. At least 12 semester hours of course work must be graded. Once registered for thesis credit (Course 651), a student must continue 651 registration each succeeding regular semester until graduation. However, if a student is registered for course work or research toward the doctorate in the semester in which the thesis examination is expected to occur, concurrent registration for 651 is not required. At least 18 semester hours of course work, in addition to thesis hours, must be at the 400-level or higher.

Each student must prepare an individual thesis. Joint theses are not permitted. The written thesis must conform to regulations concerning format, quality, and time of submission as established by the dean of graduate studies. Detailed instructions (http://gradstudies.case.edu/current/graduation/masters.html) can be obtained from the School of Graduate Studies website.

For completion of master's degrees under Plan A, an oral examination (defense) of the master's thesis is required. This examination is conducted by a committee of at least three members of the university faculty. The candidate's thesis advisor customarily serves as the chair of the examining committee. The other members of the committee are appointed by the chair of the department or curricular program faculty supervising the candidate's course of study. The examining committee must agree unanimously that the candidate has passed the thesis examination. Because theses are made public immediately upon acceptance, they should not contain proprietary or classified material. When the research relates to proprietary material, the student and advisor are responsible for making preliminary disclosures to the sponsor sufficiently in advance to permit timely release of the thesis, and these plans should be disclosed when the thesis is submitted to the School of Graduate Studies.

Master's Comprehensive (Plan B)

The minimum requirements for the master's degree under Plan B are 27 semester hours of course work (with at least 12 semester hours of graded course work), a comprehensive examination, and in some fields, an approved project. At least 18 semester hours of course work must be at the 400 level or higher.

Each candidate for the master's degree under Plan B must pass satisfactorily a comprehensive examination to be administered by the department or curricular program committee. The examination may be written or oral or both. A student must be registered during the semester in which any part of the comprehensive examination is taken. If not registered for other courses, the student will be required to register for one semester hour of EXAM 600 Master's Comprehensive Exam before taking the examination.

Acceleration Toward Graduate Study

Students admitted to the School of Graduate Studies through the IGS, BS/MS, or BS/ME program should refer to the Acceleration Toward Graduate Study (p. 563) page, maintained by the Office of Undergraduate Studies, for additional requirements for the completion of their degrees.

Academic Requirements for Doctoral Degrees

The degree of Doctor of Philosophy is awarded in recognition of in-depth knowledge in a major field and comprehensive understanding of related subjects together with a demonstration of ability to perform independent investigation and to communicate the results of such investigation in an acceptable dissertation.

Curricular Requirements

Within the framework of these general regulations, it is expected that a relevant program of study will be planned for each candidate for the doctorate by the student and the faculty advisor or advisory committee. This planned program of study (PPOS) must be submitted to the School of Graduate Studies by the end of the second semester. Guides to submitting and updating the PPOS through the student information system are available from the University Registrar.

Although specific requirements vary among departments, students entering with a bachelor's degree will satisfactorily complete a minimum of 36 semester hours of courses (which may include independent study/research, course 601), tutorials, and seminars. All course work must be at the 400 level or higher, and at least 24 semester hours of course work must be graded. For students entering with an approved master's degree, completion of at least 18 semester hours of course work and at least 12 semester hours of course work must be graded. A minimum of
18 semester hours of dissertation research (Course 701) is required for all doctoral students.

Examination Requirements
In order to meet the requirements for the doctorate, a student must pass satisfactorily a general examination (or a series of examinations covering different fields) specified and administered by the student's department or supervising committee. The examination generally precedes advancement to candidacy. A student must be registered during the semester in which any part of the general or qualifying examination is taken. If not registered for other courses, the student will be required to register for one semester hour of EXAM 700 PhD General/Qualifier Exam, before taking the examination. A student who fails the examination on the first attempt may be permitted to take the examination a second time within one year at the discretion of the department. Except in unusual circumstances, a student who fails the examination a second time will be separated from further graduate study within the same department or program.

Advancement to Candidacy
The formal acceptance of a student as a candidate for the doctoral degree is the responsibility of the student's department or the committee supervising the doctoral program in accordance with the written procedures of the academic unit. At its discretion the supervising unit may require a student to pass qualifying examinations before candidacy is granted. Generally, advancement to candidacy allows the student to enter the dissertation research phase of the degree program, and occurs after all course work and exam requirements are satisfied. Students are expected to make regular and continuous progress toward the degree. Advancement to candidacy in a PhD program should occur within a maximum of 6 years post-matriculation with a bachelor's degree (no later than at the completion of 36 semester hours of graduate study) and 4 years post-matriculation with a master's degree (no later than at the completion of 18 semester hours of graduate study). Students may continue in pre-candidacy status beyond this time by means of a petition to the School of Graduate Studies by a program director, based on evidence of student progress toward the degree. Individual programs can require advancement to candidacy before the time limit set in this policy.

The School of Graduate Studies must promptly be notified in writing of the decision concerning a student's advancement to candidacy, and a copy of the notification must be sent to the student concerned. A student who is refused candidacy status may not undertake further study for credit toward the doctoral degree within the same department or supervising unit. With the approval of both the department concerned and the School of Graduate Studies, such a student may:

1. Take additional courses, if required, in order to complete an approved master's degree in that department.
2. Seek admission to the graduate program of another department.

Course 701 Requirements (Dissertation Research, Pre- and Post-Candidacy)
When a student has been advanced to candidacy, he or she may begin dissertation research by formally registering for course 701 credits. At the point at which students begin registering for course 701, the department must identify a university faculty member who will serve as the doctoral student's principal research advisor and formally notify the dean of graduate studies. Students who have been advanced to candidacy may register for 1-9 credits of course 701 each fall and spring semester (or up to 6 credits for the summer when needed). In certain cases, students who have not advanced to candidacy may begin registering for up to a total of 6 credit hours of course 701 at the discretion of the department and upon written notification to the School of Graduate Studies. Pre-Candidacy 701 hour(s) may be taken concurrently with course work. Once a student begins registration of 701 hours, he or she must register for at least one credit hour of 701 each semester until graduation. Doctoral students have five consecutive calendar years from the semester of the first credited 701 registration, including leaves of absence, to complete all requirements for the doctorate.

Foreign Language Requirements
Although there is no general foreign language requirement for the doctorate, each department or supervising committee may set such requirements as are appropriate to the student's program of study. It is the student's responsibility to ascertain the foreign language requirements approved by the supervising unit. Each department must notify the School of Graduate Studies in writing of the specific language(s) required and the date of examination determining the student's proficiency in the required language(s).

Dissertation Requirements
All candidates for the PhD degree must electronically submit a dissertation as evidence of their ability to conduct independent research at an advanced level. The dissertation must represent a significant contribution to existing knowledge in the student's field, and at least a portion of the content must be suitable for publication in a reputable professional journal or as a book or monograph. Students must prepare their own dissertations. Joint dissertations are not permitted. The dissertation must conform to regulations concerning format, quality, and time of submission as established by the School of Graduate Studies. Detailed instructions can be obtained from the School of Graduate Studies (http://gradstudies.case.edu/current/graduation/phd.html). Research work connected with a dissertation is to be carried out under the direct supervision of a member of the university faculty selected by the student in consultation with departmental faculty and approved by the chair of the department.

Approved dissertations are to be uploaded to OhioLINK (http://etd.ohiolink.edu) before certification for the doctorate. Because dissertations are made public immediately upon acceptance, they should not contain proprietary or classified material. When the research relates to proprietary material, the student and advisor are responsible for making preliminary disclosures to the sponsor in advance to permit timely release of the dissertation. These arrangements must be disclosed when the dissertation is submitted to the School of Graduate Studies. The required form can be found in the graduation packet. (http://gradstudies.case.edu/current/graduation/phd.html)

Dissertation Research Advisor
Each doctoral student is responsible for becoming sufficiently familiar with the research interests of the department or program faculty to choose in a timely manner a faculty member who will serve as the student's research advisor. The research advisor is expected to provide mentorship in research conception, methods, performance, and ethics, as well as focus on development of the student's professional communication skills, building professional contacts in the field, and fostering the professional behavior standard of the field and research in general. The research
advisor also assists with the selection of the other faculty to serve as members of the dissertation advisory and defense committee.

**Dissertation Advisory and Defense Committee**

The composition of each student’s dissertation committee must have formal approval by the School of Graduate Studies on recommendation of the chair of the department, division, or curricular program committee. The dissertation committee must consist of a minimum of four members of the University faculty (any tenured or tenure-track Case Western Reserve University faculty member, and any CWRU full-time faculty member whose primary duties include research who is authorized to serve on a PhD dissertation committee by the school or college through which they are affiliated with the university). At least one of these CWRU faculty must hold a primary appointment that is outside of the student’s department, program, or school. The chair of the committee must be a CWRU tenured or tenure-track faculty member in the student’s program. The student’s dissertation research advisor must be a member of the committee and may serve as chair if consistent with departmental policy.

Persons who are not members of the University faculty may serve as additional members of the defense committee, subject to approval by the School of Graduate Studies. A petition with the rationale for the request must be submitted to the School of Graduate Studies along with the proposed member’s curriculum vitae. Under special conditions, a former faculty member whose time of leaving the university has not exceeded 18 months may be approved as a committee member by the School of Graduate Studies.

Throughout the development and completion of the dissertation, members of the dissertation advisory committee are expected to provide constructive criticism and helpful ideas generated by the research problem from the viewpoint of their particular expertise. Each member will make an assessment of the originality of the dissertation, its value, the contribution it makes, and the clarity with which concepts are communicated, especially to a person outside the field. The doctoral student is expected to arrange meetings and maintain periodic contact with each committee member. A meeting of the full committee for the purpose of assessing the student’s progress should occur at least once a year until the completion of the dissertation.

**Final Oral Examination (Defense of Dissertation)**

Each doctoral candidate is required to pass a final oral examination in defense of the dissertation. The examination may also include an inquiry into the candidate’s competence in the major and related fields.

The defense must be scheduled with the School of Graduate Studies no later than three weeks before the date of the examination. The chair of the examining committee should give approval to schedule the defense when the written dissertation is ready for public scrutiny. The candidate must provide to each member of the committee a copy of the completed dissertation at least ten days before the examination so that the committee members have an opportunity to read and discuss it in advance.

Scheduled defenses are publicized by the School of Graduate Studies, and any member of the university may be present at that portion of the examination pre-designated as public by the chair of the dissertation defense committee. Others may be present at the formal defense only by invitation of that chair.

It is expected that all members of the dissertation defense committee be present at the defense. Exceptions to this rule: a) must be approved by petition to the School of Graduate Studies and only under extraordinary circumstances; b) no more than one voting member can ever be absent; c) the absent member must participate through real-time video conferencing at the department’s expense; however, if such video conferencing is not available, the absent member may participate through telephone conferencing; and d) the student must always be physically present.

The dissertation defense committee is responsible for certifying that the quality and suitability of the material presented in the dissertation meet acceptable scholarly standards. A student will be certified as passing the final oral examination if no more than one of the voting members of the committee dissents.

**Institutional Review Board (IRB)**

The promotion of scholarship and the discovery of new knowledge through research are among the major functions of Case Western Reserve University. If this research is to be meaningful and beneficial to humanity, involvement of human subjects as experimental participants is necessary. It is imperative that investigators in all disciplines strive to protect human subjects. University policy and federal regulations demand compliance. Per federal regulations (45 CFR 46), all research involving human subjects requires submission of an IRB application (http://ora.ra.cwru.edu/research/orc/Case%20IRB%20System/CaseIRB.cfm) prior to initiation of research to the Case Western Reserve IRB.

Each IRB application must have a faculty member noted as the Responsible Investigator. Applications that are not fully completed as instructed will not be accepted. See university policy on the involvement of human participants in research for guidelines under which investigations involving human subjects may be pursued.

**Course Designations**

Courses numbered 100 to 399 are undergraduate-level courses. Courses numbered 400 and higher are graduate-level courses.

Graduate Students are expected to take courses at the 400-level or above. Some departments do allow courses at the 300-level to be used for graduate programs, however this should only occur when no graduate-level course is available. Departments are strongly encouraged to create cross listed graduate-level courses to accommodate this need. Graduate-level versions of courses must require additional work beyond that which is assigned to the undergraduate students in the course.

**Grading System**

See the University Registrar (p. 976) section of this Bulletin for a list of valid grades for the School of Graduate Studies and their appropriate use in assigning to graduate students. The only grades that can be changed after they have been assigned by the instructor are Incompletes (I). All others will remain permanently on the student’s academic record. Additional work cannot be done to change an existing grade to a higher grade.

There are some grading schemes in the School of Graduate Studies that have important policy implications. They are:
Incomplete (I)

Grades of I should only be assigned for letter-graded and Pass/No Pass courses for extenuating circumstances and only when a student fails to complete a small segment of the course. Students may not sit in the same course in a later semester to complete the work required for the original course. All work for the incomplete grade must be made up and the change of grade recorded in the Office of the University Registrar by the date specified by the instructor, but no later than the last day of class in the semester following the one in which the I was received. Grade changes received after that date must be accompanied by a petition signed by both the advisor and the department indicating the reason for the late change and must be approved by the Deputy Provost. Unresolved Incomplete grades will remain permanently on the student’s academic record, if the work is not made up by the designated deadline. A student who has a permanent Incomplete for a required course must retake the course in a later term. When an I grade is assigned by the instructor, he or she must also submit to the School of Graduate Studies the completed Arrangement to Resolve a Grade of Incomplete form (http://gradstudies.case.edu/current/forms.html) indicating the date that the I grade will be resolved. If the student cannot complete the work for the Incomplete by the specified deadline, he or she must petition for an extension which must be endorsed by the instructor, explain the reasons why the work has not been completed, and include a new date for completion. Students will be allowed only one extension of no more than one additional semester to complete the work for an I grade.

Pass/No Pass (P/NP)

Some graduate courses are graded on a pass or no pass basis, and students need to be aware of the regulations governing letter graded and pass/no pass credits. Of the minimum credit hours required beyond the bachelor’s degree to complete course work requirements, at least 12 credits must be letter graded for the master’s degree, and at least 24 credits must be letter graded for the PhD degree. For students with approved master’s degrees who are admitted to PhD programs, at least 12 credits of the required minimum of 18 credits of course work must be letter graded. Letter graded courses should be the courses most central to the student’s plan of study. Additional credit hours of letter graded course work may be specified by departmental policy. Performance evaluation for course 601 (Independent study/Research) is limited to P/ NP grading.

Satisfactory/Unsatisfactory (S/U)

Grades of Satisfactory (S) and Unsatisfactory (U) are to be used exclusively for two courses: 651 thesis research and 701 dissertation research. Satisfactory indicates an acceptable level of progress towards completion of the research required for the degree, and Unsatisfactory indicates an unacceptable level of progress towards completion of the research for the degree. Any student who receives a grade of U will automatically be put on academic probation, and if a second U is received, the student will be separated from further study in his or her degree program. Students who receive a U must repeat the course for the same number of credits the following semester.

Admission and Financial Aid

Admission and Financial Aid

Financial Aid

Tuition payments and fees (http://www.case.edu/finadmin/controller/bursar/tuition.htm) are administered through the Bursar’s office. For more information about financial assistance, students should contact the Office of University Financial Aid (http://financialaid.case.edu).

Admission

Applicants with good academic records from fully accredited universities and colleges will be considered for admission to graduate study (http://gradstudies.case.edu/prospect/admissions/admission.html) at Case Western Reserve University. Admission must be recommended by the department or professional school of the university in which the applicant proposes to work and must be approved by the dean of graduate studies. Prospective students apply for admission (http://gradstudies.case.edu/prospect/admissions/apply.html) through the School of Graduate Studies.

Admission of International Students

The admissions criteria for international students are the same as U.S. residents except for the following:

1. International students whose first language is not English must be able to speak, read, write, and comprehend English. English proficiency must be demonstrated by taking the Test of English as a Foreign Language (http://www.ets.org/toefl) (TOEFL). The minimum score to be considered for admission, depending on the format of the examination, is 577 (paper-based) or 90 (internet-based). IELTS test scores are also accepted with a minimum score requirement of 7.0. Please see the School of Graduate Studies website (http://gradstudies.case.edu/prospect/admissions/apply.html) for additional information.

Applicants are exempt from the TOEFL requirements if they:
- have completed a bachelor’s degree or higher at a foreign university where the instruction was in English
- have earned a bachelor’s degree or higher at a U.S. college or university

Please note that we are not able to offer "conditional admission" to students who do not meet the English language requirement.

1. To obtain a student visa, international students must demonstrate financial sufficiency by submitting bank statements and other financial documents indicating sufficient funds to support the tuition and living expenses for one academic year.

2. For those students who are to receive financial aid from the department, the amount of funds required will depend on the amount of the aid award. In some cases it will be living expenses, and in others more funds will be required.

When a letter of acceptance for an international student has been issued, a copy is sent to the Office of International Student Services (http://students.case.edu/international) where the I-20 is processed and sent to the student who must then obtain a student visa in order to begin study in the U.S.

Non-Degree Students

Individuals with earned bachelor’s degrees who want to enroll in classes for personal enrichment or to satisfy prerequisite course requirements for later admission to graduate programs must enroll as non-degree students through the School of Graduate Studies. Prospective non-degree students should apply for admission (http://gradstudies.case.edu/prospect/nondegree.html) through the School of Graduate Studies and submit an official transcript to verify their bachelor’s degree. Students may enroll in undergraduate and graduate level courses. Continuation in non-degree status is at the discretion of the dean of graduate studies. Non-degree students are not permitted to enroll in more than 21 hours for personal enrichment or to satisfy prerequisite course requirements for later admission to graduate programs.
of coursework in one program. In order to continue taking courses in that program, the student must be accepted into the graduate degree program. More information about enrolling as a non-degree student can be found at the School of Graduate Studies website. (http://gradstudies.case.edu/prospect/nondegree.html)

Transferring Non-degree Course Work
Applicants who are interested in transferring course work into graduate degree programs are encouraged to seek early advice from the departments to which they intend to apply to insure that courses taken as non-degree students will satisfy departmental requirements. Non-degree students cannot assume that they will be admitted to any graduate degree program, or that all course work taken will transfer into the program. Only 400 level and higher course work will be considered for graduate transfer. The term of the earliest approved, transferred course will establish the date of entrance into the degree program. Courses transferred from non-degree status must have been taken within five years of the first term of matriculation as a degree seeking student and passed with a grade of B or better. Students considering transfer into a degree program will need to meet a minimum matriculation requirement of two semesters and six semester hours of course work.

Postgraduate Audit Program
A postgraduate audit program allowing registration for coursework is available to individuals who hold a doctoral degree such as MD, DNP, DDS, or PhD and are involved in research or clinical programs at Case Western Reserve University. Additional information is available on the Office of Postdoctoral Affairs website (http://postdoc.case.edu/current/benefits.html).

Office of Postdoctoral Affairs

Office of Postdoctoral Affairs
The Office of Postdoctoral Affairs, located within the School of Graduate Studies, is responsible for the appointment of postdoctoral scholars and fellows, as well as the development, implementation and monitoring of all university policies applicable to these positions. Additional information is available on the Postdoctoral Affairs website (http://postdoc.case.edu).

Services
The following are some of the services that are offered by the Office of Postdoctoral Affairs:

• Employment-related activities including letters of appointment
• Extension, and termination of appointments for postdoctoral scholars and fellows
• Orientation
• Administration of the Postdoctoral Benefits Program
• Coordination of all grievance procedures

Definition of Postdoctoral Scholar
A postdoctoral scholar is defined as a special class of employee who:

• holds a PhD or equivalent
• works on scholarly projects funded by grants obtained by others at the University or is funded by department funds
• is engaged in a mentored training relationship with a member of the University faculty, and
• actively pursues fellowship/grant funding for his/her own research project in order to develop his/her future professional career.

Postdoctoral scholars are not to be confused with postdoctoral fellows who are not employees of the University and receive their funding from training grants, fellowships, or grants they have applied for and obtained from outside sources and not faculty-sponsored research grants. "Once such funding has been obtained, the postdoctoral scholar becomes a postdoctoral fellow.

Definition of Postdoctoral Fellow
A postdoctoral fellow is defined as a trainee (not an employee) who:

• holds a PhD or equivalent
• works on scholarly projects funded by training grants, fellowships, or grants they have applied for and obtained from outside sources
• is engaged in a mentored training relationship with a member of the University faculty, and
• actively pursues fellowship/grant funding for his/her own research project in order to develop his/her future professional career.

Criteria for Postdoctoral Scholars and Fellows

• The postdoctoral scholar/fellow was recently (normally within 5 years) awarded a PhD or equivalent degree in an appropriate field.
• The appointment is temporary and postdoctoral scholars/fellows are expected to complete their mentored training within 5 years.
• The time devoted to this appointment as well as the specific scholarly training activities will be decided in collaboration with the mentor and committed in writing in the form of a training plan. All postdoctoral scholars/fellows will be encouraged to pursue additional training and other opportunities in the respective areas up to 25% of their time.
• The appointee will train under the supervision of a senior scholar (faculty mentor).

Salary/Stipend Guidelines
CWRU uses the current year NIH NRSA scale (http://postdoc.case.edu/admin/salaries.html) as the minimum salary/stipend guidelines for all Postdoctoral Scholar and Postdoctoral Fellow positions. These guidelines apply regardless of funding source.

Postdoctoral Benefits Program
Postdoctoral scholars/fellow are eligible to participate in the Postdoctoral Benefits Program (http://postdoc.case.edu/current/benefits.html), but are excluded from participating in all other CWRU benefits including employee retirement and benefit plans. The postdoctoral benefits program offers the following plans:

• Anthem Blue Cross/Blue Shield Blue Access PPO Plan
• Dental: MetLife PPO
• Vision: EyeMed PPO
• Life and AD & D: MetLife

SIS Postdoctoral Appointment System
The Student Information System (SIS) postdoctoral appointment component allows for all appointment information and documentation (including visa, CV, diploma, and other documents) to be submitted electronically through SIS. It will also allow for electronic approval flow. Additional information on the appointment process and documents
required can be found on the Office of Postdoctoral Affairs (http://postdoc.case.edu) website.

Postgraduate Audit Program

A postgraduate audit program allowing registration for coursework is available to individuals who hold a doctoral degree such as MD, DNP, DDS, or PhD and are in training positions (e.g., fellows, etc.) in research or clinical programs at Case Western Reserve University. Additional information is available on the Office of Postdoctoral Affairs (http://postdoc.case.edu) website.
School of Law

Founded in 1892, the Case Western Reserve University School of Law (http://law.case.edu) is a charter member of the Association of American Law Schools and of the national law honorary society, the Order of the Coif. It was among the first law schools accredited by the American Bar Association.

The school has a student body of about 650 and a full-time faculty of about fifty. In the school’s early years, most students came from Ohio and remained in Ohio after graduation. Today, students come from all parts of the country, and there are CWRU law graduates in virtually every state (and in several foreign countries), and certainly in every major U.S. city. An active and aggressive Career Services Office works with students, graduates, and prospective employers from all over the nation to maximize job opportunities.

The Judge Ben C. Green Law Library

The law library’s holdings include more than 410,000 books and volume-equivalents, complete collections of federal and state law, law reviews, current law services, an extensive British and Commonwealth collection, and special collections in taxation, labor law, foreign investments, international law, and environmental law. The law library is building strong collections in law and medicine, intellectual property, and law of the European Union. It is a selective depository for both U.S. and Canadian government documents. There are computer facilities on every floor of the library, providing access to more than 700 electronic services and library catalogs, and a wide range of software services. The university boasts a fast and powerful computing network and wireless access, and the university network links the law school to the vast resources of the Internet. The law library is a member of OhioLINK, which is a consortium of Ohio’s college and university libraries and the State Library of Ohio. OhioLINK offers access to more than 31 million library items from 79 institutions. These materials include items from law, medical, and special collections.

The law library offers its users access to an ever-expanding list of electronic research databases as well as e-books. Electronic resources are accessible through the library catalog and the Law Library Services page on our website. Web-based databases offered include Lexis/Nexis and Westlaw as well as over 100 OhioLINK databases (including Index to Legal Periodicals and Medline). Many of these OhioLINK databases contain the full text of journal articles. Housed within the law library is a computer laboratory and a computer training classroom.

Special Programs

Litigation Program

Since the mid-1970s, the School of Law has invested heavily in its litigation program. Students practice the basic skills of trial advocacy in such courses as LAWS 6110 Trial Tactics, LAWS 6111 Appellate Practice, and in the co-curricular moot court and mock trial programs.

Study Abroad

The JD program in the law school offers a number of opportunities for students to engage in comparative legal study. The opportunities range from formal semester abroad programs (the School of Law has cooperative agreements with over 16 schools in Canada, Latin America, Europe, and Asia, allowing students to study at the host school for a semester and transfer the completed credits to the CWRU JD program), to various summer study programs, as well as the Case Abroad at Home program, which brings foreign scholars to our campus to offer special one-week intensive courses immediately prior to the start of the fall term each year.

Student Activities

Publications

The School of Law publishes three scholarly journals, all student-edited. The oldest is the Case Western Reserve Law Review. The Journal of International Law is a academic journal specializing in research in the areas of international and comparative law. Health Matrix: Journal of Law-Medicine began as a joint undertaking of all six of the university’s professional schools but since 1990, has been sponsored solely by the law school and its Law-Medicine Center.

Competitions

Moot Court

A student board administers the Dean Dunmore Competition, a year long program in which second-year (and a very few third-year) students participate. It culminates in a round-robin tournament involving 16 finalists. From those finalists, the board selects teams who will compete the following year in the National Moot Court Competition, the Craven Competition in constitutional law, and the Niagara Competition (sponsored by the Canada-U.S. Law Institute). Case Western Reserve also enters the Jessup International Competition; that team is selected by another student group, the Society of International Law Students.

Mock Trial

The Jonathan M. Ault Mock Trial Board sponsors an intramural competition from which emerge the members of interscholastic teams. Currently, the law school sends student representatives to the National Trial Competition, the National Student Trial Competition of the Association of Trial Lawyers of America, and a competition sponsored by the Academy of Trial Lawyers of Allegheny County, Pennsylvania.

Regulations and Rules of Conduct

The Academic Regulations of the School of Law are provided to each student upon matriculation through the law school’s website.

In addition to the university’s rules of conduct, law students are expected to comply with the American Bar Association’s Model Code of Professional Responsibility and Model Rules of Professional Conduct, to the extent that these are applicable, and with the law school’s own Code of Conduct. The Model Code and Model Rules are available in the law library. The school’s Code of Conduct, like the Academic Regulations, is provided to each student upon matriculation through the law school’s Intranet website.

Academic Centers

Milton A. Kramer Law Clinic Center

The Supreme Court of Ohio authorizes student practice under attorney supervision in the final year of law school. Through the clinic, students provide legal representation to indigent clients and community groups and receive academic credit. The supervising attorneys are full-time members of the law faculty. The clinical program is the capstone of the skills curriculum and offers specialized practice experiences in Criminal Justice, Community Development, Civil Litigation Practice, focused on
consumer matters, predatory lending, social security disability, and other public benefit issues, Immigration, Health Law, and Family Law.

**Center for Business Law and Regulation**

To better prepare its students and future leaders with a thorough understanding of the business issues facing entrepreneurs, entities, and other clients, the School of Law created the Center for Business Law and Regulation. The center focuses on expanding curricular offerings and programs as well as engaging in opportunities for legal, empirical, and interdisciplinary research, assessing the role and impact of government in the regulation of business. The center will also host special lectures and symposia to highlight topics in business law and foster public debate and inquiry regarding business regulation.

**Center for the Interdisciplinary Study of Conflict and Dispute Resolution (CICSDR)**

During this age of globalization, our world has begun to steadfastly look toward negotiation, mediation, arbitration and other forms of dispute resolution as alternative methods of solving conflict. Since the 1970s, the Alternative Dispute Resolution (ADR) movement has gained momentum in judicial and academic circles and is currently reflected in courses in most law schools, while the number of established mediation and arbitration practices continues to rise. To best prepare students for meeting these societal and legal changes, the School of Law has established the Center for the Interdisciplinary Study of Conflict and Dispute Resolution (CICSDR). CICSDR’s core mission is to encourage greater sensitivity to appropriate dispute resolution and skill development, preparing School of Law students for the multiple roles they will perform as lawyers in a global economy.

**Center for Law, Technology and the Arts**

The Center for Law, Technology, and the Arts was established as an internationally recognized forum for the interdisciplinary study of law, technology, and the arts. The Center focuses on teaching, research, and programs pertaining to intellectual property, technological innovation and technology transfer, the intersection of science, economics, philosophy, and law, legal issues concerning biotechnology and computer technologies, and laws and cultural issues relating to the creative arts. Through the Center, the law school is able to offer students opportunities to address important, topical issues relating to law and technology and law and the arts through a variety of courses, lectures, events, and symposia.

**Frederick K. Cox International Law Center**

The International Law Center serves as the stimulus for enhancing programs in international, comparative, and transnational law at the law school. It supports visiting scholars and visiting faculty at the law school to enrich the curriculum and research capacity of the resident faculty. It also supports the development of international information resources. Through a series of sister law school relationships, it seeks to attract foreign students to the law school and provide opportunities for Case Western Reserve law students to study abroad; it also provides opportunities for faculty to study and teach abroad.

**Institute for Global Security Law and Policy**

The events and aftermath of 9/11 have made security and counterterrorism fundamental, if not defining, concerns for the world community, nations, companies, the legal system, and individuals. The institute for Global Security Law and Policy was created in 2005 to provide a uniquely comprehensive hub for addressing the legal, financial, political, social, religious and cultural ramifications of counterterrorism, using an innovative multifaceted approach that integrates theory with practical application. The Institute develops and integrates the best learning from the academic and the real world and draws on numerous disciplines and experiences to provide innovative and world class programs, research, teaching, and service on the issues of security and counterterrorism. The work of the Institute serves as an invaluable resource to governments, businesses, organizations, the legal profession, and the general community.

**Law-Medicine Center**

The Law-Medicine Center at Case Western Reserve University has been in operation for over 50 years. It began with a focus on forensic medicine, but has broadened to include the whole range of legal, social, economic, scientific, and ethical issues in which law and medicine are interrelated. Besides the regular course offerings, the center frequently presents lectures, symposia, and workshops, and sponsors major conferences. It publishes a student-edited journal, Health Matrix: Journal of Law-Medicine. Participants in the center’s activities include not only university personnel, but also professionals from such institutions as University Hospitals of Cleveland and the Cleveland Clinic.

**Center for Social Justice**

The School of Law has a proud but little-known history of providing a welcoming atmosphere that attracted African American students in the years before desegregation. Many of those graduates went on to distinguished careers. The purpose of the Center for Social Justice is to honor those graduates and the School of Law’s historic commitment to racial equality, as well as to promote social justice now and in the future for various groups that experience discriminatory treatment today. Its activities include holding conferences and speaker programs, hosting scholars from academia and practice, expanding curricular coverage, and providing financial support to students working in the area of social justice full-time after graduation or during summers while in law school.

**Canada-United States Law Institute**

The Canada-U.S. Law Institute, established in 1976, is jointly sponsored by the law schools of Case Western Reserve University and the University of Western Ontario. Its primary educational purpose is to give students of both schools a comparative perspective on their own country's legal system. Each semester, up to six students from each school spend the term in residence at the other school. The school in which the student is a degree candidate gives full credit for the semester's work. The two schools also exchange faculty, usually for periods of one or a few days, but occasionally to teach one or more courses for a full semester.

A second purpose of the institute is to provide a framework for the exploration of transnational and international legal issues affecting the relationship between Canada and the United States. In addition to the regularly scheduled courses on Canadian-U.S. topics, the institute sponsors workshops and conferences, including annual conferences in Cleveland, which, in recent years, have dealt with Canadian-U.S. economic ties.

The institute also sponsors a regular publication, the Canada-U.S. Law Journal; the annual Niagara Moot Court Competition, in which students from U.S. and Canadian law schools participate; and special research projects, often with funding support.
Dual Degree Programs

For students in dual degree programs, 12 hours of elective credits in the JD program are waived in consideration of completion of the dual degree. Students must be separately admitted to both degree programs in order to pursue a dual degree, the qualitative requirements of both degrees must be fully met, and the two degrees must be earned simultaneously. Students must begin coursework in the second degree program prior to beginning the fifth semester of law school work. Also, no coursework completed prior to official matriculation in the law school may be counted towards the law school degree.

JD/MBA (Master of Business Administration)

Students may complete the three-year JD program and the two-year MBA program in four academic years by completing 133 credit hours (including a 7-credit-hour overload which can be taken during the academic year or during the summer semester).

The School of Law allows dual degree students to use 12 credit hours from the School of Law to fulfill both MBA and JD requirements. Students must achieve a grade of C or better to receive double credit for the courses. This reduces the total number of hours required for the two degrees by 24 credit hours.

JD/MBA students may enroll only on a full-time basis, except during summer sessions. Dual degree students must receive both the JD and the MBA degrees simultaneously upon completion of degree requirements at both schools in order to receive the 24 hours of cross-credits described above.

Throughout the dual degree program, JD/MBA students continue to register in the first school they attended. After completion of both degree programs, two separate diplomas are awarded. Course work for both programs must be completed within six years of the date of initial enrollment in either program.

JD/MA or JD/MS (Master of Arts or Master of Science)

Enrolling in both the School of Law and the School of Graduate Studies, a student complete a Juris Doctor (JD) and a Master of Arts (MA) or Master of Science (MS) degree and earn the two degrees in seven semesters or six semesters plus two summers. Law students enrolled in a dual JD/MA degree program may earn up to 12 credits toward the JD in graduate level courses. Current options for this dual degree are:

- MA – Art History and Museum Studies
- MA - Bioethics
- MA - Legal History
- MA - Political Science
- MS – Biochemistry

JD/MSSA (Master of Science in Social Administration)

A dual degree program established by the Mandel School of Applied Social Sciences and the School of Law makes it possible for selected full-time students to pursue an integrated program of studies and receive the MSSA and JD degrees within four years rather than the normal five years that would be required to earn the two degrees separately. Law students enrolled in the dual JD/MSSA program may earn up to 12 credits toward the JD in graduate level MSSA courses. Applicants for the dual degree program must apply to and meet the admission requirements of both professional schools and are encouraged to apply for admission to both programs simultaneously.

Dual degree students must receive the MSSA and JD degrees simultaneously to be granted credit for specific courses taken in the other program.

JD/MD (Doctor or Medicine)

The School of Law and the School of Medicine offer a specialized dual degree program that allows a student to complete both degrees in six years. Law students enrolled in the dual JD/MD degree program may earn up to 12 credits toward the JD in graduate level MD courses. A student who begins at the law school spends two years studying law, then four years studying medicine. Alternatively, a student may spend the first two years and the last two years at the medical school, and the two middle years at the law school.
**JD/MPH (Master of Public Health)**

The MPH degree will generally add a year of additional course work to the JD degree, creating a four-year program. Law students enrolled in the dual JD/MPH degree program may earn up to 12 credits toward the JD in graduate level MPH courses. The law school offers several health law courses that meet the MPH elective requirements.

**Juris Doctor (JD)**

**Juris Doctor**

The School of Law offers the Juris Doctor (JD) degree as well as several dual-degree programs. The JD degree requires successful completion of 88 credit hours, of which 38 hours are in required courses and 50 hours are elective courses - at least 2 of the elective credits must be used for the writing of a substantial research paper. The first year program for the JD degree consists mainly of the required basic courses.

**Required First Year Courses**

**JD Curricular Concentrations**

JD students have an option to earn a curricular concentration by focusing their course selections within a particular area of legal study. Requirements for each particular concentration are listed below. In order to receive the concentration, students must earn at least 15-18 credits (varies by the specific concentration) in courses within the concentration, and earn an overall grade point average of 3.000 or higher amongst all courses defined by that concentration. Each concentration has a number of prescribed required courses, along with a menu of courses that can be counted as elective hours. Each concentration also has a writing requirement: a substantial research paper on a topic applicable to the concentration must be completed with a grade of B+ or higher; contact the concentration advisor for more details. Specific courses applicable to each concentration are subject to change by faculty review. Please obtain the most current concentration curriculum sheet from the Law School Academic Services Office. Each concentration has an assigned faculty leader who can assist students with course selection and curriculum planning.

### Criminal Law

**Required Courses**
- LAWS 4807: Criminal Procedure I (3 units)
- LAWS 5718: Criminal Procedure II (2 units)
- LAWS 4808: Evidence (4 units)

**Elective Courses**
- LAWS 5905: Advanced Evidence (3 units)
- LAWS 5113: National Security Law 2: Counterterrorism (2 units)
- LAWS 6022: Criminal Justice Clinic II (2 units)
- LAWS 5213: Criminal Law and Psychiatry (2 units)
- LAWS 5721: Death Penalty Lab (3 units)
- LAWS 5722: Death Penalty Lab II (3 units)
- LAWS 5132: Homeland Security/USCG Lab (3 units)
- LAWS 5116: International Criminal Law and Procedure (3 units)
- LAWS 5736: Juvenile Law (3 units)
- LAWS 6108: Pretrial Practice: Criminal (3 units)
- LAWS 5749: Prisoner Rights & Litigation (3 units)
- LAWS 5751: Scientific Evidence in Criminal Litigation (3 units)
- LAWS 5919: Scientific Evidence and Advanced Research (3 units)
- LAWS 6110: Trial Tactics (3 units)
- LAWS 5118: War Crimes Research Lab (3 units)
- LAWS 5924: White Collar Crime Research Seminar (3 units)
- LAWS 5925: Wrongful Convictions Seminar (3 units)

**Total Units:** 15

### Litigation / Alternative Dispute Resolution

**Required Courses**
- LAWS 4808: Evidence (3 units)

**Elective Courses**
- LAWS 4806: Administrative Law (3 units)
- LAWS 5907: Arbitration Law and Practice Seminar (3 units)
- LAWS 6103: Basic Mediation Training (3 units)
- LAWS 5212: Civil Law and Psychiatry (3 units)
- LAWS 5713: Complex Federal Criminal Investigation and Prosecution (3 units)
- LAWS 5714: Complex Litigation (3 units)
- LAWS 5716: Conflict of Laws (3 units)
- LAWS 5313: Copyright and Trademark Litigation (3 units)
- LAWS 5213: Criminal Law and Psychiatry (3 units)
- LAWS 4807: Criminal Procedure I (3 units)
- LAWS 5718: Criminal Procedure II (3 units)
- LAWS 5720: Death Penalty Law and Process (3 units)
- LAWS 5726: Employment Law (3 units)
- LAWS 5729: Expert Testimony in Civil Cases (3 units)
- LAWS 5904: Famous American Trials Seminar (3 units)

**Practice Electives**
- LAWS 5707: Alternative Dispute Resolution (3 units)
- LAWS 6111: Appellate Practice (3 units)
- LAWS 7005: City Law Externship (3 units)
- LAWS 5721: Death Penalty Lab (3 units)
- LAWS 5722: Death Penalty Lab II (3 units)
- LAWS 7015: Federal Public Defender Externship (3 units)
- LAWS 7045: Judicial Externship Seminar (3 units)
- LAWS 6550: Mock Trial (3 units)
- LAWS 6107: Pretrial Practice: Civil (3 units)
- LAWS 7050: Prosecutor's Office Externship (3 units)
- LAWS 5133: Terrorism Prosecution Lab (3 units)
- LAWS 7061: United States Attorney Externship: Criminal (3 units)

**Total Units:** 16

* or any clinic course except Community Development.
** must take at least one Doctrinal and one Practice course
+ 4 credits of any clinical course except Community Development may be taken as Practice Courses

### Health Law

**Required Courses**
- LAWS 4201: Health Law (3 units)

**One of the following:**
- LAWS 4401: Business Associations (3 units)
- LAWS 4808: Evidence (3 units)
- LAWS 4806: Administrative Law (3 units)

**Elective Courses**
- LAWS 4200: Bioethics and Law (3 units)
- LAWS 5202: Bioethics and Law (opt'l additional writing seminar) (3 units)
- LAWS 5210: Biotechnology Law and Practice (3 units)
- LAWS 5212: Civil Law and Psychiatry (3 units)
- LAWS 5213: Criminal Law and Psychiatry (3 units)
- LAWS 5723: Disability Law (3 units)
- LAWS 5724: Discrimination in Employment (3 units)
- LAWS 5729: Expert Testimony in Civil Cases (3 units)
- LAWS 5203: Food And Drug Law (3 units)
- LAWS 5204: Genetics and Law (3 units)
- LAWS 5219: Health Care Transactions (3 units)

Graduate Law Programs

Graduate Law Programs

Programs for foreign-educated lawyers

Three different Master of Laws (LLM) programs are offered to students who have completed legal training outside of the United States. These programs allow students to spend one year in an intensive study program to gain exposure and immersion into the legal theory and practices of the U.S., and to engage in comparative study of the U.S. and other international legal systems. Building on a base of required courses specific to the International LLM programs, each LLM student will develop a individual plan of study leading to a Master of Laws degree in general United States and Global Legal Studies, or the more focused fields of Intellectual Property Law or International Business Law. Students in general United States and Global Legal Studies have the option to pursue a particular curricular concentration by consulting with the director of Foreign Graduate Studies and choosing a focus area in their elective courses.

LAWS 4901  Foreign Graduate Seminar 1
LAWS 4902  U.S. Legal Writing for Foreign Law Graduates 2
LAWS 4903  U.S. Contract Law 3
LAWS 4904  Doing Business in the United States 3
Elective courses as approved by program director 14
Total Units 23

Each student’s courses will be determined by the program director in consultation with the student and will be based on the student’s prior legal education and interests. After completion of the degree requirements, students may elect to spend a summer internship with a law firm or corporate legal department in the United States. Further information and admission materials may be requested from the Foreign Graduate Studies Program office. (http://www.case.edu/law/llm)

Doctor of Juridical Science

The Doctor of Juridical Science (SJD) offers advanced academic study of law for students who hold either a JD degree or an equivalent professional law degree from a country outside of the USA, and some promise for advanced academic study. The SJD program is highly individualized and tailored to the student’s aspirations. The program will train graduates for positions of leadership in academia, research or policy making. Students will spend at least two semesters in advanced coursework, as determined by the student’s graduate program adviser. The student will then undertake significant research resulting in the writing of a doctoral dissertation under the supervision of a selected faculty member. Students must spend at least one full year in full-time residence at the law school. Completion of the SJD program typically will require two to three years of full-time effort. Further information and admission materials may be requested from the Director of SJD programs.

International Criminal Law

The Master of Laws (LLM) program in International Criminal Law is a one-year advanced study program to students who hold the JD degree from a U.S. law school, or equivalent training from a school outside of the USA. It provides students with an in-depth knowledge of international criminal law and procedure, international humanitarian law, and national security law, and will equip them to practice international criminal law before international tribunals or national courts. Students will plan their course of study by working closely with the Program Director. Selected students will also have the opportunity to participate in one of our International Criminal Tribunal Externships during one of their semesters in the program.

School of Law Courses

Courses

LAWS 1100. Introduction to Lawyering. 1 Unit.
This course is the first component of the CaseArc Integrated Lawyering Skills Program. It is an introduction and orientation to the study of law and lawyering skills. The course introduces students to issues of professionalism, interviewing skills, the trial and appellate processes as well as legal analysis, writing and argumentation. It also introduces students to skills for preparation and participation in the law school classroom and to comparative analysis of different legal systems. The course is required for all entering students and is scheduled each day of the week prior to the beginning of regular classes in the fall semester.

LAWS 1101. Contracts. 4 Units.
The formation of a contract; problems of offer and acceptance; consideration; the question of contract breach; damages and remedies for a breach. Required.

LAWS 1102. Criminal Law. 4 Units.
A basic course in substantive criminal law, dealing with the standards to be used in defining and punishing criminal behavior. The course includes discussion of crimes and criminality; culpable mental states; causation; insanity; attempt and complicity; homicide; and rape. Required.

LAWS 1103. Torts. 4 Units.
This course covers compensation of an injured party for harm resulting from intentional or unintentional acts and omissions of others. Consideration is given to the rules, rationale, and policy underlying tort liability. The course includes analysis of assault and battery, false imprisonment, negligence, standard of care, duty, risk, causation, liabilities and rights of landowners and land users, liability relating to dangerous activities and defective products, liabilities arising from special relationships or specially recognized legal interests, and defenses. Required.

LAWS 1201. Civil Procedure. 4 Units.
A broad survey of the procedural development of a lawsuit is undertaken, tracing the various steps from pleading and discovery to trials and judgments. Modern procedural issues involved in jurisdiction of the courts, venue, choice of law, and former adjudications are discussed. Throughout the course principal attention is given to the Federal Rules of Civil Procedure. Required.

LAWS 1202. Constitutional Law I. 4 Units.
The constitutional system of the United States; judicial function in constitutional cases; the division of powers between the nation and the states and within the national government; the powers of the president; national and state citizenship; and constitutional limitations on the powers of the states and nation for the protection of individual liberties. Required.

LAWS 1203. Property. 4 Units.
The nature of property interests; estates in land and future interests; concurrent ownership; landlord-tenant; transfer of property interests; easements, covenants, and equitable servitudes; nuisance; and zoning. Required.
LAWS 1801. Legal Writing, Leadership, Experiential Learning, Advocacy, and Professionalism 1. 4 Units.
Students will study the fundamental lawyering skills of researching, analyzing, and writing about the law in LLEAP 1 (Fall semester of first year) and LLEAP 2 (Spring semester of first year.) Skills include objective analysis and writing, complex factual and legal analysis and persuasive writing. In the simulation portion of the course students will begin to develop the basic skills of client counseling and oral advocacy.

LAWS 1802. Legal Writing, Leadership, Experiential Learning, Advocacy, and Professionalism 2. 4 Units.
Students will study the fundamental lawyering skills of researching, analyzing, and writing about the law in LLEAP 1 (Fall semester of first year) and LLEAP 2 (Spring semester of first year), Skills include objective analysis and writing, complex factual and legal analysis and persuasive writing. In the simulation portion of the course students will begin to develop the basic skills of client counseling and oral advocacy. The LLEAP 2 course particularly focuses on legal transactions. Students will learn the basic principles of reading, analyzing and drafting a contract, including identifying and developing substantive deal terms and contractual processes that should be added to the contract, although not identified by the client. By means of a simulated negotiation, the students will conduct a mock client interview and a business negotiation. Prereq: LAWS 1801.

LAWS 2001. Professional Responsibility. 3 Units.
This course deals with questions underlying the responsibilities of the lawyer, as a professional, to self, society, client, and the profession. Premises concerning the lawyer's role or roles within the context of the adversary system are examined in some detail, as is the idea of professionalism. The Model Code of Professional Responsibility and the Model Rules of Professional Conduct are analyzed as generalized statements of the aspirations and obligations of lawyers, and as applied to concrete problems. Required.

LAWS 2803. Core 3: Transaction, Writing, and Skills. 2 Units.
This is the third of the required sequence of four courses in which students are introduced to the fundamental skills of practicing law. Students build on their learning in CORE 1 and CORE 2 by applying the principles of legal research, analysis, writing, interviewing, counseling and negotiation in the transactional setting. Students also learn about the challenges of applying these lawyering skills in the representation of groups and entities. The format of the course and teaching methods are similar to CORE 1 and CORE 2. Students must take this course sometime during the second year of law school, in either the fall or spring semester. Prereq or Coreq: LAWS 4401

LAWS 2904. Legal Writing, Leadership, Experiential Learning, Advocacy, and Professionalism - Part 4. 2 - 4 Units.
This course will serve as the classroom component to the capstone fieldwork experience (either a clinic or approved capstone externship) that each student will complete during his or her third-year in law school. This course will serve several purposes, including: (i) discussion of fieldwork in a collaborative law-firm setting, (ii) coverage of foundational substantive law related to the fieldwork, (iii) coverage of skills-training components, (iv) reflection on and discussion of ethical and professionalism issues associated with the fieldwork experiences and commonly faced by lawyers engaged in this type of work, and (v) leadership training tailored to lawyers.

LAWS 3901. International Law. 2 Units.
An introduction to basic comparative, transnational, and international law disciplines. Using areas of substantive and procedural law familiar to first-year students, the course examines issues arising from cross-national activity. Students are exposed to choice of law, comparative law, international law, and international institutions.

LAWS 4200. Bioethics and Law. 2 Units.
This course will explore how the legal and policy systems reconcile competing values and interests in controversies surrounding the practice of medicine. Case law, legislation, administrative law, and institutional policies will be examined, as well as selected commentary from the legal, medical, and philosophical perspectives. Substantive topics will include end-of-life issues, informed consent, use of new reproductive technologies, and other timely subjects in bioethics.

LAWS 4201. Health Law. 3 Units.
The course examines the nature and structure of the health care system; the relationship between patient, provider, and payer; private legal controls on health care delivery such as malpractice and informed consent law; and public controls in the form of government regulatory and payment programs. Offered as HSMC 427 and LAWS 227.

LAWS 4300. Intellectual Property Survey. 2 Units.
This course is designed to provide students with an overview of several areas of law traditionally associated with intellectual property or IP, including copyright law, which pertains to the protection of literary, musical, and artistic creations and has issues replete with First Amendment implications; patent law and trade secret law, which focus on the protection of technological works ranging from chemical formulae, to software, to biotechnology; and trademark law, which relates to the goodwill associated with corporate identity and product recognition. We will also devote time to the study of the philosophy and economics of intellectual property keeping in mind, throughout the course, the need to strike an optimal balance between incentives to create and commercialize intellectual creations on the one hand and public access to these creations on the other hand.

LAWS 4301. Copyright Law. 3 Units.
Copyright law is the in-depth study of the legal doctrine and policy relating to the protection of one's artistic, literary, musical, and computer-related expression. We will focus primarily on the 1976 Copyright Act and amendments thereto, such as the Digital Millennium Copyright Act of 1998.

LAWS 4302. Patent Law. 2 - 3 Units.
Basic concepts of patent law as property considered primarily in its substantive aspects, including the relationship to other forms of protection and intellectual property, infringement, and statutory requirements for patents.

LAWS 4303. Trademark Law. 3 Units.
Trademark Law is the study of how commercial entities use words and designs to identify the source their products and services in the minds of consumers and competitors. This course focuses on domestic and international trademark acquisition, retention, transfer, registration, and infringement. In addition to the common law of trademarks and unfair competition, much of this course will be devoted to studying the statutory scheme of federal trademark law.
LAWS 4401. Business Associations. 5 Units.
This course is an introduction to the law of business associations, including general and limited partnerships, limited liability companies, and corporations. The functions and relationships of enterprise participants, primarily promoters, equity owners, creditors, and managers are investigated. The course covers pre-organizational problems and then canvasses the roles of ownership and management, with emphasis on the special duties (fiduciary and other) imposed on certain participants in publicly and closely-held entities. The regulation of securities fraud, proxy voting and solicitations, and the issuance of securities under the federal securities laws is explored. Fundamental concepts of business financing, including valuation of the concern and claim structure, are investigated. Organic changes, including dissolutions, mergers, and tender offers, are discussed.

LAWS 4402. Nonprofit Organizations Law. 2 Units.
Explores the rationales for the existence of the nonprofit sector and the allocation of certain functions to it. The focus is on the legal framework for the structure and operation of nonprofit organizations under state nonprofit corporation statutes and the policy and practice of preferred tax treatment for selected organizations and gifts to them under the Internal Revenue Code.

LAWS 4404. Sales. 3 Units.
One of the basic courses in commercial law. It serves equally as an introduction to the general organization, structure, and appropriate application of the Uniform Commercial Code. Primarily we study the law of Sale of Goods under Article 2 of the U.C.C. Necessarily this includes a study of products liability law, which is explored under both sales warranty and strict tort liability theories. The interrelationship between these competing theories of products liability law are also investigated. Other specific topics studied are the legal rules applicable to 1) the formation of sale contract, including the battle of the forms, statute of frauds, and parol evidence rule, 2) performance of and excuse of performance from the sales contract, including breach of the sales contract. Students may not take both LAWS 381 and LAWS 266 (Sales and Secured Financing).

LAWS 4405. Federal Income Tax. 4 Units.
An introductory course in federal income taxation of the individual taxpayer, including a consideration of the nature of income, specific statutory exclusions, business and nonbusiness deductions, the treatment of capital gains and losses, and elementary tax accounting.

LAWS 4701. Dispute Resolution. 2 Units.
This course will examine the characteristic methods by which American courts resolve disputes, and will then compare those methods with those used by alternative institutions of dispute resolution such as administrative agencies, arbitration, and mediation negotiation. In resolving disputed issues of law, American courts are constrained by doctrines of precedent, stare decisis, and the principles of statutory interpretation, all of which will be treated in some depth in the course. Disputed issues of fact in American courts are commonly decided by juries consisting of ordinary citizens, and the course will explore a number of features of the jury as it impacts litigation in courts. The portion of the course devoted to alternative dispute resolution will involve some simulations and role-playing exercises. There will be a single examination at the end of the term which will be the primary basis for grading.

LAWS 4702. Courts, Public Policy, and Social Change. 2 Units.
Examines the social impact of law and use of social research in the legal process, assesses efforts to use law to effect social reform, and empirical studies of legal processes and institutions. Recommended preparation: Graduate standing or consent of department. Offered as LAWS 285 and POSC 429.

LAWS 4808. Evidence. 4 Units.
A comprehensive course in the law of evidence as applied in civil and criminal cases. Subjects include relevance, hearsay, judicial notice, privileges, examination of witnesses, expert and lay opinion testimony, and real, demonstrative, and scientific evidence. This course deals with both the practical applications and theoretical underpinnings of the Federal Rules of Evidence and common law precedents. Students may not take both LAWS 207 and LAWS 212.
LAWS 4809. Wills, Trusts, and Future Interests. 4 Units.
A survey of the law of intestate and testate succession, will substitutes, private and charitable trusts, fiduciary administration, and future interests (including the Rule Against Perpetuities).

LAWS 4810. Entering the Profession. 2 Units.
This course provides an introduction to the testing formats and required skills common to bar exams in United States jurisdictions, including the Multistate Bar Exam (MBE, multiple-choice format); the Multistate Performance Test (MPT, task-oriented essay); and essay questions in various substantive areas (which generally incorporate some state-specific content). Substantive content will be presented to provide raw material for practice testing. Students will earn the course credit by attending at least 80% of class sessions and completing 100% of written assignments with at least 65% success rate. Rewrites and retests will be allowed on request. The course does not comprise complete preparation for any bar exam. Rather, it provides familiarity, study strategies, and test-taking instruction along with limited substantive content.

LAWS 4811. Business Aspects of Law. 2 Units.
The Business Aspects of Law seminar presents a challenging opportunity to study various occupational opportunities within the legal field: The challenges and rewards of building a solo practice, as well as the responsibilities for marketing and successful progression in small, medium or large law firms, government agencies and non-traditional forms of practice. The seminar will cover the choice of a practice form, where to house the practice, staffing and financial management, creation of a business plan, how to get business and market legal services, how to charge and collect legal fees, and the ethical issues that arise in the process. Students will create a business plan for their hypothetical law practice and will present their plans to the class.

LAWS 4815. Leadership Assessment and Development. 2 Units.
The objective of this course is to broaden and deepen your self-awareness and prepare you to be a life-long learner, to prepare you for leadership at several levels. This course will help you to refine or develop skills to build better and more effective relationships with colleagues and clients, and prepare you for organizational or firm management. The course is based on a model of self-directed learning and development. This process will help you throughout your career in understanding and formulating your own career and life vision, in assessing your skills and abilities and in designing plans to reach your objectives. From mastery of this basic process comes the ability to lead others effectively.

LAWS 4901. Foreign Graduate Seminar. 1 Unit.
This seminar is the required introductory course for foreign students enrolled in the Graduate Program in U.S. Legal Studies. It begins with a series of lectures introducing students to American legal education; American government, courts, and culture; various common law subjects; and professional responsibility. Throughout the year seminar sessions are held with legal practitioners from law firms and corporations in the Cleveland area who are involved in an international practice. Limited to the foreign LL.M. students.

LAWS 4902. U.S. Legal Writing for Foreign Law Graduates. 1 - 2 Units.
This course is designed to teach English compositional skills and grammar for legal studies. With an English-as-a-second-language focus, this course will seek to teach students the various steps of the writing process, English grammar, and certain aspects of legal composition. The main goal of this course is to enable students to write clearly and correctly within U.S. legal studies and the U.S. legal work place. The course will meet twice a week for one hour. Students will be required to take this course based on a written exam administered at the beginning of the semester. Students must receive a grade of at least a C to pass out of the course.

LAWS 4903. U.S. Contract Law. 3 Units.
The subject matter and coverage of this course is approximately the same as the subject matter and coverage of first-year Contracts (LAWS 123) as abbreviated and modified to reflect that it (a) is limited to foreign students who are candidates for the LL.M. in U.S. Legal Studies and (b) consists of 3 (not 5) credit hours.

LAWS 4904. Doing Business in the United States. 3 Units.
The course is designed to introduce foreign students to many areas of U.S. domestic law through consideration of a transnational business transaction. Examples of areas of law covered: restrictions on foreign investment, regulatory agencies, banking and finance, importing and exporting, business entities, litigation and alternative dispute resolution, labor relations, immigration law, taxation. Limited to candidates for the LL.M. in the U.S. Legal Studies.

LAWS 4905. Business Associations for LL.M. Students. 3 Units.
This course is an introduction to the law of business associations including general and limited partnerships, limited liability companies, and corporations tailored to their specific needs.

LAWS 4906. Evidence. 3 Units.
This is a comprehensive course in the law of evidence as applied in civil and criminal cases. Subjects include relevance, direct and cross-examination, impeachment, character, expert and lay opinion testimony, and hearsay. A problem-oriented approach is used to highlight both the practical applications and theoretical underpinnings of rules of evidence. Students may not take both LAWS 207 and LAWS 212.

LAWS 4911. SJD Seminar. 2 Units.
This year-long seminar is required of all SJD program students. The purpose of the course is to improve the academic writing skills of SJD students, introduce students to thesis writing, and to improve the English writing skills of those students whose native language is not English.

LAWS 5110. Contemporary Issues in International and Comparative Law. 1 Unit.
The objectives of the course will revolve around initiating students to the basic concepts and principles of comparative law reasoning and helping students make sense of the increasing dialogue between jurisdictions practicing constitutionalism in a global context with a focus on human rights issues. The coverage of the proposed course will select from the following themes depending on student interest and availability of materials: (a) Freedom of religion, secularism and culture; (b) Freedom of expression and hate propaganda; (c) Freedom of expression and sexual representation; (d) Equality and same sex unions; (e) Assisted suicide; (f) Death penalty; (g) Implementation of human rights in federal or quasi-federal politics; (h) Socio-economic rights; and/or (i) Cultural rights.

LAWS 5111. Admiralty Law. 2 Units.
The general principles of admiralty law including jurisdiction, practice, maritime liens, collisions, salvage, limitation of liability, and the rights of injured maritime workers.

LAWS 5112. Canada-United States Law Institute Seminar. 2 Units.
Canada-US Legal Relations provides students with a broad examination of the issues confronting the Canada-US relationship. Topics discussed include comparative constitutional law, North American trade & investment law, immigration, Canada-US border security, and environmental issues -- including the Great Lakes. The course includes lectures by practitioners and government officials. Students are required to author a paper that may be published in Canada-US Law Institute material and journals.
LAWS 5113. National Security Law 2: Counterterrorism. 3 Units.
This course will take an in-depth look at counter-terrorism in the United States, Israel, and other countries. The course will examine the competing conceptions and definitions of terrorism at the national and international level and the institutions and processes designed to execute the "war on terrorism." This will include study of the balance between security and liberty policies in the U.S. Patriot Act, the use of military tribunals or civil courts, the use of assassination or targeted killings, and the emerging law on enemy combatants and their detention, and the arguable need for new self-defense doctrines at the global level.

LAWS 5114. European Union Law. 2 - 3 Units.
After a brief introduction to the institutions and organs of the European Community, the legal aspects of the internal operations of the Community will be discussed. Special emphasis will be placed on the external impact of Community law, for example, its trading rules, company law, and business competition law, as well as its rules governing the free movement of goods, services, capital, and persons. The concept of European citizenship will also be dealt with.

LAWS 5115. International Arbitration. 2 Units.
An advanced course covering the current status of arbitration as a dispute settlement mechanism in international affairs. This course will cover the use of arbitration as a means of resolving international disputes: a) between private parties; b) between private and governmental parties; and c) between governments. It will cover possible forums and rules of arbitral dispute resolution and the problems of the enforcement of foreign arbitral awards. Special aspects of dispute resolution in certain geographical and subject areas will be covered as will be the problem of sovereign immunity. Disputes arising from multinational business transactions will be focused on as will be maritime, environmental, and border disputes.

LAWS 5116. International Human Rights. 3 Units.
This course will cover a variety of issues in the area of international human rights. Issues covered will include the law of treaties and treaty interpretation; international organizations' and non-governmental organizations' roles in protecting human rights; the rights of women and minorities; critiques of the idea of "universal" human rights; and the Alien Tort Claims Act. In addition to covering the procedure and substance of the international system for protection of human rights, we will also discuss human rights under various domestic legal systems from a comparative perspective. Grade is based on the final exam, class participation and possibly a group project.

LAWS 5117. International Organizations. 3 Units.
