BIOC 641. Proposition I. 2 Units.
Design of research proposal.

BIOC 651. Thesis M.S.. 1 - 6 Unit.
(Credit as arranged.)

BIOC 701. Dissertation Ph.D.. 1 - 9 Unit.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Bioethics

Marie Norris (marie.norris@case.edu), Program Assistant

The mission of the Department of Bioethics is to improve public and professional understanding of the ethical issues involved in health sciences research, health care delivery, and health policy development through teaching, research and community dialogue.

The department has offices at the Case’s School of Medicine and at MetroHealth Medical Center and has faculty from multiple disciplines, including philosophy, religion, law, political science, anthropology, history, sociology, nursing and medicine.

Department faculty teach in both core and elective components of the medical school curriculum, undergraduate courses in ethics, and an intensive course in responsible conduct of research for PhD students in the School of Medicine. The department also has a highly successful master’s degree program in bioethics.

Department faculty have gained international prominence for research in many areas of biomedical ethics that collectively address the concerns of the School of Medicine’s spectrum of biomedical disciplines.

The Department of Bioethics publishes a newsletter, Bioethics Update. Bioethics Update contains information and articles on a variety of ethical issues of interest to both professional and lay communities. It is published three times a year and features faculty research and activities, department events, and master’s degree alumni information.

Please visit the department website (http://www.case.edu/med/bioethics), where visitors can read Bioethics Update online, obtain information about the master’s degree and PhD programs, and learn about department and faculty activities.

Master of Arts in Bioethics Degree

The Department of Bioethics offers a program leading to the Master of Arts degree in bioethics, emphasizing the interdisciplinary and inter-professional nature of the field. This graduate program is designed to provide advance training in bioethics for students and professionals who anticipate encountering ethical issues in the course of their primary careers.

The 27 credit-hour degree can be earned full-time in one year or part-time in up to three years. Core courses are taught by department faculty and are scheduled so that part-time students can continue their professional responsibilities while completing the degree.

The Master of Arts program provides students with a firm understanding of the intellectual content of the study of bioethics, of bioethical literature, and of the underlying philosophical arguments and empirical assumptions that inform it. Students are taught to understand the institutions and structures of health care and the ethical issues that arise in medical practice. They are trained to identify and analyze a range of clinical ethics issues.

All students pursuing a Master of Arts degree in bioethics are required to complete the interdisciplinary core of 12 credit hours (the equivalent of four courses) in the first two semesters of their first year of study.

The courses, BETH 401 Foundations in Bioethics I, and BETH 402 Foundations in Bioethics II, each six credits, examine 10 basic topic areas in bioethics: death and dying, the therapeutic relationship, method and theory in bioethics, organ transplantation, health care justice, defining health care needs, reproduction and fertility, families, babies and children, research ethics and genetics. Classes meet two evenings per week for seminar sessions (two hours per session).

Another required course is BETH 405 Clinical Ethics Rotation. This course requires a minimum of 8 hours of clinical experience per week during two 10-week rotations. Students spend most of their time observing rounds in relevant services (intensive care units, pediatrics, geriatrics, etc.) with leading clinicians at several area hospital sites. Students must complete rotations at two sites. At the conclusion of each rotation, students are familiar with the clinical, psychological, social,
Concerning bioethics questions. Graduates will:

- become researchers who can develop and conceptualize timely and meaningful research questions in bioethics

Graduates of the program have a wide range of opportunities, including careers as independent investigators, serving as a bridge between colleagues in the traditional medical humanities and those in clinical and basic-science departments, and employment in academic bioethics centers, clinical and basic science departments in medical schools and schools of public health, government agencies, and public policy institutes.

PhD students receive a full tuition scholarship, health insurance support and a $20,000-per-year graduate assistantship.

**Course of Study**

Completion of the PhD requires:

- Minimum of 51 credit hours of course work for candidates with bachelor's degrees; minimum of 42 credit hours for candidates with master's degrees
- 18 credit hours of dissertation course work
- 125 research hours (supervised research experiences with Department faculty)
- Training in research ethics
- Comprehensive examination preceding advancement to candidacy
- Defense of dissertation proposal
- Completion of dissertation
- Defense of dissertation

**Core Coursework**

- Foundations in Bioethics I & II
- Clinical Ethics Rotation
- Advanced Seminar on Methods in Normative Bioethics I & II
- Empirical Research Methods and Design in Bioethics I & II
- Statistical Methods and Data Management in Bioethics I & II
- Grant Writing
- Critical Readings in Bioethics
- Research hours

Additional course work: three credit hours each in advanced statistics, methods and study design, and theory from the social sciences, and six credit hours of elective courses

**Enrollment in the Doctoral Program**

The doctoral program is highly selective. Candidates should have a strong theoretical background in the social sciences or philosophy, preferably in the form of a master’s degree in a relevant discipline or a clinical degree. Candidates also must demonstrate an ability to work with quantitative data and demonstrate promise of integrating theory and empirical application.

**Applicants must complete an interview and submit:**

- CWRU Graduate School Application
- Transcripts (undergraduate and graduate if applicable)
- GRE scores — verbal, analytic and quantitative sections. Scores will be considered in relation to the applicant’s other credentials. Applicants may submit scores of other standardized tests in addition to the GRE.
• Three letters of recommendation
• A letter to the admission committee detailing the applicant’s general interests in bioethics and the candidate’s past training and current research interests

Total Units in Sequence: 85.5

Courses

**BETH 271. Bioethics: Dilemmas. 3 Units.**
We have the genetic technology to change nature and human nature, but should we? We have the medical technology to extend almost any human life, but is this always good? Should we allow doctor-assisted suicide for the terminally ill? This course invites students from all academic disciplines and fields to examine current and future issues in bioethics—e.g., theory and methods in bioethics; death and dying; organ transplantation; genetics; aging and dementia; fertility and reproduction; distributive justice in health care access. The course will include guest lecturers from nationally-known Bioethics faculty. Offered as BETH 271, PHIL 271.

**BETH 314. Global Health: India. 3 Units.**
Bioethics is the study of ethical controversies arising at the intersection of biology, medicine, technology, politics, law, philosophy, religion and culture. This course will discuss and analyze the issue of health in India; recognizing that health is more than the diagnosis and treatment of a disease. Using three diseases (HIV/AIDS, leprosy and tuberculosis) students will explore the relationship between culture and health care outcomes. Relevant issues addressed in the course include the history of British rule in India, Hinduism, the Caste system, poverty, access to education and public policy. Faculty will introduce readings on the history of India, medical anthropology, religion and the law. Students will then be given the opportunity to focus on a particular topic, research the existing literature, present their findings to the class and create a plan to observe the chosen topic while in India during the Summer semester. Course instructors include Nicole Deming, JD, MA Assistant Professor of Bioethics; Deepak Sarma, PhD, Associate Professor of South Asian Religions; and Gopal Yadavalli, MD Assistant Professor of Medicine and Chief of the Infectious Diseases Clinic at the Cleveland VA Medical Center. The course will also invite guest lectures from many different departments and schools to share their expertise and experience in the areas of Global Justice, Anthropology, and Human Rights.

**BETH 315. International Bioethics: Policy and Practice. 3 Units.**
Taught by Case and international faculty, this course will include 7-10 days of intensive didactic and experiential learning in one of several "host" countries. Examples of sites include: Free University of Amsterdam and University of Utrecht in the Netherlands; University of Paris in France; and Ben Gurion University in Israel. It will afford a unique opportunity to gain perspective on important bioethics issues in different societies, i.e., euthanasia, public health policies, access to healthcare, and stem cell research. At the international site, students will spend 6 hours per day (5 days) in seminar (involving didactics, discussion, and guided-observation clinical experience). There will be two 3-hour preparatory sessions, required reading, and two 3-hour post trip sessions. Requirements: preparation, attendance, and class participation, a 12-15 page paper (undergraduate credit) and a 15-20 page paper (graduate credit). Graduate credit will also require students to prepare a presentation for a post-intensive session. Enrollment will be capped at 25. This course has an additional fee to cover costs of travel and lodging. Limited scholarships are available. Offered as BETH 315 and BETH 415.
BETH 315A. International Bioethics Policy and Practice: Women's Health in the Netherlands. 3 Units.
This 3-credit course allows students to familiarize themselves with social policies and practices related to women's health in the United States and the Netherlands. Issues covered in the course include birth control and family planning, abortion, prenatal testing, childbirth, health care disparities, cosmetic surgery, prostitution and trafficking in women. This course also addresses the US and Dutch national policies regarding the public provision of health care for women. The course places an emphasis on the ways in which social norms shape policies over time, which political actors are involved in shaping women's health policy, and the balance between women's health as a matter of the public good or individual responsibility. This course substantively explores gender-specific cultural values and practices in relation to women's health in the United States and the Netherlands and will help students develop the analytical skills necessary for evaluating social policy and ethical issues related to women's health. Offered as BETH 315A and BETH 415A.

BETH 315B. International Bioethics Policy and Practice: Public Health in the Netherlands. 3 Units.
This one week 3-credit intensive course will be held in Amsterdam, The Netherlands. Taught by faculty from Case and Utrecht University, this course offers students a cross-cultural perspective on ethical dilemmas raised by the practice of public health in the United States and Northern Europe. Additionally, this course examines policies related to prostitution, drug use, sex education, infectious disease prevention, and access to health care and how they differ in the cultural and political settings of the United States, Europe, and the Netherlands. We will examine both the rationales and outcomes of Dutch and American policies, stimulating course participants to consider their own views on these often controversial issues. Prior to the trip, students will attend lectures at Case, which will acquaint them with the theoretical approaches to public health ethics and major issues raised in the practice of public health. In these pre-trip sessions, students will also analyze and report on a case study designed to stimulate critical thinking on comparative public health ethics. In Amsterdam, students will attend lectures that will be supplemented by site visits and discussion sessions aimed at exploring the ethics of public health policy and practice in the Netherlands. Following the intensive week in Amsterdam, students will meet with instructors at Case for two hours to discuss their experiences and compare policies and practices in the U.S. and the Netherlands. Offered as BETH 315B and BETH 415B.

BETH 315C. International Bioethics Policy and Practice: Health Care Costa Rica. 3 Units.
This 3-credit course gives students the unique opportunity to observe patients and practitioners in a radically different health care system. Costa Rica has one of the most comprehensive health care systems in the Western hemisphere, featuring the innovative use of mid-level health care workers organized in basic comprehensive health care teams. This has resulted in a longer life expectancy than the United States, despite a per capita GDP of only $10,000 per person. Students will gain first-hand experience of Costa Rican health care through field experiences at sites including a national hospital in the capital city, San Jose; a peripheral treatment clinic in a smaller town; and observation of the work of an integrated basic health care team in an indigenous reserve. Following each visit, students will discuss the practical and ethical dilemmas that practitioners face in the context of the Costa Rican health care system. Specific topics include: health inequalities within and between nations; the ethics of transplantation, medical research, and end-of-life care; and health care in rural environments and with indigenous populations. Offered as BETH 315C and BETH 415C.

BETH 315D. French Connections, A Cross-Cultural Comparison of Medical Ethics. 3 Units.
This 3-credit course is collaboration between Case Western Reserve University and the University of Paris. The course includes a ten-day trip to Paris, France over Spring Break. This course offers a cross-cultural comparison of the French and American medical systems. Students will have the unique opportunity to learn first-hand how the French medical education system is structured and how the social, cultural and political contexts in France shape medical and ethical issues. The trip includes guided field experiences in French clinical settings as well as opportunities to engage with French faculty members and physicians about contemporary issues in bioethics. Ethical issues that may be considered may include reproductive rights, decision-making involving severely impaired newborns, withholding/withdrawing life-sustaining treatment and issues in organ donation and transplant. The course also will emphasize the role of French culture and history while in Paris with museum and site visits designed to complement seminar content and offer real-life illustrations of course content. Prior to the trip, students attend six hours of lectures, either at Case Western Reserve University or via a web-based tutorial. They are expected to become familiar with the representative articles assigned for the course, and be prepared to integrate those readings into pre-trip class participation and active participation while in France. Following the trip, students will meet with the instructor for an additional four hours to discuss and synthesize their experiences. Offered as BETH 315D and BETH 415D.

BETH 315E. International Bioethics: Policy and Practice--US and Spanish Perspectives, Salamanca Spain. 3 Units.
This 3-credit course introduces advanced undergraduate and graduate students to theoretical and practical aspects of bioethics in a European context. Continental health professionals and bioethicists work in an environment that differs from the American context in at least three important dimensions: the political structure of their health care systems, the cultural influence of their religious histories, and the theoretical perspective of continental moral philosophy. The University of Salamanca in Spain, one of the oldest universities in Europe (known as the "Oxford of Spain"), will be used in this course as a focal point for examining the interplay of these three dimensions in shaping institutional and professional approaches to specific problems in bioethics, including end of life decisions, organ procurement and allocation, reproductive ethics, health care justice, and environmental bioethics ("eco-ethics"). This will help advanced students who are already grounded in American bioethics develop the analytical skills necessary for evaluating European bioethical scholarship and policy-making, while helping less advanced students develop a familiarity with fundamental similarities and differences between bioethics in Spain and the U.S. The course will include a one week trip to Salamanca, Spain where students will be taught by instructors and faculty from the University of Salamanca. Training will include some guided field experiences and regular discussion sessions with the course faculty. Prior to the trip, students will attend 4 hours of class at Case to become familiar with elements of political theory and moral philosophy relevant to the in-country discussions. Following the trip, students will meet with instructors for an additional 2 hours. Offered as BETH 315E and BETH 415E.
BETH 315F. Bioethics Themes as Expressed in Spanish and American Culture: Film, Television, and Literature. 3 Units.
This 3-credit intensive course will be held in San Sebastian, Spain. Taught by faculty from CWRU and University of the Basque Country, this course offers students a cross-cultural perspective on bioethics in the United States and Spain. This course uses the medium of film, complemented by readings in bioethics, film criticism, and medical research, to introduce students to a number of compelling bioethics problems facing physician-scientists today, including: when life begins, the nature and limits of informed consent, use of randomization without equipoise, medical imperialism (or the appearance thereof), the treatment of so-called "orphan" diseases, use of deception in research, and financial conflicts of interests caused by among other things, the involvement of the pharmaceutical industry in the drug invention process. Offered as BETH 315F and BETH 415F.

BETH 315G. Death, Dying & Euthanasia: Netherlands & the USA. 3 Units.
Is it ever permissible for physicians to kill their patients? In the Netherlands, the answer is yes. In the United States, it is no. Are the Dutch sliding down a moral slippery slope? Are the Americans compromising the rights and dignity of dying patients? This 3-credit course is a unique opportunity to examine a range of Dutch and American end-of-life policies and practices with special focus on the unique ethical, cultural, religious, and legal contexts in which they developed. This course will compare how two liberal democracies, the United States and the Netherlands, have handled difficult end-of-life issues, including: The Dutch regulation of euthanasia; Regulation of physician-assisted suicide in the state of Oregon; Terminal sedation; End-of-life decisions in newborns; Withholding and withdrawing of artificially-provided fluids and nutrition; The legal basis for end-of-life decision making in the USA; Palliative care and hospice; Public trust in medicine and physicians. In the United States, teaching methods will include lectures, case discussion, and exposure to how some of the course's themes are reflected in popular culture such as movies. Offered as BETH 315G and BETH 415G.

BETH 353. Hindu and Jain Bioethics. 3 Units.
This course will provide both an introduction to basic Hinduism and Jainism and an introduction to Hindu and Jain bioethics. We will ask: How would a Hindu or a Jain respond to issues concerning euthanasia, abortion, and other topics of controversy. Are these answers altered in the North American context or in the light of recent technological changes? Offered as RLGN 353, RLGN 453, BETH 353, and BETH 453.

BETH 360. Science and Society. 3 Units.
This course examines the complex ethical and other value relationships that exist between science and society. Students will be encouraged to question the simplistic view that science proceeds independently of societal values and contentious ethical commitments. A range of other social factors, such as ethical belief systems, political forces, and large-scale financial interests all influence new scientific and technological developments. In order to illuminate each of these larger themes, this course focuses on three exciting areas of scientific inquiry: stem cell research; synthetic biology; and nanotechnology. Each of these contentious scientific fields provides an excellent view into the challenging ethical, cultural, social, political, and economic issues that will face students, both as scholars and as citizens. No prior technical knowledge is necessary for any of these scientific areas. All relevant scientific information will be provided during the course by the professor. Offered as BETH 360, BETH 460 and PHIL 360.

BETH 371. Advanced Bioethics. 3 Units.
This course offers upper-level instruction on many key bioethical issues introduced in BETH/PHIL 271. The class follows a discussion-intensive seminar format. Students begin with an in-depth analysis of ethical issues surrounding the conduct of clinical trials, both within the U.S. and through U.S.-sponsored research abroad. Next students examine the philosophical and practical challenges involved in medical decision making for adults and pediatric patients. This course concludes by addressing the broader ethical problem of what duties we owe to future generations in terms of our reproductive choices and the allocation of health-related public expenditures. Each of these general topic areas - clinical trials, medical decision making, and future generations - is of crucial importance for all students whether one plans to enter a career in biomedical research, the healthcare professions, or some other career path. Everyone is a potential patient or the family member of a potential patient. The topics covered in Advanced Bioethics will help prepare students to become responsible participants in an increasingly complex biomedical world. Offered as BETH 371 and PHIL 371. Prereq: BETH 271 or PHIL 271.

BETH 371C. Advanced Bioethics: Clinical Observation. 1 Unit.
This course is a one credit class intended to supplement BETH 371: Advanced Bioethics. In this course students will become familiar with the clinical, psychological, social, professional, and institutional context in which bioethical problems arise. Students are exposed to clinical cases as they arise, to hospital ethics committees and ethics consultation programs, to institutional review boards (IRB), and to hospital policies covering "do not resuscitate" orders (DNR), advance directives, withdrawal of artificial feeding, and medical futility. The clinical rotation will consist of 20 hours of supervised observation where students attend structured clinical activities such as ICU rounds, case conferences as well as shadow clinicians that work with the Department of Bioethics and are used to having students at various levels of observers. The purpose of the clinical rotation will be to give students first hand observational experience in the health care system and how the key bioethical issues discussed in BETH 371 manifest in the clinical setting. The primary locations for this course are MetroHealth Medical Center and Louis Stokes Cleveland VA Medical Center. Prereq: BETH 271 or PHIL 271. Coreq: BETH 371 or PHIL 371.

BETH 401. Foundations in Bioethics I. 6 Units.
The first of the two required seminar courses, this course covers five basic topic areas in bioethics: death and dying; health profession-patient relationship; method and theory in bioethics; organ transplantation; and ethics and children. The course meets twice weekly and is taught in seminar format by Center faculty members who are experts on specific topics. Preentry.

BETH 402. Foundations in Bioethics II. 6 Units.
This course completes the required seminar core and covers the basic bioethics topic areas: health care justice; defining 'health care needs;' reproduction and fertility ethics; research ethics; and ethics in genetics. The course meets twice weekly and is taught in seminar format by Center faculty members who are experts on specific topics. Recommended preparation: BETH 401.
BETH 405. Clinical Ethics Rotation. 1.5 - 3 Unit.
In this course students will become familiar with the clinical, psychological, social, professional, and institutional context in which ethical problems arise. This course exposes students to clinical cases, to hospital ethics committees and ethics consultation programs, to institutional review boards (IRB), and to hospital policies covering the "do not resuscitate" orders (DNR), advance directives, withdrawal of artificial feeding, organ procurement and transplantation, and medical futility. Requires minimum of 8 total hours of rotation experience per week during two semester 10-week rotations. Locations for this course include: MetroHealth Medical Center, University Hospitals of Cleveland, and the Hospice of the Western Reserve. Recommended preparation: BETH 401 or concurrent enrollment.

BETH 407. Interprofessional Integrative Seminar. 0 Units.
This is an integrative seminar for dual professional degree students in Bioethics, e.g. Bioethics and Law, Bioethics and Public Health, Bioethics and Medicine. It is required for all dual professional degree students in Bioethics who were admitted to Bioethics on or after January 1, 2013. Students are required to take the seminar for two semesters at any time during their Bioethics program. The course focuses on the study of selected texts with respect to ethical issues and interprofessional relationships. Prereq: Must be a dual professional degree student.

BETH 408. Ethics, Law and Health Research. 3 Units.
This course focuses on an examination of issues arising at the juncture of law, ethics, and health research, such as informed consent, the assessment of risks and benefits, conflict of interest, and scientific misconduct. Particular attention is placed on issues arising in the context of study design and community-based research. To the extent possible, the class will utilize a case-focused approach.

BETH 409. Global Justice and Bioethics. 3 Units.
This course aims to introduce students to the problem of global distributive justice, with an emphasis on both theoretical accounts of justice, and the practical implications of those accounts for important topics in global bioethics. The first half of this course will be devoted to important contemporary works which bring out core philosophical ideas about justice and how we address concerns of justice globally. The second half of this course will focus on current global bioethics topics, such as inequality and poverty, global intellectual property rights, the allocation of healthcare resources, the setting of research priorities, exploitation & the distribution of the benefits of research, and medical tourism. In addition to familiarizing students with the contemporary literature regarding global justice and related topics in bioethics, this course also seeks to help students strengthen their skills in reading, analyzing, interpreting, and engaging with philosophy and bioethics texts. This course is a seminar and will therefore emphasize in-class discussion rather than lecture. Students are expected to prepare by reading all assigned readings before class.

BETH 412. Ethical Issues in Genetics/Genomics. 3 Units.
This course is designed to familiarize graduate students with the major controversies over the generation and use of new human genetic information. Topics will include the spread of predictive genetic testing, prenatal diagnosis, genetic discrimination, human genetic variation research, eugenics, genetic counseling, and the limits of human gene therapy. The course will be conducted as a seminar, involving discussions of readings, guest speakers, and student presentations.

BETH 414. International Health Research Ethics. 3 Units.
This course will introduce students in the health and social sciences to key ethical issues that arise in international health research. The course will include intensive reading and case-based discussion of current ethical and moral quandaries posed by research conducted in the international arena. Five full-day sessions are planned. Each day will be divided into a series of formal presentations and active, group-based discussions around topics that include: the historical context of international health research; current international ethics principles, standards, and declarations; key tools and concepts for unpacking ethical issues in international health research; issues in informed consent and conflict of interest; "reasonable availability" and the conduct of clinical trials; cutting-edge international genetics research; and, the responsibility of researchers to the international health community. Course evaluation is based on class participation, a written exercise, and a case analysis.

BETH 415. International Bioethics: Policy and Practice. 3 Units.
Taught by Case and international faculty, this course will include 7-10 days of intensive didactic and experiential learning in one of several "host" countries. Examples of sites include: Free University of Amsterdam and University of Utrecht in the Netherlands; University of Paris in France; and Ben Gurion University in Israel. It will afford a unique opportunity to gain perspective on important bioethics issues in different societies, i.e., euthanasia, public health policies, access to healthcare, and stem cell research. At the international site, students will spend 6 hours per day (5 days) in seminar (including didactics, discussion, and guided-observation clinical experience). There will be two 3-hour preparatory sessions, required reading, and two 3-hour post trip sessions. Requirements: preparation, attendance, and class participation, a 12-15 page paper (undergraduate credit) and a 15-20 page paper (graduate credit). Graduate credit will also require students to prepare a presentation for a post-intensive session. Enrollment will be capped at 25. This course has an additional fee to cover costs of travel and lodging. Limited scholarships are available. Offered as BETH 315 and BETH 415.

BETH 415A. International Bioethics Policy and Practice: Women's Health in the Netherlands. 3 Units.
This 3-credit course allows students to familiarize themselves with social policies and practices related to women's health in the United States and the Netherlands. Issues covered in the course include birth control and family planning, abortion, prenatal testing, childbirth, health care disparities, cosmetic surgery, prostitution and trafficking in women. This course also addresses the US and Dutch national policies regarding the public provision of health care for women. The course places an emphasis on the ways in which social norms shape policies over time, which political actors are involved in shaping women's health policy, and the balance between women's health as a matter of the public good or individual responsibility. This course substantively explores gender-specific cultural values and practices in relation to women's health in the United States and the Netherlands and will help students develop the analytical skills necessary for evaluating social policy and ethical issues related to women's health. Offered as BETH 315A and BETH 415A.
BETH 415B. International Bioethics Policy and Practice: Public Health in the Netherlands. 3 Units.
This one week 3-credit intensive course will be held in Amsterdam, The Netherlands. Taught by faculty from Case and Utrecht University, this course offers students a cross-cultural perspective on ethical dilemmas raised by the practice of public health in the United States and Northern Europe. Additionally, this course examines policies related to prostitution, drug use, sex education, infectious disease prevention, and access to health care and how they differ in the cultural and political settings of U.S. and the Netherlands. We will examine both the rationales and outcomes of Dutch and American policies, stimulating course participants to consider their own views on these often controversial issues. Prior to the trip, students will attend lectures at Case, which will acquaint them with the theoretical approaches to public health ethics and major issues raised in the practice of public health. In these pre-trip sessions, students will also analyze and report on a case study designed to stimulate critical thinking on comparative public health ethics. In Amsterdam, students will attend lectures that will be supplemented by site visits and discussion sessions aimed at exploring the ethics of public health policy and practice in the Netherlands. Following the intensive week in Amsterdam, students will meet with instructors at Case for two hours to discuss their experiences and compare policies and practices in the U.S. and the Netherlands. Offered as BETH 315B and BETH 415B.

BETH 415C. International Bioethics Policy and Practice: Health Care Costa Rica. 3 Units.
This 3-credit course gives students the unique opportunity to observe patients and practitioners encounter in a radically different health care system. Costa Rica has one of the most comprehensive health care systems in the Western hemisphere, featuring the innovative use of mid-level health care workers organized in basic comprehensive health care teams. This has resulted in a longer life expectancy than the United States, despite a per capita GDP of only $10,000 per person. Students will gain first-hand experience of Costa Rican health care through field experiences at sites including a national hospital in the capital city, San Jose; a peripheral treatment clinic in a smaller town; and observation of the work of an integrated basic health care team in an indigenous reserve. Following each visit, students will discuss the practical and ethical dilemmas that practitioners face in the context of the Costa Rican health care system. Specific topics include: health inequalities within and between nations; the ethics of transplantation, medical research, and end-of-life care; and health care in rural environments and with indigenous populations. Offered as BETH 315C and BETH 415C.

BETH 415D. French Connections, A Cross-Cultural Comparison of Medical Ethics. 3 Units.
This 3-credit course is collaboration between Case Western Reserve University and the University of Paris. The course includes a ten-day trip to Paris, France over Spring Break. This course offers a cross-cultural comparison of the French and American medical systems. Students will have the unique opportunity to learn first-hand how the French medical education system is structured and how the social, cultural and political contexts in France shape medical and ethical issues. The trip includes guided field experiences in French clinical settings as well as opportunities to engage with French faculty members and physicians about contemporary issues in bioethics. Ethical issues that may be considered may include reproductive rights, decision-making involving severely impaired newborns, withholding/withdrawing life-sustaining treatment and issues in organ donation and transplant. The course also will also emphasize the role of French culture and history while in Paris with museum and site visits designed to complement seminar content and offer real-life illustrations of course content. Prior to the trip, students attend six hours of lectures, either at Case Western Reserve University or via a web-based tutorial. They are expected to become familiar with the representative articles assigned for the course, and be prepared to integrate those readings into pre-trip class participation and active participation while in France. Following the trip, students meet with the instructor for an additional four hours to discuss and synthesize their experiences. Offered as BETH 315D and BETH 415D.

BETH 415E. International Bioethics: Policy and Practice--US and Spanish Perspectives, Salamanca Spain. 3 Units.
This 3-credit hour course will introduce advanced undergraduate and graduate students to theoretical and practical aspects of bioethics in a European context. Continental health professionals and bioethicists work in an environment that differs from the American context in at least three important dimensions: the political structure of their health care systems, the cultural influence of their religious histories, and the theoretical perspective of continental moral philosophy. The University of Salamanca in Spain, one of the oldest universities in Europe (known as the “Oxford of Spain”), will be used in this course as a focal point for examining the interplay of these three dimensions in shaping institutional and professional approaches to specific problems in bioethics, including end of life decisions, organ procurement and allocation, reproductive ethics, health care justice, and environmental bioethics (“eco-ethics”). This course will help advanced students who are already grounded in American bioethics develop the analytical skills necessary for evaluating European bioethical scholarship and policy-making, while helping less advanced students develop a familiarity with fundamental similarities and differences between bioethics in Spain and the U.S. The course will include a one week trip to Salamanca, Spain where students will be taught by instructors and faculty from the University of Salamanca. Teaching will include some guided field experiences and regular discussion sessions with the course faculty. Prior to the trip, students will attend 4 hours of class at Case to become familiar with elements of political theory and moral philosophy relevant to the in-country discussions. Following the trip, students will meet with instructors for an additional 2 hours. Offered as BETH 315E and BETH 415E.
BETH 415F. Bioethics Themes as Expressed in Spanish and American Culture: Film, Television, and Literature. 3 Units.
This 3-credit intensive course will be held in San Sebastian, Spain. Taught by faculty from CWRU and University of the Basque Country, this course offers students a cross-cultural perspective on bioethics in the United States and Spain. This course uses the medium of film, complemented by readings in bioethics, film criticism, and medical research, to introduce students to a number of compelling bioethics problems facing physician-scientists today, including: when life begins, the nature and limits of informed consent, use of randomization without equipoise, medical imperialism (or the appearance thereof), the treatment of so-called "orphan" diseases, use of deception in research, and financial conflicts of interests caused by medical research. Offered as BETH 315F and BETH 415F.

BETH 415G. Death, Dying & Euthanasia: Netherlands & the USA. 3 Units.
Is it ever permissible for physicians to kill their patients? In the Netherlands, the answer is yes. In the United States, it is no. Are the Dutch sliding down a moral slippery slope? Are the Americans compromising the rights and dignity of dying patients? This 3-credit course is a unique opportunity to examine a range of Dutch and American end-of-life policies and practices with special focus on the unique ethical, cultural, religious, and legal contexts in which they developed. This course will compare how two liberal democracies, the United States and the Netherlands, have handled difficult end-of-life issues, including: The Dutch regulation of euthanasia; Regulation of physician-assisted suicide in the state of Oregon; Terminal sedation; End-of-life decisions in newborns; Withholding and withdrawing of artificially-provided fluids and nutrition; The legal basis for end-of-life decision making in the USA; Palliative care and hospice; Public trust in medicine and physicians. In the United States, teaching methods will include lectures, case discussion, and exposure to how some of the course's themes are reflected in popular culture such as movies. Offered as BETH 315G and BETH 415G.

BETH 417. Introduction to Public Health Ethics. 3 Units.
The course will introduce students to theoretical and practical aspects of ethics and public health. This course will help students develop the analytical skills necessary for evaluating ethical issues in public health policy and public health prevention, treatment, and research. Will include intensive reading and case-based discussions. Evaluation based on class participation, a written exercise and a case analysis. Open to graduate students with permission from instructors.

BETH 419. Ethics and the Business of Biomedicine. 3 Units.
Central to current national discourse are concerns about ethics, costs, and profits in relation to health care. These concerns are primarily driven by major shifts in health care during the 20th century. These shifts include: The transformation of professional medical practice from a service orientation to a market orientation; the emergence of powerful pharmaceutical and health care corporations; the development of new, innovative, and expensive biomedical technologies by for-profit enterprises. This course will focus on questions about values (e.g., distributive justice, rights, human dignity, community welfare in relation to the business of medicine). Topics covered include: 1) commodification in relation to health care; 2) the just distribution of health care goods and services in market economies; 3) pharmaceutical research, development, and marketing; and 4) ethical issues in the sale of human body parts and ethically contentious services (like contract surrogacy). While course topics will be addressed primarily in reference to the United States, students will have some opportunity to analyze specific issues regarding these topics from an international perspective.

BETH 420. Critical Issues in Research Ethics. 3 Units.
This course is open to graduate students with an interest in health-related research ethics. Enrollment preference will be given to Masters-level bioethics students in the Research Ethics Track (RET). The course provides students with a comprehensive study of critical issues in research ethics, including the modern history of research ethics in science and medicine, the ethics of clinical trial design and conduct, advanced issues in informed consent, the ethics of animal experimentation, and key issues in genetics research. Coursework will include case studies and in-depth readings to highlight topical areas. Discussions of ethical and regulatory frameworks that influence decision-making, policy development, and the conduct of biomedical and social-behavioral science research will allow students to explore the nuances, gaps, challenges, and concerns present in research, particularly research involving human subjects. Topics will be addressed within the framework of integrating research ethics into the scientific process. Students are expected to lead class discussions and write a course-relevant paper. Enrollment will be limited to 15 students. Class will meet weekly for 3 hours.

BETH 421. Research Ethics Practicum. 1.5 Unit.
The Research Ethics Practicum (80 hours, 1.5 CREDITS) is designed to complement the theoretical and conceptual training received in the course, Critical Issues in Research Ethics. By way of a series of campus-wide rotations, students learn about the practical, everyday side of research administration, compliance, and scientific review. Students will work with key staff in research ethics centers, and observe their day-to-day operations, as well as attend institutional review board (IRB) and Institutional Animal Care and Use Committee (IACUC) meetings. They will become familiar with human subjects, animal, and tissue research regulations and policies as these are applied in an institutional/academic research context. Students will also spend time in a clinical trials unit and tour animal care facilities. The practicum has the following overall objectives: (1) students will be able to identify, analyze, and understand research ethics issues as they develop in the context of actual institutional research governance (2) students will gain an understanding of methods of ethical research design and implementation.
BETH 422. Clinical Ethics: Theory & Practice. 3 Units.
This course will focus on both theoretical and practical issues in clinical ethics. Clinical ethics will be distinguished from other areas of bioethics by highlighting distinctive features of the clinical context which must be taken into account in clinical ethics policy and practice. Fundamental moral and political foundations of clinical ethics will be examined, as will the role of bioethical theory and method in the clinical context. Topical issues to be considered may include informed consent; decision capacity; end of life decision making; confidentiality and privacy; the role and function of ethics committees; ethics consultation; the role of the clinical ethicist; decision making in various pediatric settings (from neonatal through adolescent); the role of personal values in professional life (e.g., rights of conscience issues, self disclosure and boundary issues); dealing with the chronically non-adherent patient; ethical issues in organ donation and transplant; health professional-patient communication; medical mistakes; and other ethical issues that emerge in clinical settings.

BETH 430. Bioethics in Literature. 1 Unit.
This course complements the Foundation course in the MA bioethics program by introducing students to narrative literature (fiction, nonfiction and poetry) that addresses ethical issues in medicine. The material is frequently the work of physicians and patients who narrate their respective experiences. As such, narrative provides direct insights into the practice of modern medicine tested against both accepted and controversial moral norms and serves as a vehicle for discussion and analysis of ethical issues. These issues involve topics such as death and dying, reproduction, pediatrics, women as patients and clinicians, public health and medicine as a profession and its practice as a privilege. Students will sample the work, among others, of William Carlos Williams, Lewis Thomas, Toni Morrison, Margaret Atwood, John Donne, Dylan Thomas and Abraham Verghese.

BETH 440. Science and Society Through Literature. 3 Units.
This course will examine the interaction of scientific investigation and discovery with the society it occurred in. What is the effect of science on society and, as importantly, what is the effect of society on science? An introduction will consider the heliocentric controversy with focus on Galileo. Two broad areas, tuberculosis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art and music will be examined to understand the changing views of society towards the disease, how society's perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and film, the transformation of the original story into myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials. Offered as PHRM 340, BETH 440, PHRM 440, and HSTY 440.

BETH 450. Hindu and Jain Bioethics. 3 Units.
This course will provide both an introduction to basic Hinduism and Jainism and an introduction to Hindu and Jain bioethics. We will ask: How would a Hindu or a Jain respond to issues concerning euthanasia, abortion, and other topics of controversy. Are these answers altered in the North American context or in the light of recent technological changes? Offered as RLGN 353, RLGN 453, BETH 353, and BETH 453.

BETH 460. Science and Society. 3 Units.
This course examines the complex ethical and other value relationships that exist between science and society. Students will be encouraged to question the simplistic view that science proceeds independently of societal values and contentious ethical commitments. A range of other social factors, such as ethical belief systems, political forces, and large-scale financial interests all influence new scientific and technological developments. In order to illuminate each of these larger themes, this course focuses on three exciting areas of scientific inquiry: stem cell research; synthetic biology; and nanotechnology. Each of these contentious scientific fields provides an excellent view into the challenging ethical, cultural, social, political, and economic issues that will face students, both as scholars and as citizens. No prior technical knowledge is necessary for any of these scientific areas. All relevant scientific information will be provided during the course by the professor. Offered as BETH 360, BETH 460 and PHIL 360.

BETH 466. Promoting Health Across Boundaries. 3 Units.
This course examines the concepts of health and boundary spanning and how the synergy of the two can produce new, effective approaches to promoting health. Students will explore and analyze examples of individuals and organizations boundary spanning for health to identify practice features affecting health, compare and contrast practices and approaches, and evaluate features and context that promote or inhibit boundary spanning and promoting health. Offered as MPH 466, EPBI 466, SOCI 466, NURS 466 and BETH 466. Prereq: Graduate student status or instructor consent.

BETH 503. Research Ethics and Regulation. 2 Units.
This course is designed to introduce students to the ethical, policy, and legal issues raised by research involving human subjects. It is intended for law students, post-doctoral trainees in health-related disciplines and other students in relevant fields. Topics include (among others): regulation and monitoring of research; research in third-world nations; research with special populations; stem cell and genetic research; research to combat bioterrorism; scientific misconduct; conflicts of interest; commercialization and intellectual property; and the use of deception and placebos. Course will meet once per week for 2 hours throughout the semester. Grades will be given based on class participation and a series of group projects and individual short writing assignments. Offered as BETH 503, CRSP 603 and LAWS 603.

BETH 504. Critical Readings in Bioethics. 3 Units.
This course will focus on both normative (traditional) and descriptive (empirical) approaches to bioethics. It will be co-directed by two faculty members, one with a specialization in normative bioethics and one with a specialization in descriptive bioethics.

BETH 505. Methods in Normative Bioethics I. 3 Units.
The first of the two required Methods seminars is designed to give graduate students an intensive introduction to the modes of moral reasoning that have been adopted and adapted by contemporary Bioethics, and the major critical perspectives that have been brought to bear upon them.

BETH 506. Methods in Normative Bioethics II. 3 Units.
The second of the two required Methods seminars is designed to give graduate students an intensive introduction to the modes of moral reasoning that have been adopted and adapted by contemporary Bioethics, and the major critical perspectives that have been brought to bear upon them.
BETH 507. Research Design in Bioethics I. 3 Units.
The first of two empirical research courses will introduce students to theoretical and methodological approaches in the design and implementation of empirical research on topics in biomedical ethics. Students will be provided with a comprehensive and robust exploration of empirical models for the development of bioethics research and the skills for critically assessing the optimal methods for designing studies relevant to ethical issues in biomedicine.

BETH 508. Research Design in Bioethics II. 3 Units.
The second of two empirical research courses will introduce students to theoretical and methodological approaches in the design and implementation of empirical research on topics in biomedical ethics. Students will be provided with a comprehensive and robust exploration of empirical models for the development of bioethics research and the skills for critically assessing the optimal methods for designing studies relevant to ethical issues in biomedicine. Prereq: BETH 507.

BETH 511. Grant Writing. 3 Units.
This course will teach students the fundamentals of writing a grant proposal. We will concentrate on NIH-style applications, although the principals of grant writing can be applied to any venue. In the process of working through devising a research question and study design, students will be encouraged to use this as an opportunity to think about their dissertation topic. In addition to applying theoretical and research design knowledge gained through their other core course work, the course will also teach students about how to complete application forms and to create a budget. We will also familiarize students with the peer review process. Each student will produce a draft grant application. The students will form a mock peer review session and will critique the grants.

BETH 512. Clinical Ethics Rotation - Ph.D.. 1.5 Unit.
In this course students will become familiar with the clinical, psychological, social, professional, and institutional context in which ethical problems arise. This course exposes students to clinical cases, to hospital ethics committees and ethics consultation programs, to institutional review boards (IRB), and to hospital policies covering the “do not resuscitate” orders (DNR), advance directives, withdrawal of artificial feeding, organ procurement, transplantation, and medical futility. Requires minimum of 10 total hours of rotation experience per week during two semester 10-week rotations. Locations for this course include: MetroHealth Medical Center, University Hospitals of Cleveland, and the Hospice of the Western Reserve. Recommended preparation: BETH 520/521 or concurrent enrollment.

BETH 520. Foundations in Bioethics I - Ph.D.. 3 Units.
The first of the two required seminar courses, this course covers five basic topic areas in bioethics: death and dying; health professional-patient relationship; method and theory in bioethics; organ transplantation; and ethics and children. The course meets twice weekly and is taught in seminar format by Center faculty members who are experts on specific topics.

BETH 521. Foundations in Bioethics II - Ph.D.. 3 Units.
The second of the two required seminar courses, this course covers five basic topic areas in bioethics: death and dying; health professional-patient relationship; method and theory in bioethics; organ transplantation; and ethics and children. The course meets twice weekly and is taught in seminar format by Center faculty members who are experts on specific topics.

BETH 602. Special Topics in Bioethics. 1 - 3 Unit.
Students will explore particular issues and themes in biomedical ethics in depth through independent study and research under the direction of a faculty member.

BETH 603. Bioethics Research. 6 Units.
Research leading toward the MD/MA degree is Bioethics.

BETH 604. Advanced Research Ethics Seminar. 0 Units.
This course meets for two hours each month and is focused on the following topics and the development of the stated competencies: September Introduction; How to critically analyze the literature; Facilitator critique of assigned manuscript; Designing re-entry projects Critical analysis of literature. October Trainee #1 critique of assigned manuscript; Methodological and ethical issues in designing and reviewing research; Trainee presentation of concept papers for re-entry projects Critical review of research protocols and manuscripts; Issues in designing research. November Trainee #2 critique of assigned manuscript; How to prepare and present professional presentations Critical analysis of literature; Oral presentation skills December Trainee #3 critique of assigned manuscript; Principles of adult education Critical analysis of literature; Oral presentation skills; Development of teaching skills. January Trainee #1 critique of assigned manuscript; Principles of adult education Critical analysis of literature; Oral presentation skills. February Trainee #2 critique of assigned manuscript; Developing submissions for IRB review Critical analysis of literature; Oral presentation skills; Identifying and addressing ethical issues in research; Preparation of IRB submissions. March Trainee #3 critique of assigned manuscript; Update on development of re-entry projects; Logistical issues related to re-entry projects; Manuscript preparation Critical analysis of literature; Oral presentation skills; Implementing research; Preparing work for publication; Negotiation skills. April Re-entry issued Implementing research; Readjustment. This course is only open to trainees in the Fogarty-funded Training Program in International Research Ethics.

BETH 605. Special Study: IRB Administration. 1.5 Unit.
This course is limited to Fogarty-sponsored trainees in the Training Program in International Research Ethics. The course, which meets 1.5 hours per week, focuses on issues relevant to the management and administrations of the various functions of research ethics review committees. Topics to be covered include identification and selection of appropriate community representatives for membership and/or consultation, utilization of independent experts/consultants, recordkeeping, approaches to communication with investigators, and others. Regular guest lectures will be provided by members of the various local IRBs, staff members of local IRBs, and senior investigators. The course will utilize a case-based approach.

BETH 701. Dissertation Ph.D.. 1 - 9 Unit.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Environmental Health Sciences

The Department of Environmental Health Sciences is devoted to the study of the fundamental mechanisms responsible for disease processes initiated or aggravated by environmental agents. Indoor and outdoor environments consist of complex interacting systems. These systems require the development of new approaches to understanding the basis of their action. Current research interests of the faculty include chemical and environmental carcinogenesis, genetic and reproductive toxicology, cytogenetics, radiation biology, and clinical and forensic toxicology.

The Department of Environmental Health Sciences offers the MS degree and an MD/MS program for students who have received formal acceptance to the School of Medicine and are interested in expanding their training in the area of environmental health sciences. This program
allows students to complete the requirements for both degrees within a four-year period.

**MS Environmental Health Science**

The Master of Science degree program is designed to increase the student’s knowledge of environmental health science as well as to provide a firm foundation in the life sciences. The program is multidisciplinary and emphasizes cancer biology, environmental toxicology, and nutrition and toxicology. It is based on a core classroom curriculum in the biological sciences, including biochemistry, biostatistics, microbiology, genetics, molecular biology, pharmacology, epidemiology, and toxicology.

**Admissions**

Applicants must complete a CWRU Graduate Application. Tuition or stipends will not be provided for the master of science program (no additional tuition is required for enrolled medical students).

**Degree Requirements**

Currently, a student can obtain a MS with a thesis based on an individual research project [Plan A] or may obtain a MS based solely on course work and a comprehensive exam [Plan B]. Both degrees require completion of 27 semester hours of credit. Under Plan A, up to 9 of the 27 semester hours can be obtained through research. Students also prepare a written thesis and complete an oral defense for a Plan A Degree. Completion of a Plan B, MS Degree, requires satisfactory performance on a written comprehensive exam taken after the student has finished their 27 hours of coursework. Also, for Plan B, it’s recommended that the student take CBIO 453 Cell Biology I & CBIO 455 Molecular Biology I [8 Credits] or BIOC 407 Introduction to Biochemistry: From Molecules To Medical Science [4 Credits] & BIOC 408 Molecular Biology [4 Credits].

Of the 27 semester hours of coursework required for the MS degree, 9 hours of credit are fulfilled by the EVHS Core Curriculum. This Core Curriculum is comprised of three 3 credit courses: EVHS 401 Fundamentals of Environmental Health Sciences: Biochemical Toxicology and EVHS 402 Fundamentals of Environmental Health Sciences: Risk Assessment. Finally, as part of the 12 credits of Core Courses, a student must take a Statistics course of their choosing (must be approved by the Department).

The required course list is as follows:

**Courses**

**EVHS 401. Fundamentals of Environmental Health Sciences: Biochemical Toxicology. 3 Units.**

This course details the fundamentals of biochemical toxicology. Specific topics include oxidation-reduction reactions, Phase I and II xenobiotic metabolism and mechanisms of cellular toxicity. Also, this course focuses on pharmacology. General principles of pharmacology, drug transport and absorption, drug metabolism, neuropharmacology, immunopharmacology and pharmacokinetics are discussed.

**EVHS 402. Fundamentals of Environmental Health Sciences: Risk Assessment. 3 Units.**

This course presents an overview of the scientific approaches used to determine whether environmental agents are potentially dangerous to people. In this course, criteria utilized for establishing exposure limits is presented. A variety of assays which can be employed to assess the impact of environmental exposure on normal and genetically susceptible individuals are studied. These include: numerous animal tests, short term toxicity and mutagenicity tests, functional assays, molecular techniques to delineate mechanisms of action, epidemiology studies and controlled clinical trials. Recommended preparation: EVHS 429.

**EVHS 435. Environmental Health Law and Policy. 3 Units.**

This course will introduce students to environmental law and policy, with a focus on federal environmental law. The goal of the course is to enable students to understand the distinctive characteristics of a regulatory agency, where scientific insights must be channeled through the paths set out by law. Students will consider how federal statutes are implemented through agency regulations, and the role of courts in overseeing the regulatory process. Substantive statutes we will consider include the Clean Air Act, the Clean Water Act, the Safe Drinking Water Act, the regulation of hazardous wastes and the cleanup of contaminated sites, and a range of federal statutes regulating chemical manufacturing/use and the workplace. The course includes an overview of the common law concepts of torts and nuisance. Prereq: EVHS 429 or permission of instructor.

**EVHS 506. Independent Study in Environmental Health Sciences. 1 - 6 Unit.**

**EVHS 651. Master’s Thesis Research. 1 - 9 Unit.**

**EVHS 701. Dissertation Ph.D.. 1 - 9 Unit.**

(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

**Epidemiology and Biostatistics**

The Department of Epidemiology and Biostatistics (http://epbiwww.case.edu) draws on the core disciplines of Epidemiology, Biostatistics, and Public Health to help support students in developing the knowledge, skills and competencies needed to assume positions of leadership with the ultimate goal of advancing the public’s health. Through challenging coursework and both independent and collaborative research opportunities, students will develop a thorough understanding of the multiple determinants of population health outcomes; the individual and structural factors that may lead to disparities in those outcomes; and the way in which specific policies and interventions influence the nature and impacts of population health determinants.

The Department of Epidemiology and Biostatistics offers the following degrees:
• Doctor of Philosophy (PhD)
• Masters (MS)
• Master of Public Health (MPH)

Faculty and Research
Department faculty are nationally recognized and have more than $9.5 million in grants that support projects including HIV/TB research in Uganda, the search for genes that cause disease, cancer prevention and control, studies of interventions to change human behaviors that promote good health, design of clinical trials, studies to change high-risk behaviors related to AIDS, studies of public policies concerning the health of the elderly, and cost/benefit studies of medical interventions. Many research projects are performed in collaboration with the four affiliated hospitals; the University Hospitals, Metro Health, the Cleveland Clinic and the Veteran Administration. The department has offices in two locations at the university, (Wood Building and Woelstein Research Building) and in the Prevention Research Center for Healthy Neighborhoods (PRHCN). The department maintains two scientific computer centers comprised of 14 lab computers and over a dozen servers. Several very large national health care and demographic databases (including Medicare, Medicaid, and Vital Statistics databases) are stored on the servers and are used for faculty and student research and educational projects.

Masters Programs
Master of Science in Biostatistics
Statistics is the science of data and a discipline that provides tools for making decisions under conditions of uncertainty. Biostatistics addresses all aspects of statistics that arise from medical and health-related sciences, and is an essential component of most medical, biological, and health care. The study of biostatistics includes design and analysis of both experimental studies, such as clinical trials, and observational studies; the theory of probability and statistic; mathematical and statistical modeling; and knowledge of the methodology used to evaluate the properties of statistical procedures. It also includes a competency in computing, which encompasses programming, statistical software use, and database management. Modern Biostatistics is a dynamic field of study and an integral part of medical and public health research. Those who earn the MS in Biostatistics are equipped for careers in government, industry and academic research centers or to enter doctoral programs in biostatistics.

There are three tracks or majors: Biostatistics, Genomics and Bioinformatics and Health Care Analytics.

The mission of the Masters Program in Biostatistics is to enroll and train outstanding students in the core discipline of biostatistics. The faculty and students in this program are committed to teaching and learning the theory, methodology and application of the essential and modern statistical methods used in the biomedical and related sciences.

Courses required in this program include data management and statistical programming, applied biostatistics methods, epidemiology and biostatistics consulting. Biostatistics Track: Statistical Theory, Longitudinal Data Analysis, Data Meaning with either Machine Learning or Multivariate Analytics. Genomics and Bioinformatics Track: Genetic Epidemiology, Bioinformatics, Genome Sequencing, Advanced Methods in Genomic Analysis. Health Care Analytics: Large Healthcare Databases and Electronic Health Records and two of the following: Longitudinal Data Analysis, Observational Studies, Clinical Trials, Machine Learning and Data Mining, Comparative and Cost Effectiveness Analysis.

Plentiful research opportunities exist within the department and numerous research centers across the university, and extend to the adjoining University Hospitals, to the nearby Cleveland Clinic, to Cleveland’s MetroHealth Medical Center, and to similar entities across the United States and internationally.

Concurrently, students will master the rigorous scientific and analytic methods necessary to be at the forefront of efforts to not only describe, but effectively evaluate and improve the population’s health, and contribute to both the society and the biostatistics profession. Student- and faculty-led seminars provide an ongoing mechanism for keeping abreast of current literature and identifying important areas of research and collaborative opportunities. The Department operates within a strong interdisciplinary framework involving faculty within the department, the school of medicine, and across the entire university, as well as leaders in health care institutions and health oriented organizations and agencies throughout the wider community.

Graduates from accredited universities and colleges will be considered for admission to the department. All applicants must satisfy both CWRU and department requirements for graduate admission. The MS program in Biostatistics consists of a 19-credit core curriculum, plus a 9 credit major and a 3 credit internship or practicum.

General Requirements
Students must satisfy the requirements of the School of Graduate Studies as stated here, as well as those outlined by the Biostatistics program.

The MS program in Biostatistics offers “Plan B”, as defined by the CWRU School of Graduate Studies. For Plan B, the student must successfully defend their internship practicum project.

Master of Public Health (MPH)
Aylin S. Drabousky, MA Master of Public Health Program Administrative Director
Case Western Reserve University
10900 Euclid Avenue, W-G74
Cleveland, Ohio 44106-4945
216.368.3128 - phone
216.368.2286 - fax drabousky@case.edu

A Master of Public Health degree is designed to prepare students to address the broad mission of public health, defined as “enhancing health in human populations, through organized community effort,” utilizing education, research and community service. Public health practitioners are prepared to identify and assess the health needs of different populations, and then to plan, implement and evaluate programs to meet those needs. It is the task of the public health practitioner to protect and promote the wellness of humankind. The master of public health program prepares students to enhance health in human populations through organized community effort. Graduates are qualified to work in local and state health departments, universities and colleges, hospitals, ambulatory medical centers, non-profit organizations, and the insurance and pharmaceutical industries. The program seeks to attract a rich mix of students, including those pursuing degrees in medicine, nursing, dentistry, law, social work, bioethics, management and other fields, as well as students holding undergraduate degrees.

The CWRU MPH Program has a two-year curriculum requiring 42 credit hours. Twenty-one credits are accumulated in seven core required
courses, representing the fundamental domains of public health: biostatistics, epidemiology, environmental health sciences, health services administration, public health history and social and behavioral sciences. Students receive nine credits for three courses in the major of their choice, three credits for one elective course, and nine credits for the “Culminating Experience,” a 3 credit public health field practicum and a 6 credit capstone project. Previous experience or education pertaining to public health may increase the student’s flexibility in course selection. Students may also enroll part-time and take courses over a three to five year period.

Requirements: Course List

Core required courses (21 credits)

- MPH 403 Research & Evaluation Methods 3
- MPH 405 Statistical Methods in Public Health 3
- MPH 406 History and Philosophy of Public Health 3
- MPH 411 Introduction to Health Behavior 3
- MPH 429 Introduction to Environmental Health 3
- MPH 439 Public Health Management and Policy 3
- MPH 483 Introduction to Epidemiology for Public Health Practice 3

Culminating Experience

- MPH 652 Public Health Capstone Experience 6
- MPH 650 Public Health Practicum 3

Complete 9 credits within chosen major 2 9

Elective 3

Total Units 42

1 Students in the Population Health Research major should strongly consider taking MPH 431 Statistical Methods I in place of MPH 405.

2 Choices for major are Population Health Research, Global Health, Health Policy & Administration, or Health Promotion and Disease Prevention.

MPH Sample Plan of Study (full-time):

First Year Units  
Fall Spring

- History and Philosophy of Public Health (MPHP 406) 3
- Introduction to Health Behavior (MPHP 411) 3
- Introduction to Epidemiology for Public Health Practice (MPHP 483) 3
- Major course 1 3
- Statistical Methods in Public Health (MPHP 405) 3
- Introduction to Environmental Health (MPHP 429) 3
- Public Health Management and Policy (MPHP 439) 3
- Year Total: 9

Second Year Units  
Fall Spring

- Major course 2 3
- Major course 3 3
- Elective course 3
- Public Health Practicum (MPHP 650) (Public Health Capstone Experience) 3

Total Units in Sequence: 39

Majors

Currently, four different majors (a.k.a. tracks) are offered by the CWRU MPH Program: Population Health Research, Global Health, Health Policy & Administration, and Health Promotion & Disease Prevention. Each major has a required course or courses (in addition to the core required courses), plus selective offerings to be combined for a total of 9 credit hours in major coursework. Students develop a Capstone project relevant to the major area to expand and apply the knowledge of the subject. Individual emphasis will differ from student to student within each major.

MPH students can also choose to expand the emphasis and depth of their program of study by electing to do a double major plan of study. For the double major, the student chooses two areas (two majors) of equal emphasis and takes 3 courses in each area (this requires the student to take a minimum of 45 credit hours). The student’s Capstone project must embrace and integrate both emphases, and no double-counting of credits can take place. Students choosing to do the double major plan of study should also work closely with an advisor to ensure optimal course selection and foster the evolution of a successful Capstone project.

Population Health Research Major

Coordinator - Mendel Singer, PhD

Learning Objectives:

- Working knowledge of epidemiologic principles, terminology, and tools
- Working knowledge of the primary analytic methods employed in both prospective and retrospective studies relating to population health
- Understand the most common study designs used in public health and/or clinical research
- Gain familiarity with some of the key advanced concepts in one of the subspecialties of population health (e.g. epidemiology, health services research, outcomes research.

Select three of the following courses one of which must be a methods course:

Global Health Major
Coordinator - Daniel Tisch, PhD, MPH

Learning Objectives:

- Develop a global perspective on health and diseases
- Learn to design, execute, analyze, and evaluate global health research or projects
- Acquire skills to understanding and communicate meaningfully with colleagues from distant fields of global health
- Learn to integrate multiple objectives in global health across academic and applied disciplines
- Understand ethical and regulatory issues for global health research

Select two out of the following three courses as required major courses:

- INTH 401 Fundamentals of Global Health 3
- EPBI 447 Global Health: Outbreak Investigation in Real-Time 3
- EPBI 484 Global Health Epidemiology 1

Select remaining major course from below:

- EPBI 467 Comparative and Cost Effectiveness Research 1
- EPBI 508 Ethics, Law, and Epidemiology 3
- EPBI 510 Health Disparities 3
- ANTH 461 Urban Health 3
- ANTH 480 Medical Anthropology and Global Health I 3
- ANTH 481 Medical Anthropology and Global Health II 3
- ANTH 511 Seminar in Anthropology and Global Health: Topics 3
- LAWS 4101 International Law 3
- LAWS 5123 International Trade Law and Policy 3
- MGMT 460 Managing in a Global Economy 3

Health Promotion & Disease Prevention Major
Coordinator - Erika Trapl, PhD

Learning Objectives:

- Describe models and theories of health behavior as they relate to health promotion and disease prevention
- Identify multi-factorial causes of health behavior and disease
- Demonstrate knowledge and skills necessary to support behavior change
- Apply principles and practice of effective health communication
- Describe development, implementation, and evaluation of programs that promote healthy lifestyle and behaviors

Required major course:

- EPBI 423 Dissemination and Implementation Science for Health Promotion 3
- EPBI 464 Obesity and Cancer: Views from Molecules to Health Policy 3
- EPBI 485 Adolescent Development 3
- EPBP 508 Ethics, Law, and Epidemiology 3
- EPBI 510 Health Disparities 3
- ANTH 461 Urban Health 3

PhD Epidemiology and Biostatistics

The PhD Program in Epidemiology and Biostatistics draws on the core disciplines of biostatistics and epidemiology to support students in developing the knowledge, skills and competencies needed to assume positions of leadership with the ultimate goal of advancing the public's health. Students accepted into the PhD program will master the rigorous scientific and analytic methods necessary to be at the forefront of efforts to not only describe, but effectively evaluate and improve the
public’s health. The Department operates within a strong interdisciplinary framework involving faculty within the department, the school of medicine, and across the entire university, as well as leaders in health care institutions and health oriented organizations and agencies throughout the wider community.

Student- and faculty-led seminars provide an ongoing mechanism for keeping abreast of current literature and identifying important areas of research and collaborative opportunities. Students are considered junior colleagues of the faculty who will develop the capacity to work independently in a supportive environment. The Department operates within a strong interdisciplinary framework involving faculty within the department, the school of medicine, and across the entire university, as well as leaders in health care institutions and health oriented organizations and agencies throughout the wider community.

Graduates from accredited universities and colleges will be considered for admission to the department. All applicants must satisfy both CWRU and department requirements for graduate admission. Upon acceptance into the PhD program, each student will be assigned an academic advisor, who will guide the student through department and graduate school regulations, assist him or her in designing the initial planned program of study, and track the student’s progress toward degree completion.

All incoming PhD students take a required 36-credit core curriculum, which includes a 24-credit common core, 12-credit concentration core, and 6-credits of electives from one of five areas of concentration: Genetic Epidemiology and Bioinformatics, Global Health Epidemiology, Health Behavior and Prevention Science, Health Care Organizations, Outcomes and Policy, and Modern Biostatistics (see descriptions below).

On completion of all core requirements, students take a qualifying examination that leads to advancement to candidacy. When ready to embark upon the Doctoral dissertation, the student must choose a dissertation topic and find a faculty member with an appointment in the Department who is willing to be his/her research advisor. One way for the research advisor to have the major responsibility for facilitating, guiding, and advising the student in his or her research.

Curriculum

The Doctor of Philosophy degree in the Department of Epidemiology and Biostatistics comprises the following components:

- Basic Core Curriculum (24 credits) or Statistical Alternative Core (24 credits)
- Specialization/Concentration Core Curriculum (12 credits)
- Concentration Approved Electives (9 credits)
- Seminar Requirements (501 & 502, 503, 504, or 505)
- Passing the Qualifying Exam
- Portfolio Presentation
- Dissertation (18 credits)

Core Curriculum

The basic core curriculum is designed to provide PhD students with a strong foundation in epidemiology and biostatistics and related areas - the fields that comprise population health sciences - and the methodological and analytic training to conduct a rigorous, high quality dissertation in the student’s selected specialization or concentration.

Specialization/Concentrations

The PhD coursework requirement also consists of concentrated studies within one of four substantive areas offered within the department: Genetic Epidemiology and Bioinformatics, Global Health Epidemiology, Health Behavior and Prevention Science, and Health Care Organizations, Outcomes and Policy and Modern Biostatistics.

Most PhD students will specify a concentration when they apply to the program; those who do so will have better chance of acceptance. Students who do not directly specify a concentration when applying for admission to the program, must do so by no later than the end of the second semester (for full-time students) or 18 credit hours of core coursework, and meet all the requirements of the chosen concentration. Applying to a concentration after matriculation OR changing concentrations after initial admission does not guarantee acceptance into the concentration. Some concentrations may have additional prerequisites beyond those required for entrance into the PhD program (i.e., at least one course in calculus), or additional non-coursework requirements (i.e., applied research experience).

Electives

Electives are chosen in conjunction with consultation with the student’s academic advisor.

Seminars (0 credits)

Attending research seminars is integral to our graduate program and your professional development. Students are required to attend weekly research seminars. These seminars provide a forum for students to develop skills in scientific presentation, thought and communication, and balance general and concentration-specific speakers and topics. Meeting locations may vary from week to week depending upon the speaker.

Portfolio Presentation

The purpose of the portfolio presentation is to give the doctoral student, faculty and other doctoral students an opportunity to consider the progress, achievements and goals of the presenting student. However, it is neither an examination nor a formal checklist of activity. The presentation is an opportunity for the presenting student to review her/his study and career goals and for the faculty to offer feedback and advice to the student regarding progress toward her/his goals. One way for the student to think about the portfolio presentation is to imagine that (s)he is being interviewed for an academic or research position. In such a circumstance, the student would explain why (s)he has the background and skills that would qualify her/him for the position.

Generally, the Portfolio Presentation is given after Advancement to Candidacy but prior to the dissertation proposal defense.

Dissertation (18 credits)

After passing the qualifying examination and completing all course work, the student should choose a dissertation topic and find a faculty member with an appointment in the Department who is willing to be his/her research advisor.

PhD Epidemiology & Biostatistics Sample Plan of Study

Please also see Graduate Studies Academic Requirements for Doctoral Degrees.
### Areas of Concentration

#### Genetic Epidemiology and Bioinformatics

Students enrolled in the Genetic Epidemiology and Bioinformatics Concentration will learn to design and conduct epidemiological studies investigating the genetic and environmental influences on disease. Genetic epidemiology combines genetics, epidemiology, and biostatistics. Bioinformatics involves the use of sophisticated statistical and data mining tools to analyze genomic, epigenomic, and proteomic data.

Special study designs and statistical methods are required to explore genetic influences in epidemiologic studies, and this field continues to evolve as molecular and computational technology evolves. Furthermore, studies have moved beyond associations strictly between trait and DNA sequence, and now incorporate gene-environment interaction, RNA/gene expression, copy number variants, epigenetics, and proteomics. Thus, today’s genetic epidemiologists must be able to take multidisciplinary approaches to the evaluation of genetics in disease pathogenesis.

Researchers in many diverse areas are interested in incorporating genetics into their studies of disease pathogenesis, so this field is in demand. Currently the area is moving towards the development of predictive models incorporating genetic polymorphisms, so this field is central to translational and personalized medicine. After finishing training in this concentration, students may become collaborators with other basic and clinical scientists who are interested in examining genetic effects on their respective phenotypes, may become methodologists and develop new statistical/bioinformatic approaches appropriate for obtaining genetic information, or may lead their own research related to the genetics of specific complex traits.

#### Global Health Epidemiology

The World Health Organization (WHO) and the US Institute of Medicine (IOM) defines Global Health as “health problems, issues, and concerns that transcend national boundaries, may be influenced by circumstances or experiences in other countries, and are best addressed by cooperative actions and solutions”. We believe that, at its core, Global Health (and more broadly, population health sciences) is built upon the disciplines of epidemiology and biostatistics. The unifying theme of this concentration is the relatedness of health across diverse geographic areas and communities and the application of epidemiology in the context of related disciplines to define, quantify, and address health determinants, measurements, and trends.
CWRU is a recognized leader in Global Health research and education. Academic opportunities in the field of Global Health are extensive and have been formally organized through the CWRU Framework for Global Health with nine departments, five schools and The Center for Global Health and Diseases at CWRU. Recognizing that Global Health is not limited to international settings or "developing countries", the concentration also recognizes neglected diseases and vulnerable populations within the USA that transcend cultural boundaries.

The spirit of this concentration is advanced, innovative training to invite and strengthen the brightest new researchers in the field of global health. To accomplish this to the highest degree possible, we take advantage of our own connections within the University and our deep resources in Global Health professionals. Since the focus of this concentration is the development of research impact in a global perspective of health, prior or current experience in cultural settings from which these populations arise is strongly encouraged.

Health Behavior and Prevention Science
Health behavior and prevention research involves the systematic study of factors that modify behaviors related to disease risk and health promotion. This involves the development and testing of intervention programs designed to change behavior and reduce the onset and impact of various diseases, and programs designed to improve quality of life. Students enrolled in a concentration in Health Behavior and Prevention Science (HBPS) will train and conduct research on the psychological, social and ecological influences of health-related behaviors linked to the prevention of chronic disease, focusing not only on individual-level health and health behavior change, but more broadly to include multi-level, socio-ecological influences from interpersonal relationships and families, to organizations (school, work, religion), neighborhoods and communities, and policy.

Research opportunities for HBPS students are plentiful across campus, both with EPBI faculty and through established research centers within the university, such as the Prevention Research Center for Healthy Neighborhoods, Center for Reducing Health Disparities, Practice-Based Research Networks, Swetland Center for Environmental Health, Case Comprehensive Cancer Center (Prevention and Control Program), and the Center on Urban Poverty and Community Development.

The Prevention Research Center for Healthy Neighborhoods, through its Training and Mentoring and Research Development Cores, have built-in opportunities for students to become part of research teams, attend seminars, brown-bag discussions and participate in collaborative exchanges with community research partners.

Health Care Organization, Outcomes, and Policy
Students in the Health Care Organization, Outcomes, and Policy concentration will be prepared to design and carry out research in alternative models for the organization and delivery of care; quality, cost-effectiveness and comparative effectiveness of care; disparities in receipt or outcomes of care; translation of evidence-based practice into guidelines and evaluation of their real-world applications; and health policy analysis and implementation. Students in this concentration will acquire a solid grounding in the conduct of rigorous multidisciplinary studies applying quantitative, qualitative and mixed methods, and specialized competencies in key areas, viz., large database analysis; cost-effectiveness and comparative effectiveness analysis; health economics; health policy and management; and other advanced methods such as hierarchical linear modeling; structural equation modeling; instrumental variable analysis; analysis of weighted survey data; and spatial analysis of data.

There is a nationally recognized need for researchers prepared to lead or collaborate on the types of studies students in this concentration would be prepared to conduct. Placements of past graduates of our department who focused their studies in this area indicate that a variety of employment opportunities exist in academia, industry, and government. This concentration is closely related to research in comparative effectiveness, disparities, and health care quality, all three of which reflect national funding priorities. For example, over one billion in federal research dollars has recently been devoted to the funding of comparative effectiveness research.

Modern Biostatistics
Modern biostatistics is the science of designing experiments, analyzing and interpreting data from both experimental and observational studies, and making predictions. Appropriate planning and designing of a study is critical to ensure the quality and relevancy of its data to a scientific enquiry. Sound statistical analyses require consideration of multiple and perhaps previously unconsidered factors, knowledge and skills in modern statistics, computation and relevant sciences. Data mining and modern statistical learning techniques are important for knowledge discovery from large or massive data.

Modern biostatistics addresses all aspects of statistics that arise from medical and health-related sciences, including challenges in nanomedicine, microarray experiments, next generation sequencing, preclinical and clinical trials, complex health policies, biomedical engineering and other new/emerging areas. It involves the application and development of statistical methods for the advancement of medical science, health care and related areas. Thus, modern biostatistical scientists develop new statistical methods, play a key role in the effective communication of quantitative information, collaborate with medical scientists in disease prevention and treatments, and contribute to the rational formulation of health policies and interventions.

The concentration in modern biostatistics provides both theoretical and practical biostatistical training integrated with the core requirements in epidemiology and health sciences, facilitated by the involvement of faculty in cutting-edge biomedical and health research across the medical school and university. This concentration aims to develop students as modern biostatisticians with knowledge of the determinants of population health and/or another scientific area of applications (of the student's choice), as well as in statistical theory, methods and computing which naturally have applications beyond a particular substantive area. This program provides unique biostatistical training designed to prepare students for today’s rewarding careers in academia, government, and industry. Modern biostatisticians are highly sought after in the job market.
EPBI Courses

EPBI 400. Statistics As Integral to the Scientific Method. 3 Units.
Modern statistical thinking and methods and how they are integral to the scientific method. Designing studies (statistical planning), analyzing data, interpreting results, and presenting statistical material effectively and truthfully, often via graphics far more informative and truthful than those still commonly appearing in scientific publications. Mathematically, only ordinary algebra is needed to understand the key statistical concepts and models. Extensive use of R (via RStudio), an open-source (free) system that runs under Windows, Mac OS, and Linux, and is now a standard environment used widely throughout the scientific world. All R programs used in the lectures are provided to students, so they can modify them to conduct their own analyses. However, this course does not focus on the technical details underlying those computations. Almost all student work is based on using R to apply the methods to real/reallistic problems in their own research areas and then develop and give oral presentations. This includes learning that sticks. Grading is P/NP; auditing is allowed (if space available). May not be used to satisfy course requirements in MS or PhD programs in the Department of Epidemiology and Biostatistics.

EPBI 411. Introduction to Health Behavior. 3 Units.
Using a biopsychosocial perspective, an overview of the measurement and modeling of behavioral, social, psychological, and environmental factors related to disease prevention, disease management, and health promotion is provided. Offered as EPBI 411 and MPH 411. Prereq: Enrollment limited to MPH students (Plan A or Plan B) and EPBI students or consent.

EPBI 414. Introduction to Statistical Computing. 3 Units.
This course introduces the use of computers in epidemiologic investigations and biostatistical applications. Topics covered include the use of the Internet to access and obtain publicly available databases, database and spreadsheet concepts, and developing a sound approach to analysis planning and implementation. The majority of the course will focus on instruction in the use of SAS software for advanced database management and manipulation and basic statistical analyses, with parallel applications in R to exploit its features. Primary emphasis is on developing the knowledge and familiarity required for running these particular programs in connection with data collection, analysis, and presentation of results in clinical studies. Students will be required to complete assignments using personal computers using Windows operating systems and/or computer systems maintained by the department. Students should expect weekly assignments to reinforce lecture concepts. Knowledge of basic statistics is beneficial, as this course does not teach inferential statistical analysis in detail; but it is not vital to learning the material in this course.

EPBI 415. Statistical Computing and Data Analytics. 3 Units.
Statistical computing is an essential part of modern statistical training. This course emphasizes on statistical and data analytic problem solving skills, covers elements of statistical computing, and special topics in modern data analytics. This includes numerical methods for statistics, stochastic simulation, symbolic and graphical computation, plus special topics in resampling methods, EM algorithms, Gibbs Sampling/MCMC, projection pursuit, Laplace approximation, parallel computing, and selected methods for big and high dimensional data. The course will use R/Splus predominantly. However, interface of R with another high level programming language such as C, C++, Fortran, JAVA or Python will be essential for Big Data and intensive computation. Some Matlab, Mathematica, and graphviz will be used for symbolic and graphical computation. Prerequisite: Knowledge in statistics, equivalent to that in either STAT 325/425, or STAT 345/445, or EPBI 481 or EPBI 431, or by permission. Experience with at least one programming language is required: R/Splus, Matlab, C/C++, Fortran, JAVA, or Python. Prereq: STAT 312, STAT 325, STAT 425, STAT 345, STAT 445, EPBI 431 or EPBI 481.

EPBI 423. Dissemination and Implementation Science for Health Promotion. 3 Units.
This graduate-level course introduces concepts, skills, and methods for systematically disseminating and implementing evidence-based interventions for population health promotion. The course includes a focus on developing partnerships and transdisciplinary research teams, applying theories and frameworks to guide dissemination and implementation (D & I) science, examining research methods and designs appropriate for conducting D & I research at different and multiple levels of intervention (e.g., clinical, community, policy), and exploring channels for effectively communicating evidence to inform decision-making and practice in diverse contexts. Recommended Preparation: EPBI 411 or grad. level behavioral theory equivalent; EBPI 490 or MPH 483 or grad. level research methods equivalent.

EPBI 430. Design and Analysis of High-Dimensional Data. 3 Units.
High-dimensional, high-throughput data are often encountered in the fields of genomics, proteomics, systems biology and bioinformatics. Through this course, students will learn how to design high-throughput studies and analyze the high-dimensional genomic data necessary for precision medicine when the number of measures far exceeds the number of subjects ("high-dimensional data"). Topics include (but are not limited to) design of high-throughput studies, sample size estimation, power analysis, low-level preprocessing of microarrays, basic exploratory genomics and proteomics data analyses, multiple comparison (p>>n problem), supervised and unsupervised learning methods. These statistical methods will be applied to gene and protein expression data, and next generation sequencing data. The course will use an interdisciplinary approach that combine statistics, computer science, molecular biology, and genomics. While this particular course will focus mostly on statistical methods for designing and analyzing molecular studies, those who take it will come from a wide variety of disciplines. Therefore, relevant multivariate methods and molecular biology will be reviewed. Recommended Preparation: At least one advanced undergraduate or graduate statistical course experience.

EPBI 431. Statistical Methods I. 3 Units.
Application of statistical techniques with particular emphasis on problems in the biomedical sciences. Basic probability theory, random variables, and distribution functions. Point and interval estimation, regression, and correlation. Problems whose solution involves using packaged statistical programs. First part of year-long sequence. Offered as ANAT 431, BIOL 431, CRSP 431, EPBI 431 and MPH 431.
EPBI 432. Statistical Methods II. 3 Units.
Methods of analysis of variance, regression and analysis of quantitative data. Emphasis on computer solution of problems drawn from the biomedical sciences. Design of experiments, power of tests, and adequacy of models. Offered as BIOL 432, EPBI 432, CRSP432 and MPHP 432. Prereq: EPBI 431 or equivalent.

EPBI 433. Community Interventions and Program Evaluation. 3 Units.
This course prepares students to design, conduct, and assess community-based health interventions and program evaluation. Topics include assessment of need, evaluator/stakeholder relationships, process vs. outcome-based objectives, data collection, assessment of program objective achievement based on process and impact, cost-benefit analyses, and preparing the evaluation report to stakeholders. Recommended preparation: EPBI 490, EPBI 431, or MPHP 405. Offered as EPBI 433 and MPHP 433.

EPBI 434. Community Engaged Research: Principles, Methods and Applications. 3 Units.
Community-engaged research is a partnership approach to research that equitably involves community members, organization representatives, and academic researchers in all aspects of the research process. This course is designed to provide an overview of community-based participatory research (CBPR) and will familiarize students with the core principles, concepts and methods as it applies to health-related outcomes. Using a class format that includes lectures, discussion, case studies, small group exercises and fieldwork projects, we will examine and discuss key methodological considerations in each phase of the research process from partnering with communities to planning for research, data gathering, and dissemination of results. Examples of applications in both public health and clinical settings will be highlighted.

EPBI 435. Survival Data Analysis. 3 Units.
Basic concepts of survival analysis including hazard function, survival function, types of censoring; non-parametric models; extended Cox models: time dependent variables, piece-wise Cox model, etc.; sample size requirements for survival studies. Prereq: EPBI 432.

EPBI 436. Essence of Multilevel Statistical Modeling, Including Repeated Measures Analysis. 1 Unit.
A brief introduction to statistical models to handle studies having observational units (cases) at multiple levels (hierarchies). In particular, cases are often nested within groups, such as distinct communities, healthcare centers, or schools. Because the cases are not independent, ordinary statistical models (EPBI 432) are not appropriate. In addition, some research questions suggest case-level analyses; others suggest group-level analyses. Longitudinal and other repeated measures analyses can be formed by taking the measurements to be nested within independent cases. Methods include the basic "summary measure" approach and mixed linear model methods, such as random coefficient regression models. Examples and wise use of software (R and SAS) are stressed in order to develop a strong conceptual understanding of the models. This course joins EPBI 437 and 438 as the three-step "essence" series in advanced statistical methods required for the PhD in Population Health Science. Prereq: EPBI 432 or requisites not met permission.

EPBI 437. Essence of Classical Multivariate Analysis. 1 Unit.
A brief introduction to classical multivariate analysis methods: data visualization, two-group discriminant analysis via Hotelling's test, principal components and exploratory factor analysis, cluster analysis. Examples and wise use of software R are stressed in order to develop a strong conceptual understanding of the methods. This course joins EPBI 436 and 438 as the three-step "essence" series in advanced statistical methods required for the PhD in Population Health Science. Prereq: EPBI 432 or requisites not met permission.

EPBI 438. Essence of Structural Equation Modeling. 1 Unit.
Brief introduction to classic "linear structural relations" (LISREL) formulation of structural equation models: Building them to address specific research aims. Fitting and assessing the goodness of the fit. Prudent interpretations. Examples and wise use of software are stressed in order to develop a strong conceptual understanding. This course joins EPBI 436 and 437 as the three-step "essence" series in advanced statistical methods required for the PhD in Population Health Science. Prereq: EPBI 432 or requisites not met permission.

EPBI 440. Introduction to Population Health. 3 Units.
Introduces graduate students to the multiple determinants of health including the social, economic and physical environment, health services, individual behavior, genetics and their interactions. It aims to provide students with the broad understanding of the research development and design for studying population health, the prevention and intervention strategies for improving population health and the disparities that exist in morbidity, mortality, functional and quality of life. Format is primarily group discussion around current readings in the field; significant reading is required.

EPBI 444. Communicating in Population Health Science Research. 2 Units.
Doctoral seminar on writing journal articles to report original research, and preparing and making oral and poster presentations. The end products are ready-to-submit manuscripts and related slide and poster presentations for the required first-year research project in the PhD program in the Department of Epidemiology and Biostatistics. While this course provides a nucleus for this endeavor, students work intensively under the supervision of their research mentors, who guide all stages of the work including providing rigorous editorial support. Seminar sessions are devoted to rigorous peer critiques of every stage of the projects and to in-depth discussions of assigned readings. Recommended preparation: PhD students in the Department of Biostatistics and Epidemiology. Non-PhD EPBI students permitted if space available. Fluency in English writing (e.g., in accord with the Harbrace College Handbook). Prereq: EPBI 431 and EPBI 490. Coreq: EPBI 432.

EPBI 445. Research Ethics in Population Health Sciences. 0 Units.
This zero credit course is a required add-on for PhD students in EPBI. Students will register and fulfill all requirements for IBMS 500 "Being a Professional Scientist". The purpose of EPBI 445 is to address specialized population health topics not covered by IBMS 500, including international research, human genomics, and/or big data/electronic medical records. There will be no meetings/lectures for this course. Students will complete a short written assignment due at the end of the semester.
EPBI 447. Global Health: Outbreak Investigation in Real-Time. 3 Units.
This course provides a trans-cultural, trans-disciplinary, multimedia learning experience by analyzing historical and real-time data from the annual dengue endemics and sporadic epidemics in Puerto Rico and Brazil. A rigorous problem-centered training in the epidemiology, prevention, treatment, and control of infectious diseases using real-time and historical surveillance data of endemic and epidemic Dengue in Bahia, Brazil. This is an advanced epidemiology course in which core material will be primarily taught through reading assignments, class discussion, group projects, and class presentations. The course will utilize the online web-based communication and learning technology to create a single classroom between the CWRU and international partners with unique and complementary skills. In addition to joint classroom lectures across sites, student groups will also perform smaller-scale videoconference meetings for assigned group projects, thus creating strong international connections for the students, faculty, and our institutions. Note: Due to the complexities of time zones for this international course, the course will begin at 8:00a.m. until the U.S.A. adjusts clocks for Daylight Savings Time (unlike Brazil). Therefore, classes after the second week of March will begin at 9:00a.m. Offered as: EPBI 447, INTH 447, and MPHP 447. Prereq: EPBI 490.

EPBI 450. Clinical Trials and Intervention Studies. 3 Units.
Issues in the design, organization, and operation of randomized, controlled clinical trials and intervention studies. Emphasis on long-term multicenter trials. Topics include legal and ethical issues in the design; application of concepts of controls, masking, and randomization; steps required for quality data collection; monitoring for evidence of adverse or beneficial treatment effects; elements of organizational structure; sample size calculations and data analysis procedures; and common mistakes. Recommended preparation: EPBI 431 or consent of instructor. Offered as EPBI 450 and MPHP 450.

EPBI 451. Principles of Genetic Epidemiology. 3 Units.
A survey of the basic principles, concepts and methods of the discipline of genetic epidemiology, which focuses on the role of genetic factors in human disease and their interaction with environmental and cultural factors. Many important human disorders appear to exhibit a genetic component; hence the integrated approaches of genetic epidemiology bring together epidemiologic and human genetic perspectives in order to answer critical questions about human disease. Methods of inference based upon data from individuals, pairs of relatives, and pedigrees will be considered. Offered as EPBI 451, GENE 451, and MPHP 451. Prereq: EPBI/MPH 431 and EPBI/MPHP 490 or MPHP 405.

EPBI 452. Statistical Methods for Genetic Epidemiology. 3 Units.
Analytic methods for evaluating the role of genetic factors in human disease, and their interactions with environmental factors. Statistical methods for the estimation of genetic parameters and testing of genetic hypotheses, emphasizing maximum likelihood methods. Models to be considered will include such components as genetic loci of major effect, polygenic inheritance, and environmental, cultural and developmental effects. Topics will include familial aggregation, segregation and linkage analysis, ascertainment, linkage disequilibrium, and disease marker association studies. Recommended preparation: EPBI 431 and EPBI 451.

EPBI 453. Categorical Data Analysis. 3 Units.
Descriptive and inferential methods for categorical data with applications: bivariate data; models for binary and multinomial response variables, with emphasis on logit models; loglinear models for multivariate data; model fitting using the maximum likelihood approach; model selection and diagnostics; and sample size and power considerations. Topics in repeated response data as time allows. Recommended preparation: EPBI 441.

EPBI 454. Population Genetics for Genetic Epidemiology. 3 Units.
Introduce concepts and classical results of mathematical population genetics, with emphasis on the influence of evolutionary forces and population history on contemporary human genetic variation. Survey empirical population variation and their implication for mapping complex traits. How to simulate population sequence data using coalescence models will also be emphasized.

EPBI 457. Current Issues in Genetic Epidemiology: Design and Analysis of Sequencing Studies. 3 Units.
Statistical methods to deal with the opportunities and challenges in Genetic Epidemiology brought about by modern sequencing technology. Some computational issues that arise in the analysis of large sequence data sets will be discussed. The course includes hands-on experience in the analysis of large sequence data sets, in a collaborative setting. Prereq: EPBI 451 and EPBI 452.

EPBI 458. Statistical Methods for Clinical Trials. 3 Units.
This course will focus on special statistical methods and philosophical issues in the design and analysis of clinical trials. The emphasis will be on practically important issues that are typically not covered in standard biostatistics courses. Topics will include: randomization techniques, intent-to-treat analysis, analysis of compliance data, equivalence testing, surrogate endpoints, multiple comparisons, sequential testing, and Bayesian methods. Offered as EPBI 458 and MPHP 458. Prereq: EPBI 432 or MPHP 432.

EPBI 459. Longitudinal Data Analysis. 3 Units.
Descriptive and inferential methods for the analysis of longitudinal data with an emphasis on application in biological and health research. Topics include exploratory data analysis, response feature analysis, growth curve models, mixed-effects models, generalized estimating equations, and missing data. Prereq: EPBI 432.

EPBI 460. Introduction to Health Services Research. 3 Units.
This survey course provides an introduction to the field of Health Services Research and an overview of key health services research concepts and methods, including conceptual frameworks and models; outcomes research; risk adjustment; disparities in health care; policy/health care systems; cost and cost-effectiveness; quality of life, process improvement; patient satisfaction; patient safety; health economics; statistical modeling techniques; and qualitative research methods. Offered as EPBI 460 and MPHP 460.

EPBI 461. Health Services Research Methods. 3 Units.
This is a course in research methods focusing on practical issues in the conduct of health services research studies. Topics include: an overview of health services research; ethics in health services research; proposal writing and funding; the relationship between theory and research; formulating research questions; specifying study design and study objectives; conceptualizing and defining variables; validity and reliability of measures; scale construction; operationalizing health research relevant variables using observation, self and other report, and secondary analysis; formatting questionnaires; developing analysis plans; choosing data collection methods; sampling techniques and sample size; carrying out studies; preparing data for analysis; and reporting of findings.
EPBI 464. Obesity and Cancer: Views from Molecules to Health Policy. 3 Units.
This course will provide an overview of the components of energy balance (diet, physical activity, resting metabolic rate, dietary induced thermogenesis) and obesity, a consequence of long term positive energy balance, and various types of cancer. Following an overview of energy balance and epidemiological evidence for the obesity epidemic, the course will proceed with an introduction to the cellular and molecular biology of energy metabolism. Then, emerging research on biologically plausible connections and epidemiological associations between obesity and various types of cancer (e.g., colon, breast) will be presented. Finally, interventions targeted at decreasing obesity and improving quality of life in cancer patients will be discussed. The course will be cooperatively-taught by a transdisciplinary team of scientists engaged in research in energy balance and/or cancer. Didactic lectures will be combined with classroom discussion of readings. The paper assignment will involve application of course principles, lectures and readings. Offered as EBPI 464, MPHP 464.

EPBI 465. Design and Measurement in Population Health Sciences. 3 Units.
This course focuses on common design and measurement approaches used in population health sciences research. This course covers the preliminary considerations used in selecting qualitative, quantitative and mixed methods research approaches including an understanding of different philosophical worldviews, strategies of inquiry and methods and procedures for each approach. The course also includes an introduction to survey design and related concepts of latent variables, factor analysis and reliability and validity. Students will develop an in-depth knowledge of these design and measurement approaches through readings, lectures, group discussions and written and oral project presentations. Prereq: EPBI 440, EPBI 431, EPBI 432, EPBI 460, EPBI 444 and EPBI 445.

EPBI 466. Promoting Health Across Boundaries. 3 Units.
This course examines the concepts of health and boundary spanning and how the synergy of the two can produce new, effective approaches to promoting health. Students will explore and analyze examples of individuals and organizations boundary spanning for health to identify practice features affecting health, compare and contrast practices and approaches, and evaluate features and context that promote or inhibit boundary spanning and promoting health. Offered as MHPH 466, EPBI 466, SOCI 466, NURS 466 and BETH 466. Prereq: Graduate student status or instructor consent.

EPBI 467. Comparative and Cost Effectiveness Research. 1 Unit.
Comparative effectiveness research is a cornerstone of healthcare reform. It holds the promise of improved health outcomes and cost containment. This course is presented in a convenient 5-day intensive format in June. There are reading assignments due prior to the 1st session. Module A, Days 1-2: Overview of comparative effectiveness research (CER) from a wide array of perspectives: individual provider, institution, insurer, patient, government, and society. Legal, ethical and social issues, as well as implications for population and public health, including health disparities will also be a component. Module B, Day 3: Introduction to the various methods, and their strengths, weaknesses and limitations. How to read and understand CER papers. Module C, Days 4-5: Cost-Effectiveness Analysis. This will cover costing, cost analysis, clinical decision analysis, quality of life and cost-effectiveness analysis for comparing alternative health care strategies. Trial version of TreeAge software will be used to create and analyze a simple cost-effectiveness model. The full 3-credit course is for taking all 3 modules. Modules A or C can be taken alone for 1 credit. Modules A and B or Modules B and C can be taken together for a total of 2 credits. Module B cannot be taken alone. If taking for 2 or 3 credits, some combination of term paper, project and/or exam will be due 30 days later. Offered as EPBI 467 and MPHP 467.

EPBI 468. The Continual Improvement of Healthcare: An Interdisciplinary Course. 3 Units.
This course prepares students to be members of interprofessional teams to engage in the continual improvement in health care. The focus is on working together for the benefit of patients and communities to enhance quality and safety. Offered as EPBI 468, MPHP 468, NURS 468.

EPBI 480. Introduction to Statistical Theory. 3 Units.
Theoretical introduction to probability and deep understanding of key concepts of statistical inference. Topics will be covered are: basic probability theory, conditional probability, Bayes theorem, random variables, discrete and continuous distributions (Bernoulli, binomial, hypergeometric, Poisson, negative binomial, normal, gamma and beta distribution), expectation, variance, moments, moment generating functions, the central limit theorem, maximum likelihood methods, unbiased estimators, sufficient statistics, EM algorithm, sample and sampling distribution, point and interval estimation, hypothesis testing and basic asymptotic theory. Prereq: MATH 122, MATH 124 or MATH 126.

EPBI 481. Theoretical Statistics I. 3 Units.
Topics provide the background for statistical inference. Random variables; distribution and density functions; transformations, expectation. Common univariate distributions. Multiple random variables; joint, marginal and conditional distributions; hierarchical models, covariance. Distributions of sample quantities, distributions of sums of random variables, distributions of order statistics. Methods of statistical inference. Offered as STAT 345, STAT 445, and EPBI 481. Prereq: MATH 122 or MATH 223 or Coreq: EPBI 431.

EPBI 482. Theoretical Statistics II. 3 Units.
Point estimation: maximum likelihood, moment estimators. Methods of evaluating estimators including mean squared error, consistency, “best” unbiased and sufficiency. Hypothesis testing; likelihood ratio and union-intersection tests. Properties of tests including power function, bias. Interval estimation by inversion of test statistics, use of pivotal quantities. Application to regression. Graduate students are responsible for mathematical derivations, and full proofs of principal theorems. Offered as STAT 346, STAT 446 and EPBI 482. Prereq: STAT 345 or STAT 445 or STAT 456 or EPBI 481.
EPBI 483. Causal Inference. 3 Units.
This course covers concepts and methods for causal inference in health research. The ideas and approaches introduced in this course take us beyond standard statistical methods such as regression analysis, and have applications in both observational and randomized studies. Specific topics include potential outcomes, causal diagrams, confounding, propensity scores, instrumental variables, treatment noncompliance, mediation analysis, sensitivity analysis, and structural equations models. Prereq: EPBI/MPHP/BIOL 432 or equivalent.

EPBI 484. Global Health Epidemiology. 1 - 3 Unit.
This course provides a rigorous problem-centered training in the epidemiology, prevention, treatment, and control of infectious diseases and, more generally, global health. This is an advanced epidemiology that embraces an active learning environment. Students are expected to invest time out of the classroom reading and working with classmates. Classes will be conducted with discussions, debates, group projects, and group presentations. By taking this course, students will develop a framework for interpreting, assessing, and performing epidemiologic research on issues of global importance. The course will be divided into three modules: 1) Global Health Epidemiology, 2) Helminth Epidemiology, and 3) Epidemiology of Disease Elimination. Each module is worth 1 credit hour and may be taken separately. Each module will have a separate project and/or exam. The final exam time will be used for group presentations and panel discussion. Active class participation is required through discussions, case studies, and group projects. Offered as EPBI 484, INTH 484, and MPHP 484.

EPBI 490. Epidemiology: Introduction to Theory and Methods. 3 Units.
This course provides an introduction to the principles of epidemiology covering the basic methods necessary for population and clinic-based research. Students will be introduced to epidemiologic study designs, measures of disease occurrence, measures of risk estimation, and casual inference (bias, confounding, and interaction) with application of these principles to specific fields of epidemiology. Classes will be a combination of lectures, discussion, and in-class exercises. It is intended for students who have a basic understanding of the principals of human disease and statistics. Offered as EPBI 490 and MPHP 490. Prereq or Coreq: EPBI 431 or requisites not met permission.

EPBI 494. Infectious Disease Epidemiology. 3 Units.
This course focuses on tuberculosis (TB) and HIV epidemiology, including perspectives on these diseases in the US and globally. It is a follow-up to EPBI/MPHP 484: Global Health Epidemiology, but these courses do not necessarily need to be taken in sequence. This is an advanced course, focusing on methods and approaches in epidemiology and public health. Offered as EPBI 494, INTH 494 and MPHP 494. Prereq: EPBI 490.

EPBI 499. Independent Study. 1 - 18 Unit.

EPBI 500. Design and Analysis of Observational Studies. 3 Units.
An observational study investigates treatments, policies or exposures and the effects that they cause, but it differs from an experiment because the investigator cannot control assignment. We introduce appropriate design, data collection and analysis methods for such studies, to help students design and interpret their own studies, and those of others in their field. Technical formalities are minimized, and the presentations will focus on the practical application of the ideas. A course project involves the completion of an observational study, and substantial use of the R statistical software. Topics include randomized experiments and how they differ from observational studies, planning and design for observational studies, adjustments for overt bias, sensitivity analysis, methods for detecting hidden bias, and focus on propensity score methods for selection bias adjustment, including multivariate matching, stratification, weighting and regression adjustments. Recommended preparation: a working knowledge of multiple regression, some familiarity with logistic regression, with some exposure to fitting regression models in R. Offered as CRSP 500 and EPBI 500.

EPBI 501. Research Seminar. 0 Units.
This seminar series includes faculty and guest-lecturer presentations designed to introduce students to on-going research at the University and elsewhere. Seminars will emphasize the application of methods learned in class, as well as the introduction of new methods and tools useful in research.

EPBI 502. Seminar in Genetic Epidemiology and Bioinformatics. 0 Units.
Presentation of original research or recent journal publications by faculty and students.

EPBI 503. Seminar in Biostatistics. 0 Units.
Presentation of original research or recent journal publications by faculty and students in the area of Biostatistics.

EPBI 504. Seminar in Health Care Organization, Outcomes and Policy. 0 Units.
This seminar is designed to enhance the professional development of students in the Health Care Organization, Outcomes and Policy concentration of the Department of Epidemiology and Biostatistics and provide them with practical information, experiences and guidance to foster their academic success. Students will 1) develop the ability to critically appraise the health services research literature; 2) gain experience in organizing and delivering oral presentations based on published literature and their own research endeavors; 3) be exposed to role models and receive coaching on career development through lecture and discussion involving experienced faculty from within and outside the division; 4) receive didactic training and hands-on experience with career-related tasks and skills such as grant writing and proposal evaluation, article review, and effective participation in professional meetings; and hear faculty from within and outside the department describe their research. The specific content of the seminar for any given semester will be determined jointly by HCOOP students and faculty. Enrollment is limited to students in the HCOOP division of the Department of Epidemiology and Biostatistics.
EPBI 505. Seminar in Global Health Epidemiology. 0 Units.
This seminar series examines a broad range of topics related to infectious disease research in international settings. Areas of interest are certain to include epidemiology, bioethics, medical anthropology, pathogenesis, drug resistance, vector biology, cell and molecular biology, vaccine development, diagnosis, and socio-cultural factors contributing to or compromising effective health care delivery in endemic countries. Speakers will include a diverse group of regional faculty and post-doctoral trainees, as well as visiting colleagues from around the world. Students will be asked to read a journal article written by the speaker and then discuss this article with the speaker after their seminar.

EPBI 506. Seminar in Health Behavior and Prevention Research. 0 Units.
This seminar is designed to enhance the academic and professional development of students in the Health Behavior & Prevention Research (HB&PR) concentration in the Department of Epidemiology and Biostatistics. The seminar is comprised of a journal club style in which current and classic research literature in health behavior and prevention research is critically evaluated. Also, talks are given by students, faculty, and invited guests. These activities give students the opportunity to improve their ability to: 1) critically evaluate research literature in HB&PR; 2) lead effectively a discussion of a research article; and 3) organize and deliver oral presentations based on published literature and their own research endeavors. Some sessions are devoted to didactic training and hands-on experience with career-related tasks and skills such as grant writing, proposal evaluation, and manuscript review. The specific content of the seminar for any given semester will be determined jointly by the students and faculty in HB&PR. Enrollment is required of all PhD students in the HB&PR concentration of the Department of Epidemiology and Biostatistics; however, open is to all interested students.

EPBI 510. Health Disparities. 3 Units.
This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, EPBI 510, MPH 510, NURS 510, and SASS 510.

EPBI 515. Secondary Analysis of Large Health Care Data Bases. 3 Units.
Development of skills in working with the large-scale secondary data bases generated for research, health care administration/billing, or other purposes. Students will become familiar with the content, strength, and limitations of several data bases; with the logistics of obtaining access to data bases; the strengths and limitations of routinely collected variables; basic techniques for preparing and analyzing secondary data bases and how to apply the techniques to initiate and complete empirical analysis. Recommended preparation: EPBI 414 or equivalent; EPBI 431 or EPBI 460 and EPBI 461 (for HSR students).

EPBI 550. Meta-Analysis & Evidence Synthesis. 2 - 3 Units.
Systematic reviews use reproducible methods to systematically search the literature an synthesize the results of a specific topic area. Meta-analysis is a specific analytic technique used to pool results of individual studies. Systematic reviews are useful ways to establish one's knowledge in a particular field of study, and can highlight gaps in research which can be pursued in future work. They can also inform the background of a grant. This course is designed to introduce students to the methods of conducting a high quality systematic review. We will cover the design, methods, and analytic techniques involved in systematic reviews. These concepts will prepare students to conduct their own systematic review or evaluate the systematic reviews of others. Sessions will be lectures, labs, and presentations. Topics include developing a search strategy, abstracting key data, synthesizing the results qualitatively, meta-analytic techniques, grading the quality of studies, grading the strength of the evidence, and manuscript preparation specific to systematic reviews. Offered as CRSP 550 and EPBI 550. Prereq: CRSP 401, EPBI 431, MPH 405, NURS 532 or Requisites Not Met permission.

EPBI 601. Master's Project Research. 1 - 18 Unit.

EPBI 602. Practicum. 1 - 3 Unit.
This course focuses on the skills needed to become an effective statistical consultant. The course objectives are: to learn the role of the consulting statistician and the accompanying responsibilities and ethical considerations, to develop the ability to interact with clients and elicit the information required to provide consulting expertise, to learn general strategies for approaching consulting problems that can be applied to a wide range of problems in medical areas, and to develop expertise in areas needed by the consulting biostatistician. These include database architecture, data quality control, record keeping for potential audits, statistical techniques, and report generation.

EPBI 651. Thesis M.S.. 1 - 18 Unit.

EPBI 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

MPHP Courses

MPHP 306. History and Philosophy of Public Health. 3 Units.
The purpose of this course is to introduce students to the science and art of public health through an understanding of the history and philosophies that represent its foundation. Students will learn about the essentials of public health and applications of those precepts throughout history and in the present. The course will examine public health case histories and controversies from the past and present, in order to better understand solutions for the future. Offered as MPHP 306 and MPHP 406. Prereq: Enrollment limited to juniors and seniors only.

MPHP 313. Health Education, Communication, and Advocacy. 3 Units.
Historical, sociological, and philosophical factors that have influenced definitions and the practice of health education and health promotion are studied. Advanced concepts in health communication theory will also be explored. This course is designed to educate, motivate, and empower undergraduate and graduate students to become advocates for their own health, the health of their peers, and the health of the community. Offered as MPHP 313 and MPHP 413.
MPHP 403. Research & Evaluation Methods. 3 Units.
This course is designed to provide an overview of research and evaluation methods for first-year MPH students. Through lecture, discussion, and application exercises, students are introduced to the principles and processes of research and evaluation in public health, including formulation of research questions, aims and hypotheses and evaluation goals and objectives; literature review; development/selection of conceptual and theoretical models; quantitative, qualitative and evaluation project management; and application of ethical principles and protection of human subjects in public health research and evaluation.

MPHP 405. Statistical Methods in Public Health. 3 Units.
This one-semester survey course for public health students is intended to provide the fundamental concepts and methods of biostatistics as applied predominantly to public health problems. The emphasis is on interpretation and concepts rather than calculations. Topics include descriptive statistics; vital statistics; sampling; estimation and significance testing; sample size and power; correlation and regression; spatial and temporal trends; small area analysis; statistical issues in policy development. Examples of statistical methods will be drawn from public health practice. Use of computer statistical packages will be introduced. Prereq: Enrollment limited to MPH students (Plan A or Plan B) and EPBI students only. All others require instructor consent.

MPHP 406. History and Philosophy of Public Health. 3 Units.
The purpose of this course is to introduce students to the science and art of public health through an understanding of the history and philosophies that represent its foundation. Students will learn about the essentials of public health and applications of those precepts throughout history and in the present. The course will examine public health case histories and controversies from the past and present, in order to better understand solutions for the future. Offered as MPHP 306 and MPHP 406. Prereq: Enrollment limited to MPH students (Plan A or Plan B) and EPBI students or instructor consent.

MPHP 411. Introduction to Health Behavior. 3 Units.
Using a biopsychosocial perspective, an overview of the measurement and modeling of behavioral, social, psychological, and environmental factors related to disease prevention, disease management, and health promotion is provided. Offered as EPBI 411 and MPHP 411. Prereq: Enrollment limited to MPH students (Plan A or Plan B) and EPBI students or consent.

MPHP 413. Health Education, Communication, and Advocacy. 3 Units.
Historical, sociological, and philosophical factors that have influenced definitions and the practice of health education and health promotion are studied. Advanced concepts in health communication theory will also be explored. This course is designed to educate, motivate, and empower undergraduate and graduate students to become advocates for their own health, the health of their peers, and the health of the community. Offered as MPHP 313 and MPHP 413.

MPHP 421. Health Economics and Strategy. 3 Units.
This course has evolved from a theory-oriented emphasis to a course that utilizes economic principles to explore such issues as health care pricing, anti-trust enforcement and hospital mergers, choices in adoption of managed care contracts by physician groups, and the like. Instruction style and in-class group project focus on making strategic decisions. The course is directed for a general audience, not just for students and concentration in health systems management. Offered as ECON 421, HSMC 421, and MPHP 421.

MPHP 429. Introduction to Environmental Health. 3 Units.
This survey course will introduce students to environmental and occupational health topics including individual, community, population, and global issues. Students will develop an understanding of the human health impacts of physical, biological, and chemical agents in the environment and workplace including basic principles of toxicology. Presentation of concepts including risk assessment, communication and management as well as discussion of environmental and occupational practices, policies and regulations that promote public and population health is included.

MPHP 431. Statistical Methods I. 3 Units.
Application of statistical techniques with particular emphasis on problems in the biomedical sciences. Basic probability theory, random variables, and distribution functions. Point and interval estimation, regression, and correlation. Problems whose solution involves using packaged statistical programs. First part of year-long sequence. Offered as ANAT 431, BIOL 431, CRSP 431, EPBI 431 and MPHP 431.

MPHP 432. Statistical Methods II. 3 Units.
Methods of analysis of variance, regression and analysis of quantitative data. Emphasis on computer solution of problems drawn from the biomedical sciences. Design of experiments, power of tests, and adequacy of models. Offered as BIOL 432, EPBI 432, CRSP 432 and MPHP 432. Prereq: EPBI 431 or equivalent.

MPHP 433. Community Interventions and Program Evaluation. 3 Units.
This course prepares students to design, conduct, and assess community-based health interventions and program evaluation. Topics include assessment of need, evaluator/stakeholder relationship, process vs. outcome-based objectives, data collection, assessment of program objective achievement based on process and impact, cost-benefit analyses, and preparing the evaluation report to stakeholders. Recommended preparation: EPBI 490, EPBI 431, or MPHP 405. Offered as EPBI 433 and MPHP 433. Prereq: MPHP 411

MPHP 439. Public Health Management and Policy. 3 Units.
This course is designed to introduce students to the basics of health policy-making and includes a background on the basic structure and components of the US Health Care System (such as organization, delivery and financing). It will also cover introductory concepts in public health management, including the role of the manager, organizational design and control, and accountability. We will address relevant legal, political and ethical issues using case examples. At the end of the course, students will understand how health policy is developed and implemented in various contexts, and the challenges facing system-wide efforts at reform. This is a required course for the MPH degree. Grades will be based on a series of assignments. Prereq: Enrollment limited to MPH students (Plan A or Plan B) and EPBI Students or instructor consent.
MPHP 447. Global Health: Outbreak Investigation in Real-Time. 3 Units.
This course provides a trans-cultural, trans-disciplinary, multimedia learning experience by analyzing historical and real-time data from the annual dengue endemics and sporadic epidemics in Puerto Rico and Brazil. A rigorous problem-centered training in the epidemiology, prevention, treatment, and control of infectious diseases using real-time and historical surveillance data of endemic and epidemic Dengue in Bahia, Brazil. This is an advanced epidemiology course in which core material will be primarily taught through reading assignments, class discussion, group projects, and class presentations. The course will utilize the online web-based communication and learning technology to create a single classroom between the CWRU and international partners with unique and complementary skills. In addition to joint classroom lectures across sites, student groups will also perform smaller-scale videoconference meetings for assigned group projects, thus creating strong international connections for the students, faculty, and our institutions. Note: Due to the complexities of time zones for this international course, the course will begin at 8:00a.m. until the U.S.A. adjusts clocks for Daylight Savings Time (unlike Brazil). Therefore, classes after the second week of March will begin at 9:00a.m. Offered as: EPBI 447, INTH 447, and MPHP 447.

MPHP 450. Clinical Trials and Intervention Studies. 3 Units.
Issues in the design, organization, and operation of randomized, controlled clinical trials and intervention studies. Emphasis on long-term multicenter trials. Topics include legal and ethical issues in the design; application of concepts of controls, masking, and randomization; steps required for quality data collection; monitoring for evidence of adverse or beneficial treatment effects; elements of organizational structure; sample size calculations and data analysis procedures; and common mistakes. Recommended preparation: EPBI 431 or consent of instructor. Offered as EPBI 450 and MPHP 450.

MPHP 451. Principles of Genetic Epidemiology. 3 Units.
A survey of the basic principles, concepts and methods of the discipline of genetic epidemiology, which focuses on the role of genetic factors in human disease and their interaction with environmental and cultural factors. Many important human disorders appear to exhibit a genetic component; hence the integrated approaches of genetic epidemiology bring together epidemiologic and human genetic perspectives in order to answer critical questions about human disease. Methods of inference based upon data from individuals, pairs of relatives, and pedigrees will be considered. Offered as EPBI 451, GENE 451, and MPHP 451.

MPHP 456. Health Policy and Management Decisions. 3 Units.
This seminar course combines broad health care policy issue analysis with study of the implications for specific management decisions in organizations. This course is intended as an applied, practical course where the policy context is made relevant to the individual manager. Offered as HSMC 456 and MPHP 456.

MPHP 458. Statistical Methods for Clinical Trials. 3 Units.
This course will focus on special statistical methods and philosophical issues in the design and analysis of clinical trials. The emphasis will be on practically important issues that are typically not covered in standard biostatistics courses. Topics will include: randomization techniques, intent-to-treat analysis, analysis of compliance data, equivalency testing, surrogate endpoints, multiple comparisons, sequential testing, and Bayesian methods. Offered as EPBI 458 and MPHP 458.

MPHP 460. Introduction to Health Services Research. 3 Units.
This survey course provides an introduction to the field of Health Services Research and an overview of key health services research concepts and methods, including conceptual frameworks and models; outcomes research; risk adjustment; disparities in health care; policy/health care systems; cost and cost-effectiveness; quality of life, process improvement; patient satisfaction; patient safety; health economics; statistical modeling techniques; and qualitative research methods. Offered as EPBI 460 and MPHP 460.

MPHP 464. Obesity and Cancer: Views from Molecules to Health Policy. 3 Units.
This course will provide an overview of the components of energy balance (diet, physical activity, resting metabolic rate, dietary induced thermogenesis) and obesity, a consequence of long term positive energy balance, and various types of cancer. Following an overview of energy balance and epidemiological evidence for the obesity epidemic, the course will proceed with an introduction to the cellular and molecular biology of energy metabolism. Then, emerging research on biologically plausible connections and epidemiological associations between obesity and various types of cancer (e.g., colon, breast) will be presented. Finally, interventions targeted at decreasing obesity and improving quality of life in cancer patients will be discussed. The course will be cooperatively-taught by a transdisciplinary team of scientists engaged in research in energy balance and/or cancer. Didactic lectures will be combined with classroom discussion of readings. The paper assignment will involve application of course principles, lectures and readings. Offered as EPBI 464, MPHP 464.

MPHP 466. Promoting Health Across Boundaries. 3 Units.
This course examines the concepts of health and boundary spanning and how the synergy of the two can produce new, effective approaches to promoting health. Students will explore and analyze examples of individuals and organizations boundary spanning for health to identify practice features affecting health, compare and contrast practices and approaches, and evaluate features and context that promote or inhibit boundary spanning and promoting health. Offered as MPHP 466, EPBI 466, SOCI 466, NURS 466 and BETH 466. Prereq: Graduate student status or instructor consent.

MPHP 467. Comparative and Cost Effectiveness Research. 1 Unit.
Comparative effectiveness research is a cornerstone of healthcare reform. It holds the promise of improved health outcomes and cost containment. This course is presented in a convenient 5-day intensive format in June. There are reading assignments due prior to the 1st session. Module A, Days 1-2: Overview of comparative effectiveness research (CER) from a wide array of perspectives: individual provider, institution, insurer, patient, government, and society. Legal, ethical and social issues, as well as implications for population and public health, including health disparities will also be a component. Module B, Day 3: Introduction to the various methods, and their strengths, weaknesses and limitations. How to read and understand CER papers. Module C, Days 4-5: Cost-Effecrctiveness Analysis. This will cover costing, cost analysis, clinical decision analysis, quality of life and cost-effectiveness analysis for comparing alternative health care strategies. Trial version of TreeAge software will be used to create and analyze a simple cost-effectiveness model. The full 3-credit course is for taking all 3 modules. Modules A or C can be taken alone for 1 credit. Modules A and B or Modules B and C can be taken together for a total of 2 credits. Module B cannot be taken alone. If taking for 2 or 3 credits, some combination of term paper, project and/or exam will be due 30 days later. Offered as EPBI 467 and MPHP 467.
MPHP 468. The Continual Improvement of Healthcare: An Interdisciplinary Course. 3 Units.
This course prepares students to be members of interprofessional teams to engage in the continual improvement in health care. The focus is on working together for the benefit of patients and communities to enhance quality and safety. Offered as EPBI 468, MPH 468, NURS 468.

MPHP 472. Leadership and Advocacy in Urban Community Health. 3 Units.
Teams of medical and MPH students will work with the Children's Defense Fund and Cleveland neighborhood and nonprofit organizations using principles of community organization to articulate shared stories and hopes for the health and well-being of community where both the students and the organizations live and serve. While the course begins with dialogue, it will end with specific activities (performed by the students and community together) to improve community health, and a logic model for evaluating and expanding those activities. As reflection is a critical skill for leadership, the experiences in community organizing and advocacy will be counterposed with reflection on learning and will include independent reading and writing and small group discussions. Readings about leadership, advocacy and community health (particularly in cities) will include diverse perspectives and genre including work from Lao Tzu, Gandhi, Martin Luther King Jr., Shakespeare, Saul Alinsky and others. Prereq: Enrolled in MPH or JD program.

MPHP 475. Management of Disasters Due to Nature, War, or Terror. 3 Units.
The purpose of this course is to make participants aware of the special needs of children and families in disaster situations and understand public health approaches to address these needs. The learning objectives for this course are: 1) Identify the most important problems and priorities for children in disaster situations, 2) Identify the organizations most frequently involved in providing assistance in disaster situations and define their roles and strengths, 3) Describe the reasons why children are among the most vulnerable in disaster events, 4) Conduct emergency nutritional assessments for children, 5) Develop health profiles on displaced children and plan interventions based on results, 6) Define common psychosocial issues of children and the means to address them, 7) List basic points of international law including the Geneva Convention that relate to all persons involved in disaster situations, 8) List important security issues, 9) Appreciate ethical issues involved in disaster situations and employ skills of cross cultural communication, 10) Recognize and respond to special issues for children involved in biological and chemical terrorist attacks.

MPHP 477. Internship at Health-Related Government Agencies. 3 Units.
This independent study course will incorporate a one-semester-long internship at health-related government agencies (Ohio Department of Health, Ohio Department of Job and Family Services, or Cleveland City Health Department). The choice of the agency will depend on the student's academic interests and research goals. The objective is to develop a level of familiarity with the organizational and operational aspects of such agencies, and to gain an understanding of agencies' and bureaus' interactions with the legislative body, as well as the processes of developing, implementing, managing, and monitoring health initiative. The instructor and the liaison persons at the agencies will be responsible for planning structured encounters of interns with key administrators and policy makers, and to select a research project, based on the intern's research interests and the agencies' research priorities. Interns will be required to submit a draft of the report to the instructor at the end of the semester. The approved, final report will be submitted to the agency. The project will be evaluated for its methodological soundness and rigor. Students will be required to be at the agency one day a week. Recommended preparation: EPBI 515.

MPHP 479. Teaching Population Health and Community Assessment. 3 Units.
This course allows students to function in a teaching and leadership role in population health education and conduct of a multilevel community assessment of underserved neighborhoods in Cleveland. During the course, students will function as facilitators of small groups (8 to 9 students) of first year medical students during the Population Health block of their medical curriculum. Community assessment, also known as the "Extensive Care Unit" project will include 1) semi-structured interviews with Key Community Contacts; 2) an environmental scan of the assigned neighborhood; 3) analysis of publicly available data; and 4) analysis of youth risk behavior survey data. All data analysis will be mentored by course faculty. In addition, students will be involved with facilitation of a pandemic influenza tabletop exercise. Students will participate in an intensive training prior to facilitation responsibilities; and each week will both debrief the community assessment sessions and plan for the next weekly session.

MPHP 480. Health Systems Management in Primary Care. 1 Unit.
Goal - To develop a deeper understanding of components of the health system that influence and provide shape to the environment in which health care is delivered and about the implementation of systems-based strategies that foster better processes and/or outcomes of health care delivery.

MPHP 481. A Primer of Dental Public Health. 3 Units.
This course introduces students to principles and issues in dental public health. In addition to the principles, students will learn about contemporary issues impacting dental public health, oral epidemiology, dental health care systems, and oral health promotion. To facilitate the understanding of oral health promotion, students will gain a basic understanding of the common oral diseases. Prereq: MPH 306 or MPH 406 and MPH 490 or EPBI 490.
MPHP 482. Qualitative and Mixed Methods in Public Health. 3 Units.
The purpose of this course is three-fold - 1) to provide students with an understanding of the fundamentals of qualitative and mixed methods, including the history and philosophy of these methods, 2) to provide students with an understanding of and skill set associated with the use of qualitative and mixed methods in public health research, and 3) to provide students with an introduction to local professionals engaged in qualitative and mixed methods public health research. Prerequisites include MPH 405 and 483 (or equivalents) and current status as an MPH student. Prereq: MPH 405, MPH 483 and current MPH student.

MPHP 483. Introduction to Epidemiology for Public Health Practice. 3 Units.
This course is designed to introduce the basic principles and methods of epidemiology. Epidemiology has been referred to as the basic science for public health. Application of epidemiologic principles is critical to disease prevention, as well as in the development and evaluation of public policy. The course will emphasize basic methods (study design, measures of disease occurrence, measures of association, and causality) necessary for epidemiologic research. It is intended for students who have a basic understanding of the principals of human disease as well as statistics. Prereq: Must be an MPH Plan A or MPH Plan B, or EPBI student in order to enroll in the course.

MPHP 484. Global Health Epidemiology. 1 - 3 Unit.
This course provides a rigorous problem-centered training in the epidemiology, prevention, treatment, and control of infectious diseases and, more generally, global health. This is an advanced epidemiology that embraces an active learning environment. Students are expected to invest time out of the classroom reading and working with classmates. Classes will be conducted with discussions, debates, group projects, and group presentations. By taking this course, students will develop a framework for interpreting, assessing, and performing epidemiologic research on issues of global importance. The course will be divided into three modules: 1) Global Health Epidemiology 2) Helminth Epidemiology, and 3) Epidemiology of Disease Elimination. Each module is worth 1 credit hour and may be taken separately. Each module will have a separate project and/or exam. The final exam time will be used for group presentations and panel discussion. Active class participation is required through discussions, case studies, and group projects. Offered as EPBI 484, INTH 484, and MPH 484.

MPHP 485. Adolescent Development. 3 Units.
Adolescent Development can be viewed as the overriding framework for approaching disease prevention and health promotion for this age group. This course will review the developmental tasks of adolescence and identify the impact of adolescent development on youth risk behaviors. It will build a conceptual and theoretical framework through which to address and change adolescent behavior to promote health.

MPHP 490. Epidemiology: Introduction to Theory and Methods. 3 Units.
This course provides an introduction to the principles of epidemiology covering the basic methods necessary for population and clinic-based research. Students will be introduced to epidemiologic study designs, measures of disease occurrence, measures of risk estimation, and casual inference (bias, confounding, and interaction) with application of these principles to specific fields of epidemiology. Classes will be a combination of lectures, discussion, and in-class exercises. It is intended for students who have a basic understanding of the principals of human disease and statistics. Offered as EPBI 490 and MPH 490. Prereq or Coreq: EPBI 431 or requisites not met permission.

MPHP 491. Epidemiology: Case-Control Study Design and Analysis. 3 Units.
This course builds upon EPBI 490 with a comprehensive study of the concepts, principles, and methods of epidemiologic research. The course content specifically focuses on the case-control study design and provides a framework for the design, analysis, and interpretation of case-control studies. Rigorous problem-centered training includes exposure measurement, subject selection, validity, reliability, sample size and power, effect modification, confounding, bias, risk assessment, matching, and logistic regression. Individual and group data projects will be analyzed using SAS statistical software. Prereq: EPBI/MPHP 490.

MPHP 492. Epidemiology: Cohort Study Design and Analysis. 3 Units.
This course provides a comprehensive introduction to the cohort study. Particular emphasis is placed on cohort study design and cohort data analysis. The course will cover the conceptual framework underlying cohort studies, planning and conducting a cohort study, basic concepts of time, exposure and outcome, and methods in the analysis of longitudinally collected data. Analytic methods covered in the class include, but are not limited to: analysis of age, period, and cohort effects, analysis of incidence rates, analysis of repeated measures, and analysis of time-to-event data. Students will have the opportunity to conduct analysis of data obtained from an actual cohort study using a statistical package of their choice. Prereq: EPBI 431 and EPBI 490 or equivalent.

MPHP 494. Infectious Disease Epidemiology. 3 Units.
This course focuses on tuberculosis (TB) and HIV epidemiology, including perspectives on these diseases in the US and globally. It is a follow-up to EPBI/MPHP 484: Global Health Epidemiology, but these courses do not necessarily need to be taken in sequence. This is an advanced course, focusing on methods and approaches in epidemiology and public health. Offered as EPBI 494, INTH 494 and MPH 494. Prereq: EPBI 490.

MPHP 499. Independent Study. 1 - 18 Unit.

MPHP 506. The Future of Public Health. 0 - 3 Units.
This seminar course is meant to provide an orientation to the Master of Public Health (MPH) Program at Case Western Reserve University's (CWRU) School of Medicine, essential topics related to the future of public health as a professional field, and local public health efforts in the broader campus and Cleveland communities. This seminar is designed for first year MPH students. Prereq: MPH Plan A or Plan B student status.

MPHP 507. Building a Public Health Project. 0 Units.
This course is designed to walk students through the process of creating a Capstone Project, form "idea to field." Specific topics to be covered include: identifying a project, creating a project plan, how to effectively work in the community, program design, evaluation, ethical issues in community research, creating an analytic plan, survey design, and writing results. Major class projects include completing an IRB application or completing a grant application for your own project. The last two weeks of class center around attending and discussing the Capstone Presentations of graduating students. Prereq: MPH Plan A or Plan B student status.
MPHP 508. Ethics, Law, and Epidemiology. 3 Units.
This course is designed to provide epidemiology students with basic knowledge about the ethical and legal principles underling epidemiological research. This is not a public health law class. Issue papers are assigned on a weekly basis. Each issue paper requires that the student analyze the situation depicted and apply the principles learned. Some issue papers may require that the student draft a proposed rule, a portion of legislation, or a document such as an informed consent form. Other exercises may require that students critique an existing agency rule or legislation. Prereq: EPBI 490 and EPBI 491 or equivalent.

MPHP 510. Health Disparities. 3 Units.
This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, EPBI 510, MPHP 510, NURS 510, and SASS 510.

MPHP 532. Health Care Information Systems. 3 Units.
This course covers concepts, techniques and technologies for providing information systems to enhance the effectiveness and efficiency of health care organizations. Offered as HSMC 432 and MPHP 532.

MPHP 650. Public Health Practicum. 1 - 3 Unit.
The Public Health Practicum is an integral component of the MPH curriculum, allowing students to apply, develop, and refine their conceptual knowledge and skills as part of a planned, supervised, and evaluated community-based experience. The Practicum is designed to move students beyond the walls of academia, to understand the political, economic, social, and organizational contexts within which public health activities are conducted. To complete the Practicum, students must complete three credits of MPHP 650, dedicating at least 120 hours to a substantial public health experience, and attend Community Health Research and Practice (CHRP) group meetings. Prereq: Complete at least 9 credit hours in the MPH program and be in good academic standing.

Public health field practicum, involving a placement at a community-based field site, and a Master's essay. The field placement will provide students with the opportunity to apply the knowledge and skills acquired through their Master of Public Health academic program to a problem involving the health of the community. Students will learn to communicate with target groups in an effective manner; to identify ethical, social, and cultural issues relating to public health policies, research, and interventions; to identify the process by which decisions are made within the agency or organization; and to identify and coordinate use of resources at the placement site. The Master's essay represents the culminating experience required for the degree program and may take the form of a research thesis, an evaluation study, or an intervention study. Each student is required to formally present the experience and research findings. In any semester in which a student is registered for MPHP 652 credit, it is required that the student attend the Community Health Research and Practice (CHRP) group at a minimum of two sessions per 3 credits. CHRP is held once a week for approximately an hour and a half for the duration of fall, spring, and summer semesters. MPHP 652 credit is available only to Master of Public Health students.

MPHP 655. Dual Degree Field Practicum II. 3 Units.
This course is designed to be taken by MSSA/MPH joint degree students as the second field period of their master’s program. It consists of a field practicum and participation in professional development opportunities. The Field Practicum is an integral component of the MSASS and MPH curriculums, allowing students to apply, develop, and refine their conceptual knowledge and skills as part of a planned, supervised, and evaluated community-based experience. The Practicum is designed to move students beyond the walls of academia, to understand the political, economic, social, and organizational contexts within which social work and public health activities are conducted. These collective experiences provide students with the opportunity to develop skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent developing practitioners. (EPAAS Program Objective M6 and EPAAS Content Area 4.7) The overall goal of this course is to provide graduate level MSSA/MPH joint degree students with field related opportunities to continue to develop foundation level competencies in the eight MSSAS abilities by helping students apply knowledge of social work and public health theory, skills, values and ethics acquired in the classroom in an agency setting. Offered as MPHP 655 and SASS 655.
The Case Comprehensive Cancer Center (Case CCC) is one of only 41 centers operated by University Hospitals and Cleveland Clinic. As a consortium cancer center, Case CCC has become a powerful example of the potential generated by complementary institutions coming together for the benefit of research and discovery, patient treatments and community impact. Through its partners, Cancer Center programs extend throughout Northeast Ohio to offer residents access to cancer care through participation in community outreach, cancer prevention, cancer survivorship initiatives and a robust clinical trials operational effort coordinated across academic medical centers and community sites. The CCI has over 360 collaborating scientists and physicians who have successfully competed for over $119 million in annual funding. These investigators are organized into eight interdisciplinary scientific programs and have access to 15 Scientific Core Facilities. A unified clinical research effort consisting of 12 multidisciplinary clinical disease teams develop and prioritize clinical trials among the partner institutions. As a consortium cancer center, Case CCC serves a population with higher than average cancer rates. Research programs extend to CWRU affiliates MetroHealth Medical Center (the region’s county hospital) and Louis Stokes Veterans Affairs Hospital and to 13 community medical centers operated by University Hospitals and Cleveland Clinic.

The Center for Clinical Investigation (CCI) was founded in 2007 and is part of Case Western Reserve University School of Medicine’s Division of General Medical Sciences. The CCI serves as the academic home of Cleveland’s Clinical & Translational Science Collaborative, a partnership of 4 local institutions (Case Western Reserve University, the Cleveland Clinic Foundation, the MetroHealth System, and University Hospitals) and member of a national consortium of approximately 60 institutions funded by the National Institutes of Health to increase the efficiency and speed of clinical and translational research across the country. The CCI’s mission is to enhance clinical and translational research efforts across the Cleveland area by: (1) spurring advances in knowledge of risk factors, outcomes and treatment effectiveness in the population; (2) facilitating the transfer of scientific advances to the community; and (3) developing a new generation of clinical researchers equipped with the skills needed to efficiently design, implement and interpret novel studies that address important public health questions. To accomplish its mission, the CCI provides computer systems and applications support for basic science and clinical research activities and works closely with basic science and clinical investigators in the CWRU Schools of Medicine, Nursing, and Dental Medicine, as well as the University Hospitals Case Medical Center, Cleveland Clinic Foundation, and MetroHealth System. The CCI has supported hundreds of clinical research and epidemiology projects, including local and national multicenter, longitudinal studies.

MPHP 656. Dual Degree Field Capstone III. 3 Units.
The Public Health Capstone Project is an integral component of the MPH curriculum, allowing students to apply, develop, and refine their conceptual knowledge and skills as part of a planned, mentored, and evaluated public health scholarly project. This course is designed to be taken by advanced level students. It consists of a 288 hour field based Capstone experience and participation in 12 hours of professional development opportunities. The overall goal of this course is designed to move students beyond the walls and constraints of the classroom, to understand the political, economic, social, and organizational contexts within which public health and social work activities are conducted. It is also designed to provide graduate level dual degree students with field related opportunities to begin to develop advanced level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. These collective experiences provide students with a forum to continue to develop and hone social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent developing practitioners. (EPAS Program Objective M6 and EPAS Content Area 4.7) Offered as SASS 656 and MPHP 656 Prereq: MPHP 655.

MPHP 657. Dual Degree Field Capstone IV. 3 Units.
The Public Health Capstone Project is an integral component of the MPH curriculum, allowing students to apply, develop, and refine their conceptual knowledge and skills as part of a planned, mentored, and evaluated public health scholarly project. This course is designed to be taken by advanced level students. It consists of a 288 hour field based Capstone experience and participation in 12 hours of professional development opportunities. The overall goal of this course is designed to move students beyond the walls and constraints of the classroom, to understand the political, economic, social, and organizational contexts within which public health and social work activities are conducted. It is also designed to provide graduate level dual degree students with field related opportunities to begin to develop advanced level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. Offered as MPHP 657 and SASS 657.

General Medical Sciences
The Division of General Medical Sciences was established in 1986 to provide an organizational home for units pursuing interdisciplinary research and education objectives. The division is the equivalent of an academic department, and its constituent units are characterized as Centers. The Dean of the School of Medicine serves as the Chair of the division; each Center is led by a director. The unique nature of each of the General Medical Sciences centers is described in the paragraphs below. (Centers are listed in alphabetical order by full title, and associated academic programs including certificate, MS and PhD programs described in top navigation tabs).

Case Comprehensive Cancer Center
Phone: 216.844.8797
http://cancer.case.edu
Stanton L. Gerson, MD, Director, Case Comprehensive Cancer Center
Anne M. Duli, MPA, Associate Director, Research Administration and Finance
The Case Comprehensive Cancer Center (Case CCC) is one of only 41 National Cancer Institute-designated Comprehensive Cancer Centers in the country. The Case CCC integrates the cancer research activities of the largest medical collaborative in Ohio, Case Western Reserve University (CWRU), University Hospitals Case Medical Center and Cleveland Clinic - under a single leadership structure. Our researchers dedicate themselves to improving cancer outcomes through basic studies into signaling pathways giving rise to cancer and its generic and epigenetic causes, pursuing novel therapeutic targets, and analyzing lifestyle interventions to prevent cancer and detect it earlier.

Located in Cleveland, Ohio, the Case CCC serves a population with higher than average cancer rates. Research programs extend to CWRU affiliates MetroHealth Medical Center (the region’s county hospital) and Louis Stokes Veterans Affairs Hospital and to 13 community medical centers operated by University Hospitals and Cleveland Clinic.

As a consortium cancer center, Case CCC has become a powerful example of the potential generated by complementary institutions coming together for the benefit of research and discovery, patient treatments and community impact. Through its partners, Cancer Center programs extend throughout Northeast Ohio to offer residents access to cancer care through participation in community outreach, cancer prevention, cancer survivorship initiatives and a robust clinical trials operational effort coordinated across academic medical centers and community sites.

Center for Clinical Investigation
Phone: 216.368.3286
http://cci.case.edu/cci/index.php/Main_Page
Pamela Davis, MD, PhD, Director
James Spilsbury, PhD, Academic Development Core Director
Nathan Morris, PhD, Statistical Sciences Core Director
Guo-Qiang Zhang, PhD, Medical Informatics Division Chief
The Center for Clinical Investigation (CCI) was founded in 2007 and is part of Case Western Reserve University School of Medicine’s Division of General Medical Sciences. The CCI serves as the academic home of Cleveland’s Clinical & Translational Science Collaborative, a partnership of 4 local institutions (Case Western Reserve University, the Cleveland Clinic Foundation, the MetroHealth System, and University Hospitals) and member of a national consortium of approximately 60 institutions funded by the National Institutes of Health to increase the efficiency and speed of clinical and translational research across the country. The CCI’s mission is to enhance clinical and translational research efforts across the Cleveland area by: (1) spurring advances in knowledge of risk factors, outcomes and treatment effectiveness in the population; (2) facilitating the transfer of scientific advances to the community; and (3) developing a new generation of clinical researchers equipped with the skills needed to efficiently design, implement and interpret novel studies that address important public health questions. To accomplish its mission, the CCI provides computer systems and applications support for basic science and clinical research activities and works closely with basic science and clinical investigators in the CWRU Schools of Medicine, Nursing, and Dental Medicine, as well as the University Hospitals Case Medical Center, Cleveland Clinic Foundation, and MetroHealth System . The CCI has supported hundreds of clinical research and epidemiology projects, including local and national multicenter, longitudinal studies.
The CCI has three cores that work together to provide fully integrated research support to all investigators: Academic Development Core, Division of Medical Informatics, and Statistical Sciences Core.

The Academic Development Core manages the Master’s Degree Program in Clinical Research (http://casemed.case.edu/CRSP) (Clinical Research Scholars Program - see "Clinical Research MS" tab above) as well as a newly created Certificate Program in Clinical Research. The Academic Development Core also delivers seminars and short courses in clinical research and works to coordinate educational activities in interdisciplinary clinical research across the CTSC’s institutional members. The programs target investigators and other key members of the research team, including data managers and study coordinators. Training efforts in research design, research data management, statistical sciences, statistical software, and scientific communication are emphasized.

The Division of Medical Informatics is primarily charged with developing informatics solutions to many of the barriers clinical investigators face in efficiently processing, storing and sharing research data; and with providing informatics tools and infrastructure for the CCI and the larger research community. In order to meet these goals, the Division of Medical Informatics develops data standards for research database development and data management that aim to maximize the value (accuracy, completeness, availability, security) of research data, develops technological solutions and tools in support of the other CCI cores, develops tools and systems to facilitate understanding of research data (including data dictionaries, data sharing tools, and repositories for biological data) and conducts research in new methodologies for clinical research informatics, clinical and health informatics, comparative effectiveness research, information discovery, data integration, data mining, and translational research. The Division of Medical Informatics staff consists of research programmers and systems analysts with not only a wide range of technical expertise, but with experience using semantic web technology in support of clinical research.

The Statistical Sciences Core provides data management and statistical support on study design and data analysis. Members who provide data management consist of skilled data managers and programmers who consult and collaborate with investigators on data collection instrument development and coding, database development and administration, data cleaning and quality assurance, statistical programming, and dataset preparation. Members providing statistical support collaborate and consult with clinical investigators on proposal development, study design, study monitoring, and data analysis. The Statistical Sciences Core currently consists of 1 PhD biostatistician, 2 MS biostatisticians, and 1 data manager, each with several years of collaborative experience in an academic medical center. Statistical software packages that are supported by the CCI Statistical Sciences Core include SAS, SPSS, R/S-Plus, JMP, NCSS PASS, Minitab, and Stata.

The CCI Statistical Sciences Core also includes education and service as these are related to molecular, clinical and population studies of human health and disease.

The Center is currently a national leader in National Institutes of Health-supported studies of the major infectious diseases of developing countries. Cutting-edge approaches are implemented in order to examine the molecular, genetic and immunologic basis of susceptibility to infectious diseases of public health significance - malaria, river blindness, lymphatic filariasis, schistosomiasis, HIV and other viral diseases such as Rift Valley fever. Clinical research in endemic countries is concerned with testing and implementing cost-effective public health interventions that are aimed at the control of malaria and Neglected Tropical Diseases (worm infections of children, elimination of lymphatic filariasis). The Center has ongoing research and educational collaborations with academic and governmental institutions in Papua New Guinea, Brazil, Kenya, Uganda, and several other countries in Sub-Saharan Africa. Educational programs sponsored by the Center include electives in international health, population biology, and genetics of infectious diseases (available to undergraduate, graduate and professional school students), a weekly World Health Interest Group (WHIG) seminar series, overseas rotations for graduate and professional school students, and training programs at the university and abroad for scholars from developing countries (with support from the Fogarty International Center at NIH).

A certificate in Global Health is available (see Certificates).

Center for Medical Education

Phone: 216.368.6986
Megan McNamara, MD, Director, CAML

The Center for Medical Education, established in 2010, is currently being reorganized to better align with the needs of learners across the educational continuum – from students to residents to graduate students to faculty. The Center for Medical Education (CMEd) provides an organizational home for teaching and learning programs in the School of Medicine and a supportive environment for those who want to develop special skills in medical education.

The Center for the Advancement of Medical Learning ("CAML") operates its programs under the auspices of the CMEd. CAML supports and promotes the development of teaching and lifelong-learning skills among students, faculty, staff, residents, and alumni. CAML pursues research into educational innovations to advance our knowledge of medical learning and teaching. The Center offers workshops to faculty locally, regionally, and nationally to enhance faculty teaching, research, and evaluation skills.

The Center also sponsors faculty appointments, both full- and part-time, for some faculty whose roles are predominantly focused on teaching medical students. These include community clinicians who welcome medical students into their clinics and practices.

Center for Proteomics and Bioinformatics

Phone: 216.368.0291
http://proteomics.case.edu/default.aspx
Biomedical Research Building, Ninth Floor
Mark R. Chance, PhD, Director

The Case Center for Proteomics and Bioinformatics was created, in part, to strengthen Cleveland's presence in modern proteomics and bioinformatics research to make the region a leader in the field. The
vision for the Center has been shaped over the past several years by
the leadership of the Center’s Director, Mark Chance, Ph.D, with over
$80 million in grants awarded to the Center and its collaborators since
its inception in February 2006. One of the primary goals of the CPB is
to develop an infrastructure of sophisticated equipment that facilitates
and maximizes shared equipment usage, as well as to offer a wide array
of proteomics and bioinformatics services including mass spectrometry,
protein expression/interactions, systems biology, and biostatistical
analyses.

The CPB has expanded its vision to include education of graduate
students in systems biology and bioinformatics. The Center for
Proteomics and Bioinformatics developed a graduate program in Systems
Biology and Bioinformatics in collaboration with Schools and Departments
across the campus. For more information regarding the SYBB graduate
program please see “Systems/Bioinformatics” tab above. You may also
visit http://bioinformatics.case.edu/.

Proteomics entails the in depth structural analysis of individual proteins
in human and animal cells. In studying proteins and their changes,
bioinformatics enables researchers to take an integrated -omics approach
for discovering networks involved in human disease. The School of
Medicine has established the Center for Proteomics and Bioinformatics
to perform research to better understand the genetic and environmental
bases of disease as well as provide new technologies to diagnose
diseases such as cancer, heart disease, and diabetes.

New technologies in mass spectrometry are also allowing protein
expression, localization, structure, post-translational modifications,
and interactions to be studied in increasing detail and on a genome
wide scale. The Center is also developing and applying state-of-the-
art-structural proteomics technologies to understand the function and
interactions of macromolecular complexes.

The CPB has three divisions: Proteomics and Genomics, Bioinformatics,
and Macromolecular Structure.

Proteomics and Genomics Division
The mission of the Division of Proteomics and Genomics is to support
research in protein and gene expression analysis, protein and gene
modifications, and protein interactions in a wide variety of biological
contexts. The division also develops new tools in Proteomics and
Genomics research. This includes multiple Proteomics Cores to support
these activities.

Bioinformatics Division
The mission of the Division of Bioinformatics is to support interdisciplinary
research and training in many areas of bioinformatics including analysis
of DNA and protein sequences, protein interaction networks, linkage
and association studies for simple and complex traits, and gene and protein
expression profiles. This includes a Bioinformatics Core that provides
research support for these activities.

Macromolecular Structure Division
The mission of the Division of Macromolecular Structure is to support
interdisciplinary research in new methods of structure determination,
the combination of computational and experimental structural biology
approaches, and developing and maintaining infrastructure for
macromolecular structure determination. The Division will work closely
and coordinate their activities with faculty and Departments in the
University who use structural information to understand function as
well as other Centers that provide leadership in Structural Biology and
Biophysics.

The CPB also offers a wide range of seminars, workshops, and
possibilities for individual training. These activities are posted on the CPB
Web site. For a list of services and to explore opportunities to collaborate,
please visit the Web site: http://proteomics.case.edu/index.html or e-mail:
proteomics@case.edu.

Center for Psychoanalytic Child
Development
The Center for Psychoanalytic Child Development is to be led by
a child psychoanalyst affiliated with the Hanna Perkins Center for
Child Development, located in Shaker Heights, Ohio. The Center’s
goals include the development of courses, practica, and supervisory
experiences appropriate for medical students, residents, and fellows.

The Center for RNA Molecular Biology
Phone: 216.368.1852
http://www.case.edu/med/macenter/home.htm
Timothy W. Nilsen, PhD, Director
The Center for RNA Molecular Biology is a free standing academic unit
in the basic sciences within the School of Medicine at Case Western
Reserve University. The RNA Center was established in the mid-nineties
as a core entity in recognition of the strong cadre of research laboratories
devoted to studying post-transcriptional mechanisms of gene expression
focusing on various aspects of RNA Biology. The RNA Center is currently
composed of 8 primary faculty members and 10 secondary members.

The RNA Center contains the largest concentration of RNA molecular
biologists in the nation. Collectively, the faculty of the RNA Center cover
nearly every aspect of RNA research. Current research in the Center
focuses on several of these problems ranging from extremely basic
questions such as the mechanism of RNA catalysis and how proteins
interact with RNA to the roles of RNA processing in disease. Specific
research interests include splicing and its regulation, RNA editing, tRNA
maturation, mechanisms of translation regulation, RNA degradation,
RNA trafficking, RNA interference and regulation of gene expression by
microRNAs and non-coding RNAs.

Collectively, the RNA Center provides a valuable resource for
collaborative efforts within the University and its affiliated institutions
the Cleveland Clinic Foundation, and University Hospitals System. In
addition, the official journal of the RNA Society “RNA” was founded and
continues to be housed in the RNA Center. The members of the RNA
Center have an excellent funding record and the research performed is
regularly published in highly visible journals such as Science, Nature,
Molecular Cell, NSMB, Molecular Cell, etc. In addition, a comprehensive
laboratory manual on RNA technology has been co-authored by the
Center’s director, Dr. Nilsen.

Center for Science, Health and Society
Phone: 216.368.2059
http://casemed.case.edu/cshs/
Nathan A. Berger, MD, Director
Recognizing that the successful futures of Case Western Reserve
University, the City of Cleveland, and Cuyahoga County are integrally
related, the Center for Science, Health and Society (CSHS) was created
in 2002 to focus the efforts of the University and the community in a significant new collaboration to impact the areas of health and healthcare delivery systems through community outreach, education, and health policy. The Center, based in the School of Medicine, with university wide associations is engaging the many strengths of the University and the community to improve the health of the community.

The Center has engaged the community at the level of the individual and the neighborhood, in public and private schools, at civic and faith-based organizations, and at the level of governmental agencies and community leadership to identify community problems, perceptions, assets and resources; advise the community of faculty skills, assets and expertise; and, catalyze that community service based scholarship that benefits community interests and promotes mutual enhancement. The Center coordinates the Scientific Enrichment Opportunity outreach program that brings Cleveland high school students on to the medical school campus in the summer to work along with our distinguished faculty in their research labs, to introduce and stimulate the students and help prepare them to enter careers in the health careeer professions and biomedical workforce. The Center also coordinates the Mini Medical School Program presented every Spring and Fall to educate the community in the latest developments in healthcare, particularly those developed at CWRU. The overall goal of these programs is to educate and empower the community to become better consumers of healthcare and more informed and stronger advocates for healthcare policy and legislation in their own interests.

Center for the Study of Kidney Biology and Disease

Phone: 216.778.4993
John R. Sedor, MD, co-director
Tyler Miller, MD, co-director
Donald E. Hricik, MD, co-director
Walter Boron, MD, PhD, co-director

Kidney disease is the ninth leading cause of death according to the Centers for Disease Control data. Health care costs for approximately 500,000 patients, who are being treated with dialysis [artificial kidney machine] or who received a kidney transplant, consumed almost 1% of the federal budget in 2008. Up to 26 million U.S. residents have evidence of serious kidney disease

The Center's mission is to accelerate discovery and its translation for treatment and cure of kidney diseases in an interdisciplinary environment within the rich, research environment of the CWRU School of Medicine. The faculty is an accomplished and highly interactive group of investigators, based in the adult or pediatric Divisions of Nephrology in CWRU-affiliated hospitals and the Department of Physiology and other clinical and basic departments. Research interests of the faculty include glomerular development and disease, epithelial cell biology and ion transport, tubular physiology, genetic epidemiology, health services research, renal transplantation, health disparities research and clinical trials. Research faculty applies cellular, molecular biological, genetic, genomic and epidemiological methods to in vitro models, animal models and/or patients. Many projects by Center investigators use health data, culled from robust electronic health records, and biological samples from patients with kidney diseases in order to generate novel hypotheses, which can then tested with animal models and cell lines. Training opportunities are available for undergraduate, pre- and post-doctoral students.

National Center for Regenerative Medicine

Phone: 216.368.3614
http://www.ncrm.us/
Stanton L. Gerson, MD, Director
Jeremy Rich, MD, PhD, Co-Director
Mariesa Malinowski, Executive Director

The Center for Regenerative Medicine is a multi-institutional center composed of investigators from Case Western Reserve University, University Hospitals Case Medical Center, the Cleveland Clinic, Athersys, Inc., and The Ohio State University. Building on over 30 years of experience in adult stem cell research in northeast Ohio, the Center was created in 2003 with a $19.4 million award from the State of Ohio as a Wright Center of Innovation. An additional $8M award in 2006 from the State of Ohio's Biomedical Research and Commercialization Program (BRCP) was successfully completed and enabled 3 new clinical trials to enroll patients. In 2009, $5M was awarded by the Ohio Third Frontier (OTF) Research Commercialization Program (RCP) which further validated the Center's ability to achieve its mission to utilize human stem cell and tissue engineering technologies to treat human disease. In 2010, $1M was awarded to the NCRM by the OTF Biomedical Program (OTFBP) to advance the clinical treatment of spinal cord injury, and a $2.1M OTF Wright Program Project (WPP) award was made to create a consortium of quantitative analysis imaging systems for stem cells.

Clinical Research Scholars Program (CRSP) (http://casemed.case.edu/CRSP)

The Clinical Research program is designed for individuals with an existing degree in medicine, dentistry, nursing, or an allied science such as pharmacy or biomedical engineering. Moreover, a track has also been established for medical students interested in obtaining dual MD/MS degree. The program seeks individuals committed to a career in clinical investigation in an academic or related environment. The program consists of a total of 36 credits: 27 credit hours of coursework, 9 credit hours of mentored research and a formal oral thesis defense. The curriculum offers both focus and flexibility. Focus is provided through a core curriculum (13 credit hours) highlighting clinical research methods, the ethical conduct of research, and a seminar series that introduces the skills necessary for scholarly success. Students typically have special interests in a particular area of clinical research, both clinically and methodologically. This program facilitates pursuit of different methodological interests guided by seasoned CWRU research faculty and addressed partly with choice of appropriate electives (14 credit hours). Requirements for the dual MD/MS degree differ to reflect integration with the medical school curriculum. Most graduates of this program are currently working in academic medical settings, with smaller numbers located in research positions in the private sector or private practice.

CRSP Curriculum

36 credit hours are required for completion of this Master of Science in Clinical Research degree.

Core Courses and Thesis Requirement

| CRSP 401 | Introduction to Clinical Research Summer Series | 3 |
| CRSP 402 | Study Design and Epidemiologic Methods | 3 |
| CRSP 412 | Communication in Clinical Research - Grant Writing | 1 |
NURS 630  Advanced Statistics: Linear Models  3  
CRSP 413  Communication in Clinical Research - Oral Presentation, Posters, and the Mass Media  1  
CRSP 603  Research Ethics and Regulation  2  
CRSP 651  Clinical Research Scholars Thesis  9  

Total Units  22  

**Recommended Courses**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CRSP 406</td>
<td>Introduction to R Programming</td>
<td>2</td>
</tr>
<tr>
<td>CRSP 407</td>
<td>Logistic Regression and Survival Analysis</td>
<td>3</td>
</tr>
<tr>
<td>CRSP 500</td>
<td>Design and Analysis of Observational Studies</td>
<td>3</td>
</tr>
</tbody>
</table>

Total Units  8  

Each scholar is encouraged to develop his/her own area of concentration based on personal interests and needs. Typical areas of concentration include: Clinical Research Trials, Health Services Research and Outcomes, and Multidisciplinary/Translational Clinical Research. Please consult with CRSP faculty and your Research Mentor on which electives will best suit your needs.

**The choices of electives include but are not limited to:**

<table>
<thead>
<tr>

Certificate in Global Health

Ronald Blanton, MD
216.368.4814

The Certificate is the centerpiece of the Framework for Global Health Curricula comprised of faculty from across the Case Western Reserve University campus, whose objective is to promote education in global health issues. Nearly every department at CWRU offers multiple educational activities in global health. Rather than attempt to own all of these activities, the group at CWRU (representing Anthropology, Bioethics, Biology, Biostatistics/Epidemiology, Mathematics, Medicine, Nursing, Engineering) elected to develop a structure within which each department could develop independently while taking advantage of what the others had to offer. The organizing structure for this became the certificate program rather than a separate degree. This approach recognizes that student’s need to graduate within a recognized discipline as well as recognition of a student’s focus, time and effort in training.

Each student in the Certificate program will be grounded in global health by a core course (INTH 301 Fundamentals of Global Health /INTH 401 Fundamentals of Global Health) that will allow them to understand concepts and vocabulary across disciplines and that will facilitate meaningful communication with others based in a different discipline. In addition to the Certificate, the Framework for Global Health Curricula had identified and is annotating all global health related courses at CWRU. It has supported the recent revival of Medical Spanish and new courses and electives in Global Health.

**Certificate in Cancer Biology**

216.844.5375

Stanton Gerson, MD, Director

Lyn M. Haselton, MPA, Training Program Manager

Case Comprehensive Cancer Center

http://casemed.case.edu/CRSP

The Clinical Oncology Research Career Development Program (CORP) provides interdisciplinary training in clinical and translational oncology research for clinical oncology junior faculty physicians who are interested in pursuing academic research careers as physician scientists. This training addresses the need for clinician investigators to translate fundamental cancer research discoveries into medical care of cancer patients. Eligible candidates are physicians (MD, DO or MD/PhD) with a clinical training background in one of a number of oncology disciplines, including medical, surgical, pediatric, dermatological, gynecological and radiation oncology. Scholars select one of three areas of concentration:

- Mechanism Based Therapeutics and Clinical Trials
- Stem Cell Biology and Hematopoietic Malignancy Clinical Trials
- Prevention, Aging and Cancer Genetics and Clinical Trials

The Scholars' individual training plan consists of a 2-year certificate program which includes a didactic curriculum designed to provide basic background and highly individualized advanced training in both clinical and methodological components of clinical and translational cancer research.

Each Scholar is co-mentored by both a basic or behavioral scientist and a clinical investigator. A mentoring committee comprised of faculty in the Scholar's focus of oncology research provides additional guidance and support. During the period of mentored laboratory training, the Scholars develop original hypothesis-based experiments related to disease mechanisms at a molecular or cellular level. As the Scholars build on their laboratory conclusions to create and implement clinical trials, they are mentored by clinical investigators. Clinical trials are aimed at developing new methods for diagnosis and testing promising ideas for novel therapeutic interventions. These components come together with the Scholar's presentations at a national conference, publications in peer review journals and application for independent funding as a physician scientist.

This two-year certificate program is administered through the Case Comprehensive Cancer Center. The overall goal of the K12 CORP certificate program is to foster interdisciplinary training in clinical and translational oncology therapeutic research for physicians. Upon completion of this 15-19 hour two year training, scholars will earn the K12 CORP Certificate.

The formal didactic program includes a course in responsible conduct IBMS 500 On Being a Professional Scientist: The Responsible Conduct of Research (0) or CRSP 603 Research Ethics and Regulation (2 hr); CNCR 501 Translational Cancer Research A (Translational Cancer Research Course (1 hr/semester); and one elective (1-3). Additional required activities include Clinical Protocol Tutorials, Intensive Mentored Research Project, Ongoing seminars, Meetings and Presentations; and applications for independent funding.

**Formal Didactic Curriculum Coursework**:

**Graduate Certificate in Clinical Research**

James Spilsbury (james.spilsbury@case.edu), PhD, Director

Angela Bowling (angela.bowling@case.edu), Education Administrator

Center for Clinical Investigation

http://casemed.case.edu/CRSP
216.368.2601

The Clinical Research Certificate program is a four course, 11 credit hour program. Students who successfully complete the required coursework will receive a Certificate in Clinical Research issued by the Center for Clinical Investigation. Coursework includes: Introduction to Clinical and Translational Research; Study Design and Epidemiologic Methods; Advanced Statistics: Linear Models; and a course on Research Ethics and Regulation.

Admissions will be administered by the Center for Clinical Investigation. Individuals who want to participate in the program will complete an application form that includes a brief personal statement describing the reason(s) for seeking clinical research training and a recent CV or resume. Per CWRU School of Graduate Studies requirements, individuals who are not already graduate-degree-seeking students at CWRU must submit to the School of Graduate Studies a completed non-degree application form. Individuals who are not faculty, staff, or employees of CWRU must also submit a transcript or copy of their diploma, documenting completion of a baccalaureate degree. Once accepted into the Certificate program, participants will register for the courses through the Student Information System. The program will have rolling admissions, and students will be able to start taking courses in the summer or fall semester. The coursework for the Certificate will be listed on the official CWRU transcript. However, the Certificate in Clinical Research will be issued by the Center for Clinical Investigation, not the University, and will not appear on the official CWRU transcript.

Performance Standards: A grade of B or higher in each graded course will be required for successful completion of the Certificate program. Enrolees will be responsible for keeping track of the courses they take.

Required Courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>CRSP 401</td>
<td>Introduction to Clinical Research Summer Series</td>
<td>3</td>
</tr>
<tr>
<td>CRSP 402</td>
<td>Study Design and Epidemiologic Methods</td>
<td>3</td>
</tr>
<tr>
<td>NURS 630</td>
<td>Advanced Statistics: Linear Models</td>
<td>3</td>
</tr>
<tr>
<td>CRSP 603</td>
<td>Research Ethics and Regulation</td>
<td>2</td>
</tr>
</tbody>
</table>

Exit Standards: Students who complete all required coursework will submit a checklist to the Center for Clinical Investigation notifying the Center for Clinical Investigation’s Education Administrator/Manager that all coursework is completed. This administrator will verify with the registrar’s office that all requirements have been met and will then issue a certificate to the enrollee, documenting completion of the program.

Systems Biology and Bioinformatics MS and PhD Programs

BRB 9th Floor Admin West, School of Medicine
http://bioinformatics.case.edu/
Phone: 216.368.0291
Mark Chance, PhD, Director
David T. Lodowski, PhD, Co-Director

The Center for Proteomics and Bioinformatics offers multidisciplinary training leading to a MS or PhD in Systems Biology and Bioinformatics (SYBB). The program’s faculty cohort includes faculty from 12 departments and 4 schools across the CWRU campus. The fundamental core competencies of the SYBB program include: genes and proteins; bioinformatics and computational biology; and quantitative analysis and modeling with an emphasis on molecular systems biology.

The Systems Biology and Bioinformatics PhD program at CWRU offers trainees the opportunity to combine both experimental and computational or mathematical disciplines to understand complex biological systems. The SYBB program will train scientists who are able to generate and analyze experimental data for biomedical research and to develop physical or computational models of the molecular components that drive the behavior of a biological system. The goal of the program is to produce scientists who are familiar with multiple disciplines and equipped to conduct interdisciplinary research.

The Case Western Reserve University (CWRU) graduate program in Systems Biology and Bioinformatics (SYBB) has 4 tracks (http://bioinformatics.case.edu/tracks.html):

- **Translational Bioinformatics** - Equips students to apply recent advances in genomics and proteomics to solve clinical problems in a cost-effective manner
- **Clinical Research Informatics** - Prepares students to analyze large clinical data repositories to derive new knowledge pertaining to health and disease
- **Molecular and Computational Biology** - Provides students the cutting edge tools to tackle a variety of biological problems using computational approaches
- **Applied Health Informatics** - Students learn methods and technology to translate data to information to knowledge in the healthcare ecosystem

Students can choose 1 of the 4 tracks for both the M.S. and Ph.D. programs.

The SYBB participating departments and centers include:

- Biology
- Biomedical Engineering
- Center for Proteomics and Bioinformatics
- Electrical Engineering and Computer Science
- Epidemiology and Biostatistics
- Genetics and Genome Sciences
- Mathematics
- Physiology and Biophysics
- Pharmacology

Program Competencies

The specific academic requirements of the SYBB Program are intended to provide students with a required core curriculum in Systems Biology and a set of electives designed both to assure minimum competencies in three Fundamental Core Competencies and equip them for their particular thesis research discipline. Each trainee will be guided in a course of study by a mentoring committee to ensure the completion of training in the program competencies as well as maintenance of a focus on molecular systems theory.

**Fundamental Core Competencies**

- Genes and proteins
- Bioinformatics and Computational Biology
- Quantitative Analysis and Modeling
Masters Degree Plan A Summary

The minimum requirements for the master’s degree under Plan A are 21 semester hours of course work plus a thesis equivalent to at least 9 semester hours of registration for 30 hours total. These must include SYBB 501 Biomedical Informatics and Systems Biology Journal Club, and a minimum of 9 hours of SYBB 651 Thesis MS. Additional required courses for the Translational Bioinformatics and Molecular and Computational Biology tracks are SYBB 459 Bioinformatics for Systems Biology and SYBB 555 Current Proteomics. Additional required courses for the Clinical Research Informatics and Applied Health Informatics tracks are SYBB 421 and SYBB 422 Clinical Informatics at the Bedside and the Bench Parts I and II. The curriculum plan must be approved by the program steering committee and include appropriate coverage of the core competencies in genes and proteins, bioinformatics, and quantitative modeling and analysis. At least 18 semester hours of course work, in addition to thesis hours, must be at the 400-level or higher.

Each student must prepare an individual thesis that must conform to regulations concerning format, quality, and time of submission as established by the dean of graduate studies as well as conforming to the SYBB program guidelines. For completion of master’s degrees under Plan A, an oral examination (defense) of the master’s thesis is required, where the examination is conducted by a committee of at least three members of the university faculty.

Masters Degree Plan B Summary

The minimum requirements for the master’s degree under Plan B are 30 semester hours of course work (with at least 18 semester hours of course work at the 400 level or higher) and a written comprehensive examination or major project with report to be administered and evaluated by the program steering committee. The coursework must include SYBB 501 Biomedical Informatics and Systems Biology Journal Club. Additional required courses for the Translational Bioinformatics and Molecular and Computational Biology tracks are SYBB 459 Bioinformatics for Systems Biology and SYBB 555 Current Proteomics. Additional required courses for the Clinical Research Informatics and Applied Health Informatics tracks are SYBB 421 and SYBB 422 Clinical Informatics at the Bedside and the Bench Parts I and II. The curriculum plan must be approved by the program steering committee and include appropriate coverage of the core competencies in genes and proteins, bioinformatics, and quantitative modeling and analysis.

Sample Plan of Study for MS Degree in Clinical Research Informatics Track

Plan of Study includes required courses as well as electives.

PhD Program Summary

The Systems Biology and Bioinformatics program differs from current CWRU programs in the comprehensive requirement for an understanding of biological systems, bioinformatics, and quantitative analysis & modeling. The program includes a set of required courses including SYBB 501 Biomedical Informatics and Systems Biology Journal Club and a course in the Responsible Conduct of research (IBMS 500 On Being a Professional Scientist: The Responsible Conduct of Research). Additional required courses for the Translational Bioinformatics and Molecular and Computational Biology tracks are SYBB 459 Bioinformatics for Systems Biology and SYBB 555 Current Proteomics. Additional required courses for the Clinical Research Informatics and Applied Health Informatics tracks are SYBB 421 and SYBB 422 Clinical Informatics at the Bedside and the Bench Parts I and II. At least six additional courses will be required based upon individualized student interests. Other requirements include a qualifier exam, a PhD Dissertation, and oral defense. The total credits required for the PhD is at least 54 credits: 24 grade graduate courses, 12 pre-dissertation research credits, and at least 18 dissertation research credits. Admissions to this program may be obtained through the integrated Biomedical Sciences Training Program, by direct admission to the department or via the Medical Scientist Training Program.

Sample Plan of Study for PhD Degree

Please also see Graduate Studies Academic Requirements for Doctoral Degrees (p. 600)

Plan of study includes required courses as well as electives. Visit www.bioinformatics.case.edu for information regarding Plan of Study for all SYBB Tracks.

### CMED Courses

**CMED 401. Intro to Clinical Research and Scientific Writing. 3 Units.**

This seminar brings in numerous experts to cover a variety of essential issues and concepts in clinical research and scientific writing. The overarching goal is for students to produce a short but well-crafted research proposal. Topics for reading and discussion include general principles of research design and proposal development; key concepts and issues in biostatistical science for study planning, data management, analysis, interpretation, and presentation; modern medical library informatics; ethical issues in clinical research and necessary rigmarole; technical writing emphasizing research proposals; designing studies of diagnostic tests; outcomes research and medical decision making; clinical genomics research.

**CMED 402. Statistical Science for Medical Research. 3 Units.**

A rigorous, practical introduction to core concepts and methods in statistical planning, managing, and analyzing data, and interpreting and communicating biostatistical information. Seminar sessions: discuss readings, work through realistic examples using popular commercial software. Project sessions: individuals in small groups discuss their own examples and receive on-the-spot feedback. Topics: types of data and common distributions; database and statistical software; understanding and describing data with simple statistics and effective tables and graphics; statistical transforms (log, logit) and what they imply, basic inference tests, confidence intervals, and related sample-size analyses involving categorical data (analyzing proportions), ordinal data (analyzing ranks), continuous data (analyzing means), and time-to-event data with censoring. A substantial introduction to statistical modeling unifies seemingly diverse methods to induce a cohesive, flexible, and broad understanding of biostatistics. Medical students enrolled in CRSP must complete CCLCM Introduction to Clinical Research, IBIS 431 and IBIS 490 to satisfy the CRSP 401, 402 and 403 series. Prereq: Must be enrolled in School of Medicine.

**CMED 403. Introduction to Clinical Epidemiology. 3 Units.**

Using multiple learning modalities, including case-based seminars, computer-based interactive learning, journal club, and readings from texts as well as contemporary clinical literature, students will receive a rigorous introduction to methods of research in clinical epidemiology. Topics to be covered will include human subjects protections; legal and ethical components of clinical research; measures of disease frequency; basics of clinical study design; nature of and analysis of risk factors; cohort study design and analysis; case-control study design and analysis; confounding; interaction; bias; survey research; diagnostic tests; disease screening; design, analysis, and reporting of clinical trials; meta-analysis; decision analysis; cost-effectiveness analysis; and a brief introduction to health services research. Medical students enrolled in CRSP must complete CCLCM Introduction to Clinical Research, IBIS 431, and IBIS 490 to satisfy the CRSP 401, 402, and 403 series. Prereq: Must be enrolled in School of Medicine.

**CMED 404. Clinical Research Seminars. 1 Unit.**

The Clinical Research Seminars series is intended to give students a broad exposure to issues unique to clinical research as well as career development. Students attend seminars on relevant clinical research topics offered either on the Case or CCF campuses, and will write a short summary of each seminar attended. A total of 12-14 one-hour seminars per semester is required for successful completion of the course. Students are expected to take two semesters. Prereq: Must be enrolled in School of Medicine and consent of CCLCM Office.
CMED 405. Clinical Research Seminars. 1 Unit.
The Clinical Research Seminars series is intended to give students a broad exposure to issues unique to clinical research as well as career development. Students attend seminars on relevant clinical research topics offered either on the Case or CCF campuses, and will write a short summary of each seminar attended. A total of 12-14 one-hour seminars per semester is required for successful completion of the course. Students are expected to take two semesters. Prereq: Must be enrolled in School of Medicine and consent of CCLCM Office.

CMED 406. Introduction to Database Programming Base SAS. 0 Units.
Using the SAS Data Step as a programming language. Creating temporary and permanent SAS datasets, exchanging datasets with other software (e.g. Excel, Jmp, R), checking and manipulating data, sorting and merging, producing reports. Effective programming style. This is not a course in statistical analysis. Prereq: Must be enrolled in the School of Medicine and consent of CCLCM Office.

CMED 407. Basic Research Ethics. 3 Units.
Examine the ethical issues of clinical research involving human subjects. Topics include research versus clinical practice, informed consent, therapeutic misconception, risk reduction, vulnerability and subject selection, recruitment and inducement.

CMED 450. Clinical Trials. 3 Units.
Design, organization and operation of randomized controlled clinical trials and intervention studies. Topics include legal and ethical issues in design; application of concepts of controls; masking and randomization; steps required for quality data collection; monitoring for evidence of adverse or beneficial treatment effects; elements of organizational structure; sample size calculations and data analysis procedures and mistakes. Prereq: Must be enrolled in School of Medicine.

CMED 458. Statistical Modeling with Applications in Clinical Research. 3 Units.
Statistical modeling methods and strategies for analyzing data in clinical research, including randomized and non-randomized clinical trials. Standard Normal-theory, logistic, and Cox proportional hazard regression methods, emphasizing that these tools provide a unified schema to use linear models for continuous and categorical predictors of outcomes that are continuous, binary, or time-to-event with censoring. Repeated measures analysis using summary measures versus modern mixed models. Spline models for non-linear relationships. Extending the logistic model for ordinal outcomes. Propensity analysis. Software: R. Prereq: Must be enrolled in School of Medicine and consent of CCLCM Office.

CMED 460. Foundations of Clinical Medicine. 3 Units.
Students meet weekly to learn, examine, and discuss issues related to their future societal and professional roles as physicians. Topics covered include population health, medical errors and patient safety, cultural competence, health care disparities, quality improvement, pain management, ethical and legal issues in medicine, leadership, and professionalism. Prereq: Must be enrolled in School of Medicine and consent of CCLCM Office.

CMED 499. Independent Study in Clinical Trials. 3 Units.
A survey of the various aspects of clinical trial investigation to provide the student a first-hand perspective on the day-to-day conduct of clinical investigation from the perspective of investigating physicians, clinical trial coordinators, compliance and regulatory officers, and core laboratory personnel. Students will develop a specific plan with the course directors that will total 40-50 hours of discussion and direct participation. Prereq: CMED 450. Must be enrolled in the School of Medicine and consent of CCLCM Office.

CMED 500. Scientific Integrity in Biomedical Research. 0 Units.
This course covers a wide variety of topics in ethics for biomedical researchers including Institutional Review Boards for human and animal experimentation, requirements of the Health Insurance Portability and Accountability Act (HIPAA), informed consent, and de-identification of patient data in research databases. Issues of data ownership, responsibilities of authorship, and conflicts of interest are also discussed. Prereq: Enrolled in School of Medicine. Must have completed 1.5 years.

CMED 601. Clinical Research Project. 9 Units.
Clinical research project leading toward the completion of a type B Masters of Science in Biomedical Investigation - CRSP.

CNCR Courses

CNCR 460. Introduction to Microarrays. 3 Units.
Microarray technology is an exciting new technique that is used to analyze gene expression in a wide variety of organisms. The goal of this course is to give participants a hands-on introduction to this technology. The course is intended for individuals who are preparing to use this technique, including students, fellows, and other investigators. This is a hands-on computer-based course, which will enable participants to conduct meaningful analyses of microarray data. Participants will gain an understanding of the principles underlying microarray technologies, including: theory of sample preparation, sample processing on microarrays, familiarity with the use of Affymetrix Microarray Suite software and generation of data sets. Transferring data among software packages to manipulate data will also be discussed. Importation of data into other software (GeneSpring and DecisionSite) will enable participants to mine the data for higher-order patterns. Participants will learn about the rationale behind the choice of normalization and data filtering strategies, distance metrics, use of appropriate clustering choices such as K-means, Hierarchical, and Self Organizing Maps. Course Offered as BIOC 460, PATH 460, CNCR 460.

CNCR 501. Translational Cancer Research A. 1 Unit.
In this course Case K12 Paul Calabresi Scholars will learn about the steps to receive an IRB approval for their research proposal and clinical trials; how to design and conduct clinical trials-designing a protocol, developing a research question, the purpose of the LOI, funding and budge issues, working with pharmaceutical companies; essential writing skills for successfully submitting a manuscript for publication in a peer reviewed journal. The class will discuss Social Intelligence and the Biology of Leadership by Goleman and Boyatzis; the scholars will learn about the Case Cancer Center Core Facilities services and resources which are available for their research projects. Topics also include the expectations of the K12 CORP program and essential elements for advancing their academic and research career. Recommended preparation: Acceptance to Case K12 Clinical Oncology Career Development Training Program as Paul Calabresi Research Scholar.
CNCR 502. Translational Cancer Research B. 1 Unit.
In this course Case K12 Paul Calabresi Scholars will learn how to manage clinical trials; including staffing, multi or single site, contracting issues, translation and incorporation of laboratory research/ correlative science into clinical trials design, getting involved with ECOG. The scholars will learn about mentored and independent funding resources, how to select the appropriate mechanism, and strategies for successful grant submissions and resubmissions. They will learn how to present research and clinical trials progress orally and written to peers/faculty for evaluation my making two PowerPoint presentations: on to the class and their two K12 mentors and a second to the K12 CORP Advisory Committee for written evaluation. Both of these sections will be videotaped and a copy of the tape will be reviewed with the scholar. Each scholar will also provide a written summary of their research to date along with their goals for the next 12 months on April 1. Recommended preparation: Acceptance to Case K12 Clinical Oncology Career Development Training Program as Paul Calabresi Research Scholar.

CNCR 503. Translational Cancer Research C. 1 Unit.
In this course each Case K12 Paul Calabresi Scholar will present a summary of their experience from attending either the ASCO/AACR or ASH Clinical Trial Protocol Writing Workshop; two sessions will cover how to write a research proposal-hypothesis, specific aims, methods, and study design. Each scholar will write a sample research proposal which will be critiqued by the other members of the class; two sessions will cover the organization and analysis of biostatistic data used in research. One of these sessions will be a working session based on the scholar’s own data. The scholars will learn about the essential components and issues in developing a successful career in clinical and translational research. Recommended preparation: Acceptance to Case K12 Clinical Oncology Career Development Training Program as Paul Calabresi Research Scholars.

CNCR 504. Translational Cancer Research D. 1 Unit.
In this course Case K12 Paul Calabresi Scholars will discuss an article on essential components of leadership in an academic and clinical setting; how to advance their clinical research career to the level that they can present at the ASCO national conference; learn how to present research and clinical trials progress orally and written to peers/ faculty for evaluation by making two PowerPoint presentations: one to the class and their two K12 mentors and a second to the K12 CORP Advisory Committee for written evaluation. Both of these sessions will be videotaped and a copy of the tape will be reviewed with the scholar. Each scholar will also provide a written summary of their research and date along with their goals for the next 12 months on April 1. Recommended preparation: Acceptance to Case K12 Clinical Oncology Career Development Training Program as Paul Calabresi Research Scholar.

CRSP Courses
CRSP 401. Introduction to Clinical Research Summer Series. 1 - 3 Unit.
This course is designed to familiarize one with the language and concepts of clinical investigation and statistical computing, as well as provide opportunities for problem-solving, and practical application of the information derived from the lectures. The material is organized along the internal logic of the research process, beginning with mechanisms of choosing a research question and moving into the information needed to design the protocol, implement it, analyze the findings, and draw and disseminate the conclusion(s). Prereq: M.D., R.N., Ph.D., D.D.S., health professionals.

CRSP 402. Study Design and Epidemiologic Methods. 3 Units.
This course will cover the methods used in the conduct of epidemiologic and health services research and considers how epidemiologic studies may be designed to maximize etiologic inferences. Topics include: measures of disease frequency, measures of effect, cross-sectional studies, case-control studies, cohort studies, randomized controlled trials, confounding, bias, effect modification, and select topics. Recommended preparation: CRSP 401 or permission of instructor.

CRSP 406. Introduction to R Programming. 2 Units.
This course will provide students with an introduction to R. Major topics will include session management, data objects, reading and writing data, restructuring and combining data frames, handling missing data, working with dates, statistical analysis concepts, and R traditional graphics. Students will learn R programming conventions, how to create, manage and edit R scripts programs, and how to interpret output. Each class will consist of a demo on each lesson followed by a practice session when time permits. Small research datasets will be used both in class examples and in the exercises for each lesson. Students will be expected to complete all homework assignments on time and submit a take-home final exam.

CRSP 407. Logistic Regression and Survival Analysis. 3 Units.
This course will focus on the conceptual understanding and practical application of multivariable modeling in the context of binary and time to event outcomes. Particular emphasis will be placed on model specification, assessment of model assumptions and proper interpretation and visualization of model results. Classes will generally involve a conceptual discussion of the topic in question, followed by a practical application using R statistical software. Planned topics include contingency tables, logistic regression models, Kaplan-Meier curves, Cox proportional hazard models, and sample size estimation for binary and time to event outcomes. Students will be expected to complete biweekly assignments and two course projects involving problem specification, data collection, analysis using R, and a presentation. Prior to taking this course students should have working knowledge of linear regression and its application using R. Students must have the latest software version of R installed on their laptops. Recommended preparation: CRSP 406. Prereq: NURS 630.

CRSP 410. Independent Study in Clinical Research. 1 - 3 Unit.
Independent Study in Clinical Research enables the student to undertake study of advanced topics in clinical research that are not offered as standing courses at Case Western Reserve University. The student(s) and a member of the Clinical Research Scholars Program faculty, or another faculty member at CWRU, submit a 1-2 page proposal for independent study to the CRSP Program Director. The proposal should include a descriptive title (e.g., research method or clinical topic area) to be studied; a list of up to 5 student-centered objectives of the study; how the subject matter will be learned; and how success in achieving the objectives will be measured (e.g., manuscript, essay, grant proposal, or other written product; examination, etc.). It is expected that there will be at least one contact hour per week for each credit hour requested.

CRSP 412. Communication in Clinical Research - Grant Writing. 1 Unit.
Written communication is a critical skill in clinical science. We disseminate our work to others through publications, and we obtain the resources to conduct research through grant proposals. This course has been developed for K12 and CRSP scholars. The course focuses on writing grant proposals and, in particular, specific sections of an NIH-style grant. However, the principles discussed in the course apply to any type of proposal. Prereq: CRSP 401 or equivalent.
CRSP 413. Communication in Clinical Research - Oral Presentation, Posters, and the Mass Media. 1 Unit.
To move their work forward, investigators must be able to present their research effectively to both scientific and lay audiences. Although "the written word" is probably the first medium that comes to mind when we think of communication in scientific circles, other modes of communication are also vital. The main objective of this course is to help scholars improve their oral and poster presentation skills, as well as interaction with the mass media. This objective will be achieved through a combination of didactic sessions, readings, and presentations by the students. Prereq: CRSP 401 or equivalent.

CRSP 431. Statistical Methods I. 3 Units.
Application of statistical techniques with particular emphasis on problems in the biomedical sciences. Basic probability theory, random variables, and distribution functions. Point and interval estimation, regression, and correlation. Problems whose solution involves using packaged statistical programs. First part of year-long sequence. Offered as ANAT 431, BIOL 431, CRSP 431, EPBI 431 and MPH 431.

CRSP 432. Statistical Methods II. 3 Units.
Methods of analysis of variance, regression and analysis of quantitative data. Emphasis on computer solution of problems drawn from the biomedical sciences. Design of experiments, power of tests, and adequacy of models. Offered as BIOL 432, EPBI 432, CRSP432 and MPH 432. Prereq: EPBI 431 or equivalent.

CRSP 440. Translational & Patient-Oriented Research Theory. 3 Units.
Clinical (patient-oriented) and translational science has emerged as a new scientific discipline aimed to accelerate scientific discovery into effective practice. This course provides an overview of the theoretical framework, rationale, process, methodologies, and ethics of clinical and translational research. An integral feature of this course is the participation of a multidisciplinary teaching team, whose expertise and perspective will contribute to providing real-world insights into the complexities of translational and patient-oriented research.

CRSP 450. Seminar in Multidisciplinary Clinical & Translational Research. 0 Units.
The purpose of this monthly seminar is to introduce students to the processes and challenges of multidisciplinary clinical/translational science, through which discoveries in the laboratory or in early clinical studies are transformed into interventions, treatments, and ultimately, best practices and policies on national and international levels. The seminar will use a case-based approach. Examination of active projects at Case Western Reserve University, Cleveland Clinic Foundation, the MetroHealth Medical Center, University Hospitals Case Medical Center, and the Louis Stokes Veterans Administration Medical Center will enable students to learn first-hand about clinical translational science in action.

CRSP 500. Design and Analysis of Observational Studies. 3 Units.
An observational study investigates treatments, policies or exposures and the effects that they cause, but it differs from an experiment because the investigator cannot control assignment. We introduce appropriate design, data collection and analysis methods for such studies, to help students design and interpret their own studies, and those of others in their field. Technical formalities are minimized, and the presentations will focus on the practical application of the ideas. A course project involves the completion of an observational study, and substantial use of the R statistical software. Topics include randomized experiments and how they differ from observational studies, planning and design for observational studies, adjustments for overt bias, sensitivity analysis, methods for detecting hidden bias, and focus on propensity score methods for selection bias adjustment, including multivariate matching, stratification, weighting and regression adjustments. Recommended preparation: a working knowledge of multiple regression, some familiarity with logistic regression, with some exposure to fitting regression models in R. Offered as CRSP 500 and EPBI 500.

CRSP 501. Team Science - Working in Interdisciplinary Research Teams. 1 Unit.
This course will assist learners to understand how different professional disciplines, each representing a body of scientific knowledge, can best work together to develop and disseminate translational knowledge. Learners will develop a set of skills specific to be an effective member and leader of an interdisciplinary research team, including working with different value and knowledge sets across disciplines, understanding the mental models of other disciplines, creating shared mental models, running effective meetings, managing conflict, giving and receiving feedback, and group decision making techniques. Using the small group seminar approach and case studies, learners will practice individual and group communication, reflective and self-assessment techniques, and engage in experiential learning activities regarding effective teamwork in interdisciplinary research teams. Techniques to increase group creativity and frame new insights will be discussed.

CRSP 502. Leadership Skills for Clinical Research Teams. 2 Units.
Leadership Assessment and Development is for participants to learn a method for assessing their knowledge, abilities, and values relevant to management; and for developing and implementing plans for acquiring new management related knowledge and abilities. The major goals of this course include generating data through a variety of assessment methods designed to reveal your interests, abilities, values, and knowledge related to leadership effectiveness; learning how to interpret this assessment data and use it to design/plan developmental activities; small group sharing of insights from the various assessments. Recommended preparation: K grant appointment or consent of instructor.

CRSP 503. Innovation and Entrepreneurship. 1 Unit.
The purpose of this module is to acquaint and ultimately engage clinical researchers with the business of innovation and entrepreneurship. Goals include: (1) to provide researchers with many of the skills that they would need to translate academic research into commercial use; (2) to sensitize clinical researchers to the goals of the business community and facilitate their ability to work with the private sector on technology development; and (3) to make clinical researchers aware of the processes of academic technology development and transfer. Sessions consist of a lecture and case discussion facilitated by one of the co-directors.
CRSP 504. Managing Research Records - A System's Approach. 2 - 3 Units.
This course will provide an approach to managing data for research studies. Major topics include a discussion of a research study system including database design and development, data management, and clinical data management; how to evaluate the needs of a study including the impact of required regulations; summary of key regulations; the role of the data manager including protocol review, development of a data management plan, CRF design, data cleaning, locking studies and ensuring best practices. Each session will include a lecture, class discussion, and student presentation.

CRSP 505. Investigating Social Determinants of Health. 2 - 3 Units.
The biopsychosocial model highlights the inter-related roles that biological, psychological, and social factors play in health and illness. This course is geared towards clinical research scholars who would like to incorporate aspects of the "social context" in their research. The course will examine the conceptualization, measurement, and effects of several key socio-cultural determinants of health and illness. Sample studies that incorporate social determinants of health will be reviewed. The course will also consider strategies and techniques to conduct clinical research involving social factors in socially and ethnically diverse settings. Students will be encouraged to develop a prototypical study design to incorporate social determinants in their research. To earn an optional third credit hour for this course, students will be required to complete additional assignments tailored to the students' research needs and interests upon mutual agreement with the instructor at the beginning of the course. Recommended preparation: CRSP 401.

CRSP 510. Health Disparities. 3 Units.
This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, EPBI 510, MPHP 510, NURS 510, and SASS 510.

CRSP 550. Meta-Analysis & Evidence Synthesis. 2 - 3 Units.
Systematic reviews use reproducible methods to systematically search the literature and synthesize the results of a specific topic area. Meta-analysis is a specific analytic technique used to pool results of individual studies. Systematic reviews are useful ways to establish one's knowledge in a particular field of study, and can highlight gaps in research which can be pursued in future work. They can also inform the background of a grant. This course is designed to introduce students to the methods of conducting a high quality systematic review. We will cover the design, methods, and analytic techniques involved in systematic reviews. These concepts will prepare students to conduct their own systematic review or evaluate the systematic reviews of others. Sessions will be lectures, labs, and presentations. Topics include developing a search strategy, abstracting key data, synthesizing the results qualitatively, meta-analytic techniques, grading the quality of studies, grading the strength of the evidence, and manuscript preparation specific to systematic reviews. Offered as CRSP 550 and EPBI 550. Prereq: CRSP 401, EPBI 431, MPHP 405, NURS 532 or Requisites Not Met permission.

CRSP 601. Research Practicum. 1 - 3 Unit.
Research practicum and/or laboratory rotation.

CRSP 603. Research Ethics and Regulation. 2 Units.
This course is designed to introduce students to the ethical, policy, and legal issues raised by research involving human subjects. It is intended for law students, post-doctoral trainees in health-related disciplines and other students in relevant fields. Topics include (among others): regulation and monitoring of research; research in third-world nations; research with special populations; stem cell and genetic research; research to combat bioterrorism; scientific misconduct; conflicts of interest; commercialization and intellectual property; and the use of deception and placebos. Course will meet once per week for 2 hours throughout the semester. Grades will be given based on class participation and a series of group projects and individual short writing assignments. Offered as BETH 503, CRSP 603 and LAWS 603.

CRSP 651. Clinical Research Scholars Thesis. 1 - 18 Unit.
CRSP Thesis M.S.

CRSP 701. Dissertation Ph.D.. 1 - 9 Unit.
Ph.D. Dissertation credits. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

INTH Courses

INTH 301. Fundamentals of Global Health. 3 Units.
This course seeks to integrate the multiple perspectives and objectives in global health by investigating how the disciplines of Biology, Medicine, Anthropology, Nursing, Mathematics, Engineering analyze and approach the same set of international health problems. Students will develop a shared vocabulary with which to understand these various perspectives from within their own discipline. The focus sites will emphasize issues related to the health consequences of development projects, emergency response to a health care crisis and diseases of development in presence of underdevelopment. Offered as INTH 301 and INTH 401. Prereq: Junior or senior.
INTH 401. Fundamentals of Global Health. 3 Units.
This course seeks to integrate the multiple perspectives and objectives in global health by investigating how the disciplines of Biology, Medicine, Anthropology, Nursing, Mathematics, Engineering analyze and approach the same set of international health problems. Students will develop a shared vocabulary with which to understand these various perspectives from within their own discipline. The focus sites will emphasize issues related to the health consequences of development projects, emergency response to health care crisis and diseases of development in presence of underdevelopment. Offered as INTH 301 and INTH 401. Prereq: Graduate student.

INTH 447. Global Health: Outbreak Investigation in Real-Time. 3 Units.
This course provides a trans-cultural, trans-disciplinary, multimedia learning experience by analyzing historical and real-time data from the annual dengue endemics and sporadic epidemics in Puerto Rico and Brazil. A rigorous problem-centered training in the epidemiology, prevention, treatment, and control of infectious diseases using real-time and historical surveillance data of endemic and epidemic Dengue in Bahia, Brazil. This is an advanced epidemiology course in which core material will be primarily taught through reading assignments, class discussion, group projects, and class presentations. The course will utilize the online web-based communication and learning technology to create a single classroom between the CWRU and international partners with unique and complementary skills. In addition to joint classroom lectures across sites, student groups will also perform smaller-scale videoconference meetings for assigned group projects, thus creating strong international connections for the students, faculty, and our institutions. Note: Due to the complexities of time zones for this international course, the course will begin at 8:00a.m. until the U.S.A. adjusts clocks for Daylight Savings Time (unlike Brazil). Therefore, classes after the second week of March will begin at 9:00a.m. Offered as: EPBI 447, INTH 447, and MPHP 447.

INTH 484. Global Health Epidemiology, 1 - 3 Unit.
This course provides a rigorous problem-centered training in the epidemiology, prevention, treatment, and control of infectious diseases and, more generally, global health. This is an advanced epidemiology that embraces an active learning environment. Students are expected to invest time out of the classroom reading and working with classmates. Classes will be conducted with discussions, debates, group projects, and group presentations. By taking this course, students will develop a framework for interpreting, assessing, and performing epidemiologic research on issues of global importance. The course will be divided into three modules: 1) Global Health Epidemiology 2) Helminth Epidemiology, and 3) Epidemiology of Disease Elimination. Each module is worth 1 credit hour and may be taken separately. Each module will have a separate project and/or exam. The final exam time will be used for group presentations and panel discussion. Active class participation is required through discussions, case studies, and group projects. Offered as EPBI 484, INTH 484, and MPHP 484.

INTH 494. Infectious Disease Epidemiology. 3 Units.
This course focuses on tuberculosis (TB) and HIV epidemiology, including perspectives on these diseases in the US and globally. It is a follow-up to EPBI/MPHP 484: Global Health Epidemiology, but these courses do not necessarily need to be taken in sequence. This is an advanced course, focusing on methods and approaches in epidemiology and public health. Offered as EPBI 494, INTH 494 and MPHP 494. Prereq: EPBI 490.

INTH 551. World Health Seminar. 1 Unit.
This seminar series examines a broad range of topics related to infectious disease research in international settings. Areas of interest are certain to include epidemiology, bioethics, medical anthropology, pathogenesis, drug resistance, vector biology, cell and molecular biology, vaccine development, diagnosis, and socio-cultural factors contributing to or compromising effective health care delivery in endemic countries. Additionally we will discuss intellectual property policies on global access to medical innovations. Topics will also include neglected diseases and the interactions between these diseases with HIV and malaria infections. Speakers will include a diverse group of regional faculty and post-doctoral trainees, as well as visiting colleagues from around the world. Students will be asked to read a journal article written by the speaker and then discuss this article with the speaker after their seminar.

SYBB Courses
SYBB 311A. Survey of Bioinformatics: Technologies in Bioinformatics. 1 Unit.
SYBB 311/411A is a 5-week course that introduces students to the high-throughput technologies used to collect data for bioinformatics research in the fields of genomics, proteomics, and metabolomics. In particular, we will focus on mass spectrometer-based proteomics, DNA and RNA sequencing, genotyping, protein microarrays, and mass spectrometry-based metabolomics. This is a lecture-based course that relies heavily on out-of-class readings. Graduate students will be expected to write a report and give an oral presentation at the end of the course. SYBB 311/411A is part of the SYBB survey series which is composed of the following course sequence: (1) Technologies in Bioinformatics, (2) Data Integration in Bioinformatics, (3) Translational Bioinformatics, and (4) Programming for Bioinformatics. Each standalone section of this course series introduces students to an aspect of a bioinformatics project - from data collection (SYBB 311/411A), to data integration (SYBB 311/411B), to research applications (SYBB 311/411C), with a fourth module (SYBB 311/411D) introducing basic programming skills. Graduate students have the option of enrolling in all four courses or choosing the individual modules most relevant to their background and goals with the exception of SYBB411D, which must be taken with SYBB411A. Offered as SYBB 311A, BIOL 311A and SYBB 411A. Prereq: BIOL 214 and BIOL 215 or BIOL 250. Coreq: SYBB 311B, SYBB 311C, and SYBB 311D.

SYBB 311B. Survey of Bioinformatics: Data Integration in Bioinformatics. 1 Unit.
SYBB 311/411B is a five week course that surveys the conceptual models and tools used to analyze and interpret data collected by high-throughput technologies, providing an entry points for students new to the field of bioinformatics. The knowledge structures that we will cover include: biomedical ontologies, signaling pathways, and interaction networks. We will also cover tools for genome exploration and analysis. The SYBB survey series is composed of the following course sequence: (1) Technologies in Bioinformatics, (2) Data Integration in Bioinformatics, (3) Translational Bioinformatics, and (4) Programming for Bioinformatics. Each standalone section of this course series introduces students to an aspect of a bioinformatics project - from data collection (SYBB 311/411A), to data integration (SYBB 311/411B), to research applications (SYBB 311/411C), with a fourth module (SYBB 311/411D) introducing basic programming. Graduate students have the option of enrolling in all four courses or choosing the individual modules most relevant to their background and goals with the exception of SYBB411D, which must be taken with SYBB411A. Offered as SYBB 311, BIOL 311B, and SYBB 411B. Prereq: BIOL 214 and BIOL 215 or BIOL 250. Coreq: SYBB 311A, SYBB 311C, and SYBB 311D.
SYBB 311C. Survey of Bioinformatics: Translational Bioinformatics. 1 Unit.
SYBB 311/411C is a longitudinal course that introduces students to the latest applications of bioinformatics, with a focus on translational research. Topics include: 'omic drug discovery, pharmacogenomics, microbiome analysis, and genomic medicine. The focus of this course is on illustrating how bioinformatic technologies can be paired with data integration tools for various applications in medicine. The course is organized as a weekly journal club, with instructors leading the discussion of recent literature in the field of bioinformatics. Students will be expected to complete readings beforehand; students will also work in teams to write weekly reports reviewing journal articles in the field. The SYBB survey series is composed of the following course sequence: (1) Technologies in Bioinformatics, (2) Data Integration in Bioinformatics, (3) Translational Bioinformatics, and (4) Programming for Bioinformatics.

SYBB 311D. Survey of Bioinformatics: Programming for Bioinformatics. 1 Unit.
SYBB 311D/411D is a 1 credit, 5-week long course that will introduce students to bioinformatics software and programming in the R language; this course is designed for those with little or no prior programming experience. Students will gain hands-on experience working with R packages and functions designed for bioinformatics applications. Programming for Bioinformatics short course focuses on a platform, in this case R-project (rproject.org), and introduces students to basic programming in R, what packages are available for their use, and teaches an introductory hands-on experience working with R by walking through the students in analyzing a large-omics dataset. At the end of the class, the students are assessed with a small-scale project, where they analyze a publicly available dataset and produce a short report. The SYBB survey series is composed of the following course sequence: (1) Technologies in Bioinformatics, (2) Data Integration in Bioinformatics, (3) Translational Bioinformatics, and (4) Programming for Bioinformatics. Each standalone section of this course series introduces students to an aspect of a bioinformatics project - from data collection (SYBB 311/411A), to data integration (SYBB 311/411B), to research applications (SYBB 311/411C), with a fourth module (SYBB 311/411D) introducing basic programming. Graduate students have the option of enrolling in all four courses or choosing the individual modules most relevant to their background and goals with the exception of SYBB411D, which must be taken with SYBB411A. Offered as SYBB 311C, BIOL 311C and SYBB 411C. Prereq: (BIOL 214 and BIOL 215) or BIOL 250. Coreq: SYBB 311A, SYBB 311B, and SYBB 311D.

SYBB 319. Applied Probability and Stochastic Processes for Biology. 3 Units.
Applications of probability and stochastic processes to biological systems. Mathematical topics will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random samples from specified probability distributions), Markov processes in discrete and continuous time with discrete and continuous sample spaces, point processes including homogeneous and inhomogeneous Poisson processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using a combination of MATLAB, the R statistical package, MCell, and/or URDME, at the discretion of the instructor. Student projects will comprise a major part of the course. Offered as BIOL 319, EECS 319, MATH 319, SYBB 319, BIOL 419, EBM 419, MATH 419, PHOL 419, and SYBB 419. Prereq: MATH 224 or MATH 223 and BIOL 300 or BIOL 306 and MATH 201 or MATH 307 or consent of instructor.

SYBB 322. Clinical Informatics at the Bedside and the Bench (Part II). 3 Units.
This course is part of a two semester series that provides student with an overview of the field of clinical informatics and its research applications. SYBB 422 focuses on the use of informatics in public health, epidemiology, and translational bioinformatics; topics include: pharmaco-surveillance, comparative effectiveness research, and personalized medicine. Through lectures and in-depth readings of literature in the field, students will learn to approach population-level problems in medicine through the lens of "informatics", the science of information, with a focus on application over theory. Students will be required to use R (or another programming language) for data analysis assignments. Offered as SYBB 322 and SYBB 422. Prereq: SYBB 321.

SYBB 387. Undergraduate Research in Systems Biology. 1 - 3 Unit.
This course provides students research experience in data science, proteomics, bioinformatics, and clinical informatics under the guidance of faculty affiliated with the Systems Biology and Bioinformatics program. Areas of research include production of big data at bench (cellular proteomics, structural proteomics, genomics, and interaction proteomics) and analysis of big data such as computational/statistical biology, bioinformatics tool development and clinical research informatics. A written report must be approved by the sponsor and submitted to the director of the Center for Proteomics and Bioinformatics before credit is granted.

SYBB 388. Undergraduate Research. 1 - 3 Unit.
Guided laboratory research under the sponsorship of a biology faculty member. May be carried out within the biology department or in associated departments. Appropriate forms must be secured in the biology department office. A written report must be approved by the biology sponsor and submitted to the chairman of the biology department before credit is granted. Only 3 credit-hours may count towards the biology majors or minor. Offered as BIOL 388 and SYBB 388.
SYBB 388S. Undergraduate Research - SAGES Capstone. 3 Units.
Guided laboratory research under the sponsorship of a biology faculty member. May be carried out within the biology department or in associated departments. May be taken only one semester during the student's academic career. Appropriate forms must be secured in the biology department office. A written report must be approved by the biology sponsor and submitted to the chairman of the biology department before credit is granted. A public presentation is required. Offered as BIOL 388S and SYBB 388S. Counts as SAGES Senior Capstone.

SYBB 411A. Survey of Bioinformatics: Technologies in Bioinformatics. 1 Unit.
SYBB 311/411A is a 5-week course that introduces students to the high-throughput technologies used to collect data for bioinformatics research in the fields of genomics, proteomics, and metabolomics. In particular, we will focus on mass spectrometer-based proteomics, DNA and RNA sequencing, genotyping, protein microarrays, and mass spectrometry-based metabolomics. This is a lecture-based course that relies heavily on out-of-class readings. Graduate students will be expected to write a report and give an oral presentation at the end of the course. SYBB 311/411A is part of the SYBB survey series which is composed of the following course sequence: (1) Technologies in Bioinformatics, (2) Data Integration in Bioinformatics, (3) Translational Bioinformatics, and (4) Programming for Bioinformatics. Each standalone section of this course series introduces students to an aspect of a bioinformatics project - from data collection (SYBB 311/411A), to data integration (SYBB 311/411B), to research applications (SYBB 311/411C), with a fourth module (SYBB 311/411D) introducing basic programming skills. Graduate students have the option of enrolling in all four courses or choosing the individual modules most relevant to their background and goals with the exception of SYBB411D, which must be taken with SYBB411A. Offered as SYBB 311A, BIOL 311A and SYBB 411A. Prereq: Graduate Standing or Requisites Not Met Permission.

SYBB 411B. Survey of Bioinformatics: Data Integration in Bioinformatics. 1 Unit.
SYBB 311/411B is a five week course that surveys the conceptual models and tools used to analyze and interpret data collected by high-throughput technologies, providing an entry points for students new to the field of bioinformatics. The knowledge structures that we will cover include: biomedical ontologies, signaling pathways, and interaction networks. We will also cover tools for genome exploration and analysis. The SYBB survey series is composed of the following course sequence: (1) Technologies in Bioinformatics, (2) Data Integration in Bioinformatics, (3) Translational Bioinformatics, and (4) Programming for Bioinformatics. Each standalone section of this course series introduces students to an aspect of a bioinformatics project - from data collection (SYBB 311/411A), to data integration (SYBB 311/411B), to research applications (SYBB 311/411C), with a fourth module (SYBB 311/411D) introducing basic programming. Graduate students have the option of enrolling in all four courses or choosing the individual modules most relevant to their background and goals with the exception of SYBB411D, which must be taken with SYBB411A. Offered as SYBB 311, BIOL 311B, and SYBB 411B. Prereq: Graduate Standing or Requisites Not Met Permission.

SYBB 411C. Survey of Bioinformatics: Translational Bioinformatics. 1 Unit.
SYBB 311/411C is a longitudinal course that introduces students to the latest applications of bioinformatics, with a focus on translational research. Topics include: `omic drug discovery, pharmacogenomics, microbiome analysis, and genomic medicine. The focus of this course is on illustrating how bioinformatic technologies can be paired with data integration tools for various applications in medicine. The course is organized as a weekly journal club, with instructors leading the discussion of recent literature in the field of bioinformatics. Students will be expected to complete readings beforehand; students will also work in teams to write weekly reports reviewing journal articles in the field. The SYBB survey series is composed of the following course sequence: (1) Technologies in Bioinformatics, (2) Data Integration in Bioinformatics, (3) Translational Bioinformatics, and (4) Programming for Bioinformatics. Each standalone section of this course series introduces students to an aspect of a bioinformatics project - from data collection (SYBB 311/411A), to data integration (SYBB 311/411B), to research applications (SYBB 311/411C), with a fourth module (SYBB 311/411D) introducing basic programming. Graduate students have the option of enrolling in all four courses or choosing the individual modules most relevant to their background and goals with the exception of SYBB411D, which must be taken with SYBB411A. Offered as SYBB 311C, BIOL 311C and SYBB 411C. Prereq: Graduate Standing or Requisites Not Met Permission.

SYBB 411D. Survey of Bioinformatics: Programming for Bioinformatics. 1 Unit.
SYBB 311D/411D is a 1 credit, 5-week long course that will introduce students to bioinformatics software and programming in the R language; this course is designed for those with little or no prior programming experience. Students will gain hands-on experience working with R packages and functions designed for bioinformatics applications. Programming for Bioinformatics short course focuses on a platform, in this case R-project (rproject.org), and introduces students to basic programming in R, what packages are available for their use, and teaches an introductory hands-on experience working with R by walking through the students in analyzing a large-omics dataset. At the end of the class, the students are assessed with a small-scale project, where they analyze a publicly available dataset and produce a short report. The SYBB survey series is composed of the following course sequence: (1) Technologies in Bioinformatics, (2) Data Integration in Bioinformatics, (3) Translational Bioinformatics, and (4) Programming for Bioinformatics. Each standalone section of this course series introduces students to an aspect of a bioinformatics project - from data collection (SYBB 311/411A), to data integration (SYBB 311/411B), to research applications (SYBB 311/411C), with a fourth module (SYBB 311/411D) introducing basic programming. Graduate students have the option of enrolling in all four courses or choosing the individual modules most relevant to their background and goals with the exception of SYBB411D, which must be taken with SYBB411A. Offered as SYBB 311D, BIOL 311D and SYBB 411D. Prereq: Graduate Standing or Requisites Not Met Permission.
SYBB 419. Applied Probability and Stochastic Processes for Biology. 3 Units.
Applications of probability and stochastic processes to biological systems. Mathematical topics will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random samples from specified probability distributions), Markov processes in discrete and continuous time with discrete and continuous sample spaces, point processes including homogeneous and inhomogeneous Poisson processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using a combination of MATLAB, the R statistical package, MCell, and/or URDME, at the discretion of the instructor. Student projects will comprise a major part of the course. Offered as BIOL 319, EECS 319, MATH 319, SYBB 319, BIOL 419, EBME 419, MATH 419, PHOL 419, and SYBB 419.

SYBB 421. Fundamentals of Clinical Information Systems. 3 Units.
Technology has played a significant role in the evolution of medical science and treatment. While we often think about progress in terms of the practical application of, say, imaging to the diagnosis and monitoring of disease, technology is increasingly expected to improve the organization and delivery of healthcare services, too. Information technology plays a key role in the transformation of administrative support systems (finance and administration), clinical information systems (information to support patient care), and decision support systems (managerial decision-making). This introductory graduate course provides the student with the opportunity to gain insight and situational experience with clinical information systems (CIS). Often considered synonymous with electronic medical records, the "art" of CIS more fundamentally examines the effective use of data and information technology to assist in the migration away from paper-based systems and improve organizational performance. In this course we examine clinical information systems in the context of (A) operational and strategic information needs, (B) information technology and analytic tools for workflow design, and (C) subsequent implementation of clinical information systems in patient care. Legal and ethical issues are explored. The student learns the process of "plan, design, implement" through hands-on applications to select CIS problems, while at the same time gaining insights and understanding of the impacts placed on patients and health care providers. Offered as EBME 473, IIME 473 and SYBB 421.

SYBB 422. Clinical Informatics at the Bedside and the Bench (Part II). 3 Units.
This course is part of a two semester series that provides student with an overview of the field of clinical informatics and its research applications. SYBB 422 focuses on the use of informatics in public health, epidemiology, and translational bioinformatics; topics include: pharmacosurveillance, comparative effectiveness research, and personalized medicine. Through lectures and in-depth readings of literature in the field, students will learn to approach population-level problems in medicine through the lens of "informatics", the science of information, with a focus on application over theory. Students will be required to use R (or another programming language) for data analysis assignments. Offered as SYBB 322 and SYBB 422. Prereq: SYBB 321.

SYBB 437. Laboratory Course in Proteomics. 3 Units.
SYBB 437 is designed to train students, postdoctoral fellows, and senior investigators in advanced methods in quantitative proteomics in the context of investigating the effects of pH on protein expression in the model organism E. coli. This intensive laboratory class is a 3-credit laboratory course and will be offered for a scheduled three hours time block once each week. In this course, we will cover topics in proteomics including protein sample preparation, total protein quantification, gel based separation and quantification methods, quantitative high throughput mass spectrometry and data analysis methods for examining these high throughput data. Students enrolled in SYBB 437 will be expected to turn in weekly lab reports summarizing their findings on each of the lab topics and will write two project reports at the end of labs 9 and 14 interpreting and summarizing the results obtained.

SYBB 459. Bioinformatics for Systems Biology. 3 Units.

SYBB 472. BioDesign. 3 Units.
Medical device innovations that would have been considered science fiction a decade ago are already producing new standards of patient care. Innovation leading to lower cost of care, minimally invasive procedures and shorter recovery times is equally important to healthcare business leaders, educators, clinicians, and policy-makers. Innovation is a driver of regional economic development and wealth creation in organizational units ranging in size from the start-up to the Fortune 500 companies. In a broader context, the pace of translational research leading to product and service innovation is highly interdisciplinary, thus, new products and services result from team efforts, marked by a systematic, structured approach to bringing new medical technologies to market and impacting patient care. In this course we examine medical technology innovations in the context of (A) addressing unmet clinical needs, (B) the process of inventing new medical devices and instruments, and (C) subsequent implementation of these advances in patient care. In short, the student learns the process of "identify, invent, implement" in the field of BioDesign. Offered as EBME 472, IIME 472 and SYBB 472.
SYBB 501. Biomedical Informatics and Systems Biology Journal Club. 0 Units.
The purpose of this journal club is to provide an opportunity for students to critically discuss a wide variety of informatics and systems biology topics and to present their works in progress. A wide range of informatics and systems theory approaches to conducting biomedical research will be accomplished through the guided selection of articles to be discussed during the club. Potential articles will be chosen from scientific journals including: Nature, Science, BMC Bioinformatics, BMC Systems Biology, the Journal of Bioinformatics and Computational Biology, and the Journal for Biomedical Informatics. During journal presentations, trainees will be expected to lead a discussion of the article that leads to the critical evaluation of the merit of the article and its implication for biomedical informatics and systems biology. The Journal Club will also provide a forum for trainees to present proposed, on-going, and completed research. Trainees will attend and participate in the Journal Club throughout their tenure in the program. The Journal Club will meet twice a month and each trainee will be required to present one journal article and one research in progress presentation yearly. The Journal Club will also include sessions where issues related to the responsible conduct of research are reviewed and extended.

SYBB 502. Clinical Informatics Journal Club. 0 Units.
The Clinical Informatics Journal Club serves as a forum for students to present current research in the field of clinical informatics. Students are required to coregister for SYBB 421 or SYBB 422; weekly lectures in SYBB 421/422 will introduce topics for discussion in the journal club. SYBB 421 or SYBB 422

SYBB 535. Independent Study in Biomedical Informatics. 1 - 3 Unit.
For students pursuing MS or PhD degrees in SYBB, this course provides the opportunity for in-depth exposure to a subfield of systems biology and/or biomedical informatics. Degree-seeking students can enroll in this course prior to beginning 601 or 701 research. In conjunction with their proposed research advisor, enrolled students will undertake a self-directed study of a subfield of systems biology and/or biomedical informatics pertinent to their research area. The selected readings may also represent topics not covered by the student's coursework. The student's performance will be evaluated in an end-of-semester presentation or report at their advisor's discretion.

SYBB 555. Current Proteomics. 3 Units.
This course is designed for graduate students across the university who wish to acquire a better understanding of fundamental concepts of proteomics and hands-on experience with techniques used in current proteomics. Lectures will cover protein/peptide separation techniques, protein mass spectrometry, bioinformatics tools, and biological applications which include quantitative proteomics, protein modification proteomics, interaction proteomics, structural genomics and structural proteomics. Laboratory portion will involve practice on the separation of proteins by two-dimensional gel electrophoresis, molecular weight measurement of proteins by mass spectrometry, peptide structural characterization by tandem mass spectrometry and protein identification using computational tools. The instructors’ research topics will also be discussed. Recommended preparation: CBIO 453 and CBIO 455. Offered as PHRM 555 and SYBB 555.

SYBB 600. Special Topics. 1 - 18 Unit.
Offered as EECS 600 and SYBB 600.

SYBB 601. Systems Biology and Bioinformatics Research. 1 - 18 Unit.
(Credit as arranged.)

SYBB 651. Thesis MS. 1 - 18 Unit.
(Credit as arranged.)

SYBB 701. Dissertation PhD. 1 - 9 Unit.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Genetics and Genome Sciences

Clarice Young (clarice.young@case.edu), Coordinator

The Department of Genetics & Genome Sciences embraces a unified program devoted to outstanding research and teaching in all areas of genetics, with particular emphases on genomics, human genetics and animal models, development, and chromosome structure and function. Faculty conduct internationally recognized research programs in each of these areas. The also are committed to training the next generations of leading genetics researchers. The department has three special programs: the Center for Human Genetics, the Center for Computational Genomics, and the Genomic Medicine Institute (descriptions appear later in this narrative).

Programs offered lead to the PhD, combined MD/PhD degree, or MS with a special emphasis in genetic counseling. In addition to required and elective coursework, students participate in ongoing journal clubs, research seminars and grand rounds. A program of departmental and interdepartmental seminars by outstanding visiting scientists provides regular exposure to a broad range of current research in genetics.

The department accepts direct on-line applications (http://genetics.case.edu/page.php?page_id=126) to the doctoral program by those who have significant prior research experience in genetics and are committed to careers in genetics research. The PhD program also participates in the integrated Biomedical Sciences Training Program (BSTP, please see separate listing in this publication and/or BSTP Web site). Students interested in pursuing the combined MD/PhD program are admitted through the Medical Scientist Training Program (MSTP, please see separate listing in this publication). Those students interested in careers in genetic counseling apply directly to the Genetic Counseling Training Program, via the common Graduate Studies application (http://gradstudies.case.edu).

The Center for Human Genetics is an integral part of the Department of Genetics and consists of both research and clinical laboratories involved in human and clinical genetics. This center supports research and clinical programs focusing on the molecular basis of inherited disease, human genetic disease mapping, and the genetic dissection of complex disease, as well as providing clinical care and training for postdoctoral fellows and genetic counseling students.

The Center for Computational Genomics is an interdisciplinary research and training program involving faculty in the Department of Epidemiology and Biostatistics in the School of Medicine and in the Department of Electrical Engineering and Computer Science in the School of Engineering. The center provides opportunities to combine research in genetics, genomics, epidemiology, biostatistics, computer science, and systems biology.

The Genomic Medicine Institute is a joint program involving the Cleveland Clinic Foundation and Case. Its emphasis involves translating discoveries in basic and clinical research to clinical practice. The mission is to exploit
the discoveries in genomics, epidemiology, ethics, pharmacology, genetics and physiology to revolutionize the practice of medicine.

**MS Genetic Counseling**

The Genetic Counseling Training Program is a 40 credit hour program that spans four academic semesters and an intervening summer. Acquisition and mastery of clinical competencies are reflected in the Program’s didactic coursework, clinical rotations, thesis process and supplementary experiences. The sequence of medical genetics courses and genetic counseling courses are designed to introduce concepts regarding medical genetics, general medical practice, counseling theory and clinical skills such that they build from beginning skills to a more advanced skill set in the order needed for clinical experiences. The goal of the program is to provide students with the knowledge and clinical skills to function as competent and caring genetic counselors in a wide range of settings and roles. All of these activities enable successful graduates to meet the clinical competencies as outlined by the American Board of Genetic Counseling (ABGC).

Experiential professional training occurs concurrently with formal coursework and over the summer between years one and two. Clinical settings include a variety of clinics and inpatient services at the Center for Human Genetics at University Hospitals Case Medical Center, the Genomic Medicine Institute at the Cleveland Clinic, Genetic Services at MetroHealth Medical Center and Medical Genetics at Akron Children’s Hospital. Students also rotate through the Center for Human Genetics Diagnostic Laboratory which includes experiences in cytogenetics, molecular genetics, cancer cytogenetics and maternal serum screening. Student participation in these and other departmental professional and educational activities such as lectures, seminars, journal club, grand rounds, genetics conferences, and various research, counseling and patient management conferences is expected throughout the program. Coursework and clinical experiences are designed to develop the competencies expected by the ABGC.

The First Year

The major activities during the first year consist of course work (in plan of study below), clinical observations and preparing a research proposal. Observational clinical rotations begin early in October with students observing in prenatal genetics, cancer genetics, and general genetics clinics at the program’s three affiliated institutions. Additionally, students meet several times over the fall semester to discuss the thesis process, potential topics and are introduced to the faculty’s research areas of interest.

In addition to continuing clinical observational rotations and thesis work, students continue with course work including an introduction to research methods and more in-depth theory and practice in the psychosocial aspects of counseling during spring semester.

During the intervening summer of years one and two, students begin clinical rotations at the Medical Genetics Division at Akron Children’s Hospital to gain exposure in various clinical settings including prenatal, general genetics, pediatrics, specialty clinics and cancer genetics clinic. They also rotate through the Center for Human Genetics Laboratory to become familiarized with the clinical aspects of a diagnostic cytogenetics and molecular genetics laboratory.

The Second Year

The major focus of the second year is continued clinical experiences, research and taking the comprehensive written and oral examination.

Students also complete their coursework, taking one course each semester.

At the beginning of spring semester in January, the students sit for the written comprehensive examination (covering the didactic and clinical genetic counseling material covered to date in the program) and the oral section of the examination, which is given shortly after the written portion. Both examinations are intended to allow students to expand on their knowledge base of human and medical genetics and genetic counseling. Students are expected to pass both sections of the examination in order to meet graduation requirements by the Program. The written portion of the examination is patterned after the certification examination given by the American Board of Genetic Counseling.

Students continue to work on data collection and analyses for their theses projects, which should result in a publishable document. They meet with the PD periodically to review their progress as well as with their thesis committee and of course, are meeting with their mentor on a more frequent basis. During the fall semester of second year the student also attend the National Society of Genetic Counselors annual education meeting. This provides an opportunity for students to meet genetic counselors from across the country, to attend scientific sessions to continue adding to their knowledge base and to meet and discuss job opportunities with prospective employers. Successful completion of the program fulfills the curricular and clinical training requirements for eligibility to sit for the certification examination given by the ABGC.

The sequence of courses for students graduating in 2012 is as follows:

Total Units in Sequence: 43

**PhD Genetics**

Admissions to the Genetics program may be obtained through the integrated Biomedical Sciences Training Program, by direct admission to the department or via the MSTP program. The following summary pertains to most incoming PhD students, regardless of the route through which they enter the program. Exceptions are occasionally made to reflect previous educational experiences (e.g., a prior MS degree).

The First Year

Course work, rotations in at least three laboratories, and participation in seminars, journal clubs, and research meetings are the major activities of first year students. During the Fall term, most students take core courses in Cell and Molecular Biology (CBIO 453 Cell Biology I/CBIO 455 Molecular Biology I) that are offered for Biomedical Sciences Training Program departments. Laboratory rotations begin in early July and the choice of a thesis advisor is usually made at the end of December (see below for more details on Choosing an Advisor).

During the Spring term, PhD students take the core Advanced Eukaryotic Genetics course sequence (GENE 500 Advanced Eukaryotic Genetics I/GENE 504 Advanced Eukaryotic Genetics II), which is followed by a written comprehensive examination in late May or early June. This core course is designed to acquaint students with fundamental principles and methodologies used in modern genetic research. The focus is on similarities and differences between different model organisms used in genetics research. Also during the Spring term and continuing into the Summer, students begin formulating a doctoral research proposal.

The Second Year and Beyond

During the second year, students participate in a Proposal Writing Workshop (GENE 511 Grant Writing and Reviewing Skills Workshop) and take other advanced elective courses based on the academic background and interest of the student. The remaining elective credits can be satisfied by choosing from the courses offered by departmental faculty or participating training faculty from other departments (see List of Courses below). At the end of the second academic year, students must pass an oral proposal defense in order to advance to candidacy for the PhD degree. An outline of the typical course of study is shown below.

Please also see Graduate Studies Academic Requirements for Doctoral Degrees (p. 600).

**Other Requirements**

- Students meet twice per year with Thesis Committee
- Students meet once per year with Genetics Graduate Education Committee
Courses

GENE 367. Commercialization and Intellectual Property Management. 3 Units.
This interdisciplinary course covers a variety of topics, including principles of intellectual property and intellectual property management, business strategies and modeling relevant to the creation of start-up companies and exploitation of IP rights as they relate to biomedical-related inventions. The goal of this course is to address issues relating to the commercialization of biomedical-related inventions by exposing law students, MBA students, and Ph.D. candidates (in genetics and proteomics) to the challenges and opportunities encountered when attempting to develop biomedical intellectual property from the point of early discovery to the clinic and market. Specifically, this course seeks to provide students with the ability to value a given technological advance or invention holistically, focusing on issues that extend beyond scientific efficacy and include patient and practitioner value propositions, legal and intellectual property protection, business modeling, potential market impacts, market competition, and ethical, social, and healthcare practitioner acceptance. During this course, law students, MBA students, and Ph.D. candidates in genomics and proteomics will work in teams of five (two laws students, two MBA students and one Ph.D. candidate), focusing on issues of commercialization and IP management of biomedical-related inventions. The instructors will be drawn from the law school, business school, and technology-transfer office. Please visit the following website for more information: fusioninnovate.com. Offered as LAWS 5341, MGMT 467, GENE 367, GENE 467, EBME 467 and EECS 467.

GENE 467. Commercialization and Intellectual Property Management. 3 Units.
This interdisciplinary course covers a variety of topics, including principles of intellectual property and intellectual property management, business strategies and modeling relevant to the creation of start-up companies and exploitation of IP rights as they relate to biomedical-related inventions. The goal of this course is to address issues relating to the commercialization of biomedical-related inventions by exposing law students, MBA students, and Ph.D. candidates (in genetics and proteomics) to the challenges and opportunities encountered when attempting to develop biomedical intellectual property from the point of early discovery to the clinic and market. Specifically, this course seeks to provide students with the ability to value a given technological advance or invention holistically, focusing on issues that extend beyond scientific efficacy and include patient and practitioner value propositions, legal and intellectual property protection, business modeling, potential market impacts, market competition, and ethical, social, and healthcare practitioner acceptance. During this course, law students, MBA students, and Ph.D. candidates in genomics and proteomics will work in teams of five (two laws students, two MBA students and one Ph.D. candidate), focusing on issues of commercialization and IP management of biomedical-related inventions. The instructors will be drawn from the law school, business school, and technology-transfer office. Please visit the following website for more information: fusioninnovate.com. Offered as LAWS 5341, MGMT 467, GENE 367, GENE 467, EBME 467 and EECS 467.

GENE 488. Yeast Genetics and Cell Biology. 3 Units.
This seminar course provides an introduction to the genetics and molecular biology of the yeasts S. cerevisiae and S. pombe by a discussion of current literature focusing primarily on topics in yeast cell biology. Students are first introduced to the tools of molecular genetics and special features of yeasts that make them important model eukaryotic organisms. Some selected topics include cell polarity, cell cycle, secretory pathways, vesicular and nuclear/cytoplasmic transport, mitochondrial import and biogenesis, chromosome segregation, cytoskeleton, mating response and signal transduction. Offered as CLBY 488, GENE 488, MBIO 488, and PATH 488.

GENE 500. Advanced Eukaryotic Genetics I. 3 Units.
Fundamental principles of modern genetics; transmission, recombination, structure and function of the genetic material in eukaryotes, dosage compensation, behavior and consequences of chromosomal abnormalities, mapping and isolation of mutations, gene complementation and genetic interactions. Recommended preparation: BIOL 362.

GENE 503. Readings and Discussions in Genetics. 0 - 3 Units.
(Credit as arranged.) In-depth consideration of special selected topics through critical evaluation of classic and current literature.

GENE 504. Advanced Eukaryotic Genetics II. 3 Units.
Fundamental principles of modern genetics: population and quantitative genetics, dissection of genome organization and function, transgenics, developmental genetics, genetic strategies for dissecting complex pathways in organisms ranging from Drosophila and C. elegans to mouse and human. Recommended preparation: GENE 500 or permission of instructor.
GENE 505. Genetics Journal Club. 1 Unit.
Genetics Journal Club is a graduate level course designed to facilitate discussion of topics in Genetics. Students choose "hot" papers in Genetics and present them to their peers. Group presentations are designed to encourage audience participation. The intent of this class is to expose students to cutting edge topics in Genetics and to instill teaching and leadership skills.

GENE 508. Bioinformatics and Computational Genomics. 3 Units.
The course is designed to provide an understanding of theory and application of computational methods for molecular biology research. The course will be divided into four primary sections: DNA methods, protein methods, structure analysis (RNA and protein) and phylogenetic analysis. Special emphasis will be placed on the use and development of tools to search and analyze large amounts of sequence data generated as part of the Genome Projects in human, Drosophila and other eukaryotic organisms. The course offers extensive hands-on computational training using UNIX, Web and PC-based software. As such, for every hour of lecture material there will be two corresponding hours of computational laboratory time. In the initial year, enrollment will be limited to five students. Preference will be given to senior-level genetics graduate students or post-doctoral fellows. Recommended preparation: GENE 500 and GENE 504 or permission of instructor.

GENE 511. Grant Writing and Reviewing Skills Workshop. 3 Units.
This is an introductory graduate course in grant writing and reviewing skills. During this course each student will write a research grant on a topic of his or her choice. Proposals may form the basis for the written component of the preliminary examination in the Genetics Department. Students will also participate in editing and reviewing the proposals of their classmates. Prereq: GENE 500 and GENE 504 or consent of instructor.

GENE 513. Stem Cell Genetics. 3 Units.
This course focuses on fundamental aspects of development with implications for stem cell therapy, tissue engineering, regenerative medicine and postnatal health. The goal of the class is to inform and promote critical thinking and discussion of research topics of medical importance in developmental biology. The themes of the course will include the conditions and factors which promote pluripotency and differentiation, regeneration and repair, epigenetic stability and reprogramming, and prenatal conditions which affect postnatal health. The topics will include early embryonic development and embryonic stem cells, cardiac development and regeneration, bone development and repair, pancreatic development and regeneration, germ line stem cells and conditions affecting postnatal health. The course will be structured around facilitated discussion of the primary literature.

GENE 524. Advanced Medical Genetics: Molecular & Cytogenetics. 2 - 3 Units.
This course provides an in-depth forum for discussion of fundamental principles regarding clinical cytogenetics and molecular genetics and their relevance to medical genetics, genomics and genetic counseling. Following a historical overview, topics include a discussion of numerical and structural aberrations, sex chromosome abnormalities, issues regarding population cytogenetics, clinical relevance of such findings as marker chromosomes, mosaicism, contiguous gene deletions and uniparental disomy. The course will cover principles of molecular genetics including structure, function and regulations of genes (DNA, RNA, proteins), genetic variation, inheritance patterns and both cytogenetic and molecular laboratory techniques (fluorescence in situ hybridization, micro-array, SNP analyses, sequencing) in the clinical laboratory. Students who register for 3.00 credit hours are required to do an additional paper.

GENE 525. Advanced Medical Genetics: Clinical Genetics. 2 - 3 Units.
Fundamental principles regarding congenital malformations, dysmorphology and syndromes. Discussion of a number of genetic disorders from a systems approach: CNS malformations, neurodegenerative disorders, craniofacial disorders, skeletal dysplasias, connective tissue disorders, hereditary cancer syndromes, etc. Discussions also include diagnosis, etiology, genetics, prognosis and management.

GENE 526. Advanced Medical Genetics: Quantitative Genetics & Genomics. 2 - 3 Units.
The purpose of this course is twofold: first, to provide a foundation in quantitative genetics and second, to focus on genomic approaches and technologies which have greatly expanded our understanding of not only rare genetic disorders but common ones as well. We will cover concepts related to risk assessment and calculation and its application to medical genetics including principles and application of Hardy Weinberg equilibrium as well as applying Bayes' Theorem as a mechanism to refine risk assessment based on data specific to a patient. We will also focus on understanding the clinical implications of the interpretation of next generation sequencing results, identify limitations of genomic technologies, and practice curation / annotation and interpretation of genomic testing results. In addition, we will discuss resources and bioinformatics tools including national databases and clinical labs to aid in the interpretation of genomic test results including variants of uncertain significance. Students who register for 3.00 credit hours are required to do an additional paper.

GENE 527. Advanced Medical Genetics: Biochemical Genetics. 2 - 3 Units.
Fundamental principles of metabolic testing; amino acid disorders; organic acid disorders; carbohydrate disorders; peroxisomal disorders; mitochondrial disorders; etc. Discussion of screening principles and newborn screening as well as approaches to diagnosis, management and therapy for metabolic diseases.

GENE 528. Principles and Practices of Genetic Counseling. 3 Units.
Fundamental principles needed for the practicing genetic counselor. Topics include skills in obtaining histories (prenatal, perinatal, medical, developmental, psychosocial and family); pedigree construction and analysis, physical growth and development; the genetic evaluation; the genetic counselor's role; and hereditary risk assessment. Discussions also include diagnosis, etiology, genetics, prognosis and management.

GENE 529. Psychosocial Issues in Genetic Counseling. 3 Units.
Fundamental principles regarding the psychosocial aspects of genetic disease and birth defects, its psychological and social impact on the individual and family. Topics include the genetic counseling interview process, issues regarding pregnancy and prenatal diagnosis, chronicity, death and loss. Cultural issues and their impact on the genetic counseling session are addressed. Resources for families are also explored. Basic interviewing skills are presented. Students will have an opportunity for practice of skills through role play and actual interviewing situations.

GENE 530. Ethical and Professional Issues in Genetic Counseling. 2 Units.
Professional issues inherent in medical genetics and genetic counseling are addressed, including ethical, legal, religious, and cultural concepts. Fundamental principles of ethics are explored in some depth as they relate to genetic issues, such as autonomy and informed consent; use of the NSGC Code of Ethics is emphasized. Genetic counseling roles and responsibilities and aspects of a career as a professional are explored.
GENE 531. Cancer Genetics. 2 - 3 Units.
This seminar will discuss basic concepts in cancer epidemiology, principles of cancer genetics, inherited cancer syndromes, cytogenetics of cancers, pedigree analysis for familial cancer risk and approaches to the differential diagnosis of inherited and familial cancers. Additionally, topics of risk assessment, genetic testing, screening, management and psychosocial issues in providing genetic counseling to patients with familial and inherited cancers will be discussed.

GENE 532. Clinical Practicum in Genetic Counseling. 1 - 6 Unit.
This clinical practicum provides the student an opportunity to function as a genetic counselor by preparing for cases; obtaining appropriate histories; determining risks; performing psychosocial assessments; discussing disease characteristics, inheritance, and natural history; providing anticipatory guidance and supportive counseling; using medical and community resources; and follow-up. Students rotate through four clinical areas and one laboratory and will register for a total of 12 hours over the course of the program. Recommended preparation: Admission to Genetic Counseling Training Program.

GENE 537. Microscopy-Principles and Applications. 3 Units.
This course provides an introduction to various types of light microscopy, digital and video imaging techniques, and their applications to biological and biomedical sciences via lectures and hands-on experience. Topics covered include geometrical and physical optics; brightfield, darkfield, phase contrast, DIC, fluorescence and confocal microscopes; and digital image processing. Offered as GENE 537, MBIO 537, and PHOL 537.

GENE 601. Research in Genetics. 1 - 9 Unit.
(Credit as arranged.)

GENE 651. Thesis M.S.. 1 - 9 Unit.
(Credit as arranged.) Master's Thesis Plan A.

GENE 701. Dissertation Ph.D.. 1 - 9 Unit.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Molecular Biology and Microbiology
Brinn Omabegho (brinn.omabegho@case.edu), Manager

The Department of Molecular Biology and Microbiology provides a focus within the School of Medicine for the study of the growth and development of microorganisms at the molecular level. The Department is home to three PhD programs: Cell Biology, Molecular Biology and Microbiology, and Molecular Virology.

Faculty have nationally-funded research programs. Many faculty serve on study sections of national agencies, publish in the most prestigious journals, serve as editors of journals, and take leadership positions in throughout Case School of Medicine. The department also enjoys numerous collaborations with faculty in the Departments of Biochemistry, Neuroscience, and Genetics, the Case Comprehensive Cancer Center, the Visual Sciences Research Center, the Center for AIDS Research, and the Center for RNA Molecular Biology, and the Department of Cell Biology at the Lerner Research Center at CCF, because of shared research interests. All these activities create a vibrant scientific environment.

Research areas include the study of normal cell functions, microbial systems, viruses, and infectious diseases. It is only by developing a thorough understanding of the fundamental biology of cells and pathogenic microbes, their host organisms, and how the two interact during infection that improved strategies for prevention and treatment of infectious diseases can be achieved.

PhD in Cell Biology, Molecular Biology and Microbiology, Molecular Virology

The Department of Molecular Biology and Microbiology is home to three PhD programs: Cell Biology, Molecular Biology and Microbiology, and Molecular Virology. Admissions for all three of these programs occurs through the common PhD admissions program, the Biomedical Sciences Training Program (p. 665). In addition, students in the Medical Scientist Training Program (p. 662) (MSTP) can also pursue these three PhD programs.

PhD Requirements

Students entering through BSTP begin the first of three research rotations during the summer and participate in the Core Curriculum in Cell and Molecular Biology (C3MB), two integrated courses which provides formal instruction in modern cell and molecular biology. Some exceptional students with strong backgrounds, such as a previous Master’s Degree, may be eligible to be exempted from part of the Core Curriculum, and instead enroll in one or more advanced courses during the fall semester. Some students may be eligible to apply for the transfer of credit from their previous institution (please visit here (http://gradstudies.case.edu) for more information). Transfer credit must be requested prior to beginning coursework at CWRU.

A student who chooses a thesis advisor from Cell Biology, Molecular Biology Microbiology or Molecular Virology can become a member of one of these three PhD programs. To earn a PhD a student must complete 400-level graduate Core and Elective coursework including responsible conduct of research as described in the course of study.

Students in each program are expected to attend the joint student seminars (MBIO 435 Seminar in Molecular Biology/Microbiology/MBIR 435 Seminar in Molecular Biology/Microbiology/CLBY 435 Seminar in Molecular Biology/Microbiology) for at least 3 semesters (3 credit hours). Continued participation in the seminars after completion of this requirement is encouraged. Up to 4 credit hours can be allocated to the seminar course (one credit per semester).

Molecular Biology and Microbiology/ Molecular Virology and Cell Biology students should take the MBIO 450 Cells and Pathogens/MVIR 450 Cells and Pathogens/CLBY 450 Cells and Pathogens.

In addition, Cell Biology Students entering in 2009 or later must take two of the following fundamental courses: (CLBY 422 Topics in Cell Biology); (CLBY 526 Cell Biology and Human Disease/MBIO 526 Cell Biology and Human Disease); or (CLBY 488 Yeast Genetics and Cell Biology).

Beyond that, any combination of graduate courses from within or outside the department can be used to fulfill the requirement as long as the planned program of study has the approval of the student's advisor and committee.

In addition, each PhD student must successfully complete a qualifier examination for advancement to candidacy in the form of a short grant proposal with oral defense. The qualifier is generally completed in the summer after year two. During the dissertation period, students are expected to meet twice a year with the thesis committee, present seminars in the department, and fulfill journal publication requirements.
Throughout the doctoral training, students are expected to be enthusiastic participants in seminars, journal clubs, and research meetings in the lab and program.

Plan of Study

Research in Molecular Biology and Microbiology (MBIO 601)
or Special Problems (CLBY 601)
or Research (MVIR 601)

Year Total: 5-14 5-14 5-14

Total Units in Sequence: 26-62

Third Year: Either semester, complete elective coursework so that total graded courses = 24 credits; Research credits switch from 601 to 701 once passed into candidacy

Third Year + Full-time thesis research (701) - 18 total credit hours total

CLBY Courses

CLBY 416. Fundamental Immunology. 4 Units.
Introductory immunology providing an overview of the immune system, including activation, effector mechanisms, and regulation. Topics include antigen-antibody reactions, immunologically important cell surface receptors, cell-cell interactions, cell-mediated immunity, innate versus adaptive immunity, cytokines, and basic molecular biology and signal transduction in B and T lymphocytes, and immunopathology. Three weekly lectures emphasize experimental findings leading to the concepts of modern immunology. An additional recitation hour is required to integrate the core material with experimental data and known immune mediated diseases. Five mandatory 90 minute group problem sets per semester will be administered outside of lecture and recitation meeting times. Graduate students will be graded separately from undergraduates, and 22 percent of the grade will be based on a critical analysis of a recently published, landmark scientific article. Offered as BIOL 316, BIOL 416, CLBY 416, PATH 316 and PATH 416. Prereq: Graduate standing.

CLBY 417. Cytokines: Function, Structure, and Signaling. 3 Units.
Regulation of immune responses and differentiation of leukocytes is modulated by proteins (cytokines) secreted and/or expressed by both immune and non-immune cells. Course examines the function, expression, gene organization, structure, receptors, and intracellular signaling of cytokines. Topic include regulatory and inflammatory cytokines, colony stimulating factors, chemokines, cytokine and cytokine receptor gene families, intracellular signaling through STAT proteins and tyrosine phosphorylation, clinical potential, and genetic defects. Lecture format using texts, scientific reviews and research articles. Recommended preparation: PATH 416 or equivalent. Offered as BIOL 417, CLBY 417, and PATH 417.

CLBY 422. Topics in Cell Biology. 3 Units.
This team-taught seminar course focuses on 3-4 distinct areas of contemporary cell biology. Faculty will present context and overview, but most time will be devoted to a close reading of the literature and discussion by students in a round table format. Recommended preparation: CBIO 453 and CBIO 455.

CLBY 433. Seminar in Molecular Biology/Microbiology. 1 Unit.
Graduate students will attend the departmental seminar given by all graduate students in the Department of Molecular Biology and Microbiology, in the Molecular Virology Program, and in the Cell Biology Program, as well as give a seminar on their own thesis research. Students will be evaluated by the faculty member in charge of that student's seminar with input from the students' own thesis committee. After each seminar, the student presenter will meet with other graduate students for peer-review of the content, delivery, and style of the seminar. Peer reviewers will also be evaluated for the quality of their input. Offered as CLBY 435 and MBIO 435 and MVIR 435.
CLBY 450. Cells and Pathogens. 3 Units.
Modern molecular cell biology owes a great debt to viral and bacterial pathogens as model systems. In some instances pathogens operate by faithful mimicry of host proteins, and other cases represent the result of extensive molecular tinkering and convergent evolution. This course will also explore numerous mechanisms utilized by pathogens to subvert the host and enhance their own survival. Topics covered include nuclear regulatory mechanisms, protein synthesis and stability, membrane-bound organelles, endocytosis and phagocytosis, and factors that influence cell behavior such as cytoskeleton rearrangements, cell-cell interactions, and cell migration. Additional topics include cell signaling and co-evolution of pathogens and host cell functions. Students are expected to come to class prepared to discuss pre-assigned readings consisting of brief reviews and seminal papers from the literature. Student assessment will be based on effective class participation (approximately 80%) and successful presentation of an independent research topic (approximately 20%). Offered as CLBY 450, MBIO 450, and MVIR 450. Prereq; CBIO 453 and CBIO 455 or permission of instructor.

CLBY 466. Cell Signaling. 3 Units.
This is an advanced lecture/journal/discussion format course that covers cell signaling mechanisms. Included are discussions of neurotransmitter-gated ion channels, growth factor receptor kinases, cytokine receptors, G protein-coupled receptors, steroid receptors, heterotrimeric G proteins, ras family GTPases, second messenger cascades, protein kinase cascades, second messenger regulation of transcription factors, microtubule-based motility, actin/myosin-based motility, signals for regulation of cell cycle, signals for regulation of apoptosis. Offered as CLBY 466 and PHOL 466 and PHRM 466.

CLBY 468. Membrane Physiology. 3 Units.
This student-guided discussion/journal course focuses on biological membranes. Topics discussed include thermodynamics and kinetics of membrane transport, oxidative phosphorylation and bioenergetics, electro-physiology of excitable membranes, and whole and single channel electrophysiology, homeostasis and pH regulation, volume and calcium regulation. Offered as CLBY 468 and PHOL 468.

CLBY 488. Yeast Genetics and Cell Biology. 3 Units.
This seminar course provides an introduction to the genetics and molecular biology of the yeasts S. cerevisiae and S. pombe by a discussion of current literature focusing primarily on topics in yeast cell biology. Students are first introduced to the tools of molecular genetics and special features of yeasts that make them important model eukaryotic organisms. Some selected topics include cell polarity, cell cycle, secretory pathways, vesicular and nuclear/cytoplasmic transport, mitochondrial import and biogenesis, chromosome segregation, cytoskeleton, mating response and signal transduction. Offered as CLBY 488, GENE 488, MBIO 488, and PATH 488.

CLBY 511. Cell Biology Seminar. 1 Unit.
The Cell Biology Seminar provides a forum for presentation and discussion of contemporary issues in Cell Biology. Students, fellows, local faculty and guest speakers present both research talks and journal clubs.

CLBY 512. Cell Biology Seminar. 1 Unit.
The Cell Biology Seminar provides a forum for presentation and discussion of contemporary issues in Cell Biology. Students, fellows, local faculty and guest speakers present both research talks and journal clubs.

CLBY 519. Molecular Biology of RNA. 3 Units.
Selected topics regarding editing, enzymatic function, splicing, and structure of RNA. Offered as BIOC 519, CLBY 519, and MBIO 519.

CLBY 525. Transport and Targeting of Macromolecules in Health and Disease. 3 Units.
PATH 525 is a 3 credit hour advanced course on neurodegenerative disorders intended for PhD and MD/PhD students. Master's and first and second-year medical students with adequate background in cell and molecular biology and the drive to work hard and overcome challenges are welcome. This course attempts to bridge the gap between molecular mechanisms at the cellular level with disease presentation and therapeutic options for neurodegenerative disorders of protein mis-folding and metal mis-metabolism. The course will cover topics related to Alzheimer's disease, Parkinson's disease, Huntington's disease, Amyotrophic lateral sclerosis, Multiple sclerosis, Prion diseases, disorders of iron and copper metabolism, and other disorders of interest to the students. The class will meet once every week, and the students will discuss relevant scientific reports from recent literature. Students are expected to participate actively in class discussion, and write a 5-6 page research paper following NIH guidelines for the final exam. The students are expected to present and defend their proposal in class. Grading criteria: Class participation (70%), final paper and presentation (30%). Offered as PATH 525 and CLBY 525.

CLBY 526. Cell Biology and Human Disease. 3 Units.
This course is designed to provide broad base of knowledge regarding cell structure and function. The basic structure of the cell will be discussed, as will the various functional systems that are superimposed upon and interact with this structure. The course will discuss organelle biogenesis, materials movement inside cells, cell interaction with the external environment, cell cycle and cell death regulation, cytoskeleton dynamics, quality control mechanisms, and basic signal transduction concepts. The course will also discuss how abnormal cell function may lead to human disease, and how basic cell function may be harnessed by intracellular pathogens to provide favorable intracellular environments for replication. The major goals of this course are to provide students with a working knowledge of the cell to facilitate understanding of the scientific literature, and to familiarize students with modern experimental approaches in cell biology. The course will rely heavily on student participation. Students will be provided with study guides with the expectation they will come to class prepared to lead interactive group discussions with minimal input from instructors. Offered as: CLBY 526, MBIO 526, MVIR 526.

CLBY 599. RNA Structure and Function. 3 Units.
This course will cover fundamental aspects of modern RNA biology with emphasis on the interplay of three dimensional structure of nucleic acids and their function. The main focus of the course is on the recent discoveries that indicate a prominent role of RNA as a major regulator of cellular function. Topics discussed will include an introduction to RNA structure, folding and dynamics, RNA/RNA and RNA-protein interactions, and role of RNA in catalysis of biological reactions in ribosome and the role of other catalytic RNAs in RNA biogenesis, pre-mRNA splicing, and viral replication. The course also covers the recently discovered RNA regulatory switches, large noncoding regulatory RNAs, and the role of RNA in human diseases and novel, RNA-based therapeutics. Offered as BIOC 599, CLBY 599, and MBIO 599.

CLBY 601. Special Problems. 1 - 18 Unit.
This is the listing for independent research. Students should enroll in this course once they have selected their laboratory for Ph.D. research. The number of credit hours depends on how many didactic courses they are following at the same time. Once they have passed their qualifying examination they should register for CLBY 701.
After each seminar, the student presenter will meet with other graduate students' seminar with input from the students' own thesis committee. Students will be evaluated by the faculty member in charge of that program, as well as give a seminar on their own thesis research.

**MBIO Courses**

**MBIO 399. Undergraduate Research. 1 - 3 Unit.**
Permits qualified undergraduates to work in a faculty member's laboratory.

**MBIO 413. Advanced Topics in Molecular and Biochemical Research Ethics. 0 Units.**
This course offers continuing education in responsible conduct of research for advanced graduate students. The course will cover the nine federally defined responsible conduct of research (RCR) areas through a combination of lectures, on-line course material and small group discussions. Six 2-hour meetings per semester are planned. Maximum enrollment of 15 students with preference to graduate students in the Department of Molecular Biology and Microbiology, the Department of Biochemistry, and trainees of the Cell and Molecular Biology Training Grant. Offered as: BIOC 413, MBIO 413.

**MBIO 420. Current Topics in Cancer. 3 Units.**
The concept of cancer hallmarks has provided a useful guiding principle in our understanding of the complexity of cancer. The hallmarks include sustaining proliferative signaling, evading growth suppressors, enabling replicative immortality, activating invasion and metastasis, inducing angiogenesis, resisting cell death, deregulating cellular energetics, avoiding immune destruction, tumor-promoting inflammation, and genome instability and mutation. The objectives of this course are to (1) examine the principles of some of these hallmarks, and (2) explore potential therapies developed based on these hallmarks of cancer. This is a student-driven and discussion-based graduate course. Students should have had some background on the related subjects and have read scientific papers in their prior coursework. Students will be called on to present and discuss experimental design, data and conclusions from assigned publications. There will be no exams or comprehensive papers but students will submit a one-page critique (strengths and weaknesses) of one of the assigned papers prior to each class meeting. The course will end with a full-day student-run symposium on topics to be decided jointly by students and the course director. Grades will be based on class participation, written critiques, and symposium presentations. Offered as BIOC 420, MBIO 420, MVIR 420, PATH 422, and PHRM 420. Prereq: CBIO 453 and CBIO 455.

**MBIO 435. Seminar in Molecular Biology/Microbiology. 1 Unit.**
Graduate students will attend the departmental seminar given by all graduate students in the Department of Molecular Biology and Microbiology, in the Molecular Virology Program, and in the Cell Biology Program, as well as give a seminar on their own thesis research. Students will be evaluated by the faculty member in charge of that student's seminar with input from the students' own thesis committee. After each seminar, the student presenter will meet with other graduate students for peer-review of the content, delivery, and style of the seminar. Peer reviewers will also be evaluated for the quality of their input. Offered as CLBY 435 and MBIO 435 and MVIR 435. Prereq: CBIO 453 and CBIO 455.

**MBIO 445. Molecular Biology and Pathogenesis of RNA and DNA Viruses. 3 Units.**
Through a combination of lectures by Case faculty and guest lecturers, along with student discussion of current literature, this course emphasizes mechanisms of viral gene expression and pathogenesis. RNA viruses to be discussed include positive, negative, and retroviruses. DNA viruses include SV40, adenovirus, herpes, papilloma, and others. Important aspects of host defense mechanisms, antiviral agents, and viral vectors will also be covered. Students will be evaluated based on their quality of presentation of course papers assigned to them and their overall participation in class discussions. Offered as MBIO 445 and MVIR 445.

**MBIO 450. Cells and Pathogens. 3 Units.**
Modern molecular cell biology owes a great debt to viral and bacterial pathogens as model systems. In some instances pathogens operate by faithful mimicry of host proteins, and other cases represent the result of extensive molecular tinkering and convergent evolution. This course will also explore numerous mechanisms utilized by pathogens to subvert the host and enhance their own survival. Topics covered include nuclear regulatory mechanisms, protein synthesis and stability, membrane-bound organelles, endocytosis and phagocytosis, and factors that influence cell behavior such as cytoskeleton rearrangements, cell-cell interactions, and cell migration. Additional topics include cell signaling and co-evolution of pathogens and host cell functions. Students are expected to come to class prepared to discuss pre-assigned readings consisting of brief reviews and seminal papers from the literature. Student assessment will be based on effective class participation (approximately 80%) and successful presentation of an independent research topic (approximately 20%). Offered as CLBY 450, MBIO 450, and MVIR 450. Prereq: CBIO 453 and CBIO 455 or permission of instructor.

**MBIO 486. HIV Immunology. 3 Units.**
This course will examine the unique immunology of HIV disease. The course content will include the study of HIV pathogenesis, immune control, immune dysfunctions, HIV prevention and immune restoration. Students will be expected to attend lectures and participate in class discussions. A strong emphasis will be placed on reviewing scientific literature. Students will be asked to help organize and to administer an HIV immunology journal club and will be asked to prepare a written proposal in the area of HIV immunology. Offered as PATH 486 and MBIO 486.

**MBIO 488. Yeast Genetics and Cell Biology. 3 Units.**
This seminar course provides an introduction to the genetics and molecular biology of the yeasts S. cerevisiae and S. pombe by a discussion of current literature focusing primarily on topics in yeast cell biology. Students are first introduced to the tools of molecular genetics and special features of yeasts that make them important model eukaryotic organisms. Some selected topics include cell polarity, cell cycle, secretory pathways, vesicular and nuclear/cyttoplasmic transport, mitochondrial import and biogenesis, chromosome segregation, cytoskeleton, mating response and signal transduction. Offered as CLBY 488, GENE 488, MBIO 488, and PATH 488.

**MBIO 513. Bacterial Virulence and Host Interactions. 3 Units.**
The goal of this seminar course is to familiarize students with bacterial virulence mechanisms and how they interact with the host. The focus will be on current literature pertaining to this field. While the molecular basis of bacterial virulence mechanisms will be the main focus, some time will be spent on the host immune response. Topics covered will include adhesins/pili, secretion mechanisms, AB toxins, bacterial invasion and intracellular survival, regulation of virulence gene expression. Prereq: CBIO 453 and CBIO 455 or equivalent courses.
MBIO 519. Molecular Biology of RNA. 3 Units.
Selected topics regarding editing, enzymatic function, splicing, and structure of RNA. Offered as BIOC 519, CLBY 519, and MBIO 519.

MBIO 520. Principles of Microbiology. 3 Units.
This course provides lectures and small group discussions of the cellular and molecular mechanisms by which certain bacteria, viruses, and parasites execute normal and pathologic conditions in human hosts. The biology, genetics, and physiological properties of these infectious agents are considered in light of the mechanisms by which they induce pathogenic conditions in their human hosts. The course is intended for graduate students advanced beyond the core curriculum of course work in molecular biology and microbiology areas of specialization. Prereq: CBIO 453 and CBIO 455.

MBIO 526. Cell Biology and Human Disease. 3 Units.
This course is designed to provide broad base of knowledge regarding cell structure and function. The basic structure of the cell will be discussed, as will the various functional systems that are superimposed upon and interact with this structure. The course will discuss organelle biogenesis, materials movement inside cells, cell interaction with the external environment, cell cycle and cell death regulation, cytoskeleton dynamics, quality control mechanisms, and basic signal transduction concepts. The course will also discuss how abnormal cell function may lead to human disease, and how basic cell function may be harnessed by intracellular pathogens to provide favorable intracellular environments for replication. The major goals of this course are to provide students with a working knowledge of the cell to facilitate understanding of the scientific literature, and to familiarize students with modern experimental approaches in cell biology. The course will rely heavily on student participation. Students will be provided with study guides with the expectation they will come to class prepared to lead interactive group discussions with minimal input from instructors. Offered as: CLBY 526, MBIO 526, MVIR 526.

MBIO 537. Microscopy-Principles and Applications. 3 Units.
This course provides an introduction to various types of light microscopy, digital and video imaging techniques, and their applications to biological and biomedical sciences via lectures and hands-on experience. Topics covered include geometrical and physical optics; brightfield, darkfield, phase contrast, DIC, fluorescence and confocal microscopes; and digital image processing. Offered as GENE 537, MBIO 537, and PHOL 537.

MBIO 599. RNA Structure and Function. 3 Units.
This course will cover fundamental aspects of modern RNA biology with emphasis on the interplay of three dimensional structure of nucleic acids and their function. The main focus of the course is on the recent discoveries that indicate a prominent role of RNA as a major regulator of cellular function. Topics discussed will include an introduction to RNA structure, folding and dynamics, RNA-RNA and RNA-protein interactions, and role of RNA in catalysis of biological reactions in ribosome and the role of other catalytic RNAs in tRNA biogenesis, pre-mRNA splicing, and viral replication. The course also covers the recently discovered RNA regulatory switches, large noncoding regulatory RNAs, and the role of RNA in human diseases and novel, RNA-based therapeutics. Offered as BIOC 599, CLBY 599, and MBIO 599.

MBIO 601. Research in Molecular Biology and Microbiology. 1 - 18 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

MBIO 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

MVIR Courses

MVIR 435. Seminar in Molecular Biology/Microbiology. 1 Unit.
Graduate students will attend the departmental seminar given by all graduate students in the Department of Molecular Biology and Microbiology, in the Molecular Virology Program, and in the Cell Biology Program, as well as give a seminar on their own thesis research. Students will be evaluated by the faculty member in charge of that student’s seminar with input from the students’ own thesis committee. After each seminar, the student presenter will meet with other graduate students for peer-review of the content, delivery, and style of the seminar. Peer reviewers will also be evaluated for the quality of their input. Offered as CLBY 435 and MBIO 435 and MVIR 435.

MVIR 445. Molecular Biology and Pathogenesis of RNA and DNA Viruses. 3 Units.
Through a combination of lectures by Case faculty and guest lecturers, along with student discussion of current literature, this course emphasizes mechanisms of viral gene expression and pathogenesis. RNA viruses to be discussed include positive, negative, and retroviruses. DNA viruses include SV40, adenovirus, herpes, papilloma, and others. Important aspects of host defense mechanisms, antiviral agents, and viral vectors will also be covered. Students will be evaluated based on their quality of presentation of course papers assigned to them and their overall participation in class discussions. Offered as MBIO 445 and MVIR 445. Prereq: CBIO 453 and CBIO 454 and CBIO 455 and CBIO 456.

MVIR 450. Cells and Pathogens. 3 Units.
Modern molecular cell biology owes a great debt to viral and bacterial pathogens as model systems. In some instances pathogens operate by faithful mimicry of host proteins, and other cases represent the result of extensive molecular tinkering and convergent evolution. This course will also explore numerous mechanisms utilized by pathogens to subvert the host and enhance their own survival. Topics covered include nuclear regulatory mechanisms, protein synthesis and stability, membrane-bound organelles, endocytosis and phagocytosis, and factors that influence cell behavior such as cytoskeleton rearrangements, cell-cell interactions, and cell migration. Additional topics include cell signaling and co-evolution of pathogens and host cell functions. Students are expected to come to class prepared to discuss pre-assigned readings consisting of brief reviews and seminal papers from the literature. Student assessment will be based on effective class participation (approximately 80%) and successful presentation of an independent research topic (approximately 20%). Offered as CLBY 450, MBIO 450, and MVIR 450. Prereq: CBIO 453 and CBIO 455 or permission of instructor.
**Molecular Medicine Program**

The Molecular Medicine PhD Program is a unique collaborative graduate training opportunity that integrates medical knowledge into graduate training. The goal of this program is to produce scientists trained in translational research: basic or applied research relevant to human health and disease that can lead to new understanding of disease, clinical and diagnostic tools, medications, and therapies.

Students train rigorously to apply basic science discoveries to human health and to the causes and treatments of human disease. The mastery of competencies necessary to translate scientific observations from the research bench to clinical care is the focus of this PhD program. Graduates will be well prepared to collaborate with physicians and for the challenge of using molecular and cellular biology to advance human health.

**PhD in Molecular Medicine**

Admission into the Molecular Medicine PhD program is obtained through application directly to the program. Graduate students complete didactic coursework, independent research, and other doctoral requirements to earn the PhD. First year students complete three laboratory rotations among the laboratories of training faculty, and are exposed to trainer research projects during the Frontiers of Molecular Medicine seminars. The journal club series is taken during the first year. The first year begins mid-July.

During subsequent years, students will devote the majority of their time to thesis research while attending advanced graduate courses, seminars, and journal clubs. Advanced elective courses may be chosen from any department or program on campus with the approval of the graduate program director and the student’s thesis committee. Students must take a total of 36 semester hours of courses and maintain a B average.

The qualifying exam will be comprised of preparing and defending a grant application in the NIH/NRSA format. The topic of the grant is the area of the student’s thesis research in the laboratory of the Research Advisor. At least one aim of this proposal will consist of a specific translational or clinical aim.

All efforts should be made to complete the PhD within five years from the date of matriculation. All students are expected to submit two or more first-authored primary research publications in peer-reviewed scientific journals. At least one manuscript must be accepted for publication prior to the thesis defense.

**PhD Program Requirements**

**Coursework**

Students begin in July by first taking MMED 410 Introduction to Human Physiology and Disease. The student will follow a progressive curriculum including Cell Biology; Metabolism and Pharmacology; Nucleic Acids, Gene Expression and Gene Regulation; Mammalian Genetics; and Infection and Immunity. The core series concludes with a course in Principles of Clinical and Translational Research and a mentored Clinical Experience.

**Research Rotations**

The research rotations allow the student to sample areas of research and become familiar with faculty members and their laboratories. The main purpose of these rotations is to aid the student in selecting a laboratory for the thesis work. Students will begin their rotations in July. A minimum of three rotations must be completed during the year.

**Choosing a Thesis Advisor**

After the second semester of the first year, students select an advisor for the dissertation research. The emphasis of the PhD work is on research, culminating in the completion of an original, independent research thesis.

**Plan of Study**

Please also see Graduate Studies Academic Requirements for Doctoral Degrees (p. 600).

* All required coursework is listed in this plan

usually 1-9 credits. The student is expected to participate in all lab and departmental activities, e.g., lab meetings and seminars. At the completion of a rotation the student is required to submit a written Rotation Report including an outline of the problem being studied, a description of the experimental approaches, a discussion of the results of performed experiments as well as future directions.

**MMED 403. Tools for Research. 2 Units.**

The goal of this course is to provide a thorough and comprehensive review of current laboratory technology essential to research in molecular medicine, focusing on basic underlying principles, important controls and caveats. The students will clone a cytokine during a laboratory component of the course, which will involve designing appropriate primers, obtaining RNA from cytokine-expressing cells, performing RT/PCR, and ligating isolated, characterized fragments into cloning- and expression vectors, followed by transfection into mammalian cells. Additional bench work will include characterizing the cloned product using real-time PCR, ELISA, western blot analysis, and immunohistochemistry. Seminars on commonly used molecular techniques will be given intermittently by guest lecturers with the relevant expertise. Evaluation will be based on the student's lab techniques, class participation, and contribution to the group learning process.

**MMED 404. Journal Club / Frontiers in Molecular Medicine. 1 Unit.**

This course is a combination of a weekly discussion-based Journal Club with selected articles relevant to the core curriculum of the week and the Frontiers in Molecular Medicine Seminar series. The seminars are presented by Molecular Medicine faculty and guest lecturers to introduce first year students to the opportunities and issues in translational and clinical research.

**MMED 410. Introduction to Human Physiology and Disease. 4 Units.**

The purpose of this course is to give an introduction to the physiology of the major human organ systems, as well as selected associated pathophysiologies. The course will provide a physiological basis for subsequent study and research in Molecular Medicine. The integration of clinical faculty into the course will emphasize the importance of bringing scientific knowledge to bear on clinical problems, a theme which will be stressed throughout the Molecular Medicine curriculum. The course will also acquaint students with medical terminology.

**MMED 412. Metabolism and Introduction to Principles of Pharmacology. 2 Units.**

The course will include a combination of interactive lectures, research presentations, related journal club article, and group projects with presentations. Topics to be covered include: bioenergetics/oxidative phosphorylation, carbohydrate metabolism; lipid and lipoprotein metabolism, amino acid and nucleotide metabolism; integrative regulation of metabolism; and principals of pharmacology.

**MMED 413. Nucleic Acids, Gene Expression, and Gene Regulation. 2 Units.**

The course will include a combination of interactive lectures and problem-based learning. Each week will conclude with at least one clinical correlation where the weekly topic is presented in the context of a clinical problem. Topics to be covered include: DNA structure, chromosome structure, replication and repair; RNA synthesis and RNA processing, the organization of eukaryotic genes and the genetic code and translation; and gene regulation.

**MMED 414. Mammalian Genetics. 2 Units.**

The course focuses on genetics, genomics, and bioinformatics, and it will include a combination of interactive lectures, problem-based learning and a week-long group project. Topics to be covered include: genetic variation; linkage studies; association studies; complex traits, linkage disequilibrium, the Hap Map, pharmacogenetics; genome-wide expression studies, and mouse models of human disease, and bioinformatics.

<tr>
<td><strong>MMED 400. Research Rotations. 0 Units.</strong></td>
<td></td>
</tr>
<tr>
<td>Research rotations are conducted to expose the student to several laboratory environments, a variety of research problems and numerous laboratory techniques as well as to assist them in the selection of their Research Advisor. Rotations will begin immediately upon enrollment and continue through the second semester of the first year. Usually rotations will last 12 weeks, however if a student decides that he/she is not interested in the assigned laboratory a shorter rotation is appropriate. The student is responsible for arranging each rotation with an approved trainer with the consultation of the Graduate Program Director. To assist in this endeavor, the Graduate Program Director will provide a list of approved trainers who have space, time and money to support a graduate student. During the rotation, students are expected to participate in all lab and departmental activities, e.g., lab meetings and seminars. At the completion of a rotation the student is required to submit a written Rotation Report including an outline of the problem being studied, a description of the experimental approaches, a discussion of the results of performed experiments as well as future directions.</td>
<td>0</td>
</tr>
</tbody>
</table>
MMED 415. Cell Biology. 2 Units.
The course will include a combination of interactive lectures and problembased learning. Each week will conclude with at least one clinical correlation where the weekly topic is presented in the context of a clinical problem. Topics to be covered include: cell structure and organelles, prokaryotes/eukaryotes; intracellular compartments and protein sorting; receptors/endocytosis/rafts; the nucleus; cell communication; and mechanics of cell division.

MMED 416. Host Defense: Infection and Immunity. 2 Units.
The course will include a reading program, lectures, and weekly problem-based student-led presentations. Weeks 1 and 2 are dedicated to establishing the scope of the field and forming vocabulary. Week 3 and part of Week 4 will cover immune mechanisms. The remainder of the course will deal with clinical aspects of immunobiology. On a regular basis Clinical Correlations, relevant to weekly topics, are integrated into the material. Topics to be covered include: biology and molecular biology of infectious agents; fundamentals of immunology; innate and adaptive responses to infection, immune effector mechanisms; and clinical aspects of immunobiology.

MMED 501. Principles of Clinical and Translational Research. 4 Units.
To give an introduction to the ethical, statistical, methodologic and informatics basis of clinical and translational research. Topics will include the history of clinical and translational research, regulatory aspects of human subjects research, clinical trials study design, conflicts of interest, human subjects recruitment, research and publication ethics, technology transfer, biobank construction and utilization, and clinical and research database construction and utilization. In addition, students will be introduced to principles of biostatistics and clinical epidemiology relevant to clinical and translational research and gain expertise in statistical tool using problem based learning sets.

MMED 504. Student Seminar Series. 1 Unit.
This course is designed as a weekly seminar series that will include presentations by the MMED graduate students. The format will be as follows: seminar talks by students in years 3 and beyond to provide a research update presentations by second year students involving basic science-clinical case translation topics, and short presentations on lab rotation accomplishments by first year students. The primary goals of this series are to gain experience and improve oral presentation skills, to share results and thoughts with peers during research discussions, and to learn to take the lead in developing and asking questions during seminars.

MMED 521. Molecular aspects of the diagnosis, pathology, and treatment of selected human diseases. 3 Units.
The goal of this course is to integrate medical knowledge into PhD training. This team-taught seminar course focuses on a top down examination of selected human diseases starting with clinical presentations of the manifestations, diagnoses, and treatment of disease. This is followed by study of the pathology, cell biology, and molecular biology of the disease. This information forms the foundation of a final discussion of current treatment strategies and ongoing research to identify new strategies. Three to four separate disease areas will be discussed during each semester, such as diabetes, cancer, and cardiovascular diseases. The specific areas of discussion are selected to demonstrate the strength of an integrated team of clinical and basic scientists; and to provide a model for students to follow in future studies in their own area of expertise. Emphasis will be given to the basic scientific observations that formed the basis of successful clinical practice, and how this was utilized by integrated teams of basic and clinical investigators to provide better patient care. Students will prepare for discussions with close reading of the literature. Faculty will present an overview in a discussion format. It is anticipated that each disease area will be presented by an integrated team of clinical and basic scientists. The final weeks of the semester will be devoted to student preparation of a research proposal based upon the information discussed during the course. The specific topic of this proposal will be of the students choosing. Grading will be based both upon preparation for and participation in discussions, and upon the research proposal. Recommended Preparation: Introductory Graduate or Medical School courses in Cell Biology, Molecular Biology, and Physiology

MMED 601. Dissertation Research. 1 - 9 Unit.
Research leading toward the Ph.D. dissertation in Molecular Medicine.

MMED 612. Clinical Experience. 2 Units.
Each student will be assigned a Clinical Mentor who will co-advice the student and serve on both the Qualifying Examination Committee and Thesis Committee. The Clinical Mentor will develop an individualized curriculum for the student in consultation with the Thesis Research Mentor and Program Director. The curriculum will be organized around the integrated, multidisciplinary disease groups at the Clinic. The students will attend and actively participate in the regularly scheduled multidisciplinary clinical conference organized by their disease group (most meet for one hour every week or every other week), usually involving a combination of case presentations and research presentations. At the conclusion of the semester the student will make a presentation to the group focused on a relevant translational research problem. The Clinical Mentor will also organize a series of supervised clinical experiences (with a Mentor) to various locations where students will observe clinician interactions with patients to better understand the disease from the patient perspective and to disease-related diagnostic and research laboratories.

MMED 701. Dissertation Ph.D.. 1 - 9 Unit.
Research leading toward the Ph.D. dissertation in Molecular Medicine. Recommended preparation: Advancement to candidacy in MMED. Prerequisite: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Neurosciences

Katie Wervey (kathleen.wervey@case.edu), Department Assistant

Understanding how the nervous system develops and functions to process information and mediate behavior and how it is altered by disease, injury and the environment is one of the most exciting
frontiers remaining in biological science. Neuroscience is inherently multidisciplinary and integrative and solving the major outstanding problems will require knowledge of molecular, cellular, systems, and behavioral levels of organization. It also requires a multidisciplinary approach combining the tools of electrophysiology, anatomy, biochemistry and molecular biology in studies of animals, brain slices, and tissue culture models.

The department offers a PhD program that provides interdisciplinary training in modern neurosciences through a combination of course work, seminars and research experience. Medical students are encouraged to pursue research projects with neurosciences faculty. Neuroscientists at CWRU are using state-of-the art techniques and instrumentation to study diverse aspects of nervous system function, including neural circuitry and plasticity, development and regeneration, and cellular and molecular neurobiology. Techniques used include electrical recording and imaging to study the behavior of neurons from ion channels to how they function in awake, behaving animals; molecular genetic approaches to discover the roles of specific genes in circuit formation, synaptic function, and in neurological disorders; and anatomical, biochemical, computational, and behavioral methods to understand the normal nervous system and how it is affected by disease and injury.

**PhD in Neurosciences**

The Neurosciences graduate program has a strong emphasis on cellular and molecular mechanisms that mediate the function and development of the nervous system. Admissions to the Neurosciences PhD program may be obtained through the integrated Biomedical Sciences Training Program, by direct admission to the department or via the Medical Scientist Training Program. To earn a PhD in Neurosciences, a student must complete rotations in at least three laboratories, followed by selection of a research advisor, and complete Core and Elective coursework including responsible conduct of research as described in the plan of study, below. In general, students must be registered for a total of 9 credit hours each fall and spring semester until they advance to candidacy, at the end of their 2nd year. Students who previously completed relevant coursework, for example, with a MS, may petition to complete alternative courses. Each graduate program follows the overall regulations established and described in CWRU Graduate Studies and documented to the Regents of the State of Ohio.

In addition, each student must successfully complete a preliminary exam after year one, and a qualifier examination for advancement to candidacy in the form of a short grant proposal with oral defense. The qualifier is generally completed in the summer after year two. During the dissertation period, students are expected to meet twice a year with the thesis committee, present seminars in the department, and fulfill journal publication requirements. Throughout the doctoral training, students are expected to be enthusiastic participants in seminars, journal clubs, and research meetings in the lab and program. Completion of the PhD degree will require 36 hours of coursework (24 hours of which are graded) and 18 hours of NEUR 701 Dissertation Ph.D.

*NEUR 540 Advanced Topics in Neuroscience Ethics is offered every other spring semester (beginning 2008), so can be taken in 3rd or 4th year.*
Courses

NEUR 402. Principles of Neural Science. 3 Units.
Lecture/discussion course covering concepts in cell and molecular neuroscience, principles of systems neuroscience as demonstrated in the somatosensory system, and fundamentals of the development of the nervous system. This course will prepare students for upper level Neuroscience courses and is also suitable for students in other programs who desire an understanding of neuroscience. Recommended preparation: CBIO 453. Offered as BIOL 402 and NEUR 402.

NEUR 405. Cellular and Molecular Neurobiology. 3 Units.
Cell biology of nerve cells, including aspects of synaptic structure physiology and chemistry. The application of molecular biological tools to questions of synaptic function will be addressed. Recommended preparation: BIOL 473. Prereq: NEUR 402.

NEUR 415. Neuroscience Seminars. 1 Unit.
Current topics of interest in neurosciences. Students attend weekly seminars. From this series, students prepare critiques. No credit is given for less than 75% attendance.

NEUR 419. Critical Thinking in Neuroscience. 3 Units.
The goal of this course is to develop the student’s critical reasoning skills through reading and discussing primary research papers. Each year, the course will focus on 3-4 different topics selected by participating Neuroscience faculty members. Students will receive a letter grade based on their contributions to discussions, and at the discretion of the faculty, performance on exams and/or term paper. Prereq: NEUR 402.

NEUR 424. Sensory Neuroscience. 3 Units.
How do our brains and those of other animals allow for the acquisition and processing of unique sensory percepts? In what manners might sensory systems interact to enhance perception? Further, what happens to sensory system function in cases of neurological disorders? This course is a topic introduction to sensory neuroscience, a major area of modern neuroscience with connections to neurology, psychology, ethology, and related topics. Topics include visual, auditory, somatosensory, gustatory, and olfactory neuroscience. We will also examine the mechanisms and uses of magnetoreception, electroreception, echolocation, and other ‘special’ senses. All of the above topics will be covered under the theme of how animals actively sample their sensory environments for information. Prereq: BIOL 402 or BIOL 473 or NEUR 402 or PSCL 403 or Consent of Instructor.

NEUR 425. Stem Cell Biology and Therapeutics. 3 Units.
This course is intended to teach current understanding of stem cells as it relates to their characterization, function, and physiologic and pathological states. The course will expose students to the current understanding of various types of stem cells, including embryonic and adult stem cells of various tissues, techniques for their isolation and study. Experimental models and potential biomedical therapeutic applications will be discussed. The course will be taught by the faculty of the “Center for Stem Cell and Regenerative Medicine” who are affiliated with multiple departments of Case Western Reserve University, Cleveland Clinic Foundation and the partnering biomedical companies. Offered as NEUR 425 and PATH 425.

NEUR 427. Neural Development. 3 Units.
Topics include cell commitment, regulation of proliferation and differentiation, cell death and trophic factors, pathfinding by the outgrowing nerve fiber, synapse formation, relationships between center and periphery in development and the role of activity.

NEUR 432. Current Topics in Vision Research. 3 Units.
Vision research is an exciting and multidisciplinary area that draws on the disciplines of biochemistry, genetics, molecular biology, structural biology, neuroscience, and pathology. This graduate level course will provide the student with broad exposure to the most recent and relevant research currently being conducted in the field. Topics will cover a variety of diseases and fundamental biological processes occurring in the eye. Regions of the eye that will be discussed include the cornea, lens, and retina. Vision disorders discussed include age-related macular degeneration, retinal ciliopathies, and diabetic retinopathy. Instructors in the course are experts in their field and are members of the multidisciplinary visual sciences research community here at Case Western Reserve University. Students will be exposed to the experimental approaches and instrumentation currently being used in the laboratory and in clinical settings. Topics will be covered by traditional lectures, demonstrations in the laboratory and the clinic, and journal club presentations. Students will be graded on their performance in journal club presentations (40%), research proposal (40%), and class participation (20%). Offered as NEUR 432, PATH 432, PHRM 432 and BIOL 432.

NEUR 466. Cell Signaling. 3 Units.
This is an advanced lecture/journal/discussion format course that covers cell signaling mechanisms. Included are discussions of neurotransmitter-gated ion channels, growth factor receptor kinases, cytokine receptors, G protein-coupled receptors, steroid receptors, heterotrimeric G proteins, ras family GTPases, second messenger cascades, protein kinase cascades, second messenger regulation of transcription factors, microtubule-based motility, actin/myosin-based motility, signals for regulation of cell cycle, signals for regulation of apoptosis. Offered as CLBY 466 and PHOL 466 and PHRM 466.

NEUR 473. Introduction to Neurobiology. 3 Units.
How nervous systems control behavior. Biophysical, biochemical and molecular biological properties of nerve cells, their organization into circuitry, and their function within networks. Emphasis on quantitative methods for modeling neurons and networks, and on critical analysis of the contemporary technical literature in the neurosciences. Term paper required for graduate students. This course satisfies a lab requirement for the B.A. in Biology, and a Quantitative Laboratory requirements for the B.S. in Biology. Offered as BIOL 373, BIOL 473, and NEUR 473.

NEUR 474. Neurobiology of Behavior. 3 Units.
In this course, students will examine how neurobiologists interested in animal behavior study the linkage between neural circuitry and complex behavior. Various vertebrate and invertebrate systems will be considered. Several exercises will be used in this endeavor. Although some lectures will provide background and context on specific neural systems, the emphasis of the course will be on classroom discussion of specific journal articles. In addition, students will each complete a project in which they will observe some animal behavior and generate both behavioral and neurobiological hypotheses related to it. In lieu of examinations, students will complete three written assignments, including a theoretical grant proposal, a one-page Specific Aims paper related to the project, and a final project paper. These assignments are designed to give each student experience in writing biologically-relevant documents. Classroom discussions will help students understand the content and format of each type document. They will also present their projects orally to the entire class. Offered as BIOL 374, BIOL 474, and NEUR 474. Counts as SAGES Departmental Seminar.
NEUR 475. Protein Biophysics. 3 Units.
This course focuses on in-depth understanding of the molecular biophysics of proteins. Structural, thermodynamic and kinetic aspects of protein function and structure-function relationships will be considered at the advanced conceptual level. The application of these theoretical frameworks will be illustrated with examples from the literature and integration of biophysical knowledge with description at the cellular and systems level. The format consists of lectures, problem sets, and student presentations. A special emphasis will be placed on discussion of original publications. Offered as BIOC 475, CHEM 475, PHOL 475, PHRM 475, and NEUR 475.

NEUR 476. Neurobiology Laboratory. 3 Units.
Introduction to the basic laboratory techniques of neurobiology. Intracellular and extracellular recording techniques, forms of synaptic plasticity, patch clamping, immunohistochemistry and confocal microscopy. During the latter weeks of the course students will be given the opportunity to conduct an independent project. One laboratory and one discussion session per week. Recommended preparation for BIOL 476 and NEUR 476: BIOL 216. Offered as BIOL 376, BIOL 476 and NEUR 476.

NEUR 477. Cellular Biophysics. 4 Units.
This course focuses on a quantitative understanding of cellular processes. It is designed for students who feel comfortable with and are interested in analytical and quantitative approaches to cell biology and cell physiology. Selected topics in cellular biophysics will be covered in depth. Topics include theory of electrical and optical signal processing used in cell physiology, thermodynamics and kinetics of enzyme and transport reactions, single ion channel kinetics and excitability, mechanotransduction, and transport across polarized cell layers. The format consists of lectures, problem sets, computer simulations, and discussion of original publications. The relevant biological background of topics will be provided appropriate for non-biology science majors. Offered as BIOC 476, NEUR 477, PHOL 476, PHRM 476.

NEUR 478. Computational Neuroscience. 3 Units.
Computer simulations and mathematical analysis of neurons and neural circuits, and the computational properties of nervous systems. Students are taught a range of models for neurons and neural circuits, and are asked to implement and explore the computational and dynamic properties of these models. The course introduces students to dynamical systems theory for the analysis of neurons and neural learning, models of brain systems, and their relationship to artificial and neural networks. Term project required. Students enrolled in MATH 478 will make arrangements with the instructor to attend additional lectures and complete additional assignments addressing mathematical topics related to the course. Recommended preparation: MATH 223 and MATH 224 or BIOL 300 and BIOL 306. Offered as BIOL 378, COGS 378, MATH 378, BIOL 478, EBME 478, EECS 478, MATH 478 and NEUR 478.

NEUR 482. Drugs, Brain, and Behavior. 3 Units.
This course is concerned with the mechanisms underlying neurochemical signaling and the impact of drugs on those mechanisms. The first half of the course emphasizes the fundamental mechanisms underlying intra- and extracellular communication of neurons and the basic principles of how drugs interact with the nervous system. The second half of the course emphasizes understanding the neural substrates of disorders of the nervous system, and the mechanisms underlying the therapeutic effects of drugs at the cellular and behavioral levels. This course will consist of lectures designed to give the student necessary background for understanding these basic principles and class discussion. The class discussion will include viewing video examples of behavioral effects of disorders of the nervous system, and analysis of research papers. The goal of the class discussions is to enhance the critical thinking skills of the student and expose the student to contemporary research techniques. Offered as BIOL 382, BIOL 482, and NEUR 482.

NEUR 540. Advanced Topics in Neuroscience Ethics. 0 Units.
This course offers continuing education in responsible conduct of research for advanced graduate students. The course will cover the nine defined areas of research ethics through a combination of lectures, online course material and small group discussions. Six 2-hr meetings per semester. Maximum enrollment of 15 students with preference given to graduate students in the Neurosciences program. All neurosciences graduate students must complete this course during their 3rd or 4th year.

NEUR 601. Research in Neuroscience. 1 - 18 Unit.
NEUR 651. Master's Thesis (M.S.). 1 - 6 Unit.
(Credit as arranged.) Recommended preparation: M.S. candidates only.

NEUR 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Nutrition

Pamela Woodruff (pamela.woodruff@case.edu), Graduate Student Coordinator

The department’s focus is on human nutrition and the application of the science of nutrition to health promotion and disease prevention. Undergraduate programs are designed for students interested in nutritional biochemistry and metabolism, clinical nutrition, professional study in dietetics, public health nutrition, medicine, physical therapy, pharmacy or dentistry. Graduate programs emphasize dietetics, public health nutrition, nutritional biochemistry and clinical nutrition.

The Department of Nutrition offers programs leading to the bachelor of science degree in nutrition, bachelor of arts degree in nutrition, bachelor of arts degree in nutritional biochemistry and metabolism, bachelor of science degree in nutritional biochemistry and metabolism, master of science degree in nutrition, a master of public health/master of science nutrition dual degree program and doctor of philosophy degree. A nutrition minor is available. Graduate certificate programs are available in areas such as maternal and infant nutrition or gerontology. The certifications are in addition to the basic graduate degree.

Human Nutrition (p. 747) | Nutritional Biochemistry and Metabolism (p. 748) | Minors (p. 750)
## Undergraduate Degrees (NTRN)

### Major Programs

The undergraduate degree in nutrition is appropriate for students who wish to:

1. pursue graduate programs in nutritional biochemistry, dietetics, public health and community nutrition or other biomedical sciences
2. enter professional schools of dentistry, medicine, physical therapy, or pharmacy
3. apply to dietetic internships or approved experience programs in order to prepare for the professional practice of dietetics
4. pursue careers with the government or in the food or pharmaceutical industry

This major offers flexibility in course selection within a framework of general program requirements. The selection of courses depends on the student’s choice of emphasis. Students wishing to qualify for admission to professional or graduate programs need to include specific courses considered prerequisites for admission. Students interested in applying to dietetic internships must meet specific course requirements (Didactic Program in Dietetics) as required by the Accreditation Council for Education in Nutrition and Dietetics of the Academy of Nutrition and Dietetics. These requirements are met in the courses that comprise the Didactic Program in Dietetics (DPD). The DPD at Case Western Reserve University is currently granted Accreditation by the Accreditation Council for Education in Nutrition and Dietetics of the Academy of Nutrition and Dietetics, 120 South Riverside Plaza, Suite 2000, Chicago, IL 60606-6995, 800.877.1600. A department advisor should be consulted in the freshman year to plan the dietetics course work.

**Masters Degrees**

The Department of Nutrition offers four distinct programs leading to Masters Degrees: (1) MS in Nutrition (2) MS in Public Health Nutrition Internship (3) Coordinated Dietetic Internship/Master's Degree Program and (4) Master of Public Health/Master of Science in Nutrition Dual Degree Program.

**MS Nutrition**

This degree program offers two options. For those pursuing the thesis option, 30 semester hours of a planned program of study are required, including six to nine semester hours of research, as well as a final oral defense of the thesis. The non-thesis option requires 30 semester hours and a final written, comprehensive examination.

All candidates are required to take 18 semester hours of nutrition, including six hours of advanced human nutrition. In addition, students are encouraged to pursue complementary studies in the biomedical, social, and behavioral sciences. The plan of study may vary considerably depending on the education, goals and specific interests of each student. Students may elect to focus on nutritional biochemistry and metabolism, and molecular nutrition. The individual program also may be planned to fulfill the academic requirements for dietetic registration (Didactic Program in Dietetics).
MS in Public Health Nutrition Internship Program

The primary goal of this program is to prepare Registered Dietitian Nutritionists (RDNs) for employment in public health or community agencies. A minimum of 30 semester hours of combined academic work and supervised practice is required to earn the degree. Supervised practice is concurrent with coursework utilizing local agencies for translation of theory and science into practice. The program includes an eight to ten week experience in an out of state public health agency that has a strong nutrition program.

In addition to the public health nutrition curriculum, students may elect to complete a certificate in Maternal and Child Nutrition or Gerontology. Specialty certificates may require completion of additional coursework. If a certificate program is selected, supervised practice will be geared toward the specific population group.

Upon completion of the program, students are eligible to take the Registered Dietitian Nutritionist (RDN) exam. The program is accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND).

Coordinated Dietetic Internship/Master’s Degree Program

The Coordinated Dietetic Internship/Master’s Degree Program combines academic work with clinical practice at either of the dietetic internships at University Hospitals of Cleveland or the Louis Stokes Cleveland Department of Veterans Affairs Medical Center or Cleveland Clinic. A minimum of 27 semester hours is required. Admission is contingent on the student’s being selected and matched to one of the hospitals. Appointment to these internships follows the admission procedure outlined by the Accreditation Council for education in Nutrition and Dietetics of the Academy of Nutrition and Dietetics.

Coursework is planned individually with the student’s academic advisor.

Master of Public Health/Master of Science in Nutrition Dual Degree Program

This is a dual degree program that is offered jointly by the Departments of Epidemiology and Biostatistics, and Nutrition. The core Master Degree courses include a mixture of those from nutrition, biochemistry and public health.

The trained graduate could be employed in a wide variety of settings, including (but not limited to) local, state, national, or global public policy, governmental public health, hospital outreach, community-based health non-profit organizations, health organizations, research projects; or the Food and Drug Administration. Additionally, these graduates could serve as health emissaries to foreign countries regarding nutrition, sufficient food supply, sanitary environment, food safety, oral rehydration, or the advisability of food supplements.
The MPH/Nutrition dual degree is envisioned with students able to apply for either degree, then later join the other; or apply directly for the joint degree. Both the MPH and MS programs confer degrees through the School of Graduate Studies and as such are subject to Graduate Studies rules and procedures. Both programs are housed in the School of Medicine.

### MD/MS Biomedical Investigation--Nutrition Track

For Admissions and MD requirements, see the MD Dual Degree Programs section (p. 660). This track is designed to provide medical students with more in-depth knowledge and research experience in nutrition. Students may elect to focus on nutrition biochemistry and metabolism or molecular nutrition or clinical nutrition. The student’s mentor or the Graduate Program Director will assist the student in selecting the appropriate courses for their interests.

**Students in Nutrition must complete:**

- NTRN 551 Seminar in Advanced Nutrition 1
- NTRN 601 Special Problems 1 -
  18
- IBIS 600 Exam in Biomedical Investigation 0

### PhD in Nutrition

The PhD degree in Nutrition is awarded for study and research in nutrition. Areas of concentration are nutritional biochemistry and metabolism, and molecular nutrition. Admissions to the PhD in Nutrition program are obtained through the integrated Biomedical Scientist Training Program (BSTP), by direct admission to the department or via the Medical Scientist Training Program (MSTP).

In order to earn a PhD in Nutrition, a student must complete rotations in at least three laboratories followed by selection of a research advisor, completion of Core and Elective coursework, including responsible conduct of research, as described in the plan of study. Each graduate program follows the overall regulations established and described in CWRU Graduate Studies and documented to the Regents of the State of Ohio. Completion of the PhD degree will require 36 hours of coursework (24 hours of which are graded) and 18 hours of NTRN 701 Dissertation Ph.D..

In addition, each student must successfully complete a qualifier examination for advancement to candidacy in the form of a short grant proposal with oral defense. During the dissertation period, students are expected to meet twice a year with the thesis committee, present seminars in the department, and fulfill journal publication requirements. Throughout the doctoral training, students are expected to be enthusiastic participants in seminars, journal clubs, and research meetings in the lab and program.

Research Rotation in Biomedical Sciences Training Program (BSTP 400) or Research Rotation in Medical Scientist Training Program (MSTP 400) or Special Problems (NTRN 601)
Molecular Biology I (CBIO 455) 4
Advanced Human Nutrition II (NTRN 434)
Seminar in Advanced Nutrition (NTRN 551)
Isotope Tracer Methodology (NTRN 454) or Molecular Nutrition (NTRN 455)
Investigative Methods in Nutrition (NTRN 561)
Special Problems (NTRN 601) 1 - 4
On Being a Professional Scientist: The Responsible Conduct of Research (IBMS 500) 1
Year Total: 9 9-20 1

Second Year Units
Advanced Human Nutrition I (NTRN 433) 4
Nutritional Biochemistry and Metabolism (NTRN 452) 3
Seminar in Advanced Nutrition (NTRN 551) 1
Investigative Methods in Nutrition (NTRN 561) 1 - 4
Special Problems (NTRN 601) 1 - 9
Seminar in Advanced Nutrition (NTRN 551) 1
Electives: 2 courses - Any NTRN 400 and/or graduate course in SOM basic science departments 6
Investigative Methods in Nutrition (NTRN 561) 1 - 4
Special Problems (NTRN 601) 1 - 9
Dissertation Ph.D. (NTRN 701) 1 - 9
Year Total: 10-21 9-20 1-9

Third Year Units
Seminar in Advanced Nutrition (NTRN 551) 1
Dissertation Ph.D. (NTRN 701) 1 - 9
Seminar in Advanced Nutrition (NTRN 551) 1
Dissertation Ph.D. (NTRN 701) 1 - 9
Year Total: 2-10 2-10

Total Units in Sequence: 44-109

After the third year, student enrolls in one credit of NTRN 701 Dissertation Ph.D., Fall and Spring Semesters until graduation.

Courses

NTRN 201. Nutrition. 3 Units.
The nutrients, their functions, food sources, and factors affecting human needs throughout life.

NTRN 328. Child Nutrition, Development and Health. 3 Units.
The relationship between nutrition and physical/cognitive growth and development of the child from the prenatal period through adolescence, including individuality, maturation and biological needs. Nutritional influences (nutrient requirements, food choices, and nutritional/feeding problems) and effects on health are emphasized. Prereq: NTRN 201.

NTRN 342. Food Science. 3 Units.
Chemical, physical and biological properties of food constituents and their interactions in food preparation and processing and practical application of processing methods and their effect on nutritional quality and acceptability. Prereq: CHEM 106.

NTRN 342L. Food Science Lab. 2 Units.

NTRN 343. Dietary Patterns. 3 Units.
Examination of the food supply in the United States as it is affected by production, processing, marketing, government programs, regulation, and consumer selection. Nutritional evaluation of dietary patterns of different cultures. Recommended preparation: NTRN 201 or consent.

NTRN 351. Food Service Systems Management. 3 Units.
The application of organizational theory and skills in the preparation and service of quantity food. Laboratory experience in professional food services are included. Graduate students will analyze one aspect of food service management in depth. Offered as NTRN 351 and NTRN 451. Prereq: Nutrition major or consent of instructor.

NTRN 359. Diabetes Prevention and Management. 3 Units.
In this course, we will explore the diabetes epidemic, its effects on the healthcare system, and strategies for prevention. The pathophysiology of the disease will be examined as well as environmental factors leading to the increase in diagnoses. Comorbid conditions and acute and chronic complications of diabetes and hyperglycemia will be addressed. Rationale for current therapeutic strategies will be explored, including the use of blood glucose monitoring, physical activity, nutrition counseling, oral medications, and insulin therapy. Patient education and health literacy will be studied in the context of patient centered goal setting. Requirements for developing a Diabetes Self-Management Education Program will be discussed. Community program development will be examined in the context of population-based prevention strategies. Offered as NTRN 359 and NTRN 459. Prereq: NTRN 201 and Junior or Senior Status.

NTRN 360. Guided Study in Nutrition Practice. 3 Units.
Methods for the provision of nutrition services to individuals and groups. Principles of professional practice including ethics, standards, and regulatory issues. Recommended preparation: NTRN 363 or NTRN 433 or consent. Prereq: NTRN 201 and NTRN 342 or MS in Nutrition or MS in Public Health Nutrition.
NTRN 361. Energy Dysregulation: From Obesity to Anorexia. 3 Units.
Energy imbalance and the implications on health will be explored in this
course. Key concepts covered in this class include: 1. Energy imbalance
refers to positive and negative states of energy balance and occurs
when energy intake does not match energy expended in metabolic
processes, daily living activities, and physical activity; 2. Obesity is a
result of chronic positive energy balance whereas anorexia nervosa is
a condition of chronic negative energy balance; 3. Energy metabolism
is controlled by a complex array of neural and hormonal signaling; 4.
Energy imbalance disrupts the neural and hormonal signaling pathways
of energy metabolism resulting in unfavorable health consequences
such as pro-inflammatory state, oxidative stress, immune dysregulation,
menstrual dysfunction, sarcopenia, and low bone mineral density;
and 5. Exercise training can impact energy imbalance health-related
outcomes. Learning Outcomes: Students will be able to 1. define energy
balance and explain the components of energy expenditure; 2. define
disordered eating, female athlete triad, and disordered eating; 3. explain
the relationship among energy intake, energy expenditure, and body
composition in energy imbalance; 4. describe alterations in skeletal
muscle and adipose physiology in energy imbalance; 5. diagram neural
control of feeding and energy homeostasis and hormonal control of
energy metabolism; 6. explain the neural and hormonal changes that
occur in chronic energy imbalance and describe current theories in how it
results in menstrual dysfunction, inflammatory response, oxidative stress,
immune dysregulation, sarcopenia, and low bone mineral density; and
7. explain how exercise training can influence inflammatory response,
oxidative stress, immune function, and musculoskeletal health in energy
imbalance. Offered as NTRN 361 and NTRN 461. Prereq: NTRN 201 or
requisites not met permission.

NTRN 363. Human Nutrition I: Energy, Protein, Minerals. 3 Units.
Chemical and physiological properties of specific nutrients, including
interrelationships and multiple factors, in meeting nutritional needs
throughout the life cycle. Prereq: CHEM 223 and BIOL 216 (3 or 4 cr.
hrs.).

NTRN 364. Human Nutrition II: Vitamins. 3 Units.
Chemical and physiological properties of vitamins, including
interrelationships and multiple factors, in meeting nutritional needs
throughout the life cycle. Prereq: NTRN 363.

NTRN 365. Nutrition for the Prevention and Management of Disease:
Pathophysiology. 4 Units.
Interplay among etiology, metabolic perturbations, pathophysiology,
clinical signs and symptoms, and nutrition principles for the prevention
and management of disease. Prereq: NTRN 363 and BIOC 307 or
equivalent or consent of instructor.

NTRN 366. Nutrition for the Prevention and Management of Disease:
Clinical Applications. 3 Units.
Application of nutrition principles and knowledge for the prevention
and management of disease. Case studies and other educational
approaches and techniques will be used. Course includes evidence-
based assessments and interpretation of key data (biochemical, dietary,
physical) to develop nutritional interventions. Coreq: NTRN 365.

NTRN 371. Special Problems. 1 - 3 Unit.
Independent reading, research, or special projects supervised by a
member of the nutrition faculty. Prereq: Junior or senior standing.

NTRN 372. Special Problems. 1 - 3 Unit.
Independent reading, research, or special projects supervised by a
member of the nutrition faculty. Prereq: Junior or senior standing.

NTRN 388. Seminar in Nutrition. 1 - 3 Unit.
Prereq: Junior or senior standing.

NTRN 390. Undergraduate Research. 3 - 9 Units.
Guided laboratory research in nutritional biochemistry or molecular
nutrition under the sponsorship of a nutrition faculty member.

NTRN 397. SAGES Capstone Proposal Seminar. 3 Units.
In this departmental seminar course, students will conceptualize, develop
and prepare a written plan, known as the "Capstone Proposal," for their
senior Capstone project (NTRN 398: Senior Capstone Experience).
Discussion will include, but not be limited to basic research principles,
different types of research, ethics and IRB procedures. The Capstone
Proposal shall include the project design, aims, methodology, budget,
data analysis and presentation. Upon completion of this course, students
will have confirmed student/Capstone advisor and, if applicable, mentor
relationships, written a Capstone proposal and given an oral presentation
of their proposal at a departmental colloquium. Counts as SAGES
Departmental Seminar. Prereq: NTRN 201 and NTRN 342.

NTRN 398. SAGES Senior Capstone Experience. 3 Units.
Students will implement their "Capstone Proposal" projects as designed
in NTRN 397: Capstone Proposal Seminar. Pertinent research activities
will depend on the nature of the student's "Capstone Proposal" project.
The student will meet regularly with their Capstone advisor, at least
twice monthly, to provide progress reports, discuss the project, and for
critique and guidance. By the end of this course, the student will have
completed their SAGES Senior Capstone research project and presented
their project results/findings orally at the Senior Capstone Fair and at a
departmental colloquium. Counts as SAGES Senior Capstone. Prereq:
NTRN 397.

NTRN 399. Senior Project. 3 Units.
Formal investigation of a topic in nutrition culminating in a paper and oral
presentation. Requires definition of a problem, evaluation of the scientific
literature and delineation of problem-solving approaches. Recommended
preparation: Twenty-one hours of Nutrition.

NTRN 433. Advanced Human Nutrition I. 4 Units.
Emphasis on reading original research literature in energy, protein and
minerals with development of critical evaluation and thinking skills.
Recommended preparation: NTRN 201 and CHEM 223 and BIOL 348 or
equivalent.

NTRN 434. Advanced Human Nutrition II. 3 Units.
Emphasis on reading original research literature on vitamins with
development of critical evaluation and thinking skills. Recommended
preparation: NTRN 433 or consent.

NTRN 435. Nutrition during Pregnancy and Lactation. 3 Units.
Study of current research literature on nutrition for pregnancy and
lactation including nutrient requirements, nutrition assessment, and
nutrition intervention. Prereq: Graduate Student in Nutrition or Public
Health Nutrition or (NTRN 363 and NTRN 364) or requisites not met
permission.

NTRN 436. Pediatric Nutrition. 3 Units.
This course will focus on understanding the nutritional needs of infants,
children and adolescents. Evidence based guidelines will be used as we
discuss best clinical practice for the management of pediatric nutrition
issues. Anthropometric measurements used in growth assessment will
be reviewed. Nutrient requirements for each stage of development will
be explored with a specific focus on micronutrients relevant to pediatrics
such as fluoride, iron, calcium and vitamin D. Abnormal growth resulting
in malnutrition and obesity will be examined with a focus on prevention,
diagnosis and treatment. Skills necessary to complete a pediatric
nutrition assessment will be reviewed with opportunities to practice and
demonstrate competency. Prereq: NTRN 435.
NTRN 437. Evaluation of Nutrition Information for Consumers. 3 Units.
Reading and appraisal of food and nutrition literature written for the
general public, including books, magazines, newsletters. Prereq:
Graduate standing and Nutrition or Public Health Nutrition major or
consent of instructor.

NTRN 438. Dietary Supplements. 3 Units.
An examination of dietary supplements specific to health promotion
and disease prevention/treatment throughout the life cycle. Topics and
concepts include regulation, controversies, safety, efficacy, and the
surrounding scientific evidence for dietary supplement use. Prereq: NTRN
364 or requisites not met permission.

NTRN 440. Nutrition for the Aging and Aged. 3 Units.
Consideration of the processes of aging and needs which continue
throughout life. The influences of food availability, intake, economics,
culture, physical and social conditions and chronic disease as they affect
the ability of the aged to cope with living situations. Recommended
preparation: Nutrition major or consent of instructor.

NTRN 446. Advanced Maternal Nutrition: Special Topics. 3 Units.
Analysis of the problems commonly associated with high-risk pregnancies
and fetal outcome. Discussion of causes, mechanisms, management and
current research. Recommended preparation: NTRN 435 or consent.

NTRN 451. Food Service Systems Management. 3 Units.
The application of organizational theory and skills in the preparation
and service of quantity food. Laboratory experience in professional food
services are included. Graduate students will analyze one aspect of food
service management in depth. Offered as NTRN 351 and NTRN 451.
Prereq: Nutrition major.

NTRN 452. Nutritional Biochemistry and Metabolism. 3 Units.
Mechanisms of regulation of pathways of intermediary metabolism;
amplification of biochemical signals; substrate cycling and use
of radioactive and stable isotopes to measure metabolic rates.
Recommended preparation: BIOC 307 or equivalent. Offered as BIOC
452 and NTRN 452.

NTRN 454. Isotope Tracer Methodology. 3 Units.
Stable and radioactive isotopes in metabolic research concentrating on
the design of in-vitro and in-vivo investigative protocols using mostly
stable isotopes and mass spectrometric analysis; critical interpretation of
data from the recent literature; and pathway identification and kinetics.
Recommended preparation: BIOC 407.

NTRN 455. Molecular Nutrition. 3 Units.
Nutrient control of gene expression in mammalian cells and deregulation
of expression of these genes. The molecular basis of nutrition-related
diseases, such as diabetes mellitus, PKU, and LDL-receptor deficiency,
will be discussed. The application of genetic manipulation to metabolism
and nutrition will be evaluated. Recommended preparation: BIOC 407.

NTRN 459. Diabetes Prevention and Management. 3 Units.
In this course, we will explore the diabetes epidemic, its effects on the
healthcare system, and strategies for prevention. The pathophysiology
of the disease will be examined as well as environmental factors leading
to the increase in diagnoses. Comorbid conditions and acute and
chronic complications of diabetes and hyperglycemia will be addressed.
Rationale for current therapeutic strategies will be explored, including the
use of blood glucose monitoring, physical activity, nutrition counseling,
oral medications, and insulin therapy. Patient education and health
literacy will be studied in the context of patient centered goal setting.
Requirements for developing a Diabetes Self-Management Education
Program will be discussed. Community program development will be
examined in the context of population-based prevention strategies.
Offered as NTRN 359 and NTRN 459. Prereq: Graduate Standing.

NTRN 460. Sports Nutrition. 3 Units.
Study of the relationships of nutrition and food intake to body composition
and human performance. Laboratory sessions include demonstrations
of body composition and fitness measurements and participation in a
research project. Recommended preparation: NTRN 363 or NTRN 433 or
consent.

NTRN 461. Energy Dysregulation: From Obesity to Anorexia. 3 Units.
Energy imbalance and the implications on health will be explored in this
course. Key concepts covered in this class include: 1. Energy imbalance
refers to positive and negative states of energy balance and occurs
when energy intake does not match energy expended in metabolic
processes, daily living activities, and physical activity; 2. Obesity is a
result of chronic positive energy balance whereas anorexia nervosa is
a condition of chronic negative energy balance; 3. Energy metabolism
is controlled by a complex array of neural and hormonal signaling; 4.
Energy imbalance disrupts the neural and hormonal signaling pathways
of energy metabolism resulting in unfavorable health consequences
such as pro-inflammatory state, oxidative stress, immune dysregulation,
menstrual dysfunction, sarcopenia, and low bone mineral density;
and 5. Exercise training can impact energy imbalance health-related
outcomes. Learning Outcomes: Students will be able to 1. define energy
balance and explain the components of energy expenditure; 2. define
disordered eating, female athlete triad, and disordered eating; 3. explain
the relationship among energy intake, energy expenditure, and body
composition in energy imbalance; 4. describe alterations in skeletal
muscle and adipose physiology in energy imbalance; 5. diagram neural
control of feeding and energy homeostasis and hormonal control of
energy metabolism; 6. explain the neural and hormonal changes that
occur in chronic energy imbalance and describe current theories in how it
results in menstrual dysfunction, inflammatory response, oxidative stress,
immune dysregulation, sarcopenia, and low bone mineral density; and
7. explain how exercise training can influence inflammatory response,
oxidative stress, immune function, and musculoskeletal health in energy
imbalance. Offered as NTRN 361 and NTRN 461. Prereq: NTRN 201 or
requisites not met permission.

NTRN 462. Exercise Physiology and Macronutrient Metabolism. 3
Units.
The purpose of this course is to provide students with the knowledge
of theoretical and applied concepts of exercise physiology. Students
will gain an understanding of the acute and chronic physiological
responses and adaptations of the cardiovascular, metabolic, hormonal,
and neuromuscular systems in response to exercise. Additional topics
include factors effecting performance, assessing cardiorespiratory and
muscular fitness, designing exercise programs for health and wellness,
special populations, and athletes, environmental considerations and
nutrition’s role in sport and exercise performance. Prereq: Nutrition Major.
NTRN 516. Seminar in Dietetics I. 4 Units.
Study of evidence-based guidelines for dietetic practice in medical nutrition therapy. Emphasis on life cycle stages and common disease states that require specialized nutrition care. Enrollment restricted to those accepted into Case Coordinated Dietetic Internship/Master Degree Program.

NTRN 517. Seminar in Dietetics II. 4 Units.
Study of scientific basis for clinical and community nutrition practice and developments in food service systems management. Recommended preparation: Dietetic internship.

NTRN 528. Introduction to Public Health Nutrition. 3 Units.
Philosophy, objectives, organization, and focus of government and voluntary agencies with emphasis on nutrition components. Recommended preparation: Public health nutrition majors only. Prereq: Public health nutrition students and graduate nutrition students only.

NTRN 529. Nutritional Epidemiology. 3 Units.
This course uses epidemiology as a tool for assessing potential causal associations between dietary excesses, deficiencies and imbalances to the prevalent chronic diseases. It addresses the epidemiologic aspects of nutrition related chronic diseases, for example, the multi-factorial nature of etiology. Recommended preparation: Statistics and Public Health Nutrition students only.

NTRN 530. Public Health Nutrition. 3 Units.
Analysis of public health programs in government and voluntary health agencies and the effect of legislation. Emphasis on integration with other disciplines working in public health settings and the role of a public health nutritionist.

NTRN 531. Public Health Nutrition Field Experience. 1 - 6 Unit.
Individually planned public health experience. May be concurrent with course work in local agencies or in blocks of full-time work with a city, county, or state health agency. Prereq: Open to public health nutrition students only. Consent of instructor.

NTRN 532A. General Nutrition Care. 1 - 3 Unit.
Individually arranged clinical experience.

NTRN 532C. Specialized Public Health Nutrition Field Experience. 1 - 3 Unit.
Individually arranged clinical experience. Prereq: Public Health Nutrition students only. Consent of instructor.

NTRN 532E. Clinical Research: Methods in Nutrition and Metabolism. 3 Units.
Individually arranged.

NTRN 533. Nutritional Care of Neonate. 3 Units.
Nutritional assessment and management of high-risk newborns with emphasis on prematurity and low birth weight. Review of current literature coordinated with clinical experience in the neonatal intensive care unit. Issues on follow-up included. Recommended preparation: NTRN 435 or consent.

NTRN 534. Advanced Public Health Nutrition Field Experience. 1 - 6 Unit.
Individually planned advanced public health experience. Prereq: Open to public health nutrition students only.

NTRN 550A. Advanced Community Nutrition. 3 Units.
Development of skills needed by the community dietitian. Emphasis on effective tools for service development and delivery. Recommended courses of action for the professional. Prereq: Open to nutrition graduate students and senior undergraduate nutrition majors only.

NTRN 551. Seminar in Advanced Nutrition. 1 Unit.
Ph.D. students meet weekly to discuss topical journal articles. Students gain experience in critical evaluation of research and develop presentation/communication skills. Discussion of research integrity and ethics. Students participate in departmental seminars with invited speakers.

NTRN 561. Investigative Methods in Nutrition. 1 - 4 Unit.
Research methods appropriate for nutrition. Methods for conducting research in nutrition and food sciences, food service management and dietetics. Designing research proposals. Prereq: Nutrition major.

NTRN 601. Special Problems. 1 - 18 Unit.

NTRN 651. Thesis M.S.. 1 - 18 Unit.

NTRN 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Pathology

Christine Kehoe (christine.kehoe@case.edu), Student Affairs

The clinical, research, and educational activities of the Case Department of Pathology are centered at the Case School of Medicine and University Hospitals Case Medical Center (UHCMC). The core components of the department are the Basic Science Pathology Program at Case School of Medicine and the three clinical divisions of Pathology at University Hospitals Health System (UHHS), including the Division of Anatomic Pathology at UHMC, the Division of Clinical Pathology at UHCMC, and the UHHS Pathology Division of Community Hospitals. In addition, our affiliates include the Cuyahoga County Medical Examiner’s Office, the Pathology Department at the Louis Stokes Veteran’s Administration Medical Center, and the Pathology Department at MetroHealth Medical Center. Research laboratories of the department are located in the Wolstein Research Building and Institute of Pathology. Both are situated adjacent to University Hospitals of Cleveland, the primary teaching hospital of the Case School of Medicine and the location of the department’s Pathology Residency Program.

World-class research is conducted in the department in biomaterials biocompatibility, cancer biology, immunology, neuropathology and neurodegenerative disease, outcomes research, and tissue injury and healing. The department’s research activities are characterized by highly cooperative and collaborative interactions within the department, and with many other departments at Case and its affiliated institutions. In FY 2011, the department’s annual external research grant support totaled $15,463,639, $13,080,886 of which was from NIH. The CWRU Department of Pathology NIH funding level ranked 12th nationally in FY11 and 13th nationally in FY12. For information about graduate programs, please see here (http://www.case.edu/med/pathology/training/graduate.html).

Masters Degrees

MS in Pathology (full-time)

The full-time Master’s Program in Pathology is intended for students with a background in the biological or chemical sciences, typically a bachelors or baccalaureate degree, who are interested in pursuing advanced coursework in the basis of disease. This coursework may be useful for those interested in pursuing a professional doctoral degree (e.g., MD, DO, DDS, or DMD) or other health professions degree, since the core curriculum and electives include many topics of medical
relevance, including histology, gross anatomy, pathology, cancer and immunology. The time of matriculation in the Program is flexible; a typical time to degree is anticipated to be 4 semesters, although completion in approximately 13 months, including an intensive summer course in Anatomy, is possible. The course of study will be determined by the student, their Academic advisor, and the Graduate Program Committee and will consist of 30 credit hours of course work. Flexible electives in cellular basis of disease, immunology and cancer biology will allow students to focus on an area of interest. Graduates of the Program can pursue opportunities in basic or clinical research, teaching, biotechnology, pharmaceuticals, health care, or government. While the Master’s may be a terminal degree, it may also lead to admission to professional or PhD programs.

Description of Program

Students will earn a Plan B Masters from Case Western Reserve University. The degree program is comprised of core courses in Pathology with elective course work from related disciplines, a course on research ethics, attendance of the departmental seminar series, and a comprehensive final project in the form of a review paper that will ideally be suitable for publication. The topic of the review paper will be determined by the student and their academic advisor. The core of the Program is geared toward providing the student a solid basis in cell biology and pathology. This begins with courses in histology and cell & molecular biology (ANAT 412 Histology and Ultrastructure/ANAT 413 General Histology Laboratory and PATH 475 Cell and Molecular Foundations of Pathology) followed by courses in basic pathology and immunology (PATH 510 Basic Pathologic Mechanisms and PATH 416 Fundamental Immunology). After the first year the student can specialize by choosing electives in their area of interest. In the final semester the student will register for 3 credits of PATH 601 Special Problems while writing their paper. An advisor for the paper should be identified by mutual interest during the first year.

</table>

**Total Units in Sequence:** 49-100

* Students with a significant background in Cell and Molecular Biology may take Path 525 (Transport and targeting of macromolecules in health and disease) or Path 488 (Yeast Genetics and Cell Biology) instead.

### Admission Criteria

Applicants will be screened by the Pathology Department Admissions Committee. Students will be required to supply a GRE or MCAT score, a transcript, three letters of recommendation and an essay that details the student’s interest in the Program. Students will be interviewed on campus or via electronic media (i.e. FaceTime or Skype). Although there are no set requirements, successful applicants would be expected to have an MCAT >26, GRE verbal >150 and GRE quantitative > 150, and an undergraduate GPA around 3.0. Applications will be accepted throughout the year with a deadline of June 1st; final decisions for Fall matriculation will be made by July 1st. Prospective students are advised to submit their applications well in advance of the deadline, since the class may fill completely before that date.

### Tuition

Financial aid will not be provided by the Department. Students may apply for financial aid through the federal government at http://www.fafsa.ed.gov/. Tuition is currently $1546/credit hour. The total cost of the Program is based on tuition for the credits taken each term. Credits taken in excess of 12 per semester incur no additional cost (e.g. the cost of 12 credits is $18,552, if a student takes 15 credits in a semester the cost will be limited to $18,552).

### MS in Pathology (part-time)

A part-time program leading to the Master of Science degree in Pathology is available to laboratory staff who are employed by Case Western Reserve University. Students in this program must be full-time university employees and must have the agreement of their supervisor to begin studies as a part-time student. Courses are available as an employee fringe benefit (up to 6 credits per semester for Fall and Spring, and 3 credits for Summer) and can only be taken as limited by the fringe benefit regulations.

A formal application for this program must be submitted to the graduate school. Prior to submission of this application, the employee, the supervisor, and the Director of the Pathology Graduate Program must meet to review and facilitate the student’s application for admission.

This program can lead to an M.S. degree through Plan A. Required core courses include CBIO 453 Cell Biology I (4 credits), CBIO 455 Molecular Biology I (4 credits), PATH 510 Basic Pathologic Mechanisms (4 credits), and participation in a seminar course (PATH 511 Experimental Pathology Seminar I and/or PATH 512 Experimental Pathology Seminar II) for at least one semester. CBIO 453 Cell Biology I, CBIO 455 Molecular Biology I and must be taken as graded courses (not P/F).

Plan A requires a minimum of 27 total coursework credits. In addition to the required core courses, the student must take a minimum of 6 credits of PATH 651 Thesis, which involves research in the laboratory.
of the supervisor (who serves as the M.S. Thesis Mentor) and thesis preparation. The student must register for at least one credit of PATH 651 Thesis M.S. every semester until graduation. A GPA of 2.75 or better must be maintained for a terminal M.S. (Students considering using the M.S. in Pathology as a “stepping stone” to the Ph.D. degree must maintain a GPA of 3.0 or better.) An M.S. thesis must be prepared based on the research, and the student must pass an M.S. Degree Examination in which the thesis is defended.

**MD/MS Biomedical Investigation--Pathology Track**

For Program Admissions and MD requirements, see MD Dual Degree Programs (p. 660). This track is designed to provide students with an in-depth understanding of the cellular basis of disease or immunity. During the first year of medical school the student should identify a mentor and begin planning coursework and a research project leading to the MS degree. Because the background and interest of applicants varies widely, members of the Program Oversight Committee will assist each student in designing an individualized schedule of graduate courses for any track.

Students are expected to complete at least two graduate courses (3 credits each or total 6 credits) before beginning the laboratory research period (year 3), and students should take three graduate courses before the research period if this is possible. For students to receive graduate credit for any medical coursework (as IBIS credit, e.g. IBIS 403 Integrated Biological Sciences III), they must register at the beginning of the semester. Students in the MD/MS joint degree program must attain a cumulative GPA of 3.0 in the graduate courses. Students in this program may participate in any of the three tracks of the Department of Pathology Graduate Program.

For information about the Pathology Track in the MD/MS program, contact Dr. James Anderson (james.anderson@case.edu), 216.368.0279, or Dr. Clive Hamlin (clive.hamlin@case.edu), 216.368.0512.

**Students in the Pathology track must complete:**

' 15 graded credits of graduate school courses should be taken in the first 2 years, including IBIS 403 Integrated Biological Sciences III (6 credits) and three PATH graduate courses (3 credits each). Students may defer a maximum of one 3-credit hour course to Year 3.

### PhD in Pathology

PhD Training in the Pathology Graduate Program occurs in three tracks that share a common core curriculum but provide additional track-specific
curricular offerings. This provides a cohesive program that addresses
the specific needs of different Pathology-related areas of research
training. Section II of the handbook “Pathology PhD Program” describes
core features of the program that are shared and provides detailed
descriptions of the three training tracks:

- Molecular and Cellular Basis of Disease Training Program (MCBTP)
- Immunology Training Program (ITP)
- Cancer Biology Training Program (CBTP)

To earn a PhD in Pathology, a student must complete rotations in at
least three laboratories followed by selection of a research advisor, and
complete Core and Elective coursework including responsible conduct
of research as described in the Course of Study, below. Students who
previously completed relevant coursework, (for example, with a MS) may
petition to complete alternative courses. Each training track follows the
overall regulations established and described in CWRU Graduate Studies
and documented to the Regents of the State of Ohio. Completion of the
PhD degree will require 36 hours of coursework (24 hours of which are
graded) and 18 hours of PATH 701 Dissertation Ph.D..

In addition, each PhD student must successfully complete a qualifier
examination for advancement to candidacy in the form of a short grant
proposal with oral defense. The qualifier is generally completed in
the summer after year two. During the dissertation period, students are
expected to meet twice a year with the thesis committee, present
seminars in the department, and fulfill journal publication requirements.
Throughout the doctoral training, students are expected to be
enthusiastic participants in seminars, journal clubs, and research
meetings in the lab and program.

**Total Units in Sequence:** 45-128

^ Alternative courses for MSTP students: IBIS 401-404. MSTP students in the CBTP do not need to take CBIO 453 Cell Biology I, CBIO 455 Molecular Biology I, PATH 510 Basic Pathologic Mechanisms, or PATH 416 Fundamental Immunology, although PATH 416 Fundamental Immunology may still be taken as a Track Elective.

^ Alternate course is MSTP 400 Research Rotation in Medical Scientist Training Program for MSTP students with PATH 601 Special Problems for direct admit students

** PATH 416 Fundamental Immunology is included as a Track Elective for CBTP students

+ Petition to convert 601 credits to 701 credits for semester in which advancement occurs

++ Once 36 credits including 24 graded credits have been completed, register for up to 6 credits of PATH 701 Dissertation Ph.D.

# Exception: Take 1-3 credits of PATH 701 Dissertation Ph.D.
**Important:** Students should take the following steps to reduce charges to their mentor and department: AFTER ADVANCE TO CANDIDACY, IT IS NO LONGER NECESSARY TO REGISTER FOR 9 CREDITS PER SEMESTER TO MAINTAIN FULL-TIME STUDENT STATUS. In the first semester after advancement to candidacy, students should register only for the number of credits of PATH 701 Dissertation Ph.D. needed to bring their total number of accumulated credits of PATH 701 to 9 by the end of the semester (and should register for no other courses). In subsequent semesters, students should register for only 1 credit of PATH 701 (and no other courses), except that in the final semester registration should be for the number of credits of PATH 701 needed to complete a total of 18 credits by the end of the semester. EXCEPTION: IT IS IMPORTANT TO MAXIMIZE THE NUMBER OF PATH 701 CREDITS THAT CAN BE COMPLETED DURING PERIODS WHERE TRAINING GRANT SUPPORT IS AVAILABLE. If the student is on the NIH T32 training grant of NRSA award or other funding mechanism that supports this level of tuition, registration should be for the full 9 credits during semesters when grant support for tuition will be available, until a total of 18 credits of PATH 701 is accumulated, after which registration should be for only 1 credit of PATH 701 each semester until graduation. Even prior to advancing to candidacy, if a student has completed 36 “foundation” credits of graduate courses (at least 24 of which must be graded courses), the student should enroll in as many credits of PATH 701 as possible up to a maximum of 6 credits with the remaining credits to be graded courses or PATH 601. In the semester in which the student advances to candidacy, any PATH 601 credits for that semester that are beyond the 36 “foundation” credits should be converted to PATH 701 by petition to Graduate Studies. Students registering for PATH 601, PATH 651 or PATH 701 must indicated their thesis advisor as the Instructor. If a Class Section does not exist with your Thesis Advisor as Instructor, please see the Student Affairs Coordinator to add the Section in order for you to register.

**NOTE:** Schedule beyond year 5 will generally be the same as year 5.

**Courses**

**PATH 316. Fundamental Immunology. 4 Units.**
Introductory immunology providing an overview of the immune system, including activation, effector mechanisms, and regulation. Topics include antigen-antibody reactions, immunologically important cell surface receptors, cell-cell interactions, cell-mediated immunity, innate versus adaptive immunity, cytokines, and basic molecular biology and signal transduction in B and T lymphocytes, and immunopathology. Three weekly lectures emphasize experimental findings leading to the concepts of modern immunology. An additional recitation hour is required to integrate the core material with experimental data and known immune mediated diseases. Five mandatory 90 minute group problem sets per semester will be administered outside of lecture and recitation meeting times. Graduate students will be graded separately from undergraduates, and 22 percent of the grade will be based on a critical analysis of a recently published, landmark scientific article. Offered as BIOL 316, BIOL 416, CLBY 416, PATH 316 and PATH 416. Prereq: BIOL 215 and 215L.

**PATH 390. Undergraduate Research in Cancer Biology, Immunology, or Pathology. 1 - 3 Unit.**
Students undertake a research project directly related to ongoing research in the investigator's/instructor's laboratory. Written proposal outlining research topic, a schedule of meetings and format and length of final written report to be prepared prior to registration for credit. Recommended preparation: One year of college chemistry and consent of instructor.

**PATH 395. Selected Readings in Immunology, Cancer Biology, or Pathology. 1 - 3 Unit.**
Relevant readings and literature search on particular immunology, cancer biology or pathology topic(s) chosen by the student and directed by the instructor. Written proposal outlining chosen topic, type of work to be done, a schedule of meetings and format and length of final written report to be prepared prior to registration for credit.

**PATH 405. Discussions in Molecular Immunology (Health and Disease). 2 Units.**
Lectures and discussion on aspects of neurobiology of aging in model systems; current research on Alzheimer's, Parkinson's, and Huntington's diseases.

**PATH 415. Cytoskeleton and Disease. 1 Unit.**
Discussion of recent papers that have added to knowledge of normal cytoskeletal functions and their alterations in disease.

**PATH 416. Fundamental Immunology. 4 Units.**
Introductory immunology providing an overview of the immune system, including activation, effector mechanisms, and regulation. Topics include antigen-antibody reactions, immunologically important cell surface receptors, cell-cell interactions, cell-mediated immunity, innate versus adaptive immunity, cytokines, and basic molecular biology and signal transduction in B and T lymphocytes, and immunopathology. Three weekly lectures emphasize experimental findings leading to the concepts of modern immunology. An additional recitation hour is required to integrate the core material with experimental data and known immune mediated diseases. Five mandatory 90 minute group problem sets per semester will be administered outside of lecture and recitation meeting times. Graduate students will be graded separately from undergraduates, and 22 percent of the grade will be based on a critical analysis of a recently published, landmark scientific article. Offered as BIOL 316, BIOL 416, CLBY 416, PATH 316 and PATH 416. Prereq: Graduate standing and consent of instructor.
PATH 417. Cytokines: Function, Structure, and Signaling. 3 Units.
Regulation of immune responses and differentiation of leukocytes is modulated by proteins (cytokines) secreted and/or expressed by both immune and non-immune cells. Course examines the function, expression, gene organization, structure, receptors, and intracellular signaling of cytokines. Topic include regulatory and inflammatory cytokines, colony stimulating factors, chemokines, cytokine and cytokine receptor gene families, intracellular signaling through STAT proteins and tyrosine phosphorylation, clinical potential, and genetic defects. Lecture format using texts, scientific reviews and research articles. Recommended preparation: PATH 416 or equivalent. Offered as BIOL 417, CLBY 417, and PATH 417.

PATH 418. Tumor Immunology. 3 Units.
Interactions between the immune system and tumor cells. Topics include the historical definition of tumor specific transplantation antigens, immune responses against tumor cells, the effects of tumor cell products on host immune responses, molecular identification of tumor specific transplantation antigens and recent advances in the immunotherapy of human cancers. Prereq: PATH 416.

PATH 422. Current Topics in Cancer. 3 Units.
The concept of cancer hallmarks has provided a useful guiding principle in our understanding of the complexity of cancer. The hallmarks include sustaining proliferative signaling, evading growth suppressors, enabling replicative immortality, activating invasion and metastasis, inducing angiogenesis, resisting cell death, deregulating cellular energetics, avoiding immune destruction, tumor-promoting inflammation, and genome instability and mutation. The objectives of this course are to (1) examine the principles of some of these hallmarks, and (2) explore potential therapies developed based on these hallmarks of cancer. This is a student-driven and discussion-based graduate course. Students should have had some background on the related subjects and have read scientific papers in their prior coursework. Students will be called on to present and discuss experimental design, data and conclusions from assigned publications. There will be no exams or comprehensive papers but students will submit a one-page critique (strengths and weaknesses) of one of the assigned papers prior to each class meeting. The course will end with a full-day student-run symposium on topics to be decided jointly by students and the course director. Grades will be based on class participation, written critiques, and symposium presentations. Offered as BIOL 420, Mbio 420, MVir 420, PATH 422, and PHRM 420. Prereq: CBIO 453 and CBIO 455.

PATH 425. Stem Cell Biology and Therapeutics. 3 Units.
This course is intended to teach current understanding of stem cells as it relates to their characterization, function, and physiologic and pathological states. The course will expose students to the current understanding of various types of stem cells, including embryonic and adult stem cells of various tissues, techniques for their isolation and study. Experimental models and potential biomedical therapeutic applications will be discussed. The course will be taught by the faculty of the "Center for Stem Cell and Regenerative Medicine" who are affiliated with multiple departments of Case Western Reserve University, Cleveland Clinic Foundation and the partnering biomedical companies. Offered as NEUR 425 and PATH 425.

PATH 430. Oxidative Stress and Disease Pathogenesis. 1 Unit.
Oxidative stress and free radicals are implicated in a number of disease processes including aging, arthritis, emphysema, Alzheimer's disease and cancer. Lecture course with discussion of recent studies concerning the formation and destructive mechanisms of free radicals in the context of various disease processes. Students read assigned papers and discuss these in class.

PATH 432. Current Topics in Vision Research. 3 Units.
Vision research is an exciting and multidisciplinary area that draws on the disciplines of biochemistry, genetics, molecular biology, structural biology, neuroscience, and pathology. This graduate level course will provide the student with broad exposure to the most recent and relevant research currently being conducted in the field. Topics will cover a variety of diseases and fundamental biological processes occurring in the eye. Regions of the eye that will be discussed include the cornea, lens, and retina. Vision disorders discussed include age-related macular degeneration, retinal ciliopathies, and diabetic retinopathy. Instructors in the course are experts in their field and are members of the multidisciplinary visual sciences research community here at Case Western Reserve University. Students will be exposed to the experimental approaches and instrumentation currently being used in the laboratory and in clinical settings. Topics will be covered by traditional lectures, demonstrations in the laboratory and the clinic, and journal club presentations. Students will be graded on their performance in journal club presentations (40%), research proposal (40%), and class participation (20%). Offered as NEUR 432, PATH 432, PHRM 432 and BIOC 432.

PATH 435. Tissue Engineering and Regenerative Medicine. 3 Units.
This course will provide advanced coverage of tissue engineering with a focus on stem cell-based research and therapies. Course topics of note include stem cell biology and its role in development, modeling of stem cell function, controlling stem cell behavior by engineering materials and their microenvironment, stem cells' trophic character, and state-of-the-art stem cell implementation in tissue engineering and other therapeutic strategies. Offered as EBME 425 and PATH 435. Prereq: EBME 325 or equivalent or graduate standing.

PATH 444. Neurodegenerative Diseases: Pathological, Cellular & Molecular Perspectives. 3 Units.
This course, taught by several faculty members, encompasses the full range of factors that contribute to the development of neurodegeneration. Subjects include pathological aspects, neurodegeneration, genetic aspects, protein conformation and cell biology in conditions such as Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis and prion diseases. Students read assigned primary literature and present and discuss these in class.

PATH 450. Interdisciplinary Musculoskeletal Research. 3 Units.
This is an advanced graduate level course for students interested in the morphogenesis, structure, function, and maintenance of the skeletal system taught jointly by faculty from Case Western Reserve University (CWRU), Cleveland Clinic Foundation (CCF), and the Northeastern Ohio Universities College of Medicine (NEOUCOM). It will meet twice per week for 90 minutes per session. The format will include an overview of the topic by the responsible faculty, followed by a discussion of important papers on the topic. The students will be expected to discuss the papers for each session and grading will be based on those discussions. The intent of the course is to enable students to understand the important problems in skeletal biology and both classical and modern approaches for solving them.
PATH 460. Introduction to Microarrays. 3 Units.
Microarray technology is an exciting new technique that is used to analyze gene expression in a wide variety of organisms. The goal of this course is to give participants a hands-on introduction to this technology. The course is intended for individuals who are preparing to use this technique, including students, fellows, and other investigators. This is a hands-on computer-based course, which will enable participants to conduct meaningful analyses of microarray data. Participants will gain an understanding of the principles underlying microarray technologies, including: theory of sample preparation, sample processing on microarrays, familiarity with the use of Affymetrix Microarray Suite software and generation of data sets. Transferring data among software packages to manipulate data will also be discussed. Importation of data into other software (GeneSpring and DecisionSite) will enable participants to mine the data for higher-order patterns. Participants will learn about the rationale behind the choice of normalization and data filtering strategies, distance metrics, use of appropriate clustering choices such as K-means, Hierarchical, and Self Organizing Maps. Course Offered as BIOC 460, PATH 460, CNCR 460.

PATH 465. Advanced Immunobiology. 4 Units.
This course will cover fundamental (innate and adaptive responses, antigen recognition, cell activation, etc.) and applied (immune evasion, autoimmunity, allergy, transplantation, vaccines, etc.) immunology topics, highlighting the most important and recent advancements found in the primary literature. Lectures will be derived largely from the primary literature, but will also include modern techniques and fundamental background knowledge to enhance the learning environment for the immunology concepts presented. Course organization consists of two lectures per week by the immunology faculty, midterm and final examinations, and an oral presentation. Enrolled students have the option of concurrent enrollment in PATH 466 Writing for Immunologists. Prereq: PATH 416

PATH 466. Proposal Writing for Immunologists. 1 Unit.
This course is an introduction to research proposal writing and evaluation for immunology graduate students. One of the most important aspects of being an active investigator in academia, biotechnology, or pharmaceutical industries is being a skilled communicator of one’s ideas. This course is designed to teach these practical writing skills and will include lectures and discussions of key writing strategies. Throughout the semester, students will write a research proposal on a topic outside of their thesis research focus (but it can be related), present their ideas in front of the class, and take part in an end-of-semester review panel of the proposals of their classmates. Enrollment requires concurrent enrollment in PATH 465 Advanced Immunobiology and instructor permission. Prereq: PATH 416. Coreq: PATH 465.

PATH 475. Cell and Molecular Foundations of Pathology. 3 Units.
This course is designed for M.S. students in the Pathology Graduate Program, and is an introductory course covering normal cell and molecular biology as well as cell physiology. Additional topics to be discussed in the course will include cell structure and function, as well as correlates to cellular and molecular pathology. Recommended Preparation: Should have undergrad-level cell biology and biochemistry.

PATH 480. Logical Dissection of Biomedical Investigations. 3 Units.
PATH 480 is an upper level graduate course encompassing discussion and critical appraisal of both published and pre-published research papers, book chapters, commentaries and review articles. Emphasis will be placed on evaluating the logical relationships connecting hypotheses to experimental design and experimental data to conclusions drawn. Thus, the course will aim to develop students’ capacities for independent thinking and critical analysis. Half of the course will be devoted to an analysis of fundamental conceptual issues pertaining to immunology, but this material will be applicable to a wide variety of fields. The other half of the course will be devoted to the analysis of papers that have been submitted for publication (with the students acting as primary reviewers of these papers). Our expectation is that this course will have practical relevance for students by providing them with methods to review their own prepublication manuscripts and eliminate common errors. It should also give students the tools to question widely held beliefs in diverse biomedical fields. Recommended preparation is completion of the C3MB curriculum and 2nd year or higher graduate school training. Previous exposure to immunology and molecular biology will be helpful but not required.

PATH 481. Immunology of Infectious Diseases. 3 Units.
This course centers on mechanisms of immune defense, immune escape and disease pathogenesis caused by important human pathogens. Some of the infectious diseases covered in this course include AIDS, TB and Malaria. Most topics focus on immunology of viral, bacterial, protozoan and fungal infections. Topics will also include aspects of epidemiology and global health. Classes will consist of literature review of current scientific articles, faculty lectures and student presentations. Grades will be determined by exams, class presentations, participation, and short reports. Graduate students will also be asked to write a brief research proposal. PATH 481 involves faculty from: Division of Infectious Diseases and HIV Medicine, Center for Global Health & Diseases, Department of Pathology. Prereq: PATH 416.

PATH 486. HIV Immunology. 3 Units.
This course will examine the unique immunity of HIV disease. The course content will include the study of HIV pathogenesis, immune control, immune dysfunctions, HIV prevention and immune restoration. Students will be expected to attend lectures and participate in class discussions. A strong emphasis will be placed on reviewing scientific literature. Students will be asked to help organize and to administer an HIV immunology journal club and will be asked to prepare a written proposal in the area of HIV immunology. Offered as PATH 486 and MBIO 486. Prereq: PATH 416 or permission from the instructor.

PATH 488. Yeast Genetics and Cell Biology. 3 Units.
This seminar course provides an introduction to the genetics and molecular biology of the yeasts S. cerevisiae and S. pombe by a discussion of current literature focusing primarily on topics in yeast cell biology. Students are first introduced to the tools of molecular genetics and special features of yeasts that make them important model eukaryotic organisms. Some selected topics include cell polarity, cell cycle, secretory pathways, vesicular and nuclear/cytoplasmic transport, mitochondrial import and biogenesis, chromosome segregation, cytoskeleton, mating response and signal transduction. Offered as CLBY 488, GENE 488, MBIO 488, and PATH 488.

PATH 510. Basic Pathologic Mechanisms. 4 Units.
An interdisciplinary introduction to the fundamental principles of molecular and cellular biology as they relate to the pathologic basis of disease. Lectures, laboratories, conferences.
PATH 511. Experimental Pathology Seminar I. 1 Unit.
Weekly discussions of current topics and research by students, staff and distinguished visitors.

PATH 512. Experimental Pathology Seminar II. 1 Unit.
Weekly discussions of current topics and research by students, staff and distinguished visitors.

PATH 520. Basic Cancer Biology and the Interface with Clinical Oncology. 3 Units.
This is an introductory cancer biology course that is intended to give students a broad and basic overview of Cancer Biology and Clinical Oncology. The course will cover not only fundamental principles of cancer biology, but will also highlight advances in the pathobiology and therapeutics of cancer. Classes will be of lecture and discussion format, with emphasis on critically reading original journal articles. The specific topics presented will include carcinogenesis, oncogenes, tumor suppressor genes, genetic epidemiology, DNA repair, growth factor action/signal transduction, apoptosis, cell cycle control, cell adhesion, angiogenesis, tumor cell heterogeneity, metastasis, chemotherapy, photodynamic therapy, gene therapy, signal transduction inhibitor therapy, chemoprevention, and clinical oncology of the breast, prostate, lymphatic tissue, colon and other related malignancies. Course grades will be from participation/discussion, presentation and mid-term/final exams. Recommended preparation: CBIO 453 and CBIO 455. Offered as PATH 520 and PHRM 520.

PATH 521. Special Topics in Cancer Biology and Clinical Oncology. 1 Unit.
This one credit hour course in Cancer Biology is intended to give students an opportunity to do independent literature research while enrolled in PHRM 520/PATH 520. Students must attend weekly Hematology/Oncology seminar series and write a brief summary of each of the lectures attended. In addition, students must select one of the seminar topics to write a term paper which fully reviews the background related to the topic and scientific and clinical advances in that field. This term paper must also focus of Clinical Oncology, have a translational research component, and integrate with concepts learned in PHRM 520/PATH 520. Pharmacology students must provide a strong discussion on Therapeutics, while Pathology students must provide a strong component on Pathophysiology of the disease. Recommended preparation: CBIO 453 and CBIO 455, or concurrent enrollment in PHRM 520 or PATH 520. Offered as PATH 521 and PHRM 521.

PATH 523. Histopathology of Organ Systems. 3 Units.
Comprehensive course covering the underlying basic mechanisms of injury and cell death, inflammation, immunity, infection, and neoplasia followed by pathology of specific organ systems. Material will include histological ("structure") and physiological ("function") aspects related to pathology (human emphasis). Recommended preparation: ANAT 412 or permission of instructor. Offered as ANAT 523 and PATH 523.

PATH 524. Cell Biology of Neurodegenerative Disorders. 3 Units.
PATH 524 is a 3 credit hour introductory course on neurodegenerative disorders intended for Master's and first and second-year medical students. This course attempts to bridge the gap between molecular mechanisms at the cellular level with disease presentation and therapeutic options for neurodegenerative disorders of protein mis-folding and metal mis-metabolism. The course will cover topics related to Alzheimer's disease, Parkinson's disease, Huntington's disease, Amyotrophic lateral sclerosis, Multiple sclerosis, Prion diseases, disorders of iron and copper metabolism, and other disorders of interest to the students. The class will meet once every week, and following an introductory lecture, the students will discuss relevant scientific reports from recent literature. Students are expected to participate actively in class discussion, and write a 5-6 page research proposal following NIH guidelines for the final exam. The students are expected to present and defend their proposal in class. Grading criteria: Class participation (70%), final paper and presentation (30%).

PATH 525. Transport and Targeting of Macromolecules in Health and Disease. 3 Units.
PATH 525 is a 3 credit hour advanced course on neurodegenerative disorders intended for PhD and MD/PhD students. Master's and first and second-year medical students with adequate background in cell and molecular biology and the drive to work hard and overcome challenges are welcome. This course attempts to bridge the gap between molecular mechanisms at the cellular level with disease presentation and therapeutic options for neurodegenerative disorders of protein mis-folding and metal mis-metabolism. The course will cover topics related to Alzheimer's disease, Parkinson's disease, Huntington's disease, Amyotrophic lateral sclerosis, Multiple sclerosis, Prion diseases, disorders of iron and copper metabolism, and other disorders of interest to the students. The class will meet once every week, and the students will discuss relevant scientific reports from recent literature. Students are expected to participate actively in class discussion, and write a 5-6 page research proposal following NIH guidelines for the final exam. The students are expected to present and defend their proposal in class. Grading criteria: Class participation (70%), final paper and presentation (30%). Offered as PATH 525 and CLBY 525.

PATH 601. Special Problems. 1 - 18 Unit.
Research on the nature and causation of disease and on host factors which tend to protect against disease. Special courses and tutorials in subspecialty areas of general and/or systemic anatomic and/or clinical pathology.

PATH 651. Thesis M.S.. 1 - 18 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

PATH 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Pharmacology

Diane Dowd, PhD, Coordinator

The Department of Pharmacology offers training leading to MS, PhD or MD/PhD degrees for highly qualified post-undergraduate candidates committed to academic research careers in the biomedical sciences. Adequate preparation in the biological sciences, mathematics, organic chemistry, and physics or physical chemistry is a prerequisite for admission.

Multidisciplinary training, carried out by faculty in pharmacology and other basic science departments, emphasizes molecular, cellular, physiological, and clinical aspects of the pharmacological sciences.
Areas of faculty expertise include drug/xenobiotic metabolism; receptor-ligand interactions, and biochemical reaction mechanisms; cell biology of signaling pathways; structure-function of membrane components; endocrine and metabolic regulation; cell surface and nuclear receptors, hormonal regulation of gene expression; cancer biology and therapeutics, bacterial and viral pathogenesis, neuroscience/neuropharmacology, and drug resistance.

Students who desire the combined MD/PhD degrees are admitted to the Medical Scientist Training Program (MSTP, please see separate listing in this publication). These students participate in the two-year integrated preclinical curriculum of the School of Medicine (University Program), which features clinical correlation of basic biologic concepts. Combined degree students who select the PhD in pharmacology undertake a series of advanced courses, research rotations, preliminary examinations and dissertation research in the same manner as that described for the PhD program.

Facilities
The Department of Pharmacology occupies about 25,000 net square feet distributed among several locations, namely the Biomedical Research Building, the School of Medicine Harland Goff Wood Building and the adjacent Wood Research Tower, as well as facilities in the West Quad Bldg. Facilities include extensive chromatographic and tissue culture facilities, a transgenic mouse laboratory, imaging and confocal microscopy equipment, and ready access to specialized research techniques, including various aspects of recombinant DNA and hybridoma technology, in situ hybridization histochemistry, fluorescence cell sorting, NMR and mass spectroscopy, X-ray crystallography, and cryo electron microscopy.

Masters Degrees
Although training efforts by the Department of Pharmacology are primarily directed toward the award of the PhD degree, training for the MS degree is offered also in a variety of contexts. For example, research assistants in the Department who seek educational advancement may pursue the MS degree via Plan A (thesis) or Plan B (coursework only). Medical students who seek to specialize in Pharmacology during the scholarly research component of their preclinical program may pursue the MS degree. Employees in the Biotechnology Industry may seek advanced training in Pharmacology by pursuing the MS degree. Finally, a PhD candidate who is unable to complete the PhD requirements for extraordinary reasons may petition to have earned credits transferred to fulfill MS degree requirements.

Masters Plan B (Coursework, MS direct admit)
This program is aimed at students who seek a Master’s Degree but do not intend to specialize in research following their Master’s work. To satisfy the requirement for a Comprehensive Exam for the MS Degree, students register for 1 credit of EXAM 600 during their final semester and sit for an integrative essay question-style examination on the content of the required coursework. A total of 27 credit hours are required (see below). The advancement of understanding and practice of therapeutics is based on research. Therefore all students in degree programs in Pharmacology are expected to become involved in independent research and scholarship. Registration for PHRM 601 Independent Study and Research requires a pre-arrangement with a faculty mentor who will oversee the combination of study and bench research and proscribe the basis for satisfactory performance, including oral and written reports.

With pre-approval of the Departmental Director of Graduate Studies, a student’s study plan may substitute additional specific advanced courses to replace PHRM 601 Independent Study and Research credits.

Masters Plan A (Research, direct admit)
In addition to the course requirements below, candidates for this degree are required to submit an acceptable written thesis based on their original research, and register for at least 9 credit hours of PHRM 651 Thesis M.S. (master’s dissertation research). The acceptability of the thesis will be determined by an oral examination administered by the student’s Thesis Advisory Committee. This committee must be chaired by a member of the primary Faculty of Pharmacology, and it should include the research mentor and two other faculty members (total of four faculty members, two from the Department of Pharmacology). As above, a minimum of 27 credit hours are required. For these students, passing the final exams in PHRM 401 Principles of Pharmacology I: The Molecular Basis of Therapeutics and PHRM 402 Principles of Pharmacology II: The Physiological Basis of Therapeutics satisfies the requirement for a Comprehensive Exam for the MS Degree.

PhD in Pharmacology

Students seeking the PhD degree are admitted directly into the Department of Pharmacology through the Molecular Therapeutics Training Program, through the Biomedical Sciences Training Program, each of which provides an introduction to many related training areas within the biomedical field during the first year, or through the Medical Scientist Training Program (MSTP).

The PhD program is divided into three phases. The first phase allows students to follow an integrated first-year sequence of course work that involves a core curriculum in cell and molecular biology. In addition, the first year includes three research rotations that allow the students to sample areas of research and become familiar with faculty members and their laboratories. Selection of a specific training program and thesis advisor is made before the end of the first year. The second phase involves a two part course in intensive Pharmacology study, oral presentations and laboratory experience, which cumulates in a comprehensive written exam designed to challenge students to apply key concepts in new context.

After advancing to PhD candidacy by passing the comprehensive written exam, students select one of four advanced tracks in Pharmacology. Choice among the tracks is based on the area of research expertise of the thesis advisor and the student's interest in specific coursework. The four tracks are: Cancer Therapeutics, Membrane Biology and Pharmacology, Molecular Pharmacology and Cell Regulation, and Translational Therapeutics.

The PhD degree is awarded to students who complete a research project leading to two original and meritorious scientific contributions that are submitted for publication to leading journals in the field of study; at least one manuscript must be accepted for publication before scheduling the PhD thesis defense. Completion of the PhD degree will also require 36 hours of coursework (24 hours of which are graded) and 18 hours of PHRM 701 Dissertation Ph.D.

Core course requirements for the PhD in Pharmacology

The first year consists of the Core curriculum in Cell Biology and Molecular Biology (CBIO 453 Cell Biology I, CBIO 455 Molecular Biology I) and research rotations, as well as a scientific ethics course (15 credit hours). This is included with the additional 15 formal course credit hours which are required in Pharmacology as listed and then described below.

### Total Units in Sequence: 27-80

## Courses

**PHRM 301. Undergraduate Research. 1 - 18 Unit.**

**PHRM 309. Principles of Pharmacology. 3 Units.**

Principles of Pharmacology introduces the basic principles that underlie all of Pharmacology. The first half of the course introduces, both conceptually and quantitatively, drug absorption, distribution, elimination and metabolism (pharmacokinetics) and general drug receptor theory and mechanism of action (pharmacodynamics). Genetic variation in response to drugs (pharmacogenetics) is integrated into these basic principles. The second half of the course covers selected drug classes chosen to illustrate these principles. Small group/recitation sessions use case histories to reinforce presentation of principles and to discuss public perceptions of therapeutic drug use. Graduate students will be expected to critically evaluate articles from the literature and participate in a separate weekly discussion session. Recommended preparation for PHRM 409: Undergraduate degree in science or permission of instructor. Offered as PHRM 309 and PHRM 409. (CHEM 223 and CHEM 224), or (CHEM 323 and CHEM 324), or (EBME 201 and EBME 202), or (BIOL 116 and BIOL 117).

**PHRM 315. Nuclear Receptors in Health and Disease. 3 Units.**

This course focuses on hormone-gene interactions mediated by the ligand-inducible transcription factors termed nuclear hormone receptors. The class will address the mechanisms of action, regulatory features, and biological activities of several nuclear receptors. The usage of nuclear receptors as therapeutic targets in disease states such as cancer, inflammation, and diabetes will also be discussed. The course aims to teach students to critically evaluate primary literature relevant to nuclear hormone receptors biology, and to reinforce presentation/discussion skills. Grades for undergraduates will be based on midterm, final exam; grades for graduates will be based on midterm, final exam, and presentation of a recently published research article related to the role of nuclear receptors in health and disease. Offered as PHRM 315, BIOC 315, PHRM 415 and BIOC 415.
PHRM 340. Science and Society Through Literature. 3 Units.
This course will examine the interaction of scientific investigation and discovery with the society it occurred in. What is the effect of science on society and, as importantly, what is the effect of society on science? An introduction will consider the heliocentric controversy with focus on Galileo. Two broad areas, tuberculosis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art and music will be examined to understand the changing views of society towards the disease, how society’s perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and film, the transformation of the original story into myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials. Offered as PHRM 340, BETH 440, PHRM 440, and HSTY 440.

PHRM 400. Research Experience in Pharmacology. 0 - 1 Units.
Research rotation in pharmacology.

PHRM 401. Principles of Pharmacology I: The Molecular Basis of Therapeutics. 3 Units.
This core course focuses on the chemical and biochemical properties of therapeutic agents and molecular mechanisms of therapeutic action, including kinetic and thermodynamic principles of enzyme catalysis and drug-receptor interactions. Moreover, emphasis is placed on fundamental principles of pharmacokinetics, including the absorption, distribution, metabolism, and excretion of drugs. Mathematical concepts needed to understand appropriate administration of drugs and maintaining therapeutic concentrations of drugs in the body are discussed. A second broad area of emphasis is on fundamental principles of pharmacodynamics, including drug-receptor theory, log dose-response relationships, therapeutic index, receptor turnover, and signal transduction mechanisms. The primary learning objective is to develop a self-directed, critical approach to the evaluation and design of experimental research in the broad context of receptor interactions with endogenous ligands and therapeutic agents in the context of disease models. This is a team-coordinated course involving session organized by faculty to facilitate student-directed learning experiences including discussion of study questions, problem solving applications, and primary literature presentations. A two-part laboratory exercise introduces experimental methodologies widely applied during the study of molecular interactions between therapeutic agents and receptor targets to reinforce fundamental principles of drug action. This 3-credit hour course meets 3 hr per week during the spring semester of year 1.

PHRM 402. Principles of Pharmacology II: The Physiological Basis of Therapeutics. 3 Units.
This course focuses on human physiology of organ systems including the central nervous system, cardiovascular system, and those systems (gastrointestinal, hepatic, and renal) that are involved in determining the pharmacokinetics or time course of drug action in vivo. A second major emphasis is placed on disease-based sessions where normal physiology, pathophysiology, and key drug classes to treat pathophysiologies are discussed. The students learn key concepts in endocrine pathologies, inflammatory disorders, pulmonary diseases, infectious diseases, and cancer. The main learning objectives are for the student to gain an understanding of basic principles of modern pharmacology and physiology and to build self-directed learning skills. This is a highly interactive course in which faculty lectures are minimized. A heavy emphasis is placed on student-directed learning experiences including presentation and discussion of primary literature, problem solving applications, small group discussion and team-based learning. This 3-credit hour course meets 3 hr per week during the fall semester of year 2.

PHRM 403. Public and Professional Views of Modern Therapeutics. 3 Units.
This course will present the students with headline news stories from the popular press along with pertinent published articles from the scientific literature. The object is to engage the students in critical evaluation of the scientific literature and news reports to discern the scientific basis for decisions such as removal of drugs from the market. The course will focus on topics such as Cox-2 Inhibitors and Heart Disease, Antidepressant Use for Adolescents, and Parkinson’s Disease and Stem Cell Therapy, among others. Evaluation will be based on participation in student-led discussion sessions, weekly topical quizzes, and on written critiques of the primary literature.

PHRM 409. Principles of Pharmacology. 3 Units.
Principles of Pharmacology introduces the basic principles that underlie all of Pharmacology. The first half of the course introduces, both conceptually and quantitatively, drug absorption, distribution, elimination and metabolism (pharmacokinetics) and general drug receptor theory and mechanism of action (pharmacodynamics). Genetic variation in response to drugs (pharmacogenetics) is integrated into these basic principles. The second half of the course covers selected drug classes chosen to illustrate these principles. Small group/recitation sessions use case histories to reinforce presentation of principles and to discuss public perceptions of therapeutic drug use. Graduate students will be expected to critically evaluate articles from the literature and participate in a separate weekly discussion session. Recommended preparation for PHRM 409: Undergraduate degree in science or permission of instructor. Offered as PHRM 309 and PHRM 409.

PHRM 412. Membrane Transport Processes. 3 Units.
Membranes and membrane transporters are absolutely required for all cells to take up nutrient, maintain membrane potential and efflux toxins. This course will consider the classification and structure of membrane transport proteins and channels, examine the common mechanistic features of all systems and the specific features of different classes of transporter. Understanding the physiological integration of transport processes into cell homeostasis and consideration of transporters and channels as drug targets will be a goal. Course format is minimal lecture, primarily student presentations of primary literature papers. Offered as PHOL 412, PHRM 412. Prereq: CBIO 453 and CBIO 455.
PHRM 415. Nuclear Receptors in Health and Disease. 3 Units.
This course focuses on hormone-gene interactions mediated by the ligand-inducible transcription factors termed nuclear hormone receptors. The class will address the mechanisms of action, regulatory features, and biological activities of several nuclear receptors. The usage of nuclear receptors as therapeutic targets in disease states such as cancer, inflammation, and diabetes will also be discussed. The course aims to teach students to critically evaluate primary literature relevant to nuclear hormone receptors biology, and to reinforce presentation/discussion skills. Grades for undergraduates will be based on midterm, final exam; grades for graduates will be based on midterm, final exam, and presentation of a recently published research article related to the role of nuclear receptors in health and disease. Offered as PHRM 315, BIOC 315, PHRM 415 and BIOC 415.

PHRM 420. Current Topics in Cancer. 3 Units.
The concept of cancer hallmarks has provided a useful guiding principle in our understanding of the complexity of cancer. The hallmarks include sustaining proliferative signaling, evading growth suppressors, enabling replicative immortality, activating invasion and metastasis, inducing angiogenesis, resisting cell death, deregulating cellular energetics, avoiding immune destruction, tumor-promoting inflammation, and genome instability and mutation. The objectives of this course are to (1) examine the principles of some of these hallmarks, and (2) explore potential therapies developed based on these hallmarks of cancer. This is a student-driven and discussion-based graduate course. Students should have had some background on the related subjects and have read scientific papers in their prior coursework. Students will be called on to present and discuss experimental design, data and conclusions from assigned publications. There will be no exams or comprehensive papers but students will submit a one-page critique (strengths and weaknesses) of one of the assigned papers prior to each class meeting. The course will end with a full-day student-run symposium on topics to be decided jointly by students and the course director. Grades will be based on class participation, written critiques, and symposium presentations. Offered as BIOC 420, MBIO 420, MVIR 420, PATH 422, and PHRM 420. Prereq: CBIO 453 and CBIO 455.

PHRM 430. Advanced Methods in Structural Biology. 1 - 6 Unit.
The course is designed for graduate students who will be focusing on one or more methods of structural biology in their thesis project. This course is divided into 3-6 sections (depending on demand). The topics offered will include X-ray crystallography, nuclear magnetic resonance spectroscopy, optical spectroscopy, mass spectrometry, cryo-electron microscopy, and computational and design methods. Students can select one or more modules. Modules will be scheduled so that students can take all the offered modules in one semester. Each section is given in 5 weeks and is worth 1 credit. Each section covers one area of structural biology at an advanced level such that the student is prepared for graduate level research in that topic. Offered as BIOC 430, CHEM 430, PHOL 430, and PHRM 430.

PHRM 432. Current Topics in Vision Research. 3 Units.
Vision research is an exciting and multidisciplinary area that draws on the disciplines of biochemistry, genetics, molecular biology, structural biology, neuroscience, and pathology. This graduate level course will provide the student with broad exposure to the most recent and relevant research currently being conducted in the field. Topics will cover a variety of diseases and fundamental biological processes occurring in the eye. Regions of the eye that will be discussed include the cornea, lens, and retina. Vision disorders discussed include age-related macular degeneration, retinal ciliopathies, and diabetic retinopathy. Instructors in the course are experts in their field and are members of the multidisciplinary visual sciences research community here at Case Western Reserve University. Students will be exposed to the experimental approaches and instrumentation currently being used in the laboratory and in clinical settings. Topics will be covered by traditional lectures, demonstrations in the laboratory and the clinic, and journal club presentations. Students will be graded on their performance in journal club presentations (40%), research proposal (40%), and class participation (20%). Offered as NEUR 432, PATH 432, PHRM 432 and BIOC 432.

PHRM 440. Science and Society Through Literature. 3 Units.
This course will examine the interaction of scientific investigation and discovery with the society it occurred in. What is the effect of science on society and, as importantly, what is the effect of society on science? An introduction will consider the heliocentric controversy with focus on Galileo. Two broad areas, tuberculosis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art and music will be examined to understand the changing views of society towards the disease, how society’s perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and film, the transformation of the original story into myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials. Offered as PHRM 340, BETH 440, PHRM 440, and HSTY 440.

PHRM 466. Cell Signaling. 3 Units.
This is an advanced lecture/journal/discussion format course that covers cell signaling mechanisms. Included are discussions of neurotransmitter-gated ion channels, growth factor receptor kinases, cytokine receptors, G protein-coupled receptors, steroid receptors, heterotrimeric G proteins, ras family GTPases, second messenger cascades, protein kinase cascades, second messenger regulation of transcription factors, microtubule-based motility, actin/myosin-based motility, signals for regulation of cell cycle, signals for regulation of apoptosis. Offered as CLBY 466 and PHOL 466 and PHRM 466.

PHRM 475. Protein Biophysics. 3 Units.
This course focuses on in-depth understanding of the molecular biophysics of proteins. Structural, thermodynamic and kinetic aspects of protein function and structure-function relationships will be considered at the advanced conceptual level. The application of these theoretical frameworks will be illustrated with examples from the literature and integration of biophysical knowledge with description at the cellular and systems level. The format consists of lectures, problem sets, and student presentations. A special emphasis will be placed on discussion of original publications. Offered as BIOC 475, CHEM 475, PHOL 475, PHRM 475, and NEUR 475.
PHRM 476. Cellular Biophysics. 4 Units.
This course focuses on a quantitative understanding of cellular processes. It is designed for students who feel comfortable with and are interested in analytical and quantitative approaches to cell biology and cell physiology. Selected topics in cellular biophysics will be covered in depth. Topics include theory of electrical and optical signal processing used in cell physiology, thermodynamics and kinetics of enzyme and transport reactions, single ion channel kinetics and excitability, mechanotransduction, and transport across polarized cell layers. The format consists of lectures, problem sets, computer simulations, and discussion of original publications. The relevant biological background of topics will be provided appropriate for non-biology science majors. Offered as BIOL 476, NEUR 477, PHOL 476, PHRM 476.

PHRM 511. Pharmacology Seminar Series. 0 - 1 Units.
Current topics of interest in the pharmacologist sciences.

PHRM 513. Structural Journal Club. 1 Unit.
Current topics of interest in structural biology, and protein biophysics. Offered as PHOL 513 and PHRM 513.

PHRM 520. Basic Cancer Biology and the Interface with Clinical Oncology. 3 Units.
This is an introductory cancer biology course that is intended to give students a broad and basic overview of Cancer Biology and Clinical Oncology. The course will cover not only fundamental principles of cancer biology, but will also highlight advances in the pathobiology and therapeutics of cancer. Classes will be of lecture and discussion format, with emphasis on critically reading original journal articles. The specific topics presented will include carcinogenesis, oncogenes, tumor suppressor genes, genetic epidemiology, DNA repair, growth factor action/signal transduction, apoptosis, cell cycle control, cell adhesion, angiogenesis, tumor cell heterogeneity, metastasis, chemotherapy, photodynamic therapy, gene therapy, signal transduction inhibitor therapy, chemoprevention, and clinical oncology of the breast, prostate, lymphatic tissue, colon and other related malignancies. Course grades will be from participation/discussion, presentation and mid-term/final exams. Recommended preparation: CBIO 453 and CBIO 455. Offered as PATH 520 and PHRM 520.

PHRM 521. Special Topics in Cancer Biology and Clinical Oncology. 1 Unit.
This one credit hour course in Cancer Biology is intended to give students an opportunity to do independent literature research while enrolled in PHRM 520/PATH 520. Students must attend weekly Hematology/Oncology seminar series and write a brief summary of each of the lectures attended. In addition, students must select one of the seminar topics to write a term paper which fully reviews the background related to the topic and scientific and clinical advances in that field. This term paper must also focus of Clinical Oncology, have a translational research component, and integrate with concepts learned in PHRM 520/PATH 520. Pharmacology students must provide a strong discussion on Therapeutics, while Pathology students must provide a strong component on Pathophysiology of the disease. Recommended preparation: CBIO 453 and CBIO 455, or concurrent enrollment in PHRM 520 or PATH 520. Offered as PATH 521 and PHRM 521.

PHRM 525. Topics in Cell and Molecular Pharmacology. 0 - 18 Units.
Individual library research project under the guidance of a pharmacology sponsor. Projects will reflect the research interest of the faculty sponsor, including molecular endocrinology, neuropharmacology, receptor activation and signal transduction, molecular mechanisms of enzyme action and metabolic regulation.

PHRM 526. Grant Writing Tutorial. 1 - 3 Unit.
Students will be expected to provide critiques of a grant proposal to bring to a workshop. At the workshop, a faculty review panel will discuss the grant proposal and provide critiques to illustrate the key components that are necessary for any grant proposal, and the specific items that enhance the quality of the proposal or detract from it. The students will be able to compare what they emphasized in their critiques to what the expert panel focused on. After completing the workshop, each student will prepare a proposal based on their thesis topic; this document will be scored, and the student will also be evaluated for an oral defense of the proposal.

PHRM 528. Contemporary Approaches to Drug Discovery. 3 Units.
This course is designed to teach the students how lead compounds are discovered, optimized, and processed through clinical trials for FDA approval. Topics will include: medicinal chemistry, parallel synthesis, drug delivery and devices, drug administration and pharmacokinetics, and clinical trials. A special emphasis will be placed on describing how structural biology is used for in silico screening and lead optimization. This component will include hands-on experience in using sophisticated drug discovery software to conduct in silico screening and the development of drug libraries. Each student will conduct a course project involving in silico screening and lead optimization against known drug targets, followed by the drafting of an inventory disclosure. Another important aspect of this course will be inclusion of guest lectures by industrial leaders who describe examples of success stories of drug development. Offered as BIOL 528, PHOL 528, and PHRM 528.

PHRM 555. Current Proteomics. 3 Units.
This course is designed for graduate students across the university who wish to acquire a better understanding of fundamental concepts of proteomics and hands-on experience with techniques used in current proteomics. Lectures will cover protein/peptide separation techniques, protein mass spectrometry, bioinformatics tools, and biological applications which include quantitative proteomics, protein modification proteomics, interaction proteomics, structural genomics and structural proteomics. Laboratory portion will involve practice on the separation of proteins by two-dimensional gel electrophoresis, molecular weight measurement of proteins by mass spectrometry, peptide structural characterization by tandem mass spectrometry and protein identification using computational tools. The instructors’ research topics will also be discussed. Recommended preparation: CBIO 453 and CBIO 455. Offered as PHRM 555 and SYBB 555.

PHRM 600. Preparation for Qualifying Exam. 1 Unit.
Students pursuing the M.S. or Ph.D. degrees in Pharmacology are required to prepare systematically for the comprehensive qualifying exam by reviewing the concepts of cellular and molecular biology and pharmacology. The qualifier is comprised of a two-part written exam administered simultaneously to all eligible students. It is designed to evaluate their understanding of concepts presented in the various core courses. It also assesses their skills in critical reading of research articles and design of experiments. The division into two parts allows each student to receive feedback on deficient areas and work toward improvement on the second segment. Eligibility: Students may register for the exam when they have fulfilled two criteria: (a) Successful completion (grade B or better) in all of the Core Courses, and an overall GPA of 3.0 or better. (b) Satisfactory performance in all research rotations and consistent research effort in the thesis laboratory as documented formally by the Ph.D. mentor. No student on probation may sit for the Qualifying Exam (Prelim). Prereq: CBIO 453, CBIO 455, PHRM 401 and PHRM 402.

PHRM 601. Independent Study and Research. 1 - 18 Unit.

PHRM 651. Thesis M.S.. 1 - 18 Unit.
PHRM 701. Dissertation Ph.D.. 1 - 9 Unit.  
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

**Department of Physiology and Biophysics**

Jean Davis (jean.davis@case.edu), Coordinator

The Department of Physiology and Biophysics at Case is a multidisciplinary department that takes great pride in its history of conducting research and training graduate students. The department includes 20 Primary and 33 Secondary faculty members, more than 25 post-doctoral associates, and 34, full-time PhD, MD/PhD, and Master of Science degree students. The training programs are designed to provide a mentored training environment that maximizes faculty-student interaction.

As outlined below, the department offers PhD, MD/PhD and Master of Science degrees. These programs are tailored to prepare students for successful careers in biomedical, pharmaceutical and industrial research. The department offers multiple graduate-level programs, each of which uses state-of-the-art molecular, cell biology, and biophysical approaches to study physiological questions at a variety of different organizational levels. The goal is to provide an outstanding training opportunity. The major goals of the PhD and Tech Masters programs are to provide students with a broad knowledge base in organ systems and integrated physiology and in-depth expertise and outstanding research potential in the fields of cellular and molecular physiology and molecular and cellular biophysics. These goals are accomplished using a series of foundation and advanced topic courses, skill development courses, laboratory rotations and thesis research. The MS in Medical Physiology program is a post-baccalaureate program designed to help students prepare for admission to medical, dental, pharmacy, or veterinary school or for opportunities to work in the biotechnology industry.

**Masters Degrees**

The Master's Program in Medical Physiology is designed for students with at least a bachelor's degree in a chemical, physical, or biological science who are seeking advanced training in the physiological sciences, typically in preparation for admission to a professional medical program (e.g. Medical School, Dental School). The program is flexible in duration. It can take as little as 1 year (2 semesters, 9 months) to complete the required 30 credit hours of course work. However, students who wish to decompress the program can take 14 months or more to complete the requirements. Core courses and flexible electives allow students to focus their work in key areas of medical physiology, including Anatomy, Biochemistry, or Pharmacology. Graduates of the Medical Physiology Master's Program also can pursue careers in basic and clinical research, research administration, teaching or management in academia, the pharmaceutical and biotechnology industries, private research institutions, government science or regulatory agencies, or medicine and health care.

**MS Physiology - Type A Thesis Option**

The Department of Physiology and Biophysics encourages research staff members to expand their critical research knowledge and skills by enrolling in our Master's of Science in Physiology and Biophysics program. This Tech Master's Program, is specifically designed for staff working full time. Each employer has their own policy on allowing staff to take classes and enroll in graduate programs. CWRU's policy is to allow staff, with their supervisor's permission, to take up to 6 credit hours per term, with tuition being covered by CWRU as part of the employee benefit package. Staff are expected to make up the time they spend in class during the day after hours.

**MD/MS Biomedical Investigation - Physiology Track**

This track offers training in physiology and biomedical laboratory technology, including emphasis on mentored independent research training which includes both laboratory experience and formal course work in modern laboratory methodology and instrumentation.

**Students in Physiology and Biotechnology track must complete:**

The Physiology and Biophysics Graduate Program provides comprehensive training leading to the PhD degree and MD/PhD degrees. This program has three tracks of study with emphasis on Cell and Molecular Physiology, Structural Biology and Biophysics, and Organ Systems Physiology. Admissions to the Physiology and Biophysics program may be obtained in the integrated Biomedical Sciences Training Program, by direct admission to the department or via the MSTP program.

To earn a PhD in Physiology and Biophysics, a student must complete rotations in at least three laboratories followed by selection of a research advisor, and complete Core and Elective coursework including responsible conduct of research as described in the course of study, below. Students who previously completed relevant coursework, for example with a MS, may petition to complete alternative courses. Each graduate program follows the overall regulations established and described in CWRU Graduate Studies and documented to the Regents of the State of Ohio. Completion of the PhD degree will require 36 hours of coursework (24 hours of which are graded) and 18 hours of PHOL 701 Dissertation Ph.D.

In addition, each student must successfully complete a qualifier examination for advancement to candidacy in the form of a short grant proposal with oral defense. The qualifier is generally completed in the summer after year two. During the dissertation period, students are expected to meet twice a year with the thesis committee, present seminars in the department, and fulfill journal publication requirements. At the completion of the program, successful defense of a doctoral dissertation is required. Throughout the doctoral training, students are expected to be enthusiastic participants in seminars, journal clubs, and research meetings in the lab and program.

Plan of Study for PhD in Cell and Molecular Physiology *

Total Units in Sequence: 34-66

* After passing qualifying exam - full-time thesis research (701) - 18 total credit hours total

**Courses**

**PHOL 351. Independent Study. 1 - 6 Unit.**

This course is a guided program of study in physiology textbooks, reviews, and original articles. Guided laboratory projects to reproduce and extend classical physiological experiments are offered to the undergraduate science major. This course is being offered in conjunction with the Graduate level course PHOL 451. Students are required to consult with the faculty member whose work they have interest in and plan their individual experience.

**PHOL 401A. Physiology and Biophysics of Molecules and Cells. 2 Units.**

Physiology and Biophysics of Molecules and Cells is a graduate-level introductory course designed to provide the fundamental principles of modern physiology, protein science and structural biology, and to prepare students for advanced courses in the biomedical sciences. The course is divided into 2 blocks that can be taken independently as PHOL401A or PHOL401B (2 credit hrs each) during the Spring semester of each year. The first block will cover the structure and function of proteins and lipids, and the organization of cellular membranes. Topics will include primary, secondary, tertiary and quaternary protein structure and analysis, enzyme kinetics, allostery and cooperativity, lipid membrane organization and domain structure, and protein-protein and protein-lipid interactions. The second block will cover molecular pathways and processes critical for cellular homeostasis, function, and signaling. Topics will include molecular mechanisms of transport across biological membranes and cellular compartments, ionic basis of the resting membrane potential, action potential generation and propagation, osmosis and Gibb-Donnan equilibria, regulation of voltage-gated channels and electrogenic transporters, cellular pH regulation, and the biophysics of epithelial transport. Format will be a combination of lecture, discussion-based problem sets, journal paper presentations, and computer lab exercises and demonstrations. Grading will be based on performance on two essay-type exams administered in the middle and at the end of each block (80%), and on class participation (20%).
PHOL 401B. Physiology and Biophysics of Molecules and Cells. 2 Units.

Physiology and Biophysics of Molecules and Cells is a graduate-level introductory course designed to provide the fundamental principles of modern physiology, protein science and structural biology, and to prepare students for advanced courses in the biomedical sciences. The course is divided into 2 blocks that can be taken independently as PHOL401A or PHOL401B (2 credit hrs each) during the Spring semester of each year. The first block will cover the structure and function of proteins and lipids, and the organization of cellular membranes. Topics will include primary, secondary, tertiary and quaternary protein structure and analysis, enzyme kinetics, allosteric and cooperativity, lipid membrane organization and domain structure, and protein-protein and protein-lipid interactions.

The second block will cover molecular pathways and processes critical for cellular homeostasis, function, and signaling. Topics will include molecular mechanisms of transport across biological membranes and cellular compartments, ionic basis of the resting membrane potential, action potential generation and propagation, osmosis and Gibbs-Donnan equilibria, regulation of voltage-gated channels and electrogentic transporters, cellular pH regulation, and the biophysics of epithelial transport. Format will be a combination of lectures, discussion-based problem sets, journal paper presentations, and computer lab exercises and demonstrations. Grading will be based on performance on two essay-type exams administered in the middle and at the end of each block (80%), and on class participation (20%).

PHOL 402. Physiological Basis for Disease. 4 Units.

Physiological Basis for Disease is a graduate-level introductory course designed to provide the fundamental physiology of a select group of organ systems and examples of how the molecular basis of disease affects physiological function of these systems. As such PHOL402 will prepare students for future study in advanced biomedical sciences courses. Select diseases of the endocrine, central nervous, pulmonary, cardiac and renal systems will be covered. The course is 4 credit hours and will be given in the Fall semester of each year. The format will be a combination of lecture and journal paper presentations and discussion. Grading will be based on five short answer/essay examinations given at the end of each section (50%), class participation (30%) and a final presentation (20%).

PHOL 412. Membrane Transport Processes. 3 Units.

Membranes and membrane transporters are absolutely required for all cells to take up nutrient, maintain membrane potential and efflux toxins. This course will consider the classification and structure of membrane transport proteins and channels, examine the common mechanistic features of all systems and the specific features of different classes of transporter. Understanding the physiological integration of transport processes into cell homeostasis and consideration of transporters and channels as drug targets will be a goal. Course format is minimal lecture, primarily student presentations of primary literature papers. Offered as PHOL 412, PHRM 412. Prereq: CBIO 453 and CBIO 455.

PHOL 419. Applied Probability and Stochastic Processes for Biology. 3 Units.

Applications of probability and stochastic processes to biological systems. Mathematical topics will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random samples from specified probability distributions), Markov processes in discrete and continuous time with discrete and continuous sample spaces, point processes including homogeneous and inhomogeneous Poisson processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using a combination of MATLAB, the R statistical package, MCell, and/or URDME, at the discretion of the instructor. Student projects will comprise a major part of the course. Offered as BIOL 319, EEC5 319, MATH 319, SYBB 319, BIOL 419, EBME 419, MATH 419, PHOL 419, and SYBB 419.

PHOL 430. Advanced Methods in Structural Biology. 1 - 6 Unit.

The course is designed for graduate students who will be focusing on one or more methods of structural biology in their thesis project. This course is divided into 3-6 sections (depending on demand). The topics offered will include X-ray crystallography, nuclear magnetic resonance spectroscopy, optical spectroscopy, mass spectrometry, cryo-electron microscopy, and computational and design methods. Students can select one or more modules. Modules will be scheduled so that students can take all the offered modules in one semester. Each section is given in 5 weeks and is worth 1 credit. Each section covers one area of structural biology at an advanced level such that the student is prepared for graduate level research in that topic. Offered as BIOL 430, CHEM 430, PHOL 430, and PHRM 430.

PHOL 451. Independent Study. 1 - 18 Unit.

Guided program of study using physiology textbooks, research reviews, and original research articles. An independent laboratory research project may also be included.

PHOL 456. Conversations on Protein Structure and Function. 2 Units.

The goal of this course is to supplement the short and basic presentation of Proteins in C3MB by lectures and discussions for students with backgrounds in physical-chemical sciences or students who already have a good basic background in protein science. The course presents an overview of Protein structure/function. Following an introduction to the principles of protein structure, the physical basis of protein folding and stability, and a brief overview of structural and bioinformatics approaches to protein analysis is presented. Typically two lecture/discussion style presentations are followed by a student lead journal club on recent high profile papers. The way the Journal club is done is that one student presents a paper (background and figures in powerpoint slides) while presentation of the main figures is shared between the class. Papers and Figures will be assigned by instructor. Typically two papers will be presented per session. Offered as PHOL 456 and BIOL 457.
PHOL 466. Cell Signaling. 3 Units.
This is an advanced lecture/journal/discussion format course that covers cell signaling mechanisms. Included are discussions of neurotransmitter-gated ion channels, growth factor receptor kinases, cytokine receptors, G protein-coupled receptors, steroid receptors, heterotrimeric G proteins, ras family GTPases, second messenger cascades, protein kinase cascades, second messenger regulation of transcription factors, microtubule-based motility, actin/myosin-based motility, signals for regulation of cell cycle, signals for regulation of apoptosis. Offered as CLBY 468 and PHOL 466 and PHRM 466.

PHOL 467. Topics in Evolutionary Biology. 3 Units.
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/EEPS/PHIL/PHOL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation. Offered as ANTH 367, BIOL 368, EEPS 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, EEPS 467, PHIL 467 and PHOL 467.

PHOL 468. Membrane Physiology. 3 Units.
This student-guided discussion/journal course focuses on biological membranes. Topics discussed include thermodynamics and kinetics of membrane transport, oxidative phosphorylation and bioenergetics, electroph-physiology of excitable membranes, and whole and single channel electrophysiology, homeostasis and pH regulation, volume and calcium regulation. Offered as CLBY 468 and PHOL 468.

PHOL 475. Protein Biophysics. 3 Units.
This course focuses on in-depth understanding of the molecular biophysics of proteins. Structural, thermodynamic and kinetic aspects of protein function and structure-function relationships will be considered at the advanced conceptual level. The application of these theoretical frameworks will be illustrated with examples from the literature and integration of biophysical knowledge with description at the cellular and systems level. The format consists of lectures, problem sets, and student presentations. A special emphasis will be placed on discussion of original publications. Offered as BIOC 475, CHEM 475, PHOL 475, PHRM 475, and NEUR 475.

PHOL 476. Cellular Biophysics. 4 Units.
This course focuses on a quantitative understanding of cellular processes. It is designed for students who feel comfortable with and are interested in analytical and quantitative approaches to cell biology and cell physiology. Selected topics in cellular biophysics will be covered in depth. Topics include theory of electrical and optical signal processing used in cell physiology, thermodynamics and kinetics of enzyme and transport reactions, single ion channel kinetics and excitability, mechanotransduction, and transport across polarized cell layers. The format consists of lectures, problem sets, computer simulations, and discussion of original publications. The relevant biological background of topics will be provided appropriate for non-biology science majors. Offered as BIOC 476, NEUR 477, PHOL 476, PHRM 476.

PHOL 478. LifeStyle Medicine. 3 Units.
While the current acute care model of medicine focuses on disease and treatment of individual organ systems by specialists, 50-60% of the public use complementary and alternative medicine (CAM), which focuses on prevention rather than disease. In CAM, damage caused by Western diets is avoided with low fat, vegetarian, or vegan diets, and with herbs and supplements. Damage mediated by emotional responses to stress is counteracted with relaxation practices such as yoga, meditation or hypnosis. In support of CAM, NIH-funded research performed over the past decade has shown that 70-90% of chronic diseases such as obesity, atherosclerosis, and cancer result from lifestyle. Moreover, mechanisms of lifestyle-induced disease as well as mechanisms by which these can be prevented or reversed by CAM practices have been described. This course examines interrelationships between lifestyle, health and disease and influences of CAM practices in terms of physiological health. Topics include evidence that Western diets, chronic emotional stress resulting from pervasive environmental, societal, workplace, financial, or relationship issues, and changes in circadian rhythms resulting from behaviors such as not getting enough sleep or working night-shifts facilitate disease by inducing cellular events that include epigenetic modification, changes in gene expression, and decreased telomere length. Mechanisms by which CAM practices prevent or reverse these lifestyle-mediated changes are also covered. In addition, the course considers the broader issue of how economic and political pressures are forcing rapid changes in healthcare and the influence that lifestyle-based approaches is likely to have on evolving delivery models, healthcare costs, and public health policies. The course is presented over a period of 8 weeks during the summer session. It is heavily discussion-based delivered in the form of slide presentations, discussions of the literature, video segments, and experiential relaxation instructions. Grading is based on class discussion and a written discussion paper.

PHOL 479. Clinical Reasoning: Applied Medical Physiology. 3 Units.
Physicians, detectives, scientists and mechanics all use deductive reasoning with multiple hypotheses to solve problems. The primary objective of this course is to help students apply their knowledge of medical physiology to solving clinical problems. The second objective is to develop an overall view of the clinical reasoning process as a problem-solving method. This will be done primarily through problem-based case studies of patients with cardiovascular, pulmonary and renal disease. Case studies will be supplemented by video presentations of patient history and physical exam, and student-led presentations. Prereq: PHOL 482 and PHOL 484.
PHOL 480. Physiology of Organ Systems. 4 Units.
Our intent is to expand the course from the current 3 hours per week (1.5 hour on Monday and Wednesday) to 4 hours per week (1.5 hours on Monday and Wednesday plus 1 hour on Friday). Muscle structure and function, Myasthenia gravis and Sarcopenia; Central Nervous System, (Synaptic Transmission, Sensory System, Autonomic Nervous System, CNS circuits, Motor System, Neurodegenerative Diseases, Paraplegia and Nerve Compression); Cardiovascular Physiology (Regulation of Pressure and flow; Circulation, Cardiac Cycle, Electrophysiology, Cardiac Function, Control of Cardiovascular function, Hypertension); Hemorraghy, Cardiac Hypertrophy and Fibrillation; Respiration Physiology (Gas Transport and Exchange, Control of Breathing, Acid/base regulation, Cor Pulmonaris and Cystic Fibrosis, Sleeping apnea and Emphysema); Renal Physiology (Glomerular Filtration, Tubular Function/transport, Glomerulonephritis, Tubulopathies); Gastro-Intestinal Physiology (Gastric motility, gastric function, pancreas and bile function, digestion and absorption, Liver Physiology; Pancreatitis, Liver Disease and cirrhosis); Endocrine Physiology (Thyroid, Adrenal glands, endocrine pancreas, Parathyroid, calcium sensing receptor, Cushing and diabetes, Reproductive hormones, eclampsia); Integrative Physiology (Response to exercise, fasting and feeding, aging). For all the classes, the students will receive a series of learning objectives by the instructor to help the students address and focus their attention to the key aspects of the organ physiology (and physiopathology). The evaluation of the students will continue to be based upon the students' participation in class (60% of the grade) complemented by a mid-term and a final exam (each one accounting for 20% of the final grade). Offered as BIOL 480 and PHOL 480.

PHOL 481. Medical Physiology I. 6 Units.
Physiology is the dynamic study of life. It describes the vital functions of living organisms and their organs, cells, and molecules. For some, physiology is the function of the whole person. For others, physiology may focus on the cellular principles that are common to the function of all organs and tissues. Medical physiology deals with how the human body functions, which depends on how the individual organ systems function, which depends on how the component cells function, which in turn depends on the interactions among subcellular organelles and countless molecules. Thus, it requires an integrated understanding of events at the level of molecules, cells, and organs. Medical Physiology I is a lecture course (3, 2 hr. lectures/week). It is the first of a two-part, comprehensive survey of physiology that is divided into four blocks: Block 1 covers the physiology of cells and molecules, signal transduction, basic electrophysiology, and muscle physiology; Block 2 covers the nervous system; Block 3 covers the cardiovascular system, and; Block 4 covers the respiratory system. Grading in the course will be based on performance on multiple choice/short essay examinations administered at the end of each block with each examination weighted according to the number of lectures contained in that block.

PHOL 482. Medical Physiology II. 6 Units.
Physiology is the dynamic study of life. It describes the vital functions of living organisms and their organs, cells, and molecules. For some, physiology is the function of the whole person. For many practicing clinicians, physiology is the function of an individual organ system. For others, physiology may focus on the cellular principles that are common to the function of all organs and tissues. Medical physiology deals with how the human body functions, which depends on how the individual organ systems function, which depends on how the component cells function, which in turn depends on the interactions among subcellular organelles and countless molecules. Thus, it requires an integrated understanding of events at the level of molecules, cells, and organs. Medical Physiology II is a lecture course (3, 2hr. lectures/week). It is the second of a two-part, comprehensive survey of physiology that is divided into five blocks: Block 5 covers the physiology of the urinary system; Block 6 covers the gastrointestinal system; Block 7 covers the endocrine system; Block 8 covers reproduction; and Block 9 covers the physiology of everyday life. Grading in the course will be based on performance on multiple choice/short essay examinations administered at the end of each block with each examination weighted according to the number of lectures contained in that block.

PHOL 483. Translational Physiology I. 2 Units.
Physiology is the dynamic study of life, describing the vital functions of living organisms and their organs, cells, and molecules. For some, physiology is the function of the whole person. For many practicing clinicians, physiology is the function of an individual organ system. For others, it focuses on the cellular principles that are common to the function of all organs and tissues. Medical physiology deals with how the human body functions, which depends on how the individual organ systems function, which depends on how the component cells function, which in turn depends on the interactions among subcellular organelles and countless molecules. Translational Physiology I will explore examples of how the latest basic research in physiology and biophysics is being applied to the treatment of human disease. For example, while the students are studying the basic principles of cardiovascular physiology, they will also be investigating how these principles are being applied to treat/cure human cardiovascular disorders such as congestive heart failure, coronary artery disease, high blood pressure, etc. Translational Physiology I is a lecture course (1, 2 hr lecture/week) taught primarily by clinical faculty. It is the first of a two-part course that follows the topics being simultaneously covered in the Medical Physiology I course. It is divided into four blocks: Block 1 covers the physiology of cells and molecules, signal transduction, basic electrophysiology, and muscle physiology; Block 2 covers the nervous system: Block 3 covers the cardiovascular system; and Block 4 covers the respiratory system. Grading in the course will be based on performance on multiple choice/short essay examinations administered at the end of each block with each examination weighted according to the number of lectures contained in that block.
PHOL 484. Translational Physiology II. 2 Units.
Physiology is the dynamic study of life, describing the vital functions of living organisms and their organs, cells, and molecules. For some, physiology is the function of the whole person. For many practicing clinicians, physiology is the function of an individual organ system. For others, it focuses on the cellular principles that are common to the function of all organs and tissues. Medical physiology deals with how the human body functions, which depends on how the individual organ systems function, which depends on how the component cells function, which in turn depends on the interactions among subcellular organelles and countless molecules. Translational Physiology II will explore examples of how the latest basic research in physiology and biophysics is being applied to the treatment of human disease. For example, while the students are studying the basic physiology of the urinary system, they will also be investigating how these principles are being applied to treat/cure human kidney disorders such as renal failure, high blood pressure, glomerular disease, polycystic kidney disease, etc. Translational Physiology II is a lecture course (1, 2hr lecture/week) taught primarily by clinical faculty. It is the first of a two-part course that follows the topics being simultaneously covered in the Medical Physiology II course. It is divided into five blocks: Block 5 covers the physiology of the urinary system, Block 6 covers the gastrointestinal system; Block 7 covers the endocrine system, Block 8 covers reproduction; and Block 9 covers the physiology of everyday life. Grading in the course will be based on performance on multiple choice/short essay examinations administered at the end of each block with each examination weighted according to the number of lectures contained in that block. Coreq: PHOL 482.

PHOL 497. Journal Club in Structural Biology and Biophysics. 1 Unit.
Biweekly Journal club to engage faculty and students in discussion of recent high profile papers in structural biology and protein biophysics. Registered students have to present one entire seminar on an assigned paper and attend all seminars, as well as participate in discussion. Recommended Preparation: undergraduate biochemistry or equivalent.

PHOL 497A. Neurology Grand Rounds. 1 Unit.
This course is a weekly seminar series offered summer, fall, and spring semesters by the Department of Neurology at University Hospitals Case Medical Center. To earn a Passing grade in this course, students must attend at least 75% of the grand rounds offered by the Department of Neurology during the semester (signing in at the session) and submit to the course director within the week following the Grand Rounds, a one page report containing: 1) the name of the presenter and their professional affiliation; 2) the title of the presentation; 3) time and place of the Grand Rounds; 4) a one paragraph synopsis of the content of the presentation. Recommended Preparation: Pass the NBME Subject Exam in Physiology and Neurophysiology. Prereq: PHOL 481, PHOL 482, PHOL 483, PHOL 484, PHOL 498A and PHOL 498B.

PHOL 497B. Neurology Grand Rounds. 1 Unit.
This course is a weekly seminar series offered summer, fall, and spring semesters by the Department of Neurology at University Hospitals Case Medical Center. To earn a Passing grade in this course, students must attend at least 75% of the grand rounds offered by the Department of Neurology during the semester (signing in at the session) and submit to the course director within the week following the Grand Rounds, a one page report containing: 1) the name of the presenter and their professional affiliation; 2) the title of the presentation; 3) time and place of the Grand Rounds; 4) a one paragraph synopsis of the content of the presentation. Recommended Preparation: Pass the NBME Subject Exam in Physiology and Neurophysiology. Prereq: PHOL 481, PHOL 482, PHOL 483, PHOL 484, PHOL 497A, PHOL 498A and PHOL 498B.

PHOL 497C. Clinical Nephrology Conference. 1 Unit.
Clinical Nephrology Conference (CNC) at MetroHealth Medical Center, Dept. Medicine, Division of Nephropathy. This course must be taken at least once and can be taken up to 2 times for a total of 2 credit hours. For the 15-week semester, students are responsible for attending and reporting on 12 of the scheduled CNC. For each CNC, the student must submit to the course director (Dr. Liedtke) within the week following the CNC, a one page report stating: a. The name of the presenter and their professional affiliation b. The title of the presentation c. Time and place of the CNC d. A one paragraph synopsis of the presentation The course director is responsible for assigning the grades for this course. Prior or concurrent CITI training must be completed. Prereq: PHOL 481, PHOL 482, PHOL 483, PHOL 484, PHOL 498A and PHOL 498B.

PHOL 497D. Clinical Nephrology Conference. 1 Unit.
Clinical Nephrology Conference (CNC) at MetroHealth Medical Center, Dept. Medicine, Division of Nephropathy. This course must be taken at least once and can be taken up to 2 times for a total of 2 credit hours. For the 15-week semester, students are responsible for attending and reporting on 12 of the scheduled CNC. For each CNC, the student must submit to the course director (Dr. Liedtke) within the week following the CNC, a one page report stating: a. The name of the presenter and their professional affiliation b. The title of the presentation c. Time and place of the CNC d. A one paragraph synopsis of the presentation The course director is responsible for assigning the grades for this course. Prior or concurrent CITI training must be completed. Prereq: PHOL 481, PHOL 482, PHOL 483, PHOL 484, PHOL 498A and PHOL 498B.

PHOL 498A. Physiology and Biophysics Departmental Seminar. 1 Unit.
Weekly one-hour reviews by invited speakers of their research. Students present literature reviews or summaries of their research.

PHOL 498B. Physiology Seminar B (Spring Semester), 1 Unit.
Weekly one-hour reviews by invited speakers of their research. Offered spring semester.

PHOL 505. Laboratory Research Rotation. 1 Unit.
Six week experience in a selected faculty research laboratory designed to introduce the student to all aspects of modern laboratory research including the design, execution and analysis of original experimental work. Recommended preparation: Consent of instructor and scheduled laboratory.

PHOL 513. Structural Journal Club. 1 Unit.
Current topics of interest in structural biology, and protein biophysics. Offered as PHOL 513 and PHRM 513.
PHOL 514. Cardiovascular Physiology. 3 Units.
The goal of this course is to provide the student with a solid foundation in cardiovascular physiology and pathophysiology. The course will begin by providing a solid foundation in the structure, phenotype and function of cardiovascular and vascular muscle. In addition, electrophysiology and metabolism will be addressed. Both basic physiology and more advanced topics, such as pathophysiology, will be covered using a journal club format. (Twice weekly; 1.5hrs/class.) Student participation is required.

PHOL 519. Cardio-Respiratory Physiology. 3 Units.
This course is designed to integrate systemic, cellular and molecular aspects of cardio-respiratory systems in physiological and pathophysiological states. The course requires prior knowledge of basic physiology of the cardiovascular systems. Extensive student participation is required. Instructors provide a brief overview of the topic followed by presentation and critical appraisal of recent scientific literature by students.

PHOL 522. Special Topics in Cardiac Electrophysiology. 3 Units.
Introduction to current topics in cellular cardiac electrophysiology and cardiac ion channel structure, function, and regulation. The format includes informal lectures as well as student presentations and class discussion of current literature.

PHOL 528. Contemporary Approaches to Drug Discovery. 3 Units.
This course is designed to teach the students how lead compounds are discovered, optimized, and processed through clinical trials for FDA approval. Topics will include: medicinal chemistry, parallel synthesis, drug delivery and devices, drug administration and pharmacokinetics, and clinical trials. A special emphasis will be placed on describing how structural biology is used for in silico screening and lead optimization. This component will include hands-on experience in using sophisticated drug discovery software to conduct in silico screening and the development of drug libraries. Each student will conduct a course project involving in silico screening and lead optimization against known drug targets, followed by the drafting of an inventory disclosure. Another important aspect of this course will be inclusion of guest lectures by industrial leaders who describe examples of success stories of drug development. Offered as BIOG 528, PHOL 528, and PHRM 528.

PHOL 530. Technology in Physiological Sciences. 3 Units.
This lecture/discussion/journal course focuses on techniques in the physiological sciences. Topics include spectroscopy, microscopy, and electrophysiology. The theory and practice are covered with an emphasis on examples taken from the scientific literature.

PHOL 537. Microscopy-Principles and Applications. 3 Units.
This course provides an introduction to various types of light microscopy, digital and video imaging techniques, and their applications to biological and biomedical sciences via lectures and hands-on experience. Topics covered include geometrical and physical optics; brightfield, darkfield, phase contrast, DIC, fluorescence and confocal microscopes; and digital image processing. Offered as GENE 537, MBIO 537, and PHOL 537.

PHOL 601. Research. 1 - 18 Unit.
Cellular physiology laboratory research activities that are based on faculty and student interests.

PHOL 610. Oxygen and Physiological Function. 3 Units.
Lecture/discussion course which explores the significance and consequences of oxygen and oxygen metabolism in living organisms. Topics to be covered include oxygen transport by blood tissues, oxygen toxicity, and mitochondrial metabolism. Emphasis will be placed on mammalian physiology with special reference to brain oxidative metabolism and blood flow as well as whole body energy expenditure and oxidative stress related to disease. The course will cover additional spans of physiology, nutrition and anatomy. Offered as ANAT 610 and PHOL 610.

PHOL 614. Sleep Physiology - Neurobiology of Sleep/Wake. 3 Units.
Participants in this course will gain an understanding of the neural mechanisms contributing to the states of sleep and wakefulness. Contemporary theories regarding why humans need to sleep will be reviewed. We will also review how perturbations within specific neurotransmitter systems become manifest as sleep related disorders and the pharmacological interventions used to normalize activity within those neural pathways. Prereq: PHOL and PHOL 482 or requisites not met permission.

PHOL 620A. Clinical Observer: Neurology Service. 2 Units.
This course is a 2 week intensive experience offered summer, fall, and spring semesters on a schedule set by the Department of Neurology at University Hospitals Case Medical Center. The Objective of the course is to provide the students with the experience of observing patient care provided by 3rd year medical students on a clinical rotation under direct supervision by house staff and attendings on an active acute Neurology Service. The PGY-2 Neurology Resident and PGY-3 Chief Resident will always be available for immediate supervision. Students round as Clinical Observers with the CWRU medical students according to their daily schedule. They will learn the basics of neurological history-taking, neurological examination, neurodiagnostic studies, and neurological therapeutics. Unlike the medical students on the rotation, a Clinical Observer will only observe procedures and will not actively take part in any health care - he/she will act strictly as an observer. To pass this course, students must pass both Parts I and II of their evaluation. Part I: The attending physician on the service will recommend to the course director whether the student earned a Pass or No Pass grade in the clinical aspect of the course based upon attendance, professional demeanor, active participation, and knowledge of the area. Part II: The student will submit (no later than one week after the end of the course) a 5 page paper (minus the title page, figures, and references) for grading to the course director describing the physiology that underlays one of the clinical cases they observed during the course. Students who do not Pass both parts of the evaluation will receive a grade of No Pass for the course and will be dropped from the Area of Concentration in Clinical Neuroscience program and will not be able to take further course in the PHOL620 series of courses. Recommended Preparation: Pass National Board Subject Exam in Physiology and Neurophysiology. Prereq: PHOL 481, PHOL 482, PHOL 483, PHOL 484, PHOL 498A and PHOL 498B.
PHOL 620B. Clinical Observer: Stroke Service. 2 Units.
This course is a 2 week intensive experience offered summer, fall, and spring semesters on a schedule set by the Department of Neurology at University Hospitals Case Medical Center. The Objective of the course is to provide the students with the experience of observing patient care provided by 3rd year medical students on a clinical rotation under direct supervision by house staff and attendings on an active acute Stroke Service. The PGY-2 Neurology Resident and PGY-3 Chief Resident will always be available for immediate supervision. Students round as Clinical Observers with the CWRU medical students according to their daily schedule. Students will observe the medical team involved with management of stroke and vascular neurological problems in the emergency department, the Neuro-critical care unit, step down unit, and hospital floor. They will learn how to approach an acute stroke and will become familiar with identifying which patients may benefit from the interventional procedures. Unlike the medical students on the rotation, a Clinical Observer will only observe procedures and will not actively take part in any health care - he/she will act strictly as an observer. To pass this course, students must pass both Parts I and II of their evaluation. Part I: The attending physician on the service will recommend to the course director whether the student earned a Pass or No Pass grade in the clinical aspect of the course based upon attendance, professional demeanor, active participation, and knowledge of the area. Part II: The student will submit (no later than one week after the end of the course) a 5 page paper (minus the title page, figures, and references) for grading to the course director describing the physiology that underlays one of the clinical cases they observed during the course. Students who do not Pass both parts of the evaluation will receive a grade of No Pass for the course and will be dropped from the Area of Concentration in Clinical Neuroscience program and will not be able to take further course in the PHOL620 series of courses. Recommended Preparation: Pass National Board Subject Exam in Physiology and Neurophysiology. Prereq: PHOL 481, PHOL 482, PHOL 483, PHOL 484, PHOL 498A and PHOL 498B.

PHOL 620C. Clinical Observer: Epilepsy Service. 2 Units.
This course is a 2 week intensive experience offered summer, fall, and spring semesters on a schedule set by the Department of Neurology at University Hospitals Case Medical Center. The Objective of the course is to provide the students with the experience of observing patient care provided by 3rd year medical students on a clinical rotation under direct supervision by house staff and attendings on an active acute Epilepsy Service. The PGY-2 Neurology Resident and PGY-3 Chief Resident will always be available for immediate supervision. Students round as Clinical Observers with the CWRU medical students according to their daily schedule. The course will: 1. Introduce the student to clinical assessment of adults with new onset seizures. 2. Introduce the student to history-taking of adults with a seizure disorder. 3. Teach the student the principles of managing epilepsy with medications and surgery. 4. Expose the student to some "cutting-edge" technologies applied in epilepsy - PET, SPECT, and invasive EEG. 5. Give the student a clinical approach in the management of epilepsy induced comorbidities (social, psychologic, etc.). Unlike the medical students on the rotation, a Clinical Observer will only observe procedures and will not actively take part in any health care; he/she will act strictly as an observer. To pass this course, students must pass both Parts I and II of their evaluation. Part I: The attending physician on the service will recommend to the course director whether the student earned a Pass or No Pass grade in the clinical aspect of the course based upon attendance, professional demeanor, active participation, and knowledge of the area. Part II: The student will submit (no later than one week after the end of the course) a 5 page paper (minus the title page, figures, and references) for grading to the course director describing the physiology that underlays one of the clinical cases they observed during the course. Students who do not Pass both parts of the evaluation will receive a grade of No Pass for the course and will be dropped from the Area of Concentration in Clinical Neuroscience program and will not be able to take further course in the PHOL620 series of courses. Recommended Preparation: Pass National Board Subject Exam in Physiology and Neurophysiology. Prereq: PHOL 481, PHOL 482, PHOL 483, PHOL 484, PHOL 498A and PHOL 498B.

PHOL 621. Clinical Nephrology Observer. 4 Units.
This course is a total of 4 week intensive experience offered on the School of Medicine elective schedule. Students will round with fellow and Medicine residents rotating during the elective on a daily basis starting with morning work rounds. Attending rounds generally begin in the afternoon. The student is restricted to a total of 15 hrs/ week on clinical rounds. The student is expected to read appropriate or assigned text, journal and internet resources for necessary background reading; the time spent on these resources do not count toward the 15 hrs/week for rounds. The fellow or attending physician on the service will recommend to the course director (Dr. Liedtke) whether the student earned a Pass or Fail in the course based upon attendance, professional demeanor, active participation, and knowledge of the area. The course director is responsible for assigning the grades for this course. CITI training must be completed prior to enrollment. Prereq: PHOL 481, PHOL 482, PHOL 483, PHOL 484, PHOL 498A, PHOL 498B.

PHOL 651. Thesis M.S.. 1 - 18 Unit.
PHOL 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Weatherhead School of Management

The Weatherhead School of Management (http://weatherhead.case.edu) has been widely recognized for its innovative approach to management education. Weatherhead develops leaders who innovate to create sustainable value and who are good global citizens.

Weatherhead is home to six academic departments comprising 68 full-time faculty members and 83 full-time staff members. It offers programs at the undergraduate, master’s and doctoral levels in the Peter B. Lewis Building and executive programming in the George S. Dively Building on the campus of Case Western Reserve University. Located within University Circle, a square mile of educational, scientific, medical and cultural institutions, Weatherhead counts among its neighbors the Cleveland Orchestra, the Cleveland Museum of Art, the Cleveland Botanical Garden, the Cleveland Museum of Natural History, the Cleveland Institute of Art, University Hospitals and the Cleveland Clinic. Weatherhead is a business school that attracts interest from every corner of the globe while maintaining roots in the Cleveland community.

Mission Statement

Developing transformational ideas and outstanding leaders for the advancement of business and society.

Values

- Weatherhead believes that management is a noble profession committed to the advancement of human life.
- Weatherhead values its strong ethical foundation and strives to promote a culture rich in ideas and reflection.
- Weatherhead is committed to increasing individual creative and critical capacities, nurturing new and expansive patterns of thought.
- Weatherhead values research of enduring consequence and judges its significance by the impact it has on management thought, management action and public policy.
- Weatherhead values learning that is active and collaborative. Students, faculty and staff together engage important management problems with an innovative, knowledge-creating approach.
- Weatherhead is responsive to the needs of its students.
- Weatherhead considers alumni its important partners and strives to add value to their personal and professional lives.
- Weatherhead values partnerships with the business community and other organizations.
- Weatherhead values meaningful service to society and strives for outcomes that influence and positively change the way people and organizations conduct themselves.
- Weatherhead is a cohesive learning organization with an international outlook.
- Weatherhead values diversity, characterized by open dialogue and mutual respect among individuals with different specializations, backgrounds, cultures and perspectives.
- Weatherhead is results-oriented and judges contributions by actions taken and outcomes achieved.

Vision

Weatherhead is respected locally and globally for research of enduring consequence. The school is recognized for attracting and educating managers to design novel solutions to the most complex issues facing business and society. Weatherhead’s learning environment is a hub of creative thinking, innovative teaching and trans-disciplinary research, filled with excitement and a strong sense of community.

Distinguishing Focus

It matters to the Weatherhead School of Management that its education and research efforts help people improve organizations and society. To that end, Weatherhead educates and develops managers of private and public, corporate and nonprofit institutions to combine rigorous analytic skills, design competence and a bias for action.

Weatherhead develops leaders who:

- Innovate using design practices. Faculty, students and alumni contribute to our innovative endeavors through:
  - The first Design & Innovation Department in a management school
  - MBA courses including: Design in Management: Concept and Practices
  - Partnerships with university initiatives like think[box (http://engineering.case.edu/thinkbox)] and Blackstone Launchpad (http://www.bdmorganfdn.org/blackstone-launchpad)
- Create sustainable value through intrapreneurship, entrepreneurship and social entrepreneurship. We bring this to our community through:
  - MBA courses including: The Institute for Sustainable Value and Social Entrepreneurship
  - The Fowler Center for Business as an Agent of World Benefit (https://weatherhead.case.edu/centers/fowler)
  - Partnerships with Great Lakes Energy Institute and Globally Responsible Leadership Initiative (GRLI)
- Are good global citizens. The global mindset of Weatherhead’s community is reflected in:
  - The school’s adherence to the Principles for Responsible Management Education (PRME) based on the United Nations Global Compact
  - The Global Forum
  - The Global MBA Program

Brief History

In 1952, Western Reserve University established the School of Business by combining the Cleveland College Division of Business Administration and the Graduate School Division of Business Administration, and from its founding until 1988, the activities of the School of Business were divided among a number of buildings both in downtown Cleveland and in University Circle. In 1967, the merger of Case Institute of Technology and Western Reserve University created Case Western Reserve University, and the Western Reserve University School of Business absorbed Case’s Division of Organizational Sciences to become the School of Management in 1970. Just six years later, the School of Management launched its full-time MBA.

It was in 1980 that the School of Management was renamed in honor of Albert J. Weatherhead III, a Cleveland businessman and industrialist.
who represented the fourth generation of his family to carry on the Weatherhead name and values, including cultural and educational leadership. By 1999, the Weatherhead School of Management had developed a strong identity, growing out of its space in Enterprise Hall and requiring new construction. Funded by the philanthropist and entrepreneur whose name it bears, the Peter B. Lewis building, designed by renowned contemporary architect Frank Gehry and completed in 2002, was the answer. Located across the street from the George S. Dively Building, which houses Weatherhead Executive Education programs, the Lewis Building, featuring Gehry’s unmistakable sculptural profile and gleaming stainless steel roof, both sets the school apart from its surroundings and, quite literally, reflects the prestigious neighborhood of the school. Gehry redefined the way a business school should look, just as Weatherhead redefines the way management education should take place.

Accreditation
The programs of the Weatherhead School of Management have been fully accredited by The Association to Advance Collegiate Schools of Business (AACSB) International since 1958.

Administration
Robert E. Widing II, PhD
(Ohio State University)
Dean, Weatherhead School of Management; Albert J. Weatherhead III Professor of Management; Professor, Design & Innovation

Fred Collopy, PhD
(University of Pennsylvania)
Vice Dean; Professor, Design & Innovation

Laura Desmond, BA
(University of Michigan)
Associate Dean, External Relations

Denise Douglas, PhD
(University of Minnesota)
Associate Dean, Executive Education

Anurag Gupta, PhD
(New York University)
Associate Dean, Global Initiatives; Chair and Professor, Banking and Finance

Jennifer Johnson, MBA
(Case Western Reserve University)
Associate Dean, Undergraduate and Integrated Programs; Associate Professor, Design & Innovation

Kalle Lyytinen, PhD
(University of Jyvaskyla)
Associate Dean, Research; Iris S. Wolstein Professor of Management Design; Faculty Director, DM Program; Chair and Professor, Design & Innovation

Mark Taylor, PhD, CPA
(University of Arizona)
Andrew D. Braden Professor of Accounting and Auditing; Chair and Professor, Accountancy

Undergraduate Programs

Bachelor of Science (BS) in Accounting

The accounting profession demands a high degree of technical training, similar to the professions of architecture, law, engineering and medicine, and a broad knowledge of the fundamentals of economics and business with a commitment to public well-being. Career opportunities in accounting include the public, corporate, government, nonprofit and healthcare sectors. The undergraduate program in accountancy is designed to prepare students for entrance into these careers and to provide a foundation for the examination to become a CPA or to achieve other professional certifications.

As part of the sequence of courses leading to the BS in Accounting offered through Weatherhead, the student takes required and elective courses in related fields of banking and finance, economics, marketing, organizational behavior and operations.

BS in Accounting

General Education Requirements

*Departments must award at least 12 credits in Business or Economics.
‡The Senior Capstone may be either a thesis, a project, or an internship.
Integrated Study Program in Accountancy

Undergraduate accounting students at Case Western Reserve have the unique opportunity to pursue both the Bachelor of Science (BS) in Accounting and the MAcc at the same time through the Integrated Study program. The Integrated Study program allows students to complete both degrees in four or five years, most commonly, four-and-a-half years or nine academic semesters. Each year, a select number of exceptionally well-qualified high school seniors who plan to pursue careers in accountancy are offered places in the Pre-Professional Scholars Program in Accountancy, although students may apply to the integrated program once they have begun their studies at Case Western Reserve. Because of the necessity for proper planning of coursework and programs, undergraduate students are strongly encouraged to apply for the MAcc in their junior year. All Weatherhead students must apply for and be admitted to the MAcc program, although certain requirements are waived, such as the Graduate Management Admission Test (GMAT), for Weatherhead students. Once admitted, students in an integrated study program are required to design a comprehensive study plan with their Weatherhead undergraduate adviser.

Pre-Professional Scholars Program in Accountancy

Each year, approximately 10 to 15 exceptionally well-qualified high school seniors who plan to pursue careers in accountancy will be offered places in the Pre-Professional Scholars Program in Accountancy at Case Western Reserve University. Pre-Professional Scholars receive a conditional commitment of admission to the Weatherhead School of Management Master of Accountancy (p. 904) program, a scholarship package covering a minimum of 50% of an academic year’s tuition cost and a GMAT waiver to be honored when students formally apply for the Integrated MAcc programs. Students are required to maintain a minimum undergraduate GPA of 3.2 overall and in accountancy courses. Those who achieve higher grade point averages will be eligible for greater scholarship amounts.

Practicum Program

The practicum program (http://students.case.edu/careers/students/jobs/practicums) is a planned, structured, supervised workplace experience at an approved “site” organization. The practicum is an experiential learning arrangement between the student, the employer, and the practicum adviser in conjunction with the University Career Center. Employers provide appropriate supervision and work-related learning while the practicum adviser guides and evaluates the student’s experience. The primary goal of this active learning experience is the intellectual, personal and professional growth of the student in an area related to the student’s academic goals. The practicum should provide the student with new skills, insights and experiences that are transferable to the academic setting.

Students apply to the University Career Center in the semester preceding the work assignment and may participate in up to two practicums. All practicums developed through the University Career Center must be taken for transcript notation, and students must have a faculty member serve as a practicum adviser. If a student elects to work in an internship/practicum without enrolling in the course for academic notation, he or she will not have the benefits of full-time student status. Additionally, he or she will not represent the practicum program in any official capacity.

For more information, contact Tiffany Welch (tiffany.welch@case.edu), assistant dean, undergraduate and integrated study programs, at 216.368.2058.

### Bachelor of Arts (BA) in Economics

(College of Arts and Sciences)

The BA in Economics is a 120-credit-hour, structured program in which students learn to analyze problems of resource allocation and decision making, and to understand the influence of these factors on economies and societies. Our program was ranked #5 in the nation for the study of microeconomics and #7 for macroeconomics in *Businessweek’s* 2012 survey of undergraduate programs.

Our highly regarded degree attracts some of the best students on campus. Students have the opportunity to assist Weatherhead faculty in their research activities and to participate in independent research projects.

### General Degree Requirements

Students are required to complete the Arts and Sciences General Education Requirements (p. ).

<table>

**Calculation:** Ideally, Econometrics should be taken by the junior year to enrich understanding of upper-level elective courses and to enable engagement in more sophisticated economic analysis.)
Elective courses (a minimum of five additional economics courses at the 200 or 300 level). ECON 398 Honors Research II does not count toward fulfilling this requirement.

**Total Units** 38

**SAGES Senior Capstone Experience**

The economics major does not require a capstone as part of the major. However, students need to complete a capstone as part of the SAGES requirement. The Economics Department offers the following courses for a capstone.

- ECON 398 Honors Research II 3
- ECON 395 The Economy in the American Century 3
- ECON 399 Individual Readings and Research (upon approval of Senior Capstone Coordinator) 3-6

For more information, contact Teresa Kabat (teresa.kabat@case.edu), department administrator, at 216.368.4110.

**Bachelor of Science (BS) in Management**

Graduates of the BS in Management degree program obtain a broad education within a scientific framework that enables them to bring an unusual degree of analytical capability to the problems of management and business. Each student is required to complete an approved major program of study from the options outlined below. In addition, each student must consult with an adviser in the Office of Undergraduate and Integrated Study Programs at Weatherhead.

**General Education Requirements**

**SAGES**

- First Seminar 4
- Two University Seminars 6
- Departmental Seminars - taken as MGMT 395, see below* 3-6
- Senior Capstone ** 3-6

**Breadth Requirements**

- MATH 125 Math and Calculus Applications for Life, Managerial, and Social Sci I 4
- or MATH 121 Calculus for Science and Engineering I
- MATH 126 Math and Calculus Applications for Life, Managerial, and Social Sci II 4
- or MATH 122 Calculus for Science and Engineering II

Two Natural Science Courses 6-8
- Two Arts & Humanities Courses 6-8
- Two Social Sciences Courses 6

**Management Requirements**

**Principles Requirements**

- ECON 102 Principles of Microeconomics 3
- ECON 103 Principles of Macroeconomics 3
- ACCT 101 Introduction to Financial Accounting 3
- ACCT 102 Management Accounting 3
- OPRE 207 Statistics for Business and Management Science I 3

**Core Requirements**

- MGMT 201 Contemporary Business and Communication 3
- BAFI 355 Corporate Finance 3

- ORBH 250 Leading People (LEAD I) 3
- ORBH 251 Leading Organizations (LEAD II) 3
- MIDS 301 Introduction to Information: A Systems and Design Approach 3
- MKMR 201 Marketing Management 3
- OPRE 301 Operations Research and Supply Chain Management 3
- PLCY 399 Business Policy 3
- MGMT 395 Advanced Seminar (*MGMT 395-one credit hour seminar; each student must complete three) 3

**Major Requirements**

*Students must complete an 18-credit-hour major in Business Management, Finance, Marketing, or a Dean’s Approved Major.*

**Business Management Requirements (18)**

1. Complete three courses (9 cr) from within one of the following concentrations:

- **Innovation and Entrepreneurship**
  - ECON 364 Economic Analysis of Business Strategies 3
  - ECON 369 Economics of Technological Innovation and Entrepreneurship 3
  - ENTP 301 Entrepreneurial Strategy ((Required)) 3
  - ENTP 311 Entrepreneurship and Wealth Creation 3
  - BLAW 331 Legal Environment of Management 3
  - ORBH 380 Managing Negotiations 3
  - MKMR 312 Selling and Sales Management 3

  NOTE: ENTP 301 is required for this Concentration. Students completing an Innovation and Entrepreneurship Concentration may not complete an Entrepreneurship minor.

- **International Business**
  - ECON 375 Economics of Developing Countries 3
  - BAFI/ECON 372 International Finance 3
  - ECON 373 International Trade 3
  - MGMT 315 International Management Institute ((Required)) 3
  - ORBH 391 Leadership in Diversity and Inclusion: Towards a Globally Inclusive Workplace 3

  NOTE: MGMT 315 is required for this Concentration. If a student wishes to substitute a course from another study abroad experience, he/she must receive prior approval from an academic advisor.

- **Organizational Leadership**
  - ORBH 391 Leadership in Diversity and Inclusion: Towards a Globally Inclusive Workplace 3

  NOTE: Students completing an Organizational Leadership Concentration may not complete a Leadership Minor.

- **Supply Chain Management**
  - OPRE 332 Computer Simulation 3
  - OPMT 377 Enterprise Resource Planning in the Supply Chain 3
  - OPMT 422 Lean Operations 3

</tr>
</tbody>
</table>

For more information, contact Jim Hurley, assistant dean of undergraduate and integrated study programs at 216.368.3856.

Additional Requirement

Electives 16-23

Total Credit Hours for Degree: 122

Students must complete one university-approved SAGES Senior Capstone. It is not required that students complete a Weatherhead-specific capstone. However, the vast majority of students take MGMT 398 Action Learning. Highly motivated students with a keen interest in a particular business topic may complete an individual research project via MGMT 397, subject to approval by the Weatherhead Undergraduate Executive Committee.

Integrated Study Program in Accountancy

The Integrated BS in Accounting/Master of Accountancy (MAcc) program permits students to work towards the completion of the Master of Accountancy during their undergraduate studies thereby enabling completion of both degrees in as little as four years. If after completion of the bachelor’s degree an additional semester is needed to complete the MAcc or if a student chooses to complete a majority of the MAcc in a fifth year, the student would then enroll solely as a graduate student in the Weatherhead School of Management to complete the master’s degree. Depending on the student’s academic record and total credit hours completed, they may choose to double count up to six credit hours (two courses) towards the BS and the MAcc.

These programs are strongly recommended for those individuals planning to obtain professional certification as a certified public accountant (CPA). CPA candidates must have completed 150 semester hours of study at the university level in order to qualify to sit for the CPA examination. The integrated program saves qualified students both time and money while equipping students with the skills and knowledge attractive to top accounting firms.

Because of the necessity for proper planning of coursework and programs, undergraduate students are strongly encouraged to apply for the MAcc in their junior year. Weatherhead students must apply for and be admitted to the MAcc program, although certain requirements are waived, such as the Graduate Management Admission Test (GMAT), for Weatherhead undergraduate students. Once admitted, students in an integrated study program are required to design a comprehensive study plan with both their Weatherhead undergraduate adviser and the faculty director of the MAcc program.

For more information, contact Tiffany Welch (tiffany.welch@case.edu), assistant dean of undergraduate and integrated study programs, at 216.368.2058 or Ashley Lu (ashley.lu@case.edu), program manager, MAcc, at 216.368.5376.

BA/BS degree and MSM-Finance Integrated Program (https://weatherhead.case.edu/degrees/undergraduate/academics/finance/integrated-program)

As a student in the BA/BS and MSM-Finance Integrated Study (https://weatherhead.case.edu/degrees/undergraduate/academics/finance/integrated-program) program, you can obtain a BA/BS degree and an MSM-Finance degree in as little as four years.

For more information, contact Jim Hurley (james.hurley@case.edu), Assistant Dean of Undergraduate and Integrated Study Programs, at 216.368.3856 (http://bulletin.case.edu/weatherheadschoolofmanagement/undergradprograms/tel:+12163683856), or Marybeth Keeler (mxk761@case.edu), Program Manager, MSM-Finance, at 216.368.3688 (http://bulletin.case.edu/weatherheadschoolofmanagement/undergradprograms/tel:+12163683688).

Master of Business Administration (MBA)

Full-Time MBA

The full-time MBA is a four-semester, 60-credit-hour program. The Weatherhead experience starts where many MBA programs end up: in conversation with top executives. Weatherhead’s first-year Management Perspectives and Dialogues course brings business leaders into the classroom, where they work on real management issues with the help of students. Students also complete a leadership development course that puts them in touch with their strengths and identifies areas that can be improved through a personal learning and career plan. During their second year, candidates are immersed in studio-based courses in design practices or sustainable value; the MBA Institute in Sustainable Value and Social Entrepreneurship was touted in Forbes as one of the 10 most innovative business school courses, while Businessweek named the Weatherhead School of Management MBA as one of the 30 best design programs in the world.

Independent Study

MBA students are limited to six credit hours of elective credit as independent study. Any student wishing to take more than six credit hours of independent study must petition the faculty director of the full-time MBA.

Other courses at the university may be eligible for MBA elective credit. Contact the faculty director of the full-time MBA for additional information.

Curriculum

All of the core courses in the following tables are required.

Total Units in Sequence: 60

Either the year-long course Design in Management: Concept and Practices or the year-long course MBA Institute in Sustainable Value...
and Social Entrepreneurship is required. Students must take both semesters of either Design in Management: Concept and Practices or MBA Institute in Sustainable Value and Social Entrepreneurship. Students may take both semesters of both courses, but they may not change courses mid-year, taking Design in Management: Concept and Practices in the fall followed by MBA Institute in Sustainable Value and Social Entrepreneurship in the spring, for example.

**Electives**

The program provides space for taking nine elective courses.

**Cleveland Clinic Health Management Scholars Program**

Cleveland Clinic has joined forces with Weatherhead to create the Health Management Scholars Program. This innovative partnership gives four students the unique opportunity to participate in Weatherhead’s full-time MBA program and in a specialized experiential learning assignment at the Cleveland Clinic. Qualifying scholars will also receive the following benefits:

- Partial tuition scholarship
- Prestigious paid summer internships at Cleveland Clinic

For additional information about this program, contact Deborah Bibb (deborah.bibb@case.edu), senior director of admissions, at 216.368.6702.

**Part-Time MBA**

The part-time MBA is a 48-credit-hour, three-year, cohort-based program that combines a core of fundamental business classes with elective options to create an integrated experience focused on honing general management skills. Students develop a personalized learning plan through the MBAP 401 Leadership Assessment and Development (LEAD) course.

A Leadership Speaker Series provides an opportunity to hear from a variety of executives who bring current business experience to the classroom. Most classes meet one evening a week. Summer semesters may include more intensive formats.

The part-time MBA program also features cutting-edge classes in applying design ideas to management issues and in understanding sustainable business practices. These classes will help students break from the norm of viewing every challenge through the standard spreadsheet-based prisms common to so many MBA programs.

The first summer semester begins with the intensive offering of LEAD and moves through the rest of the core offerings within the first two years of the program. The majority of the third year is devoted to electives.

**Open Electives**

Students in the part-time MBA program have the opportunity to choose four electives. Students determine their own focus areas and, with the help of our Career Management Office, learn how to best position themselves for post-MBA career advancement.

**Traditional Students**

Part-time students are those who entered the part-time MBA program in fall semester 2009 or prior, transferred in during summer semester 2010 or prior, or transitioned from non-degree to degree-seeking status prior to fall semester 2010. Students must complete 48 credit hours, consisting of 10 core required courses and 6 electives. The 48 hours must be completed within six years of starting the program.

For additional information about this program, contact Deborah Bibb (deborah.bibb@case.edu), senior director of admissions, at 216.368.6702.

**Executive MBA (EMBA)**

For candidates with at least 10 years of experience and the endorsement of their organizations, the Executive MBA (EMBA) is tailored to those poised to move into a more prominent leadership role. Weatherhead’s renowned Organizational Behavior Department structured the EMBA around an exploration of the four levels of leadership, amplifying students’ ability to effect change at the personal, team, organization and societal levels. The program is based around periodic residencies in the company of intimate cohort groups.
Curriculum

Students attracted to the Weatherhead EMBA aspire to senior leadership roles within organizations. The curriculum opens horizons, fusing that aspiration with Weatherhead's expertise in turning good leaders into great ones. At every stage in the program, students build their knowledge of how business works while strengthening their personal leadership capacity. Each course is taught in the format that best facilitates learning its content.

requiring only 16 total residencies on campus, the 48-credit-hour Weatherhead EMBA program is designed to be manageable for busy executives, allowing students from around the world to participate in a one-of-a-kind leadership program. The curriculum is delivered over five semesters, or 21 months. Both fall and spring semesters are comprised of four three-day residencies. The summer semester is delivered abroad through the EMBA 475 International Tour. The EMBA requires a serious time commitment from each participant. Although individual study habits vary, students should anticipate devoting a minimum of 20 hours per week to study outside of classes.

The Weatherhead EMBA is a lock-step cohort program. Participants self-select learning teams which represent essential study partnerships over the course of the program as well as invaluable resources for networking and organizational support. Learning teams meet weekly outside of the classroom, either face-to-face or remotely, to achieve course objectives and enhance the learning experience. In addition, faculty often host optional study and review sessions, which are also recorded for virtual access.

Cleveland Clinic-Weatherhead Executive MBA

The broad challenges facing the health care industry today can only be met by strong leadership, collaboration across disciplines and creative thinking. The Cleveland Clinic-Weatherhead Executive MBA at Case Western Reserve University combines Weatherhead’s breakthrough business concepts of leadership in management with Cleveland Clinic’s innovation in health care to make this EMBA the premier option for experienced professionals in the health care profession.

Join practicing leaders from all sectors of health care in this two-year, brief-residency EMBA.

The Cleveland Clinic-Weatherhead EMBA is a lock-step cohort program. Participants self-select learning teams, which represent essential study partnerships over the course of the program as well as invaluable resources for networking and organizational support. Learning teams often grow as close as a second family, with members establishing impactful, lifelong relationships. Team members go on to be each other’s mentors, advisers and even employers. Learning teams meet weekly outside of the classroom, either face-to-face or remotely, to achieve course objectives and enhance the learning experience. In addition, faculty often host optional study and review sessions, which are also recorded for virtual access.

Executive Coaching Component

The Cleveland Clinic-Weatherhead EMBA emphasizes a unique, personalized approach to learning, with a focus on self-awareness as the key to becoming an effective leader. Each candidate in the program is assigned an executive coach who helps him or her take full advantage of the academic experience while providing guidance as he or she develops as an individual and leader.

Application Project

The Application Project integrates design practices in management education. Each student spends a semester exploring his or her organization for a “design opportunity”—an opportunity to create value by deploying resources and capabilities in new ways. Students assume leadership responsibility and, with the support of a team of peers in the program, execute a design project that generates a return for the organization.

Cleveland Clinic-Weatherhead EMBA International Study Experience
During the summer semester, students travel abroad for a portion of the program during which faculty reinforce business fundamentals through a global lens. Weatherhead faculty and experienced professionals from institutions and organizations worldwide coordinate hands-on activities with global and local entities, as well as in an academic setting, in the region selected for that year’s study experience.

Students explore the nature of global leadership and operations while improving their understanding of the role of culture in business and society. They return to their own organization with a renewed commitment to employ the knowledge, skills and holistic perspective developed during their experience abroad to benefit their colleagues at home.

The Class of 2016 will travel to Sweden and Latvia. Students generally visit two different countries as part of their tour. Previous cohorts have traveled to such destinations as South Africa, Argentina, Vietnam, China, and Turkey, Japan, and South Korea.

For more information, contact Michelle Wilson (michelle.j.wilson@case.edu), program manager of the EMBA, at 216.368.6411.

### Global MBA

The Global MBA allows students to directly experience classrooms and cultures in the United States, China and India. Students go far beyond a tourist’s experience of these countries and economies by participating in substantial company-based projects on teams drawn from their cohort group.

Each cohort is comprised of about 20 students from Weatherhead and 20 students from each of the two partner organizations, Tongji University’s School of Economics and Management (SEM-Tongji) in Shanghai, China; and Xavier Labour Relations Institute (XLRI) in Jamshedpur, India. These students are taught together in lock-step and mixed in teams for projects. Students spend one semester at each school before returning to their home school for the final semester. There, they can choose five electives.

This level of experiential learning at multiple international locations is a feature that sets this program apart from others. The Global MBA is ideal for individuals seeking a top management role because it addresses the need to engage directly with areas of significant economic growth around the world.

The Global MBA curriculum is integrated across the three campuses for a seamless experience, covering core MBA skills and knowledge while drawing upon each partner school’s areas of international renown. The curriculum is organized into five themes.

#### Language of Management

Students must understand the way business communicates through financial and management accounts. This theme explores the fundamentals of accounting and finance and includes mastery of concepts in finance relating to valuation and risk management.

#### Management Analytics

Modern managers use analytical skills across various functional disciplines to solve issues of project management, appraisal, market analysis and strategy. These analytical skills include basic statistical analysis, econometric modeling and forecasting. This theme also includes operations management techniques (such as linear programming), simulation and behavioral analysis including change management.

#### Strategic Thinking

Students will develop critical and strategic thinking skills and master core conceptual material relating to markets, competitive positioning and strategy. They will explore sustainable value, entrepreneurship and business planning and associated managerial challenges. Functional disciplines such as economics, marketing and psychology, as well as core strategic management approaches, are also covered in this thematic area.

#### Managing Teams and Leadership

Students will learn about the management of high-performing, internationally diverse teams. They will strengthen their capacity for effective leadership, entrepreneurship and change management and learn about international human resource management issues.

#### Global Environment

This theme provides a thorough exposure to the social, legal and economic environment of the three partner schools. Through interaction and dialogue with executives, students will learn of the challenges facing...
today's global firms and discover the importance of integrated thinking to address these challenges. Project work immerses student teams in corporate sites, and students learn by doing as they address significant business problems.

**Total Units in Sequence**: 90

For additional information about this program, contact Deborah Bibb (dib10@case.edu), senior director of admissions, at 216.368.6702.

**Master of Accountancy (MAcc)**

The MAcc program at Weatherhead is designed for individuals who seek to obtain an advanced degree that builds upon the skills and knowledge acquired in an undergraduate degree in accountancy. The program is fully accredited and provides professional education by very highly qualified faculty members. In an increasingly competitive business environment, the MAcc program provides students with an important foundation for long-term success and sets graduates apart from their colleagues.

**Undergraduate Opportunities**

Undergraduate accounting students at Case Western Reserve have the unique opportunity to pursue both the Bachelor of Science (BS) in Accounting and the MAcc through the Integrated Study (p. 899) program. The Integrated Study program allows students to complete both degrees in four or five years, most commonly, four-and-a-half years or nine academic semesters. Each year, a select number of exceptionally well-qualified high school seniors who plan to pursue careers in accountancy are offered places in the Pre-Professional Scholars Program in Accountancy (p. 894), although students may apply to the integrated program once they have begun their studies at Case Western Reserve. Because of the necessity for proper planning of coursework and programs, undergraduate students are strongly encouraged to apply for the MAcc in their junior year. All Weatherhead students must apply for and be admitted to the MAcc program, although certain requirements are waived.

**Eligibility to Apply**

To be eligible to apply for the MAcc program, applicants must have earned or are in process of earning an equivalent of a U.S. bachelor's degree from an accredited institution. Please note that a bachelor's degree in accounting is not required to apply for the program.

**Prerequisite Courses**

Because the program builds upon skills and knowledge developed in an undergraduate accountancy program, all admitted candidates must complete certain prerequisite courses. It is not required that students have completed all the prerequisite courses before beginning the MAcc program, but it is recommended that students have completed financial accounting and managerial accounting (Principles I and II) before beginning the program.

- Prerequisite courses may be taken at any accredited four-year educational institution, although once students are admitted to the MAcc program department approval should be obtained in advance of enrolling in any prerequisite courses not taken at Case Western Reserve.
- Students must earn a grade of C or better in all prerequisite coursework.

ACCT 101 Introduction to Financial Accounting 3
ACCT 102 Management Accounting 3
ACCT 207 Excel Applications and Modeling 3
ACCT 300 Corporate Reporting I 3
ACCT 301 Corporate Reporting II 3
ACCT 305 Income Tax: Concepts, Skills, Planning 3
ACCT 306 Accounting Information Systems - Basic 3
Curriculum
The 30-credit-hour MAcc program offers the flexibility of beginning in the fall or spring semester. Upon completion of the program, graduates should have satisfied all accounting educational requirements for the CPA examination in the state of Ohio.

Accountancy Concentration(s)
Students must complete at least one concentration in either Financial Reporting and Attestation Services or U.S. Taxation by completing the related series of three one-credit-hour ACCT 495: Advanced Accounting Seminars. The U.S. Taxation related seminars are offered in the fall semester and the Financial Reporting and Attestation Services related seminars are offered in the spring semester.

Supporting Elective
If students choose not to complete a second concentration, MAcc students may select one elective (three credit hours) in an area that complements a professional accountancy career. A list of approved graduate supporting electives will be provided each semester.

For more information about the MAcc, contact Tiffany Welch (tiffany.welch@case.edu), assistant dean, undergraduate and integrated study programs, at 216.368.2058 or Ashley Lu (ashley.lu@case.edu), program manager, MAcc, at 216.368.5376.

Master of Engineering and Management (MEM)
The Master of Engineering and Management (MEM) degree is offered through an innovative collaboration between the Case School of Engineering and the Weatherhead School of Management. The one-year, 14-course program is designed to equip students with the technical and analytical skills gained through an undergraduate engineering degree and provides a real-world framework for applying them alongside master’s-level business management tools. Individualized coaching emphasizes self-assessment and emotional intelligence. Interdisciplinary team projects enhance the people skills needed as a business leader today. The MEM program positions students to become more productive faster and in the process, accelerate their careers.

Additional information regarding the MEM program (p. 9) is available in the Case School of Engineering section of the Bulletin.

Master of Science in Management-Finance (MSM-Finance)
The Master of Science in Management-Finance (MSM-Finance) degree is a rigorous program designed to equip students to meet the needs of financial-sector companies in today’s intense and competitive business climate. Upon completion of the program, students will be prepared to make immediate contributions to careers in corporate finance, investment banking, equity research, investment management, risk management and corporate consulting, or to pursue higher studies.

Students learn from and work directly with world-class faculty whose hands-on involvement with students is a point of pride at Weatherhead; meanwhile, Weatherhead’s Cleveland location is home to the Federal Reserve Bank of Cleveland and to a number of corporate headquarters including KeyCorp. The program’s 30 credit hours can be completed in as little as two semesters, or students can stay longer to work toward additional departmental certification or a specialization track - corporate finance or risk management - by taking appropriate additional electives.

Upon completion of the MSM-Finance program, students will:

- Have a working knowledge of financial theory and applications
- Speak and understand the languages of business
- Work more effectively in teams
- Be prepared to add value in corporations

Curriculum
The 30-credit-hour MSM-Finance program is a two-semester, full-time curriculum.

The curriculum is comprised of the following components:

Financial Orientation
All entering MSM-Finance students will have to take the mandatory preparatory/refresher course before the first fall semester begins.

MSFI 401 Financial Orientation 1.5

Core Courses
The core courses provide students with the tools and techniques that build a strong foundation in finance.
MSFI 404  Financial Modeling  3
MSFI 421  Corporate Financial Analysis  3
MSFI 429  Investment Management  3
MSFI 430  Derivatives and Risk Management  3
MSFI 435  Empirical Finance  3
MSFI 436A  Individual, Team and Career Development .75
MSFI 436B  Individual, Team and Career Development .75

Total Units  16.5

### Electives

Elective courses develop expertise in a particular track: corporate finance or risk management. Enrollment in elective courses may be contingent upon appropriate performance in the program.

- MSFI 428  Financial Strategy and Value Creation  3
- MSFI 431  Fixed Income Markets and Their Derivatives  3
- MSFI 432  Corporate Risk Management  3
- MSFI 433  Quantitative Risk Modeling (Quantitative Risk Modeling)  3
- MSFI 440  Financial Decisions, Contracting & Value  3
- BAFI 420  Health Finance  3
- BAFI 444  Entrepreneurial Finance  3
- MSFI 450  Mergers and Acquisitions  3
- MSFI 480  Global Banking & Capital Markets  3
- MSFI 490  Projects in Corporate Finance  3
- MSFI 491  Projects in Risk Management  3

or any other appropriate elective, as approved by the program faculty director.

Departmental certification is available upon successful completion of 39 credit hours in a specific track.

For more information see the website or contact Marybeth Keeler, program manager, at 216.368.3688; or Stephen Scheidt, director of admissions, at 216.368.3254; or Ted Evans, admissions manager, at 216.368.2069.

### Finance in China

The Weatherhead School of Management at Case Western Reserve University and the School of Economics and Management at Tongji University (SEM-Tongji) have partnered to offer the Master of Science in Management-Finance (MSM-Finance) in China program. This is the first master’s degree in finance offered by a world-class U.S. university in mainland China. This innovative program, taught in Shanghai and Cleveland, provides students with both broad general management skills and depth of knowledge in finance. Graduates come away with a global way of thinking and the latest insights on the financial markets and instruments.

Students enrolled in this program take 30 credit hours of Weatherhead MSM-Finance courses through two semesters of part-time study on the Tongji University campus in Shanghai, plus one month-long residency on the Case Western Reserve University campus in Cleveland, Ohio.

Upon graduation from the program, students will obtain the MSM-Finance degree from Weatherhead.

### Program Features

- Obtain the first MSM-Finance degree offered from a highly ranked U.S. university in mainland China
- Gain cutting-edge knowledge and skills in global finance
- Take advantage of the opportunity to prepare for CFA, FRM and other certifications
- Specialize in corporate finance, risk management and capital markets
- Network with financial sector players in the U.S.; intern in Shanghai’s Lujiazui/Pudong international finance and trade area

To learn more, contact Yuan Wu (yuan.wu@case.edu), project manager, at 216.368.2077.

### Master of Science in Management-Healthcare (MSM-Healthcare)

The Master of Science in Management-Healthcare (MSM-Healthcare) program prepares healthcare professionals and service providers to design and manage systems that optimize behaviors and processes for positive change and sustainable value.

As the healthcare sector grows and the landscape continues to change, staff are being asked to do more. Many struggle to adapt and others rely on traditional approaches to management, which often are not sustainable. Faculty research in healthcare finance and economics means students in the MSM-Healthcare program can learn about crucial contemporary issues directly from experts in the field, while also gaining a solid background in business fundamentals. The Case Western Reserve University family also includes top-ranked schools of medicine (http://casemed.case.edu) and nursing (http://fpb.case.edu) and a highly respected dental school (http://dental.case.edu), reflecting our university-wide prioritization of advancing the healthcare field.

Furthermore, the university’s location at the heart of Cleveland’s University Circle district puts us within a few minutes of three major medical systems: Cleveland Clinic, University Hospitals and the Louis Stokes Cleveland VA Medical Center. These institutions are complemented by the MetroHealth system and the new Global Center for Health Innovation located next door to the Cleveland Convention Center downtown. Cleveland is the ideal place to prepare for an exciting career in the healthcare sector.

### Outcomes

Upon completion of the MSM-Healthcare program, students will:

- Gain an understanding of finance, accounting and business strategy
- Gain exposure to a wide range of healthcare settings including public health organizations
- Speak and understand the language of business
- Acquire a network of regional and national contacts in the healthcare sector

### Curriculum

The MSM-Healthcare is a 30-credit-hour program that is completed in six semesters with one summer semester completely dedicated to an independent project.

For additional information about this program, contact Deborah Bibb (deborah.bibb@case.edu), senior director of admissions, at 216.368.6702.

Master of Science in Management in Operations Research and Supply Chain Management (MSM-OR/SC)

The MSM-OR/SC degree is designed for individuals with quantitative training who seek to obtain a position in operations management or a management position in manufacturing, healthcare, service or consulting firms that are part of sophisticated national or global supply chains. The MSM-OR/SC curriculum provides students with the fundamentals of business as well as depth and focus in the principles and concepts of operations and supply chain management. This unique program produces highly knowledgeable professionals well prepared to make organizations more efficient and competitive.

The MSM-OR/SC degree attracts individuals with a quantitative undergraduate degree who have an interest in gaining expertise in the field of operations research and supply chain management. Typical undergraduate majors include:

- Economics
- Mathematics
- Business

Students beginning this program must have a working knowledge of undergraduate calculus, including differentiation and integration, and one semester of undergraduate linear algebra. Work experience is beneficial but not required for admission; many students pursue the MSM-OR/SC immediately following the completion of their undergraduate degree.

Outcomes

Upon completion of the MSM-OR/SC program, students will:

- Be equipped with analytical and supply chain skills to become an agent of positive change at their organization within the first few years of work
- Speak and understand the language of business
- Have a working knowledge of all functional areas of an organization and the ability to communicate effectively with colleagues in these areas
- Have a network of regional, national and international business contacts

Curriculum

The 39-credit-hour MSM-OR/SC is a three-semester, full-time program beginning in the fall semester of each year. The curriculum comprises the following three components:

Business Core (9 credit hours)

The Business Core introduces students to business fundamentals and includes a professional development course, a unique feature of the Weatherhead MSM-OR/SC not found in most competitors’ programs.

For more information, contact Kamlesh Mathur (kamlesh.mathur@case.edu), PhD, chair and professor of operations and faculty director of the MSM-OR/SC, at 216.368.3857 or Deborah Bibb (deborah.bibb@case.edu), senior director of admissions, at 216.368.6702.

**Master of Science in Positive Organization Development and Change (MPOD)**

The Master of Science in Positive Organization Development and Change (MPOD) is a unique program created and offered by the world-renowned Organizational Behavior Department at the Weatherhead School of Management. It is specifically geared toward the needs of managers and change agents from a wide variety of roles and organizations that face continual change, increasing complexity and growing interconnectedness in multicultural contexts, and that must respond in ways that will yield sustainable value.

Toward this end, the MPOD program emphasizes strength-based and positive approaches to managing change, designing sustainable institutions, formulating effective strategy, creating high engagement work cultures, leading through emotional intelligence, coaching for high performance, and deep personal and professional development. It will be of value to organizations with aspiring managers who wish to:

- Build new capabilities in strategic-level change interventions that create value for customers and communities  
- Broaden their knowledge of leading-edge theory and practice in appreciative inquiry, strength-based human resource development and positive organizational change research  
- Develop emotional intelligence competencies needed to coach and foster leadership skills and personal growth in one’s self and others  
- Form extraordinary teams and enterprises that enable human flourishing, are economically prosperous and ecologically advanced, and unite strengths with aspirations  
- Engage in lifelong experiential learning to realize, develop and model themselves as agents for positive change  

The MPOD program is grounded in the basic belief that a person can be a powerful instrument for change, and that personal and professional development go hand in hand. The learning experience will enable participants to become more effective at designing and conducting positive change interventions that have much better chances of success than traditional approaches, to have experiential opportunities to become more self-aware, to practice and experiment with new skills, and to give and receive coaching that can be life changing.

**Curriculum**

The MPOD program is conducted in five separate week-long residencies and one 7-day international tour spread over 18 months. These residencies are conveniently spaced 10-12 weeks apart—thereby making the program flexible enough to accommodate the busy schedules of leaders, managers and staff professionals. This design will enable students to attend school while continuing to work on a full-time basis. The intervening periods (between program residencies) will involve project and group work, self-study, written assignments, reading and online guidance done in collaboration with the faculty at CWRU.

One of the many rewarding aspects of the MPOD program is the 7-day international study tour. Students will travel as a cohort where they will join with other students from Katholieke University in Leuven, Belgium.

**Major Course Topics**

- Foundations of Positive Organization Development and Change  
- Organization Design for a Knowledge World  
- Leadership and Executive Assessment and Development  
- Sustainability for Strategic Advantage  
- Interpersonal Skill Building  
- Experiential Learning for Individuals, Teams, and Organizations  
- Practicum in Appreciative Inquiry and Positive OD  
- Individual Field Project  
- Foundations of Strategic Thinking  
- The Dynamics of Effective Consulting and Implementation  
- Global Citizenship and Multicultural OD: International Study Tour

For more information, please visit the website (http://weatherhead.case.edu/degrees/ms-positive-organization-development) or contact Patricia Petty (patricia.petty@case.edu), program manager, at 216.368.4642.

**Master of Science in Positive Organization Development and Change (MPOD) in India**

The Weatherhead School of Management at Case Western Reserve University and Xavier Labour Relations Institute (XLRI) (http://www.xlri.ac.in) in Jamshedpur, India, have partnered to offer the first ever Master of Science in Positive Organization Development and Change (MPOD) in India. Upon graduation from the program, students obtain both the Master of Science degree from the highly regarded Organizational Behavior Department (http://weatherhead.case.edu/departments/organizational-behavior) at Weatherhead and a diploma from XLRI.

The MPOD-India degree enables professionals to create a better world by developing human potential through strength-based methods of inquiry, design and change management. Students enrolled in this program take courses through five, week-long residencies on the XLRI campus or in select major cities in India, plus one, two-week residency on the Case Western Reserve University campus in Cleveland, Ohio.
Is this program right for you?

The program is designed for part-time students who are fully employed in responsible leadership or change agent positions and are able to travel to Case Western Reserve for the two-week residency. This program is right for those who want to learn how to:

- align organizational strengths and make weaknesses irrelevant
- understand the difference between outstanding leaders and those who are not
- achieve economic well-being by doing what is right environmentally and socially to create sustainable value
- tap the innovative and cooperative potential in the human resources you manage and lead
- become the sought-out strategic change leader and facilitator in your organization
- increase cooperative capacity in multi-stakeholder settings to bring about rapid, positive changes

Learn more about how the MPOD-India program features (https://weatherhead.case.edu/degrees/masters/ms/positive-organization-development-change/india) can prepare you for workplace change as well as personal and organizational success. For more information, please contact Patricia Petty (patricia.petty@case.edu) at 216.368.4642.

Doctoral Programs

Doctor of Management (DM) and PhD in Management: Designing Sustainable Systems

Business leadership is increasingly required to integrate multiple sources of knowledge, understand the perceptions of diverse parties and put human values into action. Executives are challenged to create social, intellectual and economic value for their organizations and for society at-large based on rigorous and sound evidence. Recognizing these challenges, Weatherhead offers two doctoral degrees in management for working professionals: the DM and the PhD in management: Designing Sustainable Systems.

The DM is based on the expectation that the practitioner-scholar will develop the ability to think intensely and critically about problems confronting an organization, a community, a nation and the world. Through conceptually modeling these problems, assessing and modifying the assumptions underlying the models, testing assumptions empirically and applying modes of thought drawn from many disciplines, students draw conclusions and propose solutions based on the results their models produce.

The PhD in management: Designing Sustainable Systems is focused on preparing interdisciplinary practitioner-scholars for successful research and academic careers. Students develop the ability to approach problems of practice rigorously from multiple disciplinary angles and to produce sound evidence and theoretical frames to address those problems.

Curricula and coursework in these programs provide a foundation for conducting rigorous research and practicing evidence-based management. Courses are interrelated theoretically and methodologically and prepare students to bring academic, theoretical and empirical perspectives to bear on problems that they face in their organizations or in public policy advocacy.

DM

The DM is a 54-credit-hour, three-year, lock-step program. DM students' research projects are evaluated by a faculty review committee over the course of the program at critical research milestones.

Research Requirements and Deliverables

The DM dissertation consists of the Qualitative Research Paper, Quantitative Research Paper and an Integrative Paper that organizes the research into a coherent thesis.

Research Proposal Paper

The first research requirement is a qualitative research proposal that frames the student's research problem and question and specifies a design for the fieldwork portion of the qualitative research project. The student develops a written research proposal that synthesizes a
substantial body of scholarly literature (theoretical and empirical) in a fashion that creates a conceptual framework and model providing insight into a significant problem of practice reflecting the lived worlds of a specified body of practitioners. The Research Proposal Paper produces a “grand tour” research question to guide the qualitative research project and includes a design for the fieldwork to be carried out in the course of the research project. Students develop individual skills of conceptualizing (including modeling), creating ethnographic/phenomenological interview protocols, conducting phenomenological interviews and interpretively analyzing qualitative interview data.

Qualitative Research Paper

The Qualitative Research Paper presents findings and explanatory concepts from the student's qualitative fieldwork project. It identifies frames and a potent “phenomenological practice gap” where current practitioner and academic knowledge guide effective practice. The research synthesizes significant scholarly literature into a coherent conceptual framework and an understandable model of relationships among theoretical constructs. Students learn to frame effective questions for practitioner-scholarship research that embodies inquiry and openness, to align the conceptual framework and research question to the chosen problem of practice and to write scholarly papers that are clear and that present a logical flow of well-supported arguments. By understanding the development of grounded theory and understanding ethnographic observation and field notes, students formally and rigorously analyze qualitative data in an interpretive fashion.

Capstone

The Capstone integrates the analytical approaches the student has learned in EDMP 643 Measuring Business Behaviors and Structures and EDMP 649 Causal Analysis of Business Problems II. The Capstone exercise is intended to allow students to demonstrate their independent competence in quantitative inquiry skills and, based on a satisfactory assessment, to progress toward the completion of the quantitative inquiry project, which is a requirement for both the DM and the PhD in management: Designing Sustainable Systems.

Quantitative Research Paper

The objective of the Quantitative Research Paper is to generate a rigorous and valid quantitative empirical study that is guided by a sound conceptual model of the student's phenomenon of interest. The study must position itself with respect to the theoretical and research literature of the topic, utilize a robust research design to collect credible data that mitigates biases, reflect systematic and rigorous quantitative analysis indicative of material covered in the quantitative inquiry courses and meet high scholarly standards to merit publication in top-rated journals and outlets.

Integrative Paper

As a final requirement for the DM dissertation, each student writes an overview statement introducing his or her Qualitative and Quantitative Research Papers, making substantive observations and conclusions about each project, and presenting a personal reflective statement about each project's significance to the author. The Research Proposal frames the dissertation overview in a preliminary way, but in light of the student's experience in conducting qualitative and quantitative studies, the synthesis is rewritten, revised and critically evaluated to become the Integrative Paper. The approved Integrative Paper, Qualitative Research Paper and Quantitative Research Paper serve as the dissertation requirement of the DM program.

PhD in management: Designing Sustainable Systems

The students in Weatherhead's PhD in management: Designing Sustainable Systems are selected from second-year DM students who wish to reorient their careers to pursue positions as academic researchers and scholars.

Research Requirements and Deliverables

Although transdisciplinary research is the main focus of the PhD in management: Designing Sustainable Systems track, candidates must be grounded in a disciplinary field. Therefore, throughout their course of study, candidates will read seminal works and acquire knowledge that leads to a grounding in their chosen discipline(s) (for example, marketing, strategy, accounting, information systems, organizational behavior, finance or economics). Students are required to take a comprehensive exam demonstrating knowledge of the field’s theories, research methods and results. Upon passing the comprehensive exam, students are advanced to candidacy for the PhD. Candidates defend their PhD thesis proposal and the final thesis during their course of study.

Doctoral candidates in the PhD in management: Designing Sustainable Systems track undertake dissertation research during their fourth year of study to extend their contributions to managerial knowledge. Informed by courses in design practices, sustainable value and complex systems thinking, candidates incorporate human values and appropriate mixed methods of analysis into their research. An original and significant endeavor, the dissertation includes a detailed review of the chosen topic, relevant research questions, methods of inquiry used and findings obtained, as well as the implications of these findings.

For more information, contact Sue Nartker (sue.nartker@case.edu), managing director of the DM program, at 216.368.1943; or Marilyn Chorman (marilyn.chorman@case.edu), associate director of the program, at 216.368.3638.

PhD in Management

A PhD in management offers students the opportunity to develop theory-driven scholarship that is grounded in practice and explores various dimensions of value creation, and to prepare for a career as a faculty member.

Candidates may specialize in one of three areas:

- Accountancy
- Designing Sustainable Systems
- Design and innovation

Accountancy

The PhD in accountancy is structured and a student study plan is developed to support high-quality research and effective teaching based upon knowledge and skill levels appropriate to a student’s goals. Doctoral students work with faculty whose research investigates matters of importance to academics, practitioners and policy makers, in order to influence practice and standard setting in both the private and public sectors.
Curriculum
The first two academic years are directed toward the study of the literature, methods and recent research appropriate to a student’s identified interests. Summer periods are available for individual reading, development and writing along project lines to be determined by the student’s chair and program committee. This two-year period is expected to provide the foundation for preparing well-developed research papers that exhibit knowledge and skill levels appropriate to an individual’s goals as he or she approaches candidacy.

The third year is devoted to writing focused individual papers leading to a dissertation proposal under the supervision of a study program committee. Based upon one of these high-quality research papers, a suitable dissertation proposal will be prepared by the end of the third year of study. This research and writing activity will not only help to determine the student’s dissertation topic, but will also be considered equivalent to field examinations. The series of papers leading up to the dissertation proposal, the proposal itself, and an oral presentation to the student’s study program committee will be taken into account as the committee determines whether to grant doctoral candidate status to the student.

The fourth year is focused upon completion of the dissertation. The student will also prepare documents necessary and helpful to the acquisition of a full-time academic appointment. Most students will also be engaged in the revision of submissions of academic work to journals in the accounting discipline. Throughout the program, the student will develop competencies related to classroom and teaching activities as well.

For more information, visit our website (http://weatherhead.case.edu/degrees/phd-management/accountancy) or contact Elaine Iannicelli (elaine.iannicelli@case.edu), department administrator, at 216.368.4141.

Designing Sustainable Systems
Please refer to the Doctor of Management (p. 909) section of the Bulletin for more information on the PhD in management: Designing Sustainable Systems.

Design and Innovation
The PhD in design and innovation brings together the disciplines of information systems, strategy and marketing to prepare scholars for path-creating research on consequential issues faced by organizations and managers.

The program encourages a cross-disciplinary approach to the generation of new knowledge on the management challenge of creating value for customers, stakeholders and society. Because traditional boundaries between the economic and the social, between the public and the private, and between management disciplines are becoming blurred, economic elements that had been separate and autonomous are now interconnected and interdependent. As a result, the global market economy requires unrelenting innovations in designing better products, services, interactions and environments.

The guiding principles for PhD studies in the Design & Innovation Department are:

• To develop scholars with the interdisciplinary theoretical grounding and methodological skills that enable path-creating research on important management problems
• To prepare scholars and educators capable of holding academic positions in top universities and research institutions
• To produce scholars with a reputation as risk-takers who are unafraid to embrace the unconventional and engage in exciting research that informs both disciplinary and interdisciplinary interests
• To train graduates that value partnership with practitioner-scholars who share their interests and engage in joint exploration of research opportunities for publication in top scholarly journals

Curriculum
The department’s PhD program is focused on disciplinary research and trains academic scholars for faculty positions in the disciplines of information systems and marketing at leading business schools.

The organizing principles for the program are:

• To provide rigorous interdisciplinary training in theory and methods through core courses
• To challenge students to develop research articles in each year of study that are discipline-focused and draw from their interdisciplinary training

The PhD program consists of coursework in three areas and a dissertation. Coursework in the following areas is required: general management research and methods, specialization research, and a minor area of study.

The general management research and methods component involves six courses offering sufficient interdisciplinary orientation:

• Research theory and methods
• Qualitative research methods
• Measurement in management research
• Multivariate data analysis
• Theory building and analysis
• Advanced data analysis

At the end of the first- and second-year of study, each student will be expected to complete and present a publishable paper that draws from one or more of their courses of study and demonstrates their progress in the program. These papers are expected to be targeted to top academic conferences and academic journals. In addition, students are required to attend the interdisciplinary research seminar series during each year of their study.

Following the completion of all required coursework, students take a comprehensive qualifying examination, generally during the second summer semester or early in the fall semester of the third year. Upon successful completion of the comprehensive qualifying examination, the student is admitted to candidacy and formally begins the dissertation phase of the program. The dissertation proposal and the dissertation itself are generally completed in one-and-a-half to two years. The advising team for each student will be led by a faculty member from the student’s disciplinary focus but is expected to have interdisciplinary representation.

Students making normal progress should expect to finish all degree requirements within four to five years. Students must remain in residence throughout the coursework portion of the program, and the faculty strongly discourages any student from relocating prior to completion of the dissertation as doing so dramatically reduces the likelihood of completing the degree.

Students will be expected to complete a teaching requirement as part of their PhD studies. This requirement includes engaging in teaching
responsible for at least two full semesters as an instructor of an assigned course and/or assistant assigned to department faculty teaching a course. Teaching responsibilities are governed by department priorities as determined by the chair.

Qualified students generally receive full tuition support for PhD courses taken at Case Western Reserve University. Outstanding students tend to receive financial aid based on research or teaching assistantships. Such assistantships require at least 20 hours of assigned work each week. The department plans to recruit four students every year.

Student Profile

Potential doctoral students are expected to have strong quantitative ability, a master's degree, a minimum of two years' work experience, a GMAT score which exceeds 650, and interest in pursuing a research topic that aligns with the research interests of the faculty in the department. Interested students are therefore encouraged to contact individual faculty in the department to explore mutual interests. Qualified students will have a demonstrable record of intellectual curiosity, academic excellence and industry experience. We value diversity and encourage students with academic work in basic and social sciences including engineering, health and law to apply, in addition to those with business backgrounds.

For more information, visit our website (https://weatherhead.case.edu/departments) or contact Tedda Nathan (tedda.nathan@case.edu), department administrator, at 216.365.5326.

PhD in Operations

The intrinsic complexity of supply chain organizations and the coordination of operational and financial decisions throughout the supply chain are at the heart of the PhD in operations research. Weatherhead's Operations Department has a rich history as a center of education and scholarship—it was here that the world's first doctorate in operations research was granted. Candidates learn a unique combination of mathematics, statistics and computer modeling to assist in decision-making for complex organizational problems.

Please note that the Operations Department is not accepting new PhD candidates for academic year 2015-2016. For more information, contact Tedda Nathan (tedda.nathan@case.edu), department administrator, at 216.368.2040.

PhD in Organizational Behavior

Weatherhead's PhD in organizational behavior was the first of its kind. Graduating our first PhD students in 1964, our department set the standard for universities worldwide. United by a passion for generating new knowledge of enduring consequence through scholarly research, inquiry, and writing as well as deeply reflective practice, doctoral students study in a department consistently ranked among the best in the world.

Recipients of our PhD in organizational behavior have taken positions in leading universities and research institutions such as the London School of Business, Columbia University, Stanford University and the Naval Post-Graduate School.

Organizational behavior is a vital and growing field of knowledge that is concerned with human and developmental processes across levels of analysis from individuals and groups through organizations, inter-organizational systems and societies. The academic roots of the field span the disciplines of individual and social psychology, sociology, anthropology, political science and social philosophy. Organizational behavior situates the knowledge and tools of those disciplines in the context of the human dimensions of organizational life.

We approach the study of organizational behavior from the perspective of human possibility, with a special concern for the dynamics and processes of development and for creating new knowledge of individual, group and organizational processes of learning, development and transformation.

Goals of the Program

Our educational goals are to prepare PhD students to:

• Obtain a doctoral-level foundation in academic areas pertinent to organizational behavior, from the micro to the macro. This interdisciplinary course of study covers key social science domains such as psychology, sociology, learning theory, organization theory, living systems theory, management science and the organizational dimensions of global sustainability and change.

• Master and triangulate rigorous qualitative, quantitative and action-research methodologies in the quest for deep and comprehensive understanding.

• Develop a high level of professional creativity and interpersonal competence, as well as a foundation of professional values and ethics enabling the pursuit of research and teaching in the field, including the facilitation and design of contexts for human development and self-reflective learning, organization development and larger-system transformative change.

Our mission is to provide students with the knowledge, skills and values needed to: (1) conduct the highest quality research and teaching in the field and sub-fields of organizational behavior, and (2) become leading scholars in careers as researchers and educators at the top levels of their specializations and in high-impact areas of society.

Our vision is clear: to be a world-class center of doctoral education—known for our bold ideas, our powerful learning community, and our commitment to value-driven knowledge for the betterment of organizations and the greater good. All of this is in clear and strong alignment with the aim of the Weatherhead School of Management at Case Western Reserve University "to develop transformational ideas and outstanding leaders for the betterment of business and society," and through this environment to have a transformational impact on all who teach, learn, discover and work here, so they are prepared and engaged to advance knowledge and serve humanity.

The philosophy of the Organizational Behavior Department (http://weatherhead.case.edu/departments/organizational-behavior) is rooted in human values. These values guide our behavior as we strive to enhance research, learning and academic excellence amidst the demands and complexities of everyday life. They also reflect the spirit of connectedness among us that gives life to the doctoral learning community as a whole. The following guiding ideas represent our aspirations and our community at our best:

• Knowledge of consequence
• Methodological rigor and variety
• A community of inquiry
• A deep value for diversity and inclusion
• Whole person development
• The life of the mind
• Academic innovation and excellence
Curriculum

Our doctoral program is structured to resonate with our department’s mission of developing world-class researchers and educators interested in doing high quality academic work of enduring consequence. Hence our program and course requirements encourage continual development of reading, writing, research methods, statistical skills and relational skills to help students effectively study and communicate their ideas. Coursework is completed in the first two years of the program, as follows:

Total Units in Sequence: **51**

The PhD in organizational behavior program is designed for full-time, year-round engagement. Although some students may take shorter or longer to complete the program, it is generally completed in four to five years.

Each semester during the first two years, students participate in the ORBH Dynamic Modules, which are a series of short courses, each meeting once a week for five weeks. These Modules are designed to introduce the knowledge bases and key research of organizational behavior and related fields as well as share the current research interests of the department’s faculty.

Students also participate each semester in the ORBH Research Seminar which is designed to create and sustain an intellectually nourishing and appreciative learning space for the entire community. The ORBH Research Seminar is required for both the first- and second-year cohort groups. It includes gatherings of the department’s learning community of doctoral students and faculty. It provides a forum for discussion and advancement of ongoing research and scholarship through presentation and preparation of Integrative Scholarship Papers, Qualifying Papers, Dissertation Proposals and Dissertation Defenses. Thus the ORBH Research Seminar is a department-wide platform for developing productive and collaborative research relationships and for increasing collective knowledge of the current state of organizational behavior and related fields.

Research Requirements and Deliverables

The coursework is delineated for the first two years of the PhD. This provides a strong theoretical foundation for conducting future research. Other program requirements include the following:

Integrative Scholarship Paper

By the end of the spring semester of the first year, each doctoral student is required to complete an Integrative Scholarship Paper (ISP). This is a critical review and integration of the literature about a topic or problem of interest. It can be thought of as a report on the current state of the scholarly conversation about the topic, encompassing historical perspectives on the evolution of the scholarly conversation to date, an examination of how the topic is approached by different disciplines or schools of thought, theoretical propositions and suggestions for future research. The ISP is reviewed by the faculty adviser and a faculty reader, and upon approval is included in the department’s working paper series. Beyond the first year, students are expected to work with their faculty adviser and others to submit their ISPs for consideration for conference presentation and journal publication during their second and subsequent years of the doctoral program.

Qualifying Paper

During the summer of their second year in the doctoral program, students complete a Qualifying Paper. Generally, this is an initial empirical investigation or meta-analysis of the topic of choice. The student is expected to form a committee, headed by a faculty adviser of the student’s own choosing and two other departmental faculty members who guide the research. Often understood as a mini-thesis or pilot study, the student is expected to produce an in-depth analysis of the research question explored through a relevant method of inquiry. Students are expected to submit their qualifying paper for consideration for conference presentation and journal publication during their third and subsequent years of the doctoral program.

Dissertation

Doctoral students undertake dissertation research after completion of their qualifying paper. Each student forms a committee, consisting of three departmental faculty members (one of whom will be the committee chair) and one faculty member from outside the department but within the university, to guide the research conducted. An original and significant endeavor, the dissertation includes a detailed review of the chosen topic, relevant research questions, research methods, findings obtained and an analysis of their implications.
Though all three deliverables (the ISP, Qualifying Paper and Dissertation) may optimally flow within a single stream of inquiry, the student is free to choose a different topic of interest for each.

For more information, contact Lila Robinson (lila.robinson@case.edu), department administrator, at 216.368.2055.

Dual-Degree Programs

**MBA/MD Dual-Degree Program**

The School of Medicine and Weatherhead collaborate to offer the MBA/MD dual-degree program. The MBA/MD provides physicians with the management knowledge and skills necessary to deal with rapid changes in the healthcare industry and economy. After completion of both degree programs, two separate diplomas are awarded. Coursework for both programs is usually completed within five years, and it must be completed within six years of the date of initial enrollment in either program.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or the School of Medicine at 216.368.3450 or casemed-admissions@case.edu.

**MBA/Juris Doctor (JD) Dual-Degree Program**

Weatherhead has a formal full-time dual-degree program with the School of Law. Students enrolled in the program who fulfill the requirements set for graduation by both schools will receive both a JD and an MBA degree. The MBA/JD dual-degree program is designed for individuals who want to specialize in the legal, contractual and governmental aspects of management. After completion of both degree programs, two separate diplomas are awarded. Coursework for both programs must be completed within six years of the date of initial enrollment in either program.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or the School of Law at 216.368.3600 or lawadmissions@case.edu.

**MBA/Master of Science in Social Administration (MSSA) Dual-Degree Program**

The MBA/MSSA dual-degree program is offered in partnership with the Jack, Joseph, and Morton Mandel School of Applied Social Sciences (MSASS) and Weatherhead. The MBA/MSSA dual-degree program is designed for candidates who wish to prepare for advanced social work practice in a variety of direct practice and community practice settings/organizations, while developing the skills to assume management responsibility within those settings. Candidates must apply separately to each program.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or Mandel School at 216.368.2280 or msassadmit@case.edu.

**MBA/Master in Public Health (MPH) Dual-Degree Program**

The MBA/MPH dual-degree program was developed by the School of Medicine, the School of Graduate Studies and Weatherhead to provide the skills and knowledge necessary for those who wish to attain the following goals:

- A career working with communities to improve the health of their members by identifying and assessing the health needs of the population, and planning and implementing programs to meet those needs
- Management and leadership ability to ensure continued economic viability, human development, and effective communication for the public health organization and community in which they practice

MBA/MPH candidates must complete separate applications, participate in the required admission tests and be admitted separately to each program. Students will continue to register throughout the program in the school where they first registered.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or the School of Medicine at 216.368.3725 or info@casemph.org.

**MBA/Master of Science in Medical Physiology (MS) Dual-Degree Program**

The MBA/MS Medical Physiology dual degree is offered by the School of Medicine and Weatherhead School of Management to provide the skills and knowledge necessary for those who wish to attain the following goals:

- Learn breakthrough business concepts from the people who invented them
- Make the most of a core curriculum taught by authors of the internationally acclaimed textbook Boron & Boulpaep's Medical Physiology
- Enhance their chances of admission to Medical or Osteopathic School, Dental School, and PhD or related programs
- Realize cross-disciplinary collaboration that prepares practitioners to adapt to the changing healthcare environment and create positive, sustainable change for their organizations

MBA/MS Medical Physiology candidates must complete separate applications, participate in the required admission tests and be admitted separately to each program. Students will continue to register throughout the program in the school where they first registered.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or the School of Medicine at Thomas.Nosek@case.edu or 216.368.3242.

**MBA/Master of Science in Biochemistry (MS) Dual-Degree Program**

The MBA/MS in Biochemistry dual degree is offered by the School of Medicine and Weatherhead School of Management to provide the skills and knowledge necessary for those who wish to attain the following goals:

- A career working with communities to improve the health of their members by identifying and assessing the health needs of the population, and planning and implementing programs to meet those needs
- Management and leadership ability to ensure continued economic viability, human development, and effective communication for the public health organization and community in which they practice

MBA/MS Biochemistry candidates must complete separate applications, participate in the required admission tests and be admitted separately to each program. Students will continue to register throughout the program in the school where they first registered.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or the School of Medicine at 216.368.3725 or info@casemph.org.
• Increase job opportunities that are at the intersection of translational science and business.

MBA/MS in Biochemistry candidates must complete separate applications and be admitted separately to each program. Once students have been admitted, they will consult with the Department of Biochemistry Department Liaison and Associate Dean for MBA Programs at the Weatherhead School of Management to determine their appropriate course of study.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or the School of Medicine at 216-368-3578 or wcm2@case.edu

Weatherhead Center

Fowler Center for Business as an Agent of World Benefit

The Fowler Center for Business as an Agent of World Benefit exists to advance the scholarship and practice of flourishing enterprise. It is allied with like-minded initiatives helping all institutions create prosperity while nourishing human and natural systems.

The flourishing enterprise is about people being inspired every day and bringing their whole selves into the enterprise; it’s about innovation arising from everywhere; and it’s about realizing remarkable relationship value with stakeholders, including customers, communities, and societies, and ultimately with a thriving biosphere.

— David Cooperrider, 2014

The Fowler Center’s primary focus is on for-profit organizations that use their core activities to create value for society and the environment in ways that create even more value for their customers and shareholders; its primary vehicle for effecting change is Positive Organizational Science and Appreciative Inquiry. We are drawing on expertise and tools such as design, sustainable value, appreciative inquiry, and systems thinking to build and maintain prosperity and flourishing.

The Fowler Center works selectively with nonprofits, cities, and regions where doing so advances flourishing. It does not place emphasis on adjacent domains such as business ethics, governance, green business or social responsibility when it is part of a loss-making venture, or charity and philanthropy. A tight strategic focus ensures the development of distinctive capabilities and a recognizable brand for a relatively small Center in a mid-sized Management School with an influence bigger than its size.

The Fowler Center’s projects, education programs and corporate products are informed by its two core concepts (https://weatherhead.case.edu/centers/fowler/about/concepts): Appreciative Inquiry and Sustainable Value.

Appreciative Inquiry (AI) emerged at the Weatherhead School in the 1980s as David Cooperrider and Ron Fry discovered the power of positive inquiry for igniting innovation and whole-system change. Their concept of AI has become a global movement with tens of thousands of practitioners on six continents, all working to:

• identify the unique strengths of individuals, businesses and systems, and
• leverage and unite those strengths to greater effect throughout whole systems.

Sustainable Value is defined by Associate Professor of Organizational Behavior, Chris Laszlo, PhD, as a dynamic state that occurs when a company creates ongoing value for its shareholders and stakeholders. By “doing good” for society and the environment, the company does even better for its customers and shareholders than it otherwise would.

The shift from shareholder value to Sustainable Value is the natural outcome of a new external environment characterized by declining natural resources, radical transparency and rising expectations. Sustainable Value is not just a better environmental strategy; it is a response to a radically different market reality in which the economic, ecological and social spheres are unified into a single integrated value creation space.

Together, the concepts of Appreciative Inquiry and Sustainable Value answer the challenge of business today: to generate wealth while strategically addressing the pressures of multiple stakeholders, increasing competition, and ever-greater resource limitations.

To learn more or to find out how you or your organization can get involved with the Fowler Center, visit our website (http://weatherhead.case.edu/centers/fowler) or contact the Fowler Center at 216.368.2160 (http://bulletin.case.edu/weatherheadschoolofmanagement/centers/tel/216.368.2160).

Policies

Registration and Academic Standards for Graduate Students

Class Attendance

Students are expected to attend all scheduled class meetings for the courses in which they are registered. Students should notify faculty when they are forced to miss a class because of extenuating circumstances. Faculty should report excessive absences to the program’s faculty director. Students who are not on the class roster for a course are not permitted to attend the course.

Course Loads

The university requires students to be registered for a minimum of 9 credit hours to maintain full-time student status. Weatherhead requires students to register for and complete courses as specified in their cohort program curriculum plan to continue in their program and maintain any scholarship granted. Failure to adhere to the program curriculum plan may result in separation from the program.

Part-time MBA cohort students register for between 3 and 7.5 credit hours per semester. Non-cohort part-time students are those who entered the part-time MBA program in the 2009 fall semester or prior, transferred in during the 2010 summer semester or prior, or transitioned from non-degree to degree-seeking status prior to the 2010 fall semester. Non-cohort students must complete 48 credit hours, consisting of 10 required courses and 6 electives. The 48 hours must be completed within six years of starting the program.

Course Registration

A student may enroll during each registration period through the last day of late registration, as set by the official university calendar (https://www.case.edu/registrar/calendar). Exceptions will be granted only
upon the recommendation of the dean of Weatherhead. A fee of $25 is charged during the late registration period.

To register, students must have a clear balance unless they are participating in the Bridge Loan Program. Students eligible for the Bridge Loan Program need to submit a company tuition reimbursement letter, Bridge Loan application and fee each semester. Students register online using the Student Information System (SIS). Students who wish to apply for federal loans should visit the FAFSA website (http://www.fafsa.ed.gov).

During any semester, a student may not register in more than one career in SIS, unless the student is in a dual-degree program.

If at any time a student fails to register in two consecutive semesters, excluding the summer session, the student must reapply for admission to Weatherhead, unless prior approval was granted by the Weatherhead registrar.

**Degrees Conferred**

Case Western Reserve University grants degrees to qualified candidates three times per year: in August, for students who complete their programs during the summer semester; in January, for students who complete their programs during the fall semester; and in May, for students who complete their programs during the spring semester.

There is only one diploma (http://case.edu/commencement) exercise each year, in May, and all candidates are invited to march at this ceremony, regardless of the month in which their degree was awarded. May degree candidates receive their diplomas the day of the ceremony. May degree candidates who do not participate in the ceremony can have diplomas mailed or held for pick up. Students may not receive diplomas prior to the date on which the degree is to be granted.

**Extra Assignments**

No student is permitted to do extra assignments beyond the work assigned to all students in a course, in order to obtain a higher grade. This policy applies to changing an I grade to a regular grade, or to changing one regular grade to another. However, faculty may replace or substitute assignments for individual students in a course, based on extenuating circumstances.

---

### Grades

</thead>
<tbody>
<tr>
<td>S</td>
<td>Satisfactory</td>
<td>0</td>
<td>No degree credit awarded</td>
<td></td>
</tr>
<tr>
<td>U</td>
<td>Unsatisfactory</td>
<td>0</td>
<td>No degree credit awarded</td>
<td></td>
</tr>
</tbody>
</table>

### Grade of Incomplete (I)

The grade I is assigned at the discretion of an instructor, provided that two criteria are met:

- There are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justify an extension of time beyond the requirements established for other students in the class. It is the student’s responsibility to notify the instructor of the circumstances which prevent completion of the course.
• The student has been passing the course and only a small segment of the course, such as a term paper, remains to be completed, for which the extenuating circumstances justify a special exception

In order to receive credit for an I, the student must complete the work by the date specified by the instructor, and no later than the end of the next regular semester (fall or spring semester).

In the absence of notification or adequate justification, the I will automatically change to F or NP (depending on the grading basis for the course) on the stated deadline.

If the student wishes to petition to extend a grade of I beyond the stated deadline, the student must obtain approval from the faculty member who assigned the I, and from the program's faculty director, before the deadline. A request must be made in writing, preferably via email, and convey (a) the extenuating circumstances justifying the extension and (b) the expected date of completion of the work. If approved, the request should be initiated by the faculty member and delivered by the student to the faculty director for approval and then to the Weatherhead registrar. Failure to complete course requirements by the extended date will result in a grade of F or NP, depending on the grading basis for the course.

Graduation Requirements

A cumulative GPA of 2.5 in all graduate courses taken for credit in the MBA, EMBA, MSM-Finance, MSM-Healthcare, MPOD, MPOD-India, MSM-OR/SC, or MAcc degree programs is required for graduation. Candidates must submit an application for graduation in SIS no later than two months before the graduation date at which their degree is expected to be awarded. The candidate is responsible for filing the application. Upon receipt of the student's application, the Weatherhead registrar will verify the student's eligibility for graduation at the anticipated date. Students are advised to contact the Weatherhead Registrar's Office (wsomregistrar@case.edu) if they have any questions regarding requirements for graduation.

Leave of Absence

If a student will not be taking classes for more than one semester, the student should request a one year leave of absence. Approval for any leave of absence from a degree program must be requested in writing by the student. This request for approval should be submitted to the faculty director of the program and the Weatherhead registrar. Unapproved interruption in the program sequence constitutes separation from the program.

Retroactive leaves of absence are not permitted. Students who fail to return upon completion of a leave of absence need to re-apply to the degree program. Students must graduate within six years from the start of their first semester at Weatherhead. A leave of absence does not extend the maximum time permitted for the completion of degree requirements. A leave of absence cannot be taken if students are on an approved extension of the time limit to complete their degree.

Registration

Students generally register for classes and make changes to their schedule using SIS. Step by step information on registering for classes is available online (http://www.case.edu/registrar). For assistance with this process, students must contact the Weatherhead registrar (wsomregistrar@case.edu) at 216.368.5900 before the last day of the drop/add period.

Repeat Policy

Master's students can take a course one time; courses are not repeatable. DM students who earned a grade of NP in a doctoral course are required to repeat the course and earn a P. Graduate students can repeat Curricular Practical Training, Independent Study/Special Problems and Topics and International Institute/study abroad electives. Full semester study abroad experiences at an international school are not repeatable.

Residency

For the EMBA program:

In-person presence at each residency is critical for success in the EMBA program. Students are expected to attend each residency and each class. If unavoidable absences arise, these should be approved in advance, and accommodation should be reached with the faculty member(s) in question to make up the content. In addition to regularly-scheduled classes, students can expect to attend frequent meetings with small groups formed at the start of the program.

For the MPOD and MPOD-India programs:

In-person presence at each residency is critical for success in the MPOD and MPOD-India programs. Students are expected to attend each residency and each class, and to participate throughout the program with classmates in small groups, team projects and practicums. If unavoidable absences arise, these should be approved in advance, and accommodation should be reached with the faculty member(s) in question to make up the content.

Retention Requirements

All students are required to follow their curriculum plan and graduate with their cohort. If at any time a student fails to register in two consecutive semesters, excluding the summer session, the student must reapply for admission to Weatherhead, unless prior approval was granted by the Weatherhead registrar.

For the MBA, EMBA, MSM-Finance, MSM-OR/SC and MSM-Healthcare degree programs:

• A cumulative GPA of 2.5 is needed to maintain good standing
• A cumulative GPA below 2.5 will result in probation
• A cumulative GPA below 2.5 in two different semesters will result in separation from the program
• An earned F received in any class will result in separation from the program
• If a student receives a grade of D in a required class, the student must pass a proficiency exam in order to continue and graduate. The student must take and pass the proficiency exam before the start of the next semester. If the student passes the proficiency exam, a grade of C will appear on the transcript. Failure to obtain a C will lead to separation from the program. If the GPA of a student on probation is low enough to remain below 2.5 regardless of a C grade earned in a proficiency exam, the student will not be allowed to take the exam and will be separated from the program

For MAcc, MPOD, MPOD-India degree programs:

• A cumulative GPA of 2.5 is needed to maintain good standing
• A cumulative GPA below 2.5 will result in probation
Transcripts

Case Western Reserve University considers grades and other information about a student’s performance at the university to be a private matter and will release such information to the student only upon written request. Transcripts will not be issued to or on behalf of a student who has not discharged all financial obligations to the university. Transcripts are issued by the University Registrar's Office. Requests can be made online (http://www.case.edu/registrar/transcripts.html) or in person or by mail using this form (http://www.case.edu/registrar/transcript).

Transcripts of work completed at other institutions will not be released to the student or other third parties.

Transfers and Waivers

No transfers, waivers or substitutions are accepted for full-time MBA, EMBA, MPOD, MPOD-India or MAcc.

For the MSM-Finance and MSM-OR/SC:

Upon approval of the faculty program director, MSM-Finance and MSM-OR/SC students may substitute up to 9 credit hours of coursework if comparable CWRU courses have been completed.

For the MSM-Healthcare:

Students may transfer up to 6 credit hours of prior course work from an AACSB-accredited university to replace elective classes only with approval from the faculty director and the Weatherhead registrar. No course in which the student received a grade lower than a “B” will be accepted. Graduate courses counted toward another degree are not eligible for transfer credit. Courses completed more than 5 years prior to the start of the MBA program are not eligible for transfer credit. If a transfer credit request is approved, upon completion of the course, it is the student’s responsibility to provide the Weatherhead Registrar’s Office with an official transfer transcript. Courses cannot be transferred without an official transfer transcript. Quarter hours convert to semester hours with a conversion of 0.67 semester hours for every 1.0 quarter hours.

For the part-time MBA:

Students who entered the program in fall 2011 and after may transfer up to 6 credit hours of prior course work from an AACSB-accredited university to replace elective classes only with approval from the faculty director and the Weatherhead registrar. No course in which the student received a grade lower than a “B” will be accepted. Graduate courses counted toward another degree are not eligible for transfer credit.

Courses completed more than 5 years prior to the start of the MBA program are not eligible for transfer credit. If a transfer credit request is approved, upon completion of the course, it is the student’s responsibility to provide the Weatherhead Registrar’s Office with an official transfer transcript. Courses cannot be transferred without an official transfer transcript. Quarter hours convert to semester hours with a conversion of 0.67 semester hours for every 1.0 quarter hours.

Legacy part-time students who entered the part-time MBA program prior to the 2011 fall semester must complete the Petition for Transfer Credit Form and submit the required accompanying documents (a current course description and the course syllabus). Core courses are not eligible for transfer credit. Transfer approval in this case is required from the Weatherhead registrar, the faculty program director, the department chair and the Dean’s Office. Legacy part-time students should contact the Weatherhead Registrar’s Office for the Petition for Transfer Credit Form.

Withdrawals

To withdraw from courses during a semester, the student may either initiate a request to withdraw in SIS or contact the Weatherhead registrar (wsomregistrar@case.edu) before the last day of classes. All withdrawals after the official drop/add periods will result in a grade of W (WD if withdrawing from all classes) on the student's transcript. A student withdrawing after the last day of classes will receive the grade of F unless, in the judgment of the program’s faculty director, there are valid reasons for recording the grade of W.

Failure to attend class, giving notice to the instructor, or nonpayment of fees will not be regarded as official notice of withdrawal. A grade of F will be assigned in each course from which the student has not officially withdrawn.

Note: A student is not entitled to any tuition adjustment for a single course dropped after the drop/add deadline. However, if a student is forced to withdraw from all coursework for the semester due to unavoidable and unforeseen circumstances, he or she may petition (in writing to the Weatherhead registrar) for a partial tuition refund. Tuition charges for withdrawals after the drop/add deadline are prorated based upon the week of withdrawal and according to the schedule (http://www.case.edu/finadmin/controller/pdf/bill_sch12-13.pdf) published in the semester registration materials.

Academic Integrity Policy

This policy comprises the standards of academic integrity in the graduate programs of the Weatherhead School of Management at Case Western Reserve University and sets forth the procedures to be followed by the dean, faculty, and staff in cases in which students are alleged to have violated the Academic Integrity Policy. This policy does not address alleged violations and disciplinary actions in the undergraduate programs. Such matters are addressed at the university level.

Academic integrity is vital to the Weatherhead School of Management’s (WSOM) graduate programs’ learner-centered approach to management education. A deep commitment to learning and honesty on the part of every student is crucial. Every student is expected to respect the learning process, to enhance it, and to strenuously avoid any activity that might corrupt it. Students are required to report observed violations of the WSOM code of academic conduct. Faculty, the dean and administration also have a crucial role in upholding academic integrity at WSOM and ensuring adherence to general principles of academic integrity and this policy.
To foster a well-informed commitment to academic integrity, the following policies govern the WSOM learning environment:

1. All forms of dishonesty including cheating, plagiarism, or knowingly furnishing false information to WSOM faculty or administrators are prohibited. This standard is to be interpreted strictly. Examples of violations of the code of academic conduct include, but are not limited to:

   • Communication or use of aids not specifically authorized by the instructor during examinations. Such instances include giving or receiving unauthorized assistance in any form (including the use of unauthorized aids, copying from another student's work, or giving, soliciting or receiving unauthorized aid)

   • Submission of work prepared for another class, for another section of the same class in the same or prior years, or by other students without the prior authorization of the course instructor

   • Submission of texts or partial texts prepared by anyone other than the student (plagiarism), including material from the internet, without proper attribution, including whether the true author is aware of or condones the act. Plagiarism can occur inadvertently due to the omission of proper credit and includes failure to properly footnote sources, to indicate quoted or paraphrased material or to credit others for their ideas, words or work

   • Misrepresentation on a resume, WSOM application materials or any other official document.

2. Computer software is private intellectual property; therefore, copying university owned or licensed software or data, or loading such software on to another computer system for personal or external non-CWRU use without prior written approval is prohibited. The modification of university-owned or -licensed software or data without prior written approval is prohibited

3. Information technology, including computers, data transmission and storage technology are essential to knowledge production and learning. Damage or disruption to the operation of computer equipment, data communications equipment or data communications lines is prohibited. The use of university-owned or -licensed computers for non-educational purposes or for purposes for which they were not intended is prohibited

To maintain and consolidate information on prior academic integrity violations and associated consequences, prior to each academic year, Council will designate one Academic Integrity Officer (AIO) and one Associate Academic Integrity Officer (AAIO) from the full-time faculty to serve a term of one year of service during the coming academic year, renewable up to five years based upon the respective individuals' willingness and ability to fulfill the respective roles. Council will carefully consider the fit between the workload demands of the AIO and AAIO and the characteristics of the individuals, including such things as the individuals' tenure, rank and previous involvement in other WSOM committees related to WSOM curriculum. To fulfill the responsibilities of the AIO, the individual will be provided with the appropriate administrative support.

The AIO is the first contact for allegations of violations of the code of academic conduct, as explained below. The AAIO is appointed for two purposes. First, the AAIO serves as a backup for the AIO in the event that conflicts of interest or other obligations prevent the AIO from fulfilling AIO duties in a given case. Second, Council selects the AAIO with the idea that the AAIO may become the succeeding AIO when the AIO's term is concluded, where upon Council will designate a replacement AAIO. The expectation is that the AIO and the AAIO will work together on academic integrity issues that arise.

If a student witnesses an activity that appears to violate the code of academic conduct, that student must take proper action to address or curtail the activity. Proper action may include confronting the individuals involved, requesting that the instructor clarify the guidelines for appropriate conduct, and reporting the activity to the instructor or the AIO. Provision will be made for an anonymous reporting channel as necessary.

In the event that a faculty member has reasonable grounds to suspect that a student has violated the WSOM Code of Academic Conduct, the faculty member must consult the AIO. The purpose of the consultation is fourfold: (1) to provide the faculty member with an awareness of precedents for the violation in question, (2) to maintain consistency across departments in the WSOM, (3) to determine whether the student has prior violations and (4) to allow the faculty member and the AIO to determine whether additional information should be gathered about the alleged incident and by whom. If the student has had prior offenses, a hearing must be conducted.

A faculty member may resolve the violation without a hearing if the following four conditions are met: (1) the incident and sanction have been reported to the AIO, (2) the student admits to the violation, (3) based on the best information available, it is the student's first violation and (4) the student accepts the sanction proposed by the faculty member. If the student does not accept the faculty member's proposed sanction, the student has one week from that refusal to request a hearing. The minimum sanction in such cases is failure in the work in question; the maximum sanction is failure in the course. In addition, any student guilty of an academic integrity violation shall not be permitted to participate in the evaluation process for either the faculty member(s) who brought the allegation or the course in which the violation occurred.

If the student does not accept the faculty member's proposed sanction, the student has one week from that refusal to request a hearing. If any one of the four conditions noted above is not met, or if the faculty member concludes that the seriousness of the offense warrants a hearing, a hearing must be convened in accordance with the procedures outlined below. In addition, students found guilty of an academic integrity violation shall not have the same rights as other students to participate in the course/instructor evaluation process. A separate policy document regarding this can be obtained from the AIO.

If a hearing is warranted then a maximum penalty can include failure in the course and expulsion.

Procedures for Conducting Academic Integrity Disciplinary Hearings

Initial Steps

1. The faculty member or other individual alleging the academic integrity violation shall prepare a written, signed statement containing a description of the acts constituting the alleged violation of the Code of Academic Conduct, including dates, times, locations and names of individuals involved. The written statement shall include all supporting evidence that is pertinent to the alleged violation.

2. The individual shall submit the statement to the AIO. The AIO will review the statement to determine whether the written statement contains sufficient information to warrant further investigation. The AIO shall also notify the university’s Office of Student Affairs of the matter. The AIO can
continue to consult the university’s Office of Student Affairs to the extent appropriate.

3. If the AIO determines that further investigation is warranted, the AIO may request that other parties prepare written statements describing their knowledge of the alleged violation of the Code of Academic Conduct.

4. The AIO shall notify the student of the allegations and that a hearing will be scheduled, which will provide the student with the opportunity to prepare a defense against the allegations and to have an adviser present at the hearing.

Hearing Process
1. After receiving all written statements and any other pertinent information, the AIO shall convene an ad hoc hearing committee comprised of the following individuals: (a) one student; and (b) two full-time regular faculty members. One non-voting administrative staff member shall also attend to take minutes of the proceeding. The members of the committee will elect one member to serve as chair with the staff member recording the minutes. The AIO shall approach student government and allow that organization to nominate the student representative. If student government does not respond, the AIO shall appoint a student representative.

2. Prior to the hearing, the ad hoc hearing committee members will be provided with the written documents concerning the alleged incident and any other pertinent information.

3. The ad hoc hearing committee will establish a hearing date and communicate the date to all parties involved. Prior to the hearing date, the student in question shall have access to all written documents and any other information the ad hoc hearing committee has reviewed. For these purposes the committee should be aware that privacy concerns or related legal issues may prevent the sharing of certain information with the student. For example, cases may arise in which the sharing for certain information may violate the Family Education Rights and Privacy Act (FERPA). In such cases, the committee will consult with the university’s legal counsel.

4. All members of the ad hoc hearing committee must be present at the hearing.

5. The student may be accompanied and assisted by an adviser. The adviser shall not be permitted to participate in the hearing except to advise the student.

6. The faculty member bringing the academic integrity matter to the hearing ordinarily must be present at the hearing. However, if the AIO determines that no material issue of fact exists, the faculty member’s presence is not required.

7. Minutes of the hearing will be recorded by the staff member referenced in item 1 of this section.

8. The student shall have the opportunity to argue his or her defense and to present supporting evidence and witnesses. The student shall have the opportunity to hear and question witnesses against him or her by directing all such inquiry through the person chairing the meeting.

9. The hearing committee shall have the authority to reasonably limit the time for testimony for each witness, including the testimony of the student in question.

10. After the hearing, the committee shall convene to discuss the information presented. The committee shall make a written recommendation at this time. The recommendation shall be made to the dean no later than one week after the hearing. The dean will make the final decision regarding the outcome of the hearing.

11. The recommendation may include discipline up to and including expulsion. The student will receive a copy of the committee’s recommendation.

Sanctions and Appeal Process
1. The dean shall have the authority to accept, reject or modify the hearing committee’s recommendation, after consultation with the AIO and, if possible, the AAIO. The student shall have the right to present in writing his or her basis for requesting acceptance, rejection or modification. The dean shall communicate his or her decision in writing to the student and the committee.

2. In no event will a student be suspended from classes or expelled prior to a final resolution of the charges, except in cases where the dean believes the student’s presence on campus presents a risk to the university community.

3. The procedures set forth herein do not preempt the jurisdiction and disciplinary processes of other university bodies that retain their own concurrent jurisdiction to investigate and enforce their own rules and impose their own disciplinary measures. In circumstances in which different disciplinary findings or measures may be imposed by different bodies, the more severe shall have precedent.

4. A student found in violation of the academic integrity policy has the right to appeal the original decision to the Provost’s Office according to the following procedures: An appeal of a decision must be submitted in writing and postmarked or hand delivered to the provost or the provost’s designee, within 10 calendar days after the date on which written notice of the decision was sent to the student. Each student shall be limited to one appeal. The decision of the appeal officer is final.

5. An appeal may be based only upon one or more of the following grounds: (a) procedural error, (b) misapplication or misinterpretation of the rule alleged to have been violated, (c) findings of facts not supported by a preponderance of evidence, (d) discovery of substantial new facts that were unavailable at the time of the hearing, or (e) that the disciplinary sanction imposed is grossly disproportionate to the violation committed.

6. The appeal officer shall dismiss the appeal if the appeal is not based upon one or more of the grounds set forth in section 5 immediately above. The appeal officer may decide the appeal based upon a review of the record. The appeal officer may request additional written information or an oral presentation from any relevant person(s) and then decide the appeal based upon the enhanced record.

7. The appeal officer may, after a review of the record, uphold the original sanction, dismiss the original sanction or impose a lesser sanction. An appeal officer may also remand the case to the original hearing body or refer the case to a new hearing officer or panel to be reheard. If possible, the new hearing officer or panel should be different from the one that originally decided the case. If a case is reheard by a hearing officer or panel, the sanction imposed could be greater or lesser than that imposed at the original hearing.

8. A student and hearing officer may agree in advance to minor deviations from procedure. Such deviations are not then subject to appeal. Other minor deviations are acceptable as long as such deviations are not found upon appeal to be unreasonably harmful to the student.
Standards of Conduct Beyond Academic Integrity

In addition to the standards set forth in the Academic Integrity Policy (p. 918), Weatherhead students are subject to the university’s Standards of Conduct (http://studentaffairs.case.edu/handbook/policy/standards.html) which specifically prohibit the following activities:

1. Interference with freedom of speech or movement, or intentional disruption or obstruction of teaching, research, administration or other functions on university property
2. Any actual or threatened physical harm or mental abuse of any person on university premises or at functions sponsored or supervised by the university
3. Failure to comply with the directions of university officials, instructional or administrative, acting in performance of their duties
4. Theft or vandalism of university property or that of a member of the university community or campus visitor
5. All forms of dishonesty, including cheating, plagiarism, knowingly furnishing false information to the university, forgery and the alteration or misuse of university documents, records or instruments of identification
6. Falsification, distortion or misinterpretation of information before a hearing body
7. Unauthorized carrying or possession on university premises of firearms or of any weapon with which injury, death or destruction may be inflicted
8. Violation of law on university premises or in connection with university functions
9. Violation of published university rules and regulations

A student accused of any of the above prohibited activities will be referred to the disciplinary conduct procedures described below.

Disciplinary Conduct Procedures

Initial Steps

1. The student, faculty member or member of staff making the allegation shall prepare a written and signed statement containing a complete description of the acts constituting the violation of the university Standards of Conduct, including dates, times, locations and names of individuals involved.
2. The written statement must be directed to the dean of Weatherhead who may choose a designee to administer the disciplinary proceedings. The dean or designee shall review the statement to determine whether the written statement contains enough information to warrant further investigation. The dean or designee shall also notify the university’s Office of Student Affairs of the matter. The dean or designee and university Office of Student Affairs will work collaboratively on this matter to the extent appropriate.
3. If the dean or designee determines that further investigation is warranted, he or she may require that other parties involved make a written statement describing their knowledge of the incident. The student in question will be notified in writing of the nature of the charges against him or her.
4. The student will be notified that a hearing will be scheduled and that he or she will have the opportunity to defend himself or herself against the allegations and to have an adviser present at the hearing.

Hearing Process

1. After receiving all written statements and any other pertinent information, the dean or designee shall convene an ad hoc hearing committee consisting of two elected student officers, two full-time faculty members and one administrative staff member. The members of the committee shall elect one member to serve as chair.
2. Prior to the hearing, the hearing committee will be provided with the written documents concerning the alleged incident and any other pertinent information.
3. A hearing date will be decided upon and communicated to all parties involved. Prior to the hearing date, the student in question shall have access to all written documents and any other information the hearing committee has reviewed, unless the committee decides that it would be inappropriate to provide certain information to the student.
4. On the hearing date, all members of the hearing committee must be present.
5. The student may be accompanied and assisted at the hearing by an adviser. The adviser shall not be permitted to participate in the hearing except to advise the student.
6. Minutes of the hearing will be recorded.
7. The student shall have the opportunity to argue his or her defense and to present supporting witnesses. The student shall have the opportunity to hear and cross-examine witnesses against him or her by directing all such inquiry through the meeting chair, unless the committee deems that it would be inappropriate to permit cross-examination for certain witnesses.
8. The hearing committee shall have the authority to limit the time for testimony for each witness, including the testimony of the student in question.
9. After the hearing, the committee shall convene to discuss the evidence presented and to make a written recommendation. The recommendation will be made to the dean or designee no later than one week after the hearing.
10. The recommendation may include discipline up to and including suspension and expulsion. The student shall receive a copy of the committee’s recommendation.

Sanctions and Appeal Process

1. The dean or designee shall have the authority to accept, reject or modify the hearing committee’s recommendation. The dean or designee shall communicate his or her decision in writing to the student and the committee. The student shall have the right to present, in writing, a request for acceptance, rejection or modification no later than one week after receiving the decision.
2. In no event will a student be suspended from classes or expelled prior to a final resolution of the charges, except in cases where the dean or designee believes that the student’s presence on campus presents a risk to the university community.
The procedures set forth herein do not preempt the jurisdiction and disciplinary processes of other university bodies, which retain their own concurrent jurisdiction to investigate and enforce their own rules and impose their own disciplinary measures. In circumstances where different disciplinary findings and/or measures may be imposed by different bodies, the more severe sanction shall take precedence.

Grievance Procedures
Staff and faculty members have an important role to play in supporting the best possible learning environment. In the event that a student feels unjustly affected by a non-disciplinary academic or administrative action, he or she may grieve the action or decision in the following manner:

1. The student should bring his or her complaint directly to the person responsible for the action in question. The student should make an effort to resolve the problem informally.

2. If efforts at informal resolution of the problem are not successful, the student shall prepare a written statement within a reasonable period of time after the action or decision that gives rise to the grievance. The statement shall contain the following:
   • Date of the grievance
   • Brief description of the alleged unjust academic or administrative action or decision
   • Names of individual(s) involved
   • Explanation of previous attempts to resolve the problem(s)
   • Action(s) that the student believes should be taken to resolve the problem

3. The written statement shall be directed to the Student Services Specialist.

4. The dean or dean's designee may request that the individual(s) named in the grievant's written statement prepare a written statement responding to the grievant.

5. Upon receiving the written statements, the dean or designee shall convene an ad hoc committee consisting of one student and two full-time faculty members.

6. The committee shall consider the written statements of the individuals involved and any other information they deem relevant. The committee may interview the individuals involved, including the grievant.

7. The committee shall make a written recommendation to the dean or designee and furnish a copy to the grievant.

8. The dean or designee may accept, reject or modify any or all of the committee's recommendations. The dean or designee shall make the final decision as to the grievance and shall communicate the decision to the grievant in writing.

All grievances will be held in strictest confidence by all involved. The grievance process cannot be used to circumvent the disciplinary process and procedures set forth elsewhere in this document.

Honors and Awards
Graduate Student Leadership Awards
All Weatherhead graduate students, faculty and staff may nominate graduating students for the student awards. Finalists are chosen from among the nominees and recipients are elected by graduating students.

The Rita Kicher Award is presented to a graduating part-time student at Weatherhead. The award recipient is recognized as an outstanding colleague in Cleveland's professional community by his or her peers and supervisors, is an active member of community nonprofit organizations, contributes to one or more professional societies or organizations, demonstrates leadership qualities and promotes Weatherhead in a positive way.

The Scott S. Cowen Student Leadership Award is presented to a Weatherhead graduate student who serves as a leader and role model for all students. The recipient promotes the Weatherhead image in a positive way, contributes to the total community and stimulates the classroom experience.

The Student Life Award is presented to a Weatherhead graduate student who actively participates in and supports Weatherhead student activities and events; encourages and supports student participation in student life activities; and creates, revitalizes or provides added value to Weatherhead student organizations, activities or programs.

The Theodore M. Alfred Distinguished Service Award is presented to a Weatherhead graduate student who serves as a leader and role model for all students. The recipient promotes the Weatherhead image in a positive way.

Awards presented independent of nominations are:

• The Dean's Academic Achievement Award to those students attaining the highest GPA in their respective degrees.

• Beta Gamma Sigma - Master's students graduating in the spring who are in the top 20 percent of their graduating class (summer, fall and spring graduates) are invited to join in the semester they complete their program. Master's students graduating in the summer and fall who are in the top 20 percent of their graduating class (summer, fall and spring graduates) are invited to join in the spring semester following completion of their program. Doctoral students graduating in the spring are invited to join in the semester they complete their program. Doctoral students graduating in the summer and fall are invited to join in the spring semester following completion of their program.

Weatherhead School of Management Courses

ACCT Courses

ACCT 101. Introduction to Financial Accounting. 3 Units.
Financial reports are the most significant means for an organization to communicate its management results to stockholders, creditors, and regulators. This course covers concepts, principles, and practices, including preparation and interpretation, of financial reports. The financial reporting system and basic internal controls for the balance sheet, income statement, and cash flow statements are discussed. A student may not receive credit for both ACCT 101 and ACCT 203.

ACCT 102. Management Accounting. 3 Units.
This course focuses on management accounting as a supporting system, helping managers to run businesses and other organizations. The course builds on knowledge of microeconomics, organizational design and behavior, production, and logistics as a foundation to explore how management accounting provides information for management planning, control and decision activities. Prereq: ACCT 101 or requisite not met permission.

ACCT 203. Survey of Accounting. 3 Units.
The course covers the principle of financial and managerial accounting for non-management students, including the framework that underlies financial and management accounting and how accounting information should be used by: (1) parties external to the firm, i.e., stockholders, creditors and government, to evaluate the financial performance of an organization; and (2) internal management to fulfill the planning, control and performance evaluation functions. Enrollment is limited to students who are neither management nor accounting majors nor enrolled in the Weatherhead School of Management. This course may be substituted for ACCT 101. A student may not receive credit for both ACCT 101 and ACCT 203. This course cannot be substituted for ACCT 102 without a waiver from the chairman. Offered as ACCT 203 and ACCT 403.

ACCT 207. Excel Applications and Modeling. 3 Units.
ACCT 207 is a three hour class where students will combine classroom, lab and project work to complete assignments leveraging Microsoft Excel 2013. Through this course, the student will gain an understanding of how to create accounting models and how to use Microsoft Excel 2013 as the technology leveraged. Prereq: ACCT 101.

ACCT 300. Corporate Reporting I. 3 Units.
ACCT 300 is the first course in the Corporate Reporting sequence. This course examines some of the more fundamental areas of accounting, such as the basic financial statements (balance sheet, income statement, statement of cash flows), the asset side of the balance sheet (e.g., receivables, inventory), accrual accounting, revenue recognition, time value of money, and profitability analysis. We will cover the first nine chapters in the text. Also, this course will detail the differences between GAAP and IFRS relative to current assets in the financial statements. Prereq: ACCT 101 or ACCT 203. Coreq: ACCT 102 and ACCT 207.

ACCT 301. Corporate Reporting II. 3 Units.
This course is the second of a 3 course sequence and covers financial accounting theory, generally accepted accounting principles and reporting practices. Areas of focus include: property plant and equipment, liability determination, long-term debt, derivatives, leases, pensions and other postretirement benefits, and investments. International (IFRS) aspects also are considered. Prereq: ACCT 300.

ACCT 302. Corporate Reporting III. 3 Units.
ACCT 302 continues the Corporate Reporting sequence as the third and final course. This course covers many of the most complex areas of accounting. These areas include issues of accounting for income taxes, shareholders equity, share based compensation, accounting changes and errors, the statement of cash flows, governmental accounting and not for profit accounting and notes prepared using U.S. GAAP accrual accounting. Deep understanding of these topics is essential for the CPA exam and for professional practice. In addition, this course covers the differences between GAAP and IFRS related to the accounting content in the course. Prereq: ACCT 300.

ACCT 304. Advanced Financial Reporting. 3 Units.
This course covers partnerships, consolidations, foreign exchange, international aspects of accounting, accounting for state and local governments and not-for-profit organizations, segment reporting and interim reporting. Prereq: ACCT 301.

ACCT 305. Income Tax: Concepts, Skills, Planning. 3 Units.
This course addresses U.S. Federal Income Taxation concepts and applications. The subject matter includes topics applicable to individuals, partnerships and corporations and various other entities required to file income tax returns. In addition the subject matter addressed includes a variety of business, legal and taxation concepts and practices related to effective tax planning. The purpose of the course is to provide the student with the appropriate knowledge and skill levels to "speak the language of U.S. tax." Prereq: Sophomore Standing.

ACCT 306. Accounting Information Systems - Basic. 3 Units.
ACCT 306 is a three hour class in which the students will combine classroom, lab and project work to complete assignments leveraging SAP's Enterprise Resource Planning System. Through this course, the student will gain an understanding of how the various AIS modules function together to support the financial reporting process within a company. Prereq: ACCT 207.

ACCT 314. Attestation and Assurance Services. 3 Units.
This course covers the role of the auditor, the audit process, the public accounting profession, audit risk and materiality, fraud, audit methods and techniques, audit planning, internal control, the effects of information technology on the audit, auditing revenue, receivables and inventories, professional ethics, legal responsibilities, emerging assurance services, and recent developments in the auditing profession. Prereq: ACCT 301.

ACCT 360. Independent Study. 1 - 18 Unit.
ACCT 401. Financial and Managerial Accountancy. 3 Units.
This course examines the underlying framework of financial and managerial accountancy, focusing on how financial information is used by: (1) parties external to the organization to evaluate financial performance, i.e., stockholders, creditors, and government agencies; and (2) internal management to plan, control, and evaluate the financial results of the organization. Prereq: Standard MBA, Cohort MBA - PT, or Cohort MBA - PT - Clev Clinic.

ACCT 401H. Accounting for Healthcare. 3 Units.
Accounting for Healthcare students. Prereq: MSM Healthcare students only.

ACCT 403. Survey of Accounting. 3 Units.
The course covers the principle of financial and managerial accounting for non-management students, including the framework that underlies financial and management accounting and how accounting information should be used by: (1) parties external to the firm, i.e., stockholders, creditors and government, to evaluate the financial performance of an organization; and (2) internal management to fulfill the planning, control and performance evaluation functions. Enrollment is limited to students who are neither management nor accounting majors nor enrolled in the Weatherhead School of Management. This course may be substituted for ACCT 101 and ACCT 203. This course cannot be substituted for ACCT 102 without a waiver from the chairman. Offered as ACCT 203 and ACCT 403.

ACCT 404. Advanced Financial Reporting. 3 Units.
ACCT 404 covers advanced financial reporting topics including financial statement consolidations, foreign currency translations and transactions, VIE’s, (variable interest entities), partnership accounting, derivatives, segment reporting, and interim financial statement reporting. As a graduate course, a master’s level project or paper will be required. Prereq: ACCT 301.

ACCT 405. Advanced Federal Taxes. 3 Units.
Corporate income taxes, estate and gift tax, fiduciary income taxes, partnerships, and hybrid forms of organization are covered. Prereq: MAcc students only and ACCT 305.

ACCT 406. Auditor’s Role in AIS Accounting. 3 Units.
ACCT 406 is a three hour class in which the students will combine classroom and project work to complete assignments leveraging SAP’s Enterprise Resource Planning System. Through this course, the student will gain an understanding of the System Development Lifecycle (SDLC) and the auditor’s role plus the auditor’s role in on-going usage of AIS. Prereq: ACCT 306.

ACCT 414. Corporate Reporting and Analysis. 3 Units.
This course provides a basis for evaluation of traditional and proposed uses of report and information for decision making in investment, credit and internal planning and control. Students are introduced to concepts and analytical techniques that can be used to critique and interpret the financial health of the organization. At a practical and theoretical level, the course integrates research in the areas of accounting, quantitative methods and finance which has proved useful in the financial analysis of organizations. Prereq: ACCT 300 or ACCT 401, MBAC 502 or MBAP 402 or requisites not met permission of instructor.

ACCT 418. Fraud, Governance and Reporting. 3 Units.
This course examines managerial fraud, primarily made possible by the manipulation of accounting. This includes treatments of the motives for fraudulent behavior but focuses primarily upon the techniques of earnings management and the processes of its detection. Governance of organizations in the post-Enron, WorldCom and Tyco environment will also be studied. Regulation and the duties of those responsible for proper governance will be among the topics in this portion of the course. Guest speakers from the forensic industry and materials from practice institutes will be employed. Prereq: ACCT 401 and BAFI 402 or equivalent.

ACCT 431. Tax Practice: Analysis, Planning and Communications. 3 Units.
This course examines auditing concepts and issues in depth. A special focus exists on audit evidence and how auditors make decisions. Some topic areas include ethics, analytical review, fraud, and the role of technology. Prereq: MAcc students only; ACCT 314 or consent.

ACCT 444. Advanced Auditing Theory and Practice. 3 Units.
This course examines auditing concepts and issues in depth. A special focus exists on audit evidence and how auditors make decisions. Some topic areas include ethics, analytical review, fraud, and the role of technology. Prereq: MAcc students only; ACCT 314 or consent.

ACCT 480. Multi-Jurisdictional Taxation. 3 Units.
Multi-jurisdictional taxation is one of the most exciting and fastest growing areas of tax practice. This course examines the tax and business issues faced by businesses seeking to expand operations, both across state and local jurisdictions within the U.S. and across international boundaries. We consider the basic state sales, use, and income tax treatment of multi-state businesses; the U.S. tax treatment of businesses investing abroad; and the U.S. taxation of inbound foreign investment. A student will achieve a practical command of the tax issues, from an accountant’s perspective, which are raised by international and multi-state U.S. transactions and how the U.S. and State tax laws resolve those issues. Prereq: ACCT 305.

ACCT 495A. Advanced Accounting Seminar (Audit). 1 Unit.
This seminar provides an opportunity to consider specialized technical financial reporting and attestation services (audit) topics of importance in the rapidly changing environment of professional accountancy. The specific topic and scope of the coverage will be defined by the course instructor and will be consistent with the Master of Accountancy Financial Reporting and Attestation Services (Audit) concentration. The development of writing and communication skills and in-depth discussion are expected attributes of seminar activity. Prereq: ACCT 314 or Requisites Not Met permission.

ACCT 495T. Advanced Accounting Seminar (Tax). 1 Unit.
This seminar provides an opportunity to consider specialized technical taxation topics of importance in the rapidly changing environment of professional accountancy. The specific topic and scope of the coverage will be defined by the course instructor and will be consistent with the Master of Accountancy U.S. Taxation (Tax) concentration. The development of writing and communication skills and in-depth discussion are expected attributes of seminar activity. Prereq: ACCT 305 or Requisites Not Met permission.

ACCT 501. Special Problems and Topics. 0 - 18 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.
ACCT 520. Advanced Accounting Theory. 3 Units.
This seminar studies contemporary issues in financial accounting theory and business reporting. Topics are considered from their historical development to contemporary circumstances. Academic and professional literatures are employed to gain a variety of perspectives on current matters. The development of communication skills, written and verbal, and use of support technology for presentations is emphasized throughout. Students are required to make several individual and team presentations, to conduct database and periodical research and to provide frequent written and oral research reports. Prereq: MAcc students only and ACCT 304. Prereq or Coreq: ACCT 404.

ACCT 540. Corporate Governance and Contemporary Accounting Policy. 3 Units.
The Sarbanes-Oxley Act (SOX), passed in the wake of a series of corporate accounting scandals including Enron and WorldCom, was designed to strengthen Corporate Governance processes for all US publicly traded companies with an aim of "protecting investors by improving the accuracy and reliability of corporate disclosures." The contemporary implications of SOX for the accounting profession are immense. Students must understand these implications to successfully navigate the world of public company financial reporting. One implication is the role SOX gave to corporate board audit committees to oversee the independent auditors charged with auditing public company financial statements. This requires a fundamental understanding of corporate boards including why they exist and what are their more general responsibilities. Another implication is the establishment of the Public Company Accounting Oversight Board (PCAOB) to regulate the accounting profession. Thus, this seminar examines broad issues surrounding Corporate Governance including governance of public companies including investment companies, with strong contemporary connections to the accounting profession, including professional ethics, independence and quality control. Prereq: MAcc students only, ACCT 304, and ACCT 314. Prereq or Coreq: ACCT 404.

ACCT 601. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

ACCT 701. Dissertation Ph.D. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

BAFI Courses

BAFI 341. Money and Banking. 3 Units.
This course emphasizes the importance of financial markets, the nature and role of the financial system, and the linkages between these--money and banking--and the economy. Emphasis is placed on both theoretical and practical constructs, on major innovations and contemporary changes, and the closely intertwined condition of financial and economic systems with monetary and fiscal policy. Offered as BAFI 341 and ECON 341. Prereq: ECON 102 and ECON 103.

BAFI 342. Public Finance. 3 Units.
Government intervention is a pervasive feature of every modern economy. The goal of this course is to develop the economic tools for understanding and evaluating a wide range of government behaviors such as taxation and redistribution policy, the public provision of goods and services, and the regulation of private markets. ECON 342 begins by considering "market failures" that justify government intervention in a market economy. To respond to such failures, governments must raise revenues through taxation. Using the tools of microeconomic theory, we will develop a framework for thinking about the positive and normative effects of alternative forms of taxation. Particular attention will be paid to the individual income tax in the U.S., allowing students to understand the efficiency, distributional and behavioral implications of recent changes in the tax code. We will then turn to the expenditure side of the public sector. The economic principles used to evaluate public expenditures will be discussed and exemplified through the analysis of significant public programs. Of particular interest will be the effect of public programs on the incentives faced by workers and families. Offered as BAFI 342 and ECON 342. Prereq: ECON 102.

BAFI 355. Corporate Finance. 3 Units.
The basic goals of this course are to familiarize students with the concepts and tools used in financial management at both the corporate and personal levels. They include the notion of present value, securities valuation, risk and return analysis, and other financial analysis techniques. The concepts and techniques are, in turn, used to evaluate and make decisions regarding the firm's investments (capital budgeting) and the cost of capital. Prereq: Minimum sophomore standing; ACCT 101 or ACCT 203.

BAFI 356. Investments. 3 Units.
This course is about investing in securities. It provides a comprehensive introduction to security analysis and portfolio management. Investing is a rational decision-making process in which the investor seeks to select a package or portfolio of securities that meets a predetermined set of objectives. Descriptive, institutional and quantitative decision-making methods are arranged in a cohesive framework of analysis of interest to the informed investor. Topics include modern portfolio theory, the relation between risk and return, efficient markets, bonds, and options, among others. Prereq: BAFI 355.

BAFI 357. Financial Modeling, Analysis and Decision Making. 3 Units.
Firms try to create value. In their day-to-day operations, they are faced with numerous challenges: Should we accept trade credit or borrow? Will an acquisition create or destroy value? Should we introduce a new product line even if it cannibalizes an existing one? In each of these situations they try to quantify the impact on the value of their firm. The goal of this course is to develop your skills in financial modeling and valuation, so you can tackle issues like the ones described above. The course is designed to be "hands-on": You will learn to apply the theory and develop spreadsheet modeling skills through homework, case studies and a group project. By the end of the course you will have a good understanding of both the theory and practice of valuation, and possess a set of cutting-edge financial modeling skills. This course is designed for students who aspire to work in a regular company, a bank or a consulting firm in (i) corporate finance (including mergers and acquisitions); (ii) strategy; or (iii) equity and analysis. Prereq: BAFI 355.
BAFI 358. Intermediate Corporate Finance. 3 Units.
This is a rigorous second course in corporate finance (following BAFI 355) designed to lay the analytic foundation for careers in business. The objective is to strengthen students’ theoretical and conceptual understanding of several important topics in finance, and to develop their problem-solving skills. Topics covered include economic cash flows and valuation, Long term financial planning and ratios analysis, Growth and external financing, Short term financial planning and Working capital management, Managerial options and valuation, Derivatives, Agency cost and asymmetric information, Capital structure and payout policy. Prereq: BAFI 355

BAFI 359. Cases in Finance. 3 Units.
This course applies the case study method applied to a variety of business situations that teaches students to think on their feet, develop presentation skills and hone business judgment. The objective of the course is to strengthen students’ conceptual understanding and problem-solving skills. It is intended to complement the course sequence in corporate finance (BAFI 355 and BAFI 358) by applying these concepts to real world problems. Topics covered include cash flow estimation and corporate valuation, financial planning and ratio analysis, financing using internal and external sources, capital budgeting and managerial options, capital structure, payout policy, financial strategy, public equity analysis (including initial public offerings), mergers and acquisitions and leveraged buyouts. The course envisages an extensive use of case studies and simulation exercises. Prereq: BAFI 355.

BAFI 360. Independent Study. 1 - 18 Unit.
This course is offered for candidates undertaking reading in a field of special interest. Permission of department chair required.

BAFI 361. Applied Financial Analytics. 3 Units.
This course is developed based on the feedback received from employers who have hired BS Management (finance) graduates in the past and will likely do so in future. The goal is to enable students to use financial econometrics to effectively analyze financial data, and hone skills in financial modeling and valuation with the objective of understanding the value created or destroyed by the activities or proposed activities of a firm. The course will draw on theoretical aspects of BAFI 355 but focus on developing financial analytic skills. SAS statistical package use and modeling skills will be developed. By the end of the course, students will appreciate what drives valuation, and be comfortable in financial data analytics using SAS. Prereq: BAFI 355 and STAT 207 or OPRE 207.

BAFI 372. International Finance. 3 Units.
This course deals with open-economy macroeconomics and international financial markets, covering open-economy national income analysis, international macroeconomic policy coordination, exchange rate determination, foreign portfolio investment, and global financial crises. Offered as BAFI 372 and ECON 372. Prereq: ECON 102 and ECON 103.

BAFI 402. Financial Management I. 3 Units.
In this course, students are introduced to the basics of corporate finance, including the objectives, tasks, and decisions made by corporate financial managers. The course covers discounted cash flows, bond and stock valuation, cost of capital, capital budgeting, asset risk and return, and short-term and long-term financial management. Coreq: ACCT 401.

BAFI 402A. Financial Management I. 2 Units.
This module reviews knowledge and refresher core skills in managerial finance, especially those related to financial statement analysis, discounted cash flow valuation, and risk and return in the capital markets. Teaching methods include lectures, discussions, cases, and extensive exercises. Prereq: Open to ACL-MBA students.

BAFI 403. Financial Management. 3 Units.
The purpose of this course is to familiarize the student with the theory and application of additional models used in financial decision-making by corporations. Issues relating to efficient markets, dividend policy, capital structure, financing decisions, option pricing, leasing, and risk management are among the topics considered. In addition, special topics may include mergers and acquisitions, pension funds, and international financial management. Prereq: ACCT 401 or MBAC 502 or MBAP 402.

BAFI 404. Financial Modeling. 3 Units.
Firms try to create value. In their day-to-day operations, they are faced with numerous challenges; should we accept trade credit or borrow? Will an acquisition create or destroy value? Should we introduce a new product line even if it cannibalizes an existing one? In each of these situations they try to quantify the impact on the value of their firm. The goal of this course is to develop your skills in financial modeling and valuation, so you can tackle issues like the ones described above. The course is designed to be “hands-on”: you will learn to apply the theory and develop spreadsheet modeling skills through homework, case studies and a group project. By the end of the course you will have a good understanding of both the theory and practice of valuation, and possess a set of cutting-edge financial modeling skills. This course is designed for students who aspire to work in a regular company, a bank or a consulting firm in (i) corporate finance (including mergers and acquisitions); (ii) strategy; or (iii) equity analysis. Prereq: BAFI 402 or MBAC 504 or MBAP 405 or GLO-MBA.

BAFI 420. Health Finance. 3 Units.
Exploration of economic, medical, financial and payment factors in the U.S. healthcare system sets the framework for the study of decisions by providers, insurers, and purchasers in this course. The mix of students from various programs and professions allows wide discussion from multiple viewpoints. Offered as BAFI 420 and HSMC 420.

BAFI 427. Green Finance. 3 Units.
Natural systems and resources are being depleted, degraded, and impaired at a rapidly increasing pace. Yet there are very few businesses that are paying adequate attention to the adverse impact of such changes on their future as well as on their survival. How do these changes affect corporate risks? What financial challenges do they create? How can policy changes help move firms in the right direction? What innovative products and strategies can companies use to deal with these challenges? How can companies assess sustainability risk? How can these strategies add sustainable value to firms? These are just a sample of the questions that we will address in this course. This course on Green Finance will provide you with a unique opportunity to understand and explore such questions, especially as they pertain to the role of senior financial managers as well as other members of the senior management team of companies across different industries. It will expose you to cutting edge practices in the area of green finance, providing you with the thought leadership that is essential for success in today’s competitive world.

BAFI 428. Financial Strategy and Value Creation. 3 Units.
The intersection between the theory of perfect markets and the reality of market imperfections provides the basis for the exploration of value creation in this course. Opportunities in both product and financial markets are explored using case studies to develop a framework for strategic financial decisions.
BAFI 429. Investment Management. 3 Units.
This course explores the characteristics of financial investments and markets and develops modern techniques of investment analysis and management. The goal is to help students develop a level of analytical skill and institutional knowledge sufficient to make sensible investment decisions. Topics include: an overview of stock, debt and derivative asset markets, practical applications of modern portfolio theory, equilibrium and arbitrage-based approaches to capital market pricing, the debate over market efficiency, the term structure of interest rates, bond portfolio management, and uses of derivative assets in investment portfolios. Prereq or Coreq: BAFI 403 or MBAC 504 or MBAP 405 or GMBA 401A.

BAFI 430. Derivatives and Risk Management. 3 Units.
This course is intended to give students an understanding of options and futures markets both in theory and practice. The emphasis is on arbitrage and hedging. The course concentrates on listed common stock and index contracts as well as commodity markets. Various theories for trading strategies are studied. Prereq or Coreq: BAFI 403 or MBAC 504 or MBAP 405 or GMBA 401A.

BAFI 431. Fixed Income Markets and Their Derivatives. 3 Units.
This class is concerned with fixed income securities, interest rate risk management, and credit risk. Fixed income securities account for about two thirds of the market value of all outstanding securities, and hence this topic is important. The course covers the basic products of fixed income markets including treasury and LIBOR products, such as interest rate swaps. Risk management and hedging strategies are covered as well as selected topics in credit risk models and mortgage-backed securities. Prereq: BAFI 430.

BAFI 432. Corporate Risk Management. 3 Units.
This is a unique strategic risk management course aimed at participants who wish to enhance their understanding of the risks faced by corporate firms, both financial and non-financial, learn techniques to identify and measure these risks, and understand how derivatives and risk management solutions can be used to manage these risks, create value, and advance the strategic goals of the firm. The course is designed in a manner such that it would be of use to executives of all corporations, financial and nonfinancial, across all functional areas. Prereq: BAFI 403 or MBAP 405 or MBAC 504 or MBAC 505.

BAFI 433. Quantitative Risk Modeling. 3 Units.
This course is designed to help students learn quantitative models for estimating risk in various financial settings for different types of financial institutions (banks, hedge funds, and others). It is a very hands-on course where students will become familiar with several state-of-the-art quantitative risk models as well as their detailed implementation procedure in the real world. The course uses several in-class Excel exercises to illustrate the models as well as their practical implementation using real financial data. Offered as BAFI 433 and MSFI 433.

BAFI 440. Financial Decisions, Contracting & Value. 3 Units.
The firm is a nexus of contracts among its various stakeholders (managers, shareholders, debt holders etc.). In this course, we will examine how value is created, and how real world conflicts between the various stakeholders of a firm lead to deviations from "perfect world" solutions. For instance, you may have learned in basic corporate finance courses that it is optimal to invest in positive NPV projects. Real-world conflicts can make it sub-optimal for shareholders do so. We will examine such issues and ways to mitigate them. In particular, we will examine Valuation, Asymmetric Information, Agency Cost, Incentive Contracts and Performance Metrics, and, time permitting, also discuss Regulation, Reputation and the role of certifiers and the economic crises. The takeaway learnings from this course are: (a) Understanding how Value can be created or destroyed, (b) Measuring Value, (c) Understanding the links between capital structure and: asymmetric information, market reactions and signaling, agency and management incentives, taxes, shareholder-bondholder conflicts etc., (d) Understanding the links between payout policy and: informational content, market reaction, stock returns and signaling, clientele effects etc., and (e) Understanding the need for and the design of incentive mechanisms. Case studies will be used to reinforce learning. We will emphasize on links to real-world events.

BAFI 444. Entrepreneurial Finance. 3 Units.
The objective of this course is to introduce students to the issues of financial management and capital formation in new ventures. The course will address issues of estimation of cash requirements, development of pro forma financial plans, firm valuation and the process and tools used in raising debt and equity financing. Bootstrapping, angel investing, venture capital, strategic alliances and initial public offerings will be covered. The emphasis is on the entrepreneur and how he/she can assess financial needs and develop a sensible plan for acquiring financial resources in a manner that is consistent with their financial needs and other strategic goals. Offered as BAFI 444 and MSFI 444. Prereq: MBAC 504 or MBAP 405 or BAFI 402 or MSFI 403 or GMBA 401A.

BAFI 450. Mergers and Acquisitions. 3 Units.
This course examines the economic rationale and motivation for the different merger and acquisition and recapitalization activities undertaken by firms and individuals in the U.S. market. Emphasis is on the comparable publicly traded proxy company, comparable "change of control" transaction, and discounted cash flow methods of valuing a firm. The class will also review the different types of debt and equity capital employed to fund mergers and acquisitions and recapitalizations, how senior lenders and equity investors structure their loans and/or investments, and how investors realize the gains through different exit strategies. The legal and tax ramifications of various forms of M&A activity are also discussed. The course gives the student an excellent understanding of the role that senior commercial banks, insurance companies, pension funds, LBO funds, investment banking firms, and venture/growth capital investors play in mergers and acquisitions and will strengthen the students' ability to value a business enterprise. Prereq: BAFI 403 or MBAC 504 or MBAP 405 or GMBA 401A.
BAFI 460. Investment Banking. 3 Units.
This course covers the role of the investment banker as a strategic financial advisor, primarily to corporate clients. The course is divided into three sections, roughly equal in length: (1) industry structure, key players, services and strategies, (2) the capital acquisition process, with a particular focus on initial public equity offerings, and (3) mergers and acquisitions, with a focus on advising financial and strategic buyers and financing these transactions. Students will gain extensive experience in applying financial models that support valuations in various markets. Prereq: BAFI 403.

BAFI 480. Global Banking & Capital Markets. 3 Units.
This course will expose students to Banking and Capital Market Structure, Practices, and Regulations in North America, Europe, as well as Asia. Students will learn about structure of the financial services industry in different parts of the world, the history and evolution of the regulatory frameworks in this industry, and its consequent impact on financial and economic development as well as risk. Several case studies are used to expose students to different issues and questions that arise in the day-to-day jobs of financial managers in this industry. Offered as BAFI 480 and MSFI 480. Prereq: MBAC 505 or MBA 405 or BAFI 403 or MSFI 403 or MSFI 401A.

BAFI 501. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to students undertaking reading in a field of special interest.

BIOS Courses

BIOS 447. Regulatory Affairs for the Biosciences. 1.5 Unit.
This mini-course introduces students to the Food and Drug Administration (FDA) and the laws and regulations it enforces. A scientific regulatory agency with far reaching enforcement authority, FDA is the most powerful consumer protection agency in the world. This course will familiarize students with FDA’s mission, philosophy and organizational structure, as well as policy and procedure it uses to ensure the safety and effectiveness of the food, drugs, biologics, cosmetics, medical devices and radiation-emitting products it regulates. Recommended preparation: Enrollment in the MEM Biomedical Entrepreneurship Track. Offered as BIOS 447, HSMC 447, and IIME 447.

BIOS 448. Engineering Statistics for Biosciences. 3 Units.
This course provides an introduction to biostatistics, emphasizing experimental design, analysis of data, and special emphasis on statistical and financial aspects of randomized clinical trials for biomedical applications. There will be a final project involving development of a clinical trial protocol including the experimental design, recruitment and retention strategy, analysis plan and budget. Offered as BIOS 448, HSMC 448, and IIME 445.

BLAW Courses

BLAW 331. Legal Environment of Management. 3 Units.
This course is designed as a survey course in the area of basic business law. It covers the fundamental legal principles and laws that underlie any business decision. The major topics include: contracts, the Uniform Commercial Code (sales), torts, real and intellectual property, business organizations, Securities Regulation and Agency.

BLAW 411. Business and Law Colloquium. 3 Units.
This course will bring together law students, business students, mid-level attorneys and senior leaders in the legal field for a one-semester weekly colloquium. Offered as LAWS 5432 and BLAW 411. Even though women have represented approximately half of law-school graduates for a number of years, women represent only 16% of law firm equity partners and even fewer corporate General Counsels. This course aims to offer an introduction to the business skills that both women and men will need to rise to the highest levels of law practice and organizational leadership. Each week will focus on a different aspect of law and business. The curriculum will include sessions focused in financial management, business development, communication skills, and intercultural business and law practices.

BLAW 417. Legal Environment for Managers - M.B.A.. 3 Units.
This course will provide an overview of the legal environment in which business transactions take place. Through coverage of a number of topical areas, the student will be given a broad understanding of how the law impacts upon the daily decisions of managers. More specifically, the student will be better able to identify and understand how the legal issues facilitate or hinder the conduct of business. Topics covered will include contracts, property, products’ liability, employment law, and corporate law. Special emphasis is placed on those regulatory areas of greatest interest to modern business.

ECON Courses

ECON 102. Principles of Microeconomics. 3 Units.
This course is an introduction to microeconomic theory, providing a foundation for future study in economics. In particular, it addresses how individuals and businesses make choices concerning the use of scarce resources, how prices and incomes are determined in competitive markets, and how market power affects the prices and quantities of goods available to society. We will also examine the impact of government intervention in the economy.

ECON 103. Principles of Macroeconomics. 3 Units.
While Microeconomics looks at individual consumers and firms, Macroeconomics looks at the economy as a whole. The focus of this class will be on the business cycle. Unemployment, inflation and national production all change with the business cycle. We will look at how these are measured, their past behavior and at theoretical models that attempt to explain this behavior. We will also look at the role of the Federal Government and the Federal Reserve Bank of the United States in managing the business cycle.

ECON 120. Life After Graduation. 1 Unit.
This is a one-credit seminar intended for freshmen, sophomores and juniors. The purpose of the class is to help students understand what career choices they will have with an economics major. During this course, students will assess their strengths and weaknesses, learn networking tools, and explore the options available to them. The class will meet once a week for an hour. Graduating seniors need to obtain permission to enroll. Students may not earn credit for ECON 120 if they have completed MGMT 250.

ECON 255. Economic History of the United States. 3 Units.
The growth of the American economy from the colonial period to the present. Competing explanations of economic growth; significant attention to the political and legal environment in which the U.S. economy developed; “lessons” of past experience for contemporary policy; some attention to inequality and the changing distribution of wealth and income. Offered as ECON 255 and HSTY 255.
ECON 307. Intermediate Macro Theory. 3 Units.
Macroeconomics studies aggregate indicators of the performance of an economy, most commonly measured in terms of GDP, unemployment rate and inflation rate. An important goal of macroeconomic researchers is to develop a model of an economy that is simple, yet powerful enough to explain the historical trends of these aggregate economic indicators. Needless to say, coming up with a good model has remained a very difficult task. So far, there is no single model that is good enough to coherently explain even the most prominent historical trends of aggregate economic indicators. But several models have been built, each offering insight into a certain aspect of the economy. Throughout the course model building is motivated by real world cases from the American economy. Prereq: ECON 102 and ECON 103.

ECON 308. Intermediate Micro Theory. 3 Units.
This course builds on ECON 102 to provide a deeper understanding of microeconomic theory, which forms a basis for much of economic analysis. The main focus of the class will be theoretical, in order to give you a solid foundation for future study in virtually any other field of economics. This includes the theory of how consumers decide what to consume and how firms decide when to stay in business, and how much to produce at what price. Note: a student cannot receive degree credit for both ECON 308 and ECON 309. Prereq: ECON 102 and (MATH 121 or MATH 125).

ECON 309. Intermediate Micro Theory: Calculus-Based. 3 Units.
This course builds on Economics 102 and provides a more in-depth analysis of the theory of the consumer, the theory of the firm, market equilibrium, market failure and government intervention in the market. We will use calculus to derive supply, demand and market equilibrium from first principles. You should come away from this course with a greater understanding of how consumers and firms make their decisions and how they interact in the market place. Note: a student cannot receive degree credit for both ECON 308 and ECON 309. Prereq: ECON 102 and (MATH 122 or MATH 126).

ECON 310. Marketing Analytics. 3 Units.
To appreciate, design, and implement data-based marketing studies for extracting valid and useful insights for managerial action that yield attractive ROI, five essential processes are emphasized: (a) making observations about customers, competitors, and markets, (b) recognizing, formulating, and refining meaningful problems as opportunities for managerial action, (c) developing and specifying testable models of marketing phenomenon, (d) designing and implementing research designs for valid data, and (e) rigorous analysis for uncovering and testing patterns and mechanisms from marketing data. Offered as MKMR 310 and ECON 310. Prereq: MKMR 201 and OPRE 207.

ECON 326. Econometrics. 4 Units.
Econometrics is the application of statistics to empirical economic analysis. One way of testing the validity of economic theories is to gather data and apply statistical tests to see if the data support the theory. These data are usually gathered by observing actual economies, firms and consumers, rather than by performing experiments in a laboratory. Because economic analysts lack the precision and control of the laboratory, they must compensate by adjusting their statistical procedures. In this class, we will concentrate on regression analysis, which is the basic tool of the economic researcher. We will study the assumptions commonly made in the application of this technique, the consequences of violating these assumptions, and the corrections that can be made. Students will have a chance to formulate and test their own hypotheses using econometric software available for personal computers. Recommended preparation: One semester of statistics or consent of instructor. Prereq: ECON 102 and ECON 103 and (OPRE 207 or STAT 243 or STAT 312).

ECON 327. Advanced Econometrics. 3 Units.
This class builds on the foundations of applied regression analysis developed in ECON 326. The goal of the class is to equip students with the tools to conduct a causal analysis of a hypothesis in a variety of settings. Topics will include causality, panel and time series data, instrumental variables and quasi-experiments, semi- and non-parametric methods, and treatment evaluation. Offered as ECON 327 and ECON 427. Prereq: ECON 326.

ECON 328. Designing Experiments for Social Science, Policy, and Management. 3 Units.
Both economists and firms are increasingly relying on experiments to study the economic behavior of individuals and the effectiveness of policies in a wide range of settings. This course gives students the tools they need to design and critique experiments that answer a research or business question. A small part of the class will be devoted to important theoretical concepts in experimental design, such as treatments, factorial designs, randomization, internal and external validity, biases, and inference problems. The bulk will be devoted to learning about how these concepts come together by discussing exciting new experimental work on topics such as discrimination and identity, cooperation versus self-interest, and dishonesty and corruption. Prereq: ECON 102 and (OPRE 207, STAT 201, STAT 243, STAT 312, ANTH 319, or PSCL 282).

ECON 329. Game Theory: The Economics of Thinking Strategically. 3 Units.
The term “game theory” refers to the set of tools economists use to think about strategic interactions among small groups of individuals and firms. The primary purpose of this course is to introduce students to the basic concepts of game theory and its applications. The class will stress the use of game theory as a tool for building models of important economic phenomena. The class will also include a number of experiments designed to illustrate the game theoretic results, and to highlight how reality may depart from the theory. The course will stress the value of thinking strategically and provide students with a framework for thinking strategically in their everyday lives. Rather than approaching each strategic situation they encounter as a unique problem, students will be taught to recognize patterns in the situations they face and to generalize from specific experiences. A paper on an application of game theory will be required for graduate students. Offered as ECON 329 and ECON 429. Prereq: ECON 102.
ECON 330. Economic Behavior and Psychology. 3 Units.
This course will cover the relatively new field of Behavioral Economics, also sometimes called "Psychology and Economics." Behavioral economics involves incorporating insights into economics from other disciplines that enrich the understanding of how people make economic decisions. Most of the crossovers come from the field of psychology, but there is also a growing interest in ideas from sociology and neuroscience. We will cover fundamental concepts related to decision-making, such as how people respond to risk, how people make decisions over time, and the ways in which people really aren't as selfish as economists sometimes make it seem. We will also discuss empirical work that shows how these concepts affect how economists think about real-world issues. Examples include examining how to set the default options for 401k programs, understanding why people pay for costly gym memberships they do not use, and looking at whether sellers on Ebay use the best possible ending times for their auctions. Prereq: ECON 102.

ECON 332. Economic Analysis of Labor Markets. 3 Units.
This course is about the economics of work and pay. We will take a comprehensive look at labor markets in the U.S. and other advanced countries and examine related social policy issues. This will include the effect of unions on wages, the underpinnings of the income distribution of the U.S., issues of poverty and welfare, discrimination and wage differential by gender and race, the relationship between work and family, education as a determinant of wages, and the way firms use wage and employment practices to motivate their employees to work productively. What makes labor economics special is that the commodity we examine is human labor, something that is central to the organization of our lives and the functioning of the economy. Labor economics thus applies the standard neoclassical model of demand, supply, and equilibrium to many areas that also have a profound human dimension. Prereq: ECON 102.

ECON 333. The Economics of Organizations and Employment Relationships. 3 Units.
Organizational Economics is the study of effective organizational design and management. It applies the powerful tools of modern economics to such questions as: what are the practices and structures that make for successful firms? Why are successful firms able to excel at some things (think Microsoft and word processors and spreadsheets) but not at other things (think Microsoft and web-based search)? Fundamentally organizations are human enterprises and their performance is driven by the people they employ. For this reason a good deal of organizational economics is concerned with how firms structure relationships with their employees. One of the important benefits students gain from studying organizational economics is a rigorous and logical framework for thinking about their jobs and careers. By applying this framework to many different real world settings, students become adept at translating general insights to their specific concerns. Organizational economics is built upon a hybrid approach to human behavior that draws from economics and social psychology. From economics, we take the idea that individuals can skillfully use the resources and information at their disposal to achieve their goals. From social psychology we take the idea that individual pursuit of their interests is complicated by the emotions, impulses, and cognitive biases built into human brains. The economic emphasis on goals implies that successful organizations must structure incentives and design jobs in ways that are consistent with the interests of employees. The psychological approach implies that successful organizations must also adopt motivational strategies that appeal to both the rational and non-rational drivers of human behavior. Prereq: ECON 102.

ECON 338. Law and Economics. 3 Units.
This course examines legal institutions and rules from an economic perspective. Students will learn when and how legal rules can be efficient. Topics will include property law (including intellectual property), tort (accidental) law, contracts, and crime. Offered as ECON 338 and ECON 438. Prereq: ECON 102.

ECON 341. Money and Banking. 3 Units.
This course emphasizes the importance of financial markets, the nature and role of the financial system, and the linkages between these--money and banking--and the economy. Emphasis is placed on both theoretical and practical constructs, on major innovations and contemporary changes, and the closely intertwined condition of financial and economic systems with monetary and fiscal policy. Offered as BAFI 341 and ECON 341.

ECON 342. Public Finance. 3 Units.
Government intervention is a pervasive feature of every modern economy. The goal of this course is to develop the economic tools for understanding and evaluating a wide range of government behaviors such as taxation and redistribution policy, the public provision of goods and services, and the regulation of private markets. ECON 342 begins by considering "market failures" that justify government intervention in a market economy. To respond to such failures, governments must raise revenues through taxation. Using the tools of microeconomic theory, we will develop a framework for thinking about the positive and normative effects of alternative forms of taxation. Particular attention will be paid to the individual income tax in the U.S., allowing students to understand the efficiency, distributional and behavioral implications of recent changes in the tax code. We will then turn to the expenditure side of the public sector. The economic principles used to evaluate public expenditures will be discussed and exemplified through the analysis of significant public programs. Of particular interest will be the effect of public programs on the incentives faced by workers and families. Offered as BAFI 342 and ECON 342. Prereq: ECON 102.

ECON 346. Economic Perspectives. 3 Units.
This course examines important contemporary and historical issues from an economic perspective. It enables students to think about the world "like an economist." Possible topics of current interest include the transformation of Eastern Europe, ethnic and racial strife, environmental policy and sustainable development, and professional sports.

ECON 350. World Economic History: From Poverty to Prosperity. 3 Units.
The average person living in the industrialized world today has 10-20 times the annual income of his or her forbearers in 1800 and a much longer lifespan. What explains the massive increases in living standards for residents of the industrialized world? The average person living in Africa today has roughly the same if not less annual income than in 1800. Why haven't all the world's people seen a similar increase in living standards since 1800? These questions are the central themes of this course on the evolution of the world economy over the past millennium. Highlights of the class will include the pre-1800 Malthusian economy, the industrial revolution and its spread, 19th and 20th century globalization booms, and the development successes and failures of the 20th century. Prereq: ECON 102.
ECON 364. Economic Analysis of Business Strategies. 3 Units.
This course examines how companies compete against each other and interact with customers in an effort to increase profits. Topics include: pricing strategies, product differentiation, advertising, R&D strategies, bundling and tie-ins, entry barriers, mergers and acquisitions, collusion and cartels, the dynamics of network industries (e.g. information technology), and technology adoption and diffusion. The course will take two complementary perspectives. First, we will consider the point of view of companies, and ask how different business strategies can affect competitive success. Second, we will consider the perspective of consumers and policymakers: we will ask whether different firm strategies enhance or reduce social welfare, and will explore different policy options to increase welfare (e.g. antitrust policies, patent systems). The first part of the course will utilize a range of basic economic tools. In the second part of the course, we will apply what was learned in the first part to real examples of firms and industries, including both business and legal cases. Prereq: ECON 102.

ECON 366. Environmental Economics. 3 Units.
Economic models and reasoning provide a valuable lens through which to view many of the most intractable and perplexing environmental problems. The objective of this class is to apply the tools of a typical introductory or intermediate microeconomics course to topics involving the natural environment. That is, we will view environmental topics from the perspective of an economist. Topics that will be covered in this class include: Market failure in the case of externalities and public goods provision, Management of renewable resources, Cost-effective pollution control, and Energy use and global climate change. Perhaps the most exciting part of this course is that we will take tools from the classroom and apply them to ongoing environmental questions. lectures will include guest presentations from professionals who are actively working on environmental challenges. Offered as ECON 368 and ECON 468. Prereq: ECON 102.

ECON 369. Economics of Technological Innovation and Entrepreneurship. 3 Units.
This course is designed to help students identify, evaluate, and obtain control over technological opportunities so they may successfully understand the challenges of starting new companies. The course focuses on four themes: 1) the source, discovery and evaluation of technological opportunities; 2) the process of organizing a new firm to produce new technology that satisfies the needs of customers; 3) the acquisition of financial and human resources necessary to exploit technological opportunities; and 4) the development of mechanism to appreciate the returns from exploitation of technological opportunities. Prereq: ECON 102.

ECON 372. International Finance. 3 Units.
This course deals with open-economy macroeconomics and international financial markets, covering open-economy national income analysis, international macroeconomic policy coordination, exchange rate determination, foreign portfolio investment, and global financial crises. Offered as BAFI 372 and ECON 372. Prereq: ECON 102 and ECON 103.

ECON 373. International Trade. 3 Units.
This course deals with international trade theories and policies, covering gains from and patterns of trade, immigration, foreign direct investment, protectionism, multilateral trade liberalization, regionalism and the costs and benefits of globalization within as well as among nations. Prereq: ECON 102 and ECON 103.

ECON 374. Financial Regulation. 3 Units.
This course will provide students with an understanding of the economic underpinnings of financial regulation as it exists in the United States today. The course will highlight salient aspects of financial markets, such as asymmetric information and the chains of exposures linking financial market participants, that make financial regulation both necessary and yet problematic. Emphasis will be put on the difference between regulations on individual financial firms as compared with regulating for systemic financial stability. The course will be designed to: (1) provide enhanced understanding of financial markets to undergraduate students who have already taken ECON/BAFI 341 (Money and Banking); (2) provide institutional insight to master's level finance students; (3) illustrate the application of welfare analysis to financial regulation, and (4) teach all students to think critically about regulatory arbitrage and the dynamic evolution of regulated markets. Prereq: ECON 102, ECON 103 and (ECON 341 or BAFI 341).

ECON 375. Economics of Developing Countries. 3 Units.
This course focuses on international aspects of economic development. The term “developing country” is often defined as a country that exhibits low per capita income, high poverty level, low level of industrialization, or low life expectancy. In terms of size, the developing countries make up at least three-fourth of the world population. Why do we study those countries’ economies separately from the industrialized economies? In fact, low economic growth, high unemployment, or high poverty rates also exist in many developed countries. The differences lie not in the types of problems but in the causes of these problems. In addition, differences in the kind of institutions that prevail in developing countries also lead to different policy prescriptions. Among developing countries, differences in historical experience, cultural practices, political institutions and economic conditions are also enormous. Illustrations and explanations of those differences are provided from a wide range of developing countries. Prereq: ECON 102.

ECON 376. Inside the Financial Crisis. 3 Units.
This is a case study in the events surrounding the 2007 global financial crisis. The course will build from fundamental economic concepts into a comprehensive analysis of the elements which led to the collapse and the contemporary policy debates about the recovery. The background for debate will come from an analysis of: Housing and housing finance, bank runs and Bear Sterns, mortgage backed securities and toxic asset purchases. The course will then examine major components of the Dodd-Frank Act and enable students to assess whether the act will address the causes of the 2007 crisis and more importantly establish the conditions to prevent a future crisis. Prereq: ECON 102 and ECON 103.

ECON 378. Health Care Economics. 3 Units.
The health care industry is the fastest growing sector of the U.S. economy, with expenditures on health care now accounting for over 14% of total GDP. Because of its complexity and sheer size, the health care industry affects virtually every facet of the economy including labor productivity, income distribution and international competitiveness. The goal of ECON 378 is to apply the tools of economic analysis to develop students’ understanding of health care markets and related public policy issues. The course begins with an overview of the health care system in the U.S. with attention to disturbing statistics that have inspired calls for reform. The remainder of the course is approximately divided between analysis of the consumer side of the health care market and analysis of the provider side. Throughout the course, proposals for reforming the health care system will be described and discussed. Prereq: ECON 102.
ECON 386. Urban Economics. 3 Units.
Microeconomic theory as taught in principles (and even intermediate) does not usually take into account the fact that goods, people, and information must travel in order to interact. Rather, markets are implicitly modeled as if everyone and everything is at a single point in space. In the first part of the course, we will examine the implications of spatial location for economic analysis. In the second part of the course, we will use microeconomic tools to understand urban problems. Topics that we will cover include urban growth, suburbanization, land use, poverty, housing, local government, transportation, education, and crime. Prereq: ECON 102.

ECON 391. Advanced Topics and Writing in Economics. 3 Units.
This course is characterized by intense yet open-ended intellectual inquiry, guided by reading from primary and secondary sources, and will include extensive practice in written and oral communication. The focus will be on contemporary economic issues and scholarship, and assumes a high level of ability in undergraduate economics training. Specifically, this course provides an avenue for an intellectual discourse on some of the most challenging present day economic issues, and we will rigorously think and write about how economic concepts can be applied to virtually any topic, issue and event in the social world. Students will be challenged throughout the course to think and write like an economist and see the world through the economist's lens. Counts as SAGES Departmental Seminar. Prereq: ECON 308 or ECON 309 and ECON 326 and junior or senior standing.

ECON 395. The Economy in the American Century. 3 Units.
This class provides an approved SAGES capstone experience for economics majors. It uses American economic history as an arena for a culminating application of the diverse knowledge and skills students have acquired during their undergraduate careers. The twentieth century American economy was shaped by a series of transformations that make our lives profoundly different from those lived by Americans in 1900. Attempting to understand these transformations has shaped the discipline of economics. Events and processes such as mass migration, the Great Depression, the growth of women's participation in the workforce, and suburbanization generated questions that economists developed theories and bodies of empirical evidence to answer. Students will synthesize knowledge accumulated in their prior undergraduate study to tackle big questions posed by the history of the American economy during the 20th century. These questions cover the spectrum of economic life and scholarship, from finance and technology to human capital and gender. Students form teams to tackle an important question developed in consultation with the instructor. Each team will be responsible for educating the class on their research findings through researching and delivering a class-length presentation and preparing readings and exam questions. Students will produce an individual final paper related to their team's topic that expresses their own scholarly perspective and interest. Counts as SAGES Senior Capstone. Prereq: Junior or Senior standing.

ECON 397. Honors Research I. 3 Units.
All students admitted to the Honors Program will undertake an independent research project (Senior Thesis) under the guidance of a faculty member (Thesis Advisor). ECON 397 is used to define the topic, review relevant literature, formulate hypotheses, and collect appropriate data toward completing their research project. Students will have the responsibility of providing regular progress reports to their thesis advisor highlighting the work accomplished to date, the immediate challenges confronting them, and a plan to complete the project in the time remaining. Prereq: ECON 102, ECON 103, ECON 326 and ECON 308 or ECON 309; Junior standing and minimum GPA of 3.3 in ECON major and 3.0 overall.

ECON 398. Honors Research II. 3 Units.
This is the second course in a two-course sequence to complete the Honors Research Program in Economics. Counts as SAGES Senior Capstone. Prereq: A grade of B or higher in ECON 397.

ECON 399. Individual Readings and Research. 1 - 6 Unit.
Intensive examination of a topic selected by the students. Students must receive permission from the program administrator before the start of the term, and permissions will only be granted in cases where the students have a clear learning plan and objectives in using the independent readings/research option that cannot be met through available course offerings.

ECON 403. Economics for Management. 3 Units.
This course surveys of the basic principles of micro and macroeconomics. Topics covered in microeconomics include supply and demand, the theory of production and costs, market structures and factor markets. Macroeconomics topics are the national incomes accounts, the determination of national income, employment and inflation, fiscal and monetary policies and international trade.

ECON 403A. Economics. 1 Unit.
This course serves as a review of economic principles and an introduction to the use of economics in the management setting. Basic economic concepts will be demonstrated by analyzing economic issues and policies relating to the environment in which organizations function. Economic analysis will be demonstrated with reference to particular decisions confronted by firms, including game theory. Prereq: Open to ACL-MBA students.

ECON 421. Health Economics and Strategy. 3 Units.
This course has evolved from a theory-oriented emphasis to a course that utilizes economic principles to explore such issues as health care pricing, anti-trust enforcement and hospital mergers, choices in adoption of managed care contracts by physician groups, and the like. Instruction style and in-class group project focus on making strategic decisions. The course is directed for a general audience, not just for students and concentration in health systems management. Offered as ECON 421, HSMC 421, and MPH 421. Prereq: ECON 403 or MBAC 512 or MBAP 406 or GMBA 401A or MSM in Healthcare program.

ECON 427. Advanced Econometrics. 3 Units.
This class builds on the foundations of applied regression analysis developed in ECON 326. The goal of the class is to equip students with the tools to conduct a causal analysis of a hypothesis in a variety of settings. Topics will include causality, panel and time series data, instrumental variables and quasi-experiments, semi- and non-parametric methods, and treatment evaluation. Offered as ECON 327 and ECON 427.
ECON 429. Game Theory: The Economics of Thinking Strategically. 3 Units.
The term “game theory” refers to the set of tools economists use to think about strategic interactions among small groups of individuals and firms. The primary purpose of this course is to introduce students to the basic concepts of game theory and its applications. The class will stress the use of game theory as a tool for building models of important economic phenomena. The class will also include a number of experiments designed to illustrate the game theoretic results, and to highlight how reality may depart from the theory. The course will stress the value of thinking strategically and provide students with a framework for thinking strategically in their everyday lives. Rather than approaching each strategic situation they encounter as a unique problem, students will be taught to recognize patterns in the situations they face and to generalize from specific experiences. A paper on an application of game theory will be required for graduate students. Offered as ECON 329 and ECON 429.

ECON 431. Economics of Negotiation and Conflict Resolution. 3 Units.
Students frequently enroll in a negotiation class with one thought in mind—negotiating a better job offer from an employer. They soon learn, however, that negotiation skills can do far more than improve a pay check. Negotiations occur everywhere: in marriages, in divorces, in small work teams, in large organizations, in getting a job, in losing a job, in deal making, in decision making, in board rooms, and in court rooms. The remarkable thing about negotiations is that, wherever they occur, they are governed by similar principles. The current wave of corporate restructuring makes the study of negotiations especially important for M.B.A.s. Mergers, acquisitions, downsizing and joint ventures call into question well established business and employment relationships. Navigating these choppy waters by building new relationships requires negotiation skills. The increased stress on quality and other hard-to-measure aspects of relationships with customers and suppliers makes the process of negotiation even more complex and subtle. For these reasons, negotiation classes have taken center stage in the study of management. Every major business school now offers classes in negotiation and these classes are overflowing with students. Offered as ECON 431 and LHRP 413.

ECON 438. Law and Economics. 3 Units.
This course examines legal institutions and rules from an economic perspective. Students learn when and how legal rules can be efficient. Topics will include property law (including intellectual property), tort (accidental) law, contracts, and crime. Offered as ECON 338 and ECON 438.

ECON 468. Environmental Economics. 3 Units.
Economic models and reasoning provide a valuable lens through which to view many of the most intractable and perplexing environmental problems. The objective of this class is to apply the tools of a typical introductory or intermediate microeconomics course to topics involving the natural environment. That is, we will view environmental topics from the perspective of an economist. Topics that will be covered in this class include: Market failure in the case of externalities and public goods provision, Management of renewable resources, Cost-effective pollution control, and Energy use and global climate change. Perhaps the most exciting part of this course is that we will take tools from the classroom and apply them to ongoing environmental questions. lectures will include guest presentations from professionals who are actively working on environmental challenges. Offered as ECON 368 and ECON 468. Prereq: MBAC 512 or GMBA 403A.

ECON 501. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to students undertaking reading in a field of special interest.

ECON 601. Special Problems and Readings. 1 - 18 Unit.
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

EDMP Courses

EDMP 610. Culture and World Politics. 3 Units.
Religion, ethnicity, and nationalism have assumed major political significance in the post Cold-War and post-9/11 eras. The course examines ideas of political democracy and economic liberalism in relation to different cultural and religious ideas and explores relationships among social values, political structures, and economics. Prereq: Must be enrolled in the DM Program.

EDMP 611. Theory and Practice of Collective Action. 3 Units.
The ability of autonomous and interdependent parties to coordinate actions, or to act cooperatively, affects a wide range of organizational and social problems. This course addresses the theory and practice of collective action in local, national and global contexts. Case studies of collective action problems, such as environmental protection, community revitalization, and the mobilization of interest groups will be discussed. Prereq: Must be enrolled in the DM Program.

EDMP 613. Leading Change. 3 Units.
Change is an enigma and yet sustained, desirable change (SDC) drives adaptation, growth and life itself. In this course, we will continuously attempt to answer two questions: What is the process of sustained, desirable change? and What is the role of a leader? Concepts from complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad, team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. Leadership and its development will be examined by studying a number of topics and applying them to three major case studies: (1) yourself; (2) practice coaching with compassion; and (3) a major change project. This course will explore questions, such as: Who are effective leaders? How do they think and act? What makes us want to follow them? How are leaders developed? What is the role of emotional and social intelligence? How does a leader’s mind, body, heart, and spirit affect their performance? For Doctor of Management Students.

EDMP 614. Business as an Evolving Complex System. 3 Units.
The goal of this course is to provide a foundation for understanding how business systems evolve, why the business systems in the major advanced countries have evolved differently over the last 100 years or so, and what the underlying driving forces are. The focus is on transformation rather than economic growth. The course examines the evolution of business systems as a result of technological and organizational change. It deals with the role of history, culture and finance in generating business organizations in various countries. The course also studies the emergence of regional innovation systems and industry clusters, as well as how digitization and globalization are changing the “industrial logic.” For Doctor of Management Students.
EDMP 616. Global Economic Systems and Issues. 3 Units.
This course provides a framework and analytical tools for understanding globalization and international economic relations in the context of the global political system. It analyzes the economic and political forces that are shaping global cooperation on economic matters, the role and impact of international economic institutions such as the World Bank, the International Monetary Fund, and the World Trade Organization, and evolving forms of regional governance, such as the European Union. It covers national and international policies and development and the causes and cures of international financial crises. The course revolves around concepts of efficiency, equality, power, and institutions in the making of public policy towards globalization of communications and transportation. Prereq: EDMP 665.

EDMP 617. Technology and Social System Design. 3 Units.
Managers are designers who shape the social and technical world we inhabit. This course explores the process of design and asks how managers can become better designers and interventionists who anticipate and evaluate the social, economic, and political consequences of existing and emerging products, processes, and organizational forms. For Doctor of Management Students.

EDMP 638. Qualitative Inquiry I. 3 Units.
This course explores ways to conceptualize an object of study and facilitates formulation of students’ conceptual work and production of research reports at the end of the first year of the program. The course conveys how to generate research ideas by critically reviewing literature and developing ideas that contribute to a problem or issue of interest by working with theory and extending previous research. The practicality of conducting certain kinds of research is evaluated and length, intensity and ethical constraints of different research efforts are examined. Each student produces a report communicating and supporting a conceptualization of the phenomenon of interest involving independent, mediating and dependent variables. The paper defines a problem of practice, presents, both visually and in narrative form, concepts shaped by field experience and prior writing that promote understanding of the problem, and includes a research proposal describing sample, data collection and data analysis. Prereq: EDMP 665.

EDMP 640. Social Ethics: Contemporary Issues. 3 Units.
The course draws upon intellectual ancestors and current thinkers in moral philosophy and ethics to assist each student in identifying, analyzing, and discussing social and ethical questions pertaining to the definition and purpose of contemporary life, the need for moral coherence, and the meaning of life in a global society. The unifying theme of the course is Tolstoy’s question, “How then shall we live?” The course does not seek to provide answers to the great questions of life. Rather, it tries to expand each student’s capacity to grapple with such questions. Prereq: Must be enrolled in the DM Program.

EDMP 641. Qualitative Inquiry II. 3 Units.
This course guides the student in conducting the qualitative research project that was proposed in EDMP 638. Fieldwork and initial analysis is conducted during the summer when data based on semi-structure interviews is collected and analysis begins using inductive coding techniques. A summer residency is held in mid-June to assess progress as final data collection and analysis continues. The aim of the fall semester is to prepare a formal research report on that project, which will be submitted to an academic research conference. The final report includes a revision of one’s conceptual model, integrating new understandings and literature arising from the data collection and analysis. Prereq: EDMP 638.

EDMP 642. Directed Studies Seminar. 0 - 9 Units.
At different times during the Program, EDM students register for Directed Studies courses. The purpose of these courses is to recognize the work the students are doing to conduct and present their individualized research at a high quality level. Activities conducted under the Directed Studies courses are dedicated to the collection of qualitative or quantitative data and the preparation of research reports. Prereq: Must be enrolled in DM program or PhD in Management: Designing Sustainable Systems track.

EDMP 643. Measuring Business Behaviors and Structures. 3 Units.
This course aims to develop the basic foundations and skills for designing and executing generalizable studies. It focuses on building competence in model building, construct measurement, research design, data collection methodologies, and application of analytical software commonly involved in quantitative inquiry. Covered topics include framing research questions, reliability and validity of measurement, quasi-experimental research design, and fieldwork for data collection. Classes are designed to balance between the theory and practice of quantitative research design, and will be linked to the participant’s own research projects. Prereq: EDMP 641.

EDMP 645. Integration of Qualitative and Quantitative Inquiry. 3 Units.
Using the mixed method research toolkit developed in previous courses, this course focuses on critically analyzing selected pieces of published and policy research to develop a critical appreciation of issues and debates that have wide applicability and relevance. In particular, it offers students ways to integrate and triangulate using a mixed method approach, different forms of evidence, and related evidence. In addition, this course addresses common method choice and justification issues and related challenges of validity and theory formulation that typically arise during the students’ execution of a series of individual research projects. Application of critical analysis and appreciation approach in justifying mixed methods designs to the student’s own research work is encouraged and supported by sharing and discussing common research and methodology themes and problems. Prereq: Must be enrolled in the DM Program.

EDMP 646. Advanced Analytical Methods for Generalizing Research. 3 Units.
This course addresses advanced topics in regression and structural equation modeling such as latent growth curve models, partial least squares, logit models, tests for various types of invariance, multiple-group analysis, multilevel analysis, and analyzing qualitative/categorical data. These analytical methods are intended to enhance the student’s toolkit as to facilitate a strong bridge to the academic literature and the application to specific data based problems that arise in applied managerial research. For Doctor of Management Students.

EDMP 648. Causal Analysis of Business Problems I. 3 Units.
Model Building & Validation I introduces fundamental concepts in theory-based model building and validation. In this course students will develop, explore, refine and validate a range of models appropriate for addressing their problem of practice including classification models, process models, variance models, and articulating nomological networks. In particular, the course will focus on effective conceptualizations of causation, control, mediation, and moderation. Further, foundational statistical techniques such as tests of assumptions of the data, exploratory factor analysis, and regression and path analysis will be introduced. Prereq: Must be enrolled in the DM Program.
EDMP 649. Causal Analysis of Business Problems II. 3 Units.
Building upon the first course in Model Building & Validation, this course will guide students through the theoretically-grounded variance models that are required for testing through structural equation modeling (SEM) in the quantitative portion of their research. Fundamental concepts in model testing will be reinforced using path analysis, and will include a deeper exploration of moderation by addressing topics such as moderated mediation and interaction effects. Beyond the analysis the course will emphasize precise and accurate formulation of theoretical models and associated reasoning, as well as careful interpretation of findings. The class will also delve into testing of data assumptions and prepare students for the model testing portion of their capstone assignments. Prereq: Must be enrolled in the DM Program.

EDMP 664. Knowledge Dissemination to Influence Managerial Practice. 3 Units.
The aim of this course is twofold. First, it supports students organizing and writing their DM thesis overview or their PhD thesis proposal. Also discussed are ways to organize and communicate in scientific genres, their aims and their generic properties. Secondly, students become acquainted with scientific communication and publishing. Effective reviewing, criteria for judging articles and theses, management of review processes, and how to communicate and respond to reviews are topics discussed. The course also addresses publication strategies and ways of managing and communicating scientific and managerial knowledge to different stakeholders. Prereq: Must be enrolled in the DM Program.

EDMP 665. Introduction to Research Inquiry. 3 Units.
This course begins participants' three-year research experience. Energized by one's personal passion and commitment to the topic, we seek for the work to be accomplished at a level that makes it worthy of widespread dissemination and influence as engaged scholars. The goal in this course is to prepare students to develop their minds as scholars by understanding the world of research; develop a research identity by identifying one's research domain; learn to read academic literature and write in a scholarly style; work with academic literature to identify and digest concepts and theories that inform research on that problem; begin to develop a conceptual model that abstracts how the world may be functioning in that problem domain and points to a research question that can guide the next stage of the research. The final deliverable for this course is to present the research topic with substantiation for its significance, relevance and timeliness in the management field. This would include the research question(s); the literature review; and proposed qualitative methodology and analytical approach(es). For Doctor of Management Students.

EDMP 671. Design and Sustainable Systems. 3 Units.
The goal of this course is to introduce doctoral students to the nature and practice of design as a strategy of inquiry as well as a mode of action in addressing the problems of creating and managing sustainable human systems. The objectives are (1) to introduce the conceptual framework of design, (2) the nature of human interaction as seen from the perspective of design, (3) the intellectual and practical strategies of design, (4) the methods and techniques of design that are relevant to the study and design of sustainable human systems, and (5) the nature of "wicked problems" and the ethical issues of design, with special attention to the place of human dignity in the design of sustainable systems. The course will employ key elements of the literature of design, close reading and discussion, and exercises that explore the concepts and methods of design. Prereq: Must be enrolled in the DM Program.

EDMP 672. Flourishing Enterprise: Creating Sustainable Value for Business and World Benefit. 3 Units.
This course is designed to galvanize new visions of business and society, as well as organizational leadership. The course is born of a conviction that the future of human society and the natural world is intimately linked to the future of the world economy, business enterprises, and management education. The course presentations, books, dialogues, and interview projects are organized around three themes: (1) the state of the world and the economics possibilities of our time, (2) the business case for understanding business as an agent of world benefit--how business performance can profit from current and future advances in sustainable design and social entrepreneurship; and (3) tools for becoming a change leader--including the methods of Appreciative Inquiry and new insights about "strength-based" change emerging from the science of human strengths. The overarching aim is to provide a powerful introduction to the many facets of sustainable value creation as a complete managerial approach. Prereq: Must be enrolled in the DM Program.

EDMP 673. Understanding, Designing, Managing Complex Systems. 3 Units.
The purpose of this course is to provide a perspective on systems thinking and complex systems and aid PhD students in expanding the ideas in their research on systems, systems models, and complex systems. The work of the course will develop with increasingly difficult books on the subject of complex systems, a major case study in health care, and individual applications of the concepts to their potential research model and methods. Prereq: Must be enrolled in the DM Program.

EDMP 677. Designing Sustainable Systems. 3 Units.
Students in teams will recognize and work in practice on a managerial problem that involves dimensions of sustainability and design. They will develop a set of solutions to the problem by generating alternative models and intervention strategies to address the problem. The project results in a short presentation and written communication of the solution in a form of a poster or prototype. The course will also include presentations of intervention and action research approaches and issues of inquiry validation and theory development. Prereq: Must be enrolled in the DM Program.

EDMP 678. Effectiveness of Institutional, Individual and Organizational Decision Making. 3 Units.
This course introduces students to research on individual judgment and decision making. Drawing insights from research in economics, political science, psychology, management, and sociology, behavioral decision making and judgment is the study of how-why-when people make decisions. Sessions introduce and explore the discipline. Along with a historical review of the literature, the general topics of emotion, experience, self control, and motivation are introduced. Behavioral finance is a topic specifically used as the lens through which individual, group, and firm decision making and judgment are analyzed. Designed to expose the student to a number of academic theories which may be incorporated into their second year paper, this course will also allow the student to experience a deeper dive into the particulars of academic literature including research design, literature reviews, discussion and dissemination, etc. This course will employ an integrated learning format. Lectures, group projects, written assignments, etc. will be used throughout this semester. Prereq: Must be enrolled in the DM Program.
EDMP 680. Conflict & Cooperation in the Global Arena. 3 Units.
The global arena is described by some as a realm of perpetual conflict. Others argue that given the right institutions and incentives, international actors can find ways to achieve cooperation, peace and increased global prosperity. Still others suggest that the international political and economic arena is "what you make of it"—emphasizing the role of norms, identities and ideas in shaping international outcomes. This course will examine both theoretical and policy perspectives regarding the question of international conflict and cooperation, with a specific emphasis on drawing on insights from collective action theory and international relations scholarship. Prereq: Must be enrolled in the DM Program.

Program participants who have not successfully completed their Applied Research Projects before the start of the fall semester following their third year of enrollment in the E.D.M. Program will have seven years from the date of their initial matriculation into the Program to complete degree requirements. If their work continues beyond the normal 54 credit hours of designed courses, they will register for Applied Research Project Continuation. Continuation credits may also be used for students enrolling in the Program after August 2000, who have not completed their required course work and research requirements within the Program's required 54 semester credit hours. Prereq: EDMP 665.

EMBA Courses

EMBA 417. TEAMS. 1 Unit.
This course enables the formation of E.M.B.A. study groups and classroom learning environment by introducing participants to their adult learning styles, models of group decision-making, theories of team development and rules of engagement for effective learning teams. Prereq: E.M.B.A. students only.

EMBA 436. Accounting for Business Executives. 2.5 Units.
This course is an introduction to financial and managerial accounting, rather than a course in introductory accounting. This course is designed for the business professional and is intended to prepare the student to use the information prepared by accountants. It will not dwell in detail on the technical aspects of accounting or bookkeeping. In addition, this course is designed to help the student become an effective user of cost information, from the perspective of parties internal to the firm. This aspect of accounting is a compilation of techniques rather than a set of rules. Since the information is for private use, the goal is to create the most meaningful and useful data for use by managers. Assignments will be designed to develop the student's ability to analyze and interpret accounting data and to more effectively utilize accounting data in day to day business decisions. Finally, this course is intended to strengthen abilities to identify problems and opportunities, to search out and analyze desired information leading to a well-reasoned conclusion, and to perform sensitivity analysis around that conclusion, using financial information. Prereq: E.M.B.A. candidates only.

EMBA 437. Economic Analysis for Managers. 2.5 Units.
This course, which is limited to students in the Executive M.B.A. program, explores the basic elements of the economic system which the executive needs to know in order to understand how the firm interacts with the system and how economic factors affect decision making. Prereq: E.M.B.A. candidates only.

EMBA 437A. Economic Analysis for Managers. 1.5 Unit.
This course, which is limited to students in the Executive M.B.A. program, explores the basic elements of the economic system which the executive needs to know in order to understand how the firm interacts with the system and how economic factors affect decision making. Prereq: EMBA 437A

EMBA 438A. Business Statistics and Quantitative Analysis. 1.25
Unit.
In this course, students study the use of modern quantitative and business statistics to support the executive decision-making process. With the help of computer software, the models examined assist in describing and analyzing problems and suggesting possible managerial actions. The techniques discussed include tools for decision making under uncertainty including regression analysis. This course is part of a two (2) course sequence. Prereq: E.M.B.A. candidates only.

EMBA 438B. Business Statistics and Quantitative Analysis. 1.25
Unit.
In this course, students study the use of modern quantitative and business statistics to support the executive decision-making process. With the help of computer software, the models examined assist in describing and analyzing problems and suggesting possible managerial actions. The techniques discussed include tools for decision making under uncertainty including regression analysis. This course is part of a two (2) course sequence. Prereq: EMBA 438A

EMBA 439. Corporate Finance. 2.5 Units.
The central organizing principle of this course is to familiarize the class with the basics of valuation. This first course in finance introduces the tools and methods employed in valuation of projects and corporate securities. Valuation involves the determination of (i) cash flows of the firm, project or financial assets and (ii) the discount rates that are used to compute the present values of the cash flows. Asset pricing models provide the underpinnings for the development of the discount rates. The material is synthesized in capital budgeting exercises which are cost-benefit analyses of capital project cash flows to evaluate whether they are value enhancing. Prereq: E.M.B.A. candidates only.

EMBA 439B. Corporate Finance. 1.5 Unit.
The central organizing principle of this course is to familiarize the class with the basic of valuation. The first course in finance introduces the tools and methods employed in valuation of projects and corporate securities. Valuation involves the determination of (i) cash flows of the firm, project or financial assets for (ii) the discount rates that are used to compute the present values of the cash flows. Asset pricing models provide underpinnings for the development of the discount rate. The material is synthesized in capital budgeting exercises which are cost-benefit analyses of capital project cash flows to evaluate whether they are value enhancing. Prereq: EMBA 439A

EMBA 441. Leading Change: Self. 2.5 Units.
The primary objective of Leading Change: Self is to learn a method for assessing your knowledge, abilities, values, and interests relevant to leadership and executive management so that you will be able to develop and implement a plan for enhancing your leadership and executive capability throughout your career and life. The enabling objectives are: (a) To systematically identify your current and desired capability (i.e., knowledge, abilities, values, and interests); (b) To develop an individualized learning agenda and plan for the next 3-5 years; and (c) To explore techniques to assist others in doing the same. This course will explore questions, such as: Who are effective leaders? How are they different than managers? How do they think and act? What makes us want to follow them? How are leaders developed? How can people help others become effective leaders? What type of leader do I want to be? And, what can I do to become that type of leader? Prereq: E.M.B.A. candidates only.
EMBA 441A. Leading Change: Self. 2 Units.
The primary objective of Leading Change: Self is to learn a method for assessing your knowledge, abilities, values, and interests relevant to leadership and executive management so that you will be able to develop and implement a plan for enhancing your leadership and executive capability throughout your career and life. The enabling objectives are: (a) To systematically identify your current and desired capability (i.e., knowledge, abilities, values, and interests); (b) To develop an individualized learning agenda and plan for the next 3-5 years; and (c) To explore techniques to assist others in doing the same. This course will explore questions, such as: Who are effective leaders? How are they different than managers? How do they think and act? What makes us want to follow them? How are leaders developed? How can people help others become effective leaders? What type of leader do I want to be? And, what can I do to become that type of leader? This course is part of a two (2) course sequence. Prereq: E.M.B.A. candidates only.

EMBA 441B. Leading Change: Self. 1 Unit.
The primary objective of Leading Change: Self is to learn a method for assessing your knowledge, abilities, values, and interests relevant to leadership and executive management so that you will be able to develop and implement a plan for enhancing your leadership and executive capability throughout your career and life. The enabling objectives are: (a) To systematically identify your current and desired capability (i.e., knowledge, abilities, values, and interests); (b) To develop an individualized learning agenda and plan for the next 3-5 years; and (c) To explore techniques to assist others in doing the same. This course will explore questions, such as: Who are effective leaders? How are they different than managers? How do they think and act? What makes us want to follow them? How are leaders developed? How can people help others become effective leaders? What type of leader do I want to be? And, what can I do to become that type of leader? The course will take place over two semesters. This course is part of a two (2) course sequence. Prereq: EMBA 441A.

EMBA 442. Innovation. 2.5 Units.
Organizations are under continuous pressure to be efficient and productive in order to generate (often short-term) profit. At the same time they must innovate to remain competitive in the long-term. Innovation involves the generation, development, and delivery of new products, processes, or businesses. Intrapreneurs are those who can successfully bring new ideas to fruition in established organizations. Innovation in the context of an established organization requires that intrapreneurs fundamentally understand the dynamics of innovation and innovation management. This course introduces fundamental concepts associated with innovation in the context of an established organization. Prereq: E.M.B.A. candidates only.

EMBA 443. Supply Chain Management. 2.5 Units.
Operations managers, ranging from supervisors to vice presidents, are concerned with the production of goods and services. More specifically, they are responsible for designing, running, controlling and improving the systems that accomplish production. This course is a broad-spectrum course with emphasis on techniques and information that are helpful to the practice of management in general and at any level. We will discuss commonly occurring application problems such as process analysis, inventory control, quality management, just-in-time concepts, etc. The field of operations management was originally concerned with manufacturing systems. But many of the same ideas apply, and the same trade-offs are present, in service organizations like health care, insurance, hotel-management, airlines and government related operations. Several manufacturing and non-manufacturing environments will be discussed explicitly, and the emphasis will be on the fundamentals of the operations function in an organization. Also we will explore the interface of operations management with other functional areas such as marketing, finance, accounting, etc. Prereq: E.M.B.A. candidates only.

EMBA 443B. Supply Chain Management and International Experience. 1.5 Unit.
Operations managers, ranging from supervisors to vice presidents, are concerned with the production of goods and services. More specifically, they are responsible for designing, running, controlling and improving the systems that accomplish production. This course is a broad-spectrum course with emphasis on techniques and information that are helpful to the practice of management in general and at any level. We will discuss commonly occurring application problems such as process analysis, inventory control, quality management, just-in-time concepts, etc. The field of operations management was originally concerned with manufacturing systems. But many of the same ideas apply, and the same trade-offs are present, in service organizations like health care, insurance, hotel-management, airlines and government related operations. Several manufacturing and non-manufacturing environments will be discussed explicitly, and the emphasis will be on the fundamentals of the operations function in an organization. Also we will explore the interface of operations management with other functional areas such as marketing, finance, accounting, etc. Prereq: E.M.B.A. candidates only.

EMBA 444. Expanding Boundaries. 2.5 Units.
This course will help you understand the keys to successful corporate development-competitive advantage in every business in which a firm is involved. In particular, the course will help the participants to understand the following: -Corporate development strategy through capabilities and leveragable capabilities -Before venturing into a new business, the firm has to have a clear understanding of the critical capabilities required for success in the new business. -Firms can increase the odds of success if they can leverage (parts of ) existing capabilities to new businesses. -Corporate development strategies-adapting to a market -Analyze the industry environment in order to select the competitive battlefield to increase the odds of success by leveraging some of your existing capabilities - sometimes also known as core competencies. This is a relatively low risk strategy. We will develop methodologies that will allow you to identify markets (segments) where your current capabilities are leveragable. -Shaping a market usually requires developing a completely new set of capabilities - very risky. We will develop concepts to understand techniques to mitigate these risks. -Acquisitions as one of the means for corporate development -Approximately half of the class sessions will be devoted to the specific case of acquisitions as a means to expand the boundaries of a firm. We will explore both how acquisitions contribute to competitive advantage and the selection process and integration of the acquired entity. Less emphasis will be placed on strict financial valuations and negotiations. Prereq: E.M.B.A. candidates only.
EMBA 446. Managing Risk and Real Options. 2.5 Units.
The course seeks to help corporate managers understand how financial design can be used to advance the goals and strategies of the firm. In the Finance course, you concentrated almost exclusively on the firm’s capital expenditure decision. You studied in great detail the discounted cash flow model, NPV, how you get your cash flows, and how you discount according to risk. Now we move to the other side of the balance sheet to look at how the firm can finance these expenditures. The first part of this class provides the basic building blocks of financial engineering which begins with call and put options. The course focuses on using derivatives (calls and puts) to change a firm’s risk profile with respect to equity, interest rate, foreign exchange, credit, and commodity risks. We look at capital structure decisions and securitization issues and discuss what it means to create optimal structures. Almost immediately we will tie this to our financial crisis and obtain an appreciation for financial designs that could be setup so as to enhance firm value, mitigate systemic risks, or accomplish specific sustainable goals in a global economy. The second part of the class is geared towards real options and its relationship to strategic planning. In competitive markets, no one expects to formulate a detailed long-term plan and follow it mindlessly. As soon as we start down the path, we begin learning about business conditions, competitors’ actions, and so forth and we need to respond flexibly to what we learn. Unfortunately, the financial tool most widely relied on to estimate the value of strategy, DCF, assumes that we follow a predetermined plan, regardless of how events unfold. A better approach to valuation would incorporate both the uncertainty inherent in business and the active decision making required for strategy to succeed. Prereq: E.M.B.A. candidates only.

EMBA 449. Contemporary Issues in Management. 2.5 Units.
This course is intended to address the contemporary issues in management to be decided by faculty and student interest. With the current global economic crisis, this year the course will focus on International Finance and Economics. In subsequent years, the topics will evolve as the global business climate changes. Prereq: E.M.B.A. candidates only.

EMBA 450. Managerial Marketing. 2.5 Units.
This course is designed with three overarching objectives. The first is an emphasis on decision making in a broad range of market contexts. The second objective builds on the notion that decision making is dynamic; that is, market situations demand not just one good decision but a series of them as a situation unfolds (providing new and varied information for each subsequent decision). Integrating concepts from a number of the courses that you are taking concurrently into decision-making about markets is a final objective. Prereq: E.M.B.A. candidates only.

EMBA 451. Business Model Design. 2.5 Units.
In most companies the process of designing business models is an ad hoc process and in my opinion an inefficient process. In this course you will learn a systematic but iterative process to do this. We will expose you to some broad categories of business models and internalize the basic logic of how to make money in each of these categories. The first step is to recognize which of these categories is most applicable to your business. The second step is to customize these broad patterns to the specifics of the business at hand. This seems easy because everything is in English and there are no hard formulas to figure out. However, unless you discipline yourself to systematically go through a structured process (there are other equally valid processes than the ones you’ll be exposed to) it is very easy to fall into the ad hoc trap. You will internalize this process by applying it over a wide range of business situations that will give you confidence in its applicability to any business opportunity. After the completion of this course you should be quickly able to draw the outline of a business model for any business opportunity that you’re considering. Prereq: E.M.B.A. candidates only.

EMBA 457. International Trade and Finance. 2.5 Units.
This course consists of two parts. The first part deals with the global trade and direct investment environment. It covers the theories as well as the political economy of international trade and foreign direct investment. Its aim is twofold: (i) to enable an understanding of such technical issues as to how the effects of tariffs and quotas differ or how free trade areas and customs unions differ; and (ii) to provide a systemic view of how government policies and corporate strategies interact in changing the global trade and investment environment of business. The second part of the course deals with regional economic integration and the global monetary system. Its aim is twofold (i) to enable an understanding of such technical issues as to how different stages of economic integration such as free trade areas and customs union differ; how the foreign exchange market functions in terms of different hedging instruments in the context of the international monetary system; and (ii) to provide a systemic view of how government policies and corporate strategies interact in changing the global trade and financial environment of business. Prereq: E.M.B.A. candidates only.
EMBA 473. Leading Change: Teams. 2.5 Units.
Sustainability of effective leadership is necessary for adaptive, resilient organizations and for the health and functioning of the leader. Chronic stress results in diminished cognitive functioning, as well as poor health and a contagion of negative mood in organizations. The latest advances in social neuroscience and endocrinology will be used to develop an understanding how someone in a leadership position can renew themselves and mitigate the ravages of chronic stress. The short course will focus on how to coach others toward renewal and sustainability. Prereq: E.M.B.A. candidates only.

EMBA 473A. Leading Change in Dyads and Teams and Beyond. 1.5 Unit.
Sustainability of effective leadership is necessary for adaptive, resilient organizations and for the health and functioning of the leader. Chronic stress results in diminished cognitive functioning, as well as poor health and a contagion of negative mood in organizations. The latest advances in social neuroscience and endocrinology will be used to develop an understanding how someone in a leadership position can renew themselves and mitigate the ravages of chronic stress. Examining leadership in dyads, the course will focus on how to coach others toward renewal, sustainability, and effective leadership. In the context of an International Change Theory and complexity concepts, the course will also examine in detail how to lead and develop teams to be effective. This course is part of a two (2) course sequence. Students will receive a grade of “R” at the end of the Fall Semester; the “R” will then be changed to the appropriate grade at the end of the Spring Semester. Prereq: E.M.B.A. candidates only.

EMBA 473B. Leading Change in Dyads and Teams and Beyond. 1.5 Unit.
Sustainability of effective leadership is necessary for adaptive, resilient organizations and for the health and functioning of the leader. Chronic stress results in diminished cognitive functioning, as well as poor health and a contagion of negative mood in organizations. The latest advances in social neuroscience and endocrinology will be used to develop an understanding how someone in a leadership position can renew themselves and mitigate the ravages of chronic stress. Examining leadership in dyads, the course will focus on how to coach others toward renewal, sustainability, and effective leadership. In the context of an International Change Theory and complexity concepts, the course will also examine in detail how to lead and develop teams to be effective. Prereq: EMBA 473A.

EMBA 475. International Tour. 3 Units.
This course is designed to present first-hand issues in international management. It accomplishes this by means of readings, a written assignment and, most importantly, an international trip designed to witness different management cultures, styles and environments for business in the international community. Faculty responsibility rests with the Faculty Director of the E.M.B.A. Program as well as a “Resident -Faculty” specific to each field trip. Such faculty are drawn from the Weatherhead community and vary by the design and destination of the trip. In addition, the course is staffed by an administrative assistant from the complement of Dively CMDR staff. Occasionally and where appropriate, there is also “in-tourist” assistance in some of our foreign locations Prereq: E.M.B.A. candidates only.

EMBA 476. Corporate Governance. 2.5 Units.
The course structure is grounded in the following themes: - The role of the board of directors; - The CEO relationship to the firm’s principal stakeholders (shareholders, board of directors, employees, customers) and the CEO’s responsibility to give back (time and money) to the community; - CEO role in developing and maintaining the organization’s vision, values and corporate culture. Prereq: E.M.B.A. candidates only.

EMBA 477. Behavioral Economics. 1.5 Unit.
This class develops practical, actionable insights into how people make economic decisions in the real world. Standard economics proposes that decisions are motivated by a rational response to financial incentives and information. Behavioral economics expands the standard approach by incorporating and understanding the systematic biases and errors we make in interpreting information and making decisions. This expanded toolbox will help the student to improve their own decisions and to understand and motivate behavior in employees, customers, and others. Prereq: E.M.B.A. candidates only.

EMBA 478A. Leading Design in Organization. 1.25 Unit.
This course explores the ideas and methods of design as a new approach to management practices that is well suited to the changing environment that organizations face in contemporary culture and the emerging economic environment in the United States and abroad. It is a studio course as well as a seminar, because it is designed around a project that each student brings to the EMBA program, a project that is grounded in the issues and operations of the student’s organization or in the kind of organization that the student wishes to explore. In addition to the yearlong project, the course will also include important readings in management and organizational literature that are relevant to the new direction of strategic thinking. Finally, the course will draw on the expertise of other faculty at the Weatherhead School of Management who will be called upon to share their practical expertise and theoretical knowledge in the development and execution of the student’s management design project, whether in the area of vision and strategy, new product development of goods and services, operations, organizational design and configuration, or related topics. This is the first part of a two semester course. Prereq: E.M.B.A. candidates only.

EMBA 478B. Leading Design in Organizations. 1.25 Unit.
This course explores the ideas and methods of design as a new approach to management practices that is well suited to the changing environment that organizations face in contemporary culture and the emerging economic environment in the United States and abroad. It is a studio course as well as a seminar, because it is designed around a project that each student brings to the EMBA program, a project that is grounded in the issues and operations of the student’s organization or in the kind of organization that the student wishes to explore. In addition to the yearlong project, the course will also include important readings in management and organizational literature that are relevant to the new direction of strategic thinking. Finally, the course will draw on the expertise of other faculty at the Weatherhead School of Management who will be called upon to share their practical expertise and theoretical knowledge in the development and execution of the student’s management design project, whether in the area of vision and strategy, new product development of goods and services, operations, organizational design and configuration, or related topics. This is the second part of a two semester course. Prereq: E.M.B.A. candidates only.
EMBA 479. Leading Change: Society. 2.5 Units.
This course explores a proposition: that business, the motor of our society has the opportunity to be a new creative force on the planet, a force that could contribute to the well being of many. Our exploration and search is for "business as an agent of world benefit" and the questions are many: what does it look like, where is it happening, what are the market, societal and leadership enablers, and what are the results? Prereq: E.M.B.A. candidates only.

ENTP Courses

ENTP 301. Entrepreneurial Strategy. 3 Units.
This course is designed to show students how to identify potential business opportunities, determine what constitutes a good business model, and to strategically implement a business proposal. Topics of focus include an overview of the entrepreneurial process, determinants of venture success in high tech and other business environments, and strategies for industry entry and venture growth. Prereq: ACCT 101 or ACCT 203. Coreq: At least sophomore standing.

ENTP 310. Entrepreneurial Finance - Undergraduate. 3 Units.
This course explores the financing and financial management of entrepreneurial new ventures. The course will focus on issues of financial management of new ventures (forecasting cash flows, cash flow management, capital budgeting, valuation, capital structure) and the various financial methods and mechanisms available to entrepreneurs (bootstrapping, angel investors, venture capitalists, IPOs). Prereq or Coreq: ACCT 101 or ACCT 303 or consent of instructor.

ENTP 311. Entrepreneurship and Wealth Creation. 3 Units.
This course explores all aspects of the creation of a new venture from idea through startup, growth, and beyond. Students will learn how to evaluate opportunities, develop strategies, create a business plan and acquire financing for a new venture. In this course students will develop a business plan for a new venture.

ENTP 312. Senior Seminar in Entrepreneurship. 3 Units.
The main objective of this course is to meet the advanced needs of our students in honing their entrepreneurial skills. This objective will be achieved through readings and case instruction, presentations by entrepreneurs who are actively engaged in starting new ventures and the commercialization of new technologies, and the successful completion of a research project for an entrepreneurial venture. These projects will be graded by the professor and presented to the class and to the client entrepreneur. Prereq: ENTP 310 and ENTP 311.

ENTP 418. Enterprise Development. 3 Units.
Course features new product launch by students and new business idea competition judged by actual venture capitalists. Students will also learn how to acquire control of an existing company, including valuation methods, sources of funding, tactics for finding companies to buy, and how to negotiate the purchase of a business. Also includes actual student negotiation with sellers of a company. Course is designed to accelerate career success through bold entrepreneurial strategies. Offered as ENTP 418 and PLCY 418.

ENTP 428. Entrepreneurship and Innovation. 3 Units.
In all companies, new and old, large and small, innovation and entrepreneurship are important ways economic value is created. Whether a person wants to found their own company or work in an existing one, and whether one wants to run a business or simply work in one, it is difficult to go through one's career without needing to engage in innovation or entrepreneurship. The purpose of this course is to equip students to think about how to manage innovation and entrepreneurship. The course will provide frameworks and tools for understanding four important dimensions of innovation and entrepreneurship: (1) identifying and evaluating opportunities for the new products, processes, ways of organizing, materials, and markets; (2) assessing the needs of customers for new products and services and developing products and services that fulfill those needs; (3) creating strategies to financially benefit from investing in innovation and entrepreneurship; and (4) designing groups and organizations to be innovative and entrepreneurial.

ENTP 450. Entrepreneurial Marketing-M.B.A.. 3 Units.
This course addresses the entrepreneurial/intrapreneurial process of commercializing an idea for a market opportunity. Students select an opportunity and develop a deployable, one-year market entry program and a five-year strategic marketing program. Emphasis is on the entrepreneurial marketing decision process, including defining the business, defining the market, specifying customer perceived value, assessing competitive capability and advantage, identifying and properly using secondary and primary information, and deploying marketing programs throughout the organization and the supply chain.

ENTP 501. Special Problems and Topics. 1 - 18 Unit.

HSMC Courses

HSMC 410. The American Healthcare Landscape and Statistics for Healthcare. 3 Units.
The goal of this courses are (i) to establish a common understanding of the roles played by various institutions and players in the health care system, and (ii) to ensure competency in basic statistical tools utilized in empirical analyses. These are considered "foundational" topics for students in the MSM-Healthcare program, helping facilitate more effective and efficient delivery of material covered in subsequent courses. Prereq: Students in MSM-Healthcare or requisites not met permission.

HSMC 420. Health Finance. 3 Units.
Exploration of economic, medical, financial and payment factors in the U.S. healthcare system sets the framework for the study of decisions by providers, insurers, and purchasers in this course. The mix of students from various programs and professions allows wide discussion from multiple viewpoints. Offered as BAFI 420 and HSMC 420. Prereq: ACCT 401.

HSMC 421. Health Economics and Strategy. 3 Units.
This course has evolved from a theory-oriented emphasis to a course that utilizes economic principles to explore such issues as health care pricing, anti-trust enforcement and hospital mergers, choices in adoption of managed care contracts by physician groups, and the like. Instruction style and in-class group project focus on making strategic decisions. The course is directed for a general audience, not just for students and concentration in health systems management. Offered as ECON 421, HSMC 421, and MPHP 421.
HSMC 427. Health Law 1. 4 Units.
Health Law 1 and Health Law 2 are the core courses in the Health Law curriculum and both courses are required for the Health Law Concentration. The subject matter of the courses spans the entire field of health law, including (1) the history, structure, financing, and operation of the U.S. medical system; (2) legal and ethical rules and regulations governing physicians and other health care professionals; the patient-physician relationship; institutional providers of care such as hospitals, nursing homes, and laboratories; and drug and device manufacturers; (3) regulation of health insurers and managed care organization; (4) medical malpractice law; (5) confidentiality and electronic medical records; (6) fraud and abuse; (7) antitrust law; (8) employer health plans; (9) medical research; and (10) public health. The courses will be taught by a team of full-time and adjunct law professors and will include significant experiential exercises and opportunities. Grading will be based on periodic quizzes, memos, performance on experiential exercises, and final exams. Offered as HSMC 427 and LAWS 227.

HSMC 432. Health Care Information Systems. 3 Units.
This course covers concepts, techniques and technologies for providing information systems to enhance the effectiveness and efficiency of health care organizations. Offered as HSMC 432 and MPHP 532.

HSMC 446. Models of Health Care Systems. 1.5 Unit.
This course is for professionals who will pursue their careers in, or associated with, the health care industry; and therefore, need to understand the structure, operations and decision influences in the health care delivery system. The course is intended to develop competence and confidence in the participant's ability to understand and operate in the industry, the largest and, perhaps, the most complex in the United States. It is applicable to the private and public, profit and not-for-profit sectors. In this course students are introduced to: the different systems of care delivery; their organization and operations; their markets and the nature of the demand for their services; and the dynamics of their interoperation among themselves and with other entities in the industry (e.g., payors/insurers, regulators and accreditors, technology and pharmaceuticals suppliers). Offered as HSMC 446 and IIME 446.

HSMC 447. Regulatory Affairs for the Biosciences. 1.5 Unit.
This mini-course introduces students to the Food and Drug Administration (FDA) and the laws and regulations it enforces. A scientific regulatory agency with far reaching enforcement authority, FDA is the most powerful consumer protection agency in the world. This course will familiarize students with FDA’s mission, philosophy and organizational structure, as well as policy and procedure it uses to ensure the safety and effectiveness of the food, drugs, biologics, cosmetics, medical devices and radiation-emitting products it regulates. Recommended preparation: Enrollment in the MEM Biomedical Entrepreneurship Track. Offered as BIOS 447, HSMC 447, and IIME 447.

HSMC 448. Engineering Statistics for Biosciences. 3 Units.
This course provides an introduction to biostatistics, emphasizing experimental design, analysis of data, and special emphasis on statistical and financial aspects of randomized clinical trials for biomedical applications. There will be a final project involving development of a clinical trial protocol including the experimental design, recruitment and retention strategy, analysis plan and budget. Offered as BIOS 448, HSMC 448, and IIME 445.

HSMC 456. Health Policy and Management Decisions. 3 Units.
This seminar course combines broad health care policy issue analysis with study of the implications for specific management decisions in organizations. This course is intended as an applied, practical course where the policy context is made relevant to the individual manager. Offered as HSMC 456 and MPHP 456.

HSMC 457. Health Decision Making & Analytics. 3 Units.
The goals of this course are to: (1) introduce the sources of data healthcare that managers can exploit to improve decision-making in their organizations; (2) examine health decision making styles, approaches and impediments; (3) provide a framework for medical informatics and how information technology can be exploited to pursue organizational goals; and (4) examine the analytic tools necessary for turning “raw data” into actionable information. The course is pragmatic, covering such issues as the current state and emerging trends in medical informatics (MI), information principles, decision models and analytics approaches, as well as the impact of emerging health legislation, information systems and processes on decisions and analytics. Prereq: MSM Healthcare students only.

HSMC 501. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to students undertaking reading in a field of special interest.

HSMC 502. Health Care Executive Education Series. 1 - 3 Unit.
Students may choose six out of eight all day Friday seminars in the Health Care Executive Education Series, plus completion of a paper covering an aspect of the management of health care systems. Registration is 1 credit for Fall semester and 2 credits for the Spring Semester as seminars begin in the Fall and continue through the Spring semester. Limited to students admitted to the Health Systems Management Certificate program and those with approval from Mindy Kinnard at 368-6405.

LHRP Courses

LHRP 360. Independent Study. 1 - 18 Unit.
This course is offered for candidates undertaking reading or independent research in a field of special interest.

LHRP 431. Negotiations for Managers. 3 Units.
The aim of this course is to enhance individual as well as organizational performance and competitive advantage through “principled negotiation”, “win-win bargaining”, and collaborative as opposed to competitive approaches to team problem solving. The context crosses all types of business, government and non-governmental organizations. Concepts, strategies, and models of negotiation are drawn from social psychology, economics, labor relations, and legal literature. Students will also be introduced to mediation (both as mediators and negotiators); to the complex art of advocacy and to the latest alternative dispute resolution (ADR) techniques. There is heavy reliance on simulations and role play to enhance student understanding of key course concepts. Although immediate skill enhancement through practice is a goal, students understanding of key concepts will enable them to continuously improve their insights and skills long after the course is concluded. There is no prerequisite for the course.

LHRP 501. Special Problems and Topics. .5 - 18 Units.
This course is offered, with permission, to students undertaking individual reading or research projects in a field of special interest.

LHRP 601. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

LHRP 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
MBAC Courses

MBAC 504. Corporate Finance. 3 Units.
This is a MBA core finance course. In this course, students are introduced to the basics of corporate finance, including the objectives of and the decisions made by corporate financial managers. Topics covered include time value of money, stock and bond valuation, cost of capital and risk and return, investment decision rules, cash flows and free cash flows, cash flow projections and planning, working capital management and short-term financing, capital budgeting, capital structure, dividend policy, efficient markets, and macroeconomic/industry analysis and valuation. The course envisages extensive use of spreadsheets, case studies, data analysis, and an intensive workshop. The course envisages extensive use of spreadsheets as well as an intensive workshop involving data analysis. Prereq: Full-time MBA program only.

MBAC 506. Marketing and Supply Chain Management. 3 Units.
MBAC 506 (Marketing and Supply Chain Management) and MBAC 507 (Operations and Supply Chain Management) are an integrated presentation of the process of marketing, operations and supply chain management. Thus, they must be taken in numerical sequence or concurrently. Through lecture, discussion, cases and/or simulations you will learn theory and practice of how firms develop processes to understand, create and deliver “triple bottom line” value (i.e., economic, social and environmental) to business and/or consumer markets. In systems theory these continual-input-transformation-output stages comprise value chains. Specifically in this course, we will introduce you to and help you to practice the ways managers think about and employ information, processes, tools and skills in order to 1. understand and target value from the customer’s perspective, 2. build marketing programs that attract, retain satisfied customers, and 3. evaluate brand equity based on customer lifetime value to the firm. Throughout both courses (see MBAC 507 for its specific content) we will address the integrated process of managing ongoing long-term relationships with customers, distribution partners and suppliers to assure long-term customer satisfaction and achievement of the organization’s economic, social and environmental goals. Prereq: Full-time MBA program only.

MBAC 507. Operations and Supply Chain Management. 3 Units.
MBAC 506 (Marketing and Supply Chain Management) and MBAC 507 (Operations and Supply Chain Management) are an integrated presentation of the process of marketing, operations and supply chain management. Thus, they must be taken in numerical sequence or concurrently. Through lecture, discussion, cases and/or simulations you will learn theory and practice of how firms develop processes to understand, create and deliver “triple bottom line” value (i.e., economic, social and environmental) to business and/or consumer markets. In systems theory these continual-input-transformation-output stages comprise value chains. Specifically, in this course, we will introduce you to, and help you to practice, the ways managers forecast demand, establish production processes for the product or service, manage inbound resource flows, and manage outbound distribution so the customer can get the product or service the way he or she wants (i.e., place, form, time and “experience” utility). Throughout both courses (see MBAC 506 for its specific content) we will address the integrated process of managing ongoing long-term relationships with customers, distribution partners and suppliers to assure long-term customer satisfaction and achievement of the organization’s economic, social and environmental goals. Prereq: Full-time MBA program only.

MBAC 508. Strategic Issues and Applications. 3 Units.
Strategic management deals fundamentally with the ways firms build and sustain superior competitive positions and profitability. Successful strategy design and implementation requires an understanding of a firm’s external environment, its internal resources and capabilities. It also requires an integrative view of the firm that spans functional areas such as operations, marketing and finance. Strategic analysis draws on a number of academic disciplines including economics, psychology, political and management science. Prereq: Full-time MBA program only.

MBAC 511. Statistics and Decision Modeling. 3 Units.
This course provides the foundations of statistical and operations research methodologies for managerial decision-making. Topics covered include making inferences for populations from sample data via (a) estimation with confidence intervals, (b) hypothesis tests, and (c) forecasting with simple and multiple regression. Decision modeling of organizational systems uses mathematical and computer models to provide a quantitative approach to analyzing and solving complex decision problems. This course includes an introduction to linear programming models and applications, queuing models, and simulation models. Prereq: Full-time MBA program only.

MBAC 512. Economics. 3 Units.
In this short class you will be introduced to the basics of modern microeconomic and macroeconomic thinking. Topics include consumers, firms, markets, the role of the government, information and public choice. This class will also focus on the economy as a whole: business cycle, statistics used to measure the economy, fiscal and monetary policy, international trade and development. Prereq: Full-time MBA program only.

MBAC 515. Leading People and Organizations. 3 Units.
Using the behavioral and social sciences as a basis, this course examines concepts relevant to the effective management of oneself, other people and organizations. In this course, students will learn and engage in a process of personal development and growth. This will include receiving feedback by engaging in a 360-feedback session, and receiving individual coaching that culminates in a personal vision statement and development plan. Students will also gain a better understanding of working in a team by learning about group and team dynamics. In order to be better managers and more effective leaders, they will also gain a better understanding of working in a team by learning about group and team dynamics. In order to be better managers and more effective leaders, they will also study various aspects of organizational life such as culture; motivation and reward systems; power, politics and influence; and social capital and social networks. A variety of methods, including self-assessments, experiential and interactive activities, case studies, and other types of media are used to study these topics. Students are encouraged to reflect on their experiences throughout the course. Prereq: Full-time MBA program only.
MBAC 517. Management Perspectives and Dialogues. 3 Units.
This course serves as a vehicle to exercise critical thinking and integration skills. While much is learned by attending to the various functions of a business, effective management requires that you be able to integrate these to better understand the whole (organization, supply chain, market, industry, etc.). The course addresses that objective in three ways. First, we will bring in teams of senior managers for you to engage in dialogue about issues they have recently addressed, expect to address in the near future and how they function as leaders of their organizations. Next, are several modules that explore a couple of particular perspectives on management—managers are designers and that businesses play a critical role in shaping a sustainable world. These are viewed as lenses for integrating the skills you are developing in the functional courses. Finally, we will have sessions in which you will practice thinking on your feet about how to approach business problems and situations. These are structured to help you in job interviews and to help you stand out in your early days in new work environment. The goal of this course is pragmatic. You can help by actively engaging with us in a dialogue about which elements work in helping you achieve these objectives and which do not. Prereq: Full-time MBA program only.

MBAC 520A. Design and Sustainability. 3 Units.
Design and Sustainability involves 6 credits divided up into two parts. In the fall semester students are introduced to sustainability which creates a foundational platform featuring key models and managerial tools for the building sustainable value and "turning the social and global issues of our day into business opportunities. In the spring semester students are introduced to Design which is giving form to an idea to conceive of a more desirable product, service, process or organization and refining the idea into something that can be delivered reliably and efficiently. Good design integrates these evolving ideas with the day-to-day realities of a firm's operations, systems, marketing, economics, finance and human resources. Designing is thus a unique managerial activity that brings together changing technologies, capabilities, relationships, activities and materials to shape an organization's plans and strategies. It combines analysis and synthesis in ways that are integrative and inventive, and through it managers create opportunities and means of attaining them. Prereq: Full-time MBA program only.

MBAC 520B. Design and Sustainability. 3 Units.
Design and Sustainability involves 6 credits divided up into two parts. In the fall semester students are introduced to sustainability which creates a foundational platform featuring key models and managerial tools for the building sustainable value and "turning the social and global issues of our day into business opportunities. In the spring semester students are introduced to Design which is giving form to an idea to conceive of a more desirable product, service, process or organization and refining the idea into something that can be delivered reliably and efficiently. Good design integrates these evolving ideas with the day-to-day realities of a firm's operations, systems, marketing, economics, finance and human resources. Designing is thus a unique managerial activity that brings together changing technologies, capabilities, relationships, activities and materials to shape an organization's plans and strategies. It combines analysis and synthesis in ways that are integrative and inventive, and through it managers create opportunities and means of attaining them. Prereq: Full-time MBA program only.

MBAP Courses

MBAP 401. Leadership Assessment and Development. 3 Units.
This course is designed to increase competitive attractiveness in the marketplace and maximize the added value of the M.B.A. program. The objective of the course is to have students learn a method for assessing and developing in themselves the knowledge and abilities relevant to management throughout their careers. This is accomplished by helping students develop an individualized learning plan to enhance their level of knowledge in 11 fields and 22 abilities. Students engage in a number of assessment activities, then receive feedback and interpret it. This occurs in the context of an Executive Action Team (i.e., students and a facilitator) in which students help each other assess their current capability and future development needs. This course is limited to students in the Part-time Cohort M.B.A. program. Prereq: This course is for students in the Part-time Cohort MBA Program or Cleveland Clinic Part-time Cohort MBA Program only.

MBAP 403. Statistics and Decision Modeling. 3 Units.
This course provides the foundations of statistical and operations research methodologies for managerial decision-making. Business statistics focuses on statistical thinking as one of the fundamentals of effective management. Topics covered include sampling and the normal distribution, making inferences from data via confidence intervals and hypothesis tests, and analyzing relationships between samples. Decision modeling of organizational systems uses mathematical and computer models to provide a quantitative perspective on identifying, analyzing and solving complex decision problems. This course includes an introduction to linear programming models and applications, simulation techniques in decision-making, and project management. Prereq: This course is for students in the Part-time Cohort MBA Program or Cleveland Clinic Part-time Cohort MBA Program.

MBAP 404. Managing People in Organizations. 3 Units.
Examines the behavioral sciences relevant to the effective management of people and the effective design of human resources system, structure and policies. Topics include leadership, change management, motivation and pay systems, team dynamics, staffing, decision making, organizational communications, employee participation, performance appraisal, conflict management, negotiation, work design, organizational design, and organizations culture. A variety of methods, including experiential and interactive learning methods, are used to study these topics. Prereq: This course is for students in the Part-time Cohort MBA Program or MSM Healthcare program only.

MBAP 405. Financial Management I. 3 Units.
This is a Corporate Finance course that deals with investment theory and financial value. The course materials cover discounted cash flows, bond and stock valuation, capital budgeting, applications of real options in investment analysis, asset's risk and return, cost of capital, market efficiency and capital structure. The tools, problem solving techniques, and ways of thinking that you develop in this course have broad applicability to all areas of business. They also form the basis for sensible personal decisions in the areas of investments, borrowing, and financial planning. Prereq: This course is for students in the Part-time Cohort MBA Program or Cleveland Clinic Part-time Cohort MBA Program.
MBAP 406. Economics for Managers. 3 Units.
This course surveys the basic principles of micro and macroeconomics. Topics covered in microeconomics include supply and demand, the theory of production and costs, market structures and factor markets. Macroeconomics topics are the national incomes accounts, the determination of national income, employment and inflation, fiscal and monetary policies and international trade. Prereq: This course is for students in the Part-time Cohort MBA Program or Cleveland Clinic Part-time Cohort MBA Program only.

MBAP 407. Managerial Marketing. 3 Units.
This course focuses on managing marketing as a process of creating value and mutually desirable exchanges of values. That is the foundation of a customer orientation and a central theme of market-driven management. Methods for strategic marketing planning, understanding buyer behavior, market analysis, segmentation and devising integrated marketing programs are introduced. Creating customer value and competitive advantage in worldwide markets is the central theme. Prereq: This course is for students in the Part-time Cohort MBA Program, Cleveland Clinic Part-time Cohort MBA Program or MSM in Healthcare only.

MBAP 408. Operations Management. 3 Units.
Operations management deals with the design of products and processes, the acquisition of resources, the conversion of inputs to outputs, and the distribution of goods and services. It is central to a firm’s ability to compete effectively. As global competition in both goods and services increases, the management of operations is becoming more and more important. This course provides a broad overview of the managerial issues associated with production and delivery of goods and services. It includes the use of quantitative modeling using computers as a central methodology. Prereq: This course is for students in the Part-time Cohort MBA Program, Cleveland Clinic Part-time Cohort MBA Program, or MSM in Healthcare only.

MBAP 409. Sustainability and Social Entrepreneurship. 3 Units.
This course creates a foundational platform featuring key models and managerial tools for building sustainable value and “turning the social and global issues of our day into business opportunities.” Case studies of leading mainstream companies are used to analyze how business value is created for a range of social and environmental initiatives. Students will look at sustainability business strategies that reduce risks, drive down costs, create new revenue streams, serve new markets, and position companies to take advantage of changing societal expectations. Environmental issues such as climate change are covered along with social issues such as global poverty. Students acquire the competencies required to make effective business decisions based on integrating sustainability into the core of a company’s value added activities. Prereq: This course is for students in the Part-time Cohort MBA Program or Cleveland Clinic Part-time Cohort MBA Program only.

MBAP 411. Identifying Design Opportunities. 3 Units.
Designing is giving form to an idea for a more desirable product, service, process or organization, and refining the idea into something that can be delivered reliably and efficiently. Good design integrates these evolving ideas with the day-to-day realities of a firm’s operations, systems, marketing, economics, finance and human resources. Designing is thus a unique managerial activity that brings together changing technologies, capabilities, relationships, activities and materials to shape an organization’s plans and strategies. It combines analysis and synthesis to create opportunities for improvement and means of attaining them. Viewed this way, designing is a core competence of a successful entrepreneur or innovative leader. Design analysis is the systematic review of the four orders of design found in every firm—namely, the firm’s communications, products, interactions and environments—and the creation of opportunities to increase firm value by improving each. Students will identify ill-defined, ill-structured problems within organizations. Such problems are ones for which there are no definitive formulations and for which the formulation chosen affects the solutions available. For such problems, there is no explicit way of knowing when you have reached a solution, and solutions cannot necessarily be considered correct or incorrect. But finding innovative solutions to such problems can provide unique opportunities to create exceptional value. A major outcome of the semester’s inquiry is a presentation of the design problem and proposed design solution. Prereq: This course is for students in the Part-time Cohort MBA Program, Cleveland Clinic Part-time Cohort MBA Program or MSM in Healthcare only.

MBAP 412A. Dialogues in Leadership. 1.5 Unit.
This course is a three credit hour two-semester course sequence that seeks to educate students of management in the intricacies of issues management through a process of facilitated dialogs with practicing management professionals who possess deep and highly contextualized knowledge and experiences in addressing a varied range of management issues in contemporary real life settings. The goal of the course is to help students bring their in-class theoretical learning into a safe laboratory setting for active testing. Real life managerial contexts will be introduced as faithfully as possible wherein theory and practice are brought into constructive juxtaposition, each providing a complementary and not necessarily a counter perspective to the other. Prereq: This course is for students in the Part-time Cohort MBA Program or Cleveland Clinic Part-time Cohort MBA Program only.

MBAP 412B. Dialogues in Leadership. 1.5 Unit.
This course is a three credit hour two-semester course sequence that seeks to educate students of management in the intricacies of issues management through a process of facilitated dialogs with practicing management professionals who possess deep and highly contextualized knowledge and experiences in addressing a varied range of management issues in contemporary real life settings. The goal of the course is to help students bring their in-class theoretical learning into a safe laboratory setting for active testing. Real life managerial contexts will be introduced as faithfully as possible wherein theory and practice are brought into constructive juxtaposition, each providing a complementary and not necessarily a counter perspective to the other. Prereq: This course is for students in the Part-time Cohort MBA Program or Cleveland Clinic Part-time Cohort MBA Program only.

MGAB Courses

MGAB 501. Study Abroad. 1 - 15 Unit.
Place holder for students studying abroad, to be replaced with actual course work taken at Exchange location once course work is completed and a transcript is sent to CWRU.
MGMT Courses

MGMT 1. Supervised Professional Practicum - Semester 1. 0 Units.
A professional practicum is a workplace experience, the primary goal of which is the intellectual, personal and professional growth of the student. It occurs under the sponsorship or supervision of a mentor in the workplace who is committed to seeing that it is an educational as well as a work venture. It requires skills appropriate to the student's year in college and provides students with new skills, insights and experiences that are transferable back to the academic setting and/or to a future position in the workplace. (Only available to declared Weatherhead Accounting or Management majors.) Prereq: Junior standing or higher.

MGMT 2. Supervised Professional Practicum - Semester 2. 0 Units.
A professional practicum is a workplace experience, the primary goal of which is the intellectual, personal and professional growth of the student. It occurs under the sponsorship or supervision of a mentor in the workplace who is committed to seeing that it is an educational as well as a work venture. It requires skills appropriate to the student's year in college and provides students with new skills, insights and experiences that are transferable back to the academic setting and/or to a future position in the workplace. (Only available to declared Weatherhead Accounting or Management majors.) Prereq: Junior standing.

MGMT 201. Contemporary Business and Communication. 3 Units.
This course is designed to survey business topics, issues, and practices. Students will be introduced to each of the functional areas of business, including accounting, finance, marketing, operations, business intelligence, and human resources management. The course is designed to help students appreciate the interrelationship of these business functions and, more generally, the role and context of business in society. Other topics considered include: the economic and legal environment of business, the globalization of markets, workforce diversity, leadership and entrepreneurship. To convey course content, lectures, in-class discussions, exercises, simulations, and guest speakers are used. Weekly discussions and a high level of student interaction amplify on class materials and concepts by focusing on contemporary issues of actual businesses.

MGMT 315. International Management Institute. 3 Units.
The course provides undergraduate students with a unique overseas visitation, language orientation, and management subject experiences during periods such as Spring Break, or during interims immediately following the end of the semester. Opportunities for diverse cultural and language experiences which result from the institute are added benefits of these programs.

MGMT 360. Special Topics and Issues in Management. 1 - 9 Unit.
This course option is available to qualified students who are undertaking special projects in a management related field.

MGMT 395. Advanced Seminar. 1 Unit.
This seminar, for undergraduate students with junior class standing or above, provides an opportunity to consider topics of importance in the community of ideas and activities related to the professional and managerial world. The development of writing and communication skills and in-depth discussion are expected attributes of seminar activity. The topic and scope of the coverage will be defined by the course instructor as consistent with the seminar approach to learning of the University. Counts as SAGES Departmental Seminar. Prereq: Declared ACCT or MGMT Major and At Least Junior Standing.

MGMT 397. Undergraduate Research Project. 3 - 6 Units.
This course provides a supervisory structure for students completing a capstone research project in the Weatherhead School of Management. Arrangements should be made by consultation with a faculty member selected and the Senior Capstone Committee of the School of Management. Open to all management and accounting majors and other qualified students with instructor approval. A written report, presentation to the faculty department most closely related to the student's topic, and an approved public presentation are required. Counts as SAGES Senior Capstone.

MGMT 398. Action Learning. 6 Units.
This is an experiential course built around consulting projects in local organizations. Each project is focused on solving a business problem or pursuing a business opportunity. Each student will work in a team to analyze the current situation and identify related problems/opportunities, conduct research, analyze findings, creatively envision alternatives, and recommend an appropriate course of action and next steps. Throughout the semester students will receive instruction and coaching on the problem solving approach used in the course. Counts as SAGES Senior Capstone. Prereq: ACCT 102, BAFI 355 and MKMR 201, Senior Standing, and Declared ACCT or MGMT major.

MGMT 403. Leadership Assessment and Development. 3 Units.
This course is designed to increase competitive attractiveness in the marketplace and maximize the added value of the M.B.A. program. The objective of the course is to have students learn a method for assessing and developing in themselves the knowledge and abilities relevant to management throughout their careers. This is accomplished by helping students develop an individualized learning plan to enhance their level of knowledge in 11 fields and 22 abilities. Students engage in a number of assessment activities, then receive feedback and interpret it. This occurs in the context of an Executive Action Team (i.e., students and a facilitator) in which students help each other assess their current capability and future development needs. This course is limited to students in the M.B.A. program.

MGMT 413. Human Value in Organizations. 3 Units.
Examines the behavioral sciences relevant to the effective management of people and the effective design of human resources system, structure and policies. Topics include leadership, change management, motivation and pay systems, team dynamics, staffing, decision making, organizational communications, employee participation, performance appraisal, conflict management, negotiation, work design, organizational design, and organizations culture. A variety of methods, including experiential and interactive learning methods, are used to study these topics.

MGMT 418. Curricular Practical Training. 0 Units.
This course is intended for graduate business students who wish to gain curricular practical training in support of career goals. The experience developed in an internship will complement academic experience gained in Weatherhead classes.

MGMT 419. Corporate Field Research. 1 - 3 Unit.
This course is intended for the graduate business student who wishes to gain applied/practical business experience based on his/her intended career path and/or with an organization. This course will assist building required skills and bridge the gap between the classroom and real world application.
MGMT 440. Leadership Assessment and Development II. 0 Units.
The exit assessment course (MGMT 440) is aimed at assessing how students' career goals, values and abilities may have changed since the program began. The course meets for one mandatory half day seminar in the Spring Semester and carries 0 units of credit. In the MGMT 403 course, students were provided the tools and opportunities for self-assessment and career planning. In the very first semester, they completed several assessment instruments (LSI, POQ, 360-Feedback (ECI-U), ASI, My Values, Career Anchors and others). They had to identify their top values, set a career vision and created an individualized learning plan. The ultimate goal was to assure that their personal development and preparation was relevant to, and in alignment with, the emergent requirements of today's business management careers. This course is specifically designed to identify if a student's prior learning plan (completed in the MGMT 403 course) still fits with his/her current career reality and to also identify what has changed for him/her. The activities in the course will include: Viewing the current reality of today's business environment; Revisiting their experience in the MBA program including any internships/jobs.; Determining if a student's values, vision and learning plan still fit; Retaking the 360-Feedback (Emotional Intelligence Competencies) to identify development of competencies; Identifying relevant areas of personal development; Committing to a refined learning plan and goals. Through a highly interactive and team based process, students will be able to reflect on their current reality, get feedback on your personal growth and discover what changes would enhance their professional career journey.

MGMT 458. International Institute. 3 Units.
The International Institute involves semester-long study of a particular region, followed by a class trip to an area within that region. The preparatory coursework varies depending on the region selected for that particular semester; however, it typically consists of research about cultural, financial, political, and economic topics. The trip consists of daily research meeting with organizations within the region being studied. Upon return, a summary exercise is required to complete the coursework. The class trip is a mandatory component of the course.

MGMT 460. Managing in a Global Economy. 3 Units.
Managers need new skills to enable them to manage effectively in what is increasingly a global economy. They need a deeper understanding of cultural differences and how these differences may influence communications with foreign employers, employees, customers, suppliers or partners. They need a better understanding of the economic and political mechanics of the world business system. They need to learn how to find out more about potential opportunities and threats that lie outside the United States. This course is designed to address these needs.

MGMT 464. Business Ethics. 3 Units.
This course is built around two core learning tracks. The first is extended analyses of case studies, which identifies ethical problems, diagnoses import, and develops strategic programs to address them. The second learning track uses short pieces of fiction to explore issues of ethical character, leadership, and organizational responsibility. Each student keeps an ethics journal over the course of the semester to reflect on ethical issues, both inside and outside the classroom. In addition, small student groups are formed to write case studies focusing on a business ethics problem.

MGMT 465. Perspectives in European Management. 3 Units.
The European Institute provides an introduction to international business through a unique combination of class meetings and an excursion to Europe. While in Europe, students meet with local business people, consulate officials, and university professors to learn the prerequisites for doing business in the region. The trip features site visits to local companies.

MGMT 467. Commercialization and Intellectual Property Management. 3 Units.
This interdisciplinary course covers a variety of topics, including principles of intellectual property and intellectual property management, business strategies and modeling relevant to the creation of start-up companies and exploitation of IP rights as they relate to biomedical-related inventions. The goal of this course is to address issues relating to the commercialization of biomedical-related inventions by exposing law students, MBA students, and Ph.D. candidates (in genetics and proteomics) to the challenges and opportunities encountered when attempting to develop biomedical intellectual property from the point of early discovery to the clinic and market. Specifically, this course seeks to provide students with the ability to value a given technological advance or invention holistically, focusing on issues that extend beyond scientific efficacy and include patient and practitioner value propositions, legal and intellectual property protection, business modeling, potential market impacts, market competition, and ethical, social, and healthcare practitioner acceptance. During this course, law students, MBA students, and Ph.D. candidates in genomics and proteomics will work in teams of five (two laws students, two MBA students and one Ph.D. candidate), focusing on issues of commercialization and IP management of biomedical-related inventions. The instructors will be drawn from the law school, business school, and technology-transfer office. Please visit the following website for more information: fusioninnovate.com. Offered as LAWS 5341, MGMT 467, GENE 367, GENE 467, EBME 467 and EECS 467. Prereq: MBAC 508.

MGMT 470. Corporate Governance. 3 Units.
This course is geared to enabling students to accelerate their careers and to rise to the very top echelons of management. Top CEOs from prominent regional businesses will share what they look for when they hire MBAs and they will suggest strategies for advancing through entry level and middle management to senior management. Improving your interviewing technique will be featured. The course will give students a top down look at career success. The role of the board of directors will also be explored. The best practices learned will be applicable to for-profit businesses and non-profit organizations, including health care.

MGMT 497. Action Learning Project. 3 Units.
This course allows teams of students to integrate functional, core knowledge and apply analysis and strategic management skills in a real-world setting. Students will be evaluated by the instructor and the project managers at the client organizations. Prereq: MSM Healthcare students only.

MGMT 499. Strategic Issues and Applications. 3 Units.
This course wraps up the M.B.A. core by providing an integrative experience of applying the full range of managerial skills addressed throughout the core in a comprehensive case exercise. Students develop, document, and present comprehensive, implementable strategic and tactical actions programs in groups. Prereq: ACCT 401 and BAFI 402.

MGMT 501. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to students undertaking reading in a field of special interest.
MGMT 560. Theoretical Perspectives in Management. 3 Units.
This seminar exposes students to management theories from a variety of
disciplines. The goal of the course is to help students learn to synthesize and
contrast theories to develop hypotheses of their own. Prereq: Ph.D.
standing or consent of instructor.

MGMT 570. Research Theory and Method. 3 Units.
This seminar explores pertinent issues in the philosophy of social
sciences and in the use of quantitative and qualitative research methods.
It seeks to clarify pivotal issues in scientific enterprise like the nature of
scientific knowledge, the nature of scientific methods, their grounding,
issues of ontology and epistemology, rhetoric, and how scientific
knowledge relates to the organization of scientific communities. The
seminar's objective is to prepare students to think critically about the
underlying assumptions and their day-to-day research practices. Prereq:
Ph.D. standing.

MGMT 571. Measurement Theory and Method. 3 Units.
This doctoral seminar focuses on the theoretical and methodological
issues involved in social science measurement. Specifically, the course
will cover topics in basic principles of measurement including Classical
Test Theory, Reliability, Validity, and Item Response Theory, as well as
related tools for measurement analysis including Exploratory and
Confirmatory Factor analysis. In addition, the course will expose students
to analytical methods that model measurement error in simultaneous
equations including models with mediation and moderation effects. This
course involves extensive use of statistical packages including SPSS,
LISREL, and EQS. Prereq: Ph.D. standing.

MGMT 573. Applied Multivariate Data Analysis. 3 Units.
The objectives of the seminar are to provide students with an
understanding of the substantive and methodological issues involved in
applied multivariate data analysis. The seminar aims to expose
students to the assumptions, principles and applications of a selected
set of multivariate techniques including Logistic Regression, MANOVA/
Discriminant, Profile, Multilevel and Latent Growth Model analysis. This
course involves extensive use of statistical packages including SPSS,
LISREL, and EQS. Prereq: Ph.D. standing.

MGMT 575. Doctoral Research Project. 3 Units.
The objective of the course is to produce a stand-alone piece of
scholarship in the academic discipline pursued by the student. The paper
or project should be of publishable quality as judged by the instructor.
The work of the student is to be accomplished on the independent
study basis under the direction of a faculty member. Although there
are no specific course prerequisites, the understanding is that all other
coursework should have been completed to be admitted into the class.
Prereq: Ph.D. standing.

MGMT 601. Special Topics. 1 - 18 Unit.
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

MGMT 602. Advanced Topics. 1 - 18 Unit.
This is a course of flexible design to meet advanced theoretical and/or
methodological needs of doctoral students. Approval is needed from the
instructor, and it requires a letter grade.

MGMT 610. Culture and World Politics. 3 Units.
Religion, ethnicity, and nationalism have assumed major political
significance in the post Cold-War and post-9/11 eras. The course
examines ideas of political democracy and economic liberalism in relation
to different cultural and religious ideas and explores relationships among
social values, political structures, and economics. Prereq: Only for
students in PhD in Management: Designing Sustainable Systems, or by
permission of the Program Director.

MGMT 614. Business as an Evolving Complex System. 3 Units.
The goal of this course is to provide a foundation for understanding
how business systems evolve, why the business systems in the major
advanced countries have evolved differently over the last 100 years
or so, and what the underlying driving forces are. The focus is on
transformation rather than economic growth. The course examines
the evolution of business systems as a result of technological and
organizational change. It deals with the role of history, culture and finance
in generating business organizations in various countries. The course
also studies the emergence of regional innovation systems and industry
clusters, as well as how digitization and globalization are changing
the industrial logic. Prereq: Must be enrolled in PhD in Mgt: Designing Sustainable Systems.

MGMT 616. Global Economic Systems and Issues. 3 Units.
This course provides a framework and analytical tools for understanding
globalization and international economic relations in the context of the
global political system. It analyzes the economic and political forces
that are shaping global cooperation on economic matters, the role and
impact of international economic institutions such as the World Bank,
the International Monetary Fund, and the World Trade Organization,
and evolving forms of regional governance, such as the European
Union. It covers national and international policies and development
and the causes and cures of international financial crises. The course
revolves around concepts of efficiency, equality, power and institutions
in the making of public policy towards globalization of communications
and transportation. Prereq: Must be enrolled in Ph.D in Management:
Designing Systems track.

MGMT 617. Technology and Social System Design. 3 Units.
This course explores the process of design to become a better
designer and interventionist who anticipates and evaluates the social,
economic, and political consequences of existing and emerging products,
processes, and organizational forms. Prereq: Must be enrolled in PhD in
Management: Designing System Systems track.

MGMT 640. Social Ethics: Contemporary Issues. 3 Units.
The course draws upon intellectual ancestors and current thinkers
in moral philosophy and ethics to assist each student in identifying,
analyzing, and discussing social and ethical questions pertaining to
the definition and purpose of contemporary life, the need for moral
coherence, and the meaning of life in a global society. The unifying
theme of the course is Tolstoy's question, "How then shall we live?" The
course does not seek to provide answers to the great questions of life.
Rather, it tries to expand each student's capacity to grapple with such
questions. Prereq: Students in PhD Management program or requisites
not met permission.

MGMT 641. Qualitative Res Methods II. 3 Units.
This course guides the student in conducting the qualitative research
project that was proposed in EDMP 638. Fieldwork and initial analysis
is conducted during the summer when data based on semi-structure
interviews is collected and analysis begins using inductive coding
techniques. A summer residency is held in mid-June to assess progress
as final data collection and analysis continues. The aim of the fall
semester is to prepare a formal research report on that project, which
will be submitted to an academic research conference. The final
report includes a revision of one's conceptual model, integrating new
understandings and literature arising from the data collection and
analysis. Prereq: Only for students in PhD in Management: Designing Sustainable Systems, or by permission of the Program Director.
MGMT 643. Measuring Bus Behav & Struc. 3 Units.
This course aims to develop the basic foundations and skills for designing and executing generalizable studies that measure business behaviors and structures. It focuses on building competence in building of measurement systems, construct measurement, research design, data collection methodologies, and application of analytical software commonly involved in quantitative inquiry. Covered topics include framing research questions, reliability and validity of measurement, quasi-experimental research design, and fieldwork for data collection. Classes are designed to balance theory and practice through quantitative research design and will be linked to the participant's own research project. Prereq: Only for students in PhD in Management: Designing Sustainable Systems, or by permission of the Program Director.

MGMT 645. Integration of Qualitative and Quantitative Inquiry. 3 Units.
Using the mixed method research toolkit developed in previous courses, this course focuses on critically analyzing selected pieces of published applied and policy research to develop a critical appreciation of issues and debates that have wide applicability and relevance. In particular, it offers students ways to integrate and triangulate using a mixed method approach, different forms of evidence, and related evidence. In addition, this course addresses common method choice and justification issues and related challenges of validity and theory formulation that typically arise during the students' execution of a series of individual research projects. Application of critical analysis and appreciation approach in justifying mixed methods designs to the student's own research work is encouraged and supported by sharing and discussing common research and methodology themes and problems. Prereq: Students in PhD Management program or requisites not met permission.

MGMT 646. Advanced Analytical Methods for Generalizing Research. 3 Units.
This course addresses advanced topics in regression and structural equation modeling such as latent growth curve models, partial least squares, logit models, tests for various types of invariance, multiple-group analysis, multilevel analysis, and analyzing qualitative/categorical data. These analytical methods are intended to enhance the student's toolkit as to facilitate a strong bridge to the academic literature and the application to specific data based problems that arise in applied managerial research. Prereq: Students in PhD Management program or requisites not met permission.

MGMT 648. Causal Analy of Bus Prob I. 3 Units.
Causal Analysis of Business Problems I introduces fundamental concepts in theory-based model building and validation. In this course students will develop, explore, refine a range of models appropriate for addressing their problem of practice including classification models, process models, variance models, and articulating nomological networks. In particular, the course will focus on effective conceptualizations of causation, control, mediation, and moderation. Further, foundational statistical techniques such as tests of assumptions of the data, exploratory factor analysis, and regression and path analysis will be introduced to analyze concepts of causation, control, mediation and moderation. Prereq: Only for students in PhD in Management: Designing Sustainable Systems, or by permission of the Program Director.

MGMT 649. Causal Analy of Bus Prob II. 3 Units.
Building upon the first course in Causal Analysis of Business Problems, this course will guide students through the theoretically-grounded variance models that are required for testing through structural equation modeling (SEM) in the quantitative portion of their research. Fundamental concepts in model testing will be reinforced using path analysis, and will include a deeper exploration of moderation by addressing topics such as moderated mediation and interaction effects. Beyond the analysis the course will emphasize precise and accurate formulation of theoretical models and associated reasoning, as well as careful interpretation of findings. The class will also delve into testing of data assumptions and prepare students for the model testing portion of their capstone assignments. Prereq: Only for students in PhD in Management: Designing Sustainable Systems, or by permission of the Program Director.

MGMT 664. Knowledge Dissemination to Influence Managerial Practice. 3 Units.
The aim of this course is twofold. First, it supports students organizing and writing their DM thesis overview or their PhD thesis proposal. Also discussed are ways to organize and communicate in scientific genres, their aims and their generic properties. Secondly, students become acquainted with scientific communication and publishing. Effective reviewing, criteria for judging articles and theses, management of review processes, and how to communicate and respond to reviews are topics discussed. The course also addresses publication strategies and ways of managing and communicating scientific and managerial knowledge to different stakeholders. Prereq: Students in PhD Management program or requisites not met permission.

MGMT 671. Design and Sustainable Systems. 3 Units.
The goal of this course is to introduce doctoral students to the nature and practice of design as a strategy of inquiry as well as a mode of action in addressing the problems of creating and managing sustainable human systems. The objectives are (1) to introduce the conceptual framework of design, (2) the nature of human interaction as seen from the perspective of design, (3) the intellectual and practical strategies of design, (4) the methods and techniques of design that are relevant to the study and design of sustainable human systems, and (5) the nature of “wicked problems” and the ethical issues of design, with special attention to the place of human dignity in the design of sustainable systems. The course will employ key elements of the literature of design, close reading and discussion, and exercises that explore the concepts and methods of design. Prereq: Students in PhD Management program or requisites not met permission.
MGMT 672. Flourishing Enterprise: Creating Sustainable Value for Business and World Benefit. 3 Units.
This course is designed to galvanize new visions of business and society, as well as organizational leadership. The course is born of a conviction that the future of human society and the natural world is intimately linked to the future of the world economy, business enterprises, and management education. The course presents, books, dialogues, and interview projects are organized around three themes: (1) the state of the world and the economics possibilities of our time, (2) the business case for understanding business as an agent of world benefit—how business performance can profit from current and future advances in sustainable design and social entrepreneurship; and (3) tools for becoming a change leader—including the methods of Appreciative Inquiry and new insights about “strength-based” change emerging from the science of human strengths. The overarching aim is to provide a powerful introduction to the many facets of sustainable value creation as a complete managerial approach. Prereq: Must be a student in the PhD in Management: Designing Sustainable Systems track.

MGMT 673. Understanding, Designing, Managing Complex Systems. 3 Units.
The purpose of this course is to provide a perspective on systems thinking and complex systems to aid students in expanding the ideas in their research on systems, systems models, and complex systems. The work of the course will develop with increasingly difficult books on the subject of complex systems, a major case study in health care, and individual applications of the concepts to their potential research model and methods. Prereq: Students in PhD Management program or requisites not met permission.

MGMT 677. Designing Sustainable Systems. 3 Units.
Students in teams will recognize and work in practice on a managerial problem that involves dimensions of sustainability and design. They will develop a set of solutions to the problem by generating alternative models and intervention strategies to address the problem. The project results in a short presentation and written communication of the solution in a form of a poster or prototype. The course will also include presentations of intervention and action research approaches and issues of inquiry validation and theory development. Prereq: Only for students in PhD in Management: Designing Sustainable Systems.

MGMT 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Must be enrolled in Ph.D. in Management: Designing Sustainable Systems and have predoctoral research consent or advanced to Ph.D. candidacy milestone.

MIDS Courses
MIDS 301. Introduction to Information: A Systems and Design Approach. 3 Units.
Managers must design business systems and flows of information that enable an organization to operate successfully in changing environments. This course will explore what “design,” “systems,” “information” and “environment” really mean in this context. You will develop a systems and design perspective on information and organizations that will inform your future work as a manager and leader. You will learn how to model organizations and their environments to reveal how they reflect foundational concepts of information theory, cybernetic control and complexity. You will also learn to evaluate multiple levels of information design, including communication design, product design, experience design and organization design, as an integral part of your management skills. In addition, you will study the strategic use of contemporary information technologies (e.g., enterprise systems, cloud computing, crowd sourcing, viral marketing, distributed innovation, and social media) to understand how they have changed the competitive landscape of business. Throughout the course, you will be challenged to develop new skills for analyzing organizations, environments and systems, and for using design concepts and methods to create information environments that will enable successful organizations.

MIDS 360. Independent Study. 1 - 18 Unit.
MIDS 409. System and Design Thinking. 3 Units.
For over a half-century, the field of information systems has been learning about the design, development, testing, and use of complex systems. Computers are just the start. The networks that connect them to create a massive communications grid, the software that runs on them, and the impact of these artifacts on organizations have all generated large bodies of knowledge. Two modes of thinking have proven particularly valuable in making sense of these developments—system thinking and design thinking. While this course applies concepts from system thinking and design thinking to problems related to using information in organizations, the techniques are widely applicable to managing.
MIDS 420A. Design in Management: Concept and Practices. 3 Units.
Designing is giving form to an idea to conceive of a more desirable product, service, process or organization and refining the idea into something that can be delivered reliably and efficiently. Good design integrates these evolving ideas with the day-to-day realities of a firm's operations, systems, marketing, economics, finance and human resources. Designing is thus a unique managerial activity that brings together changing technologies, capabilities, relationships, activities and materials to shape an organization's plans and strategies. It combines analysis and synthesis in ways that are integrative and inventive, and through it managers create opportunities and means of attaining them. Viewed this way, designing is a core competence of a successful entrepreneur or innovative leader. This course is the first in a two-semester sequence. Design analysis is the systematic review of the four orders of design found in every firm--namely, the firm's communications, products, interactions and environments--and the creation of opportunities to increase firm value by improving each. Students will identify ill-defined, ill-structured problems within organizations. Such problems are ones for which there are no definitive formulations and for which the formulation chosen affects the solutions available. For such problems, there is no explicit way of knowing when you have reached a solution, and solutions cannot necessarily be considered correct or incorrect. But finding innovative solutions to such problems can provide unique opportunities to distinguish organizations and to create exceptional value. A major outcome of the semester's inquiry is a presentation of the challenges and opportunities discovered during the design analysis of the client organization. The presentation will include a conceptualization of the client's current situation and opportunities, along with a statement of their design requirements. It is successful to the extent that it demonstrates learning by creating unexpected value to the client.

MIDS 420B. Design in Management: Concept and Practices. 3 Units.
Designing is giving form to an idea to conceive of a more desirable product, service, process or organization and refining the idea into something that can be delivered reliably and efficiently. Good design integrates these evolving ideas with the day-to-day realities of a firms' operations, systems, marketing, economics, finance and human resources. Designing is thus a unique managerial activity that brings together changing technologies, capabilities, relationships, activities and materials to shape an organization's plans and strategies. It combines analysis and synthesis in ways that are integrative and inventive, and through it manages to create opportunities and means of attaining them. Viewed this way, designing is a core competence of a successful entrepreneur or innovative leader. This course is the first in a two-semester sequence. Design analysis is the systematic review of the four orders of design found in every firm--namely, the firm's communications, products, interactions and environments--and the creation of opportunities to increase firm value by improving each. Students will identify ill-defined, ill-structured problems within organizations. Such problems are ones for which there are no definitive formulations and for which the formulation chosen affects the solutions available. For such problems, there is no explicit way of knowing when you have reached a solution, and solutions cannot necessarily be considered correct or incorrect. But finding innovative solutions to such problems can provide unique opportunities to distinguish organizations and to create exceptional value. A major outcome of the semester's inquiry is a presentation of the challenges and opportunities discovered during the design analysis of the client organization. The presentation will include a conceptualization of the client's current situation and opportunities, along with a statement of their design requirements. It is successful to the extent that it demonstrates learning by creating unexpected value to the client. Prereq: MIDS 420A.

MIDS 440. Design of Disruptive Business Models. 3 Units.
This course will explore the design of business models that disrupt traditional or established business patterns. With the shift toward services and human interactions as the foundation of many new companies, this course will focus on methods of inventing and developing business models that use digital technology, information, and service concepts to meet new needs in areas of retail, medical care, and other areas of business opportunity.

MIDS 461. Change Management. 3 Units.
Change is an inherent dimension of organizational life-new policies, regulations, technologies, people, products, competitors, markets, processes, physical facilities...the list goes on. Consequently, the abilities to adapt to and manage technical and organizational changes are critical managerial competencies. This course aims to provide a framework for planning, analyzing, and managing those changes over which you as a manager will have some control. Though our discussions will focus on technology-enabled and technology-related change, the intention is to equip you with a process model, tools, and guiding principles that can be applied more generally to other change processes.

MIDS 501. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to students undertaking reading in a field of special interest.

MIDS 527. Seminar in MIDS. 3 Units.
This seminar addresses topics of current interest with a strong emphasis on research. It is intended primarily for the faculty and doctoral students of the MIDS Department.

MIDS 601. Special Topics in MIDS. 1 - 18 Unit.
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.
MKMR 310. Customer Relationship Management. 3 Units.
Customer Relationship Management (CRM) is the strategic process of building and maintaining profitable, sustainable customer relationships through co-creation of value with customers in both business-to-business (B2B) and business-to-consumer (B2C) markets. This course starts with understanding the relationship between an organization's strategic goals and the structure and dynamics of organization-customer relationships. Topics include assessing CRM system design, implementation and management; the fundamentals of customer profitability analysis; customer portfolio management; B2B relationship management; sales force management and automation; and designing services programs to optimize customer experiences; and expanding customer relationships through services. Additionally, students will explore how one-to-one marketing and social networks enhance customer relationships. Learning will be accomplished through lecture and discussion, critical discussion of case studies and contemporary marketing issues, and interaction with experienced CRM marketing professionals. Prereq: MKMR 201.

MKMR 312. Selling and Sales Management. 3 Units.
Selling and sales management are keys to implementing an organization's marketing program and customer relationships. This course emphasizes developing an understanding of basic marketing concepts, selling principles, interrelationships among sales force management and other business functions, appropriate strategy for managing a sales force and measurement of sales force productivity. We will use theories of work motivation and explore how individual difference variables influence the choices of sales managers. This course uses a synthesis of sales research and leading practices to focuses on both a strategic and a tactical perspective. Strategic issues include: entrepreneurial strategy, the sales force's role in company strategy, customer relationship and strategic account management, sales force size and organization and career paths to sales management. Tactical issues include: effective approaches to selling, finding and retaining top sales talent, motivating and compensating the field force, evaluating performance, and aligning sales territories. Prereq: MKMR 201 or MKMR 301.

MKMR 348. Strategic Internet Marketing. 3 Units.
This course aims to prepare business students to think strategically and make effective marketing decisions in networked business environments. Given the increasing strategic significance of the internet across a broad spectrum of industries, it is imperative that business students develop a deep understanding of the emerging digital marketplace. The course will focus on the following topics: The emerging digital world; individuals and firms online, network technologies, business models on the internet; online branding; customer relationship management and loyalty in electronic markets; internet's impact on innovation and product management; online retailing; business-to-business e-commerce; multi-channel management; sustainable competitive advantage in the digital marketplace; legal, ethical, and public policy issues related to digital technologies; organizing for online marketing. Prereq: MKMR 201.
MKMR 350. Entrepreneurial Marketing. 3 Units.
You have a great idea. This courses helps you achieve your goals for it - whether they are commercial, societal, environmental, public policy/ political or a combination of the four. The course addresses the conceptually creative and data-driven entrepreneurial/intrapreneurial process of conceiving and implementing an operational program for realizing the goals of a market opportunity. Students select an opportunity and develop a deployable, one-year market entry program and five-year strategic marketing program. Emphasis is on the entrepreneurial marketing decision process, including defining the business model, selecting performance objectives and measures, specifying customer perceived value, assessing competitive capability and advantage, defining and analyzing the value chain and evaluating market space structure and dynamics, and complementing the players in the value chain. Identifying and properly using both secondary and primary information in management decision making is a major focus of the course. Offered as MKMR 350 and MKMR 450. Prereq: Sophomore standing.

MKMR 355. Communications Management in a Digital Marketplace. 3 Units.
In a marketplace where consumer touchpoints have gone digital and new digital methods of connecting with the consumers are emerging, this course provides a sound understanding of management of an organization’s total marketing communications. The focus is on identifying appropriate strategy and tactics for effectively communicating with end consumers and other stakeholders/public in both conventional ways and also in new and emerging ways. Students examine the roles of advertising, sales promotion and public relations, along with below the line methods like direct response advertising, and Internet based methods including display and search advertising, affiliate marketing and viral campaigns. They work with developing and managing these elements as part of an overall, synergistic communications strategy. Perspectives and metrics for evaluation of the effectiveness of marketing communications are also introduced and discussed. Prereq: MKMR 301.

MKMR 360. Independent Study. 1 - 3 Unit.
This course is offered, with permission, to students undertaking reading and research in an area of their special interest.

MKMR 403. Managerial Marketing. 3 Units.
This course focuses on managing marketing as a process of creating value and mutually desirable exchanges of values. That is the foundation of a customer orientation and a central theme of market-driven management. Methods for strategic marketing planning, understanding buyer behavior, market analysis, segmentation and devising integrated marketing programs are introduced. Creating customer value and competitive advantage in worldwide markets is the central theme. Prereq: ACCT 401.

MKMR 405. Business Marketing. 3 Units.
This course focuses on concepts and practices of business-to-business marketing of products and services. It also examines how rapid technological change impacts industrial markets. Topics covered include: buyer-seller relationship building, competitive bidding, developing markets for new materials and value-based pricing strategies. Marketing to the government, marketing of intellectual property and marketing-R&D-manufacturing interface issues will also be explored. Prereq: MKMR 403 or MBAP 407 or MBAC 506 or (GMBA 401A and GMBA 402A and GMBA 403A and GMBA 401B and GMBA 402B and GMBA 403B).

MKMR 408. Marketing Metrics. 3 Units.
Evaluation and control are important strategic marketing processes and without effective and consistent measurement, these processes cannot be performed adequately. In recent years, marketing budgets have been challenged by top managers as the value of these expenditures to an organization’s financial well being is not often clear. Marketing activities such as advertising, sales promotions, sales force allocation, new product development and pricing all involve up-front investments and making these investments now require increasing scrutiny. This course will be about knowing and understanding what to measure, how to measure and how to report it so the link between marketing tactics and financial outcomes is clearer. The course will include lecture by the instructor, readings (no textbook), cases, computer based data exercises and guest lectures. There will also be a team project requirement. Prereq: MBAC 506 or MKMR 403 or MBAP 407 or GMBA 401A.

MKMR 410. Marketing Insight Management. 3 Units.
Customer Relationship Management (CRM) is the strategic process of building and maintaining profitable customer relationships through co-creation of value with customers. This course starts with understanding the relationship between an organization’s strategic goals and customer relationships, including assessing CRM systems, management and implementation, in both B2B and B2C markets. Students will learn the fundamentals of customer profitability analysis, customer portfolio management, B2B relationship/sales force management and automation, designing services to optimize customer experiences, as well as expanding customer relationships through services. Additionally, students will explore how one-to-one marketing and social networks enhance customer relationships. Learning will be accomplished through critical discussion of case studies and contemporary marketing issues, and hands-on group project and presentation, and interaction with experienced CRM marketing professionals. Prereq: MKMR 403 or MBAP 407 or MBAC 506 or (GMBA 401A and GMBA 402A and GMBA 403A and GMBA 401B and GMBA 402B and GMBA 403B).

MKMR 412. E-Marketing. 3 Units.
Using a combination of lectures, cases, and hands-on projects, the course examines how the Internet influences all the key aspects of marketing, including marketing strategy, pricing, advertising, segmentation, marketing research, retailing, distribution channels, and international marketing. Additionally, the course will cover more Internet specific topics such as privacy, wireless web, sales force automation, and e-marketplace models. The course incorporates both business-to-business and business-to-consumer outlooks.
MKMR 419. Marketing Analytics for Supply Chain Managers. 3 Units.
This course will emphasize how to analyze data to support and guide strategic and tactical marketing decisions relevant for supply chain managers for understanding and contributing to marketing decision-making within the firm. Many firms have extensive information, but far fewer have the expertise to act intelligently on such information. Data must be synthesized, analyzed, and interpreted before sound marketing strategies and tactical plans can be developed. The course will emphasize three key themes: (1) Market Opportunity Analysis including competitive analysis, context assessment, and customer analytics (e.g., customer profitability and lifetime value, retention and loyalty), (2) Marketing Mix Analytics including test marketing, pricing, segmentation, and response modeling, and (3) Marketing ROI including the impact of marketing decisions and plans on fundamental financial measures such as return on marketing investment and net contribution to profit. The course uses a combination of lectures, cases, and exercises. Offered as MKMR 419 and MSOR 419. Prereq: For students in the MSM-Finance, Master of Accountancy, Master of Engineering and Management, Global MBA and Exchange programs only.

MKMR 421. Marketing Value Creation. 3 Units.
Marketing value creation is the process of creating and managing successful brands through continuous innovation. Successful brand innovation and management requires understanding evolving customer needs; creating and delivering the right products, services, and experiences; and managing the process to enhance brand equity and customer satisfaction. Through text, readings, cases, high-profile guest lectures and team projects, this engaging class will cover the innovation and branding process from discovery of unmet needs, brand and product development, to brand promotion and advertising and brand equity measurement. A sustainability thread will weave through the course, covering topics such as brand's ecological footprint, product safety, eco-friendly branding, the ethics of advertising, the impact of pricing on consumers and corporate social responsibility. The result of proper sensitivity to customer needs, social concerns and the environment is integral to the process of value creation for customers, companies and society. Prereq: MKMR 403 or MBAC 506 or MBAP 407 or GMBA 403A.

MKMR 450. Entrepreneurial Marketing. 3 Units.
You have a great idea. This course helps you achieve your goals for it - whether they are commercial, societal, environmental, public policy/ political or a combination of the four. The course addresses the conceptually creative and data-driven entrepreneurial/intrapreneurial process of conceiving and implementing an operational program for realizing the goals of a market opportunity. Students select an opportunity and develop a deployable, one-year market entry program and five-year strategic marketing program. Emphasis is on the entrepreneurial marketing decision process, including defining the business model, selecting performance objectives and measures, specifying customer perceived value, assessing competitive capability and advantage, defining and analyzing the value chain and evaluating market space structure and dynamics, and complementing the players in the value chain. Identifying and properly using both secondary and primary information in management decision making is a major focus of the course. Offered as MKMR 350 and MKMR 450.

MKMR 460. Marketing Communications Management. 3 Units.
This course provides a sound understanding of management of an organization's total marketing communications. The focus is on identifying appropriate strategies and tactics for effectively communicating with end consumers and other stakeholders/publics, in order to manage the firm's brand equity and its market, industry and societal positioning. Students examine the roles of advertising, sales promotion, point-of-purchase efforts, and public relations, and emerging direct marketing technologies. They work with developing and managing these elements as part of an overall, synergistic communications strategy. Marketing communications for ongoing as well as crisis situations are developed. Multiple perspectives on evaluation of the effectiveness of marketing communications are introduced. Topics addressed include: integrated marketing communications, brand equity management, corporate communications strategies, public relations management, and crisis management. Prereq: MKMR 403.

MKMR 475. Supply Chain Logistics. 3 Units.
The focus of this course is on the effective management of a firm's downstream processes in the supply chain that deliver goods and services to customers. Concepts, methods, and strategies are presented that can lower supply chain costs while maintaining or improving customer service. In addition, ideas for using the supply chain for competitive advantage leading to revenue enhancement are discussed. Adding value for customers is the objective. Key topics include transportation planning, inventory management, network design, and customer service goal setting. Offered as MKMR 475, MSOR 475, and OPMT 475.

MKMR 476. Strategic Sourcing. 3 Units.
The primary purpose of the course is to provide a comprehensive introduction to supply issues in manufacturing and service organizations. Procurement and supply management has evolved as a strategic function across various industries. Recent volatility in commodity prices has further enhanced the challenges in procurement. This course explores sourcing strategies in global supply chains to reduce cost and enhance the competitiveness of the firm. This course will provide you with a framework for thinking about strategic sourcing and tools to procure commodities and services efficiently. Offered as MKMR 476, MSOR 476, and OPMT 476. Not available to Operations Research MSM students.

MKMR 501. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to students undertaking reading or a project in a field of special interest.

MKMR 601. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to Ph.D. candidates undertaking reading or a project in a field of special interest.

MKMR 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
MPOD Courses

MPOD 413. Foundations of Positive Organization Development and Change. 3 Units.
This course explores and develops the art of reading and understanding social systems in ways that help us imagine, design and develop organization excellence. First it seeks to show how many of our conventional ideas about organizations are based on discourse and metaphors that lead us to see and understand organizations in partial and often limiting ways. Growing research from the domains of Positive Psychology and Positive Organization Scholarship and the theory and practice of Appreciative Inquiry will be explore to show how we can create new and more positive, strength-based ways of designing and developing social systems. Includes presentations, guest lectures and panel discussions on current topics of interest for the Masters in Positive Organization Development and Change (MPOD) candidates. Led by a faculty member of the Department of Organization Behavior, these dialogues and seminars will be presented in several of the six main residencies of the MPOD program. Reflective essays and integrative papers will enable participants to explore their practice of OD, leadership capacity, application of learnings from the program and deeply held values related to current issues and opportunities in the domain of human systems change and development. Prereq: Open to MPOD candidates only.

MPOD 414. Organization Design for a Knowledge World. 3 Units.
The objective of this course is to familiarize participants with the theory and technique of organization design and corporate change with particular emphasis on helping leaders understand and implement the latest forms of organizing in a customer-focused, electronically mediated and knowledge-driven world. Frameworks presented will be used to explore the impact of the information revolution on organization design and change, and the evolution of traditional vertically integrated and multi-divisional enterprises toward spider web structures, trans-organizational networks and communities of practice. Prereq: Open to MPOD candidates only.

MPOD 416A. Leadership, Executive Assessment and Development. 1 Unit.
Leadership with emotional intelligence will be examined by studying a number of topics and applying them to two major case studies: 1) a CEO; and 2) yourself. In this context, coaching the development of leadership will be a major topic throughout the course. This course will explore questions such as: Who are effective leaders? Are they different from effective managers? How do they think and act? What makes us want to follow them? How are leaders developed? What and how can people (you) help/coach others develop their competencies to become more effective leaders? (Part one of a three-section course.) Prereq: MPOD 416B.

MPOD 416B. Leadership, Executive Assessment and Development. 1 Unit.
Leadership with emotional intelligence will be examined by studying a number of topics and applying them to two major case studies: 1) a CEO; and 2) yourself. In this context, coaching the development of leadership will be a major topic throughout the course. This course will explore questions such as: Who are effective leaders? Are they different from effective managers? How do they think and act? What makes us want to follow them? How are leaders developed? What and how can people (you) help/coach others develop their competencies to become more effective leaders? (Part three of a three-section course.) Prereq: MPOD 416B.

MPOD 418. Sustainability for Strategic Advantage. 2 Units.
Sustainability is introduced as a movement in business to create value by responding to social and environmental problems in ways that meet current needs without reducing future capacity. Students are introduced to systems thinking skills, such as whole system mapping, causal loop modeling, emergent hypotheses, stakeholder analysis and engaging productive dialogues. Emphasis is placed on use of these skills as methods for working with clients to create actionable knowledge, thereby integrating reflection with action to leave the client system stronger. Prereq: Open to MPOD candidates only.

MPOD 431A. Experiential Learning for Individuals, Teams, and Organizations. 2 Units.
This course focuses on the theory of experiential learning and its application at the individual, team, and organizational levels of analyses. This course offers the chance for students to gain insight into their individual learning and adaptive styles, and how such styles impact the way they interact and have consequence for team. The course also explores how teams and organizations learn, and the effect that cultural determinants have on learning and adaptability. In addition, the course examines how learning theory can be applied to focused institutional development projects and educational processes. The course uses presentations, lectures, research findings, interactive activities, and class discussion. The current topics of interest are for the Masters in Positive Organization and Change (MPOD) candidates. It is led by a faculty member of the Department of Organization Behavior. Reflective essays and integrative papers will enable participants to explore their learning styles and that of their organizations and teams to strengthen the practice of OD and human systems change and development. Part one of two. Prereq: MPOD students only.

MPOD 431B. Experiential Learning for Individuals, Teams, and Organizations. 1 Unit.
This course focuses on the theory of experiential learning and its application at the individual, team, and organizational levels of analyses. This course offers the chance for students to gain insight into their individual learning and adaptive styles, and how such styles impact the way they interact and have consequence for team. The course also explores how teams and organizations learn, and the effect that cultural determinants have on learning and adaptability. In addition, the course examines how learning theory can be applied to focused institutional development projects and educational processes. The course uses presentations, lectures, research findings, interactive activities, and class discussion. The current topics of interest are for the Masters in Positive Organization and Change (MPOD) candidates. It is led by a faculty member of the Department of Organization Behavior. Reflective essays and integrative papers will enable participants to explore their learning styles and that of their organizations and teams to strengthen the practice of OD and human systems change and development. Part two of two. Prereq: MPOD 431A.
MPOD 432A. Interpersonal Skills Building. 1 Unit.
The objective of this course is to hone the participant's abilities to use themselves as instruments of change and development in relationships with colleagues and clients. This requires comfort with and practice in intervening in a broad range of interpersonal and group dynamics, and knowledge of how one's unique personal style and character serve as both strengths and weaknesses in dealing with others in a helping relationship. Participants will explore theories of adult development, interpersonal and group dynamics, diagnose their interpersonal needs and styles, and practice techniques for developing generative relationships with clients across the OD (organization development) cycle and as process consultants in group settings. (Part one of two.) Prereq: Open to MPOD candidates only.

MPOD 432B. Interpersonal Skills Building. 2 Units.
The objective of this course is to hone the participant's abilities to use themselves as instruments of change and development in relationships with colleagues and clients. This requires comfort with and practice in intervening in a broad range of interpersonal and group dynamics, and knowledge of how one's unique personal style and character serve as both strengths and weaknesses in dealing with others in a helping relationship. Participants will explore theories of adult development, interpersonal and group dynamics, diagnose their interpersonal needs and styles, and practice techniques for developing generative relationships with clients across the OD (organization development) cycle and as process consultants in group settings. (Part two of two.) Prereq: Open to MPOD candidates only.

MPOD 435. Practicum in Appreciative Inquiry and Positive OD. 3 Units.
This course develops participants' consultative skills. Competence in role entry and development, data collection, intervention and evaluation is gained through class exercises and field projects. The focus is on developing a problem-centered approach to intervening in organizations that minimizes reliance on programmed techniques and maximizes collaborative innovation and learning between client and consultant. Prereq: Open to MPOD candidates only.

MPOD 439A. Individual Field Project. 2 Units.
The objective of this course is to plan and execute a significant organization development, change and/or analysis project with an ongoing client or employer. Emphasis is placed on the craft of developing projects that are consistent with one's current skills, career plans and developmental needs, combined with the needs, opportunities, readiness, and resources of the client organization. This course is limited to candidates for the MPOD program. (Part one of a two section course.) Prereq: MPOD 439A.

MPOD 439B. Individual Field Project. 2 Units.
The objective of this course is to plan and execute a significant organization development, change and/or analysis project with an ongoing client or employer. Emphasis is placed on the craft of developing projects that are consistent with one's current skills, career plans and developmental needs, combined with the needs, opportunities, readiness, and resources of the client organization. This course is limited to candidates for the MPOD program. (Part two of a two-section course.) Prereq: MPOD 439A.

MPOD 470A. Leading Change from a Complexity Perspective. 1 Unit.
In this course, we will continuously attempt to answer two questions: (1) What is the process of sustained, desirable change? and (2) What is the role of a leader? Concepts from complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad, team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. In this context, coaching the development of leadership will be a major topic throughout the course. Prereq: MPOD candidates only.

MPOD 470B. Leading Change from a Complexity Perspective. 2 Units.
In this course, we will continuously attempt to answer two questions: (1) What is the process of sustained, desirable change? and (2) What is the role of a leader? Concepts form complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad, team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. In this context, coaching the development of leadership will be a major topic throughout the course. Prereq: MPOD candidates only.

MPOD 479. Foundations of Strategic Thinking. 3 Units.
This course will define what constitutes strategic change and what does not. Students will be introduced to a variety of strategic interventions and models from which to interpret, understand and achieve positive organizational change. Opportunity will be provided to apply selected models to the student's organization and other cases in order to gain insight and appreciation for financial and non-financial factors that influence fundamental organizational growth and development. Prereq: Open to MPOD candidates only.

MPOD 480. Dynamics of Effective Consulting Strategies. 3 Units.
This course will: 1) highlight the major current trends and changes that affect the nature of managerial work; 2) describe how OD practitioners and consultants need to factor such trends into their consulting strategies; 3) differentiate between types of interventions, the circumstances in which they apply and their unique strengths; 4) provide background theories that explain the challenges inherent in mobilizing positive change; 5) describe ways to bridge the gap between knowing and doing in order to build organization resilience; and 6) introduce a variety of consulting techniques and skills that the students can add to their repertoire. Prereq: Open to MPOD candidates only.

MPOD 498. Global Citizenship and Multi-Cultural OD: International Study Tour. 3 Units.
This course will broaden perspectives and knowledge of how OD principles and technologies are generated and applied in contexts and cultures outside of North America. Selected literature representing global perspectives on the practice of OD and field experiences will provide support and background for personal experience and reflection on cross-cultural issues in organizing. The primary learning context will be an intense, 10-day study tour to some country outside of North America to provide the participants with opportunities for: 1) comparative studies of OD practices in different cultural settings; 2) in-depth experiences with OD practitioners and students in a different national, regional and cultural context; 3) co-inquiry with non-North American students also involved in developing OD knowledge and skills; and 4) on-site organization visits outside of North America to observe and learn about on-going dynamic change efforts. Prereq: Open to MPOD candidates only.
MSFI Courses

MSFI 401. Financial Orientation. 1.5 Unit.
This is a mandatory preparatory/refresher course for all entering MSM-Finance students. It will cover several basic topics in statistics, financial accounting and in financial management, so that all students can hit the road running with the other MSM-Finance core courses in the first semester. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 403. Corporate Finance. 3 Units.
The purpose of this course is to familiarize the student with the theory and application of additional models used in financial decision-making by corporations. Issues relating to efficient markets, dividend policy, capital structure, financing decisions, option pricing, leasing, and risk management are among the topics considered. In addition, special topics may include mergers and acquisitions, pension funds, and international financial management. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 404. Financial Modeling. 3 Units.
Firms try to create value. In their day-to-day operations, they are faced with numerous challenges: Should we accept trade credit or borrow? Will an acquisition create or destroy value? Should we introduce a new product line even if it cannibalizes an existing one? In each of these situations they try to quantify the impact on the value of their firm. The goal of this course is to develop your skills in financial modeling and valuation, so you can tackle issues like the ones described above. The course is designed to be "hands-on": You will learn to apply the theory and develop spreadsheet modeling skills through the homework, case studies and a group project. By the end of the course you will have a good understanding of both the theory and practice of valuation, and possess a set of cutting-edge financial modeling skills. This course is designed for students who aspire to work in a regular company, a bank or a consulting firm in (I) corporate finance (including mergers and acquisitions); (II) strategy; or (III) equity analysis. This course is for MSF-MSM and ACL-MSF students only. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 421. Corporate Financial Analysis. 3 Units.
This course is designed to lay the analytic foundation for careers in corporate finance, banking, consulting, and investment banking. The objective of the course is to strengthen students’ conceptual understanding and problem-solving skills, and teach them how to think on their feet. Topics covered include Economic cash flows and valuation, Valuation methods, Long term financial planning and ratios analysis, Growth and external financing, Managerial options and valuation, Capital structure, and Payout policy. Topics covered may change from semester to semester. The course envisages use of spreadsheets and case studies, and will emphasize on links to real-world events. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 428. Financial Strategy and Value Creation. 3 Units.
The intersection between the theory of perfect markets and the reality of market imperfections provides the basis for the exploration of value creation in this course. Opportunities in both product and financial markets are explored using case studies to develop a framework for strategic financial decisions. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 429. Investment Management. 3 Units.
This course explores the characteristics of financial investments and markets and develops modern techniques of investment analysis and management. The goal is to help students develop a level of analytical skill and institutional knowledge sufficient to make sensible investment decisions. Topics include: an overview of stock, debt and derivative asset markets, practical applications of modern portfolio theory, equilibrium and arbitrage-based approaches to capital market pricing, the debate over market efficiency, the term structure of interest rates, bond portfolio management, and uses of derivative assets in investment portfolios. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 430. Derivatives and Risk Management. 3 Units.
This course is intended to give students an understanding of options and futures markets both in theory and practice. The emphasis is on arbitrage and hedging. The course concentrates on listed common stock and index contracts as well as commodity markets. Various theories for trading strategies are studied. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 431. Fixed Income Markets and Their Derivatives. 3 Units.
This class is concerned with fixed income securities, interest rate risk management, and credit risk. Fixed income securities account for about two thirds of the market value of all outstanding securities, and hence this topic is important. The course covers the basic products of fixed income markets including treasury and LIBOR products, such as interest rate swaps. Risk management and hedging strategies are covered as well as selected topics in credit risk models and mortgage-backed securities. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 432. Corporate Risk Management. 3 Units.
This is a risk management course aimed at developing an understanding of the risks faced by financial and nonfinancial firms, learning techniques to identify and measure these risks, and understanding how financial engineering (especially derivatives) can be used to manage these risks and advance the strategic goals of the firm. Main topics include Value-at-Risk (VaR) techniques and implementation of VaR systems (RiskMetrics, Delta-normal, Historical Simulation, Structured Monte-Carlo); financial risk measurement and management using forwards, futures, options, swaps, and exotics; and credit risk management, including implementing various credit risk and credit VaR models, estimating capital at risk, and using credit derivatives for managing credit risk. Several classes are devoted to discussing recent risk management debacles and relating them to theory. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 433. Quantitative Risk Modeling. 3 Units.
This course is designed to help students learn quantitative models for estimating risk in various financial settings for different types of financial institutions (banks, hedge funds, and others). It is a very hands-on course where students will become familiar with several state-of-the-art quantitative risk models as well as their detailed implementation procedure in the real world. The course uses several in-class Excel exercises to illustrate the models as well as their practical implementation using real financial data. Offered as BAFI 433 and MSFI 433. Prereq: For MSF-MSM and ACL-MSF students only.
MSFI 434. Financial Econometrics. 3 Units.
MSFI 434 represents a rigorous study of the latest developments in the area of financial econometrics. The class assumes no prior knowledge of econometrics. It assumes that you have had a basic statistics class and that you have had regression analysis. It is taught using economic motivations and examples from the financial world. The course concerns modern econometric topics like time-series forecasting, volatility modeling, and panel data analysis. Various concepts and approaches in the course will be subjected to real world data. Students are expected to have basic knowledge of the fundamentals of corporate finance and statistics. The course aims at providing a lasting conceptual framework for model building using modern applied econometric techniques commonly employed in finance. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 435. Empirical Finance. 3 Units.
MSFI 435 provides an introduction to empirical analysis and research in finance. This involves the management of empirical datasets and the aspects of quantitative applications of finance theory. The goal is to enable the student to deal with the need to analyze complex and large financial and economic datasets that is present in many fields of the financial profession. The scope of the data as well as the quantitative methods used in such analysis often requires familiarity with robust computational environments and statistical packages. As such, another goal of the course is to familiarize the student with at least one such environment. Applications are conducted using real financial and economic data. The course draws on the theoretical aspects of the subjects covered, but mainly focuses on the practical matters required to undertake an empirical analysis of financial topics--e.g., the definition of the research question, the datasets required, the computational needs, and, then, the implementation. The course enables the student to evaluate outstanding financial research as well as to conduct his or her own research. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 436A. Individual, Team and Career Development. .75 Units.
This course is designed to focus on three areas of development critical to students' personal and professional success: 1) Individual; 2) Team; and 3) Career. The individual and team aspects include developing self and other awareness through exploration of learning styles, process skills, and building communication and presentation competencies. Career development includes a focus on strategies for success such as networking, resume building, and learning from executives through intensive and interactive seminars. The course involves use of assessments, group discussions, presentations and experiential activities. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 436B. Individual, Team and Career Development. .75 Units.
This course is designed to focus on three areas of development critical to students' personal and professional success: 1) Individual; 2) Team; and 3) Career. The individual and team aspects include developing self and other awareness through exploration of learning styles, process skills, and building communication and presentation competencies. Career development includes a focus on strategies for success such as networking, resume building, and learning from executives through intensive and interactive seminars. The course involves use of assessments, group discussions, presentations and experiential activities. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 440. Financial Decisions, Contracting & Value. 3 Units.
The firm is a nexus of contracts among its various stakeholders (managers, shareholders, debt holders etc.). In this course, we will examine how value is created, and how real world conflicts between the various stakeholders of a firm lead to deviations from “perfect world” solutions. For instance, you may have learned in basic corporate finance courses that it is optimal to invest in positive NPV projects. Real-world conflicts can make it sub-optimal for shareholders do so. We will examine such issues and ways to mitigate them. In particular, we will examine Valuation, Asymmetric Information, Agency Cost, Incentive Contracts and Performance Metrics, and, time permitting, also discuss Regulation, Reputation and the role of certifiers and the economic crises. The takeaway learnings from this course are: (a) Understanding how Value can be created or destroyed, (b) Measuring Value, (c) Understanding the links between capital structure and: asymmetric information, market reactions and signaling, agency and management incentives, taxes, shareholder-bondholder conflicts etc., (d) Understanding the links between payout policy and: informational content, market reaction, stock returns and signaling, clientele effects etc., and (e) Understanding the need for and the design of incentive mechanisms. Case studies will be used to reinforce learning. We will emphasize on links to real-world events. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 444. Entrepreneurial Finance. 3 Units.
The objective of this course is to introduce students to the issues of financial management and capital formation in new ventures. The course will address issues of estimation of cash requirements, development of pro forma financial plans, firm valuation and the process and tools used in raising debt and equity financing. Bootstrapping, angel investing, venture capital, strategic alliances and initial public offerings will be covered. The emphasis is on the entrepreneur and how he/she can assess financial needs and develop a sensible plan for acquiring financial resources in a manner that is consistent with their financial needs and other strategic goals. Offered as BAFI 444 and MSFI 444. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 450. Mergers and Acquisitions. 3 Units.
This course examines the economic rationale and motivation for the different merger and acquisition and recapitalization activity undertaken by firms and individuals in the U.S. market. Emphasis is on the different three (3) methods of valuing a firm, the various forms of debt and equity capital employed to fund mergers and acquisitions and recapitalizations, how lenders and investors structure their loans and/or investments, and how investors realize the gains through different exit strategies. The course gives the student an excellent understanding of the role that senior commercial banks, insurance companies, pensions funds, LBO funds, investment banking firms, and venture/growth capital investors play in mergers and acquisitions. Prereq: For MSF-MSM and ACL-MSF students only.

MSFI 480. Global Banking & Capital Markets. 3 Units.
This course will expose students to Banking and Capital Market Structure, Practices, and Regulations in North America, Europe, as well as Asia. Students will learn about structure of the financial services industry in different parts of the world, the history and evolution of the regulatory frameworks in this industry, and its consequent impact on financial and economic development as well as risk. Several case studies are used to expose students to different issues and questions that arise in the day-to-day jobs of financial managers in this industry. Offered as BAFI 480 and MSFI 480. Prereq: For MSF-MSM and ACL-MSF students only.
MSOR 406. Operations Management for MSM OR. 3 Units.
Operations managers, ranging from supervisors to vice presidents, are concerned with the production of goods and services. More specifically, they are responsible for designing, running, controlling and improving the systems that accomplish production. This course is a broad-spectrum course with emphasis on techniques helpful to the practice of management at the analyst level. Its goal is to introduce you to the environments, to help you appreciate the problems that operations managers are confronted with, and provide you with the tools to address these problems. Operations Management spans all value-adding activities of an organization including product and process design, production, service delivery, distribution network and customer order management. As global competition in both goods and services increases, a firm's survival depends on how well it structures its operations to respond quickly to changing consumer needs. Thus, it is essential for all business managers to acquire an understanding of operations management to maintain their competitive advantage. This course provides students with the basic tools needed to become an analyst in Supply Chain and Operations Management. This course provides an overview of Process analysis, Capacity management, Queueing system, analysis, Forecasting, Quality management, Material Requirements planning, Inventory management, and Supply Chain management. The emphasis of the course is on both real world applications and technical problem solving. Several manufacturing and non-manufacturing environments will be discussed explicitly, like health care, insurance, hotel-management, airlines and government related operations. Also we will explore the interface of operations management with other functional areas such as marketing, finance, accounting, etc. This coursework includes individual and group assignments, case analyses and experiential learning through simulations and educational games. Prereq: Course limited to students in Program=OPRMS, Plan=ORSC-MSM.

MSOR 410. Financial Management for Supply Chain. 3 Units.
This course focuses on learning the language of business, how basic accounting information is reported and analyzed, and how basic financial principles can be applied to understanding how value is created within an enterprise. This course is intended for individuals who have a limited background in accounting, finance and business. Most of the exercises will involve evaluating and building models in Excel. Teaching objectives are fairly straightforward: 1. Provide you with a basic understanding of the key principles of accounting and finance. We will quickly cover material that is typically covered in a three-course sequence (Introductory Accounting and Finance I and II). We will fly at a fairly high level, but we want to make sure you understand the basic concepts. 2. Apply these concepts to real (but straightforward) business situations, to gain a better understanding of how companies utilize accounting and financial information. 3. Time permitting, explore how these concepts can be applied to securities, mergers and acquisitions and leveraged buyout transactions, with a specific emphasis on how these concepts are likely to surface in your role in such transactions. Prereq: Course limited to students in Program=OPRMS, Plan=ORSC-MSM.

MSOR Courses

MSOR 406. Operations Management for MSM OR. 3 Units.
Operations managers, ranging from supervisors to vice presidents, are concerned with the production of goods and services. More specifically, they are responsible for designing, running, controlling and improving the systems that accomplish production. This course is a broad-spectrum course with emphasis on techniques helpful to the practice of management at the analyst level. Its goal is to introduce you to the environments, to help you appreciate the problems that operations managers are confronted with, and provide you with the tools to address these problems. Operations Management spans all value-adding activities of an organization including product and process design, production, service delivery, distribution network and customer order management. As global competition in both goods and services increases, a firm's survival depends on how well it structures its operations to respond quickly to changing consumer needs. Thus, it is essential for all business managers to acquire an understanding of operations management to maintain their competitive advantage. This course provides students with the basic tools needed to become an analyst in Supply Chain and Operations Management. This course provides an overview of Process analysis, Capacity management, Queueing system, analysis, Forecasting, Quality management, Material Requirements planning, Inventory management, and Supply Chain management. The emphasis of the course is on both real world applications and technical problem solving. Several manufacturing and non-manufacturing environments will be discussed explicitly, like health care, insurance, hotel-management, airlines and government related operations. Also we will explore the interface of operations management with other functional areas such as marketing, finance, accounting, etc. This coursework includes individual and group assignments, case analyses and experiential learning through simulations and educational games. Prereq: Course limited to students in Program=OPRMS, Plan=ORSC-MSM.

MSF 490. Projects in Corporate Finance. 3 Units.
This course is focused on engaging groups of students in identifying, analyzing and making decisions on real-world risk management financial problems. Teams of students will be assigned to a specific client situation drawn from one of three general areas: (i) investments and hedge funds, equity and portfolio management, fixed income and foreign exchange and (ii) risk management with derivatives, credit risk management, risk analytics, regulatory capital, asset liability bank management. This course is structured to be a capstone experience that allows students to leverage the broad range of skills, tools and approaches introduced throughout the program. It is intended to provide an important bridge from work in the classroom to the unstructured, chaotic nature of real world business. Prereq: For MSF-MSM and ACL-MSF students only.

MSF 491. Projects in Risk Management. 3 Units.
This course is focused on engaging groups of students in identifying, analyzing and making decisions on real-world risk management financial problems. Teams of students will be assigned to a specific client situation drawn from one of two general areas: (i) investments and hedge funds, equity and portfolio management, fixed income and foreign exchange and (ii) risk management with derivatives, credit risk management, risk analytics, regulatory capital, asset liability bank management. This course is structured to be a capstone experience that allows students to leverage the broad range of skills, tools and approaches introduced throughout the program. It is intended to provide an important bridge from work in the classroom to the unstructured, chaotic nature of real world business. Prereq: For MSF-MSM and ACL-MSF students only.

MSOR Courses

MSOR 406. Operations Management for MSM OR. 3 Units.
Operations managers, ranging from supervisors to vice presidents, are concerned with the production of goods and services. More specifically, they are responsible for designing, running, controlling and improving the systems that accomplish production. This course is a broad-spectrum course with emphasis on techniques helpful to the practice of management at the analyst level. Its goal is to introduce you to the environments, to help you appreciate the problems that operations managers are confronted with, and provide you with the tools to address these problems. Operations Management spans all value-adding activities of an organization including product and process design, production, service delivery, distribution network and customer order management. As global competition in both goods and services increases, a firm's survival depends on how well it structures its operations to respond quickly to changing consumer needs. Thus, it is essential for all business managers to acquire an understanding of operations management to maintain their competitive advantage. This course provides students with the basic tools needed to become an analyst in Supply Chain and Operations Management. This course provides an overview of Process analysis, Capacity management, Queueing system, analysis, Forecasting, Quality management, Material Requirements planning, Inventory management, and Supply Chain management. The emphasis of the course is on both real world applications and technical problem solving. Several manufacturing and non-manufacturing environments will be discussed explicitly, like health care, insurance, hotel-management, airlines and government related operations. Also we will explore the interface of operations management with other functional areas such as marketing, finance, accounting, etc. This coursework includes individual and group assignments, case analyses and experiential learning through simulations and educational games. Prereq: Course limited to students in Program=OPRMS, Plan=ORSC-MSM.

MSOR 410. Financial Management for Supply Chain. 3 Units.
This course focuses on learning the language of business, how basic accounting information is reported and analyzed, and how basic financial principles can be applied to understanding how value is created within an enterprise. This course is intended for individuals who have a limited background in accounting, finance and business. Most of the exercises will involve evaluating and building models in Excel. Teaching objectives are fairly straightforward: 1. Provide you with a basic understanding of the key principles of accounting and finance. We will quickly cover material that is typically covered in a three-course sequence (Introductory Accounting and Finance I and II). We will fly at a fairly high level, but we want to make sure you understand the basic concepts. 2. Apply these concepts to real (but straightforward) business situations, to gain a better understanding of how companies utilize accounting and financial information. 3. Time permitting, explore how these concepts can be applied to securities, mergers and acquisitions and leveraged buyout transactions, with a specific emphasis on how these concepts are likely to surface in your role in such transactions. Prereq: Course limited to students in Program=OPRMS, Plan=ORSC-MSM.
MSOR 419. Marketing Analytics for Supply Chain Managers. 3 Units.
This course will emphasize how to analyze data to support and guide strategic and tactical marketing decisions relevant for supply chain managers for understanding and contributing to marketing decision-making within the firm. Many firms have extensive information, but far fewer have the expertise to act intelligently on such information. Data must be synthesized, analyzed, and interpreted before sound marketing strategies and tactical plans can be developed. The course will emphasize three key themes: (1) Market Opportunity Analysis including competitive analysis, context assessment, and customer analytics (e.g., customer profitability and lifetime value, retention and loyalty), (2) Marketing Mix Analytics including test marketing, pricing, segmentation, and response modeling, and (3) Marketing ROI including the impact of marketing decisions and plans on fundamental financial measures such as return on marketing investment and net contribution to profit. The course uses a combination of lectures, cases, and exercises. Offered as MKMR 419 and MSOR 419. Prereq: For students only in the MSM-OR/SC program.

MSOR 420. Six Sigma and Quality Management. 3 Units.
The Six Sigma process is the standard for quality improvement in organizations around the globe. In this course, we study the details of the five steps in the Six Sigma process: DEFINE, MEASURE, ANALYZE, IMPROVE, and CONTROL (DMAIC). Many tools, concepts, and processes that are often an integral part of Six Sigma projects in companies are included in the course content. They range from the very basic tools of quality (such as cause-and-effect diagrams for brainstorming) to complete processes (such as benchmarking, quality function deployment, failure mode and effects analysis-FMEA). Statistical concepts with software applications that are central to Six Sigma including statistical process control and introduction to design of experiments are also included. Once the Six Sigma process and its various components are understood, we study quality management including quality control, quality planning, quality improvement, strategic quality management, and quality strategy. A major requirement of the course is an action learning component in which the students are assigned in groups to work on unpaid real projects of Six Sigma in local industries. Students meeting the required standards of performance will earn a Green Belt Certification in Six Sigma and Quality Management from the Weatherhead School of Management. Offered as MSOR 420 and OPMT 420. Prereq: For students in OPRMS Program/ORSC-MSM plan.

MSOR 422. Lean Operations. 3 Units.
In this course, students will be taught how to identify inefficiencies associated with overproduction, waiting, transport, extra processing, inventory, motion, and defects. One-by-one, areas of inefficiencies are to be identified and improved while educating the workforce towards continual improvement. Similarly, participants will be trained to reduce lead times in areas such as engineering design, order entry, purchasing, order fulfillment, receiving, production, packaging, shipping, invoicing, and collection. The above improvements will lead to cost reductions. Students will be trained in costing techniques, target pricing, and cost maintenance. The course will be delivered along the following themes: 1) Mapping the Value Stream (current and future state) 2) Workplace Organization: SS & Safety, 3) Defect Reduction and Error Proofing, 4) Quick Changeover, 5) Standard Operations, 6) Total Productive Maintenance, 7) Visual management, 8) One-piece flow, 9) Lean Metrics. This course is not oriented toward specialists in operations management. Its goal is to introduce you to the environments and help you appreciate the problems that operations managers are confronted with and the key issues in their management. Offered as MSOR 422 and OPMT 422. Prereq: For ORSC-MSM students only.

MSOR 433. Probability, Statistics, and Forecasting. 3 Units.
Data of many kinds are typically available in practice, but the challenge is to use those data to make effective professional decisions. This software-intensive course begins with useful descriptions of data and the probability theory foundation on which statistics rests. It continues to statistics, including the central limit theorem, which explains why data often appear to be normally distributed, and the Palm-Khintchine theorem which explains why data often appear to have a Poisson distribution. The remainder of the course focuses on regression and forecasting, including detecting and overcoming some of the deadly sins of regression, and the surprising flexibility of regression models. Recommended preparation: One semester of undergraduate calculus or consent of instructor. Offered as MSOR 433 and OPRE 433. Prereq: For ORSC-MSM students only.

MSOR 435B. Integrated Problem Solving in OR and SC. 1.5 Unit.
This project-oriented course uses a variety of software to involve the student in the complete problem-solving process in OR and OM. This process includes problem definition and formulation, data collection, and storage in a database, connecting the database to the solution algorithm, designing and implementing an appropriate user interface, and presenting the final solution. Offered as OPRE 435B and MSOR 435B. Prereq: For ORSC-MSM students only.

MSOR 450. Project Management. 3 Units.
Project management is concerned with the management and control of a group of interrelated tasks required to be completed in an efficient and timely manner for the successful accomplishment of the objectives of the project. Since each project is usually unique in terms of task structure, risk characteristics and objectives, the management of projects is significantly different from the management of repetitive processes designed to produce a series of similar products or outputs. Large-scale projects are characterized by a significant commitment of organizational and economic resources coupled with a high degree of uncertainty. The objective of this course is to enhance the ability of participants to respond to the challenges of large-scale projects so that they can be more effective as project managers. We study in detail up-to-date concepts, models, and techniques useful for the evaluation, analysis, management, and control of projects. Offered as MSOR 450, OPRE 350 and OPMT 450. Prereq: For students in OPRMS Program/ORSC-MSM plan.

MSOR 475. Supply Chain Logistics. 3 Units.
The focus of this course is on the effective management of a firm’s downstream processes in the supply chain that deliver goods and services to customers. Concepts, methods, and strategies are presented that can lower supply chain costs while maintaining or improving customer service. In addition, ideas for using the supply chain for competitive advantage leading to revenue enhancement are discussed. Adding value for customers is the objective. Key topics include transportation planning, inventory management, network design, and customer service goal setting. Offered as MKMR 475, MSOR 475, and OPMT 475. Prereq: For students in OPRMS Program/ORSC-MSM plan.
MSOR 476. Strategic Sourcing. 3 Units.
The primary purpose of the course is to provide a comprehensive introduction to supply issues in manufacturing and service organizations. Procurement and supply management has evolved as a strategic function across various industries. Recent volatility in commodity prices has further enhanced the challenges in procurement. This course explores sourcing strategies in global supply chains to reduce cost and enhance the competitiveness of the firm. This course will provide you with a framework for thinking about strategic sourcing and tools to procure commodities and services efficiently. Offered as MKMR 476, MSOR 476, and OPMT 476. Prereq: For students in OPRMS Program/ORSC-MSM plan.

MSOR 477. Enterprise Resource Planning in the Supply Chain. 3 Units.
Enterprise resource planning is the dominant system by which companies translate the needs from their customers into the detailed plans that the company must perform to meet the customer needs, and the resulting support the company will need from its suppliers. As such, it is a central player in the process of supply chain management. In this course, we study both the quantitative and qualitative concepts and techniques to help manage a company's operations to perform these important translation and planning tasks in order to help the company be successful. The quantitative analysis will be supported by microcomputer software available in the Weatherhead computer lab. Student teams complete a series of integrated case studies from the same company to vividly see the relationships between various planning and control activities. A major emphasis during the course is the design of processes and procedures (algorithms) for solving very complex (wicked) problems as a part of both class discussions and while working on case studies, as well as critiquing the designs so as to clearly understand their limitations. Offered as MSOR 477, OPMT 377 and OPMT 477. Prereq: For students in OPRMS Program/ORSC-MSM plan.

MSOR 485A. Individual Development. 1.5 Unit.
This course is unique in the sense that its primary focus is on the student as an individual. In this course the student will get to know themselves better by completing assessments and making sense of them, having group discussions, presenting to a group as individuals, engaging in various experiential activities, conducting career interviews, attending various individual development programs and participating in two individual coaching sessions. Prereq: For ORSC-MSM students only.

MSOR 485B. Team Development. 1.5 Unit.
This course is unique in the sense that its primary focus is on the student working in teams. In this course the student will assess their team interaction based on team assignments simulated and action learning type projects, presenting to the class as a team, engaging in various experiential activities, participating one team coaching session, working with a team, and expanding their knowledge of team leadership and membership skills and abilities. They are also expected to engage with projects external to the university (similar to an action learning project). Prereq: For ORSC-MSM students only.

OPMT Courses

OPMT 350. Project Management. 3 Units.
Project management is concerned with the management and control of a group of interrelated tasks required to be completed in an efficient and timely manner for the successful accomplishment of the objectives of the project. Since each project is usually unique in terms of task structure, risk characteristics and objectives, the management of projects is significantly different from the management of repetitive processes designed to produce a series of similar products or outputs. Large-scale projects are characterized by a significant commitment of organizational and economic resources coupled with a high degree of uncertainty. The objective of this course is to enhance the ability of participants to respond to the challenges of large-scale projects so that they can be more effective as project managers. We study in detail up-to-date concepts, models, and techniques useful for the evaluation, analysis, management, and control of projects. Offered as MSOR 450, OPRE 350 and OPMT 450.

OPMT 377. Enterprise Resource Planning in the Supply Chain. 3 Units.
Enterprise resource planning is the dominant system by which companies translate the needs from their customers into the detailed plans that the company must perform to meet the customer needs, and the resulting support the company will need from its suppliers. As such, it is a central player in the process of supply chain management. In this course, we study both the quantitative and qualitative concepts and techniques to help manage a company's operations to perform these important translation and planning tasks in order to help the company be successful. The quantitative analysis will be supported by microcomputer software available in the Weatherhead computer lab. Student teams complete a series of integrated case studies from the same company to vividly see the relationships between various planning and control activities. A major emphasis during the course is the design of processes and procedures (algorithms) for solving very complex (wicked) problems as a part of both class discussions and while working on case studies, as well as critiquing the designs so as to clearly understand their limitations. Offered as MSOR 477, OPMT 377 and OPMT 477.

OPMT 405. Operations Management. 3 Units.
Operations management deals with the design of products and processes, the acquisition of resources, the conversion of inputs to outputs, and the distribution of goods and services. It is central to a firm's ability to compete effectively. As global competition in both goods and services increases, the management of operations is becoming more and more important. This course provides a broad overview of the managerial issues associated with production and delivery of goods and services. It includes the use of quantitative modeling using computers as a central methodology. Prereq: QUMM 414.

OPMT 405A. Operations Management. 1 Unit.
In recent years, a changing competitive landscape has highlighted the critical role of the operations function in ensuring business success. In this course, we treat business as a value-added chain of processes that supply and convert disparate inputs into products and services and distribute these outputs. We examine how to best design, run and improve these processes. A variety of manufacturing and service sector settings will be used as examples to illustrate the concepts. It is assumed that the student is familiar with the material covered in a basic undergraduate course in operations management. Specifically, a vocabulary of operations management terminology and proficiency in basic tools and techniques of operations management are expected. Prereq: Open to ACL-MBA students.
OPMT 420. Six Sigma and Quality Management. 3 Units.
The Six Sigma process is the standard for quality improvement in organizations around the globe. In this course, we study the details of the five steps in the Six Sigma process: DEFINE, MEASURE, ANALYZE, IMPROVE, and CONTROL (DMAIC). Many tools, concepts, and processes that are often an integral part of Six Sigma projects in companies are included in the course content. They range from the very basic tools of quality (such as cause-and-effect diagrams for brainstorming) to complete processes (such as benchmarking, quality function deployment, failure mode and effects analysis-FMEA). Statistical concepts with software applications that are central to Six Sigma including statistical process control and introduction to design of experiments are also included. Once the Six Sigma process and its various components are understood, we study quality management including quality control, quality planning, quality improvement, strategic quality management, and quality strategy. A major requirement of the course is an action learning component in which the students are assigned in groups to work on unpaid real projects of Six Sigma in local industries. Students meeting the required standards of performance will earn a Green Belt Certification in Six Sigma and Quality Management from the Weatherhead School of Management. Offered as MSOR 420 and OPMT 420. Prereq: Not available to Operations Research MSM students.

OPMT 422. Lean Operations. 3 Units.
In this course, students will be taught how to identify inefficiencies associated with overproduction, waiting, transport, extra processing, inventory, motion and defects. One-by-one, areas of inefficiencies are to be identified and improved while educating the workforce towards continual improvement. Similarly, participants will be trained to reduce lead times in areas such as engineering design, order entry, purchasing, order fulfillment, receiving, production, packaging, shipping, invoicing and collection. The above improvements will lead to cost reductions. Students will be trained in costing techniques, target pricing, and cost maintenance. The course will be delivered along the following themes: 1) Mapping the Value Stream (current and future state) 2) Workplace Organization: SS & Safety, 3) Defect Reduction and Error Proofing, 4) Quick Changeover, 5) Standard Operations, 6) Total Productive Maintenance, 7) Visual management, 8) One-piece flow, 9) Lean Metrics. This course is not oriented toward specialists in operations management. Its goal is to introduce you to the environments and help you appreciate the problems that operations managers are confronted with and the key issues in their management. Offered as MSOR 422 and OPMT 422. Prereq: Not available to ORSC-MSM students.

OPMT 430. Sustainable Operations. 3 Units.
This course takes a business approach to environmental and social issues to answer "what do I need to know about environmental and social issues to make my company more successful, and how can I act on that knowledge profitably?" We summarize important environmental and social issues facing business (and all of society), such as global climate change, pollution, economic development, hunger, and social unrest. Drawing on most areas of the MBA program, we examine environmental and social issues associated with product design and component commonality, recycling materials, product packaging, process design and remanufacturing, facility location and design (including green building), reverse logistics and closed-loop supply chains, and global supply chains.

OPMT 450. Project Management. 3 Units.
Project management is concerned with the management and control of a group of interrelated tasks required to be completed in an efficient and timely manner for the successful accomplishment of the objectives of the project. Since each project is usually unique in terms of task structure, risk characteristics and objectives, the management of projects is significantly different from the management of repetitive processes designed to produce a series of similar products or outputs. Large-scale projects are characterized by a significant commitment of organizational and economic resources coupled with a high degree of uncertainty. The objective of this course is to enhance the ability of participants to respond to the challenges of large-scale projects so that they can be more effective as project managers. We study in detail up-to-date concepts, models, and techniques useful for the evaluation, analysis, management, and control of projects. Offered as MSOR 450, OPRE 350 and OPMT 450. Prereq: Not available to Operations Research MSM students.

OPMT 475. Supply Chain Logistics. 3 Units.
The focus of this course is on the effective management of a firm's downstream processes in the supply chain that deliver goods and services to customers. Concepts, methods, and strategies are presented that can lower supply chain costs while maintaining or improving customer service. In addition, ideas for using the supply chain for competitive advantage leading to revenue enhancement are discussed. Adding value for customers is the objective. Key topics include transportation planning, inventory management, network design, and customer service goal setting. Offered as MKMR 475, MSOR 475, and OPMT 475. Prereq: Not available to Operations Research MSM students.

OPMT 476. Strategic Sourcing. 3 Units.
The primary purpose of the course is to provide a comprehensive introduction to supply issues in manufacturing and service organizations. Procurement and supply management has evolved as a strategic function across various industries. Recent volatility in commodity prices has further enhanced the challenges in procurement. This course explores sourcing strategies in global supply chains to reduce cost and enhance the competitiveness of the firm. This course will provide you with a framework for thinking about strategic sourcing and tools to procure commodities and services efficiently. Offered as MKMR 476, MSOR 476, and OPMT 476. Prereq: Not available to Operations Research MSM students.

OPMT 477. Enterprise Resource Planning in the Supply Chain. 3 Units.
Enterprise resource planning is the dominant system by which companies translate the needs from their customers into the detailed plans that the company must perform to meet the customer needs, and the resulting support the company will need from its suppliers. As such, it is a central player in the process of supply chain management. In this course, we study both the quantitative and qualitative concepts and techniques to help manage a company's operations to perform these important translation and planning tasks in order to help the company be successful. The quantitative analysis will be supported by microcomputer software available in the Weatherhead computer lab. Student teams complete a series of integrated case studies from the same company to vividly see the relationships between various planning and control activities. A major emphasis during the course is the design of processes and procedures (algorithms) for solving very complex (wicked) problems as a part of both class discussions and while working on case studies, as well as critiquing the designs so as to clearly understand their limitations. Offered as MSOR 477, OPMT 377 and OPMT 477. Prereq: Not available to MSM Operations Research students.
OPRE 207. Statistics for Business and Management Science I. 3 Units.

OPRE 301. Operations Research and Supply Chain Management. 3 Units.
Operations research (OR) or management science, is the discipline of applying advanced quantitative methods to make better decisions. Techniques covered include linear programming, queuing models and simulation. The second part of the course focuses on how OR tools are used in managing various aspects of Supply Chain. Topics covered include demand forecasting, design of distribution systems, capacity planning, and inventory management. Recommended preparation: one semester of statistics or consent of instructor. Prereq: OPRE 207 or OPRE 207.

OPRE 332. Computer Simulation. 3 Units.
Computer Simulation is a process of designing and creating a computerized model that mimics an existing or proposed system so as to better understand the behavior of the system. Many studies have shown that in Industry, simulation is most frequently used Operations Research tool due to its ability to deal with complex systems. The first half of this course is designed to give students a basic idea of simulation methodology with the aid of population simulation software. The emphasis of the course is in simulating business processes, however, the versatility of the technique will be demonstrated with applications from finance, health care, etc. The second half of the course covers the statistical design and analysis of simulation models. The topics include random number generation, input data analysis, statistical analysis of simulation outputs, variance reduction techniques, and design of simulation experiments. Offered as OPRE 332 and OPRE 432.

OPRE 411. Optimization Modeling. 3 Units.
The first half of the course provides a practical coverage of linear programming, a special type of mathematical model. The art of formulating linear programs is taught through the use of systematic model-building techniques. The simplex algorithm for solving these models is developed from several points of view: geometric, conceptual, algebraic, and economic. The role and uses of duality theory are also presented. Students learn to obtain and interpret a solution from a computer package and how to use the associated output to answer "What-happens-if...?" questions that arise in post-optimality analysis. Specific topics include: problem formulation, geometric and conceptual solution procedures, the simplex algorithm (phase 1 and phase 2), obtaining and interpreting computer output, duality theory, and sensitivity analysis. The second half of this course provides a practical approach to formulating and solving combinatorial optimization problems in the areas of networks, dynamic programming, project management (CPM), integer programming, and nonlinear programming. The art of formulating problems, understanding what is involved in solving them, and obtaining and interpreting the solution from a computer package are shown. A comparison with formulating and solving linear programming problems is provided as a way to understand the advantages and disadvantages of some of these problems and solutions procedures. Recommended preparation: Knowledge of Excel, one semester each of undergraduate linear algebra and undergraduate calculus (derivatives); or consent of instructor. Offered as MSOR 411 and OPRE 411.

OPRE 427. Convexity and Optimization. 3 Units.
Introduction to the theory of convex sets and functions and to the extremes in problems in areas of mathematics where convexity plays a role. Among the topics discussed are basic properties of convex sets (extreme points, facial structure of polytopes), separation theorems, duality and polars, properties of convex functions, minima and maxima of convex functions over convex set, various optimization problems. Offered as MATH 327, MATH 427, and OPRE 427. Prereq: MATH 223 or consent of instructor.

OPRE 432. Computer Simulation. 3 Units.
Computer Simulation is a process of designing and creating a computerized model that mimics an existing or proposed system so as to better understand the behavior of the system. Many studies have shown that in Industry, simulation is most frequently used Operations Research tool due to its ability to deal with complex systems. The first half of this course is designed to give students a basic idea of simulation methodology with the aid of population simulation software. The emphasis of the course is in simulating business processes, however, the versatility of the technique will be demonstrated with applications from finance, health care, etc. The second half of the course covers the statistical design and analysis of simulation models. The topics include random number generation, input data analysis, statistical analysis of simulation outputs, variance reduction techniques, and design of simulation experiments. Offered as OPRE 332 and OPRE 432. Prereq: OPRE 433 or OPRE 433A and OPRE 433B or requisites not met.
OPRE 433. Probability, Statistics, and Forecasting. 3 Units.
Data of many kinds are typically available in practice, but the challenge is to use those data to make effective professional decisions. This software-intensive course begins with useful descriptions of data and the probability theory foundation on which statistics rests. It continues to statistics, including the central limit theorem, which explains why data often appear to be normally distributed, and the Palm-Khintchine theorem which explains why data often appear to have a Poisson distribution. The remainder of the course focuses on regression and forecasting, including detecting and overcoming some of the deadly sins of regression, and the surprising flexibility of regression models. Recommended preparation: One semester of undergraduate calculus or consent of instructor. Offered as MSOR 433 and OPRE 433.

OPRE 434. Regression and Forecasting. 1.5 Unit.
The first part of this course covers the fundamentals of multiple linear-regression analysis and logistic regression models emphasizing understanding and forecasting relationships between variables in a variety of data settings. The second part includes time series analysis and forecasting. Using case studies and commonly used state-of-the-art statistical software (e.g., SPSS, SAS, etc.) students learn to summarize relationships and measure how well these relationships fit data, and how to make meaningful statistical inferences and forecasts. Prereq or coreq: OPRE 433B or QUMM 414.

OPRE 435B. Integrated Problem Solving in OR and SC. 1.5 Unit.
This project-oriented course uses a variety of software to involve the student in the complete problem-solving process in OR and OM. This process includes problem definition and formulation, data collection, and storage in a database, connecting the database to the solution algorithm, designing and implementing an appropriate user interface, and presenting the final solution. Offered as OPRE 435B and MSOR 435B Prereq or Coreq: OPRE 411 or OPRE 411B.

OPRE 435C. Data Structures. 1.5 Unit.
The objective of this course is to provide the student with the data structures (arrays, files, linked lists, trees, and so on) and the numerical methods (differentiation, integration, and solving linear equations) needed for implementing algorithms that solve operations research and operations management problems. These topics are illustrated with C++ and object-oriented programming. Emphasis is given to ensuring that the programs are robust and usable by nontechnical people.

OPRE 454. Analysis of Algorithms. 3 Units.
This course covers fundamental topics in algorithm design and analysis in depth. Amortized analysis, NP-completeness and reductions, dynamic programming, advanced graph algorithms, string algorithms, geometric algorithms, local search heuristics. Offered as EECS 454 and OPRE 454. Prereq: OPRE 435A and OPRE 435C.

This course is offered, with permission, to students undertaking reading in a field of special interest.

OPRE 501. Special Problems and Topics. 1 - 36 Unit.
This course is offered, with permission, to students undertaking reading in a field of special interest.

OPRE 701. Dissertation Ph.D.. 1 - 9 Unit.
This course is limited to candidates for the Ph.D. degree who are preparing dissertations in some field of operations research. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

ORBH Courses
ORBH 250. Leading People (LEAD I). 3 Units.
The principal goals of this course are to help students learn about the context in which managers and leaders function, gain self-awareness of their own leadership vision and values, understand the options they have for careers in management based on their own aptitudes, orientations and expertise, and develop the fundamental skills needed for success in a chosen career. Through a series of experiential activities, assessment exercises, group discussions, and peer coaching, based on a model of self-directed learning and life-long development, the course helps students understand and formulate their own career and life vision, assess their skills and abilities, and design a development plan to reach their objectives. The course enables students to see how the effective leadership of people contributes to organizational performance and the production of value, and how for many organizations, the effective leadership of people is the driver of competitive advantage. This is the first course in a two course sequence. Prereq: At least sophomore standing.

ORBH 251. Leading Organizations (LEAD II). 3 Units.
The principal goal of this course is to help students enhance their leadership skills by understanding how organizations function through the lenses of structure, culture, and power/politics. The course enables students to discern how leaders function effectively as they integrate goals, resources and people within these constraints. Students learn about these organizational lenses while developing their own leadership and professional skills. Prereq: ORBH 250 or MGMT 250 and at least sophomore standing.

ORBH 303. Leading Teams. 3 Units.
This course is designed for students who want to increase their understanding of interpersonal and team dynamics. It is designed to help you to build more open and effective relationships and to improve your ability to cooperate with and lead others to work effectively in today's increasingly team-oriented organizations. The emphasis of this course is on learning about oneself in the context of others based on the here-and-now experience of the group. Prereq: At least sophomore standing.

ORBH 360. Independent Study. 1 - 6 Unit.
This course is set up individually upon conference between student and Organizational Behavior faculty member designed in consult with the student's advisor if necessary in order to engage and challenge student with topics in organizational behavior.

ORBH 370. Women in Organizations. 3 Units.
The purpose of this course is to explore the unique challenges of life for women in their twenties as they increase understanding of the issues surrounding women, ambition, and success in a variety of organizations and professions. At this stage of life there are many choices women can make regarding careers and relationships. This course will broaden understanding of the context of work in women's lives and help women and men understand the leadership and managerial issues that will surround them in organizations. Offering more complex understandings of issues women face in the workplace related to race and gender, the course will help increase self-knowledge about personal identity and direction, values, and abilities including the enhancement of leadership capabilities. It will also facilitate career development, improving the ability of individual women to be choosful about the quality of integration of both a personal and professional life. Offered as ORBH 370 and WGST 370.
ECON 431 and LHRP 413.

Negotiation is the art and science of securing agreements between two or more interdependent parties. Negotiation skills are critical to influencing others and thus to effective leadership. The good news is that negotiation is a skill that can be developed. In this interactive course, you will learn how to be a more effective negotiator by learning about the theory and processes of negotiation, participating in negotiation simulations, reflecting on your own and others' negotiation experiences and completing assignments designed to help you hone your negotiation skills. This will be done through a variety of means, including: understanding the theory and processes of negotiation, participating in negotiation simulations, reflecting on your own and others' negotiation experiences and completing assignments designed to help you hone your negotiation skills. Prereq: At least sophomore standing.

ORBH 391. Leadership in Diversity and Inclusion: Towards a Globally Inclusive Workplace. 3 Units.

This course addresses workforce diversity issues from individual, group, and organizational perspectives. The focus is on innovative ways of utilizing today's culturally expanding workforce. Emphasis is on the "what and how" for managers in developing a corporate culture that embraces diversity, helping them in learning to work with, supervise and tap the talent of diverse employees within their organizations. Included are methods for modifying systems to attract, retain, develop, and capitalize on benefits of the new workforce demographics.

ORBH 403. Developing Interpersonal Skills for Managers. 3 Units.

This course is intended to sharpen students' skills in the art of relating successfully to other individuals and groups. The course uses an intensive group experience to make students more aware of how their actions affect others, more capable of giving and receiving interpersonal feedback, and more cognizant of processes through which groups work. Several Saturday classes.

ORBH 412. Appreciative Inquiry. 3 Units.

This course studies organizational analysis through appreciative inquiry. It explores multiple frame works for understanding the complexity of organizational life. Students form teams and conduct appreciative studies across industries. This course also addresses questions of organizational change (how to move from theory/ideal to practice). Learning is experiential in nature.

ORBH 413. Economics of Negotiation and Conflict Resolution. 3 Units.

Students frequently enroll in a negotiation class with one thought in mind--negotiating a better job offer from an employer. They soon learn, however, that negotiation skills can do far more than improve a pay check. Negotiations occur everywhere: in marriages, in divorces, in small work teams, in large organizations, in getting a job, in losing a job, in deal making, in decision making, in board rooms, and in court rooms. The remarkable thing about negotiations is that, wherever they occur, they are governed by similar principles. The current wave of corporate restructuring makes the study of negotiations especially important for M.B.A.s. Mergers, acquisitions, downsizing and joint ventures call into question well established business and employment relationships. Navigating these choppy waters by building new relationships requires negotiation skills. The increased stress on quality and other hard-to-measure aspects of relationships with customers and suppliers makes the process of negotiation even more complex and subtle. For these reasons, negotiation classes have taken center stage in the study of management. Every major business school now offers classes in negotiation and these classes are overflowing with students. Offered as ECON 431 and LHRP 413.

ORBH 425. Developing Emotional Intelligence. 3 Units.

Although helping or stimulating individuals to change, learn, and develop is considered a responsibility of the human resource function in an organization, every professor, manager, consultant, and helping professional spends most of their time trying to provoke, evoke, or catalyze a change in others. This course will examine the processes by which individuals change and the methods often used to facilitate this change. How and what a person chooses to change (i.e., select their change goals) will be explored, as well as factors affecting the extent to which he/she changes. The efficacy and ethics of various approaches to individual change as part of human resource and organization development efforts will be discussed. Prereq: MGMT 403.

ORBH 430A. MBA Institute In Sustainable Value and Social Entrepreneurship I. 3 Units.

The MBA Institute in Sustainability and Social Entrepreneurship involves 6 credits divided up into two "courses". The first course--phase one--creates a foundational platform featuring key models and managerial tools for the building sustainable value and "turning the social and global issues of our day into business opportunities." The second course in an applied sustainability field experience where teams work with companies and communities or real-life sustainability and social entrepreneurship opportunities. The foundations course is a prerequisite to the applied field project phase.

ORBH 430B. MBA Practicum in Sustainable Value and Social Entrepreneurship II. 3 Units.

The MBA Institute in Sustainability and Social Entrepreneurship involves 6 credits divided up into two "courses." The first course--phase one--creates a foundational platform featuring key models and managerial tools for the building sustainable value and "turning the social and global issues of our day into business opportunities." The second course is an applied sustainability field experience where teams work with companies and communities or real-life sustainability and social entrepreneurship opportunities. The foundations course is a pre-requisite to the applied field project phase. Prereq: ORBH 430A.

ORBH 450. Executive Leadership. 3 Units.

This course explores answers to questions such as: Who are leaders? Are they different than managers, heroes and heroines? How do the effective ones think and act? What situations create leaders, foster their emergence or provide opportunities? What makes us want to follow them? What are the personal pits of being a leader (i.e., sex, drugs, alcohol, insomnia, ulcers, etc.)? How are leaders developed? Case studies, self-study and at-work projects will be the primary methods used in the course.

ORBH 451. Alternative Dispute Resolution. 3 Units.

Students will examine the processes of alternative dispute resolution (ADR) through reading materials, videotapes, guest lectures, and simulation exercises. Particular emphasis will be given to the interaction of lawyers and clients in business negotiations and in litigation. Negotiation, arbitration, mediation, and the mini-trial will be examined. The class will also cover impediments to ADR, such as lack of understanding or hostility on the part of clients or lawyers.
OBH 460. Women in Organizations. 3 Units.
This course addresses important leadership and management issues concerning women in organizations. The course provides complex understandings of issues pertinent to professional women and work such as sex role typing, sex-based discrimination, equal pay, sexual harassment, work-family balance, women's leadership and women's career issues and development. The course helps students increase self-knowledge about their own values and practices as well as enhance their capabilities as leaders and managers. We will examine the opportunities, challenges, trade-offs, and organizational dynamics experienced by women in work settings, as well as the interpersonal, organizational, and societal structures and processes impacting women in organizations. Through a variety of course methods, students gain greater awareness of the gendered nature of work and organizations and learn effective strategies for women's career progress and effective participation in organizations.

OBH 470A. Leading Change from a Complexity Perspective. 1 Unit.
In this course, we will continuously attempt to answer two questions: (1) What is the process of sustained, desirable change? and (2) What is the role of a leader? Concepts from complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad, team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. In this context, coaching the development of leadership will be a major topic throughout the course. Prereq: Open to MPOD candidates only.

OBH 470B. Leading Change from a Complexity Perspective. 2 Units.
In this course, we will continuously attempt to answer two questions: (1) What is the process of sustained, desirable change? and (2) What is the role of a leader? Concepts from complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad, team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. In this context, coaching the development of leadership will be a major topic throughout the course. Prereq: ORBH 470A.

OBH 491. Leadership in Diversity and Inclusion: Towards a Globally Inclusive Workplace. 3 Units.
This course addresses workforce diversity issues from individual, group, and organizational perspectives. The focus is on innovative ways of utilizing today’s culturally expanding workforce. Emphasis is on the "what and how" for managers in developing a corporate culture that embraces diversity, helping them in learning to work with, supervise and tap the talent of diverse employees within their organizations. Included are methods for modifying systems to attract, retain, develop, and capitalize on benefits of the new workforce demographics. A retreat experience is part of this course and is required of all participants.

OBH 501. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to students undertaking reading in a field of special interest.

OBH 510. Organizational Behavior Department Seminar. 1.5 Unit.
The OB Department Seminar is organized and managed by the first year PhD students. Seminar sessions will alternate between first year meetings and gatherings of the ORBH community of students, faculty and friends. Community sessions will be organized around research presentations of PhD Qualifying Papers, Dissertation Proposals and Dissertation Defense. Seminar Objectives: 1. To create and sustain an appreciative, intellectually nourishing learning space for the ORBH community that will support, inspire and empower us to explore the frontiers of scholarship in our field; 2. To provide a forum for sharing the ongoing research and scholarship of the department; 3. To develop productive collaborative research relationships; 4. To increase our collective knowledge of the current state of the art in OB and to develop productive collaborative research relationships; 4. To increase our collective knowledge of the current state of the art in OB and related fields.

OBH 511. Micro Organizational Behavior. 1.5 Unit.
Examines the field of micro-organizational behavior. Specifically, the study of individuals and groups within an organizational context and the study of internal processes and practices as they affect individuals and groups. Major topics include individual characteristics such as beliefs, values and personality. Individual processes such as motivation, emotions, commitment, group and team processes, such as decision-making; organizational processes and practices such as goal setting, performance appraisal and rewards, and the influence of all of these on such individual, group and organizational outcomes as performance, job satisfaction, citizenship behaviors, turnover, justice, absenteeism and employee engagement.

OBH 513. Appreciative Inquiry and Strength-Based Change. 1.5 Unit.
This course explores and develops the art of understanding social systems in ways that help us imagine, design and develop organization excellence. It seeks to show how many of our conventional ideas about organizations are based on discourse and metaphors that lead us to see and understand organizations in partial and often limiting ways. Growing research from the domains of Positive Psychology and Positive Organization Scholarship and the theory and practice of Appreciative Inquiry will be explored to show how we can create new and more positive, strength-based ways of designing and developing social systems.

OBH 520. Group and Interpersonal Analysis. 1.5 Unit.
This course is a review of major concepts and research in group dynamics and interpersonal relations. Topics concern face-to-face social interaction such as communication patterns, power, hierarchy, leadership, norms, goals, productivity, social theories of personality, and personal change through group methods. The course combines cognitive emphasis and personal experience-based learning.
ORBH 523. Design for Sustainable Value. 1.5 Unit.
The relationship between business and society—and the search for mutually beneficial advances between industry and the world's most pressing global issues—has become one of the defining issues of the 21st century. Throughout the world, immense entrepreneurial energy is finding expression, energy whose converging force is in direct proportion to the turbulence, crises, and the call of our times. Factories and buildings are being designed in ways that, surprisingly, give back more clean energy to the world than they use. Bottom-of-the-pyramid strategies and micro-enterprise models are demonstrating how business can eradicate poverty through profitability. Companies are designing products that leave behind no waste—only "food" that becomes input into their biological or technological cycles. And macrowikinomics—everything from telepresence to megacommunity—is rebooting our capacity for human cooperation and global action. Prereq: Limited to ORBH PhD students only.

ORBH 525. Leading Change from a Complexity Perspective. 1.5 Unit.
Change is an enigma and yet sustained, desirable change (SDC) drivers adaptation, growth and life itself. In this course, we will continuously attempt to answer two questions: (1) What is the process of sustained, desirable change? and (2) What is the role of a leader, including their emotional and social intelligence? Concepts from complexity theory will be used, as well as case studies and longitudinal studies including understanding the multilevel nature of SDC at the individual, dyad, team, organization (including family business), community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. Prereq: Limited to ORBH PhD students only.

ORBH 528. The Dynamics of Managing Effective Change. 1.5 Unit.
This course explores and develops an understanding of how individuals actually effect positive change and outcomes within an organization without the requisite authority or decision making power to do so. It seeks to show how managing a change process appears to follow a path of cumulative activities that in time produce a punctuated equilibrium—one that triggers a step up in performance. Such activities seem to be small episodes or learning cycles geared at converting inert knowledge into action; increasing awareness; reinforcing accountability, and/or attaining results. These findings will be compared and contrasted to existing change models and theories. Prereq: Limited to ORBH PhD students only.

ORBH 533. The Practice Turn in Organizational Research. 1.5 Unit.
In this course, doctoral students will develop an understanding of the role of practice and performativity in organizing. This involves exploring the link between doing and thinking by and between individuals in an effort to address larger issues of group- and organizational-level behavior. Students will examine elements of human behavior in organizational endeavors such as embodied cognition, and the enactment of structures and routines. Methods of "capturing" practice in organizing will also be discussed. By the end of the course, students will be expected to articulate how the practice perspective relates to their own research interests and future projects. Prereq: Limited to ORBH PhD students only.

ORBH 538. Research and Theory on Dynamical Behavior in Groups. 1.5 Unit.
This seminar exposes student to a variety of conversations in the study of group dynamics. Major topics include work on commons dilemmas, communal and exchange relationships, social facilitation, social loafing, social combination, and social creativity drawing deeply on our historical roots. It will also focus on current topical issues such as demographic faultlines, transactional memory, and issues of time and transition. Prereq: Limited to ORBH PhD students only.

ORBH 540. Social Exchange, Social Networks, and Social Capital in Organizations. 1.5 Unit.
In this course we will examine the nature of social exchange relationships in organizations. We will explore how individual perceptions regarding the quality of the relationship they have with their immediate supervisor, their work group, and the organization as an entity can impact their workplace attitudes and behaviors. Additionally, we will learn how the examination of networks of relationships can enhance our understanding of how individuals experience organizational life. The course will also provide a brief introduction to the theory, methods and procedures of social network analysis with an emphasis on applications to individual and organizational social capital.

ORBH 541. Organizational Systems. 1.5 Unit.
This course covers the use of general systems theory as a conceptual base for examining organizations from the macro-perspective. The course examines organizational structure and technology, organizations and interorganizational networks in interaction with their societal environments, and large-scale problems of organizational and social power, conflict and change. It is designed to present a large-scale perspective on organization theory and behavior that is complementary to the micro-perspective of organizational behavior.

ORBH 550. Team and Small Group Research. 1 Unit.
This seminar is designed to focus primarily on understanding the state of team research from 1950s to the present. The seminar will include in-depth reviews and critical analysis on the philosophical and methodological perspectives of team researchers. The seminar will also include topics, research design and methods (including analytical approaches) used in team research. Students will be expected to develop a research design and analysis proposal for a team research project using both qualitative and quantitative approaches.

ORBH 560. Research Methods I. 3 Units.
This course concerns itself with issues associated with the conduct of social research. The primary focus is on learning the "craft" of research and its associated technologies. Among the topics that are addressed are: scientific method; research terminology and definitions; search design; laboratory experiments; simulations; field experiments; field studies; measurement, reliability and validity; and sampling. This course is intended to help students acquire the skills necessary in undertaking dissertation-related research.

ORBH 565. Research in Gender and Diversity in Organizations. 1.5 Unit.
This course will provide a full range of feminist research methods exploring relationships between feminism and methodology involving a plurality of perspectives for conducting research and creating knowledge with an emphasis on collecting and interpreting qualitative materials. Particular attention is paid to understanding gender and diversity related phenomenon that occurs in the workplace. Classic feminist research from a variety of historical, societal, economic, interpersonal and organizational paradigms are incorporated. Coreq: ORBH doctoral students only.
IIME 424. Preparation for the Top Job, and Develop a Personal Career Strategy through exposure to leading chief officers, study the paths to and the CEO will be explored. Students will benchmark CEO best practices executive officer. The unique role, responsibilities, and requirements of This course is designed for students who aspire to become a chief officer.

PLCY 425. Chief Executive Officer. 3 Units.
This course is designed for students who aspire to become a chief executive officer. The unique role, responsibilities, and requirements of the CEO will be explored. Students will benchmark CEO best practices through exposure to leading chief officers, study the paths to and preparation for the top job, and develop a personal career strategy to increase their chances of becoming a CEO. Offered as PLCY 425 and IIME 424.

PLCY 474. Innovation for Competitive Advantage. 3 Units.
In this course, we will develop frameworks to identify new value propositions for the customer. We will then apply these frameworks to three types of innovations that we see in practice–incremental, disruptive and white space–and more importantly understand business model innovations that go beyond just a product or process innovation. The course will also explore techniques of focused brainstorming and creative problem solving techniques. Prereq or Coreq: MGMT 499.

PLCY 490. Corporate Strategy. 3 Units.
This course is an advanced strategy course that explores the determinants of successful corporate strategy. In Strategy Issues and Applications you were exposed to the basic frameworks for developing successful competitive or business unit level strategy. Corporate strategy takes you to the next level and provides the frameworks you need to be able to be successful in multiple businesses. At its core corporate strategy constitutes any and all decisions that change the core business model of a firm. Examples are vertical integration, new but related product lines, entering new markets with existing products and entering new or existing markets with unrelated products. The fundamental premise of the course is that successful corporate strategy is rooted in competitive advantage arising from capabilities residing at the business unit level. Starting from analyzing business level strategies of very simple firms, the course successively builds frameworks towards more complicated business level strategies. Next, the course develops frameworks to discuss corporate strategy based around the concept of core competencies and market entry strategies. Finally, the course develops the concepts that are useful in greenfield entries, alliances and acquisitions as part of an overall corporate strategy. Prereq: MGMT 499 or MBAC 508 or MBAP 410 or GMBA 403B.

PLCY 494. Managerial Consultancy. 3 Units.
Students will learn to match consulting methodologies with client needs and employ a step by step strategy development process applied to actual companies which are semester-long clients of the class. Accelerated career strategies in the consultancy business are featured as well as tactics for getting hired in the first place. The course views consultancy as a role rather than career and conceptualizes consultancy as a process of optimizing an organization’s value creation potential and competitive advantage. Students should be able to apply the concepts regardless of career choice. Exposure to senior practicing consultants is featured.

PLCY 496. Strategic Planning and Control Systems for Strategy Implementation. 3 Units.
This course introduces the principal tools of strategy implementation, namely the design of organization structures, the use of formal planning and control systems, and the design of measurement and reward systems. The importance of organizational context (small vs. large, for profit vs. not-for-profit, manufacturing vs. service, etc.) and the need to tailor systems to the context of the organization are emphasized. New and emergent organizational forms and their role in strategy development and implementation are reviewed. Cases and readings are the principal pedagogical methods utilized. Students work in small project teams, study the operation and effectiveness of systems for strategic control in organizations, and present the results of their analysis in class presentations.

PLCY 501. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to students undertaking reading in a field of special interest.

PLCY 601. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.
PLCY 701. Dissertation Ph.D.. 1 - 9 Unit.
Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

QUMM Courses

QUMM 414. Statistics and Decision Modeling. 3 Units.
This course provides the foundations of statistical and operations research methodologies for managerial decision-making. Business statistics focuses on statistical thinking as one of the fundamentals of effective management. Topics covered include sampling and the normal distribution, making inferences from data via confidence intervals and hypothesis tests, and analyzing relationships between samples. Decision modeling of organizational systems uses mathematical and computer models to provide a quantitative perspective on identifying, analyzing and solving complex decision problems. This course includes an introduction to linear programming models and applications, simulation techniques in decision-making, and project management.

QUMM 414A. Statistics and Decision Modeling. 1 Unit.
This class provides a brief look at management science and selected key tools and applications. Topics include modeling, linear programming, simulation and linear regression. Students should have a background in statistics and college-level algebra. Just-in-time statistics review workshops will be available at the beginning of the semester. Prereq: Open to ACL-MBA students.

QUMM 501. Special Problems and Topics. 1 - 18 Unit.
This course is offered, with permission, to students undertaking reading in a field of special interest.
Office of Undergraduate Studies

Case Western Reserve University confers baccalaureate degrees based on programs offered by the faculties of the Case School of Engineering, the College of Arts and Sciences, the Frances Payne Bolton School of Nursing, and the Weatherhead School of Management. Some major programs are offered in collaboration with the School of Medicine, the Cleveland Institute of Art, and the Cleveland Institute of Music. The faculties and administration are dedicated to offering educational programs that enable undergraduates to achieve disciplinary literacy in one or more major fields; to acquire educational breadth through study across the natural sciences, humanities and arts, and social sciences; and to learn to think critically and to communicate effectively. Overlap among the general education curricula for the various bachelor’s degree programs allows students flexibility in the choice of majors and degree program. Furthering the University mission, the educational programs aim to foster the development of qualities of integrity, creativity, leadership, and societal engagement.

Advisors for first-year students, major field advisors, other faculty, and deans assist students in selecting a field of study suited to each student’s interests and qualifications. Students with broad educational interests and goals may pursue concurrently two or more majors for the Bachelor of Arts degree, two or more majors for the Bachelor of Science in Engineering degree, or two or more majors toward the Bachelor of Science in Management degree, or may earn two bachelor’s degrees by completing both a Bachelor of Arts degree and a Bachelor of Science degree or by fulfilling the requirements for two Bachelor of Science degrees. The Bachelor of Music degree offered by the Cleveland Institute of Music may be combined with either a Bachelor of Arts or a Bachelor of Science degree at Case Western Reserve University. Qualified students who wish to accelerate their undergraduate and graduate or professional studies may earn the opportunity to begin in the senior year advanced study toward a graduate or professional degree.

The University provides undergraduates with a rich variety of experiential learning opportunities both on and off campus. Programs that engage students in curriculum-related employment include the Cooperative Education Program (http://engineering.case.edu/coop), the Practicum Program (http://students.case.edu/careers/students/jobs/practicums), and internships. Study abroad (http://www.case.edu/studyabroad), the exchange program with Fisk University (p. 996), and the Washington Semester (http://www.politicalscience.case.edu/undergraduate-programs/washington-center-program) immerse students in educational environments that build global and national knowledge and perspective. Research opportunities (http://www.case.edu/provost/source) for undergraduates abound at the university, in University Circle institutions, and in Cleveland. Individual departments offer independent study opportunities to motivated and qualified students; some departments offer courses that incorporate practical field experience or community service. The location of the University in University Circle, with its outstanding array of cultural, educational, and health care institutions, and the proximity and accessibility of the university’s various professional schools and their facilities enable undergraduates to draw upon diverse and distinctive resources to enrich their education.

Support for First-Year Students

Michael R. Mason, MEd
(Kent State University)
Associate Dean of Undergraduate Studies for First-Year Students

Nathan H. Fein, MEd
(University of Texas, Austin)
Coordinator of First-Year Residence Education in Juniper Residential College

Kimberly A. Scott, MEd
(University of Toledo)
Coordinator of First-Year Residence Education in Magnolia Residential College

Sueji M. Smith, MEd
(North Carolina State University)
Coordinator of First-Year Residence Education in Mistletoe Residential College

Support for Upperclass Students

Denise Butler, MA, MLIS
(Kent State University)
Assistant Dean of Undergraduate Studies
(students whose last names begin with S-Z)

Nancy A. Dilulio, PhD
(Pennsylvania State University)
Senior Associate Dean of Undergraduate Studies
(students whose last names begin with A-D)

TBA
Assistant Dean of Undergraduate Studies
(students whose last names begin with E-K)

Gregory J. Harris, MA
(Edinboro University of Pennsylvania)
Assistant Dean of Undergraduate Studies
(students whose last names begin with L-R)
Support for Transfer, Exchange, and Non-Degree Students
Claudia C. Anderson, BA (Youngstown State University)  
Assistant Dean of Undergraduate Studies

Advising about National Scholarships and Fellowships
TBA  
Assistant Dean of Undergraduate Studies

Advising about Health Careers
Steven P. Scherger, PhD (Kent State University)  
Director of Health Career Advising

</table>
The Bachelor of Music (BM) degree is offered by the Cleveland Institute of Music through a joint program with Case Western Reserve University.

General Requirements for all Bachelor's Degrees

The bachelor's degree programs require students to study one field in depth (the major) and to complete general education requirements as appropriate to the major field and degree program selected. There is overlap among general education requirements, which allows students flexibility in the choice of majors and degree programs.

Every candidate for a baccalaureate degree from the university must:

1. complete the requirements of the Seminar Approach to General Education and Scholarship (SAGES), as described below;
2. complete two semesters of physical education through a combination of half and/or full semesters in Physical Education activity courses, as described below;
3. complete the requirements of the major field of study, as described in the relevant sections of the Bulletin;
4. complete the general education requirements of the school and degree program in which the student's major field of study falls, as described in the relevant section of this chapter of the Bulletin (Arts and Sciences, Engineering, Management, Nursing);
5. complete a course of studies with a cumulative grade point average of no less than 2.000 for work taken at Case Western Reserve University; and
6. earn in residence at Case Western Reserve University a minimum of 60 credit-hours, of which at least 15 must be earned after the student has earned a total of 105 credit-hours.

SAGES

The Seminar Approach to General Education and Scholarship (SAGES) provides a foundation in critical thinking, written and oral communication, the use of information, quantitative reasoning, engagement with ethical issues and diversity, and exposure to experimental and theoretical approaches to understanding human culture and behavior, scientific knowledge, and methods of research.

The First Seminar

The First Seminar (4 credit-hours, taken in the first semester of enrollment) introduces students to the seminar format through reading, discussion, and intensive writing, and incorporates activities with University Circle institutions. The course focuses on the development of critical thinking and communication skills through the use of a variety of approaches, media, and perspectives to explore the human mind and the nature of inquiry. This course is designed to strengthen writing and
analytical skills while building a foundation in ethics, information literacy, and cultural diversity.

Students select a course from:

- First Seminar: Natural World (FSNA 1xx)
- First Seminar: Social World (FSSO 1xx)
- First Seminar: Symbolic World (FSSY 1xx)

Based on test scores and a writing sample, some students will be placed in FSCC 100: The Life of the Mind, designed to provide additional writing support. Most students for whom English is a second language will continue their First Seminar experience in a second semester by enrolling in and completing FSCS 150 First Seminar Continuing Semester (3 credit-hours).

*Transfer Students only: Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC 100-TR (3 – 6 credit-hours) and will be required to complete a supplemental 1-credit-hour SAGES introductory seminar – FSTS 100 SAGES Transfer Supplement.

University Seminars

After completion of the First Seminar with a passing evaluative grade and before the end of the second year, students must complete two University Seminars (totaling 6 credit-hours). University Seminars provide continued experience in critical reading, writing, and oral communication, as well as information literacy, ethics, and cultural diversity. Each University Seminar explores content determined according to the interests of the faculty. A student's First Seminar and two University Seminars must include a course from each of the three thematic areas: Natural World, Social World, and Symbolic World.

Students select courses from:

- University Seminar: Thinking About the Natural World (USNA 2xx)
- University Seminar: Thinking About the Social World (USSO 2xx)
- University Seminar: Thinking About the Symbolic World (USSY 2xx)

Students who complete their First Seminar requirement with FSCC 100, FSCS 150, or FSTS 100 may fulfill the University Seminar requirement by choosing courses from any two of the three thematic areas.

University Composition Requirement: The SAGES Writing Portfolio

Students develop a Writing Portfolio comprised of final graded writing assignments from the First Seminar and University Seminars. The Writing Portfolio is due the semester after completing the final University seminar.

Departmental Seminar

The Departmental Seminar (3 credit-hours), generally taken in the junior year after the completion of the University Seminars, focuses on discipline-specific methods and modes of inquiry and communication characteristic of the Departmental Seminar's discipline. The Departmental Seminar may be taken in the department of the student's major or in another department. A course used to fulfill the Departmental Seminar Requirement may not also be used to fulfill a Breadth Requirement. Courses meeting this requirement include the designation “Approved SAGES Departmental Seminar” in their course descriptions. Some majors include a specific Departmental Seminar as part of their requirements.

Senior Capstone

The Senior Capstone assimilates the knowledge and skills gained throughout the educational process. Students engage in a unique one- or two-semester experience (3 - 6 credit-hours) designed in consultation with a faculty member. Each Senior Capstone must include key elements:

1. Demonstration of critical thinking and writing skills;
2. Regular oversight by the Capstone advisor;
3. Periodic reporting of progress;
4. Regular writing (e.g. drafts, progress reports, critiques) throughout the project including a final written report which may be a thesis or equivalent document associated with the project or activity (e.g., such pursuits as performance, experiment, live case analysis, or creative writing), as approved by the department of capstone origin; and
5. Oral reports including a final public presentation at the Senior Capstone Fair, a conference, a performance, a public lecture, a teaching presentation, or another setting, as approved by the department of capstone origin.

Courses meeting this requirement include the designation “Approved SAGES Capstone” in their course descriptions. Some majors include a specific a Senior Capstone course as part of their requirements.

Physical Education

All students must complete two full semesters of Physical Education activity courses at zero credit-hours. Students may choose from half-semester and full-semester course offerings. If possible, a student should begin meeting this requirement in the first semester and complete it early in his or her undergraduate years.

Requirements for Specific Degrees

Students are expected to complete a bachelor's degree in a timely fashion and will ordinarily be subject to the degree requirements in place at the time of matriculation at Case Western Reserve University, although they may chose to update their requirements to those included in a later General Bulletin.

If a student extends study towards a bachelor's degree beyond 10 years after first matriculating as an undergraduate student, the major-field department(s) will review the student's academic record and may update major field requirements. Also, if the student has not already completed the applicable general education requirements in place at the time of matriculation, the appropriate dean in the school offering the major will also review the student's academic record and may update general education requirements.

Dual Undergraduate Degree Programs

To qualify for two undergraduate degrees, i.e., a BA and a BS degree, or two BS degrees, a student must satisfy all requirements for each degree, and complete for the second degree thirty credit-hours of study beyond the hours required for the first degree. A student may, however, complete two or more Arts and Sciences majors within the 120 hour minimum requirement for the BA degree, or two or more Engineering majors within the 128-133 hour minimum requirement for the BS in Engineering degree, or two or more Management majors within the 122 hour minimum requirement for the BS in Management degree. Students who seek a dual-degree program that involves the BM degree must meet Cleveland
Institute of Music and Case Western Reserve admission requirements, and seek approval of both the Cleveland Institute of Music and Case Western Reserve University.

Students completing both a BA and a BS degree are exempted from six hours of the 90-hour requirement of arts and sciences courses for the BA.

A student pursuing two degrees is encouraged to meet with a dean in the Office of Undergraduate Studies, 357 Sears Bldg., to discuss requirements.

College of Arts and Sciences
Undergraduate Degree Requirements

Bachelor of Arts Degree
(College of Arts and Sciences)

Candidates for the Bachelor of Arts (BA) degree, in addition to meeting the general requirements for bachelor's degrees (p. 973), including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 120 credit-hours.
2. No more than 42 credit-hours beyond the 100-level in any one department may be applied to the 120 credit-hour total.
3. At least 90 credit-hours in arts and sciences. These credits may be drawn from those offered by the College of Arts and Sciences, as well as those in economics, biochemistry, nutrition and computer science. (Students completing both a BA and BS degree are exempted from six hours of the 90 credit-hour arts and sciences requirement for the BA.)
4. A minimum of 30 credit-hours of courses at the 300- or 400-level.
5. The General Education Requirements of the College of Arts and Sciences listed below.
6. The requirements for a major listed below as specified in this bulletin for each department or program. A major requires a minimum of 30 credit-hours, at least 24 of which are taken in the major department or program.
7. For all courses taken in the major department and for which grades are averaged, and for all courses taken to satisfy major requirements and for which grades are averaged, a BA candidate must earn a minimum cumulative average of 2.000. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at Case Western Reserve University at least half the credit-hours required in the major department.

Major Concentrations Available for the Bachelor of Arts degree:

- American Studies*
- Anthropology
- Art History
- Asian Studies
- Astronomy
- Biochemistry
- Biology
- Chemical Biology
- Chemistry
- Classics
- Cognitive Science
- Communication Sciences
- Computer Science
- Dance
- Dean's Approved Major**
- Economics
- English
- Environmental Geology
- Environmental Studies*
- Evolutionary Biology*
- French
- French and Francophone Studies
- Geological Sciences
- German
- German Studies
- Gerontological Studies*
- History
- History and Philosophy of Science
- International Studies
- Japanese Studies
- Mathematics
- Music
- Natural Sciences*
- Nutrition
- Nutritional Biochemistry and Metabolism
- Philosophy
- Physics
- Political Science
- Pre-Architecture*
- Psychology
- Religious Studies
- Sociology
- Spanish
- Statistics
- Teacher Education*
- Theater Arts
- Women's and Gender Studies
- World Literature

* May be taken only as a second major.
** Any student interested in developing for the BA a major of his or her own design may submit, before the end of the sophomore year, a program proposal for a Dean's Approved Major to the Office of Undergraduate Studies. The Dean of Undergraduate Studies and the Dean of the College of Arts and Sciences must approve any proposed Dean's Approved Major.
General Education Requirements of the College of Arts and Sciences

These requirements provide a broad foundation for the Bachelor of Arts degree program.

Students pursuing a degree in the College of Arts and Sciences may not fulfill the Departmental Seminar requirement with a course that is being used to fulfill an Arts & Humanities, Social Sciences, or Natural & Mathematical Sciences breadth requirement. A course that has been designated as a Departmental Seminar and that also falls into the Global and Cultural Diversity category may be used to fulfill both requirements.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy general education requirements.

Breadth Requirements (minimum of six 3- or 4-credit-hour courses, totaling at least 18 credit-hours)

NOTE: Two courses used to fulfill requirements for the major may be used also to fulfill the breadth requirements.

Arts and Humanities (6 - 8 credit-hours)
Two 3- or 4-credit-hour Arts and Humanities courses selected from:

- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)
- Dance (DANC)
- English (ENGL)
- French (FRCH)
- German (GRMN)
- Greek (GREK)
- Hebrew (HBRW)
- History (HSTY)
- Italian (ITAL)
- Japanese (JAPN)
- Latin (LATN)
- Music - General (MUGN)
- Music - History (MUHI)
- Music - Theory (MUTH)
- Philosophy (PHIL)
- Portuguese (PORT)
- Religious Studies (RLGN)
- Russian (RUSN)
- Spanish (SPAN)
- Theater (THTR)
- World Literature (WLIT)

Natural and Mathematical Sciences (6 - 8 credit-hours)
Two 3- or 4-credit-hour Natural and Mathematical Science courses selected from:

- Astronomy (ASTR)
- Biochemistry (BIOC)
- Biology (BIOL)
- Chemistry (CHEM)
- Earth, Environmental and Planetary Sciences (EEPS)
- Mathematics (MATH)
- Nutrition (NTRN)
- Physics (PHYS)
- Statistics (STAT)

Social Sciences (6 credit-hours)
Two 3-credit-hour Social Science courses selected from:

- Anthropology (ANTH)
- Cognitive Science (COGS)
- Communication Sciences (COSI)
- Economics (ECON)
- Political Science (POSC)
- Psychology (PSCL)
- Sociology (SOCI)

Quantitative Reasoning (3 - 4 credit-hours)

Each student must complete at least one 3- or 4-credit-hour course identified as a quantitative reasoning course selected from the list below. This course may also be used to fulfill a major, minor, and/or breadth requirement.

- ANTH 319 Introduction to Statistical Analysis in the Social Sciences 3
- BIOL 321 Design and Analysis of Biological Experiments 3
- EECS 132 Introduction to Programming in Java 3
- ENGR 131 Elementary Computer Programming 3
- MATH 121 Calculus for Science and Engineering I 4
- MATH 123 Calculus I 4
- MATH 125 Math and Calculus Applications for Life, Managerial, and Social Sci I 4
- MATH 150 Mathematics from a Mathematician’s Perspective 3
- PHIL 201 Introduction to Logic 3
- PSCL 282 Quantitative Methods in Psychology 3
- STAT 201 Basic Statistics for Social and Life Sciences 3
- STAT 201R Basic Statistics for Social and Life Sciences Using R Programming 3

Global and Cultural Diversity (3 - 4 credit-hours)

The goal of the Global and Cultural Diversity requirement is to provide students with the opportunity for academic reflection about the variation in human experience. Courses that satisfy this requirement must (1) substantively explore one or more cultures outside the United States, or (2) address in a substantive way ethnic, gender, sexual, religious, or other cultural practices within the United States, so as to provide students with fresh perspectives on their own cultural assumptions, traditions, and experiences. This course may also be used to fulfill a major, minor, and/or breadth requirement.

Students who matriculate as undergraduate degree candidates in August 2012 or later must select a course from the list below; students who
matriculated as degree candidates prior to August 2012 can find the list of options from which they may choose on their academic requirements report.

Bachelor of Science Degree
(College of Arts and Sciences)
Candidates for the Bachelor of Science degrees, in addition to meeting the general requirements for bachelor's degrees (p. 973), including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 120-133 credit-hours as specified by the requirements for each BS program.
2. A minimum of 30 credit-hours of courses at the 300- or 400-level.
3. The General Education Requirements of the College of Arts and Sciences listed below. For some BS programs, the General Education Requirements of the College Arts and Sciences have been modified and incorporated into the degree requirements as presented in this bulletin in the section devoted to each department or program.
4. The requirements for a major field listed below as presented in this bulletin in the section devoted to each department or program.
5. For all courses taken in the major department and for which grades are averaged, and for all courses taken to satisfy major requirements and for which grades are averaged, a candidate for a BS from the College of Arts and Sciences must earn a minimum cumulative average of 2.000. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at Case Western Reserve University at least half the credit-hours required for the major.

Major Concentrations for the Bachelor of Science degree:
- Applied Mathematics
- Art Education
- Astronomy
- Biochemistry
- Biology
- Chemistry
- Geological Sciences
- Mathematics
- Mathematics and Physics
- Music Education
- Nutrition
- Nutritional Biochemistry and Metabolism
- Physics
- Statistics
- Systems Biology

General Education Requirements of the College of Arts and Sciences
These requirements provide a broad foundation for the Bachelor of Science degree programs.

Students pursuing a degree in the College of Arts and Sciences may not fulfill the Departmental Seminar requirement with a course that is being used to fulfill an Arts & Humanities, Social Sciences, or Natural & Mathematical Sciences breadth requirement. A course that has been designated as a Departmental Seminar and that also falls into the Global and Cultural Diversity category may be used to fulfill both requirements.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy general education requirements.

Breadth Requirements (minimum of six 3- or 4-credit-hour courses, totaling at least 18 credit-hours)
NOTE: Two courses used to fulfill requirements for the major may be used also to fulfill the breadth requirements.

Arts and Humanities (6 - 8 credit-hours)
Two 3- or 4-credit-hour Arts and Humanities courses selected from:
- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)
- Dance (DANC)
- English (ENGL)
- French (FRCH)
- German (GRMN)
- Greek (GREK)
- Hebrew (HBRW)
- History (HSTY)
- Italian (ITAL)
- Japanese (JAPN)
- Latin (LATN)
- Music - General (MUGN)
- Music - History (MUHI)
- Music - Theory (MUTH)
- Philosophy (PHIL)
- Portuguese (PORT)
- Religious Studies (RLGN)
- Russian (RUSN)
- Spanish (SPAN)
- Theater (THTR)
- World Literature (WLIT)

Natural and Mathematical Sciences (6 - 8 credit-hours)
Two 3- or 4-credit-hour Natural and Mathematical Science courses selected from:
- Astronomy (ASTR)
- Biochemistry (BIOC)
- Biology (BIOL)
- Chemistry (CHEM)
- Earth, Environmental and Planetary Sciences (EEPS)
• Mathematics (MATH)
• Nutrition (NTRN)
• Physics (PHYS)
• Statistics (STAT)

Social Sciences (6 credit-hours)
Two 3-credit-hour Social Science courses selected from:

• Anthropology (ANTH)
• Cognitive Science (COGS)
• Communication Sciences (COSI)
• Economics (ECON)
• Political Science (POSC)
• Psychology (PSCL)
• Sociology (SOCI)

Quantitative Reasoning (3 - 4 credit-hours)
Each student must complete at least one 3- or 4-credit-hour course identified as a quantitative reasoning course selected from the list below. This course may also be used to fulfill a major, minor and/or breadth requirement.

ANTH 319  Introduction to Statistical Analysis in the Social Sciences  3
BIOL 321  Design and Analysis of Biological Experiments  3
EECS 132  Introduction to Programming in Java  3
ENGR 131  Elementary Computer Programming  3
MATH 121  Calculus for Science and Engineering I  4
MATH 123  Calculus I  4
MATH 125  Math and Calculus Applications for Life, Managerial, and Social Sci I  4
MATH 150  Mathematics from a Mathematician's Perspective  3
PHIL 201  Introduction to Logic  3
PSCL 282  Quantitative Methods in Psychology  3
STAT 201  Basic Statistics for Social and Life Sciences  3
STAT 201R  Basic Statistics for Social and Life Sciences Using R Programming  3

Global and Cultural Diversity (3 - 4 credit-hours)
The goal of the Global and Cultural Diversity requirement is to provide students with the opportunity for academic reflection about the variation in human experience. Courses that satisfy this requirement must (1) substantively explore one or more cultures outside the United States, or (2) address in a substantive way ethnic, gender, sexual, religious, or other cultural practices within the United States, so as to provide students with fresh perspectives on their own cultural assumptions, traditions, and experiences. This course may also be used to fulfill a major, minor, and/ or breadth requirement.

Students who matriculate as undergraduate degree candidates in August 2012 or later must select a course from the list below; students who matriculated as degree candidates prior to August 2012 can find the list of options from which they may choose on their academic requirements report.

AMST 117  Exploring American History Through Biography  3
ANTH 233  Introduction to Jewish Folklore  3
ANTH 312  Ethnography of Southeast Asia  3
ANTH 349  Cultures of Latin America  3
ANTH 353  Chinese Culture and Society  3
ANTH 354  Health and Healing in East Asia  3
ARAB 337  Women in the Arab World  3
ARAB 349  The Arab World Experience  3
ARTH 101  Art History I: Pyramids to Pagodas  3
ARTH 102  Art History II: Michelangelo to Maya Lin  3
ARTH 203  The Arts of Asia  3
ARTH 208  Arts of Japan  3
ARTH 220  Jewish Traditional Art and Architecture  3
ARTH 226  Greek and Roman Sculpture  3
ARTH 230  Ancient Roman Art and Architecture  3
ARTH 241  Medieval Art  3
ARTH 249  The Global Middle Ages: From Paris to Baghdad  3
ARTH 260  Art in Early Modern Europe  3
ARTH 274  Nineteenth-Century European Art  3
ARTH 301  Museums and Globalization  3
ARTH 302  Buddhist Art in Asia  3
ARTH 307  Arts of China  3
ARTH 308  Daoism: Visual Culture, History and Practice  3
ARTH 311  Rome: City and Image  3
ARTH 325  Art at the Crossroads of Religion: Polytheistic, Christian, and Islamic Art in Antiquity  3
ARTH 327  The Parthenon Then and Now: New Discoveries, Old Problems and Reception  3
ARTH 329  Marvels of Rome: Monuments and Their Decoration in the Roman Empire  3
ARTH 342  Issues in Indian and Southeast Asian Art  3
ARTH 349  Gothic Art: Vision and Matter  3

**Case School of Engineering Undergraduate Degree Requirements**

**Bachelor of Science in Engineering Degree**

*(Case School of Engineering)*

Candidates for the Bachelor of Science in Engineering (BSE) degree, in addition to meeting the general requirements for bachelor’s degrees, including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 128-133 credit-hours as specified by the requirements for each BSE major.
2. The General Education Requirements of the Case School of Engineering listed below.
3. The requirements for the specific engineering major listed below as presented in this Bulletin in the section devoted to each department or program.

Note that most students pursuing a degree from the Case School of Engineering will complete ENGR 398 and ENGL 398 to fulfill the SAGES Departmental Seminar requirement and will complete an engineering senior project in their major to fulfill the SAGES Senior Capstone requirement.

**Major Fields Available for the Bachelor of Science in Engineering degree:**

- Aerospace Engineering
- Biomedical Engineering
- Chemical Engineering
- Civil Engineering
- Computer Engineering
- Electrical Engineering
- Engineering Physics
- Materials Science and Engineering
- Mechanical Engineering
- Polymer Science and Engineering
- Systems and Control Engineering
- Engineering (undesignated)

With the exception of the undesignated major in engineering, all of the engineering programs listed above are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

**General Education Requirements of the Case School of Engineering**

These requirements provide a foundation in mathematics and sciences for programs in engineering leading to the Bachelor of Science degree. The CSE general education requirements are also designed to develop communication skills and to provide a body of work in the humanities and social sciences.
Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy Case School of Engineering general education requirements.

**Mathematics, Sciences, and Engineering Requirements (44 credit-hours)**

**Total Units** 44

* NOTE: The Chemistry-Materials course sequences CHEM 105-CHEM 106-ENGR 145 or AP/IB credit in chemistry- ENGR 145, or CHEM 105-CHEM 106-EMAC 276 may substitute for the sequence CHEM 111-ENGR 145.

** Students pursuing a Polymer Science and Engineering major or the Biomaterials concentration in the Biomedical Engineering major may substitute EMAC 351 and EMAC 352 for ENGR 225.

** Bachelor of Science in Computer Science Degree **

*(Case School of Engineering)*

Candidates for the Bachelor of Science in Computer Science degree, in addition to meeting the general requirements for bachelor's degrees (p. 973), including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 129 credit-hours.
2. The General Education Requirements of the Case School of Engineering as modified for the Bachelor of Science in Computer Science degree listed below.
3. The requirements for the computer science Bachelor of Science major as presented in this Bulletin.

Note that most students pursuing a degree from the Case School of Engineering will complete ENGR 398 and ENGL 398 to fulfill the SAGES Departmental Seminar requirement and will complete an engineering senior project in their major to fulfill the SAGES Senior Capstone requirement.

** General Education Requirements of the Case School of Engineering, modified for the Bachelor of Science in Computer Science degree **

These requirements provide a foundation in mathematics and sciences for the Bachelor of Science program in computer science. The CSE general education requirements are also designed to develop communication skills and to provide a body of work in the humanities and social sciences.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy Case School of Engineering general education requirements.

Weatherhead School of Management Undergraduate Degree Requirements

Bachelor of Science Degree
(Weatherhead School of Management)

Candidates for the Bachelor of Science in Accounting degree or the Bachelor of Science in Management degree, in addition to meeting the general requirements for bachelor's degrees (p. 973), including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 122 credit-hours.
2. The General Education Requirements of the Weatherhead School of Management listed below.
3. The requirements for a major in accounting or management as presented in this Bulletin in the section devoted to each department or program.
4. For all courses taken in the major department and for which grades are averaged, for all courses taken to satisfy major requirements and for which grades are averaged, a candidate for a BS from the Weatherhead School of Management must earn a minimum cumulative average of 2.000. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at Case Western Reserve University at least half the hours required for the major.
5. A minimum of 30 credit-hours of courses at the 300- or 400-level.

Note that most students pursuing a degree from the Weatherhead School of Management will complete three one-credit-hour MGMT 395 seminars to fulfill the SAGES Departmental Seminar requirement.

Majors Available for the Bachelor of Science in Management degree:

- Business Management
- Finance
- Marketing
- Dean's Approved Major*

*Any student interested in developing a major of his or her own design for the BS in Management should consult with the Office of Undergraduate and Integrated Study Programs in the Weatherhead School of Management.

General Education Requirements of the Weatherhead School of Management (minimum of eight 3- or 4 credit-hour courses, totaling at least 26 credit-hours)

These requirements provide a broad educational foundation for programs in accounting and management, leading to the Bachelor of Science degree.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer credit may be...
used to satisfy Weatherhead School of Management general education requirements.

NOTE: Two courses used to fulfill requirements for the major may be used also to fulfill the breadth requirements.

**Arts and Humanities (6 - 8 credit-hours)**

Two 3- or 4-credit-hour Arts and Humanities courses selected from:

- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)
- Dance (DANC)
- English (ENGL)
- French (FRCH)
- German (GRMN)
- Greek (GREK)
- Hebrew (HBRW)
- History (HSTY)

* Any two 3- or 4-credit-hour Natural Science courses selected from:
  - Astronomy (ASTR), Biochemistry (BIOC), Biology (BIOL), Chemistry (CHEM), Earth, Environmental, and Planetary Sciences (EEPS), Nutrition (NTRN), Physics (PHYS)

**Social Sciences (6 credit-hours)**

Any two 3-semester hour Social Science courses except ECON 102 Principles of Microeconomics* or ECON 103 Principles of Macroeconomics* selected from: Anthropology (ANTH), Cognitive Science (COGS), Communication Sciences (COSI), Economics (ECON), Political Science (POSC), Psychology (PSCL), Sociology (SOCI).

* ECON 102 Principles of Microeconomics and ECON 103 Principles of Macroeconomics are included in Accounting and Management major requirements.

---

**Frances Payne Bolton School of Nursing Undergraduate Degree Requirements**

**Bachelor of Science in Nursing Degree**

( Frances Payne Bolton School of Nursing)

Candidates for the Bachelor of Science in Nursing (BSN) degree, in addition to meeting the general requirements for bachelor's degrees (p. 973), including the SAGES and Physical Education requirements, must also complete the following requirements:

1. A minimum of 126 credit-hours.
2. The General Education Requirements of the Frances Payne Bolton School of Nursing listed below.
3. The requirements for the major in nursing as presented in this Bulletin.
4. For all courses specifically required for the major in nursing, a minimum grade of C.

Note that most Nursing students will complete NURS 320 Theoretical and Evidence Bases for Best Practice in Nursing to fulfill the SAGES Departmental Seminar requirement and will complete NURS 373 Global Health Practicum to fulfill the SAGES Senior Capstone requirement. Also, most Nursing students will complete NURS 277 upon matriculation to count as a half-semester of Physical Education credit; this course may be used again two years later for a second half-semester.

**General Education Requirements of the Frances Payne Bolton School of Nursing**

(minimum of ten 3- or 4-credit-hour courses, totaling at least 30 credit-hours)

These requirements provide a broad educational foundation for the Bachelor of Science in Nursing program.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer credit may be used to satisfy School of Nursing general education requirements.

**Arts and Humanities (6 - 8 credit-hours)**

Two 3- or 4-credit-hour Arts and Humanities courses selected from:

- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)
- Dance (DANC)
- English (ENGL)
- French (FRCH)

### Acceleration Toward Professional Degrees

#### Senior Year in Professional Studies at Case Western Reserve University

Students of outstanding ability and attainment who are candidates for the BA and who are admitted to professional studies at Case Western Reserve University by the end of the junior year are offered an opportunity to shorten their entire course of studies by one year through the Senior Year in Professional Studies privilege. Application should be made during the second semester of the junior year through the dean of undergraduate studies. This privilege is extended to students who are candidates for the BA and who attend the School of Dental Medicine, the School of Medicine, the Frances Payne Bolton School of Nursing, or the Mandel School of Applied Social Sciences of Case Western Reserve University.

A student granted the senior year in professional studies privilege is permitted to substitute the work of the first year in a professional school for that required during the last year as an undergraduate. Upon the satisfactory completion of the first year’s work in the professional school, the student will be granted the bachelor’s degree from the College of Arts and Sciences. To be eligible for the senior year in professional studies privilege, a student must:

1. Be accepted for admission to professional studies in Case Western Reserve University.
2. Meet the following degree requirements:
   a. Completion of the SAGES requirements, the General Education Requirements of the College of Arts and Sciences, and the physical education requirement.
   b. Completion of three-fourths of the courses required for the major, including three-fourths of the courses required in the major department.
   c. Completion of 84 credit-hours of arts and sciences courses. These credit-hours may be drawn from those offered by the College of Arts and Sciences, as well as those in economics, biochemistry, nutrition, or computer science.
   d. Completion of at least 90 credit-hours of academic work, of which the final 60 credit-hours must have been in residence. A student may include in that final 60 credit-hours no more than six credit-hours earned in courses completed in other institutions, either by cross-registration in regular sessions or by approved transient registration in summer sessions. (Note: Students applying for the Senior Year in Professional Studies in the School of Medicine will generally be expected to have completed at least 117 credit-hours towards the BA degree.)

Upon admission to the program, students register in the professional school to which they have been admitted and are subject to the policies, rules and regulations of the professional school. They may, however, continue to receive CWRU undergraduate scholarships and may continue to reside in undergraduate housing during what would normally be their senior year of undergraduate work.

For information, contact the Office of Undergraduate Studies (ugstudies@case.edu), 357 Sears Bldg., 216.368.2928.
Senior Year in Absentia Privilege for Students of Medicine and Dentistry

Students of outstanding ability and attainment who are candidates for the BA degree and are offered admission to a medical or dental school other than those at Case Western Reserve University at the end of the junior year are eligible to shorten their entire course of studies by one year through the Senior Year in absentia privilege. Application for this privilege should be made during the second semester of the junior year through the dean of undergraduate studies.

A student granted the Senior Year in absentia privilege is permitted to substitute the work of the first year in a professional school for that required during the last year in the undergraduate college. Upon the satisfactory completion of the first year’s work in the professional school, the student will be granted the BA from the College of Arts and Sciences. The privilege is extended to qualified students who attend medical schools in the United States or Canada approved by the Association of American Medical Colleges or dental schools in the United States approved by the American Association of Dental Schools.

To be eligible for the Senior Year in absentia privilege, a student must:

1. Be accepted for admission to professional studies.
2. Attain a cumulative grade point average of at least 3.200 in all courses attempted from the date of admission as an undergraduate.
3. Meet the following degree requirements:
   a. Completion of the SAGES requirements, the General Education Requirements of the College of Arts and Sciences, and the physical education requirement.
   b. Completion of three-fourths of the courses required for the major, including three-fourths of the courses required in the major department.
   c. Completion of 84 credit-hours of arts and sciences courses. These credits may be drawn from those offered by the College of Arts and Sciences, as well as those in economics, biochemistry, nutrition, or computer science.
   d. Completion of at least 90 credit-hours of academic credit, of which the final 60 credit-hours must have been in residence. A student may include in that final 60 credit-hours no more than six credit-hours earned in courses completed in other institutions, either by cross-registration in regular sessions or by approved transient registration in summer sessions.

For information, contact the Office of Undergraduate Studies (ugstudies@case.edu), 357 Sears Bldg., 216.368.2928.

Integrated BS in Accounting/Master of Accountancy (MAcc)

The Integrated BS in Accounting/Master of Accountancy (MAcc) program allows students to work towards the completion of the Master of Accountancy (https://weatherhead.case.edu/degrees/masters/m-accouting) during their undergraduate studies, thereby enabling completion of both degrees in as little as four years. If after completion of the BS an additional semester is needed to complete the MAcc or if a student chooses to complete a majority of the MAcc in a fifth year, the student will enroll solely as a graduate student in the Weatherhead School of Management to complete the master’s degree. Depending on the student’s academic record and total credit-hours completed, he or she may choose to count up to six credit-hours (two courses) towards both the BS and the MAcc.

These programs are strongly recommended for those students planning to obtain professional certification as a certified public accountant (CPA). CPA candidates must have completed 150 credit-hours of study at the university level in order to qualify to sit for the CPA examination. The integrated program can save qualified students both time and money while equipping them with the skills and knowledge attractive to top accounting firms.

Because of the necessity for proper planning of coursework and programs, undergraduate students are strongly encouraged to apply for the Master of Accountancy in the junior year. Weatherhead undergraduates must apply for and be admitted to the MAcc program, but certain requirements are waived, such as the Graduate Management Admission Test (GMAT). Once admitted, students in the integrated study program are required to design a comprehensive study plan with both their Weatherhead undergraduate advisor and the faculty director of the MAcc program.

For more information, contact Tiffany Welch (tiffany.welch@case.edu), assistant dean of undergraduate and integrated study programs, at 216.368.2056 or Ashley Lu (jingwen.lu@case.edu), program manager for the MAcc, at 216.368.5376.

Integrated BA/BS and MSM-Finance

The Integrated Bachelor of Arts or Bachelor of Science and Master of Science in Management-Finance (https://weatherhead.case.edu/degrees/masters/ms-management/finance) (MSM-Finance) program allows qualified CWRU undergraduates to work towards the completion of the MSM-Finance during their undergraduate studies, thereby enabling completion of both degrees in as little as four years. If after completion of the BA or BS an additional semester is needed to complete the MSM-Finance or if a student chooses to complete a majority of the MSM-Finance in a fifth year, the student will enroll solely as a graduate student in the Weatherhead School of Management to complete the master’s degree.

Students admitted to the program are permitted to take up to nine credit-hours of graduate level courses toward the MSM-Finance while an undergraduate and count these credit-hours towards both the undergraduate degree (as appropriate to the student’s undergraduate degree program) and the MSM-Finance.

Admission to the MSM-Finance program (https://weatherhead.case.edu/degrees/masters/ms-management/finance/admission) is based on academic preparation and achievement (undergraduate coursework and GPA), GMAT/GRE or SAT scores, and genuine interest in finance (determined by application essays, letters of recommendation, and interview).

For more information about the program, contact Jim Hurley (james.hurley@case.edu), assistant dean of undergraduate and integrated programs, at 216.368.3856 or Marybeth Keeler (marybeth.keeler@case.edu), program manager of the MSM-Finance program, at 216.368.3688. For more information about applying to the MSM-Finance program, contact Ted Evans (theodore.evans@case.edu) at 216.368.2069.
Acceleration Toward Graduate Study
Integrated Graduate Studies Program

The Integrated Graduate Studies Program (IGS) is intended for highly motivated undergraduate students who are candidates for the BA degree and whose objective is a degree at the master’s or doctoral level. Qualified students may be admitted to graduate study for their senior year and pursue the simultaneous completion of requirements for both the master’s and bachelor’s degrees. The baccalaureate will normally be awarded upon completion of the requirements for both degrees, unless a student satisfies all BA requirements prior to completing the master’s degree requirements. Students in the IGS Program are exempted from the 42-hour restriction imposed on BA candidates for work above the 100-level in a single department. However, the exemption is granted only upon completion of the master’s degree requirements.

Eligibility requirements for participation in the Integrated Graduate Studies Program are:

1. 90 credit-hours earned of which the last 60 credit-hours must have been in residence at Case Western Reserve University.
2. Completion of the SAGES requirements, the General Education Requirements of the College of Arts and Sciences, and the physical education requirement; students who have fulfilled all SAGES requirements except the Senior Capstone will be required to complete the capstone during their first year in the IGS program.
3. Completion of three-fourths of the requirements for the major, including three-fourths of the courses required in the major department.
4. Admission to a master’s or doctoral program offered through the School of Graduate Studies.

Upon admission to the program, IGS students register as students in the School of Graduate Studies and are subject to the policies, rules and regulations of the School of Graduate Studies. They may, however, continue to receive CWRU undergraduate scholarships and may continue to reside in undergraduate housing during what would normally be their senior year of undergraduate work.

For information, contact the Office of Undergraduate Studies (ugstudies@case.edu), 357 Sears Bldg., 216.368.2928.

Integrated BS/MS in Nutrition

Admission to the Integrated BS/MS in Nutrition program is subject to the same process and requirements as admission to the Integrated Graduate Studies Program described above. Upon successful completion of the program, students earn the BS in Nutrition and the MS in Nutrition.

BS/MS Program for Candidates for the BS in Engineering, Computer Science, Mathematics, Natural Sciences, and Statistics

The Integrated BS/MS Program is intended for highly motivated candidates for the BS in engineering, computer science, mathematics, natural sciences, or statistics who wish to pursue an advanced degree. Application to the BS/MS program must be made after completion of 75 credit-hours of course work and prior to attaining senior status (completion of 90 semester hours). Generally, this means that a student will submit the application during his or her sixth semester of undergraduate course enrollment and will have no fewer than two semesters of remaining BS requirements to complete.

A student admitted to the program may, in the senior year, take up to nine credit-hours of graduate courses (400-level and above) that will count towards both MS and BS requirements. The courses to be double-counted must be specified at the time of application. Courses taken prior to admission to the program cannot count towards the MS unless they are in excess of BS degree requirements and permission to use them towards the MS has been granted by the dean of graduate studies and the dean of undergraduate studies.

To be considered for the BS/MS Program, a student must:

1. submit to the School of Graduate Studies an application for admission to the program, and
2. submit to the Office of Undergraduate Studies an MS Planned Program of Study Form, showing the courses to be double-counted.

Students for whom the master’s project or thesis is a continuation and development of the senior project should register for Exxx 651 Thesis (or the appropriate project course) during the senior year and are expected to complete all other courses for the BS before enrolling in further MS course work and thesis (continuing the senior project). Students for whom the master’s thesis or project is distinct from the senior project will be expected to complete the MS before taking further graduate courses for the master’s degree.

Applicants in engineering or computer science should consult their departmental BS/MS advisor in the Case School of Engineering. Applicants in mathematics, natural sciences, and statistics should consult the dean of undergraduate studies.

Conditionally Guaranteed Admission to the University’s Professional Schools

The Pre-Professional Scholars Programs in medicine, dentistry, law, and social work grant to a few outstanding, entering first-year undergraduates conditional commitments of admission to the appropriate professional school at Case Western Reserve University. These commitments are honored upon successful completion of the requirements established by each professional school. Students admitted to these programs are relieved of much of the anxiety and uncertainty associated with pre-professional studies. Consequently, they feel free to undertake challenging courses of study and pursue a variety of interests as they prepare for professional studies. Pre-Professional Scholars are free to choose any of the bachelor’s degrees available in the University. Participants who wish to change their career goals or apply for admission to other professional schools are free to do so.

The Six-Year Dental Program gives exceptionally able and committed entering first-year undergraduates the opportunity to accelerate their undergraduate and professional studies.

Pre-Professional Scholars Program in Dentistry

Each year, a small number of exceptionally well-qualified high school seniors who plan to pursue careers in dentistry are offered places in the Pre-Professional Scholars Program in Dentistry. This program requires eight years: four years of successful undergraduate study and four years at the School of Dental Medicine.

Pre-Professional Scholars in Dentistry are free to choose a major in an area of interest, but must take the following courses to fulfill admission requirements of the School of Dental Medicine:
Chemistry:

CHEM 105 Principles of Chemistry I 3
CHEM 106 Principles of Chemistry II 3
CHEM 113 Principles of Chemistry Laboratory 2
CHEM 223 Introductory Organic Chemistry I 3
CHEM 224 Introductory Organic Chemistry II 3
CHEM 233 Introductory Organic Chemistry Laboratory I 2
CHEM 234 Introductory Organic Chemistry Laboratory II 2

Biology:

BIOL 214 Genes, Evolution and Ecology 4 & 214L and Genes, Evolution and Ecology Lab
BIOL 215 Cells and Proteins 4 & 215L and Cells and Proteins Laboratory
BIOL 216 Development and Physiology 4 & 216L and Development and Physiology Lab

Mathematics:

MATH 125 Math and Calculus Applications for Life, Managerial, and Social Sci I 4

Physics:

PHYS 115 Introductory Physics I 4
PHYS 116 Introductory Physics II 4

They are required to take the Dental Admission Test in the junior year and achieve an acceptable level of performance on the test.

Successful progress through the program and admission to dental studies will be based on the pre-professional scholar’s personal and academic development and on the scholar’s achievement of a cumulative grade point average of 3.250 or higher for his or her work overall, as well as for his or her work in the required sciences. Successful progress in the program will be determined individually and reviewed at regular intervals during the student’s undergraduate career.

Pre-Professional Scholars in Dentistry who wish to accelerate their program may apply for the senior year in professional studies (p. 990) privilege.

Six-Year Dental Program

Each year a few exceptionally well-qualified high school seniors who plan to pursue careers in dentistry are offered places in the Six-Year Dental Program.

The first two years of the program are spent pursuing undergraduate studies, advised by the director of health career advising. Students are required to earn a minimum of 60 credit-hours. They are required to take all of the science and mathematics courses listed above for the Pre-Professional Scholars Program in Dentistry. If Advanced Placement credit is used to satisfy some of these science requirements, a minimum of 30 credit-hours in biology, chemistry, physics, and mathematics must be taken during the two years of undergraduate study. Additionally, to meet general education requirements, students must take one year of physical education, First Seminar, two University Seminars, one course in the area of Arts and Humanities, and one course in the area of Social Sciences, and must complete a writing portfolio. To qualify for the place reserved in the School of Dental Medicine, a student in the program must achieve the following:

1. A cumulative grade point average of 3.250 or higher for all course work completed;
2. Grades of B or higher in the required courses in biology, chemistry, physics, and mathematics;
3. An average score of 18 or higher on both the academic and PAT portions of the Dental Admission Test of the American Dental Association. The test must be taken no later than April of the second year.

Pre-Professional Scholars Program in Law

Each year, a small number of exceptionally well-qualified high school seniors who plan to pursue careers in law will be offered places in the Pre-Professional Scholars Program in Law at Case Western Reserve University. Pre-Professional Scholars receive a conditional commitment of admission to the Case Western Reserve School of Law, to be honored upon completion of the bachelor’s degree at the University.

The Pre-Professional Scholars in Law are encouraged to gain a wide cultural experience in their undergraduate studies, to major in the area that most interests them, and to choose courses in which they will learn habits of rigor and logical analysis. The law school encourages applications from all majors, including engineering and the sciences. The School of Law recommends that Pre-Professional Scholars in Law take courses in accounting, economics, history, and philosophy and that they gain as much writing experience as possible, because the ability to write effectively is critical to success in law school and legal practice.

Students admitted to the Pre-Professional Scholars Program in Law will be guaranteed a seat in the School of Law upon graduation from Case Western Reserve University if they satisfy the requirements set out at the time of admission to the program.

Pre-Professional Scholars Program in Medicine

Each year, 15 to 20 exceptionally well-qualified high school seniors who plan to pursue careers in medicine are offered places in the Pre-Professional Scholars Program in Medicine. Pre-Professional Scholars receive a conditional commitment of admission to the University Program of the Case Western Reserve University School of Medicine to be honored upon successful progress toward and completion of the bachelor’s degree. The Pre-Professional Scholars Program in Medicine requires eight years: four years of successful undergraduate study leading to the bachelor’s degree followed by four years in the University Program of the School of Medicine. Pre-Professional Scholars in Medicine who complete their undergraduate degree requirements in less than four years are required to pursue other experiences intended to enhance their professional and personal development during the period following the receipt of their bachelor’s degree and until study at the School of Medicine begins.

Pre-Professional Scholars in Medicine are free to choose from among all of the degree and major programs offered in the university, but must complete the courses in biochemistry, biology, chemistry, physics, math/statistics, and behavioral sciences listed in the Conditions of Admission letter they received when accepted to the program. They are also expected to continue to fulfill expectations for outstanding professional and personal development as outlined in the Condition of Admission letter. These expectations include, but are not limited to, maintaining...
academic integrity and adhering to the university’s standards of conduct (all academic integrity and judicial offenses will be reported to the School of Medicine), clinical shadowing, and involvement in undergraduate activities and community programs.

Pre-Professional Scholars in Medicine are not required to take the Medical College Admission Test (MCAT) for the program. However, if they do take the MCAT, they are expected to achieve a score that is above the 94th percentile. Program participants who have an interest in applying to any other medical schools or who wish to be considered for a dean’s merit scholarship at the Case Western Reserve School of Medicine should plan on taking this test.

Pre-Professional Scholars are expected to demonstrate successful academic progress by meeting the following level of performance: A CWRU cumulative GPA of 3.63 and a cumulative American Medical College Application Service (AMCAS) GPA and AMCAS Biology, Chemistry, Physics and MATH (BCPM) GPA of 3.63 at the time of application and maintained on final graduation transcripts.

Progress is reviewed with each student at regular intervals in the program. At the end of the third year, Pre-Professional Scholars in Medicine who have met the required levels of performance go through the normal admission procedures for the University Program of the School of Medicine, including submitting an application through the American Medical College Application Service (AMCAS) and an interview. Participants who do not meet the required levels of performance may still be admitted into the University Program of the School of Medicine, but such admission will be subject to review and approval by the School of Medicine’s Admissions Committee.

Successful completion of the Pre-Professional Scholars Program in Medicine guarantees admission only to the University Program of the School of Medicine. Students seeking admission to the Cleveland Clinic Lerner College of Medicine of the Case Western Reserve University School of Medicine must complete a separate application and will be considered in competition with all applicants for that program.

Pre-Professional Scholars Program in Social Work

Each year, as many as ten high school seniors who plan to pursue careers in social work are offered places in the Pre-Professional Scholars Program in Social Work. The program gives a conditional commitment of admission to the Case Western Reserve University Jack, Joseph, and Morton Mandel School of Applied Social Sciences to be honored upon successful completion of the bachelor’s degree.

Admission to the master’s degree program in social work at MSASS is dependent upon the following requirements:

1. Graduation from the University with a cumulative grade point average of 3.000 in the junior and senior years.
2. Completion of a minimum of 24 credit-hours in the social and behavioral sciences.
3. Continued evidence of a combination of personal qualities which are considered essential for the professional practice of social work.

Pre-Professional Scholars in Social Work who wish to accelerate their program may apply for the senior year in professional studies (p. 990) privilege.

Application Procedures for Pre-Professional Scholars and Six-Year Dental Programs

Prospective students interested in any of the Pre-Professional Scholars Programs or the Six-Year Dental Program should apply for admission through the Office of Undergraduate Admission of Case Western Reserve University. All forms are included within the application materials.

The application for admission, supporting test scores and high school transcript, must be submitted to the Office of Undergraduate Admission as early as possible, but no later than December 1.

Students who are admitted to the University and are also deemed eligible for consideration for one of the Pre-Professional Scholars Programs or the Six-Year Dental Program will be notified by February 1 and will be invited for interviews at the appropriate professional schools. The basis for selection for these programs will be dedication to the pursuit of the particular profession, distinguished academic performance, a record of personal accomplishments that attests to a student’s maturity, leadership, and interpersonal skills, and an interview with an admissions officer from the appropriate professional school. Decisions on admission to the programs will be communicated on or about April 1.

Students who are not admitted to these special programs are encouraged to pursue their undergraduate studies and to apply in the normal course to the professional school of their choice, including the professional schools of Case Western Reserve University.

Undergraduate Experiential Learning

Experiential Learning

Case Western Reserve University offers undergraduates a variety of experiences inside and outside the classroom that are built on a process of guided inquiry, preparation, action and reflection. Many research, internship, and employment opportunities are aligned with academic programs. Linguistic and cultural immersion characterize the study abroad experience. Courses that incorporate community service or internships into the curriculum forge links between Case Western Reserve undergraduates and schools, neighborhoods, businesses, and governmental and health care institutions in Cleveland and elsewhere.

Course-Based Experiential Learning

In disciplines as diverse as psychology, journalism, engineering, Spanish, Russian, nursing, anthropology, history, and biology, Case Western Reserve students engage in experiential learning beyond the on-campus classrooms and laboratories. Experiences that form the basis for reflection and synthesis under the guidance of faculty include working with hospitalized children, designing engineering solutions for a problem presented by a municipality, interning at a local media outlet, tutoring in Cleveland’s Hispanic community, gaining experience in public health clinics, studying history with “the city as classroom,” or collecting aquatic specimens from the ponds at the university’s 389-acre farm.

International Experience

Case Western Reserve University encourages all students to study abroad. Students of all majors are able to study abroad without interfering with their graduation timeline. Many of the study abroad programs cost the same as studying in Cleveland, and financial aid can be used to supplement study abroad costs as needed. Additionally, many
students will find that they are eligible for scholarships. Students should visit www.case.edu/studyabroad or contact a study abroad advisor at studyabroad@case.edu to find a program that meets their needs.

Semester and Academic Year Programs
Case Western Reserve University partners with several overseas institutions in order to allow students to determine, in consultation with their academic advisor and study abroad advisor, study abroad programs that meet their academic and personal goals. Students can choose from a list of approved study abroad partners (http://www.case.edu/international/edabroad/thinkStudyAbroadLongTerm.html).

Undergraduate students who have completed at least 24 credit-hours of coursework at Case Western Reserve University, have declared a major, and are in good academic and disciplinary standing, with no pending judicial actions, and are otherwise eligible to register on campus at Case Western Reserve University for the proposed semester(s) (no financial holds, e.g.) are eligible to participate in programs of study or practical experience that immerse them in the culture and language of another country.

After matriculation at Case Western Reserve University, students are permitted to earn at other accredited colleges or universities or through an approved program of study abroad no more than 38 credit-hours toward the totals required for the degree, including courses taken through the cross-registration program, with no more than 15 credit-hours taken as part of domestic programs or as summer study in a student's home country; any off-campus study credits beyond 15 may only be taken through approved programs of study abroad. Any additional credit earned at other institutions after matriculation at Case Western Reserve beyond 15 domestically or as summer study in a student's home country and beyond a total of 38 including study abroad will raise the total number of semester hours required for the degree by a corresponding number.

Case Western Reserve does not require students to complete any foreign language prerequisites before studying abroad, though students wishing to study in a country where the native language is not English are advised to develop their language skills to the extent possible. However, students studying for at least a semester in a single location where English is not an official language must take a course that advances their skills in a language of the host country during each semester of study abroad, provided such courses are available; this may be a course of language instruction or a course taught in a language of the host country. Students participating in study abroad experiences that are comparative in nature and visit several sites within the same semester are not required to include language study in their academic programs.

Students participating in semester or academic year study abroad must enroll in the equivalent of at least 12 credit-hours each semester in order to maintain full-time student status for the semester abroad. Upon presentation of an official transcript from the study abroad program, transfer credit will be awarded for courses equivalent or comparable to those offered by Case Western Reserve University and completed with a grade of C or better.

Students participating in semester or academic year study abroad pay tuition to Case Western Reserve University and maintain their status during the period of study abroad. Case Western Reserve University will, in turn, pay the tuition costs for the student's program, but the student will be responsible for all non-tuition costs associated with study abroad. Students eligible for financial aid continue their eligibility during study abroad.

CWRU in London at the Royal Academy of Dramatic Art
CWRU in London at the Royal Academy of Dramatic Art is organized by Case Western Reserve University to allow students to travel in a cohort to London to study theater and theater history. This theater/humanities program, offered in conjunction with the Royal Academy of Dramatic Art, allows students to sharpen their acting skills and gain a solid understanding or theatrical history while living and studying alongside some of the world's best performing artists. Because students are formally enrolled in CWRU courses while participating in this program, their courses and grades appear on the CWRU transcript in the ordinary way rather than as transfer credit.

Short-Term Programs
Case Western Reserve University offers a robust portfolio of short-term study abroad options, which allow students to travel as a group with a member of the Case Western Reserve University faculty. These programs are often one to three weeks in duration and are offered over Spring Break, Winter Break, and during the summer. Program offerings vary each year, but recent short-term study abroad locations included Botswana, China, Costa Rica, Cuba, Ecuador, France, Germany, Guatemala, Israel, the Netherlands, Poland, Spain, and the United Kingdom. All CWRU students in good standing are eligible to participate in short-term study abroad programs. For more information, contact the study abroad advisor in the Office of Educational Abroad, Tomlinson Hall 143.

Summer Programs
All Case Western Reserve undergraduates in good academic and judicial standing are permitted to study abroad during the summer. With approval, up to 15 credit-hours of summer coursework can be transferred to Case Western Reserve University. In the summer, study abroad students pay tuition and fees directly to the school/provider overseas. A wide variety of summer programs is available through the Office of Education Abroad, Tomlinson Hall 143.

Research Opportunities Abroad
Case Western Reserve University offers research opportunities abroad as part of a semester abroad on many of our approved programs, as well a research-intensive programs in partnership with Acadia University (summer options) and EuroScholars (semester options). EuroScholars is a network of 11 internationally-recognized European research institutions. All are ranked in the top 2% of the 4,000 universities throughout Europe. Projects are available in arts and humanities, performing arts, biology, chemistry, engineering, mathematics, physics, astronomy, computer science, medicine, biomedical sciences, law, economics, management, politics, and social studies. The CWRU study abroad advisors can help students apply to this elite program. Students can also identify independent research projects abroad with the help of the Office of Education Abroad and CWRU faculty.

Research Experience
Undergraduate Research
Case Western Reserve University is a research-intensive community with a historic tradition of involving undergraduates in research and creative endeavors. Regardless of a student's major or academic interests, there are numerous opportunities to engage in research either on campus with Case Western Reserve faculty or elsewhere during both the academic
year and the summer. The SOURCE (http://www.case.edu/provost/source) (Support of Undergraduate Research and Creative Endeavors) Office provides assistance to students throughout the undergraduate educational experience, including:

- helping students identify research and creative project opportunities,
- providing funding for on-campus summer research,
- providing funding for travel for students presenting their work at regional and national conferences,
- providing educational research and informational seminars,
- sponsoring Intersections: SOURCE Symposium and Poster Session for students to present their work to our academic community, and
- sponsoring Discussions: The Undergraduate Research Journal of CWRU.

For more information, contact the SOURCE Director, Sheila Pedigo (sheila.pedigo@case.edu), Sears 451, 216.368.8508.

In many cases, students pursuing research under the guidance of a faculty member may earn degree credit by registering for "Undergraduate Research" or "Independent Study" in the appropriate department. These are advanced-level courses and require departmental approval. However, students may not earn both degree credit and pay for the same work. Students may discuss academic credit for research with their major advisor.

Work Experience

The Center for Civic Engagement and Learning

The Center for Civic Engagement and Learning (https://students.case.edu/civicens) connects students and the community through service. The center coordinates both curricular and co-curricular activities that promote learning through service to communities locally, nationally, and internationally. Service learning venues include academic course work, work-study positions, residence hall and Greek Life programs, and weekly service opportunities.

The Center for Civic Engagement also offers regular, weekly and bi-monthly opportunities for community service through the CASE SERVICES projects; assists faculty and students in designing and implementing community-based courses and SAGES capstone projects; coordinates on-going volunteer and work-study tutoring; and schedules Days of Service for one-time community service projects.

Cooperative Education

Cooperative Education (Co-op) (http://engineering.case.edu/coop) is an academic program that enables students to alternate classroom studies with career-based experiences in industry. It is a learning experience designed to integrate classroom theory with practical experience and professional development. Co-op is a paid full-time work experience designed to enhance the student’s education. Case Western Reserve co-op assignments are typically for two seven-month periods, each period consisting of a summer and a contiguous spring or fall semester. While participating in co-op, students maintain their full-time student status. This program is available to students pursuing degrees in engineering, biochemistry, biology, chemistry, engineering physics, geology, mathematics, physics, and statistics. For additional information, contact Ms. Mary Rose Tichar (mrt2@case.edu), 304B Nord Hall, 216.368.4447.

Professional Practicum

Practicum (http://students.case.edu/careers/students/jobs/practicums) is an experiential learning collaboration among a student, an employer, and a faculty member serving as the student’s practicum advisor that is coordinated by the Career Center’s Experiential Learning Specialist. The program is open to undergraduate students enrolled in the College of Arts and Sciences and/or the Weatherhead School of Management. The primary goal of a practicum is the intellectual, personal, and professional growth of the student. In order to ensure that this goal is achieved, the collaborators establish learning objectives prior to the start of the practicum. These objectives are reviewed throughout the semester, and the student’s progress is evaluated at both the mid-point and end of the practicum.

While completing a practicum assignment, a student works full-time for a minimum of 14 weeks in a professional setting and does not take classes. The student will maintain full-time student status during the practicum period. Though credit is not awarded, students who successfully complete the practicum assignment will receive transcript notation. A student may participate in up to two practica, but it is recommended that at least one semester be spent on campus between these experiences. Students interested in participating in a practicum should contact the Career Center a semester prior to the intended practicum assignment.

Washington Study Program

The Washington Study Program (http://politicalscience.case.edu/undergraduate/washington-center-program) provides students with the opportunity to complete a full-time, research-intensive internship in Washington, D.C. By participating in a semester-length program during the fall or spring (WASH 2A (p. 469) Washington Center Internship), students earn 9 credit-hours; for a summer internship (WASH 2D (p. 469) Washington Center Summer Internship), they earn 3 credit-hours. In addition, students earn 3 credit-hours for participating in a seminar and attending a weekly lecture/discussion group (WASH 2B (p. 469) Washington Center - Politics and Public Policy Course) and 3 credit-hours by developing a portfolio based on their internship experiences (WASH 2C (p. 469) Washington Center - Portfolio). The credits earned can be counted as general electives or applied to a student’s major or minor, with the prior consent of the individual department(s).

To be eligible for the program, a student is expected to be a junior or senior and have at least a 3.00 GPA. The program director (Professor Justin Buchler (justin.buchler@case.edu), 111 Mather House, 216.368.2646), the student’s major advisor, and the appropriate dean must approve each application. Students must ensure that their participation will not prevent them from meeting on-campus residency or other university requirements.

Undergraduate Collaborative Programs

Collaborative Programs with Other Colleges

Cross Registration in Northeast Ohio

Full-time undergraduates in good academic standing may cross-register for one course per semester at no additional tuition cost beyond their Case Western Reserve University tuition at the Cleveland Institute of Art, Cleveland State University, Cuyahoga Community College, or John Carroll University. Cross-registration at other local colleges and
universities while enrolled full-time at Case Western Reserve will be considered on a case-by-case basis. Approval to participate in cross-registration is handled by the Office of Undergraduate Studies, and is normally limited to courses that are not offered at Case Western Reserve.

To cross-register for studio courses at the Cleveland Institute of Art, a student must have permission from Case Western Reserve University's director of art studios, Mr. Timothy Shuckerow (timothy.shuckerow@case.edu), 2215 Adelbert Road, 216.368.2714.

Joint Program in Art Education

The joint program in art education of Case Western Reserve University and the Cleveland Institute of Art (CIA) enrolls students pursuing the BS in Art Education, combining studio art courses at the Cleveland Institute of Art with liberal arts and education courses at Case Western Reserve University. Admission to the program requires application to Case Western Reserve University and presentation of an art portfolio to the Cleveland Institute of Art; credentials must be acceptable to both institutions.

Joint Program in Music

All programs in music are conducted jointly by Case Western Reserve University and the Cleveland Institute of Music, and provide the intimacy and specialization of a professional conservatory, together with the resources of a comprehensive university.

Private music lessons can be arranged through the Department of Music in collaboration with the Cleveland Institute of Music. Students interested in pursuing this opportunity must obtain a permit at the Music Department in Haydn Hall to enroll for credit in Applied Music. Charges for private lessons will be covered by the full tuition rate for music and music education majors only. All other students will pay an additional fee.

Students pursuing a major in music or music education take music theory and lessons at the Cleveland Institute of Music, and take music history and other liberal arts and music education courses at Case Western Reserve University. Students pursuing the Bachelor or Arts degree with a major in music or the Bachelor of Science in Music Education degree apply to and enroll in Case Western Reserve University, while students seeking the Bachelor of Music degree apply to and enroll in the Cleveland Institute of Music.

Reserve Officer Training Corps (ROTC)

Reserve Officer Training Corps (ROTC) programs are available to Case Western Reserve University students through cooperative arrangements with Kent State University for Air Force ROTC and with John Carroll University for Army ROTC. Each of these universities offers military studies, leadership, and training courses. Participating students may seek transfer credit at Case Western Reserve for these courses, and may be exempted from the undergraduate physical education requirement. Students who are not recipients of ROTC scholarships may enroll in the first- and second-year ROTC courses without incurring any military obligation. University students enrolling in ROTC programs are eligible to compete for ROTC scholarships awarded by the Air Force or the Army.

Air Force ROTC

The Air Force Reserve Officer Training Corps (http://www.kent.edu/afrotc) (AFROTC) program provided by Kent State University prepares students for service as officers in the United States Air Force. Through courses in history, management, and leadership, and through practical training, students acquire leadership and management skills, and learn about Air Force career opportunities, the role of the military in American society, the history of air power, and national defense policy.

An agreement between Case Western Reserve University and Kent State University allows full-time Case Western Reserve students to complete aerospace studies courses. Students cross-register for these courses through Cleveland State University, but the courses are held at Kent State University, which is approximately 35 miles from Case Western Reserve. Classes are usually scheduled on one or two afternoons during the week. This arrangement allows Case Western Reserve students to participate in either the four- or two-year AFROTC program. Students who wish to enter the two-year program in the junior year must contact the professor of aerospace studies no later than February prior to the academic year of planned entry.

Air Force ROTC scholarships are available on a competitive basis. Information about courses, registration, and scholarships may be obtained from the Air Force ROTC DET 630, 125 Terrace Drive, Kent State University, Kent, Ohio 44242; telephone: 330-672-2182. Case Western Reserve students planning to register for AFROTC courses at Kent State University should consult with the Office of Undergraduate Studies for information regarding registration procedures.

Army ROTC

The Army ROTC (http://www.jcu.edu/rotc) program is designed to prepare students for service as a commissioned Army officer in either the active duty U.S. Army or the reserve components of the Army Reserve or National Guard. Classes and practical training focus on military skills, officer professionalism, leadership training, and the development of military-related officer and management techniques and procedures.

Army ROTC is offered as part of a collaboration with John Carroll University with some of the first- and second-year ROTC classes being offered on the Case Western Reserve University campus. For those courses offered at Case Western Reserve (MLSC 101, MLSC 102, MLSC 201, and MLSC 202), students register in the ordinary way. For other Army ROTC classes, students enroll through cross-registration in the Department of Military Science at John Carroll University, which is approximately five miles from Case Western Reserve.

Army ROTC scholarships are available on a competitive basis. Information about courses, registration, and scholarships may be obtained from the Department of Military Science (ARMY-ROTC), John Carroll University, University Heights, OH 44118-4581; telephone: 216.397.4421. Case Western Reserve students planning to register for Army ROTC courses at John Carroll University should consult with the Office of Undergraduate Studies for information regarding registration procedures.

Fisk University Exchange Program

An exchange program between Fisk University and Case Western Reserve University enables up to four Case Western Reserve students to spend a semester as visiting students at Fisk each year. Up to four Fisk students may spend a semester at Case Western Reserve each year. Fisk University was founded in 1866 as the first integrated coeducational school in the United States, and, at its founding, focused on providing a quality liberal arts education to the children of former slaves. Fisk University has a distinguished history as a liberal arts institution. It was the first historically black college to have chapters of the Phi Beta Kappa and Mortar Board national honorary societies.
Case Western Reserve students who participate in the Case Western Reserve-Fisk Exchange pay tuition to Case Western Reserve University, pay the Fisk room and board fees, and maintain their CWRU student status during the period of the exchange. Information about the exchange program is available from the Fisk exchange advisor in the Office of Undergraduate Studies.

The Dual Degree (3-2) Program in Engineering

Students of superior scholarship who have attended one of a group of select liberal arts colleges with which Case Western Reserve University has a dual degree agreement are eligible to participate in the Dual Degree (3-2) (http://engineering.case.edu/delpp/dualdegree) program at Case Western Reserve University. This program allows outstanding students to begin their studies at a liberal arts college for three years and pursue an engineering degree at Case Western Reserve University for two years. Once requirements at both institutions are completed, students will receive a degree from the liberal arts college and a degree from Case Western Reserve University in a designated engineering discipline. For additional information, contact Debbie Fatica (dx3@case.edu), 304 Nord Hall, 216.368.4449.

Undergraduate Academic Advising

Academic Advising

Academic advising is an important component of the educational program at Case Western Reserve University. Academic advisors assist students in the exploration of academic opportunities at the university and in the selection of courses. Advisors may refer students to other sources of information and assistance at Case Western Reserve.

The advising model at Case Western Reserve aims to balance generalist and field-specific advising, shifting the balance as students progress through their undergraduate careers. At the beginning, a student's First Seminar instructor provides generalist advising until the student declares a major. At the same time, representatives from each major and minor are available to provide field-specific advice as a student decides on an area of focus. Once a student declares a major, the emphasis shifts to major-focused advising with an advisor assigned in that field to guide the student in the construction of an academic plan and to monitor the student's progress in pursuit of that plan. Throughout a student's undergraduate career, the deans in Undergraduate Studies are available for generalist advising to address concerns that fall outside of the pursuit of a specific major.

Students are expected to initiate and maintain regular contact with their advisors to address the student's curricular and career concerns, and to review progress towards graduation. Students are expected to meet with advisors when declaring a major or minor, before registering for classes each semester, and when making corrections to their academic requirements reports.

Advising during the First Year

During a student's first year at Case Western Reserve University, the faculty member instructing the student's SAGES First Seminar serves as the student's academic advisor. Students and their advisors are expected to explore the student's academic interests and concerns, as well as educational and career goals, and to seek expert information and advice about academic policies and procedures and about specific academic programs from the General Bulletin, from newsletters and websites, from the academic representatives in the majors and minors designated as first year resources, and from other sources of advice and counseling on campus. Staff in the Office of Undergraduate Studies (http://case.edu/ugstudies) (including the coordinators of first-year residence education in the First-Year Residential Colleges), the University Career Center (http://studentaffairs.case.edu/careers), Educational Services for Students (http://studentaffairs.case.edu/education), the Office of Multicultural Affairs (http://studentaffairs.case.edu/multicultural), the University Counseling Services (http://studentaffairs.case.edu/counseling), and specialized programs such as Co-op (http://engineering.case.edu/coop) (co-operative education), SOURCE (http://www.cwru.edu/source) (research and creative projects), the Center for International Affairs (http://case.edu/international) (study abroad, international student services), and the Center for Civic Engagement and Learning (http://studentaffairs.case.edu/civicengagement) (community service) are available to support first year students and their advisors with publications, workshops, websites, experiential learning opportunities, and individual communications.

Advising in the Majors and Minors

Although some first-year undergraduates enter with definite goals, they are not assigned to advisors in the majors until they have declared their major. Opportunities for exploration of majors and minors during the first and second semesters include a Choices Fair, departmental information sessions, and individual conversations with faculty and academic advisors. First-year students who are ready to declare a major in their first year may do so beginning in November.

Students engaging in further exploration of majors are expected to declare a major no later than the end of the second year (See Declaring a Major in the section on Academic Policies and Procedures (p. 1000)). When a student selects a specific major or minor, the academic representative assigns a faculty advisor. A choice or change of major or minor is not recorded for any student until the major or minor declaration form, bearing the signature of the student, the name of the advisor, and the signature of the academic representative of the major or minor, has been completed and submitted to the Office of Undergraduate Studies, 357 Sears Bldg.

After the first year, students who have not declared a major should consult their assigned advisor (noted in their online student information) or the academic representative of an academic department of interest for advice and schedule approval.

Advising in the Office of Undergraduate Studies

The deans and advisors in the Office of Undergraduate Studies, including the coordinators of first-year residence education in the First-Year Residential Colleges, are available to answer student and faculty questions about University rules, practices, programs, and resources and to meet with students who are interested in accelerated undergraduate to graduate and professional school programs, academic awards, and fellowship and scholarship opportunities. All students who have not declared a major should consult with their first year advisor or with one of the deans in the Office of Undergraduate Studies for advising and schedule approval. Students with interests in health professions and/or law school are encouraged to seek advice from the director of health career advising, Steven Scherger (http://www.case.edu/ugstudies/about-us/who-we-are/staff/steven-p-scherger.html), and the pre-law advisor,
Undergraduate Grades

Grades

Grades at Case Western Reserve University are issued on the following scale, with good standing based on criteria presented in the section on Academic Standing Regulations (p. 1004) and the requirement of a 2.000 average for graduation. Academic averages are computed by dividing the number of quality points earned by the number of hours completed, excluding transfer credit, credit based on examinations (AP, IB, proficiency, etc.), and courses graded P/NP.

Grade of Incomplete

Assignment of the Incomplete Grade:
The Incomplete grade (I) is assigned by and at the discretion of the instructor when a) there are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justify an extension of time beyond the requirements established for and met by other students in the class, and b) the student has been passing the course and only a small segment of the course, such as a term paper, remains to be completed. It is the student’s responsibility to notify the instructor of the circumstances preventing completion of all assigned work. In the absence of notification or adequate justification, the instructor has the authority to assign the student a final grade that assumes a failing grade for the missing work. An Incomplete grade should not be assigned a) when a student has been absent for much of the semester and/or has done little of the work required for a course, or b) because a student is absent from a final examination, unless the dean of undergraduate studies has authorized the grade.

The amount of additional time allowed the student to make up incomplete work should serve to accommodate the student while being fair to other students in the course. It should be proportional to the duration of a student’s illness or absence and might be no more than a few days or weeks. At the extreme, it should not extend past the eleventh week of the session following the one in which the Incomplete grade was received. In certain cases (such as students on probation) the dean of undergraduate studies may establish an earlier date for completion of courses with Incomplete grades.

Changing the Incomplete Grade:

When the student has completed the required work, the instructor shall enter in the Student Information System a final evaluative grade to replace the Incomplete. When a student fails to submit the work required for removing the Incomplete by the date established, the instructor shall enter a final grade that assumes a failing performance for the missing work. In the absence of the assignment of a grade by the instructor, the Registrar will convert the I to F when the deadline for making up Incomplete grades from a previous semester has passed.

Audit

See section on Academic Policies and Procedures (p. 1000).

Pass/No Pass

Undergraduate students (degree candidates and non-degree students enrolled at the undergraduate level), other than students participating in the Pre-College Scholars program, may elect to take one course each fall and spring semester on a Pass/No Pass grading basis, provided they remain enrolled in at least 3 semester hours of courses for regular evaluative grades. Enrollment in courses that are graded on a Pass/No Pass basis (e.g., PHED 55A Cardio-Fitness (First Half)) does not preclude a student’s use of the Pass/No Pass option in another courses taken the same term. The Pass/No Pass option is not available during the summer session or to undergraduate degree candidates enrolled at the graduate or professional levels through the IGS program or Senior Year in Professional Studies.

Instructors are not notified of a student’s use of this option. They submit evaluative grades for all students, and these are converted to Pass/No Pass in the Registrar’s Office. Courses elected on a Pass/No Pass basis and completed with a grade of D or higher will be entered with the grade P on the student’s transcript. Courses taken Pass/No Pass for which a grade of F is earned will have NP entered on the transcript. Students who earn a P grade will earn credit for the course, while those who earn NP will not. Grades of P and NP are not included in computing the grade point average.

Students may submit an on-line Pass/No Pass Option form at any time in the fall or spring semester after the end of the drop/add period and before 5:00 p.m. on the day of the course withdrawal deadline for that semester (currently the 11th Friday of the semester for upperclass students, including new transfer students; and the last day of classes for first year students).

Use of the Pass/No Pass option is subject to the following restrictions:

1. All courses to be counted toward major, minor, or SAGES/general education/core requirements must be taken for regular evaluative grades.
If a student opts for the Pass/No Pass option in a course, that course will not be counted toward any of these requirements.

2. Students majoring in any Weatherhead School of Management degree program (accounting or management) may not use the Pass/No Pass option for any Weatherhead School of Management courses (ACCT, BAFI, BLAW, ENTP, LHRP, MGMT, MIDS, MKMR, OPMT, ORBH, OPRE, PLCY), either required or elective.

3. A decision to use the Pass/No Pass option is irrevocable unless the student needs that course to complete requirements for a major or minor declared in a subsequent semester. In that event, the student may request that the Office of Undergraduate Studies reveal the grade on the transcript at the start of the student’s final term at Case Western Reserve University.

Course Repetition
See section on Academic Policies and Procedures (p. 1000).

Grade Reports and Transcripts
Students may view their grades on the Student Information System (https://case.edu/sis). Students can request official copies of their transcripts (http://www.case.edu/registrar/transcripts.html) from the Registrar’s Office. The University considers the grades earned by a student and other information about the student’s performance at the University confidential and will release such information only upon written request by the student. Transcripts will not be issued to or on behalf of students who have not discharged all obligations to the University.

Mid-Semester Grades
Mid-semester grades are assigned in undergraduate courses at the end of the eighth week of each semester. Mid-semester grades are advisory; the grades are not part of a student’s official academic record or transcript. At mid-semester, an instructor may assign to undergraduates evaluative letter grades (A, B, C, D, or F) or grades of satisfactory (S) and unsatisfactory (U), with S corresponding to performance in the range of A through C, and U corresponding to performance in the D or F range. (S and U may not be assigned as final course grades in undergraduate courses.) Students may view their mid-semester grades on the Student Information System (https://www.case.edu/sis). Students who have any low or unreported mid-semester grades should discuss their progress with their instructors and with their advisors.

Undergraduate Academic Policies and Procedures

Academic Policies and Procedures
All academic regulations governing undergraduates are administered by the Office of Undergraduate Studies. Academic regulations are subject to change by action of the Faculty Senate, its Committee on Undergraduate Education, and the various committees responsible for the oversight of curriculum and academic standing.

When circumstances so warrant, a student may submit to the Office of Undergraduate Studies a petition requesting an exception to a specific regulation. Petition forms are available in the Office of Undergraduate Studies, 357 Sears Bldg.

Academic Grievance Policy
A student who wants to register a complaint about course instruction or evaluation should first bring the matter to the direct attention of the professor or instructor involved. If the matter is not satisfactorily resolved, the student should go to the chair of the academic department in question and seek departmental review. If neither step resolves the complaint, the student may take the matter to the faculty member’s college or school dean for final review and decision.

Academic Integrity Policy
See the Academic Integrity Policy (http://students.case.edu/handbook/policy/integrity.html) and Academic Integrity Procedures in the CWRU Student Handbook.

Academic Standing
See section on Academic Standing Regulations (p. 1004).

Attendance
Students are expected to attend classes regularly. Each instructor is free to determine the extent to which absences affect the final grades of students but should make the policy regarding attendance known at the start of the course. Instructors should report excessive absences to the Office of Undergraduate Studies. Instructors who judge a student’s absences from class to be excessive may drop the student from the course with a grade of F. Instructors taking such action must notify the student’s dean in writing.

Students unable to attend classes because of illness should notify their instructors and make the appropriate arrangements directly with the instructor. The University Health Service and the Office of Undergraduate Studies do not provide medical excuses for class absence. Information concerning the policy of the Health Service and the Office of Undergraduate Studies is available in those offices.

Any student who is unable to attend classes or participate in any examination, study, or work requirement on a particular day because of his or her religious beliefs is excused from any such activity. The student will be given the opportunity to make up the examination or work that is missed, provided the make-up work does not create any unreasonable burden upon the university. When possible, students should give notice to instructors early in the semester about missing classes because of religious observance.

Audit
A student may audit a course with the dean’s or advisor’s approval and the consent of the instructor of the course. An auditor receives no credit for the course. Registration in a course cannot be changed from audit to credit or the reverse after the end of the drop/add period. However, a student may take for credit a course he or she audited in an earlier semester. At the beginning of the course, the student and instructor should reach agreement regarding the requirements to be met for a grade of AD. The grade of AD is entered on the student’s transcript if approved by the instructor of the course. If the instructor does not approve the grade AD, the enrollment is not posted on the transcript.

Course Loads and Overloads
In order to be classified as a full-time student, a student must enroll for a minimum of 12 credit-hours by the end of the drop/add period. Eligibility for many forms of financial aid and for participation on intercollegiate
varsity sports teams requires full-time status. Students registering for fewer than 12 credit-hours are classified as part-time and charged tuition on the basis of the number of credit-hours being taken.

The normal full-time load is 14-17 credit-hours. Students ordinarily may not enroll in more than 19 credit-hours in a semester. Any schedule of more than 19 credit-hours requires a dean’s approval. Continuing students may enroll for 20-21 hours in a semester if they have a cumulative grade point average of 3.200 or better. To register for 22 or 23 hours, a minimum grade point average of 3.500 is required. Graduating seniors may be approved for overloads if they need such a schedule in order to graduate at the end of the semester in question.

Course Placement

No credit will be awarded to count towards degree requirements for foreign language or mathematics courses which duplicate work taken earlier in high school or in another institution. First-year undergraduates who have questions regarding their eligibility to receive credit for foreign language or mathematics courses should see the associate dean for first-year students in the Office of Undergraduate Studies.

Course Repetition

Students have the opportunity to repeat a course in order to improve their mastery of the course material. When a course is repeated, the student will earn credit for the course only once, but both the original grade and the grade for the repeated course will be included in the semester and cumulative grade point averages, each weighted by the credit-hours for the course. The student’s transcript will show the comment “REPEATED: NO CREDIT AWARDED” directly below the original grade. Similarly, if a student repeats a course for which he or she has already received either test (AP, IB, etc.) or transfer credit, the original credit will be removed and the transcript will show the comment “REPEATED: NO CREDIT AWARDED;” credit will instead be awarded for the course taken at Case Western Reserve University. However, if the first attempt of the course resulted in a passing grade but the second attempt results in a failing grade, the student will continue to earn credit for the first attempt; both grades will be included in the semester and cumulative grade point averages.

The course repeat option may not be exercised after a degree has been awarded.

CAUTION: Students who are the recipients of any form of federal financial aid (grants, loans, work study, etc.) and repeat a course that previously earned a passing grade must enroll for a minimum of 12 credit-hours for which credit had not been earned previously.

Credit by Examination

Advanced Placement/International Baccalaureate/French Baccalaureate/A-Level Examinations

Students may earn degree credit on the basis of advanced examinations taken while in secondary school. Examinations eligible for credit and/or advanced placement include, but are not limited to, College Board Advanced Placement Examinations, International Baccalaureate Higher Level Examinations, French Baccalaureate, and A-Levels. Determination of the criteria for granting credit and/or placement is made by the appropriate department.

Proficiency Examinations

Departments within each academic unit offering undergraduate programs may choose to offer students the opportunity to earn course credit in specific courses by proficiency examination. To qualify for proficiency examination credit for a course, the student’s examination performance must demonstrate knowledge and skills at a level no lower than that of an average student who successfully completes the course. Upon notification from the academic department, the Office of Undergraduate Studies will post credit for the course on the transcript. The grade will be recorded as PR, and will not be included in a student's grade point average.

Declaring a Major or Minor

Students matriculating at Case Western Reserve University as first-year students may begin declaring their majors, though are not required to do so, on November 1 of the fall semester. Transfer students may begin declaring their majors at the start of their first semester at Case Western Reserve. A choice or change of major or minor is not recorded for any student until the major or minor declaration form, bearing the signature of the student, the name of the advisor, and the signature of the academic representative for the major or minor, has been completed and submitted to the Office of Undergraduate Studies, 357 Sears Bldg.

Students who enroll at Case Western Reserve University as first-year students are expected to declare a major before registering for classes for their fifth semester of enrollment. Transfer students are expected to declare a major before registering for their third semester at Case Western Reserve. Beyond that point, students who have not declared a major will have a registration hold placed on their accounts until they have done so. Those who will have earned fewer than 60 credit-hours (including transfer, AP, IB, and proficiency credit) by the end of the fourth semester for students who started as first-year students, or by the end of their second semester for transfer students, may request that their dean in Undergraduate Studies allow them to register for the next semester by lifting the registration hold. Students may later change their majors should their academic interests change.

Enrollment Changes

Drop/Add

Changes in course schedules must be submitted to the Registrar’s Office using the Student Information System or a drop/add form before the end of the second week of classes during the fall and spring semesters. However, for courses that run for half of the semester, students are allowed only a one-week drop/add period at the start of those courses. Deadlines for dynamically-dated courses (i.e. those that meet on some alternative schedule) are set in a proportional manner. Similarly, the drop/ add deadline for summer courses are set in a proportional manner, with the deadline ordinarily being the second day of classes.

Students who add a course after the start of the semester are responsible for any work missed and are expected to speak with the instructor to learn the consequences of any work missed and whether there are opportunities for making up missed work. In some cases, the instructor of a course may require his or her consent before a student may add a course during the second week of the drop/add period.
Withdrawal from a Course

The First Undergraduate Year:
For the first two semesters of enrollment, matriculated students who are beginning their college studies may withdraw from a course at any time during the semester, but no later than the last day of classes. Any course for which a grade of W is assigned will be deleted from the transcript at the end of the semester. This policy is not available for transfer students and does not apply to the summer session.

After the First Undergraduate Year:
A student may withdraw from a course no later than the end of the 11th week of the semester and receive a grade of W. In extenuating circumstances, a student may petition for permission to withdraw from a course after the deadline and receive a W. The grade of W will be posted on the student’s transcript.

For all course withdrawals:
Students in good academic standing (i.e., not on probation, probation incomplete, or continued on probation) may withdraw from courses through the Student Information System, provided that they remain actively enrolled in at least 12 credit-hours. All other course withdrawals (those by students who are not in good standing and those that take a student below 12 credit-hours of active enrollments) must be transmitted by the student to the Registrar’s Office on the appropriate form, signed by a dean in the Office of Undergraduate Studies. Failure to attend class or providing notice only to the instructor does not constitute an official withdrawal from a course. Such an unofficial withdrawal normally will result in the student’s being assigned the grade of F.

Students are ordinarily not permitted to withdraw from a course after a grade has been posted.

Withdrawal from the University
To withdraw from the university during a semester or session, a student must complete an official withdrawal form in the Office of Undergraduate Studies by the last day of classes for that semester or session. If unable to complete the withdrawal in person, the student must send written notification to the Office of Undergraduate Studies. If the withdrawal is necessary for reasons of health, a statement from the student’s physician to the University Health Service may be required as a condition of readmission. Grades of WD will be assigned in all courses in which a student is registered at the time of withdrawal, provided that a student follows the procedures stated above. Failure to attend classes or notification of instructors only does not constitute withdrawal from the university. A student who ceases to attend or otherwise participate in courses without officially withdrawing will be assigned the grade F for each course in which he or she is enrolled.

Students who do not plan to return for the following semester must notify the Office of Undergraduate Studies (ugstudies@case.edu), 357 Sears Bldg., 216.368.2928, in person or in writing.

Final Examinations
Final examinations normally are required in all courses and must be given during the final examination period at the time assigned by the Registrar; they may not be given during the final week of classes or on Reading Days. Any exception must be approved by the dean of undergraduate studies.

No student will be required to take more than two final examinations on a single day. A student who has three final examinations scheduled for a single day should go to the Office of Undergraduate Studies and obtain the assistance of the dean in arranging to take one of those examinations on an alternative day during the final examination period. Similarly, a student with conflicting examinations should seek the assistance of the dean of undergraduate studies in arranging to have the time of one examination changed.

A student must explain immediately and in writing to the dean of undergraduate studies an absence from a final examination. If the explanation is acceptable, the dean will authorize the assignment of the grade Incomplete and the administration of a make-up examination by the instructor. In the event of an unexcused absence from a final examination, the instructor should assign the student a final grade that assumes a grade of zero on the final examination and is consistent with the grading policy established for the course.

Graduation and Commencement
Application for Graduation
A student who has completed all graduation requirements in fewer than four years has the choice of graduating early or deferring graduation in order to graduate with his or her class. A student who completes all graduation requirements in four years or more must graduate at that time. The student must file an on-line application for the degree through the Student Information System by October 1 for January graduation, by February 1 for May graduation, and by June 1 for August graduation.

A student must discharge all financial obligations to Case Western Reserve University to receive a diploma and for the Registrar’s Office to release final transcripts.

Graduation Check
Students must ensure that their Academic Requirement reports reflect accurately their progress toward their degrees. All requested corrections and exceptions must be submitted to the Office of Undergraduate Studies at least one semester prior to graduation. Academic Requirement reports are available on-line through the Student Information System.

Participation in Commencement
Students are eligible to participate in May commencement activities provided that they have completed all degree requirements during that spring semester or the immediately preceding fall semester or summer session, or have an appropriate plan to complete their degree requirements in the upcoming summer session or fall semester. A student may participate in Commencement only once as a bachelor’s degree candidate, though exceptions are sometimes made for students receiving a second bachelor’s degree at least one year after the first.

Incompletes
See section on Grades.

Pass/No Pass
See section on Grades.

Promotion
The standards for promotion are:
better. Any such courses taken prior to the student's graduation from the University and completed with a grade of C or better. Credit earned elsewhere after matriculation at Case Western Reserve beyond a total of 38 including study abroad will raise the total number of credit-hours required for the degree by a corresponding number.

Permission of a dean in the Office of Undergraduate Studies must be obtained in advance if the student wishes to enroll elsewhere. Further, if a student wishes to take elsewhere a course to satisfy a major or minor requirement, it must also be approved by the department chair or academic representative. Upon presentation of an official transcript from each institution attended, transfer credit will be awarded for courses equivalent or comparable to those offered by Case Western Reserve University and completed with a grade of C or better. Credit earned elsewhere after matriculation at Case Western Reserve University is not applied toward the residence requirement of a minimum of 60 credit-hours, including at least 15 after a student has earned a total of 105 credit-hours, earned at Case Western Reserve. The Off-Campus Study Request Form is available in the Office of Undergraduate Studies, 357 Sears Bldg.

Credit is not awarded for work done at an unaccredited institution in the United States except by proficiency examination in those departments of Case Western Reserve University offering that opportunity. The awarding of transfer credit for work done at institutions outside the United States is subject to departmental evaluation.

A student separated for poor scholarship may not earn transfer credit for courses taken in the first two sessions after that dismissal.

Grades for courses taken at other institutions will not be entered on the student’s record nor will they be computed in the student’s grade point average.

In addition to the regulations concerning transfer credit outlined above, the following special restrictions apply to credit for summer courses taken at other colleges, universities, or technical institutes:

1. Students ordinarily will not be permitted to take elsewhere in Cuyahoga County courses offered at Case Western Reserve University. Exceptions to this policy will be permitted only in the event of significant extenuating circumstances. Students who desire the opportunity to take elsewhere in Cuyahoga County a course being offered at Case Western Reserve must petition the Office of Undergraduate Studies in advance for permission to do so.

2. Students must be in good standing. If a student is placed on probation between receiving permission and the start of off-campus enrollment, the
The student is no longer eligible to enroll for and receive transfer credit for this work. Students on probation require special approval and should contact a dean in the Office of Undergraduate Studies.

3. Students may register for no more than 12 credit-hours. One quarter-hour equals two-thirds of one credit-hour at CWRU.

4. Students may transfer credit only for courses in which a semester's work is completed in a minimum of three weeks.

**Academic Standing Regulations**

### Academic Standing Regulations

The Academic Standing Board monitors the progress of all undergraduate degree candidates at the end of each fall and spring semester to ensure that they are making appropriate progress toward earning their degrees in terms of the grades and number of credit-hours earned each semester; see below for information about the summer session. All degree candidates begin their academic careers in good standing. Those who fail to meet the requirements to continue in good standing, as defined below, are automatically placed on academic probation for the following semester in order to signal the need to improve their academic performance. Those who fail to meet a minimum set of academic standards defined below or who do not return to good standing after a semester of academic probation are ordinarily separated from the university for a period of two academic sessions, including the summer session.

### Good Academic Standing

#### Full-time First-Year and Transfer Students in the First Semester

In order to maintain good academic standing at the end of the first semester at Case Western Reserve University, a full-time (i.e., enrolled in at least 12 credit-hours at the end of the drop/add period) first-year student or new transfer student must:

1. earn a semester grade point average of 2.000 or higher AND
2. earn a minimum of 9 credit-hours in that semester.

#### Full-time Students After the First Semester

Following the first semester of the first year, full-time students (i.e., those enrolled in at least 12 credit-hours at the end of the drop/add period) will be in good standing provided they:

1. earn a semester grade point average of 2.000 or higher AND
2. earn a minimum of 12 credit-hours in that semester.

#### Part-time Students

Part-time students (i.e., those enrolled in fewer than 12 credit-hours at the end of the drop/add period) will be in good standing if they earn a semester grade point average of 2.000 or higher.

**NOTE:** Any student with incomplete grades at the end of a semester may be placed on “probation (incomplete)” or made “ineligible to register,” as described below.

### Academic Probation

Students who, at the end of any semester, fail to maintain the standard of performance required for good standing as specified above will be automatically placed on probation. Students placed on probation are ineligible to represent the university in intercollegiate activities and may not hold an elective or appointed office or chair a committee in any campus organization. In addition, they may not earn degree credit for work completed at another college or university during the period of probation without special permission.

When placed on academic probation, students will be expected to perform at a level that will return them to good standing at the end of the next semester. If they fail to return to good standing at the end of the following semester, they will be considered for separation from the university for at least two academic sessions, including the summer session.

A full-time student placed on probation who subsequently enrolls as a part-time student will not be reviewed for further academic action until he or she has completed sufficient semesters to total at least 12 credit-hours. At that time, the student will be reviewed on the basis of a composite of those semesters.

Similarly, a student who goes on probation as a part-time student will not be reviewed for further academic action until he or she has completed sufficient semesters to total at least the number of credit-hours attempted in the semester for which the student was placed on probation. At that time, the student will be reviewed on the basis of a composite of those semesters and will be expected to have earned at least the number of credit-hours attempted in the semester for which he or she was placed on probation.

### Separation

Students on academic probation who fail to return to good standing at the end of the following semester will be considered for separation from the university for at least two academic sessions, including the summer session.

Also, full-time students at the end of their first semester at Case Western Reserve University will be considered for separation without a semester of probation if they:

1. earn a semester grade point average less than 1.000 AND
2. earn fewer than 9 credit-hours in that semester.

After the first semester, full-time students will be considered for separation without a semester of probation if they:

1. earn a semester grade point average less than 1.000 OR
2. earn fewer than 9 credit-hours in that semester.
Part-time students are not eligible for separation without already being on probation, but will be considered for separation if they fail to return to good standing after a period of probation.

Separation because of academic performance is not an automatic process. Students being considered for separation will be asked to prepare a statement explaining the difficulties that interfered with their ability to earn a satisfactory record. If a student thinks he or she should not be separated, the statement should include an explanation of why the Academic Standing Board should have confidence in the student's ability to return to good standing at the end of the next semester and should outline the plan the student has established for ensuring academic success. The Academic Standing Board will decide to separate the student or to place or continue the student on academic probation based on a review of the student's statement and the academic record.

Students separated for reasons of academic performance may not earn transfer credit for work completed elsewhere.

Readmission from Separation

Students who have been separated because of poor academic performance may petition for readmission after two academic sessions, including the summer session, have elapsed. Students readmitted after being separated for reasons of academic performance will retain all credits and quality points earned before separation, and the cumulative grade point average will be continued, including all grades earned before and after separation.

Permanent Separation

A second academic separation following review by the Academic Standing Board will ordinarily be permanent.

Ineligible to Register

Students will be declared “ineligible to register” when they have Incomplete grades which would result in the student's being considered for separation if those Incomplete grades were converted to F's. Such students will be required to finish the incomplete courses with grades that justify their retention before they will be allowed to continue for the next academic session, unless they successfully petition the Academic Standing Board for permission to enroll.

Summer Enrollment at Case Western Reserve University

Students will not be reviewed for academic action at the end of the summer session except in the following two situations:

1. A student on academic probation as of the end of the spring semester will be returned to good standing at the end of the summer session if he or she has completed at least 6 credit-hours at Case Western Reserve University with a summer grade point average of at least 2.000.
2. Nursing students who enroll during the summer session for a full course-load (at least 12 credit-hours) that includes the capstone course will be reviewed according to the standards of a regular fall or spring semester.

Undergraduate Criteria for Scholarship Retention

Undergraduate Criteria for Scholarship Retention

Students who are awarded scholarships based on academic achievement or potential by Case Western Reserve University are expected to perform at an appropriate academic level and maintain good conduct in the community. These scholarships will be automatically renewed each semester, provided that the student meets the retention criteria established for his or her scholarship at the time of initial award.

The retention criteria for students who matriculated at Case Western Reserve University in August 2011 or later are outlined below, along with information about the duration of these scholarships and the appeal process for students who fail to meet the established retention criteria. Scholarship recipients who matriculated prior to August 2011 should consult the 2013-2014 General Bulletin.

Full-Tuition (Andrew Squire, Albert W. Smith, and Alexander Treuhaft), University, Michelson-Morley STEM, and Bolton Scholarships

The academic records of scholarship recipients are ordinarily reviewed at the end of each semester. To have a scholarship renewed for the following semester, the student must be in good academic and disciplinary standing.

In exceptional cases, Academic Standing Board will continue a scholarship for a student whose achievement or whose attendance does not meet the standards outlined above. It is the student's responsibility to write to the Academic Standing Board, c/o the Office of Undergraduate Studies, within 7 business days of the end of the exam period each semester to request special consideration for continuation of a scholarship. This appeal should inform the committee of any special circumstances which may have affected performance and/or attendance during the preceding academic semester, provide any relevant documentation, and describe a plan for how academic performance will be improved in the future.

Students who lose their scholarships because of unsatisfactory academic or disciplinary standing will have their scholarships automatically reinstated at the start of the next semester if they return to good standing. These students lose a semester of scholarship eligibility for each semester that they fail to achieve good standing; that is, students will not receive these scholarships while on probation or during their first semester back from an academic separation, and the maximum number of semesters for which they can receive their scholarships will be reduced. However, students placed on probation at the end of the spring semester who return to good standing based on summer coursework at Case Western Reserve University (see Academic Standing Regulations (p. 1004)) will continue their scholarships for the fall semester without interruption or loss of a semester of eligibility.

Other Scholarships Awarded by Case Western Reserve University

Recipients of scholarships other than those listed above should refer to their scholarship award letters for specific scholarship retention criteria.
Duration

A student who meets the standards for scholarship retention may receive scholarship assistance for no more than eight semesters of full-time undergraduate study (less any semesters lost due to falling out of good academic or disciplinary standing, as described above). The scholarship is awarded for full-time enrollment in regular (fall and spring) semesters.

A scholarship recipient who does a complete withdrawal during a semester will have used up a semester of scholarship eligibility, but will be eligible to receive the scholarship again when he or she next enrolls, provided that his or her leave of absence does not last more than one semester (as described below). If a scholarship recipient completes a bachelor’s degree in fewer than eight semesters of full-time study at Case Western Reserve University, the scholarship will be terminated upon completion of the degree.

In the eighth semester (or in the final semester for a student completing the bachelor’s degree in fewer than eight semesters), a recipient may request permission for part-time enrollment with pro-rated scholarship support if completion of the degree does not require full-time enrollment in that final semester.

Semesters spent participating in the Cooperative Education Program or on a leave of absence are not counted against a student’s eight full-time semesters of scholarship eligibility.

Leave of Absence Policy

A scholarship recipient may take a one-semester leave of absence during the student’s undergraduate career and put his/her scholarship “on hold” for reactivation upon the student’s return to Case Western Reserve University. Requests for a one-semester leave of absence must be submitted in advance to the Office of Undergraduate Studies. Requests for leaves of absence longer than one semester must be submitted to the Academic Standing Board and will be reviewed on an individual basis.

A scholarship is automatically terminated upon a student’s transfer to another institution or upon permanent separation from the University.

Undergraduate Honors and Awards

Dean’s Honors Lists

The Dean's Honors Lists consist of the names of those undergraduate students who have distinguished themselves by achieving during the previous semester the grade point averages required with a minimum of 12 credit-hours earned and who have no Fs or NPs, during the same period. Students with a grade point average of 3.750 or higher will be placed on the Dean’s High Honors List. Students with a grade point average of at least 3.500 but less than 3.750 will be placed on the Dean’s Honors List. Students whose records include Incompletes become eligible for the Dean’s Honors Lists once all Incompletes have been converted to final grades. Having earned a place on the Dean's Honors List or Dean’s High Honors List is noted on the transcript.

Commencement Honors

Commencement Honors are awarded to the top 35 per cent of the graduating class.

- Top 10 per cent: summa cum laude
- Next 10 per cent: magna cum laude
- Next 15 per cent: cum laude

The specific GPA cutoffs are determined each year after the awarding of August degrees on the basis of the GPAs of students who graduated over the past five years. These cutoffs are then applied to degrees awarded in the following January, May, and August.

To be eligible for commencement honors, candidates must have:

1. Earned a minimum of 54 credit-hours for evaluative grades (A, B, C, D) in residence at the University.
2. Attained the required percentile ranking on the basis of all work for which grades are averaged at the University, including any grades earned before an academic separation.

Honors in the Major

Some majors offer outstanding students the opportunity to complete an honors program. Students who participate in an honors program in the major and satisfy the requirements for such a distinction, as specified by the major, may qualify to receive the degree "with honors in the major." The academic representative for the major can provide information regarding requirements for graduation with honors in the major.

Phi Beta Kappa

Phi Beta Kappa, a national honor society, recognizes outstanding scholarship in the arts and sciences. The Alpha Chapter of Ohio, established in Western Reserve College in 1847, was one of the first ten established nationally. Students may qualify for election to membership in the second semester of the senior year. A few outstanding students may be elected to membership as juniors.

Tau Beta Pi

Tau Beta Pi is a national honor society that recognizes full-time engineering students for outstanding scholarship, leadership, and service.

Mortar Board

Mortar Board is a national honor society that recognizes full-time senior students for outstanding scholarship, leadership, and service.

Fellowships and Scholarships

Outstanding students may obtain information about national competitive scholarships (Goldwater, Truman, Rhodes, etc.) in the Office of Undergraduate Studies, 357 Sears Building.

Departmental and Collegiate Awards

At academic awards assemblies at the end of each spring semester, the University recognizes the outstanding achievement of individual students. Departmental awards are based on achievement in specific academic disciplines. Some departmental and collegiate awards are based on a combination of leadership, scholarship, and service. The collegiate awards for students with the best academic records take into account credit load and grades; students who opt for the Pass/No Pass grading option in a course will not be eligible for best academic record awards unless the original grades submitted by the instructor to the Registrar's Office would qualify them.
Accountancy
- The Apple Growth Partners Scholarship Award to a junior, senior, or Master of Accountancy accounting major with a grade point average of 3.250 or higher and who has displayed high ethics and strong leadership in student organizations
- The Beta Alpha Psi Award for excellence in accounting
- The Beta Alpha Psi Scholars Recognition Award for outstanding scholarship among members of the Pi Chapter
- The Andrew D. Braden Award for Excellence in Auditing and Financial Reporting Studies to a student whose achievement as an undergraduate in auditing and financial reporting subjects is recognized as demonstrating attributes consistent with professionalism and leadership
- The Cashy Family Scholarship Award
- The Cohen & Co./Beta Alpha Psi Leadership Award
- The Dean’s Achievement Award in Accounting
- The Dean’s Award in Accounting
- The Dean’s Award in Accounting/The Deloitte Award to an outstanding junior majoring in Accounting
- The Dean’s Award in Accounting/The Meaden and Moore Award
- The Dean’s Award in Accounting/The Plante Moran Award
- The Department of Accountancy Academic Achievement Award
- The Thomas Dickerson Award for Excellence in Professional Accountancy Studies to a student who displays high academic achievement and leadership in the integrated studies program in accountancy
- The Accounting Achievement Award/Ernst and Young Award
- The Louis E. Levy Scholars in Accountancy
- The Northeast Ohio Chapter of the Institute of Internal Auditors Scholarship
- The Ohio Society of Certified Public Accountants Cleveland Endowment Scholarship
- Saltz, Shamis & Goldfarb/SS&G Scholarship Award
- The Dean’s Award in Accounting/Skoda, Minotti & Company Award for an outstanding underclassman
- The Wallach-Lee Families Scholarship Award
- The Cohen & Co. Leadership Award
- The Charles and Barbara Webb Scholarship Award

Anthropology
- The Callender Memorial Award for outstanding achievement in anthropology
- The James Dysart Magee Award for the senior year to an outstanding student in social and behavioral sciences
- The Jonathan F. Plimpton Award to a graduating senior for outstanding achievement in anthropology
- The Ruth and Newbell Niles Puckett Award to a graduating senior for outstanding achievement in anthropology

Art History
- The Muriel S. Butkin Art History Prize for overall best performance and highest grade point average by an undergraduate art history major
- The Noah L. Butkin Award for the best term paper on an art history topic written by an undergraduate
- Friends of Art Prize awarded to an undergraduate senior art history major for distinction in the field of art history
- The Charles E. Clemens Prize for outstanding talent and accomplishment in art
- The William Grauer Award for excellence in art studio courses
- The Doris Young Hartsook Prize for excellence in art education
- The Hazel Gibbs Herbruck Prize for excellence in art education
- The Kennedy Prize for creative work in art
- The Arnold Philip Award for excellence in art
- The Andrew D. Braden Award for Excellence in Auditing and Financial Reporting Studies to a student whose achievement as an undergraduate in auditing and financial reporting subjects is recognized as demonstrating attributes consistent with professionalism and leadership
- The Cashy Family Scholarship Award
- The Cohen & Co./Beta Alpha Psi Leadership Award
- The Dean’s Achievement Award in Accounting
- The Dean’s Award in Accounting
- The Dean’s Award in Accounting/The Deloitte Award to an outstanding junior majoring in Accounting
- The Dean’s Award in Accounting/The Meaden and Moore Award
- The Dean’s Award in Accounting/The Plante Moran Award
- The Department of Accountancy Academic Achievement Award
- The Thomas Dickerson Award for Excellence in Professional Accountancy Studies to a student who displays high academic achievement and leadership in the integrated studies program in accountancy
- The Accounting Achievement Award/Ernst and Young Award
- The Louis E. Levy Scholars in Accountancy
- The Northeast Ohio Chapter of the Institute of Internal Auditors Scholarship
- The Ohio Society of Certified Public Accountants Cleveland Endowment Scholarship
- Saltz, Shamis & Goldfarb/SS&G Scholarship Award
- The Dean’s Award in Accounting/Skoda, Minotti & Company Award for an outstanding underclassman
- The Wallach-Lee Families Scholarship Award
- The Charles and Barbara Webb Scholarship Award

Astronomy
- The Jason J. Nassau Prize to an outstanding senior student in astronomy

Biochemistry
- The Merton F. Utter Prize to a candidate for the BA majoring in biochemistry for outstanding achievement
- The Harland G. Wood Prize for outstanding performance by a graduating senior majoring in biochemistry who is a candidate for the BS in Biochemistry

Biomedical Engineering
- The Jose Ricardo Alcala Memorial Award for biomedical engineering research
- The Mark Bernstein Memorial Award to a senior biomedical engineering major for outstanding achievement in academics and leadership, contributions to research, and service to the university, department or community
- The Biomedical Engineering Chairman’s Award for outstanding academic achievement and service to the biomedical engineering community
- The Biomedical Engineering Faculty Award for outstanding academic achievement, and service to the biomedical engineering community
- The Biomedical Engineering Research and Engineering Award for outstanding performance in biomedical engineering research combined with outstanding academic achievement
- The Biomedical Engineering Scholarship Award
- The Cristina A. Camardo Award to a biomedical engineering student in recognition of his or her leadership and service within the university community
• The Srinivasa (Vasu) P. Gutti Chairman's Award to an outstanding student in biomedical engineering
• Outstanding Senior Project Award
• Outstanding Undergraduate Teaching Assistant Award
• The Gheorghe and Claudia Mateescu Award for Research in Imaging for outstanding research contribution in biomedical imaging
• The J. Thomas Mortimer Cooperative Education Award
• Outstanding Industrial Experience Award

Chemical and Biomolecular Engineering
• The Monroe J. Bahnsen Award to a senior for achievement in chemical engineering whose work in design and research projects has been outstanding.
• The Chemical Engineering Award for the outstanding junior student
• The Chemical Engineering Award for the outstanding sophomore student
• The Connie Ilcin Award to the student who exhibits outstanding performance in chemical engineering
• The Carl F. Prutton Chemical Engineering Award to the senior whose academic performance merits his or her selection as outstanding.
• The William H. Schuette Memorial Award to an outstanding senior in chemical engineering
• The A. W. Smith Prize to a senior for academic achievement in chemical engineering in the junior and senior years

Chemistry
• The Analytical Chemistry Award for excellence in analytical chemistry
• The Hippolyte Gruener Award to a student for merit in chemistry
• The Hypercube Scholar Award
• The Inorganic Chemistry Award for excellence in inorganic chemistry
• The Iota Sigma Pi/Frank Hovorka Prize to the woman chemistry major with the highest average after three semesters
• The Eli Lilly Award to a sophomore or junior chemistry major pursuing the BS degree
• The Charles F. Mabery Prize is awarded to the undergraduate or graduate student presenting the best thesis on a subject connected with research in the Department of Chemistry
• The Mateescu Citizenship Award
• The Merck Index Award to an outstanding organic chemistry student
• The Ignacio Ocasio Freshman Chemistry Achievement Award for the highest achievement in freshman chemistry
• Polymer Valley Chemical Undergraduate Research Award
• The Carl F. Prutton Prize for scholarship in chemistry to a student pursuing a BS degree
• The Olin Freeman Tower Prize for excellence in physical chemistry
• The W. R. Veazey Prize to a student with the highest academic achievement in physical chemistry courses

Civil Engineering
• The Kenneth M. Haber Award to the outstanding senior in civil engineering
• The Roy Harley Prize to a promising senior or graduate student in civil engineering
• The Craig J. Miller Memorial Award to a student who has shown outstanding academic achievement
• The Allison C. Neff Memorial Award in recognition of high proficiency in professional studies and participation in professional activities to a junior whose major field is civil engineering
• The Richard and Opal Vanderhoof Award to an outstanding senior in civil engineering

Classics
• The Kathleen S. and Frederick C. Crawford Scholarship to the American School of Classical Studies in Athens
• The Abraham Lincoln Fuller Prizes for excellence in the study of Greek or Latin
• The Emma Maud Perkins Prize for excellence in classical studies

Cognitive Science
• The Cognitive Science Award to the graduating senior for outstanding academic achievement in cognitive science
• The Award in Cognition and Culture

Dance
• The Lily Dreyfuss Memorial Award for excellence in dance
• The Bradford W. Petot Award for Excellence in Dance to a student minoring in dance

Earth, Environmental and Planetary Sciences
• The Charles S. Bacon Award for outstanding contributions to the Department of Geological Sciences
• The Philip O. Banks Award for outstanding academic achievement in geological sciences
• The Carol W. Walker Award for an outstanding senior project in the Department of Geological Sciences

Economics
• The Robert N. Baird Award for academic excellence and leadership in extracurricular activities
• The Marvin J. Barloon Book Award for outstanding performance in economics
• The Gardiner Scholarship to a junior majoring in economics and also interested in finance
• The H. W. Kniesner Prize to an outstanding senior in economics
• The James Dysart Magee Award to an outstanding student in economics for the senior year
• The Howard T. McMyler Award to an outstanding junior majoring in economics
• The WSOM Dean’s Achievement Award for scholarship and leadership in economics

Electrical Engineering and Computer Science
• The ACM Award to the senior judged by the student chapter of the Association for Computing Machinery most likely to have an outstanding professional career
• The Chairman’s Award to a student in the Department of Electrical Engineering and Computer Science who shows exceptional academic or leadership potential
• The Donald P. Eckman Award to the outstanding senior in systems and control engineering
• The Electrical Engineering and Computer Science Award for the best senior project in electrical and computer engineering
• The Electrical Engineering and Computer Science Award for the best senior project in computer science
• The Best Senior Project Award in Systems and Control Engineering
• The Electrical Engineering Service Award to the senior performing outstanding service to his or her class
• The IEEE/HKN Award to the senior judged by the student chapters of the Institute of Electrical and Electronics Engineers and Eta Kappa Nu to possess the qualities necessary for an outstanding professional career in a general field of electrical engineering
• The National Electrical Engineering Consortium William L. Everitt Award to a student who has excelled academically in communications or computers
• The Andrew R. Jennings Award for excellence in Computer Engineering and Sciences
• The Carolyn J. and John A. Massie ’66 Prize for Computer Engineering awarded to the outstanding junior in computer engineering with exceptional research and leadership potential
• The Carolyn J. and John A. Massie ’66 Prize for Computer Engineering awarded to the outstanding sophomore in computer engineering with exceptional research and leadership potential
• The Carolyn J. and John A. Massie ’66 Prize for Computer Science awarded to the outstanding junior in computer science with exceptional research and leadership potential
• The Carolyn J. and John A. Massie ’66 Prize for Computer Science awarded to the outstanding sophomore in computer science with exceptional research and leadership potential
• The W. Bruce Johnson Award to a senior for an outstanding project in the area of electrical sciences and applied physics
• The EECS Research Award to the senior demonstrating exceptional research potential
• The Undergraduate Alumni Capital Award in Systems and Control Engineering to a senior for academic excellence and professional promise.

English
• The Charles E. Clemens Award for talent and accomplishment in writing
• The Finley Foster/Emily M. Hills Poetry Prize for the best poem or group of poems
• The Emily M. Hills Award for the best poem or essay written by a woman in the College of Arts and Sciences
• The Holden Prize for the best English paper written by an upperclass student
• The Kennedy Prize for creative work in English
• The Edith Garber Krotinger Prize for excellence in creative writing
• The Karl Lemmerman Prize for the best paper by a first-year student
• The Eleanor Leuser Award for outstanding writing for or about children by a student enrolled in a creative writing course at the university
• The Nemeth Scholarships for the demonstration of excellence in creative writing
• The Harriet Pelton Perkins Prize to an outstanding student majoring in English
• The Helen B. Shamoff Award for formal poetry submitted by undergraduate students

Environmental Studies
• The Henry David Thoreau Award for an outstanding senior in environmental studies

History
• The Donald Grove Barnes Award to a senior for excellence in history
• The Clarence H. Cramer Award for excellence in research and writing of history
• The Annie Spencer Cutter Prize to a senior for outstanding achievement in history
• The History Department Award for outstanding achievement in history
• The Sigma Psi Prize for excellence in history
• The John Hall Stewart Prize for excellence in historical studies

Judaic Studies
• The Ira and Ruth Bressler Prize to a student who has done outstanding work in the area of Jewish studies
• The Eudese and Elmer Paull Prize to one or several undergraduate or graduate students who demonstrate an interest in Jewish studies or Jewish contemporary life

Macromolecular Science and Engineering
• The Hal Loranger Award to the outstanding senior in polymer science
• The Macromolecular Senior Achievement Award
• The Samuel Maron Memorial Award to an undergraduate for excellence in polymer research

Management
• The Robert O. Berger Jr. Award to a junior who demonstrates overall achievement in scholarship, as well as notable community participation and leadership
• The Nellie Chittenden Carlton Prize to a senior in management whose outstanding work in the general field of economics shows the greater promise of leadership
• The Excellence in Finance Award
• The Excellence in Marketing Award
• The Financial Executive’s Institute Award
• The Outstanding Marketing Student Award
• The Roulston Performance Award for outstanding performance in management
• The Kevin J. Semelsberger Prize for excellence in management

Macromolecular Science and Engineering
• The Iris Wolstein Award for Excellence in Business Venture History to a student whose work on projects and/or course work related to the study of Cleveland business venture history is determined to have made a significant contribution to the understanding of the business development in Northeast Ohio and related environs
• The Wolstein Family Award for Excellence in Business Venture Plan Development to a student enrolled in a major or minor in Weatherhead undergraduate programs whose business venture development plan is considered to have the highest promise to be successfully initiated

Materials Science and Engineering
• The Wesley P. Sykes Prize to a senior majoring in materials science and engineering who shows outstanding ability in scientific research, especially as evidenced by the quality of his or her senior project.
• The Professor Jack F. Wallace Award to the materials science and engineering student who embodies the dedication and spirit of Professor Wallace

Mathematics, Applied Mathematics, and Statistics
• The Case Alumni Award to an outstanding senior mathematics major
• The Chair's Award to a student contributing to the intellectual life of the majors program
• The Max Morris Prize to an outstanding undergraduate student in mathematics who is pursuing the BS degree.
• The Webster Godman Simon Mathematics Award to a sophomore or junior pursuing a BA degree, for excellence in mathematics
• The Henry A. Logan Award for outstanding achievement in mathematics
• The Robert and Leona Garwin Prize to a student who has demonstrated theoretical scientific ability with experimental competence and inventive talent
• The Gustav Kuertl Award to the senior in mechanical and aerospace engineering who has demonstrated the highest level of scholarship
• The Anish Shah ’91 Award to an outstanding senior in mechanical and aerospace engineering based on academic achievement, extracurricular activities, and community service
• The Fred Hale Vose Prize to the senior in mechanical engineering who has demonstrated the greatest promise for professional leadership
• The Arthur H. Benade Prize to a senior with a major other than music who has made a notable contribution to music on campus during his or her undergraduate years
• The Charles E. Clemens Prize for talent and accomplishment in music

Mechanical and Aerospace Engineering
• The Robert and Leona Garwin Prize to a student who has demonstrated theoretical scientific ability with experimental competence and inventive talent
• The Gustav Kuertl Award to the senior in mechanical and aerospace engineering who has demonstrated the highest level of scholarship
• The Anish Shah ’91 Award to an outstanding senior in mechanical and aerospace engineering based on academic achievement, extracurricular activities, and community service
• The Fred Hale Vose Prize to the senior in mechanical engineering who has demonstrated the greatest promise for professional leadership

Modern Languages and Literatures
• The Arabic Book Prize for high achievement in Arabic
• The Louise Burke French Prize to an outstanding French student
• The Chinese Book Prize for high achievement in Chinese
• The Susie Scott Christopher Prize for excellent contributions to the French program
• The Department of Modern Languages and Literatures Award for outstanding achievement
• The Emile B. DeSauze Award for attaining the highest honors in modern languages and literatures
• The Folberth German Prize for excellence in German language and literature
• The French Book Prize for high achievement in French
• The German Book Prize for high achievement in German
• The Hebrew Book Prize for high achievement in Hebrew
• The Italian Book Prize for high achievement in Italian
• The Japanese Book Prize high achievement in Japanese
• The Max Kade Excellence in German Award
• The Florence Keuerleber Prize to an undergraduate student who has seriously pursued and excelled in the study of a modern language while majoring in another area
• The Russian Book Prize for high achievement in Russian
• The Spanish Book Prize for high achievement in Spanish

Music
• The Arthur H. Benade Prize to a senior with a major other than music who has made a notable contribution to music on campus during his or her undergraduate years
• The Charles E. Clemens Prize for talent and accomplishment in music
• The Doris Young Hartsock Prize for outstanding performance in music education
• The Kennedy Prize for creative work in music
• The Lyman Piano Award
• The Ronis Recital Prize to an outstanding undergraduate majoring in music who has made an exceptional contribution to the musical life of the University and has been selected by audition to perform in the Leonard and Joan Ronis Annual Memorial Recital

Nursing
• The Bolton Scholar Award for Excellence in Acute Care Nursing
• The Bolton Scholar Award for Excellence in Community Health Nursing
• The Bolton Scholar Award for Excellence in Critical Care Nursing
• The Bolton Scholar Award for Excellence in Gerontology
• The Bolton Scholar Award for Excellence in Leadership and Community Service
• The Bolton Scholar Award for Excellence in Maternal-Child Nursing
• The Bolton Scholar Award for Excellence in Nursing Informatics
• The Bolton Scholar Award for Excellence in Nursing Research
• The Bolton Scholar Award for Excellence in Pediatric Nursing
• The Bolton Scholar Award for Excellence in Psychiatric/Mental Health Nursing
• The Dean's Award for an outstanding capstone project
• The Director's Award for the Outstanding BSN Graduate

Nutrition
• The Mary Eliza Parker Award for excellence in nutrition and dietetics

Philosophy
• The Truman P. Handy Philosophical Prize to outstanding juniors or seniors for excellence in philosophy

Physical Education
• The Emily Russell Andrews Award to the senior woman who makes the greatest contribution to the physical education department through scholarship, leadership, participation, and service
• The Philip K. “Nip” Heim Award to the senior man who makes the most outstanding contribution to Case Western Reserve University through the athletic program
• The Dorothy L. Hoza Award to the outstanding freshman, sophomore or junior who has made a strong contribution to the women's intercollegiate sports program, maintained a high level of academic achievement, shown leadership in the team, and contributed service to the department and university
• The Patricia B. Kilpatrick Award to the four-year varsity participant with the highest grade point average
• The Arthur P. Leary Award to the outstanding freshman, sophomore or junior who has demonstrated leadership, good sportsmanship, maintained good academic standing, and made contributions to the department of physical education and the university
• The Bill Sudeck Outstanding Student-Athlete Award to the student-athlete who has demonstrated and achieved significant athletic accomplishment, academic achievement, and engagement in campus activities, and has shown leadership in athletics and in the classroom
Physics
- The Leslie L. Foldy Award to the outstanding senior in physics
- The Albert A. Michelson Proze awarded upon completion of the junior year to a physics major who has demonstrated superior performance
- The Dayton C. Miller Award to an outstanding senior in physics for the best thesis
- The Elmer C. Stewart Memorial Award to an outstanding senior in Engineering Physics
- The Senior Award for service and scholarship in physics

Political Science
- The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
- The Flora Stone Mather Alumnae Award for outstanding academic performance in political science

Psychological Sciences
- The Stephen Bednarik Memorial Award to an outstanding senior majoring in psychology
- The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
- The Professor Edwin P. Hollander, Adelbert 1948, and Mrs. Patricia A. Hollander Capstone Research Award
- The Flora Stone Mather Alumnae Award for outstanding academic performance in psychology
- The National Student Speech-Language-Hearing Association Award for outstanding leadership and achievement in communication sciences

Religious Studies
- The Ratner Family Prize to a graduating senior for the highest academic achievement in the study of religion

Sociology
- The Stella Berkeley-Friedman Award to a graduating senior for the highest academic achievement in the study of sociology
- The Robert C. Davis Award for demonstrated commitment to sociological studies
- The Mark Lefton Award for excellence in sociological studies
- The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
- The Schermerhorn Award for an outstanding student in sociology

Theater
- The Dionysus Award for an outstanding contribution to theater for a student not majoring in theater arts
- The Barclay Leatham/Nadine Miles Award for creativity and general excellence in theater

Women’s and Gender Studies
- The George Sand Award in Women’s and Gender Studies to a graduating senior majoring or minoring in the field for excellence in academic performance
- The Sojourner Truth Award to an outstanding student who combines academic excellence in Women’s and Gender Studies with commitment to community service, advocacy of women’s and gender-related issues, and activism
- The Mary Wollstonecraft Award to a continuing undergraduate student for excellence in Women’s and Gender Studies courses

Awards for Study Abroad
- The Brookes Friebolin Award to an outstanding student for study in France
- The Eva L. Pancoast Memorial Fellowship for graduating senior women in the College of Arts and Sciences or women students in the School of Graduate Studies interested in extending their education by foreign travel or study
- The Alice Seagraves Award to outstanding students for study abroad

Collegiate Awards
- The Robert J. Adler Award to the undergraduate engineering student who, through high scholarship, technical creativity, and service to his or her peers, best exemplifies the ideals and talents of Professor Robert J. Adler
- The Army ROTC Professor of Military Science Award to the senior ROTC cadet who possesses the highest ideals of leadership, academics, and physical fitness
- The Bakr-Nord Center for the Humanities Prize for excellence in a SAGES capstone project or senior paper in the humanities
- The Bolton Scholar Award for Academic Excellence
- The Bolton Scholar Award for Excellence in Nursing for the student who has attained the highest academic record at the junior level
- The Bolton Scholar Award for Excellence in Nursing for the student who has attained the highest academic record at the sophomore level
- The Carol and Edward Breznyak G’64 Cooperative Education Student of the Year Award to a student in the Case School of Engineering who has demonstrated outstanding performance in the Cooperative Education Program based on industry evaluations, written reports and student initiative
- The Case Alumni Association Prize for Achievement to the senior with the best academic record in the Case School of Engineering
- The Edward J. “Ted” Corcoran Award to a senior for outstanding leadership, character and service
- The Dean’s Achievement Award for excellence in scholarship and leadership in accounting/management
- The Russell A. Griffin Award to a senior in the College of Arts and Sciences who has made the most significant contribution to campus life
- The George T. Hunt Awards to a junior and a senior outstanding in leadership, scholarship, and service
- The Matthew Leskiewicz Award to a senior in the Weatherhead School of Management for outstanding leadership and service
- The Louis K. Levy Prize for an outstanding junior in the College of Arts and Sciences
- The P. G. “Jerry” Lind Award for a graduating senior in engineering or science who has made a significant contribution to campus life
- The Flora Stone Mather Alumnae Award for outstanding academic performance in the humanities
- The Outstanding Junior Awards of the College of Arts and Sciences to juniors with the best academic records at the end of five semesters in the College of Arts and Sciences
- The Outstanding Junior Awards of the Case School of Engineering to juniors with the best academic records at the end of five semesters in the Case School of Engineering
• The Outstanding Sophomore Awards of the Case School of Engineering to the sophomores with the best academic record at the end of three semesters in the Case School of Engineering
• The Phi Beta Kappa Prize to sophomores with the best academic records in a liberal arts curriculum after three semesters
• The Alexandra Piepho Learning and Life Scholarship to the student who demonstrates enthusiasm for experiential learning and life, provides guidance to others, and exhibits a broad scope of learning interests
• The Harriet Levion Pullman Award to a sophomore outstanding in scholarship, leadership, and service
• The John Schoff Millis Award to the senior with the best academic record in the College of Arts and Sciences
• The Sylvia Green Rosenberg Award to a part-time or full-time non-traditional student
• The Robert L. Shurer Prize to a senior for leadership in extracurricular activities in the Case School of Engineering
• The Joseph Skigin Memorial Award to an outstanding premedical student for the senior year
• The Stephanie Tubbs-Jones Award for significant contributions to campus life, scholarship and community service
• The Weatherhead School of Management Award to a senior, for outstanding achievement in the Weatherhead School of Management
• The Stanley E. Wertheim Prize for an outstanding junior in the Case School of Engineering who has demonstrated leadership skills through involvement in campus or co-op activities
• The Alexandra Piepho Learning and Life Scholarship to the student who demonstrates a vital and active interest in the improvement of life in Cleveland

Undergraduate Non Degree Students

Non-Degree Students

Opportunities exist for individuals who are not seeking a degree from Case Western Reserve University to enroll in undergraduate courses for credit or to audit courses and not receive degree credit.

Enrolling in Courses for Credit

Cross-Registration in Northeast Ohio

Full-time undergraduates in good academic standing at the Cleveland Institute of Art, Cleveland State University, Cuyahoga Community College, or John Carroll University may cross-register for one course per semester at Case Western Reserve University during the fall or spring semester at no tuition cost. Cross-registration from other local colleges and universities will be considered on a case-by-case basis. Students wishing to participate in the cross-registration program should review the procedures at their home institutions. Registration at Case Western Reserve University is handled by the Office of Undergraduate Studies, and is normally limited to courses that are not offered at the student’s home institution. Cross-registered students must meet all prerequisite requirements before being admitted to specific courses.

Transient Students

A transient student is one who has begun his or her education at another college or university and intends to return there. Case Western Reserve University permits full- or part-time study as a transient student during the fall and spring semesters or during the summer session. Enrollment must be for credit-bearing courses.

Applications for enrollment as a transient student may be obtained from the Office of Undergraduate Studies. (International exchange students apply through the Office of International Affairs.) As part of the application, the student must present a statement of good standing from the registrar of his or her home college or university. A degree candidate from another institution may not enroll as a transient student at Case Western Reserve University if the student would not be eligible to enroll for that semester at his or her home institution. Exceptions may be granted by appeal to the Academic Standing Board, c/o the Office of Undergraduate Studies.

Enrollment is limited to a total of 30 credit-hours and is subject to the regulations of the student’s college. Transient students must meet all prerequisite requirements before being admitted to specific courses. Transient students are expected to perform at the same academic standards as degree candidates. In particular, transient students whose records would make them eligible for separation as a degree candidate at Case Western Reserve University may not continue as transient students unless they successfully petition the Academic Standing Board.

Transient students are not eligible to receive financial aid from Case Western Reserve University. If the student’s home institution has entered into a consortium agreement with Case Western Reserve University, the student should inquire of the home institution regarding eligibility to receive aid through the home institution.

Others Who Have Completed High School But Not an Undergraduate or Advanced Degree

Adults who do not already hold an undergraduate or advanced degree may apply through the Office of Undergraduate Studies to enroll for credit in courses for which their education or experience has qualified them, even though they are not pursuing a baccalaureate degree. Case Western Reserve University permits full- or part-time study as a non-degree student during the fall and spring semesters or during the summer session. Enrollment must be for credit-bearing courses. (Persons who already hold undergraduate or advanced degrees and wish to continue their studies without actively pursuing an additional degree should apply to the School of Graduate Studies.)

Applicants are expected to provide a transcript from the most recent college or high school attended. They must meet all prerequisite requirements before being admitted to specific courses. Those who have been degree-seeking students at Case Western Reserve University or have been denied admission to Case Western Reserve as an undergraduate transfer student are not eligible to attend as non-degree undergraduates.

Non-degree students are required to perform up to the same academic standards as degree candidates. In particular, non-degree students whose records would make them eligible for separation as a degree candidate at Case Western Reserve University may not continue as transient students unless they successfully petition the Academic Standing Board.

A non-degree student who wishes to become a degree candidate must apply through the Office of Undergraduate Admission. Courses taken for credit as a non-degree student may be applied toward the degree upon acceptance as a degree candidate.
Pre-College Scholars

The Pre-College Scholars Program (http://case.edu/ugstudies/pre-college-scholars-program) at Case Western Reserve University is designed to give highly motivated and able secondary school students the opportunity to enroll in challenging college courses prior to graduation from high school, either in the summer or during the academic year. Admission to the Pre-College Scholars Program is selective and competitive. Case Western Reserve University has limited seats available for this program and preference is given to qualified juniors and seniors who have exhausted academic options at their high schools and who are looking for unique educational opportunities. Students must have pursued a rigorous curriculum and achieved academic excellence in all course work. Additional factors considered in admission are the applicant’s standardized test scores (ACT, PSAT, SAT, or other tests of aptitude and/or academic achievement), and the applicant’s academic goals and level of maturity. Pre-College Scholars may take a maximum of two courses per term. They attend regularly-scheduled classes with undergraduate students at Case Western Reserve, and must be able to work well independently at the college level. Questions about the program should be directed to the Office of Undergraduate Studies at 216.368.2928.

Auditing Courses

Special Audit

The Special Audit Program provides the adult student with the opportunity to attend a regular university course as a serious but informal observer at half the regular tuition. This program is available only to those not enrolled in a degree program at Case Western Reserve University. Special audit students receive no grades and no academic credit for the courses attended. No transcripts will be issued, but a certificate of attendance will be provided if requested. The Office of Undergraduate Studies handles registration for this program. No transcripts are necessary to register.

Course Audit Program for Senior Citizens

Case Western Reserve University’s Course Audit Program for Senior Citizens (http://www.case.edu/provost/seniorauditprogram) (CAPSC) allows senior citizens (age 65 and older) to take on campus courses at a reduced tuition rate. Additional information is available from the CAPSC Coordinator (capsc@case.edu).

SAGES Courses

SAGES Courses

For a full description of the SAGES Program, see the section on General Degree Requirements (p. 973).

This list of courses includes only those courses offered directly by the SAGES Program that have been approved as permanent offerings. Not all of the First Seminars and University Seminars listed are offered every year, but the list of offerings in any given year will include courses that received one-term approval. All Department Seminars are offered through the academic departments and are listed among their course offerings. Most Senior Capstone courses are offered through the academic departments, though several are offered through the SAGES Program and are included here with the course prefix UCAP.

FSCC Courses

FSCC 100. First Seminar. 4 Units.
This four credit-hour course provides an introduction to various dimensions of academic life. It will be characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources, and will include practice in written and oral communication in small groups. Each seminar is led by a faculty member and a writing co-instructor. The goals are to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to introduce basic information literacy skills; to provide a foundation for ethical decision-making; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive common intellectual experience for first-year students at Case.

FSCS Courses

FSCS 150. First Seminar Continuing Semester. 3 Units.
This is a continuation of the First Seminar experience for ESL students. The seminar will continue the introduction to various dimensions of academic life. It will be characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources, and will include practice in written and oral communication in small groups. The goals of the seminar are to continue to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to continue to introduce basic information literacy skills; to continue to provide a foundation for ethical decision-making; to continue to encourage a global and multidisciplinary perspective on the learning process; and to continue to facilitate faculty-student interactions. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, or FSCS. Prereq or Coreq: FSTS 100.

FSNA Courses

FSNA 103. Energy and Society. 4 Units.
This four-credit-hour course provides an introduction to collegiate writing and to various dimensions of academic life, but will focus on the critical appreciation of the world of energy. Currently, most of the world runs on non-renewable resources; this course is designed to help students develop viewpoints about these issues, and to express themselves in a clear, coherent way. The class will involve both literacy and numeracy, and students will learn to become comfortable handling some of the quantitative measures of energy use. The class will be characterized by intense yet open-ended intellectual inquiry, guided by reading, lectures and discussion, and will include practice in written and oral communication individually and in small groups.

FSNA 104. Archaeoastronomy: Monuments and Ideas. 4 Units.
The unifying theme of this course is how astronomical practice and knowledge is central to ancient civilizations and how that emphasis continues today as manifested through scientific endeavor and also as strongly through the power of unifying myth.
FSNA 109. Science and Race. 4 Units.
This four-credit seminar examines the development and impact of the concept of race. We will first focus on the causes of biological variability in species, leading to an evaluation of whether race is a useful device for understanding biological variability in humans. Second, we will examine how the understanding of race has changed over time within the biological sciences. Third, we will examine how scientific conceptualizations about race have influenced, and been influenced by, cultural beliefs. Through readings and open-ended discussion, we will critically examine the scientific process as it has been (and still is) being applied to the study of human races so that each student will ultimately be equipped to develop a scientifically sound conceptualization of race. Topics which will be covered include Social Darwinism, the eugenics movement, legislation to restrict immigration into the U.S., race-based medicine, and race and intelligence. Students are expected to enhance their skills at critical reading, thoughtful analysis, constructing logical arguments, and improving written and oral communication.

FSNA 111. Chemical Aspects of the Aging Mind. 4 Units.
This seminar will focus on three age-related neurological disorders: Alzheimer's, Parkinson's and Huntington disease. These diseases pose enormous social and economic impact, and current drug-based therapeutic approaches are limited and may not be suited to deal with the imminent problems. The seminar will examine lifestyle changes (i.e., diet, exercise, vitamins, and other habits such as reading) that are implicated in preventing or slowing down these disorders. The focus on a medical topic with important socioeconomic ramifications will provide a novel approach to enhancing critical thinking and communication skills.

FSNA 112. Talking Brains: The Neuroscience of Language. 4 Units.
J speaks both Italian and English. After suffering a stroke, he finds himself switching to Italian in the middle of a sentence, even when he knows the person he's talking to doesn't speak Italian! He can't stop himself no matter how hard he tries. In this discussion-based seminar, we'll use cases like J's to understand how a mass of cells can give rise to something as complicated as human language. We'll use primary source readings from neuroscience to study topics such as the typical organization of language in the brain, bilingualism, sign language, and problems with language resulting from brain injury.

FSNA 113. Facts and Values in Environmental Decisions. 4 Units.
This four-credit seminar will guide students to critically evaluate the evidence, uncertainties, and value judgments pertinent to some of the world's pressing environmental issues. We will begin by studying climate change. Students will decide the topics of exploration to follow. Through reading, field trips, discussions and writing we will investigate natural environmental processes and how they have changed with the growth in human population and technology. Students will learn about the scientific process and will consider the roll of science and technology and their limits in making decisions about shared resources.

FSNA 116. Cities (Under Construction). 4 Units.
Based on the premise that cities are never "finished," and constantly being remade, we will look at the technological and cultural history of cities from the ancient world to the present day. Students will explore the history of building materials--wood, brick, steel, concrete, and glass--used in the construction of cities. We will also trace the development of city infrastructure such as water and sewage systems; streets, bridges, and subways; electricity, telephone and the internet. Specific technological innovations, such as the elevator and the automobile, will receive special consideration. We will move both geographically and temporally to visit the world's great cities, Athens, Mexico City, Tokyo, and New York City. As we do, we will study the examples of significant building projects, such as the Brooklyn Bridge, the Chicago World's Fair, Washington, DC's Metro, and Cleveland's first skyscraper, the Rockefeller Building. The course will cover the history of the professions--engineering, architecture, and urban planning--that have contributed to the construction of cities, and will review the works of these practitioners, as well as that of artists, reformers, and utopians that have imagined new directions for the city. We will also explore first-person narratives of the city, the impact of the city on personal and collective memory, and the possibilities and pitfalls of the "virtual" city. Through lecture, discussion, textual analysis, computer simulations, and writing assignments, Cities (Under Construction) will help students gain a deeper understanding of their role in remaking and sustaining the built environment.

FSNA 120. The Impact of Materials on Societal Development. 4 Units.
This four credit-hour SAGES seminar provides an introduction to various dimensions of academic life through open-ended intellectual inquiry and guided by reading from primary and secondary sources. The course will require practice in written and oral communications in small groups. A primary focus of the seminar will be to examine the impact of engineering materials on societal development through human history using a few specific materials of interest as examples: concrete, steel, and semiconductors. At the conclusion of the course, students will be encouraged to explore the impact of other materials on the development of specific technologies as a group project.

FSNA 123. The Automobile: Its Origins, Development, and Impact on American Society. 4 Units.
The automobile is without doubt one of the defining influences on American life and society. In 1900, most people lived in rural communities, and the main forms of personal transportation were walking and the horse and buggy. Half a century later, most Americans lived in cities or suburbs, there were millions of cars in garages, and roads and highways criss-crossed the nation. The car has transformed where we live and work, how we play, and the very nature of our cities. This course will examine the American automobile from several perspectives: its origins, evolution and effect on industry; its impact on American life and leisure; and the automobile as an art form and American icon. We will also discuss how we preserve examples of our automotive heritage. These topics will be explored in the context of the usual writing and discussion components of a first SAGES course.

FSNA 125. The Right Stuff. 4 Units.
This course will examine the Space Race. A key text for the course will be Tom Wolfe's The Right Stuff. By taking a historical approach to the study of the achievements and failures of NASA scientists and astronauts, it is possible to examine: 1) how individuals dedicated to achieving a particular scientific end draw on the scientific method, 2) the consequences of scientific inquiry, and 3) how science develops in specific historic contexts.
**FSNA 126. Urban Ecology. 4 Units.**
This course will explore the natural world in an urban context. Urban spaces are defined by the interaction between human creation (the built environment) and the natural world. We will explore how those definitions can be complicated by human innovation meant to re-create nature, such as engineered wetlands. We'll read some classical ecology to understand how ecological issues differ in cities. Some topics we'll cover include: wildlife management; human/organism conflict and interdependence; urban heat islands; wastewater, stormwater, and sewer management; and how trees grow in urban conditions. We'll also explore ethical issues such as environmental justice and sustainable development. Our field trips are meant to illuminate how urban planners, park managers, and others deal with such issues to create positive and healthy environments for their communities. Students will apply arguments and concepts learned in the course readings to the sites we visit.

**FSNA 128. Naturally Spicy: Spices, History, Culture, Health and Cuisine. 4 Units.**
This course will delve into the world of spices. Each commercially important spice will be discussed with the goal of understanding the influence spices and the spice trade had on the history, culture, and cuisines of different parts of the world. The chemistry of some of the natural compounds present in the spices and their effect on various diseases will be explored by reading and discussing scientific literature. Finally, the class will cook with some of these spices and sample other distinctly spiced foods to learn more about various cuisines and cultures.

**FSNA 129. Engineering Design for the World’s Poorest. 4 Units.**
Almost half (47%) of the people in Africa have incomes less than $1.25 per day. Most of these people live as subsistence farmers in small villages with no electricity, running water or automobiles (but with cell phones). Through readings, group discussions, writing assignments, and open-ended experiential learning activities, the course will address ways that engineering solutions can improve peoples’ lives within these severe economic constraints. A hands-on component of the course will involve designing and building affordable devices to meet specific needs. We have developed interactions with villages in Senegal, Malawi, and Botswana, and the engineering solutions will be explored within the context of these villages.

**FSNA 133. Engineering Innovation and Design. 4 Units.**
Innovation and design are cornerstones of the engineering profession and are responsible for many of the improvements in the quality of life that have taken place over the last century. Innovation is also viewed as the essential skill that will drive economies and solve many of the challenges facing societies around the globe. This seminar-based course will provide a disciplined approach to engineering innovation and design. The course requires students to engage in written and oral communications as well as working in small teams to complete open-ended design/build-related assignments. The course will culminate in the design, fabrication and validation of a prototype product to meet an identified need. The design, fabrication and validation of these products will be carried out in think[box] 1.0 (Prentke-Romich Collaboratory), and the Reinberger Design Studio.

**FSNA 134. Fuel Cells. 4 Units.**
Fuel Cells convert hydrogen and other fuels directly to electricity and are viewed as a key technology for non-polluting, oil-independent energy in the future. In this course, we will study and critically analyze the prospects, technical and economic barriers, and impact of broad implementation of fuel cells, focusing on the transportation sector and portable power. Major topics of the course include: (i) World and US energy outlook; (ii) Potential role and impact of fuel-cells; their advantages, principles of operation, design and materials issues, limitations and prospects for improvements; (iii) Special focus on details of a polymer type fuel cells (PEMFCs) for transportation and portable power; (iv) Modeling fuel cell performance and evaluation of controlling mechanisms that limit performance. The course is designed for students from all disciplines. Students will be expected to read assigned texts and articles and critically analyze statements and points of view presented. Quantitative analysis will be encouraged and developed. Student teams will develop a hypothesis to improve fuel cell performance by modifying the design of a component of the fuel cell. The new component design with then be fabricated and tested in an operating prototype fuel cell. Data analysis, hypothesis conclusion, and reporting of results are expected.

BioDesign basics explores the art of finding patient needs. No prior clinical or medical education is required, as we focus on acquiring and refining the underpinning critical thinking skills needed to identify and articulate unmet clinical patient needs in contemporary healthcare settings. Many--if not a majority of--ideas leading to healthcare innovation are derived from issues that arise during the daily activities of caring for patients. Whether it is frustration with the use of a specific surgical instrument, processes that interfere with health care delivery, better waiting rooms for the family, designing more comfortable hospital gowns, or materials inadequate for intended outcomes, patient needs cover a broad range of physical and emotional states. Many students find the idea of identifying a “patient need” quite ambiguous at first, but the BioDesign process for defining patient need is a widely use national model developed at Stanford University that the student will find contains easy-to-follow steps that are simple and appealing. As an interactive and “hands-on” course, students will be engaged in discussions, events and activities to promote a first-hand understanding of “needs finding” to support individual mastery of writing and oral presentation skills. The Fourth Hour will be centered on “walking tours” of local medical institutions around University Circle as well as actual use of medical devices (wheelchairs and crutches) on campus as ways to help your efforts identify a patient need based on those observations. In short, you will create your own experiences leading to stories that make writing fun. The course requires students to engage in written and oral communications as well as working in small teams to complete open-ended assignments.
FSNA 136. Saving the World from Poverty, Disease, Injustice and Environmental Exploitation. 4 Units.
Half of the world’s population lives in poverty. The causes of poverty and injustice are complex and the ramifications are numerous and serious and include grave risk to human health and to the environment. Through reading, analysis, writing, and rigorous discussion the class will investigate issues surrounding poverty and disparities in health and opportunity. We will also explore how innovation and engineering design can help address causes of poverty and disparity and meet needs of people at risk. Design teams will work throughout the semester to identify an unmet need to engineer a solution to benefit an under-served or under-resourced population. Fourth-hour activities will include interviewing knowledgeable stakeholders (locally and abroad via teleconference), learning about and volunteering with service organizations, and visiting local institutions and/or companies addressing these issues.

FSNA 137. Volts, Amps, Bits, Bytes. 4 Units.
The electrical grid, the computer, biomedical devices, electric vehicles, interactive art, and smart homes are a few examples of the pervasiveness of electronics and computer technology. This seminar will introduce the engineering design process, and present the basics of electricity, electronic circuits, measurement, sensors, and microcomputers (the Arduino), and how to use them to design and build useful devices. Students will reverse-engineer products, learn electrical and mechanical prototyping and fabrication, and apply them in a variety of hands-on labs. The course will conclude with students proposing, designing, and prototyping innovative design projects. The course will make extensive use of the Sears Design Lab and Think[box] and is writing intensive.

FSNA 138. Light. 4 Units.
This course explores Light, otherwise known as visible electromagnetic radiation. We will examine what light is in its various forms; how it is created and detected; how we perceive it; and how it has influenced our evolutionary development, our technological, artistic, and religious cultures, and our conceptions of space and time. Students will discuss topics suggested by the course readings and by exposure to the many scientific activities, historical artifacts, and artistic works on the CWRU campus and at other local institutions that involve light in a significant way.

FSNA 142. Designed by Man, Built by Nature. 4 Units.
If you look at the structure of a human tendon, and at the reinforcement system in an automobile tire, they share many design elements in common. The eye of an octopus can be similar as well. The structure of sea shell and of vehicular armor - again, these share common features. In this class we will examine how nature designs things for performance, and how mankind copies these to produce useful objects. Two general introductions to technology will be supplemented with specific readings from the technical literature to provide a broad introductory background. This writing-intensive seminar is tailored for incoming CWRU students with an interest in science, engineering and technology. Among other class activities this seminar will require the student to research, design and build prototype bio-inspired systems according to assignments made in class, with a competition held during the last week of the semester.

FSNA 143. Materials and Energy. 4 Units.
Manufacturing and using the materials of modern life--metals, polymers, ceramics, paper products, and others--play major roles in the world’s consumption of energy and natural resources. This course will objectively and (when applicable) quantitatively explore the technological and social forces that drive current levels of materials usage. Through readings, group discussions, writing assignments, and open-ended experiential learning activities, the course will address the following questions: What are the scale and geographical distribution of materials usage? How do the magnitude and impact of materials usage compare to those of other demands on energy and resources (such as agriculture, transportation, residential heating, and clean water)? What are the impacts--positive and negative--of materials consumption on society and the natural environment? How did the world get to its current situation, and what should, and can, be done in the future? Students successfully completing this course will be able to think critically and objectively about the role of materials in society’s use of energy and natural resources, and to articulate realistic, persuasive arguments based in quantifiable facts about these topics.

FSNA 144. Is Mind What the Brain Does?. 4 Units.
Together we will explore the nature of the human mind by asking the question, “Is the mind what the brain does?” Through an exploration of neurological and psychological case studies, empirical research studies, direct experimentation, and readings and films about brain structure and function, we will form hypotheses about the relationship between the mind and the brain and gather evidence to test our hypotheses. Writing assignments will explore ideas about your own mind and brain, examples of other individuals with unusual or atypical brains and minds, and a research topic of your choice.

FSNA 148. Science or Pseudoscience? Exploring Extraordinary Claims. 4 Units.
In the contemporary world, extraordinary claims about ghosts, aliens, and the nature of the universe appear on popular television shows, on the Internet, and in the press. Many of these claims are framed as science. In this seminar, we critically examine the nature of these understandings of the world around us. We will ask if these claims are scientific and, if not, whether they constitute a form of pseudoscience. We will explore the role of demarcation, evidence, scientific progress, and fallacies of reasoning in pseudoscience. We will also consider the historical and sociocultural currents that give rise to these pseudoscientific claims as well as their social and political implications. Drawing on anthropological, philosophical, and historical case studies, we will consider topics such as cryptozoology, astrology, ancient aliens, parapsychology, the Nemesis theory of dinosaur extinctions, theories of intelligence, and other extraordinary claims.

FSSO Courses

FSSO 110. Conflict and Cooperation. 4 Units.
Why is it that when cooperation seems so likely, conflict breaks out? Or why at other times when conflict looms, cooperation wins out? This course explores the social and political complexities of this basic human condition. Through seminar discussions of classic readings, the course will introduce students to the basic social science concepts and theories used to explain conflict and cooperation. In addition to general knowledge, the course will also allow students hands on experience. Classroom time will be dedicated to simulating the decision making and negotiating dynamics which lead to cooperation or conflict. Studies will include individual, historical, and international cases. Graded projects will include small group negotiation and decision making exercises as well as individual writing tasks.
FSSO 114. Music in Our Lives. 4 Units.
This seminar will examine the role, meaning, power, and influence of music in our lives. Readings, writing assignments, and fourth-hour events will focus on the following three themes: music is important, everyone is musical, and there are many uses of music and ways to be musical. Topics include the Cleveland music scene, the use of music in political movements, music in today's media, and the use of music to heal. This course will be characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources. It will also include practice in written and oral communication in small groups. The goals are to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to introduce basic information literacy skills; to provide a foundation for ethical decision-making; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive common intellectual experience for first-year students at Case.

FSSO 116. Working-Class Heroes. 4 Units.
This course will focus on the representation of the American laborer in literary and other cultural texts. Beginning our study with mid-to-late nineteenth-century works, we will concentrate on how particularly American ideas about economics, race, and gender shape authors' depictions of working-class figures, reading both primary and secondary sources. We will examine and discuss historical debates concerning the "hero in struggle" while paying special attention to rhetorics of protest and reform as informed by literary modes such as Sentimentalism, Naturalism, Realism, and Modernism. Throughout the course, we will pair the literary and historical readings with pop-cultural representations of working-class figures, viewing films, listening to music, and analyzing visual arts both in class and on visits to Cleveland cultural institutions. Writing Requirements include short critical response papers, two longer papers, and a final project accompanied by class presentations.

FSSO 119. Philanthropy in America. 4 Units.
This four-credit course provides an introduction to various dimensions of philanthropy and volunteerism. Using the seminar format and an array of interactive activities, we will conduct a broad but intellectual inquiry into the systems and ethics of giving time and money to charitable causes. In four units of inquiry, we will consider the giving traditions that have influenced American culture and society since its colonial days. We will examine the role that the Third Sector (also known as the Independent or Nonprofit Sector) plays as an agent of social change in a functioning democratic republic. We will explore the nature of donors and volunteers and take a critical look at the missions and goals of a cross section of nonprofit organizations. We will wrestle with ethical issues related to philanthropy and consider the giving patterns of different social, religious, and ethnic groups. We will also turn our collective thinking to how the nonprofit sector might better serve the social needs of the nation and the world. At the end of the semester, we will reflect on how our ideas about philanthropy have changed over the course of fifteen weeks.

FSSO 120. Poverty and Social Policy. 4 Units.
This course has two major loci: poverty and social policies designed to ameliorate poverty. Sociologists in the United States and in other countries have made major contributions to studies of poverty. They have primarily focused on income-based poverty, but more recently, have also studied other forms of poverty. In this class, we will examine different conceptualizations and measures of poverty. We will then examine short-term and long-term poverty experiences and their potential consequences. We will then turn to explanations of poverty: why are some individuals more likely to experience periods of low income than others? While the United States will be the focus of the course, we will contrast the experiences of other countries. The second component will be an analysis of social policies designed to ameliorate poverty. In particular, we will examine the development and reformation of welfare states and other social policies, the various goals of social policy, and the different impacts social policies have had on individuals, families, other groups, and the country overall. This discussion will reflect on experiences of other countries.

FSSO 122. China in Modernization. 4 Units.
This four-credit-hour course provides an introduction to various dimensions of modernization in contemporary China, especially cultural and social changes such as consumption, education, migration, and tourism as a result of economic reforms, trade expansion, foreign investments and technology transfer, especially the development of information technology. The seminar will also assess the impacts of these changes on various aspects of globalization and vice versa. It will be characterized by intense yet open-ended intellectual inquiry, guided by reading relevant material, and will include practice in written and oral communication in discussion forums and small groups. The goals are to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to introduce basic information on literacy skills; to provide a foundation for ethical decision-making; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive common intellectual experience at CWRU.

FSSO 123. Ten Developments That Are Shaking The World. 4 Units.
This seminar is an introduction to some of the most important global developments of our times. We will examine these events through political, historical, economic, cultural, sociological, scientific and ethical lenses. Readings will come from a wide-range of sources, and assignments will include exercises in written and oral communication. The professor will choose the first three global developments to be investigated as well as the relevant readings. His topics will most likely be the proliferation of nuclear weapons, the rise of China as a great power and the fiftieth anniversary of the European Union. Each of the remaining seven will be chosen by small groups of students, who will assign the readings and run the sessions for their respective topic. Possible topics include the global food crisis, genocide and the failure of the world community to stop it, global warming and the growing gap between the world's rich and poor.
FSSO 126. Religion and the Ethics of War. 4 Units.
Although war is a highly rational, organized and purposeful affair, it also is the most destructive and bloody of human activities. For this reason, war and warfare has always been subject to various religious and moral restrictions. As technology has developed, the conduct of war has changed and the definitions of just and unjust war, as well as what it means to fight justly, have undergone profound changes. This course looks at war and warfare from a variety of angles and examines how various religious and moral thinkers have tried to define just war, and create guidelines for fighting a war justly. At the end of the semester, the course looks at the moral challenges presented by new technologies and new concepts of war.

FSSO 128. Movers and Shakers: Leadership. 4 Units.
“Never doubt that a small group of thoughtful, committed citizens can change the world. Indeed, it is the only thing that ever has” (Margaret Mead, 1901-1978). This seminar is about understanding what enables people to make a generative impact on the world. Students will explore the socio-emotional and motivational characteristics of effective leaders and their ability to create positive change. Students will also be encouraged to develop their own theories of leadership and to explore their personal approaches to making a difference. The seminar will profile leaders from different occupations and walks of life. Seminar sessions will feature assigned readings on leaders and change agents, class discussion on what drives movers and shakers, and individual and group presentations on class members’ emergent leadership perspectives. A key objective of the seminar is the development of critical thinking skills, writing skills, and verbal skills. Consequently, the weekly class readings, reflection papers on class readings, class discussions, class presentations (individual and group), and final project are vital features of the seminar experience. Students will be expected to leave the seminar with a grounded perspective on leaders and leadership, and the ability to articulate their own personal views on making a difference in the world.

FSSO 131. Social, Political, Economic Environment of Cleveland Northeast Ohio Region. 4 Units.
This First Seminar will focus on the socio/political/economic environment of the Cleveland/Northeast Ohio Region. Students will be encouraged to explore the agents that create change in our region; major employers and start-up innovative businesses, politicians, philanthropic funds and grassroots activists. Our analysis will also include the topic of growth. Definitions of it, creation of it, measurement of it, equity of it and sustainability of it.

FSSO 132. Legal Lessons in Poems and Plays. 4 Units.
This First Seminar will focus on law-related practical and philosophical lessons learned through poems and plays. At its core is the belief that by studying law in literature, students can become better thinkers and writers, readers and speakers, as well as better participants in civic affairs. This seminar will broaden and deepen students’ understanding of the presence of literature and human nature in law and society.

FSSO 136. The Founding Fathers. 4 Units.
Americans often disparage politicians and U.S. political institutions, like Congress and the Presidency. Nonetheless, the same Americans often revere the men and women who founded the country and designed the political system that seems to give us so much trouble. This four credit-hour course explores American political thought from our country’s founding to the present through the prism of the founding fathers. It will be characterized by intense yet open-ended intellectual inquiry into all of the contradictions inherent in the writings and lives of the founding fathers and contemporary American politics, guided by reading from primary as well as secondary sources.

FSSO 140. Working-Class Literature. 4 Units.
In her volume, Silences (1978), writer Tillie Olson refers to the relationship between social class and literature as “the great unexamined.” This statement still largely rings true, despite the continued production of novels, films, and poems depicting the working-class, and despite the unprecedented growth in recent years of America’s working class. In this course, we will examine the relationship between social class and literature, reading narratives written by and about laborers in the hopes of understanding the complexities of working-class life in America, including the intricate ways in which economic status mediates one’s sense of identity. Beginning our study with mid-to-late nineteenth-century works, we will consider ideas about economics, race, and gender that have shaped and that continue to influence the depiction of the working-class. Throughout the course, we will pair literary and historical readings with pop-cultural materials, viewing films, listening to music, and analyzing visual arts both in class and on visits to Cleveland cultural institutions such as the Western Reserve Historical Society and the Maltz Museum of Jewish History.

FSSO 143. Living With and Making Decisions Concerning Injustice. 4 Units.
Injustice. What do you think of when you hear that word? There are all types of injustice in this world, and chances are that during our lifetime we will either find ourselves in a position or system of power, perpetrating injustice on others; or in a position or system of supposed impotence, a subject of injustice. What are our choices? How will we respond? In this course we will examine the topic of living with and making decisions concerning injustice using, as an example, the specific injustice of slavery, examining the lives and decisions of both a famous slaveholder and two not-so-famous slaves; and learning from their lives and decisions how we might, ourselves, live with and make decisions concerning injustices we face in our lives.

FSSO 145. Berlin in History, History in Berlin. 4 Units.
From its emergence as a fishing village in the sandy marshes of the eastern frontier of Germany, to its 21st-century role as a cosmopolitan metropolis, Berlin has embodied the arc of change over time in human society. This course uses the history of the city of Berlin as the lens through which to contemplate the complexity of human social and cultural arrangements, their expression in economics and politics (including war), and the imbrication of human cultural and social constructions with the “natural” world. We will read books and articles about the history, culture, economy, and politics of Berlin, primarily from its establishment as the capital of new German Empire in 1871 to the present. We will view films that introduce us to the manic energy that Berlin represented in the transition to modernity. We will visit local museums that house examples of the material culture of Berlin, from the Cleveland Museum of Art to the Rock and Roll Hall of Fame and Museum. We will listen to the music of Berlin, from the baroque of the Brandenburg Concertos to the heavy metal of the Skorpions. And we will learn its history, from fishing village, to court city, to imperial metropolis and industrial engine, to divided symbol of the Cold War, to de-industrialized center of art, government, education, and incubator of high-technology. This First Seminar will prepare students to pursue their undergraduate degrees grounded in thinking about places in time, about change over time, and about human creativity, while preparing them to write and speak about their arguments with clarity and grace.
FSSO 147. Critical Attitude. 4 Units.
In his essay, “What is Enlightenment?” Immanuel Kant said enlightenment begins with the courage to use your own understanding-as opposed to following the mindset of your parents, teachers, or ministers. Two hundred years later, the great French social historian Michel Foucault called the Kantian idea of enlightenment, “critique.” For Foucault, the essential is a critical attitude. In this seminar, we pursue the thread of a critical attitude focusing on three areas of your life: culture, work, and school. For reasons we will see, politics will remain in the background, as the un-broached dimension. The month on culture is called “osmosis,” the month on work “treadmill” and the month on school “brainwash.” In this dark(ly humorous) course, we join selected readings in the tradition of critical theory with contemporary and classic films. And we visit local cultural institutions, and events -as well as riding through the city with a critical attitude.

FSSO 149. Creativity in the Arts, Sciences, and Engineering. 4 Units.
This seminar will have a focus on creativity in the arts, sciences, and engineering. What are the similarities and differences in the creative process in these three different broad fields? How are the creative products different? What are the creative processes involved in these different domains. Are there differences in personalities between scientists and artists? How can we foster creativity in children and adults in these fields? We all read about and discuss the different dimensions of creativity; what makes something creative; what helps people become creative; the role of cognition and emotion in the creative process in the arts and sciences; and mental illness and creativity.

FSSO 152. Decision Making in Everyday Life. 4 Units.
Although social cognition allows us to process vast amounts of information quickly, we are not always aware of the subtle forces that guide our decision making. This course will use a seminar approach to explore rational and irrational forces that influence decision making. We will use a multi-disciplinary approach to decision making, including topics such as personality factors, incentive-based decision making, cognitive biases, automatic information processing, and theories of mind. These topics will be explored using class discussion, writings, and student presentations.

FSSO 153. Reading Social Justice: The Anisfield-Wolf Book Awards. 4 Units.
In this seminar, we will read a selection of poetry, short stories and books and use them as a framework to explore questions related to understanding tolerance, social justice and diversity. We will begin by establishing a definition of and methodology for addressing these issues in our discussion and writing, and build upon them as the semester progresses. Much of the fiction and nonfiction we will read will be by winners of the Anisfield-Wolf Book Awards. In addition to our reading, we will also analyze and discuss a selection of films, art works and music related to our theme. Our Fourth Hour experiences will include attending the Awards ceremony in September, visits to cultural institutions within University Circle, lectures and guest speakers. While the primary goal of the class is to help students develop their critical thinking and writing skills, it is also intended to introduce them to a vital, Cleveland-based literary institution. By engaging the themes, texts, and authors of Anisfield-Wolf, students will have a deeper understanding not only of contemporary literature, but the importance of social justice to a liberal arts education.

FSSY Courses

FSSY 106. Trauma and Memory: Modes of Remembrance and Representation. 4 Units.
The twentieth century has often been referred to as a traumatic century, characterized by unprecedented and unimaginable acts of violence. Traumatic events have engrained themselves into both individual and collective memory structures. Not surprisingly, trauma studies have become a central topic of investigation across disciplinary lines. Yet much of the field is still negotiated. We will try to recreate this ongoing discussion in our classroom, when learning, talking, and writing about trauma and its remembrance. The goal of this writing-intense seminar is to give insight into the topic as well as introduce students to academic research, life, and expression. At first we will familiarize ourselves and take part in some fundamental debates: the distinction of memory and history, false memories, individual and collective memories, as well as the definitions of trauma across the disciplines. We will then have a closer look at the difficulty faced by researchers who grapple with trauma and its remembrance. In a final segment we will analyze representations of traumatic memories in public spaces, literature, and the visual arts.

FSSY 108. First Seminar: The Language of Sport. 4 Units.
This seminar explores, through the medium of sport literature, significant periods of life: maturing, playing, living, loving, aging, and dying. Through the genre of sport literature, the course explores sport as metaphor, fantasy, and myth in context (1) time and death, (2) religion and philosophy, and (3) the human condition. Literal, symbolic, euphonic, mythical and figurative interpretations of poetic sport in literature and the plot, point of view, characterization, symbolism, and emotion consideration when reading sport fiction serve as the framework for discussion concerning self, the meaning of sport and life, and the interaction of sport, culture, and self.

FSSY 110. The Greek Hero Since Antiquity. 4 Units.
The Greek Hero and Heroic Culture since Antiquity: the Classical Tradition in Literature and the Arts is the specific topic of this seminar. The influence of ancient Greece on subsequent Western civilization has been profound. This course focuses on the impact of Greek mythology on the literature and arts of five later periods: the Middle Ages, the Renaissance, the Baroque, the Revolutionary Age (1750-1848), and the Modern period. While there are many aspects of Greek mythology that we might investigate, the story of the Trojan War will serve as a central, unifying myth for exploration. The concept of the hero evolved considerably between the time of Homer and the time of Euripides; yet, the Homeric heroes continued to appear in literature and the arts from ancient times onward. How has the concept of the hero inherited from Homer changed in literature and art since antiquity? Does the word “hero” still have value? Are there relevant and meaningful applications of this very specific Greek word outside literature and art in our time? These are just some of the questions we shall consider in our study of the Greek Hero and Heroic Culture since Antiquity in literature and the arts.
**FSSY 112. Shakespeare - Still a Hit. 4 Units.**
What is the enduring appeal of the works of William Shakespeare? Not only are the plays themselves popular today; there are also many film versions and adaptations, some recent and some dating back to the early days of cinema. In this First Seminar, students will read approximately six Shakespeare plays, including at least one history, comedy, and tragedy. In addition, they will view at least one film version or adaptation of each play. With the help of Kelvin Smith Library, the films will be made available on streaming video with password-protected access, enabling students to view them when convenient and as often as necessary. Since this class (like all First Seminars) is writing-intensive, students will complete four formal essays as well as frequent in-class writing activities. There will also be in-class readings from the plays, discussions of the various film adaptations, and one or two short oral presentations or activities.

**FSSY 113. Movies and Meaning. 4 Units.**
This course explores methods for interpreting films. To interpret a film is a more aggressive and creative activity than is simply viewing one. How do critics and researchers of cinema “make meaning”? What strategies do they use? How does one mount a film interpretation that is both novel and persuasive? The course will emphasize close reading of films as, each week, we screen a film and together discuss what meanings we can infer from it. Also each week, we'll read an essay that offers an interpretation of the film. We’ll analyze the reading in light of our sense of the film under consideration. Students will write short essays, approximately one every two weeks, in which they analyze the rhetorical and interpretive strategies of a given film analysis. Students will share their essays with the class, and these readings will serve as bases for class discussions. Final writing projects will consist of student interpretations of a film. At least twice during the semester, the class will, in substitution for the weekly required evening screening, attend a film off campus--either at the Cleveland Cinematheque or at the Cleveland Museum of Art. The course emphasizes writing instruction and discussion in a seminar format. There will be required evening screenings each week.

**FSSY 119. Art, Music and The Museum. 4 Units.**
This four credit-hour course provides an introduction to art, music, and the museum, particularly the intersections between and among these three subject areas. Formal training in these disciplines is not required. The course will be characterized by intense yet open-ended intellectual inquiry and guided by readings and the experience of artworks from a wide range of styles and cultures. A strong emphasis will be placed on academic writing. The goals are to enhance basic intellectual skills including critical reading, thoughtful analysis, and written and oral communication (including PowerPoint presentation); to introduce basic information literacy skills; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive intellectual experience for first-year students at Case.

**FSSY 126. Fly Fishing: The Sport, the Metaphysics, and the Literature. 4 Units.**
The seminar will explore the sport of fly-fishing—and an individual’s relationship to the natural world surrounding them—as presented in both fiction and non-fiction. Selected texts will provide the impetus for posing such questions as: What is the fundamental nature of sport, how does it vary from other forms of recreation, and can a sport be considered an art? What prompts the various authors to often imbue the fly-fishing with metaphysical, spiritual, or aesthetic dimensions? How does the intent and style of this genre of writing differ from those of traditional academic research? How might these elements of craft be applied and integrated into an effective academic writing style? In addition to considering the stylistic and philosophical approaches to the topic, seminar participants will also engage in several experiential learning sessions involving certain skill aspects of fly casting and tying, and consider those experiences both in discussion and written assignments.

**FSSY 127. The Music of New Orleans. 4 Units.**
This course focuses on the musical landscape of New Orleans from the late 18th century to the present. We will look at the diverse musics of the city, including opera and orchestral music, slave song, Gospel, solo piano, ragtime, jazz, rhythm and blues, rock and roll, and Cajun and zydeco. Through the course, students will develop a better understanding of music and music history and a deeper knowledge about the history of New Orleans. The course spends considerable time on communication: public speaking, discussion, and writing. Fourth Hour trips will include visits to the Rock and Roll Hall of Fame and the Western Reserve Historical Society.

**FSSY 131. Death and Representation. 4 Units.**
This four credit-hour course will explore the ways death has been represented in visual culture, from ancient times to the contemporary epoch. Can death, something abstract and never directly experienced, ever be represented? Throughout the ages, how have artists, patrons, and viewers influenced the imagery of death, and how, in turn, have they been influenced by it? The course includes multiple visits to the Cleveland Museum of Art, the Natural History Museum, and the Museum of Contemporary Art.

**FSSY 137. Cultural Representations: Ideologies, Images, and the World. 4 Units.**
Narrative forms, such as myths, folktales, novels, films, and the media make significant contributions to the varied ways that people understand and imagine the spatial structures of the world. Specifically, this course will help you a) to develop an understanding of how narratives and the media have an impact on the ways we come to terms with geopolitical regions and how geopolitical regions are invented and imagined; b) to point out and address geopolitical assumptions, over-generalizations and to engage concepts such as the ‘East’ and ‘West,’ etc. critically; c) to analyze travel narratives, films, and current media representations of certain areas of the world and situate your observations into a wider set of theoretical problems; and d) to develop a set of reading skills that will help you to decipher texts(both primary and secondary) so that you can formulate productive questions and articulate your intellectual discoveries in a compelling way.
between science and art might find some points of common contact. One has to say to the others, and how the apparently unbridgeable gap between them. We will try to ask what each of these discursive models contemporaneously, and on that basis to reconstruct the conversation. We trace specific trains of influence (although they do exist) so much as to consider how parallel developments in the sciences and the arts emerge as a result. In this course, we will explore the intellectual contributions of Leonardo da Vinci and two earlier polymaths: Saint Augustine (390-430CE), a north African bishop, philosopher, and theologian who became a Doctor of the Church; and Hildegard of Bingen (1098-1179), a German nun who was a composer, philosopher, herbalist, and mystic visionary. Through discussion of writings by these three figures and of secondary literature about them, the course explores their intellectual diversity and the cultural forces that shaped them. It also examines what it meant to be a polymath at various points in history, why polymaths have become associated with the Renaissance and with men specifically, and why there are relatively few polymaths today.

FSSY 141. "Renaissance" Men and Women: Polymaths from Late Antiquity to Leonardo Da Vinci. 4 Units.
The term "Renaissance man" is often used to refer to a polymath, someone whose expertise spans numerous and diverse subject areas. Leonardo da Vinci (1452-1519), perhaps the most famous polymath of all, was an artist, scientist, engineer, musician, and indeed a man who lived during the Renaissance. Yet already in late antiquity and the Middle Ages many of the great thinkers were polymaths, and they were not all men. This course examines the intellectual contributions of Leonardo da Vinci and two earlier polymaths: Saint Augustine (390-430CE), a north African bishop, philosopher, and theologian who became a Doctor of the Church; and Hildegard of Bingen (1098-1179), a German nun who was a composer, philosopher, herbalist, and mystic visionary. Through discussion of writings by these three figures and of secondary literature about them, the course explores their intellectual diversity and the cultural forces that shaped them. It also examines what it meant to be a polymath at various points in history, why polymaths have become associated with the Renaissance and with men specifically, and why there are relatively few polymaths today.

FSSY 146. Doc Talk: Language & Medicine. 4 Units.
This course explores the role of language in constructing, experiencing, treating, and understanding the states we call "health" and "illness." We will ask questions such as: Why do we fight cancer but mend broken bones? When (and how) do some experiences (e.g., sadness, hunger) become symptoms of disease? Why do doctors ask where it hurts rather than when or how? Is there a difference between saying that a patient is "med compliant" and that she has "taken her prescription medicines"? To answer these questions (and to ask dozens more), we will read primary research on medical language, visit several of Cleveland’s nationally renowned cultural institutions, and discuss the symbolic and social meanings of a variety of medical terms, images, objects, and patterns of communication.

FSSY 147. Art and Physics. 4 Units.
The twentieth century’s advances in physics, from relativity to quantum mechanics and string theory, have offered distinctly new ways of looking at ourselves and the world around us. It is no surprise that they have equally impacted different branches of the arts, revealing new possibilities for what to represent and how to represent it. This course intends to explore this relationship between physics and art by taking two of those signal advances -- Albert Einstein’s theory of relativity and Werner Heisenberg’s uncertainty principle -- and considering how they inflect artistic models of expression such as painting (Cubism), music (atonal composition), and literature (postmodern metafiction). Our goal is not to trace specific trains of influence (although they do exist) so much as to consider how parallel developments in the sciences and the arts emerge contemporaneously, and on that basis to reconstruct the conversation between them. We will try to ask what each of these discursive models has to say to the others, and how the apparently unbridgeable gap between science and art might find some points of common contact.
UCAP Courses

UCAP 390. Conservation of National Parks and Protected Areas: A Service Learning Capstone. 3 Units.
This capstone course explores environmental conservation with a focus on protected natural areas and community engagement. Limited to a small group that meets in weekly seminar, the course investigates the often competing interests of ecosystem protection, private development, historic preservation, and public use. A vital part of the capstone is a service learning trip during break when students travel to a National Park or other protected area to contribute to conservation efforts and to gain hands-on experience with environmental management activities. Each student chooses an issue relevant to protected areas to investigate throughout the semester and writes a significant paper about that issue, utilizing the service learning trip experience to deepen their understanding and analysis of the issue. At the end of the semester, each student makes a public presentation of his/her work. Counts as SAGES Senior Capstone. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSSO, FSSY or FSCS

UCAP 395. SAGES Capstone Experience. 1 - 6 Unit.
UCAP 395 affords students the opportunity to pursue a capstone experience outside the constraints of SAGES capstone courses offered by individual academic departments. Students must identify a project, a mentor and an oversight committee. If the mentor is not a Case faculty member, then the student must also identify a faculty advisor who does hold such an appointment and who will serve as the instructor of record. A capstone experience can take various forms but must include certain elements: critical thinking, regular oversight by the project advisor(s), periodic written and oral reporting of progress, a final written report which describes the project activity (which may be a performance, experiment, student teaching, live case analysis, creative writing endeavor, etc.), and a final public presentation. More details about course policies, including procedures for registering, are available via the SAGES office and web site. UCAP 395 may be taken as a one-semester or a two-semester course for 1-6 credits in any given semester and 3-6 credits total. Permit from Director of SAGES required. Counts as SAGES Senior Capstone.

UCAP 395A. Engage Cleveland Capstone Experience. 3 Units.
This community-based capstone provides a unique opportunity for students to learn about and become involved in community issues in greater Cleveland. Limited to a small group of students, the capstone weaves together hands-on experience and academic inquiry through which students learn about urban issues, community engagement, and about themselves as leaders and advocates for social change. The capstone has two parts - a summer community-based experience (non-credit) followed by a fall semester academic capstone course (3-credit), which utilizes and builds upon the summer experience. Counts as SAGES Senior Capstone.

USNA Courses

USNA 204. The Evolution of Scientific Ideas. 3 Units.
Scientific understanding has evolved over the years. There are very few beliefs about the natural world that have remained intact over the past few centuries, or even the past few decades. The chief goal of the course will be to give students an understanding of how scientific ideas change and how newer ideas supersede the old. Questions to be investigated include: What is Science? How do disciplinary scientific communities (physicists, chemists, biologists, etc.) form and identify themselves? How does the community of scientists within a discipline come to a consensus that it is time to adopt a new paradigm: What scientific, social, political, and cultural factors come into play during the periods of transition? The course will be in seminar format. The students will be given opportunities to explicitly develop critical thinking skills (the specific skills to be developed will be selected by the class from an explicit list) and writing and speaking skills. Class meetings will be used to share their research results and to study the assigned texts and papers. The students will be required to demonstrate their understanding in a variety of ways. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 206. Land and Life in the Americas. 3 Units.
This course investigates the physical processes that shape the Earth's environments and how these environments have influenced, and been influenced by, human history. A principle focus will be the evolution of the Americas since the end of the last ice age. We will apply what we learn to the history of cultural development and to debate environmental issues facing us today. This class is limited to students participating in SAGES. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 211. Einstein, Space and Time. 3 Units.
This course will explore the profound changes in our conception of space and time brought about by Einstein's theories of special and general relativity. As a University Seminar, it will also integrate writing and discussion about these topics into the class and explore the philosophical and technological context in which the ideas were developed. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 216. Fuel Cells--Reality, Prospects and Myth. 3 Units.
Fuel cells have been recently identified as a key source for non-polluting, oil-independent energy in the future. In this course, we will study and critically analyze the prospects, barriers, and impact of broad implementation of fuel cells, focusing primarily on the transportation sector. Major topics of the course include: (i) World and U.S. energy outlook; (ii) Potential role and impact of fuel-cells, their advantages, limitations and prospects for improvements; (iii) Alternative fuels--source, availability, distribution and cost; (iv) Potential political, public policy, economic, and environmental impact of large-scale implementation of fuel-cells technology. The course is designed for students from all disciplines. Students will be expected to read assigned texts and articles and critically analyze statements and points of view presented. Quantitative analysis is expected where appropriate. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 220. Suburban Landscapes: Nature, Technology, and Culture. 3 Units.
This course will examine suburban neighborhoods by focusing on the design of technology and nature in these spaces. The way that people understand and operate in the world is so entangled with values and assumptions that the physical shape of the world cannot be separated from human culture. In this sense, suburban landscapes are not simply neighborhoods but also examples of culture. The form of the land and the technologies in the suburbs are continually reshaped to correspond with the cultures of the people occupying those spaces. By studying suburban landscapes we can see how the ideas in people's heads become part of the physical world in which we live. Upon completion of the course, the students should be well equipped to recognize scientifically unrealistic assumptions and statements in pseudoscientific books, movies, TV programs and other mass media sources. The course will be sufficiently flexible to allow coverage of topics that are proposed by, and interesting to, students, or the topics which would arise during discussions. The course will encourage open-minded approach to understanding controversial areas, as well as emphasize the great achievements that humankind made in the short historical period of our civilization. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 223. Critical Science Fiction. 3 Units.
The emphasis of this seminar will be on developing skills of critical analysis of science fiction. A goal of the course is that the students will be able to distinguish plausible from impossible when they read their next science fiction book or watch a sci-fi movie. Upon completion of the course, the students should be well equipped to recognize scientifically unrealistic assumptions and statements in pseudoscientific books, movies, TV programs and other mass media sources. The course will be sufficiently flexible to allow coverage of topics that are proposed by, and interesting to, students, or the topics which would arise during discussions. The course will encourage open-minded approach to understanding controversial areas, as well as emphasize the great achievements that humankind made in the short historical period of our civilization. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 224. Food, Farming, and Economic Prosperity. 3 Units.
Intended to challenge conventional thinking about “progress”, this course will examine the evolution of food production and consumption in the U.S. over the past 50 years. We will begin with the topic of food, itself. We will explore fundamental questions such as, What is food? Why should we care? Where does food come from? Why does it matter what we eat, and equally important, what we eat eats? Students will explore their own eating habits by keeping a journal of what, when, where, and how they eat. Discussions will focus on the social, cultural, nutritional, and technological aspects of food. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 226. Evolution of Human Behavior. 3 Units.
Human behavior is a result of the complex interplay between our genes and the environment, both of which have been shaped by evolutionary forces over millions of years. To what extent does natural selection shape our behavior today? Are humans naturally monogamous? Why do conflicts arise even in our most intimate relationships? Is human behavior ultimately in the service of reproductive success, ensuring that our genes are passed into the next generation? This course reviews the history of evolutionary theories of mind and behavior, as well as current ideas about the ecological and genetic components of behavior. We will examine key principles of neurobiology, sociobiology, and evolutionary psychology to critically evaluate evolutionary interpretations of human behaviors, including those comprising cultural traditions and social institutions. Specific topics to be addressed include human mate choice, parenting strategies, interpersonal conflict, and altruism. The course is structured as a seminar, with emphasis on discussion and formation of logical arguments. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 228. Time. 3 Units.
This seminar course will explore the nature of time from many stances, including those of Psychology, Biology, Technology and Philosophy. Yet time is central to Physics, and in Physics we will orient our explorations of time. Our understanding of time has sharpened a great deal in the last few centuries, the most obvious markers being Newton's Absolute time, which remains entrenched in modern culture, and its subsequent physical overthrow by Einstein's relativity. Given the physical primacy of Einstein's time, many questions arise: How malleable is the concept of time? Is there a fact of time? Can the present be defined? The past? The future? The successes of modern Cosmology lead us to ask: Was there a beginning of time? Will time end? The symmetry of fundamental physical laws with respect to the direction of time, counterpointed by asymmetric phenomena, lead to: Is there a master arrow of time? Is the flow of time an illusion? In this course we will investigate what “Time” is telling us about the natural world and ourselves. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 237. Landscape History and Conservation. 3 Units.
Human history is intimately intertwined with the natural landscape on which it occurred. From coastal preserves and their beach communities to Midwestern farmland and the preserved site of Thoreau’s Walden Pond cabin, and at places like the Grand Canyon, the American landscape itself holds many clues to our country’s natural, ecological, and cultural history. This course will investigate the lived landscape in two ways (which have a multitude of shades to them): as a place where humans shape the natural for their own memorial, productive, and aesthetic uses, or as a natural place that humans set aside or conserve. We will read landscape history and conservation theory, and we will consider global practices of conservation through UNESCO’s World Heritage Sites. Class work will entail a process-oriented project on the Cleveland landscape, which students are encouraged to approach through the lens of their major. We will visit the Wade Oval and the cultural gardens of Rockefeller Park as an example of current conservation practices working to protect the natural and cultural value of the local landscape. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 240. Technologies of the City. 3 Units.
Based on the premise that cities are never "finished," and constantly being remade, the University Seminar, Technologies of the City, will look at the technological and cultural history of cities from the ancient world to the present day. Students will explore the history of building materials—wood, brick, steel, concrete, and glass—used in the construction of cities. We will also trace the development of city infrastructure such as electricity, water and sewage systems, streets, bridges, and subways. Technological innovations, such as the automobile, will receive special consideration. We will move moth geographically and temporally to visit the world's great cities, studying examples of significant building projects, such as the Brooklyn Bridge, the Chicago World's Fair, and Cleveland's first skyscraper, the Rockefeller Building. The course will cover the history of the professions—engineering, architecture, and urban planning—that have contributed to the construction of cities, and will review the works of these practitioners, as well as that of artists, reformers, and utopians that have imagined new directions for the city. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 241. Urban Transportation. 3 Units.
The course is intended to examine the variety of issues associated with urban transportation. To provide focus the Cleveland metropolitan area will be used as the example urban environment. The issues that will be addressed include the perceived transportation needs, the mutual influences of perceived needs and the transportation system, the effect on business, residence, recreation and entertainment, the variety of approaches that have been used or suggested in the United States and abroad and the approaches that might be used, the resources needed, and the time needed to make changes. It is expected that the students will further develop the issues that should be addressed, do the necessary study of available information, discuss the issues, and finally report on their findings, conclusions and possibly recommendations. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 245. The Impact of Technology on Society. 3 Units.
There is commonly a lack of understanding and appreciation of how the spread of advanced technologies (the artifacts of engineering) has led to economic, social, and political changes on a global scale. As a result, young people do not think that careers in science and engineering are rewarding and useful or do they think of technology as one of the most powerful forces for social change. Furthermore, in a world where advanced knowledge is widespread and low-cost labor is readily available, U.S. advantages in the marketplace and in science and engineering have begun to erode. We want to be able to compete in the world. Economic growth is driven by technological innovation. Societies that foster it lead the pack, while others lag behind. An enlightened citizenry is essential both to support and to engage in new developments in science and engineering. Insights will be given on how engineering innovations develop and have changed the world, both good and bad and, hopefully, it will be clear that engineering is essential to meet many of the major global challenges of the future. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 247. Epidemics in Human History. 3 Units.
This course will examine the role of epidemics (of all types) in human history. Disease has shaped our society in many ways and continues to do so. Despite the plethora of antibiotic and antiviral drugs since 1940, 90% of the decrease in (First World) infectious disease is due to simple public health measures and better hygiene. But overuse of antibiotics increasingly is causing the rapid evolution of "superbugs" that threaten new plagues and epidemics. Both historical and modern epidemics of plague, smallpox, Salmonella, cholera, tuberculosis, and HIV/AIDS will be examined. The interaction of these epidemics with societies and how the epidemics influence society, cultures, art, and literature will be major topics of discussion. The course is primarily discussion with short student presentations. In addition, 3-4 short "Front Lines" talks by and discussion with CWRU and University Hospital clinicians will explore today's realities of epidemics, infection, and antibiotic resistance in the United States, Uganda, South Africa and elsewhere. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 252. The Future of Food. 3 Units.
Since World War II, science and technology have transformed the way Americans produce and consume food. This transformation has been supported by government policies and accomplished through the application of industrial methods in agriculture, food processing, and food delivery. Such methods have allowed a tiny fraction of the American population to produce vast quantities of food products at very low prices for American consumers. But this American diet, while inexpensive, has turned out to be high in sugar, fat, and processed grains that are contributing to chronic disease such as diabetes and obesity. In addition, environmental impacts of confined animal feeding operations, vast monoculture grain production, and global food transport are raising questions about the sustainability of American agribusiness. This seminar will explore the evolution of food production in the United States since World War II and will ask the question: is it possible to nourish the world's population using nutrition and flavor as guiding principles rather than cost? What is the true meaning of "sustainability" in agriculture? The last third of the course will be devoted to creating a plan for using part of the University Farm to grow food for the University. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 258. Designing Urban Green Space. 3 Units.
In this course, we will investigate the history, theory and practical design of green space in cities. We will focus on types of green space and their community function, relationship to commerce, aesthetics, recreation, ecology, and health in particular. Students will engage in group projects where they locate all underused space in Cleveland (vacant space, gray or brown fields) and will propose a new use for it as green space of some kind. Individual research projects will be related to that site. Lively class discussion and frequent reading responses required. Mandatory field trip to sites in downtown Cleveland. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 259. Bring Out Your Dead. 3 Units.
This course examines the interplay between history and plague outbreaks. Course readings draw largely on the writings and experiences of scientists, physicians, and public health officials. By taking a historical approach to the study of the relationship between human history and the history of disease, students will learn about the development of the scientific method (namely the slow process by which humans learned to identify, categorize, and respond to disease), how science develops in specific historic contexts, the consequence of scientific inquiry, and what humans do when they are faced with imminent death. A tentative list of plagues includes: the Athenian Plague, Black Death, Yellow Fever, TB, Malaria, Influenza in 1918, and AIDS. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 260. Life in the Past. 3 Units.
This course will focus on how we learn, discover, and make conclusions about life in the deep past. What types of life were present? And how can we understand their extinction? A principal focus will be how extinctions in North and South America have affected both the land and its animals and, consequently, the course of human development. We will look at megafauna from the local area in conjunction with the “Extreme Mammals” exhibit at the Cleveland Museum of Natural History, read about the fossil boom, study the Dodo, and look at scientific ways in which animals are currently being completely re-imagined via technology (computer bone/muscle articulation, eating habits, climate models, etc.). We will also look at the cultural ways in which we view these “dinosaurs” (movies, children’s books, museum exhibits) and see if it helps or hurts our scientific and historical understanding of them. At heart, our main question will be: can you really understand a time, space and creature that has been extinct for millions of years? How? Why? And why do these “monsters” hold such fascination for us? Does their disappearance bode well of the human race? Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 262. How I Learned to Love The Bomb. 3 Units.
In this course, we will explore the development of the atom bomb and its historical ramifications. Our guides through this history will be the scientists themselves. Our goal will be to understand their work as well as their motivations, trials, internal conflicts, and the consequences of their achievement. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 265. Thinking National Parks. 3 Units.
This seminar provides students an opportunity to explore U.S. national parks and their history of displaying both nature and culture. This discussion-based, writing- and research-focused class requires students to examine a park system that is both extraordinarily popular and rife with controversy. We begin with several recurring questions: Where did the national parks idea come from? How has the park mission evolved and adapted? Can parks be “read” as texts, and if so, how does our point of view determine what we see? How do parks arrange displays of cultural and natural worlds, and how do they display interactions therein? How can changing park philosophies be reflected in their physical apparatus and infrastructure? Students will participate in regular class discussions, occasionally lead these same discussions, complete formal writing assignments, and develop a final research project. The course readings will alternate between historical and present-day selections, so that we explore the history of U.S. national parks while simultaneously considering challenges and controversies that matter very much today. Early readings will include John Muir and Gifford Pinchot; current trends will be explored in the writings of William Cronon, Alfred Runte, and Jennifer Price, among many others. We will view significant portions of Ken Burns’ recent PBS series The National Parks: America’s Best Idea. The ultimate “text” for the class, however, is an actual national park. Each student will choose a national park as the basis for their semester-long project. Students will begin with description and history of their park, and then they will explore controversies or other issues in the park, developing their own argument. Next, students will have a chance to play architect/landscaper/park-superintendent, as they propose a change to the park that would address an existing problem or enhance the visitors’ experience. Finally, students will gather these pieces into a single coherent project, submitting a 10-15 page final essay as well as producing an engaging class presentation. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 266. Life After the Death of Print. 3 Units.
Around 1439, Johannes Gutenberg invented the moveable type printing press, a technological development that altered the world by ushering in an era of mass, reproducible communication. For nearly 500 years, print technologies have dominated communications. Scholars have shown that print’s ability to disseminate information led to revolutions in art, science and politics. In short, print technologies have largely defined what it means to be a thinking and communicating human being. The emergence of digital technologies has altered communications in ways that are only now being understood. This course examines how developments in digital technologies impact communication practices by threatening print’s historic stronghold. Consequently, the course also explores what impact new technologies have on human identity. We will consider the historical development of display technologies (printed materials and digital screens) to understand what is at stake in the move from print to digital communication. We will then investigate current phenomena associated with Web 2.0, including blogs and social networks, in order to understand how our communication choices construct and allow for our public and private identities. Additionally, the course will examine new display technologies, such as iPhones and Kindles, that allow for the possibly constant dissemination of those identities. Finally, we will hypothesize about how digital technologies force us to conceive of human identity differently from the ways that print invites. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 270. Alternative Energy Sources. 3 Units.
Alternative energy sources are needed, because of limited fossil fuel resources, increased demand, and environmental impacts. This course will deal with the issues of alternative energy sources. Various sources such as solar (thermal and photovoltaic), hydroelectric, wind, geothermal, ocean thermal, wave, tidal and geothermal energy, as well as energy from biomass will be discussed in order to determine what is practical on a large scale, as well as on the scale of the individual homeowner. We will pay attention to the efficiency of each alternative energy source as well as what limitations exist in terms of extracting useable energy. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 271. Gene, Environment and Behavior. 3 Units.
The goal of this course is to encourage students to be well informed and critical consumers of the media reports about the influence of genes and environment on human behavior. This course involves the book by Matt Ridley titled, “Genome: The autobiography of a species in 23 chapters.” Ridley has a Ph.D. in zoology, worked as a journalist, science editor, and national newspaper columnist. The book devotes a chapter to each pair of human chromosomes. Each chapter focuses on the role of a gene. Ridley’s book was published in 1999; therefore, students will conduct their own research to update each of the chapters in Ridley’s book. The first few weeks of class will be used to provide a background on genetics research through field trips and guest lectures from CWRU genetic researchers. We will have several writing workshops spread throughout the semester to offer “Just in Time” tips needed to write critical evaluations and literature reviews. Each student will present twice during the semester. The first oral presentation will revolve around a summary, critical evaluation, and an update of the human trait presented in the Ridley book on their assigned chromosome. The presentation will be about 15 minutes with 5 minutes left for questions. Students not presenting will be assigned one of the three chromosomes (chapters) covered that day and they will each write a seminar question to pose to the class. In addition, each student will also serve as a reviewer for one of the presentations to provide constructive feedback to the presenter. The second presentation will consist of new material found by each student about genes on their chromosome. They must find another trait on their chromosome and present the most current information available on that trait. In place of a final exam, each student will turn in a research paper on their assigned chromosome. We will build these papers throughout the semester with a series of graded “checkpoint” assignments. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 272. The Thames Watershed. 3 Units.
In this seminar, we will investigate the London, England-area Thames watershed and its associated concerns, like urban development, watershed management, aquatic species conservation, and habitat engineering and restoration. A critical part of this seminar will be a spring break field trip to London. On the field trip, we will focus on London’s rivers and their history and ecology. We will study the Lea River Valley (where the 2012 summer Olympic Village is located), the Fleet River and various water-related constructions, such as Docklands, Regent’s Canal, and the Wildfowl and Wetlands Nature Reserve, each from historical and ecological standpoints. Emphasis will be on how humans have treated the watershed historically, from using the rivers as sewers and transportation links, to restoring their ecosystems, as is the current case in the Lea River Valley. Course readings will be a mix of cultural history, London newspapers archives, and scientific studies on riparian corridor management. Students will keep field journals in London and will write an experiential learning essay about how the field trip intersected with the readings we’ve discussed in the seminar. They will also write a 10-12 page research paper on one of the ecological issues witnessed in London and its significance. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 274. Science and Religion. 3 Units.
Commentary on the relationship between science and religion tends to take one of the following perspectives: (1) science and religion are incompatible; (2) science and religion are compatible; (3) science and religion are not fundamentally different kinds of things. This class will critically examine each perspective by looking at the history of the relationship between science and religion and the philosophical issues that have arisen therein. We will then use what we have learned to see if we can make progress on contemporary debates surrounding science education. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 283. Cultures of Science. 3 Units.
From the laboratory to the museum, science is a dominant way in which we make sense of the world. This seminar examines the cultures of science. Drawing on the fields of anthropology, sociology, history, and science and technology studies, we explore the interplay, exchange, and fertile ground between “culture” and “science.” We analyze the cultural practices of scientists, the relationship between scientific and indigenous ways of knowing, and ethics of scientific knowledge, as well as scientifically mediated understandings of personhood, nation, legality, and truth. We will consider case studies from the U.S., Latin America, Europe, Africa, and Asia that reflect on contemporary intellectual debates and public concerns. The course considers the following questions: Is science cultural? What does objectivity mean? How are scientific facts produced? Do our understandings of citizenship and the nation have any connection to science? Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 285. The Science of Madness: An Historical Investigation of Mental Illness. 3 Units.
Since antiquity the western world's understanding of mental illness has continued to evolve. This course will examine the trajectory of that evolution, looking at the medical theories that have influenced assumptions about the causes and treatments of mental illness from the early modern era through the twenty-first century. Examples of questions we will investigate include: How have we defined the normal and the pathological in human mental behavior over time? How do we explain the centuries-old correlation that medicine has made between creativity and mental illness? Which past and present psychiatric treatments have been beneficial and which harmful? How did Darwin's theory of evolution affect theories of mental illness (and how does it continue to do so with the advent of evolutionary psychology)? How have changing philosophies of science affected the research and practice of psychology? How and why do the sciences of the mind—psychiatry, psychoanalysis, clinical psychology, psychopharmacology, the cognitive neurosciences—claim so much scientific authority and exert influence over our lives today? As a frame work for this inquiry, the class will use the concept of paradigm shifts as Thomas Kuhn defines in his classic work, the Structure of Scientific Revolutions. Prereq; Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq; FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 286. Science and the Paranormal. 3 Units.
From paranormal television programs to the academic study of parapsychology, claims about the "science" of the paranormal abound. This seminar examines the ways in which people have attempted to scientifically explore questions of life after death, the soul, and anomalous phenomena such as ghosts, telepathy, and ESP. The seminar begins by exploring the emergence of psychical research and parapsychology in the late nineteenth century. We then critically analyze a variety of purportedly scientific approaches to the paranormal and analyze their understandings of nature and science. By exploring the claims of paranormal researchers, parapsychologists, and fringe scientists, we will analyze the constitution of science and its demarcation from pseudoscience. We consider a variety of methodological and heuristic tools to distinguish science from non-science such as falsifiability and Occam's razor and apply them to paranormal claims. We also analyze the criticisms leveled at paranormal research. We ask the following questions. What is science? What distinguishes it from "pseudoscience" or non-science? What is skepticism? Can there be a science of the paranormal? What understanding of the natural world is the paranormal grounded on? What is the relationship among science, religion, and belief? Prereq; Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq; FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 287A. Perspectives on the Cosmos: From the Ancient Philosophers to Modern Science. 3 Units.
For all of recorded history, and presumably well before that, people have asked the Big Questions: What is the nature of the Universe? How big is it? How old? What is our place in it? For just as long, we've been making up the answers. Cosmology is the subject that seeks to answer the big questions. As such, it is the nexus where science, philosophy, and religion collide. This course will explore the subject of cosmology, from both an historical and scientific perspective. In the process, we will examine the roles of faith, philosophy, and empirical knowledge. We will survey prevailing attitudes towards the nature of the world model over time, examining the impact of belief systems on the interpretation of physical evidence. Subjects to be covered include the first vital steps of the ancient philosophers, the tension between geocentric and heliocentric world models at the time of Copernicus and Galileo, and the modern scientific world view. Students will learn to critically examine evidence and its interpretation, and to appreciate the strengths and shortcomings of various forms of human knowledge. Emphasis will be placed on the importance and limitations of empirical evidence, and the dangers inherent in the interpretation of evidence within a preconceived framework. The student will gain an appreciation for the historical development of world models, culminating with modern cosmology. In the process comes a respect for the diverse paths to knowledge followed by humanity. Prereq; Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq; FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 287C. Animals and Humans: Making Sense of the Human-Animal Bond. 3 Units.
Humans have an incredibly complex relationship with (non-human) animals. We eat some animals and consider other animals members of our family. We worship some animals and vilify others. This class examines the complexities of our relationship with (non-human) animals. Through exploring human emotional, practical, and epistemological ties with animals, this course examines what it means to be animal as well as what it means to be human. We analyze the following questions. How do we come to know and understand animals? What are the issues surrounding the use of animals in scientific speculation, classification and experimentation, such as vivisection, cloning and the human-animal relationship in technoscience? Do some non-human animals possess material culture, social morality, and emotions such as grief and sadness? Why do animals populate our popular culture and art? Prereq; Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq; FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 287D. Native American Environmentalism: Sustainability and Contemporary Energy. 3 Units.
This seminar course will focus on three main areas of Native American environmentalism. First, we will learn about Native Cosmologies and historical connections to the land while exposing the controversial relationship of Native Americans to land and wildlife within the myth of the "ecological Indian." Second, we will examine how Native Americans have responded to toxic pollution of indigenous lands as a result of manufacturing and uranium mining, which some refer to as "environmental racism." We will also learn about tribes who choose to host nuclear waste facilities as an exercise of their sovereignty and as an avenue of economic development. Finally, we will investigate initiatives by tribes and coalitions in land and water stewardship, investment in "new" energies and technologies, sustainability of lands (prairie and forest restoration), reclamation of waterways (dam removal), and wildlife management, to name a few. Students will inform their critical thinking about Native American environmentalism with a variety of texts and websites of scholarly and public opinion, scientific data, native knowledge, and historic fact. The seminar will include collaborative learning and presentation projects in which students will pursue research topics related to energy development, stewardship and sustainability, or wildlife management and harvesting. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 287E. Evolution and the Modern World. 3 Units.
Modern evolutionary theory has influenced all aspects of biology and the clinical sciences. It has, moreover, resulted in novel ways to think about many of the social sciences. This class will focus on how the concept of evolution has dramatically altered the way we view human anatomy, physiology, and behavior. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 287F. Environment and the Fates of Societies: Guns, Germs, and Steel. 3 Units.
This University Seminar deals with the connections between human societies and landscape, climate, pathogens, and plant and animal species. The main method for this exploration is a close reading of Jared Diamond's Guns, Germs, and Steel. Diamond explains that Western Europeans came to occupy and dominate large areas of the globe because of natural resources present in certain regions of the Old World since the end of the last Ice Age. For example, Diamond studies ancient patterns of plant diffusion or the place of mountain ranges and deserts in the development of technologies. Seminar participants will also study historical sources from specific times and places - namely North America from European contact to 1850 - and compare them to Diamond's general environmental explanations and models. Placing Diamond's broad explanations within specific historical contexts is revealing. A range of alternative methods, perspectives, primary sources from North America, and case studies (especially in environmental history) help develop a critical understanding of the complexities of the fates of societies. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 287G. Genes, Genomes and Society. 3 Units.
2013 marks the 60th anniversary of the discovery of the double helix of DNA and the 10th anniversary of the sequencing of the first human genome. Advances in genetics (the study of individual genes), and genomics (the study of an entire genome) have fundamentally altered our understanding of biology. In this seminar, we will focus on topics covered by the mainstream press. We will explore the science behind the news and discuss the philosophical, ethical, and societal concerns raised by these scientific advances. Topics will include: the dangers and benefits of genetically modified crops; genetics and the conservation of endangered species; learning about human biology and disease from yeast, flies, worms and fish; the use and potential misuse of genetic fingerprinting by government agencies; genetic testing; personalized medicine; and issues of genetic privacy. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 287H. Plants in Medicine. 3 Units.
Plants have always been the basis of medicinal treatments, and as they continue to be essential to modern forms of medicine, alternative and traditional alike. In this course, we will consider the history of how humans have used particular plants for medicinal purposes, such as the cinchona tree (Cinchona officinalis) for quinine, willow bark (Salix) for aspirin, and the yew tree (Taxus baccata) for the cancer medication paclitaxel. By investigating how a plant is used medicinally through time, we will also come to understand the culture that used it and how they conceived of health in relationship to nature. We will read texts that show how a plant's medicinal uses can be tied to colonialism and global exploration. For example, the first botanical gardens were collections of medicinal plants cultivated for use and experimentation, often containing non-native plant-based cures discovered through colonial contact. While this is not a course in botany per se, we will be discussing basic plant biology, cultivation practices, and the contemporary science of using plants as the basis for pharmaceutical cures. Students should be active course participants in class discussion and on field trips. Writing instruction will focus on research-based argument, and students will complete a researched essay focusing on a medicinal plant of their choice. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 287K. Human Research Ethics: Scientific Truth vs. Cultural Belief. 3 Units.
Scientific breakthroughs in genetics, neuroscience, and behavioral psychology have allowed us to learn more about ourselves than ever before. But how much do we really want to know - and who gets to decide? Is DNA our destiny? Should the quest for scientific knowledge trump cultural belief? How does society balance risk to a few in the face of the needs of the many? Using a blend of historical documents and literary examples, we will examine the evolution of the ethical standards that govern how doctors experiment on their patients. We will also debate the hard choices that medical researchers make when the quest for scientific truth intersects with cultural belief. Finally, we will apply what we have learned to find solutions to real-world ethical problems in medical research. Prereq: Passing letter grade in a first year seminar in FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USNA 287Q. Gothic Science: Discovery and Dread in the 18th Century. 3 Units.
Discovery has always enticed us. From the ocean voyage to the space mission, from the discovery of electricity to gene-splicing, men and women have sought to explore the boundaries of knowledge. However, such explorations often come at a cost. New scientific discovery in the 18th century—from neurology to reproduction to electricity—caused as much fear as excitement. The Enlightenment focus on clarity and rationality harbors a dark double self that appears as monstrosity in early Gothic fiction. This course will explore the ways cultural anxieties are re-interpreted through fictional narratives and reflect on what this says about our own scientific explorations today. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 287U. Energy - The Great Challenge Ahead. 3 Units.
Among the greatest challenges we face today is to find means of meeting our energy requirements without jeopardizing the environment or fostering geopolitical conflicts. This course investigates what we can do both individually and collectively to tackle this energy challenge. The questions we will consider include: To what extent is the world aware of the energy challenge and its environmental implications? What is already being done to meet this challenge? What role can technology play in addressing it? What research can we be doing now to help predict the future of our energy needs and potential environmental impacts? By investigating these questions, students will develop a fuller and more precise understanding of the energy challenge, as well as generate possible solutions. Students may not receive credit for both USNA 287U and USNA 288L. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USNA 288L. Future Energy: @home&abroad. 3 Units.
Among the greatest societal challenges we face today is to find means of meeting our energy requirements without jeopardizing the environment or fostering geopolitical conflicts. This course investigates what we can do both individually and collectively to tackle this challenge. The questions we will consider include: To what extent is the world aware of the energy challenge and its environmental implications? What is already being done to meet this challenge? What role can technology play in addressing it? What research can we be doing now to help predict the future of our energy needs and potential environmental impacts? By investigating these questions, students will develop a fuller and more precise understanding of the energy challenge, as well as generate possible solutions. As an important and indeed unique aspect of this course that will greatly enhance their learning experience, students will compare strategies implemented in the State of Ohio and an international location to meet the energy and the environment challenge. To this end the course will require enrolled students to join the instructor in an international location for five or more days over a University break to visit energy conversion and storage installations involving solar thermal, solar photovoltaic, wind farms, geothermal and hydroelectric and acquire profound knowledge of technological and economic factors involved in their operation and maintenance. Students may not receive credit for both USNA 287U and USNA 288L. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO Courses

USSO 201. Society and Technology: How Do They Impact One Another?. 3 Units.
This course focuses on a systematic analysis of the relationships between society, and the specific institutional elements of technology and technological innovation. It describes the social aspects of computers and related technologies and explores the ways in which these technologies influence and impact organizations and individuals. The course explores the design, use and cultural significance of technologies and uses a historical focus to assess the integration of technology into all aspects of our society. The restructuring of traditional human interaction by information technology will provide a contemporary focus for the course. Offered in a seminar format, the course will provide opportunities for scholarly discussion, systematic inquiry and written communication. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 203. Law in Literature. 3 Units.
An interdisciplinary venture. This seminar will focus on law in literature by examining representations of the legal process in poems, plays, short stories, and novels. It will provide a taste of the vastness and variety of human life—and will broaden and deepen students’ understanding of the role law plays in society. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 205. The Human Struggle Through the Lens of Sport. 3 Units.
This seminar explores, through the medium of sport literature, the interaction of sport, society, and self. Students will examine the social and psychological effects on participants, consumer, and society of sport through the study of fiction, research studies, essays, and poetry having a sport motif. Topics include racism and sexism (valuing diversity), love (cooperating), death (losing), transformation (aging), and achievement (winning). This class is limited to students participating in SAGES. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 209. Face First. 3 Units.
Human beings greet the world face first. In fact, the ability to process facial features seems to be innate. A baby easily recognizes its mother’s face yet the most powerful computers have difficulty using facial features to identify people. This is because all human faces are similar while fine details make each face unique. This course will begin by studying the human face as an anatomic construction of hard and soft tissue skeletal components. We will discuss how we use anatomic facial features to recognize individuals. One homework exercise will be to construct faces using an FBI identikit. Each student will create an FBI composite sketch of their own face. Seminar time will then be used to view each sketch and try to match the sketch with the seminar participant. Discussion will focus on how facial anatomy is similar or different. Following this introduction, the seminar will shift focus from anatomy to sociology. We will discuss facial attractiveness and beauty. Seminar topics will also include manipulation of facial appearance i.e., cosmetics, body piercing, veils, and plastic surgery. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 222. Science and Society Through Literature. 3 Units.
This course will examine the interaction of scientific investigation and discovery within the context of the society it occurred in. What is the effect of science on society and, as importantly, what is the effect of society on science? An introduction will consider the heliocentric controversy with focus on Galileo. Two broad areas; tuberculosis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art and music will be examined to understand the changing views of society towards the disease, how society's perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and viewing several films, the transformation of the original story into a myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 229. A Study of Power: Criteria Essential to Its Rise and Fall. 3 Units.
This SAGES seminar will coordinate examinations of major historical events and their influence on the future. Particular emphasis will focus on the development and/or demise of powerful countries and people, and political and religious infrastructures. Sample topics include: the rise and fall of the Roman empire, the Barbarian empires, the British empire, the National Socialists, the Soviet empire, etc. Development and practice of religious behavior from praying to pagan Gods and spiritual Gods may also be analyzed. The idea is to demonstrate the similarities and differences in each of these broad categories as they progressed. An examination of the impact of greater world "enlightenment" as civilization expanded over time is also discussed. The evolution and eventual demise or change and the continuing impact on contemporary civilization shall be explored. Conclusions shall be used to suggest a model for the future. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 231. Evolution as Metaphor and Model: Why Don't We Live Forever?. 3 Units.
Evolution will be used to examine biological, historical, and social issues associated with health, illness and aging. In this overview course, evolution is a paradigm that is used to understand how systems change over time. The readings and discussions will identify universal processes and patterns in order to understand the effect of disease on history and explain how and why humans remain vulnerable to aging. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 234. Questions of Identity. 3 Units.
Who we are informs the ways in which we act in the world. How we respond to society in the individual, local, and global community is impacted by the way we see ourselves, the way others see us, and the way we see others. Who am I? How do I look at myself in relationship to others? How does the way in which society views me affect the way I think of myself? How have writers, historians, and philosophers dealt with the challenges of self and group identity? We will explore these issues through readings from the Civil Rights Era, the Holocaust, and the period of decolonization in Africa. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 238. The First Amendment. 3 Units.
The First Amendment to the United States Constitution states that "Congress shall make no law ... abridging the freedom of speech." In this seminar we will explore what this right has meant in America and how it has been limited throughout American history. We will discuss the importance of free speech in a democratic society and how the government balances the freedom of speech with other government interests. This course is also designed to give you a glimpse of law school and what being a lawyer is like. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 239. Change Agents: Past, Present, and Future. 3 Units.
Though it is often said that we are living in a time of constant change, surprisingly few people take the time to understand who makes change happen and how. This seminar will explore the phenomenon of change on multiple levels. We begin by looking at change through an historical lens, examining social movements in the 1960's. We will then investigate organizational turnarounds of the late 20th century and today. In each instance, we will consider the role of the individual, groups, and organizations as change agents, and examine the influence of environmental factors on change processes. Throughout this course, we will study the dynamics of effective change, identify change strategies, and move to develop a personal understanding of how each one of us can initiate change. In addition to diagnosis and analysis, we will engage in creative thinking and writing about our own capacity to become change agents. We will apply what we read and learn to our current and future lives. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 243. The Art of Fact. 3 Units.
As evidenced by the tragedy that unfolded in New Orleans in the wake of Hurricane Katrina, we are confronted by complex social problems and have done so using many of the conventions employed by writers of fiction. Writer Ben Yagoda described this literary journalism as “making facts dance.” We'll spend our time researching numerous issues and learn to write about them in a clear and compelling voice. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 255. Hinduism. 3 Units.
This course will provide an introduction to Hindu thought and culture. We will read a wide range of texts and secondary sources. Two readings, the Ramayana and Samskara, will focus on issues of ethics and proper dharma. We will also be watching Deepa Mehta’s Fire. There will be a visit to the Shiva-Vishnu Temple in Parma. Heavy emphasis on research and writing. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 260. Spin, P.R., and America Today. 3 Units.
We live today surrounded by spin--corporations don’t fire, they downsize; government pronouncements are assumed to be cynically slanted and misleading; even scholarly medical articles are written by public relations (p.r.) flacks. The guiding principle isn't truth or reality but the right message and staying on it. How and why has p.r. become such a seemingly potent force in our time? What does this say about America and its values--about even the meaning of truth? In this seminar we will explore the role of public relations and image-making, in American society today. Our objectives are (1) Examine the uses of p.r. today in business, politics and popular culture to shape images and define reality; (2) explore the tools used to construct and sell those messages and perceptions and (3) Analyze the values underlying these activities--to the end of deepening our understanding society today. This seminar explores these issues through reading, both academic and popular writing, discussion, and research. The writing assignments will be both academic and various forms of media and public relations formats. We will use class time to discuss and review student writing. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 264. Government and Race Relations. 3 Units.
Current debates over such issues as immigration and affirmative action raise core questions about the government’s influence upon American race relations. What roles have various governmental entities--e.g., federal courts, state governors, and city councils--played in promoting racial equality or defending racial hierarchies? What roles should they play? And how much can the government (re)shape cultural attitudes and social practices? How much authority over race relations should remain with states and localities, and how much should be exercised by the federal government? This course offers a forum to investigate and debate such questions more thoroughly by examining a range of instances in the period from the late 19th century to the present day in which different kinds of government action have significantly influenced American race relations. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 266. Framing Our Legal System: Law in the Movies. 3 Units.
This course explores important themes in the study of law, lawyers, and legal institutions by regarding their representations in movies. We will cover such issues as race/class/gender and the law, legal ethics, legal education, the adversarial system, and the image and status of the lawyer in American culture. We will also look at the ways in which law and the legal profession affect popular culture and, conversely, the ways in which popular views of legal problems and lawyers affect law. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 269. Create-A-College. 3 Units.
In seminar format, students will develop plans for a new institution of higher learning, shaping and communicating in several different formats its mission, goals, academic focus, and physical and financial needs. Supporting the course’s research, writing, and presentation expectations will be documents from existing colleges, information on the policy and social environment for such a venture, and requirements imposed by external entities such as governmental and accrediting agencies. Course will include interactions among two sets of student teams and several intermediary presentations, culminating in a group presentation of plans for the new college to a panel of experts including current or former members of the University’s Board of Trustees and the Ohio Board of Regents. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 270. The Geography of Wealth. 3 Units.
While many of us are familiar with thinking about wealth in social, political and economic terms, wealth can also be understood as a function of geography. This seminar will look at American history and culture to seek a deeper understanding of how place and wealth interact; some of the government policies that affect those interactions; and some of the grand experiments in philanthropy, law, and social policy that have tried to reverse the perceived evils of “concentrated poverty.” The seminar will not require an advanced mathematical or statistical background. However, we will analyze how statistics can illuminate (and disguise) issues and problems. We will look at the business corporation as both an aggregator of wealth and as a wealth allocation system. Of necessity we will wander into matters of race, employment, power, class, culture, history, and government. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 271. Schoolhouse Rocked: Education Reform. 3 Units.
Today, the term "education reform" may bring to mind standardized tests and No Child Left Behind. Many believe that our schools must become more rigorous, with stricter rules and definable goals. "Reform," however, used to be defined differently. John Dewey, Maria Montessori, and Paulo-Freire, for example, struggled to make schools freer and more humane. They hoped not to make the classroom less challenging, but more child-centered. Some disciples of such reformers, discouraged by schools' resistance to change, eventually turned to homeschooling--pulling kids out of school and educating them with real-life learning experiences. In this seminar, we will explore progressive educational theory and connect it with contemporary alternative schools and homeschooling. Visits to nearby Montessori and Waldorf schools and discussions with homeschoolers will make real-life connections to seminar reading and classwork. Challenging assumptions about how well our schools work and raising questions such as, "How do we learn?" and "What is good teaching?" will provoke thought, conversation, and interesting writing. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 274. Passion, Insult, and Virtue in Ancient Athens. 3 Units.
Students explore the social fabric of Athens at its height—the various social and economic institutions that shaped households and the city—state in the fifth and fourth centuries BCE. Primary source material will include courtroom speeches, two comedies of Aristophanes, and Aristotle's Ethics. Topics: lust, love, marriage, prostitution, slavery, elite drinking parties, street life, hubristic violence, competition, feuding murder, the legal system, diverse concepts of virtue, and how ordinary people were expected to treat one another in good times and bad. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 275. Psychology of Creativity, 3 Units.
The purpose of this course is to explore how individuals become creative. What are the most important qualities, emotional and cognitive, that are related to creativity? Is there a creative personality? What is the difference between artistic and scientific creativity? How does creativity relate to mental illness? How can we foster creativity in people? The course will study creativity in children and adults and will include research studies as well as descriptions of creativity from creative individuals. We will also discuss how different cultures view and effect creativity and the ethical issues involved. This course is a seminar and will use a discussion format. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 280. Democracy?. 3 Units.
"Democracy?" poses democracy as a question, in two forms. First, what do we mean by democracy? Second, where should democracy be practiced? Although conventional understandings link democracy to political systems and issues of governance, the course will consider democracy in other institutions and locations. Course questions include: What is democracy? Why do we value democracy? Does democracy in the state require democracy in the economy? What would that look like? What are the potential conflicts between economic and political democracy with full citizen involvement? Is direct democracy democratic? Does democracy in the state require democracy in the family? In universities? In the workplace? In prisons? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 284. The Kaleidoscope of Birth. 3 Units.
The course will explore topics in science, technology and culture across time as they relate to the social construction of birth. Students and faculty will critically examine the seminar topics through an interdisciplinary approach. The learners will develop their own understanding of how science and technology related to birth have and continue to change. What happens when newer technologies supersede the old? What happens when older ideas are revived? Students will be introduced to the influence of culture and technology. Methods of oral and written communication will be enhanced via assignments. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285A. Ethnicity and Local History. 3 Units.
This course will explore the many different kinds of ethnic communities to which we belong. Why do local ethnic groups formed arts and cultural organizations, sports clubs, charities, and other groups which highlight their difference? How have these local groups operated within larger, national ethnic groups and how have they helped us negotiate our identities as citizens, members of religious communities, and/or members of other nations? To what extent have these groups been successful in encouraging future generations to identify with the ethnic group? Our starting point and focus will be an examination of theories of civil society, ethnic identity formation, and nationalism. We will then turn to an examination of the ethnic communities in the Greater Cleveland area. This study of our own local context will then be followed by a consideration of ethnic organizations in other parts of the world. As we consider how ethnic communities have developed and changed throughout history, we will also examine our connections to these communities and, it is hoped, gain a better appreciation for the diversity which surrounds us. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285D. Advertising and the American Dream. 3 Units.
This SAGES seminar will explore advertising in America, its social and cultural roots, and its impact (or lack thereof) on our values, tastes, and behavior as consumers and citizens. It is hard to find a space in the contemporary world that is not plastered with ads—from the Coke cups next to the judges on "American Idol" to stencils on the sidewalks we walk on. This blizzard of advertising images may, in fact, define our age. We will examine the forces that created this giant American industry and ask: Why do we have advertising? How is it created? What social functions does it serve? How has it changed? Where is it going? Central to this seminar is discussion, research, and writing to analyze and critique this in-our-face, but little understood, social institution. Some of our discussions will flow from advertising industry news (e.g., the Super Bowl ads), a contemporary or early 20th century ad campaign, or the backstage insights of a guest from one of Cleveland's major ad agencies. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 285I. Spectacle in American Culture. 3 Units.
This seminar will examine the topic of spectacle both chronologically and typologically to better understand the power of remarkable visual experiences to awe, entertain, persuade, and create meaning from the colonial period to the present day. In the 17th century, the religious beliefs of the New England community and its need to maintain social cohesiveness gave rise to the spectacle of witch trials and public punishments. As Americans moved westward, the natural world became the focus of the spectacular. In the nineteenth century, the campaigns and debates of presidential candidates became political theater. The latter half of the century gave rise to Consumption as Spectacle as exemplified in the may expositions and World’s Fairs. Today, spectacle has reached all facets of our lives. Americans are willing to expose the most intimate details of their personal relationships on television shows like Jerry Springer and The Real World. Although frequently used to maintain power, spectacle also has been employed as a tactic of resistance and as an instrument for creating alternative meaning by subcultures. More recently, spectacle has served as an instrument of terror. Through lectures, discussion, multimedia presentations, and writing assignments, we will have an opportunity to reflect on the many forms and uses of spectacle in American history. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285K. The Economics of Global Poverty. 3 Units.
Developing countries make up at least three-fourths of the world population. This course focuses on international aspects of economics of the developing world. Questions we will ask include: why are the poorest countries failing to thrive, what can be done about it, and can the rich afford to help the poor? The term “developing country” means a country that exhibits low per capita income, high poverty level, little industrialization, or low life expectancy. However, these problems also affect developed countries. Why, then, do we study poor countries’ economies separately from those of industrialized nations? The answer lies not in the types of problems but in the severity and causes of these problems. It is these issues, the causes and consequences of global poverty, and solutions to help the world’s poorest, that concern us here. Raising people out of poverty requires economic growth, a more even income distribution, investment in education, health care, and infrastructure, social safety nets, honest political leaders, reliable social and financial institutions, and international aid from rich countries. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285N. Globalization and American Culture. 3 Units.
This course investigates the role of the United States in globalization. The first third examines the claim that globalization entails cultural “Americanization,” the middle third covers the resistance of local cultures, and the last part explores the ways in which American invented technologies do, in fact, spread culturally specific ways of working and behavior. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285O. Cities (Deconstructed). 3 Units.
This seminar will look at the history of cities, real and imagined, in terms of deconstruction, both in the sense of physical destruction and literary analysis. We will explore how societies have brought about, and reacted to, the destruction of buildings, neighborhoods, and entire cities at the hands of economic development, terrorism, war, neglect, decay, and natural disasters such as the recent relevant works, the students will be exposed to a variety of related primary and secondary materials (such as texts, photos, film clips, music, songs, and websites). In addition to receiving informative yet concise instruction, the student will also be involved in practice in critical reading and thinking, in writing and orally presenting research papers. In these activities, the students will be introduced to basic methods and concepts critical to the understanding of important economic, social, and cultural developments and changes as products of movements rather than isolated incidents. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285P. China in Transformation and Globalization. 3 Units.
This seminar introduces students to major economic, social, and cultural developments in China over the past quarter century, taking as its particular focus the way in which China experienced changes such as consumption, education, migration, and tourism as a result of economic reforms, trade expansion, foreign investments and technology transfer, and the development of information technology. The seminar will also assess the impacts of various aspects of globalization on these changes and vice versa. This seminar promotes broad knowledge of--and increased appreciation of the importance of diversity in China's cultural past, social frameworks, economic conditions, and natural environment. In a close connection to the primary readings, which include several recent relevant works, the students will be exposed to a variety of related primary and secondary materials (such as texts, photos, film clips, music, songs, and websites). In addition to receiving informative yet concise instruction, the student will also be involved in practice in critical reading and thinking, in writing and orally presenting research papers. In these activities, the students will be introduced to basic methods and concepts critical to the understanding of important economic, social, and cultural developments and changes as products of movements rather than isolated incidents. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 285S. Correspondence. 3 Units.
Correspondence will look at the practice of writing and reading letters, and explore the use of letters as biographical, historical, and forensic evidence. Students will read love letters, "Letters to the Editor," letters from the battlefield, and correspondence between scientists and theologians. We will gain access to the experience of tourism through post cards, and the world of the modern corporation through business letters, emails and text messages. We will read examples of fiction where the letter acts as a plot device, as in the epistolary novels of the 18th century. We will think about the function of the letter as an instrument of persuasion, as an opportunity to develop ideas in a private and informal manner, and as a forum for expressing emotion. In addition, we will study the communication systems and technologies, such as the post office, the telegraph, and the internet, that have facilitated, and changed the nature of, correspondence throughout history. Students will be asked to write letters based on their personal experiences and their political opinions, and write analytical essays based on topics related to the practice and history of correspondence. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285T. Why We Believe Weird Things. 3 Units.
How, in such a skeptical age, can people maintain questionable beliefs regarding urban legends, alternative medicine, superstitions, and paranormal phenomena? How do cults manage to attract and maintain large memberships? How can so many seemingly normal people come to the conclusion that they have been abducted by aliens? We will explore the idea that these behaviors are not examples of pathological thought processes, but rather natural consequences of the biases that characterize everyday reasoning. Emphasis will be placed on critical examination of questionable phenomena with a goal of understanding why people might want to hold such beliefs. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285V. Travel Literature in the Age of Discovery. 3 Units.
The discovery of the Americas in the 15th century challenged European constructions of the known world and tested assumptions about nature, culture, and the workings of intellectual inquiry. Although before 1492 Europeans traveled, they usually read new landscapes in light of familiar religious paradigms. The discoveries forced Europeans to draw the world anew, literally and metaphorically. Students will read works of travel fiction and real-life travelers' tales, and will address the following questions: how did travel literature reflect successive discoveries? What new maps (geographical or metaphorical) did this literature help draw? How did the discoveries bear on literary genres? Additionally, students will read brief accounts of actual travels. Students will write three papers and prepare presentations on topics such as pilgrimage routes, map making, the search for longitude, and America in the visual arts. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 285Y. Quest for Perfection: Law as a Vehicle for Social Improvement. 3 Units.
Americans often seek to use U.S. law to create "fairness" and "civility"—in a world that can sometimes be brutal and fundamentally unjust. Increasingly, we rely on courts and statutes to "fix" identified social problems and to achieve a more just society. This course will examine our reliance on law to improve human behavior and to achieve social goals. Can statutes and lawyers lead the way to a better world? What are the limits (if any) of our ability to improve society by passing new laws and mandates? Are there unforeseen, negative consequences that arise from our legal efforts to improve public and personal behavior? This course will examine those questions in the context of selected social issues. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286E. Global Tourism. 3 Units.
Tourism can be viewed as a metaphor for contemporary existence in an increasingly globalizing world where attachments and ties to a concrete place are often temporary. Besides capturing the essence of present-day mobility, tourism is a phenomenon that can be researched both politically and economically. Indeed, 10 percent of global GNP comes from tourism and many poor countries rely on the tourism industry to sustain national economic development. In this class, we will touch on the economic and political significance of tourism, but will spend most of our time thinking of what happens in the tourist encounter, what tourists expect, what drives them, and who loses as well as benefits in the encounter. Some of the specific themes include: the nature of tourist destinations, quest for authentic sites, entertainment tourism (Disneyland, Dracula-Park), tourism to Auschwitz, culinary tourism, sex tourism, and eco-tourism. By reading theoretical works, travel blogs, and literature, we will gain insight to the motivations of tourists, the inhabitants of the places being visited, and international organizations as well as governments who oversee this industry. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 286F. Environment and Civic Culture in the Developing World. 3 Units.
Can the fight against environmental degradation lead to an improved civic culture and political reform in developing nations? Developing nations typically sacrifice environmental protection in favor of economic development. Only when the costs of environmental degradation become obvious do nations consider a sustainable development regime that includes environmental protection. This seminar addresses whether implementing a sustainable development model requires a new civic culture that encourages political reform. In doing so, students will examine and write about literature on economic development, environmental degradation, and several international initiatives that encourage reforms to aid sustainable development. The seminar will use the People’s Republic of China as a case study, but will also draw on evidence from other developing countries. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286L. Exploring Non-Profit Organizations. 3 Units.
This seminar is structured to expose students to the opportunities and challenges of working in and running non-profit organizations. Students will explore the importance and significant roles non-profit organizations play in our society. The class will learn how non-profits are organized and regulated and the importance of the organization’s mission is to determining the impact of the non-profit organization in the community. Additionally, the students will learn how non-profits are funded and how these organizations maintain their financial stability and sustainability in the community. These goals will be accomplished through group analysis of non-profit organizational principles, and investigation of existing non-profit organizations. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286M. Hip-Hop Narrative in Film. 3 Units.
This seminar explores films of the Hip-Hop Generation and, by presenting certain films in chronological order, draws out the common threads. Hip-Hop culture is a conversation, an argument between the have-nots and the rest of us. The goals and objectives of that conversation have evolved and changed in timbre and urgency. Tracking that dialog through the late 60s, the post-civil rights era, the emergence of the b-boy, Reaganomics, and the rise of the new Black middle class helps us to get a better look at where it is and where it’s going. By isolating the stories told by filmmakers within a certain period and then analyzing their place in the larger Hip-Hop narrative, the instructor and the students can infer truths about the politics and zeitgeist of the times in which the film works were conceived. This course will consist of lots of film, yes, but also lots of reading and writing. Upon successful completion, the student should be able to recognize and define the Hip-Hop narrative in popular cinema, focus critical thinking skills, pull the narrative from certain films and discuss it, note and discuss the visual aesthetic and how it impacts the story, and discuss the marketing, packaging, and cultural impact of the Hip-Hop narrative. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286N. Nazi Art Theft and Its Aftermath. 3 Units.
During World War II the German government perpetrated one of the most egregious and extensive art thefts in the history of human kind. The Nazi party’s desire to gain control of Europe involved their prolific confiscation of the great art treasures of European public and private collections, particularly those belonging to European Jews. This seminar will explore the Nazi’s deliberate war looting campaign, its aftermath, and the current issues surrounding the reclamation of stolen works and the restitution claims yet to be settled. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286J. Women’s Education at CWRU: The Flora Stone Mather Oral History Project. 3 Units.
This seminar will offer a discussion-based exploration of the history of women’s education in America. Much of the discussion will focus on the emergence of coordinate colleges, including the College for Women (later renamed Flora Stone Mather College) at Western Reserve University. The seminar will also give students an opportunity to contribute to the historical literature by conducting interviews with Flora Stone Mather alumnae. Students will be instructed in the basic principles and techniques of oral history and engage in the creation of primary source materials—tapes and transcriptions—essential for historical documentation. They will then reflect on the relationship between the stories they have collected and the present-day educational experiences of women at Case Western Reserve University. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 286O. Place, Religion, and Public Life. 3 Units.
What is the place of religion in everyday life? How do people contend with conflicting beliefs about the proper relationship between religion, politics, and personal conduct? How do they decide which kinds of religious behavior belong in public and which belong in private? How do they decide what counts as a “private” or “public” place to begin with? Where does religion belong? In this seminar, students will explore these questions at a range of scales, from the local to the global. They will ask how secular and religious thought interact to shape social life in a range of material and virtual spaces, from Case to Facebook. In so doing, they will learn to approach the religious/secular divide from a broadly ethnographic perspective. Focusing mostly on the United States but also considering case studies from other parts of the globe, students will examine how diverse groups practice their faiths, express their beliefs, and contend with secular institutions and expectations in everyday life. Coursework will include trips to local neighborhoods and institutions, readings from a broad range of fields in the social sciences and humanities, and a fieldwork-based research paper. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286P. Immigrant Entrepreneurs--Can They Drive Cleveland's Economy Once Again?. 3 Units.
This seminar will focus on the impact of immigrant entrepreneurs in Cleveland--past, present and future. The class will take a look back at the historic contributions immigrant entrepreneurs played in creating economic prosperity in Cleveland during the 20th century. While immigrant entrepreneurs once played a central role in driving Cleveland's economic success, in recent years the city has attracted much less foreign talent than other faster growing U.S. metropolitan areas. Cleveland's population is at its lowest level since 1903 and continues to shrink. Chicago, Philadelphia and Louisville, among other cities, have embarked on efforts to attract foreign talent to not only address the "brain drain" of young people leaving their cities but also to spur economic development. In a March 29, 2009 editorial, The Plain Dealer argued for a more proactive approach in Cleveland to attract foreign talent: "If Cleveland is to regain (its) lofty status--especially in a global economy that rewards intelligence, creativity and innovation--it needs to re-establish itself as a magnet for new Americans. We need their fresh ideas, entrepreneurial zeal and optimism. We need them to help reverse decades of migration away from the region's urban core."
The culmination of the seminar will examine the question of whether Cleveland should proactively recruit foreign talent and look closely at the public policy, regulatory and political challenges that must be overcome in order to effectively do so. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286Q. History of Late 20th Century Popular Culture. 3 Units.
This course focuses on American popular culture of the late twentieth century (c. 1970 to 2001). Students will analyze this period using a variety of historical texts and primary sources (everything from more "traditional" sources such as printed materials to films, television episodes and clips, music and sound lyrics, fanzines ["zines"], graphic novels, and music videos). Secondary sources include history essays and monographs, as well as articles by scholars employing critical theory. Students will explore whether "products" of popular culture perpetuate power structures and help to shape the discourse of late twentieth century American culture. Moreover, they will examine how individuals contribute to and challenge the discourses as consumers and creators of pop culture. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286S. Mystics, Inquisitors, and Deviance in the Early Modern Spanish World. 3 Units.
What role does religion play in constructing social norms? Does religion function primarily to enforce social conformity and maintain the status quo, or does it give a voice to protest and dissent from marginalized individuals and groups? Within the Christian tradition, these questions have transcended time and place. This course explores these questions in the context of sixteenth-century Spain. Similar to contemporary American society, sixteenth-century Spain seemed to encourage religious fervor, but did not tolerate religious figures or groups that threatened the status quo. During this time, Spain experienced an explosion of individuals who claimed to have direct experiences of the divine, and authorities invested much time and energy to differentiate between authentic, orthodox mysticism, and fraudulent heresy. In the last 40 years, social theory has allowed historians to unlock the relationship between religion, gender, authority, and social structure. These issues are at the forefront of contemporary approaches to sixteenth-century Spanish mysticism, as the vast majority of individuals claiming mystical experiences were women. Even those who were judged to be orthodox had voiced strong criticisms of Spain's church and government while alive, but after death were celebrated for their obedience. We will examine a variety of media that represent mystical experience in Spain's Golden Age, including: short stories, autobiography and biography, mystical texts, inquisition trials, and works of art. Additionally, we will encounter how the legacy of Golden Age Spanish mysticism has been transmitted to our own time in historical narratives and film. Thus, the goals of this course are twofold. Students will learn to employ a contemporary academic lens and gain understanding of a historical context that is both similar to, and different from, our own. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 286U. Ideal Communities, Utopian Visions, and Totalitarian Nightmares. 3 Units.
This course will study communal attempts to form ideal societies and will offer a transcultural, transhistorical view of how various authors and filmmakers have imagined the best and worst possibilities of human society. Its central questions are: How can society be improved? What role does education play in improving society? How do you define freedom? How can we combine freedom with social order? How can social problems be critiqued through representations of ideal or dysfunctional societies? The course will be interdisciplinary by combining historical study with analysis of literature, film, art, and music. In studying and discussing utopian communities, students will examine the problems that each community attempted to solve, their philosophical approach to solving these problems, the success or failure of their solutions, and the similarities and differences among these communities. In studying utopian and dystopian literature and film, we will analyze the problems and solutions that each text or film examines and proposes, and will look at each text or film in its social and historical context. We will also explore how authors and filmmakers have used their utopian and dystopian visions to respond to the positive or negative trends in their own societies. In addition, we will discuss how each text or film coincides with or challenges our perceptions of the strengths and problems in our society and how we might solve those problems. This course will encourage students to think about the kind of world they would like to help bring about, as well as the various social problems that may darken the future of the human race. Students will write in class regularly about these issues as well as the assigned readings that raise these issues, and will write essays about ideal communities, utopian texts, and dystopian texts. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286V. Management of Chronic Illness in a Cultural Context. 3 Units.
This course will explore the cross cultural, self-care approaches to health problems. It covers substance-based (e.g., herbs, acupuncture), mind-body (e.g., yoga, qigong), spiritual (e.g., prayer) and social (e.g., communal, family) approaches that have been used to manage chronic diseases and promote wellness in various cultural settings. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286X. The Future of News. 3 Units.
The saying goes, "Strong Press, Strong Democracy." But what if strong democracy in the Internet Age when the traditional press seems weak? That's this seminar's big question. Can the "old" media, struggling to avoid financial collapse, still deliver the news necessary to be democracy's watchdog, as in the past? Can the new internet media--blogs, YouTube, viral videos, "hyperlocalism" experiments, pro publica investigations, crowd sourcing, instant news, Facebook, Gawker, True/Slant, Drudge and the proliferation of the other news and entertainment sources--take its place or complement traditional journalism? How do these new entrants change the nature of news and the role of the media in our society? These are uncharted developments, but they go to the heart of the continued success of America's democratic experiment. Our goal is to grasp more clearly the connections between media, news, citizenship and democracy in this new age. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 286Y. The Holocaust and Local History. 3 Units.
The Holocaust and Local History will focus on how the events that make up the Holocaust affected communities in both Eastern Europe, where the most horrific crimes of the Holocaust occurred, and in the United States, where the Jewish community responded to the events with both astonishment and action. A focus on local histories will illustrate the legacy of the Holocaust and help students understand how history directly affects their own lives and the lives of those around them. The goal is to uncover the role that this complex history continues to play in our daily lives, whether in the small towns of Eastern Europe or the suburbs of greater Cleveland. Topics will include the course of the Holocaust in towns in Eastern Europe, the effects of the Holocaust in American communities like Cleveland, and the commemoration of the Holocaust and memory of local Jewish communities in Eastern Europe. Students will examine these topics with the help of primary and secondary sources, hear from local survivors of the Holocaust, and learn more about how the Holocaust is represented in local museums. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287B. Migration in Human History. 3 Units.
The movements of individuals and groups, along with the ideas, technologies, and diseases that accompanied them, have played an integral role in shaping human history. Migration has continually created, challenged and shaped societies from the most ancient periods through to the present. It has a transformative effect on communities at the points of origin, along migration routes, and at temporary and final destinations. This seminar will introduce students to several different ways of thinking about migration throughout history, from the contacts between nomadic and settled societies, to colonial settlement and diasporas and migration from rural towns and villages to industrial cities, as well as the ongoing mobility at the highest and lowest levels of modern society. Indeed, many contemporary conflicts of class and culture can be traced back to migration, in the interactions between those seen as migrants and those who consider themselves natives. This seminar will also encourage students to consider the importance of different forms of migration in their own lives, in the histories of their families, and in the city around them. Cleveland is a city founded by migrants from Connecticut (hence the 'Western Reserve' in the name of the university), populated by both transatlantic and internal American migration, and shaped by the local migrations that affected ethnic neighborhoods, suburbs, and smaller towns throughout the region. Compared to historical migrations of thousands and millions of people, such movements may seem minor, but they can be studied and understood in similar terms. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 287C. Murder in the Jazz Age. 3 Units.

Having lived through the devastation and consequences of World War I, you might think that Americans would have been appalled by the violent murders that marred the 1920s. To be sure, they were. Americans were also drawn to the infamous murders as though understanding these crimes would enable them to explain the changes in society, such as changes to gender rules and urbanization, brought about and accelerated by the war. In this class, we will examine the major crimes of the decade in the hopes of gaining the insight that the people at the time sought. The course readings include secondary sources that provide an analysis of the decade and primary sources from the murder cases themselves. In addition, students will become familiar with the historical context and scientific advancements that gave birth to modern forensics. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287E. Clash of the Titans: Economic, Industrial and Social Trends for the 21st Century. 3 Units.

Since the beginning of recorded human civilization, locally dominant societies have risen, prospered, decayed and finally ended, with new ones taking their place. Starting in the 15th century, however, Europe established global dominance and maintained it for four centuries, from the age of New World exploration through the Industrial Revolution of the 19th century. Then came the rise of the United States, which in the late 20th century became the world’s only superpower, economically, industrially, militarily and, increasingly, culturally. In the late 20th and early 21st centuries, we are witnessing the “flattening” of the world due to the technological revolution, a phenomenon brought about by the instant and worldwide generation of and access to information. Two major consequences of this evolution are: a) Individuals are more empowered than at any time in history and the traditional societal structure is under constant challenge; b) Companies have changed their business structures and practices and have begun to operate on a truly global scale. The main goal of the course is to help students learn the lessons of history and use them to develop an educated argument as to whether the US will continue in its prominent leadership role, or whether one or both of the emerging Asian economic powerhouses, China and India, will supplant it and become dominant. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287J. Education in sub-Saharan Africa. 3 Units.

The level of education in sub-Saharan Africa is much lower than in the United States. In some sub-Saharan countries, less than 20% of the adults are literate, less than 10% have a secondary school education, and less than 1% have a college education. The low level of education keeps the region in poverty—most households in sub-Saharan Africa have no electricity or running water. This seminar will address the barriers that hinder education in sub-Saharan Africa, and explore ways to overcome these barriers. The barriers have a broad range of origins, including economic (not enough money for teacher salaries, books, and school maintenance), societal (education not seen as important, especially for girls), technological (lack of electricity and transportation), institutional (widespread corruption in government), and medical (AIDS, malaria and diseases from unclean water cause student absences and orphan students). Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287O. Utopia and Social Change in American Fiction. 3 Units.

In this course we will read American Utopian fiction alongside selections from other academic disciplines in order to consider the issues, problems, and conflicts for creating meaningful social change. We will consider questions such as: What has it meant/does it mean to imagine a perfect American society? Who is excluded from these visions and on what grounds? How has the radically different social order represented in utopian fiction been used to critique American society’s injustices? In our readings we will think through the ways in which historical perceptions of equality, hope, and political action have been portrayed in imagining ideal communities. We will also examine how academic theories have influenced and reacted to American utopian literature. Our coursework may include essay responses, service learning, and primary research (interviews and surveys), and will culminate in a project in which you will present your vision of a utopian future in a creative form and interpret and explain this “future” through a research paper analyzing the decisions that went into its creation. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287Q. Social Constructs Associated with Marginalization: Making a Difference. 3 Units.

The purpose of this course is to increase the students’ awareness of selected social constructs within the global society (i.e., vulnerability) that have the potential to generate circumstances that place some individuals or groups at risk for marginalization and diminished well-being. The course will be conducted within a seminar format and will provide opportunities for scholarly inquiry and debate regarding the nature of the constructs posited. Students will critique each other’s social constructs with intent to generate innovative strategies to reduce individual and global marginalization. Each student will prepare a formal written report of their findings related to their construct of interest. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287R. The Business of Sports-Content, Television, Social Media, Consumer Products, Advertising & Marketing. 3 Units.

The sports industry is experiencing rapid growth and is expected to become one of the nation’s top 25 industries by 2030. This seminar will explore five elements of the business model that is driving this growth: content, television, social media, advertising, and consumer products. In addition, it will examine the marketing of these five elements. Students will be graded on class participation, essays, and a final paper. They will be asked to read weekly articles on each aspect of the sports industry and to participate in social media sites in order to understand how powerful this platform is to the sports business. In addition, they will work together in groups to create their own sports marketing websites and present these sites for evaluation by the entire class. The results of the evaluation will contribute to their grade for this part of the course. Guest lecturers for the seminar will include nationally recognized experts and representatives of the sports industry, many of whom visit northeast Ohio for sporting events. Students in the course will acquire a unique perspective on a business that is projected to become one of the world’s leading growth industries in the 21st century. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 287T. Gender, Visibility and Performance: The Courtesan. 3 Units.
Throughout history, the figure of the courtesan has embodied seduction, performance, and mystery; occupying the private spaces of the real and the imaginary across cultures. The impact of the courtesan on society can be seen in travelogues, poetry, and historical treatises, as well as in texts written specifically about courtesans themselves. Those cultures which had a courtesan class frequently experienced varying degrees of social discomfort. Within the culture, there was tension between those who patronized courtesans and those who considered them a social menace. From without, cultures which had courtesans were believed to be either excessively decadent or highly civilized, depending on the cultural standpoint of the observer. In this seminar, we will study real courtesans as well as examine the figure of the courtesan within the context of literature, religion, music history, and gender theory. The seminar will begin with an overview of the origins of the courtesan, focused on the roles of women and slave musicians in the court and temple in Egypt, India, Greece, and Mesopotamia starting in 3,000 BCE. Then, we will explore factors leading to the development of a courtesan class and compare the roles of courtesans and their place in their culture in Europe, India, Asia, and the Middle East. Readings and class discussion will encompass issues relating to the impact of gender on performance, literary genres, education, and social and legal status, as well as continuing questions related to translation of primary sources, colonialism, and religious movements. In addition to the readings, we will also study images of the courtesan from antiquity to the present, listen to music by and about courtesans, sample some of their writing, and watch films about "real" courtesans. The primary goal is not only to look at the impact of courtesans in history, but also to engage issues related to gender and performance from a variety of different disciplinary and cultural points of view. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287V. The Public and the Past: History in the Marketplace. 3 Units.
How does one or should one "sell" the past? Our primary encounters with the past are not in the university classroom, but via popular media, museums, theme parks, and historic sites; entities whose survival is increasingly dependent upon market economics. This dependency often demands attention to audience size and the need to avoid controversies that could alienate private and public funders. Complicating this is the issue of heritage—the somewhat mythic pasts which individuals, groups, and nations claim as their right, even when research challenges the underlying myths. What then are the consequences, in terms of ethics and accuracy, or in terms of civic value, when one turns history into a heritage-based commodity? More specifically, how does this affect professional historians? Can they work in history outside of academe without sacrificing integrity and standards? The seminar will debate these critical questions and also take an in-depth look at the growing field (positions, products and potential) of public/applied history. Readings, documentaries, interviews, and on-site visits to public history institutions will provide the basis for our discussions and the written assignments in this seminar as well as serve as an introductory "course" for students interested in a career in public or applied history. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287X. The War.... 3 Units.
Why do people go to war? Why are they willing to give up everything and send their children off to fight? What makes people cheer when war is declared? This class will address these questions by focusing on 1914 and the start of the First World War. It will be a course focused on understanding the politics, motivations, and imaginings surrounding the origins of World War I. The course readings include secondary sources that provide an analysis of 1914 and primary sources that provide the various perspectives of those living through the events. In addition to furthering their writing skills, students will become familiar with library research methods. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 287Z. Concubines, Soldiers and Field Hands: World Slavery from Antiquity to the Present. 3 Units.
For many Americans, the most familiar type of slavery is plantation slavery of the Americas and the horrific consequences to the indigenous peoples and transplanted peoples from Africa. The longevity of the institution of slavery, and acceptance of the practice by many different cultures and belief systems, however, reaches from antiquity to the present day. In addition to providing physical labor and domestic services, slaves have been used as entertainers, civil servants, led armies and served in temples. Slavery is a complex legal, religious, moral and social institution, and the relationship between slave, state and owner/slaver is equally complicated; so much so that understanding the bond between them, and what the actual boundary was between “free” and “un-free”, is still difficult to determine in some cultures. In this seminar, we will use a chronological framework to examine the institution of slavery, uses for slaves, methodologies and sources for studying slavery and the slave trade in world history. Beginning with slavery in the Ancient Near East, Egypt, Greece and Rome, the class will include slavery and the feudal system in medieval Europe, indentured servitude and concubinage, slaves in the early Islamic courts, the Ottoman slave trade, the African slave trade and slavery in the Americas, and the current problem of human trafficking. Within each section, students will read primary texts and recent scholarship examining the social, economic and religious rationales behind slavery. We will also study different methodologies and the impact of gender, race and social class on the study of world slavery. As many slave cultures had different definitions for what it meant to be a slave, we will address questions related to translation, interpretation and perception when dealing with primary sources. The primary goal of the course is to provide a broader context for the institution of slavery in world history as a means not only to understand the impact of slavery has had on American culture, but on other cultures as well. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 288B. Doing Good: How Nonprofits Change Lives. 3 Units.
The American economy is made up of three sectors: government, business, and nonprofit. It's pretty obvious what government and business do, but the activity of nonprofits, while it is everywhere, is much more subtle. A nonprofit is most likely where you were born, went to school, attend church, or adopted your family dog. If you became an Eagle Scout, watched "Sesame Street," attended a benefit concert, or participated in a walk for a cause, you were engaged with a nonprofit. Perhaps you haven't given much thought to the way the organization was structured, where it gets its money, or what kind of an impact it's really having. In this seminar, students will learn what nonprofits are, how they operate, how they influence everyday lives, and their role in advancing social change and a civil society. We will consider the economic impact of nonprofits as well as their role in protecting culture, environment, values, and heritage. We will also look at the key challenges facing nonprofits today and how they are addressing them. Writing assignments will include a grant proposal for a new or existing nonprofit. The seminar will feature guest speakers and class visits to nonprofits in the Cleveland area. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 288C. Green Transformation and Globalization. 3 Units.
This seminar introduces students to the recent major green transformation in China and elsewhere in the world, focusing on the way the green changes took place in relation to globalization, environment and climate protection, technology innovation, income redistribution, domestic consumption, and education, to meet the challenges of financial crisis, climate change, energy insecurity, and international competition. The seminar will also assess the impacts of various aspects of green transformation and globalization on today's and future world and vice versa. This seminar promotes broad knowledge of-and increased appreciation of the importance of diversity in China's cultural past, social frameworks, economic conditions, and natural environment. In a close connection to the primary readings, which include several recent relevant works, the students will be exposed to a variety of related primary and secondary materials (such as texts, photos, film clips, music, songs, and websites). In addition to receiving informative yet concise instruction, the student will also be involved in practice in critical reading and thinking, in writing and orally presenting research papers. In these activities, the students will be introduced to basic methods and concepts critical to the understanding of important economic, social, and cultural developments and changes as products of movements rather than isolated incidents. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 288D. Why we ride: Motorcycles in America. 3 Units.
The purpose of this course is to explore motorcycle culture as an outcome, microcosm, and sometimes foil for broader American culture from the end of World War II to the present. We will examine historical accounts and current media to understand the variety of perspectives on this elastic and evolving subculture. Many within the motorcycle press and industry believe that motorcycling is in the midst of a major cultural shift, which may reflect changes in generational values as well as economic realities, and which makes this a uniquely fascinating time to study this significant American subculture. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 288J. Museums and Community. 3 Units.
This course will use Cleveland-area museums as a laboratory to think critically about the role of museums within society. It will combine literature review, museum visits, and discussions led by museum professionals. The goal is that students consider what role, if any, they believe museums should play in society in general, and in their local community in particular. Since experiential learning is key to understanding museums, museum visits will be foundational elements of the course. Students will first explore a local museum with the instructor and collaborate on a case study. They will then work individually on case studies of two local institutions that they have not previously visited. Finally, drawing on the readings and class discussions, each student will expand one of the case studies into a plan to make that institution fall more in line with their personal vision of museums in society. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 288T. Coffee and Civilization. 3 Units.
Whether you enjoy an occasional cup or sip throughout the day from a bottomless mug, did you know that since its introduction in the Western world coffee has been intimately tied to sociability and intellectual life? In this seminar, we will explore coffee's civilizing history, from eighteenth-century coffee houses buzzing with political dissent, to 1920s establishments crowded with avant-garde artists and our modern bookstore cafés. We will also explore the human and ecological costs of our taste for coffee by investigating the enduring connections between coffee, slavery, North-South geo-political relations, and notions of fair trade. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 288Y. The Secret History of Corporate America. 3 Units.
The corporation is the most powerful economic institution of our time. How did it come to reign, and how does its power affect us economically, politically, and socially? This course will chart the history and impact of corporate capitalism. Topics will include the corporation's impact on democracy, consumer culture, the environment, and even the university itself. If you have ever wondered why products are purposely designed to wear out (planned obsolescence), why unions are so powerless in America, why the military is as powerful as it is, why it takes special technology from the Diebold corporation to run a simple election, why broadcasting companies are allowed to profit by using the public airwaves for free, why it looks like there are a million publishers of books when in truth giant companies dominate 80 percent of the book market, why the perfect lawn is a marketing ploy to get consumers to buy a lot of chemical inputs, why universities, which are supposed to be bastions of independent thought, are now dominated by an army of administrators who run around talking about return on investment instead of figuring out how to create a culture where students can learn, then this is the course for you. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 289C. Ethics For The Real World: Developing a Code of Ethics to Guide Decisions in Work and Life. 3 Units.
This seminar addresses two major questions: How do the contexts in which we live or work affect ethical behavior? And how can we manage to struggle through personal and organizational challenges if we find they present us with something ethically compromising? In this course, we look to religion, spiritual teaching and cultural upbringing to understand sources of personal values and standards of behavior that might help structure one's life in the midst of difficult contexts. One way we consider this is through practical exercises including development of your own personal code of ethics, an iterative process designed to help you articulate the principles of your own moral construction. These can serve as a foundation for leadership integrity and moral courage for ethical decisions throughout life and work. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 289K. Struggles for Justice in Complex Globalizing Environments: Cleveland and Madagascar. 3 Units.
Increasing complexity is a hallmark of contemporary human life. In environments across the globe, elaborate and varied material conditions are linked to fast-paced, globalizing changes in economic, social and cultural arrangements. This course is concerned with struggles for justice in such spaces and places of globalization. How are people now formulating their interests, having them heard and getting them satisfied? What are the shapes assumed by contemporary struggles for justice? We will approach such questions of "the social" by first considering theories and models of complexity and globalization. Students will consider how material, economic and socio-cultural forms are integrated, how these arrangements are tied to global processes, how they change, and how political processes fit in. These theoretical concerns will then be fleshed out through extended case studies of social life in the rainforests of southeastern Madagascar and the urban neighborhoods of Cleveland, Ohio. In Madagascar, we will look at the attempts by indigenous Tanala (People of the Forest) to keep their land and hold on to their way of life in the face of international conservation groups managing a national park. In Cleveland, the focus will be on poor African-American communities living on the city's east side who try to gain a voice in city planning issues. The instructor has carried-out long term field and historical research in both locations, and insights and and examples culled from his work will be employed throughout the term. The course will also take an interdisciplinary approach, employing theories and methods from the fields of anthropology, sociology, geography, ecology, and urban studies. Readings, extended class discussion, focused writing projects and research presentations will help prepare students for a required research paper on a specific society living with issues of complexity. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 289Q. The Nazis Next Door: Everyday Germans and National Socialism 1919-1990. 3 Units.
From the beginning of the National Socialist Party in 1919 until German Unification in 1990, everyday Germans had to deal with the reality that, regardless of their own political beliefs, many neighbors and even relatives embraced the doctrines of National Socialism. This seminar explores this complex reality from the rise of National Socialism, through the crimes of the Third Reich, and the stumbling and mixed efforts of the postwar Germanies to cope with the presence of Nazis in German society. Ranging from the defeated and divided society of the Weimar Republic, through the Nazi triumph, crimes, and defeat, to the recivilization of Germans after the war, we will examine how Germans dealt with the fact that to some degree, there were always Nazis next door. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSO 289Z. China and the World: 19th and 20th Century Encounters. 3 Units.
Although frequently characterized as a country with a past that was marked by insularity and disdain for all things foreign, until the West "opened [it] up," China's engagement with the world has been long and deep. China--Chinese emperors, Chinese governments, and Chinese people across the social spectrum--have energetically engaged with the broader world, permitting, encouraging, and seeking the circulation of foreign ideas and goods. This course is about how China has taken measure of the world and the goods and ideas that have flowed into and out of China during the past several centuries, from roughly the sixteenth through the twentieth centuries. Students will examine one topic in depth as an historical case study during the semester-long course. Possible topics from which the case study will be drawn include the Opium Wars, meanings of revolution, gender and sexuality, religion and political ideology, the environment, nationalism, history of science and technology, etc. Focus on a single thematic topic serves as a microcosm of social, political, and economic exchanges that highlight the complex ways in which understandings of China and the world have shifted over time. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSO 290M. The Effects of Race, Class and Education: A Dialogue on Current Issues. 3 Units.
Recent decades have seen a growing income and opportunity disparity in America. In our seminar, we will examine a variety of overlapping issues related to this crisis, with special attention to the impact of race, class and educational levels in determining how people fare in society. The larger set of issues includes poverty, income inequality, job loss and its effect on the industrial city, the concept of a "living wage," affordable housing, education, and sentencing and incarceration. Readings, class discussions, and student papers will all explore these topics. In urban communities such as Cleveland and Northeast Ohio, the income and opportunity divide is especially visible and persistent. Recognizing this, we have incorporated a novel approach to experiential learning in our seminar. Case Western Reserve students will interact with a similarly sized group of students incarcerated at Lorain Correctional Institution, a state prison located in nearby Grafton, Ohio. The two groups will conduct workshops together and will hold joint discussions via teleconference throughout the semester. The incarcerated students will be studying the same material on the same schedule and will be sharing their views with students in the seminar. We believe there are several benefits to this dialogue. We have two Northeast Ohio institutions - our university and the prison - which are neighbors but whose residents are largely from opposite sides of the divide. It will be useful to consider the income and opportunity divide from both perspectives and to share ideas and experiences related to the overall problem of inequality. A bilateral discussion and interaction will not only enhance the students' educational experience, but also, we hope, will foster greater understanding. Procedures will be in place to ensure strict confidentiality and anonymity in any and all exchanges of views between CWRU students and students at the prison. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY Courses

USSY 204. System Thinking. 3 Units.
This is a seminar course in which students critically examine the way that language is used to model and analyze the social world and its organizations. System thinking is used by business leaders, economists, policy analysts and planners to represent the socio-economic world so that they can manage it. During the seminar, students will read and discuss key works that lay the foundations of system thinking and will apply system thinking techniques to a socio-economic situation of interest to them. The emphasis will be on questioning the premises of system thinking, surfaced its strengths and weaknesses, and grappling with its ethical implications. Some key ideas related to system thinking that will be explored include: information theory, cybernetics, system modeling, language, meta language, modeling and intervention in social systems. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 209. Art and Math. 3 Units.
Students in this University Seminar will explore relationships between art and mathematics. Topics include: pattern, symmetry and beauty in natural forms; symmetry and proportion in art, architecture, ornament and design; perspective and optics; number, iteration, and infinity; mathematical and computer techniques and themes in art, architecture and design. Note: This class is limited to students participating in SAGES. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 211. Beethoven and the Age of Revolution. 3 Units.
Beethoven's music is symbolic of the age and spirit of change which reached its zenith with the French Revolution. Fueled by political, social, and emotional reactions, his oeuvre was remarkable in every way. From the early works, imitative of Haydn and Mozart, through his truly unique later compositions, Beethoven was revolutionary in his person and in his music. The course will center around specific Beethoven masterworks which are being presented by University Circle Institutions, and student attendance at these concerts will be required. Class sessions will involve discussions concerning the historical and cultural setting, influences, and analytic investigation into these masterworks. Readings will be taken from Joseph Kaman and Alan Tyson (The New Grove Beethoven), Frida Knight (Beethoven and the Age of Revolution), and George Marek (Beethoven: Biography of a Genius). This course is directed towards the general university student, and no specialized knowledge of music is necessary, although certain rudimentary aspects of musical discourse will be covered. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 226. Probability in Modern Thought. 3 Units.
The idea of probability is ubiquitous in the modern world, appearing in everything from quantum physics to business decision theory, from DNA evidence in court to the insurance industry. Yet there is controversy about the very meaning of probability itself, and any person who encounters probability—which is everyone—should be familiar with that controversy. This seminar examines what we mean by probability ascriptions. Although there will be some computational work, especially early in the semester, the seminar is not primarily a course on the mathematics of probability. Most of our focus is philosophical, sociological, and psychological, attempting to answer questions like these: In what different ways do we use the concept of probability? To what domains of knowledge can it be rightly applied? Do all legitimate conceptions of probability obey the standard mathematical axioms? How good are people at estimating probabilities? Do all the coherent uses of probability have a common conceptual core? These and other questions will be explored through class discussions and experiments, two papers, and group presentations on a variety of topics. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 227. Travel Writing on Screen. 3 Units.
Through the image of the traveler in a wide range of films, we will examine such issues as border crossing, culture shock, and the nature of memory. Topics include: The Grand Tour, pilgrimage, exile, and imaginary journeys. A group presentation, 5 short-reaction papers, and a take-home final essay are required. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 228. Women in Outer Space. 3 Units.
We will study the history of women astronauts and the representation of women as aliens and astronauts in popular culture. We will see films such as Alien, Apollo 13, and Contact, and will also read two novels. Film and women's studies theory and criticism will be used to examine the texts. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 229. Art Mirrors Art. 3 Units.
At the beginning of the Renaissance, about the year 1400, an important new theme arose in painting, sculpture and printmaking—the theme of art about art. At a time when the status of artists in society was rising, new subjects began to appear in western European art that depicted both the artist and the process of making art. Self portraits of artists, depictions of Saint Luke painting the Virgin Mary, images of women as artists and muses, classical and mythological stories of art making (Pygmalion and Galatea, Apelles painting the mistress of Alexander the Great), depictions of painting and sculpture studios and of art academies and instruction, scenes of art galleries and collections, still lifes about art, all reflected this new cultural interest in art as a topic in itself. This seminar will look at individual works of art and subject types to understand what they tell us about the role of the arts and the changing status of the artist in the Renaissance and early modern period, up to the eve of the French Revolution, about 1789. The works we study will thus be understood as symbolic indicators of social status and ideas about what art meant to European society. Prereq: Passing letter grade in a first year seminar in FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 230. Sexualities, Citizenship, and Social Action. 3 Units.
This course will explore themes in both the symbolic and cultural domains. While sexuality and citizenship, in reality and in academic discourse, cuts across the areas, this course will consider methods and concepts (see syllabus for details) in the human sciences and humanities. In the humanities, students will learn fundamental ideas in the philosophy of social science. They will be taught how to recognize, in social theory(s) and theorizing, underlying arguments: ontological, epistemological, and methodological. It is not our purpose to add these ideas to our conceptual language within a discipline or to a specific topic; we will explore how they can be applied to other areas of learning and practice. They will then be applied to a current and highly controversial aspect of academic and political practice: to explore the relationship between sexuality and citizenship. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 233. Constructing the Self. 3 Units.
The purpose of this seminar is to explore how individuals construct and present the self. The class will explore what we know of the self from historical, sociological, psychological, and philosophical perspectives. We will examine how the meaning of the self has changed over time. We will also explore where the self comes from, and the role of parents, peers and society in making a person who they are. Finally, we will explore how the self is defined for others, whether through an online presence, fashion choices, or the names that people prefer for themselves. Specific topics will include Freud's view of the self as unavailable to consciousness, the importance and fallacy of high self-esteem, individualist and collective societies, and the ethics of self-presentation. Students should expect to develop their critical thinking as well as writing and oral presentation skills through this class. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 237. The Transformation of the American South. 3 Units.
The purpose of the course is to increase the student's understanding of the remarkable transformation of the American South from an isolated regional backwater committed to racial segregation to a vibrant, complex, rapidly growing, diverse biracial society that has rejoined the national mainstream. In fact, a quick look at where our national political leaders have come from recently—President Bill Clinton of Arkansas and President George W. Bush of Texas, to name the two most prominent examples—indicates how central the South has become to the nation. We will explore all aspects of the transformation of Dixie during our course. Central to the story will be political change, although, of course, politics cannot be easily isolated from social and economic life. Thus, it was a grassroots social development—the Civil Rights Movement—that gave important impetus to the key political changes that occurred in the mid-1960s and beyond, as we shall see. Prereq: Passing letter grade in a first year seminar in FSSC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 241. The Birth of the Modern: 1905-1925. 3 Units.
"The Birth of the Modern: 1905-1925" will attempt to answer the question "What is the modern?" by exploring some of the breakthrough works of literature, music, art, and scientific theory in the first decades of the twentieth century. We will study what characterizes the new modes of thinking or "language" of modernity, developed in experimental work across the arts, the sciences, and the social sciences. We will be examining some of the major manifestos of and statements about the nature of Modernism in order to see how they illuminate, for example, a novel by James Joyce or a painting by Picasso, a composition by Stravinsky, a scientific theory of Einstein's, or a psychological theory of Freud's. At the conclusion of the seminar, students will present their findings and write a research paper about "the modern" as it relates to a field of particular interest to them. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 246. How to Make a Leader. 3 Units.
Leaders are both born and made. Some seem to naturally know what to do and some need to study and practice to gain the necessary skills. Both groups can be successful and it usually requires a combination of natural ability and effort to become the very best. Leaders often point to role models as being important to the development of "natural" or acquired ability. This course is appropriate for both those who are intellectually curious about leadership. The course will be divided into three sections. The first part will involve reading and discussions to explore and identify what leaders are like and what they do. During the second part you will observe leaders in action and talk to them about what they think makes them successful. Some examples of what you may observe will include a surgeon in the operating room (theater), a coach with his/her players, an executive in the board room, a concertmaster with his/her musicians and a judge in a courtroom. The third part of the course will involve readings and discussions during which you will develop a personal approach to the level of leadership to which you aspire. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 249. Paris: From Revolution to Globalization. 3 Units.
This course explores the history of Paris as it became the center of French national life, international culture and politics in the 19th century and a global city in the late 20th. The course acquaints students with the history of Paris as a dynamic environment deeply influenced by industrializing forces during this period. We will study contemporary writings, art and popular culture economic developments, political and military events, and architectural and engineering projects that have profoundly shaped the city and popular responses to it. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 250. Medical Narratives. 3 Units.
This course examines the relationship between medicine and narrative by exploring the representational structures and narrative conventions that have been used to understand and communicate the experience of illness, to tell stories about the human body, and to diagnose and treat disease. The course focuses on literary texts (including novels, plays, short stories and memoirs) written by doctors, patients, nurses and creative writers, as well as on medical case histories from different cultures and historical periods. It examines such topics as the uses of narrative in medical practice; the uses of metaphor in conceptualizing and representing disease; the ethical dilemmas posed by medical research and practice; the therapeutic value of narrative; the structural similarities (and historical links) between detective fiction and medical case histories; the imaginative function of illness in literature; the cultural myths and iconography of disease in different historical periods; the representation of physical and mental illness and the human body in language and art, and cultural responses to major health crises such as bubonic plague, syphilis, and AIDS. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 267. Medieval Love Songs: Poetry, Music, Spirituality. 3 Units.
In the high and late Middle Ages (c1100-c1450), love songs accounted for much of the poetry and music composed at the secular courts and urban centers of Europe. At the same time, spiritual love songs were an important element of medieval Christian theology and worship. What may surprise a modern audience is that the worldly love songs were often intensely spiritual, while the religious ones were often highly sensual and erotic. This seminar investigates the convergence of worldly and spiritual elements in the poetry and music of medieval love songs. Students will learn basic tools for analyzing medieval poetry and music, and through such analysis, coupled with discussion of readings from the scholarly literature, they will explore the provocative interactions between literal and allegorical, sacred and profane, and ascetic and erotic elements in medieval culture. Primary texts will be drawn from Bernard of Clairvaux’s commentaries on the Song of Songs, the courtly lyrics and melodies of the troubadours and trouvères, and the lyric poetry of Dante, Petrarch, and Boccaccio. No prior musical training required. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 273. Intellectual Property: Pirates and Privateers. 3 Units.
We take it for granted that our cars and camels are our “property” but what about intangible objects like poems or songs on CDs? In this seminar we will examine the development of this relatively recent form of property through the lens of piracy. We will begin with piracy on the high seas. Through analysis of historical, literary, and cinematic representations of piratical activity in the early modern era we will develop a critical methodology to aid us when we turn our attention to the newer “intellectual” property. Intellectual property is rapidly becoming the linchpin of the burgeoning global “information economy,” and the U.S. is among its staunchest and most powerful enforcers. Yet only a century ago the U.S. was itself a pirate nation. After examining this piratical moment in the history of intellectual property we will turn for comparison to a selection of present-day transgressions—from peer-to-peer file sharing, to Asian software and CD/DVD bootlegging, and South American patent busting. Our aim will be to develop an informed position in the current public debate about the legitimacy and limits of private ownership of ideas in our globalizing information economy. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 275. Colors, Capes, and Characters: American Comics Symbolism. 3 Units.
The history of the comic book is a vital site for critical questions about intersections of art and popular culture in America. In this course we will not simply read “funny books,” but will examine a genre that is as unique as its many colorful protagonists: from Popeye to Superman, Wonder Woman to the X-men, comics have given us larger-than-life characters who are often caricatures of dominant (and sometimes subversive) American ideologies. We will learn not only the history of this unique genre, but will interrogate what it means to truly read comics artistically, politically, culturally, and symbolically. At heart, reading comics in an exercise in interpretation: given visual symbols, what meanings can we take from them? What can comics tell us? And how can we write about them in intelligent, critical ways? In this course we will learn to approach comics through critical thinking strategies; that is, questioning what they are, what they say, and where they come from. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 279. Navigating Contemporary Art. 3 Units.
Art has always had a shifting, complicated relationship to the general public. In today's world, contemporary art is sometimes regarded as a detached, self-reflexive, and elite mystery reserved for in-the-know connoisseurs and aspiring scene-makers. Yet there are many points of entry for meaningful dialogue about the art, the artists, and the audience that comprise the world of contemporary art. This seminar will explore the critical and cultural contexts that can help foster this conversation. It will include visits to local museums, galleries, and artists' studios, and culminate in a tour of the Progressive Art Collection. The goal of the seminar is to inspire a genuine interest in contemporary art and provide students with the tools required to think, speak, and write more clearly about it. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 280. Passport to Eastern Europe. 3 Units.
Images and texts shape rather than merely reflect the world and its geopolitical structures. Novels, films, and myths make significant contributions to the varied ways that people make sense of continents, nations, and other (often too conveniently used) geopolitical categories such as the East and West. After considering the ways in which the European continent has been imagined over the centuries, we will explore texts and films that have contributed to the invention of East Central Europe and the Balkans and continue to shape our understanding of the eastern parts of Europe. The class will include analyses of current news coverage of this area to unpack representations disseminated by the media and to reflect on the forces that aim to shape our understanding of geopolitical entities. Ultimately, the course hopes to address geopolitical assumptions, evaluate cultural contexts, and help you think critically about the constructed nature of geopolitical categories. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 281. Defining the Animal. 3 Units.
Since the Darwinian revolution of the mid-nineteenth century, the relationship between humans and animals has become an increasingly significant area of inquiry in fields as diverse as literature, the fine arts, anthropology, evolutionary theory, the biological sciences and philosophy. In this course, we will explore the way humans have sought to understand and explain the animal, beginning with several contemporary ethical debates surrounding animal treatment. Such works will lead us to a range of related social and institutional places and practices, such as the zoo, the insane asylum, biometrics, the treatment of women, and the concentration camp. At the same time, we will examine the way artists, writers and filmmakers explore the human/animal divide through painting (Franz Marc, Marc Chagall and Max Ernst), literature (Franz Kafka, D. H. Lawrence and Rainer Marie Rilke), and cinema, through representations of a donkey (Bresson, Au hasard Balthazar), a fly (Cronenberg, The Fly), a Great White shark (Spielberg, Jaws) and a grizzly bear (Herzog, The Grizzly Man). We will end with Balthazar), a fly (Cronenberg, The Fly), a Great White shark (Spielberg, Jaws) and a grizzly bear (Herzog, The Grizzly Man). We will end with J.M. Coetzee's The Lives of Animals, which moves seamlessly between cinema, through representations of a donkey (Bresson, Au hasard Balthazar), a fly (Cronenberg, The Fly), a Great White shark (Spielberg, Jaws) and a grizzly bear (Herzog, The Grizzly Man). We will end with J.M. Coetzee's The Lives of Animals, which moves seamlessly between moral philosophy and literature, tying together a wide variety of concerns and themes raised throughout the semester. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq; FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 284. The Art of Madness. 3 Units.
Taking a historical approach, this course will examine the relationship between the evolution of social and medical attitudes toward mental illness and fictional representations of madness in literature. Beginning with the early modern period, students will compare period sociological and medical narratives on mental illness to fiction works with representations of madness. In so doing, students will consider how the interactive dynamics of art and science contribute to cultural and social thought. Specific areas of inquiry will include: the development of psychology and its effect on societal perceptions of mental illness; cultural developments that occurred in response to changing perceptions of mental illness over the centuries; and the use of representational structures and narrative conventions in understanding and communicating the experience of mental illness. Other interrogrations will include the imaginative function of mental illness in literature (e.g., melancholy's role in creativity); the cultural myths in iconography of mental illness in different historical periods; and ethical dilemmas regarding mental illness as reflected in both medical and literary narratives. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285D. The World of African Literature. 3 Units.
In this seminar, we will look at how a diverse number of African writers have responded, in both form and content, to three periods in Africa's literary history: the 1960s, or the decolonization period, which produced nationalist literature; the 1970s and 1980s, or the neocolonial period, which produced revolutionary novels; and the 1990s through the present, a period producing literature that contends with globalization. In an attempt to answer the riddle of what makes an African novel African, we shall grapple with fundamental questions concerning the origin of the novel; how it came to Africa; African literary traditions; and the language of the African novel. We will also use African literature to explore universal questions about politics and literature: What is a protest novel? What is the role of the writer and of art in society? The goal of the seminar is to increase your appreciation of African literature and literature in general, and at the same time sharpen your analytical, critical, oral and written skills. You will be expected to lead discussions, engage in peer critiques and, through scholarly essays, engage African literature. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq; FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 285I. Representing the Immigrant. 3 Units.
For many the world over AMERICA is a dream, a powerful myth, whether imagined through TV and movies, metaphors such as The Gold Mountain, or as symbolized by the Statue of Liberty. Following those visions may lead to success or disenchantment or both. Through fiction, memoir, films, and photographs we will explore the experience of immigrants: the tensions, generational conflicts, and difficulties with communication and culture their families undergo. We will examine expressions of those varied and complex experiences, especially how language represents them. We will also look at the significance of language itself—think about what and how words mean, and the difficulties of linguistic and cultural translation. Students will share their reactions to what we read and see in class discussion and also in writing informally, even (if they wish) personally. Formal requirements: two shorter analytical papers and a longer paper using sources and possibly interviews, also to be presented in oral reports. There will be conferences on papers and revision. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285N. The American Dream: Real and Imagined. 3 Units.
What is meant when we or our leaders talk about "the American dream"? Is it a political cliché, a myth, or something fundamental to our national ethos? In this seminar students will explore what is meant by "the American dream." We will pose the questions: how it has been defined by artists, writers, political leaders, immigrants and the native-born; how it has changed over time; and to what extent the dream is real and/or imagined? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285Q. The Documentary Impulse. 3 Units.
The course is structured around a historical overview of documentary film from 1920 to the present. We begin with Robert Flaherty's Nanook of the North (1922) and focus on a different documentary style each week, from the city symphony films of the late 20s and early 30s (Jean Vigo, On the Subject of Nice, 1930) to avant-garde experiment (Dziga Vertov, The Man with a Movie Camera, 1929), to cinema verite (Rouch and Marin, Confessions of a Summer, 1955) and its effects on the French New Wave (Jean-Luc Godard, Breathless, 1959). Other style will include direct Cinema (Drew and Pennebaker, Primary, 1960), the improvisational style of John Cassavetes, the use of time-lapse photography (Reggio, Koyaanisqatsi, 1982), and, finally the documentary (Bob Roberts, 1992). The course will emphasize the importance of ideology, bias, and efforts to capture the "real" through the work of Leni Riefenstahl (Triumph of the Will, 1935), and 1970's examples of Third Cinema in Cuba, Brazil, and Argentina. Each student in The Documentary Impulse will be required to create on five-minute video using a particular documentary mode examined in class, paying attention to ideology, narrative structure, transitions, sounds, and video editing techniques. The final project will use either found stills, or newly shot filmed images, and will include a sound track either from the Freedman Center's archives, or of the student's own creation. Equal time will be devoted to written assignment that analyze the documentary style of particular films. The first half of the course will include a weekly film screening in KSL; after midterms, the location will alternate with the Freedman Center, where students will spend time creating and editing video projects. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285R. Crime and Punishment in German Literature. 3 Units.
How societies define and punish crime is related to a web of interconnected considerations including the form of government, the legal code, social mores, evolving conceptions of justice, the purpose of punishment, and attitudes toward individual criminals and criminality in general. These social, historical, and ethical norms give rise to questions such as: What constitutes a crime? How is the violation of the law different from or similar to transgressions of morality or ethical norms? What is the purpose of punishment and why is this important? To what extent are we interested in the circumstances that lead to crime? In what ways is punishment an insufficient answer to crime? This course will explore the social and historical questions raised by the perpetrators and victims of crime as well as attending punishment in the literary works of Friedrich Schiller, Heinrich von Kleist, Annette von Droste-Hulshoff, Franz Kafka, Bertolt Brecht, Primo Levi, Hannah Arendt, and Bernhard Schlink. Focusing on short stories, detective fiction, novels, drama, and personal essay, we will pay particular attention to the way that criminal transgression is defined, the role of society and history in producing criminals, when and why punishment is justified or necessary, and the degree to which these resolutions are "just." Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285T. Art, Music and Culture. 3 Units.
This course uses the intersections of art and music as a way to understand how the arts reflect, interact with, and influence the cultures in which they develop. After an introduction to research and writing in the arts (week 1), the course continues with a survey of certain historical periods and masterpieces of European and American art and music from 1700 to the present (weeks 2-6). It then takes up a few important themes in the interaction of music and the visual: 1) the concert hall as the intersection of architecture and acoustics (week 7); 2) the art museum and its music (week 8); 3) music and film (week 9); 4) the Broadway musical (week 10), and 5) rock music and its artifacts (week 11). A full week (12) of instruction on writing and oral presentation then prepares students for a seminar paper and seminar report, the creation and refining of which constitutes the final phase (weeks 12-15) of the course. Requirements and activities include, in addition to the seminar paper and report, a series of activities including three optional and three required events centered on the Cleveland Museum of Art and its concerts, the Cleveland Orchestra at Severance Hall, and the Rock and Roll Hall of Fame Museum. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285U. Popular Music and Film. 3 Units.
This course takes an interdisciplinary approach to studying music in American film. Students will learn to analyze film and music with greater sophistication, to contextualize them in time and place, and to interpret their meanings. The films predominantly feature jazz and popular music. We will discuss several aspects of a film: filmmaking techniques, visual composition, the film's available interpretations, audience reception, and so on. We will also discuss musical composition and performance, artists' self-representation, the link between music and commerce, and so on. Course sources include films and critical literature. The primary focus of the class will be on the ways music and film intersect as entertainment and art. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 285V. Castaways and Cannibals: Stories of Empire. 3 Units.
Through a study of texts that exploit "new world" images like the castaway, the cannibal, the wild man, and the exotic woman, this course explores the ideologies that propelled nineteenth-century imperialism, particularly regarding the British in Australia and South Africa. The class will consider how British settlers made "homes" in hostile and unfamiliar climates, how they addressed the problem of unfriendly and unequal contact with indigenous peoples, and how contemporary novelists reevaluate the historical past. The course will work under the premise that contemporary geopolitical realities have been shaped by the imaginative work of British colonialists who, under the principle of terra nullius or "no man's land," claimed the land and the resources of these southern territories and dismissed the very existence of the indigenous peoples that populated them. The scope of the course will be broadly historical, exploring works that participated in British imperialism, as well as those that take a modern perspective. Course materials will be drawn from a variety of genres, including fiction, poetry, film, ethnography, natural history, history, and criticism. Ultimately, students will consider how narratives participate in the shaping of reality and of real-world relations of power. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285X. Living in the Digital Age. 3 Units.
Digital technologies have changed the world we live in. This brave new world is populated by new-media, video, games, and social networks. To survive this world we need a vocabulary of criticism and authorship, a "New Media Literacy" that we can use to effectively and efficiently embrace our roles as both artist and critic. This course explores a wide variety of New Media themes in both contemporary and historical contexts. Students in the course will analyze the ever-evolving relationship to New Media as both viewers and creators. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285Y. Musical Acts: The Performer in Western Culture. 3 Units.
Much of music history emphasizes the text/composition and its author/composer. Yet music is unique among the arts in that a musician must bring the work to life; arguably, a piece of music can only be said to exist in real time, in performance. This course will examine musical performance as it has evolved over the centuries and consider how thinking about performance and performers continues to change. Although an understanding of the rudiments of music will be helpful, students will not need advanced training in music for this course to be of interest. Readings will include historical accounts and reviews as well as articles about performance and musical aesthetics. Further sources will be recorded audio, video and live performances, as well as interactions with performers (and teachers of performers) from the Cleveland Institute of Music and the university's departments of music, theater and dance. The interests and needs of the students will help set the tempo and line of our class discussions. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 285Z. The Ubiquitous Frankenstein. 3 Units.
This seminar will explore the birth, evolution, devolution, and undead nature of the Frankenstein myth in popular culture. Using Mary Shelley's novel, her source texts, 19th- and 20th-century critical accounts, and 19th- and 20th-century popular cultural manifestations, the seminar participants will discover how "Frankenstein" found its way into the Western mind and continues to provoke responses both in those familiar and in those completely unfamiliar with the novel. The course will touch on issues of literary influence, science/technology, religion, ethics, education, literary merit, popular culture relevance, and adaptation as art form. Central questions for the seminar include: (1) Does the Frankenstein myth as we perceive it today have anything to do with Mary Shelley's original novel? (2) What were the moral and ethical implications of Shelley's novel for her time and for the generations afterward? (3) Is an "accurate" film adaptation of a literary work possible or needed? (4) Is being ubiquitous a blessing or a blight for a literary work? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 286C. How Photos Shape What We See. 3 Units.
Because of both its special ability to convince and its ubiquity, photography has had a major impact on the way we view the world, and particularly in our view of "the other." Just like other major forms of discourse, photography should be approached with a thoughtful and critical attitude. Some of the techniques of critical looking are different from the techniques of critical reading, but the fundamental tasks are very similar. The aim of this seminar is to help students develop an awareness of why and how photographs are such effective media of communication, and to help them develop an ability to read photographs critically. This is, of course, set within a general context of developing critical reading and writing skills. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 286J. Creativity and Constraint. 3 Units.
The purpose of this course is to explore creative problem-solving as it relates to different disciplines and types of problems and to encourage a passion for finding best solutions, not merely obvious ones. We will use and evaluate case studies of real-world projects and complex decisions, readings about creativity, firsthand accounts from creative professionals, and in-class exercises to hone strategic thinking skills. The seminar is specifically concerned with how constraints--ranging from budgets and schedules to the laws of physics--can encourage, rather than inhibit, creative solutions. But we will also consider general questions about the process and psychology of problem-solving. Areas of investigation will include steps in establishing problem scope and defining and recognizing successful solutions; the dynamics of group versus individual problem-solving; and strategies for communicating complex ideas to teammates and leading the creative process. Students will be expected to participate actively in shaping class discussions and activities. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 286S. Shakesploitation of an Icon: Four Hundred Years of Shakespeare Marketing. 3 Units.
Following the interregnum in England, William Shakespeare began a long, sustained trajectory as a cultural icon, first in England, but eventually among all English-speaking cultures. In the process, Shakespeare's works have been reinterpreted, adapted, re-contexted, commoditized, and re-purposed for the sake of art, educational relevance, and entertainment. In the process, Shakespeare has often become the tool of unabashed commercialism, a practice which has come to be known as "Shakesploitation." But why is Shakespeare's work so frequently purloined? Why are we out of context references to him so ubiquitous? Why do people tend to equate the name of Shakespeare with qualities of genius? Why have his works been continually adapted (often shamelessly) not only for the stage, but into other genres, including operas, paintings, novels and films? How do we account for the proliferation of Shakespeare-based self-help books such as Shakespeare on Leadership? Why is the infant stimulation video Baby Shakespeare a best-seller? This course will explore these questions not only by reading a selection of Shakespeare's most enduring works, but also by examining criticism, adaptations, and marketing strategies that have been applied to Shakespeare's image and works over the last four centuries. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 286U. Puzzled. 3 Units.
"Puzzled" will look at the practice of puzzle making and puzzle-solving and explore the meaning of puzzles for different cultures throughout history. We will read works from the disciplines of math, history, anthropology, philosophy, and literature. We will explore why certain types of puzzles became popular and how puzzles have transferred from one culture to another. We will examine the role of code writing and code-breaking in the military and in the world of business. We will read examples of fiction and watch films that adopt the form of the puzzle as a narrative device. We will think about the function of puzzles as instruments to exercise the faculties of reason and logic and as a means of leisure or pleasant distraction. Students will be asked to both solve and create puzzles over the course of the semester. They will write analytical essays on topics related to the practice and history of puzzle making and puzzle solving, and they will pursue a research topic that revolves around an issue or problem that has "puzzled" them. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 286V. Food Craze: (No) Reservations. 3 Units.
The great number of food-related TV-shows indicate an unprecedented interest in questions about and fascination with food; in fact, these TV shows allure viewers with the appeal of a myth: eating involves discovery (Anthony Bourdain's No Reservations, On the Road Again with Mario Batali, Planet Food), thrill (Bizarre Foods), or "supernatural" competition (Man vs. Food, Top Chef). These television shows and food-related writings that accompany them in earnest "worship" food and often promote ideas of multiculturalism by which exciting and novel locales, foods, and meal preparatory techniques are discovered. The objective of this course is to "indulge" in these shows and food writings and scrutinize them: What explains such fascination with the viewing of and reading about food? In what ways can food-exploration trips expand on ideas and critiques of multiculturalism and globalization? What explains the centrality and "mythical" nature of food in the twenty-first century? To begin these conversations, we will touch on a plethora of food writing works including works motivated by environmental and health concerns such as Michael Pollan's essays. Then we will look at the world of cookbooks (including the cookbooks of Julia Child and Rachel Ray), food blogs and TV-shows, and essays by Bill Buford and Calvin Trillin among many others. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 287F. Telling True Stories: Literary Journalism in America. 3 Units.
Literary journalism is a genre of nonfiction writing that employs all of the reportorial and truth-telling covenants of traditional journalism, while employing rhetorical and storytelling techniques more commonly associated with fiction. In short, it is journalism as literature. This course will introduce you to major themes in American literary journalism, the genre's representative writers, and the enduring questions of the field. For example, we will ask how these stories work as narratives, as scientific explanations, as political tools, and as entertainment. How do these categories overlap? How do they motivate us to act? Where are these stories published and who is the readership? How do historical and cultural contexts influence and appear in the works? What is the relationship between (literary) journalism and democracy? What is the relationship between form and content? Is there a difference between physical truth and emotional truth? In the process of answering these questions, this course will emphasize close reading, interdisciplinary thinking, and the writing process. Through reading assignments, class discussions and presentations, and paper writing we will have the opportunity to examine, analyze, and develop our own interpretations about these multifaceted writings and the diverse cultural experiences and meanings they chronicle. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
**USSY 287G. Shadowplay/East and West. 3 Units.**
Shadows flicker across the screen, drawing us back to the precursors of the cinema and forward to digital effects. To borrow Gorki's phrase, the cinema is truly a "train of shadows." This course focuses on interactions between shadow theatre, dance, visual arts, the cinema, and traditional forms of play. While the main focus is on traditional artistic forms, we also explore modern variants, including the use of shadows in contemporary photography. We will look at shadows in different (yet overlapping) contexts, and compare the effects of still and moving shadows. All of these contexts involve moments of narrative and silence. Through a series of short papers which will be integrated into a longer paper, each student will explore his/her approach to a central question: What does it mean to play with shadows? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

**USSY 287H. Cityscapes in 20th-Century and Contemporary Visual Culture. 3 Units.**
This seminar will explore the dynamic meanings of modern and contemporary urban environments through visual representation. What does a city look like? As great complex entities of constant change, we will see that cities have been portrayed in a myriad of ways. What social ideals have engaged the vision of architects, urban planners, and landscape designers in the making of the metropolis since the late 19th century? How have artists interpreted major cities as sites of modernity, technological advancement, civilization and cultural vanguard; or, in contrast as sites of failed experiment? How can forms of representation help us envision the entirety of urban spaces of diverse geographies, including typically un-aesthetic forms of fringe areas, the abandoned zones of prior use, and infrastructures? What recent developments in convergent media might be employed as catalyst for achieving an enhanced understanding of the interrelationship of urban structures, spaces, and human need? Our chief objective is to begin to comprehend the enormity of these questions. Thus, we will view and discuss selected examples of architecture, design, art, photography, film and video, in essence sampling the roles they have played in the process of conceiving and imagining the design and significance of cities. Our examination of visual material will be organized over the course of the semester according to three major overlapping themes: the utopian and visionary city, the visual culture of cities, and the emerging city. The methods by which we will seek to interpret the visual component of our studies in the three categories will be adapted from the perspectives of visual culture, urban studies, urban design and landscape urbanism, and architectural history. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

**USSY 287M. Literature of 9/11. 3 Units.**
Nearly 10 years after the September 11, 2001 terrorist attacks, politicians, economists, artists, and educators continue to use the umbrella term "post-9/11" to describe our general cultural sensibility. Yet, what does it mean, specifically, to live in a "post-9/11" America? How have the cataclysmic events of that day altered our political and intellectual points of view? In this course, we will explore these questions by considering how novelists, poets, and other writers have and continue to represent September 11th. We will analyze techniques used to narrate the story of 9/11, investigating how American cultural values--or critiques of such values--influence the aesthetic choices that writers make. Our course will begin chronologically at "Ground Zero," as we examine representations of the immediate urban trauma while exploring the tensions between memorial and commemoration, spectacle and commercial pursuits. We will then focus on works by both American and international authors addressing the days and months following the attacks. We will examine how America is depicted with respect to its foreign policy and domestic politics, paying particular attention to the space of the "home." In addition to novels, short fiction, and poetry, we will read cultural criticism and some philosophy. Students will be given additional opportunities to explore film and other visual or new media representations of 9/11. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

**USSY 287N. Fantasy and Philosophy. 3 Units.**
Fantasy novels and films can be philosophical catalysts. One can read philosophical arguments and debate ethical and epistemological issues. Or, one can become immersed in a work of art and imagination that presents a fiction expressing the same profound human issues. Such a work dramatizes philosophical debates and conflicts, and hurl's readers and viewers into poignant, gripping, suspenseful, horrific, or beautiful stories that convey those very same struggles with truth and morality. Indeed, while many philosophical works are inaccessible to everyone but those with a specialized vocabulary (or prescient ability to discern tortured language), literary and cinematic works actually stimulate a different part of the brain. The ideas are conveyed and processed differently, and this is why works of fiction can have such poigniant and lasting effects on the emotions, provoke us to meditate on the grave and constant in human sufferings, and revisit those works as we relive our own struggles with truth, morality, love, identity, conflict, violence, and death. In this course students will read short works of fiction and philosophy, and watch films that delve into philosophical issues. These include selections from The Seventh Seal, Dr. Strangelove, Lord of the Rings, Harry Potter and the Half-Blood Prince, Star Trek, Futurama, House, M.D., True Blood, Dexter, Woman in the Dunes, The Denial of Death, The Dharma of Dragons and Daemons, Death's Dream Kingdom, Thus Spake Zarathustra, Philosophy and the Mirror of Nature, Serial Killers and Philosophy, and The Bhagavad Gita. Students who have taken USSO 286W for credit may not take this course. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 287O. What is Art for?. 3 Units.
Together we will study a crucial and distinctive aspect of the human mind: the uniquely human ability to engage in the production and reception of art. This course will explore human responses to artistic works in a wide range of media: literature, music, painting, and performance. Some of the larger questions we will be addressing in this course are the following: What is art for? Is art simply a kind of cognitive play that refines behavioural options over time? How is art related to (or dependent on) simulation, empathy and aspects of social cognition? What precisely can science contribute to explaining the aesthetic response and the artistic impulse? What, given the inherent constraints on human creativity imposed by human cognitive abilities, are the unique artistic conventions that contribute to experiencing a work of art as a work of art? What are the conceptual, intentional, emotional dimensions of art, manifested as they are in artistic creativity, talent and appreciation? Like most big questions, these are addressed in different ways by the disciplines of psychology, neuroscience, evolutionary biology, philosophy, and aesthetics. By exploring some collisions among these multiple perspectives we will learn more than through any single perspective. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 287T. King Arthur’s Days and Knights. 3 Units.
Few legends have remained popular and vital as long as the story of King Arthur has. Beginning with brief references in sixth-century histories, Arthur has risen again and again in medieval adventure stories, Victorian lyrics, and contemporary cinema. Over thirty-five films, in fact, have depicted the adventures of the Round Table. How can we explain this phenomenon? To investigate this question, this seminar will trace the development of the legend from its oldest remaining written manifestations to the present day. A chronological approach will allow us to see how Arthur’s story accumulated new elements over time, including the famous love affair between Lancelot and Guinevere and the equally famous quest for the Holy Grail—neither of which appeared in the earliest versions of the story. We will discuss topics such as what Arthur has represented at different periods in time and how his story changes when it is retold in different genres and media. We will also consider how writers have adapted Round Table stories to suit political and social agendas. Finally, to broaden our perspective, we will spend a unit exploring legends from a variety of cultures and comparing their presentation of heroism. Texts will include Sir Gawain and the Green Knight, pieces of Sir Thomas Malory’s The Death of Arthur, the indispensable Monty Python and the Holy Grail, and portions of its new incarnation, Spamalot. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 287X. Paris in the Arts. 3 Units.
Since the late eighteenth century, Paris has been a favorite subject for visual artists and writers alike, as well as the birthplace of several seminal artistic movements, such as Impressionism, Cubism, and the New Wave. This course will use representations of Paris in the arts as lenses through which the identity and recent history of this major city will come into focus. Further, stories, photographs, and films that stage the city of Paris and its people will also allow us to explore the broader relationship between art, the city, and the plight of modern man. The course will include a wide range of artworks, from mid-nineteenth century photographs documenting the destruction of Medieval Paris and the advent of a rational capital, to stories chronicling the fate of hopeful newcomers, and films where the city is treated either as intimate landscape or impersonal grid. The course will be both discussion based and writing intensive: students will be encouraged to envision class participation and writing assignments as means to analyze collaboratively, as well as individually, the material at hand. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 288E. Fantastic Voyages: The Journey in the Ancient and Medieval World. 3 Units.
When we make a record of a journey to an unfamiliar place (regardless of whether or not we really went there), we are framing difference. On the one hand, we create a record of what we see and experience, while on the other, we reveal our own cultural standpoint based on how we represent that experience. In this seminar, students will read a selection of narratives from antiquity to the late medieval era that purport to depict a “real” journey into the unknown, with the intent of examining how the representation of different cultures by the traveler, whether real or imaginary, shapes and defines cultural boundaries. Our focus will be on journeys within the cultures of the Mediterranean and Europe (including Britain), and will include texts from Greek, Roman, Middle Eastern, and Western travelers. Students will consider the texts in relation to their context and audience, evaluate the authority of the author’s account using primary source material, and draw on subsequent scholarship. By undertaking a symbolic journey through the eyes of different travelers, students will learn not only to examine texts from several perspectives, but also to recognize the ways in which cultural differences and "otherness" are constructed. We will begin with the concept of the journey in the ancient world, particularly how different cultures traveled and how their mode of transport (horse, boat, foot) and mode of living (nomadic, sedentary) influenced their perception of the people they encountered. As we move from antiquity into the medieval era, we will trace how religious, political, and economic changes influenced representations of other cultures. In addition to written texts, we will study visual references, including illustrations based on the seminar's required texts as well as early maps. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 288I. Diversions: Experimental Stories and New Media. 3 Units.
In this course, students will study works in which the authors and artists have experimented with traditional linear forms and created stories that are, for instance, labyrinthine, framed, collaged, geometrical, digressive, and even networked. While both print-based and digital texts offer spaces for diverse and deeply engaging written or visual performances, they also require further critical inquiry into the ways in which they create, reflect, or resist social and cultural values. Our focus in this course will be exploring how stories (and other texts) - in print, on screen, on canvas, in digital formats - that don't follow or that play with conventional rules of order encourage us to participate in making sense of our contemporary world. The goals of the course include: exploring the relationship between form and content in written and visual productions, developing a critical perspective from which to enjoy, assess, and respond creatively to traditional print and multimedia presentations, and making excellent use of research resources at CWRU and cultural resources at University Circle. In addition, students will work to develop their writing and presentation skills and to innovate novel models of research writing. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 288J. Cultural Representations of Violence. 3 Units.
The twentieth century was arguably the most violent in human history. That legacy has carried into our own time: from 9/11 to school shootings to the recent conflict in Libya, violence surrounds us. But what exactly is violence? How is it that we all recognize it when we see it? How do we represent it to ourselves? Most importantly, how do we make sense of it? Can we make sense of it? This class will explore these questions by studying the uneasy role violence plays in literature, film, performance art, and other cultural productions. As we do so, we will consider two central and potentially conflicting ideas. On the one hand, violence tends to resist our abilities to represent it; any depiction seems somehow inadequate to the real thing. At the same time, representations of violence surround us constantly, and for any number of political, cultural, and social reasons. Thus, violence in modern and contemporary culture is paradoxical, both permeating and resisting our imaginations. Through class discussions, written responses, presentations, and independent research projects, we will explore these and other ideas, considering how art attempts to comprehend violence and how artistic representations of violence relate to (implicate?) their audience. Although our focus will be largely on art, and primarily literature, our approach will be necessarily interdisciplinary. Be prepared to weigh in on topics as diverse as politics, aesthetics, philosophy, gender and sexuality, war, trauma, and colonialism. Undoubtedly, violence can be a painful subject, but the goal of our seminar is to pursue a rigorous intellectual and imaginative inquiry into one of the most pressing topics of our time. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 288K. Hiroshima: History, Memory, Representation. 3 Units.
On August 6, 1945, when the U.S. first used nuclear weapons against Japan, the name "Hiroshima" ceased to designate merely a place, and came to signify an event, an anxiety, and a prognosis for the future. This course seeks to interrogate the various and overlapping discourses which constitute the symbolic nexus around Hiroshima--and, to a lesser extent, Nagasaki. We will be asking how the event of the bomb has been understood according to different disciplinary perspectives (history, psychology, literature, and film) and how it is represented from both American and Japanese perspectives. Accordingly, our investigation will be an intensely comparative attempt to answer the question: if there is something like what Robert Lifton calls "the atomic bomb experience," then how is that experience captured in different forms of cultural expression? Or, perhaps more importantly, how do these cultural objects speak to an ongoing negotiation with historical trauma in the present? What differences and similarities do we find among different, cross-cultural encounters with the atomic bomb? Our investigation into the politics of representation around this event will lead us ultimately to ask whether it is even possible to capture the novelty and horror of an event that in many ways exceeds language altogether. After orienting ourselves to the history of the bombings and the psychological and philosophical issues at stake in them, we will turn to some of its canonical representations in John Hersey’s Hiroshima and Masuji Ibuse’s Black Rain. From there, we will look at Yoshihiro Tatsumi’s graphic novel Goodbye. And we will conclude with the cinematic representations of Alain Resnais’s Hiroshima mon amour and Ishiro Honda’s Godzilla. As a University Seminar, the course will also include substantial instruction in research and writing, leading to students' production of a medium-length research paper which they will work on throughout the semester. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 288R. Cultural and Ethical Issues in American-Chinese Business Relations. 3 Units.
The American and Chinese economies are the two biggest economies in the world. The dynamic American economy is unique in its combination of large multinational enterprises and small entrepreneurial firms. The American economy is characterized by a vast private sector, the rule of law, and the largest private capital markets in the world. The Chinese economy is 30 years into a period of reform from communist industrial organization to "socialism with Chinese characteristics", which includes a significant role for the private sector. The Chinese economy is still an experiment. The established American business system exists within a democratic political system, where corporate lobbying has a significant influence on the creation of laws and government policy. The Chinese economy is still under the tight control of the Chinese Communist Party, a one-party dictatorship. When Americans go to China to do business, they find the cultural, social, political, and moral systems vastly different than what they are familiar with. Transparency International Ranks China 27 out of 28 of the most corrupt large economies in the world. In China, bribery of government officials and kickbacks to sales and purchasing managers is common. Key questions we will investigate are: 1. In what ways are the two business systems similar and different? 2. What is the nature of Chinese social relations? How do they differ from American social relations? What effect do they have on business? 3. What is the nature of the Chinese political system? What impact does it have on business in China? 4. How do American business people negotiate the Chinese business system? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 288W. A History of Noise: Music and Politics from Beethoven to Jimi Hendrix. 3 Units.
This writing-intensive course examines the roles that noise has played in political discourses throughout the nineteenth and twentieth centuries. Its charged bookends - Beethoven and Jimi Hendrix - invite students to challenge supposed differences between "Art" and popular music and examine relationships between music and society. "Who does 'Art' serve?," "Is it possible to distinguish between 'Art' and noise?," and "Is sound capable of influence at all?" are among the chief questions this course explores. The curriculum's historical breadth allows students to consider these larger questions through a variety of case studies, including (among others) the bombast and nationalism of Beethoven's ninth symphony; the Marxist-inspired "emancipation" of sound, as presented by Arnold Schoenberg; the gender-bending metal of Eddie Van Halen; and the protest-by-distortion of Hendrix's national anthem at Woodstock. By the end of this course, students will gain more awareness of the ways in which the music surrounding them seeks to shape society. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 288V. Seclusion, Gender and the Exotic: Imagining the Harem. 3 Units.
When the term "harem" is invoked, the first image that comes to mind is of scantily clad women living in sequestered opulence in some exotic, yet vaguely "Eastern" place. This image has been reproduced and perpetuated through art, literature and music to the degree that even today, familiar themes of seduction, passivity and mystery related to the harem can be found throughout popular culture. Historically, gender segregation reaches into antiquity and existed in a variety of forms, cross-culturally. The term "harem" was not used regularly until the 13th century, and then only referred to the specific form of gender segregation used by the Ottoman court. Application of the word "harem" to all women's quarters in other cultures was the result of European contact with the Ottoman Empire, despite the fact that other cultures often had their own, distinct, terminology for women's spaces. In this seminar, we will explore the history and practice of gender segregation as a means to examine how the idea of the harem was constructed in the Eastern and Western imagination. Under what circumstances did women live separately? How were gendered spaces created, justified and maintained? Where did our image of the harem come from? Using primary and secondary sources, we will examine a selection of histories and representations of the harem in literature, slave and travel narratives, and religion. As the Western idea of the harem is part of what Edward Said theorized as "Orientalism", we will explore Said's theory as well as subsequent theories related to gender and the exotic. In addition, we will look at images of women's quarters from antiquity to the present and listen to representations of the exotic in music. Our goal is not only to study the historical fact of the harem, but also to engage issues related to gender, the exotic and representation from different disciplinary and cultural points of view. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 288X. 1939. 3 Units.
This course will examine the year 1939. At the time, people in the United States and Great Britain were invested in creating an active and lush fantasy world. There were debutant balls, the World’s Fair, college sports, “The Big Sleep,” “Gone With the Wind,” and “The Wizard of Oz.” Meanwhile Hitler was also conceiving of his dream world. The history of 1939 is the history of these competing fantasies and their collision. In addition to bettering their writing and research skills, students in this class will learn to understand the language and imagery of films, speeches, propaganda, social mores, diplomacy, and other various modes of communication that were used to construct and reinforce the sundry of imagined realities of 1939. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 288Y. Shots in the Dark: Investigating Crime Films. 3 Units.
Crime movies and their subgenres (Gangster, film noir, detective, police) are the most enduringly popular of all Hollywood genres. They’ve been around since the silent era and attest to America’s fascination with crime. But another reason we are so attracted to crime films stems from a pair of contradictory narrative projects that underlie the genre. On the one hand, these films valorize the distinctions between the genre’s stock characters—criminal, victim and avenger—in order to affirm the social, moral or institutional order. On the other hand, crime movies explore the relations between the three roles in order to mount a critique that challenges that order. In addition to emphasizing film studies, we will study the films for what they say about crime, criminals and criminal law. As most crime films contain an investigation, so too will the organization of the course. There are methods for analyzing film just as there are methods for investigating a crime scene. Investigation requires identifying, collecting, analyzing and interpreting evidence. We’ll start by investigating what makes the genre so enduring—its mise-en-scene, intent or characters? You will be reporting your findings in three scholarly papers: a formal analysis on a specific film, a sociological analysis of a specific film and a research paper with documentation. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 289A. Do We Have Free Will?. 3 Units.
Concepts such as freedom, choice, moral responsibility, and autonomy are commonly invoked to describe our sense, as human beings, that our actions and thoughts are really our own. This seems like experiential commonsense-when I choose to read a novel instead of a philosophy text it feels like the decision to do so was made by me, that there was no coercion, or other seen or unseen force, that intervened to make me choose as I did. We extend this logic to the judgment of moral and legal responsibility. If you engage in good behavior, you get the praise; if you do bad things, you are blameworthy. Despite our self-perception that we freely make decisions and choose our actions, we sometimes invoke the notion that certain events are the result of some prior cause or circumstance that determines what occurs in the present. In this instance, we do not appear to be fully free in our choices because we cannot undo the causes that dictate what is taking place here and now. To the extent that we experience current actions as having a cause in the past, we are flirting with the idea that our behavior is not wholly free, but determined or conditioned by what has come before. Determinism, necessity, fate, destiny, predestination: these are terms typically used to describe the sense that our actions and thoughts are the result of unknown forces or circumstances beyond our control. This course uses classic and contemporary texts, taken from multiple cultural traditions, to explore the problem of free will and related issues of body/mind dualism and personal identity. Although the term "free will" does not appear in all cultural contexts, found everywhere are questions of whether we are free to act and think as we wish or whether our thoughts and actions are in some way determined. We also read science fiction short stories as thought experiments in order to help us understand the ramifications of various positions on free will and related problems. This course is discussion-based and writing-intensive. Classes focus on analysis and interpretation of texts and ideas. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
USSY 289E. Poets of Ohio. 3 Units.
More often than not, contemporary society views poetry as a strange and dated art form. When the genre actually does receive recognition, it is usually under the guise of Hip-Hop or Slam Poetry. While both of those offshoots contain their own poetic and artistic merit, this course intends to familiarize you with contemporary, literary poetry and highlight the dynamic poetry community of Ohio. Luckily for us, many of the poets we will read during the course agreed to visit our class this semester to talk about their work and read their poems. In addition to demonstrating that poetry is alive, well, and thriving all around us, we will also attempt to think critically about this genre. Why do poetic texts, both of the present and the past, seem so difficult to read and understand? What writing techniques, strategies, and styles do poets use that make comprehending their work such a challenge? More importantly, why would anyone choose to write in this manner? Through close readings of the primary texts, researching the historical and literary contexts surrounding contemporary poetry, and discussing the art form with each other (as well as with the poets themselves), we will come to a better understanding of how these texts function. To this extent, our course will engage the symbolic world as we explore the local and national poetry communities, noting how writers found relationships upon geography, aesthetics, and demographics (just to name a few), using written texts to express some emotion, thought, or identity. In order to accomplish these goals, we will read, participate in class discussions, and write extensively about poetry composed by contemporary Ohio poets. Therefore, you will be expected to engage our course texts critically, thinking through the manner in which language operates as a tool for generating and sustaining, as well as undermining, community formation. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 289F. Reading and Writing The City. 3 Units.
This seminar will follow Joyce Carol Oates by asking, “If the City is a text, how shall we read it?” To explore this question, we will study a wide range of writings and other cultural productions. The first part of the course will examine classic and contemporary texts about city life from urban studies, history, philosophy, and geography, among other fields. These texts will provide useful frameworks and insights for the second part of the course, where we will analyze contemporary cultural productions that offer their own intriguing urban visions, including fiction, poetry, film, and music. We will analyze how these texts suggest ways of both reading/interpreting and writing/rewriting the city. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 289G. The American West on Film. 3 Units.
Few geographical areas in the United States contain as many tall tales and mythological figures as the American frontier. From an extreme point of view, the West is the only American myth because no other nation can claim the cowboy, the Native American, or the immigrant worker on the transcontinental railroad. And yet, each of these figures remains spectacularly diverse. We celebrate their variety and lionize their individuality in film, popular novels, and cultural criticism. From the visions of the New World to the conquest of the frontier, the color of the American West proliferates and transforms, defining our culture. In this course, we will investigate how critics have understood our fascination with the Western frontier. The class will broadly explore version of the frontier in novels, films, and historical accounts. Reading about the history of the actual west, the course will then examine how the films of the twentieth century alter history in order to express the fantasies and anxieties of their own time. By studying both history and film, we will be able to interrogate manifest destiny and the myth of American exceptionalism. What makes the West such an integral part of our understanding of America? How has its actual history become myth? What does the American fascination with the cowboy, the Native American, or the outlaw imply about our nation? Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

USSY 289J. Beauty Myths Today. 3 Units.
Published just over 20 years ago, Naomi Wolf's influential study "The Beauty Myth" significantly influenced popular thinking about body image. Analyzing both cultural trends and empirical data, Wolf argued that as women made unprecedented advances in public life in the latter half of the 20th century, they were at the same time held to increasingly unrealistic standards of physical beauty. Wolf's study not only contributed to extant analyses of sexism in the media, but also introduced to mainstream readers the politics of the representation of women's bodies in popular culture. This course will examine to what extent Wolf's original claim hold true today. In other words, what physical standards must one meet in order to be considered professionally and personally successful? In exploring this question, we will look at the origins and current workings of the American beauty industry, considering the changing representation of the ideal body throughout the 20th century. We'll read texts by historians, philosophers, novelists, poets, cultural critics, and journalists who examine the politics of beauty. To both (re-)define and trace the continuing effects of beauty myths in the 21st century, we'll consider the rhetoric of ideal womanhood as it shows up in popular texts such as websites promoting anorexia, TV shows about plastic surgery, diet books, magazines, and guides for mothers. Students will have opportunities to define the beauty myth more broadly, exploring its effects on men and its mediating presence in other cultural sites. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
**USSY 289Y. Reading and Writing Biography. 3 Units.**
The study and practice of biography, that is, writing about someone's life, is an important tool for understanding how meaning is constructed. In this class, we will learn some of the history of biography and what it hopes to accomplish in its various sub-genres. Why are biographies so popular? Why are we so interested in them? What do they do? Is it possible to perfectly represent an objective truth of someone or does the discussion of someone else's life require a more symbolic interpretation of things? We will engage in reading and discussing some important and contemporary biographies in a variety of styles and genres from autobiography to works of near-fiction. We will learn how researchers use facts to construct more symbolic narratives around an argument that tells a story about someone's life in a way that engages with important issues of self, audience, and the location of truth. As our final research project, we will undertake our own biographical projects where we will do primary research in order to construct focused narratives of people of our own choosing. To work up to this point, we will work on our own autobiographies, look at the lives of things, and look at some films which foreground the narrative of life. This course will be of great use to writers and researchers who must be able to communicate by any kind of true account in a way that is both engaging and comprehensive. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.

**USSY 290C. Out of Proportion. 3 Units.**
In this seminar, we will explore the meaning of things great and small, from the largest buildings and greatest distances, to nanotechnology and the smallest viruses. The seminar's goal will be to inspire critical thinking by confronting our fascination with things expanding and contracting, growing and shrinking, things speeded up and things slowed down. We will approach the subject from a variety of disciplines - cultural history, psychology, mathematics, philosophy, literature, economics, and the sciences - with the intention of unpacking both the topic itself and the tools that we use to explain our world. We will ask questions about why we find gigantism and dwarfism unsettling; how we define ugliness and beauty; how we understand the odds and statistics of horrific or wonderful things happening to us; and how this determines our behavior. After examining theory and examples of things "out of proportion", students will produce a research project that combines primary and secondary sources and will make an argument in behalf of an example that they find compelling. Prereq: Passing letter grade in a first year seminar in FSCC, FSNA, FSSO, or FSCS. Prereq or Coreq: FSTS 100. Requisites not met permission required if previous course completion in this subject group.
Physical Education & Athletics

The Department of Physical Education and Athletics (http://studentaffairs.case.edu/athletics/default.html) offers the student a variety of opportunities from challenging academic classes to vigorous recreational activities.

Case Western Reserve University sponsors 19 NCAA Division III varsity sports. Men's sports include football, soccer, cross country, basketball, wrestling, swimming, baseball, tennis and indoor/outdoor track & field. Women’s sports include volleyball, basketball, swimming, indoor/outdoor track & field, tennis, cross country, soccer and softball.

CWRU is a charter member of the University Athletic Association (UAA), sharing in the belief that academic excellence and athletic excellence are not mutually exclusive. The Spartans are joined in the UAA by Brandeis University, Carnegie Mellon University, Emory University, New York University, University of Chicago, University of Rochester and Washington University in St. Louis.

The Spartan football team also maintains affiliate membership in the Presidents' Athletic Conference (PAC).

The department sponsors a variety of intramural and club sport activities, including archery, cheerleading, crew, cycling, fencing, ice hockey, lacrosse, kendo, kung fu, table tennis, tae kwon do, ultimate frisbee, volleyball, and water polo. Sport clubs are available to all students, faculty, and staff. Intramural competition is available in more than 40 activities, and more than one-half of undergraduates participate for relaxation, physical fitness, and a chance to improve skills.

Lifetime Sports Program

The department has designed an instructional program of modern activities and lifetime sports. Each semester, fifteen to twenty-five coeducational lifetime sports classes are offered.

Undergraduates have a one-year physical education requirement to be completed in the first year. Required classes, for zero credits, are offered for either half-semester or full-semester. First year students have first priority in electing PHED 010-199. Others who have completed the requirement may audit classes.

A number of popular, advanced lifetime sports activities are also offered for one hour of academic credit. Advanced skills, strategy, and coaching are taught (PHED 200-299).

Recreational Activities and Intercollegiate Athletics

The intramural program provides a continuous schedule of activities throughout the year. Individual and team sports are available to students in several divisions: university housing, fraternity, women, coed, graduate, and open. Intercollegiate varsity athletic competition is available in ten sports for men and nine sports for women.

Courses

**PHED 100. Independent Activity. 0 - 10 Units.**
This course is designed to allow the student to write individual fitness goals, compose an individual fitness program specific to the goals and execute the individual program. Students are required to participate in a pre- and post-testing program and must achieve a minimum of 75% for each test component (national norms) in order to participate in Independent Activity. The course instructor must approve all programs. The student will be required to maintain a detailed activity log.

**PHED 108. Fencing. 0 Units.**
Fencing is the art of swordsmanship. Students will learn fencing skills such as on guard, lunge, attack, parry and touch. Students will learn the rules of competition and have the opportunity to compete during class time.

**PHED 10A. Cardio Games (First Half). 0 Units.**
Cardio Games emphasizes conditioning of the aerobic and anaerobic systems through fun and energetic games such as Ultimate Frisbee, Tag, Dodge Ball, Flicker Ball and more. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

**PHED 10B. Cardio Games (Second Half). 0 Units.**
Cardio Games emphasizes conditioning of the aerobic and anaerobic systems through fun and energetic games such as Ultimate Frisbee, Tag, Dodge Ball, Flicker Ball and more. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

**PHED 11A. Jump Rope Training (First Half). 0 Units.**
This class is designed to help students develop quickness, agility, balance, strength, power, and endurance through jump rope training. Students will learn rope-handling skills, jumping techniques and training routines to help supplement training for fitness and performance. Workouts and progressions are included for warm-up, cool-down, fitness components and sport-specific training. Prereq: Undergraduate degree seeking student.

**PHED 12A. Badminton (First Half). 0 Units.**
This class provides the student with the basic skills, footwork and strategies necessary to play the sport of badminton. Emphasis is placed on skill development through instruction and drills as well as singles and doubles match play. This class is appropriate for all students. Students with special needs can be accommodated. Prereq: Undergraduate degree seeking student.

**PHED 12B. Badminton (Second Half). 0 Units.**
This class provides the student with the basic skills, footwork and strategies necessary to play the sport of badminton. Emphasis is placed on skill development through instruction and drills as well as singles and doubles match play. This class is appropriate for all students. Students with special needs can be accommodated. Prereq: Undergraduate degree seeking student.
PHED 130. Wellness. 0 Units.
This lecture class teaches the components of physical fitness as well as evaluation techniques, fitness assessment, body composition, nutrition and weight control information. This class is appropriate for all students.

PHED 131. Personal Fitness. 0 Units.
Personal Fitness is a full semester class that teaches the components of physical fitness through both lecture and activity. Students will assess their fitness levels and learn conditioning activities to improve flexibility, cardiovascular endurance, muscular strength and endurance. Nutrition, weight control and concepts of wellness are covered in this class. This class is appropriate for most students.

PHED 13A. Rock Wall Climbing (First Half). 0 Units.
This course is designed to give students a comprehensive introduction to the skills, safely, terminology and equipment used in the sport of recreational activity of rock climbing. Prereq: Undergraduate degree seeking student.

PHED 13B. Rock Wall Climbing (Second Half). 0 Units.
This course is designed to give students a comprehensive introduction to the skills, safely, terminology and equipment used in the sport of recreational activity of rock climbing. Prereq: Undergraduate degree seeking student.

PHED 141. Dance. 0 Units.
This course is designed to introduce the student to dance. Students will be exposed to a variety of dances including contemporary, jazz, folk and formal dancing. Students will learn how choreography is mounted and how dancers remember it. The class is appropriate for beginners as well as students with dance experience.

PHED 14B. Indoor Rowing (Second Half). 0 Units.
This course introduces the student to basic indoor rowing techniques, skills, and equipment. Students will learn conditioning programs to prepare the student to continue in recreational, fitness or competitive rowing programs. Prereq: Undergraduate degree seeking student.

PHED 170. Varsity Baseball. 0 Units.
PHED 171. Varsity Basketball (Men). 0 Units.
PHED 172. Varsity Basketball (Women). 0 Units.
PHED 174. Varsity Cross Country (Men). 0 Units.
PHED 175. Varsity Cross Country (Women). 0 Units.
PHED 178. Varsity Football. 0 Units.
PHED 180. Varsity Soccer (Men). 0 Units.
PHED 181. Varsity Soccer (Women). 0 Units.
PHED 182. Varsity Swimming (Men). 0 Units.
PHED 183. Varsity Swimming (Women). 0 Units.
PHED 184. Varsity Tennis (Men). 0 Units.
PHED 185. Varsity Tennis (Women). 0 Units.
PHED 186. Varsity Track and Field (Men). 0 Units.
PHED 187. Varsity Track and Field (Women). 0 Units.
PHED 188. Varsity Volleyball. 0 Units.
PHED 189. Varsity Wrestling. 0 Units.
PHED 190. Varsity Softball (Women). 0 Units.

PHED 191. Varsity Softball (Men). 0 Units.

PHED 216. Weight Training II. 1 Unit.
This class is for the student with weight training experience and/or the student who has successfully completed the basic weight training program and wishes to continue training in an advanced program. Advanced skill development, program development and safety are emphasized. This class section does not satisfy the Physical Education requirement.

PHED 217. Life Guarding. 1 Unit.
Advanced physical education activities. Advanced instruction in sports, limited to upperclassmen. This course may lead to certification in lifeguarding. Recommended preparation: Advanced swimming skills.

PHED 218. Wellness. 1 Unit.
PHED 21A. Hatha Yoga (First Half). 0 Units.
This course provides an introduction to Hatha Yoga, presenting body awareness, basic philosophy, breathwork, postures and meditation techniques. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 21B. Hatha Yoga (Second Half). 0 Units.
This course provides an introduction to Hatha Yoga, presenting body awareness, basic philosophy, breathwork, postures and meditation techniques. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 22A. Intermediate Hatha Yoga (First Half). 0 Units.
This course utilizes the basics of Hatha Yoga including body awareness, philosophy, breathwork, and postures with emphasis on increased strengthening, increased aerobic segments, and more challenging postures. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 22B. Intermediate Hatha Yoga (Second Half). 0 Units.
This course utilizes the basics of Hatha Yoga including body awareness, philosophy, breathwork, and postures with emphasis on increased strengthening, increased aerobic segments, and more challenging postures. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 24B. Jogging (Second Half). 0 Units.
Prereq: Undergraduate degree seeking student.

PHED 25A. Power Volleyball (First Half). 0 Units.
This class introduces volleyball skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 25B. Power Volleyball (Second Half). 0 Units.
This class introduces volleyball skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 26A. Racquetball (First Half). 0 Units.
This course teaches racquetball skills and strategies for team and individual play. Course content includes terminology, skill development, scoring, etiquette and safety. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 26B. Racquetball (Second Half). 0 Units.
This course teaches racquetball skills and strategies for team and individual play. Course content includes terminology, skill development, scoring, etiquette and safety. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.
PHED 27A. Indoor Group Cycling (First Half). 0 Units.
A stationary cycling program set to motivational music. Students will learn how to use and set up the bike and how to create a challenging workout using sprints, jumps and climbs. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 27B. Indoor Group Cycling (Second Half). 0 Units.
A stationary cycling program set to motivational music. Students will learn how to use and set up the bike and how to create a challenging workout using sprints, jumps and climbs. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 28A. Squash (First Half). 0 Units.
Students will be introduced to the skills, techniques and strategies necessary to play the sport of squash. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 28B. Squash (Second Half). 0 Units.
Students will be introduced to the skills, techniques and strategies necessary to play the sport of squash. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 29A. Swimming - Beginning and Intermediate (First Half). 0 Units.
This class focuses on basic swimming skills and safety. This class is appropriate for non-swimmers to those students with mid-range swimming skills. Students with disabilities may be accommodated. Prereq: Undergraduate degree seeking student.

PHED 29B. Swimming - Beginning and Intermediate (Second Half). 0 Units.
This class focuses on basic swimming skills and safety. This class is appropriate for non-swimmers to those students with mid-range swimming skills. Students with disabilities may be accommodated. Prereq: Undergraduate degree seeking student.

PHED 30A. Swimming - Endurance (First Half). 0 Units.
This class is for individuals who have mastered intermediate swimming skills and wish to develop advanced swimming skills and greater swimming endurance. Prereq: Undergraduate degree seeking student.

PHED 30B. Swimming - Endurance (Second Half). 0 Units.
This class is for individuals who have mastered intermediate swimming skills and wish to develop advanced swimming skills and greater swimming endurance. Prereq: Undergraduate degree seeking student.

PHED 31A. Tennis (First Half). 0 Units.
Students will learn the tennis skills and strategies necessary for both singles and doubles play. Emphasis is placed on stroke development, rules, scoring and etiquette. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 31B. Tennis (Second Half). 0 Units.
Students will learn the tennis skills and strategies necessary for both singles and doubles play. Emphasis is placed on stroke development, rules, scoring and etiquette. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 325. Officiating Basketball. 2 Units.
Administrative procedures, promotion, managerial relationships, scheduling, tournaments, budgeting, scoring systems, and officiating.

PHED 326. Introduction to Sports Medicine. 3 Units.
This class provides a detailed introduction to the foundation of Sports Medicine. Students will understand the complexities of sports medicine and athletic training through classroom lecture, structured laboratory and clinical hours. Topics covered in this class include roles and responsibilities of the sports medicine team, injury pathology, injury prevention, evaluation and management of injury.

PHED 332. Kinesiology. 3 Units.
The purpose of this course is to present the conceptual ideas and general principles of the science of human movement. It reviews and applies the pertinent aspects of anatomy, physiology and mechanics. Subject matter is drawn from research and clinical findings of widely dispersed kinesiological subdisciplines and professional specializations. Prereq: PHED 332.

PHED 334. Orthopedic Assessment of the Upper Extremity. 3 Units.
This class provides students with hands on experience that prepares them to perform orthopedic assessments within the field of athletic training. Students learn to take medical histories, palpate bony and soft structures, perform range of motion, neurological and circulatory tests. Students will learn to perform orthopedic tests of the upper extremities, head, cervical spine and abdomen. This class involves lectures, laboratory and clinical hours. Prereq: PHED 332 and PHED 342.

PHED 339. Orthopedic Assessment of the Lower Extremity. 3 Units.
This class provides students with hands on experience that prepares them to perform orthopedic assessments within the field of athletic training. Students learn to take medical histories, palpate bony and soft structures, perform range of motion, neurological and circulatory tests; and perform orthopedic special test of the lower extremities, pelvis, and lumbar spine. This class involves lectures, labs, and clinical hours. Prereq: PHED 332 and PHED 342.

PHED 341. Physiology of Exercise. 3 Units.
The classroom and laboratory experiences in this class are intended to provide an understanding of physiological adaptations of the human body to acute and chronic exercise. The classroom portion will focus mainly on the response and adaptation of bodily systems to exercise and the relationship of physiology to sport, health and exercise programs. The laboratory portion will focus on evaluation of the physiological response to exercise. Prereq: PHED 332, PHED 342, PHED 334, PHED 339.

PHED 342. Kinesiology. 3 Units.
The purpose of this course is to present the conceptual ideas and general principles of the science of human movement. It reviews and applies the pertinent aspects of anatomy, physiology and mechanics. Subject matter is drawn from research and clinical findings of widely dispersed kinesiological subdisciplines and professional specializations. Prereq: PHED 332.

PHED 343. Weight Training (First Half). 0 Units.
This class focuses on muscular strength and endurance training through individualized weight training programs. Emphasis is placed on appropriate use of equipment and safety procedures. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 344. Weight Training (Second Half). 0 Units.
This class focuses on muscular strength and endurance training through individualized weight training programs. Emphasis is placed on appropriate use of equipment and safety procedures. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 350. Therapeutic Rehabilitation and Modalities. 3 Units.
Topics covered in this class include concepts and practices associated with the conditioning and reconditioning (rehabilitation) of athletic injuries. Principles and practical skills associated with therapeutic modalities used in the treatment and rehabilitation of athletic injuries are also covered. This class involves lectures, labs and clinical hours. Prereq: PHED 332, PHED 334, PHED 339, and PHED 342.
PHED 39A. Bowling (First Half). 0 Units.
This class introduces bowling skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 39B. Bowling (Second Half). 0 Units.
This class introduces bowling skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 40A. Basketball (First Half). 0 Units.
This class introduces basketball skills, techniques, rules and basic offense and defense. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 40B. Basketball (Second Half). 0 Units.
This class introduces basketball skills, techniques, rules and basic offense and defense. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 41A. Softball (First Half). 0 Units.
This class introduces softball skills, techniques, rules and basic offense and defense strategies. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 41B. Softball (Second Half). 0 Units.
Students will learn the skills, techniques and strategies to play the sport of indoor soccer. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 42A. Core Yoga (1st Half). 0 Units.
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will combine stretching and strengthening to improve posture and flexibility and create balance in the physical body. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 42B. Core Yoga (2nd Half). 0 Units.
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will combine stretching and strengthening to improve posture and flexibility and create balance in the physical body. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 43A. Introduction to Speed and Agility Training. 0 Units.
This introductory course is intended for the student with an interest in training of speed and agility specific to their sport interest. The course will focus on the aspects of physical training necessary for the development of speed and agility and improved athletic performance. Prereq: Undergraduate degree seeking student.

PHED 43B. Introduction to Speed and Agility Training. 0 Units.
This introductory course is intended for the student with an interest in training of speed and agility specific to their sport interest. The course will focus on the aspects of physical training necessary for the development of speed and agility and improved athletic performance. Prereq: Undergraduate degree seeking student.

PHED 44A. Core Yoga (1st Half). 0 Units.
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will combine stretching and strengthening to improve posture and flexibility and create balance in the physical body. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 44B. Core Yoga (2nd Half). 0 Units.
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will combine stretching and strengthening to improve posture and flexibility and create balance in the physical body. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 45A. Cardio-Fitness (First Half). 0 Units.
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 45B. Cardio-Fitness (Second Half). 0 Units.
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 50A. Personal Safety Awareness (First Half). 0 Units.
This class focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 50B. Personal Safety Awareness (Second Half). 0 Units.
This class focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 55A. Cardio-Fitness (First Half). 0 Units.
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 55B. Cardio-Fitness (Second Half). 0 Units.
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 60A. CPR/First Aid (1st half). 0 Units.
Students will learn the basic first aid and CPR skills necessary to act in an emergency. Automated external defibrillation training is included. This class involves both lecture and hands-on work. Students will have the opportunity to achieve Basic Rescuer certification at the completion of the class.

PHED 60B. CPR/First Aid (2nd half). 0 Units.
Students will learn the basic first aid and CPR skills necessary to act in an emergency. Automated external defibrillation training in included. This class involves both lecture and hands-on work. Students will have the opportunity to achieve Basic Rescuer certification at the completion of this class.

PHED 65A. Cardio-Fitness (First Half). 0 Units.
This course introduces softball skills, techniques, rules and basic offense and defense. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 65B. Cardio-Fitness (Second Half). 0 Units.
This course introduces softball skills, techniques, rules and basic offense and defense strategies. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 70A. Personal Safety Awareness (First Half). 0 Units.
This class focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 70B. Personal Safety Awareness (Second Half). 0 Units.
This class focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

### Field of Study Specifics

- Accountancy: Bachelor of Science in Accounting, Master of Accountancy, Doctor of Philosophy.
- Aerospace Engineering: Bachelor of Science in Engineering, Master of Science.
- American Studies (1): Bachelor of Arts.
- Anthropology: Bachelor of Arts, Master of Arts, Doctor of Philosophy.
- Art Education: Bachelor of Science in Art Education, Master of Arts.
- Art History: Bachelor of Arts, Master of Arts, Doctor of Philosophy.
- Art History and Museum Studies: Master of Arts, Master of Arts/Juris Doctor.
- Asian Studies: Bachelor of Arts.
- Astronomy: Bachelor of Science in Astronomy, Master of Science.
- Biochemistry: Bachelor of Science in Biochemistry, Master of Science.
- Bioethics: Bachelor of Arts, Doctor of Philosophy.
- Biology: Bachelor of Arts, Master of Science.
- Biomedical Engineering: Bachelor of Science in Engineering, Master of Science.
- Business Management: Bachelor of Science in Management, Master of Science.
- Cell Biology: Bachelor of Science in Management, Doctor of Medicine.
- Chemical Biology: Bachelor of Arts, Master of Science.
- Chemistry: Bachelor of Arts, Master of Science.
- Civil Engineering: Bachelor of Science in Engineering, Master of Science.
- Classics: Bachelor of Arts.
- Clinical Research: Master of Science.
- Cognitive Science: Bachelor of Arts.
- Cognitive Linguistics: Master of Arts.
- Communication Sciences: Bachelor of Arts, Master of Arts.
- Computer Engineering: Bachelor of Science in Engineering, Master of Science.
- Computer Science: Bachelor of Arts, Bachelor of Science in Computer Science.

1. Available only as a second major
2. Includes dietetics
3. The Medical Scientist Training Program
4. Combined degree by special arrangement for selected students who hold acceptances in the School of Medicine
5. Degrees conferred jointly by the Mandel School of Applied Social Sciences and the Weatherhead School of Management in association with the Mandel Center for Nonprofit Organizations
6. Available as the undergraduate portion of the Bachelor of Science in Engineering/Master of Science program
7. Available as the graduate portion of the Bachelor of Science in Engineering/Master of Science program
8. Joint five-year Doctor of Medicine/Master of Science
9. The Biomedical Investigation Program
10. Program currently not accepting applications
11. Masters offered only to current doctoral students or through the Integrated Graduate Studies program (IGS)
University Registrar

Registration

Students register at the time indicated by the University Registrar (http://www.case.edu/registrar), as shown in the Student Information System (http://www.case.edu/sis) (SIS) or as indicated by individual graduate/professional schools. Undergraduate student registration for fall begins in April and continues through the beginning of classes in August; undergraduate student registration for spring begins in November and continues through the beginning of classes in January. Only those students who have no outstanding financial obligations to the university are eligible to register. The Office of Student Financial Services will bill those students who have registered for the next semester. The tuition payment will be due in full by the last day of the drop/add period. The schedule of classes (http://www.case.edu/registrar/registration/schedule-of-classes) is available electronically and can be accessed through SIS. (http://www.case.edu/sis)

The University Registrar's website includes the academic calendar (http://www.case.edu/registrar/calendar) and the dates for late registration and drop/add (http://www.case.edu/registrar/registration/lastday). SIS includes a complete real time listing of courses offered. Students use SIS to register for classes; refer to the listing of registration start dates for each school (http://www.case.edu/registrar/registration/when) to determine registration eligibility. No zero-credit only registrations (e.g., zero-credit physical education courses) are allowed unless approved as part of ongoing degree programs.

Registration deadlines will be strictly enforced. Only students officially registered, according to the official SIS class roster, are permitted to attend that class. Instructors may permit students to sit in on occasional classes at their discretion, but students who wish to attend class regularly without receiving credit should register as auditors. Unregistered students are not permitted to take part in laboratory activities.

Courses of Instruction

All courses at the university, except courses in the Medical School, Law School, School of Dental Medicine, and School of Nursing are numbered according to the following plan:

- **100-199** Elementary courses
- **200-299** Intermediate courses
- **300-399** Advanced undergraduate courses
- **400-499** Lower level graduate courses (some are open to undergraduates; consult with the appropriate department)
- **500 and above** Advanced graduate courses

Roman numerals (I, II, etc.) after course titles indicate segments of a multi-course sequence. Arabic numerals in parentheses after course titles indicate the semester credit hours for each course.

Veterans Affairs School Certifying Official

The School Certifying Official, housed in the Office of the University Registrar, 135 Yost Hall, administers the regulations governing the educational benefits and opportunities open to veterans under various federal laws. For more information see o (http://www.case.edu/registrar/veterans.html)ur Veterans Education Benefits page (http://www.case.edu/registrar/forms-services/veterans), call 216.368.4310 or email registrar@case.edu.

Exceptions to Policies

Requests for exceptions to any academic or administrative policy must be submitted within three months of the end of the semester for which the exception is sought.

Course Audit Program for Senior Citizens

Case Western Reserve University's Course Audit Program for Senior Citizens (http://www.case.edu/provost/seniorauditprogram) (CAPSC) allows senior citizens (age 65 and older) to take on campus courses at a reduced tuition rate. For more information, contact the CAPSC Coordinator in the Office of the President and Provost at capsc@case.edu.

Student Records

The Family Educational Rights and Privacy Act of 1974 (FERPA) contains several provisions that are important to students. First, the university may not release personally identifiable student records to a third party, with certain specific exceptions, unless the third party has requested the information in writing and the student has consented, again in writing, to its release. The university may release directory information about a student, however, unless the student submits a written request that any or all such information not be released. Second, a student may request, in writing, an opportunity to inspect and review the student's official files and records maintained by the university and may, if appropriate, challenge the accuracy of those records. The university is permitted a reasonable time, not to exceed 45 days, to respond to such a request. Third, a student may file with the Family Policy and Regulations Office of the U.S. Department of Education a complaint concerning what he or she believes to be the university's failure to comply with FERPA. Finally, a student may obtain from the Registrar a copy of this policy, which the university has adopted to meet the requirements of FERPA.

The information below is presented in compliance with the provisions of FERPA, which require the university to notify students annually of their rights and the university's policies and procedures. Specific procedures may vary slightly among the schools and colleges of the university, and each student is encouraged to inquire at his or her own dean's office if any question arises.

Access to Files

A student may request, in writing, an opportunity to review the contents of the student's educational file. Certain materials are excluded from review as specified in FERPA. Among these are:

- Records kept in the sole possession of faculty, staff, and other personnel, used only as a personal memory aid, and not accessible to any other person except a temporary substitute for the maker of the record.
- Records created and maintained by law enforcement units solely for law enforcement purposes that are not maintained by persons other than law enforcement officials.
- Records created and maintained by a physician, psychiatrist, psychologist, or other professional or paraprofessional acting in that capacity in connection with the provision of treatment to a student. Such records can, of course, be reviewed by a physician or other appropriate professional of the student's choice.
• Employment records of a student made and maintained in the normal course of business. Such employment records may be obtained in the Student Employment Office or Human Resources under the policies applicable to those offices.
• Financial records of a student's parents, or any information contained therein.
• Confidential letters and statements of recommendation placed in the file before January 1, 1975.
• Records for which the student previously waived his or her right of access.
• Records that contain only information about a person after that person is no longer a student, such as alumni records.

The office to which the request is made will arrange an appointment within a reasonable period of time (not to exceed 45 days) for the student to review the file in the presence of a member of the office staff.

FERPA affords students certain rights with respect to their educational records. Students may ask the university to amend a record that the student believes is inaccurate or misleading. The student should write to the university official responsible for the record, clearly identifying the part of the record the student wants changed, and specify why it is inaccurate or misleading. If the university decides not to amend the record as requested by the student, the university will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

The student may request copies of those records to which he or she has access under the terms of FERPA. The student will be charged a nominal fee per page for these copies.

Release of Personally Identifiable Records

FERPA affords the student the right to consent to disclosures of personally identifiable information contained in the student's educational records, except to the extent that FERPA authorizes disclosure without consent. One exception, which permits disclosure without consent, is disclosure to school officials with legitimate educational interests. A school official is defined as a person employed by the university in an administrative, supervisory, academic, or support staff position (including law enforcement unit and health staff); a person or company with whom the university has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or assisting another school official in performing his or her tasks. A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her professional responsibility.

Upon request, the university discloses education records without consent to officials of another school in which a student seeks or intends to enroll. The university also discloses education records to organizations conducting studies for educational agencies or institutions under certain circumstances.

Directory Information

For the convenience of faculty and fellow students, FERPA provides for a category known as directory information, which may be released without requesting the eligible student's specific prior consent. Rather, the act requires that students be notified annually of the types of information included in this category and be given an appropriate period in which to express, in writing, any preference that such information about themselves not be released. For this purpose, directory information is defined to include:

- Name (including both maiden name and married name, where applicable)
- Address, telephone listing, and electronic mail address
- Date and place of birth
- Major field of study
- Anticipated graduation date
- Enrollment Status (undergraduate or graduate, full-time or part-time)
- Dates of attendance
- Degrees and awards received
- Participation in officially recognized sports and activities
- Weight and height (members of athletic teams)

Any student who would prefer that the university not release such information about himself or herself should so notify the Office of the University Registrar, in writing, prior to the first week of classes in the fall semester. Students entering the university at midyear may submit such notice during the first week of classes of the spring semester.

Transcripts

A transcript of grades (http://www.case.edu/registrar/transcript) will be released only upon written (or electronically authenticated) request of the student, either in person, by mail or by online request through our transcript servicing partner. A fee is charged for each transcript copy. Neither transcripts nor diplomas will not be issued to, or on behalf of, students who have not discharged delinquent obligations to the university.

Student Right to Know

The Student Right to Know and the Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Act requires that universities throughout the country produce statistics and/or information on the following subjects:

1. retention and graduation rates;
2. financial assistance available to students and requirements and restrictions imposed on Title IV aid;
3. athletic program participation rates and financial support;
4. other institutional information including: the cost of attendance, accreditation and academic program data, facilities and services available to students with disabilities, and withdrawal and refund policies;
5. Family Educational Rights and Privacy Act Policy; and
6. crime statistics on campus.

The university makes this information available in the following ways:

1. Data on retention and graduation rates is available in the Office of the Provost in Adelbert Hall (216.368.4389 (http://bulletin.case.edu/universityregistrar/tel:%28216.368.4389) and is posted on the University Registrar's website (http://case.edu/registrar/general/statistics/completion-rates).
2. Information on financial assistance, including descriptions of application procedures and forms, and refund policies, may be obtained from the Office of University Financial Aid (case.edu/
Grading System

The following grading system is used at Case Western Reserve University:

Financialaid/ in Yost Hall (216.368.4530 [http://bulletin.case.edu/universityregistrar/tel:%28216.368.4530]).

3. Information concerning athletic program participation and financial support may be obtained from the Physical Education and Athletics Department in Veale Center (216.368.2867 [http://bulletin.case.edu/universityregistrar/tel:%28216.368.2867]).

4. Other institutional information, such as that listed in No. 4 above including undergraduate cost of attendance (case.edu/financialaid/undergraduate/cost/), graduate cost of attendance (case.edu/financialaid/gradprof/cost/), accreditation and academic program data (bulletin.case.edu/), facilities and services available to students with disabilities (students.case.edu/education/disability/), and withdrawal and refund policies (case.edu/registrar/withdraw.html and case.edu/financialaid/documents/FinAidStudentGuide.pdf), may be obtained from the above links or by contacting the Offices of: University Financial Aid, Provost, Student Affairs, and University Registrar.

5. The Family Educational Rights and Privacy Act (FERPA) policy is available at case.edu/registrar/general/ferpa/.

6. Case Western Reserve University’s annual security report is updated annually by Oct. 1 and is available online at police.case.edu by clicking on the Annual Security Report tab. A full print copy of the report is available at police.case.edu/docs/secrpt14.pdf or can be obtained by contacting the crime prevention office at 216.368.1243.

The report includes:

- Statistics for the previous three years concerning certain categories of reported crimes—including hate crimes in certain categories, domestic violence, dating violence and stalking—that occurred on campus, in off-campus buildings or properties owned or controlled by the university, and on public property within or immediately adjacent to and accessible from campus.
- Summaries of institutional policies regarding safety and security, reporting of crimes, sexual misconduct, drug and alcohol use, timely warnings and missing persons investigations. The university maintains a daily crime log that can be accessed at police.case.edu.
- Information on emergency notification, emergency response and evacuation procedures. Emergency procedures for students, faculty, staff and visitors can be reviewed at case.edu/emergencymanagement.

Case Western Reserve University also produces an annual fire safety report that includes fire statistics for on-campus housing, summaries of fire policies and evacuation procedures. The university maintains a fire log for all fires that occur in on-campus housing. The report and log are available at case.edu/ehs/FireSafety.

Any emergency on campus should be reported to CWRU Police & Security Services at 216.368.3333 [http://bulletin.case.edu/universityregistrar/tel:216.368.3333]. This number is staffed 24 hours a day.

</table>
forfeits the privilege of completing the course for credit, and the grade student fails to remove the Incomplete within the specified time, he or she event later than the end of the next regular semester (fall or spring). If the must complete the work by the date specified by the instructor and in no Incomplete grades from a previous semester has passed. Failure to meet the Registrar will convert the I to F when the deadline for making up the Incomplete by the date established, the instructor shall transmit to the grades. When a student fails to submit the work required for removing Unauthorized absence from a final examination will result in a failing grade. When the student completes the work, the Incomplete is changed to an A, B, C, D, P, F, or NP. (Note: not all schools award all of these grades, see first paragraph of "Grading System" above.)

Incomplete (I)
The grade of I is assigned at the discretion of an instructor provided that:

1. There are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justify an extension of time beyond the requirements established for other students in the class. It is the student’s responsibility to notify the instructor of the circumstances preventing completion.

2. The student has been passing the course and only a small segment of the course remains to be completed, such as a term paper, for which the extenuating circumstances justify a special exception.

An Incomplete grade may not be assigned if a student is absent from a final examination, unless the dean has authorized the absence. Unauthorized absence from a final examination will result in a failing grade. When the student completes the work, the Incomplete is changed to an A, B, C, D, P, F, or NP. (Note: not all schools award all of these grades, see first paragraph of "Grading System" above.)

Undergraduate Students
All work for the Incomplete grade must be made up and the change of grade recorded in the Office of the University Registrar, by the date specified by the instructor, but no later than the 11th week of the session following the one in which the Incomplete grade was received. In certain cases (such as students on probation or graduating students), the dean may establish an earlier date for completion of courses with Incomplete grades. When a student fails to submit the work required for removing the Incomplete by the date established, the instructor shall transmit to the Registrar a final grade that assumes a failing performance for the missing work. In the absence of the assignment of a grade by the instructor the Registrar will convert the I to F when the deadline for making up Incomplete grades from a previous semester has passed. Failure to meet this deadline for removing the Incomplete will result in a failing grade. An instructor may elect to give the grade of F or NP if the Incomplete is not removed within the specified time limit.

Graduate and Professional Students
In order to receive credit for a course marked Incomplete, the student must complete the work by the date specified by the instructor and in no event later than the end of the next regular semester (fall or spring). If the student fails to remove the Incomplete within the specified time, he or she forfeits the privilege of completing the course for credit, and the grade becomes a permanent Incomplete unless the instructor elects to give a grade of F.

Satisfactory (S)
The grade of S given graduate students in the School of Graduate Studies indicates satisfactory progress in evaluating exclusively thesis and dissertation research. The grade S is not counted in determining quality averages. The alternative to a grade of S is U (Unsatisfactory). The grade of I (Incomplete) may not be used in evaluating thesis and dissertation research. In other graduate/professional schools, the grade of S may indicate passing performance in designated courses and advanced seminars.

Conditional (R)
The grade of R is used for work, such as undergraduate thesis and project laboratories, that extends more than one semester and, upon completion of the thesis or project, will be changed to the letter grade awarded for the completed work. The R grade assigned in ENGL 148 Introduction to Composition indicates that a student must re-enroll in ENGL 148 Introduction to Composition. In the following semester, the R grade in ENGL 148 Introduction to Composition remains on the student's record and is not subject to replacement by the final grade earned in ENGL 148.

Audit (AD) and Unsuccessful Audit (NG)
The grade of AD (audit) will be given when a student has officially registered to audit a course and has satisfied the requirements specified by the instructor for this grade. The grade of NG (unsuccessful audit, graduate, and professional schools only) will be given when a student has officially registered to audit a course and has not satisfied the requirements specified by the instructor.

Undergraduate Students
A student may audit a course with the dean's or advisor's approval and the consent of the instructor of the course. An auditor receives no credit for the course.

Registration in a course cannot be changed from audit to credit or the reverse after the end of the drop/add period. At the beginning of the course, the student and instructor should reach agreement regarding the requirements to be met for a grade of AD. The grade of AD is entered on the student's transcript. A student may take for credit a course he or she audited in an earlier semester.

Graduate/Professional Students
Dental students: Courses toward degree programs in the School of Dental Medicine may not be audited.

The following statements apply to the Schools of Graduate Studies and Management: The instructor may designate that the student has completed all requirements for auditing the course and that NG (Unsuccessful Audit) be recorded on the student's transcript. A course once audited may not be repeated for credit, nor may any course for which credit has been given be repeated for credit toward degree requirements. Students will be permitted to change their registration in a course from credit to audit (AD), or the reverse, with written consent of
their advisor and the instructor only if the change is officially made on or before the date specified in the academic calendar for the given term.

Other graduate and professional schools: Please refer to individual school sections of this publication, or to individual school student handbooks.

Partial Withdrawal (W)
The grade of W will be given if a student officially withdraws from a course on or before the date specified in the academic calendar for the given term. After this date, the grade as determined by the instructor will be posted.

Complete Withdrawal (WD)
The grade WD is assigned by the University Registrar for complete withdrawal from all course work for the semester. All withdrawal requests are to be submitted to the University Registrar prior to the last day of class.

Grade Point Averages
Grade-point averages are calculated by multiplying the number equivalent of the letter grade by the number of credit hours for the course. The semester grade-point average is computed by dividing the total number of grade points earned at the university during a given semester by the sum of the credit hours for all courses in which the student received letter grades of A, B, C, D, or F taken at the university during that same semester. (Not all of these grades are given by all schools.)

For the purpose of semester grade calculations, grade points earned when a grade of Incomplete is replaced by the appropriate course grade are credited to the semester in which the incomplete grade was received, but status action (separation, probation, or restoration to good standing) taken at the end of that semester is not affected unless the grade change occurs by the first day of classes of the following semester. Qualification for honors is based on the same terms.

The cumulative grade-point average is computed by dividing the total grade points earned at the university by the sum of the credit hours for all courses included in the grade-point calculation.

Pass-No Pass
See specific colleges and schools for information about courses that may be taken on a pass-no pass basis and similar options.

Definition of a Credit-Hour
Program Integrity Rules issued by the U.S. Department of Education require institutions to establish a definition of "credit hour." CWRU's definition was approved by the Faculty Senate on 4/25/12 and applies to all degree programs (undergraduate through graduate/professional):

1. The assignment of credit-hours to a course occurs through a formal review process conducted at the appropriate levels of faculty governance.

2. For courses in lecture format, one credit-hour represents the subject content that can be delivered in one academic hour of contact time each week for the full duration of one academic semester, typically fourteen weeks along with a final examination period. For undergraduate courses, one credit-hour also includes associated work that can be completed by a typical student in 2-3 hours of effort outside the classroom. For graduate and professional courses taught in lecture format, 3-4 hours of outside work is expected for each academic hour of contact time.

3. For courses taught in other than lecture format (e.g., seminars, laboratories, independent study, clinical work, research, etc.), one credit-hour represents an amount of content and/or student effort that in aggregate is no less than that described in (2) above.
