Psychology is the study of the mind and behavior. The discipline embraces all aspects of the human experience: from the functions of the brain to the actions of neurons, from child development to care for the aged. In settings ranging from scientific research centers to mental health care services, "the understanding of behavior" is the enterprise of psychologists. An undergraduate major in psychology offers a student preparation for a wide variety of careers. Many majors find psychology to be an excellent preparation for such service-oriented professions as social work, counseling and guidance, special education, and management. Those who pursue graduate work in one of the many fields of psychology often seek positions in teaching and research or applied human services. In addition, the study of psychology provides a knowledge and an understanding of behavior that has applications in professions such as nursing, medicine, law, teaching, business, and public relations.

Communication Sciences Program | Psychology Program

Communication Sciences

Major

The major in communication sciences leads to the Bachelor of Arts degree. For many students, a BA in communication sciences is a pre-professional degree in preparation for graduate study in speech-language pathology or audiology. The undergraduate course work emphasizes the basic processes and acquisition of normal communication in children and adults. Graduate study then focuses on the study of disordered communication. (Please see the description of the Integrated Graduate Studies Program below.)

Students pursuing the BA are required to take 45 credit hours of course work which includes study in communication sciences and disorders, psychology, and English/linguistics, as well as in statistics and research design. A recommended course sequence is shown below. Please note, however, that an individual student’s sequence may differ from this one. For example, undergraduate students may elect to take 400- or 500-level graduate courses with departmental/instructor permission.

Suggested Sequence of Required Courses for the Bachelor of Arts Degree (45 credits)

Integrated Graduate Studies

The Integrated Graduate Studies (IGS) Program (p. 549) is intended for undergraduate students who are interested in obtaining a graduate degree in communication disorders (speech-language pathology). Qualified students may be accepted for admission to the School of Graduate Studies after completing 90 hours of undergraduate course work.

Typically, a master’s degree requires two additional years of study beyond the bachelor’s degree. Through the IGS Program, however, a student can complete an undergraduate degree in communication disorders and a master’s degree in communication disorders in five years. The recommended undergraduate sequence for students interested in the IGS Program is somewhat different from the recommended sequence presented above. Students should consult their academic advisor and the Office of Undergraduate Studies for additional information concerning IGS requirements.

Minor in Communication Sciences

The minor in communication sciences requires a minimum of 15 credit hours. It focuses on normal processes of speech, language, and hearing, as well as on the speech, language, and hearing disorders that result from breakdowns in these processes. Interested students should meet with an advisor for specific course requirements.

<table>

Minor in Health Communication

The minor in health communication offers introductory and advance study in theoretical and practical application of communication within a health context. It includes a variety of additional courses that students can choose according to their specific areas of interest. The course work is designed to appeal to students in such fields as pre-med, nursing, pre-law, public policy, public health, communication disorders, gerontological studies, nutrition, health management, and social work.

The minor requires 15 credit hours of course work, of which 9 credit hours come from required courses:

</tbody>
</table>

Minimum of 15 credit hours of elective course work chosen in consultation with advisor. * 15

Total Units: 30

* No more than 9 hours of practicum courses may be applied to the major.

Departmental Honors

Junior majors with a 3.0 overall GPA and a 3.25 GPA in psychology are encouraged to apply to the department’s honors program. This program consists of one three-credit course, PSCL 395 Capstone and Honors Program, in which students carry out, under faculty supervision, an independent project in their area of interest. Satisfactory completion of a paper based on this research qualifies students to receive their degree with honors in psychology noted on their academic transcript. PSCL 375
Research Design and Analysis is a prerequisite to PSCL 395 Capstone
and Honors Program.

Integrated Graduate Studies
The Department of Psychology participates in the Integrated Graduate
Studies Program (p. 549). Interested students should note the general
requirements and the admission procedures in this bulletin and may
consult the department for further information.

Communication Sciences Program | Psychology Program

Communication Sciences

Master of Arts
The principal goal of the Master of Arts program is to develop clinical
scientists who are skilled in the management of individuals with speech
and language disorders. The master’s program is accredited by the
Council on Academic Accreditation of the American Speech-Language-
Hearing Association (ASHA). Upon successful completion of the Master
of Arts degree, students will also meet the academic and clinical
practicum requirements for certification by ASHA and licensure in the
State of Ohio.

Degree requirements include completion of 42 credit hours of course
work, including a clinical practicum in communication disorders. In
addition, students must satisfactorily complete a clinical research project
or write a master’s thesis.

Clinical Opportunities in Speech, Language, and
Hearing Disorders
The program is affiliated with, and located in, Cleveland Hearing &
Speech Center (CHSC), a nonprofit agency that serves children and
adults with communication disorders. CHSC serves as the primary
training site for graduate students enrolled in clinical practice. Its
personnel and facilities provide exceptional clinical experiences for
students seeking clinical certification in speech-language pathology.

The program also draws on clinical resources in University Circle and
the Greater Cleveland area. In addition to clinical practicum experiences
at CHSC, graduate students complete at least two externships at
sites including University Hospitals of Cleveland, Rainbow Babies and
Children’s Hospital, MetroHealth Medical Center, Cuyahoga County
Board of Mental Retardation and Developmental Disabilities, Cleveland
Clinic Center for Autism, Legacy Health Services, and Western Reserve
Speech and Language Partners.

Doctor of Philosophy
The Doctor of Philosophy is awarded in recognition of (1) mastery,
at an advanced level, of a body of knowledge in the disciplines
of communication sciences and speech-language pathology, and (2) a
demonstrated ability to perform independent research and communicate
the results of that research. With the major advisor, the student designs
an individual plan of study based on his/her professional goals and
previous experience. Doctoral students choose a content area (such
as communication and aging, medically based speech disorders, or
child language development and disorders) as their primary focus of
study. However, they are also encouraged to enhance their scholarly
preparation by completing course work outside of their primary content
area.

In addition to course work within the department, doctoral students
may choose courses from graduate programs in other departments of
the College of Arts and Sciences, as well as from several professional
schools at the university, including the School of Medicine (e.g.,
nervescience, genetics), the Case School of Engineering (e.g.,
biomedical engineering), the School of Dental Medicine, the
Weatherhead School of Management, and the Mandel School of Applied
Social Sciences.

Requirements for the doctoral program include course work, research
rotations, a supervised classroom teaching experience, written and oral
comprehensive examinations, and a dissertation.

• A minimum of 36 hours of course work is required, including 9 credit
hours in statistics and research design and 3 credit hours of directed
study and research. Fifteen credit hours in the primary content area
are required.

• Two research rotations are required. One rotation is completed in the
primary content area with the major advisor. The second rotation is
completed with a faculty member other than the major advisor. The
dissertation research is not included in either of the two research
rotations.

• A supervised classroom teaching experience is completed under the
guidance of a faculty member in the program.

• Written and oral examinations are taken after all course work and
research rotations are completed.

• A dissertation prospectus is prepared under the guidance of a
committee consisting of the dissertation advisor and two additional
faculty members. A defense of the dissertation prospectus is required
prior to commencing the dissertation study.

• An oral defense of the dissertation takes place at the end of the
doctoral program.

Additional information about graduate work in communication sciences is
available on the program’s website (http://www.case.edu/artsci/cosi).

Psychology
The Department of Psychological Sciences offers full-time programs
leading to a PhD in clinical or experimental psychology. These programs
give students a thorough grounding in basic areas of psychological fact
and theory and prepare them for careers as researchers, teachers, and
practitioners. The Master of Arts degree can be earned in the department
as part of work toward a doctorate.

Clinical Psychology. The department’s program in clinical psychology,
which has been approved by the American Psychological Association,
emphasizes the scientist-practitioner model. Students participate in an
integrated curriculum of basic and applied courses, research activities,
and practicum and pre-internship placements. The program’s goal is to
prepare students to make meaningful contributions to the science and
profession of psychology by instructing them in broad applications of
clinical skills and research methods.

Experimental Psychology. Doctoral training in experimental psychology
prepares the student for an academic career in teaching and research.
It offers concentrations in developmental psychology, adulthood and
aging, cognitive psychology, mental retardation research, and social
psychology. Faculty members help students develop flexible programs of
study, according to individual interests.
Additional information about graduate work in psychology is available on the program’s website (http://psychology.case.edu).

**Department Faculty**

Lee A. Thompson, PhD  
(University of Colorado, Boulder)  
**Professor and Chair**  
Human behavior genetics; child development

Patrizia Bonaventura, PhD  
(The Ohio State University)  
**Assistant Professor**  
Simulation of speech production and biomechanical modeling of the vocal tract; motor control mechanisms in normal and disordered speech production; speech technology applications

Angela Hein Ciccia, PhD  
(Case Western Reserve University)  
**Assistant Professor**  
Neuroscience of communication and communication disorders in adolescents/adults, with focus on traumatic brain injury

Arin M. Connell, PhD  
(Emory University)  
**Jesse Hauk Shera Assistant Professor**  
Internalizing problems; coping skills during adolescence

Heath A. Demaree, PhD  
(Virginia Tech)  
**Professor**  
Cerebral and psychophysiological bases of emotion

Douglas K. Detterman, PhD  
(University of Alabama, Tuscaloosa)  
**Louis D. Beaumont University Professor**  
Human intelligence and intellectual disability

Anastasia Dimitropoulos, PhD  
(Vanderbilt University)  
**Assistant Professor**  
Genetic syndromes involving intellectual disabilities; compulsive behavior in MR/DD; functional neuroimaging

Julie J. Exline, PhD  
(State University of New York, Stony Brook)  
**Associate Professor**  
Social relationships; transgression; moral and religious issues

Joseph F. Fagan III, PhD  
(University of Connecticut)  
**Lucy Adams Leffingwell Professor**  
Development of and individual differences in cognition, perception, and intelligence

Norah C. Feeny, PhD  
(Bryn Mawr College)  
**Professor**  
Evaluation of interventions for anxiety (e.g., post-traumatic stress disorder) and mood disorders

Grover C. Gilmore, PhD  
(Johns Hopkins University)  
**Professor; Dean, Mandel School of Applied Social Sciences**  
Perceptual development and aging; visual information processing; memory; psychophysics

Robert L. Greene, PhD  
(Yale University)  
**Professor**  
Human memory and cognition

Barbara Lewis, PhD  
(Case Western Reserve University)  
**Professor**  
Familial and genetic bases of speech/language

T. J. McCallum, PhD  
(University of Southern California)  
**Associate Professor**  
Older adults; caregiving; ethnicity; stress and coping

James C. Overholser, PhD  
(Ohio State University)  
**Professor**  
Adult psychopathology; depression; suicide; personality disorders

Amy Przeworski, PhD  
(Pennsylvania State University)  
**Assistant Professor**  
Anxiety disorders; emotion regulation; cultural factors in family interactions

Kathryn (Krya) Rothenberg, PhD  
(Kent State University)  
**Instructor**  
Health communication

Sandra W. Russ, PhD  
(University of Pittsburgh)  
**Professor**  
Creativity; affective development in children; personality assessment; coping mechanisms in children

Elizabeth J. Short, PhD  
(University of Notre Dame)  
**Professor**  
Cognitive psychology; applied developmental; learning disabilities

Jennell Vick, PhD  
(University of Washington)  
**Assistant Professor**  
Study of movements of the face, lips, and tongue that generate speech; acquisition and development of speech in typically developing infants and children; impact of various disorders on speech acquisition, development, and production

**Lecturers**

Jennifer L. Butler, PhD  
(Case Western Reserve University)  
Social psychology

Patricia O. Carothers, MS, CCC-A  
(Ithaca College)  
Fluency disorders

Kathryn (Kay) McNeal, MS, CCC-SLP  
(Purdue University)  
**Clinical Program Director**  
Speech-language pathology

Jean Nisenboum, MA  
(Miami University)  
Dysphagia, Diagnosis of speech
Adjunct Faculty

Melissa Baker, MS, CCC-SLP
(Bowling Green State University)
Adjunct Instructor; Monarch Center for Autism
Speech-language pathology

Rachel Berkowitz, MA, CCC-SLP
(University of Cincinnati)
Adjunct Instructor, Mayfield Schools
Speech-language pathology

Laura Brady, MA, CCC-A
(Kent State University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Audiology

Lisa Bruening, MS, CCC-SLP
(University of Wisconsin)
Adjunct Instructor; ALS Association, Northern Ohio Chapter
Speech-language pathology

Jane R. Buder-Shapiro, PhD
Adjunct Assistant Professor; private practice

Michelle Burnett, MA, CCC-SLP
(Michigan State University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Speech-language pathology

Cameron Camp, PhD
Adjunct Professor; Myers Research Institute

Sandra Caramela-Miller, PhD
Adjunct Assistant Professor; Cuyahoga County Coroner's Office

Barbara Choudhury, MA, CCC-SLP
(Case Western Reserve University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Speech-language pathology

Margaret Duff, MA, CCC-SLP
(Kent State University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Speech-language pathology

Nicole Gerami, MA, CCC-SLP
(Case Western Reserve University)
Adjunct Instructor; private practice
Speech-language pathology

Robert Goldberg, PhD
Adjunct Associate Professor; Louis Stokes Cleveland VA Medical Center

Bernard P. Henri, PhD
(Northwestern University)
Adjunct Associate Professor; Director, Cleveland Hearing & Speech Center

Fluency disorders; professional issues in speech-language pathology; health care management

Douglas Hicks, PhD
(Vanderbilt University)
Adjunct Professor; Cleveland Clinic Foundation

Voice disorders

Vanessa Jensen, PhD
Adjunct Assistant Professor; Cleveland Clinic

Karen Kantzes, AuD, CCC-A
(A.T. Still University)
Adjunct Instructor, Cleveland Hearing & Speech Center
Audiology

Susan M. Knell, PhD
Adjunct Assistant Professor; Spectrum Psychological Associates

Marilyn Malkin, PhD
Adjunct Assistant Professor; private practice

Lauren Masuga, MA, CCC-SLP
(Miami University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Speech-language pathology

Darlene Moenter-Rodriguez, PhD
(Ohio State University)
Adjunct Assistant Professor; Louis Stokes Cleveland VA Medical Center
Auditory potentials

Shirley Prok
Adjunct Instructor; Sign Language Instructor, Cleveland Hearing & Speech Center

Aarti Pyati, PhD
Adjunct Assistant Professor; University Counseling Services

Philip Safford, PhD
Adjunct Professor; Emeritus, Kent State University

Ethan Schafer, PhD
Adjunct Assistant Professor; Spectrum Psychological Associates

Jeremy Shapiro, PhD
Adjunct Assistant Professor; Director, University Counseling Services

Harry Sivec, PhD
Adjunct Assistant Professor; Northcoast Behavioral Healthcare

Kenneth Weiss, PhD
Adjunct Assistant Professor; Louis Stokes Cleveland VA Medical Center

Brigid Whitford, AuD, CCC-A
(A.T. Still University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Audiology

Lucene Wisniewski, Ph.D.
Adjunct Assistant Professor; Cleveland Center for Eating Disorders

Eric Youngstrom, PhD
Adjunct Professor; Associate Professor of Psychology, University of North Carolina Chapel Hill

Secondary Faculty

Richard E. Boyatzis, PhD
Professor of Organizational Behavior, Weatherhead School of Management

Alan Castro, PhD
Senior Instructor; University Hospitals Case Medical Center
Howard Hall, PsyD, PhD  
Associate Professor, School of Medicine/Rainbow Babies and Children’s Hospital

Rebecca Hazen, PhD  
Assistant Professor, School of Medicine/Rainbow Babies and Children’s Hospital

Leslie L. Heinberg, PhD  
Associate Professor, The Cleveland Clinic Lerner College of Medicine

Carolyn Landis, PhD  
Associate Professor, School of Medicine/Rainbow Babies and Children’s Hospital

Britt A. Nielsen, PhD  
Assistant Professor, Department of Psychiatry, School of Medicine

Lynn Singer, PhD  
Professor, School of Medicine/University Hospitals

Terry Stancin, PhD  
Professor, School of Medicine/MetroHealth Medical Center

Thomas P. Swales, PhD  
Assistant Professor, School of Medicine/MetroHealth Medical Center

Gerry Taylor, PhD  
Professor, Department of Pediatrics, School of Medicine

Carol Sue White, PhD  
Associate Professor, School of Medicine/MetroHealth Medical Center

Abraham Wolf, PhD  
Professor, Department of Psychiatry, School of Medicine

James M. Yokely, PhD  
Assistant Professor, Department of Psychiatry, School of Medicine

Richard Pazol, PhD  
Clinical Instructor; University Counseling Services

Joy Pengilly-Wyatt, PhD  
Clinical Instructor; University Counseling Services

David Pincus, DMH  
Clinical Assistant Professor, Department of Psychiatry, School of Medicine

Robert Smith, PhD  
Clinical Assistant Professor; Behavioral Management Associates, Inc.

Terry Tobias, PhD  
Clinical Assistant Professor; Private Practice

---

**COSI Courses**

**COSI 101. Introduction to Health Communication. 3 Units.**  
An introductory examination of the influences associated with the functions of human life, communication processes, and research related to health and the health care industry from interpersonal, cultural, and organizational communication perspectives. The course will include a review of the history and development of health communication and the understanding and application of communication theories.

**COSI 109. Introduction to Communication Disorders. 3 Units.**  
Forty-two million Americans have some type of communication disorder. How does a person with a communication disorder cope with the challenges of daily living? This course will examine the characteristics of communication disorders via first hand and fictionalized accounts in books, films, and simulated communication disorders experiences. Topics will include disorders of speech, language, and hearing in children and adults. Effects of communication disorders on families.

**COSI 200. Interpersonal Communication. 3 Units.**  
Communication is a primary means of initiating, maintaining, and dissolving relationships. Managing interpersonal relationships is a human concern across several contexts. Interpersonal communication is a highly interactive course whereby participants investigate the foundations, processes, and issues associated with communication in relationships. The student will become sensitized to theories and processes via traditional lectures and textbook readings. The student is also expected to participate in group discussions. The result is a continuous dialogue with others about communication processes, and outcomes. The goal of this course is to provide a forum for both investigation and increased competence.

**COSI 211. Phonetics and Phonology. 3 Units.**  
Theoretical and applied study of the speech sounds of language. The use of the international phonetic alphabet as a tool for characterizing normal and deviant sound patterns. The linguistic structure and function of speech sound systems of both the adult and developing child.

**COSI 220. Introduction to American Sign Language I. 3 Units.**  
This course offers basic vocabulary training and conversational interaction skills in American Sign Language. Syntactic and semantic aspects of American Sign Language will be addressed.
COSI 221. Introduction to American Sign Language II. 3 Units.
This class is taught without voice, using functional, whole language approaches and in situ experiences, emphasizing communicative competency. It emphasizes sentence structure development, classifiers, and conversational regulating behaviors. It also covers inflection, role shifting, adverbial non-manual behaviors, temporal aspects, sequencing, and includes a brief introduction to ASL English diglossia and biolinguistic aspects. There will be opportunities for discussion of deaf culture. Prereq: COSI 220.

COSI 260. Multicultural Aspects of Human Communication. 3 Units.
Introduces intercultural/interracial communication by discussing specific communication principles and by putting theory into practice by exploring differences in perception, and verbal and nonverbal communication messages. Course emphasizes relationship between communication, race, culture; nature of race and culture; and how they influence the communication process. Various theories and approaches to study of intercultural/interracial communication will be discussed, along with significant concepts, processes and considerations. Practical outcomes of intercultural/interracial encounters also will be discussed.

COSI 280. Organizational Communication. 3 Units.
This course includes a review of the development of organizational communication theories and how application of theories enhances our understanding of various types of organizations. COSI 280 addresses the communication challenges faced by contemporary organizational leaders and members. Knowledge of the theories and development of analytical skills should improve students’ chances for successful interactions in diverse organizational situations and cultures.

COSI 301. Professional Speaking. 3 Units.
This course is designed to introduce students to theories and practices and to develop their abilities to speak effectively in public. Students will develop skills in organization and presentation of ideas for public and conference forums, in critical listening, and in proper use of technology. Students demonstrate abilities via written assignments, skill building exercises, oral presentations, rhetorical analysis, and group projects. The expectations in this course include high levels of participation and interaction. This is a departmental seminar course with a focus on formal presentation in settings related to health care. This course will be beneficial to students planning professions in the health sciences where responsibilities include public instruction and exposition and for those preparing for capstone presentations in the Department of Psychological Sciences programs. Activities include: 1. Readings from McKerrow et al. text, 2. Class discussions related to communication competence in differing communication settings, 3. Application opportunities to give speeches, to work in groups, and relate with others in one-on-one situations, 4. Written assignments. Prereq: Completion of 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, or FSCS and either COSI 109 or PSCL 101.

COSI 302. Instrumental Measurements in Speech Sciences. 3 Units.
This course will provide hands on experience on techniques for instrumental measurements of speech and voice parameters, for applications to assessment and diagnosis of speech and voice disorders, to linguistic analysis of speech parameters (prosodic and segmental), and to speech production modeling. In particular, instrumental measures of voice parameters will be carried out by Electroglottography; evaluation of Voice Range Profile and of perturbation of frequency (jitter) and amplitude (shimmer) of the laryngeal waveform, by dedicated KayPentax software (Visi-pitch and Voice Range Profile) and by Praat software; spectrographic analyses will be carried out by Praat software, and articulographic measurements will be performed by an AG200 Electromagnetic Articulograph. Nasalance will be measured by a KapyPentax nasometer. Emphasis on use rather than theory. All instrumentation is available at the Case Speech Production Lab. Recommended preparation: COSI 211, COSI 321/421, and COGS 203, or bases in phonetics, linguistics and speech science; also Physics and Engineering instrumentation courses are good preliminaries to this course. Offered as COSI 302 and COSI 402.

COSI 305. Neuroscience of Communication and Communication Disorders. 3 Units.
The course focus is neuroanatomy and neurophysiology related to motor control and cognition, particularly aspects of cognition involved in language functions. Topics to be addressed include: principles of neurophysiology and neurochemistry; functional neuroanatomy of the central and peripheral nervous systems; neurological and neuropsychological assessment of communication; neurodiagnostic methods. In part, the course material will be presented in a problem-based learning format. That is, normal aspects of human neuroscience will be discussed in the context of neurological disorders affecting communication. COSI 405 is an introduction to COSI 557 and COSI 561. Offered as BIOL 379 and COSI 305 and COSI 405.

COSI 313. Language Development. 3 Units.
Language acquisition theory and stages of development of syntax, semantics, pragmatics, and phonology in children. Contributions of biological, social, cognitive and environmental factors to process of language development. Information on language variation in multicultural populations. Open to majors and non-majors. Recommended prerequisite: Child Psychology. Offered as COSI 313 and COSI 413.

COSI 321. Speech and Hearing Science. 3 Units.
The course will focus on the aspects of normal speech production and perception and hearing perception. The purpose of this course is to provide a foundation in normal aspects of oral communication that will prepare students for advance study in the assessment and management of disorders of speech and hearing perception. Topics to be covered include motor speech control, aeromechanics, basic acoustics, phonatory acoustics, speech and hearing acoustics, psychoacoustics, and speech and hearing perception. Recommended preparation: COSI 325. Offered as COSI 321 and COSI 421.
COSI 325. Anatomy and Physiology of Speech and Hearing Mechanism. 3 Units.
The course will focus on normal anatomy and physiology of the body systems involved in the processes of speech, language, hearing, and swallowing including the following: the auditory, respiratory, phonatory, articulatory, resonatory, and nervous systems. In part, the course material will be presented in a problem-based learning format. That is, normal aspects of human anatomy and physiology will be discussed in the context of the disorders that affect the processes of human communication and swallowing.

COSI 332. Persuasion. 3 Units.
This survey course explores the history, theories, and dynamics of persuasion. There is an extensive focus on theoretical models of attitude change. Persuasion also plays a strong role in everyday aspects of our culture. Along these lines, we will investigate persuasion activities in everyday life from compliance gaining to media campaigns. Learning is conveyed through lecture, activities, and observation of the student’s everyday life. At the end of the semester, the astute student will be literate in a variety of persuasion strategies and dynamics.

COSI 340. Health Communication. 3 Units.
Various communication processes assume a central role in the acquisition and enactment of health care. This course examines communication activity across a broad range of health care contexts. Attention will be given to provider-client communication, communication, and ethical concerns, persuasive health promotion efforts, media impact on health, and basics in health communication methodology and research. Students will consider source, message, and receiver aspects of health communication as well as cultural and illness-specific issues. Prerequisite of COSI 101 for 300-level only. Offered as COSI 340 and COSI 440. Prereq: COSI 101.

COSI 345. Communication and Aging. 3 Units.
The normal and abnormal psychobiological changes that occur during aging and their effects on communication are addressed, as are communicative interaction styles, disordered communication, and rehabilitation practices. Graduate students are given an opportunity to incorporate information from their own disciplines in a special project, where appropriate. Offered as COSI 345 and COSI 445.

COSI 352. Introduction to Clinical Practice in Speech-Language Pathology. 3 Units.
Clinical assessment and teaching procedures as well as the role of research/theory in clinical practice. Procedures to observe, measure, analyze communication skills. Practical application through case studies. Students complete 25 hours of observation of speech/language assessment and intervention. Prereq: COSI 211 or COSI 313.

COSI 355. Introduction to Linguistics. 3 Units.
This course provides an introduction to linguistics, with application to clinical assessment, diagnosis and therapy of language disorders. In particular, the course provides an introduction to theory and methods of linguistics: universal properties of human language; phonetic, phonological, morphological, syntactic, and semantic structures and analysis; nature and form of grammar.

COSI 357. Acquired Neurogenic Communication Disorders. 3 Units.
This course is designed to provide knowledge about the theoretical foundations, etiologies, and characterizations of acquired language-based and cognitive-communication disorders in adults. The organization of the course is designed so that we will discuss communication disorders typically associated with left hemisphere lesions (e.g., aphasia), right hemisphere lesions (e.g., RHD), frontal lobe lesions (e.g., traumatic brain injury) and mesial temporal lesions (e.g., dementia). This course is intended to provide students with a framework for considering communication disorders of diverse medical etiologies rather than specific impairment types. The course is meant to provide information that can be used as a foundation for a clinically applied course in acquired language disorders. The course will focus on critical thinking, professional presentation (both oral and written), and critical consumption of research. Recommended preparation: Instructor consent for COSI 457 only. Offered as COSI 357 and COSI 457. Prereq: COSI 109.

COSI 370. Introduction to Audiology. 3 Units.
Disorders of hearing, assessment of hearing; including behavioral and objective measures; intervention strategies; and identification programs. Offered as COSI 370 and COSI 470. Prereq: COSI 325.

COSI 390. Independent Study. 1 - 6 Unit.
Individual study, under the guidance of a faculty member, involving specific programs of reading, research and special projects.

COSI 395. Honors Program. 3 Units.
Student completes an independent project in the student’s area of interest under the supervision of a faculty member. Prereq: STAT 201 or PSCL 282, and PSCL 375.

COSI 402. Instrumental Measurements in Speech Sciences. 3 Units.
This course will provide hands on experience on techniques for instrumental measurements of speech and voice parameters, for applications to assessment and diagnosis of speech and voice disorders, to linguistic analysis of speech parameters (prosodic and segmental), and to speech production modeling. In particular, instrumental measures of voice parameters will be carried out by Electroglottography; evaluation of Voice Range Profile and of perturbation of frequency (jitter) and amplitude (shimmer) of the laryngeal waveform, by dedicated KayPentax software (Visi-pitch and Voice Range Profile) and by Praat software; spectrographic analyses will be carried out by Praat software, and articulographic measurements will be performed by an AG200 Electromagnetic Articulograph. Nasalance will be measured by a KapyPentax nasometer. Emphasis on use rather than theory. All instrumentation is available at the Case Speech Production Lab. Recommended preparation: COSI 211, COSI 321/421, and COGS 203, or bases in phonetics, linguistics and speech science; also Physics and Engineering instrumentation courses are good preliminaries to this course. Offered as COSI 302 and COSI 402.
COSI 405. Neuroscience of Communication and Communication Disorders. 3 Units.
The course focus is neuroanatomy and neurophysiology related to motor control and cognition, particularly aspects of cognition involved in language functions. Topics to be addressed include: principles of neurophysiology and neurochemistry; functional neuroanatomy of the central and peripheral nervous systems; neurological and neuropsychological assessment of communication; neurodiagnostic methods. In part, the course material will be presented in a problem-based learning format. That is, normal aspects of human neuroscience will be discussed in the context of neurological disorders affecting communication. COSI 405 is an introduction to COSI 557 and COSI 561. Offered as BIOL 379 and COSI 305 and COSI 405.

COSI 413. Language Development. 3 Units.
Language acquisition theory and stages of development of syntax, semantics, pragmatics, and phonology in children. Contributions of biological, social, cognitive and environmental factors to process of language development. Information on language variation in multicultural populations. Open to majors and non-majors. Recommended prerequisite: Child Psychology. Offered as COSI 313 and COSI 413.

COSI 421. Speech and Hearing Science. 3 Units.
The course will focus on the aspects of normal speech production and perception and hearing perception. The purpose of this course is to provide a foundation in normal aspects of oral communication that will prepare students for advance study in the assessment and management of disorders of speech and hearing perception. Topics to be covered include motor speech control, aeromechanics, basic acoustics, phonatory acoustics, speech and hearing acoustics, psychoacoustics, and speech and hearing perception. Recommended preparation: COSI 325. Offered as COSI 321 and COSI 421.

COSI 440. Health Communication. 3 Units.
Various communication processes assume a central role in the acquisition and enactment of health care. This course examines communication activity across a broad range of health care contexts. Attention will be given to provider-client communication, communication, and ethical concerns, persuasive health promotion efforts, media impact on health, and basics in health communication methodology and research. Students will consider source, message, and receiver aspects of health communication as well as cultural and illness-specific issues. Prerequisite of COSI 101 for 300 - level only. Offered as COSI 340 and COSI 440.

COSI 445. Communication and Aging. 3 Units.
The normal and abnormal psychobiological changes that occur during aging and their effects on communication are addressed, as are communicative interaction styles, disordered communication, and rehabilitation practices. Graduate students are given an opportunity to incorporate information from their own disciplines in a special project, where appropriate. Offered as COSI 345 and COSI 445.

COSI 452A. Graduate Clinical Practicum I: Case Management. 1 Unit.
Addresses professional issues in speech-language pathology including case management, clinical effectiveness, counseling and working with families from diverse backgrounds. Four to ten hours of clinic contact per week at the Cleveland Hearing and Speech Center. (Maximum of 2 credits.) Recommended preparation: COSI 352 and COSI 413.

COSI 452B. Graduate Clinical Practicum II: Professional Issues. 1 Unit.
Addresses professional issues in speech-language pathology including case management, managed health care, ethics and interviewing. Four to ten hours of clinic contact per week at the Cleveland Hearing and Speech Center. (Maximum of 2 credits.) Recommended preparation: COSI 352, COSI 413, COSI 452A, and COSI 453.

COSI 452C. Graduate Clinical Practicum III: Special Populations. 1 Unit.
Addresses professional issues in speech-language pathology including case management, special clinical populations, collaborating with other professionals, teaming, leadership, and use of technology. Fifteen to thirty hours of clinic contact per week at area skilled nursing facilities, hospitals, rehab centers, early intervention centers, centers for developmentally disabled, private practices, etc. (Maximum of 2 credits.) Recommended preparation: COSI 352, COSI 452A, COSI 452B, COSI 453, and COSI 456.

COSI 452E. Graduate Clinical Practicum V: Medical Speech Pathology. 1 Unit.
Addresses professional issues in speech-language pathology including case management, special clinical populations, collaborating with other professionals, documentation, managed health care, and use of technology. Fifteen to thirty hours of clinic contact per week at area skilled nursing facilities, hospitals. (Maximum of 2 credits.) Recommended preparation: COSI 352, COSI 452A, COSI 452B, COSI 452C, COSI 453, and COSI 456.

COSI 453. Articulation and Phonology Disorders. 3 Units.
Overview of normal speech sound development and characterization of children with speech sound disorders. Distinctions between phonology and articulation are drawn. Theoretical as well as assessment and treatment issues are addressed.

COSI 455. Fluency Disorders. 3 Units.
Stuttering and related disorders of rhythm and prosody in terms of the symptomatology, etiology, measurement, and treatment of nonfluent speaking behavior.

COSI 456. Child Language Disorders. 3 Units.
COSI 457. Acquired Neurogenic Communication Disorders. 3 Units.
This course is designed to provide knowledge about the theoretical foundations, etiologies, and characterizations of acquired language-based and cognitive-communication disorders in adults. The organization of the course is designed so that we will discuss communication disorders typically associated with left hemisphere lesions (e.g., aphasia), right hemisphere lesions (e.g., RHD), frontal lobe lesions (e.g., traumatic brain injury) and mesial temporal lesions (e.g., dementia). This course is intended to provide students with a framework for considering communication disorders of diverse medical etiologies rather than specific impairment types. The course is meant to provide information that can be used as a foundation for a clinically applied course in acquired language disorders. The course will focus on critical thinking, professional presentation (both oral and written), and critical consumption of research. Recommended preparation: Instructor consent for COSI 457 only. Offered as COSI 357 and COSI 457.

COSI 463. Language and Literacy Across Content Areas. 3 Units.
This course focuses on research-based theories of reading, cognition, language, and learning. The student will use the content of their area (art, music, or speech-language pathology) as the target for organizing explicit instruction and strategies for word skills, reading comprehension, oral expression, vocabulary, and written language development as they apply to the culturally and linguistically diverse populations present in today’s schools. Curriculum planning and assessment strategies for instructional purposes are addressed. Federal legislation pertaining to the education of children with disabilities is included.

COSI 464. Case Studies in Communication Disorders: Diagnosis and Treatment. 3 Units.
Diagnosis as a clinical skill involving scientific hypothesis testing with clinical problem solving. The course includes academic learning combined with diagnostic clinic experiences. Overview of psychometric principles, survey of psychological communication tests, and measurements. Section on non-biased assessment. Instruction and practice in effective family interviewing techniques. Prereq: COSI 453 and COSI 456

COSI 470. Introduction to Audiology. 3 Units.
Disorders of hearing, assessment of hearing; including behavioral and objective measures; intervention strategies; and identification programs. Offered as COSI 370 and COSI 470. Prereq: COSI 325.

COSI 497. Methods of Research. 3 Units.
Pure and applied research design for speech language pathologists. Focus on evaluation of research methodology and the formulation of testable research questions.

COSI 556. Language Disorders 2: Language and Literacy. 3 Units.
This course focuses on research-based theories of reading, cognition, language, and learning disorders in the school-age and adolescent student. Language development of the older child during the school age and adolescent years will be reviewed. Topics include the development of metalinguistic skills, the expanding lexicon, narration and discourse, and advances in syntax and morphology. The relationship of spoken language to literacy will be discussed. The course will examine common language, literacy and learning disabilities during the school age years. The student will explore interventions for word skills, reading decoding and comprehension, oral expression, vocabulary, and written languages as they apply to the Speech Language Pathologist. Assessment and intervention strategies for the school-age child and adolescent with a language/learning disorder are included. The class format includes lectures, discussions of case studies, and experiential learning through the observation of therapy with the school age/adolescent student. Prereq: COSI 456.

COSI 557. Acquired Adult Language Disorders. 3 Units.
A model relating communication impairment to activities of daily living and quality of life will serve as the study of acquired neurogenic communication disorders in adults. The focus will be on dementia, aphasia, and the communication disorders associated with traumatic brain injury and right hemisphere stroke. Knowledge about the biological basis of neurogenic communication disorders will be applied in discussion on assessment and intervention for these disorders. Prereq: COSI 405 or equivalent.

COSI 560. Medical Aspects of Speech Pathology I: Voice Disorders. 3 Units.
Aspects of normal and abnormal voice production, evaluation and management of various voice and resonance disorders.

COSI 561. Med Aspects of Speech Path II: Neuromotor and Craniofacial Anomalies. 3 Units.
Speech disorders resulting from conditions acting on motor speech production including dysarthria and apraxia will be discussed. The speech production system, diseases and acquired and congenital neuropathological conditions that affect motor process and resulting speech disorders of phonation, articulation, resonance and prosody will be reviewed. Also covered will be the speech, language and hearing disorders stemming from craniofacial anomalies: cleft lip and palate. Principles and methods of assessment and treatment within an interdisciplinary rehabilitation framework will be reviewed for both types of disorders. Prereq: COSI 321 or COSI 421 and COSI 405 or equivalent.

COSI 562. Medical Aspects of Speech Pathology III: Dysphagia. 3 Units.
Course relates to medical speech-language pathology and includes analysis of clinical problems involving dysphagia in high risk populations. Course focus is on the anatomy and physiology of the normal swallow, dysphagia, early identification and prevention, the clinical swallow assessment, instrumental assessment and intervention in pediatric and adult populations.

COSI 580. Aural Rehabilitation. 3 Units.
The effects of hearing impairment, especially related to speech perception and language processing. Remediation and intervention strategies for hearing impaired children and adults, including speech reading, auditory training, and the use of hearing aids.
PSCL Courses

PSCL 101. General Psychology I. 3 Units.
Methods, research, and theories of psychology. Basic research from such areas as psychophysiology, sensation, perception, development, memory, learning, psychopathology, and social psychology.

PSCL 102. General Psychology II. 3 Units.
The applications of psychological research in normal problems of adjustment. Topics include: coping with anxiety, romance and marriage, and interpersonal behavior.

PSCL 230. Child Psychology. 3 Units.
Basic facts and principles of psychological development from the prenatal period through adolescence. Recommended preparation: PSCL 101.

PSCL 282. Quantitative Methods in Psychology. 3 Units.
The theory and application of basic methods used in the analysis of psychological data. Not available for credit to students who have completed STAT 201 or ANTH 319.

PSCL 313. Psychology of Personality. 3 Units.
The development and organization of personality; theories of personality and methods for assessing the person; problems of personal adjustment.

PSCL 315. Social Psychology. 3 Units.

PSCL 317. Health Psychology. 3 Units.
Examines psychological processes that affect physical health. Covers the physiological factors affecting the immune system, chronic physical disorders, pain, compliance with prescribed medical treatments, the effects of stress and coping, the effects of the patient-physician interaction, and the psychological aspects of the hospital and the health care systems. Recommended preparation: PSCL 101.

PSCL 321. Abnormal Psychology. 3 Units.

PSCL 325. Psychotherapy and Personality Change. 3 Units.
Three methods of psychotherapy (behavioral, psychoanalytic, and client-centered) are discussed. The therapy techniques and the manner by which personality change is effected are examined. Recommended preparation: PSCL 101.

PSCL 329. Adolescence. 3 Units.
Psychological perspectives on physical, cognitive, and social development. Recommended preparation: PSCL 101.

PSCL 334C. Seminar and Practicum: Hospitalized Children. 3 Units.
Supervised field placement and attendance at staff conferences in various child and adolescent settings. Regular seminar meetings. Prereq: PSCL 230.

PSCL 335C. Seminar and Practicum: Hospitalized Child. 3 Units.
Supervised field placement and attendance at staff conferences in various child and adolescent settings. Regular seminar meetings. Prereq: PSCL 230 and Junior or Senior Status.

PSCL 338. Seminar and Practicum in Adolescents. 3 Units.
Supervised field placement and attendance in early childhood, child, and adolescent settings including preschools, schools, hospitals, and neighborhood centers. This class is used to fulfill requirements by the Ohio Department of Education teacher licensure program. Recommended preparation: PSCL 101, EDUC 301, EDUC 304, and permission of program director. Offered as EDUC 338, PSCL 338, and SOCI 338.

PSCL 344. Developmental Psychopathology. 3 Units.
This course will focus on the interplay of biological, psychological, familial, and social determinants of disorders ranging from autism to delinquency and bulimia. Recommended preparation: PSCL 230 or PSCL 321. Offered as PSCL 344 and PSCL 444.

PSCL 350. Behavior Genetics. 3 Units.
Examines the impact of both nature and nurture on human behavior. Basic quantitative genetic methodology will be covered. Current family, twin and adoption studies in the areas of personality, intelligence, alcoholism, criminality, and psychopathology will be reviewed. Recommended preparation: PSCL 101.

PSCL 352. Physiological Psychology. 3 Units.
This course is designed to teach the fundamentals of neural communication and central nervous system structure. Special attention is placed on common neurological illnesses and their psychopharmacological treatments. Neural systems underlying sensory/perceptual, motor, and higher-order cognitive processes are also explored. Prereq: PSCL 101.

PSCL 353. Psychology of Learning. 3 Units.
The basic methods in the study of learning. The major theories proposed to account for the learning process. Development of the fundamental concepts and principles governing the learning process in both humans and lower animal. Recommended Preparation: PSCL 101.

PSCL 355. Sensation and Perception. 3 Units.
PSCL 357. Cognitive Psychology. 3 Units.

PSCL 369. Adult Development and Aging. 3 Units.
An overview of concepts and research relating to adult development and aging. The lifespan perspective will be used in examining major developmental paradigms. Personality and cognitive lines of development will be traced across the lifespan. Data from both longitudinal and cross-sectional studies will be analyzed. Both normal and pathological aging will be discussed. Special emphasis will be given to areas of cognitive deterioration in aging. Implications for optimal adult development and aging will also be discussed.

PSCL 370. Human Intelligence. 3 Units.
Survey of individual differences in human intellect including construction and administration of intelligence tests, theories and models of intelligence, and the role of heredity and environment in intelligence and the development of intelligence. This course will also examine the relationships of cognitive abilities to intelligence and human to artificial intelligence. Recommended preparation: PSCL 101.

PSCL 375. Research Design and Analysis. 3 Units.

PSCL 379. Neurodevelopmental Disabilities. 3 Units.
Ways in which neurobehavioral development can go awry, the causes of such deviations, and their consequences. The course builds on basic psychological and neuroscience concepts to explore the manner in which developmental disabilities occur, ways of preventing disabilities, and approaches to ameliorating and managing disabling conditions. Recommended preparation: PSCL 101 and PSCL 230.

PSCL 382. Psychological Measurement. 3 Units.

PSCL 388. Human Sexual Behavior. 3 Units.
Sex is approached as a form of personal and interpersonal behavior. A broad range of theories from social psychology will be used to explain human sexual behavior, and these will be evaluated by using facts and findings from recent research studies. Topics include sexual relationships, gender differences, promiscuity, rape and coercion, finding and choosing sex partners, sexual risk-taking, harassment, sexual identity and orientation, cultural influences and differences, evolution of sexual motivations, prostitution, pornography, and love. Prereq: PSCL 101 and PSCL 315.

PSCL 389. Emotion and Emotion Regulation. 3 Units.
This course will focus on academic research associated with emotional processes and emotion regulation. Specifically, we will answer questions like: What are emotions, and why are they important? How are emotions communicated, and how do researchers measure them? How do emotions influence one’s thinking ability, and visa-versa? What is emotion regulation? How do people differ in terms of their overall happiness and well-being, the degree to which they seek/avoid positive/negative experiences, and how they try to control their emotions? And what brain mechanisms are involved in emotional processing and emotion regulation? This course is also intended to help students read research in a thorough, critical manner, which may have a positive impact on students considering an academic career. Prereq: PSCL 101 and PSCL 352.

PSCL 390. Seminars in Psychology. 1 - 3 Unit.
Surveys of special subject areas. Topics vary in response to faculty and student interests. Small group discussion. Prerequisite depends on content.

PSCL 391. Psychology Capstone Research Using Data Archives. 3 Units.
In this course, each student will derive and address a research question by identifying and analyzing archived publicly available data. Successful completion of the course will require: training in ethical research involving human participants; a critical review of the literature on a specific area of psychology with the goal of creating a research question; identification of a set of variables in a publicly available data set that can be used to address the research question, a final written research report in a format acceptable for publication in a psychological research journal, and an oral presentation of the research. Prereq: PSCL 101 and PSCL 282 or equivalent (ANTH 319, STAT 201), and PSCL 375.

PSCL 393. Experimental Child Psychology. 3 Units.
The development of behavior from birth to adolescence. Growth of basic processes such as perception, learning, memory, intelligence, and language in the light of current theoretical models. Recommended preparation: PSCL 101.

PSCL 394. Psychology Capstone Seminar: Current Problems. 3 Units.
This seminar course will revolve around the identification and critical examination of current problems in society. Insights gained from psychological research will be applied to better understand these problems. Successful completion of the course will require critical analysis of published research, integration of information from different areas of psychology and from different disciplines, an oral presentation, and a final written research report including a literature review. Prereq: PSCL 375.

PSCL 395. Capstone and Honors Program. 3 Units.
Supervision in carrying out an independent research study in the student’s area of interest. Prereq: PSCL 375.

PSCL 396. Anxiety and Depression: Symptoms, Etiology, and Treatment. 3 Units.
A research-based and writing-intensive presentation of current knowledge regarding the symptoms, etiology, and treatment of anxiety disorders and mood disorders.
PSCL 397. Independent Study. 1 - 3 Unit.
Individual study involving specific programs of reading, research, and special projects. Prereq: PSCL 101.

PSCL 398C. Child Policy Externship and Capstone. 3 Units.
Externships offered through CHST/ANTH/PSCL 398C give students an opportunity to work directly with professionals who design and implement policies that impact the lives of children and their families. Agencies involved are active in areas such as public health, including behavioral health, education, juvenile justice, childcare and/or child welfare. Students apply for the externships, and selected students are placed in local public or nonprofit agencies with a policy focus. Each student develops an individualized learning plan in consultation with the Childhood Studies Program faculty and the supervisor in the agency. Offered as CHST 398C, ANTH 398C, and PSCL 398C. Prereq: CHST 301.

PSCL 401. Sensation and Perception. 3 Units.
Role of sensory and perceptual processes in adjustment. Theories and experimental work dealing with such topics as nativism vs. empiricism, perception without awareness, perception and personality, effects of drugs on personality, effects of drugs on perception, pathology of perception. Limited to graduate students.

PSCL 402. Cognition and Information Processing. 3 Units.
Aspects of cognition beyond the area of sensation and perception, involving symbolic processes, especially problems of meaning, conceiving, reasoning, judging, and thinking.

PSCL 403. Physiological Foundations of Behavior. 3 Units.
Fundamental neurological processes controlling behavior.

PSCL 404. Learning Theory. 3 Units.
The research literature in learning; theoretical formulations of contemporary learning theorists. Limited to graduate students.

PSCL 405. Personality Theory. 3 Units.
General problems and systematic points of view in the analysis of personality. Limited to graduate students.

PSCL 407. Research Design and Quantitative Analysis I. 3 Units.
Intermediate research design and statistical analysis used in psychological research. Statistical inference from single variables, elementary principles of probability, correlation and regression. Recommended preparation: PSCL 282.

PSCL 408. Research Design and Quantitative Analysis II. 3 Units.

PSCL 409. Advanced Social Psychology. 3 Units.
Major theories, methods, and problem areas of social psychology. Psychological development of the individual group structures and dynamics.

PSCL 410. Developmental Psychology. 3 Units.
The research literature and theoretical formulation in the area of developmental psychology. Limited to graduate students.

PSCL 412. Measurement of Behavior. 3 Units.

PSCL 418. History and Systems. 3 Units.
Historical antecedents of modern psychology.

PSCL 424. Clinical Interviewing. 3 Units.
Introduction to diagnostic and therapeutic interviewing.

PSCL 425. Methods of Assessment I. 3 Units.
Limited to graduate students in clinical psychology. Recommended preparation: Graduate standing in psychology with department permission.

PSCL 426. Methods of Assessment II. 3 Units.
Methods of psychological assessment, emphasizing personality and family function in childhood and adulthood. Recommended preparation: Limit to Grad students in Clinical Psychology. Requires approval of the Director of Clinical Training.

PSCL 429. Practicum in Assessment I. 1 Unit.

PSCL 430. Practicum in Assessment II. 1 Unit.
Recommended preparation: Approval of the Director of Clinical Training or concurrent enrollment in PSCL 426.

PSCL 431. Supervised Field Placement Year 2. 0 Units.
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all second year students in the clinical psychology training program. Recommended preparation: PSCL 425, PSCL 426.

PSCL 444. Developmental Psychopathology. 3 Units.
This course will focus on the interplay of biological, psychological, familial, and social determinants of disorders ranging from autism to delinquency and bulimia. Recommended preparation: PSCL 230 or PSCL 321. Offered as PSCL 344 and PSCL 444.

PSCL 451. Special Topics in Psychology. 1 Unit.
These 1 credit mini-courses should provide enjoyable opportunities for students to explore interesting material related to clinical psychology that has not been covered in other required courses. A primary goal is to stimulate interest and discussion in the area. Thus, students will not be expected to write term papers or take any exams. In terms of background reading, students should be provided with roughly one journal article per hour of class meeting. The course is graded pass/no pass, and grading will be based on class attendance and class participation.

PSCL 453. Seminars in Psychology. 1 - 3 Unit.
A special problem or topic. Content varies with student and faculty interest. Recent offerings: creative thinking in research, community psychological, evaluation of community processes, experimental and computer methods, consultation, and psychoanalytic ego psychology.

PSCL 469. Psychology of Aging. 3 Units.
Normal psychological development in later life; psychological development in the oldest old; definitions and assessment of successful aging.
PSCL 497. Graduate Independent Study. 1 - 3 Unit.
Independent research and reading programs with individual members of the faculty.

PSCL 501. Seminar: Pediatric Psychology. 1 - 3 Unit.
Seminar on current research topics, research design and methodological issues related to pediatric psychology. Introductory lectures provide an overview of research populations, methods, and practical issues appropriate to research with pediatric populations.

PSCL 502. Seminar: Pediatric Psychology. 1 - 3 Unit.
Seminar examining specific topics in pediatric psychology. Topics will deal with issues of infant development. Infants at risk for disability, neuropsychology and learning disabilities, and childhood psychopathology. Recommended preparation: Limited to Graduate students in Psychology department.

PSCL 510. Psychology and Diversity. 3 Units.
Diversity and multiculturalism in psychological theory, research and practice.

PSCL 524. Advanced Psychopathology. 3 Units.
Theoretical issues and current research data bearing on major patterns of psychological disturbance.

PSCL 525. Ethical and Professional Issues in Psychology. 3 Units.
Consideration of legal and ethical principles in research and practice in clinical psychology and contemporary controversies in professional psychology. Recommended preparation: Graduate standing in Psychology

PSCL 529A. Practicum in Intervention I: Behavior Therapy. 1 Unit.
Recommended Preparation: Graduate standing in clinical psychology.

PSCL 529C. Practicum in Intervention I: Psychodynamic. 1 Unit.
Recommended preparation: Graduate standing in clinical psychology.

PSCL 530A. Practicum in Intervention II: Behavior Therapy. 1 Unit.
Recommended preparation: Graduate standing in clinical psychology.

PSCL 530C. Practicum in Intervention II: Psychodynamic. 1 Unit.
Recommended preparation: Graduate standing in clinical psychology.

PSCL 531A. Seminar in Intervention I: Behavior Therapy. 2 Units.
Theoretical issues and research on psychological interventions. Recommended preparation: Graduate standing in clinical psychology.

PSCL 531C. Seminar in Intervention I: Psychodynamic. 2 Units.
Theoretical issues and research on psychological interventions. Recommended preparation: Graduate standing in clinical psychology.

PSCL 532A. Seminar in Intervention II: Behavior Therapy. 2 Units.
Theoretical issues and research on psychological interventions. Recommended preparation: Graduate standing in clinical psychology.

PSCL 532C. Seminar in Intervention II: Psychodynamic. 2 Units.
Theoretical issues and research on psychodynamic intervention. Recommended preparation: PSCL 531C and graduate standing in clinical psychology.

PSCL 535. Child and Family Intervention. 2 Units.
A course for advanced clinical graduate students that covers psychodynamic and cognitive behavioral approaches for working with children and adolescents and systems approaches for working with families.

PSCL 536. Advanced Child and Family Intervention. 2 Units.
A course for advanced clinical graduate students that covers evidence-based approaches to child and family therapy as well as parent training. Special emphasis on empirically guided treatment planning and outcome evaluation.

PSCL 537. Child and Family Case Seminar I. 1 Unit.
Clinical graduate students in child and family field placements present and receive group supervision on ongoing cases.

PSCL 538. Child and Family Case Seminar II. 1 Unit.
Clinical graduate students in child and family field placements present and receive group supervision on ongoing cases.

PSCL 539. Supervised Field Placement Year 3. 0 Units.
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all third year students in the clinical psychology training program. Recommended preparation: PSCL 531A, PSCL 532A.

PSCL 540. Supervised Field Placement Year 4. 0 Units.
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all fourth year students in the clinical psychology training program. Recommended preparation: PSCL 531A, PSCL 532A.

PSCL 601. Special Problems. 1 - 18 Unit.
(Credit as arranged.)

PSCL 651. Thesis M.A.. 1 - 18 Unit.
(Credit as arranged.)

PSCL 700. Internship. 0 Units.
Full-time predoctoral internship in clinical psychology. Required of all students in clinical psychology program. Registration requires written consent of director of clinical psychology training and must be for one calendar year.

(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
Department of Religious Studies

The academic study of religion at Case Western Reserve University is multicultural, non-sectarian, and both disciplinary and interdisciplinary. Students examine a range of past and present cultures and societies using methods and approaches drawn from the humanities, arts, social sciences, and sciences, all of which sharpen critical and evaluative skills. Religious beliefs, institutions, and practices are studied with emphasis placed on the critical problems and possibilities inherent in current theories, methods, and technologies.

The Department of Religious Studies offers both undergraduate (Bachelor of Arts) and graduate (Master of Arts) degrees. Undergraduates may pursue either a major or minor in the department; outstanding students may apply for the departmental honors program. Both the major and minor programs acquaint students with significant religious texts and traditions and with the cultures and societies in which these traditions are grounded. Majors are encouraged to participate in study abroad programs.

Where appropriate, courses are designed to utilize Internet and other technological resources, cultural institutions in University Circle, and the cultural diversity of Greater Cleveland. Several 300-level courses may be taken for graduate credit by fulfilling additional course requirements. The Department of Religious Studies also contributes courses to and supports a number of the college’s interdisciplinary programs and centers, such as Asian Studies, Environmental Studies, Ethnic Studies, Women’s and Gender Studies, International Studies, and Judaic Studies.

The academic study of religion, combined with appropriate courses in other fields, provides an excellent background for any professional career that involves interaction with diverse populations—including law, engineering, medicine and health care professions, journalism, and social work—and for graduate studies in a number of fields. A major in religious studies provides a well-rounded liberal arts education or can be combined conveniently with a second major. A minor in religious studies complements and broadens any field chosen as a major.

Undergraduate Programs

Major

Students majoring in religious studies must complete a minimum of 30 semester hours. Requirements for the major are as follows:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>RLGN 102</td>
<td>Introduction to the Study of Religion</td>
<td>3</td>
</tr>
<tr>
<td>RLGN 299</td>
<td>Method and Theory in the Study of Religion</td>
<td>6</td>
</tr>
<tr>
<td>&amp; RLGN 399</td>
<td>and Major/Minor Seminar</td>
<td></td>
</tr>
</tbody>
</table>

Seven courses dealing with the academic study of religion  **  21

Total Units  30

* RLGN 102 Introduction to the Study of Religion introduces students to various approaches to the academic study of religion, including (but not limited to) sociological approaches, cultural/anthropological approaches, and psychological approaches. It also introduces students to at least four different religious traditions.

** Subsequent course selections (totaling 21 credit hours) will be determined in consultation with the student’s major advisor and should display some diversity in themes and topics. Up to six of these credit hours may be taken outside the Department of Religious Studies, provided that the courses relate to the overall character of the major.

Departmental Honors

Majors who have an overall grade point average of 3.5 and a grade point average of 3.5 in religious studies courses may apply for the honors program. Such students should take RLGN 299 Method and Theory in the Study of Religion in the fall semester and RLGN 395 Honors Research II (instead of RLGN 399) in the spring semester of the senior year. During the fall semester, the student will work with an honors advisor to prepare a proposal to be approved by the department no later than the end of the first semester. Departmental honors are awarded upon completion and satisfactory defense of the senior project before a faculty committee, provided that the required grade point averages are maintained.

Minor

A minor in religious studies requires at least 18 credit hours, to include the following:

<td>and Major/Minor Seminar</td>
<td></td>
</tr>
</tbody>
</table>

Nine hours of elective credit  *  9

Total Units  18

* The nine hours of elective credit hours are chosen in consultation with a departmental advisor. The courses should demonstrate study of diverse religious traditions.

General Information

The department offers a graduate program leading to a Master of Arts degree in Religious Studies. This two-year program concentrates on method and theory in the study of religion. The MA is designed to give students from a variety of backgrounds a solid foundation in the methods used in the contemporary study of religion.

Total Units in Sequence: 30

**Courses**

**RLGN 102. Introduction to the Study of Religion. 3 Units.**
Introduction to the academic study of religion and of the religious dimensions of life. Open to all students but prerequisite for majors and minors in religious studies.

**RLGN 190. Sacred Space in Western Religions. 3 Units.**
A significant problem facing all three of the great western religious traditions -- Judaism, Christianity and Islam -- is how to establish a sacred space on earth for the worship of a deity which cannot be contained. In many ways, architectural and artistic decisions about the location, internal layout, orientation and other features of such sacred spaces reflect deep presuppositions in each religion about the divine and how worship is to be effected in a human context. This course will be based around visits to a number of religious buildings to examine how one might understand and interpret such spaces.

**RLGN 204. Introduction to Asian Religions. 3 Units.**
Principal Asian religious traditions based on a study of classical sources. Classical Chinese thought, Hinduism, and Buddhism. Readings include selections from the works of Confucius, Mencius, Mo Tzu, Lao Tzu, Chuang Tzu, the Mahabharata, the Bhagaavad Gita, and the early Buddhist canon.

**RLGN 206. Religion and Ecology. 3 Units.**
Historical and cross-cultural introduction to religious perspectives on nature and ecology, including Jewish, Christian, Hindu, Buddhist, and Native American texts and ritual practices. Themes include: ecology of chaos and complexity, urban ecology, wilderness, and ecological crises.

**RLGN 207. Women and Religion. 3 Units.**
Examination of feminist perspectives on religion, such as the status of women in Western and non-Western religions, the nature and purpose of religious beliefs and practices from the standpoints of religious and non-religious feminists, the current status of feminist philosophies of religion, and the efforts of feminists to transform traditional religions and to create new religions. Offered as RLGN 207 and WGST 207.

**RLGN 208. Introduction to Western Religions. 3 Units.**
Basic introduction to the three great monotheistic religions of the Western World: Christianity, Judaism, and Islam. All three of these religious traditions trace their roots to the faith of biblical Israel as revealed by a series of prophets including Noah, Abraham, and Moses. Each absorbed the philosophy and science of the Greco-Roman world and went on both to influence and struggle with each other. Many of the religious problems of the contemporary world, from Afghanistan to the Middle East to Yugoslavia, can be traced to tension within and between these religious groups. Offered as RLGN 208 and JDST 208.

**RLGN 209. Introduction to Biblical Literature. 3 Units.**
This course is an introduction to the academic study of biblical literature, including Hebrew Scriptures ("Old Testament") and the New Testament. The literature will be studied in light of both ancient and contemporary historical contexts, with a particular emphasis on the roles it plays in American culture and politics today. Class sessions will be discussion oriented and will involve close, careful analysis and interpretation of texts. No background in religion is necessary. Evaluation will be based on class preparation and participation, regular short writing assignments, two exams, and a major paper.
RLGN 211. Great Books of Western Religion. 3 Units.
Students will engage with the major writings that have shaped Western religious traditions (Christianity, Judaism, Islam) from their earliest expressions until the present day. Readings include the foundational Scriptures (Hebrew Bible, New Testament, Quran) of each tradition, religious poetry and other writings from the Middle Ages, and modern writers on spiritually and religiously within each of these traditions. The course will be conducted as a seminar, in which students will read the selected original texts and will discuss their religious and spiritual meaning and significance in class. Each student will also prepare a final project based on the assigned authors or readings. Offered as RLGN 211 and JDST 211.

RLGN 212. Introduction to Christianity. 3 Units.
An introduction to the history, thought and culture of Christianity and its diverse traditions. Course will include field research with local Christian religious institutions.

RLGN 215. Religion In America. 3 Units.
Survey of religious histories in North America, from the trans-Bering migrations to the present. Drawing from a variety of approaches such as social history, ritual studies, and institutional and doctrinal histories, this course charts the religious development of various groups including Native Americans, African Americans, Euro-Americans, and others.

RLGN 216. Hinduism I: The Vedic, Epic and Puranic Periods. 3 Units.
This course will provide an introduction to the Vedic, Epic and Puranic periods in the development of Hinduism. We will read a range of primary sources produced during these times. These texts were composed between 1500 BCE and the 5th century CE. The course has an emphasis on research and writing. We will not be examining contemporary issues or practice. The goal of the class is to gain detailed understanding of the kind of world(s) that were envisioned in these forms of early "Hinduism."

RLGN 217. Buddhism. 3 Units.
The development of Buddhism. The life and teaching of the Buddha, the formation of the early Buddhist church, the schools of Hinayana Buddhism and Abhidharma philosophy, Nagarguna and the emergence of Mahayana Buddhism, the spread of Buddhism to China, the transformation of Buddhist thought in China, Zen Buddhism, the spread of Buddhism to the West. 

RLGN 218. Islam: Faith and Politics. 3 Units.
An overview of the relationship between Islam as a religion and Islam as a political system and the effects of this relationship on Islamic society from its origin to the present time.

RLGN 221. Indian Philosophy. 3 Units.
A survey of Indian philosophical thought with emphasis on the Vedas, early Hindu, and Jain literature. Offered as PHIL 221 and RLGN 221.

RLGN 222. African-American Religions. 3 Units.
This course is an exploration of the rich diversity of African American religions from the colonial period to the present. Attention will be given to key figures, institutional expressions, and significant movements in African American religious history. Major themes include African traditions in African American religions, slavery and religion, sacred music, social protest, Black Nationalism in religion, Islam, African American women and religion, and black and womanist theologies. Course requirements will include field trips to local religious sites. Offered as ETHS 222 and RLGN 222.

RLGN 223. Religious Roots of Conflict in the Middle East. 3 Units.
The course is about the rhetoric and symbols used by various voices in the Middle East in the ongoing debate about the future shape of the region. For historical and cultural reasons, much of the discourse draws on religious symbolism, especially (although not exclusively) Islamic, Jewish and Christian. Because of the long and complex history of the region and the religious communities in it, virtually every act and every place is fraught with meaning. The course examines the diverse symbols and rhetorical strategies used by the various sides in the conflict and how they are understood both by various audiences within each community and among the different communities.

RLGN 231. Jews in the Modern World. 3 Units.
Investigation of the impact of modernity on the Jewish community. In particular, the course will examine the influence of the Enlightenment in the social situation of the Jews in Europe and America and the corresponding changes in Judaic religion, philosophy, social structure, and culture. Attention will be paid to the creation of a modern Jewish identity in the secular culture of the post-Modern world. Offered as HSTY 238, JDST 231, and RLGN 231.

RLGN 233. DESI: Diaspora, Ethnicity, Southas(n), Interrogate. 3 Units.
In this class we will interrogate the cultural Identity(ies) and imagined community(ies) of the "South Asian" Diaspora. We will first examine taxonomy and categorization itself, as a methodical, philosophical, and political enterprise. We will then examine how such contrived categories have been applied to the so-called desis, loosely and broadly understood as members of the South Asian Diaspora. To this end we will scrutinize the development of American(ized)) "Hinduism." the imagined location that desis have in North American racial and ethnic hierarchies, and the construction of assimilated, enculturated, and transnational imagined desi communities. Offered as RLGN 232, ETHS 232 and HSTY 232

RLGN 235. Religion and Visual Culture. 3 Units.
Cross-cultural introduction to complex relations between religion and seeing. Study of visual culture, sacred iconography, calligraphy, film, mass media, and avant-garde fashion. Extensive use of cultural resources in University Circle.

RLGN 237. Religion and Dance in South Asia. 3 Units.
This is an experimental interdisciplinary course in religion, dance, and South Asian studies. We will explore the performance of religion in bharata natyam, one storytelling dance form from South Asia. This dance style draws upon Hindu devotional (bhakti) allegories of sacred and profane love in its choreography. Lover and beloved, as the ideal relationship between God and the human, becomes the model for the performed relationship between heroes and heroines (nayaka-nayaki) danced on stages and, more recently, Bollywood screens. To this end we will examine primary and secondary sources on bharata natyam and aesthetic theory/classical dramatics. We will also observe dance performances in the greater Cleveland area. Offered as RLGN 237 and DANC 237.
RLGN 238. Alternative Altars: Folk Religion in America. 3 Units.
Taking a multidisciplinary approach, students will become familiar with the distinction between conventional and unconventional religions, with the history and personalities associated with new belief systems in America, and with the means, motivations and methods of generating faith communities. Students will come to understand the role of cultural anxieties, new technologies, changing roles, globalization and other social tensions in the formation and duration of alternative altars.

RLGN 240. The Heavens in Religion and Science. 3 Units.
Review of the relationships between scientific descriptions of the natural world and the religious and ethical implications drawn from those in Western civilizations. Introduction to the close cooperation between religion and science in the West until the modern period and review of the breakdown of that relationship in the past 200 years.

RLGN 251. Perspectives in Ethnicity, Race, Religion and Gender. 3 Units.
This course is designed to introduce students to the study of ethnicity. Basic concepts such as race, gender, class, and identity construction will be examined. Students are encouraged to use the tools and perspectives of several disciplines to address the experiences of ethnic groups in the United States. Offered as ETHS 251 and RLGN 251.

RLGN 254. The Holocaust. 3 Units.
This class seeks to answer fundamental questions about the Holocaust: the German-led organized mass murder of nearly six million Jews and millions of other ethnic and religious minorities. It will investigate the origins and development of racism in modern European society, the manifestations of that racism, and responses to persecution. An additional focus of the course will be comparisons between different groups, different countries, and different phases during the Nazi era. Offered as HSTY 254, RLGN 254, ETHS 254, and JDST 254.

RLGN 260. Introduction to the Qur'an. 3 Units.
This course explains the complexities of the Qur'an and provides an entree into a text that has shaped the lives of millions for centuries. In addition to a comprehensive introduction to the Qur'an, the course will examine problems of translation and the major subjects addressed in the Qur'an: Muhammad and revelation, God and the Last Judgment, prophets in general, and the Qur'an as a law book. Also discussed will be the relations of Muslims to the other Peoples of the Book, namely Jews and Christians.

RLGN 268. Women in the Bible: Ethnographic Approaches to Rite and Ritual, Story, Song, and Art. 3 Units.
Examination of women in Jewish and Christian Biblical texts, along with their Jewish, Christian (and occasionally Muslim) interpretations. Discussion of how these traditions have shaped images of, and attitudes toward, women in western civilization. Offered as RLGN 268, WGST 268, and JDST 268.

RLGN 270. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCS, FSNA, FSSO, FSSY, FSTS, FSCS.

RLGN 272. Morality and Mind. 3 Units.
Recent research in cognitive science challenges ethical perspectives founded on the assumption that rationality is key to moral knowledge or that morality is the product of divine revelation. Bedrock moral concepts like free will, rights, and moral agency also have been questioned. In light of such critiques, how can we best understand moral philosophy and religious ethics? Is ethics primarily informed by nature or by culture? Or is ethics informed by both? This course examines 1) ways in which cognitive science--and related fields such as evolutionary biology--impact traditional moral perspectives, and 2) how the study of moral philosophy and comparative ethics forces reconsideration of broad cognitive science theories about the nature of ethics. The course examines the concept of free will as a case study in applying these interpretive viewpoints. Interdisciplinary readings include literature from moral philosophy, religious ethics, cognitive science, and evolutionary biology. Offered as COGS 272, RLGN 272.

RLGN 273. Religion and Healing in the United States. 3 Units.
A cross-cultural exploration of the relationships between religion, health and healing in the United States. Through an interdisciplinary approach that includes religious studies, medical anthropology and ethnic/gender studies, the course investigates how persons interpret illness and suffering. Attention is also paid to how different groups utilized, or are served by, the health care system.

RLGN 280. Religion and Politics in the Middle East. 3 Units.
An in-depth look at the relationship between politics and religion in the Middle East. Students will spend the first week on the CWRU campus and the last three weeks in Israel, where time will be divided between classroom teaching, guest lectures, and “field trips” to important sites. Students will have the opportunity to interact directly with members of the region’s diverse religious groups within the political, social, and cultural contexts in which they live. A final research paper will be required. Knowledge of Hebrew is not necessary. Offered as JDST 280 and RLGN 280.

RLGN 283. Muhammad: The Man and the Prophet. 3 Units.
The life of the Prophet Muhammad (c.470-632 CE) which was as crucial to the unfolding Islamic ideal as it is today. An examination of how he attempted to bring peace to war-torn Arabia by evolving an entirely new perspective of the human situation, guidance for human lives, and humans’ relationship with God. The course will include Western perceptions of Islam, especially in light of September 11, 2001.
RLGN 284. Jesus Through Islamic Lens. 3 Units.
An introduction to an image of Jesus little known outside Arabic Islamic culture. It is an image that might be of interest to those who wish to understand how Jesus was perceived by a religious tradition which greatly revered him but rejected his divinity. The course will draw from various Islamic texts to provide a comprehensive selection of excerpts pertaining to the life and moral teachings of Jesus. Approaching Christ from an Islamic perspective, this course will offer the students a rare opportunity to understand the significance of Jesus in Islam and to gain a better understanding of the Islamic faith, not only as it contrasts with Christianity but also as it compares.

RLGN 299. Method and Theory in the Study of Religion. 3 Units.
This is an advanced course in method and theory in the study of religion and is designed for majors in religious studies. The goal is to strengthen the foundation in religious studies first obtained in RLGN 102 and to prepare students for projects to be completed and presented during the second semester in RLGN 399. (or RLGN 395 for honors). Class time will be devoted to lectures and discussions of a variety of authors, methods and topics. Particular readings will be assigned by the designated instructor. Students are expected to attend class regularly, complete assigned reading and participate in class discussions. Prereq: RLGN 102 and 9 credits in other RLGN courses.

RLGN 301. Ritual in Religion. 3 Units.
Drawing from a broad range of approaches and academic fields, this seminar offers an introduction to the study of ritual. The course has three main goals: (1) to help students become familiar with important theories of and approaches to ritual studies; (2) to explore a number of ritual practices from different cultures, from ancient priestly rites in the Bible to contemporary cockfights in Bali; and (3) to study and discuss several representations of ritual in contemporary literature and film.

RLGN 305. Sanskrit Religious Texts. 3 Units.
Introduction to the Sanskrit language and culture through the reading of selected texts taken from the ancient religions of South Asia. Offered as CLSC 305 and RLGN 305.

RLGN 306. Interpreting Buddhist Texts. 3 Units.
Readings in translation of major texts from the Buddhist tradition. Special emphasis on problems of textual interpretation, historical context, Buddhist conceptions of the sacred, and Buddhist ethics.

RLGN 309. Advanced Sanskrit Religious Texts. 3 Units.
This class is a continuation of RLGN 305/CLSC 305, the introduction to the Sanskrit language and culture. In RLGN 309/CLSC 309 students will learn advanced Sanskrit grammar and syntax. Previous knowledge of Sanskrit is required. We will finish the lessons from Devavanipravesika that we began in the introductory course. We will then translate sections for the Bhagavad Gita. Offered as CLSC 309 and RLGN 309. Prereq: RLGN 305 or CLSC 305.

RLGN 311. Representations of Black Religion in Film. 3 Units.
In this course we will explore cinematic representations of black religion in the Americas and the Caribbean. Each week we will view a film representing diverse religious traditions such as Christianity, Candomble, Santeria, Vodou, and Islam. Films will include Cabin in the Sky, The Color Purple, Black Orpheus, The Serpent and the Rainbow, Malcolm X, Eve’s Bayou, and The Princess and the Frog. Throughout the course we will analyze the ways in which notions of gender, the history of colonialism, modern notions of race, and geographical landscapes have informed representations of black religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas of black religion in the Americas. Offered as RLGN 311, ETHS 311, and RLGN 411. Prereq: RLGN 222 or ETHS 251 or ENGL 367 or by permission of Instructor.

RLGN 312. The Mythical Trickster. 3 Units.
Few literary figures have as wide a distribution, and as long a history, as the mythical Trickster. He is at once sacred and profane, creator and destroyer; an incorrigible duper who is always duped. Free of social and moral restraints he is ruled instead by passions and appetites, yet it is through his unprincipled behavior that morals and values come into being. How are we to interpret this amazing creature? Using folkloristic theories and ethnographic methods, we will come to understand the social functions and symbolic meanings of the cross-cultural Trickster, over time and across space.

RLGN 313. Topics in Biblical Literature:. 3 Units.
A departmental "topics" seminar focused on advanced textual analysis and interpretation of particular biblical (including apocryphal) texts and the critical issues of method, theory, theology, and history that pertain to those texts. Reading assignments will be divided between close, exegetical analysis of small units of texts and the study of scholarly criticism of the same texts (commentaries, journal articles, critical notes). Evaluation will be based on class preparation and participation, weekly short papers, an exegetical paper focused on a particular pericope of the student’s choice, and an interpretive paper based on exegesis of several related passages. Graduate students enrolled in the course as RLGN 413 will have the following additional requirements: (a) preliminary academic reading on the biblical material; (b) leadership/teaching of one seminar session on an academic theoretical or theological approach to the biblical text, including an additional meeting with the professor in preparation for that session; and (c) a longer final paper that critical engages the approach that was the focus of the seminar session s/he leads (15-20 pages, suitable for publication at an academic conference). Offered as RLGN 313 and RLGN 413. Prereq: RLGN 209 or permission of instructor.

RLGN 315. Heresy and Dissidence in the Middle Ages. 3 Units.
Survey of heretical individuals and groups in Western Europe from 500 - 1500 A.D., focusing on popular rather than academic heresies. The development of intolerance in medieval society and the problems of doing history from hostile sources will also be explored. Offered as HSTY 315 and RLGN 315.

RLGN 319. The Crusades. 3 Units.
This course is a survey of the history of the idea of "crusade," the expeditions of Western Europeans to the East known as crusades, the Muslim and Eastern Christian cultures against which these movements were directed, as well as the culture of the Latin East and other consequences of these crusades. Offered as HSTY 319 and RLGN 319.
The major focus of this seminar will range from the ongoing questions of peace and justice in Israel and occupied Palestine to the land and border questions; Green line, crossing points, the wall; to interpretations from biblical to contemporary texts, reflecting a multiplicity of agendas. Our primary focus will be the analysis of recent research and scholarship on issues of mass violence, contested space and land, gender, race and ethnicity, religious sectarianism, colonialism/imperialism. Through our readings we will identify the bias and concerns of various interpretive communities involved in the ongoing struggles in this very small area. With two peoples claiming the same land for different reasons, can this conflict ever be resolved? Recommended preparation: One course about the Middle East. Offered as ETHS 359 and RLGN 320.

RLGN 321. Advanced Indian Philosophy. 3 Units.
We will closely examine a limited number of texts in Jain, Hindu, and/or Buddhist philosophy. Our concern will be the methods, presuppositions, arguments, and goals of these schools and trajectories of thought. What were their theories on the nature of the person, the nature of reality, and the nature and process of knowing? What were the debates between the schools and the major points of controversy? We will spend the majority of time analyzing the arguments or positions as they are found in primary texts (in translation). We will rely on the primary sources found in Sarma Introduction to Classical Indian Philosophy as well as PDFs provided by the instructor. Students will read texts out loud in class and will be expected to comment on the passage or passages. Students are expected to use outside sources in their preparations. The goal of the class is to continue to learn how to make and write arguments against (or in support of) the various positions using the prasangika (reductio ad absurdum) method. The papers are rigorous ones and require the student to present the position and then to posit arguments against it, finding internal incoherences. This is a writing-intensive class. Students will continue to learn how to write as per the genre of Indian philosophy. Offered as RLGN 321 and PHIL 321. Prereq: RLGN 221 or PHIL 221.

RLGN 325. Justice, Religion, and Society. 3 Units.
The ways in which several 20th-century American religious figures, both North and South American, have interpreted their religion as requiring them to struggle for a better society by using direct action to deal with issues of poverty, peace, and social justice. Introduction to writings of prominent social justice activists such as Dorothy Day, Daniel Berrigan, Thomas Merton, and others. Course includes service learning within the Cleveland area via association with structured institutions and programs engaged in social justice and urban poverty issues in order to investigate these from the inside.

RLGN 330. Classical Jewish Religious Thought. 3 Units.
The thought of some major biblical and Rabbinic writings and of the classic age of medieval Jewish philosophy. Offered as JDST 330, PHIL 332, and RLGN 330.

RLGN 333. Philosophy of Religion. 3 Units.
Topics include: classical and contemporary arguments for God’s existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433. Prereq: PHIL 101 or RLGN 102.

RLGN 338. Black Women and Religion. 3 Units.
This course is an exploration of the multidimensional religious experiences of black women in the United States. These experiences will be examined within particular historical periods and across diverse social and cultural contexts. Course topics and themes include black women and slave religion, spirituality and folk beliefs, religion and feminist/womanist discourse, perspectives on institutional roles, religion and activism, and spirituality and the arts. Offered as: ETHS 339 and RLGN 338 and WGST 339.

RLGN 342. Mysticism: Sources, Methods, and Traditions. 3 Units.
Through an interdisciplinary approach that includes literary, historical and sociological methods, the course examines the history of Christian mysticism and the selected writings of mystics from diverse Christian traditions. We will explore the social and religious contexts in which these mystics speak, write and act; their impact on social, religious and political movements; and how perceptions of gender, race and power legitimate or delegitimate their claims of mystic knowledge. The course will highlight specific themes, issues and concepts such as religious practice, ritual, mystical itinerary, monasticism, disease and distress, delification, healing, asceticism, art, music, dance, ecology and the role of the body.

RLGN 345. Religion and Horror. 3 Units.
This seminar explores relations among religion, horror, and the monstrous in ancient scripture and contemporary horror. Course readings, discussions, and research projects approach the subject from two distinct but related directions: first, a focus on elements of horror and the monstrous in biblical and related ancient mythic and ritual texts; second, an examination of religious dimensions in the modern horror, especially as found in representations of monstrosity in literature and film. Offered as RLGN 345 and RLGN 445. Prereq: RLGN 102.

RLGN 349. Biocultural Approaches to Religion. 3 Units.
This course studies religious beliefs and rituals from a biocultural perspective. A biocultural approach to religion is based on the idea that human religiosity is informed by both our evolutionary biological makeup and by our ability to construct culture to adapt to variable social worlds and environments. According to a biocultural view, humans are biologically constrained but have the cultural capacity to adapt to the world in a variety of ways. Thus, a biocultural approach to religion asserts that biology and culture operate in tandem and that both biological and cultural insights are required in order to understand and explain religious beliefs and practices. This course explores these assumptions and examines them against specific religious data. This course introduces students to major ideas, concepts, and questions that motivate biocultural approaches to religion. The course requires students to apply course material to a final research project that explores particular religious beliefs and/or practices in terms of the intersection of cultural choices and biological constraints. Students will present their research findings to the class. Students who take this course under the COGS designation are expected to engage substantively with the contemporary scientific study of the human mind in their research project and other course work. Offered as RLGN 349, RLGN 449 and COGS 349.
RLGN 350. Jewish Ethics. 3 Units.
An exploration of Jewish moral and ethical discourse. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abortion, euthanasia, and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of moral rhetoric in the Jewish community today. Readings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as JDST 350, RLGN 350, and RLGN 450.

RLGN 352. Language, Cognition, and Religion. 3 Units.
This course utilizes theoretical approaches found in cognitive semantics -- a branch of cognitive linguistics -- to study the conceptual structures and meanings of religious language. Cognitive semantics, guided by the notion that conceptual structures are embodied, examines the relationship between conceptual systems and the construction of meaning. We consider such ideas as conceptual metaphor theory, conceptual blending, image schemas, cross-domain mappings, metonymy, mental spaces, and idealized cognitive models. We apply these ideas to selected Christian, Buddhist, and Chinese religious texts in order to understand ways in which religious language categorizes and conceptualizes the world. We examine both the universality of cognitive linguistic processes and the culturally specific metaphors, conceptual blends, image schemas, and other cognitive operations that particular texts and traditions utilize. Offered as RLGN 352, RLGN 452, COGS 352 and COGS 452.

RLGN 371. Jews under Islam and Christianity. 3 Units.
This course examines the social and political status of Jews under Muslim and Christian rule since the Middle Ages. Themes include interfaith relations, Islamic and Christian beliefs regarding the Jews, Muslim and Christian regulation of Jewry, and the Jewish response. Offered as HSTY 371, JDST 371 and RLGN 371.

RLGN 373. History of the Early Church: First Through Fourth Centuries. 3 Units.
Explores the development of the diverse traditions of Christianity in the Roman Empire from the first through the fourth centuries C.E. A variety of New Testament and extra-Biblical sources are examined in translation. Emphasis is placed on the place of Christianity in the larger Roman society, and the variety of early Christian ideals of salvation, the Church, and Church leadership. Offered as HSTY 303 and RLGN 373.

RLGN 374. Reformation Europe, 1500-1650. 3 Units.
Origins and development of Protestantism, the Catholic Counter-Reformation, and the interaction between secular power and religious identity in Christian Europe. Offered as HSTY 309 and RLGN 374.

RLGN 388. Topics in Religion. 3 Units.
Critical assessment of selected topics of historical or current interest. Project must be accepted by a member of the department faculty prior to registration. Offered as RLGN 388 and RLGN 488.

RLGN 392. Independent Study. 1 - 3 Unit.
Up to three semester hours of independent study may be taken in a single semester. Must have prior approval of faculty member directing the project.

RLGN 394. Honors Research I. 3 Units.
Intensive study of a topic or problem leading to the writing of an honors thesis. Requires RLGN 102 plus 9 RLGN credits and department approval. Prereq: RLGN 102 plus 9 RLGN credits.

RLGN 395. Honors Research II. 3 Units.
Intensive study of a topic or problem leading to the writing of an honors thesis. By department approval only. Prereq: RLGN 394 and by departmental approval.

RLGN 399. Major/Minor Seminar. 3 Units.
Capstone course primarily for majors and minors in religious studies. Allows students to interact with peers and faculty, reflect critically, and integrate their learning experiences. Prepares students to continue their learning in the discipline and in the liberal arts. Subject matter varies according to student and faculty needs and perspectives. May be repeated once for up to six credit hours. Prereq: RLGN 299.

RLGN 401. Foundational Readings in Religious Studies. 3 Units.
Structured as an Independent Study, this course is meant to familiarize the student with the major classical works and thinkers that have shaped the modern field of Religious Studies. Students will meet on a regular basis with the Instructor to discuss the theories and methods described in the literature.

RLGN 410. Cognitive Science of Religion. 3 Units.
This course introduces theories and methods in the cognitive science of religion. Particular emphasis is placed on applying cognitive scientific concepts and theories to such religious issues as belief in deities, religious ritual, and morality. We examine such topics as the relationship of religious studies to evolution and cognition, cognitive theories or religious ritual, anthropomorphism and religious representation, religion as an evolutionary adaptation, and cognitive semantics and religious language. Course work includes student-led discussions, a research-intensive journal-length essay on a topic chosen in consultation with the Instructor, and presentation of research findings to the class. Course readings are taken from the humanities, the social sciences, and natural sciences.

RLGN 411. Representations of Black Religion in Film. 3 Units.
In this course we will explore cinematic representations of black religion in the Americas and the Caribbean. Each week we will view a film representing diverse religious traditions such as Christianity, Candomble, Santeria, Vodou, and Islam. Films will include Cabin in the Sky, The Color Purple, Black Orpheus, The Serpent and the Rainbow, Malcolm X, Eve’s Bayou, and The Princess and the Frog. Throughout the course we will analyze the ways in which notions of gender, the history of colonialism, modern notions of race, and geographical landscapes have informed representatives of black religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas of black religion in the Americas. Offered as RLGN 311, ETHS 311, and RLGN 411.
RLGN 413. Topics in Biblical Literature. 3 Units.
A departmental "topics" seminar focused on advanced textual analysis and interpretation of particular biblical (including apocryphal) texts and the critical issues of method, theory, theology, and history that pertain to those texts. Reading assignments will be divided between close, exegetical analysis of small units of texts and the study of scholarly criticism of the same texts (commentaries, journal articles, critical notes). Evaluation will be based on class preparation and participation, weekly short papers, an exegetical paper focused on a particular pericope of the student's choice, and an interpretive paper based on exegesis of several related passages. Graduate students enrolled in the course as RLGN 413 will have the following additional requirements: (a) preliminary academic reading on the biblical material; (b) leadership/teaching of one seminar session on an academic theoretical or theological approach to the biblical text, including an additional meeting with the professor in preparation for that session; and (c) a longer final paper that critical engages the approach that was the focus of the seminar session s/he leads (15-20 pages, suitable for publication at an academic conference). Offered as RLGN 313 and RLGN 413.

RLGN 420. Structuralism and Anthropology of Religion. 3 Units.
The anthropological study of religion attempts to understand individual religions as social constructs. As such, it investigates the phenomenon of religion as a general pattern of human behavior. It asks, among other things, why there are religions at all and what common characteristics, if any, religions share. Among the central concepts are notions of the sacred and the way the sacred is marked through individual behaviors and communal structures. This course introduces the philosophical and cognitive background to the anthropological study of religion and traces the ways in which this method has evolved and been applied over the last century and a half. Special emphasis will be placed on more recent developments, such as Structuralism, which focuses especially on the underlying structures of religions and religious organizations.

RLGN 430. Genealogies of Religious Otherness. 3 Units.
Concepts of otherness pervade recent theories of religion. More or less related to one another, many of these concepts are borrowed from fields other than academic religious studies. This seminar explores the genealogies of otherness in theoretical discourse as they relate to religion. In the course of this seminar, our researches and discussions will address several key issues in academic religious studies, including: psychological and sociological processes of projection and their roles in the construction and deconstruction of religious identity; the significance of gender, sexuality, and ethnicity to these projections; concepts of otherness in mystical religious thought and experience; and the interrelations of order and chaos, figuring and disfiguring within religious ideas, institutions, and practices, interrelations that challenge common theoretical perspectives that treat religion primarily if not exclusively as a means of establishing order against chaos and as a force of social and ideological structure legitimation.

RLGN 433. Philosophy of Religion. 3 Units.
Topics include: classical and contemporary arguments for God's existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433.

RLGN 440. Insiders and Outsiders in the Study of Religion. 3 Units.
This course will provide an introduction to one of the most important theoretical and methodological issues in the social sciences and in religious studies, namely, the epistemic authority of the insider and of the outsider. We will read books and articles, both classical and contemporary, on the topic. My goal is to place students at the center of a contemporary debate in the study of religion. We will also examine both hypothetical and actual communities that uphold insider epistemologies.

RLGN 445. Religion and Horror. 3 Units.
This seminar explores relations among religion, horror, and the monstrous in ancient scripture and contemporary horror. Course readings, discussions, and research projects approach the subject from two distinct but related directions: first, a focus on elements of horror and the monstrous in biblical and related ancient mythic and ritual texts; second, an examination of religious dimensions in the modern horror, especially as found in representations of monstrosity in literature and film. Offered as RLGN 345 and RLGN 445.

RLGN 449. Biocultural Approaches to Religion. 3 Units.
This course studies religious beliefs and rituals from a biocultural perspective. A biocultural approach to religion is based on the idea that human religiosity is informed by both our evolutionary biological makeup and by our ability to construct culture to adapt to variable social worlds and environments. According to a biocultural view, humans are biologically constrained but have the cultural capacity to adapt to the world in a variety of ways. Thus, a biocultural approach to religion asserts that biology and culture operate in tandem and that both biological and cultural insights are required in order to understand and explain religious beliefs and practices. This course explores these assumptions and examines them against specific religious data. This course introduces students to major ideas, concepts, and questions that motivate biocultural approaches to religion. The course requires students to apply course material to a final research project that explores particular religious beliefs and/or practices in terms of the intersection of cultural choices and biological constraints. Students will present their research findings to the class. Students who take this course under the COGS designation are expected to engage substantively with the contemporary scientific study of the human mind in their research project and other course work. Offered as RLGN 349, RLGN 449 and COGS 349.

RLGN 450. Jewish Ethics. 3 Units.
An exploration of Jewish moral and ethical discourse. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abortion, euthanasia, and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of moral rhetoric in the Jewish community today. Readings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as J DST 350, RLGN 350, and RLGN 450.
RLGN 452. Language, Cognition, and Religion. 3 Units.
This course utilizes theoretical approaches found in cognitive semantics -- a branch of cognitive linguistics -- to study the conceptual structures and meanings of religious language. Cognitive semantics, guided by the notion that conceptual structures are embodied, examines the relationship between conceptual systems and the construction of meaning. We consider such ideas as conceptual metaphor theory, conceptual blending, Image schemas, cross-domain mappings, metonymy, mental spaces, and idealized cognitive models. We apply these ideas to selected Christian, Buddhist, and Chinese religious texts in order to understand ways in which religious language categorizes and conceptualizes the world. We examine both the universality of cognitive linguistic processes and the culturally specific metaphors, conceptual blends, image schemas, and other cognitive operations that particular texts and traditions utilize. Offered as RLGN 352, RLGN 452, COGS 352 and COGS 452.

RLGN 460. Approaches to the Study of Urban Religion. 3 Units.
This course will introduce students to basic concepts and tools used in sociology of religion drawing upon works from various theorists and sociologists of religion such as Nancy Ammerman, Peter Berger, and Robert Wuthnow. The course analyze the relationship between the role and structure of religion in North America and the larger historical, cultural and social landscape. Utilizing the city of Cleveland as a resource, students will apply the tools and concepts learned to explicate how religious organizations impact, and are impacted by, urban environments.

RLGN 488. Topics in Religion. 3 Units.
Critical assessment of selected topics of historical or current interest. Project must be accepted by a member of the department faculty prior to registration. Offered as RLGN 388 and RLGN 488.

RLGN 601. Special Research. 1 - 6 Unit.
Project must be accepted by a member of the department faculty prior to registration. Prereq: Graduate standing.

RLGN 651. Thesis M.A.. 1 - 9 Unit.
Project must be accepted by a member of the department faculty prior to registration.
Department of Sociology

The Department of Sociology offers programs leading to the Bachelor of Arts, Master of Arts, and Doctor of Philosophy degrees.

Sociologists investigate human and social processes in a complex and rapidly changing world, addressing important and fascinating questions about many aspects of social life. Our department is especially devoted to research and graduate education in the sociology of health and medicine and the sociology of age and the life course. Our undergraduate program also offers concentrations in crime and delinquency, gender and family, health and aging, and social inequality.

Many sociology majors participate in field-based learning experiences, both through their classes and through their involvement in faculty research projects. The department encourages interaction between students and faculty by offering many opportunities for individualized study and research. It has a long history of combining leadership in research with a friendly, student-centered culture, for both graduate and undergraduate students.

Especially with the increase in diversity in our society, many employers look favorably on the breadth of knowledge and perspective provided by majoring in sociology. Graduates of our program are working in interesting jobs in research institutions, private industry, and the public sector. A sociology degree is also excellent preparation for graduate or professional study, whether in sociology or in such fields as medicine, law, public health, and social work.

Undergraduate Programs

Major

The major in sociology has been designed to serve the different educational goals of undergraduates: general education, pre-professional training, postgraduate employment, and preparation for graduate school. The major requires a minimum of 30 hours of course work. All majors complete the common core requirements, plus electives:

- SOCI 101 Introduction to Sociology 3
- SOCI 300 Modern Sociological Thought 3
- SOCI 303 Social Research Methods 3
- STAT 201 Basic Statistics for Social and Life Sciences 3
- or PSCL 282 Quantitative Methods in Psychology 3
- An additional 18 hours of electives, consisting of any six courses in sociology 18

Total Units 30

SOCl 375 Independent Study is available to selected majors in their junior or senior year.

Majors have the option of choosing a general sociology curriculum or one of four concentrations:

1. Crime and Delinquency
2. Gender, Work and Family
3. Health and Aging
4. Social Inequality

Students may choose four courses within any of the following specializations for a concentration in that area:

Crime and Delinquency Concentration

- SOCI 204 Criminology 3
- SOCI 320 Delinquency and Juvenile Justice 3
- SOCI 328 Urban Sociology 3

Sociology of Deviant Behavior 3
Social Inequality 3
The Sociology of Law 3

Gender, Work and Family Concentration

- SOCI 201 Introduction to Gender Studies 3
- SOCI 208 Dating, Marriage, and Family 3
- SOCI 222 Gender in U.S. Society 3
- SOCI 228 Sociology of Sexuality 3
- SOCI 275 Lives in Medicine: Becoming and Being a Physician 3
- SOCI 326 Gender, Inequality, and Globalization 3
- SOCI 370 Sociology of the Family 3
- SOCI 372 Work and Family: U.S. and Abroad 3

Health and Aging Concentration

- SOCI 203 Human Development: Medical and Social 3
- SOCI 262 Disability and Society 3
- SOCI 275 Lives in Medicine: Becoming and Being a Physician 3
- SOCI 311 Health, Illness, and Social Behavior 3
- SOCI 313 Sociology of Stress and Coping 3
- SOCI 319 Sociology of Institutional Care 3
- SOCI 345 Sociology of Mental Illness 3
- SOCI 361 The Life Course 3
- SOCI 365 Health Care Delivery 3
- SOCI 369 Aging in American Society 3
- SOCI 377 Population Dynamics and Changing Societies 3

Social Inequality Concentration

- SOCI 113 Critical Problems in Modern Society 3
- SOCI 201 Introduction to Gender Studies 3
- SOCI 203 Human Development: Medical and Social 3
- SOCI 228 Sociology of Sexuality 3
- SOCI 302 Race and Ethnic Minorities in American Society 3
- SOCI 320 Delinquency and Juvenile Justice 3
- SOCI 326 Gender, Inequality, and Globalization 3
- SOCI 347 Sociology of Education 3
- SOCI 349 Social Inequality 3
- SOCI 372 Work and Family: U.S. and Abroad 3
- SOCI 374 Using Law to Designate Public-Private Boundaries for Social Policies 3

SAGES Participation

In conjunction with the SAGES program, the department offers two special seminars, SOCI 325 Departmental Seminar in Sociology: Great Books and SOCI 392 Senior Capstone Experience. These seminars fulfill SAGES requirements but are NOT requirements for the major. They may, however, be counted toward the 30 hours for the sociology major or the 15 hours for the minor.

Departmental Honors

Juniors majoring in sociology with a 3.4 overall GPA and a 3.6 GPA in sociology are invited to apply for the department’s honors program, which consists of an intensive, year-long investigation of a research problem under the guidance of a faculty member. Students will earn credit through registration in SOCI 397 Honors Studies and SOCI 398 Honors Studies. Admission to honors work is by faculty approval.

The opportunity to join Alpha Kappa Delta (AKD), the national sociology honors fraternity, is available to junior or senior sociology majors. Membership requires a 3.3 GPA in sociology and a 3.0 GPA overall.
Integrated Graduate Studies

The Department of Sociology participates in the Integrated Graduate Studies Program (p. 549). Students in the program are able to obtain BA and MA degrees simultaneously. Interested students should note the general requirements and the admission procedures in the appropriate section of this bulletin and may consult the department for further information.

Minor

The minor consists of 15 credit hours in sociology, including:

Graduate Programs

The Department of Sociology offers graduate training leading to the Doctor of Philosophy degree. Students may petition for a Master of Arts degree once they fulfill the requirements outlined below. Sociology of Age and the Life Course, Medical Sociology, and Research Methods are the major areas of emphasis in the department.

Master of Arts

To receive the Master of Arts degree, a student must successfully complete 27 credit hours of course work.

In addition, the student must pass two written comprehensive examinations in Sociology of Age and the Life Course, Medical Sociology, or Research Methods and successfully defend the dissertation.

A predoctoral training program in Health Research and Aging, sponsored by the National Institute of Aging, has been offered in conjunction with the Elderly Care Research Center of the Department of Sociology.

Research Programs

The Elderly Care Research Center

The Elderly Care Research Center (ECRC) funds research projects focusing on theory-based and public policy-relevant issues in aging and medical sociology. Current projects relate to physical and mental health outcomes of stress, coping, cancer survivorship, and adaptation to frailty in late life. Research projects have been funded by the National Institute of Aging (NIA), the National Cancer Institute (NCI), and the National Institute of Nursing Research. In addition to conducting quantitative surveys and in-depth qualitative interviews with community-dwelling elders, researchers at the ECRC are also engaged in an NCI-funded intervention to help elderly patients communicate more effectively with their doctors.

The Center has been the recipient of an NIA Merit Award for a long-term study of very old residents of a retirement community. This research seeks to understand health promotion, proactive adaptation, and maintenance of wellness in late life. ECRC serves as a laboratory for student research. Collaborative and cross-national research involves colleagues from multiple disciplines at universities in Israel, Hungary, Britain, and Germany.

Cancer Survivors Research Program

The Cancer Survivors Research Program (CSRP) investigates important research issues in psychological oncology. Formally started in September 1998, the CSRP had been funded for ten years by the National Cancer Institute. Gary Deimling serves as program director and principal investigator and is assisted by colleagues in the Department of Sociology and the Case School of Medicine. As with many other research programs within the department and the university at large, the CSRP also serves as a teaching facility, training graduate students in the many methodological and theoretical aspects of sociomedical research. The program enables graduate students in sociology to gain hands-on experience in a formal research setting while putting their course work into practice.

Comparative-Historical Analysis of Children’s Rights: Introducing the Children’s Rights Index

The Children’s Rights Index (CRI), developed by Brian Gran, is an innovative measure of the status of children’s rights in more than 190 countries for 2004. With funding from the National Science Foundation, this project is now replicating the CRI for five-year intervals during the period 1984 to 2009.

Past studies of children’s rights have focused on violations of particular rights, and on specific countries where children’s rights are frequently or severely violated. What has been lacking is systematic scholarship on the various kinds of children’s rights that exist, across countries and over time. This project will examine factors that promote or hinder children’s rights. A short-term objective is to provide evidence on the status of children’s rights. A long-term objective is to use the CRI to determine whether stronger rights lead to superior outcomes for children.
FreshLink: Increasing Access to Healthy Foods in Disadvantaged Neighborhoods

The Prevention Research Center for Healthy Neighborhoods (PRCHN), a Centers for Disease Control and Prevention initiative housed in the Case Western Reserve University School of Medicine, conducts research to improve health and prevent chronic disease in Cleveland neighborhoods. Recognizing that obesity and poor nutrition are the primary drivers of chronic disease at all ages, Principal Investigator Jessica Kelley-Moore is conducting FreshLink, an intervention study designed to change the neighborhood food environment by increasing access to healthier food options and to education about nutrition. FreshLink is one of the few intervention projects seeking to change the food environment instead of focusing on individual behavior change. This multidimensional study is working in four primary venues: food retail, schools, community gardens, and community centers. Go here for more information about FreshLink and the PRCHN (http://prchn.org/FreshLink_home.aspx).

Cumulative Dis/Advantage Research Group: Trajectories of Inequality Across the Life Course

Across the entire society, old people are probably the most diverse of any age category of the population. Inequality also appears greatest among older people. How does such inequality come about? The Cumulative Dis/Advantage (CDA) Research Group analyzes the life-course processes – economic, political, interactional and demographic – that contribute to this phenomenon, and the efficacy of social policies designed to ameliorate the effects of social processes that contribute to CDA. Data sources for this project range from large-scale, longitudinal data sets such as the Health and Retirement Survey and the National Longitudinal Study of Youth to ethnographic work.

Learning from Those Who Know: Action Research and Reform Efforts in Long-term Care

This project responds to the need to reform and restructure long-term care by incorporating the perspectives, insights, and expertise of those whom such reforms are intended to serve, yet who often have little voice in the reform process: the residents themselves. Using the method of participatory action research, the project assembles research groups consisting of residents, staff, family members, and researchers who meet weekly to discuss life in the facility and to identify areas where change could benefit those who live (or work) there.

Department Faculty

Dale Dannefer, PhD
(Rutgers University)

Selah Chamberlain Professor of Sociology and Department Chair
Aging and the life course; theory; work and family; research methods

Timothy Black, PhD
(University of Massachusetts-Amherst)
Associate Professor
Social inequality; poverty; urban sociology; qualitative research methods

Gary Deimling, PhD
(Bowling Green State University)
Professor
Family sociology; sociology of aging; medical sociology; research methods

Mary Patrice Erdmans, PhD
(Northwestern University)
Associate Professor
Ethnicity; immigration; qualitative research methods; gender

Brian Gran, PhD, JD
(Northwestern University; Indiana University-Bloomington)
Associate Professor
Sociology of law; political sociology; comparative sociology; health care policy

Susan W. Hinze, PhD
(Vanderbilt University)
Associate Professor
Medical sociology; social inequality, sex and gender; work and family

Eva Kahana, PhD
(University of Chicago)
Distinguished University Professor and Pierce T. and Elizabeth D. Robson Professor of the Humanities
Sociology of aging; medical sociology; social factors in stress and coping

Jessica Kelley-Moore, PhD
(Purdue University)
Associate Professor
Health disparities; sociology of disability; sociology of the life course; race/ethnicity

Emilia McGucken, PhD
(University of Akron)
Senior Instructor
Criminology; juvenile delinquency; deviance; theory; urban sociology

Secondary Faculty

David E. Biegel, PhD
(University of Maryland, Baltimore)

Henry Zucker Professor, Mandel School of Applied Social Sciences
Family; social networks; caregiving; mental health

Kathleen Smyth, PhD
(Case Western Reserve University)
Associate Professor, Department of Epidemiology and Biostatistics, School of Medicine
Medical sociology; research methods; sociology of aging

Kurt Stange, MD, PhD
(University of North Carolina)
Professor, Department of Epidemiology and Biostatistics, School of Medicine
Epidemiology; preventive health care; biostatistics; disability prevention in the elderly

Aloen Townsend, PhD
(University of Michigan)
Professor, Mandel School of Applied Social Sciences
Adult development and aging; research methods and statistics; mental health; families and formal service systems

Adjunct Faculty

Gunhild Hagestad, PhD
(University of Minnesota)

Professor of Sociology, Agder University College; Senior Researcher, NOVA (Norwegian Social Research)
Life course; gender; social policy

Linda Noekler, PhD
(Case Western Reserve University)
Associate Director of Research, Benjamin Rose Institute on Aging
Sociology of aging; family sociology; sex and gender

Carol Whitlatch, PhD
(The Pennsylvania State University)
Assistant Director and Senior Research Scientist II, Benjamin Rose
Institute on Aging
Sociology of aging

Courses

SOCI 101. Introduction to Sociology. 3 Units.
This course examines the basic principles that underlie how sociologists look at the world: "The Sociological Imagination". It addresses the basic questions: How is social order possible and how does change occur? The course is designed as a foundation for further study in field of sociology and related disciplines. It introduces the student to the role that culture and social institutions play in modern society and examines important concepts such as socialization, deviance, social control, patterned inequalities and social change. These concepts are discussed in the context of both contemporary and historical social theories. Additionally, the student will be introduced to the methods of inquiry used by practicing sociologists.

SOCI 113. Critical Problems in Modern Society. 3 Units.
Focus is on major social problems present in large, complex, industrial societies. Topics include environmental problems, poverty, drug addiction, social deviance, and alienation.

SOCI 201. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Prereq: ENGL 150 or passing letter grade.

SOCI 203. Human Development: Medical and Social. 3 Units.
Social influences on health and illness across the lifespan. Social determinants of health and health behavior, and delivery of health care. Guest lecturers from the medical school and other health care providers address professional practice issues across the lifespan. Issues include: new approaches to birth; adolescent substance abuse: myths and realities of AIDS; risk factors of diseases in middle age; menopause, cognition and aging-Alzheimer's disease; problems in care of elderly; medical ethic of death and dying.

SOCI 204. Criminology. 3 Units.
What is crime and to what extent does crime affect you? This course will investigate the nature and extent of crime, theories on the causes of crime, types of crime and criminals, and the efforts society makes to cope with and prevent criminal behavior.

SOCI 208. Dating, Marriage, and Family. 3 Units.
What is the family today? How has it changed over the last century? How will it change in the future? This course aims to answer these questions as it explores the influences of work, education, government, health and religion on today's changing families. The course considers the factors that affect mate selection. It also examines parenting, roles of husbands and wives, and family dysfunction, and divorce.

SOCI 222. Gender in U.S. Society. 3 Units.
The focus of this course is on unique and convergent experiences of men and women in U.S. society. Different social expectations and opportunities encountered by men and women in the context of marriage and the family, work settings, and in informal organizations will be addressed. Legislation and social policy dealing with gender issues will be considered. Offered as SOCI 222 and WGST 222.

SOCI 228. Sociology of Sexuality. 3 Units.
This course analyzes the issues of sex and sexuality from a sociological point of view. It is centered on the notion that what we consider to be 'normal' or 'natural' about sex and sexuality is, in reality, socially constructed. One's viewpoint on the issues surrounding sexuality are influenced by the social context in which they live, as opposed to the purely biological viewpoint that presupposes some sense of normalcy or naturalness regarding sexual relations. A range of topics will be covered, including readings that discuss the variations of sexuality and the notions of sexual "deviance" in order to explore the cultural and societal variation that exists along the lines of gender, race, ethnicity, sexual orientation, age and disability. Offered as SOCI 228 and WGST 228.

SOCI 255. Special Topics. 1 - 3 Unit.
Courses taught as special topics seminars focus on selected areas of study in sociology. They tend to be more specialized and emphasis is placed upon a sociological examination of one social institution (such as the media) or on one historical period (such as the '60s).

SOCI 262. Disability and Society. 3 Units.
This course considers and examines the relationship between disability and society. The course covers how we define, represent, and react to disability in modern society. This includes an analysis of stigma and discrimination. We also explore the timing and experience of disability from a life-course perspective. Finally, we examine the political, social, and economic influences on disability, including the Disability Rights movement.

SOCI 269. Young and Old Face the 21st Century. 3 Units.
Examines prospects and problems of the young and old as a window into the 21st century. An intergenerational perspective is used to highlight opportunities for cooperation and conflict between young and old who face the future together. This approach represents a shift in thinking about aging as relevant only to the old, to a view that aging is relevant to the future of all individuals, families, and societies.
SOCI 275. Lives in Medicine: Becoming and Being a Physician. 3 Units.
This course applies a sociological approach to medical profession. Medical sociology emerged as a distinct field of study in the 1950s in part due to prominent studies of medical education such as The Student Physician by Robert K. Merton and Howard Becker’s Boys in White. Since then, sociologists and other social scientists have written extensively about how issues of race, gender, aging and ethnicity are tied to issues of medical education, medical training, medical socialization and physician decision-making. Using a life course perspective, this course will examine how lives in medicine change over time; in particular, we’ll study changing workforce patterns, physician satisfaction, and burnout. Other topics to be covered include contemporary ethical issues and alternative professional health careers. The course provides an overview of how medicine and medical practice have a profound influence on--- and are influenced by---social, cultural, political and economic forces. In short, you’ll become familiar with how scholars outside of medicine cast a sociological gaze on the profession.

SOCI 300. Modern Sociological Thought. 3 Units.
The most profound commentary of industrial society began in the middle of the nineteenth century with thinkers such as Durkheim, Marx, and Max Weber. Students will read the work of these scholars as it appeared in the original sources. They thoughtfully address concepts such as social integration and alienation, crime and punishment, and the social impact of modernization. The course is of special relevance to students in the social sciences, but is also recommended for students in other fields who wish to understand the social context in which professional lives will be conducted. Prereq: SOCI 101 and Sophomore standing.

SOCI 302. Race and Ethnic Minorities in American Society. 3 Units.
Has the United States become a melting pot of ethnic groups or does it remain a salad bowl? American society is uniquely diverse in its ethnic and racial composition. This diversity has influenced much of American history and had substantial impact on the structure of social organization of present day society. This course familiarizes students with basic concepts of race and ethnicity, relevant theories and their applications to critical issues. Prereq: SOCI 101.

SOCI 303. Social Research Methods. 3 Units.
Principles of making causal inferences about human behavior; problem formulation and research design; measurement of sociological concepts; data collection and analysis methods; evaluation of research findings. Prereq: SOCI 101 and Sophomore standing.

SOCI 305A. Seminar and Practicum: School-Based Peer Court Justice. 3 Units.
Regular Seminar Meetings, and occasional supervised field placements at local high schools. Study and practice for Case undergraduate students and a select group of High School students all of whom will be introduced to the practical application of the "Restorative Peer Court Justice" system as an alternative to traditional school disciplinary intervention. The training, mentoring, and mutual collaboration in the design and implementation of this project provide active learning experiences leading to a better understanding of the offending High School student’s misbehavior, the possibility of reducing the level of reoffending, restoring relationships, and enhancing the social cohesion of the school community. Prereq: SOCI 204 or SOCI 320.

SOCI 306. The Individual in Society. 3 Units.
This course focuses on the relationship between individuals and the societies in which they live. Influences of values and culture on individuals' selves and identities are discussed as well as how individuals attach meaning to personal life experiences and histories in the context of society at large. Offered as SOCI 310 and SOCI 410. Prereq: SOCI 101.

SOCI 311. Health, Illness, and Social Behavior. 3 Units.
This course considers the role of social factors (e.g., poverty, occupational and family structure) on health and illness. Discussion will concentrate on the role of health promotion (e.g., anti-smoking campaigns), social behavior and lifestyle in health and health care use. Considerable attention is given to understanding health careers and professions and their role in the health of societies and individuals. Offered as SOCI 311 and SOCI 411. Prereq: SOCI 101 and Sophomore standing.

SOCI 313. Sociology of Stress and Coping. 3 Units.
This course will focus attention on human stress throughout the lifespan and its role in personal health and well-being. There have been exciting advances in recent years in understanding the nature of stress in everyday life as well as elements of extreme stress. Trauma is experienced by many people due to normative events such as illness and bereavement or natural and man-made disasters such as crime or war. Coping strategies and social supports which ameliorate negative impact of stress will be considered. Offered as SOCI 313 and SOCI 413. Prereq: SOCI 101 and Sophomore standing.

SOCI 319. Sociology of Institutional Care. 3 Units.
This course focuses on converging issues of theory, research, and practice in general hospitals, mental hospitals, nursing homes, hospices, and correctional institutions. The ecology of institutions and the adaptation of individuals within institutions will also be considered. There will be field trips to institutional facilities. Offered as SOCI 319 and SOCI 419. Prereq: SOCI 101 and Sophomore standing.

SOCI 320. Delinquency and Juvenile Justice. 3 Units.
The primary focus of this course is on acquainting the student with the nature and the extent of juvenile delinquency. Accordingly, theoretical approaches to delinquency causation and the prevention, control, and treatment of delinquent behavior in society are addressed. Important aspects of juvenile justice procedures, policy, and practice are examined, and the early history of the juvenile justice system and the many changes occurring over the years are discussed. Prereq: SOCI 101.
SOCI 325. Departmental Seminar in Sociology: Great Books. 3 Units.
This course fulfills the SAGES requirement of a Departmental Seminar. It focuses on close readings of contemporary classics in sociology, analytical writing and intensive seminar-type discussion. The course examines theoretical perspectives and methodological issues in sociology such that students are able to investigate, analyze and present research findings in written form. Research is always an inherently collaborative process and thus the course will focus on topics germane to a critical reading of books that inform our understanding of large and small group processes as well as individual experiences. Students will be introduced to the sociological imagination as an overarching framework to examine groundbreaking classical and contemporary books on topics such as health and aging, gender, work and family, social inequality and crime and delinquency, guided by the instructor of record. Readings will provide a sociological perspective for understanding and assessing macro- and micro-level interactions as well as encourage and stimulate critical thinking.

SOCI 326. Gender, Inequality, and Globalization. 3 Units.
Using a sociological perspective, this course examines how major societal institutions, including the economy, polity, medicine, religion, education and family, are structured to reproduce gendered inequalities across the globe. Attention is given to the intersections of race/ethnicity, social class, gender and sexuality in social systems of power and privilege. Critical importance is how gender figures in the relationship between Economic North and Economic South countries. We will elucidate how gender norms vary by culture and exert profound influence on the daily, lived experiences of women and men. The course will be informed by recent scholarship on feminism, women’s movements, and globalization. Offered as SOCI 326 and WGST 326. Prereq: SOCI 101 or permission of program director.

SOCI 328. Urban Sociology. 3 Units.
The goal of this course is to acquaint the student with the realities and the possibilities of our urban society. Theories and applications of urban sociology interpreting city life and structure are reviewed. The transformation of the urban landscape, the emergence of cities, urban life, urban problems, and urban planning are explored. Issues related to finances, schooling, transportation, the infrastructure of the city, growth and decline, urban poverty, the homeless, crime, pollution, as well as the policy issues and questions such concerns provoke are studied. Key aspects of social science theories and research findings about the nature of spatial, economic and social relationships in cities in developed and developing countries will be analyzed, illuminating some of the processes of urban growth, social transition, and change. Prereq: SOCI 101.

SOCI 333. Sociology of Deviant Behavior. 3 Units.
Sociological approaches to causes of deviant behavior, and social psychology of deviance are studied. Illustrations range from juvenile delinquency to scientific misconduct and cover both criminal and noncriminal forms of deviance. Prereq: SOCI 101.

SOCI 336. Institutional Care: Research and Reform. 3 Units.
This course is designed to provide an introduction to the nature of long term care in the USA and to contemporary issues of reform and culture change. It also provides an introduction to techniques for studying nursing home culture, and for assessing culture changes. The issues and problems of long term care are well documented and the need for changing practices of long-term care is so widely recognized and deeply felt that several initiatives for “changing the culture” of long term care have gained national notoriety and rapid momentum. While laudatory, such efforts are inevitably criticized on numerous grounds, including cost, philosophy and vision, and lack of research evidence to support claims of success. The course is designed to provide an introduction to these debates in the scientific literature and in popular culture, and will provide an opportunity to develop skills in structured observation and action research. Offered as SOCI 336 and SOCI 436.

SOCI 338. Seminar and Practicum in Adolescents. 3 Units.
Supervised field placement and attendance in early childhood, child, and adolescent settings including preschools, schools, hospitals, and neighborhood centers. This class is used to fulfill requirements by the Ohio Department of Education teacher licensure program. Recommended preparation: PSCL 101, EDUC 301, EDUC 304, and permission of program director. Offered as EDUC 338, PSCL 338, and SOCI 338.

SOCI 345. Sociology of Mental Illness. 3 Units.
Focus is on social construction of mental health and illness and sociology of emotions. Social determinants of psychological distress will be discussed along with social stigma associated with mental illness. Institutional and community options for care of the mentally ill will be considered along with the impact of recent social movements of deinstitutionalization and independent living. Offered as SOCI 345 and SOCI 445. Prereq: SOCI 101 and junior/senior standing.

SOCI 347. Sociology of Education. 3 Units.
This course provides an introduction to the field of sociology of education, which might be more properly called sociology of schooling. We will examine the development of schools historically and competing paradigms for understanding the place of school in society. Major theoretical perspectives concerning the nature and consequences of schools for individuals and for societies will be reviewed. Issues of individual opportunity - including how it is organized by race, class, and gender - will be covered, as well as issues institutional dynamics - including tracking, testing and so-called crisis and reform. Offered as SOCI 347 and SOCI 447. Prereq: SOCI 101 and junior or senior standing.

SOCI 349. Social Inequality. 3 Units.
Theory and research on contemporary inequality is considered in terms of income, wealth, education, occupational standing, occupational prestige, status categories, ethnic, religious, age, and gender groupings. Offered as SOCI 349 and SOCI 449. Prereq: SOCI 101 and Sophomore standing.

SOCI 355. Special Topics. 3 Units.
One or more sections each semester focusing on selected areas of study in sociology. Offered as SOCI 335 and SOCI 455.
SOCI 360. The Sociology of Law. 3 Units.
This course will focus on the role of rights in the U.S. legal system and society. In particular, we will consider three questions. The first is how do rights fit in the legal system and society? Second, how have different social groups used and thought about rights? Third, how do legal actors like judges and lawyers think about rights compared to non-lawyers? Offered as SOCI 360 and SOCI 460. Prereq: SOCI 101 and Sophomore standing.

SOCI 361. The Life Course. 3 Units.
Individual experiences and transitions over the life course are considered as the result of societal, cultural, psychological, biological, and historical influences. Developmental issues of childhood, adolescence, young adulthood, middle years and late life are discussed in the context of social expectations, challenges, and opportunities. Emphasis is placed on theoretical readings. Offered as SOCI 361 and SOCI 461. Prereq: SOCI 101 and Sophomore standing.

SOCI 365. Health Care Delivery. 3 Units.
Health care in the U.S. may be approaching a critical cross-road. Limiting care to older persons and the chronically ill has been proposed as a means to combat rising costs and limited access to health care. What are the alternatives to health care rationing? National health insurance? This course deals with issues of cost, quality, and access to health care in the United States and other societies. It considers how solutions by other societies can provide directions for the organization of health care in the U.S. Offered as SOCI 355 and SOCI 455. Prereq: SOCI 101 and Sophomore standing.

SOCI 369. Aging in American Society. 3 Units.
Considers the position and participation of aged adults in American society. Sociological perspectives through which to interpret the aging process and old age; social policies; intergenerational relations; lifestyles and how they affect participation of the aged in American society; dying and death serve as major themes. Offered as SOCI 369 and SOCI 469. Prereq: SOCI 101 and Sophomore standing.

SOCI 370. Sociology of the Family. 3 Units.
This course provides the theoretical and methodological foundation for conducting family research. It also reviews the most current research in the sociology of the family arena such as intergenerational issues, ethnicity and gender, and family transitions. Offered as SOCI 370 and SOCI 470. Prereq: SOCI 101 and Sophomore standing.

SOCI 372. Work and Family: U.S. and Abroad. 3 Units.
Covers the impact on human lives of the interface between work and family; the different ways gender structures the experience of work and family depending upon racial and ethnic background, social class, age, and partner preference; the impact of historical context on work-family experiences; work-family policies in the United States and other countries. Offered as SOCI 372, WGST 372, and SOCI 472. Prereq: SOCI 101 and Sophomore standing.

SOCI 374. Using Law to Designate Public-Private Boundaries for Social Policies. 3 Units.
This course studies law and the public-private dichotomy. With a basis in important research on the sociology of law, it considers three questions: 1) What is the impact of "law" on the boundary separating the public and private sectors? 2) How does "law" designate which actors and institutions belong to the public and private sectors? 3) Is the public-private dichotomy adequate for sociological analyses of law and its influences? If not, what alternatives to the public-private dichotomy can we offer? Offered as SOCI 374 and SOCI 474. Prereq: SOCI 101.

SOCI 375. Independent Study. 1 - 3 Unit.
Prereq: SOCI 101 and SOCI 300.

SOCI 377. Population Dynamics and Changing Societies. 3 Units.
Population and social structure are inextricably linked, as changes in one elicit changes in the other. Social demography, as a discipline, examines these linkages through the systematic study of size, composition and distribution of populations and their relationship to the social, political and economic organization of societies. This course will pay particular attention to mortality, morbidity and health, fertility, family and household organization, and migration as the major processes of population change. The population dynamics of the United States will be emphasized, with select comparisons to developing and developed countries. Offered as SOCI 377 and SOCI 477. Prereq: SOCI 101 or equivalent; 9 hours in SOCI, ANTH, or ECON.

SOCI 381. City as Classroom. 3 Units.
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface--both literally and figuratively--with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481.

SOCI 392. Senior Capstone Experience. 3 Units.
SOCI 392 represents the completion of an independent study paper involving exploration of a sociology topic to be chosen in consultation with the student's capstone advisor. The student will interact regularly with the faculty advisor who will review their progress on the project. This project allows for original thought and for the tailoring of the research to the student's interests. The student will integrate theory, methods and social issues as he/she applies critical thinking skills and insights to the analysis of some aspects of a subject chosen from any of the following subfields and concentrations: Gerontology, Social Inequality, Medical Sociology, Crime and Delinquency, The Life Course, Education, Work and Family, Sociology of Law, and Deviance. The Capstone Project has both a written and an oral component. Following the submission of the Capstone paper, the student will give a presentation of the project at the Senior Capstone fair, or another forum chosen by the department. Prereq: SOCI 101, SOCI 300, SOCI 303, and STAT 201 or PSCL 282.

SOCI 397. Honors Studies. 3 Units.
Intensive investigation of research or conceptual problem; original work under supervision of faculty member. Limited to senior majors. Prereq: Senior status.
SOCI 398. Honors Studies. 3 Units.
Intensive investigation of research on conceptual problems; original work under supervision of faculty member. Limited to senior majors.

SOCI 400. Development of Sociological Theory. 3 Units.
This course examines in detail the works of the major social theorists of the 19th and 20th centuries. It is intended to integrate their ideas with the social and historical milieu from which they were born. Questions of intergroup conflict vs. cooperation, interactions between economic, familial, religious, and political institutions, and the development of the self as a function of larger social processes are addressed. Such celebrated figures as Marx, Weber, and Durkheim, as well as modern thinkers will be presented and discussed. Prereq: Graduate standing.

SOCI 401. Contemporary Sociological Theory. 3 Units.
Current viewpoints in sociological theory are explored using contrasting theoretical perspectives.

SOCI 406. Sociological Research Methods I. 3 Units.
The first of a two-semester series in social research methodology. Students will learn how to interpret and conduct social science research. The two-semester course covers problem formulation, the logic of causal inference, measurement models, research designs, sampling, data collection, and data analysis.

SOCI 407. Sociological Research Methods II. 3 Units.
The second of a two-semester series in social research methodology. (See SOCI 406.) Prereq: SOCI 406.

SOCI 410. The Individual in Society. 3 Units.
This course focuses on the relationship between individuals and the societies in which they live. Influences of values and culture on individuals' selves and identities are discussed as well as how individuals attach meaning to personal life experiences and histories in the context of society at large. Offered as SOCI 310 and SOCI 410.

SOCI 411. Health, Illness, and Social Behavior. 3 Units.
This course considers the role of social factors (e.g., poverty, occupational and family structure) on health and illness. Discussion will concentrate on the role of health promotion (e.g., anti-smoking campaigns), social behavior and lifestyle in health and health care use. Considerable attention is given to understanding health careers and professions and their role in the health of societies and individuals. Offered as SOCI 311 and SOCI 411.

SOCI 413. Sociology of Stress and Coping. 3 Units.
This course will focus attention on human stress throughout the lifespan and its role in personal health and well-being. There have been exciting advances in recent years in understanding the nature of stress in everyday life as well as elements of extreme stress. Trauma is experienced by many people due to normative events such as illness and bereavement or natural and man-made disasters such as crime or war. Coping strategies and social supports which ameliorate negative impact of stress will be considered. Offered as SOCI 313 and SOCI 413.

SOCI 414. Qualitative Methods/Field Research. 3 Units.
Students explore the theoretical foundations of qualitative social research. The course is designed to introduce and provide experience with a range of data generation strategies and analytic skills. The ethnographic techniques of semi-structured interviewing and participant-observation receive particular attention.

SOCI 419. Sociology of Institutional Care. 3 Units.
This course focuses on converging issues of theory, research, and practice in general hospitals, mental hospitals, nursing homes, hospices, and correctional institutions. The ecology of institutions and the adaptation of individuals within institutions will also be considered. There will be field trips to institutional facilities. Offered as SOCI 319 and SOCI 419.

SOCI 436. Institutional Care: Research and Reform. 3 Units.
This course is designed to provide an introduction to the nature of long term care in the USA and to contemporary issues of reform and culture change. It also provides an introduction to techniques for studying nursing home culture, and for assessing culture changes. The issues and problems of long term care are well documented and the need for changing practices of long-term care is so widely recognized and deeply felt that several initiatives for "changing the culture" of long term care have gained national notoriety and rapid momentum. While laudatory, such efforts are inevitable criticized on numerous grounds, including cost, philosophy and vision, and lack of research evidence to support claims of success. The course is designed to provide an introduction to these debates in the scientific literature and in popular culture, and will provide an opportunity to develop skills in structured observation and action research. Offered as SOCI 336 and SOCI 436.

SOCI 443. Medical Sociology. 3 Units.
Course covers theories, research methods, and problems in sociology of medicine. Topics include social epidemiology, health and illness behavior, and sick role. Structures and functions of delivery systems and their interrelationships with other social institutions are discussed.

SOCI 445. Sociology of Mental Illness. 3 Units.
Focus is on social construction of mental health and illness and sociology of emotions. Social determinants of psychological distress will be discussed along with social stigma associated with mental illness. Institutional and community options for care of the mentally ill will be considered along with the impact of recent social movements of deinstitutionalization and independent living. Offered as SOCI 345 and SOCI 445.

SOCI 447. Sociology of Education. 3 Units.
This course provides an introduction to the field of sociology of education, which might be more properly called sociology of schooling. We will examine the development of schools historically and competing paradigms for understanding the place of school in society. Major theoretical perspectives concerning the nature and consequences of schools for individuals and for societies will be reviewed. Issues of individual opportunity - including how it is organized by race, class, and gender - will be covered, as well as issues institutional dynamics - including tracking, testing and so-called crisis and reform. Offered as SOCI 347 and SOCI 447.

SOCI 449. Social Inequality. 3 Units.
Theory and research on contemporary inequality is considered in terms of income, wealth, education, occupational standing, occupational prestige, status categories, racial, ethnic, religious, age, and gender groupings. Offered as SOCI 349 and SOCI 449.

SOCI 455. Special Topics. 3 Units.
One or more sections each semester focusing on selected areas of study in sociology. Offered as SOCI 355 and SOCI 455.
SOCI 481. City as Classroom. 3 Units.
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface--both literally and figuratively--with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481.

SOCI 496. Public Policy and Aging. 3 Units.
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GERO 496, HSTY 480, MHPH 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

SOCI 509. Problems of Data Analysis. 3 Units.
Research in social epidemiology, health service research and other applied fields increasingly demands an understanding of social research methodology. This seminar exposes students to state of the art analyses of social science data including: data preparation, factor analysis, regression and structural equation modeling. Students are provided the opportunity to interpret and critically evaluate the methodology used in journal articles, with an emphasis on data analytical techniques. Students will analyze data sets using SPSS and EQS. Prereq: STAT 401 or SOCI 406, and SOCI 407.

SOCI 601. Reading and Research. 1 - 9 Unit.
Individual study and/or project work.

Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
Department of Statistics

Statistics links mathematics to other disciplines in order to understand uncertainty and probability in the abstract and in the context of actual applications to science, medicine, actuarial science, social science, management science, business, engineering, and contemporary life. As technology brings advances, the statistical theory and methodology required to do them justice becomes more challenging: higher dimensional, dynamic, or computer-intensive. The field of statistics is rapidly expanding to meet the three facets of these challenges: the underlying mathematical theory, the data analysis and modeling methodology, and the interdisciplinary collaborations and new fields of application.

Undergraduate Programs

Students in statistics begin with a foundation in mathematics. Then they add statistical theory, plus intensive modern data analysis and a concentration in a field of their choice. The goal is to develop an appreciation of each facet of the discipline and a mastery of technical skills. This prepares students to enter a growing profession with opportunities in the academic, governmental, actuarial, and industrial spheres.

For the undergraduate student looking toward graduate school, the course of study within these guidelines easily incorporates additional mathematics in preparation for graduate courses. The more specialized option in actuarial science expands the basic program in statistics to incorporate topics from operations research and numerical analysis which are fundamental to actuarial theory and computation. This actuarial option includes the course work necessary to prepare for Courses 1-3 of the Society of Actuaries Exams.

All undergraduate majors begin with a foundation in mathematics and a core of courses in theoretical statistics, courses in statistical methodology, and courses in modern data analysis. Each student’s program is individualized by: (1) the choice of an applied field of concentration according to the student’s own talents and interests, and (2) the choice of appropriate statistics electives, drawn from offerings by the statistics department and from suitable offerings by other departments at the university. The senior project option allows students to work in a research setting or to participate either in interdisciplinary collaboration or in industrial consulting along with a statistics faculty member.

Majors

Bachelor of Arts

The BA degree offers flexibility and the chance to pursue a wider range of interests than the BS degree allows. It also offers students the possibility of expanding the interdisciplinary aspect of the program by completing a second major. For example, students may combine statistics with computer science, biology (molecular, organismal, or ecological), psychology, economics, accounting, or management science.

The BA degree in statistics requires a minimum of 56 hours of approved course work, including 27 hours in statistics and the remainder in related disciplines and a substantive field of application. The specific requirements are as follows:

<table>
<thead>
<tr>
<th>Required courses</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 121 Calculus for Science and Engineering I 4</td>
</tr>
<tr>
<td>MATH 122 Calculus for Science and Engineering II 4</td>
</tr>
<tr>
<td>or MATH 124 Calculus II</td>
</tr>
</tbody>
</table>

Total Units 56

Bachelor of Science

The BS degree adds a laboratory science requirement. For students seriously interested in basic science, a natural science is the logical choice as a focus for the application, and the BS degree is the logical choice of program.

The BS degree in statistics requires a minimum of 68 hours of approved course work, including 27 hours in statistics and the remainder in related disciplines and a substantive field of application.

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>MATH 121 Calculus for Science and Engineering I 4</td>
</tr>
<tr>
<td>MATH 122 Calculus for Science and Engineering II 4</td>
</tr>
<tr>
<td>or MATH 124 Calculus II</td>
</tr>
</tbody>
</table>

Total Units 56

Students are strongly encouraged to include advanced expository or technical writing courses in their programs.
Bachelor's Degree Option in Actuarial Science

The actuarial program leading to either a BA or a BS in statistics requires 30 hours in statistics and actuarial studies and must satisfy the requirements for the appropriate degree program, with the following in addition to required courses.

- At least 12 hours in statistical methodology, to be chosen from courses numbered 300 and higher offered by the statistics department, or approved courses taught in EPBI, EECS, ECON, MATH, OPRE, etc. At least 6 hours must be in STAT courses; STAT 243 Statistical Theory with Application I and STAT 244 Statistical Theory with Application II may be counted.
- STAT 317 Actuarial Science I and STAT 318 Actuarial Science II. Students ordinarily can expect to be prepared to take Courses 1-3 of the Society of Actuaries Exams upon graduation.

Minor

A minor in statistics requires a minimum of 15 hours of approved course work. The minor must satisfy the requirements below and must include a minimum of 9 credits in courses from statistics department offerings.

Required courses

One of the following sequences: 6

<table>

Graduate Programs

The department offers programs leading to the Master of Science and to the Doctor of Philosophy degrees. Graduate assistantships, both with teaching responsibilities and with research duties, are available to qualified applicants. The dual core of the MS program is mathematical statistics and modern data analysis, with the option of a special Entrepreneurial Track. Expanding from this core, students develop technical facility in a variety of statistical methodologies. This breadth of competence is designed to equip graduates to go beyond the appropriate choice of method for implementation and to be able to adapt these techniques and to construct new methods to meet the specific objectives and constraints of new situations.

Master of Science

The MS degree in statistics requires a minimum of 27 hours of approved course work in statistics and related disciplines and an MS research project or a thesis. Each student’s program is developed in consultation with the director of graduate studies or a senior faculty mentor and must satisfy the following requirements:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>STAT 425 &amp; STAT 426</td>
<td>Data Analysis and Linear Models</td>
<td>6</td>
</tr>
<tr>
<td>or STAT 445 &amp; STAT 446</td>
<td>and Multivariate Analysis and Data Mining</td>
<td>6</td>

<td>6</td>
</tr>
</tbody>
</table>

Total Units 27

The goals of this program are:

1. to give each student a balanced view of statistical theory and the application of statistics in practice or in substantive research
2. to have the student develop a broad competence in statistical methodology.

The required core course work reflects this balance. The first two requirements are for full-year sequences in data analysis and theory; the third develops the theory underlying linear modeling. The requirement for applications of statistics will be satisfied through intensive participation in the consulting forum; the selection of an MS research project provides additional exposure. Graduate students are also required to participate in a forum or seminar to gain experience in written and oral presentation.

The remainder of each student’s program is individualized to address the more specialized statistical demands of the selected field of concentration or the focus of multidisciplinary work. Each student may choose either the applied research project or the thesis option, depending on individual interests. In either case, the student can expect to work with a faculty mentor in undertaking a significant task, the results of which will be suitable for publication or for presentation at professional society meetings.

A student coming to school from a position as a professional statistician might choose a statistical problem arising in the workplace as the basis for an MS research project. A student intending to continue graduate work toward a PhD might choose an MS research project to explore the intimate relationship of statistics to substantive fields. Alternatively, either student might choose the thesis option to tailor a methodology to a new setting or to make a first essay at mathematical statistical research.

Entrepreneurial Track

The Master of Science in Statistics-Entrepreneurial Track (MSS-ET) is a professional degree designed to provide training in statistics focused on developing data analysis and decision-making skills in industrial, government, and consulting environments where uncertainties and related risks are present. It expands our master’s program in statistics by creating a professional track that includes some business training. The Entrepreneurial Track provides instruction and real-world business experience to students who have a background in statistics and a vision for new and growing ventures. The MSS-ET program requires a minimum of 27 hours.

The required New Venture Creation and Technology Entrepreneurship courses will be offered by the Weatherhead School of Management. Students on internships will sign up for the consulting forum sequence. In addition, students are required to participate in an intensive (up to 30 hours) one-week annual workshop on the industrial use of statistics from the management perspective. This non-credit workshop will take place during the fall or spring undergraduate breaks.

Doctor of Philosophy

The doctoral program focuses on research, with a plan of study devoted to the development of statistical methodology or theory with innovative applications. Graduates will be able both to extend the theoretical basis for statistics and to bring statistical thought to scientific research.
in other fields. The objective of preparing students to collaborate in interdisciplinary work demands breadth as well, so advanced knowledge of a substantive field and participation in the collaborative experience are also integral to the program.

Students planning to enter the doctoral program in statistics should obtain information from the departmental office. Plans of study are prepared individually by the graduate student and a faculty advisor to develop the talents and interests of each student.

Department Faculty

Jill E. Korbin, PhD
(University of California-Los Angeles)
Interim Chair; Professor of Anthropology

Jiayang Sun, PhD
(Stanford University)
Professor
Simultaneous inference; biased sampling; mixtures and measurement errors; data mining and bioinformatics; semiparametrics and nonparametrics; imaging; general statistics and statistics in interdisciplinary and cutting-edge research

Patricia Williamson, PhD
(Bowling Green University)
Instructor
Bayesian analysis; estimation; hypothesis testing

Wojbor Woyczynski, PhD
(Wroclaw University, Poland)
Professor
Stochastic models; probability; random fields; time series; dynamics of chaotic processes; nonlinear diffusion; turbulence

Lecturers

Paula FitzGibbon, MS
(Miami University)
General statistics and applications; program evaluation for nonprofit organizations; survey questionnaire design

Danhong Song, PhD
(Bowling Green University)
Statistical genetics; linkage analysis and association study

Adjunct Faculty

Manfred Denker, PhD
(University of Erlangen)
Adjunct Professor
Nonparametric statistics; probability theory; complex dynamics

Harold S. Haller, PhD
(Case Western Reserve University)
Adjunct Professor
Statistical quality control; experimental design

Bo Hu, PhD
(University of Wisconsin-Madison)
Adjunct Assistant Professor
Model selection; longitudinal analysis

Hemant Ishwaran, PhD
(Yale University)
Adjunct Associate Professor
Data mining; mixture models; nonparametric Bayes; genomic data

Mary Rieger, PhD
(University of California, Berkeley)
Adjunct Professor
Statistical education

Yaomin Xu, PhD
(Case Western Reserve University)
Adjunct Assistant Professor
Statistical Genetics and Bioinformatics

Courses

STAT 201. Basic Statistics for Social and Life Sciences. 3 Units.
Designed for undergraduates in the social sciences and life sciences who need to use statistical techniques in their fields. Descriptive statistics, probability models, sampling distributions. Point and confidence interval estimation, hypothesis testing. Elementary regression and analysis of variance. Not for credit toward major or minor in Statistics.

STAT 208. Statistics for Business and Management Science II. 3 Units.

STAT 243. Statistical Theory with Application I. 3 Units.

STAT 244. Statistical Theory with Application II. 3 Units.

STAT 312. Basic Statistics for Engineering and Science. 3 Units.
For advanced undergraduate students in engineering, physical sciences, life sciences. Comprehensive introduction to probability models and statistical methods of analyzing data with the object of formulating statistical models and choosing appropriate methods for inference from experimental and observational data and for testing the model’s validity. Balanced approach with equal emphasis on probability, fundamental concepts of statistics, point and interval estimation, hypothesis testing, analysis of variance, design of experiments, and regression modeling. Note: Credit given for only one (1) of STAT 312, 313, 333, 433. Prereq: MATH 122 or equivalent.
STAT 313. Statistics for Experimenters. 3 Units.
For advanced undergraduates in engineering, physical sciences, life sciences. Comprehensive introduction to modeling data and statistical methods of analyzing data. General objective is to train students in formulating statistical models, in choosing appropriate methods for inference from experimental and observational data and to test the validity of these models. Focus on practicalities of inference from experimental data. Inference for curve and surface fitting to real data sets. Designs for experiments and simulations. Student generation of experimental data and application of statistical methods for analysis. Critique of model; use of regression diagnostics to analyze errors. Note: Credit given for only one (1) of STAT 312, 313, 333, 433. Prereq: MATH 122 or equivalent.

STAT 317. Actuarial Science I. 3 Units.
Practical knowledge of the theory of interest in both finite and continuous time. That knowledge should include how these concepts are used in the various annuity functions, and apply the concepts of present and accumulated value for various streams of cash flows as a basis for future use in: reserving, valuation, pricing, duration, asset/liability management, investment income, capital budgeting, and contingencies. Valuation of discrete and continuous streams of payments, including the case in which the interest conversion period differs from the payment period will be considered. Application of interest theory to amortization of lump sums, fixed income securities, depreciation, mortgages, etc., as well as annuity functions in a broad finance context will be covered. Topics covered include areas examined in the American Society of Actuaries Exam 2. Offered as STAT 317 and STAT 417. Prereq: MATH 122 or MATH 126 or requisites not met permission.

STAT 318. Actuarial Science II. 3 Units.
Theory of life contingencies. Life table analysis for simple and multiple decrement functions. Life and special annuities. Life insurance and reserves for life insurance. Statistical issues for prediction from actuarial models. Topics covered include areas examined in the American Society of Actuaries Exam 3. Offered as STAT 318 and STAT 418. Prereq: STAT 317 and STAT 207, or STAT 312, or STAT 345 or requisites not met permission.

STAT 325. Data Analysis and Linear Models. 3 Units.
Basic exploratory data analysis for univariate response with single or multiple covariates. Graphical methods and data summarization, model-fitting using S-plus computing language. Linear and multiple regression. Emphasis on model selection criteria, on diagnostics to assess goodness of fit and interpretation. Techniques include transformation, smoothing, median polish, robust/resistant methods. Case studies and analysis of individual data sets. Notes of caution and some methods for handling bad data. Knowledge of regression is helpful. Offered as STAT 325 and STAT 425. Prereq: STAT 207 or STAT 243 or STAT 312 or EPBI 431 or EPBI 441 or EPBI 458.

STAT 326. Multivariate Analysis and Data Mining. 3 Units.

STAT 332. Statistics for Signal Processing. 3 Units.
For advanced undergraduate students or beginning graduate students in engineering, physical sciences, life sciences. Introduction to probability models and statistical methods. Emphasis on probability as relative frequencies. Derivation of conditional probabilities and memoryless channels. Joint distribution of random variables, transformations, autocorrelation, series of irregular observations, stationarity. Random harmonic signals with noise, random phase and/or random amplitude. Gaussian and Poisson signals. Modulation and averaging properties. Transmission through linear filters. Power spectra, bandwidth, white and colored noise. ARMA processes and forecasting. Optimal linear systems, signal-to-noise ratio, Wiener filter. Completion of additional assignments required from graduate students registered in this course. Offered as STAT 332 and STAT 432. Prereq: MATH 122.

STAT 333. Uncertainty in Engineering and Science. 3 Units.
Phenomena of uncertainty appear in engineering and science for various reasons and can be modeled in different ways. The course integrates the mainstream ideas in statistical data analysis with models of uncertain phenomena stemming from three distinct viewpoints: algorithmic/computational complexity; classical probability theory; and chaotic behavior of nonlinear systems. Descriptive statistics, estimation procedures and hypothesis testing (including design of experiments). Random number generators and their testing. Monte Carlo Methods. Mathematica notebooks and simulations will be used. Note: Credit given for only one (1) of STAT 312, 313, 333, 433. Graduate students are required to do an extra project. Offered as STAT 333 and STAT 433. Prereq: MATH 122 or MATH 223.

STAT 345. Theoretical Statistics I. 3 Units.
Topics provide the background for statistical inference. Random variables; distribution and density functions; transformations, expectation. Common univariate distributions. Multiple random variables; joint, marginal and conditional distributions; hierarchical models, covariance. Distributions of sample quantities, distributions of sums of random variables, distributions of order statistics. Methods of statistical inference. Offered as STAT 345, STAT 445, and EPBI 481. Prereq: MATH 122 or MATH 223 or Coreq: EPBI 431.

STAT 346. Theoretical Statistics II. 3 Units.
Point estimation: maximum likelihood, moment estimators. Methods of evaluating estimators including mean squared error, consistency, "best" unbiased and sufficiency. Hypothesis testing; likelihood ratio and union-intersection tests. Properties of tests including power function, bias. Interval estimation by inversion of test statistics, use of pivotal quantities. Application to regression. Graduate students are responsible for mathematical derivations, and full proofs of principal theorems. Offered as STAT 346,STAT 446, and EPBI 482. Prereq: STAT 345 or STAT 445 or EPBI 481.

STAT 395. Senior Project in Statistics. 3 Units.
An individual project done under faculty supervision involving the investigation and statistical analysis of a real problem encountered in university research or an industrial setting. Written report.
STAT 412. Statistics for Design and Analysis in Engineering and Science. 3 Units.
For graduate students (primarily) and advanced undergraduates in engineering, physical sciences, and life sciences. After basic statistical concepts are reviewed, the remainder of the course consists of a comprehensive introduction to statistical methods of designing experiments and analyzing data. The general objective is to train students in statistical modeling and in the choice of experimental designs to use in scientific investigations. A variety of experimental designs are covered, and regression analysis is presented as the primary technique for analyzing data from designed experiments, and in discriminating between various possible statistical models. The course is oriented toward graduate students engaged in or embarking on research. Prereq: MATH 122.

STAT 417. Actuarial Science I. 3 Units.
Practical knowledge of the theory of interest in both finite and continuous time. That knowledge should include how these concepts are used in the various annuity functions, and apply the concepts of present and accumulated value for various streams of cash flows as a basis for future use in: reserving, valuation, pricing, duration, asset/liability management, investment income, capital budgeting, and contingencies. Valuation of discrete and continuous streams of payments, including the case in which the interest conversion period differs from the payment period will be considered. Application of interest theory to amortization of lump sums, fixed income securities, depreciation, mortgages, etc., as well as annuity functions in a broad finance context will be covered. Topics covered include areas examined in the American Society of Actuaries Exam 2. Offered as STAT 317 and STAT 417. Prereq: MATH 122 or MATH 126 or requisites not met permission.

STAT 418. Actuarial Science II. 3 Units.
Theory of life contingencies. Life table analysis for simple and multiple decrement functions. Life and special annuities. Life insurance and reserves for life insurance. Statistical issues for prediction from actuarial models. Topics covered include areas examined in the American Society of Actuaries Exam 3. Offered as STAT 318 and STAT 418. Prereq: STAT 317 and STAT 207, or STAT 312, or STAT 345 or requisites not met permission.

STAT 425. Data Analysis and Linear Models. 3 Units.
Basic exploratory data analysis for univariate response with single or multiple covariates. Graphical methods and data summarization, model-fitting using S-plus computing language. Linear and multiple regression. Emphasis on model selection criteria, on diagnostics to assess goodness of fit and interpretation. Techniques include transformation, smoothing, median polish, robust/resistant methods. Case studies and analysis of individual data sets. Notes of caution and some methods for handling bad data. Knowledge of regression is helpful. Offered as STAT 325 and STAT 425.

STAT 426. Multivariate Analysis and Data Mining. 3 Units.

STAT 427. Statistical Computing. 3 Units.
Basic topics in statistical computing: floating point arithmetic; seminumerical computation including generation and test of random numbers, Monte Carlo methods, variance reduction methods, stochastic models and simulation studies; numerical computation including numerical linear algebra, optimization and root-finding, numerical integration; some graphical and symbolic computations, special topics in statistical computing: resampling methods, EM algorithms, Gibbs sampling and projection pursuit. Prereq: STAT 345 or STAT 425 or permission of department.

STAT 432. Statistics for Signal Processing. 3 Units.

STAT 433. Uncertainty in Engineering and Science. 3 Units.
Phenomena of uncertainty appear in engineering and science for various reasons and can be modeled in different ways. The course integrates the mainstream ideas in statistical data analysis with models of uncertain phenomena stemming from three distinct viewpoints: algorithmic/computational complexity; classical probability theory; and chaotic behavior of nonlinear systems. Descriptive statistics, estimation procedures and hypothesis testing (including design of experiments). Random number generators and their testing. Monte Carlo Methods. Mathematica notebooks and simulations will be used. Note: Credit given for only one (1) of STAT 312, 313, 333, 433. Graduate students are required to do an extra project. Offered as STAT 333 and STAT 433. Prereq: MATH 122 or MATH 223.

STAT 437. Stochastic Models: Time Series and Markov Chains. 3 Units.
STAT 439. Integrated Numerical and Statistical Computations. 3 Units.
This course will embed numerical methods into a Bayesian framework. The statistical framework will make it possible to integrate a priori information about the unknowns and the error in the data directly into the most efficient numerical methods. A lot of emphasis will be put on understanding the role of the priors, their encoding into fast numerical solvers, and how to translate qualitative or sample-based information—or lack thereof—into a numerical scheme. Confidence on computed results will also be discussed from a Bayesian perspective, at the light of the given data and a priori information. The course should be of interest to anyone working on signal and image processing statistics, numerical analysis and modeling. Recommended Preparation: MATH 431. Offered as MATH 439 and STAT 439.

STAT 445. Theoretical Statistics I. 3 Units.
Topics provide the background for statistical inference. Random variables; distribution and density functions; transformations, expectation. Common univariate distributions. Multiple random variables; joint, marginal and conditional distributions; hierarchical models, covariance. Distributions of sample quantities, distributions of sums of random variables, distributions of order statistics. Methods of statistical inference. Offered as STAT 345, STAT 445, and EPBI 481. Prereq: MATH 122 or MATH 223 or Coreq: EPBI 431.

STAT 446. Theoretical Statistics II. 3 Units.
Point estimation: maximum likelihood, moment estimators. Methods of evaluating estimators including mean squared error, consistency, "best" unbiased and sufficiency. Hypothesis testing; likelihood ratio and union-intersection tests. Properties of tests including power function, bias. Interval estimation by inversion of test statistics, use of pivotal quantities. Application to regression. Graduate students are responsible for mathematical derivations, and full proofs of principal theorems. Offered as STAT 346, STAT 446 and EPBI 482. Prereq: STAT 345 or STAT 445 or EPBI 481.

STAT 448. Bayesian Theory with Applications. 3 Units.
Principles of Bayesian theory, methodology and applications. Methods for forming prior distributions using conjugate families, reference priors and empirically-based priors. Derivation of posterior and predictive distributions and their moments. Properties when common distributions such as binomial, normal or other exponential family distributions are used. Hierarchical models. Computational techniques including Markov chain, Monte Carlo and importance sampling. Extensive use of applications to illustrate concepts and methodology. Recommended preparation: STAT 445.

STAT 455. Linear Models. 3 Units.
Theory of least squares estimation, interval estimation and tests for models with normally distributed errors. Regression on dummy variables, analysis of variance and covariance. Variance components models. Model diagnostics. Robust regression. Analysis of longitudinal data. Prereq: MATH 201 and STAT 346 or STAT 446

STAT 491. Graduate Student Seminar. 1 - 2 Unit.
Seminar run collaboratively by graduate students to investigate an area of current research, the topic chosen each semester. All graduate students participate in presentation of material each semester. Satisfies requirement for every full-time graduate student to enroll in a participatory seminar every semester while registered in any graduate degree program. Recommended preparation: Graduate standing.

STAT 495A. Consulting Forum. 1 - 3 Unit.
This course unifies what students have learned in their course work to apply their knowledge in consulting. It recognizes the fact that the essence of the statistical profession is continuing interaction with practitioners in the sciences, engineering, medicine, economics, etc. The course presents the views of prominent experts in the field as obtained from the literature and other sources. The responsibilities of the consultant and the client are discussed. Sample consulting problems are presented and strategies for solving them are provided. Prereq: STAT 325 or STAT 425.

STAT 495B. Consulting Forum With Practicum. 3 Units.
This course is designed to provide a hands-on experience with statistical consulting under the guidance of the instructor. It will include discussion of practical aspects of consulting such as the entrepreneurial nature of this activity. The students will become involved in actual consulting projects generated in a collaborative environment. Statistical problems, together with their substantive background, will be presented by individuals from the private sector (e.g., from industry) and/or CWRU faculty and students. Selected problems will be addressed in a collaborative fashion; i.e., by a team involving graduate students from the Statistics Department, the course instructor, and scientists. Some of these problems may lead to collaborative research or entrepreneurial ventures. Prereq: STAT 495A, STAT 325, or STAT 425 or consent of department.

STAT 525. Advanced Data Analysis. 3 Units.
Topics drawn from resampling methods (including bootstrapping), MCMC (Gibbs sampling), nonparametric curve and surface fitting, kernel density estimation, projection pursuit, mixture models, time series (time permitting), approaches to model uncertainty, models for repeated measures and structural-functional models, statistical inference for large systems, modern data analysis techniques. Recommended preparation: STAT 426 or permission of department.

STAT 527. Advanced Statistical Computing. 3 Units.
Special topics drawn from statistical computing, complex system and dynamic computation. Oriented to research. Prereq: STAT 427.

STAT 538. Stochastic Models: Diffusive Phenomena and Stochastic Differential Equations. 3 Units.
Introduction to stochastic modeling of data. Emphasis on models and statistical analysis of data with significant temporal and/or spatial structure. This course will analyze time and space dependent random phenomena from two perspectives: Brownian motion and diffusive processes: Classification of stochastic processes, finite dimensional distributions, random walks and their scaling limits, Brownian motion and its paths properties, general diffusive processes, Fokker-Planck-Kolmogorov equations, Poisson and point processes, heavy tail diffusions, Levy processes, tempered stable diffusions. Stochastic calculus and stochastic differential equations: Wiener random integrals, mean-square theory, Brownian stochastic integrals and Ito formula, stochastic integrals for Levy processes, martingale property, basic theory and applications of stochastic differential equations. This course is related to STAT 437 but can be taken independently of it. Prereq: STAT 312 or equivalent.
STAT 545. Advanced Theory of Statistics I. 3 Units.

STAT 571. Advanced Topics in Statistics. 1 - 3 Unit.
For advanced graduate students. Topics in specialized areas of statistical theory and methodology, with emphasis on recent advances in theory, developments of new methodology and definition of new research questions. Topics may change from year to year. Number of credit hours for the class will be predetermined each semester based on the material to be presented.

STAT 576. Advanced Topics in Modeling. 1 - 3 Unit.
Advanced topics in specialized areas of statistics and stochastic modeling designed to define new research directions drawing on recent advances in theory and model formulation. Focus on statistical issues arising in the application of statistical or stochastic models to new substantive research efforts. Topics may change from year to year. Number of credit hours for the class will be predetermined each semester based on the material to be presented.

STAT 601. Reading and Research. 1 - 9 Unit.
Individual study and/or project work.

STAT 621. M.S. Research Project. 1 - 9 Unit.
Completion of statistical design and/or analysis of a research project in a substantive field which requires substantial and/or nonstandard statistical techniques and which leads to results suitable for publication. Written project report must present the context of the research, justify the statistical methodology used, draw appropriate inferences and interpret these inferences in both statistical and substantive scientific terms. Oral presentation of research project may be given in either graduate student seminar or consulting forum.

STAT 651. Thesis M.S.. 1 - 18 Unit.
(Credit as arranged.) May be used as alternative to STAT 621 (M.S. Research Project) in fulfillment of requirements for M.S. degree in Statistics.

(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
Department of Theater

The Department of Theater offers education and participation in all aspects of drama, with course offerings in acting, stagecraft, costume, scene design, directing, and playwriting. Students have the opportunity to perform on stage as well as to serve on the technical crews in main-stage theatrical productions each year. The high ratio of faculty to students ensures that students will be able to work closely with highly skilled professionals. The department treats all performances as educational experiences and welcomes the participation of all students regardless of their academic majors and career goals.

Actor education in the theater program prepares majors for acting career opportunities in the American theater. Graduates are currently employed nationally and regionally. The MFA Acting Program, a collaboration between the university and The Cleveland Play House, represents a unique alliance between one of the oldest theater programs in the United States and the nation’s first regional theater.

The department is affiliated with the National Theater Institute (NTI) in Waterford, Connecticut, one of many collaborations that afford opportunities to our students. This prestigious program offers students the best in concentrated theater training, and its Moscow semester provides a singular cultural perspective as well. Students may participate in NTI programs during the fall or spring semester; full credit is available with no loss of financial aid.

Many of our students go abroad for either one semester at the British American Drama Academy (BADA) or a full year in other programs. BADA offers a conservatory-based intensive program in all aspects of actor training, with full credit transfer and no loss of financial aid. For more information on this and other opportunities, consult Jeffrey Ullom, director of undergraduate theater studies.

Undergraduate Programs

The Bachelor of Arts program in theater offers concentrations in acting, design/technical theater, dramatic writing, and directing.

The basic course requirements for all theater majors are as follows:

<table>
<thead>
<tr>
<th>Performance courses</th>
<th>15</th>
</tr>
</thead>
<tbody>
<tr>
<td>THTR 110 Introduction to Theater</td>
<td></td>
</tr>
<tr>
<td>THTR 101 Acting I For Minors</td>
<td></td>
</tr>
<tr>
<td>THTR 102 Acting I for Majors</td>
<td></td>
</tr>
<tr>
<td>THTR 103 Acting II</td>
<td></td>
</tr>
<tr>
<td>THTR 330 Play Directing I</td>
<td></td>

Total hours, not including THTR 385 Rehearsal and Production/THTR 386 Rehearsal and Performance: 42

### Departmental Honors in Theater

Majoring in theater must make written application to the director of undergraduate theater studies no later than May 1 of their junior year. Students must have a minimum 3.25 overall grade point average and a minimum 3.75 grade point average in theater. Acceptance into the honors program is contingent upon faculty support and recommendation by the director of undergraduate theater studies and the department chair.

Those accepted register for THTR 397 Honors Studies I and THTR 398 Honors Studies II during their senior year, for a total of 6 hours. The honors project is defined as a production project in acting, design, playwriting, directing, or management/outrich. A supporting paper discussing the concept, execution, and performance of the project must be filed with the director of undergraduate theater studies no later than one week following the project presentation. Preparation of the project will be supervised by a department faculty member.

This project may be accepted for honors only if it receives a grade of A from both the project advisor and the director of undergraduate theater studies. The grade of A must be received both semesters. Students who qualify will receive the notation “Departmental Honors in Theater” on their diplomas. Information about the structure and specific requirements of the honors project is available from the director of undergraduate theater studies.

### Minor

A minor in theater requires 18 hours. The requirements for each concentration are as follows:

### General Theater

### Graduate Programs

#### Master of Fine Arts in Acting

In 1996, The Cleveland Play House and Case Western Reserve University joined forces to create a new Master of Fine Arts program in acting. The students begin their involvement with the Play House in their first semester, and their level of involvement steadily increases until, in the third year, they become professional apprentices in the Play House company.

The MFA in acting is a terminal pre-professional degree. Candidacy for the program requires an undergraduate degree with (ideally) a major in theater, equivalent training and experience, or demonstrable potential for work at the MFA level. In addition, candidates must provide evidence of technical skill and creative ability.

At the end of each semester in residence, the student’s skill and creative ability are evaluated in light of his or her work in the department. Only students who have clearly demonstrated growth and excellence are permitted to remain in the program. The award of the MFA degree is contingent upon the student’s academic progress and upon the
assessment on the part of the faculty that the candidate possesses the potential to work in the field of theater on a professional level.

Requirements for the MFA degree include:

1. A minimum of 60 semester hours of graduate work beyond the bachelor’s degree
2. A cumulative grade point average of 3.0 for all course work on the graduate level
3. Completion of the course requirements for the MFA Thesis Portfolio
4. Successful completion of the Third Year Internship at The Cleveland Play House

Course requirements for the MFA in acting are as follows:

Courses in acting, including script analysis, implementation of acting theory, characterization, modernist playwrights, and Shakespeare

Courses in movement, chosen from mask work, period styles, stage combat, and commedia

Courses in voice, chosen from voice production, articulation, and interpretation

Courses in speech, using Edith Skinner techniques, dialects, verse and lyric drama, and Shakespeare

Courses in performance theory, projects, and professional seminars

Two of the following courses in creative thesis:

THTR 401 Advanced Stage Movement I
THTR 402 Advanced Stage Movement II
THTR 403 Advanced Stage Movement III
THTR 404 Advanced Stage Movement IV
THTR 473 Graduate Voice Technique I
THTR 474 Graduate Voice Technique II
THTR 475 Voice for Stage: Shakespeare
THTR 479 American Stage Speech
THTR 501 Text Analysis for the Actor
THTR 509 Seminar: Introduction to Performance Theory
THTR 512 Graduate Audition Lab
THTR 530 Ensemble Technique
THTR 531 Acting: Research and Performance I
THTR 532 Acting: Research and Performance II
THTR 533 Acting: Research and Performance III
THTR 534 Acting: Research and Performance IV
THTR 540 The Business of the Business
THTR 579 American Stage Speech II
THTR 580 Stage Dialects
THTR 581 Classical Speech and Text
THTR 601 Special Projects
THTR 610 Professional Internship
THTR 620 Advanced Role Analysis Preparation I
THTR 630 Performance Studio
THTR 642 Thesis Portfolio I
THTR 643 Thesis Portfolio II

Total Units: 57-60

Department Faculty

Ron Wilson, BGS (Wichita State University)
Katharine Bakeless Nason Professor of Theater and Drama; Chair; Director, Case/Cleveland Play House MFA Acting Program

Movement for the actor; acting; acting for the camera; playwriting; performance theory

Catherine Albers, MFA (University of Minnesota)
Professor; Director of Recruitment

Acting; audition laboratory; business of the business; acting for the camera

Jill Davis, MFA (Temple University)
Assistant Professor

Scene design; scene painting; stage management

Angelina M. Herin, MFA (University of South Carolina)
Assistant Professor

Costume, hair and makeup design

Shanna Beth McGee, MFA (University of Georgia)
Associate Professor

Voice

Jerrold Scott, MFA (University of South Carolina)
Associate Professor; Artistic Director, Eldred Theater

Acting; speech; directing

Jeffrey Ullom, PhD (University of Illinois, Champaign-Urbana)
Associate Professor; Director of Undergraduate Theater Studies

Dramatic literature, history

Adjunct Faculty

Michael Bloom, PhD (Stanford University)
Adjunct Associate Professor; Artistic Director, The Cleveland Play House

Donald Carrier (Webber Douglas Academy of Dramatic Art)
Adjunct Associate Professor; Associate Director, MFA Acting Program

Acting; script analysis

Courses

THTR 100. Introduction to Acting. 3 Units.
A course designed to provide the non-major or undeclared liberal arts major experience with a basic understanding of acting and performance. Fundamentals in improvisation, vocabulary, and scene study are stressed. This course fulfills THTR 101 or THTR 102 should the undeclared student select theater as his or her major or minor. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

THTR 101. Acting I For Minors. 3 Units.
This course is designed to expose the theater minor to the development of the actor’s basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

THTR 102. Acting I For Majors. 3 Units.
This course is designed to expose the theater major to the development of the actor’s basic tools. Relaxation, concentration, and improvisation are taught along with basic scene study work. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.
THTR 103. Acting II. 3 Units.
This course continues the work begun in THTR 101 or THTR 102 with emphasis on action, emotional life, and text analysis as the essential elements of the actor’s work. Prereq: THTR 100, THTR 101, or THTR 102.

THTR 105. Introduction to Stagecraft. 3 Units.
An introduction to scenic construction and painting, hands-on oriented to workshop skills.

THTR 106. Mr. Kiss Kiss Bang Bang - James Bond and Popular Culture. 3 Units.
The twenty-one films of James Bond have become part of popular culture, and the figure of the superspy has become mythic in proportion. This series, from its first installment in 1963 to the latest reinvention of James Bond in 2006, not only depicts one dashing man’s efforts to save the world from disaster again and again, but also traces the development of our popular culture. Issues of violence, sex, the presentation and treatment of women, racial stereotypes, and spectacle among other topics can be discussed after viewing each film, providing an opportunity to explore the changing expectations of American audiences and the developing form of contemporary cinema. Students who have taken USSO 286D may not receive credit for this class.

THTR 107. Development of Theater: Beginnings to English Renaissance. 3 Units.
An introduction to theater through established theories and knowledge of the theater as a physical space. Approaches practical problems of scenic design as well as professional potential of the field.

THTR 108. Movement for the Actor. 3 Units.
The course focuses on developing a kinesthetic awareness of the body and its use as a theatrically expressive instrument. Exercises will encompass development of flexibility, strength building, alignment, motor skills, and concentration. Prereq: THTR 101 or THTR 102.

THTR 109. Stage Management. 3 Units.
Designed to acquaint student with the numerous aspects of stage management.

THTR 110. Introduction to Theater. 3 Units.
THTR 110 is a fundamental study of theatre from the standpoint of developing the critical acumen of a potential audience. It covers each ingredient of the theatrical experience--audience, playwrighting, acting, directing, theatre architecture, design and technology--and attempts to help students define a reasonable set of standards to judge that part of the experience as an audience member and to clearly communicate their feelings and thoughts regarding that experience. The primary textbook is Edward Wilson’s The Theatre Experience, former theatre critic for The Wall Street Journal. Readings in this text are augmented by the reading of specific plays that represent different periods, genres, conventions, and dramatic styles. Representative plays (typically six each semester) include Oedipus Rex (Sophocles), Hamlet (Shakespeare), Tartuffe (Moliere), Uncle Vanya (Chekhov), Waiting for Godot (Beckett), and Angels in America (Kushner). Many of these plays are supplemented by short films prepared by Films for the Humanities so that students can see examples of various dramatic and theatrical styles in performance. In addition to class discussions, lectures, and readings, students are also required to attend two live theatre productions offered by Case Western Reserve University’s Department of Theater each semester. The students write critical essays about their experience as an audience member in relation to a particular aspect of the performance. Students also have an opportunity to complete in-class projects in which they gain experience functioning as a theatre practitioner. These projects and the accompanying written assignment are designed to increase the student’s understanding of the function and interdependence of various theatre artists.

THTR 111. Introduction to Design. 3 Units.
This course offers the opportunity to learn, develop, and practice the art of set, costume, and lighting design by concentrating specifically on the processes, skills, and disciplines of design for performance. Furthermore, students will read several plays and examine ways in which theatre design can suggest meaning and interpretation of the script. Students will learn basic design elements and principles of composition through interactive, collaborative projects and exercises in addition to critically analyzing other designers’ works from a broad spectrum of design styles. Emphasis will be placed on creativity, discovery, analysis, and collaboration.

THTR 201. Movement for the Actor. 3 Units.
The course focuses on developing a kinesthetic awareness of the body and its use as a theatrically expressive instrument. Exercises will encompass development of flexibility, strength building, alignment, motor skills, and concentration. Prereq: THTR 101 or THTR 102.
THTR 229. Development of Theater: Renaissance to Romanticism. 3 Units.
THTR 229 explores the many developments in playwriting, design, acting, and theater architecture across the world. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater II not only explores the development of theatrical conventions in Spain, England, Italy, France and other European countries that lead to the creation of modern drama, but the course also offers an in-depth look at the history and conventions of theater in India, Korea, China, and Japan. Offered as THTR 229 and WLIT 229. Prereq: Sophomore standing.

THTR 231. Acting III: Contemporary Technique. 3 Units.
An exploration of advanced contemporary acting technique based on the work of Michael Chekhov. Provides advanced acting students with the tools necessary to work effectively and consistently with contemporary texts, with emphasis placed on psychological gesture and gesture. Prereq: THTR 101 and THTR 102.

THTR 232. Acting IV: Classical Technique. 3 Units.
An exploration of techniques to approach classical theater, with emphasis on the works of Shakespeare. Presents the challenges of working with heightened language in classical texts, and provides skills necessary to transfer modern acting methods to these more poetic plays. Prereq: THTR 102.

THTR 306. Acting V: Camera Technique. 3 Units.
Acting for the Camera class with emphasis on how it differs from onstage work. Interviews, scenes, and exercises will be used to highlight the differences and similarities. Emphasis on contemporary works. Prereq: THTR 231 or THTR 232.

THTR 311. Audition Laboratory. 1 Unit.
A discussion and practicum exploring the problems faced by an actor in various audition situations. Development of an audition repertory for the actor for stage, video and film. Prereq: Senior Theater major.

THTR 312. Playwriting. 3 Units.
Theory and practice of dramatic writing, in the context of examples, classic and contemporary. Recommended preparation: ENGL 203 or ENGL 213 or ENGL 214 or ENGL 303 or ENGL 304. Offered as ENGL 305 and THTR 312.

THTR 314. Advanced Playwriting. 3 Units.
Theory and practice of dramatic writing with special focus on the craft of writing a full-length play. Offered as ENGL 314 and THTR 314. Prereq: ENGL 305 or THTR 312.

THTR 316. Screenwriting. 3 Units.
A critical exploration of the craft of writing for film, in which reading and practicum assignments will culminate in the student submitting an original full-length screenplay. Offered as ENGL 316 and THTR 316. Prereq: THTR 312.

THTR 323. Topics in Design. 3 Units.
This course will examine various topics related to theatre design and technology not covered in other design courses. Students will be provided with practical and theoretical knowledge on a specific topic in order to increase their design and/or technical skills. In addition, each course offering will have its own stated objectives. This course may be repeated by students with each new topic. Prereq: THTR 111 or instructor permission.

THTR 327. American Theater and Playwrights. 3 Units.
Designed to provide students an overview of the development of theater in the United States and to familiarize them with the works and themes of selected American playwrights. Offered as AMST 327 and THTR 327.

THTR 329. Dramatic Literature. 3 Units.
Dramatic text analyzed in the context of theatrical production. Major analytical tools introduced.

THTR 330. Play Directing I. 3 Units.
This course will begin a two-semester study of the art and craft of stage direction of plays. Topics covered will include history of the profession, directorial theory and practice, development of skills such as text analysis, design and concept, and general problem solving. Prereq: THTR 101 and THTR 102, and upperclass status.

THTR 331. Play Directing II. 3 Units.
This course will continue with the basic concepts learned in THTR 330 and will expand them in regard to actual production. Topics will include directing mechanics, ground planning, blocking, and visualization, staging and working with actors. The course will culminate in a faculty supervised directing project for public performance. There are three evening labs for this course. Prereq: THTR 330, and upperclass status.

THTR 334. Shakespeare: Histories and Tragedies. 3 Units.
Close reading of a selection of Shakespeare’s tragedies and history plays (e.g., “Richard the Third,” “Julius Caesar,” “Hamlet,” “King Lear”). Topics of discussion may include Renaissance drama as a social institution, the nature of tragedy, national history, gender roles, sexual politics, the state and its opponents, theatrical conventions. Assessment may include opportunities for performance. Offered as ENGL 324, ENGL 424, and THTR 334. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

THTR 335. Shakespeare: Comedies and Romances. 3 Units.
Close reading of selected plays of Shakespeare in the genres of comedy and romance (e.g., “The Merchant of Venice,” “Twelfth Night,” “Measure for Measure,” “The Tempest”). Topics of discussion may include issues of sexual desire, gender roles, marriage, the family, genre conventions. Assessment may include opportunities for performance. Offered as ENGL 325, ENGL 425, and THTR 335. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

THTR 375. Voice for the Stage I. 3 Units.
Development of the actor’s vocal instrument. Work in articulation, range, and flexibility. Prereq: Theater major or consent of department.

THTR 376. Voice for the Stage II. 3 Units.
Continuation of THTR 375. Prereq: THTR 375.
**THTR 382. Crossing Bridges: The Public Role of Artist in Understanding Disease. 3 Units.**
An in-depth look at the role of the artist in public life and in creating theatrical performance from life experience. The students interact with patients in medical treatment for catastrophic illness and as they understand the experience of disease, they help transform that experience into a performance that gives a voice to the unvoiced in our society. The approved service learning course is offered only as a Senior Capstone and is a demanding challenge for the serious student of theater. Prereq: Acting concentration or consent of department.

**THTR 385. Rehearsal and Production. 1 - 3 Unit.**
Practicum for students participating in production work in the Department of Theater and Dance. Supervised laboratory experience in technical theater, construction techniques, scenery, costumes, lighting, and props; production; ticket office operations, promotion, publicity and public relations; house management; wardrobe responsibilities; stage management; assistant directing; and other production positions relating to the mainstage performances in Eldred Theater. Students are recommended to take one credit hour per performance, with a maximum of 8 credit hours allowed during their undergraduate career.

**THTR 386. Rehearsal and Performance. 1 Unit.**
Practicum for students participating in performance in the Department of Theater and Dance, relating to the mainstage productions at Eldred Theater. This course may be repeated, for a maximum total of 2 credits.

**THTR 390. Theater Design and Technology Capstone. 3 Units.**
This is a SAGES Capstone course designed to provide an opportunity for advanced Design/Technical Theater Undergraduates to undergo a thorough theatrical design experience as would be expected in the professional theater. The project requires a specific play or performance piece to be chosen or assigned and researched thoroughly. The research would culminate in a production concept which should be presented in written and oral form with a great deal of visual support. The production concept leads to the design, either scenic, costume, lighting or sound, which then must be executed. In professional theater, execution first means preparing all of the drafting, renderings, and paperwork necessary for a production team to create the set or costumes, or prepare the necessary lighting or sound equipment in the venue. The final portion of the design execution will be the performance of the actual piece on stage. It could be appropriate for a scenic or costume design project to be complete at this stage as the vast majority of the work must be done before the actual performance and the realization of the design is executed by a production team. Lighting and sound designers must finish the execution of their designs in the technical rehearsal phase of production. Their work is dependent on integration with the other elements of production. However, theater is a collaborative art form, and the final execution of every design on stage is the ultimate goal of the designers, and when possible, it would be preferable to have every capstone project culminate in a fully realized production. Due to budget constraints and the logistics of allowing every design/technical senior to be able to participate in a fully realized production, students can choose to pursue a more research intensive project in which the student could study specific designers, movements in design or the development of technology in theatrical design. These projects would be presented in a more traditional oral presentation with visual support.

**THTR 393. Senior Capstone: Dramaturgy. 3 Units.**
This course introduces students to theories of textual analysis and contextual research within the framework of theatrical performance. Students will investigate the history and methodologies of dramaturgy, and then apply the best practices of the profession to the study and production of contemporary plays. Because dramaturgy is a collaborative endeavor, students will participate with others in the production of a theoretical adaptation from a non-dramatic source, as well as the creation of an interdisciplinary theatre event and a multi-media performance project. By course end, students will be able to support their theatrical interests with dramaturgical insights and to work collaboratively to create productions that reflect the cultural and aesthetic diversity of the 21st century. Prereq: Senior standing.

**THTR 396. Non-Verbal Theatrical Text. 3 Units.**
This is a SAGES capstone course. It has been constructed to provide an opportunity for advanced Design/Technical Theater Undergraduates to examine and explore the roots and current trends of post-modern, contemporary theater as well as to investigate current design outside of its traditional decorative role. Rather, as in current movements described as "action design" or "affective space theory", design will be used to create a text which combines with the spoken word in production for the purpose of audience perception of meaning. As a starting point, this course will examine the advent of realism on stage and follow this study by subsequent significant movements departing from realism. Through extensive use of video and live presentation, students will select movements in theater production for written and oral analysis. As a class, we will define post-modern as a term to describe contemporary theater and further explore the possibilities of theatrical presentation form a written dramatic source. This course will culminate in the production, whether group or individualized, of a creative design, based on a work written for the stage, but exploring non-verbal communication of an author's or director's intent. This exploration of theater language might combine non-verbal characteristics inclusive of images, relationships, activity, song, music, properties, objects, color, costume, movement, light, silence, sounds, presence or gesture. Goals of the seminar will be to find a process for textual analysis through an in-depth examination of the chosen text, to create a focus upon the action which drives this text, to discover a process for imagery that will give the text dimension and finally, to embody and realize ideas which impart to that text its intellectual content. A public presentation within Eldred's black box, Mather's dance studio space, or a public performing space within the CWRU campus will be integral to this process. Weekly discussion, analysis and critique will be a critical element of the course, as well as expository writing. Weekly participatory assignments will also be prescribed from a mandatory and suggested reading list. Prereq: Theater Majors with Design Tech Emphasis.

**THTR 397. Honors Studies I. 3 Units.**
Individual projects in acting, dance, and directing.

**THTR 398. Honors Studies II. 3 Units.**
Individual projects in acting, design, playwriting, and directing.

**THTR 399. Independent Study in Theater Arts. 1 - 3 Unit.**
Independent research and project work in areas of acting, design, voice, theater history, playwriting, directing, or theater management.
THTR 401. Advanced Stage Movement I. 3 Units.
This beginning class focuses on developing flexibility, alignment, strength, concentration and basic motor skills and serves as a base for the remaining three semesters. Yoga and Tai Chi exercises are used to develop flexibility and a relaxation of the breath. Elements of Decroux based corporeal mime technique will strengthen the student’s physical instrument as well as address alignment problems. Motor skills (articulations, inclinations and design work) will be developed with Decroux, as well as LeCoq based exercises. Prereq: Must be candidate in M.F.A. Acting program.

THTR 402. Advanced Stage Movement II. 3 Units.
Continuation of THTR 401. The course focuses on simplifying and empowering the physical actor by continuing to connect breath to action to discover relaxation within the given task, and beginning work in characterization. Strength, flow, energy and the shedding of intrusive mannerisms will be gained from a study of Tai Chi form, and LeCoq based neutral mask work. Following the neutral mask work, students will progress to character work through the use of Physical Acting techniques. Stage combat work continues. Prereq: THTR 401.

THTR 403. Advanced Stage Movement III. 3 Units.
The class focuses on expanding the actor’s physical and imaginative range which will enable students to support larger and bolder physical choices in characterization. Building upon the Neutral Mask work from the previous semester, the student will experience, through LeCoq based techniques, Basel and Expressive Masks. Stage combat work continues. Prereq: THTR 402.

THTR 404. Advanced Stage Movement IV. 3 Units.
This class gives the actor the advanced physical skills and techniques needed to encompass the demands of historical dramatic texts. The work will center around period movement for the theater. The actor will experience the philosophies of carriage and deportment; religious, scientific thought and art from particular historic periods most often encountered in the professional theater. Stage combat work continues. Prereq: THTR 403.

THTR 473. Graduate Voice Technique I. 3 Units.
Assessment of students’ current vocal and alignment skills. Laboratory for exploring new vocal and alignment habits supportive of healthy vocal functioning. Exploration of the body and voice as it relates to breath, resonance, and the healthy exhalation of sound. Prereq: Must be candidate in M.F.A. Acting program.

THTR 474. Graduate Voice Technique II. 3 Units.
Continued laboratory for the exploration of alignment and vocal skills supportive of healthy vocal functioning. Continued exploration of the body and voice as it relates to breath, articulation, resonance, and the healthy exhalation of sound. Emphasis on the physical and energetic skills needed to produce full-bodied, healthy sound capable of being heard and understood while acting in theatrical productions. Required of M.F.A. candidates in the Acting program. Prereq: THTR 473.

THTR 475. Voice for Stage: Shakespeare. 3 Units.
Development of skills needed to address the specific needs of Shakespeare and Classical texts in performance, including vocal skills, the use of breath, using imagery, and textual studies. Required of M.F.A. candidates in the Acting program.

THTR 477. American Stage Speech. 2 Units.
Designed to evaluate the graduate student actors’ current speech skills, to teach them a stage-appropriate dialect using the Skinner narrow IPA set, and to achieve a level of mastery over articulation and diction. Prereq: Course limited to first-year M.F.A. candidates in Acting Program.

THTR 501. Text Analysis for the Actor. 2 Units.
An introduction to the craft of reading a theatrical text from an actor’s point of view. Methods for analyzing the action and dialogue of a play will be applied to dramatic text so that the actor can learn to transform a one-dimensional text into a three-dimensional performance.

THTR 509. Seminar: Introduction to Performance Theory. 2 Units.
Research seminar designed to acquaint the theater student with the major theoretical writings of performance theory. Readings on the creative process and archetypal mythology. Exploration of anthropological, psychological, and cultural sources of art and the theatrical impulse.

THTR 512. Graduate Audition Lab. 1 - 2 Unit.
THTR 530. Ensemble Technique. 1 - 2 Unit.
A practicum course structured to explore the use of ensemble dynamic techniques in a rehearsal/performance environment, as well as to develop a set of exercises which encourage and sustain the actor’s channels of interpersonal communication during a range of rehearsal and performance situations. Prereq: Must be candidate in M.F.A. Acting program.

THTR 531. Acting: Research and Performance I. 3 Units.
The various elements of the actor’s process considered on advanced levels. Integration of rehearsal discoveries into a practical performance situation. Limited to M.F.A. candidates.

THTR 532. Acting: Research and Performance II. 3 Units.
The various elements of the actor’s process considered on advanced levels. Exploration of rehearsal techniques for characterization. Limited to M.F.A. candidates.

THTR 533. Acting: Research and Performance III. 3 Units.
Sequential courses designed to explore the various elements of the actor’s process on advanced levels and to integrate the discoveries made into a practical performance situations. Limited to M.F.A. candidates. Prereq: THTR 531 or THTR 532.

THTR 534. Acting: Research and Performance IV. 3 Units.
Sequential courses designed to explore the various elements of the actor’s process on advanced levels and to integrate the discoveries made into a practical performance situation. Prereq: THTR 531 or THTR 532 or THTR 533.

THTR 540. The Business of the Business. 2 Units.
This course covers the basic knowledge needed for an actor to plan and manage a career in the theater. Included is discussion of union rules and applications for AEA, AFTRA, and SAG. Discussion of basic marketing techniques, including development of an individual marketing plan for each student. Guest lecturers might include IRS experts on the actor’s special needs, casting directors, and commercial agents.
THTR 579. American Stage Speech II. 3 Units.
This course will continue the work begun in THTR 479 American Stage Speech, continuing the work on IPA, articulation, and general speech clarity for the stage. Exercises from the Berry and Rodenberg Schools of thought will be used in addition to the speech basics of Skinner. Prereq: THTR 479.

THTR 580. Stage Dialects. 2 Units.
This survey course will examine the use and application of major stage dialects in the American theatre using a phonetic tool set as a basis for understanding sound substitutions. The student will also study the ways in which rhythmic changes and resonance and tension shifts affect the dialects. Prereq: Graduate standing.

THTR 581. Classical Speech and Text. 2 Units.
This course will study ways in which the actor’s speech instrument is used differently in classical texts, particularly those of Shakespeare. Students will study tools for analyzing a line of text in order of understand how to use the words and sound of the line.

THTR 601. Special Projects. 1 - 3 Unit.
(Credit as arranged.)

THTR 610. Professional Internship. 1 - 4 Unit.
Involvement in intensive internships with professional theaters in the Cleveland area bridging academic and professional lives. Internships range from six weeks to one semester.

THTR 620. Advanced Role Analysis Preparation I. 3 Units.
Study and performance of scenes involving methods of approaching various types of plays and the specific problems they present to the individual actor. Analysis, action, characterization, and subtext. Open only to M.F.A. Acting students.

THTR 630. Performance Studio. 3 Units.
A performance laboratory, ensemble-based practicum in which the student works to integrate effectively a wide range of performance skills culminating in a studio production. May be taken two times in the last two semesters of graduate study. Prereq: THTR 534.

THTR 642. Thesis Portfolio I. 1 Unit.
Course designed specifically for candidates in the Master of Fine Arts program in Acting. Graduate students enroll for the course during their third year of study, although work spans three years of study, based on roles the M.F.A. actor has created. A portfolio is prepared, according to requirements set forth in the department’s M.F.A. Handbook, and is presented to the faculty during the spring semester of the third year, in a formal oral defense. Satisfactory completion of the portfolio and its oral defense are among the requirements for awarding the Master of Fine Arts degree. Course limited to M.F.A. candidates in the Acting program.

THTR 643. Thesis Portfolio II. 1 Unit.
Course designed specifically for candidates in the Master of Fine Arts program in Acting. Graduate students enroll for the course during their third year of study, although work spans three years of study, based on roles the M.F.A. actor has created. A portfolio is prepared, according to requirements set forth in the department’s M.F.A. Handbook, and is presented to the faculty during the spring semester of the third year, in a formal oral defense. Satisfactory completion of the portfolio and its oral defense are among the requirements for awarding the Master of Fine Arts degree. Course limited to M.F.A. candidates in the Acting program.

THTR 644. M.A. Project. 1 - 12 Unit.
Research and development of a Master of Arts project in Theater.
Environmental Studies Program

Environmental Studies is a multidisciplinary program that introduces students to the societal determinants and implications of environmental problems. The program emphasizes the moral, cultural, and political dimensions of environmental problems and solutions that arise from scientific understanding of the environment, bringing to bear the issues and methods of the humanities and social sciences as well as those of the sciences and the professions. The program is designed to serve the needs of students seeking a liberal education or a broad intellectual base for more technical training in environmental sciences. Students can pursue a major or a minor in environmental studies.

Undergraduate Programs

Major

The Environmental Studies Program offers a major (30 credit hours) leading to the Bachelor of Arts degree. However, it may be elected only as a second major. The double major is required so that the program's multidisciplinary perspective will be complemented by a concentrated disciplinary major. Students may apply up to six credits from required and elective courses in their first major to the environmental studies major. None of the required courses may be taken pass/no pass.

The required courses are:

**Required courses**

One course from each of the following disciplinary groups:

**Humanities**

- RLGN 206 Religion and Ecology
- HSTY 292 Energy and Environment in American History 1750-2010
- HSTY 327 Comparative Environmental History
- HSTY 378 North American Environmental History
- PHIL 330 Topics in Ethics

**Social Policy**

- ESTD 303 Environmental Law
- ESTD 388 Politics, Policy, and the Global Environment
- ECON 367 Energy Economics and Engineering Solutions
- ECON 368 Environmental Economics

**Science and Engineering**

- ESTD 202 Global Environmental Problems
- BIOL 351 Principles of Ecology
- EECS 342 Introduction to Global Issues

Six additional hours chosen in consultation with the departmental advisor. 6

Total Units: 30

If a required course is not offered, substitution of a course to fulfill the distribution requirement is possible only with permission of the program director.

Minor

The minor in environmental studies (15 credit hours) consists of:

**Required course:**

**Humanities**

- RLGN 206 Religion and Ecology

Program Faculty

Peter L. McCall, JD, PhD  
Professor, Department of Geological Sciences; Director, Environmental Studies Program

Jeremy Bendik-Keymer, PhD  
Elmer G. Beamer-Hubert H. Schneider Professor in Ethics; Associate Professor, Department of Philosophy

John Broich, PhD  
Assistant Professor, Department of History

Jessica Green, PhD  
Assistant Professor, Department of Political Science

Gerald Matisoff, PhD  
Professor, Department of Geological Sciences

John Ruhl, PhD  
Professor, Department of Physics

Peter Shulman, PhD  
Assistant Professor, Department of History

Theodore Steinberg, PhD  
Adeline Barry Daviee Distinguished Professor of History; Professor, Case Western Reserve University School of Law

Courses

**ESTD 101. Introduction to Environmental Thinking. 3 Units.**

Critical comparison of scientific, historical, religious, and literary conceptions of nature. Theories of environmental ethics, legal, and economic conceptions of environmental goods. Current controversies concerning human population growth, energy use, the consumer society, and attitudes towards animals.
ESTD 202. Global Environmental Problems. 3 Units.
Global Environmental Problems is a course designed to provide students with an understanding of, and an appreciation for, human-influenced environmental changes that are global in scope. Accordingly, much of the material will focus on the nature and structure of natural global systems, how and where in those systems human influences occur, and will delve deeply into a few particular problems and solutions of current interest, such as population growth, climate change, ozone depletion, and fisheries, from a variety of viewpoints. Offered as ESTD 202 and EEPS 202.

ESTD 303. Environmental Law. 3 Units.
Introduction to treatment of environmental issues in legal proceedings. Sources of environmental law, legal procedure, common law remedies (toxic torts and human health, nuisance, contract law), statutes and regulations, endangered species, public lands, toxics regulation, nuclear power, coal. The course employs the case method of reading and recitation of appellate judicial opinions. We read both classic cases in environmental law as well as current controversies. Offered as ESTD 303 and EEPS 303.

ESTD 388. Politics, Policy, and the Global Environment. 3 Units.
This course examines the law, politics and policy surrounding global environmental challenges such as climate change. The course aims to provide a broad overview of the key concepts, actors, debates, and issues in global environmental politics. It aims to illustrate the complexities of addressing environmental problems-from the proliferation of global institutions and international actors, to the absence of central enforcement mechanisms. We examine the causes of environmental degradation and competing views on the gravity of the problem. Using concepts from political science and economics, we investigate the challenges in getting states to act jointly to address environmental problems. We examine the actors and institutions of global environmental politics, to understand how conditions are defined as problems and responses are chosen and implemented. The course concludes by applying the tools and concepts to the case of climate change. Offered as POSC 388, ESTD 388, POSC 488.

ESTD 398. Seminar in Environmental Studies. 3 Units.
Small group discussion and student presentations concerning the cultural determinants of environmental attitudes. Each student presents two seminars on current environmental issues, one local and one global. Recommended preparation: ESTD 101.

ESTD 399. Departmental Seminar in Environmental Studies. 3 Units.
Discussion and critique of recent publications in Environmental Studies. Students write weekly short essays on readings and participate in weekly group discussion. Reading list changes annually and is typically comprised of 7-9 books that center on a few unifying themes for that year (food, energy, futures, toxic torts, attitudes toward animals, consumer culture, climate crises for example). Students research, write, and defend a critical review of academic literature concerning some topic contained in the readings. Prior enrollment in ESTD 101 is recommended but not required. Students may not enroll in both ESTD 399 and 398 in the same year.
Ethnic Studies Program

The goal of the Ethnic Studies Program is to expand and enhance the university’s course offerings on ethnicity and race in the United States and around the world. The program’s objectives are:

1. to examine relationships among racial/ethnic groups, the processes of racial/ethnic formation, and their intersections with class, gender, and sexuality at the personal and collective levels
2. to foster the development of research skills in a broad range of disciplines in the humanities
3. to contribute to an interdisciplinary knowledge of the challenges and contributions of ethnic minorities in the United States
4. to impart to students a deep knowledge of the cultures of Africa and Latin America
5. to help students develop competencies for working with people of different racial/ethnic backgrounds and to foster an understanding of racial/ethnic diversity
6. to support students and faculty in the transmission of knowledge, in the discovery and development of new ideas, and in research and writing in the field of ethnic studies
7. to inculcate in students an understanding of the complexity and challenges of multiethnic societies, and to prepare them for careers in education, business, law, government service, social work, social welfare, health care, teaching, public policy, law enforcement, urban and community development, and the arts.

Ethnic Studies is an interdisciplinary program. The program aims to develop fundamental skills in critical and global thinking and in comparative analysis, as well as an understanding of the interactions of race, class, gender, and sexuality in the experiences of a range of social groups. It is designed to bring together a community of students, faculty, and staff devoted to the transmission of knowledge and the discovery of new ideas in the field of ethnic studies. Ethnic Studies also offers diverse perspectives that challenge monolithic thinking about the formation of identities and societies.

The program’s core courses focus on the exploration and comparison of the cultures, history, politics, and economics of Africa, Latin America, and their diasporas. Program offerings explore ethnicity and cross-cultural exchange globally and in postcolonial frames. Ethnic Studies supports research pertinent to the field and encourages cultural and academic exchange among scholars and students.

The program is part of the university’s mission to enhance the recruitment, retention, and excellence of a diverse faculty and student body. Our long-term goals are to extend program offerings to encompass other ethnic minority groups and to develop a center that will foster an appreciation of ethnic diversity and difference in the learning and research communities of Case Western Reserve University.

Undergraduate Program

Minor

The Ethnic Studies minor is open to all undergraduate students. It requires a minimum of 15 credit hours. Students are required to take 6 credits from among Ethnic Studies core courses and 9 credits in their chosen areas of concentration. Community projects are strongly recommended, and students are encouraged to carry out field research in their areas of concentration.

The core courses are designed to introduce students to the interdisciplinary field of ethnic studies. Courses may be individually or team taught and will sometimes be conducted in seminar format. Students are encouraged to use the tools and perspectives of several disciplines (history, literature, art history, anthropology, film, sociology, and political science, for example) to address the experiences of African-Americans and Latino/a Americans. Courses center on the examination of social, cultural, political, and economic structures that shape the life of these ethnic minorities in the United States. They examine how race, class, and gender have impacted their identities as well as their economic, social, political, and cultural productions. Assignments and courses make maximum use of the archives and collections of University Circle institutions.

Courses

ETHS 218. Jews in Early Modern Europe. 3 Units.
This course surveys the history of Jews in Europe and the wider world from the Spanish expulsion through the French Revolution. Tracking peregrinations out of the Iberian Peninsula to the British Isles, France, Holland, Italy, Germany, Poland-Lithuania, the Ottoman Empire, and the American colonies, it examines the diverse ways Jews organized their communities, interacted with their non-Jewish neighbors, and negotiated their social, economic, and legal status within different states and empires. What role did Jews play and what symbolic place did they occupy during a period of European expansion, technological innovation, artistic experimentation, and religious and political turmoil? What internal and external dynamics affected Jewish experiences in the sixteenth, seventeenth, and eighteenth centuries? Through a selection of inquisitorial transcripts, government records, memoirs, and historical literature, we will explore topics such as persecution, conversion, messianism, toleration, emancipation, and assimilation. Offered as HSTY 218, JDST 218, and ETHS 218.

ETHS 222. African-American Religions. 3 Units.
This course is an exploration of the rich diversity of African American religions from the colonial period to the present. Attention will be given to key figures, institutional expressions, and significant movements in African American religious history. Major themes include African traditions in American religions, slavery and religion, sacred music, social protest, Black Nationalism in religion, Islam, African American women and religion, and black and womanist theologies. Course requirements will include field trips to local religious sites. Offered as ETHS 222 and RLGN 222.

ETHS 223. DESI: Diaspora, Ethnicity, Southasia(n), Interrogate. 3 Units.
In this class we will interrogate the cultural identity(ies) and imagined community(ies) of the “South Asian” Diaspora. We will first examine taxonomy and categorization itself, as a methodical, philosophical, and political enterprise. We will then examine how such contrived categories have been applied to the so-called desis, loosely and broadly understood as members of the South Asian Diaspora. To this end we will scrutinize the development of American(ized) “Hinduism.” the imagined location that desis have in North American racial and ethnic hierarchies, and the construction of assimilated, enculturated, and transnational imagined desi communities. Offered as RLGN 232, ETHS 232 and HSTY 232.

ETHS 234. France and Islam. 3 Units.
This seminar examines French encounters with the Muslim world from the Middle Ages to the present. Over the last millennium, France has viewed Saracens, Moriscos, Turks, Berbers, and Arabs with admiration and fear, disdain and incomprehension. Between the eleventh and thirteenth centuries, French soldiers battled in the Holy Land; for several hundred years after that, France and the Ottoman Empire exchanged diplomats, traders and slaves. The colonial occupation of Algeria that began in 1830 ended violently in 1962. By then, the empire that struck back had also come home through large waves of immigration. Today, the social and economic status, religious affiliation, political significance and cultural impact of French citizens of North African descent are the subject of burning national debate. Taking a long view on Franco-Muslim relations, the course will explore such topics as the Crusades, Mediterranean piracy and captivity, Napoleon’s Egyptian campaign, the Algerian War of Independence, the “veil affair,” riots in the suburbs of Paris and World Cup soccer. Offered as ETHS 234, HSTY 234.
ETHS 235. Theater and Identity. 3 Units.
This course aims at surveying identities in dramatic and performance texts in the modern era. It will help students develop skills to study plays and related theatrical forms, to analyze images for their social and political meanings, to investigate issues of identity, to appreciate the complexities of identity and images of self and other as related in theater, media and the larger political and social contexts. African and African-American identities, Latina/o-American and Latin American identities, Native-American identities, Asian-American and Asian identities, Gender identities will be examined.

ETHS 251. Perspectives in Ethnicity, Race, Religion and Gender. 3 Units.
This course is designed to introduce students to the study of ethnicity. Basic concepts such as race, gender, class, and identity construction will be examined. Students are encouraged to use the tools and perspectives of several disciplines to address the experiences of ethnic groups in the United States. Offered as ETHS 251 and RLGN 251.

ETHS 251A. Oral Performances and Ethnic Identities. 3 Units.
This course is an in-depth study of performances that have helped to shape and anchor the identities of different non-Western ethnic groups. The course will explore the multi-generic composition of the oral epic, which combines forms as diverse as narrative, song, praise poetry, theater, music and historical oratory. ETHS 251A will provide a comprehensive overview of oral performances while focusing on a particular area or areas of Africa, Asia, the United States, or Latin America. In the African continent, for example, the focus will be on the Madinka Sundjata corpus, dealing with the empire of Mali; the life of Shaka, the Zulu in South Africa; while in the United States, the narrative life of Frederick Douglass, blues and negro-spiritual will be considered as the sites of ethnic discourse. Using a comparative approach, the course will examine aesthetic issues of oral performance, the written word, interactions between music and voice, and interaction between poetic and prose narrative forms. The performance texts will be augmented by field recordings and in-class demonstrations by griots and other storytellers from Africa and the United States.

ETHS 252A. Introduction to African-American Studies. 3 Units.
This course is designed to introduce students to the study of Black History, cultures, economics, and politics. Students will learn about the development of the field by exploring theoretical questions, methodological approaches, and major themes that have shaped the study of black people, primarily in the U.S. context. This is a seminar-style, discussion-based course that emphasizes critical analysis and expository writing. Offered as ETHS 252A and HSTY 252A.

ETHS 252B. Introduction to Latina/o Studies. 3 Units.
Interdisciplinary introduction to the basis for a Latina/o ethnicity through an exploration of commonalities and differences in the peoples of Latin American and Caribbean origin within the continental United States. Topics include methodological and theoretical formulations central to the field (e.g., racial, gender, and sexual formations, modes and relations of production and class, nation and transnation), history and contemporary issues of identity, family, community, immigration, and the potential for a pan-ethnic identity. Discussions will focus on major demographic, social, economic and political trends: historical roots of Latinas/os in the U.S.; the evolution of Latina/o ethnicity and identity; immigration and the formation of Latina/o communities; schooling and language usage; tendencies and determinants of socioeconomic and labor force status; discrimination, segregation and bias in contemporary America; racial and gender relations; and political behavior among Latinas/os. Offered as: ETHS 252B and HSTY 259.

ETHS 253A. Introduction to Modern African History. 3 Units.
A general introduction to major themes in modern African history, with an emphasis on the nineteenth and twentieth centuries. Topics include oral tradition and narrative, economic structure and dynamics, religious movements, colonialism, nationalism, and the dilemmas of independent African states. Offered as ETHS 253A and HSTY 135.

ETHS 253B. Introduction to Latin American History. 3 Units.
This course provides an introduction to the historical and cultural development of Latin America, in an attempt to identify the forces, both internal and external, which shape the social, economic and political realities in present day Latin America. Beginning with its pre-Columbian civilizations, the course moves through the conquest and colonial period of the Americas, the wars of independence and the emergence of nation-states in the nineteenth century, and the issues confronting the region throughout the turbulent twentieth century, such as migration and urbanization, popular protest and revolution, environmental degradation, great power intervention, the drug trade and corruption, and the integration of the region into the global economy. Offered as ETHS 253B and HSTY 136.

ETHS 254. The Holocaust. 3 Units.
This class seeks to answer fundamental questions about the Holocaust: the German-led organized mass murder of nearly six million Jews and millions of other ethnic and religious minorities. It will investigate the origins and development of racism in modern European society, the manifestations of that racism, and responses to persecution. An additional focus of the course will be comparisons between different groups, different countries, and different phases during the Nazi era. Offered as HSTY 254, RLGN 254, ETHS 254, and JDST 254.

ETHS 260. U.S. Slavery and Emancipation. 3 Units.
Begins with the African encounter with Europeans during the emergence of the modern slave trade. Students are introduced to the documents and secondary literature on the creation and maintenance of slavery, first in colonial America, and then in the United States. The course concludes with the destruction of slavery. Offered as ETHS 260 and HSTY 260.
ETHS 261. African-American History 1865-1945. 3 Units.
Explores the fashioning of a modern African-American culture between emancipation and the end of World War II. Emergence of a northern-based leadership, the challenge of segregation, emergence of bourgeois culture, the fashioning of racial consciousness and black nationalism, the shift from a primarily southern and rural population to one increasingly northern and urban, the creation and contours of a modern African-American culture, the construction of racial/gender and racial/class consciousness. Offered as ETHS 261 and HSTY 261.

ETHS 262. African-American History Since 1945. 3 Units.
Completes the three-term sequence of the African-American history survey (although the first two courses are not prerequisites for this course). Explores some of the key events and developments shaping African-American social, political, and cultural history since 1945. Offered as HSTY 262 and ETHS 262.

ETHS 280. History of Modern Mexico. 3 Units.
This course explores the major issues that have influenced the formation of modern Mexico. This class is organized around three major themes. First, we will examine Mexican identity formation and its political implications. Second, we will assess Mexican life in relation to the development of the Mexican economy. Finally, we will survey how elite and popular forms of violence have affected Mexican society. Throughout the course, we will discuss the significance of the colonial heritage, regional distinctions, racial and gender stratification, and the creation and reconfiguration of various types of borders. Offered as HSTY 280 and ETHS 280.

ETHS 287. State, War, Drugs, and Coffee in Colombia: History of Modern Colombia. 3 Units.
This course will analyze the major forces that have shaped Colombian history from the 19th century to the present. Colombia is one of the largest and most fascinating countries in Latin America. It has been intricately linked to the U.S. market as a major coffee producer and, more recently, as a major supplier of illicit drugs. Colombia has always been one of the wealthier Latin American countries, and it has a high degree of electoral democracy. Paradoxically, however, Colombia has also experienced rather high levels of regionalism and political violence. This course seeks to explore the history of these paradoxes. It will situate Colombia’s contemporary conflicts within a larger historical perspective. Offered as ETHS 287 and HSTY 287.

ETHS 295. The Francophone World. 3 Units.
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle-East (Lebanon, Syria); the Caribbean (Martinique, Guadeloupe, Haiti); Southeast Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg). FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. Offered as ETHS 295, FRCH 295, and WLIT 295.

ETHS 301. Women, Creativity and the Arts. 3 Units.
WGST 301/ETHS 301 is one of two core courses for the program in Women’s and Gender Studies and an elective course for the ETHS minor. All WGST majors are to take one course concentrating on the subject of women and the arts specifically. This course also fulfills the cultural diversity requirement. In this course, students will focus on two areas of study: a) women and creativity and b) women and activism through the arts. A history of women in the arts will be covered, but the general focus of the course is on women in the arts since the 1960s in particular, and on artwork that reflects or provokes social change.

"Arts" are defined in the broadest of sense. That is, students will study women’s production in painting, photography, graphic design, sculpture, dance, film, music, and theater. A variety of learning techniques will be applied. Students will look at feminist theories on art, be introduced to the notion of cyberfeminism, study actual artwork and its reproductions, understand the role of art in feminist activism and how women “create” differently from men, and work closely with several feminist artists/activists through various programs on campus and the community in order to facilitate the planning and carrying out of artistic production. Subsequently, students will interact with children in Cleveland schools in conjunction with these artists giving master classes, and be exposed to art exhibits abroad through videoconferencing with the Algerian Cultural Center in Paris and locally through University Circle Institutions. Offered as WGST 301 and ETHS 301.

ETHS 306. The Cuban Experience: an immersion in its culture and society. 3 Units.
This is a three-week study-abroad intensive course that takes place at Editorial Vigia, in Matanzas, Cuba. The course combines the unique advantages of a total immersion environment in Spanish with a classroom curriculum that includes conversation practice and study of relevant cultural, literary and historical issues. Students complete three hours of classroom instruction and an hour and a half of publishing workshop four days per week. In this workshop, they work in the edition of a bilingual book. In addition, they participate in organized visits to historic sites and museums connected to the culture curriculum. The focus of the culture curriculum is the study of Cuban history and culture through its literature, visual arts, films, and music. After applying and being accepted in the program, students meet for personal advising with the program director and attend four different one hour orientation-information meetings in the spring semester. After successful completion of the study-abroad program, students receive 3 upper-level credits in Spanish. The course is interdisciplinary in approach and provides students with the tools they need to analyze and understand the complexities of modern Cuba. Students will have formal classes taught by their professor and talks and meetings with specialists on Cuban literature, art, architecture, history and other aspects of culture and society. In addition, they will attend lectures, participate in discussions, and take field trips that will expose them to many aspects of Cuban culture, such as art, architecture, music, dance, film, literature, artisan work, folklore, history and urban growth. Offered as SPAN 306, SPAN 406, and ETHS 306. Prereq: SPAN 202.
ETHS 311. Representations of Black Religion in Film. 3 Units.
In this course we will explore cinematic representations of black religion in the Americas and the Caribbean. Each week we will view a film representing diverse religious traditions such as Christianity, Candomble, Santeria, Vodou, and Islam. Films will include Cabin in the Sky, The Color Purple, Black Orpheus, The Serpent and the Rainbow, Malcolm X, Eve's Bayou, and The Princess and the Frog. Throughout the course we will analyze the ways in which notions of gender, the history of colonialism, modern notions of race, and geographical landscapes have informed representations of black religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas of black religion in the Americas. Offered as RLGN 311, ETHS 311, and RLGN 411. Prereq: RLGN 222 or ETHS 251 or ENGL 367 or by permission of Instructor.

ETHS 314. Cultures of the United States. 3 Units.
This course considers the rich ethnic diversity of the U.S. from the perspective of social/cultural anthropology. Conquest, immigration, problems of conflicts and accommodation, and the character of the diverse regional and ethnic cultures are considered as are forms of racism, discrimination, and their consequences. Groups of interest include various Latina/o and Native peoples, African-American groups, and specific ethnic groups of Pacific, Mediterranean, European, Asian, and Caribbean origin. Offered as ANTH 314, ETHS 314, and ANTH 414.

ETHS 316. African Political Thought. 3 Units.
Introduction to select themes in the work of contemporary African philosophers, with special emphasis on political thought. In this course, students will learn something about factors affecting the creation and flow of knowledge and ideas about Africa and discuss the relative importance of the "nation-state" as an idea in Europe, pre-colonial Africa, and postcolonial Africa. Offered as PHIL 316/416 and ETHS 316/416.

ETHS 318. History of Black Women in the U.S.. 3 Units.
Chronologically arranged around specific issues in black women's history organizations, participation in community and political movements, labor experiences, and expressive culture. The course will use a variety of materials, including autobiography, literature, music, and film. Offered as ETHS 318, HSTY 318, and WGST 318.

ETHS 335. Women in Developing Countries. 3 Units.
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondichery), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper. Offered as ETHS 335, FRCH 335, WLIT 335, WGST 335, FRCH 435 and WLIT 435.

ETHS 338. The Cameroon Experience. 3 Units.
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Coursework is in French. To do coursework in English, students should enroll in WLIT 338/438 or ETHS 338/438. Offered as ETHS 338, FRCH 338, WLIT 338, ETHS 438, FRCH 438, and WLIT 438.

ETHS 339. Black Women and Religion. 3 Units.
This course is an exploration of the multidimensional religious experiences of black women in the United States. These experiences will be examined within particular historical periods and across diverse social and cultural contexts. Course topics and themes include black women and slave religion, spirituality and folk beliefs, religion and feminist/womanist discourse, perspectives on institutional roles, religion and activism, and spirituality and the arts. Offered as: ETHS 339 and RLGN 338 and WGST 339.

ETHS 340. A History of Workers in the United States. 3 Units.
This course examines the experience of working people in the United States with an emphasis on twentieth-century social movements. It explores the lives of the women and men, skilled and unskilled, and rural and urban laborers that produce the goods and provide the services that society consumes. At crucial moments, working people have created or helped sustain national social movements in an effort to improve some aspect of their lives. We therefore will assess laborers in relation to several known and less known American social movements, such as the eight-hour day movement during the late nineteenth century, the peace movement during WWI, and the Civil Rights movement in the wake of WWII. Throughout the course we will also discuss the politics of time-managed work; the influence of public policy and government institutions; the role of unions within a competitive market economy; the relationship between industrial economies and functional blue-collar communities; and the correlation between immigration and globalization. Offered as HSTY 340, HSTY 430, and ETHS 340.
ETHS 342. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in
the literary production of Latin American women writers, particularly from
the 1920s to the present. Close attention paid to the dominant themes of
love and dependency; imagination as evasion; alienation and rebellion;
sexuality and power; the search for identity and the self-preservation of
subjectivity. Readings include prose, poetry, and dramatic texts of female
Latin American writers contributing to the emerging of feminist ideologies
and the mapping of feminist identities. Offered as SPAN 342, SPAN 442,
ETHS 342, WGST 342, WLIT 342, and WLIT 442.

ETHS 352. African Feminisms. 3 Units.
This course traces the history of African feminism from its origins
within traditions through to a more contemporary theoretical analysis of
gender, marriage, and motherhood seen from an Afrocentric perspective.
Approaches studied are those that pertain to anthropology, history,
literature, sociology, and culture. African feminist theory of scholars such
as Filomina Steady, Cheikh Anta Diop, Buchi Emecheta, Ili Amadiume,
Obioma Nnameka, Oyeronko Oyewumi, and Calixthe Beyala will be
studied and there will be some comparative analysis of Western theories
to show how African feminisms are clearly distinct. Theories on these
feminisms will be presented, and in the process, students will look at
cases of women in Cameroon, Nigeria, Ghana, Kenya, and Senegal. It
is commonly believed that African women were defined for a long time
according to constructs of Western anthropology. This course will thus
look at social institutions such as woman-to-woman marriage, matriarchy,
and various women's rituals in order to identify African constructs of
gender, family, kinship, marriage, and motherhood. Offered as ETHS 352
and WGST 352.

ETHS 359. Palestine & Israel: Whose Promised Land? Issues of
Religion, Politics & Media Coverage. 3 Units.
The major focus of this seminar will range from the ongoing questions of
peace and justice in Israel and occupied Palestine to the land and border
questions; Green line, crossing points, the wall; to interpretations from
biblical to contemporary texts, reflecting a multiplicity of agendas. Our
primary focus will be the analysis of recent research and scholarship on
issues of mass violence, contested space and land, gender, race and
ethnicity, religious sectarianism, colonialism/imperialism. Through our
readings we will identify the bias and concerns of various interpretive
communities involved in the ongoing struggles in this very small area.
With two peoples claiming the same land for different reasons, can this
conflict ever be resolved? Recommended preparation: One course about
the Middle East. Offered as ETHS 359 and RGLN 320.

ETHS 362. Politics of Central Asia. 3 Units.
Once an unfamiliar region to many people of the world, Central Asia
took center stage in the fall of 2001 as a result of the U.S. campaign
against terrorism. This course will introduce students to the politics of
Central Asia, focusing on the region today composed of Uzbekistan,
Turkmenistan, Tajikistan, Kyrgyzstan, and Kazakhstan. We will review
the nationalism, foreign relations, religion, ethnicity, and economics of the
region. Offered as ETHS 362, POSC 362, and POSC 462.

ETHS 363H. African-American Literature. 3 Units.
A historical approach to African-American literature. Such writers as
Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright,
Baldwin, Ellison, Morrison. Topics covered may include slave narratives,
African-American autobiography, the Harlem Renaissance, the Black
Aesthetic, literature of protest and assimilation. Maximum 6 credits.
Offered as ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and
WLIT 463H. Prereq: ENGL 150 or passing letter grade in a 100 level first
year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

ETHS 364. Dictatorship and Democracy in Modern Latin America. 3
Units.
Examination of political leadership in 20th-century Latin America,
exploring the nature, causes, and consequences of dictatorship and
democracy in the region, moving from the collapse of oligarchic rule
and the emergence of populism in the 1930s and 1940s, to the end
of democracy and establishment of military regimes in the 1960s and 1970s,
and ultimately to the contemporary processes of democratization and
economic liberalization. Offered as ETHS 364, POSC 364, and POSC
464.

ETHS 365N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first
century African-American literature. May focus on a genre, a single
author or a group of authors, a theme or themes. Maximum 6 credits.
Offered as ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and
WLIT 465N. Prereq: ENGL 150 or passing letter grade in a 100 level first
year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

ETHS 365Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European
colonies such as Australia and African countries. Maximum 6 credits.
Offered as ENGL 365Q, ETHS 365Q, WLIT 365Q, ENGL 465Q, and
WLIT 465Q. Prereq: ENGL 150 or passing letter grade in a 100 level first
year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

ETHS 366. Government and Politics of Africa. 3 Units.
Comparative analysis of the political forces and organizations currently
functioning in Africa, as well as a survey of the formal government
institutions. Special emphasis on single-party rule, military rule, and
the political ramifications of African socialism, tribalism and the problems
of national integration. Offered as ETHS 366, POSC 366, and POSC
466.

ETHS 369. Current Controversies in Latin American Politics and
Society. 3 Units.
In addition to questions about race, religion, abortion, the drug industry,
immigration, democracy, private property, and free trade, the course will
tackle Latin America's apparent shift to the political and ideological left,
Chavez's "Imperialism," and Cuba's humanitarian aid. Offered as ETHS
369, POSC 369 and POSC 469.

ETHS 370K. Nationalism, Ethnicity, and Religion in World Politics. 3
Units.
Examination of the post-Cold War surge in conflicts among nationalisms,
ethnic groups, and religions with particular attention to the former
Yugoslavia, Ireland, India, Africa, and the Middle East. Offered as ETHS
370K, POSC 370K, and POSC 470K.

ETHS 374. Politics of Development in the Global South. 3 Units.
Exploration of the post-World War II emergence of the Global South
nations of Africa, Asia, the Middle East, Latin America, and the Eastern
Europe arena. Offered as ETHS 374, POSC 374, and POSC 474.
ETHS 385. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel García Márquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485.

ETHS 391. Advanced Readings in Black History. 3 Units.
This is an advanced readings course that may change from semester to semester. This course will provide students with an opportunity to more deeply explore special themes and theoretical issues in the field of black history that are often quickly and briefly covered in broad survey courses. Readings may be organized around specific topics such as resistance and social protest, black intellectual history, black nationalism and identity, black film and historical literacy black cultural forms and politics, black urban history, or some such other combination. Students may take this course more than once and receive credit as long as the course topic differs. Students should contact the History Department for more details on course content during any given semester. Offered as ETHS 391, HSTY 399 and HSTY 499.

ETHS 393. Advanced Readings in the History of Race. 3 Units.
This course examines the concept of race as a social construction that carries political and economic implications. We begin by examining the histories of the early racial taxonomists (e.g., Bernier, Linnaeus, and Blumenbach among others) and the contexts that informed their writings. We then assess how the concept of race changed from the nineteenth to the twentieth century in the United States. We conclude by evaluating how the ideology of race has influenced U.S. domestic life and foreign policy at specific historical moments. Offered as HSTY 393, HSTY 493, and ETHS 393.

ETHS 394. The Subaltern and The Poetics of War in Africa. 3 Units.
This course is a seminar on major war writers and filmmakers in Africa such as Chinua Achebe, Ngugi wa Thiongo, Emmanuel Dongola, Iweala Uzodinma, Ismael Beah, Semebene Ousmane, Ingrid Sinclair etc. Students will be asked to use postcolonial theory to critically read and view films and texts on war in Africa. They will engage in discussion with guest scholars in the field of African studies. In addition to a final research paper, students are also required to write short papers on selected books and films read and/or viewed during the semester.

ETHS 399. Independent Study. 0 - 3 Units.
This course focuses on topics in ethnicity. In consultation with the program director and instructors, students pick topics in their concentrations and make a list of books and films for personal and intensive reading. Some of these projects might be Arts and Identity in post-independent Africa [African Concentration], films, literatures and human rights in Latin America [Latin America and Caribbean Concentration], civil rights through music and songs [African-American Concentration] etc. Travel may be a component of this course depending on the nature of the students’ interests. Weekly reports are required for the instructors to measure the students’ progress.

ETHS 416. African Political Thought. 3 Units.
Introduction to select themes in the work of contemporary African philosophers, with special emphasis on political thought. In this course, students will learn something about factors affecting the creation and flow of knowledge and ideas about Africa and discuss the relative importance of the “nation-state” as an idea in Europe, pre-colonial Africa, and postcolonial Africa. Offered as PHIL 316/416 and ETHS 316/416.

ETHS 438. The Cameroon Experience. 3 Units.
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Coursework is in French. To do coursework in English, students should enroll in WLIT 338/438 or ETHS 338/438. Offered as ETHS 338, FRCH 338, WLIT 338, ETHS 438, FRCH 438, and WLIT 438.

ETHS 485. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel García Márquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485.
Evolutionary Biology Program

The Evolutionary Biology Program is designed to provide students with knowledge of macro- and micro-evolutionary processes underlying the evolution and diversification of life on Earth and an understanding of the meta-scientific issues involved in this unique field of study.

The program includes grounding in the history and philosophy of evolutionary thought and alternative conceptualizations of the mechanisms, patterns, and processes of evolution. It emphasizes evolutionary theory, foundations of ecology and genetics, focused study of particular organisms or groups of organisms, and the dynamics of evolutionary principles in scientific inquiry.

Undergraduate Programs

Major

Evolutionary biology is a second major, to be pursued in conjunction with a conventional disciplinary major. Up to 12 credits in required and elective courses taken by students for their first major may be applied to their evolutionary biology major.

The 30-credit interdisciplinary major in evolutionary biology consists of:

1. Three foundation courses
2. One course in ecology
3. One course in the philosophy/history of science
4. Four approved electives

The approved electives may include additional philosophy/history of science courses from the list below. In consultation with a major advisor, students will tailor intensive study to suit particular interests within the major.

French and Francophone Studies Program

Designed to develop cross-cultural awareness and to foster international understanding, the French and Francophone Studies (FFS) Program adds an exciting dimension to the traditional liberal arts curriculum. The French and Francophone Studies major differs from the traditional French major in two respects: its interdisciplinary nature and its greater flexibility in accommodating students’ areas of interest. The FFS major answers the needs of students with a strong interest in cultural issues in general and in French and Francophone history and society in particular. By allowing students to take course work in English, the FFS major allows them to profit from the many courses in various departments that focus on France and the Francophone world.

The FFS Program is an interdisciplinary, integrated program that understands the term “French” in its broadest sense. It thus reflects the diversity of the field of French studies, which explores varied cultures of Francophone expression: Canada, the Caribbean, North and West Africa, the Middle East, and Southeast Asia. Reaching beyond disciplinary and national boundaries, the program encourages students to choose from a large selection of courses in the humanities, the arts, and the social sciences. In this way, it provides both a meaningful course of study and a large selection of courses in the humanities, the arts, and the social sciences. In this way, it provides both a meaningful course of study and an outstanding preparation for graduate or professional schools and for careers in international business and finance, law, journalism, diplomatic service, nonprofit and other international organizations, health, teaching, or the arts.

Major | Study Abroad I Minor

Undergraduate Programs

Major

Each student prepares a program of study in close consultation with a faculty advisor drawn from the advisory committee. Students should also discuss their choice of a minor or a second major with their advisor.

French and Francophone Studies (FFS) majors should demonstrate French language ability by completing French 201-202 or the equivalent. They will also take at least one 300-level FRCH course (see Foundations in Culture courses below).

The major in French and Francophone Studies requires a minimum of 33 credit hours in the following areas:

1. Foundations in Language (8 hours)

For students entering at the 200-level of French language:

<table>
<thead>
<tr>
<th>Course</th>

Total Units 9

3. Electives: Related Courses in French and Other Disciplines (15-21 hours)

Students select from courses that focus on French and Francophone cultures in FRCH and other disciplines (art history, political science, history, etc.). These are chosen from the approved list (see below) and in conjunction with a program advisor. No more than 9 of these credits may be chosen from FRCH courses.

### Philosophy

- PHIL 302 Modern Philosophy 3
- PHIL 315 Selected Topics in Philosophy 3
- PHIL 325 Philosophy of Feminism 3
- PHIL 399 Directed Study 3

### Political Science

- POSC 326 Constitutions in Practical Politics 3
- POSC/HSTY 348 History of Modern Political and Social Thought 3
- POSC 351 Modern Political Thought 3
- POSC 366 Government and Politics of Africa 3
- POSC 367 Western European Political Systems 3
- POSC 370A Political Economy 3
- POSC 373 Politics of the European Union 3
- POSC 374 Politics of Development in the Global South 3
- POSC 395 Special Projects 1 - 6

### Religious Studies

- RLGN/HSTY 315 Heresy and Dissidence in the Middle Ages 3
- RLGN 374/HSTY 309 Reformation Europe, 1500-1650 3
- RLGN 392 Independent Study 1 - 3

### Theater

- THTR/WLIT 229 Development of Theater: Renaissance to Romanticism 3
- THTR 329 Dramatic Literature 3
- THTR 399 Independent Study in Theater Arts 1 - 3

### World Literature

- WLIT 211 World Literature I 3
- WLIT 212 World Literature II 3
- WLIT/THTR 229 Development of Theater: Renaissance to Romanticism 3
- WLIT/ENGL 290 Masterpieces of Continental Fiction 3
- WLIT 300 The City in Literature 3
- WLIT/ENGL 368C Topics in Film 3
- WLIT 390 Topics in World Literature 3
- WLIT 399 Independent Study 1 - 3

Courses offered in a given semester with a French and Francophone Studies component are posted in Guilford House at registration time and on the French and Francophone Studies (http://www.case.edu/artscl/fr_studies) website.

### Study Abroad

Study abroad in France, Belgium, Switzerland, French Canada, the Francophone Caribbean, or a Francophone African or Middle Eastern country is strongly encouraged but not required for FFS majors. The Department of Modern Languages and Literatures offers a summer study abroad program in Paris (FRCH 308 The Paris Experience / WLIT 308 The Paris Experience) in even-numbered years. A summer study abroad program in Cameroon (FRCH 308 The Paris Experience / WLIT 308 The Paris Experience / ETHS 338 The Cameroon Experience) is offered in odd-numbered years. FRCH 208 The Montreal Experience is a spring break service-learning excursion to Montreal.

### Minor

The minor requires 15-17 credits. Students entering at the 200 level of language competence take:

- FRCH 201 Intermediate French I 4
- FRCH 202 Intermediate French II 4
- Three courses in FRCH from the approved list 9
- Total Units 17

At least 6 credits should be taken in disciplines other than FRCH.

Students entering at the 300 level of language competence take five courses at the 200 and 300 levels in FRCH and from the approved list. At least 3 credits should be in courses from FRCH taught in the French language, and at least 6 credits should be taken in disciplines other than FRCH.

### Program Advisory Committee

  Associate Professor and Chair, Department of Philosophy
- Marie Lathers, PhD
  Elizabeth M. and William C. Treuhaft Professor of Humanities, Department of Modern Languages and Literatures
- Miriam R. Levin, PhD
  Professor, Department of History
- Cheryl Toman, PhD
  Associate Professor, Department of Modern Languages and Literatures
German Studies Program

In its reconstituted form, Germany has again become a major player in European and global affairs. Germany has always been considered important to European development—at various times it has been called the crossroads of the entire continent—but the economic might of modern Germany and the integration of the European Union have now made American understanding of German culture and civilization more important to—and worthy of study by—American students than at any time since 1945.

German Studies, an integrated program of study leading to the BA degree, offers students the freedom to develop an interdisciplinary sequence of courses to meet their particular needs and interests. It builds the foundation for graduate work in many academic fields that call for a thorough knowledge of German language, culture, and history. It also prepares students for careers in international business or for future study in professional programs such as law and business administration.

German Studies administers a summer immersion program, The Munich Experience, which allows students to spend four weeks in Munich and experience the city’s vibrant culture and breathtaking surroundings. After graduation, many German and German Studies majors (most of whom have a second major in another field) return to Germany to study or work. Our majors have returned to Germany on Fulbright scholarships, through internships administered by the Carl-Duisberg-Gesellschaft, or as interns for the German parliament.

Undergraduate Programs

Major

The major in German Studies, which includes a German language requirement, concentrates on the study of the German cultural tradition in history, philosophy, the fine arts, music, film studies, politics, and culture. The major is particularly suited to students wishing to combine interests in German language and culture with a major in another discipline.

The major requires 30 hours, to be distributed as follows:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>GRMN 303</td>
<td>German Culture &amp; Civilization</td>
<td>3</td>
</tr>
<tr>
<td>GRMN 311</td>
<td>Advanced Conversation</td>
<td>3</td>
</tr>
<tr>
<td>GRMN 396</td>
<td>Senior Capstone - German (or equivalent)</td>
<td>3</td>
</tr>
<tr>
<td>Twenty-one additional hours approved by one of the co-directors, with no more than 9 hours from any one department</td>
<td>21</td>
<td></td>
</tr>
</tbody>
</table>

Total Units 30

Possible concentrations for the German Studies major include history and philosophy; German literature and theater history; political science and history; art history; music history; and religious studies. Within the program requirements, students are free to shape the major as they wish, based on their own intellectual interests.

Minor

The course requirements for the minor (15 hours) are as follows:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>One of the following:</td>
<td></td>
<td>3</td>
</tr>
<tr>

</tr>
<tr>
<td>GRMN 311</td>
<td>Advanced Conversation</td>
<td></td>
</tr>
</tbody>
</table>

Four additional 300-level courses approved by one of the co-directors 12

Total Units 15

Program Faculty

Kenneth Ledford, PhD
Gerontological Studies Program

The Gerontological Studies Program is a multidisciplinary program designed to integrate research and theory from multiple disciplines about aging, old age, and the life course. Prompted in part by broad social and technological changes that include the “graying” of the world’s population, humanists, scientists, social scientists, and professionals have become interested in understanding the position of the aged in society, the aging process in various contexts, and the meaning of aging to individuals. The program draws on the most recent thinking and research in a variety of disciplines to provide students with a background that will be helpful after graduation, both in work and in graduate or professional school.

In keeping with the interdisciplinary nature of the program, the core courses are drawn from five departments: Anthropology, Psychological Sciences (Communication Sciences Program), History, Psychology, and Sociology. Students may choose from a variety of courses according to their own interests. Most of the electives are not specifically gerontology courses but cover topics that contribute to the understanding of aging and the aged. The perspectives gained in the core courses will provide the student with the background needed to relate the material in the more general courses to gerontological issues. The program is firmly grounded in the liberal arts and thus provides the student with the challenge to think and communicate effectively and to integrate diverse information, theories, and practice.

Gerontological Studies is an appropriate major or minor for students with a wide variety of career goals. The aging of the population has made available entry-level positions for persons with baccalaureate degrees in organizations that provide services to and formulate policy for the elderly. Many graduate programs now include an emphasis on aging for which a degree in Gerontological Studies would serve as a useful background. Students planning to pursue professional degrees will find that an increasing number of their clients or patients will be older adults and that problems with which they must deal will be related to the aged. The perspective provided by participating in the Gerontological Studies program provides students with excellent background in working with older populations.

Faculty members associated with the program are engaged in a variety of funded research projects. These include studies of Alzheimer’s disease; cancer survivorship; patterns of care for the urban elderly in China; visual perception changes that accompany aging; the impact of high levels of physical activity on the biological aging process; grandparent-grandchild relationships; and stress, coping, and adaptation among urban community and institutionalized elderly.

Undergraduate Programs

Major

The Gerontological Studies Program offers a major that leads to the Bachelor of Arts degree. However, it may be selected only as a second major, the first major being in a traditional academic department. The major consists of a minimum of 30 credits; 15 are in required core courses and 15 are in approved elective courses.

Required core courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>

Graduate Certificate Program in Gerontology

University Center on Aging and Health
1420 Frances Payne Bolton School of Nursing
Phone: 368-2692; Fax: 216-368-6389
Diana L. Morris, PhD, RN, FAAN, FGSA, Executive Director
E-mail: diana.morris@case.edu

The University Center on Aging and Health (http://fpb.case.edu/Centers/UCAH/program.shtm) is dedicated to the premise that aging is a developmental process spanning the entire life cycle, and brings together social and behavioral sciences, health sciences, and the humanities to encourage teaching and research activities in every unit of the University. The Center sponsors a certificate program in gerontology for graduate and professional students and for those who already hold graduate degrees.

A student interested in a graduate certificate in gerontology must be enrolled in a master’s or doctoral program, or be a special non-degree student with at least a master’s degree (or equivalent). To receive a certificate in gerontology, a student must submit a formal application, be approved by the University Center on Aging and Health, and take 12 credit hours of course work.

The student must complete the following courses:

1. Two three-credit courses in gerontology within the student’s discipline, one of which can be an independent study.
2. One three-credit course in gerontology or independent study outside the student’s discipline.
3. A three-credit seminar in gerontology offered by the center.

Any departures from the requirements must be approved by the center director. For further information, contact the University Center on Aging and Health.

Program Faculty

Dale Dannefer, PhD
Selah Chamberlain Professor and Chair, Department of Sociology; Co-Director, Gerontological Studies Program

Gary T. Deimling, PhD  
Professor of Sociology; Co-Director, Gerontological Studies Program

T. J. McCallum, PhD  
Associate Professor, Department of Psychology

Courses

GERO 496. Public Policy and Aging. 3 Units.
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GERO 496, HSTY 480, MPHP 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

GERO 498. Seminar in Gerontological Studies. 3 Units.
Major themes in gerontology. Seminar members choose a problem area, explore the relevant literature from a multi-disciplinary perspective, and develop a research project using knowledge gained through community observation and library exploration.

GERO 601. Independent Study. 1 - 3 Unit.
For students enrolled in the graduate certificate program in gerontology.
History and Philosophy of Science Program

The Department of Philosophy and the Department of History together offer an undergraduate major in the history and philosophy of science. The purpose of the major is to develop a humanistic understanding of the nature and development of science through the combined use of philosophical and historical methods. The major provides a foundation for graduate study in a range of academic disciplines and for careers in such areas as business, medicine, law, public policy, and science journalism. It also may be profitably combined with a program in one of the sciences. Within the major, a student may seek an emphasis on the philosophy of science, the history of the physical sciences, or the history of the biological and medically related sciences.

Undergraduate Programs

Major

The history and philosophy of science major requires 30 credit hours from courses in philosophy and in history of science and technology:

Any four of the following seven classes: 12

International Studies Program

The International Studies Program is a multidisciplinary program leading to the BA degree. Study in the program provides students with the ability to read beyond the headlines—to understand how world situations and events came about, how they fit into broader issues and systems, and how they might shape the future. To attain this goal, students are introduced to methods of conceptualizing international and global issues, and to the study of a society other than their own. They learn to think critically about contending and complementary methods and theories, developing an appreciation of both traditional disciplinary approaches and newer, cross-disciplinary approaches. Students also acquire skills in a language other than English (or other than their native language).

It is strongly recommended that all international studies students participate in at least one of several off-campus programs that facilitate the international perspective: study abroad, summer internships overseas or in Washington, D.C., or professional, practicum-type work experiences in Cleveland that involve an international context.

In addition to forming the basis for an evolving understanding of and lifelong engagement with the modern world, a background in international studies provides excellent, practical preparation for careers that deal with the world’s emerging needs. International studies majors go on to careers in international marketing and management, diplomatic service, health, law, social services, and journalism, as well as careers within the academic disciplines. The professional schools of business, medicine, nursing, law, and applied social sciences at Case Western Reserve all have significant international foci, and our students can explore careers in these areas during their undergraduate years. The skills, analytic abilities, and critical approaches of international studies should equip students as well for new employment patterns which may not fit into existing career descriptions.

Undergraduate Program

Major

The major in international studies requires a minimum of 33 credit hours, chosen from approved topical and area studies courses, plus satisfaction of a language competency requirement. Each student will prepare a program of study that includes course selections meeting the six area requirements below. Normally, no more than two courses taken for international studies credit may count simultaneously toward a minor or another major. Courses taken to satisfy the language competency requirement are exempted from this rule, and several international studies courses contribute to the completion of the Arts and Sciences General Education Requirements.

Requirements for the Major

1. Multidisciplinary Foundations (required courses; 12 hours). These courses provide an introduction to understandings of society and culture, principles of economics, change over time, and interactions among nations, while exposing students to a variety of world societies and issues. International studies majors will be expected to have completed the multidisciplinary foundations courses before embarking on a study abroad program. These courses are:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANTH 102</td>
<td>Being Human: An Introduction to Social and Cultural Anthropology</td>
<td>3</td>
</tr>
<tr>
<td>ECON 102</td>
<td>Principles of Microeconomics</td>
<td>3</td>
</tr>
<tr>
<td>HSTY 113</td>
<td>Introduction to Modern World History</td>
<td>3</td>
</tr>
<tr>
<td>PQSC 272</td>
<td>Introduction to International Relations</td>
<td>3</td>
</tr>
</tbody>
</table>

2. Area Focus (6 hours): Two courses that concentrate on a single geographic or cultural area. Examples include Africa, Asia, Europe, Latin America, and the Middle East.

3. Topical Focus (6 hours): A related pair of courses that provide a discrete perspective on global issues and foster an appreciation of complexity through the study of particular issues and the methods appropriate to them. Examples include pairs of courses dealing with ethnicity, international health, international economics, global and environmental analysis, or international relations. Cross-disciplinary approaches are encouraged.

4. Elective Area or Topical Courses (6 hours): Two additional courses within the topical and area studies course listings that provide students with an opportunity to experiment or to tailor their program toward particular interests in international or global issues, methodology, or other cultures.

5. Senior Colloquium (required course, 3 hours): In the fall semester of the senior year, students integrate prior topical and area foci in a colloquium (INTL 398 International Senior Colloquium) that involves the writing of a substantial research paper. Students select a topic and complete the research and writing under a faculty director's supervision. They obtain peer evaluation through regular sessions, supervised by the colloquium coordinator, at which they present their initial concepts, outlines, research, and drafts. Students will be expected to identify their faculty directors and topics by the end of their junior year. Exceptional papers (grade of A) may be considered for honors if the student has maintained a 3.3 overall GPA and a 3.7 GPA in international studies courses (area focus, topic focus, and electives).

6. Language Competency (0 to 16 credit hours): In addition to the 33 credit hours of international studies course work, students must demonstrate competency in a language other than their native language. This may be done by:

1. completing a language course at the 300 level or above
2. demonstrating to the Department of Modern Languages and Literatures a non-native language competency equivalent to that attained by completing a 300-level or above course
3. completing four semesters in a single language

The International Studies Program currently recognizes more than 150 courses from which students may choose to satisfy the area and topical foci requirements. Additional courses may be selected on the basis of individual student interest, in consultation with the director. Courses may also be selected from within existing area studies programs: Asian Studies, French and Francophone Studies, German Studies, and Japanese Studies.

There is no minor in international studies.

Faculty

Kelly McMann, PhD
(University of Michigan)
Associate Professor, Department of Political Science; Director, International Studies Program
Courses

INTL 396. International Independent Study. 1 - 3 Unit.
Study of a topic within the scope of international studies. The student must complete a prospectus form, approved and signed by the supervising faculty member, no later than the second week of classes. The prospectus must outline the goals of the project and the research methodology to be used and is part of the basis for grading. Open to juniors and seniors majoring in international studies.

INTL 398. International Senior Colloquium. 3 Units.
Individual work with a faculty tutor leading to the writing of a major research paper. Regular class sessions are supervised by the colloquium coordinator in which students present their initial concepts, outlines, research, and drafts. Open only to seniors majoring in international studies.
Japanese Studies Program

Today’s students find themselves in a world of increasingly multi-ethnic, multi-religious, multicultural contexts. Through a long history of receiving, reworking, and incorporating influences from nearby cultural centers on the Asian mainland and surrounding Pacific islands and from the world beyond, including Europe and the Americas, Japan has developed a tradition of multiculturalism—a tradition that is best understood through interdisciplinary study. Following this thread, the Japanese Studies Program seeks to foster the student’s global and interdisciplinary perspectives, while at the same time maintaining a flexibility that allows individuals to pursue their own areas of interest. To further foster the students’ linguistic and cultural development, the Japanese Studies Program strongly encourages study abroad in Japan for a year, a semester, or a summer.

Students may pursue a major or a minor in Japanese studies. The program offers a variety of courses to fulfill the requirements, ranging from five levels of the Japanese language to courses about Japanese cinema, literature, and pop culture. Besides these core courses, we encourage the student to take related courses in such interdisciplinary areas as Asian art, cinema, comparative literature of Japan and the West, Japanese religion and history, and international business. Taking advantage of the varied resources of the University and University Circle institutions, the Japanese Studies Program makes the study of Japanese culture an integral part of the student’s undergraduate education. Furthermore, the Japanese Studies Program provides an excellent foundation for graduate or professional school or for careers in international business and finance, careers involving technological or medical exchange, and careers in law, journalism, foreign service, or the arts.

Undergraduate Program

Major

The BA major in Japanese studies requires a minimum of 35 credit hours. For students beginning the major at the 200 level, the course requirements are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>JAPN 201</td>
<td>Intermediate Japanese I</td>
<td>4</td>
</tr>
<tr>
<td>JAPN 202</td>
<td>Intermediate Japanese II</td>
<td>4</td>
</tr>
<tr>
<td>JAPN 301</td>
<td>Advanced Japanese I</td>
<td>4</td>
</tr>
<tr>
<td>JAPN 302</td>
<td>Advanced Japanese II</td>
<td>4</td>
</tr>
<tr>
<td>JAPN 350</td>
<td>Contemporary Japanese Texts I</td>
<td>3</td>
</tr>
<tr>
<td>or JAPN 450</td>
<td>Japanese in Cultural Context I</td>
<td></td>
</tr>
<tr>
<td>JAPN 351</td>
<td>Contemporary Japanese Texts II</td>
<td>3</td>
</tr>
<tr>

<tr>
<td>JAPN 398</td>
<td>Senior Thesis II **</td>
<td>3</td>
</tr>
<tr>
<td>Four Asian studies, world literature, or other related courses. ***</td>
<td>12</td>
<td></td>
</tr>
</tbody>
</table>

Total Units 40

* JAPN 450/451, if not taken as replacement(s) for JAPN 350/351, can be counted toward the four Asian studies, world literature, or other related courses.

** This course requires a substantial research paper in Japanese or English. Students are required to identify their faculty advisors and the topic of their paper by the end of the junior year. Exceptional papers may be considered for honors.

*** “Other related courses” may include courses in Japanese literature, film, theater, art history, anthropology, philosophy, religion, sociology, political science, or history.

Students beginning the major at the 300 level do not take JAPN 201 Intermediate Japanese I and JAPN 202 Intermediate Japanese II, but do take one “directed reading” in Japanese in an area related to their major research. All other requirements for the BA are the same.

Courses in other disciplines also form an important component of the Japanese Studies Program. They provide an international, as well as interdisciplinary, perspective on Japanese culture. A faculty advisor supervises each student’s selection of these courses.

In addition to the courses required for the major, the following courses are offered in the Japanese Studies Program:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>JAPN/WLIT 225</td>
<td>Japanese Popular Culture</td>
<td>3</td>

</tr>
<tr>
<td>JAPN/WLIT 245</td>
<td>Classical Japanese Literature in Translation</td>
<td>3</td>
</tr>
<tr>
<td>JAPN/WLIT 345</td>
<td>Japanese Women Writers</td>
<td>3</td>
</tr>
<tr>
<td>JAPN/WLIT 355</td>
<td>Modern Japanese Novels and the West</td>
<td>3</td>
</tr>
<tr>
<td>JAPN 399</td>
<td>Independent Study</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td></td>
<td>-3</td>
</tr>
</tbody>
</table>

Program Honors

Exceptional papers written for the senior thesis may qualify for program honors. In addition, to qualify for the BA with honors in Japanese, students must achieve a minimum GPA of 3.5 in courses taken for the Japanese major.

Study Abroad

A year of study in Japan is highly recommended, as is additional study in another language. All efforts are made to grant appropriate credit for courses taken at a Japanese university during the year abroad.

Minor

For students beginning Japanese at the introductory level, the course requirements for the minor are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>JAPN 101</td>
<td>Elementary Japanese I</td>
<td>4</td>
</tr>
<tr>
<td>JAPN 102</td>
<td>Elementary Japanese II</td>
<td>4</td>
</tr>
<tr>
<td>JAPN 201</td>
<td>Intermediate Japanese I</td>
<td>4</td>
</tr>
<tr>
<td>JAPN 202</td>
<td>Intermediate Japanese II</td>
<td>4</td>
</tr>
<tr>
<td>One 300-level course</td>
<td></td>
<td>3</td>
</tr>
</tbody>
</table>

Total Units 19

For students beginning Japanese at the 200 level, the requirements for the minor are five courses at the 200 and 300 level, approved by a program director.

Program Faculty

Linda C. Ehrlich, PhD
Associate Professor, Department of Modern Languages and Literatures; Co-Director, Japanese Studies Program

Program Advisory Committee

William E. Deal, PhD  
Severance Professor in the History of Religion, Department of Religious Studies

Courses

JAPN 101. Elementary Japanese I. 4 Units.  
Introduction to understanding, speaking, reading, and writing Japanese. Students learn to read and write hiragana and katakana syllabaries and approximately 100 kanji characters. Students are expected to achieve control of the aural comprehension and speaking.

JAPN 102. Elementary Japanese II. 4 Units.  

JAPN 201. Intermediate Japanese I. 4 Units.  
Further study of fundamental structures of Japanese. Students improve aural comprehension, speaking, reading, and writing abilities and learn approximately 100 new characters. Recommended preparation: JAPN 102 or equivalent.

JAPN 202. Intermediate Japanese II. 4 Units.  
Continuation of JAPN 201. Students learn an additional 100 kanji characters. With the completion of JAPN 201 - 202, students should have control of the fundamentals of modern Japanese and a firm foundation in the writing system. Recommended preparation: JAPN 201 or equivalent.

JAPN 225. Japanese Popular Culture. 3 Units.  
This course highlights salient aspects of modern Japanese popular culture as expressed in animation, comics and literature. The works examined include films by Hayao Miyazaki, writings by Kenji Miyazawa, Haruki Murakami and Banana Yoshimoto, among others. The course introduces students to essential aspects of modern Japanese popular culture and sensibility. Offered as JAPN 225 and WLIT 225.

JAPN 245. Classical Japanese Literature in Translation. 3 Units.  
Readings in English translation of classical Japanese poetry, essays, narratives, and drama to illustrate essential aspects of Japanese culture and sensibility before the Meiji Restoration (1868). Lectures explore the sociohistorical contexts and the character of major literary genres; discussions focus on interpreting the central images of human value within each period. Japanese sensibilities compared to and contrasted with those of Western and other cultures. Offered as JAPN 245 and WLIT 245.

JAPN 255. Modern Japanese Literature in Translation. 3 Units.  
Focus on the major genres of modern Japanese literature, including poetry, short story, and novel (shosetsu). No knowledge of Japanese language or history is assumed. Lectures, readings, and discussions are in English. Films and slides complement course readings. Offered as JAPN 255 and WLIT 255.

JAPN 301. Advanced Japanese I. 4 Units.  
Emphasizes conversational proficiency and reading. Students must use the course material offered by the Online Language Learning Center in addition to class meetings. Recommended preparation: JAPN 202 or equivalent.

JAPN 302. Advanced Japanese II. 4 Units.  
Continuation of JAPN 301; emphasizes conversational proficiency and reading. Japanese life and culture introduced through supplemental materials and activities. Students must use the course material offered by the Online Language Learning Center in addition to class meetings. Recommended preparation: JAPN 301 or equivalent.

JAPN 345. Japanese Women Writers. 3 Units.  
Contributions of women writers to the literature of pre-modern and modern Japan; investigations of how their works exemplify and diverge from "mainstream" literary practices. Emphasis on the social and cultural contexts of the texts. Offered as JAPN 345 and WLIT 345.

JAPN 350. Contemporary Japanese Texts I. 3 Units.  
The primary aim of this course is to develop communication skills in Japanese based on those that the students have acquired in JAPN 302 or equivalent. The students will read and discuss various texts such as daily conversations, essays, and news scripts with the assistance of vocabulary and kanji (Chinese character) lists and formal grammar explanations. Attention also will be given to enhancing the students' writing and aural/oral proficiencies through regularly assigned homework, presentations, tape listening, video viewing, and classroom discussion. Recommended preparation: JAPN 302 or equivalent.

JAPN 351. Contemporary Japanese Texts II. 3 Units.  
This course is a continuation of JAPN 350 and its primary aim overlaps with that of JAPN 350: to develop more sophisticated communication skills in Japanese. Students will read and discuss various texts such as daily conversations, essays, and news scripts largely with the assistance of vocabulary and kanji (Chinese character) lists. Attention will be given to enhancing the students' writing and aural/oral proficiencies through regularly assigned homework, presentations, tape listening, video viewing, and classrooms discussion. Prereq: JAPN 350 or consent of instructor.

JAPN 355. Modern Japanese Novels and the West. 3 Units.  
This course will compare modern Japanese and Western novels, drama, and novels. Comparisons will focus on the themes of family, gender and alienation, which subsume a number of interrelated sub-themes such as marriage, home, human sexuality, amae (dependence), innocence, experience, death, God/gods, and nature (the ecosystem). Offered as JAPN 355, WLIT 355.

JAPN 396. Senior Capstone - Japanese. 3 Units.  
The Senior Capstone in Japanese is an independent study project chosen in consultation with a capstone advisor. The capstone project should reflect both the student's interest within Japanese and the courses he or she has taken to fulfill the major. The project requires independent research using an approved bibliography and plan of action. In addition to written research, the student will also present the capstone project in a public forum that is agreed upon by the project advisor and the student. Prereq: Senior status required. Major in Japanese required.
JAPN 397. Senior Thesis I. 3 Units.
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper in English or Japanese. Limited to senior majors. Permit required.

JAPN 398. Senior Thesis II. 3 Units.
Continuation of JAPN 397. Limited to senior majors. Prereq: JAPN 397.

JAPN 399. Independent Study. 1 - 3 Unit.
Directed study for students who have progressed beyond available course offerings.

JAPN 450. Japanese in Cultural Context I. 3 Units.
The primary aim of this graduate course is to develop sophisticated communication skills (listening, speaking, reading, and writing) in Japanese. The students will read and discuss various texts in the original, such as essays, news scripts, and literary works. Classroom instruction and discussion will be conducted in Japanese. The students also will be required to write a research paper of 4000-6000 letters/characters (10-15 genkoyoshi pages) in Japanese on a topic related to Japan and the student's specialty. Recommended preparation: JAPN 351 or equivalent.

JAPN 451. Japanese in Cultural Context II. 3 Units.
This course is a continuation of JAPN 450 and it aims at a further development of sophisticated communication skills (listening, speaking, reading, and writing) in Japanese. The students will read and discuss various texts in the original, such as essays, news scripts, and literary works both classical and modern. Classroom instruction and discussion will be conducted in Japanese. The students also will be required to write a research paper of 6000-8000 letters/characters (15-20 genkoyoshi pages) in Japanese on a topic related to Japan and the student's specialty. Recommended preparation: JAPN 450 or equivalent.
Judaic Studies Program

The Judaic Studies Program offers an interdisciplinary approach to the study of the history, religion, social experience, and culture of the Jewish people. By bringing a variety of fields and disciplines to bear on its subject, the program intends to convey to students the complex interaction of forces that create and express Jewish ethnic and religious identity. Students completing the program will have a broad knowledge of the field along with the tools necessary for continued study of Jewish civilization in all its manifestations.

Undergraduate Program

Minor

The minor consists of a minimum of five or six courses, according to the following scheme, to be chosen in consultation with the program director.

Required Courses:

A. Introduction to Judaic Studies
   JDST 201  Introduction to Judaic Studies  3

B. Nine additional credit hours of courses that have a JDST cross-listing. Alternatively, students may take six credit hours of JDST courses plus three credit hours from one course on the following list:
   ENGL 365E  The Immigrant Experience  9
   HBRW 201  Intermediate Modern Hebrew I  9
   HBRW 202  Intermediate Modern Hebrew II  9
   HBRW 301  Advanced Modern Hebrew I  9
   HBRW 302  Advanced Modern Hebrew II  9
   HBRW 399  Independent Studies  9
   HSTY 257  Immigrants in America  9
   POSC 370K  Nationalism, Ethnicity, and Religion in World Politics  9
   POSC 379  Introduction to Middle East Politics  9

C. Two semesters of Hebrew (HBRW 101 and HBRW 102).  8

Students who place out of the 100-level HBRW courses must take an additional course from B as specified above.

Total Units  20

Program Steering Committee

Peter J. Haas, PhD
Abba Hillel Silver Professor of Jewish Studies; Department of Religious Studies; Director, Judaic Studies Program

Yoram Daon, MBA
Lecturer, Department of Modern Languages and Literatures

Gilbert Doho, PhD
Associate Professor, Department of Modern Languages and Literatures

Jay Geller, PhD
Samuel Rosenthal Professor of Judaic Studies; Associate Professor, Department of History

Miriam Levin, PhD
Professor, Department of History

Sean Martin, PhD
Associate Curator, Jewish Archives, Western Reserve Historical Society; Lecturer, SAGES Program

Judith Neulander, PhD
Lecturer, Department of Religious Studies

Laura Tartakoff, JD
Instructor, Department of Political Science

Gillian Weiss, PhD
Associate Professor, Department of History

Joseph White, PhD
Luxenberg Family Professor of Public Policy, Professor of Epidemiology and Biostatistics, and Director of the Center for Policy Studies.

Program Faculty

Peter J. Haas, PhD
Abba Hillel Silver Professor of Jewish Studies, Department of Religious Studies; Director, Judaic Studies Program

Judith Neulander, PhD
Lecturer, Department of Religious Studies

Jay Geller, PhD
Samuel Rosenthal Professor of Judaic Studies; Associate Professor, Department of History

Yoram Daon, MBA
Lecturer, Department of Modern Languages and Literatures

Courses

JDST 201. Introduction to Judaic Studies. 3 Units.
An introduction to the academic study of Judaic religion and culture, this course does not presuppose any previous study of, or experience with, Judaism. The course takes an interdisciplinary approach, drawing on a variety of methods to examine the diverse issues that make up the current field of Judaic Studies. The course will examine the Jewish experience across time and space, and may include some "field" experience, such as a visit to a synagogue or to the Maltz Museum of Jewish Heritage. Required for the minor in Judaic Studies.

JDST 208. Introduction to Western Religions. 3 Units.
Basic introduction to the three great monotheistic religions of the Western World: Christianity, Judaism, and Islam. All three of these religious traditions trace their roots to the faith of biblical Israel as revealed by a series of prophets including Noah, Abraham, and Moses. Each absorbed the philosophy and science of the Greco-Roman world and went on both to influence and struggle with each other. Many of the religious problems of the contemporary world, from Afghanistan to the Middle East to Yugoslavia, can be traced to tension within and between these religious groups. Offered as RLGN 208 and JDST 208.

JDST 211. Great Books of Western Religion. 3 Units.
Students will engage with the major writings that have shaped Western religious traditions (Christianity, Judaism, Islam) from their earliest expressions until the present day. Readings include the foundational Scriptures (Hebrew Bible, New Testament, Quran) of each tradition, religious poetry and other writings from the Middle Ages, and modern writers on spiritually and religiousness within each of these traditions. The course will be conducted as a seminar, in which students will read the selected original texts and will discuss their religious and spiritual meaning and significance in class. Each student will also prepare a final project based on the assigned authors or readings. Offered as RLGN 211 and JDST 211.
JDST 218. Jews in Early Modern Europe. 3 Units.
This course surveys the history of Jews in Europe and the wider world from the Spanish expulsion through the French Revolution. Tracking peregrinations out of the Iberian Peninsula to the British Isles, France, Holland, Italy, Germany, Poland-Lithuania, the Ottoman Empire, and the American colonies, it examines the diverse ways Jews organized their communities, interacted with their non-Jewish neighbors, and negotiated their social, economic, and legal status within different states and empires. What role did Jews play and what symbolic place did they occupy during a period of European expansion, technological innovation, artistic experimentation, and religious and political turmoil? What internal and external dynamics affected Jewish experiences in the sixteenth, seventeenth, and eighteenth centuries? Through a selection of inquisitorial transcripts, government records, memoirs, and historical literature, we will explore topics such as persecution, conversion, messianism, toleration, emancipation, and assimilation. Offered as HSTY 218, JDST 218, and ETHS 218.

JDST 220. Jewish Traditional Art and Architecture. 3 Units.
Tradition and transformation in Jewish artistic expression over time and across space. Course will begin with biblical period and continue down to the present day in Israel and America. Examination of how concepts such as "Jewish" and "art" undergo change within the Jewish community over this period. Offered as ARTH 220 and JDST 220.

JDST 228. The Jewish Image in Popular Film. 3 Units.
Explores film as social practice for its makers and its audience from the silent era through Hollywood’s Golden Age, to the technological dazzle of the present day. Notes views of the Jews as stereotypical "Racial Other," not only capable of Jewish self-representation, but also capable of representing any group widely believed to be non-white, non-Christian or otherwise "alien." By studying select films in historical context, the course will trace changes in this stereotype. By the end of the semester, students will understand how film is shaped by, and how it actively shapes, our construction of American Selves vs. Ethnic Others.

JDST 231. Jews in the Modern World. 3 Units.
Investigation of the impact of modernity on the Jewish community. In particular, the course will examine the influence of the Emancipation and Enlightenment on the social situation of the Jews in Europe and America and the corresponding changes in Judaic religion, philosophy, social structure, and culture. Attention will be paid to the creation of a modern Jewish identity in the secular culture of the post-Modern world. Offered as HSTY 238, JDST 231, and RLGN 231.

JDST 233. Introduction to Jewish Folklore. 3 Units.
Exploration of a variety of genres, research methods and interpretations of Jewish folklore, from antiquity to the present. Emphasis on how Jewish folk traditions and culture give us access to the spirit and mentality of the many different generations of the Jewish ethnic group, illuminating its past and informing the direction of its future development. Offered as ANTH 233, RLGN 233, and JDST 233.

JDST 254. The Holocaust. 3 Units.
This class seeks to answer fundamental questions about the Holocaust: the German-led organized mass murder of nearly six million Jews and millions of other ethnic and religious minorities. It will investigate the origins and development of racism in modern European society, the manifestations of that racism, and responses to persecution. An additional focus of the course will be comparisons between different groups, different countries, and different phases during the Nazi era. Offered as HSTY 254, RLGN 254, ETHS 254, and JDST 254.

JDST 268. Women in the Bible: Ethnographic Approaches to Rite and Ritual, Story, Song, and Art. 3 Units.
Examination of women in Jewish and Christian Biblical texts, along with their Jewish, Christian (and occasionally Muslim) interpretations. Discussion of how these traditions have shaped images of, and attitudes toward, women in western civilization. Offered as RLGN 268, WGST 268, and JDST 268.

JDST 280. Religion and Politics in the Middle East. 3 Units.
An in-depth look at the relationship between politics and religion in the Middle East. Students will spend the first week on the CWRU campus and the last three weeks in Israel, where time will be divided between classroom teaching, guest lectures, and "field trips" to important sites. Students will have the opportunity to interact directly with members of the region's diverse religious groups within the political, social, and cultural contexts in which they live. A final research paper will be required. Knowledge of Hebrew is not necessary. Offered as JDST 280 and RLGN 280.

JDST 330. Classical Jewish Religious Thought. 3 Units.
The thought of some major biblical and Rabbinic writings and of the classic age of medieval Jewish philosophy. Offered as JDST 330, PHIL 332, and RLGN 330.

JDST 341. Jewish Urban History. 3 Units.
This course examines the relationship between Jews and the modern urban environment. It seeks to answer questions such as: How did the modernization of cities affect Jews and Jewish communities? In what ways did Jews contribute to modern urban cultural and social forms? What is Jewish urban space, is it unique, and how is it remembered later on? Are there differences between the patterns in Europe, the Middle East, and the Americas? Offered as HSTY 341 and JDST 341.

JDST 350. Jewish Ethics. 3 Units.
An exploration of Jewish moral and ethical discourse. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abortion, euthanasia, and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of moral rhetoric in the Jewish community today. Readings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as JDST 350, RLGN 350, and RLGN 450.

JDST 371. Jews under Islam and Christianity. 3 Units.
This course examines the social and political status of Jews under Muslim and Christian rule since the Middle Ages. Themes include interfaith relations, Islamic and Christian beliefs regarding the Jews, Muslim and Christian regulation of Jewry, and the Jewish response. Offered as HSTY 371, JDST 371 and RLGN 371.

JDST 389. History of Zionism. 3 Units.
This course seeks to elucidate the major strands of Zionism, their origins, how they have interacted, and their impact on contemporary Israeli society. These may include political Zionism, cultural Zionism, socialist (labor) Zionism, Revisionist Zionism, and religious Zionism. This course will also examine the differences in the appeal of Zionism to Jews in different places, such as Western Europe, Eastern Europe and the United States. Offered as HSTY 389 and JDST 389.
JDST 392. Independent Study. 1 - 3 Unit.
Up to three semester hours of independent study may be taken in a single semester.
Natural Sciences Program

The natural sciences major is an interdepartmental science program that leads to the Bachelor of Arts (BA) degree. It is intended to serve students whose interests and objectives call for a major in the humanities or social sciences (e.g., the major in history and philosophy of science) that is best accompanied by a broad background in the natural sciences.

Undergraduate Programs

Major

Natural sciences is available as a second major for the BA; the first major must be in a department or program within the arts, humanities, or social sciences, excluding the programs in American Studies, Environmental Studies, Gerontological Studies, and Pre-Architecture. For a student who completes a BS degree in management or accounting, natural sciences may serve as the sole major for the BA degree.

The program requires a minimum of 50 semester hours of work in natural sciences and mathematics. The departments included in the major are astronomy; biology; chemistry; earth, environmental, and planetary sciences; and physics. The student must complete a minimum of 20 hours in one of these departments, a minimum of 8 hours each in two of the other departments, and 3 hours each in the remaining two departments. In addition, all natural sciences majors must complete:

<table>
<thead>
<tr>
<th>One of the following sequences:</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 125 &amp; MATH 126</td>
<td>Math and Calculus Applications for Life, Managerial, and Social Sci I and Math and Calculus Applications for Life, Managerial, and Social Sci II</td>
</tr>
<tr>
<td>MATH 121 &amp; MATH 122</td>
<td>Calculus for Science and Engineering I and Calculus for Science and Engineering II</td>
</tr>
</tbody>
</table>

Total Units: 6

The courses used to satisfy the natural sciences major should be courses that would satisfy requirements of an existing science major. However, any 200-level or higher astronomy course is acceptable for the natural sciences major.

Minor

A minor is achieved through completion of the requirements listed below in any four of the six participating departments.

Astronomy

One of the following sequences:

| ASTR 201 | The Sun and its Planets (& Any other 200-level ASTR course) |
| ASTR 221 & ASTR 222 | Stars and Planets and Galaxies and Cosmology |

Total Units: 6

Biology

Two of the following sequences:

| BIOL 214 & 214L | Genes, Evolution and Ecology and Genes, Evolution and Ecology Lab |
| BIOL 215 & 215L | Cells and Proteins and Cells and Proteins Laboratory |
| BIOL 216 & 216L | Development and Physiology and Development and Physiology Lab |

Total Units: 8

Chemistry

One of the following sequences: 8-10

| CHEM 105 | Principles of Chemistry I |
| & CHEM 106 | and Principles of Chemistry II |
| & CHEM 113 | and Principles of Chemistry Laboratory |
| CHEM 111 | Principles of Chemistry for Engineers |
| & CHEM 113 | and Principles of Chemistry Laboratory |
| & ENGR 145 | and Chemistry of Materials |

Total Units: 8-10

Earth, Environmental, and Planetary Sciences

One of the following:

| EEPS 101 | The Earth and Planets |
| EEPS 110 | Physical Geology |
| EEPS 115 | Introduction to Oceanography |
| EEPS 117 | Weather and Climate |
| EEPS 119 | Geology Laboratory |

One additional EEPS course: 3

Total Units: 19

Mathematics

One of the following sequences: 8

| MATH 125 & MATH 126 | Math and Calculus Applications for Life, Managerial, and Social Sci I and Math and Calculus Applications for Life, Managerial, and Social Sci II |
| MATH 121 & MATH 122 | Calculus for Science and Engineering I and Calculus for Science and Engineering II |

Total Units: 8

Physics

One of the following sequences: 8-11

| PHYS 115 | Introductory Physics I |
| & PHYS 116 | and Introductory Physics II |
| PHYS 121 | General Physics I - Mechanics |
| & PHYS 122 | and General Physics II - Electricity and Magnetism |
| & PHYS 221 | and Introduction to Modern Physics |

Total Units: 8-11
Nutrition

The College of Arts and Sciences awards the Bachelor of Arts and Bachelor of Science degrees in nutrition and nutritional biochemistry and metabolism. The required courses for the majors and minor are offered by the Department of Nutrition in the School of Medicine. For details about the department’s undergraduate programs, please consult the Department of Nutrition (p. 751) section of this bulletin.
Public Policy Program

A minor in public policy is available to undergraduates in the College of Arts and Sciences and in the economics and management programs in the Weatherhead School of Management. The course requirements are in four categories: the public policy process; economic analysis; policy or political institutions or history; and a specific policy field. Courses are listed in the "Undergraduate" section (see link above). Substitutions can be made under exceptional circumstances, at the discretion of the program director.

Undergraduate or graduate courses with public policy content are offered through the Departments of Anthropology, Earth, Environmental and Planetary Sciences, History, Political Science, and Sociology in the College of Arts and Sciences; through the Department of Economics and other departments in the Weatherhead School of Management; through the School of Law, the School of Medicine, and the Frances Payne Bolton School of Nursing; and through the Mandel School of Applied Social Sciences. Students can engage with policy issues both through courses and through the extracurricular programming of the Center for Policy Studies and other university bodies.

Two courses on a particular field of public policy * 6

Total Units 15

* Selected with the approval of the program director. A list of courses that have been approved in the past is available on the Public Policy Program’s Web site (http://www.case.edu/artsci/public_policy/specialization.html).

Program Advisory Committee

Joseph White, PhD
Luxenberg Family Professor of Public Policy and Chair, Department of Political Science; Director, Center for Policy Studies; Director, Public Policy Program

Brian Gran, PhD, JD
Associate Professor, Department of Sociology

David C. Hammack, PhD
Hiram C. Haydn Professor of History

Susan Helper, PhD
AT&T Professor of Regional Economic Development, Department of Economics, Weatherhead School of Management
Teacher Licensure Program

Teacher Licensure programs are offered in Art Education and Music Education at the undergraduate (Bachelor of Science) and graduate (Master of Arts) levels. A unique feature of these programs is that each is offered in cooperation with a University Circle Institution—the Cleveland Institute of Art and the Cleveland Institute of Music.

In addition, several departments within the College of Arts and Sciences (Biology, Chemistry, Classics, English, History, Mathematics, and Physics) participate in the Case Western Reserve University/John Carroll University Collaborative Program to prepare students for state licensure. Bachelor of Arts degrees in these departments are awarded by Case Western Reserve University, and licensure is recommended by John Carroll University.

Teacher Licensure programs at Case Western Reserve University are accredited by the Teacher Education Accreditation Council (TEAC) and the Ohio Department of Education, and lead to teaching licenses recognized by more than 40 states. In addition, the National Association of Schools of Music (NASM) accredits the music education program.

Undergraduate Programs

Ohio Teacher Education Programs

Teacher Education may be chosen as a second major by students whose primary major is in a field in which Case Western Reserve has teacher licensure agreements with John Carroll University and programs approved by the Ohio Department of Education. The teacher education major requires 36 credit hours in professional education, 12-18 hours taken at Case Western Reserve and 18-24 hours taken at John Carroll University.

Adolescence/Young Adult teacher licensure is available in integrated language arts, integrated social studies, mathematics, integrated life sciences, chemistry, and physics. In addition, the program offers dual-field licensure in physical science, which includes both chemistry and physics, to students pursuing the BA in either discipline. For information concerning specific subject area requirements, go to the departmental descriptions for Biology (p. 184), Chemistry (p. 209), English (p. 239), History (p. 256), Mathematics (p. 275), and Physics (p. 330).

The education course requirements are as follows:

1. Courses at Case Western Reserve University (18 hours):

Students must maintain a 3.0 GPA in all professional education courses, a 2.7 GPA in the specific content area, and a cumulative overall GPA of 2.5 to be recommended for Ohio teacher licensure.

As noted above, Case Western Reserve University also offers teacher licensure programs in Art Education and Music Education at the undergraduate (Bachelor of Science) and graduate (Master of Arts) levels. For further information on Art Education, see the Department of Art History and Art description in this bulletin (p. 160); for Music Education, see the Department of Music description (p. 307).

EDJC Courses

EDJC 255. Literacy Across the Curriculum. 3 Units.
Literacy development examined through psychological, socio-cultural and historical perspectives. Examines reading as an interactive, problem-solving process. Strategies that foster critical thinking, active engagement and social interaction in the teaching of reading and writing across the curriculum. Includes field experience. Field assignments related to licensure and content area. Recommended preparation: EDUC 301, EDUC 304, and EDUC 338.

EDJC 308. Modern Languages; Teaching Languages. 3 Units.
In this course, students will acquire a basic understanding of how languages are constructed, learn about the theoretical underpinnings of teaching foreign languages, practice and evaluate the application of these theories, and reflect on their own development as a language learner and future educator. Prereq: EDUC 301, and EDUC 304, and EDUC 386.
EDJC 337. Adolescent Education Special Methods. 3 Units.
For Adolescent and Multi-Age licensure program students. General methods and specific content area methods for planning, implementing and integrating curriculum, evaluating pupil achievement, and teaching to individual differences. Aligned with Ohio Department of Education’s Competency-Based Models, Praxis 2, INTASC, and learned Society Guidelines. Emphasis given to strategies related to effective teaching and learning in each licensure content area. Additional emphasis placed on nurturing a risk-taking classroom community responsive both to high standards of performance and to students with diverse backgrounds, abilities, and learning styles. Prereq: EDJC 186 and EDUC 301 and EDUC 304 and EDUC 338.

EDJC 395. Independent Study in Education. 1 - 3 Unit.
Independent Study in Education is offered for students with special interests and/or commitments that are not fully addressed in other education courses and who wish to work independently.

EDJC 405C. Adolescent Education Seminar. 3 Units.

EDJC 405D. Multi-Age Education Seminar. 3 Units.
Continued study of all grades’ development, learner achievement, and assessment. Integrates program learning with student teaching experience. Development of the professional portfolio and preparation for job interviewing. Coreq: EDJC 444D and admission to the professional semester.

EDJC 427. Adolescent Education Special Topics. 3 Units.
Practical application of issues to pre-student teaching field setting. Taken by adolescent licensure program students the semester preceding student teaching. Issues of conflict negotiation, social justice, curriculum development and school reform as they relate to the secondary school setting. Prereq: Acceptance into pre-student teaching.

EDJC 444C. Adolescent Student Teaching. 9 Units.
A full-day, full-semester teaching in an accredited secondary school under the direction of a classroom teacher qualified in the content area and a university supervisor. Supervision includes personnel with advanced training in the relevant content area. Lab fee required. Coreq: EDJC 405C and admission to the professional semester.

EDJC 444D. Multi-Age Student Teaching. 9 Units.
A full-day, full-semester experience of teaching in an accredited secondary school under the direction of a classroom teacher qualified in the content area and a university supervisor. Supervision includes personnel with advanced training in the relevant content areas. Lab fee required. Coreq: EDJC 405D and admission to the professional semester.

EDUC Courses

EDUC 255. Literacy Across the Content Areas. 3 Units.
Literacy Across the Content Areas is a three semester hour course on the teaching of reading and writing in the content areas that include instruction in organizing instruction (creating effective units and lessons), use of protocols for oral language development (including strategies for English as Second Language learners), and strategies for word skill development, reading comprehension and assessment for instructional purposes. Students will also explore new literacies that include the ability to learn, comprehend, and interact with technology in a meaningful way. Integral to the course is an eight hour field experience in a local high school. Federal legislation pertaining to the education of children with disabilities as well as Ohio Graduation Tests in content areas requirements are included.

EDUC 301. Introduction to Education. 3 Units.
The historical, sociological, and philosophical role of education in a diverse society. Contemporary practices and issues are introduced, researched, and debated. Issues of professional development. Application of research to instructional methodologies. Clinical/Field experiences required. Research project required for graduate students. Offered as EDUC 301 and EDUC 401.

EDUC 304. Educational Psychology. 3 Units.

EDUC 325. Seminar in Teaching I. 2 Units.
EDUC 325--Seminar in Teaching I is one of two courses designed to be an introduction to the profession of teaching in the high school setting, especially math and science teachers. The course will consist of weekly guided observations in a local high school classroom under the mentorship of a master teacher, and monthly discussions with the course instructor, the master teacher, a CWRU content-area faculty member, and other "reflective triads" enrolled in the course. Students must enroll in both EDUC 325 and EDUC 326, but may take them in either order. Prereq: EDUC 301.

EDUC 326. Seminar in Teaching II. 2 Units.
EDUC 326--Seminar in Teaching II is one of two courses designed to be an introduction to the profession of teaching in the high school setting, especially math and science teachers. The course will consist of weekly guided observations in a local high school classroom under the mentorship of a master teacher, and monthly discussions with the course instructor, the master teacher, a CWRU content-area faculty member, and other "reflective triads" enrolled in the course. Students must enroll in both EDUC 325 and EDUC 326, but may take them in either order. Prereq: EDUC 301.
EDUC 338. Seminar and Practicum in Adolescents. 3 Units.
Supervised field placement and attendance in early childhood, child, and adolescent settings including preschools, schools, hospitals, and neighborhood centers. This class is used to fulfill requirements by the Ohio Department of Education teacher licensure program. Recommended preparation: PSCL 101, EDUC 301, EDUC 304, and permission of program director. Offered as EDUC 338, PSCL 338, and SOCI 338.

EDUC 386. Introduction to Instructional Technology. 3 Units.
This course is designed to address the basic technology skills, which are required of all teachers. The course uses both concept and project based learning activities. Each of the projects is centered on a set of activities designed to allow students to demonstrate a particular subset of competencies. The course will not always provide step by step directions for completing projects; instead it will promote the use of existing information and help resources to allow students to develop the ability to learn new technology independently. Each of the projects will also contain the opportunity for the student to reflect on how technology impacts their teaching. Course projects are designed to assess both a basic comfort level with learning and using technology tools and the student’s ability to apply technology to improve teaching and learning. The nature of the course is a mix of technology and should engage teachers in thinking about ways to improve their teaching. Offered as EDUC 386 and EDUC 486.

EDUC 395. Independent Study in Education. 1 - 3 Unit.
Independent Study in Education is offered for students with special interests and/or commitments that are not fully addressed in other education courses and who wish to work independently. Offered as EDUC 395 and EDUC 495.

EDUC 401. Introduction to Education. 3 Units.
The historical, sociological, and philosophical role of education in a diverse society. Contemporary practices and issues are introduced, researched, and debated. Issues of professional development. Application of research to instructional methodologies. Clinical/Field experiences required. Research project required for graduate students. Offered as EDUC 301 and EDUC 401.

EDUC 404. Educational Psychology. 3 Units.

EDUC 486. Introduction to Instructional Technology. 3 Units.
This course is designed to address the basic technology skills, which are required of all teachers. The course uses both concept and project based learning activities. Each of the projects is centered on a set of activities designed to allow students to demonstrate a particular subset of competencies. The course will not always provide step by step directions for completing projects; instead it will promote the use of existing information and help resources to allow students to develop the ability to learn new technology independently. Each of the projects will also contain the opportunity for the student to reflect on how technology impacts their teaching. Course projects are designed to assess both a basic comfort level with learning and using technology tools and the student’s ability to apply technology to improve teaching and learning. The nature of the course is a mix of technology and should engage teachers in thinking about ways to improve their teaching. Offered as EDUC 386 and EDUC 486.

EDUC 495. Independent Study in Education. 1 - 3 Unit.
Independent Study in Education is offered for students with special interests and/or commitments that are not fully addressed in other education courses and who wish to work independently. Offered as EDUC 395 and EDUC 495.
Washington Study Program

The Washington Study Program provides students with the opportunity to complete a full-time, research-intensive internship in Washington, D.C. By participating in a semester-length program during the fall or spring (WASH 2A Washington Center Internship), students earn 9 credit hours; for a summer internship (WASH 2D Washington Center Summer Internship), they earn 3 credit hours. In addition, students earn 3 credit hours by developing a portfolio based on their internship experiences (WASH 2C Washington Center - Portfolio). The credits earned can be counted as general electives or applied to a student’s major or minor, with the prior consent of the individual department(s). Finally, as part of the Washington Study Program, students participate in a seminar and attend a weekly lecture/discussion group (WASH 2B Washington Center - Politics and Public Policy Course).

To be eligible for the program, a student is expected to be a junior or senior and have at least a 3.0 GPA. The program director, the student’s major advisor, and the appropriate dean must approve each application. Students must ensure that their participation will not prevent them from meeting on-campus residency or other university requirements.
Women's and Gender Studies Program

The goal of the Women's and Gender Studies Program is to educate students in interdisciplinary approaches to feminist theories of women, gender, culture, and society. Students are exposed to a variety of forms of critical thinking in relation to:

1. the social construction of knowledge and philosophy
2. approaches to science and medicine informed by "feminist empiricism" and "feminist standpoint" theories
3. historicized and cross-cultural accounts of gender and gender inequality
4. literary criticism
5. contemporary theories of art, performance, language, jurisprudence, social science, and religion in the context of women's experience
6. studies of the body as a focal point for theorizing relations among the arts and sciences

Women's and Gender Studies is an interdisciplinary program that prepares students to think critically and creatively within a framework employing gender as a central category of analysis. The program is set up to test and challenge the technologies and limitations of gender roles in a multitude of cultural and historical settings. It is designed to familiarize students with the analytical and hermeneutic tools of research and interpretation, and to create awareness of the ethical, political, and aesthetic dimensions of gender in history and culture.

Undergraduate Program

Major

The Women’s and Gender Studies Program offers a major leading to the Bachelor of Arts degree. The program offers a sound course of study with a disciplinary concentration grounding the program’s interdisciplinary objectives. Up to six credit hours in required or elective courses for another major may also be applied to the Women’s and Gender Studies major. In the two required courses, students become fluent in current tools of research and interpretation employed in women’s and gender studies. These two "core" courses are 201 and one from the list below:

<table>
<thead>
<tr>
<th>Course Code</th>

</tr>
</tbody>
</table>

Elective courses: WGST majors must distribute their courses among the Arts, Humanities, and Social Sciences. They must take at least one course in each of these three areas. In two of the areas, they must take two courses. Consult one of the program’s academic representatives with questions about the curriculum. Majors and minors in WGST may also conduct an Independent Study (WGST 399) and/or a SAGES Capstone (WGST 396) with program faculty.

Total Units: 27

Minor

Fulfillment of the minor requires completion of 18 credit hours according to the following course distribution:

<table>
<thead>
<tr>
<th>Course Code</th>

Total Units: 18

To help ensure a comprehensive course of study in a particular area of interest, each student’s combination of courses and the structure of an independent study must be approved by one of the program’s academic representatives.

Program Faculty

Athena Vrettos, PhD
Associate Professor, Department of English; Academic Representative, Women's and Gender Studies Program

Cheryl Toman, PhD
Associate Professor, Department of Modern Languages and Literatures; Academic Representative, Women's and Gender Studies Program

Eileen Anderson-Fye, EdD
Assistant Professor, Department of Anthropology

Karen Beckwith, PhD
Flora Stone Mather Professor, Department of Political Science

Diana Bilimoria, PhD
Professor, Department of Organizational Behavior, Weatherhead School of Management

Joy Bostic, PhD
Assistant Professor, Department of Religious Studies

Susan S. Case, PhD
Associate Professor, Department of Organizational Behavior, Weatherhead School of Management

M. Gabriela Copertari, PhD
Associate Professor, Department of Modern Languages and Literatures

Elina Gertsman, PhD
Assistant Professor, Department of Art History and Art

Mary Grimm, MA
Associate Professor, Department of English

Susan W. Hinze, PhD
Associate Professor, Department of Sociology

Margaretmary Daley, PhD
Associate Professor, Department of Modern Languages and Literatures

Gilbert Doho, PhD
Associate Professor, Department of Modern Languages and Literatures

Kimberly K. Emmons, PhD
Associate Professor, Department of English

Christopher Flint, PhD
Associate Professor, Department of English

T. Kenny Fountain, PhD
Assistant Professor, Department of English

Atwood D. Gaines, PhD
Professor, Department of Anthropology

Anne Helmreich, PhD
Associate Professor, Department of Art History and Art

Laura E. Hengehold, PhD
Associate Professor, Department of Philosophy
Jill Korbin, PhD  
Professor, Department of Anthropology

Ellen G. Landau, PhD  
Andrew W. Mellon Professor of the Humanities, Department of Art History and Art

Marie Lathers, PhD  
Elizabeth M. and William C. Treuhaft Professor of Humanities, Department of Modern Languages and Literatures

Miriam Levin, PhD  
Professor, Department of History

Michelle McGowan, PhD  
Assistant Professor, Department of Bioethics, School of Medicine

Colin McLarty, PhD  
Truman P. Handy Professor of Philosophy; Department of Philosophy

Thrity Umrigar, PhD  
Professor, Department of English

Rhonda Y. Williams, PhD  
Associate Professor, Department of History

Martha Woodmansee, PhD  
Professor, Department of English

Courses

WGST 201. Introduction to Gender Studies. 3 Units.  
This course introduces women and men students to the methods and concepts of gender studies, women’s studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women’s and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WGST 207. Women and Religion. 3 Units.  
Examination of feminist perspectives on religion, such as the status of women in Western and non-Western religions, the nature and purpose of religious beliefs and practices from the standpoints of religious and non-religious feminists, the current status of feminist philosophies of religion, and the efforts of feminists to transform traditional religions and to create new religions. Offered as RLGN 207 and WGST 207.

WGST 222. Gender in U.S. Society. 3 Units.  
The focus of this course is on unique and convergent experiences of men and women in U.S. society. Different social expectations and opportunities encountered by men and women in the context of marriage and the family, work settings, and in informal organizations will be addressed. Legislation and social policy dealing with gender issues will be considered. Offered as SOCI 222 and WGST 222.

WGST 228. Sociology of Sexuality. 3 Units.  
This course analyzes the issues of sex and sexuality from a sociological point of view. It is centered on the notion that what we consider to be ‘normal’ or ‘natural’ about sex and sexuality is, in reality, socially constructed. One’s viewpoint on the issues surrounding sexuality are influenced by the social context in which they live, as opposed to the purely biological viewpoint that presupposes some sense of normalcy or naturalness regarding sexual relations. A range of topics will be covered, including readings that discuss the variations of sexuality and the notions of sexual “deviance” in order to explore the cultural and societal variation that exists along the lines of gender, race, ethnicity, sexual orientation, age and disability. Offered as SOCI 228 and WGST 228.

WGST 268. Women in the Bible: Ethnographic Approaches to Rite and Ritual, Story, Song, and Art. 3 Units.  
Examination of women in Jewish and Christian Biblical texts, along with their Jewish, Christian (and occasionally Muslim) interpretations. Discussion of how these traditions have shaped images of, and attitudes toward, women in western civilization. Offered as RLGN 268, WGST 268, and JDST 268.

WGST 301. Women, Creativity and the Arts. 3 Units.  
WGST 301/ETHS 301 is one of two core courses for the program in Women’s and Gender Studies and an elective course for the ETHS minor. All WGST majors are to take one course concentrating on the subject of women and the arts specifically. This course also fulfills the cultural diversity requirement. In this course, students will focus on two areas of study: a) women and creativity and b) women and activism through the arts. A history of women in the arts will be covered, but the general focus of the course is on women in the arts since the 1960s in particular, and on art that reflects or provokes social change. “Arts” are defined in the broadest of sense. That is, students will study women’s production in painting, photography, graphic design, sculpture, dance, film, music, and theater. A variety of learning techniques will be applied: Students will look at feminist theories on art, be introduced to the notion of cyberfeminism, study actual artwork and its reproductions, understand the role of are in feminist activism and how women "create” differently from men, and work closely with several feminist artists/ activists through various programs on campus and the community in order to facilitate the planning and carrying out of artistic production. Subsequently, students will interact with children in Cleveland schools in conjunction with these artists giving master classes, and be exposed to art exhibits abroad through videoconferencing with the Algerian Cultural Center in Paris and locally through University Circle Institutions. Offered as WGST 301 and ETHS 301.
WGST 312. Women in the Ancient World. 3 Units.
The course offers a chronological survey of women's lives in Greece, Hellenistic Egypt, and Rome. It focuses on primary sources as well as scholarly interpretations of the ancient record with a view to defining the construction of gender and sexuality according to the Greco-Roman model. Additionally, the course aims to demonstrate how various methodological approaches have yielded significant insights into our own perception of sex and gender. Specific topics include matriarchy and patriarchy; the antagonism between male and female in myth; the legal, social, economic, and political status of women; the ancient family; women's role in religion and cult; ancient theories of medicine regarding women; pederasty and homosexuality. Offered as CLSC 312 and WGST 312.

WGST 315A. International Bioethics Policy and Practice: Women's Health in the Netherlands. 3 Units.
This 3-credit course allows students to familiarize themselves with social policies and practices related to women's health in the United States and the Netherlands. Issues covered in the course include birth control and family planning, abortion, prenatal testing, childbirth, health care disparities, cosmetic surgery, prostitution and trafficking in women. This course also addresses the US and Dutch national policies regarding the public provision of health care for women. The course places an emphasis on the ways in which social norms shape policies over time, which political actors are involved in shaping women's health policy, and the balance between women's health as a matter of the public good or individual responsibility. This course substantively explores gender-specific cultural values and practices in relation to women's health in the United States and the Netherlands and will help students develop the analytical skills necessary for evaluating social policy and ethical issues related to women’s health. Offered as BETH 315A and BETH 415A.

WGST 318. History of Black Women in the U.S.. 3 Units.
Chronologically arranged around specific issues in black women's history organizations, participation in community and political movements, labor experiences, and expressive culture. The course will use a variety of materials, including autobiography, literature, music, and film. Offered as ETHS 318, HSTY 318, and WGST 318.

WGST 325. Philosophy of Feminism. 3 Units.
Dimensions of gender difference. Definition of feminism. Critical examination of feminist critiques of culture, including especially politics, ideology, epistemology, ethics, and psychology. Readings from traditional and contemporary sources. Offered as PHIL 325 and PHIL 425 and WGST 325.

WGST 326. Gender, Inequality, and Globalization. 3 Units.
Using a sociological perspective, this course examines how major societal institutions, including the economy, polity, medicine, religion, education and family, are structured to reproduce gendered inequalities across the globe. Attention is given to the intersections of race/ethnicity, social class, gender and sexuality in social systems of power and privilege. Of critical importance is how gender figures in the relationship between Economic North and Economic South countries. We will elucidate how gender norms vary by culture and exert profound influence on the daily, lived experiences of women and men. The course will be informed by recent scholarship on feminism, women’s movements, and globalization. Offered as SOCI 326 and WGST 326. Prereq: SOCI 101 or permission of program director.

WGST 335. Women in Developing Countries. 3 Units.
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondicherry), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper. Offered as ETHS 335, FRCH 335, WLIT 335, WGST 335, FRCH 435 and WLIT 435.

WGST 339. Black Women and Religion. 3 Units.
This course is an exploration of the multidimensional religious experiences of black women in the United States. These experiences will be examined within particular historical periods and across diverse social and cultural contexts. Course topics and themes include black women and slave religion; spirituality and folk beliefs, religion and feminist/womanist discourse, perspectives on institutional roles, religion and activism, and spirituality and the arts. Offered as: ETHS 339 and RLGN 338 and WGST 339.

WGST 342. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in the literary production of Latin American women writers, particularly from the 1920s to the present. Close attention paid to the dominant themes of love and dependency; imagination as evasion; alienation and rebellion; sexuality and power; the search for identity and the self-preservation of subjectivity. Readings include prose, poetry, and dramatic texts of female Latin American writers contributing to the emerging of feminist ideologies and the mapping of feminist identities. Offered as SPAN 342, SPAN 442, ETHS 342, WGST 342, WLIT 342, and WLIT 442.

WGST 343. Language and Gender. 3 Units.
This course introduces students to the study of language and gender by exploring historical and theoretical trends, methods, and research findings on the ways gender, sexuality, language, and discourse interact with and even shape each other. Topics may include "grammatical" versus "biological" gender, feminine écriture, the women and language debate, speech acts and queer performativity, nonsexist language policy, discourses of gender and sexuality, feminist stylistics, and LGBT sociolinguistics. Offered as: ENGL 343, ENGL 443, and WGST 343. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.
WGST 346. Women and Politics. 3 Units.
Women and Politics involves a critical examination of the impact of gender on the forms and distributions of power and politics, with primary reference to the experience of women in the United States. Major concerns of the course include what we mean by "sex," "gender," and "politics"; the relationship between women and the state; how women organize collectively to influence state policies; and how the state facilitates and constrains women's access to and exercise of political power. The course is organized around four foci central to the study of women and politics. The first section of the course focuses on what we mean by "women," "gender," and "politics." In this section, we will consider how these concepts intersect and the ways in which each may be used to deepen our understanding of the workings of governments and political systems, and of women's relative political powerlessness. The second section of the course employs these concepts to understand the (re)emergence of the US feminist movement, its meanings, practices, and goals, and its transformation across US political history. In the third section, we turn to conventional electoral politics, focusing on women's candidacies, their campaigns, and women's voting behavior. In the final section of the course, we consider those general factors that might provide for increased gender equality and improved life status for women, in global, comparative perspective. Offered as POSC 346 and POSC 446 and WGST 346.

WGST 352. African Feminisms. 3 Units.
This course traces the history of African feminism from its origins within traditions through to a more contemporary theoretical analysis of gender, marriage, and motherhood seen from a Afrocentric perspective. Approaches studied are those that pertain to anthropology, history, literature, sociology, and culture. African feminist theory of scholars such as Filomina Steady, Cheikh Anta Diop, Buchi Emecheta, Iyi Amadiume, Oyeronko Oyewumi, and Calixthe Beyala will be studied and there will be some comparative analysis of Western theories to show how African feminisms are clearly distinct. Theories on these feminisms will be presented, and in the process, students will look at cases of women in Cameroon, Nigeria, Ghana, Kenya, and Senegal. It is commonly believed that African women were defined for a long time according to constructs of Western anthropology. This course will thus look at social institutions such as woman-to-woman marriage, matriarchy, and various women's rituals in order to identify African constructs of gender, family, kinship, marriage, and motherhood. Offered as ETHS 352 and WGST 352.

WGST 353. Women in American History I. 3 Units.
The images and realities of women's social, political, and economic lives in early America. Uses primary documents and biographers to observe individuals and groups of women in relation to legal, religious, and social restrictions. Offered as HSTY 353, WGST 353, and HSTY 453.

WGST 354. Women in American History II. 3 Units.
With HSTY 353, forms a two-semester introduction to women's studies. The politics of suffrage and the modern woman's efforts to balance marriage, motherhood, and career. (HSTY 353 not a prerequisite.) Offered as HSTY 354, WGST 354, and HSTY 454.

WGST 363. Gender in America. 3 Units.
Gender is the term used to describe the social characteristics attributed to the different sexes by the larger contextual society. This social and cultural history seminar allows students to explore various constructions of masculine and feminine identity in America between the late 18th century and the end of the 20th century. This is a multicultural course using a mixture of historical texts, gender theory, and personal biography to explore changing notions of gender (and with it sexuality, race, and religion) over time in the United States. Offered as HSTY 363, HSTY 463 and WGST 363.

WGST 365. Gender and Sex Differences: Cross-cultural Perspective. 3 Units.
Gender roles and sex differences throughout the life cycle considered from a cross-cultural perspective. Major approaches to explaining sex roles discussed in light of information from both Western and non-Western cultures. Offered as ANTH 365 and ANTH 465 and WGST 365.

WGST 370. Women in Organizations. 3 Units.
The purpose of this course is to explore the unique challenges of life for women in their twenties as they increase understanding of the issues surrounding women, ambition, and success in a variety of organizations and professions. At this stage of life there are many choices women can make regarding careers and relationships. This course will broaden understanding of the context of work in women's lives and help women and men understand the leadership and managerial issues that will surround them in organizations. Offering more complex understandings of issues women face in the workplace related to race and gender, the course will help increase self knowledge about personal identity and direction, values, and abilities including the enhancement of leadership capabilities. It will also facilitate career development, improving the ability of individual women to be choiceful about the quality of integration of both a personal and professional life. Offered as ORBH 370 and WGST 370.

WGST 372. Work and Family: U.S. and Abroad. 3 Units.
Covers the impact on human lives of the interface between work and family; the different ways gender structures the experience of work and family depending upon racial and ethnic background, social class, age, and partner preference; the impact of historical context on work-family experiences; work-family policies in the United States and other countries. Offered as SOCI 372, WGST 372, and SOCI 472.

WGST 373. Advanced Topics in American Women's History. 3 Units.
This advanced seminar is designed to allow students to investigate aspects of American women's history that are not deeply explored in other courses. The two central purposes of the course are to move students forward in their study of American women's history and to provide advanced study for graduate students and other students interested in women-focused topics. The topic is subject to change, but may be any of the following or something similar: women and medicine, images of women in popular culture, growing up female, women and political movements, women and war, etc. Recommended preparation: HSTY 353/453 or HSTY 354/454. Offered as HSTY 373, WGST 373, and HSTY 473.

WGST 383. Gender Issues in Feminist Art: The 20th/21st Century. 3 Units.
An in-depth thematic approach to issues affecting works of art by and about women. Focus on the late 20th century. Emphasis on a specifically modern use of feminine myths, subjects and modes of production, and feminist criticism. Offered as ARTH 383, WGST 383 and ARTH 483.
WGST 396. SAGES Capstone. 3 Units.
Capstone experience in the fields of Women’s and Gender Studies for an in-depth, independent project of particular interest to the student. Students are strongly encouraged to work with a WGST program faculty member, but some projects may be supervised by faculty in other areas or by other qualified professionals. All capstones require a WGST faculty advisor’s approval of the proposal prior to registration. Open to juniors and seniors majoring in Women’s and Gender Studies. Prereq: WGST 201; Junior or Senior standing with major/minor in WGST.

WGST 399. Independent Study. 1 - 3 Unit.
Independent research project in the fields of Women’s and Gender Studies. Project proposals must be approved by a WGST faculty advisor. Students are strongly encouraged to work with a WGST program faculty member, but some projects may be supervised by faculty in other areas for by other qualified professionals with a WGST faculty advisor’s approval. Credit varies with the scope and depth of the project. Prereq: WGST 201.
World Literature Program

World literature is a discipline that draws together literatures and cultures of a wide variety of countries and regions, including Western and non-Western ones. It emphasizes literatures and cultures of the past (ancient Greece and Rome, for example) as well as the present. It understands "minority" or "third world" literatures as being just as worthy of study as European literatures, and it recognizes the importance of the "classics" of both the West and the East.

The World Literature Program offers comparative courses as well as courses on individual authors, periods, and literatures. The major in world literature requires study in a language other than English, thus emphasizing that literature and language are intimately related. Students learn to examine literature from a truly multi-cultural and multi-lingual standpoint, and they become conversant in the major schools of literary criticism and theory.

In addition, students in the program take courses that investigate visual arts, film, and music. These courses reflect a belief that literature and the arts must be in permanent dialogue, and they provide students with an interdisciplinary perspective in which cultural history and aesthetic history necessarily coexist.

The World Literature Program is associated with several departments in the College of Arts and Sciences, including classics, cognitive science, modern languages and literatures, philosophy, history, and religious studies.

Apart from the major and minor undergraduate specializations, the World Literature Program recently created an interdisciplinary master’s program. See the “Graduate” page for details.

Undergraduate Programs

Major

The World Literature Program offers a major leading to the Bachelor of Arts degree. Requirements for the major are as follows:

Required Courses:

- WLIT 211 World Literature I 3
- WLIT 212 World Literature II 3
- One of the following: 3
  - ENGL/WLIT 290 Masterpieces of Continental Fiction
  - ENGL/WLIT 291 Masterpieces of Modern Fiction
- One of the following: 3
  - WLIT/CLSC 203 Gods and Heroes in Greek Literature
  - WLIT/CLSC 204 Heroes and Hustlers in Latin Literature
  - ENGL/WLIT 387 Literary and Critical Theory
- Two courses in literature at the 300 level in a language other than English 6
- WLIT 390 Topics in World Literature 3
- Twelve hours of electives 12

Total Units 33

All literature courses at the 200 and 300 levels offered by the Departments of Modern Languages and Literatures, Classics, and English are approved as world literature courses.

Undergraduate Honors

The honors program in world literature is for especially talented and dedicated majors. Requirements for honors are: 1) a GPA of at least 3.5 in the major, and 2) an honors thesis completed over the course of two semesters in the senior year, devoted to the investigation of a literary or cultural topic. Honors students enroll in WLIT 397 Honors Thesis I and WLIT 398 Honors Thesis II and write their thesis under the supervision of a WLIT faculty advisor. The thesis must be approved by a second faculty member and receive a grade of B or better. Students who qualify receive their degrees "with Honors in World Literature." A registration/proposal form for students electing honors must be completed by the end of the second week of classes in each of the two semesters.

Minor

The minor in world literature requires:

Required Courses:

- WLIT 211 World Literature I 3
- WLIT 212 World Literature II 3
- Nine credits of electives chosen in consultation with a program advisor 9

Total Units 15

BA in Classics: Classical Tradition Concentration

Students interested in world literature may also be interested in the new Classical Tradition Concentration, one of three tracks for a BA in Classics. For course information, please visit the Department of Classics page (p. 216).

Graduate Program

The interdisciplinary MA program in world literature offers tuition waivers and teaching assistant stipends to qualified students. Created in 2009, the program has ties with many other departments in the College of Arts and Sciences, including classics, modern languages and literatures, cognitive science, history, and philosophy. Interested students are invited to consult the program director.

Program Director

Florin Berindeanu, PhD
Instructor, Department of Classics; Director, World Literature Program

Steering Committee

Antonio Candau, PhD
Associate Professor, Department of Modern Languages and Literatures
Sarah Gridley, MFA
Assistant Professor, Department of English
Takao Hagiwara, PhD
Associate Professor, Department of Modern Languages and Literatures
William Siebenschuh, PhD
Professor, Department of English
Timothy Wutrich, PhD
Visiting Assistant Professor, Department of Classics

Courses

WLIT 203. Gods and Heroes in Greek Literature. 3 Units.
This course examines major works of Greek literature and sets them in their historical and cultural context. Constant themes are war, wandering, tyranny, freedom, community, family, and the role of men and women within the household and the ancient city-state. Parallels with modern life and politics will be explored. Lectures and discussions. Offered as CLSC 203 and WLIT 203.
WLIT 204. Heroes and Hustlers in Latin Literature. 3 Units.
This course constitutes the second half of a sequence on Classical literature. Its main themes are heroism vs. self-promotion, love vs. lust, and the struggle between democracy and tyranny. These topics are traced in a variety of literary genres from the period of the Roman republic well into the empire. Parallels with modern life and politics will be drawn. Offered as CLSC 204 and WLIT 204.

WLIT 211. World Literature I. 3 Units.
Survey of literature from antiquity to 1600. May include Western and non-Western texts by Homer, Vergil, Ovid, St. Augustine, Dante, Boccaccio, Rabelais, Cervantes, Sei Shonagon, Basho, and the Baghavad Gita.

WLIT 212. World Literature II. 3 Units.
Survey of literature from 1600 to present. May include Western and non-Western texts by Swift, Voltaire, Rousseau, Tolstoi, Baudelaire, Austen, Mann, Kafka, Lispector, Marmon Silko, Soyinka.

WLIT 220. Art & Literature in the Classical Tradition, Pt 1: Renaissance and Baroque (14th to 17th centuries). 3 Units.
Through lectures, varied assignments, and visits to the Cleveland Museum of Art this course will introduce students to the major issues in the study of early modern art and literatures. The emphasis will inevitably be on Italy, as the place where the physical remains of ancient Rome confronted and inspired such remarkable masters as Michelangelo (as poet and artist), Palladio, Gian Lorenzo Bernini, Nicholas Poussin (Bernini and Poussin are represented in the CMAI), though some artists -- notably Leonardo -- resisted the lure of the classical past. From Italy new ideas spread to the rest of Europe and beyond. We will not have much time to study Shakespeare in the course, but we will not be able to ignore the greatest author of the Renaissance period. Like Shakespeare, we will move between the court and the city, between scenes of often-endangered order and scenes of sometimes-productive disorder, in which classical models provided a key cultural and even psychological resource in challenging times. Recommended preparation: CLSC 112. Offered as CLSC 220 and WLIT 220.

WLIT 222. Classical Tradition 2: Birth of Archaeology. 3 Units.
The course will focus on the history of diverse methods for studying societies remote in time and space; i.e., on the formation of the distinct disciplines of archaeology and anthropology, and the interest in the origins of human society and cultural practices. The birth of archaeology occurred in the context of the profound transformation of European cultural life in the eighteenth century, the era of the Enlightenment. On the basis of a range of cultural productions (literary and historical texts, objects of luxury and use, etc.), we will study visual and literary works and consider the relationship between different modes of artistic production and expression, as well as the marketing and display of prestigious objects, whether ancient or modern. We will consider the eighteenth-century model of experiential education, the "Grand Tour," and the formation of private and public collections, as well as the emergence of the museum as institution. Finally, we will also consider important recent work on the relationship between the production of luxury commodities (sugar, coffee, tea, etc.) through the plantation economy in the Americas and beyond and the development of attitudes and ideas in Europe. Offered as CLSC 222 and WLIT 222.

WLIT 224. Sword and Sandal: The Classics in Film. 3 Units.
Gladiator. Alexander. The 300. Contemporary society's continuing fascination with putting the ancient world on the big screen is undeniable; and yet the causes underlying this phenomenon are not quite so readily apparent. In this course we will watch and discuss a number of movies about the ancient world, running the gamut from Hollywood classics such as Ben-Hur and Spartacus to more recent treatments (the aforementioned 300 and Gladiator, for starters), and from the mainstream and conventional (Clash of the Titans, Disney's Hercules) to the far-out and avant-garde (Fellini's Satyricon, anyone?). As we do so we'll learn quite a bit about the art and economics of film, on one hand, and the ancient world, on the other. And yet what we'll keep coming back to are the big questions: what does our fascination with the ancient Mediterranean tell us about ourselves as a society? Why do such movies get made, and what kinds of agendas do they serve? To what extent can we recapture the past accurately? And if we can't, are we doomed to just endlessly projecting our own concerns and desires onto a screen, and dressing them in togas? No knowledge of ancient languages is required for this course. Offered as CLSC 224 and WLIT 224.

WLIT 225. Japanese Popular Culture. 3 Units.
This course highlights salient aspects of modern Japanese popular culture as expressed in animation, comics and literature. The works examined include films by Hayao Miyazaki, writings by Kenji Miyaazawa, Haruki Murakami and Banana Yoshimoto, among others. The course introduces students to essential aspects of modern Japanese popular culture and sensibility. Offered as JAPN 225 and WLIT 225.

WLIT 228. Development of Theater: Beginnings to English Renaissance. 3 Units.
THTR 228/World Literature 228 explores the foundations of theater in Western civilization, beginning with Greece and then charting and analyzing the developments in playwriting, design, acting, and theater architecture. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater I explores developments from Aeschylus to the English Renaissance. Offered as THTR 228 and WLIT 228. Prereq: Sophomore standing.

WLIT 229. Development of Theater: Renaissance to Romanticism. 3 Units.
THTR 229 explores the many developments in playwriting, design, acting, and theater architecture across the world. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater II not only explores the development of theatrical conventions in Spain, England, Italy, France and other European countries that lead to the creation of modern drama, but the course also offers an in-depth look at the history and conventions of theater in India, Korea, China, and Japan. Offered as THTR 229 and WLIT 229. Prereq: Sophomore standing.

WLIT 235. Asian Cinema and Drama. 3 Units.
Introduction to major Asian film directors and major traditional theatrical schools of India, Java/Bali, China, and Japan. Focus on the influence of traditional dramatic forms on contemporary film directors. Development of skills in cross-cultural analysis and comparative aesthetics. Offered as ASIA 235 and WLIT 235.
WLIT 245. Classical Japanese Literature in Translation. 3 Units.
Readings, in English translation, of classical Japanese poetry, essays, narratives, and drama to illustrate essential aspects of Japanese culture and sensibility before the Meiji Restoration (1868). Lectures explore the sociohistorical contexts and the character of major literary genres; discussions focus on interpreting the central images of human value within each period. Japanese sensibilities compared to and contrasted with those of Western and other cultures. Offered as JAPN 245 and WLIT 245.

WLIT 255. Modern Japanese Literature in Translation. 3 Units.
Focus on the major genres of modern Japanese literature, including poetry, short story, and novel (shōsetsu). No knowledge of Japanese language or history is assumed. Lectures, readings, and discussions are in English. Films and slides complement course readings. Offered as JAPN 255 and WLIT 255.

WLIT 285. The Francophone World. 3 Units.
A survey of the imaginative literatures in a variety of genres from the Spanish-speaking world, including texts authored by Hispanics living in the United States. The selections will help students gain a greater understanding and appreciation of the impact and adaptation of Spanish language and culture among widely diverse populations of the world over the past centuries. Counts towards Spanish major as related course. No knowledge of Spanish required. Offered as SPAN 285 and WLIT 285.

WLIT 290. Masterpieces of Continental Fiction. 3 Units.
Major works of fiction from the 19th century and earlier. Offered as ENGL 290 and WLIT 290.

WLIT 291. Masterpieces of Modern Fiction. 3 Units.
Major works of fiction of the 20th century. Offered as ENGL 291 and WLIT 291.

WLIT 295. The Francophone World. 3 Units.
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (and where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle-East (Lebanon, Syria); the Caribbean (Martinique, Guadeloupe, Haiti); Southeast Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg). FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. Offered as ETHS 295, FRCH 295, and WLIT 295.

WLIT 300. The City in Literature. 3 Units.
Focus on major cities of the world as catalysts and reflections of cultural and historical change. Interdisciplinary approach utilizing the arts, literature, social sciences. Examples include Berlin at the turn of the century; Paris in literature and film; Tokyo in history and literature. Offered as WLIT 300 and WLIT 400.

WLIT 305. The Paris Experience. 3 Units.
Three-week immersion learning experience living and studying in Paris. The focus of the course is the literature and culture of the African, Arab, and Asian communities of Paris. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308/408 have the option of completing coursework in English. Graduate students have additional course requirements. Offered as FRCH 308, WLIT 308, FRCH 408, and WLIT 408.

WLIT 314. Love Poetry from Sappho to Shakespeare. 3 Units.
Introduction to the love poetry of ancient Greece and Rome and its impact on the later European tradition in such poets as Petrarch, Chaucer, and Shakespeare. Readings will focus especially on questions of generic convention, audience expectation, and the social setting of love poetry in the different ages under consideration. No knowledge of the original languages required. Offered as CLSC 314 and WLIT 314.

WLIT 315. Mysticism and Literature. 3 Units.
This co-taught seminar will explore and compare mystical elements in selected literary and theoretical works from the West and the East. Comparisons will focus on a number of interrelated sub-themes such as mind, language, alienation, innocence, experience, life, death, cosmogony, cosmology, good, evil, God/gods, and nature (the ecosystem). Offered as WLIT 315, WLIT 315, MLIT 415 and WLIT 415.

WLIT 316. Greek Tragedy. 3 Units.
This course provides students the opportunity to read a significant number of ancient Greek tragedies in modern English translations. We shall read, study, and discuss selected works by Aeschylus, Sophocles, and Euripides, and attempt to understand the plays as literature composed for performance. We shall study literary elements within the plays and theatrical possibilities inherent in the texts. As we read the plays, we shall pay close attention to the historical context and look for what each play can tell us about myth, religion, and society in ancient Athens. Finally, we shall give occasional attention to the way these tragic dramas and the theater in which they were performed have continued to inspire literature and theater for thousands of years. Lectures will provide historical background on the playwrights, the plays, the mythic and historical background, and possible interpretation of the texts as literature and as performance pieces. Students will discuss in class the plays that they read. The course has three examinations and a final project that includes a short essay and a group presentation. Offered as CLSC 316, WLIT 316, WLIT 416.
WLIT 317. Erotic Literature Ancient to Modern. 3 Units.
The erotic drive is a fundamental impulse in human beings, indeed in the animal world in general. Primordially, the erotic find expression in sexual desire and in associated behaviors, which in antiquity -- as in other myth-oriented cultures -- accounts to a production of poetry to aid in seduction, to praise an object of desire, or simply reflect the nature of love and/or sexual desire in general. Highly sexualized language appears in both ancient and modern texts that take into account a variety of foundational texts in Western culture. From Plato, who wrote a whole dialogue (Symposium) describing different kinds of love, to Christian interpreters of sacred texts, eroticism was a term that defined both pagan and religious experiences. This course will explore fictional as well as theoretical inquiries into the nature and purpose of erotic desire and its evaluation as aesthetic phenomenon. It will focus on texts such as Longus’s Daphnis and Chloe, Abelard’s Letters, Aucassin and Nicolette, mystical voices, Freudian theory and modern contribution such as Roland Barthes and Georges Bataille. Modern theoreticians as those mentioned here illustrate how the libidinal (whether understood as subjective drive or in Freudian terms) is inseparable from the aesthetic. Offered as: CLSC 315 and WLIT 317.

WLIT 319. Inspiration: The Topic of Creativity in Art and Literature--Ancient to Medieval. 3 Units.
Inspiration is an inextricably essential part of the aesthetic genesis, and it has instantly become one of the most frequented themes of artistic creation. Where does inspiration come from? Are artists “chosen ones” that implicitly stand out from the “non-inspired” rest? Trying to answer these questions and others related to the phenomenon of creativity, one direction that this course should take and focus on is the theme of “divine” or “transcendent” as a source of inspiration in art and literature. The course will start with the mystical teaching and theories of Pythagoras that influenced Plato and the Neo-Platonists that will be carried on further in the general tradition of Christian literature. In this respect, the course will examine creativity in readings that include both Ancient and Medieval writers whose writings place the subject of inspiration at the center of their own aesthetic invention. Among the authors included in the course will be Pseudo-Dionysius, Gregory Palamas, Jacopone da Todi, Caterina da Siena, Dante, Petrarch, and Meister Eckhart. Offered as: CLSC 317 and WLIT 319.

WLIT 320. Epic: The Sublime and Terrible in Literature. 3 Units.
The course focuses on the epic genre that dominates the dawn of Western literature as well as the literary traditions of much of the rest of the world. From the Homeric epic to the Middle Ages and deep into the Renaissance, there was a collective urge to record both in verse and in prose extraordinary adventures with exceptional heroes as central figures. Thus, the epic genre typically encouraged variations in the aesthetic treatment of the hero that eventually came to define distinct categories within the genre. “Sublime” and “terrible” are common notions in the aesthetics of classicism, from antiquity to the early modern period. Authors studied in the course include such key figures in the creation and development of epic as Homer, Virgil, Ovid, Gottfried von Strassburg, Dante, and Cervantes. The works of these authors exemplify, on the one hand, the aesthetic directions mentioned above and, on the other hand, provide opportunities for using the close engagement with particular texts to illuminate wider cultural fields, in which various aesthetic perceptions of social, political, and religious reality coexist and therefore stimulate remarkable innovations in the standard epic narrative. Offered as CLSC 319, CLSC 419, WLIT 320 and WLIT 420.

WLIT 335. Women in Developing Countries. 3 Units.
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondicherry), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper. Offered as ETHS 335, FRCH 335, WLIT 335, WGST 335, FRCH 435 and WLIT 435.

WLIT 338. The Cameroon Experience. 3 Units.
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Coursework is in French. To do coursework in English, students should enroll in WLIT 338/438 or ETHS 338/438. Offered as ETHS 338, FRCH 338, WLIT 338, ETHS 438, FRCH 438, and WLIT 438.

WLIT 340. Seminar in Enlightenment Art and Literature: Piranesi and Vico. 3 Units.
This course explores aspects of the European eighteenth century as a transformative epoch in the history of western culture. Though the Enlightenment is usually associated especially with France, in this course we will focus on Italy, as the irresistible goal of travelers taking part in the “Grand Tour,” and as a landscape of powerful ancient and modern architecture and artworks universally recognized as exemplary. In particular we will study one of the strangest and most fascinating visual artists of the period, the self-proclaimed architect Giovanni Battista Piranesi (1720-1778) famous no less now than in his own time for his fantastic prison engravings as well as his views of Rome, involving a radical rethinking of the city as a particular kind of inhabited as well as imagined space. Piranesi’s polemical response to the advocates of the Greek revival, then coming into fashion, will lead into discussion of the key philosophical debates and aesthetic shifts of the time, notably the emergence of the notion of the sublime as a category eventually subversive of western ideals of rationality and still present -- and potent -- in our own culture. Finally we will place Piranesi within a current of discussion of the origins and nature of language and of human society in general, not least as manifested in architecture and other symbolic practices. The leading figure here is the Neo-Platonic G.B. Vico, whose New Science of 1725 remains one of the most stimulating texts in the western intellectual tradition. Offered as CLSC 340, COGS 340, WLIT 340, CLSC 440, and WLIT 440.
WLIT 342. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in the literary production of Latin American women writers, particularly from the 1920s to the present. Close attention paid to the dominant themes of love and dependency; imagination as evasion; alienation and rebellion; sexuality and power; the search for identity and the self-preservation of subjectivity. Readings include prose, poetry, and dramatic texts of female Latin American writers contributing to the emerging of feminist ideologies and the mapping of feminist identities. Offered as SPAN 342, SPAN 442, ETHS 342, WGST 342, WLIT 342, and WLIT 442.

WLIT 345. Japanese Women Writers. 3 Units.
Contributions of women writers to the literature of pre-modern and modern Japan; investigations of how their works exemplify and diverge from "mainstream" literary practices. Emphasis on the social and cultural contexts of the texts. Offered as JAPN 345 and WLIT 345.

WLIT 355. Modern Japanese Novels and the West. 3 Units.
This course will compare modern Japanese and Western novellas, drama, and novels. Comparisons will focus on the themes of family, gender and alienation, which subsume a number of interrelated sub-themes such as marriage, home, human sexuality, amae (dependence), innocence, experience, death, God/gods, and nature (the ecosystem). Offered as JAPN 355, WLIT 355.

WLIT 363H. African-American Literature. 3 Units.
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature of protest and assimilation. Maximum 6 credits. Offered as ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WLIT 365. German Literature in Translation. 3 Units.
Goethe defined "World Literature" (Weltliteratur) as "Intellectual Trade Relations" (geistiger Handelsverkehr). This course gives students the opportunity to study German literary works in translation and thus to familiarize themselves with literature in general. The texts are historically or thematically organized. Maximum 6 credits. Offered as GRMN 365 and WLIT 365.

WLIT 365E. The Immigrant Experience. 3 Units.
Study of fictional and/or autobiographical narrative by authors whose families have experienced immigration to the U.S. Among the ethnic groups represented are Asian-American, Jewish-American, Hispanic-American. May include several ethnic groups or focus on a single one. Attention is paid to historical and social aspects of immigration and ethnicity. Maximum 6 credits. Offered as ENGL 365E, WLIT 365E, ENGL 465E, and WLIT 465E. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WLIT 365N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Offered as ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WLIT 365Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Offered as ENGL 365Q, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WLIT 368C. Topics in Film. 3 Units.
Individual topics in film, such as a particular national cinema, horror films, films of Alfred Hitchcock, images of women in film, film comedy, introduction to film genres, Asian-cinema and drama, dance on screen, science fiction films, storytelling and cinema, and literature and film. Maximum 12 credits. Offered as ENGL 368C, WLIT 368C, ENGL 468C, and WLIT 468C.

WLIT 375. Russian Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485.

WLIT 387. Literary and Critical Theory. 3 Units.
A survey of major schools and texts of literary and critical theory. May be historically or thematically organized. Maximum 6 credits. Offered as ENGL 387, WLIT 387, ENGL 487, and WLIT 487. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, FSTS, FSCS.

WLIT 389. Topics in World Literature. 3 Units.
In-depth examination of specific critical and literary theories and of their relevance for literature and culture studies. Authors, works and instructor may vary. Offered as WLIT 390 and WLIT 490.

WLIT 391. Introduction to Text Semiotics. 3 Units.
Introduction to Text Semiotics addresses both students of Literature and students in Cognitive Science. Most of the authors included in the reading list extend their linguistic approach towards fields that intersect literature, psychology, philosophy, aesthetics, and anthropology. The scholarly traditions of text analysis and structural theory of meaning, including authors from classical formalism, structuralism, structural semiotics, and new criticism will be connected to cognitive theories of meaning construction in text, discourse, and cultural expressions in general. The focus of this course, taught as a seminar, is on empirical studies, specific text analyses, discourse analyses, speech act analyses, and other studies of speech, writing, and uses of language in cultural contexts. This course thus introduces to a study of literature and cultural expressions based on cognitive science and modern semiotics—the new view that has be coined Cognitive Semiotics. Offered as COGS 391 and WLIT 391.
WLIT 395. French Literature in Translation. 3 Units.
Topics vary according to student and faculty interest. May include Francophone literature, literature and cinema, women writers, contemporary literature. Counts toward French major only as related course. No knowledge of French required. Offered as FRCH 395, WLIT 395, FRCH 495, and WLIT 495.

WLIT 397. Honors Thesis I. 3 Units.
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper. Prereq: Senior status.

WLIT 398. Honors Thesis II. 3 Units.
Continuation of WLIT 397. Prereq: WLIT 397 and senior status.

WLIT 399. Independent Study. 1 - 3 Unit.
For majors and advanced students under special circumstances.

WLIT 400. The City in Literature. 3 Units.
Focus on major cities of the world as catalysts and reflections of cultural and historical change. Interdisciplinary approach utilizing the arts, literature, social sciences. Examples include Berlin at the turn of the century; Paris in literature and film; Tokyo in history and literature. Offered as WLIT 300 and WLIT 400. Prereq: Graduate standing.

WLIT 408. The Paris Experience. 3 Units.
Three-week immersion learning experience living and studying in Paris. The focus of the course is the literature and culture of the African, Arab, and Asian communities of Paris. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308/408 do coursework in French. WLIT 308/408 students have the option of completing coursework in English. Graduate students have additional course requirements. Offered as FRCH 308, WLIT 308, FRCH 408, and WLIT 408. Prereq: Graduate standing.

WLIT 415. Mysticism and Literature. 3 Units.
This co-taught seminar will explore and compare mystical elements in selected literary and theoretical works from the West and the East. Comparisons will focus on a number of interrelated sub-themes such as mind, language, alienation, innocence, experience, life, death, cosmogony, cosmology, good, evil, God/gods, and nature (the ecosystem). Offered as MLIT 315, WLIT 315, MLIT 415 and WLIT 415.

WLIT 416. Greek Tragedy. 3 Units.
This course provides students the opportunity to read a significant number of ancient Greek tragedies in modern English translations. We shall read, study, and discuss selected works by Aeschylus, Sophocles, and Euripides, and attempt to understand the plays as literature composed for performance. We shall study literary elements within the plays and theatrical possibilities inherent in the texts. As we read the plays, we shall pay close attention to the historical context and look for what each play can tell us about myth, religion, and society in ancient Athens. Finally, we shall give occasional attention to the way these tragic dramas and the theater in which they were performed have continued to inspire literature and theater for thousands of years. Lectures will provide historical background on the playwrights, the plays, the mythic and historical background, and possible interpretation of the texts as literature and as performance pieces. Students will discuss in class the plays that they read. The course has three examinations and a final project that includes a short essay and a group presentation. Offered as CLSC 316, WLIT 316, WLIT 416.

WLIT 420. Epic: The Sublime and Terrible in Literature. 3 Units.
The course focuses on the epic genre that dominates the dawn of Western literature as well as the literary traditions of much of the rest of the world. From the Homeric epic to the Middle Ages and deep into the Renaissance, there was a collective urge to record both in verse and in prose extraordinary adventures with exceptional heroes as central figures. Thus, the epic genre typically encouraged variations in the aesthetic treatment of the hero that eventually came to define distinct categories within the genre. “Sublime” and “terrible” are common notions in the aesthetics of classicism, from antiquity to the early modern period. Authors studied in the course include such key figures in the creation and development of epic as Homer, Virgil, Ovid, Gottfried von Strassburg, Dante, and Cervantes. The works of these authors exemplify, on the one hand, the aesthetic directions mentioned above and, on the other hand, provide opportunities for using the close engagement with particular texts to illuminate wider cultural fields, in which various aesthetic perceptions of social, political, and religious reality coexist and therefore stimulate remarkable innovations in the standard epic narrative. Offered as CLSC 319, CLSC 419, WLIT 320 and WLIT 420.

WLIT 435. Women in Developing Countries. 3 Units.
This course will feature case studies, theory, and literature of current issues concerning women in developing countries primarily of the French-speaking world. Discussion and research topics include matriarchal traditions and FGM in Africa, the Tunisian feminist movement, women, Islam, and tradition in the Middle East, women-centered power structures in India (Kerala, Pondicherry), and poverty and women in Vietnam, Laos, and Cambodia. Guest speakers and special projects are important elements of the course. Seminar-style format, taught in English, with significant disciplinary writing in English for WGST, ETHS, and some WLIT students, and writing in French for FRCH and WLIT students. Writing assignments include two shorter essays and a substantial research paper. Offered as ETHS 335, FRCH 335, WLIT 335, WGST 335, FRCH 435 and WLIT 435.

WLIT 438. The Cameroon Experience. 3 Units.
Three-week immersion learning experience living and studying in Cameroon. The focus of the course is the culture, literature, and language of Francophone Cameroon, with some emphasis on Anglophone Cameroon. Students spend a minimum of fifteen hours per week visiting cultural sites and attending arranged courses at the University of Buea. Students will prepare a research paper. Coursework is in French. To do coursework in English, students should enroll in WLIT 338/438 or ETHS 338/438. Offered as ETHS 338, FRCH 338, WLIT 338, ETHS 438, FRCH 438, and WLIT 438.
WLIT 440. Seminar in Enlightenment Art and Literature: Piranesi and Vico. 3 Units.
This course explores aspects of the European eighteenth century as a transformative epoch in the history of western culture. Though the Enlightenment is usually associated especially with France, in this course we will focus on Italy, as the irresistible goal of travelers taking part in the "Grand Tour," and as a landscape of powerful ancient and modern architecture and artworks universally recognized as exemplary. In particular we will study one of the strangest and most fascinating visual artists of the period, the self-proclaimed architect Giovanni Battista Piranesi (1720-1778) famous no less now than in his own time for his fantastic prison engravings as well as his views of Rome, involving a radical rethinking of the city as a particular kind of inhabited as well as imagined space. Piranesi's polemical response to the advocates of the Greek revival, then coming into fashion, will lead into discussion of the key philosophical debates and aesthetic shifts of the time, notably the emergence of the notion of the sublime as a category eventually subversive of western ideals of rationality and still present -- and potent -- in our own culture. Finally we will place Piranesi within a current of discussion of the origins and nature of language and of human society in general, not least as manifested in architecture and other symbolic practices. The leading figure here is the Neapolitan G.B. Vico, whose New Science of 1725 remains one of the most stimulating texts in the western intellectual tradition. Offered as CLSC 340, COGS 340, WLIT 340, CLSC 440, and WLIT 440.

WLIT 442. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in the literary production of Latin American women writers, particularly from the 1920s to the present. Close attention paid to the dominant themes of love and dependency; imagination as evasion; alienation and rebellion; sexuality and power; the search for identity and the self-preservation of subjectivity. Readings include prose, poetry, and dramatic texts of female Latin American writers contributing to the emerging of feminist ideologies and the mapping of feminist identities. Offered as SPAN 342, SPAN 442, ETHS 342, WGST 342, WLIT 342, and WLIT 442.

WLIT 463H. African-American Literature. 3 Units.
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature of protest and assimilation. Maximum 6 credits. Offered as ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H. Prereq: Graduate standing.

WLIT 465E. The Immigrant Experience. 3 Units.
Study of fictional and/or autobiographical narrative by authors whose families have experienced immigration to the U.S. Among the ethnic groups represented are Asian-American, Jewish-American, Hispanic-American. May include several ethnic groups or focus on a single one. Attention is paid to historical and social aspects of immigration and ethnicity. Maximum 6 credits. Offered as ENGL 365E, WLIT 365E, ENGL 465E, and WLIT 465E. Prereq: Graduate standing.

WLIT 465N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Offered as ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Prereq: Graduate standing.

WLIT 465Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Offered as ENGL 365Q, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q. Prereq: Graduate standing.

WLIT 468C. Topics in Film. 3 Units.
Individual topics in film, such as a particular national cinema, horror films, films of Alfred Hitchcock, images of women in film, film comedy, introduction to film genres, Asian-cinema and drama, dance on screen, science fiction films, storytelling and cinema, and literature and film. Maximum 12 credits. Offered as ENGL 368C, WLIT 368C, ENGL 468C, and WLIT 468C. Prereq: Graduate standing.

WLIT 485. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ENGL 385, ETHS 385, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Prereq: Graduate standing.

WLIT 487. Literary and Critical Theory. 3 Units.
A survey of major schools and texts of literary and critical theory. May be historically or thematically organized. Maximum 6 credits. Offered as ENGL 387, WLIT 387, ENGL 487, and WLIT 487. Prereq: Graduate standing.

WLIT 490. Topics in World Literature. 3 Units.
In-depth examination of specific critical and literary theories and of their relevance for literature and culture studies. Authors, works and instructor may vary. Offered as WLIT 390 and WLIT 490. Prereq: Graduate standing.

WLIT 495. French Literature in Translation. 3 Units.
Topics vary according to student and faculty interest. May include Francophone literature, literature and cinema, women writers, contemporary literature. Counts toward French major only as related course. No knowledge of French required. Offered as FRCH 395, WLIT 395, FRCH 495, and WLIT 495. Prereq: Graduate standing.

WLIT 590. Seminar in World Literature. 3 Units.
Topics vary depending on student and instructor interests; may include Postcolonial literature; Latin American literature and film; African Anglophone and Francophone literature. Prereq: Graduate standing.

WLIT 595. Independent Research. 1 - 3 Unit.
For graduate students under special circumstances. Prereq: Graduate standing.

WLIT 601. Independent Study. 1 - 18 Unit.
For graduate students under special circumstances. Prereq: Graduate standing.

WLIT 651. Thesis MA. 1 - 18 Unit.
Frances Payne Bolton School of Nursing

History
The Frances Payne Bolton School of Nursing (http://bulletin.case.edu/schoolofnursing) (FPB) has a proud heritage beginning with the Lakeside Hospital Training School for Nurses established in 1898. With a generous endowment from Frances Payne Bolton (http://fpb.case.edu/Visitors/bolton.shtm), who was the first congresswoman from Ohio, FPB was established in 1923 as a school within Western Reserve University. In 1969, Western Reserve University and Case Institute of Technology merged forming the current university, Case Western Reserve University. Consistently, FPB is ranked among the leading schools in U.S. News and World Report and in funding from the National Institutes of Health. Graduate-level specialty majors have been in the top 10.

FPB is noted for its innovation, leadership and excellence in education, research and practice. To support this mission, the school has fifteen endowed chairs, among the largest number in the world for a school of nursing. FPB also houses one of only 10 World Health Organization Collaborating Centers (http://fpb.case.edu/Centers/WHOCC) for nursing in the country. The Sarah Cole Hirsh Center for Best Nursing Practices Based on Evidence (http://fpb.case.edu/Centers/Hirsh) was established in 1998 was the first national center of its kind.

Strategic Vision
Mission
Within the mission of Case Western Reserve University, the Frances Payne Bolton School of Nursing builds on a tradition of innovation and a commitment to the highest standards of excellence to provide the very best nursing education, research, clinical scholarship, and professional service locally, nationally, and internationally.

Priorities
The Frances Payne Bolton School of Nursing is committed to global leadership in nursing. The discovery, transmission, and use of knowledge are at the core of our work. Knowledge of health and illness in individuals, families, groups, and communities, both locally and internationally, provides the context for our work. The ultimate test of the validity of our vision is the results, over time, of the contributions of our faculty and graduates.

Purpose
The purpose of the Frances Payne Bolton School of Nursing is to provide an environment that permits individuals to develop their personal and professional capabilities, including the sense of responsibility for continued learning; to learn as efficiently and effectively as possible; to find enjoyment, excitement, and challenge in the pursuit of knowledge and its application; and to develop behaviors that enable them to function in a changing, complex society. As an integral component of Case Western Reserve University, the school assumes responsibility for the preparation of individuals committed to excellence and leadership in professional nursing. The faculty of the school accepts the responsibility for teaching and scholarly inquiry as integral parts of the educational process.

Philosophy
FPB has set forth the following philosophy to accomplish the stated mission.

Nursing is an academic discipline and profession. Nursing as an academic discipline is a distinctive branch of human knowledge fundamental to nursing practice, nursing education, and nursing administration, and to the continuous development of the profession. The distinctive perspective of nursing includes a focus on the metaparadigm concepts of persons, environment and nursing. The specific conceptual focus within FPB is the health-seeking mechanisms and behaviors of human beings. Some of those mechanisms and behaviors are innate; others are learned or developed and may be subject to the influence of nurses’ knowledgeable ministrations. The body of nursing knowledge is continuously advanced, structured, and restructured as a consequence of a range of methods including scientific inquiry, philosophic inquiry, historical inquiry, and clinical evaluation.

Scientific inquiry within nursing is designed to discover, advance, and clarify knowledge about determinants and correlates of optimal biological, psychological, and social functioning; physical, emotional and spiritual comfort; and individual and group attainment of health goals in multiple environments and under a variety of circumstances (including illness and injury) attendant to birth, living, development, decline and death. Philosophic inquiry is undertaken to clarify the values that underlie consumers’ and nurses’ responsibilities for human health promotion, the ethics of nursing practice, and the nature of the body of knowledge known as nursing. Historical inquiry is undertaken to document significant influences (by events and individuals) on the development of nursing over time as a body of knowledge and as a profession. Clinical evaluation is designed to test and verify the relative efficacy of strategies used in nursing administration, consultation, education, and practice, and the means employed to advance nursing knowledge.

Professional nurses have mastery over a body of scientific and humanistic knowledge that is fundamental to their particular kinds of practice. They selectively use this knowledge in the execution of their professional responsibilities and in the attainment of professional goals. Those involved in differentiated nursing practices employ nursing technologies (skills and approaches that represent the application of scientific knowledge), using artistry in the execution of their professional responsibilities. Professional nurses’ several, particular practices are guided by a code of professional ethics and also by knowledge about the individuals and groups whom they serve. The nurse’s professional goal is to appraise accurately and to enhance effectively the health status, health assets, and health potentials of individuals, groups, families, and communities and to promote the initiative and independence of those they serve in the attainment of reasonable health goals, mutually agreed upon by consumers and by nurses as their health care providers. Nursing practice includes assisting persons in the maintenance of health, detecting deviations from health, assisting persons in the restoration of health, and supporting persons during life. These responsibilities are accomplished through a systematic and deliberative process. Nursing practice includes independent and interdependent functions and nurses are an integral part of the health care system.

Other beliefs essential to nursing that are shared by the faculty are stated below:

Individuals and Groups

• Individuals have commonalities, but each person is unique and has worth.
• Individuals are in constant interaction with the environment.
• Individuals have a capacity to grow and develop.
• Human behavior is purposeful and involves choices that are directed toward meeting the individual’s needs.
• Individuals and groups have rights and responsibilities in relation to the promotion of optimal health.
• Individuals have the responsibility for making decisions about their health and have the potential to act on these decisions.
• Most individuals possess the capability for making appropriate decisions, although there are times when these abilities are diminished or absent.

Learning
• Individuals are capable of changing their behavior through the process of learning.
• The need and ability to learn continues throughout life.
• Learning is affected by interaction between the individual and the environment.
• Learning is enhanced when consideration is given to individual differences in cognitive styles.
• The responsibility for learning resides in the individual learner.
• The learning process is an individual endeavor; stimulation of the process is a joint responsibility of teacher and learner working toward common goals.

Cultural Diversity
• Learning is affected by interaction between the Individual and the environment.
• Learning is enhanced when consideration is given to individual differences in cognitive styles as well as cultural background and influences.

Health
• Health is a dynamic, ever-changing state.
• Health is influenced by an individual’s heredity, environment, and lifestyle.
• Individuals may manifest simultaneously states of health and illness.
• Individuals differ in the ways they value and define health.
• Individuals have the potential to grow as a result of an experience with illness.

Health Care
• Health care encompasses all activities necessary to promote optimal physiological, psychological, and social functioning.
• Health care is rendered by the individual alone or in collaboration with health care providers, including nurses, and extends throughout the life span of the individual.
• Health care is complex and depends on the skills, resources, and cooperative efforts of consumers and health care providers.
• A recognized need exists in society to organize effectively the delivery of health care services.
• A variety of providers, each offering a unique and specific service, may be present in an organized health care system.
• The primary contribution of nursing to the health care system is to assist individuals and groups to attain, maintain, and regain optimal health.
• Health care professionals (including nurses) and consumers collaborate to define health; to identify factors inimical to health; to limit, reduce, or eliminate threats to health; to determine human and material resources necessary to provide health care services; and to evaluate and improve health services.
• Collaboration among health professionals and consumers can lead to the achievement of health care delivery systems that provide care that is available, accessible, feasible, acceptable, of optimal quality, sustained, and cost effective.
• Relevant concepts are further defined by faculty as follows:

Optimal Level of Health
The highest achievable level of function and security. This includes physiological function and environmental (physical security, psychosocial function, and security), and personal growth.

Health-Seeking Behaviors
The range of mental and physical activities consciously performed to maintain, attain, or regain optimal health.

Environment of Care
The “place” and phenomenal field where a nurse encounters clients who need assistance in maintaining, attaining, or regaining competence in striving for health, and where the nurse performs acts for clients to facilitate health-seeking behaviors (when they cannot do for themselves).

Professional Encounter
A person’s competence in matters related to health is dynamic and is influenced by genetic endowment and life experiences. At times a person requires assistance in improving competence. At these times, the nurse may enter into a relationship with the person (client) to facilitate the client’s health-seeking behaviors as he/she strives toward an achievable level of health. The client and nurse may view this relationship differently. The professional encounter requires a reciprocal relationship in which the nurse, as a professional expert with the client’s assent, influences the behavior of the client. The client in turn evokes responses from the nurse. The professional encounter is the initiation of a relationship between a nurse and a person requiring nursing care. The relationship is reciprocal in nature and may be initiated by either the client or nurse. Through the relationship mutual goal setting regarding health attainment is sought. When a nurse and client interact within the professional relationship, each performs functions deriving from their positions within a particular social context. The context (human-physical environment) in which the encounter occurs will have varying influence on both the client and nurse based on the cognitive, perceptual and emotional capacities of both. Although the environment in its physical representation is essentially the same for both, the perceptions of the client and nurse are different. The attributes that they bring to the relationship are shaped by intervening variables.

Nursing Strategies
Nursing strategies can be categorized according to the function they serve in facilitating clients’ health-seeking behaviors. A tentative classification scheme according to the function strategies is set forth below. Within each category there are multiple behaviors from which the nurse can select depending on the nature of the clients’ assets and deficits. Also, each category is open to the discovery of more activities than are presently known. Each category focuses on facilitating health-seeking behaviors.
Compensating: Performing selected activities or measures (including monitoring) for clients when they are unable to do these activities.

Teaching: Performing actions intended to induce learning.

Counseling: Assisting clients to examine alternative course of action.

Supporting: Promoting clients’ ability to cope, adapt and change.

Stimulating: Promoting clients’ desire to perform health-seeking behaviors.

Advocating: Intervening on behalf of the client to overcome obstacles that are interfering with health-seeking behaviors.

Comforting: Providing an environment that promotes ease and well being.

The choice of nursing strategies for enhancing client’s health-seeking behaviors is based on assessment of these behaviors and the intervening variables to determine the assets and deficits and potential for engaging in behaviors that are directed toward attaining, maintaining or regaining an optimal level of health.

Accreditation

The Bachelor of Science in Nursing (BSN) and Master of Science in Nursing (MSN) programs are accredited by the National League for Nursing Accrediting Commission (NLNAC). The initial accreditation was in 1951. The last accreditation was in 2008. The next accreditation is due in 2016.

National League for Nursing Accrediting Commission, Inc.
61 Broadway-33rd Floor
New York, NY 10006

Facilities

Instructional Facilities

With a highly qualified faculty engaged in teaching, research, and community service, FPB offers high quality academic programs. Instruction includes lectures, seminars, individual conferences and small group discussions, and clinical experiences under the guidance of a preceptor. Modern research and educational facilities include computer and skills laboratories.

Clinical Facilities

Instructional facilities are abundant and varied. The University Hospitals of Cleveland is a 947-bed academic medical center and is an aggregate of specialized hospitals that includes Alfred and Norma Lerner Tower, Samuel Mather Pavilion and Lakeside Hospital for adult medical/surgical care; Rainbow Babies and Children’s Hospital; University MacDonald Women’s Hospital; University Ireland Cancer Center; and skilled nursing and rehabilitation services. University Hospitals is part of the University Hospitals Health System with services provided at 100 locations in 40 northern communities. The Cleveland Clinic Health System has 2,957 beds and is comprised of the Cleveland Clinic Foundation and Fairview Hospital, Health Hill Hospital for Children, Lakewood Hospital, Lutheran Hospital, Marymount Hospital, Euclid Hospital, Hillcrest Hospital, Huron
Hospital, and South Pointe Hospital. MetroHealth Medical Center is a regional referral center with 690-beds for medical/surgical care to adults and children. It is a trauma I center with a burn center and 143-bed rehabilitation facility specializing in spinal cord injuries, only one of 19 in the nation. MetroHealth also has the Clement Center for Family Care, a neighborhood outpatient center, and a 291 bed skilled nursing care center. These hospitals are major clinical resources.

Additional opportunities are available in a variety of health, social, and educational agencies. These include, for example, American Red Cross, Benjamin Rose Institute, Hospice of the Western Reserve, Cleveland Psychiatric Institute, Kenneth W. Clement Center for Family Health Care, Judson Park Retirement Community, Hospice of the Western Reserve, Visiting Nurses Association, Cleveland Public Health Department, the Ohio Permanente Medical Group and many others.

Libraries
The Kelvin Smith Library, a 144,000 square foot building completed in 1996, houses most of the collections of Case Western Reserve University. This includes over 1,290,000 monographs, 7,363 serial titles, U.S. Government publications, company annual reports, newspapers, CDs, technical reports, over 12,000 DVDs and videos, and more. The library enables users to integrate both traditional resources and state-of-the-art technology into teaching, research, and learning. A variety of seating styles accommodates 900 people and provide electrical ports for connecting personal laptop computers. Case Western Reserve’s wireless network enables personal laptops to have internet access throughout the library. Two multimedia rooms include scanners and sound and video digitizers. Available are individual study spaces, meeting rooms, conference areas, and social gathering places. Thirty miles of compact moveable shelving allows the library to keep much of its collection onsite for immediate access to print materials. The user-friendly interface to the online catalog, databases, and other resources allows library staff to focus their attention on working in-depth with faculty and students.

In addition to the Kelvin Smith Library, students and faculty have access to the following libraries located on campus: the Cleveland Health Sciences Libraries, supporting programs in dentistry, medicine and nursing; the School of Law Library; the Lillian and Milford Harris Library in the Mandel School of Applied Social Sciences; the Kulas Music Library; and the Astronomy Library. Altogether, collections at the Case Western Reserve libraries encompass more than 1.8 million volumes, nearly 14,000 serials and periodicals, and a wide range of electronic information resources, including a CD-ROM reference database that is accessible through the Case Western Reserve network. These include OhioLINK, a state-funded network that links the libraries of 17 public universities, 23 community/technical colleges, 44 private colleges, and the State Library of Ohio and also offers access to research databases and other information resources.

The Health Sciences Libraries, which consist of the Health Center Library and the Allen Memorial Library, serve as the major libraries for holdings related to nursing, medicine, dentistry, nutrition, and biology. The Health Center Library adjacent to the School of Nursing houses nearly 350,000 volumes, 2,780 current periodicals, and audiovisual materials. Approximately 8,800 volumes are specifically nursing texts, and more than 100 journals are nursing publications. The library also houses a historical collection of nursing materials. The most current and heavily used books are placed on reserve to insure their availability to students. Faculty also place materials on reserve for use in the library. There are 18 public workstations to access the internet, and the library also provides wireless access for those with properly-equipped laptop computers.

FPB School of Nursing Information Technology Services
The Frances Payne Bolton School of Nursing has its own Information Technology Services department (http://fpbrc.case.edu/CurrentStudents/technology.shtml). This department manages and oversees all computer related operations within the school. Furthermore, the team assists faculty, staff and students with any computer problems, issues, needs, or equipment purchase. FPB has its own Help Desk and provides troubleshooting of problems and repairs to all school-owned equipment. There are two computer laboratories and a Cyber-Café where students have access to computers and network-access connection for hooking up their laptops along with wireless network access. The main computer lab is located on the second floor and the Cyber-Café is located on the ground floor. These two areas are available during the weekdays, evenings, and weekend on a 24 hours basis. The second lab (Center for Bioinformatics) is located within the Learning Resource Center (LRC) on the ground floor and is only available when not used for classroom activities during weekdays from 9:00 a.m. to 5:00 p.m.

Learning Resource Center (LRC)
The Learning Resource Center (LRC) (http://fpbrc.cwru.edu) is a state of the art facility comprised of four academic support units, the Cyber Café, the Center for Bioinformatics and Health Promotion, the Multi-media Simulation Center and the Clinical Teaching Center. FPB students have the opportunity to advance their nursing skills by active participation in hands-on training sessions that demonstrate the real-life aspects of nursing. Our experienced learning support staff strives for competence, confidence and excellence. The staff is available by appointment to meet with students individually in order to review a particular skill, practice with SimMan, CathSim, SimBaby, SimChild, or utilize the Bioinformatics lab to work with various nursing software packages. SimMan, SimBaby, and SimChild are high-tech human patient simulators that breathe, have a pulse, and maintain heart-rhythm and blood pressure. They simulate almost any patient emergency situation and are programmable to provide the most life-like responses with immediate feedback for student learning. CathSim is an intravenous trainer, which uses virtual reality-based patients to teach intravenous (IV) catheterization. They give students the ability to choose the patient they will start an IV on, depending on their particular clinical setting. The program offers immediate feedback and opportunities for review to enhance the nursing skills needed in real life environments.

FPB is equipped with four technology-enhanced classrooms, which allow our faculty to use powerful tools in teaching to engage the students with learning. The classrooms are equipped with a Dell computer, VHS DVD combo player, a ceiling mounted video projection system, a document camera, wall-mounted speakers, and a touch panel-controlled LCD monitor.

Administration
Mary E. Kerr, PhD, RN, FAAN
(Case Western Reserve University)
May L. Wykle Endowed Professor of Nursing; Dean of Nursing
Shirley Moore, PhD, RN, FAAN
(Case Western Reserve University)
Edward J. and Louise Mellen Professor of Nursing; Associate Dean for Research
Jacline A. Zauszniewski, PhD, RN-BC, FAAN
(Case Western Reserve University)
Kate Hanna Harvey Professor in Community Health Nursing; Associate Dean for Doctoral Education; Director, PhD Program
Marilyn B. Lotas, PhD, RN
(University of Michigan)
Associate Dean for Undergraduate Programs
Elizabeth A. Madigan, PhD, RN, FAAN
(Case Western Reserve University)
Professor of Nursing; Head, WHO Collaboration Center

(Stanford University)
Sarah Cole Hirsh Professor of Nursing; Associate Dean for Evidence Based Practice
Donna A. Dowling, PhD, RN
(University of Illinois)
Associate Professor of Nursing; Program Director, DNP Program
Carol Savrin, DNP, CPNP, FNP, BC, FAANP
(Case Western Reserve University)
Associate Professor of Nursing, Director of MSN Program
Diana L. Morris, PhD, RN, FAAN, FGSA
(Case Western Reserve University)
Executive Director, University Center on Aging and Health
Evelyn G. Duffy, DNP, ANP/GNP-BC, FAANP
(Case Western Reserve University)
Associate Director, University Center on Aging and Health
Barbara Daly, PhD, RN, FAAN
(Bowling Green State University)
Gertrude Perkins Oliva Professor in Oncology Nursing; Director, BEST Center
Gayle Petty, MSN, RN
(Case Western Reserve University)
Assistant Director, BSN Program
Patricia W. Underwood, PhD, RN, FAAN
(University of Michigan)
Associate Professor of Nursing
Teona C. Griggs, M.Ed., MA
(Cleveland State University)
Director of Student Services; Director of Diversity & Inclusion
Nada Di Franco, MNO
(Case Western Reserve University)
Director of Alumni Relations
Amy Raufman, MNO
Director of Development
Samira Hussney, MPH
(Case Western Reserve University)
Director, International Programs & WHO Collaborating Center
Susan Frey, MAFIS
(Cleveland State University)
Assistant Dean for Finance and Administration
Caron Baldwin, MCSE
(Ohio Wesleyan University)
Information Services Manager
Kathleen O’Linn, BS
(Ursuline College)
Manager, Human Resources and Facilities
Helen Jones-Toms, MNO
(Case Western Reserve University)
Director of Marketing
Jason Barone, MA
(Case Western Reserve University)
Asst. Director, Marketing & Communications
Tiffany Cooper, MBA
(Ursuline College)
Executive Aide
Kathleen O’Linn, BS
(Ursuline College)
Bachelor of Science in Nursing (BSN)

Bachelor of Science in Nursing

The BSN program emphasizes intensive and early clinical experience, a strong foundation in acute and critical care nursing and a commitment to service to our community. Our students begin their clinical experience in the first term of the freshman year and complete their program with a 300-hour clinical preceptorship in the senior year. Students graduate with over 1600 hours of clinical experience, far exceeding that of other schools of nursing. In addition, students provide healthcare services to children and families—collectively amassing approximately 20,000 hours of service to local schools alone each year.

The student-learning environment includes traditional classrooms, world-class clinical facilities, community settings and the Learning Resource Center (LRC). The LRC consists of four activity centers: the Clinical Teaching Center; the Center for Bio-informatics and Health Promotion; the Multimedia Simulation Center; and the Cyber Café. Clinical experiences occur in Cleveland’s nationally and internationally renowned health care facilities including the University Hospitals of Cleveland, the Cleveland Clinic and the MetroHealth System. Students also have extensive experience in community health departments, community centers and the Cleveland Municipal School District.

The opportunities available to students are limitless. Students are encouraged to participate in interdisciplinary research projects with senior faculty. They have the opportunity to explore health issues in the global arena, to study in international sites as part of their standard curriculum. International activities are supported by FPB’s World Health Organization (WHO) Collaborating Center.

Graduates have a foundation in the discipline of nursing, demonstrate leadership in clinical practice, use clinical inquiry to advance practice, become involved in research, and assume responsibility for their own professional development.

Characteristics of the Graduate

- Teaches and counsels individuals, families and other groups about health, illness and health seeking behaviors
- Critiques and applies research findings to clinical practice
- Provides direct patient care and assumes leadership role in directing nursing care to individuals, groups and families
- Participates and assumes beginning leadership roles
- Uses principles of ethics and the professional code as a framework for decision making
- Works effectively as a member of an interdisciplinary health care team
- Uses effective communication techniques with diverse clients, colleagues, and information systems
- Describes process of health care policy development

Degree Requirements (http://fpb.case.edu/BSN/degree.shtm)

Candidates for the Bachelor of Science in Nursing degree must complete the following:

1. Minimum of 128 credit hours as specified by the requirements with a 2.0 GPA
2. A minimum of C for all courses taken in nursing and science courses counting toward the major
3. A minimum of 50 credit hours in 300 and 400 level courses
4. The SAGES General Education Requirements for the School of Nursing

Progression in the BSN Program

Progression in the Bachelor of Science in Nursing program is contingent upon satisfactory academic achievement in all required courses. To maintain satisfactory academic standing, students must attain a GPA of 2.0 or above by the end of their junior year and must obtain a C or above in all nursing and science courses counting toward the major.

Students who receive two unsatisfactory grades (D or F) in nursing and/or natural and behavioral science courses may be subject to separation from the school of nursing. See the Undergraduate Student Handbook (http://fpb.case.edu/CurrentStudents/handbook.shtm) for a description of the criteria for academic standing.

Students who receive a grade of Incomplete (I), given at the discretion of the instructor for the course, must complete course requirements by the eleventh week of the following semester. It is the student’s responsibility to notify the instructor of the circumstances preventing completion of all assigned work. In the absence of notification or adequate justification, the instructor may give the student a final grade that assumes a failing grade for the missing work. If a student fails to submit the work required for removing the Incomplete by the date established or by the eleventh week of the following semester, the instructor will give a failing grade (F). The grade will convert from I to F when the deadline for making up incomplete grades from a previous semester has passed.

Students who receive a grade below C for a nursing course must register for that course the next semester that it is offered. If the student fails to meet the University’s requirement for good academic standing, the student is placed on academic probation. If the GPA does not improve the next semester, the Academic Standing Board of the Faculty Senate Committee on Undergraduate Education will review the student’s record to determine whether extenuating circumstances warrant an additional semester of probation or separation from the university.

Curriculum (http://fpb.case.edu/BSN/curriculum.shtm)

This four-year generic program for high school graduates leads to a BSN degree. Upon successful completion of the program, graduates will be eligible to sit for the NCLEX examination (http://www.ncsbn.org) for licensure as a Registered Nurse (RN). A sample study plan (http://fpb.case.edu/BSN/sampleplan.shtm) also demonstrates how a BSN student might schedule the required courses.

The FPB School of Nursing has the right to determine a student’s readiness to sit for the NCLEX-RN examination and the right to restrict testing until the student demonstrates a readiness to pass this examination. This examination is given by State Boards of Nursing, and satisfactory completion of this examination enables the graduate to practice as an RN in the state for which the examination was written.

The BSN program includes nursing, science and liberal arts courses. A minimum of 128 credit hours, with at least 50 credits from upper division courses, are required for award of the BSN degree. Students must meet the University requirements for graduation. The ratio of clinical hours to credit hours is 4 to 1, and for laboratory hours, it is 2 to 1. The program plan for entry-level students to the BSN program is as follows:

Total Units in Sequence: 125-127
Doctor of Nursing Practice

The Doctor of Nursing Practice Program (DNP) is an innovative academic program designed to prepare advanced practice nurses who are leaders in their fields. The Post-Master’s DNP program is flexible in meeting the needs of distance education students, with an innovative executive format and cohort program that has partnerships with several academic institutions and hospitals around the country. The DNP program admits students at three different stages in order to accommodate students with diverse educational backgrounds.

- Graduate Entry Program (Pre-Licensure stage; MN degree awarded): The Graduate Entry program is a pre-licensure stage designed for individuals with baccalaureate (or above) degrees from an accredited college or university in a discipline other than nursing. Students admitted to the Graduate Entry program prepare for licensure as a registered nurse. A generalist Master of Nursing (MN) degree is awarded at successful completion of the program, and students can then apply to a Board of Nursing for licensure as a Registered Nurse and practice as a beginning staff nurse. They are also encouraged to proceed to the next phase of the DNP program to attain their MSN degree.

- Post-Licensure (Advanced Nursing Practice stage; MSN degree awarded): This phase of the DNP program is designed for registered nurses who have received the Master of Nursing (MN) degree. It awards a Master of Science in Nursing (MSN) degree and allows students to apply to a professional organization for certification in the advanced nursing specialty and to a Board of Nursing for credentials to practice in the advanced nursing specialty.

- Post-Master’s DNP (Practice Doctorate stage; DNP degree awarded): This stage of the DNP program prepares nurses with MSN degrees to be clinical leaders at the absolute pinnacle of their field. Students acquire in-depth knowledge in nursing theory, research, policy, and education or management. Most DNP students at the post-master’s level are already practicing in roles as advanced practice nurses, administrators, or educators. Once they are admitted to this phase of the program, they choose one of two elective sequences: education leadership or practice leadership.

Characteristics of the Graduate

- Teaching/Learning: Develops, implements and evaluates educational offerings, individually and in collaboration with others.
- Research/Inquiry: Promotes evidence based practice by initiating, synthesizing and generating knowledge for and through clinical research.
- Nature of Practice: Assumes functions of advanced nursing practice roles and identifies health issues amenable to clinical research and evidence based practice.
- Leadership: Assumes leadership positions of increasing complexity at the local, state, national and international levels
- Ethics: Identifies and analyzes ethical issues and standards and incorporates them into practice.
- Collaboration: Develops and promotes trans-disciplinary initiatives in the practice community.
- Communication: Disseminates knowledge and evidence to improve health. Evaluates communication systems and generates new models to enhance system efficacy.
- Policy Development: Participates in the initiation, evaluation and modification of health policy locally to globally.

Degree Requirements

- Post-master’s entry students must complete the DNP program within four years. Students who do not complete the DNP program within the above timeframe should send a letter to the Director of the Doctor of Nursing Practice Program with a request for an extension and a proposed plan for completing of remaining requirements.
- Records of students who do not complete the program within the specified timeframe will be re-evaluated in terms of the curriculum in effect at the time of review. The student may be required to take additional course work to graduate.

Academic Performance

Progression in the Doctor of Nursing Practice degree program is contingent upon satisfactory academic achievement in all required courses.

Doctor of Nursing Practice students must achieve a cumulative grade point average of 3.0 or above in all courses taken for credit as a DNP student at the Frances Payne Bolton School of Nursing to be awarded the DNP degree. All DNP students must successfully defend their scholarly project.

The grade of incomplete (I) will be given at the discretion of the instructor for work not completed in the semester. A grade of I must be removed by the end of the semester following the one in which the course was taken or before the student enrolls in a course for which the initial course is a prerequisite. No credit is given for an I grade. The I will remain a permanent part of the transcript if the student fails to complete course requirements within the next semester.

Scholarly Project

The DNP program culminates in successful completion of a scholarly project. The scholarly project is designed by the student in collaboration with a 3-member committee approved by the Program Director. The scholarly project must focus on an issue related to improving patient outcomes. The scholarly project can take the form of a thesis or a manuscript suitable for publication. The procedures and written product must conform to the regulations of the FPB School of Nursing.

Students must successfully defend their completed scholarly project in an “oral examination” with their committee members who are responsible for certifying that it meets acceptable scholarly standards. The defense is open to faculty and students; the chair determines whether the defense is open to those outside of the University. The committee determines the adequacy of the oral examination and written product. A student will pass if two or more of the committee members agree that the student successfully responded to questions during the defense and the written product met scholarly standards.

Post-Master’s DNP Curriculum

Most classes are held in an intensive format (http://fpb.case.edu/Programs/intensives.shtm), meeting for a specified number of days with additional meetings held online. A 3-credit course will meet for 5-6 days. Two courses are held online across the semester. Intensive sessions are given three times a year (January, May, and August) for at least two weeks. Papers and projects are due in the semester following the intensive session.

Graduate Entry Nursing Program

The Graduate Entry Nursing Program is designed for individuals who hold at least a BA/BS in a non-nursing major and whose career and educational goals include nursing practice at the advanced specialty level. All applicants are admitted to three stages of the program (http://fpb.case.edu/GradEntry/pathways.shtm): pre-licensure stage (leading to the Master of Nursing, or MN), advanced nursing practice stage (leading to the MSN), and practice doctorate stage (leading to the DNP). Students are encouraged to complete all phases of the program. However, they may choose to exit (temporarily or permanently) after each phase. Certain MSN majors have separate experience requirements and/or admission process.

During the pre-licensure stage, students earn about 15 credits applicable to most MSN majors. Graduate Entry students may apply for the PhD program following the pre-licensure (MN) program. The Graduate Entry Nursing program has an innovative quality and safety component (http://fpb.case.edu/QualSafe) woven throughout the curriculum, emphasizing the importance of the patient experience.

Characteristics of the Graduate

The MN (Master of Nursing) is a generalist nursing degree awarded to those who satisfactorily complete the pre-licensure stage of the Graduate Entry program. MN graduates possess the following characteristics:

- Teaching/Learning: Provides opportunities for individuals, other professionals, populations and communities to enhance their knowledge about health, illness, and health seeking behaviors through consultation and education conceived in partnership with the learner
- Research/Inquiry: Integrates best current evidence to continuously improve the delivery of care and identify areas where further evidence is needed
- Nature of Practice: Provides and directs nursing care for individuals, groups, families and populations, that focuses on safety, quality, and the recipients' needs, preferences and values
- Leadership: Assumes beginning nursing leadership roles that are directed toward outcomes evaluation and implementation of care improvement initiatives
- Ethics: Applies ethical principles in complex nursing situations
- Collaboration: Promotes nursing and inter-professional collaboration to achieve safe, quality healthcare
- Communication: Integrates technology and interpersonal techniques in communication, knowledge management, error mitigation, and decision-making with diverse clients and colleagues
- Policy Development: Actively participates in policy development at local, unit, and state levels to promote safe, quality healthcare

Degree Requirements

Time Frame for Completion of Degree

- Completion of MN degree. Graduate Entry Nursing Program students (non-nurses) must complete the MN program within 4 years of initial enrollment.
- Completion of the MSN, DNP, or PhD; refer to policies for those programs.
- Records of students who do not complete their program within the specified timeframe will be re-evaluated in terms of the curriculum in effect at the time of review. The student may be required to take additional course work to graduate.

Progression in the Program

Satisfactory Academic Standing

Progression in the Graduate Entry Nursing Program is contingent upon satisfactory achievement in all required courses. To maintain satisfactory academic standing, students enrolled for the pre-licensure (Master of Nursing-MN) component of the Graduate Entry Nursing Program must attain and maintain a GPA of 3.0 or above. C, the lowest passing grade, is viewed as borderline performance. An overall GPA of 3.0 is required to progress to the post-licensure component of the Graduate Entry Nursing Program. If a student’s semester GPA is less than 3.0 or the overall GPA is less than 3.0, the student will be placed on probation and an individualized plan will be developed and documented. The student will be removed from probation when the overall GPA is 3.0 or higher. If the student is on probation for two semesters, the student’s record will be reviewed by the Executive Committee to determine whether extenuating circumstances warrant an additional semester of probation or whether the student should be separated from the program.

When a student receives a grade of F for a required course, the student must register for that course the next semester in which the course is available. Refer to the Frances Payne Bolton Student Handbook (http://fpb.case.edu/programs/handbook.shtm) for more information on a repeating course with an F grade and the GPA. Graduate Entry students who receive two failing grades indicating unsatisfactory performance (F, NP, or U) in required courses will be excluded from Frances Payne Bolton; contact the Graduate Entry Program Director (http://bulletin.case.edu/schoolofnursing/mn/mailto:dxl41@case.edu). Progression from one semester to the next in the pre-licensure (MN) component of the Graduate Entry Nursing Program is contingent upon passing grades in all courses taken in the preceding semester. The grade of Incomplete (I) will be given at the discretion of the instructor for work not completed in the semester. A grade of I must be removed by the end of the semester following the one in which the course was taken or before the student enrolls in a course for which the initial course is a prerequisite. No credit is given for an I grade. The I will remain a permanent part of the transcript if the student fails to complete course requirements within the next semester.

Graduate Entry students in the post-licensure component must meet all progression requirements of the degree program in which they are enrolled (MSN (p. 464), DNP (p. 460), or PhD (p. 472)). Refer to those sections of the Bulletin for further information.

Approval of RN Licensure Applications

In order to have the “Program Completion” section of the application for RN licensure approved by the Program Director, students must meet the following criteria:

1. Have been awarded the Master of Nursing (MN) degree.
2. Demonstrate readiness to take the NCLEX-RN examination by achieving at least a minimum score on a NCLEX-RN predictor exam. (refer to separate procedure on “Demonstrating Readiness to the NCLEX-RN Exam” for details).

Curriculum

Applicants admitted to the Graduate Entry Nursing Program are admitted for the MN, MSN and DNP degrees (certain MSN majors have separate experience requirements and/or admission process). On completion of the MSN, or MSN degrees, students may apply for the PhD and/or DNP programs. Upon successful completion of the M.N. curriculum, graduates are eligible to sit for the NCLEX examination for licensure as a Registered
Nurse. NOTE: Successful completion of all pre-licensure courses is necessary to sit for the Professional Nursing Licensing Examination (NCLEX-RN). FPB has the right to determine a student’s readiness to sit for this exam and also reserves the right to restrict testing until the student demonstrates a readiness to pass the examination.

The MN curriculum (below) includes 72 credit hours of required courses. Students must meet the University requirements for graduation. The ratio of credit hours to clock hours is: didactic and seminar, 1:1; lab, 1:2; and clinical, 1:4.

Master of Science in Nursing (MSN)

The Master of Science in Nursing program prepares registered nurses for advanced practice specialization either as a nurse practitioner, clinical nurse specialist, advanced public health nurse, nurse midwife, or nurse anesthetist. Dual degree programs are offered in bioethics (MSN/MA), anthropology (MSN/MA), business administration (MSN/MBA), and public health (MSN/MPH). Post-master’s certificates can be provided for all programs and are crafted according to individual needs and background education.

Characteristics of the Graduate

- Teaching/Learning: Develops and teaches educational offerings and provides consultation with other professionals/populations and communities about health, illness and health-seeking behavior
- Research/Inquiry: Identifies clinical research problems, initiates utilization of research and participates in scientific inquiry
- Nature of Practice: Assumes functions and role of the Advanced Practice Nurse
- Leadership: Assumes leadership positions in employment or community organizations at the local/state/national level
- Ethics: Applies ethical principals in Advanced Practice Nursing
- Collaboration: Initiates interdisciplinary teams to enhance practice
- Communication: Establishes effective communication systems among clients and colleagues
- Policy Development: Contributes, implements and influences health policy development through work and professional organizations

Degree Requirements

The MSN program itself requires a minimum of 36 credit hours to graduate, but the majors require an average of 40 credit hours of graduate credit for the student who enters with a BSN degree. Other degree requirements must be fulfilled for those entering with the portfolio option. A maximum of nine (9) semester hours of credit in approved graduate courses, where the student obtained a grade of B or above, may be transferred to meet program requirements, and three (3) credits may be waived for a total of 12 credits. To be awarded an MSN degree, the student must have a cumulative GPA of 3.0 and received satisfactory grades in all nursing courses taken for credit as a MSN student. Degree requirements must be completed within 5 years of initial enrollment.

Path to the MSN

Students in the MSN program choose from several different majors, but virtually all students must take at least ten core courses (http://fpb.case.edu/MSN/program.shtm). Student must complete a required number of credit hours as well as clinical hours. The majors require an average of 40 credit hours, usually completed in three or four semesters (including summer). Most MSN majors also require at least 500 clinical hours; the anesthesia, midwifery, cardiovascular, and flight nursing programs require more.

Courses are usually scheduled to meet once a week for several hours. This frees up other days for clinical hours or work. Students can choose either a part-time or full-time program, with full-time consisting of 9 or more credits per semester and part-time being anything less.

Course Grades

Progression in the MSN program is contingent on a cumulative GPA of 3.0 and passing grades in all courses (A, B, C, P, or S). If the cumulative GPA falls below 3.0 during any semester, the student will be placed on academic probation. To be removed from probation, the student must have a cumulative GPA of 3.0 or higher in the next academic semester he/she is registered. If the student fails to be removed from academic probation at this time, he/she may be separated from the FPB School of Nursing.

The grade of Incomplete (I) will be given at the discretion of the instructor for work not completed in the semester. The “Arrangement to Resolve a Grade of Incomplete” form must be completed prior to the end of the semester, or the instructor may assign a grade of U or F. A grade of I must be removed by the end of the semester following the one in which the course was taken or before the student enrolls in a course for which the initial course is a prerequisite. No credit is given for an I grade. The I will remain a permanent part of the transcript if the student fails to complete course requirements within the next semester, unless alternative arrangements are approved in writing.

A student who receives a grade of F or U for a required course must register for the course the next semester it is offered to continue in the MSN program. If the grade of U or F is in a course that is not required for the MSN program, the student may register for the same course, or a substitute course and achieve a passing grade to continue in the MSN program. If the student receives a grade of F or unsatisfactory performance (F, U, and NP) in two courses, he/she will be excluded from FPB.

Majors and Sample Full-Time Curriculum

Virtually all MSN students must take at least ten core courses in Professional Development, Scientific Inquiry, and Nursing Practice (for nurse practitioner majors). Although the MSN program itself requires a minimum of 36 credit hours to graduate, the majors require an average of 40 credit hours, usually completed between 18 and 24 months, though the nurse anesthesia program requires 28 months of study. Students also need to put in at least 500 clinical hours for most MSN majors; the anesthesia, midwifery, cardiovascular, and flight nursing programs require even more. Post-master’s certificates can be provided for all programs and are crafted according to individual needs and background education.

Nurse Practitioner Majors

Acute Care Nurse Practitioner (http://fpb.case.edu/MSN/ACNP.shtm) (ACNP)

- Subspecialty: Flight Nursing (http://fpb.case.edu/MSN/ACNPFlight.shtm)
- Subspecialty: Cardiovascular Nursing (http://fpb.case.edu/MSN/ACNPCardio.shtm)

Acute care nurse practitioners (ACNPs) often serve as first responders in a variety of healthcare settings that include community and academic hospitals, intensive care units, outpatient clinics, and specialty practices like medical cardiology, subacute care, or trauma.

As part of FPB’s MSN program, the ACNP major requires at least 39 credit hours of coursework and 600 hours of clinical experience. A recent year of adult intensive care (ICU) nursing experience is required prior to beginning this program.

Adult-Gerontology Nurse Practitioner (http://fpb.case.edu/MSN/adultgero.shtm)
- Subspecialty: Cardiovascular Nursing (http://fpb.case.edu/MSN/adultgerocardio.shtm)
- Subspecialty: Gerontology

Adult-gerontology NPs provide comprehensive care, including wellness and acute and chronic illness care, to patients from late-adolescence through adulthood to the elderly. They specifically emphasize health promotion, disease prevention, and comprehensive gerontological assessment. They practice in a wide variety of locations that include hospitals, urgent and primary care settings, community clinics, long-term care facilities, and private practice.

As part of FPB’s MSN program, the adult-gero NP major requires 41 hours of coursework, plus about 600 hours of clinicals. The coursework is usually completed within 18 months (four semesters) for full-time students, and courses are offered in a distance-friendly format that requires about eight trips to Cleveland.

Pediatric Nurse Practitioner (http://fpb.case.edu/MSN/PNP.shtm) (PNP)
- Subspecialty: Cardiovascular Nursing (http://fpb.case.edu/MSN/PNPcardio.shtm)

Pediatric nurse practitioners (PNPs) are advanced degree nurses who provide primary health care for children from infancy to 21 years of age, including physical, psychosocial, and family dimensions of health. They diagnose and treat childhood illnesses, provide immunizations, perform developmental screenings and physical assessments, and much more in their objective to protect and enhance the health of children. Along with pediatricians and other providers, PNPs practice in settings such as private practice, primary care clinics, community health centers, and hospitals.

As part of FPB’s MSN program, the PNP major requires 40 credit hours of coursework, plus about 600 hours of clinicals. The coursework is usually completed within 18 months (four semesters) for full-time students, and courses are offered in a distance-friendly format that requires about eight trips to Cleveland.

**Neonatal Nurse Practitioner** ([http://fpb.case.edu/MSN/NNP.shtm](http://fpb.case.edu/MSN/NNP.shtm)) (NNP)

Neonatal nurse practitioners (NNPs) are advanced practice nurses who focus on the management and care of fragile, critically ill, and premature infants and their parents. Their role encompasses activities that promote optimal health, detect illness, and facilitate restoration and maintenance of the health of neonates. NNPs practice in neonatal intensive care units (NICUs), which are found in children’s and large general hospitals.

Two years of NICU nursing are needed prior to beginning the NNP major. As part of FPB’s MSN program, the major requires 40 credit hours of coursework, plus about 600 hours of clinicals in NICUs. Full-time coursework is completed within 24 months (4 semesters).

**Family Nurse Practitioner** ([http://fpb.case.edu/MSN/FNP.shtm](http://fpb.case.edu/MSN/FNP.shtm)) (FNP)

- Subspecialty: Cardiovascular Nursing ([http://fpb.case.edu/MSN/FNPcardio.shtm](http://fpb.case.edu/MSN/FNPcardio.shtm))
- Subspecialty: Gerontology

Family nurse practitioners (FNPs) are advanced nurses who offer care, promote health, and treat disease in patients ranging from children to elders. They provide comprehensive wellness care as well as management of acute and chronic illnesses. FNPs practice in hospitals, urgent care and primary care settings, federally-qualified health centers, and private practice offices.

As part of the MSN program, the FNP major requires 40 credit hours of coursework, plus about 600 hours of clinicals. The coursework is usually completed within 18 months (four semesters) for full-time students, and courses are offered in a distance-friendly format that requires only eight trips to Cleveland.

**Women’s Health Nurse Practitioner** ([http://fpb.case.edu/MSN/WHNP.shtm](http://fpb.case.edu/MSN/WHNP.shtm)) (WHNP)

Women’s health nurse practitioners (WHNPs) are experts in woman-focused health promotion and disease prevention. As specialists, WHNPs deliver comprehensive health care to women, with emphasis on reproductive and gynecologic health needs. They provide well-woman care, care during and after pregnancy, and care before and after menopause. They also care for women experiencing episodic acute or chronic illnesses. WHNPs see a broad range of patients in practice settings that include primary care centers, adolescent health centers, and private practice.

The WHNP major, as part of FPB’s MSN program, requires 38 credit hours of coursework, plus about 600 hours of clinicals. With full-time enrollment, coursework is usually completed within 12 months (four semesters).
semesters). Core MSN courses are offered in an intensive format (http://fpb.case.edu/Courses/intensive.shtm) that requires limited trips to Cleveland.

Blended Role (NP/CNS) Majors

Advanced Practice Adult Oncology/Palliative Care (http://fpb.case.edu/MSN/OncologyPalliativeCare.shtm)

Advanced practice adult oncology/palliative care nurses provide expert care to patients undergoing cancer treatment and those focusing on the management of complex symptoms. These advanced practice nurses care for both inpatients and outpatients, within hospitals and clinics as well as via hospice and palliative care programs.

At FPB, this innovative, versatile major prepares graduates to practice in a variety of oncology or hospice and palliative care settings. Students may select either nurse practitioner or clinical nurse specialist tracks. Graduates of the program will be eligible for the adult nurse practitioner certification and/or oncology nurse practitioner certification, oncology clinical nurse specialist certification, or certification in palliative care, assuming other examination and practice requirements are met. The program can be done on either a full-time or part-time basis. One year of oncology or medical-surgical nursing experience is required. The major requires 40-41 credit hours of coursework, plus about 500 hours of clinicals. The coursework is usually completed within 24 months (four semesters) for full-time students.

Opportunities to obtain post-Master’s certification in oncology or palliative care are also available. Palliative care courses (Symptom Management I and II) may be taken as electives as part of any other APN major, or by non-degree students seeking additional preparation for their practice.

Family Systems Psychiatric Mental Health Nursing (http://fpb.case.edu/MSN/familysystems-psych.shtm)

In addition to the shortage of advanced practice psychiatric nurses, healthcare systems are challenged to address the needs of an increasing elderly population; stressed military families; families impacted by the economy, loss of employment, home foreclosure, and other stressors; and a population facing an increase in reported rates of domestic and youth violence.

The work of an advanced practice psychiatric nurse practitioner or clinical nurse specialist is dynamic in scope, ranging from prevention and health promotion to early detection and assessment to integration and culturally appropriate, client-centered intervention. Similarly, they can practice in a multitude of environments, including community mental health clinics; hospitals systems; private physician offices; prison systems; military bases and Veteran’s Affairs Hospitals; treatment facilities; and psychiatric mental health community centers, among others.

The Family Systems Psychiatric Mental Health Nursing major, as part of the MSN program, requires 45 credit hours of coursework and 720 hours of clinicals. The coursework is usually completed within four semesters.

Other Majors
Nurse Anesthesia (http://fpb.case.edu/MSN/anesthesia.shtm)
Nurse anesthetists are advanced practice nurses who administer all types of anesthetic for every kind of surgery or procedure. As expert clinicians primarily responsible for direct patient care, they focus on preoperative evaluation, intraoperative management, and postoperative anesthesia care.

Clinical courses for MSN nurse anesthesia students at FPB provide them with the opportunity to give direct patient care, participate in staff education programs, and identify clinical topics for research. Students work one-on-one with a clinical preceptor with expertise in nurse anesthesia. They will also take part in administering general and regional anesthesia in persons of all ages. The management of emergency operations, obstetrics, pediatrics, and neurosurgery are an integral part of the clinical experience. Graduates will be eligible to take the certification examination administered by the Council on Certification of Nurse Anesthetists.

All applicants must have at least two years of recent experience in one of the following acute care settings: recovery room, emergency room, or medical, surgical, neonatal, or pediatric intensive care or one year's experience with certification in their respective nursing specialty (CCRN, CEN, CPAN).

Nurse Anesthesia: Advanced Practice II (NUAN 552) 1 - 5
Year Total: 1-5

Total Units in Sequence: 32-45

Nurse Midwifery (http://fpb.case.edu/MSN/midwifery.shtm)
Certified nurse-midwives (CNMs) are educated in the two disciplines of nursing and midwifery and are certified according to the requirements of the American Midwifery Certification Board. CNMs manage women's health care, focusing on common primary care issues, family planning and gynecologic needs, pregnancy, childbirth, the postpartum period, and care of the newborn. They practice within a healthcare system that provides for consultation, collaboration, or referral as indicated by the...
health status of the client, in accordance with the Standards for the Practice of Midwifery, as defined by the American College of Nurse-Midwives (ACNM).

Nurse midwife students must complete 48 credit hours of coursework as well as work individually with a clinical preceptor in a variety of out-patient, in-patient, and out-of-hospital settings to provide optimal care to women in the antepartum, intrapartum, and postpartum periods. Graduates will be eligible to take the certification examination administered by the American Midwifery Certification Board. With the addition of 3 clinical hours in NURS 559 Advanced Practice in Nursing Care of Women, students are eligible for dual certification in Women’s Health.

Joint Degrees

Master of Science in Nursing/Master of Arts in Anthropology (MSN/MA Anthropology) (http://fpb.case.edu/MSN/MSNMABIO.shtm)

The Master of Science in Nursing/Master of Arts in Anthropology joint degree provides students with the unique combination of cross-cultural expertise in medical anthropology and clinical expertise in nursing. Students must complete a minimum of 19 credits in nursing core courses, 12 to 22 credits in clinical major courses, and a minimum of 18 credits in anthropology courses, distributed as indicated below. The actual number of credits depends upon the major selected. This curriculum plan reflects clinical nursing majors other than nurse anesthesia and community health. Choice of electives should guarantee that minimum credit requirements are met. All students must pass the Masters Qualifying Examination in Anthropology.

Master of Science in Nursing/Master of Arts in Bioethics (MSN/MA Bioethics) (http://fpb.case.edu/MSN/MSNMABIO.shtm)

The Master of Science in Nursing/Master of Arts in Bioethics joint degree program is designed to provide nurses with the concepts essential to ethics and ethical decision-making. This program is relevant for nurses who are family advocates within health care systems. The total MSN/MA degree requirements are 53-63 credits.

Nursing Centers of Excellence

The Centers of Excellence at the Frances Payne Bolton School of Nursing expose students first-hand to nursing research, global health care systems, evidence-based practice, initiatives in aging care, self-management, end-of-life science, and inclusion of persons with disabilities into research.

Sarah Cole Hirsh Institute for Best Nursing Practices Based on Evidence (http://fpb.case.edu/Centers/Hirsh)

Established in 1998, the Sarah Cole Hirsh Institute for Best Nursing Practices Based on Evidence develops and promotes evidence-based practice in nursing. Historically, nursing and medical practices have been based, in part, on expert opinion and tradition, creating variations in practice and often subjectivity in judgment. Through the integration of research and practice, the Hirsh Institute stimulates the use of best nursing practices based on evidence as a basis for delivering superior health care, and shaping the next phase of nursing research.

Center for Research and Scholarship (http://fpb.case.edu/Research)

The Center for Research and Scholarship provides a variety of services to support the research and scholarship efforts of faculty, students, and postdoctoral fellows, including management of the internal and external funding process. The center provides faculty and students with current funding opportunities that are available, assists in the development of research proposals, and disseminates research results regionally, nationally, and internationally. The center staff assists in the submission of Human Subjects Research reviews to the affiliated institutional review boards. The center provides support for all stages of faculty members’ manuscript submission including submission and tracking. Four full-time employees staff the center. A conference room and a workroom are available within the center for both faculty and student investigators.

WHO Collaborating Center for Research and Clinical Training in Home Care Nursing (WHOCC) (http://fpb.case.edu/Centers/WHOCC)

The WHOCC is affiliated with the World Health Organization, which was established in 1948 by the United Nations as its specialized agency for health. The WHO’s objective, as set out in its Constitution, is the attainment by all peoples of the highest possible level of health. WHO Collaborating Centers are national institutions around the world designated by the WHO to collect and disseminate information on world health issues, provide education and training, and participate in collaborative research. The WHO Collaborating Center at FPB is charged with research and clinical training in home care nursing and is one of only 10 designated centers for nursing in the United States.

The University Center on Aging and Health (UCAH) (http://fpb.case.edu/Centers/UCAH)

By the year 2020, a staggering number (approximately 17%) of the US population will be considered elderly. In addition, almost 40% of a physician’s time will be spent treating the elderly by that year. UCAH at Case Western Reserve University serves international, national, and local communities by providing an interdisciplinary platform for gerontological education, research, and services. A key objective of UCAH is to increase the number of students in the role of gerontology and utilize its partnerships to promote interdisciplinary collaboration.

Center of Excellence for Self-Management Advancement through Research and Translation (SMART) (http://fpb.case.edu/SMARTCenter)

The SMART Center is an NIH-funded research center designed to address the science of self-management at the levels of individual, family, organization, and community. Its goals are to expand knowledge related to self-management through interdisciplinary investigations of self-management, serve as a national leader in research and dissemination of research findings to the scientific community, and diffuse knowledge into clinical practice and policy to enhance the use of self-management strategies to improve the health, function, and quality of life of individuals.

Building End-of-life Science through Positive Human Strengths and Traits (BEST) Center (http://fpb.case.edu/Centers/BEST)

The BEST Center is funded by the National Institute of Nursing Research/National Institute of Health. It focuses on quality of life research for seriously ill people, including those who are at the end of life. The Center’s mission is to radically shift the direction of quality of life research.

Full Inclusion of Persons with Disabilities in Self-Management Research (FIND) Lab (http://fpb.case.edu/FINDLab)

The FIND Lab’s mission is to promote the full inclusion of persons with disabilities in mainstream health care research through use of Universal Design of Research and to encourage research on the general health care needs of persons with disabilities. It is funded by the National Institutes of Nursing Research/National Institute of Health.
Other Student Categories

Non-Degree Students
An applicant with basic preparation in nursing may apply to register as a non-degree student for up to 9 credits. Those who have not yet been formally accepted into the FPB School of Nursing must complete the non-degree application (http://fpb.case.edu/StudentServices/forms.shtm) and return it to the Registrar’s office (http://fpb.case.edu/StudentServices/registrar.shtm) by fax or e-mail. After your application is received and approved, you will receive further instructions via e-mail on how to register via the Student Information System (SIS). They must also request that any former colleges or universities forward their transcripts to FPB.

For those wishing to take PhD courses, the applicant must obtain written permission from the faculty teaching the course and the Associate Dean for Doctoral Education in FPB for those taking PhD courses. Contact the Graduate Studies Office (http://www.cwru.edu/provost/gradstudies) at 216-368-4390.

Clinical courses may not be taken as a non-degree student. Continuation of this status is at the discretion of FPB’s administrative officer. Status as a non-degree student does not imply acceptance into FPB. If the non-degree student applies for admission to FPB, course work completed as a non-degree student will be evaluated on an individual basis for its applicability to degree requirements within the time frame for the degree.

Special Students
Special students are those who take a specified course of study designed to meet an individual’s needs. They must meet the admission requirements for the program where the majority of class work will be done. Their status and satisfactory performance will be reviewed after one year. Students completing MSN courses to obtain a certificate in any advanced practice nursing major will be admitted as special students.

If a special student decides to pursue a graduate degree, the approval of the Associate Dean of Academic Programs must be obtained. Entrance into the degree program will be considered the date when the student enrolled in the first course work as a special student. These courses must have been taken within the last five years. If more than five years have elapsed since the course work as special student was done, the student must meet the current academic requirements for the major selected.

International Students
International students may enroll in the masters, nursing doctorate and PhD programs. They must meet the admission requirements for the program that they select. In addition, application should be submitted approximately one year before the desired date of enrollment. English translations of transcripts are required.

Each applicant must document the ability to speak, read, and write English as evidenced by satisfactory performance on the Test of English as a Foreign Language (TOEFL). The International English Language Testing System (IELTS) is also accepted.

Test information can be obtained at: www.toefl.org (http://bulletin.case.edu/schoolofnursing/otherstudentcategories/http://www.toefl.org) and www.ielts.org (http://bulletin.case.edu/schoolofnursing/otherstudentcategories/http://www.ielts.org)

Students whose native language is English are exempt. For those whose native language is not English, the minimum acceptable scores are:

• Paper-based TOEFL: 577
• IELTS: 7.0

Additional requirements for international students:

• International students must present evidence of adequate financial resources to meet the expenses of full-time study and travel expenses to and from Cleveland. Financial assistance is not available from FPB. The student must arrange for a sponsor who will provide full financial support. The sponsor must document their ability to financially support the student, including costs of tuition and fees, room and meals, books, incidentals, and travel expenses.
• Students applying to clinical programs must be eligible for licensure as a registered nurse (RN) before any clinical courses are taken. To obtain RN licensure, the student can either 1) obtain licensure in a state other than Ohio and apply for reciprocity in Ohio, or; 2) sit for the licensure examination (NCLEX-RN) in Ohio. For information on how to become licensed in any state, you must obtain information from the specific state where you wish to become licensed. For the individual addresses of each State Board of Nursing, go to the National Council of State Boards of Nursing website (http://www.ncsbn.org) and then go to “Click here to access the Boards of Nursing contact information and Web sites.”

Students may also write to:
National Council of State Boards of Nursing
676 N. St. Clair Street
Suite 550
Chicago, IL 60611-2921
Telephone: 312.787.6555

Once admitted to FPB, an application form for a student visa will be sent to the student. Upon enrollment at the university, the student must subscribe to the Student Medical Insurance Plan or proved proof of other medical insurance coverage.

• Internet-based TOEFL: 90
PhD in Nursing

The PhD program is a post baccalaureate degree program designed to prepare scientists who initiate and conduct research relevant to nursing. Expertise in clinical nursing and competence in research are required to prepare scholars to disseminate knowledge into clinical practice and nursing education. To achieve excellence in the academic program, students engage in activities consistent with the areas of research excellence of the faculty. Moreover, the faculty is committed to the intellectual growth of the student, which is achieved through mentorship and collaboration in scholarship.

The PhD student concentrates on the organization and development of knowledge requisite to nursing practice for service to a population. The population may include: age group (children, adults), focus of service (individual, family, or community) and position on the continuum of health (health and wellness, acute and chronic disruptions in health). PhD students are culturally diverse, and many develop and apply knowledge relevant to global health needs.

Characteristics of the Graduate

- Develops, implements and evaluates educational offerings, individually and in collaboration with others, related to research and nursing theory.
- Synthesizes and generates knowledge for the discipline of nursing.
- Identifies health issues amenable to research; disseminates knowledge and evidence to improve health.
- Assumes leadership positions of increasing complexity at the local/state/national and international levels.
- Identifies and analyzes ethical issues and standards related to science and knowledge development.
- Develops systems to establish and promote interdisciplinary teams in the scientific community.
- Uses and promotes the development of effective communication strategies that support scholarship and the dissemination of research findings.
- Generates and disseminates knowledge relevant to health care policy.

Degree Requirements

Our PhD in Nursing program prepares students for careers as researchers, scientists, or university-level faculty members. They have the opportunity to participate in the research that has a profound effect on the science of nursing and changing nursing practices. PhD students concentrate on the organization and development of knowledge requisite to nursing practice for service to a particular population. PhD students are culturally diverse, and many develop and apply knowledge relevant to global health needs.

The PhD requires a minimum of 57 semester hours of course work, which includes the foundation for the student’s dissertation as well as dissertation completion. The program is individualized, taking into account student interests, aspirations, and work experience. Students entering the program with a BSN who do not wish to obtain an MSN degree will be required to take NURS 507 Clinical Knowledge and NURS 508 Context of Care. A dual degree MSN/PhD program is available for those who also want an MSN degree.

The general program requirements are listed below. Additional coursework may also be necessary, as determined by the faculty advisor.

Dissertation Fellowship (upon recommendation to the School of Graduate Studies) for a maximum of 4 consecutive semesters after completion of NURS 701

Optional PhD Education Courses

To insure that graduates from our PhD in Nursing program are prepared to assume the full faculty role upon graduation, including preparation for teaching and mentoring others, students are encouraged to take optional courses that specifically address the development of their teaching skills.

While two of these courses are taught in an intensive format, between semesters, the third course consists of a 60-hour teaching practicum.

Preparation for Nursing Education Coursework

- Curriculum and Instruction
- Theoretical Foundations of Teaching and Evaluation
- Teaching Practicum

It is recommended that courses within this education track be integrated within the student’s planned program of study within the first two years of the program.

The courses and teaching practicum must be completed before the student will be advanced to candidate status.

Opportunities for undergraduate and graduate clinical and didactic teaching during paid teaching assistantships are available.

Sample Curriculum Plans

See the website for details. (http://fpb.case.edu/PhD/sampleplans.shtm)
Traditional Format Sample Plan

Students who already have earned the MSN degree can enter the PhD program directly and complete the PhD core coursework during fall and spring semesters.

- A minimum of 3 credits of proposal development is required; however, students may need more time to complete their candidacy exam and proposal development and may therefore need to take more credits of proposal development.
- Concurrent enrollment in proposal development credits and dissertation credits is not permitted.
- Full time status is defined as 9 credits per semester ONLY while students are enrolled in their coursework prior to proposal development. However, enrollment in even a single credit of NURS 671 Proposal Development or NURS 701 Dissertation Ph.D. constitutes full time study.
- Total required credit hours for the nursing PhD (post MSN) = 57 credits

Fast-Track Sample Plan

Students with a BSN or equivalent can pursue the PhD degree without earning an MSN. In addition to PhD core requirements, they must complete transition courses to gain clinical knowledge and be able to develop a research focus pertinent to nursing in the context of care.

- A minimum of 3 credits of proposal development is required; however, students may need more time to complete their candidacy exam and proposal development and may therefore need to take more credits of proposal development.
- Concurrent enrollment in proposal development credits and dissertation credits is not permitted.
- Full time status is defined as 9 credits per semester ONLY while students are enrolled in their coursework prior to proposal development. However, enrollment in even a single credit of NURS 671 Proposal Development or NURS 701 Dissertation Ph.D. constitutes full time study.
- Total required credit hours for the nursing PhD (post BSN or equivalent) = 63 credits

Dual Degree Programs

MSN/PhD Dual Degree Program

Students are accepted into both programs. They select an MSN major or clinical specialty and may take MSN and PhD courses concurrently. Up to 8 credits of course overlap are allowed, depending on the clinical major.

DNP/PhD Dual Degree Program

Students are accepted into both programs and meet course requirements for both doctorates with an overlap of 11 credits. Students develop proposals for the DNP thesis project and PhD dissertation concurrently in order to facilitate timely completion of both degrees.

Advanced Standing for DNP Graduates

Students who have earned a DNP degree within the past five years may be granted advanced standing in the PhD nursing program and qualify for a waiver of up to 9 credits.

Other Programs

Summers-Only Plan

Depending on the number of registrants, PhD courses may be offered during the summer months to enable students to earn the degree in six summers.
School of Nursing Courses

NUAN Courses

NUAN 449. Chemical and Physical Properties of Anesthesia. 1 Unit.
Introduction and elaboration of basic chemical and physical principles as they relate to clinical nurse anesthesia practice. An in-depth study of organic and biochemical principles, structure/relation, relationships and their significance in pharmacology. Emphasis will be on the integration and practical application of these principles to clinical nurse anesthesia practice.

NUAN 450. Pharmacological Strategies in Anesthesia Practice. 1 Unit.
Application of pharmaco-kinetic and pharmaco-dynamic principles as they relate to specific anesthetic and adjunct drugs used in anesthesia practice. Integration of this information into clinical area regarding anesthetic uses, dosages, and side effects of these classes of drugs is emphasized. Coreq: NUAN 449.

NUAN 451. Physiological Variables and Responses I: Respiratory System. 1 Unit.
A detailed study of the anatomic structures and the related physiochemical mechanisms governing respiratory function in health and disease. Assess the functional integrity of this system utilizing all pertinent objective and subjective data. Consider the impact of anesthetic agents and techniques on this system and how one can plan anesthetic to facilitate health-seeking behaviors as a patient attempts to attain, maintain or regain optimal health. Implications for all types of surgery due to the effect of anesthesia on respiratory system, however, special attention on surgery involving this specific system. Prereq: NUAN 449.

NUAN 452. Physiological Variables and Responses II: Cardiovascular. 1 Unit.
A detailed study of the anatomic structures and the related physiochemical mechanisms governing cardiovascular function in health and disease. Assess the functional integrity of this system utilizing all pertinent objective and subjective data. Consider the impact of anesthetic agents and techniques on this system and how one can plan anesthetic to facilitate health-seeking behaviors as a patient attempts to attain, maintain, or regain optimal health. Implications for all types of surgery due to the effect of anesthesia on cardiovascular system, however, special attention on surgery involving this specific system. Coreq: NUAN 451.

NUAN 453. Physiological Variables and Responses III: Peds, OB, Endo & Geriatrics. 1 - 5 Unit.
Study of health-seeking behaviors and intervening variables with special consideration of the anatomy, physiology, and pathophysiology of the pediatric and obstetric, endocrine and geriatric patient. Focus will be on the integration of this information into the nurse anesthesia care to support the health-seeking behaviors of these patients. Prereq: NUAN 451 and NUAN 452.

NUAN 454. Physiological Variables and Responses IV: Renal and Neurologic Systems. 3 Units.
Systematic investigation of the physiologic factors related to health-seeking behaviors with special emphasis on pathophysiology of the renal and neurologic systems. Focus will be on the integration of this knowledge into the planning, implementation, and evaluation of patients requiring nurse anesthesia intervention. Prereq: NUAN 453.

NUAN 455. Anesthesia Nursing I. 1 Unit.
An introduction to the art and science of nurse anesthesia including basic anesthetic principles and beginning clinical practicum to introduce the student to anesthetic equipment and operating room environment. This course is designed to give the student practical information regarding administration of safe anesthesia.

NUAN 456. Anesthesia Nursing II. 1 Unit.
Progressive, guided instruction on clinical and ethical management of clients undergoing all forms of anesthesia. This unit includes the history of nurse anesthesia relevant to contemporary anesthetic practice, legal and ethical aspects of anesthesia delivery, and patient/client interaction strategies. The course is designed to give the nurse exposure to career expectations in nurse anesthesia; as well as prepare him/her in administration of safe, routine anesthetic with moderate amount of instructor intervention. Prereq: NUAN 455.

NUAN 457. Anesthesia Nursing III. 1 Unit.
Graduated, guided instruction in clinical management of clients receiving various types of anesthesia. Emphasis is on the preparation and planning for anesthesia utilizing Schlotfeldt paradigm. Includes actual administration of anesthesia for clients exhibiting more complicated pathophysiology. More advanced technical instruction and experience. Correlation of didactic and clinical materials, as well as continuous evaluation of student progress are integral to this course. Prereq: NUAN 456.

NUAN 551A. Nurse Anesthesia: Advanced Practice I. 2 Units.
Individual, in-depth study of advanced clinical nurse anesthesia in such specialty areas as neurosurgical, cardiovascular, obstetric and pediatric anesthesia. The nurse learns to handle more difficult, specialized patients who are at a higher risk. Emphasis is on more complex management with advanced monitoring techniques, use of pharmacological agents and handling higher stress situations. Students develop and utilize practical clinical applications of nurse anesthesia theory. Prereq: NUAN 457.

NUAN 551B. Nurse Anesthesia: Advanced Practice II. 2 Units.
(See NUAN 551A.) Prereq: NUAN 551A.

NUAN 551C. Nurse Anesthesia: Advanced Practice I. 1 - 5 Unit.
(See NUAN 551A.) Prereq: NUAN 551B.

NUAN 552. Nurse Anesthesia: Advanced Practice II. 1 - 5 Unit.
The continuation of advanced, independent clinical nurse anesthesia administration. Emphasis is on management of higher risk patients for more difficult procedures, performing total anesthetic care with minimum of anesthesiologist supervision, and readiness for transition from student to graduate status. Prereq: NUAN 551A and NUAN 551B and NUAN 551C.

NUND Courses

NUND 400. Guided Study. 1 - 6 Unit.
Selected topics in basic nursing. May include clinical experiences.
NUND 401. Introduction to the Discipline and Practice of Nursing. 7.5 Units.
This course is an introduction to the discipline and practice of nursing. Factors influencing health and illness will be explored. Selected nursing strategies and interventions designed to support the maximum health potential of the adult client will be incorporated into labs sessions and practiced in a variety of settings. Small group seminars will be used to examine historical, societal, and legal influences on nursing and the role of functions of the professional nurse. Coreq: NUND 402 and NUND 410.

NUND 402. Introduction to Pharmacology. 3 Units.
This course introduces basic principles of pharmacology and pharmacotherapeutics. A survey of characteristics and uses of major drug groups with an emphasis on nursing implications is presented. Coreq: NUND 401 and NUND 410.

NUND 403A. Introduction to Nursing Informatics. 1 Unit.
This course will introduce students to the concept of health informatics and the role nurses play in the management of information in supporting all areas of nursing including clinical practice, education, research, and administration. Using case studies, lecture and class discussion. Students will develop an awareness of the importance of nursing involvement in the design, implementation, and use of information systems and other technologies. Coreq: NUND 401.

NUND 403B. Nursing and Health Informatics. 1 Unit.
This is the second of a two part course sequence in Nursing Informatics. The focus of this course is the transdisciplinary nature of informatics in health care and the use of advanced information technologies (IT) to support decision-making, promote safety, and ensure quality in patient care. Current issues in health care policy and legislation relating to health information technology will be discussed. Prereq: NUND 403A.

NUND 404A. Inquiry A for the Graduate Entry DNP. 2 Units.
This course provides an introduction to conceptual and theoretical thinking. Students will examine knowledge development in nursing, conceptual structures, and the use of theory in nursing practice and research. Coreq: NUND 401.

NUND 404B. Inquiry B for the Graduate Entry DNP. 2 Units.
This course is a continuation of NUND 404A GE Inquiry A. It completes the introduction to conceptual and theoretical thinking and begins examination of the research process in nursing. The student will examine scientific inquiry and scientific investigation, including the research process. Prereq: NUND 404A.

NUND 404C. Inquiry C for the Graduate Entry DNP. 2 Units.
This course is a continuation of NUND 404B GE DNP Inquiry B. It expands the examination of scientific investigation in nursing and includes data management, analysis, and interpretation; critique of existing research; and implications for nursing practice. Coreq: NUND 404B.

NUND 405. Altered Human Functioning. 3 Units.
Introduction to basic pathophysiologic outcomes of selected intervening variables that alter human physiologic and cognitive functioning. This course builds on the student’s foundation of normal anatomy and physiology. Recommended preparation: completion of first semester of D.N.P. program.

NUND 406. Aging in Health and Illness. 2 Units.
This course will explore the concept of aging in health and illness with an emphasis on the older adult as an individual with the capacity to grow and develop. Prereq or Coreq: NUND 401 and NUND 410.

NUND 407. Acute Care Nursing of the Adult. 8.5 Units.
The focus of this course is the integration of the nursing process in clinical practice. Human responses to significant health events and alterations are analyzed. Application of relevant physiology, psychosocial dimensions, and pharmacology are included. Particular emphasis is placed on nursing strategies, interventions, and the evaluation of their effectiveness in the care of the acutely ill adult. Prereq: NUND 401, NUND 402, NUND 343, NUND 403A, NUND 404A, and NUND 410.

NUND 408. Introduction to Concepts of Genetics in Nursing. 1 Unit.
Introduction to the theories and concepts relevant to human genetics and genomics and their applications in health care.

NUND 409A. Professional Role Development: Leadership. 1 Unit.
This seminar is the second in a series designed to address professional role development. The seminar focuses specifically on leadership development in nursing. Prereq: NUND 401.

NUND 409B. Professional Role Development: Health Policy, Advocacy and Delegation. 1.5 Unit.
This seminar is the third in a series designed to address professional role development. The seminar content focuses specifically on health policy, delegation and advocacy. Prereq: NUND 409A.

NUND 410. Health Assessment. 2.5 Units.
Comprehensive introduction to the assessment skills required for a successful nursing practice. Basic skills, such as vital signs, are taught along with a system by system approach to physical examination. Taking a health and psychosocial history is integrated into the course. The course is taught concurrently with anatomy and physiology, concepts of nursing practice, and strategies and interventions for alterations in functioning. Coreq: NUND 401 and NUND 402.

NUND 411A. Public Health Nursing A. 2.5 Units.
This is the first of a two course sequence in public health nursing - health promotion disease prevention for groups, populations, and communities. This course will focus on enhancing the health and health-seeking behaviors of groups and populations. Adult teaching-learning theories and processes will be explored. Coreq: NUND 405, NUND 406, NUND 407, NUND 408, NUND 409A.

NUND 411B. Public Health Nursing B. 2 Units.
This is the second of a two course sequence in public health nursing - health promotion-disease prevention for groups, populations, and communities. This course will focus on enhancing the health and health-seeking behaviors of a selected community. Coreq: NUND 411A.

NUND 413. Issues and Ethics in Health Care. 2 Units.
This course introduces students to the principles underlying ethical issues and methods of rational decision making. Fundamental theories will be reviewed and applied through case analyses to address ethical dilemmas common to modern health care. Coreq: NUND 401.
NUND 414. Concepts in Nursing Management. 2 Units.
This course focuses on the study of basic concepts related to management and working with groups in the provision of nursing care. Concepts of nursing management including: planning, organizing, staffing, directing, and controlling within healthcare settings will be discussed. Coreq: NUND 417 or permission of course faculty.

NUND 415. Parents and Neonates in Health and Illness. 4.5 Units.
This course introduces biological, psychosocial, and developmental concepts applicable to the nursing care of women, newborns, and families during the childbearing cycle. Emphasis is placed on assessment and identification of health needs as parents and neonates respond to the changes inherent in the childbearing cycle. Strategies related to nursing care of parents and neonates are discussed. The clinical experience focuses on the direct application of these concepts and strategies in the care of patients in various perinatal settings. Prereq: NUND 405, NUND 407, NUND 408, NUND 409A, NUND 411A.

NUND 416. Children and Families in Health and Illness. 4.5 Units.
This course is the study of children from infancy through adolescence and their health status from a developmental perspective. Emphasis is on healthy children as well as those with common acute and chronic illness within the context of their family environment. Nursing strategies focus on interventions to promote, restore, and maintain health and foster growth and development. These strategies are based on understanding advanced concepts of children’s and families’ responses in health and illness. Prereq: NUND 405, NUND 407, NUND 408, NUND 409A, NUND 411A.

NUND 417. Psychiatric Mental Health Nursing. 4 Units.
This course is designed to address psychiatric and mental health nursing concepts. The focus is on clients with acute and chronic psychiatric disorders and their mental health. Nursing strategies that are appropriate for assessment and intervention with individuals, families, and groups to facilitate optimal mental health will be discussed and practiced. Prereq: NUND 407 and NUND 408.

NUND 418. Integrated Nursing Practice. 5.5 Units.
The focus of this course is implementation of the nursing process in the care of clients with increasingly complex issues of health and illness. Emphasis is placed on integrating principles of safe and quality nursing care. The didactic component includes contemporary topics of relevance to all specialties and settings of nursing practice. The clinical component will allow the student to collaborate with faculty to shape the experience based on the student’s identified learning needs. Prereq: NUND 405, NUND 407, NUND 409A, NUND 411A.

NUND 450. Applied Statistics. 3 Units.
This course provides an advanced overview of the assumptions and applications necessary to analyze and interpret questions and research related to clinical practice. Emphasis will be on statistical interpretation of research. During the course, data management, statistical analysis, and data interpretation, as well as univariate, bivariate, and multivariate statistics such as ANOVA and ANCOVA will be examined. The data analysis process will be examined and deconstructed throughout the course. Prereq: STAT 201 or equivalent within past 5 years.

NUND 480. Action Research and Program Evaluation. 1 Unit.
This course introduces the student to the concept of purposeful evaluation. The applicability of action research and evaluation to the change process and to continuous improvement within various venues will be explored. The iterative, participative, and emergent nature of generation of new knowledge and practice innovations will be discussed. Offered as NUND 480 and NURS 620. Prereq or Coreq: NUND 479.

NUND 500. D.N.P. Thesis. 1 - 6 Unit.
Systematic investigation of a clinically based research problem selected by the student for independent study. This includes proposal refinement and acceptance, data analysis and thesis completion under thesis committee supervision. Prereq: NURS 521.

NUND 504. Theories for Nursing Practice and Scholarship. 3 Units.
This initial course in the Doctor of Nursing Practice program examines the nature of theory, theory development in nursing, and significant conceptualizations of nursing. Application of mid-range theory to practice, practice change, and scholarship is explored. Recommended preparation: Post Masters graduate standing or permission of faculty.

NUND 505. D.N.P. Project. 1 - 6 Unit.
Systematic completion of a project based on existing educational or clinical research. The project could include: (1) program needs assessment, (2) development and testing of an assessment instrument/protocol for clients, (3) implementation and evaluation of a new program; or evaluation of a major existing program. The evaluation may include financial, clinical, or educational components as appropriate to the project. The project will be developed under the supervision of the student’s N.D. project committee. Prereq: NURS 521.

NUND 506. Leadership in Organizations and Systems. 4 Units.
Leadership theory, organization theory and philosophy, culture, structure, processes, information management, and other factors are analyzed for their relevance to health care enterprises. Nursing is examined within the larger context of the health care system.

NUND 507. Management in Advanced Nursing Practice. 3 Units.
This course is focused on management entrepreneurial concepts and issues related to advanced nursing practice. Seminars will focus on integrating legal, fiscal, quality improvement, and other intervening variables that affect environments of care. Prereq: NUND 506.

NUND 508. Health Care Policy and Planning. 3 Units.
The primary focus of this course is to explore the leadership role of nurses in health policy development and implementation as well as the role of research in health care policy formation and planning. Special emphasis is placed on selected national and international health policy issues that form the socio-political and economic context of nursing care and practice. Ethical dimensions of public policy formulations and implementation are highlighted. Offered as NUND 508 and NURS 609.
NUND 509. Curriculum and Instruction. 3 Units.
The purpose of this course is to explore the theoretical underpinnings of education and to examine innovative approaches to critical thinking. Students are provided the opportunity to analyze philosophies and principles of education along with teaching and learning styles. The focus of this course is on curriculum planning and development congruent with the philosophy and objectives of a nursing program. Curriculum development includes determination of program and course objectives, along with selection and organization of appropriate learning experiences to meet these objectives. Effective techniques for instruction in the classroom, laboratory, and clinical settings are explored.

NUND 530. Research Principles and Methods. 3 Units.
This course provides an overview of the components of the research process. Application of these principles to traditional as well as non-traditional research problems will be explored. Prereq: NUND 504. Prereq or Coreq: NUND 450

NUND 531. Approaches to Practice Focused Research. 3 Units.
This course considers a variety of methods used for practice improvement and research. The applicability of these methods, such as action research, program evaluation and quality improvement, to the change process and to continuous improvement within various venues will be explored. The iterative, participative, and emergent nature of knowledge and practice innovations will be discussed. Prereq: NUND 530.

NUND 607. Advanced Leadership and Management in Healthcare. 2 Units.
Leadership strategies and competencies for adapting to strategic advances in knowledge, technology, and organizational processes are explored. Emphasis is placed on developing strategic capacity within the dynamics of the competitive healthcare environment. Prereq: NUND 507.

NUND 609. Theoretical Foundations of Educational Testing and Evaluation. 2 Units.
In this course an overview of theories on educational measurement and evaluation is provided. Methods of evaluating teaching effectiveness, student learning, and student performance are explored with particular emphasis being placed on test construction and analysis. Prereq or Coreq: NUND 509.

NUND 610. Translating Evidence into Nursing Practice. 3 Units.
This course focuses on methods for developing best practice protocols, and translating them into practice. Prereq or Coreq NUND 531

NUND 611. Practicum. 1 - 2 Unit.
Under the guidance of the faculty advisor and designated mentor(s), the student will develop, implement and evaluate a specific clinical practice experience that strengthens and expands current expertise. This practicum will synthesize previous coursework. Prereq or Coreq: NUND 610.

NUND 615. Teaching Practicum. 1 - 6 Unit.
In this preceptored teaching practicum, the student may engage in classroom, laboratory, and clinical teaching assignments in nursing. The student will be expected to use current educational theory and nursing knowledge in completing the practicum experience (minimum 60 hours). Offered as NUND 615 and NURS 621. Prereq: NUND 509 and NUND 609.

NUND 619. Proposal Development. 1 - 2 Unit.
Under guidance of the student's chair, the student will develop a proposal addressing a practice-based research problem for acceptance by the proposal committee and IRB. Prereq: NUND 610.

NUND 620. Scholarly Project. 1 - 3 Unit.
Under the guidance of their advisor and committee, the student will complete a systematic investigation of a previously identified problem. The experience will culminate with a written report of the findings. Prereq: NUND 619.

NUNI Courses
NUNI 421. Theoretical Foundations of Nursing Informatics. 4 Units.
This course focuses on the practice of Nursing Informatics through the examination of concepts, theories, models, and phenomena relevant to the discipline. Conceptual and functional components of information management will be discussed along with their application within the health care setting. Nursing language concepts will be discussed including the Nursing Minimum Data Set, NIC, NOC, NANDA, as well as various specialized data sets used in health care.

NUNI 431. Advanced Nursing Informatics. 4 Units.
This course emphasizes the information needs of clinical users and the flow of information within the health care environment. General systems theory concepts and their applicability to health care information systems will be discussed. Diagnosis of information management problems, formulation of user-friendly solutions, implementation of those solutions, and their subsequent evaluation will be emphasized. Evolving/emerging information technologies will be discussed as well as the role of human-technology interactions in health care. Prereq: NUNI 421, MIDS 409, and NURS 471.

NUNI 432. Health Care Information Systems. 3 Units.
This course covers concepts, techniques and technologies for providing information systems to enhance the effectiveness and efficiency of health care organizations. Offered as HSMC 432, MIDS 432, MPHP 532 and NUNI 432.

NUNI 499. Internship in Nursing Informatics. 1 - 5 Unit.
This capstone experience consists of four components: the precepted internship in an external health care setting, an outline discussion experience, a leadership seminar, and a comprehensive program examination. This internship is designed to provide the Nursing Informatics student with the opportunity to apply the knowledge and skills acquired through the program to the management of health care information activities. Recommended preparation: Completion of first year of M.S.N.

NUNP Courses
NUNP 401. Health Promotion in Children and Adolescents. 3 Units.
This course introduces the concepts of pediatric primary health care from a developmental perspective. Concepts and theories from nursing and other related disciplines associated with the assessment and care of well children and their families are explored. Clinical application of theories and nursing strategies to optimize the health of children and their families are emphasized in the professional role development of students. Coreq: NUNP 410.
NUNP 402. Common and Acute Health Problems of Children. 6 Units.
This course introduces the common and acute health problems occurring in infancy through adolescence using a bio/psycho/social/cultural approach. Pathophysiology, assessment and diagnostic strategies specific to acute and common problems in children will be emphasized. Nursing strategies used to enhance, maintain and restore health will be discussed. Prereq: NURS 453, NURS 459 and NUNP 410. Prereq or Coreq: NURS 430.

NUNP 403. Advanced Management in Pediatric Primary Care. 5 Units.
This course focuses on the primary rehabilitative health care concepts specific to the management of complex, multidimensional health problems experienced by infants, children and adolescents within the context of their family and community environments. Pathophysiology, assessment and diagnostic strategies specific to complex health problems in children are emphasized. The selection of clinical interventions, clinical decision making and evaluation of strategies used to enhance the health outcomes of children and their families will be stressed. Emphasis will be placed on the consultation and referral processes within interdisciplinary and multidisciplinary teams. Prereq: NUNP 402.

NUNP 405. Neonatal Nurse Practitioner I. 3 Units.
This course introduces the role of the Neonatal Nurse Practitioner and concepts relevant to the management of the well or ill neonate. Analysis of nursing strategies to optimize health-seeking behaviors in families with well or ill neonates is highlighted. Prereq or Coreq: NUNP 416.

NUNP 410. Health Promotion Across the Life Span. 2 Units.
This course introduces health promotion fundamental to advanced practice nursing. Epidemiological principles and international, national and local health promotion goals are examined with emphasis on cultural and environmental principles, individual assessment and evidence based practice. Diagnostic reasoning and intervention strategies to optimize health-seeking behaviors in clients and to foster therapeutic relationships are examined.

NUNP 412. Neonatal Nurse Practitioner II. 4 Units.
This course focuses on the health problems of the high-risk neonate in the context of family, culture, and community. Nursing strategies that enhance, maintain, and restore health in ill neonates and their families. Principles identified for advanced diagnostic and therapeutic approaches specific to the neonate, including pharmacology, are emphasized. Prereq: NUNP 405.

NUNP 413. Neonatal Nurse Practitioner III. 3 Units.
Pathophysiology, assessment, and diagnostic approaches specific to neonates with acute problems will be examined. Concepts related to discharge planning collaboration and long-term follow-up will be introduced. Prereq: NUNP 412.

NUNP 414. Neonatal Nurse Practitioner IV. 5 Units.
This course focuses on the acute and on-going habilitative care specific to the management of neonates with complex health problems. Pathophysiology, assessment, and diagnostic approaches specific to complex health problems of preterm infants, infants with chromosomal aberrations, and infants with multidimensional health problems will be emphasized within the context of their family and community environments. Community-based service learning will be stressed along with follow-up of the infant and family during the first year of life. Emphasis will be placed on consultation and referral processes within multidisciplinary teams. Prereq: NUNP 405, NUNP 412 and NUNP 413.

NUNP 416. Integrated Assessment of the Neonate. 2.5 Units.
This course introduces principles fundamental to the integrated assessment of the neonate. It stresses perinatal history taking, gestational age assessment, physical assessment skills, and assessment of genetic risks. The course provides the basis for problem identification, decision making, advanced therapeutics, and case management. Coreq: NUNP 405.

NUNP 419. Family Health Nursing: Health of Adults and Older Adults. 5 Units.
This course introduces the student to the practice of primary health care of adults and older adults. The course includes the principles of growth and development, health promotion, disease prevention, and management of common acute and chronic health problems. Emphasis is placed on the biological, psychological, social and cultural aspects of care. Pathophysiology, assessment and diagnostic techniques specific to the acute and common problems are stressed. Nursing strategies related to health problems used to enhance, maintain, and restore health are emphasized; health-seeking behaviors and the impact on family are stressed. Prereq: NURS 453, NURS 459 and NUNP 410. Prereq or Coreq: NURS 430.

NUNP 421. Symptom Management I. 1 Unit.
The emphasis of this course is on holistic care for persons and families, addressing symptoms that interfere with quality of life at all phases: during active-cure-oriented treatment of reversible illness, during life limiting illnesses, and at the end of life.

NUNP 422. Symptom Management II. 1 Unit.
The emphasis of this course includes the holistic care of persons and families, addressing symptoms that interfere with quality of life at all phases: during active cure-oriented treatment of reversible illness, during life limiting illnesses, and at the end of life. Contextual factors influencing care delivery will also be addressed. These include interdisciplinary collaborative practice models, financial, ethical, cultural, and legal considerations. The role of advanced practice nurse in promoting quality and safety in the provision of palliative care will be emphasized. Prereq: NUNP 421.

NUNP 429. Family Health Nursing: Health of the Family During Childbearing Years. 4 Units.
This course introduces the influence of family dynamics on the care of women and their families before pregnancy, during pregnancy and within the interconceptional period. Assessment of physical and psychosocial health and deviations is central to the course. Content also includes principles of education for childbearing, parenting and conception control. Nursing strategies to optimize health-seeking behaviors of the family during the childbearing years are emphasized. Prereq: NUNP 410 and NUNP 419.
NUNP 431. Advanced Oncology Nursing. 4 Units.
The emphasis of this course is on the genetic basis and pathophysiology of cancer, and common treatment modalities. Advanced practice nursing responsibilities in all phases of cancer care (prevention, detection, diagnosis, treatment, survivorship, and end of life) will be discussed. Traditional, experimental, and complementary treatment modalities will be explored in relation to mechanisms of action, efficacy, and short and long-term side effects. Strategies for addressing health promotion and problem management in patients with cancer will be critically evaluated and implemented. Prereq: NUNP 419.

NUNP 432. Common & Acute Health Problems of the Adult and Older Adult. 5 Units.
This course introduces the common and acute health problems occurring across the adult life span. A problem-oriented approach is used with emphasis on the biological, psychological, social, and cultural aspects of care. Pathophysiology, pharmacology, assessment, and diagnostic strategies specific to the acute and common problems of adults and older adults will be included. Nursing strategies used to enhance, maintain, and restore health will be emphasized. Prereq: NURS 453, NURS 459 and NUNP 410. Prereq or Coreq: NURS 453.

NUNP 433. Common and Acute Health Problems of the Adult II. 3 Units.
This course is a continuation of NUNP 432. Emphasis is on the pathophysiology, assessment and diagnostic approaches specific to the adolescent and adult client. Health-seeking behaviors will be stressed within the context of the family and community.

NUNP 434. Advanced Management in Adult Primary Care. 5 Units.
This course focuses on the health care concepts specific to the management of complex, multidimensional health problems experienced by adolescents and adults within the context of their family and community environments. Pathophysiology, assessment and diagnostic strategies specific to complex health problems in adults are emphasized. The selection of clinical interventions, clinical decision making, and evaluation of strategies used to enhance the health outcomes of adults will be stressed. Prereq: NUNP 449.

NUNP 438. Foundations for Adult-Gerontology Acute Care Nursing. 4.5 Units.
This course focuses on establishing elements of advanced practice nursing (APN) assessment and diagnostic reasoning across the continuum of healthcare services to meet the specialized physiologic and psychosocial needs of adults and older adults with complex acute and/or chronic health conditions. Prereq or Coreq: NURS 453 and NURS 459 or students with an MSN and NP certification, permission of faculty.

NUNP 439. Family Health Nursing: Health of Children and Adolescents. 4 Units.
This course introduces the influence of family dynamics and the information necessary for the practice of primary health care of children and adolescents. The course includes application of the principles of growth and development, disease prevention, and management of common acute and chronic health problems. The impact of the family on child and adolescent development and health is explored. Clinical application of nursing strategies to optimize health-seeking behaviors is emphasized. Prereq: NUNP 429.

NUNP 441. Comprehensive Care of the Chronically Ill Adult and Older Adult. 4 Units.
The focus of this course is on implementation of advanced practice for patients with cancer and other life limiting conditions. Health promotion, health protection, disease prevention, and treatment of patients with cancer and other life-limiting conditions and their families will be included. An interdisciplinary approach to the care of patients and families across the cancer disease trajectory will be addressed. Cultural considerations for diverse populations will be incorporated in the implementation of advanced practice strategies.

NUNP 443. Acute Health Problems of Adults and Older Adults. 4 - 6 Units.
Emphasis is on the pathophysiology, assessment, and diagnostic approaches to adults and older adults with complex acute and chronic health disorders that manifest with physiologic instability. The clinical practicum focuses on further development of diagnostic reasoning, clinical judgement, caring practices, and collaboration in health care systems that deliver acute and critical advanced practice nursing. Students with a MSN and NP experience can request permission for enrollment. Prereq: NURS 453 and NURS 459 and NUNP 438.

NUNP 444. Advanced Management of Acutely Ill Adults and Older Adults. 3 - 4 Units.
This course focuses on concepts specific to complex, multidimensional health problems of acute and critically ill adults and older adults. Clinical practice focuses on management of patients with complex health problems and life-threatening conditions across the entire adult spectrum. Students with a MSN and NP experience can request permission for enrollment. Prereq: NUNP 443.

NUNP 449. Primary Care of Older Adults. 4 Units.
This course will focus on the assessment of the older adults. These factors are analyzed in various environments. Epidemiological and health behavior models are used to assess health risks, assist with problem identification, primary, secondary, and tertiary prevention strategies. Cultural, ethnic, and developmental issues are addressed. Concepts, assessment strategies, interventions and evaluation approaches specific for older adults are identified. Prereq: NUNP 432.

NUNP 454. Advanced Management of Complex Problems in the Older Adult. 4 Units.
This course focuses on the management of complex multidimensional health problems experienced by older adults and their families in multiple environments of care. Pathophysiology, assessment, and diagnostic strategies specific to complex health problems in older adults are emphasized. Evidence-based management strategies used to enhance the outcomes in older adults to promote health and prevent disability will be stressed. The role of the GNP on care giving teams will be included. Prereq: NUNP 449. Coreq: NURS 442.

NURS Courses
NURS 110. Foundations of the Discipline. 1 Unit.
The course is designed to introduce the student to the practice, profession and discipline of nursing. A futuristic perspective will provide a framework for discussion of the foundation of contemporary nursing practice within a variety of health care settings. Critical historical influences that affected the development of contemporary nursing will be discussed. Selected trends and issues that will guide future nursing practice will conclude this course.
NURS 111. Foundations of Practice. 3 Units.
This course is designed as a foundation for clinical nursing practice with a focus on communication, safety, and comfort. The relationship among evidence, theory, and nursing care will be explored. The basic components of the nursing process are presented as a framework for beginning clinical practice.

NURS 120. Nursing Informatics I: Introduction. 2 Units.
This course focuses on the application of mathematics for nursing, including algebra and biostatistics. Microcomputer, word processing and information concepts for nursing practice will be introduced.

NURS 122. Foundations of Practice II. 3 Units.
This course builds on the concepts essential to the foundations of nursing practice presented in previous nursing courses. It is designed to focus on strategies, skills, and techniques to obtain a comprehensive individual health history, family health history, and physical examination. Therapeutic interventions based on assessment and scientific knowledge will be performed. Prereq: C or higher in BIOL 116.

NURS 160. Community Engagement Seminar I. 1 Unit.
This course is a one credit seminar focused on the delivery of culturally appropriate community based health care and on selected issues contributing to the growing disparities in health care outcomes. Students will engage in a 12 hour field experience in a Cleveland community health facility or school system. The seminar will include two sessions devoted to the reflection and evaluation of the field experience. In addition, each semester will include required attendance at the Rozella Schlotfeldt Public Lectures related to issues contributing to disparities in health care. Prereq: NURS 111 or permission of instructor.

NURS 201. Applied Nutrition in Health and Disease. 2 Units.
This course builds upon the student’s knowledge of human physiology and metabolism. Nutrient requirements are highlighted as well as changes related to different stages in the lifespan. Contemporary nutritional issues will be addressed. Prereq: BIOL 114 and BIOL 116 or permission of instructor. Coreq: BIOL 117 and BIOL 119.

NURS 210. Community Engagement Seminar II. 1 Unit.
This course is a one credit seminar focused on the delivery of culturally appropriate community based health care and on the issues of aging and poverty as they contribute to the growing disparities in health care outcomes. Students will engage in a 12 hour field experience in a Cleveland community health facility or school system. The seminar will include two sessions devoted to the reflection and evaluation of the field experience. In addition, each semester will include required attendance at the Rozella Schlotfeldt Public Lectures related to issues contributing to disparities in health care. Prereq: NURS 160 or permission of instructor.

NURS 211. Introduction to Pharmacology. 2 Units.
Introduction to basic principles of pharmacology and pharmacotherapeutics. Review of characteristics and use of major drug groups with emphasis on nursing implications. Prereq: NURS 122 and BIOL 116.

NURS 230. Nursing Care of the Adult I. 5 Units.
This is the first of two courses focusing on the application of the nursing process to adults and older adults experiencing common acute and chronic health alterations. Special emphasis is placed on patient assessment, diagnostic testing, beginning medication teaching and administration, and other nursing interventions as they relate to caring for adults and older adults with alterations in fluid/electrolyte and acid/base balance, and respiratory, cardiac, genitourinary, and endocrine (diabetes) functioning. Care of the patient in the perioperative setting and care of the patient with cancer are also emphasized. Prereq: NURS 122, BIOL 114, and BIOL 117. Coreq: BIOL 121.

NURS 240. Nursing Care of the Adult II. 5 Units.
This course builds upon the knowledge and skills mastered in NURS 230. Course content and learning opportunities provide students with the information necessary to collaborate with other members of the health care team in providing comprehensive care to adults and older adults. Students are expected to collaborate with members of the health care team to plan and implement interventions and to evaluate patient responses to selected interventions. Special emphasis is placed on patients experiencing co-morbid conditions which include alterations in immunologic, hematologic, gastrointestinal, musculoskeletal, and neurologic functioning. Prereq: NURS 211, NURS 230, NURS 250, and BIOL 121.

NURS 250. Aging in Health and Illness. 2 Units.
This course will explore the concept of aging as a healthy developmental process with a particular focus on the elderly as active, independent, and contributing members of the community. Content will include the physiology of aging, health problems common to the elderly, the psychological, emotional, and sociological aspects of the aging process and policy issues. Prereq: NURS 122, BIOL 114, BIOL 117, and BIOL 119.

NURS 260. Community Engagement Seminar III. 1 Unit.
This course is a one credit seminar focused on the delivery of culturally appropriate community based health care and on the issues of culture, ethnicity and socio-economic background as they contribute to the growing disparities in health care outcomes. Students will engage in a 12 hour field experience in a Cleveland health care facility or school system where they will provide health screening and health education services to children and families. The seminar will include two sessions devoted to reflection and evaluation of the field experience. In addition, each semester will include required attendance at the Rozella Schlotfeldt Public Lectures related to issues contributing to disparities in health care. Prereq: NURS 110.

NURS 277. BCLS and First Aid for Health Care Providers. 0 Units.
Designed for healthcare professional students, this course follows the American Heart Association Basic Life Support (BLS) for Healthcare Providers Course objectives. It provides a variety of healthcare professional students the ability to recognize several life-threatening emergencies, provide CPR, use an AED, and relieve choking in a safe, timely and effective manner. Basic first aid skills are also included in this course.
NURS 310. Community Engagement Seminar IV. 1 Unit.

This course is a one credit seminar focused on the delivery of culturally appropriate community based health care and on the issues of culture, ethnicity and socio-economic background as they contribute to the growing disparities in health care outcomes. Students will engage in a 12 hour field experience in a Cleveland health care facility or school system where they will provide health screening and health education services to children and families. The seminar will include two sessions devoted to reflection and evaluation of the field experience. In addition, each semester will include required attendance at the Rozella Schlotfeldt Public Lectures related to issues contributing to disparities in health care. Prereq: NURS 260.

NURS 315. Parents and Neonates in Health and Illness. 4.5 Units.

This course focuses on the study of child bearing families and their health-seeking behaviors from a developmental perspective. Content includes nursing knowledge and skills related to assessment of health status of parents and neonates. Nursing strategies focusing on interventions to promote, restore, and maintain health are discussed. Prereq: NURS 240, NURS 317, and NURS 342.

NURS 316. Infants, Children, and Adolescents in Health and Illness. 4.5 Units.

The study of infants, children, and adolescents, and the health-seeking behaviors from a developmental perspective. Emphasis is on healthy infants, children, and adolescents as well as infants, children, and adolescents with common, acute, and chronic illness within the context of their family environment. Nursing strategies focus on interventions to promote, restore, and maintain health and foster growth and development. Prereq: NURS 240, NURS 317, and NURS 342.

NURS 317. Psychiatric-Mental Health Nursing. 4 Units.

The course is designed to address health-seeking behavior patterns within the context of psychiatric and mental health nursing concepts. The focus is on clients with psychiatric disorders and their mental health. Nursing strategies that are appropriate for assessment and intervention with individuals, families, and groups to facilitate optimal mental health will be discussed and practiced. Prereq: NURS 230 and NURS 211, or permission of instructor.

NURS 318. Nursing in the Community. 4 Units.

The study of the promotion of health and the primary, secondary, and tertiary prevention of health problems of a population. Focuses on the community as client with nursing care of individuals, families, and groups. The clinical component focuses upon developing and evaluating health promotion programs, family assessment, community assessment, and community-based home care within the context of the community. Recommended preparation: RN license.

NURS 320. Theoretical and Evidence Bases for Best Practice in Nursing. 3 Units.

This course explores the theoretical and evidence bases for best practices in nursing. The course begins with an overview of the theoretical and philosophical underpinnings of nursing practice and nursing science. The course includes an intensive focus on the concept of evidence based practice and the process of evaluation supporting practice. Additionally, the course introduces evaluation models used to determine the effectiveness and quality of existing practice and to recommend improvements. Prereq: STAT 201 and completion of five semesters of B.S.N. program.

NURS 338. Care of the Adult and Older Adult with Complex Health Alterations. 4.5 Units.

The purpose of this course is to provide the student with the knowledge and skills to care for one or more complex, acutely ill adult patients, who presents with co-morbid conditions and may be dependent on technologies. This complexity encompasses the physical, psychological, social, spiritual and ethical domains of care and includes both patient and the family. Prereq: NURS 211 and NURS 240 and NURS 342.

NURS 339. Care of the Perioperative Patient. 3.5 Units.

The purpose of this course is to provide the student with a dynamic learning experience in a perioperative environment to enhance the knowledge, cognitive and psychomotor skills to care for one or more patients undergoing operative or invasive procedures. The Perioperative Patient-Focused Model (AORN, 2008) will provide the framework for this course. This Model addresses patient centered care, patient safety, physiologic responses, and behavioral responses of the patient and family. In addition, content will cover issues of quality and safety, informatics, and identification of evidence based practice within the perioperative context. The clinical setting is interdisciplinary and multidisciplinary with other members of the perioperative team. As a member of this team, the student will develop strategies to inspire team work and collaboration with emphasis on communication, patient advocacy and leadership skills. Prereq: NURS 211 and NURS 240 and NURS 342.

NURS 341. Concepts of Management. 3 Units.

This course focuses on the study of basic concepts related to leadership, management and working with groups in the provision of nursing care. Concepts include: decision making, power, authority, roles, teaching-learning, evaluation, leader behaviors, work groups, change, legal aspects and quality. Students will apply the key concepts from marketing, law, finance, quality management, and other intervening variables that affect environments of care.

NURS 342. Medical Microbiology, Immunity, and Infectious Disease. 4 Units.

NURS 343. Issues and Ethics in Health Care. 2 Units.

This course is designed to introduce the student to the principles underlying ethical issues and methods of rational decision making. Fundamental theories will be reviewed and opportunity provided, using case analysis, to apply the theories in addressing ethical dilemmas common to modern health care.

NURS 345. Nursing Informatics III: Clinical NIS. 2 Units.

The focus of this course is directed toward the understanding and use of information technologies and systems that support decision making in nursing practice, administration, research and education. Tools such as list servers, the World Wide Web, e-mail and databases may be used to augment the knowledge base in the course. Recommended preparation: RN license. Prereq: NURS 240 or RN license.
NURS 346. Nursing Informatics IV: Applications. 2 Units.
The focus of this course is directed toward the advanced informatics concepts and the implementation of selected applications within the healthcare setting. Systems analyzed and implemented may range from those used for patient care within the inpatient environment to those used in community or outpatient environments. Affected users of the systems may be clients, families, nursing or other health care professionals. Prereq: NURS 345 or permission.

NURS 350. Concepts and Management in Geriatric Nursing. 9 Units.
This course will introduce concepts of rehabilitation, family nursing, geriatric nursing, and geriatric mental health and assist students in applying these concepts in a long-term care setting. Content will focus on assessment and intervention strategies for health problems common in the older adult. This will include a focus on developmental issues in the elderly, the assessment and management of depression. The course will also include content on assessment and intervention to improve the physical and functional capacities of the elderly, exercise interventions to improve cardiovascular and muscular capacity required for daily activities. Prereq: NURS 351 and NURS 353.

NURS 352. Acute Care III. 9 Units.
This course focuses on the knowledge and skills necessary to provide nursing care for patients with complex problems. Emphasis is on nursing strategies designed to provide comprehensive care to patients and their families affected by acute illness. Clinical practice is directed toward the care of acutely ill adults. Prereq: NURS 370, NURS 371, NURS 372, NURS 373.

NURS 354. Nursing Care of Critically Ill Adults. 9 Units.
This course focuses on the integration of knowledge and skills to provide effective and efficient nursing care to critically ill adults. Emphasis is on nursing strategies directed toward the care of the critically ill patient with a focus on use of biomedical technology, planning and managing patient care, and beginning care of patients with complex care needs. Prereq: NURS 370, NURS 371, NURS 372, NURS 373.

NURS 356. Nursing Care of Critically Ill Neonates, Infants, and Children. 9 Units.
This course focuses on the knowledge and skills necessary for beginning practice in the nursing care of critically ill neonates, infants and children. Emphasis is on nursing strategies directed toward the application of basic principles of critical care nursing with attention to special needs of critically ill newborns, infants and children and their families. Prereq: NURS 370, NURS 371, NURS 372, NURS 373.

NURS 360. Community Engagement Seminar V. 1 Unit.
This course is a one credit seminar focused on the delivery of culturally appropriate community based health care and on the issues of culture, ethnicity and socio-economic background as they contribute to the growing disparities in health care outcomes. Students will engage in a 12 hour field experience in a Cleveland health care facility or school system where they will provide health screening and health education services to children and families. The seminar will include two sessions devoted to reflection and evaluation of the field experience. In addition, each semester will include required attendance at the Rozella Schlotfeldt Public Lectures related to issues contributing to disparities in health care. Prereq: NURS 310.

NURS 370. Information Technologies in Health. 1 Unit.
The focus of this course is the application of advanced information and communication technologies in the healthcare setting. Students will explore Geographic Information Systems (GIS), data mining techniques, telemedicine technology, and advanced communication technologies in the context of health care. Prereq: NURS 315, NURS 316, NURS 345, NURS 351 and NURS 353. Coreq: NURS 371, NURS 372 and NURS 373.

NURS 371. Public Health Nursing. 3 Units.
In this course, students will utilize a problem-based approach to develop knowledge and specific competencies in applying key concepts of public health, public health nursing and epidemiology. Through guided observation and classroom experiences, students will discover strategies to assess, plan, implement and evaluate population-focused programs for health promotion and disease prevention. Prereq: NURS 315, NURS 316, NURS 345, NURS 351 and NURS 353. Coreq: NURS 370, NURS 372 and NURS 373.

NURS 372. Health in the Global Community. 3 Units.
This course focuses on an analysis of the forces shaping community and global health patterns. Drawing on multidisciplinary sources, this course explores the impact of these global processes as they manifest in the health of our own and other societies. Emphasis is placed on analysis of the broad cultural, environmental, social-economic, and political systems that contribute to health status and outcomes, health policies, and health care delivery around the world. Prereq: NURS 315, NURS 316, NURS 345, NURS 351 and NURS 353. Coreq: NURS 370, NURS 371, and NURS 373.

NURS 373. Global Health Practicum. 5 Units.
The purpose of this practicum is to provide students with the opportunity to analyze the concepts of health and health care, health policy and finance, culture and ethics through a preceptoried, 10-week community-based immersion experience in local, national, or international settings. Students will apply epidemiological techniques, the skills of negotiation, partnership building, community assessment and nursing science in the identification and analysis of a health problem leading to the development of an intervention. Prereq: NURS 315, NURS 316, NURS 345, NURS 351 and NURS 353. Coreq: NURS 370, NURS 371 and NURS 372.

NURS 392. Dynamics of Nursing Practice and Management. 4 Units.
The focus of this course is management and leadership concepts and their application to nursing practice management. Topics such as strategic planning, resource management, organizational structure, legal issues, and delegation will be explored. Recommended preparation: RN license.

NURS 393. New Applications in Nursing Practice Management. 4 Units.
The focus of this course is the application of management and leadership concepts in a seminar format and clinical practicum for registered nurses. Students will apply concepts of strategic planning, resource management, organizational structure, and delegation in a healthcare setting. Recommended preparation: RN license.
NURS 394. Global Health Seminar. 3 Units.
The focus of this course is the issues and trends in global health from both a nursing and a trans-disciplinary perspective. The course covers how international social, political, economic, environmental, and cultural issues affect health and health care. Particular emphasis is placed on nursing’s contribution to global health issues and outcomes. Offered as: NURS 394 and NURS 494. Coreq: INTH 301/401.

NURS 399. Independent Study. 1 - 12 Unit.
Independent guided study for undergraduate students with special needs or interests.

NURS 400. Guided Study in Nursing. 1 - 18 Unit.
Independent study for students with special needs and interests.

NURS 401. Statistics for Health Sciences. 3 Units.
This course examines statistical methods of analyses of variance and multiple linear regression. Content includes ANOVA, repeated measures analysis of variances, correlation analysis, and multiple linear regression. Learning statistical theories is coupled with practice of data analysis using statistical software. This course is for graduate students in nursing and health sciences. It is not for credit toward any undergraduate or graduate degrees in Statistics. Recommended preparation: completion of basic statistics within five years of admission to program. Prereq: STAT 201.

NURS 404. Emergent Care of the Child. 2 Units.
This course incorporates biological, developmental, psychological, emotional, social, and cultural aspects of care. The emphasis is on pathophysiology, assessment, diagnostic approaches, and interventions specific to emergent care of infants, children, and adolescents. Advanced therapeutics are introduced. Recommended preparation: Certification in PALS and neonatal resuscitation or concurrent enrollment in NUNP 444. Prereq or Coreq: NUNP 444.

NURS 405. Inquiry I - Theoretical Foundations. 3 Units.
This course provides an introduction to conceptual and theoretical thinking. Students will examine knowledge development in nursing, conceptual structures, and their uses as a basis for nursing practice and research.

NURS 406. Flight Nursing Seminar I. 1 Unit.
This seminar course provides a forum for preparing students to care for patients requiring air transfer to specialty care facilities. Special emphasis is placed on advanced procedures, flight physiology, and environmental influences on the clinical approach in order to apply acute care competencies to flight nursing practice. Prereq or Coreq: NUNP 443.

NURS 407. Flight Nursing Seminar II. 1 Unit.
This seminar continues to prepare students to care for patients requiring air transfer to specialty care facilities. Special emphasis is placed on clinical approaches to patient management across the lifespan. Recommended preparation: ACLS, PALS, and neonatal resuscitation certification. Recommended preparation or concurrent enrollment in NUNP 444, NURS 406, NURS 404.

NURS 409. Specialty Assessment and Diagnostics in Cardiovascular Nursing. 2 Units.
This course provides the basis for the selection and interpretation of assessment and testing strategies during the process of differential diagnosis of cardiovascular problems. Lecture is supplemented with specific clinical lab experiences.

NURS 410. Cardiovascular Nursing Seminar I. 1 Unit.
This seminar course focuses on cardiac rhythm abnormalities and their management. Prereq or Coreq: NURS 430. Coreq: NURS 409.

NURS 411. Cardiovascular Nursing Seminar II. 1 Unit.
This seminar course focuses on the management of complex cardiovascular disease. Prereq: NURS 410.

NURS 416. Integrated Assessment of the Neonate for Midwives. 1 Unit.
This course introduces principles fundamental to the integrated assessment of the neonate. Gestational age assessment, assessment of genetic risks, and physical assessment skills are developed.

NURS 424. Theoretical Basis of Medical/Surgical Nursing II. 5 Units.
This course provides the opportunity to explore complex health problems of patients requiring a variety of health care services and support systems. Nursing strategies requiring independent, interdependent, and collaborative activities are evaluated for their efficacy in supporting and assisting the patient’s progress toward health. Clinical experiences are individualized to promote implementation of the Clinical Nurse Specialist role and build upon the student’s expertise.

NURS 425. Inquiry II - Research Process. 3 Units.
This course emphasizes scholarly inquiry, scientific integrity and scientific investigation. It includes study of the research process, particularly design, sampling, data collection and analysis, and interpretation and reporting of findings. Recommended preparation: NUND 201 or STAT 201. Prereq: NURS 405.

NURS 430. Pharmacology and Therapeutics. 3 Units.
Examination of the major categories of pharmacologic agents and application of pharmacologic concepts in the clinical setting. Emphasis is placed on understanding the physiologic action of the drugs, expected patient responses, and major side effects. Major-specific seminars integrate knowledge of pharmacology into clinical practice. Recommended preparation: NURS 453, RN license or consent of instructor.

NURS 431. Introduction to Complementary and Alternative Healthcare in APN. 1 Unit.
The focus of this course is the use of complementary and alternative therapies in the delivery of healthcare by advanced practice registered nurses. The learner is exposed to an historical overview of therapies that are used as an adjunct to conventional healthcare. Emphasis is placed on the variety of evidence supporting these practices.

NURS 440. The Challenge of Suffering: Meaning, Responses, and Potential for Growth. 3 Units.
The interdisciplinary course will address the multiple facets of suffering, including the meaning of suffering, potential for growth and transformation, policies and practices that influence suffering, and those factors that affect quality of life and quality of death. Concepts and theories will be drawn from the social sciences and humanities, as well as from the health disciplines. The influence of socio-political, cultural, and economic forces of suffering will be addressed. Graduate standing or permission of instructor is required. Offered as: ANTH 442 and MEDS 9440 and NURS 440.
NURS 441. Mental Health of Older Adults. 1 Unit.
This course focuses on discussion of the consultative, investigative, and planning skills to meet the special mental health needs of the elderly. Concepts of mental health promotion, mental illness prevention, knowledge development, implementation, and evaluation of psychotherapeutic nursing strategies are examined. The examination of diverse mental health disorders in the aged mental health service delivery are included.

NURS 442. Mental Health Interventions with Older Adults. 1 Unit.
This course focuses on the theoretical basis of psychosocial assessment and intervention with older adults and their families, with an emphasis on individual, group, and family interventions. Concepts from individual, family, and group modalities and the process of consultation and education are examined. Students will also learn the components of individual and family assessment in "well elders" and the identification of mental disorders, including problems with memory and cognition. This knowledge base serves as the foundation for developing and applying interventions in practice to meet the mental health needs of older adults. Prereq or Coreq: NURS 441.

NURS 443A. Collaboration, Consultation, & Credentialing in Advanced Practice Nurs. 1 Unit.
The focus of this course is the process of consultation and collaboration in advanced practice nursing. The organizations that are involved in promoting and assisting advanced practice nurses (APNs) will be addressed. The similarities and differences in the roles of the APN will be explored. The process of credentialing APNs will also be examined.

NURS 443B. Role Development in Advanced Practice. 1 Unit.
The focus of this course is the study of the multiple roles integrated into advanced practice nursing including principles of management and leadership. Strategies to market the value of the advanced practice nurse (APN) role and the individual APN are addressed.

NURS 443C. Teaching and Learning in Advanced Practice. 1 Unit.
The focus of this course is the examination of the process of teaching, learning, and evaluation. A variety of teaching modalities applicable across the lifespan will be explored.

NURS 444A. Ethical Issues in Advanced Practice. 1 Unit.
The focus of this course is ethical decision-making for advanced practice nurses. The interaction between the health care delivery system and ethical decision making is explored.

NURS 444B. Health Care Delivery and Finance in Advanced Practice. 1 Unit.
The focus of this course is the study of the financial and business factors related to the health care delivery system and advanced practice nursing. Students will discuss strategies related to reimbursement, business practices, billing, and coding.

NURS 444C. Health Policy Legislation and Legal Issues in Advanced Practice. 1 Unit.
The focus of this course is the critical analysis of health policy and legal issues. Strategies for influencing the regulatory process will be explored.

NURS 446. Collaboration and Administration in the Health Care Delivery System. 3 Units.
Examination of the influence of the health care delivery environment on the delivery of care and the role of the Advanced Practice Nurse as collaborator within the health care structure. Clinical practice and seminars will focus on the role of the manager in planning, organizing, staffing, directing, and controlling the health care environment for the purpose of improving patient care, facilitating collaborative activities with other health care professionals, and identifying mechanisms to effect change within the health care system. Clinical practice 8 hours per week.

NURS 453. Advanced Pathophysiology. 4 Units.
This course focuses on the alterations produced by injury and disease across the lifespan to distinguish normal physiology from pathophysiologic process. Biologic concepts and relationships that contribute to capacity for health and vulnerability to illness are examined.

NURS 454. Well Woman Health Care. 3 Units.
Study of selected theoretical formulations and models applied by professional nurses in the promotion of growth and wellness in adolescent and adult women. Emphasis on conception, decision making, sexuality and health teaching. Acquisition of knowledge and skill related to physical and psychosocial health assessment of pregnant and nonpregnant clients. Individually planned experiences with nurse faculty who are serving as primary care givers in maternity, family planning and gynecologic care settings. Prereq or Coreq: NURS 453 and NURS 459.

NURS 455. The Childbearing Family. 4 Units.
This course will focus on analysis and applications of the nursing strategies to enhance health-seeking behaviors of the pregnant family during the maternity cycle and on the education of parents about the childbearing year. The normal aspects of the pregnant woman and the identification of any deviations from the normal are central to the content. The course will also emphasize the enhancement of the pregnant family's childbirth experience through utilization of the teaching-learning process. The student will learn to evaluate and apply techniques relative to childbirth education. Clinical experiences will be planned in ante partum, neonatal, childbirth education and home settings. Prereq: NURS 454. Coreq: NURS 430.

NURS 457. Labor and Birth. 5 Units.
The focus of this course is the application of nursing theory, practice and research by advanced practice nurses in the promotion of health and wellness of women, newborns and their families during intrapartum and the immediate postpartum period. Emphasis is placed on the health-seeking behaviors of the mother and her family using a holistic approach emphasizing cultural, ethnic and racial diversity in the provision and evaluation of care. Supervised clinical experience includes anticipating and identifying complications and participating in consultations, referrals and collaborative management. Prereq: NURS 455.

NURS 459. Integrated Assessment for Advanced Nursing Practice. 3 Units.
This course introduces concepts fundamental to the role of the Advanced Practice Nurse. It stresses health assessment, history taking, interviewing, and physical assessment skills, and provides the basis for decision making, advanced therapeutics and case management. Recommended preparation: RN license or consent of instructor.
NURS 460A. Theoretical Basis for Individual Counseling. 1 Unit.
This course emphasizes the ongoing development of the counseling relationship across the life span. The professional encounter between the individual and advanced practice nurse will be formulated based on the Helping Model for problem management. Students will differentiate counseling and therapy. Students will also develop and apply crisis intervention skills, interviewing skills and alternative adjunct therapies.

NURS 460B. Theoretical Basis for Individual Psychotherapy. 1 Unit.
This course will build therapeutic skills for the advanced practice nurse specializing in mental health. Students will master Helping Skills in their interventions with individuals with psychopathology. Prereq: NURS 460A, Prereq or Coreq: SSBT 548 or PSCL 524.

NURS 461. Practicum and Supervision of Individual Therapy. 1 - 2 Unit.
Direct care experience. Focus on therapeutic process with persons experiencing psychosocial disturbances. Use of nursing strategies to enhance health-seeking behaviors. Examination of genesis of psychopathology; emphasis on methods of assessment, goal setting, intervention, and evaluation. Group and individual supervision. Prereq: NURS 460A.

NURS 462. Practicum and Supervision of Group and Family Therapy. 2 - 3 Units.
Direct care experience, formal group and family experience focusing on process, content and leader behavior. The nurse-therapist employs nursing strategies to enhance health-seeking behaviors of family and group. Use of concepts from psychiatry and behavioral and social sciences related to the promotion of mental health and treatment of psychosocial distress in groups and families. Group and individual supervision of clinical experience. Focus of supervision is on judgment, family and group intervention skills, and application of theory from analysis and interpretation of data. Prereq or Coreq: NURS 467.

NURS 465. Psychopharmacology. 2 Units.
Course content will focus on drugs commonly used to treat psychiatric disorders and clinical implications for patient and family.

NURS 466. Theory of Family and Group Modalities. 2 - 3 Units.
The professional encounter between nurse therapist and the group or group members and the family or family members occurs within the context of an environment of care. The nurse therapist enhances health-seeking behaviors of individuals, families and groups. The nurse therapist employs nursing strategies cognizant of interviewing variables, to facilitate health-seeking behaviors of family and group members. Concepts from family and group theory, family and group literature, and research in family and small group dynamics are selected to provide an eclectic approach to treatment.

NURS 468. The Continual Improvement of Healthcare: An Interdisciplinary Course. 3 Units.
This course prepares students to be members of interprofessional teams to engage in the continual improvement in health care. The focus is on working together for the benefit of patients and communities to enhance quality and safety. Offered as EPBI 468, MPHP 468, NURS 468.

NURS 473. Advanced Psychopathology Across the Lifespan: Part I (Infant through Young Adult). 2 Units.
The course focuses on the assessment and diagnosis of psychopathology in children of all ages, infants through young adults. Behavioral deviations from normal growth and development will be assessed while considering age, social, cultural, and economic differences. The responses of family members to psychopathology in these age groups will be discussed.

NURS 474. Advanced Psychopathology Across the Lifespan Part II (Adult and Older Adult). 2 Units.
This course focuses on the assessment and diagnosis of psychopathology in adults and older adults. Behavioral/cognitive deviations from normal growth and development will be evaluated while considering socio-cultural differences and age-appropriate behavior. Responses of family members in relation to adults or older adults’ psychopathology will be discussed. Prereq: NURS 473.

NURS 475. General Systems Theory: Foundations for Practice. 2 Units.
This foundational seminar introduces General Systems Theory as a framework for understanding complex entities comprised of component parts that are in constant and mutual interaction. The concepts covered will emphasize the openness and flexibility of a system by attending to its entirety as opposed to focusing on separate parts. The focus is on the organizational structure and processes of that system that are circular in nature through cybernetics processes such as feedback loops which allow system adaptation and transformation. These changes enable systems to become more organized and efficient and to develop the capacity to repair themselves. Students will apply General Systems Theory to their disciplines.

NURS 476. Advanced Practice Seminar: Blended Role of Psychiatric-Mental Health APRN. 1 Unit.
Within the context of family and community, students will explore the blended role of the Psychiatric Mental Health Nurse Practitioner and Psychiatric Mental Health Clinical Nurse Specialist. A focus of the course is boundaries and professional development in the blended role. Students will examine ethical, legal, cultural and professional standards as they relate to micro and macro systems.

NURS 479. Public Policy and Aging. 3 Units.
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GERO 496, HSTY 480, MPHP 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

NURS 481. Family Systems Theoretical Foundations. 2 Units.
This course focuses on the major contemporary theoretical approaches and therapies for conceptualizing and working with families across the lifespan. Attention is given to families challenged by situations such as stress, trauma, violence, psychiatric disorders, and substance abuse. Prereq: NURS 473 and NURS 475 and NURS 476. Coreq: NURS 474.
NURS 482. Family Systems Integration and Application. 1 Unit.
This practicum experience in the application of family theory addresses the professional encounter between the advanced practice nurse (APN) and the family system with attention to health promotion and psychiatric disorder management. Special consideration is given to policy, legal, cultural, and ethical issues regarding family care and practice. Group supervision of the practicum experience is an expectation. Prereq: NURS 473 and NURS 475 and NURS 476. Coreq: NURS 474 and NURS 481.

NURS 484. Individual and Group Modalities for Family Systems Practice Across the Lifespan. 3 Units.
This seminar addresses therapeutic modalities and their foundation as they are applied to families across the lifespan. Brief, individual, and group modalities will be studied in the context of Family Systems Theory with a focus on differences in family constellations and developmental stages. The selection of modalities for families will consider the implications of cultural and gender differences, vulnerable populations, and the stigma of psychiatric illness. Prereq: NURS 481 and NURS 482.

NURS 485. Practicum and Supervision: Family Systems Practice Across the Lifespan. 2 Units.
This practicum experience involves the professional encounter between the individual, group members, and nurse therapist within the context of family systems theory. The nurse therapist employs nursing strategies and concepts from psychiatry and behavioral and social sciences related to the promotion of mental health and biopsychosocial treatment in individual and group members across the life span. Attention will be given to situations such as stress, loneliness, trauma, violence, and substance abuse. Group supervision of the practicum experience is an expectation. Prereq: NURS 481 and NURS 482. Coreq: NURS 484.

NURS 486. Modalities for Family Systems Practice: Vulnerable Family Populations. 3 Units.
Within the context of family and community in urban and rural settings, students will explore the special needs of families who are currently manifesting mental health and substance abuse disorders. Examples of vulnerable families include those who have been exposed to acute and chronic stress, natural and man-made disasters, and military-related and other forms of trauma. The needs of youth and adults who are incarcerated will be addressed. Students will encounter the diverse nature of family relationships, including blended, migrant, and immigrant families; relationships that are defined by choice; and families residing on reservations and in religious enclaves. A variety of treatment modalities will be discussed. Prereq: NURS 481 and NURS 482.

NURS 487. Theoretical Basis of Practice and Supervision in Consultation, Collaboration. 2 - 3 Units.
This course focuses on the professional encounter between the nurse consultant-educator and families, work groups, and communities within the context of an environment of care. The nurse consultant-educator applies general systems and family systems theory to enhance the capacity of families to learn, adapt, and develop through mutual interaction and cybernetic processes based on systems theory. The roles of the nurse, educator, researcher, administrator, and therapist supervisor are explored. The theories and processes of consultation, collaboration, and adult education are discussed relative to mental health and community education. Prereq: NURS 484 and NURS 485.

NURS 488. Psych-Mental Health Advanced Practice Nurse. 3 Units.
This practicum course emphasizes the professional encounter between the psychiatric mental health nurse practitioner/clinical nurse specialist (NP/CNS), families, organizations, communities, and agency personnel providing mental health services in the context of an environment of care. Systems variables that influence the learning, adaptation, and development of families, organizations and systems are emphasized. The psychiatric nurse clinician functions as a change agent in direct and indirect care through the role of practitioner, educator, consultant, planner, evaluator, and researcher. Prereq: NURS 484 and NURS 485. Coreq: NURS 487.

NURS 491. Public Health Nursing I: Foundations of Advanced Public Health Nursing. 3 Units.
This is the first course in the Public Health Nursing major. It is designed to introduce students to the role and functions of the advanced public health nurse and emphasizes the importance of population/community-based focused practice. Synthesizing knowledge from the discipline of nursing and public health sciences, students will examine the historical, philosophical, legal, and ethical foundations of community health nursing practice. This course requires a 60 hour community engagement experience in an existing population focused program. Coreq: NURS 405.

NURS 494. Global Health Seminar. 3 Units.
The focus of this course is the issues and trends in global health from both a nursing and a trans-disciplinary perspective. The course covers how international social, political, economic, environmental, and cultural issues affect health and health care. Particular emphasis is placed on nursing’s contribution to global health issues and outcomes. Offered as: NURS 394 and NURS 494. Coreq: INTH 301/401.

NURS 495. Public Health Nursing II: Assessment and Planning for the Health of Communities. 2 Units.
This is the second course in the Advanced Public Health Nursing major. Students will be introduced to assessment and program planning models based on theoretical underpinnings. Students will learn to identify appropriate evidence-based interventions based on primary, secondary, and tertiary prevention strategies to attain expected outcomes. Prereq: NURS 491.

NURS 496. Public Health Nursing III: Program Evaluation and Dissemination. 3 Units.
This course completes the Advanced Public Health Nursing major didactic content. A case method approach will be used to develop strategies for program evaluation. This course will explore approaches to encourage program dissemination, sustainability, community empowerment, coalition building, and collaborative activities with stakeholders. Prereq: NURS 495.
NURS 497. Public Health Nursing Clinical. 1.5 - 4.5 Unit.
The clinical hours for the Advanced Public Health Nurse major include population assessment, planning, implementation, and evaluation. The clinical content integrates the didactic content from the NURS 491, 495, and 496 courses. Students, in consultation with faculty and partnership with a community-based organization, identify a population, complete needs assessment, identify health assets and needs, develop and implement a program in consultation with stakeholders, and systematically evaluate the effectiveness of the program. Students can only implement the clinical aspects concurrent with or following the successful completion of the didactic content. For example, students may enroll for clinical hours for assessment while or after they have completed NURS 491 content. Coreq: NURS 491, NURS 495, or NURS 496.

NURS 499. The Nurse Executive-Personal & Professional Challenges in Health Care. 3 Units.
Offered toward end of the M.S.N./M.B.A. program and prepares the graduate for entry into a nurse management role. The focus will be on contemporary role demands in nursing management, ranging from head nurses to vice presidents of nursing to heads of community health and mental health agencies, and taking account of all regions of the U.S. Emphasis will be placed on exploring knowledge and skill requirements of nursing management, current developments (such as nursing values, goals, and tasks), and the strategic and operational configuration of hospitals and other health care agencies.

NURS 500. Master's Thesis. 1 - 4 Unit.
Systematic investigation of a research problem selected by the student for independent study. Prereq: NURS 415.

NURS 502. Inquiry III - Evidence-Based Nursing Practice. 2 Units.
This course focuses on linking research evidence to nursing practice. Processes for implementation and evaluation of evidence-based nursing practice will be included. Prereq: NURS 425 or NUND 404C.

NURS 503. Inquiry Practicum. 1 - 2 Unit.
This course focuses on the development of competencies in scientific inquiry. Such competencies are achieved through participation in a research study or evidence-based project related to nursing science with dissemination of the experience. Prereq or Coreq: NURS 502.

NURS 506. Nursing Epistemology. 3 Units.
This course involves the study of knowledge shared among members of the discipline, the patterns of knowing and knowledge development, criteria for evaluating knowledge claims and philosophy of science. The course is a search and discussion experience aimed at enabling graduate students to become knowledgeable about approaches to the study of disciplines and scientific knowledge development. Forces affecting the development of knowledge, the origins of key terms and concepts, and identification of major themes in nursing will be explored.

NURS 507. Clinical Knowledge. 3 Units.
This course is structured to allow students to develop clinical knowledge about their area of interest and to begin the process of identifying clinical research questions. Supervision for this experience will be twofold. Students will be placed with an expert clinician with a minimum of a master's degree (in nursing) to identify and arrange relevant clinical experiences. The student and the clinician will work with the course faculty to create opportunities for the student to experience the clinical phenomena of interest, which may include actual "hands-on" experience. Students will also meet regularly with the other students in the course and the course faculty for group supervision that focuses on linking clinical practice issues to research questions. Course requirements would include eight hours of practicum experiences per week.

NURS 508. Context of Care. 3 Units.
This course is designed to allow students to explore the social, political, economic, and health care issues that form the context for their clinical phenomena of interest. The intent of this course is for the student to become knowledgeable about the broader forces that affect their clinical problem. Topics might include current research in their field, as well as health policy related to their phenomena, political entities that affect funding, and the regulation of practice in their area of interest. The student will need a content expert to help them plan and coordinate their practicum experiences, which should be multiple and varied, and include exposure to both local and state level entities. Prereq: NURS 507 or equivalent.

NURS 510. Health Disparities. 3 Units.
This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, EPBI 510, MPHP 510, NURS 510, and SASS 510.

NURS 511. Strategies for Theory Development. 3 Units.
This course examines the nature of theory and strategies for theory development in nursing. Students will explore a variety of strategies and select an approach for beginning theory development that addresses nursing phenomena in their area of interest.

NURS 518. Qualitative Nursing Research. 3 Units.
This course is a study of qualitative research approaches directed toward the development of nursing knowledge. This course will include methods and issues in data collection, analysis, and critique of research findings. It will focus on the philosophical and epistemological foundations of qualitative research, present an overview of various methodological approaches, examine in depth the criteria for rigor, and analyze ethical issues in qualitative methodologies.
NURS 521. Advanced Nursing Research II. 3 Units.
The discussion of research designs and their rationale for use will be continued. Principles of measurement, study implementation and data analysis will be discussed. The development of a research proposal will be the expected outcome of this two-semester sequence. Prereq: NURS 401 or STAT 401 and NURS 520.

NURS 522. Advanced Internship in Cardiovascular Nursing. 1 - 5 Unit.
This 600-hour internship is designated to provide the master’s prepared ACNP-Cardiovascular Nursing Program graduate with the experience needed to enter practice as an APN caring for patients with complex cardiac disorders. Recommended preparation: completion of appropriate NP program. Prereq: NURS 411.

NURS 523. Advanced Internship in Flight Nursing. 1 - 5 Unit.
This internship is designed to provide the Master’s prepared ACNP-flight nurse concentration graduate with experience needed to qualify for the Certification Examination in Flight Nursing. This experience consists of a 600 hour precepted internship in a flight nursing setting. Recommended preparation: Completion of M.S.N. program focus in Flight Nursing and ACNP certification, certification in ACLS, PALS, and neonatal resuscitation.

NURS 524. Advanced Practicum in Infection Control. 1 - 5 Unit.
This practicum experience consists of up to 600 hours of a precepted experience in an infection control program setting. This practicum is designed to provide the student with experience needed to qualify for the Certification Examination in Infection Control administered by the Certification Board of Infection Control and Epidemiology to receive CIC certification. The student may choose among a public health, acute care, long-term care, or international setting. Prereq: NURS 450.

NURS 530. Advanced Nursing Research Methods I. 3 Units.
This course focuses on conceptualization of a research problem within a nursing perspective, threats to validity, sampling, measurement, and survey, quasi-experimental, and experimental designs. The emphasis is on the application of these strategies while encouraging flexibility in conceptualizing a study using different research methods. Students will develop a research study using methods consistent with theoretical and empirical knowledge and the nursing perspective. Coreq: NURS 532.

NURS 531. Advanced Nursing Research II. 3 Units.
This course is the second in a two-course sequence of research methods. It focuses on power analysis, data management, experimental and epidemiological designs and designs to assess change. Included is a discussion of ethics and concerns regarding human subjects. The emphasis is on the application of research strategies while encouraging flexibility in conceptualizing a study using different methods. The development of a research proposal is the outcome of this two-semester sequence. Prereq: NURS 530 and NURS 532 or consent of instructor.

NURS 532. Basic Statistics: Fundamentals for Analysis. 3 Units.
The purpose of this course is to provide the student with the fundamentals needed for analysis of research problems. It will review theoretical foundations of statistical analysis and inference, probability theory, and hypothesis testing. Use of measures of central tendency, basic parametric and non-parametric tests will be discussed, with specific application to health problems. Use of SPSS will be included. Prereq: Graduate standing or permission of instructor.

NURS 537. Advanced Midwifery. 6 Units.
In consultation with faculty, students select a nurse-midwifery service where they assume the responsibilities of beginning practitioner for a minimum of 10 weeks of intensive, supervised clinical practice. Synthesis of the nurse-midwifery management process while providing continuity of care integrating all core competency areas is emphasized. Students explore the professional aspects of nurse-midwifery practice. Historical development of the profession is used as a framework for understanding current issues related to nurse-midwifery education and practice in the United States. Prereq: NURS 457.

NURS 559. Advanced Practice in Nursing Care of Women. 4 Units.
Integration of concepts, theories, conceptual, and theoretical models, focused on supporting the health-seeking of women and their families as they contend with intervening factors. Emphasis on psychosomatic, acute and long-term illnesses and their interplay with psychosocial problems encountered by women. Clinical practice and seminars will include providing nursing care to women and their families in all stages of life cycle. Prereq: NURS 455.

NURS 557. M.S.N./M.B.A. Management Practicum. 3 Units.
The student will enter the M.S.N./M.B.A. program with a minimum of two years of recent clinical nursing experience, and may or may not have had any management experience. This practicum is designed to provide a guided experience in a management context. NURS 577 will be offered in the spring semester of the second year of the M.S.N.M.B.A. program, after the student has completed nearly all basic courses in both schools. The management practicum will provide onsite experience in management activities. Most practicum sites will be area health care agencies. In some cases, students my alternate opportunities addressing health-related policies in area businesses or corporations. Typical practicum experiences will engage students in management projects, special assignments and/or research. Students are expected to use current management and nursing knowledge and will often use the research process in completing the practicum experience. They will work closely with nurse executives and managers within their organizations. Prereq: NURS 468 and NURS 471.

NURS 578. Curriculum and Instruction. 3 Units.
The purpose of this course is to explore the theoretical underpinnings of education and to examine innovative approaches to critical thinking. Students are provided the opportunity to analyze philosophies and principles of education along with teaching and learning styles. The course will focus on curriculum planning and development congruent with the philosophy and objectives of a nursing program. Curriculum development includes determination of program and course objectives, along with selection and organization of appropriate learning experiences to meet these objectives. Techniques for instruction in the classroom, laboratory, and clinical settings are explored.

NURS 579. Public Policy and Aging. 3 Units.
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GERO 496, HSTY 480, MPH 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

NURS 601. Special Problems. 1 - 12 Unit.
This course is offered, with permission, to Ph.D. students in Nursing undertaking reading in a field of special interest.
NURS 609. Health Care Policy and Planning. 3 Units.
The primary focus of this course is to explore the leadership role of nurses in health policy development and implementation as well as the role of research in health care policy formation and planning. Special emphasis is placed on selected national and international health policy issues that form the socio-political and economic context of nursing care and practice. Ethical dimensions of public policy formulations and implementation are highlighted. Offered as NUND 508 and NURS 609.

NURS 615. Topical Seminar in Health Science Research. 3 Units.
This Ph.D. course is designed to provide in-depth knowledge of research in a given area. Opportunities are provided to apply knowledge for further development of the student’s research interests and ideas. An in-depth examination of selected theoretical and methodological approaches to the development of research related to human science will be emphasized. Interrelationships among theory, research, and knowledge from nursing and related disciplines will be explored.

NURS 619. Theoretical Foundations of Educational Testing and Evaluation. 2 Units.
In this course, an overview of educational measurement and evaluation is provided. Methods of evaluating teaching effectiveness, student learning, and student performance are explored, with particular emphasis placed on test construction and analysis. Prereq: NURS 578.

NURS 620. Action Research and Program Evaluation. 1 Unit.
This course introduces the student to the concept of purposeful evaluation. The applicability of action research and evaluation to the change process and to continuous improvement within various venues will be explored. The iterative, participative, and emergent nature of generation of new knowledge and practice innovations will be discussed. Offered as NUND 480 and NURS 620. Prereq: NURS 619.

NURS 621. Teaching Practicum. 1 - 6 Unit.
In this preceptored teaching practicum, the student may engage in classroom, laboratory, and clinical teaching assignments in nursing. The student will be expected to use current educational theory and nursing knowledge in completing the practicum experience (minimum 60 hours). Offered as NUND 615 and NURS 621. Prereq: NURS 578, NURS 619, NURS 620. Coreq: NURS 578, NURS 619.

NURS 630. Advanced Statistics: Linear Models. 3 Units.
This course is focused on advanced procedures for data analysis and statistical inference in health research. The course is devoted to discussion of linear models, including simple and multiple regression, logistic regression and application to study design. The role of assumptions and theory in guiding the analysis plan is emphasized through lecture, readings, and critical evaluation of published research in the student’s area of interest. Prereq: NURS 532.

NURS 631. Advanced Statistics: Multivariate Analysis. 3 Units.
This course focuses on selected advanced multivariate topics and procedures in health research. Topics will be covered through lecture, readings, computer analysis as well as critical analysis of published research in the health sciences fields. Topics to be covered in this course include: survival analysis, factor analysis, path analysis, repeated measures ANOVA and advanced regression techniques (logistic, loglinear, mixed models). Prereq: NURS 530 and NURS 531 and NURS 532 and NURS 630.

NURS 671. Proposal Development. 1 - 6 Unit.
Provides an opportunity for guided development of a candidacy proposal through planned contact with a designated committee of faculty members. The aim is to assist the student in the development of a refined proposal with strong scientific merit. The course should be utilized only by those with a candidacy proposal statement. Minimum 3 hours required for progression in program.

Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
School of Nursing Faculty

Professors

Claire M. Andrews, PhD, CNM, FAAN
(Wayne State University)
Professor of Nursing

Barbara J. Daly, PhD, RN, FAAN
(Bowling Green University)
Professor of Nursing

Joyce J. Fitzpatrick, PhD, MBA, RN, FAAN
(New York University)
Elizabeth Brooks Ford Professor of Nursing

Faye A. Gary, EdD, RN, FAAN
(University of Florida, Gainesville)
The Medical Mutual of Ohio Kent W. Clapp Chair & Professor of Nursing; Associate Dean for Minority Affairs and Health Disparities

Nahida H. Gordon, PhD
(Case Western Reserve University)
Professor of Nursing

Sarah Hall Gueldner, DSN, RNC, FAAN
(Emory University)
Arline H. and Curtis F. Garvin Professor of Nursing

Katherine R. Jones, PhD, RN, FAAN
(Stanford University)
Sarah Cole Hirsh Professor of Nursing

Mary E. Kerr, PhD, RN
(Case Western Reserve University)
May L. Wykle Professor of Nursing; Dean of Nursing

Susan M. Ludington, PhD, CNM, FAAN
(Texas Woman's University)
Carl W. & Margaret Davis Walter Professor of Pediatric Nursing

Elizabeth A. Madigan, PhD, RN, FAAN
(Case Western Reserve University)
Professor of Nursing

Judith A. Maloni, PhD, RN, FAAN
(University of Pittsburgh)
Professor of Nursing

Shirley M. Moore, PhD, RN, FAAN
(Case Western Reserve University)
Edward J. and Louise Mellen Professor of Nursing; Associate Dean for Research

Carol M. Musil, PhD, RN, FAAN
(Case Western Reserve University)
Professor of Nursing

May L. Wykle, PhD, RN, FAAN, FGSA
(Case Western Reserve University)
Marvin E. and Ruth Durr Denekas Professor

Jaclene A. Zauszniewski, PhD, RN, FAAN
(Case Western Reserve University)
Kate Hanna Harvey Professor in Community Health Nursing; Associate Dean for Doctoral Education

Associate Professors

Elizabeth G. Damato, PhD, RN, CPNP-PC
(Boston College)
Associate Professor of Nursing

Sara L. Douglas, PhD, RN
(Illinois State University)
Associate Professor of Nursing

Donna A. Dowling, PhD, RN
(University of Illinois)
Associate Professor of Nursing

Patricia A. Higgins, PhD, RN
(Case Western Reserve University)
Associate Professor of Nursing

Christine A. Hudak, PhD, RN-BC, CPHIMS
(Cleveland State University)
Associate Professor of Nursing

Cheryl M. Killion, PhD, RN, FAAN
(University of California, Los Angeles)
Associate Professor of Nursing

Marilyn J. Lotas, PhD, RN
(University of Michigan)
Associate Professor of Nursing

Diana L. Morris, PhD, RN, FAAN, FGSA
(Case Western Reserve University)
Florence Cellar Associate Professor of Gerontological Nursing

Mary T. Quinn Griffin, PhD, RN
(Case Western Reserve University)
Associate Professor

Carol Savrin, DNP, RN, FNP, CPNP, FAANP
(Case Western Reserve University)
Associate Professor of Nursing

Susan Tullai-McGuinness, PhD, RN
(Case Western Reserve University)
Associate Professor of Nursing

Patricia W. Underwood, PhD, RN, FAAN
(University of Michigan, Ann Arbor)
Associate Professor of Nursing; Executive Associate Dean for Academic Programs

Chris Winkelman, PhD, RN
(Case Western Reserve University)
Associate Professor

Amy Y. Zhang, PhD
(The Pennsylvania State University)
Associate Professor of Nursing

Assistant Professors

Celeste M. Alfes, DNP, RN
(Case Western Reserve University)
Assistant Professor of Nursing; Director of the Learning Resource Center

Christopher J. Burant, PhD, MACTM
(Case Western Reserve University)
Assistant Professor of Nursing

Elizabeth R. Click, ND, MS, RN
Mary A. Dolansky, PhD, RN  
Assistant Professor of Nursing  

Evelyn G. Duffy, DNP, A/GNP-BC, FAANP  
Assistant Professor of Nursing; Associate Director, University Center on Aging and Health  

Ronald Hickman, PhD, RN, ACNP-BC  
Assistant Professor of Nursing  

Evanne Juratovac, PhD, RN  
Assistant Professor of Nursing  

Carol G. Kelley, PhD, RN, CNP  
Assistant Professor of Nursing  

Irena L. Kenneley, PhD, RN, APHRN-BC  
Assistant Professor of Nursing  

Jack R. Kless, PhD, CRNA  
Assistant Professor of Nursing, Director of Nurse Anesthesia Program  

Deborah F. Lindell, DNP, PHCNS-BC, CNE  
Assistant Professor of Nursing  

Polly M. Mazanec, PhD, ACNP-BC, AOCN  
Assistant Professor of Nursing

Lecturer of Nursing
Mandel School of Applied Social Sciences

The Mandel School of Applied Social Sciences (http://msass.case.edu) offers curricula leading to the Master of Science in Social Administration (MSSA) degree in social work, and to the Doctor of Philosophy (PhD) degree in social welfare. The school also operates a continuing education program for social work practitioners in the community.

Mission Statement

The mission of the Mandel School is to provide and integrate professional social work education, research, and service to promote social justice and empowerment in communities through social work practices locally, nationally and internationally.

A History of Innovation

Ranked among the nation’s top ten graduate schools of social work by U.S. News and World Report, and ranked number one in Ohio, the Mandel School of Applied Social Sciences has always committed itself to learning from and fostering the best in social work practice and to building social work’s knowledge base. Since its founding in 1915 as the nation’s first university-affiliated professional graduate school of social work, the Mandel School has been an innovator in professional education, where educators, researchers and practitioners work side-by-side to investigate, study and disseminate knowledge to bridge the gap between the classroom and communities in which social workers practice.

The Mandel School provides students with a solid foundation designed to build core competencies with its innovative Ability-Based Learning Environment, which allows graduates a great degree of flexibility and portability. Students choose concentrations in either Community and Social Development or Direct Practice, which offers specializations in Aging; Alcohol and Other Drug Abuse; Children, Youth and Families; Health; and Mental Health. Certificate programs include gerontology, global health, management and leadership, and school social work. Dual-degree programs enable Mandel School students to obtain their social work degree concurrently with a master’s degree in bioethics, law, management and public health.

The Mandel School believes that advanced practitioners are strategists of change, working in partnership with others to enhance the caring capacity of communities. The concentrations structure cross-trains Mandel School students, who build foundations in both areas that bring a breadth of knowledge to their work lives, allowing them the flexibility to pursue their interests even as they change over time. The school prepares advanced practitioners who become lifelong learners with the abilities needed to practice ethically and effectively with diverse populations and with systems of various sizes and types. Students learn to understand the dynamics of problematic social situations and to identify the strengths and resources in individuals, families and communities that offer the best solutions. The school is committed to a vision of social work practice as a force of social justice, empowerment, and the building of healthy communities. That commitment extends beyond our national borders with the Mandel School’s award-winning program of international study options.

The Mandel School counts among its alumni many prominent educators, government officials, accomplished practitioners, researchers, advocates, public-policy-makers, and chief executives of national and regional agencies. Faculty achievements in professional organizations, research, and agency consultation further extend the school’s reputation as an active participant in the advancement of social work practice.

Mandel School education is more than preparation. It is an opportunity to join a national network of scholars and practitioners who are shaping the course of social work in communities throughout the world. The Mandel School is ranked seventh in faculty productivity among social work schools by Academic Analytics.

For nearly one hundred years, the Mandel School of Applied Social Sciences has stood at the forefront of social work education, introducing innovations in teaching, research, and practice at every step of the way, with an approach that integrates theory and practice like no other.

At the heart of the Mandel difference is experience – not just the in-depth experience of our distinguished faculty – but the experience students obtain working in the real world of social work from the time they start their education here. The Mandel School is unique among social work schools for its students’ paid field placements, providing invaluable work experience, and, by making the education more affordable, extending the opportunity to an even broader range of students. Students learn through the Mandel School’s teaching and by their own doing. What they discover in a classroom can be applied to real life at their placements. Graduates leave the Mandel School prepared to handle the demands of social work.

Mandel students take their places alongside long-time professionals in a variety of social work fields in placements at one of the more than 350 agencies with which the Mandel School collaborates, understanding firsthand the challenges of social work and sharing in its rewards. In a broad spectrum of local and regional organizations, students develop skills in direct practice, policy analysis and development, research, management and community development.

Accreditation and Licensure

The Mandel School of Applied Social Sciences is accredited by the Council on Social Work Education and the Ohio Chemical Dependency Professionals Board of Ohio.

The Master of Science in Social Administration (MSSA), the social work master’s degree program (MSW for many other programs), at the Mandel School of Applied Social Sciences is accredited by the Council on Social Work Education, a nationally recognized professional accrediting association for social work graduate and undergraduate programs.

The Mandel School of Applied Social Sciences’ Alcohol and Other Drug Abuse (AODA) curriculum is accredited by the Ohio Chemical Dependency Professionals Board of Ohio. The accreditation indicates that the AODA curriculum meets the formal master’s degree education requirements for the top level of licensed independent chemical dependency counselors in Ohio.

The Mandel School of Applied Social Sciences (MSASS) in collaboration with Baldwin Wallace College meets all of the State of Ohio Department of Education requirements for licensing in School Social Work.

The Master of Science in Social Administration (MSSA) degree fulfills part of the requirements of social work licensure in fifty (50) states in the United States. For further information about various licensing requirements by state, visit the website of the Association of Social Work Boards (ASWB) (http://www.aswb.org).

Gerald A. Strom, MSW  
Director, Intensive Weekend Program

Scott Wilkes, JD  
Director, Field Education

Zoe Breen Wood, MSW  
Director, Educational Outcome Assessment
Academic Regulations

Non-Degree Study
Foundation courses may be taken on a non-degree basis with the permission of the assistant dean for academic affairs. A maximum of 12 hours earned on a non-degree basis may be counted toward requirements for the master’s degree if the student is subsequently admitted as a degree candidate.

Admission and Application Information
Admission to the master’s degree program at the Mandel School of Applied Social Sciences is granted on a selective basis determined by the quality of the total application. An applicant for admission is expected to meet the following minimum requirements:

1. A bachelor’s degree from an accredited college or university.
2. Evidence of capacity to succeed in graduate level social work education based on undergraduate work and any previous graduate work. Previous work must include courses in social and behavioral sciences strong enough to ensure the applicant’s ability to do creditable work at the graduate level.
3. A minimum undergraduate grade-point average is 2.7. A Miller Analogies Test or Graduate Record Exam is required for applicants with less than a 2.7 grade point average. In exceptional cases, applicants who lack the required academic credentials but whose other qualifications are outstanding may be admitted on a probationary basis. Students who enter on probation may not carry more than 15 credit hours in their first semester. Probationary students must achieve at least a 3.0 grade point average in their first semester of course work (minimum of six credits) to have their probationary status removed and continue in the program.
4. Evidence of a combination of personal qualities and values that are considered essential for the professional practice of social work: strong moral character; strong analytical and verbal skills; a caring and compassionate nature; and a personal commitment to social justice, empowering individuals, and serving vulnerable and under-represented groups.
5. The school may request a personal interview or additional information about an applicant if necessary.

Admission Procedures
Application materials for admission to the Mandel School of Applied Social Sciences can be secured from the Office of Student Services, Mandel School of Applied Social Sciences, Case Western Reserve University, 10900 Euclid Avenue, Cleveland, Ohio 44106-7164; by calling 800.863.6772; or by visiting the school’s website (http://msass.case.edu).

Students applying for full-time study are admitted in the fall semester. Applications are accepted on a rolling admissions basis but the latest application date is May 15 (July 1 for Intensive Weekend), though prospective students are strongly encouraged to apply early (December/January) for admission.

Students pursing the Virtual MSSA in the online format are admitted in fall, spring, and summer semesters. Deadlines for completed applications are as follows: Spring semester: December 1; Summer semester: March 15; and Fall semester: June 15.

Advanced Standing
Advanced standing may be granted to students who have earned a bachelor’s degree in social work within the past seven years from an institution accredited by the Council on Social Work Education. Students must have earned a grade of B or better in each social work foundation course for which advanced standing credit hours are given.

Proficiency Examinations
Students without a bachelor’s degree in social work may waive the foundation courses in policy, socio-behavioral theory, and research by passing a proficiency examination. Successful completion of the exam(s) exempts the student from the requirement to complete the course(s). Elective course(s) may be substituted in order to fulfill graduation requirements. There is no fee or penalty associated with taking the proficiency exams. However, each exam may be taken only once. Exams are offered prior to the start of fall and spring semesters. Students must make reservations to take those exams with the Mandel School Office of Student Services.

Transfer
Students who are transferring to the Mandel School from another accredited graduate school of social work may apply for transfer credit for up to one full year of academic work and field education. Transfer students from social work programs must submit field work evaluations, official transcripts, and course syllabi.

Transfer credit (6 hour limit) may be given for related, but non-social work, coursework completed within the past five years. Credit hours must not have been applied toward a previous graduate degree. Students must have received a grade of B or better in any course for which transfer credit is sought. Course syllabi, request for transfer form and official transcript must be submitted to the Mandel School Office of Student Services.

International Students
Applicants from other countries follow the regular application procedure. International students must have completed available social work training in their own countries, and have had paid experience in the social welfare field prior to entering the professional degree program. International students are required to furnish results of the Test of English as a Foreign Language (TOEFL) administered by the Educational Testing Service (http://www.ets.org/toefl). Results of this test must be forwarded to the Office of Student Services. A student from abroad whose native language is English, who has completed his or her work in a foreign university where English is the language of instruction, or who has studied at or graduated from an American institution, is exempt from this requirement. Federal requirements mandate that all international students on J-1 visas purchase the medical insurance. No exceptions are allowed. All other students are strongly urged to carry health insurance of some kind.

All international applicants must submit to the university’s Office of International Students evidence of funding sources to fully finance the cost of education, housing, and transportation (approximately $13,000) for one year. Living expenses for dependents, if applicable, must also be included, i.e. spouse $6,000 and child $3,000.

All international applicants must submit to the Case Western Reserve Office of International Students evidence of funding sources to fully finance the cost of education, housing, and transportation. Applicants from other countries will be sent an additional form requiring them to provide evidence of financial resources sufficient to cover their anticipated expenses before acceptance can be finalized.

Students holding a BSW from their country of origin may be eligible for advanced standing. Applicants should contact the Council on Social Work Education (http://bulletin.case.edu/mandelschool/appliedsocialsciences/)
academicregulations/www.cswe.org) (CSWE) directly and ask to have their program reviewed.

An international applicant who holds a Master of Social Work (MSW) degree for his or her country may request a credit review for transfer credit. However, the student must complete at least 27 hours of academic credit and three semesters of field credit (9 hours) at the Mandel School.

Please note that material submitted for application cannot be returned to the applicant.

Financial Information

Tuition

In the 2012-2013 academic year, tuition for the Mandel School of Applied Social Sciences in the full-time master’s degree program (12-16 credit hours) is a flat rate of $37,120 or $1237 per credit hour.

A non-refundable tuition deposit of $100 is required of all master’s degree candidates at the time of acceptance. This deposit will be applied toward tuition for the degree program. Complete information about academic policies, procedures, and financial aid is available by contacting the Office of Student Services, Mandel School of Applied Social Sciences by calling 800-863-6772 or by visiting the school's website (http://msass.case.edu).
Doctoral Program

Doctor of Philosophy in Social Welfare

The purpose of the Doctor of Philosophy (PhD) in Social Welfare degree program is the preparation of scholars, teachers, and leaders to generate new knowledge on the policies and programs of social welfare and the practice of social work. Accordingly, we emphasize the creative and evaluative skills necessary for independent inquiry. The program prepares students to be knowledgeable in the following:

- Relevant areas of the social and behavioral sciences
- Research design, statistics, qualitative methods, and the philosophy of science
- Theory-building and theories of social welfare
- Methods for the application and transmission of knowledge in the human services

In addition to this foundation knowledge, students develop specialized expertise in policy analysis and program planning or social work practice theory and in one or more substantive areas of social welfare. Effort is made to provide an educational climate in which critical analysis and creative thinking flourish. The program core emphasizes philosophical and scientific approaches to theory development, the content and boundaries of theoretical social welfare, statistics, and advanced research methodologies, and the social and behavioral science foundations underpinning social welfare programs and social work practice.

The area of specialization enables the student to apply social science theory, analytical approaches, and research tools to a social problem or issue in either social welfare policy or social work practice. Students are encouraged to focus on a substantive policy or practice area during the period of specialization. This facilitates the development of a dissertation proposal. Permeating the content of the entire program is a focus on the development and transmission of knowledge as a part of an educational process.

Students with a specific career interest in teaching, regardless of their area of specialization, are encouraged to take courses in social work education, learning theories, and teaching strategies as an integral part of the educational plan. Teaching mentorships are available.

Students can pursue special interests through individual reading and research projects. In addition, regular course offerings in other departments of the university are available to students. Practical experiences on faculty-conducted research projects are made available to doctoral students.

A total of 36 credit hours of course work is required, plus 18 hours of dissertation credit. A qualifying examination, given after completion of course work, determines each student's eligibility for degree candidacy. The degree is awarded following successful completion of the dissertation.

The school reserves the right to require additional courses, which may not be credited toward the doctoral requirements, if the faculty believes the student has insufficient knowledge in core areas of the curriculum, or to assist students in their intellectual and professional development.

In response to the different needs and interests of potential PhD students, the Mandel School offers two formats for meeting course and degree requirements. Program requirements under both formats include taking 12 courses (36 credit hours), passing a qualifying exam, and completing a dissertation. The Alternative Program Structures are:

Full-Time Program

Under this format, full-time students can complete course requirements and individualized research fellowships over two academic years.

Fellowship Courses
SASS 701 Dissertation Ph.D. (18 credit hrs required)

Students must register each semester until the dissertation is complete. SASS 701 Dissertation Ph.D. hours are not required during the summer semester, unless the student is defending his/her dissertation.

Part-Time Program

The part-time format accommodates social work professionals who must maintain their employment commitments but wish to pursue PhD study through the completion of a minimum of four courses per year. Partial financial assistance is available to students in this program.

Academic Policies

Faculty Advisors

Each doctoral student is assigned a faculty advisor to assist in the planning of his or her educational experience. At the appropriate time, a dissertation advisor is appointed after consultation with the student.
Qualifying Examination
The qualifying examination for doctoral candidates is taken after completion of coursework. The exam is intended to test the student’s ability to critically analyze and integrate knowledge.

Admission to Candidacy
Students are admitted to candidacy for the PhD degree upon the successful completion of the qualifying examination. To be admitted to candidacy, the candidate also must have maintained a grade point average of 3.0 and received not more than one course grade of C or lower. To remain in the program, students must maintain a minimum of a cumulative 3.0 average and receive no more than one grade of C or lower.

Dissertation Requirements
Each candidate for the PhD degree must submit a written dissertation as evidence of his or her ability to conduct independent research at an advanced level. The dissertation must present a significant contribution to knowledge in the student’s field, and at least a portion of the content must be suitable for publication in a reputable professional journal or as a book or monograph.

The dissertation prospectus must be completed and accepted within two calendar years after the student has been admitted to candidacy, and the dissertation must be completed and accepted within five calendar years after admission to candidacy. It is to the student’s advantage to make steady progress in his or her research and aim for early completion of the dissertation.

Once a student registers for SASS 701 Dissertation Ph.D., he or she must continue to register each succeeding regular semester (fall and spring) until the dissertation is complete unless granted a leave of absence. The minimum requirement for the dissertation is 18 hours.

All requirements for the PhD degree must be completed within a period of five consecutive calendar years after a student is admitted to candidacy, including periods of leaves of absence.

Admission and Financial Aid
Information about admission and financial aid for the PhD in Social Welfare (http://msass.case.edu/doctorate) can be found on the Mandel School of Applied Social Sciences website.
Dual Degree Programs

Dual and Interdisciplinary Degree Programs

Dual and interdisciplinary degree programs are available to full-time students only.

Master of Science in Social Administration and Law (MSSA/JD)

The dual-degree program established by the Mandel School of Applied Social Sciences and the university’s School of Law makes it possible for selected full-time students to pursue an integrated program of studies to receive the Master of Science in Social Administration (MSSA) and Juris Doctor (JD) degrees within four years rather than the normal five years. Applicants for the dual-degree program must apply to and meet the admission requirements of both professional schools and are encouraged to apply for admission to both programs simultaneously. Dual-degree students must receive the MSSA and JD degrees simultaneously to be granted credit for specific courses taken in the other program.

Master of Science in Social Administration and Business (MSSA/MBA)

The Mandel School of Applied Social Sciences and the Weatherhead School of Management offer a dual-degree program leading to the Master of Science in Social Administration (MSSA) with the Master of Science in Business Administration (MBA). The program is designed for candidates who wish to prepare for advanced social work practice in a variety of direct practice and community and social development settings, while developing the skills to assume management responsibility within those settings. Candidates must apply separately to each program.

MSSA/MBA students may begin the dual-degree in either Mandel School of Applied Social Sciences or Weatherhead School of Management. Students will continue to register in the school at which they began the program, regardless of the school they are attending. There are 102 credit hours in the dual MSSA/MBA Program (51 credit hours at MSASS, 51 credit hours at Weatherhead), compared with 124 credit hours if both degrees were completed separately. By integrating the course work, completing some course work over the summer, and reducing the elective requirements in each program, dual-degree students may complete the MSSA/MBA in three years, instead of the four years required if both degrees were to be completed separately. Dual-degree students must receive the MSSA and MBA degrees simultaneously to be granted credit for specific courses taken in the other program.

Master of Science in Social Administration and Bioethics (MSSA/MA)

A dual degree established by the Mandel School of Applied Social Sciences and the Department of Bioethics (http://www.case.edu/med/bioethics) in the university’s School of Medicine makes it possible for selected students to pursue an integrated program of studies to earn the Master of Science in Social Administration (MSSA) and the Master of Arts (MA) in Bioethics. In a full-time format both degrees may be earned in two years plus one summer semester.

As the number and complexity of ethical dilemmas continue to increase, there is a growing need for social workers knowledgeable of the principles and practices fundamental to bioethics. Graduates of this program may help counsel clients and care providers as well pursuing careers related to policy and practice.

Applicants must apply separately and meet the admission requirement of the both professional programs and are encouraged to apply simultaneously to both schools. Dual-degree students must receive the MSSA and MA degrees simultaneously to be granted credit for specific courses taken in the other program.

Master of Science in Social Administration and Public Health (MSSA/MPH)

The “Side by Side” Dual Degree Program leads to both the Masters of Science in Social Administration (MSSA) and the Masters in Public Health (MPH). The MSSA/MPH program will prepare graduates with flexibility for professional leadership in a broad range of health and social services within communities and organizations. Areas of study will include prevention, program planning, development and evaluation.

The impetus for this dual program arises from a growing societal recognition that issues once thought to represent individual-level interventions, such as family violence, substance use, and mental illness, are multi-level problems demanding multi-level interventions for their amelioration. The MSSA/MPH Degree Program will equip students with a broader set of skills and perspectives to address such issues.

This degree option is open to full-time students only due to the sequencing of courses. Applicants must apply separately and meet the admission requirement of the both professional programs and are encouraged to apply simultaneously to both schools. This dual degree can be completed in 36 months. Dual-degree students must receive the MSSA and MPH degrees simultaneously to be granted credit for specific courses taken in the other program.
Mandel School of Applied Social Sciences Courses

SASS Courses

SASS 315. Adoption Practice and Policy. 3 Units.
This course covers the concepts, knowledge, skills, and policies associated with contemporary adoption practice. The practice method reflects a constellation perspective, meaning that adoption is examined from the viewpoints of birth families, adoptees, and adoptive families. Exemplars and case studies are presented for illustration purposes. Consideration of constellation members' needs at different life cycle stages are presented. Ethical issues and dilemmas related to adoption are emphasized throughout the course in each content area. Course content is covered via lectures and classroom discussions, as well as appropriate guest speakers. Students are expected to participate fully through field trips and classroom discussions.

SASS 318. Death, Grief, and Loss. 3 Units.
This course provides students the opportunity to become informed, aware citizens understanding human issues related to end-of-life decision making, dying, and experiencing grief and loss. Topics focus on death and grief across the lifespan; the role of death in American culture; understanding individual and family challenges with decision making at the end of life; and the experience of grieving across life stages, cultures, gender, and spiritual difference. The course provides exposure to the experience of death as it relates to the self of the student; the terminally ill person, and the bereaved. Students will gain insight into their own values and beliefs in this area, as well as understanding the needs of terminally ill people, those who need support in their grief and mourning, and persons dealing with challenging life and death decisions regarding self or loved ones. Creation of a personal learning objective is an additional focus. Course content is implemented via lectures, class discussion, individual and small group work, audio-visuals, and guest speakers.

SASS 325. The Netherlands Social Justice: Health and Violence. 3 Units.
Social justice issues including violence prevention and health care services/policies will be explored via agency visits, lectures, and discussion with Dutch experts. The pervasive use of a harm reduction policy in the Netherlands will be examined. The course will help students develop the analytical skills necessary for evaluating social policy and practice issues related to a range of health care services as well as social justice issues that pertain to health care, prostitution and substance use. Students will familiarize themselves with the United States and Dutch social policies and practices related to issues such as: right to die, euthanasia for terminally ill, those in chronic pain or severely ill newborns; access to healthcare and health disparities; addictions; and prostitution. The manner in which a society treats its citizens least capable of taking care of themselves reveals many of the core values of its cultural system of social justice and approaches to health care.

SASS 350. Seminars in Applied Social Sciences. 3 Units.
Survey of special subject areas. Topics vary in response to faculty and student interests. Small group discussion. Prerequisite depends on content.

SASS 355. Drugs and Youth. 3 Units.
Drug abuse is a more acute problem and more widespread than in any previous era of our country. Just as technology continues to evolve, drug use follows similar paths of evolution. Today, there are thousands of new drugs available that are used for medicinal purposes, recreational purposes, and other uses that affect the health of our citizens. The impact of drug use and/or abuse on the lives of ordinary people will be explored both through academic readings as well as biographies of young people who have dealt with the problem of drug abuse. Material will be presented from a wide range of disciplines and theoretical perspectives highlighting the bio-psycho-social nature of the problem—both the etiology as well as the effects of addiction. The impact of both macro (society) and micro (family and friends) on drug use of both licit (alcohol, over the counter drugs, and prescription) and illicit (marijuana, hallucinogens, and cocaine) on various subcultures such as sports/athletic, college students, women, adolescents, etc. will be explored. Course content will be covered via lectures, classroom discussions as well as appropriate guest speakers.

SASS 367. Poverty, Wealth Building, and Social Entrepreneurship. 3 Units.
With poor communities and individuals across the world aspiring for higher standards of living and quality of life, monolithic development strategies are proving to be insufficient. Microenterprise and social entrepreneurship are among the latest strategies for poverty alleviation. New strategies that are grass-roots, multi-dimensional, entrepreneurial, and engage stakeholders as partners are gaining ground. They seek to fundamentally transform the roles and relationships of the stakeholders in the economy. While social entrepreneurship is revolutionizing the practice of development work, the micro-enterprise sector plays an important role for some of the poorest sectors of society who gain employment, connection to the market, and opportunities for innovation through it. In this course, we will examine social entrepreneurship, the change it brought about in how development is viewed, conceived, and implemented. Some of the examples that will provide core content include economic development strategies that promote asset building among the poor; Mandragon in Spain (and other similar institutions from across the world), Greyston Bakery (and other similar examples from around the United States) and Evergreen Cooperative (and other relevant local examples).
SASS 368. Whatever it Takes: Creating Paths Out of Poverty for Children. 3 Units.
This course will examine current community-based strategies for providing young people living in high poverty, multiple needs, urban areas with the educational, social and economic support they need for a stronger future. The course will begin with a review of the debated root causes of poverty in the United States and an exploration of the short and long term effects of poverty on children. Students will understand how poverty differentially affects different populations and geographic areas across the United States and globally. Special attention will be given to the complexity of urban poverty issues and the corresponding need for holistic interventions. The course will further explore the concepts and strategies underlying innovative community-based initiatives being implemented across the country including the theories, programming content, inclusion criteria and outcomes of these efforts. Students will have to critically think through the cost/benefits of this programming considering economic, political and social justice issues. Special attention will be given to the Harlem Children Zone’s (HCZ) model. The HCZ has achieved successes in boosting college attendance and closing the racial and socioeconomic achievement gap among youth in a high-poverty target area in New York City. The HCZ is the model for the Obama Administration’s Promise Neighborhoods Initiative to support comprehensive neighborhood development programs for children and youth. It includes efforts for social, educational and medical support designed sequentially to keep up with youth’s developmental needs. Students will critically analyze this model and its applicability across other geographic areas and populations. Students will also learn from local best practice Initiatives in education attempting to provide a path out of poverty for Cleveland’s children through site visits at local schools. This will include experiential opportunities for firsthand contact with program staff and youth.

SASS 369. Social Networking and Community Organizing in the 21st Century. 3 Units.
This course will examine the changing nature of place, given increased mobility and diversity in communities within the United States and the emergence of a truly global economy and communication network due to the revolution in information technology. Community itself is being redefined as many members of society consider their most important relationships are primarily virtual in nature. The forms of engaging citizens are also changing as old models of community organizing give way to new approaches that focus on connectivity through social networks. This course will examine various new approaches to engagement, from political or campaign organizing to social networking around mutual interest to mobilizing people for a cause. We will examine the Obama presidential campaign as an example of a new mobilization strategy that emphasizes choice, flexibility, value, and the ability to influence through organic informal networks. The course will also explore case studies, such as network-centric organizing as developed by Bill Traynor and Lawrence (MA) Community Works. Special attention will be given to controversial efforts criticized by the right or the left, such as the ACORN voter registration initiative. Students will also explore the changing nature of community in Northeast Ohio and how this new approach might lead to social change and economic development for greater Cleveland.

SASS 375. International Travel and Study Seminar. 3 Units.
The course provides an intensive experiential learning experience that take students to a Non-Western European country for appropriately 10-12 days to explore social and community development issues, policies and practices. There will be at least 42 hours of contact time with the instructors in Cleveland and the Non-Western European country. The program explores innovative approaches to social development and draws parallels to that of the United States. The purpose of the trip is to familiarize students with social development and social policy issues. Topics appropriate to the targeted country, such as poverty alleviation, non-formal education, prostitution, HIV-AIDS, multicultural aspects of healthcare, international adoption, and possible application of information communication technologies in addressing social problems will be addressed. The trip will include guided tours to neighborhoods, field-action project workers, healthcare professionals, government officials, scholars, and researchers will further enhance students’ understanding. Students are required to attend a minimum of two pre-trip seminars, write and/or present pre-trip assignment(s), attend a post-trip meeting, and complete a final written assignment. The course requires an additional cost for travel.

SASS 385. Social Welfare Capstone Seminar. 3 Units.
This seminar course will revolve around the identification and critical investigation of current social problems. Insights gained from social welfare research will be applied to better understand these problems. Successful completion of the course will require critical analysis of published research, integration of information from social work and different disciplines, an oral presentation and a final written research report including a literature review.

SASS 390. Independent Study for Undergraduates. 1 - 3 Unit.
Individual study in Applied Social Sciences involving specific programs of reading, research, and special projects. Requires prior approval of faculty member directing the project. Recommended preparation: 12 hours of social science courses; approval of MSASS Associate Dean.

SASS 391. Seminar on Community Needs and Services. 3 Units.
The course is directed towards students interested in exploring the relationship between community needs and service delivery. The course will have both a classroom and experiential community component. The goal of the course is to provide students an opportunity to experience first-hand the application of theoretical knowledge to community needs.

SASS 426. Research Methods in Social Work. 3 Units.
This course provides an overview of the basic concepts used in the conduct of scientific inquiry and the tools of research methodology. It introduces students to the issues involved in the design, implementation, analysis and utilization of social research. Students are encouraged to focus on a practice-related research problem in their individual or group research projects, as well as to focus on research issues relevant to their specialization, field of practice, or field of practicum setting. Students are alerted to the risks of cultural bias in research throughout the course through examples and scientific readings.
SASS 440. Human Development I: Child and Adolescent. 3 Units.
This course offers an overview of normal individual development throughout the life cycle. Psychosocial theory, learning theories, and social role theory constitute the theoretical base for this foundation course. Developmentally determined objectives and tasks for every life stage are examined in the context of biological, genetic, psychological, familial, and sociocultural factors. Special emphasis is placed on the impact of gender, health, and minority status, and on community institutions of human development. This course supports the foundation social work methods course by introducing substantive content on human development as a framework for assessment, prevention, and intervention with psychosocial problems. Curricularly related to the advanced sociobehavioral courses on human development and developmental dysfunction, this course provides a basic understanding of normal human development, which can serve as a contextual framework for developmental deviations from the norm.

SASS 441. Human Development II: Adult. 3 Units.
This course builds on SASS 440 Human Development I (child & adolescent) by compassing the general themes of feeling (emotion), thinking (cognition), and acting (behavior) with adult emotional, cognitive, and behavioral development. Students will understand the differences and similarities between earlier (child and adolescent) and later (adult, including older adult) emotional, cognitive, and behavioral development by examining, across the life-span, the idea/concept of; (1) adult development as gains/losses, (2) adult development as plasticity and variation (i.e., development can take many forms and can change), (3) adult development as risks, conflicts, protective factors, and resilience and (4) adult development as context (e.g., family, society, gender culture, ethnicity, social class, discrimination, sexual orientation, and socio-historical (i.e., cohort contexts). Prereq: SASS 440.

SASS 470. Social Policy. 3 Units.
This course provides basic perspectives on social policies related to poverty, health, aging, mental health, substance abuse, and discrimination. An analytical framework is used to systematically identify, define, and analyze social problems and policies. The course also introduces the student to social planning and service delivery.

SASS 477. Direct Practice Foundation Methods Skills. 3 Units.
The goal of this course is to develop culturally competent social work generalist practitioners who are armed with the knowledge and skills necessary to practice ethically with individuals and families in diverse social work practice settings. The course introduces major social work theories (i.e., systems-ecological theory) and intervention approaches (i.e., problem-solving). Understanding and practicing the skills necessary to carry out generalist practice will be a major focus on both lectures and skills lab.

SASS 478. Macro and Policy Practice Skills. 3 Units.
This course focuses on the development and application of practice skills in work with task groups, communities, and social policy institutions. It includes both didactic and experiential teaching and learning. The course is built on first semester foundation learning, particularly in the areas of social policy, diversity, discrimination, and oppression, and the direct practice skills lab. It will also draw on knowledge taught in the second semester course on theories of groups, organizations, and communities. Finally, there will be interaction with the field seminar and the field practicum. Prereq: SASS 477.

SASS 484. Theories of Oppression and Social Justice. 3 Units.
This course provides students with a basis for developing their ability to value a diverse world and to understand how discrimination and oppression operate to limit the life opportunities of members of minority and disenfranchised groups. Students will have the opportunity to develop and enhance their personal and professional awareness of their own cultural identity and to use this as a basis for developing their competence to work with individuals and groups different from themselves. Selected theoretical perspectives will provide a descriptive and explanatory framework for critically analyzing the manifestation of discrimination and oppression and their impact on the affected populations. Social work’s response to discrimination and oppression within the profession and in society at large will also be examined.

SASS 495. Field Education Seminar. 1 Unit.
This seminar prepares students for entry into field education. The course introduces students to a number of topics that are considered basic to beginning the social work field practicum.

SASS 500. Special Topics in Applied Social Sciences. 1 - 6 Unit.

SASS 505. Adoption: Practice and Policy. 3 Units.
This course covers the concepts, knowledge, skills, and policies associated with contemporary adoption practice. The practice method reflects a triad perspective, meaning that adoption is examined from the viewpoints of birth parents, adoptees, and adoptive parents. For each topic area, social work roles, activities, tasks, and skills are explored along with policy issues. Exemplars and case studies are presented for illustration purposes. Consideration of triad needs at different life cycle stages are presented. The issues of ethnically competent adoption practice are emphasized throughout the course in each content area.

SASS 506. Perspectives on Management and Leadership. 0 Units.
This course is designed to explore management and leadership capabilities. The class explores personal and organizational aspects of leadership and management examining theoretical perspectives and models, governance, communication, advocacy, ethics and accountability. In addition, the course examines key tools for effective management and leadership to manage risk, challenges, building consensus and collaboration. The course also guides students through a personal leadership development journey. The classroom will serve as an interactive learning environment. Students will learn management and leadership abilities from readings, lecture, group discussion, reflection, assessment, planning and application. The content of the course integrates research across social work, business, the nonprofit sector, and literature to inform a solid perspective to enhance management and leadership capabilities. This course includes activities and feedback for students to facilitate growth and development, and is appropriate for students who want to become effective managers and leaders, growing related abilities and knowledge.

SASS 509. Integrative Seminar in Social Work and Public Health. 0 Units.
This course is designed to develop critical thinking skills in the evaluation of research in public health and social work, an understanding of how social work and public health strategies can be integrated at multiple levels, and an understanding of how policy in the one of these domains has implications in the other. The noncredit course is required for all students enrolled in the dual MPH-MSSA degree program. Enrollment is limited to students enrolled in the dual MPH-MSSA degree program. Prereq: Enrolled in dual MPH-MSSA degree program.
SASS 510. Health Disparities. 3 Units.
This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, EPBI 510, MPHP 510, NURS 510, and SASS 510.

SASS 515. Family Caregiving. 3 Units.
The purpose of this interdisciplinary graduate-level seminar is to explore the theoretical research, policy, and practice issues related to informal caregiving of the elderly. Topics will include the historical and cultural context of family caregiving, theoretical paradigms (i.e., adult development, stress and coping), characteristics of caregivers (i.e., gender, relationship, race, ethnicity, employment status, geographical setting), characteristics of the elderly care-receiver (i.e., type of cognitive and physical impairments), ethics, physical and mental health outcomes, service delivery issues, institutionalization, and bereavement. Through readings, discussions, guest lectures, and paper presentations, students will learn about the complexities of informal caregiving of the elderly from a range of disciplinary perspectives in order to improve assessment and practice skills in a variety of settings. Students are encouraged to focus on issues relevant to their discipline, specialization, or field of practice for their seminar papers.

SASS 517. Family System Interventions. 3 Units.
This course covers the knowledge, concepts, and skills associated with working families. The practice method will reflect a family systems approach, integrating theories and approaches within a systemic perspective. It will build practice skills in assessing, interviewing, and intervening with families and emphasize a strength-based perspective on intervention with families. Considerations of family issues at different developmental stages will be presented. The issue of ethically competent and community-based social work practice with families will be stressed throughout the course for each content area. Prereq: SASS 477 or SASS 400-TR.

SASS 522. Needs Assessment and Program Evaluation. 3 Units.
This course covers research methods and analytic tools that are used in communities and organizations to plan, monitor, and evaluate programs, projects, and initiatives. It builds upon the research methods course in the foundation curriculum and deepens and expands this content at the advanced level. The content prepares students to use quantitative and qualitative research methods to plan and evaluate programs, policies, and practices. The class covers the conceptual and technical aspects of conducting needs assessment in and applying the tools and findings to the community, program, and organizational development process. The course employs a circle perspective with the goal that students will be able to judge the strengths and weaknesses of various tools and approaches and the degree to which ethical standards have been met. Students are introduced to a variety of methods for community and needs assessment, demographic, statistical and geographic analysis, qualitative and quantitative data gathering methods, and program and policy evaluation designs. The importance of conducting research in ways that respect cultural diversity and are valid across diverse populations is emphasized. The practical aspects of using data to drive decision making, quality improvement, outcomes management and the engagement of partners and stakeholders are also covered in the course. This course is structured to have a strong emphasis on skill development in data gathering, analysis and application. Prereq: SASS 426 or SRCH 426 or SASS 400-TR.

SASS 534. Community and Social Development Perspectives. 3 Units.
An overview of the community and social development field. This course covers the history of community and social development in the US and abroad, theoretical and empirical underpinnings of this work, major approaches, institutions and public policy related to community and social development. Focus will be placed on understanding and analyzing community power, and the relationship between community and regional power structures. The history of institutional involvement in community and social development (e.g., World Bank, United Nations, Banking Industry, Intermediaries, etc.) will be traced as well as the policies that affect community and social development.

SASS 537. Medical Aspects of Disabilities. 3 Units.
The focus is on the study of children with disabilities and chronic health conditions. Related issues of development, diagnosis, treatment, and family concerns are included. Continuum of care from hospital to home considered. Involvement of the family as a member of the treatment and care team is emphasized. Context of treatment is considered from a multidisciplinary team approach.

SASS 539. Early Intervention: Theories and Practice. 3 Units.
This course both describes the characteristics of young children with disabilities and examines the intervention models and practices that are used to address the developmental and social-emotional needs of these children. The course describes the legislative and philosophical foundations for contemporary early intervention practice. It discusses the meaning of evidence based practice and examines contemporary early intervention practices from this perspective. The readings and assignments for this course have been designed to reflect the course objectives.
SASS 547. Problem Identification, Screening and Assessment/ Diagnosis. 3 Units.
This course will provide a bio-psycho-social approach to identification, screening, assessment and diagnoses of common psychosocial problems/dysfunctions experienced clients. This course introduces the student to the etiology, recognition and diagnoses of these problems in the context of social work practice. Through use of a competency-based model, students will be introduced to techniques used to screen, assess and diagnose problems such as serious mental illness, suicidality, depression and anxiety, substance abuse, child abuse, elder abuse, and exposure trauma. Students will also become familiar with the use of the DSM IV TR in providing axis I diagnostic formulations. A skills-based approach will be used in presenting students with specific screening, assessment and diagnostic protocols. This course is designed to incorporate a range of issues associated with stages across the lifespan from childhood to late life. Prereq: SASS 477 or SASS 400-TR.

SASS 549. Theory/Practice Approaches in Direct Practice Social Work. 3 Units.
This required, three credit course introduces selected theories and practice approaches commonly used in social work with individuals, families and groups. The course is designed to provide students with knowledge of theoretical explanations and practice frameworks commonly used in direct social work practice. The course also encourages students to apply critical thinking skills to theory and its practical applications. Case presentations, class discussions and assignments will require students to apply various theoretical perspectives to common problems and issues in social work practice. The course will highlight the use of professional social work values and attention to human development issues, diversity and cultural perspectives as they apply in each theory or framework. Prereq: SASS 477 or SASS 400-TR.

SASS 563. Resources for Community And Social Development. 3 Units.
Students will be able to understand and utilize the methods to identify, garner, and effectively use resources that promote community and social development. These methods can be applied to expanding resources for individuals, families, communities, and society, as well as to generate resources for organizations. While primarily focusing on financial resources, the course will also consider the important means of positioning an agency or organization to attract and receive resources and collaborate with others to put those resources to their most effective use. The skills that students practice in the course will include fund raising, grant development, financing, strategic partnerships and business deals, marketing, etc. The course will introduce proven models, such as low income tax credits, micro-enterprise, individual development accounts, and revolving loan programs. Students will also learn how to analyze and understand key domestic and international policies and institutions (e.g., foundations, banks, businesses, governments, associations) that relate to resources for community and social development.

SASS 564. Social Work Practice in Alcohol and Other Drug Abuse. 3 Units.
SASS 564 is an advanced direct practice concentration course focused upon knowledge, skills and values important for social work practice with people who abuse and/or are dependent on alcohol and other drugs. The content of SASS 564 directly builds upon the foundation direct practice course (SASS 477) and the required advanced course in screening and assessment (SASS 576). SASS 564 takes a bio-psycho-social approach to prevention, assessment and treatment of alcohol and other drug abuse and dependency (AODA) problems. This course introduces the student to the etiology and treatment of alcohol and other drug abuse in the context of social work practice. The historical background and the development of the evidence base of alcohol and other drug treatment interventions, self-help groups, and conceptual models of addiction will be presented. Students will explore their own attitudes and values toward AODA problems and how these affect treatment outcome as well as commonly used prevention and treatment approaches in social work with people who abuse and/or are dependent upon alcohol and other drugs. The course will use case materials to illustrate similarities and differences among various populations including minority/ethnic identity groups. Prereq: SASS 477 or SASS 400-TR.

SASS 565. Community-Based Practice with Children and Families. 3 Units.
This course covers knowledge, concepts, and tools associated with contemporary child welfare practice. The practice method reflects a family centered or family based approach, meaning that the welfare of children cannot be considered separately from the families of which they are a part. For each topic area, major social work roles, activities, tasks and skills are explored along with problems and issues in implementation. Program exemplars and case studies are presented for illustration purposes and practical application of the skills and techniques presented. Child welfare services that promote safety, permanency, and child well-being are presented. Consideration of family needs at different developmental stages of the child and family life cycle are also presented. The issue of culturally competent community based social work practice is stressed throughout the course for each content area. While this is primarily a methods course, program delivery and policy issues are discussed as they relate to the socio-political and organizational contexts of practice. Prereq: SASS 477 or SASS 400-TR.

SASS 567. CSD Practice I: Strategies for Assessing, Building and Organizing. 3 Units.
This course covers the frameworks and models in community assessment, community building and community organizing with a focus on the social processes in community development in the United States and internationally. Students will participate in a comparative analysis of models and learn specific skills used in community organizations and development practice, such as strategic planning, participatory action research, consciousness raising, and direct action. Through real world experience and case studies students will develop skills in neighborhood assessment, civic engagement, empowerment, leadership development, group work, relationship building, social capital formation, conflict resolution, democratic process, social policy analysis and change, and other methods. The course will provide specific applications of these models in relation to the dynamics of diversity and social justice.
SASS 569. CSD Practice II: Strategy for Designing and Implementing Community. 3 Units.
Students will learn about the design and implementation of community development in the U.S. and internationally. Content will include neighborhood revitalization, affordable housing, workforce development, business development, cooperatives, micro-enterprise, and other models of development that originated internationally and have been adapted in the United States. Attention will be given to globalization and the cultural and economic context—whether in disadvantaged communities in the U.S. or in the developing world—and to the skills that foster cultural competence. Students will practice the skills necessary for mobilizing human capital, designing community and social change, revitalizing neighborhoods, promoting productive employment, and affecting social policy. Students will learn to apply these change strategies in ways that promote sustainable development and social justice in both this country and around the world. Prereq: SASS 567

SASS 576. Integrative Seminar in Alcohol and Other Drug Abuse Treatment. 3 Units.
This course is an advanced level course in the Alcohol and Other Drug Abuse Specialization that provides opportunities for students to increase their knowledge of topics in the areas of assessment, diagnosis and treatment of alcohol and other drug disorders. The seminar builds upon course material in Foundation Methods (477) and in the advanced methods courses (SASS 549 and SASS 564). The seminar is intended to help students understand the evidence base for the treatment of substance use disorders and to explore selected areas of social work practice in intervention in the context of that evidence. Community applications of theory and techniques are stressed. The integrative Seminar in AODA Treatment uses a seminar format and provides students the opportunity to interact with treatment professionals from various treatment and practice settings. The seminar formal also facilitates individual learning: each student selects his or her own topic to pursue in depth. Each student is responsible for leading a minimum of one seminar presentation. Each student will select the topic for the seminar in consultation with the instructor. Coreq: SASS 477 and SSWM 564 or SASS 564.

SASS 573. Home Based MultiSystemic Interventions. 3 Units.
This course provides students with an in-depth comprehensive framework for home based interventions with youth and families. The course reviews clinical foundations for home based work and teaches skills and competencies necessary for multisystemic assessments and therapeutic interventions, including parent training techniques. Themes running throughout the course include ethical issues in multisystemic interventions; collaboration, teamwork, and supervision in multisystemic intervention; and consideration of diversity and multicultural appropriateness in multisystemic intervention. A variety of teaching methods are used to learn, observe, and practice new skills. This course is intended primarily for students working with children, youth and families in mental health, child welfare, juvenile justice, and substance abuse. Prereq: SASS 477.

SASS 574. Legal Issues in Social Work. 3 Units.
This course explores the legal issues that permeate the social work profession. Starting with a historical examination of our legal systems, the course will illustrate how social work is influenced and shaped by constitutional, statutory, and legal policy constructs. Students will learn about the skills necessary to provide testimony and to conduct forensic interviews, and we will discuss the legal foundation of ethical considerations and social work values. Students will also learn basic skills in how to utilize the law and legal processes to best advocate for clients and address larger social justice issues. By the end of the course, students will understand how social workers can competently navigate the choppy waters of the law in an interdisciplinary professional environment.

SASS 575. Travel and Study Seminar. 3 Units.
This course acquaints the student with the socio-political factors that influence the development of social welfare systems in a selected country and the impact of these systems on the development and functioning of individuals, families, groups, or communities. The role of the emerging social work profession in social change is explored via the social welfare system. Topics focus on the health care, mental health, aging, child, and/or educational systems and are oriented towards direct practice, management, or community development.

SASS 570. Social Work Practice in Mental Health: Children and Adolescents. 3 Units.
This advanced methods course builds on the content from required foundation social work methods, policy and human development courses including Direct Practice Methods and Skills, Mental Health Policy and Service Delivery. This course complements the content of advanced methods courses including Social Work with People Who Have Chronic Mental Illness, Social Work in Child Abuse and Family Violence, and Interventions in Alcohol and Other Drug Abuse. This course develops biopsychosocial knowledge and intervention techniques related to professional settings specializing in child and adolescent mental health: hospitals, child guidance agencies, family service agencies, mental health centers, and residential treatment centers. Students learn to use development and clinical theory to guide interventions while, maximizing individual strengths, social work treatment centers. Students learn to use development and clinical theory to guide interventions while, maximizing individual strengths, social work values and ethics, and empowerment. Social and economic risk factors, such as poverty, discrimination, and oppression, are considered in the intervention process and in the utilization of mental health services. In addition, students learn to think critically about the myriad ways cultural diversity influences parenting, child and adolescent norms and expectations. Students utilize assessment skills, coupled with knowledge of development and clinical theory to explore clinical case studies. Prereq: SASS 440 and SASS 477 or SASS 400-TR.

SASS 581. Social Work Practice with Older Adults. 3 Units.
This course is an advanced methods course that builds on the knowledge gained in Foundation Methods. The content of SASS 581 directly builds upon the foundation direct practice course (SASS 477) and the required advanced course in screening and assessment (SASS 576). It is also a required course in the Aging Specialization for the MSSA. The course will focus on the persistent principles and emerging emphases in direct practice with older adults and their families. Students will be asked to develop a model of practice based on knowledge of this unique population, social work values, and practice concepts. The course includes special issues in assessment, strengths-base case management, and intervention approaches known to be effective with emotional disorders in older adults. Prereq: SASS 477 or SASS 400-TR.
SASS 583. Social Work Practice in Mental Health Adults. 3 Units.
This advanced methods course builds on the content from required foundation social work methods, policy, and advanced sociobehavioral theory courses including Direct Practice Methods and Skills, Mental Health Policy and Service Delivery, Advanced Child and Adolescent Development and Dysfunction, and Adult Psychopathology. This course complements the content of advanced methods courses including Social Work with People Who Have Chronic Mental Illness, Social Work in Child Abuse and Family Violence, and Interventions in Alcohol and Other Drug Abuse. This course develops biopsychosocial knowledge and intervention techniques related to professional settings specializing in child and adolescent mental health: hospitals, child guidance agencies, family service agencies, mental health centers, and residential treatment centers. Students learn to use development and clinical theory to guide interventions while, maximizing individual strengths, social work values and ethics, and empowerment. Social and economic risk factors, such as poverty, discrimination, and oppression, are considered in the intervention process and in the utilization of mental health services. In addition, students learn to think critically about the myriad ways cultural diversity influences parenting, child and adolescent norms and expectations. Students utilize assessment skills, coupled with knowledge of development and clinical theory to explore clinical case studies. Prereq: SASS 477 or SASS 400-TR.

SASS 584. Integrative Seminar in Mental Health: Children and Adolescents. 3 Units.
Integrative Seminar in Mental Health: Children and Adolescents is an advanced level course, a capstone course in the Mental Health Child and Adolescent Specialization, that provides opportunities for students to increase their knowledge of assessment, diagnosis and treatment. This course builds on the course material in SASS 580, SASS 477, SASS 549, and SASS 576. The seminar is intended to help students integrate theory and practice, especially in the context of public mental health and community-based, social service practice. The integrative Seminar in Social Work Practice with Children and Adolescents uses a seminar format facilitates individual learning and promotes a learning-to-practice, reflective approach. The seminar assumes there are numerous evidenced-based models and practices and focuses student learning on the role of the professional use of self in the implementation of theory, technique, model, or intervention.

SASS 587. Integrative Seminar in Mental Health: Adults. 3 Units.
The Integrative Seminar in Social Work Practice with Adults is an advanced level course, a capstone course in the Mental Health Adult Specialization, that provides opportunities for students to increase their knowledge of assessment, diagnosis and treatment. This course builds on course material in SASS 583, SASS 477, and SASS 576. The seminar is intended to help students integrate theory and practice, especially in the context of public mental health and community-based, social service practice. The Integrative Seminar in Social Work Practice with Adults uses a seminar format and provides students the opportunity to interact with professionals, from various treatment and practice settings. The seminar format facilitates individual learning and promotes a learning-to-practice, reflective approach. The seminar assumes there are numerous evidenced-based models and practices and focuses student learning on the role of the professional use of self in the implementation of theory, technique, model, or intervention.

SASS 589. Social Work in Health: Chronic Illness. 3 Units.
This course is an interest-focused seminar, which consists of the instructor’s didactic presentations and students’ individual presentations. The instructor addresses the unique features of practice in healthcare settings within a community-based context perspective. Various social work interventions appropriate for use in healthcare are explored. Additional content focuses on developmentally determined issues for chronically ill children, adolescents, young adults, middle-aged adults, and older adults, including sensitivity to issues of diversity in practice populations. Students select one chronic illness for intensive study. The chronic illness must be an organically-based disease process, not a mental illness or an addiction. Prereq: SASS 477 or SASS 400-TR.

SASS 590. Field Practice. 1 - 12 Unit.

SASS 594. Independent Study Abroad. 1 - 12 Unit.
(Credit as arranged.)

SASS 598. Individual Reading. 1 - 12 Unit.
Special written permission needed. See MSASS registrar.

SASS 601. Field Education I. 2 Units.
The overall goal of this course is to provide graduate level social work students with field related opportunities to develop foundation level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent developing practitioners. The field instructor is based at the social service setting and provides the direct instruction of the student. The faculty advisor, who is based at the School, serves as a link between all parties, interprets the requirements and standards of the School, and participates and consults in the design of the student’s learning experience. The field instructor assigns tasks to the student according to the requirements of the School and the educational and experiential level of the student. Student, field instructor, and faculty field advisor all participate in various ways in the evaluation of the student’s work; the faculty advisor is responsible for assigning the grade.

SASS 602. Field Education II. 3 Units.
This course is designed to be taken by entering Advanced Standing students in the first semester of their master’s program and by Foundation level social work students in the second semester of their master’s program. It consists of a field practicum and participation in professional development opportunities. For students entering the program with advanced standing, there is an additional requirement of four logs and an integrative assignment, and periodic meetings with a field faculty advisor in addition to the field conference. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop foundation level competencies in the eight abilities by helping students apply knowledge of social work theory, skills, values, and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Students spend 336 hours in field and professional development in SASS 602. Prereq: SASS 601 or SASS 400-TR.
SASS 603. Field Education III. 3 Units.
The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop advanced level competencies in their area of concentration in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Students spend 336 hours in field and professional development in SASS 603. Prereq: SASS 602 or equivalent.

SASS 604. Field Education IV. 3 Units.
This course is designed to be taken by students in their advanced course of study. It consists of a field practicum and participation in professional development opportunities. The overall goal of this course is to provide graduate level social work students with field related opportunities to continue to develop advanced level competencies in their area of concentration in the eight abilities by helping students apply knowledge of social work theory, skills, values and ethics acquired in the classroom in an agency setting. The periodic meetings with the field faculty advisor are designed to provide students with an opportunity to integrate classroom and field learning. These collective experiences provide students with a forum to develop social work skills, integrate and operationalize the values and ethics inherent in professional practice, and confront social injustice as self-reflective, competent, developing practitioners. Student, field instructor, and field faculty advisor all participate in the evaluation of the student’s work; the faculty advisor is responsible for assigning the grade. Students spend 336 hours in field and professional development in SASS 604. Prereq: SASS 603 or equivalent.

SASS 608. Philosophy of Science and Theory Building. 3 Units.
This is a required foundation course. The nature of theory is examined. Inductive and deductive methods for knowledge building are reviewed. Course content draws from philosophy of science as well as empirical and phenomenological research.

SASS 609. Theories of Social Welfare and Social Justice. 3 Units.
This is a foundation course required for all students. Theories of social welfare and social justice are examined. Course content draws from moral philosophy, economics, political science, cultural anthropology, sociology, history, psychology, and social welfare theory and provides students with a broad orientation to the field of theoretical social welfare.

SASS 610. Theories of Human Behavior: Macro and Micro Dimensions. 3 Units.
This is a required, foundation course and is designed to help students acquire a critical and reflective approach to theory in social work research and practice. The course provides a broad overview of theoretical perspectives at the individual, group, community, organizational and/or societal levels and addresses major theoretical perspectives used in social work and social welfare research.

SASS 613. Advanced Research Design. 3 Units.
This foundation course in research methods is required of all students. It is a prerequisite to the quantitative and qualitative courses. Topics covered include operationalization of variables, threats to validity, and experimental, quasi-experimental and non-experimental research design.

SASS 614. Models of Qualitative Research. 3 Units.
This course introduces students to the principles, approaches, methods, and analytical techniques utilized when conducting qualitative research in the social sciences. Five models of qualitative research design and methodology are studied, including narrative analysis, case study, ethnography, and grounded theory and phenomenology. This course is designed to provide students with the tools to critically evaluate as well as to enhance the academic rigor or “quality” of qualitative data. Prereq: SASS 608 and SASS 613.

SASS 615. Social Statistics and Data Analysis. 3 Units.
This foundation course (or its equivalent) is required of all students. Content includes univariate, bivariate and inferential statistics, and the use of electronic data processing technology to manage and analyze data. Prereq: SASS 613.

SASS 616. Applied Regression and the Linear Model. 3 Units.
This is the second required course in the research methods sequence for MSASS doctoral students. At the end of this course, students will be able to apply ordinary least squares regression and logistic regression in the analysis of social science data. They will learn to formulate research questions and hypotheses, specify statistical models, carry out the appropriate analyses, interpret their findings, and communicate their results clearly and effectively. Prereq: SASS 613 and SASS 615.

SASS 617. Specialization Seminar. 3 Units.
This course is a graduate level seminar; students and instructors share in the responsibility for presenting information and constructive criticism on the material. Topics include the selection and description of a social welfare topic, the theoretical explanations of that topic and the development of a focused, empirically-based literature review resulting in research questions and hypothesis.

SASS 618. Measurement Issues in Quantitative Research. 3 Units.
This course covers the operationalization of social science concepts and development of methods for their measurement. Issues covered include index and scale construction, validity, reliability, questionnaire design, factor analysis, measurement error, and missing data. Prereq: SASS 613, SASS 615 and SASS 616.

SASS 620. Theory and Research Base of Social Work Practice. 3 Units.
This course provides a critical overview of the major theories and the body of research informing contemporary social work practice. Theories will include the foundational, such as psychodynamic, ego-psychological, ecological and systems, along with trans-theoretical and post-modern theories. The course will integrate a discussion of the history of scientific inquiry in social work, particularly focusing on practice or intervention studies, systematic reviews and meta-analyses. Criteria for evaluating individual studies and the evidence base in specific practice areas will be included, along with material on the current state of Evidence-Based Practice. Recommended preparation: SASS 610.
SASS 621. Social Welfare Policy. 3 Units.
This course focuses on the critical review and application of policy analysis frameworks related to social welfare policy. The conceptual, historical, ideological, and political foundations contributing to the development, formulation, implementation, and monitoring and evaluation of social welfare policies will be critiqued. Social welfare policies intended to ameliorate social ills (e.g., poverty, education, housing) will be analyzed using policy analysis frameworks in a critical and comparative fashion. Policy alternatives to respond to current and future social problems will be critically discussed for feasibility, viability and economic effects. Recommended preparation: SASS 610.

SASS 630. Seminar on Social Work Education. 3 Units.
This seminar examines the structure and content of social work education within the context of higher education in American society. Emphasis is placed on curriculum design and course development. The course also is designed to help students develop a strategic approach to teaching based on learning theory. Finally, attention is given to current issues and future directions for social work education.

SASS 632. Research Project. 3 Units.
This course provides students with the opportunity to work with specific faculty engaged in research studies either on an individual or group basis. Prereq: 614 and SASS 615.

SASS 635. Methodological Issues in Qualitative Research. 3 Units.
This course builds on SASS 614, Models of Qualitative Research. It focuses on the application of specific qualitative data-collection methods, data-analytic approaches, and strategies for representing findings from qualitative investigations. Prereq: SASS 614.

SASS 637. Individual Reading. 1 - 18 Unit.
This is an individual reading course permitting students to select areas of interest and pursue these interests with specific faculty. (This also is the course number to register for dissertation credits before passing the qualifying examination.)

This course is intended for students who have passed the qualifying examination and are actively working on their dissertation. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

SPPP Courses

SPPP 500. Special Topics in Social Work Policy. 3 Units.
This seminar course is intended for students who are interested in exploring advanced topics in social policy.

SPPP 502. Alcohol and Other Drug Abuse Policy and Service Delivery. 3 Units.
This course explores selected current alcohol and other drug abuse (AODA) problems using a problem analysis framework. Emphasis is placed on current and past AODA problem definitions as they affect policy and program development. Conceptualization of the problems resulting from AODA patterns of use and abuse, causation theories, the impact of cultural and social diversity as well as discrimination upon all client systems, and the role of local and national institutions which advocate for this population group are reviewed. Prereq: SASS 470 or SASS 400-TR.

SPPP 510. Mental Health Policy and Service Delivery. 3 Units.
This course is designed for students preparing for careers as social workers in the mental health field with an understanding of mental health policy and service delivery at the federal, state, and local levels. Through readings, lectures, discussion, and written assignments, the course will aid students in developing a macro-level perspective of mental health policies and programs. Prereq: SASS 470 or SASS 400-TR.

SPPP 511. Issues in Health Policy and Service Delivery. 3 Units.
This course examines health care policy issues and options, and highlights the development of health care policy in the U.S., the influence of health policy development, and the role of social work. It also examines the problems, policy, and program issues in the subsidy, financing, reorganization, and regulatory capacity of health policy. National, state, and local issues will be stressed. The course is for students in the health concentration but also welcomes students from other areas. Prereq: SASS 470 or SASS 400-TR.

SPPP 512. Legislative and Political Process. 3 Units.
This course focuses on how to deal effectively with legislators, their staff, and legislative systems. The roles of money and information in legislative and political systems are examined. The process through which a bill moves to become law is explored, including critical points of intervention in that process. Lobbying legislators, including presentation of testimony and use of coalitions, is featured. Prereq: SASS 470 or SASS 400-TR.

SPPP 513. Aging Policy and Service Delivery. 3 Units.
This course reviews current income, health, and social service policies for older Americans. It also investigates patterns and levels of care for the elderly. Trends and issues in policies and programs for seniors are analyzed in the context of the dimensions and differential characteristics of the aging population in the country. Some cross-national comparisons of services for the elderly are included in this analysis. Prereq: SASS 470 or SASS 400-TR.

SPPP 520. Homelessness Policy and Service Delivery. 3 Units.
This course provides an understanding of homelessness and its incidence and prevalence, its origins, both historical and social, its consequences, and policy-based strategies for its prevention. The course investigates the impact of homelessness on single individuals, families with children, minorities, and vulnerable populations such as the mentally ill and alcoholics. Students, organized into a task force, examine a range of professional and community-based responses to the problem. The task force method enables students to assess the effects of public policy on homeless people, critique the effectiveness and adequacy of local shelter and service programs, and propose community-based strategies to prevent, stop, and better homelessness. Prereq: SASS 470 or SASS 400-TR.

SPPP 525. AIDS Seminar. 3 Units.
This course is designed to provide an understanding of HIV/AIDS. The nature and prevalence of the disease, including its impact upon vulnerable populations such as children and youth, women, gay and lesbian populations, people of color, prisoners, IV drug users, and street people are examined. The course focuses on public policies, programs, and service delivery for HIV/AIDS at local, state, and national levels. Topics include the policy-making role of advocacy groups, the function of AIDS service organizations, and the design of educational and preventive programs. Prereq: SASS 470 or SASS 400-TR.
SPPP 529. Child and Family Policy and Service Delivery. 3 Units.
This course focuses on major federal legislation impacting children, youth, and families, examined in the context of community-based social work policy/practice. It builds upon the foundation course in social welfare policy and enables students to use an advocacy approach to provide policy-informed services and to participate in policy and implementation and change. Prereq: SASS 470 or SASS 400-TR.

SRCH Courses

SRCH 530. Practice Evaluation. 3 Units.
This advanced course prepares direct practice students to examine their own practice with individuals, families, and groups. Attention is given to basic principles of measurement and selection of appropriate measurement instruments for use in direct practice settings. The course is intended to provide students with the technical skills necessary to investigate the components of social work practice and contribute to an empirically validated social work knowledge base. The student is asked to demonstrate the efficacy of his/her practice intervention in field placement by using a suitable design and method. A hands-on project is required using clinical experience from field practice. Prereq: SASS 426 and SRCH 426 or SASS 400-TR.

SRCH 536. Individual Research Practicum. 3 Units.
With instructor and research sequence chair approval, an individual program of supervised research experience may be undertaken. This course allows the student to tailor a program of applied research to a specific practice issue or program. Prereq: SASS 426 or SASS 400-TR.

SSBT Courses

SSBT 500. Special Topics in Sociobehavioral Theory. 1 - 3 Unit.
This seminar is intended for students who are interested in exploring advanced topics of current interest in sociobehavioral theory.

SSBT 502. Infant and Toddler Development. 3 Units.
In this course, students will focus on that segment of the human life span called infancy and toddlerhood, a period of development from conception to age three years. Students will be introduced to the major theories of development and will integrate theory and research as they relate to children's physical and motor development, perception, intelligence, language and communication development, and social and emotional development. The impact of the family and sociocultural contexts that affect development will be discussed. Discussion, case studies, and observations will be used to facilitate learning. Prereq: SASS 440 or SASS 400-TR.

SSBT 527. The Theory and Practice of Leadership. 3 Units.
This course assists students preparing for management and leadership roles in social service organizations to understand theories of leadership and translate them into effective leadership practices. The class explores leadership definitions, tasks and responsibilities, and the development of leadership capabilities. Students also examine their personal values, beliefs, skills, and understanding of ethical principles underlying leadership. Prereq: SASS 440 or SASS 400-TR.

SSBT 535. Human Sexuality. 3 Units.
The course addresses sexuality as an integral part of human functioning and human relationships throughout the life cycle. The formation of sexual identity is addressed, including gender identity, sexual orientation, and sexual intention. The physiological and psychological aspects of sexual behavior are covered, including the effects of aging, chronic illness, and sexually transmitted diseases. The course concludes with practical applications for social work, including an overview of assessment and treatment of sexual dysfunction. Prereq: SASS 440 or SASS 400-TR.

SSBT 546. Poverty Strategies for Social Workers. 3 Units.
This course provides an understanding of poverty. It examines poverty through an exploration of its causes, theory, policy strategies for its amelioration and practice implications. The course investigates the impact of poverty on single individuals, families with children, minorities, and vulnerable populations. The course will examine welfare reform and its impact in bringing people out of poverty. Students, in teams, will examine one facet of poverty--its theories, policies, impacts on individuals and families, potential solutions, and our approaches to the issues as social workers. In addition to assigned texts and readings, the course will be supplemented by practitioners, organizers, and low-income persons addressing the issues of poverty. Prereq: SASS 440 or SASS 400-TR.

SSBT 555. Women's Issues. 3 Units.
This course examines theories that are relevant to the development and socialization of women, and discusses issues that are relevant to women's lives within the context of oppression based on sexism, racism, ageism, homophobia, and other forms of discrimination. Emphasis is placed on assisting students in becoming more aware of the issues that are specifically relevant to their own development and socialization, and preparing for effective and sensitive professional practice by increasing knowledge about the issues facing women. Prereq: SASS 440 or SASS 400-TR.

SSWM Courses

SSWM 500. Special Topics in Social Work Methods. 1 - 3 Unit.
This seminar course is intended for students who are interested in exploring advanced topics of current interest in methods. Prereq: SSWM 400 or SASS 477 or SASS 400-TR.

SSWM 518. Social Work with Death, Grief and Loss. 3 Units.
This course focuses on the concept of death and related topics from a social work perspective. Such topics include the role of death in American culture; the dying process and its institutions; assessment and intervention strategies; life span and family life considerations; and end-of-life decisions. The course provides both theoretical and experiential exposure to the dying process as it relates to self, the dying person, and the bereaved. Students will gain insight into serving the terminally ill, those who need assistance with mourning and grief, and clients dealing with difficult life-and-death decisions regarding loved ones. Prereq: SASS 477 or SASS 400-TR.
SSWM 519. Children and Families in the School Setting. 3 Units.
This course prepares students to be certified school social workers. The course addresses major issues in American schools; a theoretical framework for school social work services; design, delivery, and evaluation of school social work services; legal and ethical issues; and the roles and intervention strategies of school social workers. It covers student and family problems and areas of need such as disability, truancy, divorce, teen pregnancy, youth depression and suicide, substance abuse, violence, and dropping out of school. This course is required for those participating in a planned program of study leading to state certification as a school social worker. If space permits, other students may enroll if they have or have had school social work experience. Prereq: SASS 477 or SASS 400-TR.

SSWM 531. Strategic Alliances. 3 Units.
This course provides organizational leaders with the concepts and practices critical to the development of interorganizational alliances, from affiliations to mergers and consolidations. Various strategies are examined and existing community-based national and international linkages are explored. Prereq: SASS 477 and SASS 478 and SASS 400-TR.

SSWM 544. Budgeting and Financial Management in Social Service Organizations. 3 Units.
Social service managers must be both responsible and accountable for the management of resources that enhance the provision of effective and efficient services to clients. In this course, students obtain an understanding of the skills, tools, and strategies needed to plan for the financial stability of their organizations. Students use a critical thinking perspective to examine budgetary and financial choices. They are able to understand the impact of power and politics in budget and financial processes. In addition, they are able to recognize ethical dilemmas that are often inherent in financial decision-making. Students demonstrate their understanding of program budgeting, financial reporting, and monitoring as well as other resource management concerns that affect human service managers and organizations. Prereq: SASS 477 or SASS 400-TR.

SSWM 546. International Social Work. 3 Units.
This is an advanced seminar designed for students interested in the international dimensions of the social work profession and social work practice. The seminar focuses on commonalities and differences in the roles and functions of social workers in different nations. It also gives attention to social work as a global profession and social work practice on an international level. Prereq: SASS 477 or SASS 400-TR.

SSWM 563. Social Work Intervent in Co-occurring Mental and Substance Abuse Disor. 3 Units.
This advanced methods course provides a basic orientation to substance use disorders in persons with mental illness (SAMI). A biopsychosocial framework will be used to explore the etiology, the maintenance and the recovery of both mental and substance use disorders. The historical background of practitioner, programmatic, and institutional barriers that impede the development and application of clinical skills to dually diagnosed individuals will be explored. Emphasis will be placed on strategies for the implementation of services to deal with individuals with co-occurring problems and their families using the evidence-based New Hampshire-Dartmouth Psychiatric Research Center Integrated Treatment (IT) Model. Current assessment techniques and treatment of special populations including, but not limited to: women, minorities, and adolescents will be discussed. Prereq: SASS 477 or SASS 400-TR.

SSWM 575. Social Work With Persons with Serious Mental Illness. 3 Units.
This course focuses on people who have severe mental illnesses. Students learn primary and tertiary community-based treatment and rehabilitative approaches, services, and programs. In helping people achieve recovery, students learn the theory and practice skills that underscore the four major approaches to community-based service delivery: the assertive case management model; strengths case management model, psychosocial rehabilitation model, and the recovery model. Within each model, specific attention is placed on practice similarities and differences, especially interviewing assessment, and intervention. Within these practice skills, students learn how to identify social justice and empowerment values that are supported or undermined. Advocacy is highlighted as a central social work value and practice skill that cuts across community-based practice models. Finally, lectures, readings, and discussions examine how gender, ethnicity, and social class produce various experiences of mental illness and various social work interventions. Prereq: SASS 477 or SASS 400-TR.

SSWM 579. Cognitive Behavioral Interventions. 3 Units.
This course acquaints students with the theoretical, conceptual, and skill bases of several cognitive-behavioral approaches to practice. Topics include assessment, use of tasks and homework, coping skills, cognitive restructuring, and problem solving approaches to practice. The course draws upon students’ field and work experiences to illustrate the application of the concepts and skills under discussion. Prereq: SASS 477 or SASS 400-TR.

SSWM 582. Social Work in Child Abuse and Family Violence. 3 Units.
This course addresses the etiology, investigation, and treatment of child abuse including sexual abuse and the roles of child welfare, health, and mental health agencies. Particular attention is given to direct work with children and adults who have experienced abuse, and to interventions in instances of family violence. Prereq: SASS 440 and SASS 477 or SASS 400-TR.

SSWM 584. Social Work with Couples. 3 Units.
This course provides an overview of assessment and intervention methods for working with couples around issues of marriage, divorce, and remarriage. Alternate couple forms are discussed. The course emphasizes systems and social learning approaches, communication and negotiation in problem solving and its relevance to assessment, treatment structure, and techniques. Special attention will be given to problem areas such as commitment, sexual dysfunction, chemical dependency, and destructive communication patterns. Prereq: SASS 477 or SASS 400-TR.

SSWM 585. Social Work with Groups. 3 Units.
A theoretical formulation of the social group work method as a problem solving process is addressed. Exercises are presented in the use of diagnostic skills to determine individual needs and problems for which groups may be helpful, the worker’s role in facilitating group functioning through his/her use of various program media. Attention is given to the significance of goals, agency environment, and policy for direct work with groups. Prereq: SASS 477 or SASS 400-TR.

( Brandeis University)  
Assistant Professor of Research, Social Work

Marjory Klein, MSSA  
(Case Western Reserve University)  
Clinical Instructor, Social Work  
Aging, mental health, alcohol and other drugs

Lenore A. Kola, PhD  
(Boston University)  
Associate Professor, Social Work; Co-Director, Ohio Center for Evidence Based Practices  
Alcohol and other drug abuse, co-occurring mental and substance use disorders

Jill E. Korbin, PhD  
(University of California, Los Angeles)  
Professor, Anthropology and Social Work; Director, Schubert Center for Child Studies; Co-Director, Childhood Studies Interdisciplinary Program; Associate Dean, College of Arts and Sciences  
Culture and human development, child well-being and child maltreatment, cultural, medical and psychological anthropology

Siran M. Koroukian, PhD  
(Case Western Reserve University)  
Associate Professor, Social Work; Associate Professor, Epidemiology and Biostatistics  
Methodological issues in the use of large databases in health services research, Medicare and Medicaid programs, cancer-related and other health disparities

Jeff M. Kretschmar, PhD  
(Miami University of Florida)  
Assistant Professor of Research, Social Work  
Violence and aggression, suicide, victimization, mental health and substance abuse

Jung-won Lim, PhD  
(University of Southern California)  
Assistant Professor, Social Work  
Ethnic minority and underserved cancer survivors, cultural and ethnic disparities in cancer outcome research, quality of life and behavioral outcomes, family care giving and health communication, culturally competent interventions

Sana Loue, PhD  
(University of Southern California at Los Angeles and Case Western Reserve University)  
Professor, Department of Epidemiology and Biostatistics; Director for Minority Public Health, School of Medicine  
Immigration law and health, impact of HIV on the family, HIV in underserved populations, ethics in research, public health and law

Gerald J. Mahoney, PhD  
(Vanderbilt University)  
Verna Houck Motto Professor of Families and Communities; Director, Center on Interventions for Children and Families  
Early childhood mental health, early intervention, parent education, disabilities

Soad Mansour, MSSA  
(Case Western Reserve University)  
Clinical Instructor, Social Work; Director of International Affairs  
Management, policy, international social work, community development

Gillian Marshall, PhD  
(University of Washington, Seattle)  
Assistant Professor, Social Work  
Aging/social gerontology, mental health disparities, cultural factors and immigrant health

David B. Miller, PhD  
(University of Pittsburgh)  
Associate Professor, Social Work  
African American fatherhood, violence as a public health problem, child maltreatment, adolescent resiliency factors, treatment of individuals exposed to violence

Dorothy C. Miller, DSW  
(Columbia University)  
Clinical Associate Professor, Social Work; Director, Flora Stone Mather Center for Women  
Women’s economic well-being, equality, public policy

Sharon E. Milligan, PhD  
(University of Pittsburgh)  
Associate Dean for Academic Affairs; Chair, Master’s Program; Associate Professor, Social Work; Associate Director, Center on Urban Poverty and Community Development  
Evaluation of community-based initiatives, community and social development practice and urban poverty research

Meeyoung Oh Min, PhD  
(Case Western Reserve University)  
Research Assistant Professor, Social Work  
Substance-using mothers and their children, childhood trauma and its correlates/consequences, research methods and statistics

Sonia Minnes, PhD  
(Case Western Reserve University)  
Assistant Professor, Social Work  
Behavioral and mental health outcomes of prenatally drug-exposed children

Diana Morris, PhD  
(Case Western Reserve University)
Florence Cellar Associate Professor of Gerontological Nursing; Executive Director, Case Western Reserve University Center on Aging and Health
Geriatric mental health, aging and quality of life, family care giving, science of unitary human beings

Nancy V. Neuer, MSSA
(Case Western Reserve University)
Clinical Instructor, Social Work
Clinical social work, health

G. Regina Nixon, PhD
(Howard University)
Instructor, Social Work
Poverty/high-risk populations, cultural diversity

Lori Longs Painter, MSSA
(Case Western Reserve University)
Clinical Instructor, Social Work
Social work practice

Andrea Goodloe Porter, MSSA
(Case Western Reserve University)
Assistant Dean for Student Services; Clinical Instructor, Social Work
Child abuse and child welfare, domestic violence, sexual abuse identification, crisis intervention

Robert J. Ronie, MD
(Case Western Reserve University)
Douglas Danford Bond Professor and Chair, Psychiatry; Professor, Social Work
Addiction psychiatry, public health, community mental health, co-occurring disorders

Anna Marie Santiago, PhD
(University of Wisconsin-Milwaukee)
Leona Bevis and Margaret Haynam Professor of Community Development
Housing and urban policy, social capital formation, neighborhood effects on child health and well-being, community development

Mark I. Singer, PhD
(Case Western Reserve University)
Leonard W. Mayo Professor in Family and Child Welfare; Co-Director, Center on Substance Abuse and Mental Illness; Deputy Director, Begun Center for Violence Prevention Research and Education
Adolescent mental health, adolescent substance abuse, youth-related violence

Louis Stokes, JD
(Cleveland Marshall Law School)
Distinguished Visiting Professor
Government, public policy, social change, community development

Gerald Strom, MSW
(Howard University)
Senior Instructor, Social Work; Director, Intensive Weekend Program
Child abuse, growth and development, sex abuse investigation and treatment, clinical practice

Aloen Townsend, PhD
(University of Michigan)
Professor, Social Work; Associate Professor, Sociology; Chair, Doctoral Program
Adult development and aging, research methods and statistics, adult physical and mental health, families and formal service systems

Elizabeth M. Tracy, PhD
(University of Washington)
Grace Longwell Coyle Professor of Social Work
Co-occurring substance use and mental health disorders, social networks, social support

James J. Werner, MSSA
(Case Western Reserve University)
Assistant Professor of Family Medicine, School of Medicine
Health behavior change, methods for mental health service delivery and direct practice in primary care, practice-based research networks, clinician education

Scott A. Wilkes, JD
(Case Western Reserve University)
Director of Field Education; Instructor, Social Work
Child welfare, mental health, nonprofit management, social work ethics

Rhonda Y. Williams, PhD
(University of Pennsylvania)
Associate Professor, History; Director, CWRU Social Justice Institute
Social justice, race/ethnicity, urban activism

Amy Blank Wilson, PhD
(University of Pennsylvania)
Assistant Professor, Social Work
Individuals with serious mental illness and co-occurring disorders, mental health services research, interconnections among the mental health and criminal justice systems, corrections and reentry

Zoe Breen Wood, PhD
(Case Western Reserve University)
Instructor, Social Work
Adoption, child welfare, policy and practice, social work methods, international travel and study, leadership, ability based learning
Master of Science in Social Administration (MSSA)

The Master of Science in Social Administration (MSSA) program prepares students for advanced social work practice in a variety of settings. The master’s curriculum is designed to address the wide range of skills and functions required of a professional social worker. Mandel School students are instructed on the various theories of individual and group behavior as well as community systems theory. The application of this knowledge, along with the appropriate use of practice principles and techniques, is a major educational objective.

The curriculum is divided into two levels: foundation and advanced. The foundation curriculum (27 credit hours) includes the knowledge, values, processes, and skills essential for the general practice of social work. It consists of general courses in social work methods, human development theory, social policy, research methods, and an introductory semester of field education. The advanced curriculum (33 credit hours) builds on the professional foundation and provides for advanced knowledge and practice skills in the concentration selected by the student. Concentrations include the following: aging; alcohol and other drug abuse; children, youth and families; health; mental health; and community development. School social work is available as a special emphasis.

Ability Based Learning Environment (ABLE)

The MSSA program incorporates an ability-based learning environment that enables students to develop and demonstrate mastery of eight core social work abilities. Classroom courses and field education are designed to help students develop each ability and continuously assess their learning throughout the educational experience. Mastery of the abilities is demonstrated in the field practicum and documented in a cumulative learning portfolio.

- **Identify as a Reflective Professional Social Worker:** Students will demonstrate an awareness of the potential influence of their actions and words as a professional social worker upon individuals, families, groups, organizations and communities. Students will demonstrate the ability to reflect on practice decisions and activities, using self-correction to assure continual professional development.
- **Advocate for Social, Economic and Environmental Justice:** Graduates will advocate for human rights and social and economic justice as one of their primary responsibilities.
- **Apply Social Work Methods:** Graduates of the MSASS master’s program are prepared to function as advanced practitioners in a changing arena of social work and social welfare. They are able to engage clients and client systems, assess client needs and strengths, provide or help arrange needed services and support, weigh intervention alternatives, implement change strategies, and evaluate results.
- **Uphold Social Work Values and Ethics:** Students will integrate social work values and ethics into their learning and professional practice.
- **Integrate Cultural, Economic and Global Diversity:** Students will integrate into their practice the knowledge, skills, and values needed for understanding and appreciation of a diverse world, and for ongoing development of competence in working with diverse populations and settings.
- **Think Critically About Theory and Research Knowledge:** Graduating students will be able to think critically about their practice and its knowledge base, and about the social problems and situations they encounter. Critical thinking in social work includes selecting appropriate theoretical approaches and strategies to apply in practice, using research findings to improve practice, evaluating one’s own practice, and making contributions to knowledge in the field.
- **Communicate Effectively:** Graduating students will have the oral, written, nonverbal, and information technology skills that will enable them to communicate effectively and appropriately in professional roles and settings.
- **Develop as a Social Work Leader:** Social workers recognize that the context of practice is dynamic, and use knowledge and skill to respond proactively. Social work leaders are informed, resourceful, and proactive in responding to evolving organizational, community, societal and global contexts at all levels of practice in ways that improve quality of life.

Mandel School faculty place a high priority on the integration of theory with practice. To facilitate this integration, field work is done concurrent with course work. Through field education, students have the opportunity to acquire new skills and apply their classroom learning in their practice setting. The school is affiliated with over 350 agencies in the Greater Cleveland area, creating a vast network of field education as well as employment opportunities. Students are required to complete over 1000 clock hours of field education. The school and the affiliated agency or field setting agree on the content and conditions of field education, including the qualifications of social workers who serve as field instructors. Field placement decisions are based on educational criteria, with student interests and career objectives taken into consideration.

**Concentrations**
- Community and Social Development
- Direct Practice

**Direct Practice Specializations**
- Aging
- Alcohol and Other Drug Abuse
- Children, Youth and Families
- Mental Health
- Health*

*Health specialization is offered only in the full-time format.

**Program Options**

**Full-Time Program**

Approximately one-half of Mandel School students are enrolled in the Full-Time Program. This program takes four semesters to complete. Students enroll for fall and spring semesters and are scheduled concurrently for classes and field work on a full-time basis. This program is demanding in depth and scope of experience. It is not advisable for students to assume extensive employment during their semesters of enrollment.

**Advanced Standing Program**

Advanced standing may be granted to students who have earned an Bachelor’s degree in Social Work (BSW) within the last seven years from an institution accredited by the Council on Social Work Education. Students must have earned a B or better in any social work course for which advanced standing is sought.
**Intensive Weekend Program**

The Intensive Weekend Program is designed to provide graduate-level education toward the MSSA to employed professionals who are maintaining full-time employment. Classes meet one weekend per month throughout the calendar year. Students are required to attend all classes. Students complete five courses each year and all program requirements in three years. Those who have graduated from an accredited BSW program in the last seven (7) years can complete the Intensive Weekend Program in two years.

**Senior Year in Professional Studies Program**

Undergraduate students of superior ability and achievement may be admitted to the Mandel School at the end of their junior year. This program enables qualified college seniors who are majoring in social work related fields to begin their first year of graduate study during what would normally be their last year of undergraduate work. Exceptional undergraduate students who are firmly committed to social work as a profession can earn both their undergraduate and graduate degrees in five years.

A student in the Senior Year in Professional Studies Program is permitted to substitute the first year (31 semester hours) at the Mandel School for the last year of undergraduate work. The bachelor’s degree will be granted by the undergraduate college when the student has completed his or her first year at the Mandel School.

Students applying for this program must be interviewed by an admissions officer as part of the application process to explore the candidate’s level of maturity, knowledge of social work, and readiness for professional education. Application for this program should be made prior to the second semester of the junior year.

To qualify for this program, students must demonstrate superior academic ability and achievement during their first three years of undergraduate study. All applicants must (a) have sufficient coursework in the social and behavioral sciences by the end of their junior year; (b) hold a cumulative grade point average of at least 3.25; and (c) have successfully completed three-quarters of the major and minor courses in their area of concentration. Acceptance into the Senior Year in Professional Studies Program is contingent upon receipt of a written statement from the dean of the applicant’s undergraduate college, outlining any remaining requirements.

Note: This program is available to students at Case Western Reserve University, Hiram College, College of Wooster, Baldwin Wallace University, John Carroll University, Fisk University, and Ohio Northern University by joint agreement with these institutions. Interested students from other institutions are encouraged to speak with the director of admissions.

**Part-Time Degree Program**

Students may opt to complete their degree work on a part-time basis during their first year. During the second, third, and fourth years students complete field education requirements and carry a full-time, or nearly full-time, load.

Part-time students select classes from the full-time weekday schedule. These classes meet once a week for two hours. Employed professionals may participate in this program if they can arrange a flexible work schedule.

The part-time program may be completed in three years. Students granted advanced standing may complete the program in fewer semesters. Part-time students are required to register for a minimum of six credit hours per semester. A student must complete all degree requirements in a maximum of five years.

**Non-Degree Study**

Some designated courses may be taken on a non-degree basis with the permission of the assistant dean of academic affairs and the course instructor. A maximum of 12 hours earned on a non-degree basis may be counted toward requirements for the master’s degree if the student is subsequently admitted as a degree seeking candidate. A bachelor’s degree is required for enrollment.

**Virtual MSSA Program (begins Spring 2013)**

The Virtual MSSA Program option is designed to provide online graduate social work education for employed professionals who plan to maintain full-time employment. Classes meet online to complete all program requirements in two years for advanced standing, and three years for non-advanced standing.

**Master of Nonprofit Organizations Degree Program**

*(begins Fall 2013 pending approval by the Ohio Board of Regents)*

The Master of Nonprofit Organizations (MNO) degree program prepares students interested in the nonprofit sector for management and leadership positions, by building their skills, competencies, knowledge and capacity. The MNO degree has five program educational objectives for its graduates: (1) to bring contextual understanding to managerial decision-making; (2) to develop, analyze and apply relevant data; (3) to inspire and engage volunteers and professionals in the creation and implementation of ethically-grounded strategies to advance organizational mission; (4) to develop and implement revenue generation strategies; and (5) to manage human and financial resources effectively, efficiently and ethically.

The full time program consisting of thirty-nine (39) credit hours can be completed in twelve (12) months over three (3) consecutive semesters, with students beginning each year in the summer semester (June 1) and concluding at University graduation in the following May.

The curriculum will provide education that instills analytical skills, knowledge relevant to ethical and entrepreneurial decision-making, and expertise in acquiring and managing resources. Graduates will be trained to enhance organizational effectiveness, harness passion, dedication, and vision, make the best use of available resources and seek new resources. Graduates will gain hard and soft management skills and knowledge needed to address a wide range of issues confronting nonprofits and become professionals who work to influence political and social decisions, create stronger organizations, building the capacity, and advancing the mission.

Students accepted for the MNO degree program must possess a Bachelor’s degree from an accredited college or university. They must have a record of excellent academic performance and potential evidenced by grade point average and scores on the Graduate Record Examination (GRE). Students must also evidence a strong interest in the nonprofit sector through volunteer activities, internship experiences or employment in a nonprofit organization.
Eighteen-Month Advanced Standing Program

Advanced Standing students who are not in the Twelve-Month program generally follow the Eighteen-Month program leading to a Master of Science in Social Administration (MSSA). Students follow a fall semester, spring semester, fall semester sequence of courses and they graduate in January. Up to 15 hours of advanced standing may be granted to students who have completed their bachelor’s degree in social work (BSW) in the last seven years from an institution that is accredited by the Council on Social Work Education (CSWE). Students pursue this option for the following reasons:

• One of the multi-disciplinary certificate programs or special focus areas
• Electives not offered during the summer semester
• Retaking core BSW courses in which they earned a grade of B- or below

Twelve-Month Advanced Standing Program

The Twelve-Month Advanced Standing Program leading to a Master of Science in Social Administration (MSSA) is available to students who obtained a strong academic record in their bachelor of science (BSW) program.

Up to 15 hours of advanced standing may be granted to students who have completed their bachelor’s degree in social work (BSW). The Twelve-Month program follows a fall semester, spring semester, and summer session sequence of courses and is intended for students who have clear professional goals and can manage an accelerated program of study. Students complete their MSSA degree in August. Because of the short time frame for completing the Twelve-Month Program, dual degrees, individualized curricula, and the school social work emphasis are not available in this program.

Admission to the Twelve-Month Advanced Standing Program is open to students who have completed a bachelor’s degree in social work (BSW) in the last seven years from an institution which is accredited by the Council on Social Work Education (CSWE). Grades of B or better must be attained in all foundation social work courses.

### Intensive Weekend Program

The Intensive Weekend program offers human service professionals who are employed full time to pursue a Master of Science in Social Administration (MSSA). Classes meet one weekend per month through the calendar year and students are required to attend all classes. Students complete four courses each year (six during the first year), and complete all program requirements in three years.

Courses consists of four distinct components:

- A three-day weekend of classes (Friday, Saturday, and Sunday, 9:00 a.m.-5:00 p.m.)
- A four-week study period, during which additional readings and written assignments are completed
- A two-day weekend of classes (Saturday and Sunday, 9:00 a.m.-5:00 p.m.)
• A final study period of approximately three weeks, during which the final course assignment is completed and materials for the next course are received.

### Intensive Weekend Advanced Standing

The Intensive Weekend program offers human service professionals who are employed full-time to pursue a Master of Science in Social Administration (MSSA). Classes meet one weekend per month through the calendar year and students are required to attend all classes. Up to 15 hours of advanced standing may be granted to students who have completed their bachelor’s degree in social work (BSE) in the last seven years from an institution that is accredited by the Council on Social Work Education (CSWE).

### Full-Time Program

The Full-Time program takes four semesters to complete. Students are scheduled for classes and field education concurrently. In the first two semesters, students complete foundation courses which are prerequisites for concentration required courses. Advanced electives are completed in the last two semesters.

Professional Development and Continuing Education

Professional Development and Continuing Education Program

Opportunities to increase practical knowledge and skills are offered to human services practitioners in a variety of seminars, institutes, conferences, customized training, co-sponsored events, and online learning. Programs are geared to provide practitioners with learning that is immediately applicable at their workplace, skills to help to advance their careers and opportunities for lifelong learning. Programs are taught by renowned faculty and respected alumni and community practitioners.

Programs are offered at the Mandel School of Applied Social Sciences and convenient off-site locations. Distance programs allow “on demand” access to continuing education programs to accommodate busy work schedules and lives.

The Mandel School is an approved provider of professional continuing education for:

- State of Ohio Counselor and Social Worker and Marriage and Family Therapist Board
- Ohio Psychological Association (OPA)
- Ohio Chemical Dependency Professional Board (RCH)
- Ohio Nursing Home Administrators Board (BENHA)

Listings of current offerings in continuing education (http://msass.case.edu/ce) can be found on the Mandel School of Applied Social Sciences website.
Special Focus and Certificate

Special Focus and Certificate Programs

Certificate Programs

Global Health

The Certificate in Global Health (http://www.case.edu/med/cfgh/Certificate.html) focuses on the broadest concept of public health, including international aspects of disease transmission, diagnosis, treatment, policy, and prevention. The overall objective of this interdisciplinary certificate is to support MSASS students with interests in health problems, issues, and concerns that (a) transcend national boundaries, (b) may be influenced by circumstances or experiences in other countries, and (c) are best addressed by cooperative actions and solutions. Current participating departments and schools at Case Western Reserve University include Mathematics, Medicine, Public Health, Anthropology, Nursing, Bioethics, Epidemiology, Biostatistics, Biology, and Engineering.

The requirements to receive the certificate differ by discipline and emphasize discipline-specific and interdisciplinary coursework. For MSASS students, this includes completion of two required interdisciplinary courses and an additional MSASS elective. The certificate is most appropriate for students who choose to complete the Community and Social Development program, or the Health or Aging specializations in the Direct Practice program.

Gerontology

Students with an interest in serving the needs of the aging population may pursue the multidisciplinary graduate certificate program offered through the Case Western Reserve University Center on Aging and Health (http://jpb.case.edu/Centers/UCAH). This program is designed for gerontological researchers, educators, and practitioners. Participating faculty are from the Mandel School and the Case Western Reserve University Schools of Medicine, Dental Medicine, Nursing and Arts and Sciences. Students must be enrolled in the Aging specialization at the Mandel School.

School Social Work

The School Social Work program is designed to train school social workers and provide them with the competencies to practice in a variety of traditional and non-traditional primary and secondary education settings. Such competencies include assessing children’s needs; designing and implementing interventions; and making referrals to other professionals and agencies, as needed. School social workers function collaboratively with educators and other professionals to assist the schools and the communities in mobilizing resources on behalf of children and adolescents in order to help ensure academic success.

The program is consistent with the Ohio Department of Education, State of Ohio, regulations and professional standards developed by the National Association of School Workers, and is a jointly offered by the Mandel School of Applied Social Sciences at Case Western Reserve University and the Division of Education at Baldwin-Wallace University. Students in the program complete the Master of Science in Social Administration (MSSA) degree at the Mandel School with a specialization in Children, Youth and Families. As part of the MSSA degree, students complete three required education courses at Baldwin-Wallace University, SSWM 519 Children and Families in the School Setting, and a field practicum in an approved school social work setting. After the completion of all required coursework and field education, a student can apply to the State of Ohio Department of Education to receive a certificate in school social work.

This program can be completed only by two-year and eighteen-month students (not twelve-month students). Intensive weekend students can also complete this program if they are able to enroll in some full-time program courses.

Management and Leadership

This certificate allows students to pursue a set of focused coursework designed to prepare them for managing and leading in a range of social welfare settings. The certificate is available to all MSSA students regardless of concentration or specialization and can be completed within the normal masters framework. To do so, students forgo taking concentration-related electives and instead undertake the fifteen (15) academic credit courses required for the certificate. These courses include an introduction to management and leadership, supervision, budgeting and finance, and program design. In addition, students select one elective based on their interests from a set of approved courses.

Special Focus Programs

Louis B. Stokes Fellowship in Community and Social Development

The Louis Stokes Fellows Program in Community and Social Development provides full tuition scholarships to African American and Hispanic/Latino professionals who are currently working in community development. The goal of the Louis Stokes Fellows program is to:

- Support the graduate professional education of outstanding students from universities with Hispanic students and students from traditionally Black colleges and universities.
- Attract a greater number of African American and Hispanic students to advanced social work education to help meet the need for diversity in the social work profession.
- Foster future leadership in community building, community development, and housing.

ADAMHS Board Fellowship

The primary goal of the Alcohol, Drug Addiction and Mental Health Services Board program (ADAMHS) is to serve as an innovative and meaningful alternative for employed mental health and substance abuse social workers to pursue their graduate education objectives. Emphasis is placed on using evidence-based best practices to implement services that will assist individuals with mental health and substance abuse problems and their families. This weekend program makes it possible for employed individuals in Cuyahoga County to overcome the barriers of time and finances to pursue a degree in social work.

Child Welfare Fellowship

The primary goal of the Child Welfare Fellows program is to improve the public child welfare workforce in Northeast Ohio. Emphasis is placed on using evidence-based best practices in public child welfare and systems of care principles. The Mandel School’s Intensive Weekend program makes it possible for employed individuals in public child welfare agencies in Northeast Ohio to overcome barriers of time and finances to pursue a Master’s degree in social work.

Leadership Fellows Program

The Leadership Fellows Program focuses on exceptional students who want to assume leadership in clinical practice within an agency context. It is a two-year program of study for direct practice students in aging,
alcohol and other drugs, children, youth and families, health or mental health.

**Global Practice Opportunities**

At the Mandel School, students have numerous opportunities to explore beyond our own borders. The Mandel School faculty includes experts in international social work and social policy research. The Mandel School also hosts numerous international full-time students, exchange students, visiting scholars and researchers.

Qualified students may choose to participate in a number of multi-disciplinary study abroad opportunities. Many trips occur during winter and spring break. Students are able to familiarize themselves with a variety of social policies of other countries, which have in the past included the Netherlands, Guatemala, China, Bangladesh, and Israel, among others.
Office of Undergraduate Studies

Case Western Reserve University confers baccalaureate degrees based on programs offered by the faculties of the Case School of Engineering, the College of Arts and Sciences, the Frances Payne Bolton School of Nursing, the School of Medicine, and the Weatherhead School of Management. In addition, the university offers several baccalaureate programs jointly with the Cleveland Institute of Art and the Cleveland Institute of Music. The faculties and administration are dedicated to offering educational programs that enable undergraduates to achieve disciplinary literacy in one or more major fields, to acquire educational breadth through study across the natural sciences, humanities and arts, and social sciences, and to learn to think critically and to communicate effectively. Furthering the university mission, the educational programs aim to foster the development of qualities of integrity, creativity, leadership, and societal engagement.

The bachelor’s degree programs engage students in in-depth study in one field (the major), as well as general education or core requirements. Overlap among the general education and core curricula for the various bachelor’s degree programs allows students flexibility in the choice of majors and degree program. Foundational courses and seminars introduce students to modes of inquiry, thought, and communication in the natural sciences, humanities and arts, and social sciences.

Advisors for first-year students, major field advisors, other faculty, and deans assist students in selecting a field of study suited to each student’s interests and qualifications. Highly motivated and responsible students whose educational and career goals are better served through an individualized course of study may pursue academic programs of their own design through a Dean’s Approved Major.

Students with broad educational interests and goals may pursue concurrently two or more majors for the Bachelor of Arts degree or two or more majors for the Bachelor of Science in Engineering degree, or may earn two bachelor’s degrees, completing both a Bachelor of Arts degree and a Bachelor of Science degree, or fulfilling the requirements for two Bachelor of Science degrees. The Bachelor of Music degree offered by the Cleveland Institute of Music may be combined with either a Bachelor of Arts or a Bachelor of Science degree. Qualified students who wish to accelerate their undergraduate and graduate or professional studies may earn the opportunity to begin in the senior year advanced study toward a graduate or professional degree.

The university provides undergraduates with a rich variety of experiential learning opportunities off campus as well as on campus. Programs that engage students in curriculum-related employment include the Cooperative Education Program (http://engineering.case.edu/coop), the practicum Program (http://studentaffairs.case.edu/careers/jobs/practicums), and internships. Study abroad, the exchange program with Fisk University, and the Washington Semester immerse students in educational environments that build global and national knowledge and perspective. Research opportunities for undergraduates abound at the university, in University Circle institutions, and in Cleveland. Individual departments offer independent study opportunities to motivated and qualified students; some departments offer courses that incorporate practical field experience or community service. The location of the university in University Circle, with its outstanding array of cultural, educational, and health care institutions, and the proximity and accessibility of the university’s various professional schools and their facilities enable undergraduates to draw upon diverse and distinctive resources to enrich their education.

Administration

Jeffrey Wolcowitz, PhD
(NEW) - Dean of Undergraduate Studies
Lynmarie Hamel, MEd, JD
(Cleveland State University; Case Western Reserve University) - Senior Associate Dean of Undergraduate Studies

Support for First-Year Students

Michael R. Mason, MEd
(Kent State University) - Interim Assistant Dean for First-Year Students
Tiffany M. Favers, MA
(The Ohio State University) - Coordinator of First-Year Residence Education in Juniper Residential College
Katherine E. Grooms, MEd
(University of South Carolina) - Coordinator of First-Year Residence Education in Magnolia Residential College

Case School of Engineering Undergraduate Degree Requirements

Bachelor of Science in Engineering Degree

(Case School of Engineering)
Candidates for the Bachelor of Science in Engineering (BSE) degree, in addition to meeting the general requirements for bachelor’s degrees as described above, must also complete the following requirements:

1. A minimum of 128-133 hours as specified by the requirements for each BSE program.
2. The SAGES Engineering Core Curriculum.
3. The requirements for the specific engineering major as presented in this bulletin in the section devoted to each department or program.

Major Fields Available for the Bachelor of Science in Engineering degree:

- Aerospace Engineering
- Biomedical Engineering
- Chemical Engineering
- Civil Engineering
- Computer Engineering
- Electrical Engineering
- Engineering Physics
- Materials Science and Engineering
- Mechanical Engineering
- Polymer Science and Engineering
- Systems and Control Engineering
- Engineering (undesignated)

With the exception of the undesignated major in engineering, all of the engineering programs listed above are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Bachelor of Science in Computer Science Degree

(Case School of Engineering)
Candidates for the Bachelor of Science in Computer Science degree, in addition to meeting the general requirements for bachelor’s degrees as described above, must also complete the following requirements:

1. A minimum of 129 hours.
2. The SAGES Engineering Core Curriculum, with the exception of ENGR 200 Statics and Strength of Materials, ENGR 210 Introduction to Circuits and Instrumentation and ENGR 225 Thermodynamics, Fluid Dynamics, Heat and Mass Transfer.
3. The requirements for the computer science Bachelor of Science major as presented in this bulletin.

SAGES Engineering Core Curriculum of the Case School of Engineering

The SAGES Engineering Core curriculum of the Case School of Engineering provides a foundation in mathematics and sciences for programs in engineering and in computer science leading to the Bachelor of Science degree. The Engineering Core Curriculum is also designed to develop communication skills and to provide a body of work in the humanities and social sciences.

SAGES is an innovative undergraduate experience designed to establish foundations for academic inquiry. Students fulfill their Case School of Engineering General Education Requirements with a sequence of specially developed seminars and selected courses. Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy general education requirements.

SAGES Program Seminars

The First Seminar*

(4 semester hours, to be taken in the first semester of enrollment)
The First Seminar focuses on the development of critical thinking and communication skills through the use of a variety of approaches, media, and perspectives to explore the human mind and the nature of inquiry. This course is designed to strengthen writing and analytical skills while building a foundation in ethics, information literacy, and cultural diversity. Select from:

- First Seminar: FSCC 100 First Seminar
- First Seminar: Natural World (FSNA 1xx)
- First Seminar: Social World (FSSO 1xx)
- First Seminar: Symbolic World (FSSY 1xx)

* Transfer Students only: Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC 100-TR (3 – 6 semester hours) and will be required to complete a supplemental 1-semester hour SAGES introductory seminar – FSTS 100 SAGES Transfer Supplement.

University Seminars

(6 semester hours, minimum of two seminars, to be completed in the first two years of enrollment as specified below)
After completion of the First Seminar with a passing evaluative grade, students must complete two University Seminars chosen from different thematic groups; one of these may fall in the same thematic group as the student’s First Seminar. Each University Seminar explores one of three themes, with the content determined according to the interests of the faculty. University Seminars provide continued experience in critical reading, writing, and oral communication as well as information literacy, ethics, and cultural diversity. Select from:

- University Seminar: Thinking About the Natural World (USNA 2xx)
- University Seminar: Thinking About the Social World (USSO 2xx)
- University Seminar: Thinking About the Symbolic World (USSY 2xx)

University Composition Requirement

Students develop a Writing Portfolio comprised of final graded writing assignments from the First Seminar and University Seminars. The Writing
Portfolio is submitted for evaluation after completing the final University Seminar.

**Department Seminar**
(3 semester hours)

The Department Seminar includes seminar-based discussion as well as instruction and experience in the kinds of writing characteristic of the Department Seminar's discipline. The Department Seminar may be taken in the department of the student’s major or in another department. A course used to fulfill the Department Seminar requirement may not also be used to fulfill a Breadth Requirement. Most students pursuing an Engineering degree will take ENGR 398 Professional Communication for Engineers and ENGL 398 Professional Communication for Engineers concurrently to complete the Department Seminar requirement.

**Senior Capstone**
(3 – 6 semester hours)

The Senior Capstone assimilates the knowledge and skills gained throughout the educational process. Students engage in a unique one or two semester experience designed in consultation with a faculty member. Each Senior Capstone must include key elements:

1. Demonstration of critical thinking and writing skills;
2. Regular oversight by the Capstone advisor;
3. Periodic reporting of progress;
4. Regular writing (e.g. drafts, progress reports, critiques) throughout the project including a final written report which may be a thesis or equivalent document associated with the project or activity (e.g., such pursuits as performance, experiment, live case analysis, or creative writing), as approved by the department of capstone origin;
5. Oral reports including a final public presentation at the Senior Capstone Fair, a conference, a performance, a public lecture, a teaching presentation, or another setting, as approved by the department of capstone origin.

Courses meeting this requirement include the designation "Approved SAGES Capstone" in their course descriptions. Some majors include and specify a senior capstone. Most Engineering students will complete an engineering senior project within their major that will satisfy the SAGES Senior Capstone requirement.

**Physical Education**
(Must total 2 full semesters at zero credits)

Students choose from half- and full-semester course offerings to be completed in the first year.

| ENGL 398 Professional Communication for Engineers | 2 |
| ENGR 398 Professional Communication for Engineers | 1 |

Twelve semester hours comprised of 3 or 4 semester hour courses * 12

**Total Units** 15

* Humanities: Arabic (ARAB), Art History (ARTH), Art Studio (ARTS), Chinese (CHIN), Classics (CLSC), Dance (DANO), English (ENGL), French (FRCH), German (GRMN), Greek (GREK), Hebrew (HBRW), History (HSTY), Italian (ITAL), Japanese (JAPN), Latin (LATN), Music - General (MUGN), Music - History (MUHI), Music - Popular Music (MUPM), Music - Theory (MUTH), Philosophy (PHIL), Portuguese (PORT), Religious Studies (RLGN), Russian (RUSN), Spanish (SPAN), Theater (THTR), World Literature (WLIT) and/or Social Sciences: Anthropology (ANTH), Cognitive Science (COGS), Communication Sciences (COSI), Economics (ECON), Political Science (POSC), Psychology (PSCL), Sociology (SOCL)
College of Arts and Sciences
Undergraduate Degree Requirements

Bachelor of Arts Degree
(College of Arts and Sciences)
Candidates for the Bachelor of Arts (BA) degree, in addition to meeting the general requirements for bachelor’s degrees, must also complete the following requirements:

1. A minimum of 120 semester hours earned.
2. No more than 42 hours beyond the 100-level in any one department may be applied to the 120 hour total.
3. At least 90 semester hours in arts and sciences. These credits may be drawn from those offered by the College of Arts and Sciences, as well as those in economics, biochemistry, nutrition and computer science. (Students completing both a BA and BS degree are exempted from six hours of the 90 hour arts and sciences requirement for the BA.)
4. A minimum of 30 semester hours of courses at the 300-400 level.
5. The SAGES General Education Requirements of the College of Arts and Sciences.
6. The requirements for a major as specified in this bulletin for each department or program. A major requires a minimum of 30 semester hours, at least 24 of which are taken in the major department or program. For all courses taken in the major department and for which grades are averaged, and for all courses taken to satisfy major requirements and for which grades are averaged, a BA candidate must earn a minimum cumulative average of 2.000. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at Case Western Reserve University at least half the hours required in the major department.

Major Concentrations Available for the Bachelor of Arts degree:

• American Studies*
• Anthropology
• Art History
• Asian Studies
• Astronomy
• Biochemistry
• Biology
• Chemistry
• Classics
• Cognitive Science
• Communication Sciences
• Computer Science
• Dance
• Dean’s Approved Major**
• Economics
• Environmental Geology
• Environmental Studies*
• Evolutionary Biology*
• French
• French and Francophone Studies
• Geological Sciences
• German
• German Studies
• Gerontological Studies*
• History
• History and Philosophy of Science
• International Studies
• Japanese Studies
• Mathematics
• Music
• Natural Sciences*
• Nutrition
• Nutritional Biochemistry and Metabolism
• Philosophy
• Physics
• Political Science
• Pre-Architecture*
• Psychology
• Religious Studies
• Sociology
• Spanish
• Statistics
• Teacher Education*
• Theater Arts
• Women’s and Gender Studies
• World Literature

Footnotes

* May be taken only as a second major.
** Any student interested in developing for the BA a major of his or her own design may submit, before the end of the sophomore year, a program proposal for a Dean’s Approved Major to the Office of Undergraduate Studies for approval by the Dean’s Committee

Bachelor of Science Degree
(College of Arts and Sciences)
Candidates for the Bachelor of Science degrees, in addition to meeting the general requirements for bachelor’s degrees, must also complete the following requirements:

1. A minimum of 120-133 hours as specified by the requirements for each BS program.
2. A minimum of 30 semester hours of courses at the 300-400 level.
3. The SAGES General Education Requirements of the College of Arts and Sciences. For some BS programs, the SAGES General Education Requirements of the Arts and Sciences have been modified and incorporated into the degree requirements as presented in this bulletin in the section devoted to each department or program.
4. The requirements for a major field as presented in this bulletin in the section devoted to each department or program. For all courses taken in the major department and for which grades are averaged, and for all courses taken to satisfy major requirements and for which grades are averaged, a candidate for a BS from the College of Arts and Sciences must earn a minimum cumulative average of 2.0. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at Case Western Reserve University at least half the hours required for the major.

Major Concentrations for the Bachelor of Science degree:

- Applied Mathematics
- Art Education
- Astronomy
- Biochemistry
- Biology
- Chemistry
- Geological Sciences
- Mathematics
- Mathematics and Physics
- Music Education
- Nutrition
- Nutritional Biochemistry and Metabolism
- Physics
- Statistics
- Systems Biology

SAGES General Education Requirements of the College of Arts and Sciences

SAGES is an innovative undergraduate experience designed to establish foundations for academic inquiry. Students fulfill their College of Arts and Sciences General Education Requirements with a sequence of specially developed seminars and selected courses. Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy general education requirements.

SAGES Program Seminars

The First Seminar*

(4 semester hours, to be taken in the first semester of enrollment)

The First Seminar focuses on the development of critical thinking and communication skills through the use of a variety of approaches, media, and perspectives to explore the human mind and the nature of inquiry. This course is designed to strengthen writing and analytical skills while building a foundation in ethics, information literacy, and cultural diversity. Select from:

- First Seminar: FSCC 100 First Seminar
- First Seminar: Natural World (FSNA 1xx)
- First Seminar: Social World (FSSO 1xx)
- First Seminar: Symbolic World (FSSY 1xx)

* Transfer Students only: Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC 100-TR (3 – 6 semester hours) and will be required to complete a supplemental 1-semester hour SAGES introductory seminar – FSTS 100 SAGES Transfer Supplement.

University Seminars

(6 semester hours, minimum of two seminars, to be completed in the first two years of enrollment as specified below)

After completion of the First Seminar with a passing evaluative grade, students must complete two University Seminars chosen from different thematic groups; one of these may fall in the same thematic group as the student’s First Seminar. Each University Seminar explores one of three themes, with the content determined according to the interests of the faculty. University Seminars provide continued experience in critical reading, writing, and oral communication as well as information literacy, ethics, and cultural diversity. Select from:

- University Seminar: Thinking About the Natural World (USNA 2xx)
- University Seminar: Thinking About the Social World (USSO 2xx)
- University Seminar: Thinking About the Symbolic World (USSY 2xx)

University Composition Requirement

Students develop a Writing Portfolio comprised of final graded writing assignments from the First Seminar and University Seminars. The Writing Portfolio is submitted for evaluation after completing the final University seminar.

Department Seminar

(3 semester hours)

The Department Seminar includes seminar-based discussion as well as instruction and experience in the kinds of writing characteristic of the Department Seminar’s discipline. The Department Seminar may be taken in the department of the student’s major or in another department. A course used to fulfill the Department Seminar requirement may not also be used to fulfill a Breadth Requirement.

Senior Capstone

(3 - 6 semester hours)

The Senior Capstone assimilates the knowledge and skills gained throughout the educational process. Students engage in a unique one or two semester experience designed in consultation with a faculty member. Each Senior Capstone must include key elements:

1. Demonstration of critical thinking and writing skills;
2. Regular oversight by the Capstone advisor;
3. Periodic reporting of progress;
4. Regular writing (e.g. drafts, progress reports, critiques) throughout the project including a final written report which may be a thesis or equivalent document associated with the project or activity (e.g., such pursuits as performance, experiment, live case analysis, or creative writing), as approved by the department of capstone origin;
5. Oral reports including a final public presentation at the Senior Capstone Fair, a conference, a performance, a public lecture, a teaching presentation, or another setting, as approved by the department of capstone origin.
Courses meeting this requirement include the designation "Approved SAGES Capstone" in their course descriptions. Some majors include and specify a senior capstone.

**Physical Education**
(Must total 2 full semesters at zero credits)

Students choose from half- and full-semester course offerings to be completed in the first year.

**Breadth Requirements**
(18 semester hours – minimum of six 3- or 4-semester hour courses)

NOTE: Two courses used to fulfill requirements for the major may be used also to fulfill the breadth requirements.

**Arts and Humanities**
(6 - 8 semester hours)

Two 3- or 4-semester hour Arts and Humanities courses. Select from:

- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)
- Dance (DANC)
- English (ENGL)
- French (FRCH)
- German (GRMN)
- Greek (GREK)
- Hebrew (HBRW)
- History (HSTY)
- Italian (ITAL)
- Japanese (JAPN)
- Latin (LATN)
- Music - General (MUGN)
- Music - History (MUHI)
- Music - Popular (MUPM)
- Music - Theory (MUTH)
- Philosophy (PHIL)
- Portuguese (PORT)
- Religious Studies (RLGN)
- Russian (RUSN)
- Spanish (SPAN)
- Theater (THTR)
- World Literature (WLIT)

**Natural and Mathematical Sciences**
(6 - 8 semester hours)

Two 3- or 4-semester hour Natural and Mathematical Science courses. Select from:

- Astronomy (ASTR)
- Biochemistry (BIOC)
- Biology (BIOL)
- Chemistry (CHEM)
- Earth, Environmental and Planetary Sciences (EEPS)
- Mathematics (MATH)
- Nutrition (NTRN)
- Physics (PHYS)
- Statistics (STAT)

**Social Sciences**
(6 semester hours)

Two 3-semester hour Social Science courses. Select from:

- Anthropology (ANTH)
- Cognitive Science (COGS)
- Communication Sciences (COSI)
- Economics (ECON)
- Political Science (POSC)
- Psychology (PSCL)
- Sociology (SOCI)

**Quantitative Reasoning**
(3 - 4 semester hours)

Each student must complete at least one 3- or 4-semester hour course identified as a mathematical reasoning course. Such a course may also be used to fulfill a major or minor requirement, and/or one of the breadth requirements. Select from:

<table>

Frances Payne Bolton School of Nursing Undergraduate Degree Requirements

Bachelor of Science in Nursing Degree (Frances Payne Bolton School of Nursing)

Candidates for the Bachelor of Science in Nursing (BSN) degree, in addition to meeting the general requirements for bachelor’s degrees as described above, must also complete the following requirements:

1. A minimum of 126 hours
2. The SAGES General Education Requirements for the School of Nursing
3. The requirements for the major in nursing as presented in this bulletin
4. For all courses taken in nursing and science, a minimum grade of C

SAGES General Education Requirements of the Frances Payne Bolton School of Nursing

The SAGES General Education Requirements of the Frances Payne Bolton School of Nursing are based upon the SAGES General Education Requirements of the College of Arts and Sciences, and provide a broad educational foundation for the Bachelor of Science in Nursing program.

SAGES is an innovative undergraduate experience designed to establish foundations for academic inquiry. Students fulfill their Frances Payne Bolton School of Nursing General Education Requirements with a sequence of specially developed seminars and selected courses. Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy general education requirements.

SAGES Program Seminars

The First Seminar*

(4 semester hours, to be taken in the first semester of enrollment)

The First Seminar focuses on the development of critical thinking and communication skills through the use of a variety of approaches, media, and perspectives to explore the human mind and the nature of inquiry. This course is designed to strengthen writing and analytical skills while building a foundation in ethics, information literacy, and cultural diversity. Select from:

• First Seminar: FSCC 100 First Seminar
• First Seminar: Natural World (FSNA 1xx)
• First Seminar: Social World (FSSO 1xx)
• First Seminar: Symbolic World (FSSY 1xx)

Transfer Students only: Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC 100-TR (3 – 6 semester hours) and will be required to complete a supplemental 1-semester hour SAGES introductory seminar – FSTS 100 SAGES Transfer Supplement.

University Seminars

(6 semester hours, minimum of two seminars, to be completed in the first two years of enrollment as specified below)

After completion of the First Seminar with a passing evaluative grade, students must complete two University Seminars chosen from different thematic groups; one of these may fall in the same thematic group as the student’s First Seminar. Each University Seminar explores one of three themes, with the content determined according to the interests of the faculty. University Seminars provide continued experience in critical reading, writing, and oral communication as well as information literacy, ethics, and cultural diversity. Select from:

• University Seminar: Thinking About the Natural World (USNA 2xx)
• University Seminar: Thinking About the Social World (USSO 2xx)
• University Seminar: Thinking About the Symbolic World (USSY 2xx)

University Composition Requirement

Students develop a Writing Portfolio comprised of final graded writing assignments from the First Seminar and University Seminars. The Writing Portfolio is submitted for evaluation after completing the final University seminar.

Department Seminar

(3 semester hours)

The Department Seminar includes seminar-based discussion as well as instruction and experience in the kinds of writing characteristic of the Department Seminar’s discipline. The Department Seminar may be taken in the department of the student’s major or in another department. A course used to fulfill the Department Seminar Requirement may not also be used to fulfill a Breadth Requirement. Most Nursing students will complete NURS 320 Theoretical and Evidence Bases for Best Practice in Nursing to fulfill the Department Seminar requirement.

Senior Capstone

(3 - 6 semester hours)

The Senior Capstone assimilates the knowledge and skills gained throughout the educational process. Students engage in a unique one or two semester experience designed in consultation with a faculty member. Each Senior Capstone must include key elements:

1. Demonstration of critical thinking and writing skills;
2. Regular oversight by the Capstone advisor;
3. Periodic reporting of progress;
4. Regular writing (e.g. drafts, progress reports, critiques) throughout the project including a final written report which may be a thesis or equivalent document associated with the project or activity (e.g., such pursuits as performance, experiment, live case analysis, or creative writing), as approved by the department of capstone origin; and
5. Oral reports including a final public presentation at the Senior Capstone Fair, a conference, a performance, a public lecture, a teaching presentation, or another setting, as approved by the department of capstone origin.

Courses meeting this requirement include the designation “Approved SAGES Capstone” in their course descriptions. Some majors include and specify a senior capstone. Most Nursing students will complete NURS 373 Global Health Practicum to fulfill the SAGES Senior Capstone requirement.

**Physical Education**
(Must total 2 full semesters at zero credits)

Students choose from half- and full-semester course offerings to be completed in the first year.

**Breadth Requirements**
(at least 30 semester hours – minimum of ten 3 or 4-semester hour courses)

NOTE: Two courses used to fulfill requirements for the major may be used also to fulfill the breadth requirements.

**Arts and Humanities**
(6 - 8 semester hours)

Two 3- or 4-semester hour Arts and Humanities courses. Select from:

- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)
- Dance (DANC)
- English (ENGL)
- French (FRCH)
- German (GRMN)
- Greek (GREK)
- Hebrew (HBRW)
- History (HSTY)
- Italian (ITAL)
- Japanese (JAPN)
- Latin (LATN)
- Music - General (MUGN)
- Music - History (MUHI)
- Music - Popular Music (MUPM)
- Music - Theory (MUTH)
- Philosophy (PHIL)
- Portuguese (PORT)
- Religious Studies (RLGN)
- Russian (RUSN)
- Spanish (SPAN)
- Theater (THTR)
- World Literature (WLIT)

**Natural and Mathematical Sciences**

Programs Toward Graduate or Professional Degrees

Acceleration Toward Professional Degrees

Senior Year in Professional Studies at Case Western Reserve University

Students of outstanding ability and attainment who are candidates for the BA and who are admitted to professional studies in Case Western Reserve University by the end of the junior year are offered an opportunity to shorten their entire course of studies by one year through the Senior Year in Professional Studies privilege. Application should be made during the second semester of the junior year through the dean of undergraduate studies. This privilege is extended to students who are candidates for the BA and who attend the School of Dental Medicine, the School of Medicine, the Frances Payne Bolton School of Nursing, or the Mandel School of Applied Social Sciences of Case Western Reserve University.

A student granted the senior year in professional studies privilege is permitted to substitute the work of the first year in a professional school for that required during the last year in the undergraduate college. Upon the satisfactory completion of the first year’s work in the professional school, the student will be granted the bachelor’s degree from the College of Arts and Sciences. To be eligible for the senior year in professional studies privilege, a student must:

1. Be accepted for admission to professional studies in Case Western Reserve University.
2. Meet the following degree requirements:
   A. Completion of the SAGES General Education Requirements of the College of Arts and Sciences and the physical education requirement.
   B. Completion of three-fourths of the courses required for the major, including three-fourths of the courses required in the major department.
   C. Completion of 84 hours of arts and sciences courses. These credits may be drawn from those offered by the College of Arts and Sciences as well as those in economics, biochemistry, nutrition, or computer science.
   D. Completion of at least 90 semester hours of academic credit, of which the final 60 hours must have been in residence. A student may include in that final 60 hours no more than six semester hours earned in courses completed in other institutions, either by cross registration in regular sessions or by approved transient registration in summer sessions. (Note: Students applying for the Senior Year in Professional Studies in the School of Medicine will generally be expected to have completed at least 117 hours towards the BA degree.)

Upon admission to the program, students register in the professional school to which they have been admitted and are subject to the policies, rules and regulations of the professional school. They may, however, continue to receive merit-based undergraduate scholarships and may continue to reside in undergraduate housing during what would normally be their senior year of undergraduate work.

For information, contact the Office of Undergraduate Studies (http://bulletin.case.edu/undergraduatestudies/gradprofessional/mailto:ugstudies@case.edu), 357 Sears Bldg., 216.368.2928.

Senior Year in Absentia Privilege for Students of Medicine and Dentistry

Students of outstanding ability and attainment who are candidates for the BA and are offered admission to a medical or dental school other than those at Case Western Reserve University at the end of the junior year are eligible for an opportunity to shorten their entire course of studies by one year through the Senior Year in absentia privilege. Application for this privilege should be made during the second semester of the junior year through the dean of undergraduate studies.

A student granted the Senior Year in absentia privilege is permitted to substitute the work of the first year in a professional school for that required during the last year in the undergraduate college. Upon the satisfactory completion of the first year’s work in the professional school, the student will be granted the BA from the College of Arts and Sciences. The privilege is extended to qualified students who attend medical schools in the United States or Canada approved by the Association of American Medical Colleges or dental schools in the United States approved by the American Association of Dental Schools.

To be eligible for the Senior Year in absentia privilege, a student must:

1. Be accepted for admission to professional studies.
2. Attain a cumulative grade point average of at least 3.200 in all courses attempted from the date of admission as an undergraduate.
3. Meet the following degree requirements:
   A. Completion of the Arts and Sciences SAGES General Education Requirements and the physical education requirement
   B. Completion of three-fourths of the requirements for the major, including three-fourths of the courses required in the major department
   C. Completion of 84 hours of arts and sciences courses. These credits may be drawn from those offered by the College of Arts and Sciences as well as those in economics, biochemistry, nutrition, or computer science
   D. Completion of at least 90 semester hours of academic credit, of which the final 60 hours must have been in residence. A student may include in that final 60 hours no more than six semester hours earned in courses completed in other institutions, either by cross registration in regular sessions or by approved transient registration in summer sessions

For information, contact the Office of Undergraduate Studies (http://bulletin.case.edu/undergraduatestudies/gradprofessional/mailto:ugstudies@case.edu), 357 Sears Bldg., 216.368.2928.

For Candidates for the BS in Accounting

There are two programs that integrate graduate and undergraduate work in accountancy. These programs are strongly recommended for those individuals planning to become certified accounting professionals, particularly as CPAs (Certified Public Accountants).
Joint BS in Accounting/Master of Accountancy (MAcc)

Students who are candidates for the BS in accountancy and who wish to earn a master’s degree in accountancy may apply to the BS/MAcc program. Students in the program enroll during the senior year in six hours of MAcc courses that will serve toward satisfaction of both the BS and MAcc degree requirements. Before taking graduate course work, the student must have completed all prerequisites for the course on the undergraduate level and have a “B” average in those prerequisites. Following completion of the BS, students in the program will enroll in the Weatherhead School of Management to complete an additional 30 hours of courses to satisfy MAcc degree requirements. For information, see Professor Larry Parker (http://bulletin.case.edu/undergraduatestudies/gradprofessional/mailto:larry.parker@case.edu), 459 Peter B. Lewis Building, 216.368.2065.

Accelerated BS in Accounting/Master of Accountancy (MAcc) Program

This program allows motivated students to accelerate their pursuit of both the BS and MAcc degrees. In addition to applying six credit hours of Weatherhead graduate course work towards their undergraduate degree program, students in this program may begin taking more graduate course work before completing all of their undergraduate degree requirements. To enroll in this program, students must have:

1. Completed 90 hours of undergraduate course work
2. Completed all of the undergraduate Weatherhead SAGES General Education Requirements
3. Completed 36 hours of the Weatherhead Management requirements (including 18 hours of the required Accountancy coursework)
4. Achieved at least a 3.00 overall grade point average. Students in this program will receive both the BS and the master’s degree at the end of the program. For the first eight semesters of study, the student will register as an undergraduate in Case Western Reserve University; thereafter, students will register in the graduate professional degree program in the Weatherhead School of Management. For information, see Professor Larry Parker (http://bulletin.case.edu/undergraduatestudies/gradprofessional/mailto:larry.parker@case.edu), 459 Peter B. Lewis Building, 216.368.2065.

Acceleration Toward Graduate Study

Integrated Graduate Studies Program

The Integrated Graduate Studies Program (IGS) is intended for highly motivated undergraduate students who are candidates for the BA and whose objective is a degree at the master’s or doctoral level. Qualified students may be admitted to graduate study for their senior year and pursue the simultaneous completion of requirements for both the master’s and bachelor’s degrees. The baccalaureate will normally be awarded upon completion of the requirements for both degrees, unless a student satisfies all BA requirements prior to completing the master’s degree requirements. Students in the IGS Program are exempted from the 42-hour restriction imposed on BA candidates for work above the 100-level in a single department. However, the exemption is granted only upon completion of the master’s degree requirements.

Eligibility requirements for participation in the Integrated Graduate Studies Program are:

1. 90 semester hours earned of which the last 60 hours must have been in residence at Case Western Reserve University
2. Completion of the SAGES General Education Requirements of the College of Arts and Sciences and the physical education requirement; students who have fulfilled all SAGES General Education Requirements except the Senior Capstone will be required to complete the capstone during their first year in the IGS program
3. Completion of three quarters of the requirements for the major concentration, including three quarters of the courses required in the major department
4. Admission to a master’s or doctoral program offered through the School of Graduate Studies

Upon admission to the program, IGS students register as students in the School of Graduate Studies and are subject to the policies, rules and regulations of the School of Graduate Studies. They may, however, continue to receive merit-based undergraduate scholarships and may continue to reside in undergraduate housing during what would normally be their senior year of undergraduate work.

For information, contact the Office of Undergraduate Studies (http://bulletin.case.edu/undergraduatestudies/gradprofessional/mailto:ugstudies@case.edu), 357 Sears Bldg., 216.368.2928.

Integrated BS/MS in Nutrition

Admission to the Integrated BS/MS in Nutrition program is subject to the same process and requirements as admission to the Integrated Graduate Studies Program described above. Upon successful completion of the program, students earn the BS in Nutrition and the MS in Nutrition.

BS/MS Program for Candidates for the BS in Engineering, Computer Science, Mathematics, Natural Sciences and Statistics

The Integrated BS/MS Program is intended for highly motivated candidates for the BS in engineering, computer science, mathematics, natural sciences, or statistics who wish to pursue an advanced degree. Application to the BS/MS program must be made after completion of 75 semester hours of course work and prior to attaining senior status (completion of 90 semester hours). Generally, this means that a student will submit the application during his or her sixth semester of undergraduate course enrollment and will have no fewer than two semesters of remaining BS requirements to complete.

A student admitted to the program may, in the senior year, take up to nine hours of graduate courses (400 level and above) that will count towards both BS and MS requirements. The courses to be double-counted must be specified at the time of application. Courses taken prior to admission to the program cannot count towards the MS unless they are in excess of BS degree requirements and permission to use them towards the MS has been granted by the dean of graduate studies and the dean of undergraduate studies.

To be considered for the BS/MS Program, a student must:

1. submit to the School of Graduate Studies an application for admission to the program, and
2. submit to the Office of Undergraduate Studies an MS Planned Program of Study Form, showing the courses to be double-counted.
Conditionally Guaranteed Admission to the University's Professional Schools

The Pre-Professional Scholars Programs in medicine, dentistry, law, and social work grant to a few outstanding, entering first year undergraduates conditional commitments of admission to the appropriate professional school at Case Western Reserve University. These commitments are honored upon successful completion of the requirements established by each professional school. Students admitted to these programs are relieved of much of the anxiety and uncertainty associated with pre-professional studies. Consequently, they feel free to undertake challenging courses of study and pursue a variety of interests as they prepare for professional studies. Pre-Professional Scholars are free to choose any of the bachelor’s degrees available in the university. Participants who wish to change their career goals or apply for admission to other professional schools are free to do so.

The Six-Year Dental Program gives exceptionally able and committed entering first year undergraduates the opportunity to accelerate their undergraduate and professional studies.

Pre-Professional Scholars Program in Dentistry

Each year, approximately 10 exceptionally well-qualified high school seniors who plan to pursue careers in dentistry are offered places in the Pre-Professional Scholars Program in Dentistry. This program requires eight years: four years of successful undergraduate study and four years at the School of Dental Medicine.

Pre-Professional Scholars in Dentistry are free to choose a major in an area of interest, but must take the following courses to fulfill admission requirements of the School of Dental Medicine:

Chemistry:

- CHEM 105 Principles of Chemistry I 3
- CHEM 106 Principles of Chemistry II 3
- CHEM 113 Principles of Chemistry Laboratory 2
- CHEM 223 Introductory Organic Chemistry I 3
- CHEM 224 Introductory Organic Chemistry II 3
- CHEM 233 Introductory Organic Chemistry Laboratory I 2
- CHEM 234 Introductory Organic Chemistry Laboratory II 2

Biology:

- BIOL 214 & 214L Genes, Evolution and Ecology 4
- BIOL 215 & 215L Cells and Proteins 4
- BIOL 216 & 216L Development and Physiology 4

Mathematics:

- MATH 125 Math and Calculus Applications for Life, Managerial, and Social Sci 4

Physics:

- PHYS 115 Introductory Physics I 4
- PHYS 116 Introductory Physics II 4

They are required to take the Dental Admission Test in the junior year and achieve an acceptable level of performance on the test.

Successful progress through the program and admission to dental studies will be based on the pre-professional scholar’s continuing to fulfill expectations for outstanding personal and academic development and on the scholar’s achievement of cumulative grade point average of 3.250 or higher for his or her work overall, as well as for his or her work in the required sciences. Successful progress in the program will be determined individually and reviewed at regular intervals during the student’s undergraduate career.

Pre-Professional Scholars in Dentistry who wish to accelerate their program may apply for the senior year in professional studies privilege.

Six-Year Dental Program

Each year a few exceptionally well-qualified high school seniors who plan to pursue careers in dentistry are offered places in the Six-Year Dental Program.

The first two years of the program are spent pursuing undergraduate studies, advised by the director of health career advising. Students are required to earn a minimum of 60 semester hours. They are required to take all of the science and mathematics courses listed above for the Pre-Professional Scholars Program in Dentistry. If Advanced Placement credit is used to satisfy some of these science requirements, a minimum of 30 semester hours in biology, chemistry, physics, and mathematics must be taken during the two years of undergraduate study. Additionally, to meet general education requirements, students must take one year of physical education, First Seminar, two University Seminars, one course in the area of Arts and Humanities, and one courses in the area of Social Sciences, and must complete a writing portfolio. To qualify for the place reserved in the School of Dental Medicine, a student in the program must achieve the following:

1. A cumulative grade point average of 3.250 or higher for all course work completed;
2. Grades of B or higher in the required courses in biology, chemistry, physics, and mathematics;
3. An average score of 18 or higher on both the academic and PAT portions of the Dental Admission Test of the American Dental Association. The test must be taken no later than April of the second year.

Pre-Professional Scholars Program in Law

Each year, approximately twelve exceptionally well-qualified high school seniors who plan to pursue careers in law will be offered places in the Pre-Professional Scholars Program in Law at Case Western Reserve University. Pre-Professional Scholars receive a conditional commitment of admission to the Case Western Reserve School of Law, to be honored upon completion of the bachelor’s degree at the university.

The Pre-Professional Scholars in Law are encouraged to gain a wide cultural experience in their undergraduate studies, to major in the area that most interests them, and to choose courses in which they will learn habits of rigor and logical analysis. The law school encourages
applications from all majors, including engineering and the sciences. The School of Law recommends that Pre-Professional Scholars in Law take courses in accounting, economics, history, and philosophy and that they gain as much writing experience as possible, because the ability to write effectively is critical to success in law school and legal practice.

Students admitted to the Pre-Professional Scholars Program in Law will be guaranteed a seat in the School of Law upon graduation from Case Western Reserve University if they satisfy the following requirements:

1. Graduation from Case Western Reserve University with rank in the top quarter of the class.
2. Demonstration of good moral character sufficient for admission to the bar of the State of Ohio.
3. Participation in the Law School Data Assembly Service and an LSAT score at or above the 65th percentile.

Pre-Professional Scholars Program in Medicine

Each year, 15 to 20 exceptionally well-qualified high school seniors who plan to pursue careers in medicine are offered places in the Pre-Professional Scholars Program in Medicine. Pre-Professional Scholars receive a conditional commitment of admission to the University Program of the Case Western Reserve University School of Medicine to be honored upon successful progress toward and completion of the bachelor’s degree. The Pre-Professional Scholars Program in Medicine requires eight years: four years of successful undergraduate study leading to the bachelor’s degree followed by four years in the University Program of the School of Medicine.

Pre-Professional Scholars in Medicine are free to choose from among all of the degree and major programs offered in the university, but must take the following courses to fulfill admission requirements of the School of Medicine:

Pre-Professional Scholars in Medicine are not required to take the Medical College Admission Test (MCAT) for the program. However, if they do take the MCAT, they are expected to earn 34 or higher on the exam. Program participants who have an interest in applying to any other medical schools, or who wish to be considered for a dean’s merit scholarship at the Case Western Reserve School of Medicine, should plan on taking this test.

Pre-Professional Scholars are expected to demonstrate successful progress by meeting the following levels of performance:

1. By the end of the sixth semester, Pre-Professional Scholars in Medicine are expected to attain a cumulative overall grade point average of 3.600, and to maintain that average for the rest of their undergraduate studies.
2. Pre-Professional Scholars in Medicine are expected to earn grades of B or higher in all courses in chemistry, biology and physics. By the end of the sixth semester, they should attain a cumulative grade point average of 3.600 for these courses, and should maintain this average for the rest of their undergraduate studies.
3. Pre-Professional Scholars in Medicine are expected to continue to fulfill expectations for outstanding personal development, including, but not limited to, maintaining academic integrity and adhering to the university’s standards of conduct. (All academic integrity and judicial offenses will be reported to the Case School of Medicine.)

Progress is reviewed with each student at regular intervals in the program. At the end of the third year, Pre-Professional Scholars in Medicine who have met the required levels of performance go through the normal admission procedures for the University Program of the School of Medicine, including submitting an application through the American Medical College Application Service (AMCAS) and an interview. Participants who do not meet the required levels of performance may still be admitted into the University Program of the School of Medicine, but such admission will be subject to review and approval by the School of Medicine’s Admissions Committee.

Successful completion of the Pre-Professional Scholars Program in Medicine guarantees admission only to the University Program of the School of Medicine. Students seeking admission to the Cleveland Clinic Lerner College of Medicine of the Case Western Reserve University School of Medicine must complete a separate application and will be considered in competition with all applicants for that program.

Pre-Professional Scholars Program in Social Work

Each year, as many as ten high school seniors who plan to pursue careers in social work are offered places in the Pre-Professional Scholars Program in Social Work. The program gives a conditional commitment of admission to the Case Western Reserve University Mandel School of Applied Social Sciences to be honored upon successful completion of the bachelor’s degree.

Admission to the master’s degree program in social work at MSASS is dependent upon the following requirements:

1. Graduation from the university with a cumulative grade point average of 3.000 in the junior and senior years.
2. Completion of a minimum of 24 semester hours in the social and behavioral sciences.
3. Continued evidence of a combination of personal qualities which are considered essential for the professional practice of social work.

Pre-Professional Scholars in Social Work who wish to accelerate their program may apply for the senior year in professional studies privilege.

**Application Procedures for Pre-Professional Scholars and Six-Year Dental Programs**

Prospective students who wish to apply to any of the Pre-Professional Scholars Programs or to the Six-Year Dental Program should apply for admission through the Office of Undergraduate Admission of Case Western Reserve University. All forms are included within the application materials.

The application for admission, supporting test scores and high school transcript, must be submitted to the Office of Undergraduate Admission as early as possible, but no later than December 1.

Students who are admitted to the university and are also deemed eligible for consideration for one of the Pre-Professional Scholars Programs or the Six-Year Dental Program will be notified by February 1 and will be invited for interviews at the appropriate professional schools. The basis for selection for these programs will be dedication to the pursuit of the particular profession, a distinguished high school record, high scores on the college entrance examinations (ACT or SAT), a record of personal accomplishments that attests to a student’s maturity, leadership, and interpersonal skills, and an interview with an admissions officer from the appropriate professional school. Decisions on admission to the programs will be communicated on or about April 1.

Students who are not admitted to these special programs are encouraged to pursue their undergraduate studies and to apply in the normal course to the professional school of their choice, including the professional schools of Case Western Reserve University.
SAGES Courses

SAGES Courses
For a full description of the SAGES Program, see the section on General Degree Requirements (p. 602).

This list of courses includes only those courses offered directly by the SAGES Program that have been approved as permanent offerings. Not all of the First Seminars and University Seminars listed are offered every year, but the list of offerings in any given year will include courses approved as one-time offerings. All Department Seminars are offered through the academic departments and are listed among their course offerings. Most Senior Capstone courses are offered through the academic departments, though several are offered through the SAGES Program and are included here with the course prefix UCAP.

FSCC Courses

FSCC 100. First Seminar. 4 Units.
This four credit-hour course provides an introduction to various dimensions of academic life. It will be characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources, and will include practice in written and oral communication in small groups. Each seminar is led both by a faculty member and a writing co-instructor. The goals are to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to introduce basic information literacy skills; to provide a foundation for ethical decision-making; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive common intellectual experience for first-year students at Case.

FSNA Courses

FSNA 101. Flight: From Fantasy to Reality. 4 Units.
This four-credit-hour course provides an introduction to various disciplines with topics centered around the theme of flight. Topics include images of flying in myths and the arts; competing theories about the evolution of bird flight and the mechanism of insect flight; and human achievements in aviation. Through readings and open-ended discussion, we will touch on the nature of truth, the way science progresses, what makes a hero, and why flight appeals so much to the human imagination. Students are expected to enhance their skills at critical reading, thoughtful analysis, constructing logical arguments, and improving written and oral communication.

FSNA 103. Energy and Society. 4 Units.
This four-credit-hour course provides an introduction to collegiate writing and to various dimensions of academic life, but will focus on the critical appreciation of the world of energy. Currently, most of the world runs on non-renewable resources; this course is designed to help students develop viewpoints about these issues, and to express themselves in a clear, coherent way. The class will involve both literacy and numeracy, and students will learn to become comfortable handling some of the quantitative measures of energy use. The class will be characterized by intense yet open-ended intellectual inquiry, guided by reading, lectures and discussion, and will include practice in written and oral communication individually and in small groups.

FSNA 104. Archaeoastronomy: Monuments and Ideas. 4 Units.
The unifying theme of this course is how astronomical practice and knowledge is central to ancient civilizations and how that emphasis continues today as manifested through scientific endeavor and also as strongly through the power of unifying myth.

FSNA 107. Culture and Computers. 4 Units.
We live in a world that is increasingly shaped and dominated by computer systems. This seminar will explore ideas about the relationship between culture and computer/information technologies. Topics will range from the historical development of information systems to the shaping of online identities to the relationships between information systems and political ideology and conceptions of a digital future. The class will meet in three dramatically different spaces: our high technology seminar room, a virtual classroom of our own design, and the computer classrooms of the nearby Ashbury Senior Computing and Community Center (ASC-3). This course will have a service component that requires students to work six hours across the semester as teaching aides in the ASC-3 computing classes for senior adults. As students read about theories about information technologies and access, student service work will enable them to analyze these theories within the context of grass roots activism, participating in an adjoining neighborhood’s goal to expand access to the “computer revolution.” Students at all levels of computer literacy welcome.

FSCS Courses

FSCS 150. First Seminar Continuing Semester. 3 Units.
This is a continuation of the First Seminar experience for ESL students. The seminar will continue the introduction to various dimensions of academic life. It will be characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources, and will include practice in written and oral communication in small groups. The goals of the seminar are to continue to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to continue to introduce basic information literacy skills; to continue to provide a foundation for ethical decision-making; to continue to encourage a global and multidisciplinary perspective on the learning process; and to continue to facilitate faculty-student interactions. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, or FSCS. Prereq or Coreq: FSTS 100.
FSNA 109. Science and Race. 4 Units.
This four-credit seminar examines the development and impact of the concept of race. We will first focus on the causes of biological variability in species, leading to an evaluation of whether race is a useful device for understanding biological variability in humans. Second, we will examine how the understanding of race has changed over time within the biological sciences. Third, we will examine how scientific conceptualizations about race have influenced, and been influenced by, cultural beliefs. Through readings and open-ended discussion, we will critically examine the scientific process as it has been (and still is) being applied to the study of human races so that each student will ultimately be equipped to develop a scientifically sound conceptualization of race. Topics which will be covered include Social Darwinism, the eugenics movement, legislation to restrict immigration into the U.S., race-based medicine, and race and intelligence. Students are expected to enhance their skills at critical reading, thoughtful analysis, constructing logical arguments, and improving written and oral communication.

FSNA 110. The Chemistry and Biology of Drugs. 4 Units.
How do drugs work? Using chemicals to alter biological processes has been documented since recorded history began. We ingest various chemicals to alter our mood, cure disease, or simply to make our lives more comfortable, however very few people take the time to ask how these molecules work. This seminar will touch on some historical aspects of how our society has discovered and used drugs in both social and medicinal settings, but will focus on the modern day process by which new drugs are identified.

FSNA 111. Chemical Aspects of the Aging Mind. 4 Units.
This seminar will focus on three age-related neurological disorders: Alzheimer’s, Parkinson’s and Huntington disease. These diseases pose enormous social and economic impact, and current drug-based therapeutic approaches are limited and may not be suited to deal with the imminent problems. The seminar will examine lifestyle changes (i.e., diet, exercise, vitamins, and other habits such as reading) that are implicated in preventing or slowing down these disorders. The focus on a medical topic with important socioeconomic ramifications will provide a novel approach to enhancing critical thinking and communication skills.

FSNA 112. Talking Brains: The Neuroscience of Language. 4 Units.
J speaks both Italian and English. After suffering a stroke, he finds himself switching to Italian in the middle of a sentence, even when he knows the person he’s talking to doesn’t speak Italian! He can’t stop himself no matter how hard he tries. In this discussion-based seminar, we’ll use cases like J’s to understand how a mass of cells can give rise to something as complicated as human language. We’ll use primary source readings from neuroscience to study topics such as the typical organization of language in the brain, bilingualism, sign language, and problems with language resulting from brain injury.

FSNA 113. Facts and Values in Environmental Decisions. 4 Units.
This four-credit seminar will guide students to critically evaluate the evidence, uncertainties, and value judgments pertinent to some of the world’s pressing environmental issues. We will begin by studying climate change. Students will decide the topics of exploration to follow. Through reading, field trips, discussions and writing we will investigate natural environmental processes and how they have changed with the growth in human population and technology. Students will learn about the scientific process and will consider the roll of science and technology and their limits in making decisions about shared resources.

FSNA 116. Cities (Under Construction). 4 Units.
Based on the premise that cities are never “finished,” and constantly being remade, we will look at the technological and cultural history of cities from the ancient world to the present day. Students will explore the history of building materials—wood, brick, steel, concrete, and glass—used in the construction of cities. We will also trace the development of city infrastructure such as water and sewage systems; streets, bridges, and subways; electricity, telephone and the internet. Specific technological innovations, such as the elevator and the automobile, will receive special consideration. We will move both geographically and temporally to visit the world’s great cities, Athens, Mexico City, Tokyo, and New York City. As we do, we will study the examples of significant building projects, such as the Brooklyn Bridge, the Chicago World’s Fair, Washington, DC’s Metro, and Cleveland’s first skyscraper, the Rockefeller Building. The course will cover the history of the professions—engineering, architecture, and urban planning—that have contributed to the construction of cities, and will review the works of these practitioners, as well as that of artists, reformers, and utopians that have imagined new directions for the city. We will also explore first person narratives of the city, the impact of the city on personal and collective memory, and the possibilities and pitfalls of the “virtual” city. Through lecture, discussion, textual analysis, computer simulations, and writing assignments, Cities (Under Construction) will help students gain a deeper understanding of their role in remaking and sustaining the built environment.

FSNA 120. The Impact of Materials on Societal Development. 4 Units.
This four credit-hour SAGES seminar provides an introduction to various dimensions of academic life through open-ended intellectual inquiry and guided by reading from primary and secondary sources. The course will require practice in written and oral communications in small groups. A primary focus of the seminar will be to examine the impact of engineering materials on societal development through human history using a few specific materials of interest as examples: concrete, steel, and semiconductors. At the conclusion of the course, students will be encouraged to explore the impact of other materials on the development of specific technologies as a group project.

FSNA 122. Science in the World of Harry Potter. 4 Units.
The Harry Potter books have attracted more readers than any other fantasy novel series. This seminar will discuss how science may account for or duplicate some of the magical endeavors described in the novels. We will assess the feasibility of certain means of transportation, such as traveling by the floo network, apparitions, and broomsticks, in the context of modern science and technology. Parallels between certain potions and contemporary drugs will be evaluated. The seminar’s conceptual framework, integrating fantasy with technology, will loosely follow the format of Michio Kaku’s nonfiction book "Visions: How Science Will Revolutionize the 21st Century.” In "Visions," Professor Kaku offers the provocative thesis that many "fairytale ideas" may be possible in the future thanks to advances in science and technology. A combination of Rowling and Kaku in one course should offer a unique opportunity for SAGES learning.
FSNA 125. The Right Stuff. 4 Units.
This course will examine the Space Race. A key text for the course will be Tom Wolfe’s The Right Stuff. By taking a historical approach to the study of the achievements and failures of NASA scientists and astronauts, it is possible to examine: 1) how individuals dedicated to achieving a particular scientific end draw on the scientific method, 2) the consequences of scientific inquiry, and 3) how science develops in specific historic contexts.

FSSO Courses

FSSO 103. Learning and Knowledge Creation. 4 Units.
The focus of this SAGES seminar is on the process of learning and knowledge creation. We will examine this process from two perspectives—from your perspective as a learner entering Case to choose and develop a career path and from the perspective of Case as an academic community characterized by a rich diversity of academic disciplines with different approaches to learning and knowledge creation. We will begin by exploring the learning process and your unique approach to learning with its strengths and challenges, and how it influences your academic interests and desired career path. Using philosophical analysis of the different forms of knowledge creation and criteria for truth, social analysis of the culture of academic fields and individual study of professors and scholars in different fields, we will examine the skills and values required for successful learning and knowledge creation in these fields. In particular we will compare and contrast ways of learning and knowledge creation in science and the arts studying Case and the Cleveland Institute of Art.

FSSO 108. Slavery from the Old World to the New. 4 Units.
This topical First Seminar will take a global perspective on slavery to fulfill three goals. The first is to explore the diversity of coercive bondage—from ancient Greece and Rome, to early-modern North Africa, to nineteenth-century America—and the ideologies that helped justify this ultimate form of human degradation. The second is to examine the historical memory of slavery and the legacy of slavery today. The third is to enhance critical thinking, public speaking and writing skills.

FSSO 109. American Myths and Movies: Stories We Tell Ourselves. 4 Units.
This First Seminar will explore the evolution and expression of American Mythology in literature and film. Through discussion, reading, viewing films, research, and writing students will examine how particular American myths have shaped American identity, values, and national vision. They will also explore the relationship between the myths and the reality and evaluate the extent to which these myths are meaningful today.

FSSO 110. Conflict and Cooperation. 4 Units.
Why is it that when cooperation seems so likely, conflict breaks out? Or why at other times when conflict looms, cooperation wins out? This course explores the social and political complexities of this basic human condition. Through seminar discussions of classic readings, the course will introduce students to the basic social science concepts and theories used to explain conflict and cooperation. In addition to general knowledge, the course will also allow students hands on experience. Classroom time will be dedicated to simulating the decision making and negotiating dynamics which lead to cooperation or conflict. Studies will include individual, historical, and international cases. Graded projects will include small group negotiation and decision making exercises as well as individual writing tasks.

FSSO 112. The Ethnic/Racial Experience in America. 4 Units.
This four credit hour course focuses on the ethnic/racial experiences of Native, African, Latino and Asian Americans through representative works of fiction, nonfiction and film. We will look at the way racial and ethnic identities are produced through political struggle on a local/national/global scale and how they are maintained and transformed over time. We also pay close attention to the ways in which race and ethnicity intersect with gender, sexuality, class, parental pressure, and nation in order to better understand how systems of power and inequality are constructed, reinforced, and challenged.

FSSO 113. College and City - and the Idea of UniverCity. 4 Units.
In this course we will look at ways in which universities and other major cultural institutions interact with the city. Cleveland is right now an excellent site for such researches. The city is pinning the hopes for its future on its ability to become an incubator of creativity, with particular attention to the arts. Local institutions are responding, including CWRU. Imagine yourself as a student in the late nineteenth century entering the granite fortress of Adelbert Hall (the oldest building on campus). This must have sent a very clear message: when you enter this building, you leave the city behind, and you are now in a different world. Or consider the even more fortress-like building, Crawford Hall, marking the western entrance to the campus. Like other cultural institutions in the Circle, CWRU is now concerned to present a very different face to the larger world. So we want to ask: How have things changed, and what further transformations are projected, and with what objectives?

FSSO 114. Music in Our Lives. 4 Units.
This seminar will examine the role, meaning, power, and influence of music in our lives. Readings, writing assignments, and four-hour events will focus on the following three themes: music is important, everyone is musical, and there are many uses of music and ways to be musical. Topics include the Cleveland music scene, the use of music in political movements, music in today’s media, and the use of music to heal. This course will be characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources. It will also include practice in written and oral communication in small groups. The goals are to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to introduce basic information literacy skills; to provide a foundation for ethical decision-making; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive common intellectual experience for first-year students at Case.
FSSO 119. Philanthropy in America. 4 Units.
This four-credit course provides an introduction to various dimensions of philanthropy and volunteerism. Using the seminar format and an array of interactive activities, we will conduct a broad but intellectual inquiry into the systems and ethics of giving time and money to charitable causes. In four units of inquiry, we will consider the giving traditions that have influenced American culture and society since its colonial days. We will examine the role that the Third Sector (also known as the Independent or Nonprofit Sector) plays as an agent of social change in a functioning democratic republic. We will explore the nature of donors and volunteers and take a critical look at the missions and goals of a cross section of nonprofit organizations. We will wrestle with ethical issues related to philanthropy and consider the giving patterns of different social, religious, and ethnic groups. We will also turn our collective thinking to how the nonprofit sector might better serve the social needs of the nation and the world. At the end of the semester, we will reflect on how our ideas about philanthropy have changed over the course of fifteen weeks.

FSSO 120. Poverty and Social Policy. 4 Units.
This course has two major foci: poverty and social policies designed to ameliorate poverty. Sociologists in the United States and in other countries have made major contributions to studies of poverty. They have primarily focused on income-based poverty, but more recently, have also studied other forms of poverty. In this class, we will examine different conceptualizations and measures of poverty. We will then examine short-term and long-term poverty experiences and their potential consequences. We will then turn to explanations of poverty: why are some individuals more likely to experience periods of low income than others? While the United States will be the focus of the course, we will contrast the experiences of other countries. The second component will be an analysis of social policies designed to ameliorate poverty. In particular, we will examine the development and retrenchment of welfare states and other social policies, the various goals of social policy, and the different impacts social policies have had on individuals, families, other groups, and the country overall. This discussion will reflect on experiences of other countries.

FSSO 122. China in Modernization. 4 Units.
This four-credit hour course provides an introduction to various dimensions of modernization in contemporary China, especially cultural and social changes such as consumption, education, migration, and tourism as a result of economic reforms, trade expansion, foreign investments and technology transfer, especially the development of information technology. The seminar will also assess the impacts of these changes on various aspects of globalization and vice versa. It will be characterized by intense yet open-ended intellectual inquiry, guided by reading relevant material, and will include practice in written and oral communication in discussion forums and small groups. The goals are to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to introduce basic information on literacy skills; to provide a foundation for ethical decision-making; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive common intellectual experience at CWRU.

FSSO 123. Ten Developments That Are Shaking The World. 4 Units.
This seminar is an introduction to some of the most important global developments of our times. We will examine these events through political, historical, economic, cultural, sociological, scientific and ethical lenses. Readings will come from a wide-range of sources, and assignments will include exercises in written and oral communication. The professor will choose the first three global developments to be investigated as well as the relevant readings. His topics will most likely be the proliferation of nuclear weapons, the rise of China as a great power and the fiftieth anniversary of the European Union. Each of the remaining seven will be chosen by small groups of students, who will assign the readings and run the sessions for their respective topic. Possible topics include the global food crisis, genocide and the failure of the world community to stop it, global warming and the growing gap between the world’s rich and poor.

FSSO 126. Religion and the Ethics of War. 4 Units.
Although war is a highly rational, organized and purposeful affair, it also is the most destructive and bloody of human activities. For this reason, war and warfare has always been subject to various religious and moral restrictions. As technology has developed, the conduct of war has changed and the definitions of just and unjust war, as well as what it means to fight justly, have undergone profound changes. This course looks at war and warfare from a variety of angles and examines how various religious and moral thinkers have tried to define just war, and create guidelines for fighting a war justly. At the end of the semester, the course looks at the moral challenges presented by new technologies and new concepts of war.

FSSO 128. Movers and Shakers: Leadership. 4 Units.
"Never doubt that a small group of thoughtful, committed citizens can change the world. Indeed, it is the only thing that ever has" (Margaret Mead, 1901-1978). This seminar is about understanding what enables people to make a generative impact on the world. Students will explore the socio-emotional and motivational characteristics of effective leaders and their ability to create positive change. Students will also be encouraged to develop their own theories of leadership and to explore their personal approaches to making a difference. The seminar will profile leaders from different occupations and walks of life. Seminar sessions will feature assigned readings on leaders and change agents, class discussion on what drives movers and shakers, and individual and group presentations on class members’ emergent leadership perspectives. A key objective of the seminar is the development of critical thinking skills, writing skills, and verbal skills. Consequently, the weekly class readings, reflection papers on class readings, class discussions, class presentations (individual and group), and final project are vital features of the seminar experience. Students will be expected to leave the seminar with a grounded perspective on leaders and leadership, and the ability to articulate their own personal views on making a difference in the world.

FSSO 129. Perspectives on Inequality. 4 Units.
We live in a world in which millions of people die every year in developing countries due to poverty-related conditions. Within the United States, where most commentators characterize the population as “middle class,” at least 35 million people live in poverty. This course examines social inequality from multiple perspectives. We will discuss the concepts of poverty, discrimination, and social change on a global and national level. The first third of the course assesses several economic, cultural, and environmental theories of inequality. We will then survey a wide range of scholarship that has addressed various types of social inequalities from diverse viewpoints.
FSSO 131. Social, Political, Economic Environment of Cleveland Northeast Ohio Region. 4 Units.
This First Seminar will focus on the socio/political/economic environment of the Cleveland/Northeast Ohio Region. Students will be encouraged to explore the agents that create change in our region; major employers and start-up innovative businesses, politicians, philanthropic funds and grassroots activists. Our analysis will also include the topic of growth. Definitions of it, creation of it, measurement of it, equity of it and sustainability of it.

FSSY Courses

FSSY 102. Intelligence. 4 Units.
We make judgments of our own intelligence as well as the intelligence of other people, of animals, of decisions and responses, and of descriptions of the world. What is intelligence? This course will examine a variety of ways in which we ascribe the concept of intelligence, and evaluate our measures of intelligence and the consequences of our use of the term. Intelligence, and the evaluation of its type, degree, presence, or absence is strongly linked to symbols and symbol use, and so the course is themed around segments that focus on specific aspects of symbol use and how they relate to intelligence. Segments include: Intelligence and Symbols, Mental Disorders, Moral Intelligence, Artistic Intelligence, Religion and Intelligence, Neurological Methods, Biographical Methods, and Animal Intelligence. Language as a dominant form of both symbol use and intelligence indication will recur as a topic throughout the course. At the end of the course, students will be well acquainted with a variety of notions of intelligence, common controversies surrounding such notions, measures of intelligence and their flaws, and different venues in which research on intelligence promises to be fruitful.

FSSY 106. Trauma and Memory: Modes of Remembrance and Representation. 4 Units.
The twentieth century has often been referred to as a traumatic century, characterized by unprecedented and unimaginable acts of violence. Traumatic events have engrained themselves into both individual and collective memory structures. Not surprisingly, trauma studies have become a central topic of investigation across disciplinary lines. Yet much of the field is still negotiated. We will try to recreate this ongoing discussion in our classroom, when learning, talking, and writing about trauma and its remembrance. The goal of this writing-intensive seminar is to give insight into the topic as well as introduce students to academic research, life, and expression. At first we will familiarize ourselves and take part in some fundamental debates: the distinction of memory and history, false memories, individual and collective memories, as well as the definitions of trauma across the disciplines. We will then have a closer look at the difficulty faced by researchers who grapple with trauma and its remembrance. In a final segment we will analyze representations of traumatic memories in public spaces, literature, and the visual arts.

FSSY 107. Thinking Animals. 4 Units.
This four-credit hour interdisciplinary seminar looks at the ways in which humans think about the animal and how they imagine their relationship to it. It examines representations of animal existence in literature, film, and critical essays and analyzes the attitudes and projections that underlie these constructs. The discussion will center on paradigm-shifting constructions of the animal such as post-modern anthropomorphism and the concept of becoming animal. Emphasis is placed on honing expressive and analytic skills, both written and oral. Various perspectives will be brought to bear on the theme. Questions we will explore include: What is “animal”? What is the connection between animals and ourselves? How do we know animals and what do we know? Is there “good” and “bad” anthropomorphism? How does language construct the “beast”? Does a documentary really document animal existence? Do animated films prevent a deeper understanding of animal existence or do they contribute to the discourse?

FSSY 108. First Seminar: The Language of Sport. 4 Units.
This seminar explores, through the medium of sport literature, significant periods of life: maturing, playing, living, loving, aging, and dying. Through the genre of sport literature, the course explores sport as metaphor, fantasy, and myth in context (1) time and death, (2) religion and philosophy, and (3) the human condition. Literal, symbolic, euphonic, mythical and figurative interpretations of poetic sport in literature and the plot, point of view, characterization, symbolism, and emotion consideration when reading sport fiction serve as the framework for discussion concerning self, the meaning of sport and life, and the interaction of sport, culture, and self.

FSSY 110. The Greek Hero Since Antiquity. 4 Units.
The Greek Hero and Heroic Culture since Antiquity: the Classical Tradition in Literature and the Arts is the specific topic of this seminar. The influence of ancient Greece on subsequent Western civilization has been profound. This course focuses on the impact of Greek mythology on the literature and arts of five later periods: the Middle Ages, the Renaissance, the Baroque, the Revolutionary Age (1750-1848), and the Modern period. While there are many aspects of Greek mythology that we might investigate, the story of the Trojan War will serve as a central, unifying myth for exploration. The concept of the hero evolved considerably between the time of Homer and the time of Euripides; yet, the Homeric heroes continued to appear in literature and the arts from ancient times onward. How has the concept of the hero inherited from Homer changed in literature and art since antiquity? Does the word “hero” still have value? Are there relevant and meaningful applications of this very specific Greek word outside literature and art in our time? These are just some of the questions we shall consider in our study of the Greek Hero and Heroic Culture since Antiquity in literature and the arts.
FSSY 112. Shakespeare - Still a Hit. 4 Units.
What is the enduring appeal of the works of William Shakespeare? Not only are the plays themselves popular today; there are also many film versions and adaptations, some recent and some dating back to the early days of cinema. In this First Seminar, students will read approximately six Shakespeare plays, including at least one history, comedy, and tragedy. In addition, they will view at least one film version or adaptation of each play. With the help of Kelvin Smith Library, the films will be made available on streaming video with password-protected access, enabling students to view them when convenient and as often as necessary. Since this class (like all First Seminars) is writing-intensive, students will complete four formal essays as well as frequent in-class writing activities. There will also be in-class readings from the plays, discussions of the various film adaptations, and one or two short oral presentations or activities.

FSSY 113. Movies and Meaning. 4 Units.
This course explores methods for interpreting films. To interpret a film is a more aggressive and creative activity than is simply viewing one. How do critics and researchers of cinema "make meaning"? What strategies do they use? How does one mount a film interpretation that is both novel and persuasive? The course will emphasize close reading of films as, each week, we screen a film and together discuss what meanings we can infer from it. Also each week, we'll read an essay that offers an interpretation of the film. We'll analyze the reading in light of our sense of the film under consideration. Students will write short essays, approximately one every two weeks, in which they analyze the rhetorical and interpretive strategies of a given film analysis. Students will share their essays with the class, and these readings will serve as bases for class discussions. Final writing projects will consist of student interpretations of a film. At least twice during the semester, the class will, in substitution for the weekly required evening screening, attend a film off campus--either at the Cleveland Cinematheque or at the Cleveland Museum of Art. The course emphasizes writing instruction and discussion in a seminar format. There will be required evening screenings each week.

FSSY 119. Art, Music and The Museum. 4 Units.
This four credit-hour course provides an introduction to art, music, and the museum, particularly the intersections between and among these three subject areas. Formal training in these disciplines is not required. The course will be characterized by intense yet open-ended intellectual inquiry and guided by readings and the experience of artworks from a wide range of styles and cultures. A strong emphasis will be placed on academic writing. The goals are to enhance basic intellectual skills including critical reading, thoughtful analysis, and written and oral communication (including PowerPoint presentation); to introduce basic information literacy skills; to encourage a global and multidisciplinary perspective on the learning process; to facilitate faculty-student interactions; and, in the most general sense, to provide a supportive intellectual experience for first-year students at Case.

FSSY 126. Fly Fishing: The Sport, the Metaphysics, and the Literature. 4 Units.
The seminar will explore the sport of fly-fishing—and an individual’s relationship to the natural world surrounding them—as presented in both fiction and non-fiction. Selected texts will provide the impetus for posing such questions as: What is the fundamental nature of sport, how does it vary from other forms of recreation, and can a sport be considered an art? What prompts the various authors to often imbue the fly-fishing with metaphysical, spiritual, or aesthetic dimensions? How does the intent and style of this genre of writing differ from those of traditional academic research? How might these elements of craft be applied and integrated into an effective academic writing style? In addition to considering the stylistic and philosophical approaches to the topic, seminar participants will also engage in several experiential learning sessions involving certain skill aspects of fly casting and tying, and consider those experiences both in discussion and written assignments.

FSSY 127. The Music of New Orleans. 4 Units.
This course focuses on the musical landscape of New Orleans from the late 18th century to the present. We will look at the diverse musics of the city, including opera and orchestral music, slave song, Gospel, solo piano, ragtime, jazz, rhythm and blues, rock and roll, and Cajun and zydeco. Through the course, students will develop a better understanding of music and music history and a deeper knowledge about the history of New Orleans. The course spends considerable time on communication: public speaking, discussion, and writing. Fourth Hour trips will include visits to the Rock and Roll Hall of Fame and the Western Reserve Historical Society.

FSSY 137. Cultural Representations: Ideologies, Images, and the World. 4 Units.
Narrative forms, such as myths, folktales, novels, films, and the media make significant contributions to the varied ways that people understand and imagine the spatial structures of the world. Specifically, this course will help you a) to develop an understanding of how narratives and the media have an impact on the ways we come to terms with geopolitical regions and how geopolitical regions are invented and imagined; b) to point out and address geopolitical assumptions, over-generalizations and to engage concepts such as the 'East' and 'West,' etc. critically; c) to analyze travel narratives, films, and current media representations of certain areas of the world and situate your observations into a wider set of theoretical problems; and d) to develop a set of reading skills that will help you to decipher texts (both primary and secondary) so that you can formulate productive questions and articulate your intellectual discoveries in a compelling way.
FSSY 141. "Renaissance" Men and Women: Polymaths from Late Antiquity to Leonardo Da Vinci. 4 Units.
The term "Renaissance man" is often used to refer to a polymath, someone whose expertise spans numerous and diverse subject areas. Leonardo da Vinci (1452-1519), perhaps the most famous polymath of all, was an artist, scientist, engineer, musician, and indeed a man who lived during the Renaissance. Yet already in late antiquity and the Middle Ages many of the great thinkers were polymaths, and they were not all men. This course examines the intellectual contributions of Leonardo da Vinci and two earlier polymaths: Saint Augustine (390-430CE), a north African bishop, philosopher, and theologian who became a Doctor of the Church; and Hildegard of Bingen (1098-1179), a German nun who was a composer, philosopher, herbalist, and mystic visionary. Through discussion of writings by these three figures and of secondary literature about them, the course explores their intellectual diversity and the cultural forces that shaped them. It also examines what it meant to be a polymath at various points in history, why polymaths have become associated with the Renaissance and with men specifically, and why there are relatively few polymaths today.

UCAP Courses

UCAP 390. Conservation of National Parks and Protected Areas: A Service Learning Capstone. 3 Units.
This capstone course explores environmental conservation with a focus on protected natural areas and community engagement. Limited to a small group that meets in weekly seminar, the course investigates the often competing interests of ecosystem protection, private development, historic preservation, and public use. A vital part of the capstone is a service learning trip during break when students travel to a National Park or other protected area to contribute to conservation efforts and to gain hands-on experience with environmental management activities. Each student chooses an issue relevant to protected areas to investigate throughout the semester and writes a significant paper about that issue, utilizing the service learning trip experience to deepen their understanding and analysis of the issue. At the end of the semester, each student makes a public presentation of his/her work. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS

UCAP 395. SAGES Capstone Experience. 1 - 6 Unit.
UCAP 395 affords students the opportunity to pursue a capstone experience outside the constraints of SAGES capstone courses offered by individual academic departments. Students must identify a project, a mentor and an oversight committee. If the mentor is not a Case faculty member, then the student must also identify a faculty advisor who does hold such an appointment and who will serve as the instructor of record. A capstone experience can take various forms but must include certain elements: critical thinking, regular oversight by the project advisor(s), periodic written and oral reporting of progress, a final written report which describes the project activity (which may be a performance, experiment, student teaching, live case analysis, creative writing endeavor, etc.), and a final public presentation. More details about course policies, including procedures for registering, are available via the SAGES office and web site. UCAP 395 may be taken as a one-semester or a two-semester course for 1-6 credits in any given semester and 3-6 credits total. Permit from Director of SAGES required.

UCAP 395A. Engage Cleveland Capstone Experience. 3 Units.
This community-based capstone provides a unique opportunity for students to learn about and become involved in community issues in greater Cleveland. Limited to a small group of students, the capstone weaves together hands-on experience and academic inquiry through which students learn about urban issues, community engagement, and about themselves as leaders and advocates for social change. The capstone has two parts - a summer community-based experience (non-credit) followed by a fall semester academic capstone course (3-credit), which utilizes and builds upon the summer experience.

USNA Courses

USNA 202. How Engineered Devices Work. 3 Units.
Engineered devices typically lend themselves to insightful description and explanation without involving all the detailed engineering science and mathematics that go into their development. The main agenda of this course is a series of six "how-things-work" modules, covering 1) automotive components and systems; 2) airplanes and flight mechanics; 3) power generation; 4) manufacturing machinery and processes; 5) heating, air conditioning, and refrigeration; and 6) rockets, satellites, and orbital mechanics. An on-campus laboratory demonstration or near-campus facility tour associated with each of these topical modules is included. This course also incorporates case-study-based open forum discussions on professional ethics. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 204. The Evolution of Scientific Ideas. 3 Units.
Scientific understanding has evolved over the years. There are very few beliefs about the natural world that have remained intact over the past few centuries, or even the past few decades. The chief goal of the course will be to give students an understanding of how scientific ideas change and how newer ideas supersede the old. Questions to be investigated include: What is Science? How do disciplinary scientific communities (physicists, chemists, biologists, etc.) form and identify themselves? How does the community of scientists within a discipline come to a consensus that it is time to adopt a new paradigm: What scientific, social, political, and cultural factors come into play during the periods of transition? The course will be in seminar format. The students will be given opportunities to explicitly develop critical thinking skills (the specific skills to be developed will be selected by the class from an explicit list) and writing and speaking skills. Class meetings will be used to share their research results and to study the assigned texts and papers. The students will be required to demonstrate their understanding in a variety of ways. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 206. Land and Life in the Americas. 3 Units.
This course investigates the physical processes that shape the Earth's environments and how these environments have influenced, and been influenced by, human history. A principle focus will be the evolution of the Americas since the end of the last ice age. We will apply what we learn to the history of cultural development and to debate environmental issues facing us today. This class is limited to students participating in SAGES. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.
**USNA 210. Forensic Sciences: How They Impact Your World. 3 Units.**

Forensic sciences provide a unique opportunity to apply basic science knowledge to help solve medicolegal problems. Expert input can be invaluable in improving the lives of the living along with providing crucial information for identification of the deceased, as well as cause, mechanism, and manner of death. This seminar will allow students to interview forensic scientists that relate to their careers and interests, for example, forensic pathology, trace evidence, DNA, toxicology, anthropology, radiology, and odontology. They will then be responsible for giving oral and written reports to the seminar class. Dr. Simmelink has over 25 years experience in forensic odontology and has arranged facility tours and expert interviews with staff from the Cuyahoga County Coroner’s Office in University Circle. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USNA 211. Einstein, Space and Time. 3 Units.**

This course will explore the profound changes in our conception of space and time brought about by Einstein’s theories of special and general relativity. As a University Seminar, it will also integrate writing and discussion about these topics into the class and explore the philosophical and technological context in which the ideas were developed. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USNA 216. Fuel Cells—Reality, Prospects and Myth. 3 Units.**

Fuel cells have been recently identified as a key source for non-polluting, oil-independent energy in the future. In this course, we will study and critically analyze the prospects, barriers, and impact of broad implementation of fuel cells, focusing primarily on the transportation sector. Major topics of the course include: (i) World and U.S. energy outlook; (ii) Potential role and impact of fuel-cells, their advantages, limitations and prospects for improvements; (iii) Alternative fuels—source, availability, distribution and cost; (iv) Potential political, public policy, economic, and environmental impact of large-scale implementation of fuel-cells technology. The course is designed for students from all disciplines. Students will be expected to read assigned texts and articles and critically analyze statements and points of view presented. Quantitative analysis is expected where appropriate. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USNA 217. Astrobiology. 3 Units.**

This course will explore the possibilities for the existence of life on other planets in our solar system and galaxy. Using current understandings of the development of life on Earth we will discuss what habitats might be suitable for life on other worlds and the strategies scientists have developed to identify those habitats. Lastly, we will discuss the implication of the results for these ongoing searches. Students may receive credit for ASTR 206 or USNA 217—Astrobiology, but not for both Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USNA 220. Suburban Landscapes: Nature, Technology, and Culture. 3 Units.**

This course will examine suburban neighborhoods by focusing on the design of technology and nature in these spaces. The way that people understand and operate in the world is so entangled with values and assumptions that the physical shape of the world cannot be separated from human culture. In this sense, suburban landscapes are not simply neighborhoods but also examples of culture. The form of the land and the technologies in the suburbs are continually reshaped to correspond with the cultures of the people occupying those spaces. By studying suburban landscapes we can see how the ideas in people’s heads become part of the physical world in which we live. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USNA 223. Critical Science Fiction. 3 Units.**

The emphasis of this seminar will be on developing skills of critical analysis of science fiction. A goal of the course is that the students will be able to distinguish plausible from impossible when they read their next science fiction book or watch a sci-fi movie. Upon completion of the course, the students should be well equipped to recognize scientifically unrealistic assumptions and statements in pseudoscientific books, movies, TV programs and other mass media sources. The course will be sufficiently flexible to allow coverage of topics that are proposed by, and interesting to, students, or the topics which would arise during discussions. The course will encourage open-mined approach to understanding controversial areas, as well as emphasize the great achievements that humankind made in the short historical period of our civilization. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USNA 224. Food, Farming, and Economic Prosperity. 3 Units.**

Intended to challenge conventional thinking about “progress”, this course will examine the evolution of food production and consumption in the U.S. over the past 50 years. We will begin with the topic of food, itself. We will explore fundamental questions such as, What is food? Why should we care? Where does food come from? Why does it matter what we eat, and equally important, what we eat eats? Students will explore their own eating habits by keeping a journal of what, when, where, and how they eat. Discussions will focus on the social, cultural, nutritional, and technological aspects of food. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USNA 225. Science and Society. 3 Units.**

This seminar course is about the fascinating world of science and its role in society. The goal of the course is to develop in students appreciation of science and to show that science is probably the most exciting area developed by humankind. We will discuss history of science, development of scientific ideas, the scientific method, and modern state of affairs in science. We will talk about different scientific fields, from physics and mathematics to economics and history. The course topics will be sufficiently flexible to allow coverage of the areas that would be proposed by students or during our discussions. The course will encourage open-minded approach: we will discuss controversial areas, but we will do it in a respectful and intelligent way using logical arguments. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USNA 226. Evolution of Human Behavior. 3 Units.
Human behavior is a result of the complex interplay between our genes and the environment, both of which have been shaped by evolutionary forces over millions of years. To what extent does natural selection shape our behavior today? Are humans naturally monogamous? Why do conflicts arise even in our most intimate relationships? Is human behavior ultimately in the service of reproductive success, ensuring that our genes are passed into the next generation? This course reviews the history of evolutionary theories of mind and behavior, as well as current ideas about the ecological and genetic components of behavior. We will examine key principles of neurobiology, sociobiology, and evolutionary psychology to critically evaluate evolutionary interpretations of human behaviors, including those comprising cultural traditions and social institutions. Specific topics to be addressed include human mate choice, parenting strategies, interpersonal conflict, and altruism. The course is structured as a seminar, with emphasis on discussion and formation of logical arguments. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 228. Time. 3 Units.
This seminar course will explore the nature of time from many stances, including those of Psychology, Biology, Technology and Philosophy. Yet time is central to Physics, and in Physics we will orient our explorations of time. Our understanding of time has sharpened a great deal in the last few centuries, the most obvious markers being Newton’s Absolute time, which remains entrenched in modern culture, and its subsequent physical overthrow by Einstein’s relativity. Given the physical primacy of Einstein’s time, many questions arise: How malleable is the concept of time? Is there a fact of time? Can the present be defined? The past? The future? The successes of modern Cosmology lead us to ask: Was there a beginning of time? Will time end? The symmetry of fundamental physical laws with respect to the direction of time, counterpointed by asymmetric phenomena, lead to: Is there a master arrow of time? Is the flow of time an illusion? In this course we will investigate what "Time" is telling us about the natural world and ourselves. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 229. Astronomical Arguments: Pluto, Dark Matter, and Beyond. 3 Units.
This course explores how scientific controversies are resolved, using examples from astronomy and cosmology. We start with a discussion of the scientific process—both as an ideal and as a practical reality—and an overview of the scale of the universe in space and time. Then we address some historical controversies (with the benefit of scientific hindsight), before turning to modern examples of astronomical debates which remain unresolved. Examples include the Copernican Revolution, the nature of galaxies, the Big Bang, the elusive search for dark matter, and the identity of Pluto. In each case, we will examine the scientific basis of the controversy as well as the roles played by cultural and human biases. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 230. ATTENTION! Understanding the Human Attention System. 3 Units.
You're in a crowded room, in the middle of a heated conversation. Suddenly you hear someone across the room say your name. How were you able to pick out that particular sequence of sounds from all the noise around you? Why did you even notice it, given that you were talking to someone else? This course looks at this phenomenon and others having to do with the human attention system. While much of what we read will be from the fields of psychology and neuroscience, we'll also consider aspects of attention that have to do with literature, the arts, and religion. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 231. Cholesterol: The Good, the Bad, and the Money. 3 Units.
Cholesterol molecules are essential building blocks of human cells and are required for biosynthesis of some hormones. The word “cholesterol” has, however, become notorious as several diseases are linked to improper bio-processing of the molecule. Indeed, all middle-aged people are encouraged to have their cholesterol checked and monitored as needed. This course will educate students with respect to the role of cholesterol in human health and in specific disease states. Students will learn the difference between “good” and “bad” cholesterol, and the rationale for these labels. Additional topics include dietary contributions to cholesterol, cholesterol lowering drugs, the continuing evolution of what is considered to be a healthy blood cholesterol level and the factors driving this changing scale. Reading assignments will range from Newspaper articles to scientific publications. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 235. Exploring a Sense of Place. 3 Units.
Having a sense of place, or a rooted understanding of where we live, shapes our identity, actions, and commitment to community. In this course, we will go beyond the “campus bubble” to explore the concept and development of a sense of place by studying and photographing the Doan Brook, our local watershed. Course readings, writing, and discussion will focus on Doan Brook’s natural history, local environmental issues, and sustainability. We will utilize photography as a primary tool for investigating and connecting to place as we undertake a photography project documenting the Doan Brook, which will be shared with the community. We will also consider our responsibility to place and learn about community-based initiatives in which people have committed to place and taken action to make a difference. Throughout the course, we will develop a stronger understanding of Case’s ecological address and the intersection of sense of place, environmental issues, and engagement with the watershed. We will explore firsthand where we are--and why it matters. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USNA 236. Upheavals in Astronomy. 3 Units.
Why the uproar over the invention of the telescope? How does the scientific method really work to advance knowledge? What do astronomers fear is the fate of the universe? This seminar begins with an introduction to the scientific instruments that brought about revolutionary changes in our understanding of the cosmos. Students will acquire historical and practical knowledge of such instruments in part through hands-on acquaintance with telescopes and other devices in the collection of the Cleveland Museum of Natural History. Students will also examine the historical context in which advances in astronomy were made, the divergent ways in which thinkers such as Galileo and Kepler responded to official disapproval of their ideas, and the consequences of humanity’s displacement when the model of a geocentric universe gave way to the current model of an expanding universe. The seminar will include assignments in expository and persuasive writing, with an emphasis on improving and revising one’s work and developing a well-researched final paper. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 237. Landscape History and Conservation. 3 Units.
Human history is intimately intertwined with the natural landscape on which it occurred. From coastal preserves and their beach communities to Midwestern farmland and the preserved site of Thoreau’s Walden Pond cabin, and at places like the Grand Canyon, the American landscape itself holds many clues to our country’s natural, ecological, and cultural history. This course will investigate the lived landscape in two ways (which have a multitude of shades to them): as a place where humans shape the natural for their own memorial, productive, and aesthetic uses, or as a natural place that humans set aside or conserve. We will read landscape history and conservation theory, and we will consider global practices of conservation through UNESCO’s World Heritage Sites. Class work will entail a process-oriented project on the Cleveland landscape, which students are encouraged to approach through the lens of their major. We will visit the Wade Oval and the cultural gardens of Rockefeller Park as an example of current conservation practices working to protect the natural and cultural value of the local landscape. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 238. The Role of Materials Science in Emerging Technologies. 3 Units.
The development of engineering applications is, and has historically been, closely related to the development of new engineering materials. In fact, specific civilizations and time periods in the past are classified by the materials used for engineering applications, e.g., the Bronze Age. This university seminar will examine the role of materials developments in the past, as well as explore the needs and impact of new materials in emerging technologies; areas of focus will be (i) Power generation, transmission and storage, (ii) Electronic devices and electronic applications, and (iii) Biomedical engineering and medical imaging applications. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, or FSCS. Prereq or Coreq: FSTS 100.

USNA 239. The Musculoskeletal Machine. 3 Units.
This course is intended to explore the function of the musculoskeletal system from an engineering perspective. The coverage will not require a science or engineering background, although some physics background is desirable. Course topics include basic musculoskeletal anatomy, basic concepts of mechanics, mechanics of motion, energetics of motion, mechanics of sport and human-powered motion, animal motion, emulating systems (robotics), mechanisms of injury and disease, rebuilding and repair of the musculoskeletal system. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 240. Technologies of the City. 3 Units.
Based on the premise that cities are never “finished,” and constantly being remade, the University Seminar, Technologies of the City, will look at the technological and cultural history of cities from the ancient world to the present day. Students will explore the history of building materials—wood, brick, steel, concrete, and glass—used in the construction of cities. We will also trace the development of city infrastructure such as electricity, water and sewage systems, streets bridges, and subways. Technological innovations, such as the automobile, will receive special consideration. We will move both geographically and temporally to visit the world’s great cities, studying examples of significant building projects, such as the Brooklyn Bridge, the Chicago World’s Fair, and Cleveland’s first skyscraper, the Rockefeller Building. The course will cover the history of the professions—engineering, architecture, and urban planning—that have contributed to the construction of cities, and will revisit the works of these practitioners, as well as that of artists, reformers, and utopians who have imagined new directions for the city. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 241. Urban Transportation. 3 Units.
The course is intended to examine the variety of issues associated with urban transportation. To provide focus the Cleveland metropolitan area will be used as the example urban environment. The issues that will be addressed include the perceived transportation needs, the mutual influences of perceived needs and the transportation system, the effect on business, residence, recreation and entertainment, the variety of approaches that have been used or suggested in the United States and abroad and the approaches that might be used, the resources needed, and the time needed to make changes. It is expected that the students will further develop the ideas that should be addressed, do the necessary study of available information, discuss the issues, and finally report on their findings, conclusions and possibly recommendations. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, or FSCS. Prereq or Coreq: FSTS 100.
USNA 243. CWRU’s Carbon Footprint. 3 Units.
CWRU has conducted dozens of energy efficiency projects addressing sustainability, energy, and climate issues. All of which aims at reducing the University’s environmental footprint. A core component of CWRU’s first carbon footprint inventory, is engaging in strategies for reducing greenhouse gas emissions. Using the campus as a living laboratory, participants will complete CWRU’s first carbon footprint inventory, and will collectively write the University’s first Climate Action Plan. Students will become familiar with general climate issues and will conduct an institutional greenhouse gas inventory using data on CWRU’s energy consumption and other pertinent institutional practices. Complimenting the practical aspects of the course, we will also explore organizational and economic opportunities in sustainability, energy, policy, and processes of organizational change for sustainability. Many examples from other campuses will be used in addition to expert guest speakers. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 245. The Impact of Technology on Society. 3 Units.
There is commonly a lack of understanding and appreciation of how the spread of advanced technologies (the artifacts of engineering) has led to economic, social, and political changes on a global scale. As a result, young people do not think that careers in science and engineering are rewarding and useful or do they think of technology as one of the most powerful forces for social change. Furthermore, in a world where advanced knowledge is widespread and low-cost labor is readily available, U.S. advantages in the marketplace and in science and engineering have begun to erode. We want to be able to compete in the world. Economic growth is driven by technological innovation. Societies that foster it lead the pack, while others lag behind. An enlightened citizenry is essential both to support and to engage in new developments in science and engineering. Insights will be given on how engineering innovations develop and have changed the world, both good and bad and, hopefully, it will be clear that engineering is essential to meet many of the major global challenges of the future. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 247. Epidemics in Human History. 3 Units.
This course will examine the role of epidemics (of all types) in human history. Disease has shaped our society in many ways and continues to do so. Despite the plethora of antibiotic and antiviral drugs since 1940, 90% of the decrease in (First World) infectious disease is due to simple public health measures and better hygiene. But overuse of antibiotics increasingly is causing the rapid evolution of "superbugs" that threaten new plagues and epidemics. Both historical and modern epidemics of plague, smallpox, Salmonella, cholera, tuberculosis, and HIV/AIDS will be examined. The interaction of these epidemics with societies and how the epidemics influence society, cultures, art, and literature will be major topics of discussion. The course is primarily discussion with short student presentations. In addition, 3-4 short “Front Lines" talks by and discussion with CWRU and University Hospital clinicians will explore today’s realities of epidemics, infection, and antibiotic resistance in the United States, Uganda, South Africa and elsewhere. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 252. The Future of Food. 3 Units.
Since World War II, science and technology has transformed the way Americans produce and consume food. This transformation has been supported by government policies and accomplished through the application of industrial methods in agriculture, food processing, and food delivery. Such methods have allowed a tiny fraction of the American population to produce vast quantities of food products at very low prices for American consumers. But this American diet, while inexpensive, has turned out to be high in sugar, fat, and processed grains that are contributing to chronic disease such as diabetes and obesity. In addition, environmental impacts of confined animal feeding operations, vast monoculture grain production, and global food transport are raising questions about the sustainability of American agribusiness. This seminar will explore the evolution of food production in the United States since World War II and will ask the question: is it possible to nourish the world’s population using nutrition and flavor as guiding principals rather that cost? What is the true meaning of "sustainability" in agriculture? The last third of the course will be devoted to creating a plan for using part of the University Farm to grow food for the University. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 258. Designing Urban Green Space. 3 Units.
In this course, we will investigate the history, theory and practical design of green space in cities. We will focus on types of green space and their community function, relationship to commerce, aesthetics, recreation, ecology, and health in particular. Students will engage in group projects where they locate all underused space in Cleveland (vacant space, gray or brown fields) and will propose a new use for it as green space of some kind. Individual research projects will be related to that site. Lively class discussion and frequent reading responses required. Mandatory field trip to sites in downtown Cleveland. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 259. Bring Out Your Dead. 3 Units.
This course examines the interplay between history and plague outbreaks. Course readings draw largely on the writings and experiences of scientists, physicians, and public health officials. By taking a historical approach to the study of the relationship between human history and the history of disease, students will learn about the development of the scientific method (namely the slow process by which humans learned to identify, categorize, and respond to disease), how science develops in specific historic contexts, the consequence of scientific inquiry, and what humans do when they are faced with imminent death. A tentative list of plagues includes: the Athenian Plague, Black Death, Yellow Fever, TB, Malaria, Influenza in 1918, and AIDS. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USNA 266. Life After the Death of Print. 3 Units.
Around 1439, Johannes Gutenberg invented the moveable type printing press, a technological development that altered the world by ushering in an era of mass, reproducible communication. For nearly 500 years, print technologies have dominated communications. Scholars have shown that print’s ability to disseminate information led to revolutions in art, science and politics. In short, print technologies have largely defined what it means to be a thinking and communicating human being. The emergence of digital technologies has altered communications in ways that are only now being understood. This course examines how developments in digital technologies impact communication practices by threatening print’s historic stronghold. Consequently, the course also explores what impact new technologies have on human identity. We will consider the historical development of display technologies (printed materials and digital screens) to understand what is at stake in the move from print to digital communication. We will then investigate current phenomena associated with Web 2.0, including blogs and social networks, in order to understand how our communication choices construct and allow for our public and private identities. Additionally, the course will examine new display technologies, such as iPhones and Kindles, that allow for the possibly constant dissemination of those identities. Finally, we will hypothesize about how digital technologies force us to conceive of human identity differently from the ways that print invites. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USNA 270. Alternative Energy Sources. 3 Units.
Alternative energy sources are needed, because of limited fossil fuel resources, increased demand, and environmental impacts. This course will deal with the issues of alternative energy sources. Various sources such as solar (thermal and photovoltaic), hydroelectric, wind, geothermal, ocean thermal, wave, tidal and geothermal energy, as well as energy from biomass will be discussed in order to determine what is practical on a large scale, as well as on the scale of the individual homeowner. We will pay attention to the efficiency of each alternative energy source as well as what limitations exist in terms of extracting useable energy. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSNA, FSCC, FSSO, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 201. Society and Technology: How Do They Impact One Another?. 3 Units.
This course focuses on a systematic analysis of the relationships between society, and the specific institutional elements of technology and technological innovation. It describes the social aspects of computers and related technologies and explores the ways in which these technologies influence and impact organizations and individuals. The course explores the design, use and cultural significance of technologies and uses a historical focus to assess the integration of technology into all aspects of our society. The restructuring of traditional human interaction by information technology will provide a contemporary focus for the course. Offered in a seminar format, the course will provide opportunities for scholarly discussion, systematic inquiry and written communication. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 203. Law in Literature. 3 Units.
An interdisciplinary venture. This seminar will focus on law in literature by examining representations of the legal process in poems, plays, short stories, and novels. It will provide a taste of the vastness and variety of human life--and will broaden and deepen students’ understanding of the role law plays in society. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 205. The Human Struggle Through the Lens of Sport. 3 Units.
This seminar explores, through the medium of sport literature, the interaction of sport, society, and self. Students will examine the social and psychological effects on participants, consumer, and society of sport through the study of fiction, research studies, essays, and poetry having a sport motif. Topics include racism and sexism (valuing diversity), love (cooperating), death (losing), transformation (aging), and achievement (winning). This class is limited to students participating in SAGES. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 209. Face First. 3 Units.
Human beings greet the world face first. In fact, the ability to process facial features seems to be innate. A baby easily recognizes its mother’s face yet the most powerful computers have difficulty using facial features to identify people. This is because all human faces are similar while fine details make each face unique. This course will begin by studying the human face as an anatomic construction of hard and soft tissue skeletal components. We will discuss how we use anatomic facial features to recognize individuals. One homework exercise will be to construct faces using an FBI identikit. Each student will create an FBI composite sketch of their own face. Seminar time will then be used to view each sketch and try to match the sketch with the seminar participant. Discussion will focus on how facial anatomy is similar or different. Following this introduction, the seminar will shift focus from anatomy to sociology. We will discuss facial attractiveness and beauty. Seminar topics will also include manipulation of facial appearance i.e., cosmetics, body piercing, veils, and plastic surgery. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO Courses
USSO 212. Sport and American Culture in the Twentieth Century. 3 Units.
This seminar will examine the role of athletics in U.S. society throughout the century, examining in particular its influence on issues of race and gender as well as the religious and mythic aspects of sport. The focus will be on the grasp athletics has, at all levels, on our collective psyche, and as such the influence it wields on vast realms of U.S. society. The tendency in popular press is to cast sports in absolute terms. It is evil: look at the millions spent on professional players and sports complexes, unrelenting wagering and the corruption of college athletics through the near-endless accounts of recruiting violations, under-the-table booster payments and fudged test scores. Or it is noble: consider the Olympic ideal, the pursuit of excellence for its own sake, the power athletes have to inspire spectators and play a key role in influencing public attitudes about everything from race (Jackie Robinson) to gender (Billie Jean King). The following topics will be explored through readings, movies, guest speakers, and writing assignments based on controversial issues within each topic: Sport and Race, Sport and Gender, Sport and Community, Sport and Celebrity, Sport and the individual, Sport and the Academy. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 213. Accountability and Governance in Corporations. 3 Units.
Who is minding the store for the shareholders/owners? Why do CEOs get paid so much? How did corporate scandals such as Enron, WorldCom, and Tyco occur? This seminar focuses on issues of accountability and governance in the modern corporation. While the main emphasis is on the business corporation, the relevance of these concepts to not-for-profit corporations and governments agencies will also be addressed. Much of the economic wealth of the modern society is generated by corporations. To understand the role of the corporation in society, it is important to gain an insight into the mechanics of corporate governance, both in theory and in practice. As such, what these entities do and how they are held accountable is at the heart of the social contract that binds the citizens together in a democracy. This seminar uses readings, cases, independent inquiry, role playing, guest lecturers, and discussions to allow students to develop an understanding of the challenges of accountability and governance. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 217. Ethics, An Interdisciplinary Introduction: Truth and Trust. 3 Units.
What is truth? Whom/what should we trust? Is it morally acceptable to trust in someone’s stupidity or cowardice? What are the criteria for being a trustworthy friend or parent? What is entrusted to professionals of various types? What is a lie? Is there a moral difference between types of lies? What factors are relevant to deciding when, if ever, lying is justified? What does lying do to the liar? What is the effect on the person who is deceived? What does lying do to trust within a culture? This course introduces students to classical and contemporary methods of ethical reflection and reasoning from several disciplines, including philosophy. The goal of the course is to enhance students' understanding of ethical concepts and moral reasoning, to prepare them for a life-time of ethical reflection, discussion, and problem-solving, as well as for more advanced study in the disciplines introduced. We will examine issues of truth, honesty, trust, trustworthiness, and responsibility in contemporary public, private, and professional life. Discussion, active learning methods, and short written assignments and oral reports are the principle methods of learning used. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 219. Native American Cultures: Issues Past and Present. 3 Units.
Who are Native Americans? How has their identity been defined? Too often, it is thought that all Native Americans share similar cultural and physical characteristics, rather than understanding them as culturally diverse peoples. In addition, many perceive Native American cultures as static and unchanging. The goal for this course is to challenge these myths and explore the dynamic and diverse nature of Native American communities. Within this framework, students will also examine shifting Native American identities over time. The course is divided into three sections: (1) Contemporary Native Issues, (2) The Problem of Culture Area: Real Cultural Surveys, and (3) Two Case Studies. The purpose of these divisions is to help students develop a strong understanding of some of the important issues of social identity and representation in Native American communities today. The purpose of the second division is to explore historically how these issues developed and the diversity of Native American cultures within specific regions. In the final section, we will explore two specific Native American cultures in a historical and contemporary context. The requirements for this course include article reviews, a midterm and final, and a final paper with presentation. Native American speakers will be invited periodically to discuss particular issues of relevance with students. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
**USSO 222. Science and Society Through Literature. 3 Units.**
This course will examine the interaction of scientific investigation and discovery within the context of the society it occurred in. What is the effect of science on society and, as importantly, what is the effect of society on science? An introduction will consider the heliocentric controversy with focus on Galileo. Two broad areas: tuberculosis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art and music will be examined to understand the changing views of society towards the disease, how society's perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and viewing several films, the transformation of the original story into a myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USSO 223. Seven Debates on Globalization. 3 Units.**
The sense that the world is entering a new phase of global social, economic and political integration ("globalization") has provoked debate and demonstrations around the world. In this seminar students will actively study, discuss and write about seven contentious issues surrounding globalization; 1) Is there anything new about today's wave of globalization?: 2) Do the institutions for globalization do more harm than good?: 3) Is globalization creating economic value?: 4) Is globalization good for the U.S.?: 5) Is globalization good for the emerging economies?: 6) Does globalization make the world safer?: 7) Is globalization creating a McDonald's world? Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USSO 224. Women as Ordinary and Extraordinary Leaders. 3 Units.**
This seminar will explore the lives of women who are leaders or who influence culture in everyday life and/or in public life, today and across past centuries. Characteristics of women and their environment that contribute to the development of leadership and/or influence on society will be explored and analyzed along with the barriers to leadership. Themes exhibited across various types of women leaders or women of influence will also be identified. Guest speakers of local leadership and/or influence who have expertise in identified areas of interest will also be utilized. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USSO 228. Our Plastic World. 3 Units.**
If one were to look around the general store of 1900, few man-made "synthetic" items would be evident. One hundred years later, the shelves of any Walmart would be filled with plastic items, plastic packaging, and clothing produced from synthetic fibers. Questions that might be posed include: 1) How did this change happen? 2) How are the historical events of the 20th century and the development of the U.S. chemicals/plastics industry interconnected? 3) What are the societal benefits and costs of this change? 4) What can we learn from the past 100 years, and how can we use these insights going forward into the coming century? These issues will be discussed at length. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USSO 229. A Study of Power: Criteria Essential to Its Rise and Fall. 3 Units.**
This SAGES seminar will coordinate examinations of major historical events and their influence on the future. Particular emphasis will focus on the development and/or demise of powerful countries and people, and political and religious infrastructures. Sample topics include: the rise and fall of the Roman empire, the Barbarian empires, the British empire, the National Socialists, the Soviet empire, etc. Development and practice of religious behavior from praying to pagan Gods and spiritual Gods may also be analyzed. The idea is to demonstrate the similarities and differences in each of these broad categories as they progressed. An examination of the impact of greater world "enlightenment" as civilization expanded over time is also discussed. The evolution and eventual demise or change and the continuing impact on contemporary civilization shall be explored. Conclusions shall be used to suggest a model for the future. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USSO 230. Leadership and the Global Agenda. 3 Units.**
The pervasive media climate of the 21st century has put the challenges of world in front of all of us: four billion of the world's people are living on less than $2.00 a day, whole continents are under siege by pandemics of the HIV/AIDS virus, and instances of man's inhumanity to man are daily headline news. The earth itself is weakened by emissions in the atmosphere, toxins in the rivers and oceans, and soil that is so thin and exhausted that the food it produces is a fraction of what it once was. In this seminar, students will develop an executive view of the state of the world, build skills in "Appreciative Inquiry," for conducting action research into the best practices of organizations, and develop a global consciousness, not only about the common issues experienced by peoples the world over, but also about a larger set of global values. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

**USSO 231. Evolution as Metaphor and Model: Why Don't We Live Forever?. 3 Units.**
Evolution will be used to examine biological, historical, and social issues associated with health, illness and aging. In this overview course, evolution is a paradigm that is used to understand how systems change over time. The readings and discussions will identify universal processes and patterns in order to understand the effect of disease on history and explain how and why humans remain vulnerable to aging. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USSO 232. Economic Challenges. 3 Units.
This course examines economic challenges from a wide array of perspectives including philosophical, historical, psychological and practical. This course provides an avenue for a non-analytical yet economic and intellectual discourse on some of the most challenging present day economic issues, such as welfare reform, technological progress, changes in privacy norms, globalization, efficiency and the role of religion. We will explore these challenges through diverse readings from both classic economic thinkers such as Marx and Smith and modern academic scholars and journalists; analyzing the validity of their views for timely issues such as environmental questions, minimum wage laws, redistribution and educational policies. The seminar style in-depth discussions and flexible reading and project choices will provide students with an opportunity to examine and share knowledge related to their particular interests. We will also regularly discuss topical news items related to the class themes. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 233. The Pursuit of Equity and Quality in Public Education. 3 Units.
Public schools are regularly excoriated at the hands of the press, politicians, taxpayers, parents, employers, and just about every other segment of the general public. Yet our system of public education has long been regarded as the gateway to the American Dream and is (arguably) what has made our country (arguably) great. What is the status and future of this original American institution? The stakes are high: nothing less than the future of 90% of our country’s children, the fabric of our society and the strength of our nation. This seminar will explore current challenges facing public schools, such as resegregation, the impact of high-stakes testing, the “achievement gap,” and the political, moral, legal, and public policy issues surrounding the quest for equity and adequacy in funding and programming. We will discuss various visions for reform including pedagogical and legislative “solutions.” Our discussions will be informed by some historical and authoritative sources, but we will also give attention to continuously unfolding local and national events. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 234. Questions of Identity. 3 Units.
Who we are informs the ways in which we act in the world. How we respond to society in the individual, local, and global community is impacted by the way we see ourselves, the way others see us, and the way we see others. Who am I? How do I look at myself in relationship to others? How does the way in which society views me affect the way I think of myself? How have writers, historians, and philosophers dealt with the challenges of self and group identity? We will explore these issues through readings from the Civil Rights Era, the Holocaust, and the period of decolonization in Africa. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 236. What is a Nation? Reinventing China for the Modern World. 3 Units.
What makes a nation a nation? Is it a common history traceable to a primordial antiquity? Must a nation retain racial commonality? Does representative democracy mark “legitimate” nationhood? The history of modern China is used as a template against which we will ponder these questions: what is a nation, what is modernity, how did we come to assume certain characteristics of nationhood, and is there only one model for all the nations? We will study these issues by examining the views held by different Chinese figures on the meaning of China’s modern nationhood: old and young, northerners and southerners, politicians and students, and people from the heartland of China to the peripheries. We will examine the tension between the nationalist rhetoric of unity and cohesion versus the political and military reality of disunity and fragmentation. This seminar will explore the interactions between notions of democracy and dictatorship, military and civil discourse, economic development, diplomacy and geo-politics, and political parties and ideologies and how they influenced and detracted from stated nationalist objectives. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 238. The First Amendment. 3 Units.
The First Amendment to the United States Constitution states that “Congress shall make no law ... abridging the freedom of speech.” In this seminar we will explore what this right has meant in America and how it has been limited throughout American history. We will discuss the importance of free speech in a democratic society and how the government balances the freedom of speech with other government interests. This course is also designed to give you a glimpse of law school and what being a lawyer is like. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 239. Change Agents: Past, Present, and Future. 3 Units.
Though it is often said that we are living in a time of constant change, surprisingly few people take the time to understand who makes change happen and how. This seminar will explore the phenomenon of change on multiple levels. We begin by looking at change through an historical lens, examining social movements in the 1960’s. We will then investigate organizational turnarounds of the late 20th century and today. In each instance, we will consider the role of the individual, groups, and organizations as change agents, and examine the influence of environmental factors on change processes. Throughout this course, we will study the dynamics of effective change, identify change strategies, and move to develop a personal understanding of how each one of us can initiate change. In addition to diagnosis and analysis, we will engage in creative thinking and writing about our own capacity to become change agents. We will apply what we read and learn to our current and future lives. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USSO 243. The Art of Fact. 3 Units.
As evidenced by the tragedy that unfolded in New Orleans in the wake of Hurricane Katrina, we ignore the consequences of endemic poverty at our peril. How do you evacuate a city filled with thousands of people too poor to own cars? Where do you house them after they’ve been rescued from their drowned neighborhoods? Although Cleveland won’t likely be erased by flood, it’s one of the poorest big cities in the nation making it vulnerable to disaster in times of crisis and an incubator for a host of thorny social problems. Often, it’s up to journalists to bring attention to these issues, give voice to the voiceless and force policymakers to come up with solutions to seemingly intractable problems. In this seminar, we’ll read and dissect the works of journalists who’ve written stories about complex social problems and have done so using many of the conventions employed by writers of fiction. Writer Ben Yagoda described this literary journalism as “making facts dance.” We’ll spend our time researching numerous social issues and learn to write about them in a clear and compelling voice. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 253. A Widening World. 3 Units.
This course introduces students to globalization debates. It begins with a broad overview that addresses core questions: What is globalization? Is it occurring? Is it novel, and what are its effects? The course then turns to contrasting perspectives on the relationships among markets, political units, culture and individuals, and the causes, extent, effects and desirability of economic globalization. Students use these theoretical lenses to develop arguments of their own and debate contentious contemporary and historical issues. Topics include: foreign economic strategies for the United States and poor countries; the origins of and solutions to financial crises; fair prices for basic commodities; intellectual property rights of medicines; workers rights and sweatshops; disputes over ‘frankenfoods;’ film wars; and the environment. The course is writing intensive. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 254. Global Health Issues and Culture. 3 Units.
In this course, we will explore health and medical issues across the globe from anthropological, biological, historical and economic perspectives. To begin this process, we examine the issues of cultural relativism and universal human rights. Then, we use this framework for our discussion and analyses of four key global issues in the health and medical sciences: (1) poverty, labor and public health in Latin America; (2) HIV/AIDS in sub-Saharan Africa; (3) the practice of female genital cutting; and, (4) ethical issues related to rapid developments in medical technologies (such as genetic cloning or stem cell research in the West). This course offers a “sampler” to students who think they may be interested in one of the health, medicine, or allied fields. This is a seminar course, and students will be evaluated based on their attendance, participation, three short papers and a final term paper. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 255. Hinduism. 3 Units.
This course will provide an introduction to Hindu thought and culture. We will read a wide range of texts and secondary sources. Two readings, the Ramayana and Samskara, will focus on issues of ethics and proper dharma. We will also be watching Deepa Mehta’s Fire. There will be a visit to the Shiva-Vishnu Temple in Parma. Heavy emphasis on research and writing. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 256. Cognitive Archaeology. 3 Units.
Have you ever wondered how it is that humans have developed self-reflection minds capable of meta-representation and other cognitive capabilities? Have you ever pondered how the human mind operates in relation to its cultural context? These are the kinds of questions that cognitive archaeologists explore and the sorts of questions we will discuss in this course. Intersecting several fields including anthropology, psychology, and philosophy, cognitive archaeology is a truly multi-disciplinary field that has contributed significantly to our understanding of the human mind. Cognitive archaeology not only deals with how the mind works and how it evolved, but also it also deals with how archaeologists utilize what is known of how the mind operates in order to interpret the archaeological record. Students are expected to enhance their skills at critical reading, thoughtful analysis, constructing logical arguments, and improving written and oral communication. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 257. The Economics of Cooperation. 3 Units.
Economists have focused on competition, not cooperation as a mechanism for allocating and transforming resources, and lawyers have relied on an adversarial process to resolve disputes. However, many firms and other institutions have found cooperation to be quite beneficial. In this course, we will discuss topics such as: features common to many types of cooperation. We will examine questions such as the following: What do World War I trench warfare and urban living have in common? Does the public suffer when some groups (such as the American Medical Association, the Mafia, and Japanese firms) cooperate? Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 260. Spin, P.R., and America Today. 3 Units.
Live today surrounded by spin--corporations don't fire, they downsize; government pronouncements are assumed to be cynically slanted and misleading; even scholarly medical articles are written by public relations (p.r.) flacks. The guiding principle isn’t truth or reality but the right message and staying on it. How and why has p.r. become such a seemingly potent force in our time? What does this say about America and its values—about even the meaning of truth? In this seminar we will explore the role of public relations and image-making, in American society today. Our objectives are (1) Examine the users of p.r. today in business, politics and popular culture to shape images and define reality; (2) explore the tools used to construct and sell those messages and perceptions and (3) Analyze the values underlying these activities--to the end of deepening our understanding society today. This seminar explores these issues through reading, both academic and popular writing, discussion, and research. The writing assignments will be both academic and various forms of media and public relations formats. We will use class time to discuss and review student writing. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USSO 262. Shame, Honor, and the Self. 3 Units.
Cultural conceptions of shame and honor register different understandings of the self, revealing how identities are created and maintained. Shaming can be a way of separating insiders from outsiders and cementing communal identity, but it can also be a very visceral feeling of inadequacy. Thus, shame and honor are ways whereby individuals negotiate their place in a social community. Considering the transformation of these ideas at different temporal moments, this course will look at literary depictions of shame and honor from the classical period to the present including works by Seneca, Marlowe, and contemporary films to uncover the different conceptions of selfhood, and their relationship to their social context, at work in these texts. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 263. The Politics of Consumption. 3 Units.
How do the things we like and the things we buy indicate who we are? What role has consumption played in the development of ideas about masculinity and femininity? Has the emergence of modern consumerism altered the way we interact with art and history? In this course, we will consider the political and ethical implications of consumerism. We will investigate the history of commodity culture, read about the early department stores in Paris and the first cases of kleptomania, and look at Victorian advertisements and popular magazines for collectors from the turn of the century. We will use the works of Karl Marx and Oscar Wilde to theorize the ethical implications of taste. The philosophical, economic, and literary texts we read will help us to understand why it is pleasurable and why it might be problematic to be manipulated by the marketplace. In addition, we will ask if there are methods for maneuvering within the possibilities of commodity culture in an ethical manner. Can we express our politics or preserve cultures and traditions with the right kinds of shopping? Can we be moral consumers? Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 264. Government and Race Relations. 3 Units.
Current debates over such issues as immigration and affirmative action raise core questions about the government’s influence upon American race relations. What roles have various governmental entities—e.g., federal courts, state governors, and city councils—played in promoting racial equality or defending racial hierarchies? What roles should they play? And how much can the government (re)shape cultural attitudes and social practices? How much authority over race relations should remain with states and localities, and how much should be exercised by the federal government? This course offers a forum to investigate and debate such questions more thoroughly by examining a range of instances in the period from the late 19th century to the present day in which different kinds of government action have significantly influenced American race relations. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 265. Social Structures of Courtship and Love. 3 Units.
How have dating practices changed over the past centuries? What links exist between on-line dating and sixteenth century love poetry? This course will explore western forms of courtship in literature (poetry, fiction, magazines, guidebooks, film, and critical studies) from the Renaissance to the present day. By tracing how practices of courtship and the expectations of relationships have changed over time, we will explore how romantic relationships both reflect and shape cultural attitudes about women, men and social and political order. We will consider particularly how changes in acceptable practices of dating are linked with the development of the women’s movement. By exploring how the lovers’ discourse remains stable and/or varies over time and place, students will be encouraged to question the often unspoken social rules and expectations that govern romantic relationships, and thus to consider how the private affair of love is a subject of intense public concern. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 266. Framing Our Legal System: Law in the Movies. 3 Units.
This course explores important themes in the study of law, lawyers, and legal institutions by regarding their representations in movies. We will cover such issues as race/class/gender and the law, legal ethics, legal education, the adversarial system, and the image and status of the lawyer in American culture. We will also look at the ways in which law and the legal profession affect popular culture and, conversely, the ways in which popular views of legal problems and lawyers affect law. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 269. Create-A-College. 3 Units.
In seminar format, students will develop plans for a new institution of higher learning, shaping and communicating in several different formats its mission, goals, academic focus, and physical and financial needs. Supporting the course’s research, writing, and presentation expectations will be documents from existing colleges, information on the policy and social environment for such a venture, and requirements imposed by external entities such as governmental and accrediting agencies. Course will include interactions among two sets of student teams and several intermediary presentations, culminating in a group presentation of plans for the new college to a panel of experts including current or former members of the University’s Board of Trustees and the Ohio Board of Regents. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USSO 270. The Geography of Wealth. 3 Units.
While many of us are familiar with thinking about wealth in social, political and economic terms, wealth can also be understood as a function of geography. This seminar will look at American history and culture to seek a deeper understanding of how place and wealth interact; some of the government policies that affect those interactions; and some of the grand experiments in philanthropy, law, and social policy that have tried to reverse the perceived evils of “concentrated poverty.” The seminar will not require an advanced mathematical or statistical background. However, we will analyze how statistics can illuminate (and disguise) issues and problems. We will look at the business corporation as both an aggregator of wealth and as a wealth allocation system. Of necessity we will wander into matters of race, employment, power, class, culture, history, and government. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 271. Schoolhouse Rocked: Education Reform. 3 Units.
Today, the term “education reform” may bring to mind standardized tests and No Child Left Behind. Many believe that our schools must become more rigorous, with stricter rules and definable goals. “Reform,” however, used to be defined differently. John Dewey, Maria Montessori, and Paulo-Freire, for example, struggled to make schools freer and more humane. They hoped not to make the classroom less challenging, but more child-centered. Some disciples of such reformers, discouraged by schools’ resistance to change, eventually turned to homeschooling—pulling kids out of school and educating them with real-life learning experiences. In this seminar, we will explore progressive educational theory and connect it with contemporary alternative schools and homeschooling. Visits to nearby Montessori and Waldorf schools and discussions with homeschoolers will make real-life connections to seminar reading and classwork. Challenging assumptions about how well our schools work and raising questions such as, “How do we learn?” and “What is good teaching?” will provoke thought, conversation, and interesting writing. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 274. Passion, Insult, and Virtue in Ancient Athens. 3 Units.
Students explore the social fabric of Athens at its height—the various social and economic institutions that shaped households and the city-state in the fifth and fourth centuries BCE. Primary source material will include courtroom speeches, two comedies of Aristophanes, and Aristotle’s Ethics. Topics: lust, love, marriage, prostitution, slavery, elite drinking parties, street life, hubristic violence, competition, feuding murder, the legal system, diverse concepts of virtue, and how ordinary people were expected to treat one another in good times and bad. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 275. Psychology of Creativity. 3 Units.
The purpose of this course is to explore how individuals become creative. What are the most important qualities, emotional and cognitive, that are related to creativity? Is there a creative personality? What is the difference between artistic and scientific creativity? How does creativity relate to mental illness? How can we foster creativity in people? The course will study creativity in children and adults and will include research studies as well as descriptions of creativity from creative individuals. We will also discuss how different cultures view and effect creativity and the ethical issues involved. This course is a seminar and will use a discussion format. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 279. Making Men: Boyhood and the Making of Masculinity. 3 Units.
Aphorisms like "boys will be boys" simultaneously suggest that boyhood is a social problem to be solved and a privileged position. This course will explore what it means to be a boy in different historical contexts. In some texts, boys are understood as incorrigible miscreants. In others, they are the repositories of their families’ hopes and dreams. What is at stake in the way boys are treated differently from girls or from men? We will consider the relationship between boyhood and manhood not only in contemporary culture but also in texts ranging from ancient Rome to 19th century. Through memoirs, advice books, psychological explorations, and contemporary film, this class will examine both conceptions of boyhood and their place in the production of masculinity. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 280. Democracy?. 3 Units.
"Democracy?" poses democracy as a question, in two forms. First, what do we mean by democracy? Second, where should democracy be practiced? Although conventional understandings link democracy to political systems and issues of governance, the course will consider democracy in other institutions and locations. Course questions include: What is democracy? Why do we value democracy? Does democracy in the state require democracy in the economy? What would that look like? What are the potential conflicts between economic and political democracy with full citizen involvement? Is direct democracy democratic? Does democracy in the state require democracy in the family? In universities? In the workplace? In prisons? Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 282. Community Policing: A Comparative Study. 3 Units.
Community Policing is becoming increasingly popular around the globe, as well as in the U.S., where it is only found in a few cities. The objective of this course is to expand the student’s knowledge and understanding of the police systems in Japan and Sweden, since these nations are leaders in the successful introduction of community policing in their societies. It is instructive to go beyond one’s political boundary in order to draw on different experiences in other countries. While it may not be possible to “adopt” some ideas from another country’s police system, we might be able to benefit from “adapting” them to our own community needs. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USSO 283. Life is a Contact Sport. 3 Units.
This class will take students places most people have never been. We'll come face-to-face with the homeless, explore the realities of prison life, and meet people who struggle to survive in the wealthiest country in the world. We'll also meet people who have demonstrated both the vision and commitment to be change agents making a difference in the world. The interdisciplinary course will examine the shadow-line between self-interest, greed, and the common good in a capitalist society. We will look at the needs and (sometimes competing) values in democracy. We will examine ethical systems and discuss the role that leaders, managers, and ordinary citizens play as moral agents in promoting integrity and social responsibility for a just society. From interactions with real people, readings, and class discussion, the course challenges assumptions and explores core values to stretch your intellectual, ethical, and social muscles. Life is a contact sport that asks you to engage, to participate in making your talents and presence felt, not merely sit on the sidelines watching. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 284. The Kaleidoscope of Birth. 3 Units.
The course will explore topics in science, technology and culture across time as they relate to the social construction of birth. Students and faculty will critically examine the seminar topics through an interdisciplinary approach. The learners will develop their own understanding of how science and technology related to birth have and continue to change. What happens when newer technologies supersede the old? What happens when older ideas are revived? Students will be introduced to the influence of culture and technology. Methods of oral and written communication will be enhanced via assignments. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 285A. Ethnicity and Local History. 3 Units.
This course will explore the many different kinds of ethnic communities to which we belong. Why have local ethnic groups formed arts and cultural organizations, sports clubs, charities, and other groups which highlight their difference? How have these local groups operated within larger, national ethnic groups and how have they helped us negotiate our identities as citizens, members of religious communities, and/or members of other nations? To what extent have these groups been successful in encouraging future generations to identify with the ethnic group? Our starting point and focus will be an examination of theories of how science and technology related to birth have and continue to change. What happens when newer technologies supersede the old? What happens when older ideas are revived? Students will be introduced to the influence of culture and technology. Methods of oral and written communication will be enhanced via assignments. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 285B. Going to the Movies: Film Spectatorship, Reception, Exhibition. 3 Units.
Audiences clearly contribute something to the movie-going experience besides the price of admission--but what? This class examines different conceptualizations of the role of the film viewer, from abstract theories of the spectator to investigations into the historical reception of particular films to studies of the concrete and material circumstances of film exhibition. In particular, we'll be interested in how these three ways of conceiving of the act of movie-going relate to one another. With an emphasis on Hollywood cinema, we'll consider a film as a text with a context that includes the circumstances of the film's production, cultural factors weighing on both the film's production and consumption, and the mental activities of viewers. Do viewers merely "come after" the meaning-making activity that gives a film its form and significance? Are we mere passive receivers of the director's and screenwriter's messages? This course argues no, and places the viewer at the center of a dynamic process in which films only "come alive" when someone watches them. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 285D. Advertising and the American Dream. 3 Units.
This SAGES seminar will explore advertising in America, its social and cultural roots, and its impact (or lack thereof) on our values, tastes, and behavior as consumers and citizens. It is hard to find a space in the contemporary world that is not plastered with ads--from the Coke cups next to the judges on "American Idol" to stencils on the sidewalks we walk on. This blizzard of advertising images may, in fact, define our age. We will examine the forces that created this giant American industry and ask: Why do we have advertising? How is it created? What social functions does it serve? How has it changed? Where is it going? Central to this seminar is discussion, research, and writing to analyze and critique this in-our-face, but little understood, social institution. Some of our discussions will flow from advertising industry news (e.g., the Super Bowl ads), a contemporary or early 20th century ad campaign, or the backstage insights of a guest from one of Cleveland's major ad agencies. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 285H. Music and Cultural Expression. 3 Units.
In this seminar, we will focus on the recent history of music and the role it plays in our culture today. Music is a form of cultural expression that creates meaning with narrative elements in a way similar to novels, poetry, drama, and other typically literary forms; we will consider various genres of music as well as various genres of literature that depend on music to complete their expression. But music is also one of the most obvious ways we participate in our culture, and musical taste can help define our sense of ourselves and where we belong in culture. We will read some identity theory to determine how and why music helps us create identity from and within the culture around us. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USSO 285J. The Limits of Science. 3 Units.
Can science provide answers to the deeper puzzles of human existence, or do some questions lie beyond the scope of the scientific world view? Specifically, can science explain human consciousness, free will, and morality; and can it reveal the origins of religion? Students cannot, nor will they be expected to, provide a definitive answer to these questions. Instead, this seminar will provide students with an opportunity to engage in a conversation with each other against a backdrop of some of the most interesting and provocative research in cognitive science. In addition to learning about relevant psychological and neuroscientific research, students will engage with philosophical issues and arguments. This course aims to stretch student’s beliefs about what they know now, and what they think can be known. The seminar will aim to cultivate productive and rhetorical skills, especially analytical thought, oral expressiveness, and writing skills, all of which will be useful in future pursuits. It will help students to develop a more nuanced view of human nature and the ability of science to transform our view of it. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 285K. The Economics of Global Poverty. 3 Units.
Developing countries make up at least three-fourths of the world population. This course focuses on international aspects of economics of the developing world. Questions we will ask include: why are the poorest countries failing to thrive, what can be done about it, and can the rich afford to help the poor? The term “developing country” means a country that exhibits low per capita income, high poverty level, little industrialization, or low life expectancy. However, these problems also affect developed countries. Why, then, do we study poor countries’ economies separately from those of industrialized nations? The answer lies not in the types of problems but in the severity and causes of these problems. It is these issues, the causes and consequences of global poverty, and solutions to help the world's poorest, that concern us here. Raising people out of poverty requires economic growth, a more even income distribution, investment in education, health care, and infrastructure, social safety nets, honest political leaders, reliable social and financial institutions, and international aid from rich countries. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 285U. Cities (Deconstructed). 3 Units.
This seminar will look at the history of cities, real and imagined, in terms of deconstruction, both in the sense of physical destruction and literary analysis. We will explore how societies have brought about, and reacted to, the destruction of buildings, neighborhoods, and entire cities at the hands of economic development, terrorism, war, neglect, decay, and natural disasters such as fire, flood, and earthquake. In addition we will read cities themselves as texts. Architecture, public parks, billboards, graffiti, surveillance cameras, sidewalks and alleys all contribute to the discourse of what a city means. Part of that discourse includes the depiction of cities in the creative arts. We will examine works of fiction, still photography and motion pictures, art installations, and music that imagine, or comment on, the deconstructed city. Through lecture, discussion, textual analysis, multimedia presentations, and writing assignments, including a research project in which students will be asked to write a cultural biography of a building, Cities (Deconstructed) will help students confront these questions, and will prepare them to make informed decisions about sustaining the built environment. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USSO 285P. China in Transformation and Globalization. 3 Units.
This seminar introduces students to major economic, social, and cultural developments in China over the past quarter century, taking as its particular focus the way in which China experienced changes such as consumption, education, migration, and tourism as a result of economic reforms, trade expansion, foreign investments and technology transfer, and the development of information technology. The seminar will also assess the impacts of various aspects of globalization on these changes and vice versa. This seminar promotes broad knowledge of—and increased appreciation of—the importance of diversity in China’s cultural past, social frameworks, economic conditions, and natural environment. In a close connection to the primary readings, which include several recent relevant works, the students will be exposed to a variety of related primary and secondary materials (such as texts, photos, film clips, music, songs, and websites). In addition to receiving informative yet concise instruction, the student will also be involved in practice in critical reading and thinking, in writing and orally presenting research papers. In these activities, the students will be introduced to basic methods and concepts critical to the understanding of important economic, social, and cultural developments and changes as products of movements rather than isolated incidents. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 285Q. Paradigms, Ideologies, and World Views. 3 Units.
The purpose of this class is to analyze the different ways in which people view the world, and the consequences of adopting any particular perspective. Our first primary area of inquiry will be the degree to which the scientific community meets its ideals. We will explore how dominant paradigms develop and slowly change based on sociological and psychological principles that are far from the idealized notion of scientific process. Then, we will explore modern political ideologies in order to assess how fundamentally different assumptions about how the world works lead to fundamentally different conclusions about ideal policies. We will then discuss the degree to which ordinary citizens follow such ideologies. As an alternative to an ideological world view, we will then examine the concept from psychology known as the, "schema," and we will discuss how schemata affect political perceptions. Finally, we will discuss how even so-called experts are subject to errors in judgment based on their assumptions about the world. This is a University Seminar, so the class will also set aside time to discuss writing. The schedule has several sessions set aside for writing instruction (labeled, writing day or, writing week). On these days, class will be led jointly by the professor and the writing liaison to discuss writing technique. For most of these sessions, you will be asked to participate in a writing exercise, to be discussed immediately afterwards. For some sessions you will be asked to bring in outlines, thesis statements, sample paragraphs, or other preparation work for course assignments. You will be informed the week prior when you will need to bring such a sample to the writing session. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 285S. Correspondence. 3 Units.
Correspondence will look at the practice of writing and reading letters, and explore the use of letters as biographical, historical, and forensic evidence. Students will read love letters, "Letters to the Editor," letters from the battlefield, and correspondence between scientists and theologians. We will gain access to the experience of tourism through post cards, and the world of the modern corporation through business letters, emails and text messages. We will read examples of fiction where the letter acts as a plot device, as in the epistolary novels of the 18th century. We will think about the function of the letter as an instrument of persuasion, as an opportunity to develop ideas in a private and informal manner, and as a forum for expressing emotion. In addition, we will study the communication systems and technologies, such as the post office, the telegraph, and the internet, that have facilitated, and changed the nature of, correspondence throughout history. Students will be asked to write letters based on their personal experiences and their political opinions, and write analytical essays based on topics related to the practice and history of correspondence. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 285T. Why We Believe Weird Things. 3 Units.
How, in such a skeptical age, can people maintain questionable beliefs regarding urban legends, alternative medicine, superstitions, and paranormal phenomena? How do cults manage to attract and maintain large memberships? How can so many seemingly normal people come to the conclusion that they have been abducted by aliens? We will explore the idea that these behaviors are not examples of pathological thought processes, but rather natural consequences of the biases that characterize everyday reasoning. Emphasis will be placed on critical examination of questionable phenomena with a goal of understanding why people might want to hold such beliefs. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 285V. Travel Literature in the Age of Discovery. 3 Units.
The discovery of the Americas in the 15th century challenged European constructions of the known world and tested assumptions about nature, culture, and the workings of intellectual inquiry. Although before 1492 Europeans traveled, they usually read new landscapes in light of familiar religious paradigms. The discoveries forced Europeans to draw the world anew, literally and metaphorically. Students will read works of travel fiction and real-life travelers’ tales, and will address the following questions: how did travel literature reflect successive discoveries? What new maps (geographical or metaphorical) did this literature help draw? How did the discoveries bear on literary genres? After a brief foray into medieval literature, students will read The Tempest, Oronoko, excerpts from The Persian Letters, excerpts from Gulliver's Travels, Robinson Crusoe, Candide, and A Sentimental Journey. Additionally, students will read brief accounts of actual travels. Students will write three papers and prepare presentations on topics such as pilgrimage routes, map making, the search for longitude, and America in the visual arts. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USSO 285Y. Quest for Perfection: Law as a Vehicle for Social Improvement. 3 Units.
Americans often seek to use U.S. law to create "fairness" and "civility"--in a world that can sometimes be brutal and fundamentally unjust. Increasingly, we rely on courts and statutes to "fix" identified social problems and to achieve a more just society. This course will examine our reliance on law to improve human behavior and to achieve social goals. Can statutes and lawyers lead the way to a better world? What are the limits (if any) of our ability to improve society by passing new laws and mandates? Are there unforeseen, negative consequences that arise from our legal efforts to improve public and personal behavior? This course will examine those questions in the context of selected social issues. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 285Z. Mastering the Masterpiece: Looking Closely at Great Works of Visual Art. 3 Units.
Masterpiece: This oft (ab)used epithet, applied to everything from a pre-schooler’s finger painting to a Picasso portrait, suggests a creative enterprise of unrivalled achievement and quality. Using some of the finest examples of human creative expression--specifically, work on view at the Cleveland Museum of Art--this SAGES seminar will celebrate, critique, and question the "masterpiece" designation. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286E. Global Tourism. 3 Units.
Tourism can be viewed as a metaphor for contemporary existence in an increasingly globalizing world where attachments and ties to a concrete place are often temporary. Besides capturing the essence of present-day mobility, tourism is a phenomenon that can be researched both politically and economically. Indeed, 10 percent of global GNP comes from tourism and many poor countries rely on the tourism industry to sustain national economic development. In this class, we will touch on the economic and political significance of tourism, but will spend most of our time thinking of what happens in the tourist encounter, what tourists expect, what drives them, and who loses as well as benefits in the encounter. Some of the specific themes include: the nature of tourist destinations, quest for authentic sites, entertainment tourism (Disneyland, Dracula-Park), tourism to Auschwitz, culinary tourism, sex tourism, and eco-tourism. By reading theoretical works, travel blogs, and literature, we will gain insight to the motivations of tourists, the inhabitants of the places being visited, and international organizations as well as governments who oversee this industry. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, or FSCS. Prereq or Coreq: FSTS 100.

USSO 286F. Environment and Civic Culture in the Developing World. 3 Units.
Can the fight against environmental degradation lead to an improved civic culture and political reform in developing nations? Developing nations typically sacrifice environmental protection in favor of economic development. Only when the costs of environmental degradation become obvious do nations consider a sustainable development regime that includes environmental protection. This seminar addresses whether implementing a sustainable development model requires a new civic culture that encourages political reform. In doing so, students will examine and write about literature on economic development, environmental degradation, and several international initiatives that encourage reforms to aid sustainable development. The seminar will use the People’s Republic of China as a case study, but will also draw on evidence from other developing countries. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286G. Race in the Americas. 3 Units.
This course examines the history of race relations in the US and Latin America. Its premise is that modern race relations are not only the legacy of a distant slave past, but also the product of continuous cultural and political readjustments to new times and conditions. The class starts by examining the colonial development of race-based political and economic system in the Americas. It continues by exploring how racial hierarchies were re-created as nations in the Americas went through enormous political and economic changes in the 19th and 20th centuries. Students will conduct a small history research project on how race relations have affected a person, institution, city or neighborhood’s history. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286I. Society through Online Videos: The Broadcast of the Self. 3 Units.
In this course we will discover and explore the interrelationships of self, technology, and society in the 21st century through digital video on the internet. We will watch online videos and read about social theory as part of a rigorous examination of media and society. This course will examine the intended and unintended consequences of mass information sharing and communication via online video. Students will work with the seminar leader and build upon existing academic knowledge to extend their understanding of the structure and meanings inherent in our video-active lives. In addition to completing regular writing assignments, students will learn about digital video production and produce a short digital video essay. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USSO 286J. Women's Education at CWRU: The Flora Stone Mather Oral History Project. 3 Units.
This seminar will offer a discussion-based exploration of the history of women's education in America. Much of the discussion will focus on the emergence of coordinate colleges, including the College for Women (later renamed Flora Stone Mather College) at Western Reserve University. The seminar will also give students an opportunity to contribute to the historical literature by conducting interviews with Flora Stone Mather alumnae. Students will be instructed in the basic principles and techniques of oral history and engage in the creation of primary source materials—tapes and transcriptions—essential for historical documentation. They will then reflect on the relationship between the stories they have collected and the present-day educational experiences of women at Case Western Reserve University. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286L. Exploring Non-Profit Organizations. 3 Units.
This seminar is structured to expose students to the opportunities and challenges of working in and running non-profit organizations. Students will explore the importance and significant roles non-profit organizations play in our society. The class will learn how non-profits are organized and regulated and the importance of the organization’s mission is to determining the impact of the non-profit organization in the community. Additionally, the students will learn how non-profits are funded and how these organizations maintain their financial stability and sustainability in the community. These goals will be accomplished through group analysis of non-profit organizational principles, and investigation of existing non-profit organizations. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286M. Hip-Hop Narrative in Film. 3 Units.
This course explores films of the Hip-Hop Generation and, by presenting certain films in chronological order, draws out the common threads. Hip-Hop culture is a conversation, an argument between the have-nots and the rest of us. The goals and objectives of that conversation have evolved and changed in timbre and urgency. Tracking that dialog through the late 60s, the post-civil rights era, the emergence of the b-boy, Reaganomics, and the rise of the new Black middle class helps us to get a better look at where it is and where it’s going. By isolating the stories told by filmmakers within a certain period and then analyzing their place in the larger Hip-Hop narrative, the instructor and the students can infer truths about the politics and zeitgeist of the times in which the film works were conceived. This course will consist of lots of film, yes, but also lots of reading and writing. Upon successful completion, the student should be able to recognize and define the Hip-Hop narrative in popular cinema, focus critical thinking skills, pull the narrative from certain films and discuss it, note and discuss the visual aesthetic and how it impacts the story, and discuss the marketing, packaging, and cultural impact of the Hip-Hop narrative. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286N. Nazi Art Theft and Its Aftermath. 3 Units.
During World War II the German government perpetrated one of the most egregious and extensive art thefts in the history of human kind. The Nazi party’s desire to gain control of Europe involved their prolific confiscation of the great art treasures of European public and private collections, particularly those belonging to European Jews. This seminar will explore the Nazi’s deliberate war looting campaign, its aftermath, and the current issues surrounding the reclamation of stolen works and the restitution claims yet to be settled. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286O. Place, Religion, and Public Life. 3 Units.
What is the place of religion in everyday life? How do people contend with conflicting beliefs about the proper relationship between religion, politics, and personal conduct? How do they decide which kinds of religious behavior belong in public and which belong in private? How do they decide what counts as a “private” or “public” place to begin with? Where does religion belong? In this seminar, students will explore these questions at a range of scales, from the local to the global. They will ask how secular and religious thought interact to shape social life in a range of material and virtual spaces, from Case to Facebook. In so doing, they will learn to approach the religious/secular divide from a broadly ethnographic perspective. Focusing mostly on the United States but also considering case studies from other parts of the globe, students will examine how diverse groups practice their faiths, express their beliefs, and contend with secular institutions and expectations in everyday life. Coursework will include trips to local neighborhoods and institutions, readings from a broad range of fields in the social sciences and humanities, and a fieldwork-based research paper. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286P. Immigrant Entrepreneurs—Can They Drive Cleveland’s Economy Once Again?. 3 Units.
This seminar will focus on the impact of immigrant entrepreneurs in Cleveland—past, present and future. The class will take a look back at the historic contributions immigrant entrepreneurs played in creating economic prosperity in Cleveland during the 20th century. While immigrant entrepreneurs once played a central role in driving Cleveland’s economic success, in recent years the city has attracted much less foreign talent than other faster growing U.S. metropolitan areas. Cleveland’s population is at its lowest level since 1903 and continues to shrink. Chicago, Philadelphia and Louisville, among other cities, have embarked on efforts to attract foreign talent to not only address the “brain drain” of young people leaving their cities but also to spur economic development. In a March 29, 2009 editorial, The Plain Dealer argued for a more proactive approach in Cleveland to attract foreign talent: “If Cleveland is to regain (its) lofty status—especially in a global economy that rewards intelligence, creativity and innovation—it needs to re-establish itself as a magnet for new Americans. We need their fresh ideas, entrepreneurial zeal and optimism. We need them to help reverse decades of migration away from the region’s urban core.” The culmination of the seminar will examine the question of whether Cleveland should proactively recruit foreign talent and look closely at the public policy, regulatory and political challenges that must be overcome in order to effectively do so. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USSO 286Q. History of Late 20th Century Popular Culture. 3 Units.
This course focuses on American popular culture of the late twentieth century (c. 1970 to 2001). Students will analyze this period using a variety of historical texts and primary sources (everything from more "traditional" sources such as printed materials to films, television episodes and clips, music and sound lyrics, fanzines ["zines"], graphic novels, and music videos). Secondary sources include history essays and monographs, as well as articles by scholars employing critical theory. Students will explore whether "products" of popular culture perpetuate power structures and help to shape the discourse of late twentieth century American culture. Moreover, they will examine how individuals contribute to and challenge the discourses as consumers and creators of pop culture. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286S. Mystics, Inquisitors, and Deviance in the Early Modern Spanish World. 3 Units.
What role does religion play in constructing social norms? Does religion function primarily to enforce social conformity and maintain the status quo, or does it give a voice to protest and dissent from marginalized individuals and groups? Within the Christian tradition, these questions have transcended time and place. This course explores these questions in the context of sixteenth-century Spain. Similar to contemporary American society, sixteenth-century Spain seemed to encourage religious fervor, but did not tolerate religious figures or groups that threatened the status quo. During this time, Spain experienced an explosion of individuals who claimed to have direct experiences of the divine, and authorities invested much time and energy to differentiate between authentic, orthodox mysticism, and fraudulent heresy. In the last 40 years, social theory has allowed historians to unlock the relationship between religion, gender, authority, and social structure. These issues are at the forefront of contemporary approaches to sixteenth-century Spanish mysticism, as the vast majority of individuals claiming mystical experiences were women. Even those who were judged to be orthodox had voiced strong criticisms of Spain's church and government while alive, but after death were celebrated for their obedience. We will examine a variety of media that represent mystical experience in Spain's Golden Age, including: short stories, autobiography and biography, mystical texts, inquisition trials, and works of art. Additionally, we will encounter how the legacy of Golden Age Spanish mysticism has been transmitted to our own time in historical narratives and film. Thus, the goals of this course are twofold. Students will learn to employ a contemporary academic lens and gain understanding of a historical context that is both similar to, and different from, our own. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286U. Ideal Communities, Utopian Visions, and Totalitarian Nightmares. 3 Units.
This course will study communal attempts to form ideal societies and will offer a transcultural, transhistorical view of how various authors and filmmakers have imagined the best and worst possibilities of human society. Its central questions are: How can society be improved? What role does education play in improving society? How do you define freedom? How can we combine freedom with social order? How can social problems be critiqued through representations of ideal or dysfunctional societies? The course will be interdisciplinary by combining historical study with analysis of literature, film, art, and music. In studying and discussing utopian communities, students will examine the problems that each community attempted to solve, their philosophical approach to solving these problems, the success or failure of their solutions, and the similarities and differences among these communities. In studying utopian and dystopian literature and film, we will analyze the problems and solutions that each text or film examines and proposes, and will look at each text or film in its social and historical context. We will also explore how authors and filmmakers have used their utopian and dystopian visions to respond to the positive or negative trends in their own societies. In addition, we will discuss how each text or film coincides with or challenges our perceptions of the strengths and problems in our society and how we might solve those problems. This course will encourage students to think about the kind of world they would like to help bring about, as well as the various social problems that may darken the future of the human race. Students will write in class regularly about these issues as well as the assigned readings that raise these issues, and will write essays about ideal communities, utopian texts, and dystopian texts. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286V. Management of Chronic Illness in a Cultural Context. 3 Units.
This course will explore the cross cultural, self-care approaches to health problems. It covers substance-based (e.g., herbs, acupuncture), mind-body (e.g., yoga, qigong), spiritual (e.g., prayer) and social (e.g., communal, family) approaches that have been used to manage chronic diseases and promote wellness in various cultural settings. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 286X. The Future of News. 3 Units.
The saying goes, "Strong Press, Strong Democracy." But what of strong democracy in the Internet Age when the traditional press seems weak? That's this seminar's big question. Can the "old" media, struggling to avoid financial collapse, still deliver the news necessary to be democracy's watchdog, as in the past? Can the new internet media--blogs, YouTube, viral videos, "hyperlocalism" experiments, pro publica investigations, crowd sourcing, instant news, Facebook, Gawker, True/Slant, Drudge and the proliferation of the other news and entertainment sources--take its place or complement traditional journalism? How do these new entrants change the nature of news and the role of the media in our society? These are uncharted developments, but they go to the heart of the continued success of America's democratic experiment. Our goal is to grasp more clearly the connections between news, citizenship and democracy in this new age. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
USSO 286Y. The Holocaust and Local History. 3 Units.
The Holocaust and Local History will focus on how the events that make up the Holocaust affected communities in both Eastern Europe, where the most horrific crimes of the Holocaust occurred, and in the United States, where the Jewish community responded to the events with both astonishment and action. A focus on local histories will illustrate the legacy of the Holocaust and help students understand how history directly affects their own lives and the lives of those around them. The goal is to uncover the role that this complex history continues to play in our daily lives, whether in the small towns of Eastern Europe or the suburbs of greater Cleveland. Topics will include the course of the Holocaust in towns in Eastern Europe, the effects of the Holocaust in American communities like Cleveland, and the commemoration of the Holocaust and memory of local Jewish communities in Eastern Europe. Students will examine these topics with the help of primary and secondary sources, hear from local survivors of the Holocaust, and learn more about how the Holocaust is represented in local museums. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 287B. Migration in Human History. 3 Units.
The movements of individuals and groups, along with the ideas, technologies, and diseases that accompanied them, have played an integral role in shaping human history. Migration has continually created, challenged and shaped societies from the most ancient periods through to the present. It has a transformative effect on communities at the points of origin, along migration routes, and at temporary and final destinations. This seminar will introduce students to several different ways of thinking about migration throughout history, from the contacts between nomadic and settled societies, to colonial settlement and diasporas and migration from rural towns and villages to industrial cities, as well as the ongoing mobility at the highest and lowest levels of modern society. Indeed, many contemporary conflicts of class and culture can be traced back to migration, in the interactions between those seen as migrants and those who consider themselves natives. This seminar will also encourage students to consider the importance of different forms of migration in their own lives, in the histories of their families, and in the city around them. Cleveland is a city founded by migrants from Connecticut (hence the ‘Western Reserve’ in the name of the university), populated by both transatlantic and internal American migration, and shaped by the local migrations that affected ethnic neighborhoods, suburbs, and smaller towns throughout the region. Compared to historical migrations of thousands and millions of people, such movements may seem minor, but they can be studied and understood in similar terms. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 287C. Murder in the Jazz Age. 3 Units.
Having lived through the devastation and consequences of World War I, you might think that Americans would have been appalled by the violent murders that marred the 1920s. To be sure, they were. Americans were also drawn to the infamous murders as though understanding these crimes would enable them to explain the changes in society, such as changes to gender rules and urbanization, brought about and accelerated by the war. In this class, we will examine the major crimes of the decade in the hopes of gaining the insight that the people at the time sought. The course readings include secondary sources that provide an analysis of the decade and primary sources from the murder cases themselves. In addition, students will become familiar with the historical context and scientific advancements that gave birth to modern forensics. A tentative list of cases to be discussed includes: Sacco and Vanzetti, William Desmond Taylor, Ruth Snyder, and the St. Valentine’s Day Massacre. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 287O. Utopia and Social Change in American Fiction. 3 Units.
In this course we will read American utopian fiction alongside selections from other academic disciplines in order to consider the issues, problems, and conflicts for creating meaningful social change. We will consider questions such as: What has it meant/does it mean to imagine a perfect American society? Who is excluded from these visions and on what grounds? How has the radically different social order represented in utopian fiction been used to critique American society’s injustices? In our readings we will think through the ways in which historical perceptions of equality, hope, and political action have been portrayed in imagining ideal communities. We will also examine how academic theories have influenced and reacted to American utopian literature. Our coursework may include essay responses, service learning, and primary research (interviews and surveys), and will culminate in a project in which you will present your vision of a utopian future in a creative form and interpret and explain this “future” through a research paper analyzing the decisions that went into its creation. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.

USSO 287Q. Social Constructs Associated with Marginalization: Making a Difference. 3 Units.
The purpose of this course is to increase the students’ awareness of selected social constructs within the global society (i.e., vulnerability) that have the potential to generate circumstances that place some individuals or groups at risk for marginalization and diminished well-being. The course will be conducted within a seminar format and will provide opportunities for scholarly inquiry and debate regarding the nature of the constructs posited. Students will critique each others’ social constructs with intent to generate innovative strategies to reduce individual and global marginalization. Each student will prepare a formal written report of their findings related to their construct of interest. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSO, FSCC, FSNA, FSSY or FSCS. Prereq or Coreq: FSTS 100.
#### USSY 204. System Thinking. 3 Units.

This is a seminar course in which students critically examine the way language is used to model and analyze the social world and its organizations. System thinking is used by business leaders, economists, policy analysts and planners to represent the socio-economic world so that they can manage it. During the seminar, students will read and discuss key works that lay the foundations of system thinking and will apply system thinking techniques to a socio-economic situation of interest to them. The emphasis will be on questioning the premises of system thinking, surfacing its strengths and weaknesses, and grappling with its ethical implications. Some key ideas related to system thinking that will be explored include: information theory, cybernetics, system modeling, language, meta language, modeling and intervention in social systems. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

#### USSY 205. Religious and Ethical Bodies. 3 Units.

This course focuses on religious and ethical views of the body and embodiment. Among the questions we explore are: Does a particular tradition value or devalue the body? What role does the body play in the actualization of religious and ethical values? How is the body conceived, symbolized, represented, and otherwise disciplined through religious and ethical discourse? We also consider representations of the body in contemporary popular culture and the values these images engender. This class is limited to students participating in SAGES. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

#### USSY 209. Art and Math. 3 Units.

Students in this University Seminar will explore relationships between art and mathematics. Topics include: pattern, symmetry and beauty in natural forms; symmetry and proportion in art, architecture, ornament and design; perspective and optics; number, iteration, and infinity; mathematical and computer techniques and themes in art, architecture and design. Note: This class is limited to students participating in SAGES. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

#### USSY 211. Beethoven and the Age of Revolution. 3 Units.

Beethoven's music is symbolic of the age and spirit of change which reached is zenith with the French Revolution. Fueled by political, social, and emotional reactions, his oeuvre was remarkable in every way. From the early works, imitative of Haydn and Mozart, through his truly unique later compositions, Beethoven was revolutionary in his person and in his music. The course will center around specific Beethoven masterworks which are being presented by University Circle Institutions, and student attendance at these concerts will be required. Class sessions will involve discussions concerning the historical and cultural setting, influences, and analytic investigation into these masterworks. Readings will be taken from Joseph Kaman and Alan Tyson (The New Grove Beethoven), Frida Knight (Beethoven and the Age of Revolution), and George Marek (Beethoven: Biography of a Genius). This course is directed towards the general university student, and no specialized knowledge of music is necessary, although certain rudimentary aspects of musical discourse will be covered. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

#### USSY 215. Learning to See: Architecture and Aesthetics in Context. 3 Units.

From the temples of Dynastic Egypt through the magnificent cathedrals of Europe to your own back door, explore the transformations of the built environment and aesthetics in the context of politics, sociology, biology, and scientific advancements. Investigate the choices we make as a society as we continue to shape our personal and urban environment. Active discussion, critical thinking, local field trips, and thoughtful writing are essential parts of this seminar which attempts to elucidate connections between art, architecture, and the currents that move society. Learn to read the language of stone and steel that is written all around us. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
USSY 219. Everyone’s a Critic: Writing About the Arts. 3 Units.
A practical, reading- and writing-intensive course requiring attendance at local theater productions, films, art exhibitions, classical music concerts, and dance events. Some events will take place off-campus on weekends or evenings. Transportation and tickets will be provided if necessary. Using these events and published materials as fodder for discussion and analysis, students will develop appreciation skills and refine their ability, write and converse critically, accurately, concisely and insightfully about the arts. Writing projects will include short weekly reviews and one longer research paper. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 220. Digital Storytelling: Creating Meaning with Sight, Sound, & Language. 3 Units.
Storytelling can be a powerful tool to communicate and share experiences, explore meaning, and help people connect to one another. Storytelling bridges age, race, gender, and culture. It explains myth and creates a way to express individual voice. In today’s digital age, there is an opportunity to illuminate, and express our stories with sensory images. Students in this course will learn to tell their own story, create collaborative stories, and understand other viewpoints through the use of digital media. For example, students can hear and record an elderly relative’s journey, digitize photos from the past, and present that story in the context of their own lives. A group of students can explore a myth or past historical event by gathering images (letters, photos, music, art) and through crafting the story. This seminar draws upon students’ creativity, symbolic representation, and personal expression. The tools for crafting stories include written text, multimedia presentation, and learning to verbally tell a story. In each of these venues students will explore ways in which sights, sounds, and language can be used to create meaning. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 221. Bard to the Bone: The Twenty-First Century Shakespearience. 3 Units.
Why are students still being forced to read Shakespeare? Why does Shakespeare matter today? This course will examine the cultural and linguistic legacy of Shakespeare, paying particular attention to its place in the twenty-first century. Shakespeare, despite his antiquity, is contemporary in the extreme. Shakespeare today is not only a pillar of the academy; he is ubiquitous in Hollywood and has even manifested a presence in the arenas of government and corporate politics. This course will examine Shakespeare’s notoriously challenging language in the same way that we will examine his attitudes toward government, politics, sex, and human relations—by first considering them in the context of his early modern world, and then filtering them through the lens of our own. Is Shakespeare a consummate conservative who believes in the absolute authority of the church and crown, or is he a political radical who wants to uproot the social order? This course will examine those questions in the context of Shakespeare’s time, with its unique cultural and historical perspective, as well as considering them through the lens of our own time. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 222. Writing Rock and Roll: From the Critical to the Ethnographic. 3 Units.
To write about music is finally an act of translation. When one writes about music, s/he attempts to bring a thing conceived in one symbolic world into another. The task is neither simple nor straightforward. As one musician, fed up with the critics who put pen to paper in the effort to capture his music, put it: “Writing about music is like dancing about architecture.” And for a moment, this musician’s point might seem apt. The experience of music, often intense, is arguably “beyond words.” Why try to tame it by putting it in the cage of language? This course considers the pitfalls and the possibilities of the symbolic translation that is at the heart of writing about music. Focusing on the writings associated with rock and roll culture (1954-2005), the class will consider the multiplicity of approaches and styles used to capture music. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 222. Probability in Modern Thought. 3 Units.
The idea of probability is ubiquitous in the modern world, appearing in everything from quantum physics to business decision theory, from DNA evidence in court to the insurance industry. Yet there is controversy about the very meaning of probability itself, and any person who encounters probability—which is everyone—should be familiar with that controversy. This seminar examines what we mean by probability assignments. Although there will be some computational work, especially early in the semester, the seminar is not primarily a course on the mathematics of probability. Most of our focus is philosophical, sociological, and psychological, attempting to answer questions like these: In what different ways do we use the concept of probability? To what domains of knowledge can it be rightly applied? Do all legitimate conceptions of probability obey the standard mathematical axioms? How good are people at estimating probabilities? Do all the coherent uses of probability have a common conceptual core? These and other questions will be explored through class discussions and experiments, two papers, and group presentations on a variety of topics. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 227. Travel Writing on Screen. 3 Units.
Through the image of the traveler in a wide range of films, we will examine such issues as border crossing, culture shock, and the nature of memory. Topics include: The Grand Tour, pilgrimage, exile, and imaginary journeys. A group presentation, 5 short-reaction papers, and a take-home final essay are required. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 228. Women in Outer Space. 3 Units.
We will study the history of women astronauts and the representation of women as aliens and astronauts in popular culture. We will see films such as Alien, Apollo 13, and Contact, and will also read two novels. Film and women’s studies theory and criticism will be used to examine the texts. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
**USSY 229. Art Mirrors Art. 3 Units.**
At the beginning of the Renaissance, about the year 1400, an important new theme arose in painting, sculpture and printmaking—the theme of art about art. At a time when the status of artists in society was rising, new subjects began to appear in western European art that depicted both the artist and the process of making art. Self portraits of artists, depictions of Saint Luke painting the Virgin Mary, images of women as artists and muses, classical and mythological stories of art making (Pygmalion and Galatea, Apelles painting the mistress of Alexander the Great), depictions of painting and sculpture studios and of art academies and instruction, scenes of art galleries and collections, still lifes about art, all reflected this new cultural interest in art as a topic in itself. This seminar will look at individual works of art and subject types to understand what they tell us about the role of the arts and the changing status of the artist in the Renaissance and early modern period, up to the eve of the French Revolution, about 1789. The works we study will thus be understood as symbolic indicators of social status and ideas about what art meant to European society. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

**USSY 230. Sexuality, Citizenship, and Social Action. 3 Units.**
This course will explore themes in both the symbolic and cultural domains. While sexuality and citizenship, in reality and in academic discourse, cuts across the areas, this course will consider methods and concepts (see syllabus for details) in the human sciences and humanities. In the humanities, students will learn fundamental ideas in the philosophy of social science. They will be taught how to recognize, in social theory(s) and theorizing, underlying arguments: ontological, epistemological, and methodological. It is not our purpose to add these ideas to our conceptual language within a discipline or to a specific topic; we will explore how they can be applied to other areas of learning and practice. They will then be applied to a current and highly controversial aspect of academic and political practice: to explore the relationship between sexuality and citizenship. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

**USSY 235. Towards a New Museum. 3 Units.**
How do you know a museum when you see one? How has our idea of a museum evolved, and where is it going? How do we go from mummies to multimedia? Museums are more popular than ever and include some of today’s most exciting architectural designs. Explore the changing nature of museums as buildings, institutions, and cultural symbols. Uncover controversies in the museum community. Are museums sacred spaces or entertainment—or both? How does the architecture reflect what they are and who built them. Active discussion, critical thinking, local field trips, guests from local museums, and thoughtful writing are essential parts of this seminar. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

**USSY 236. Romance--The Most Comic of Catastrophes. 3 Units.**
From ancient Athens to Hollywood, romantic comedies have enjoyed continuous widespread popularity in the theater. In this course we will read a broad spectrum of romantic comedies, from the genre’s beginnings with the Greek New Comic playwright Menander to the Roman Plautus, and on to Shakespeare. We will also watch a modern romantic comedy, Pretty Woman. We will begin the course with some ancient and modern literary theories of intertextuality and metatheatre that shed light upon the relationship between Comedy and Tragedy. Some questions we will ask in this course are: What’s the historic relationship between Comedy and Tragedy? What’s the connection between sex and comedy? What can Romantic Comedies tell us about the audience that is addressed from the space of the stage or screen? Does laughter depend on personal and cultural values and variables? Does comedy have a personal and social function? Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

**USSY 237. The Transformation of the American South. 3 Units.**
The purpose of the course is to increase the student’s understanding of the remarkable transformation of the American South from an isolated regional backwater committed to racial segregation to a vibrant, complex, rapidly growing, diverse biracial society that has rejoined the national mainstream. In fact, a quick look at where our national political leaders have come from recently—President Bill Clinton of Arkansas and President George W. Bush of Texas, to name the two most prominent examples—indicates how central the South has become to the nation. We will explore all aspects of the transformation of Dixie during our course. Central to the story will be political change, although, of course, politics cannot be easily isolated from social and economic life. Thus, it was a grassroots social development—the Civil Rights Movement—that gave important impetus to the key political changes that occurred in the mid-1960s and beyond, as we shall see. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

**USSY 241. The Birth of the Modern: 1905-1925. 3 Units.**
"The Birth of the Modern: 1905-1925" will attempt to answer the question "What is the modern?" by exploring some of the breakthrough works of literature, music, art, and scientific theory in the first decades of the twentieth century. We will study what characterizes the new modes of thinking or "language" of modernity, developed in experimental work across the arts, the sciences, and the social sciences. We will be examining some of the major manifestos of and statements about the nature of Modernism in order to see how they illuminate, for example, a novel by James Joyce or a painting by Picasso, a composition by Stravinsky, a scientific theory of Einstein’s, or a psychological theory of Freud’s. At the conclusion of the seminar, students will present their findings and write a research paper about "the modern" as it relates to a field of particular interest to them. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
USSY 246. How to Make a Leader. 3 Units.
Leaders are both born and made. Some seem to naturally know what to do and some need to study and practice to gain the necessary skills. Both groups can be successful and it usually requires a combination of natural ability and effort to become the very best. Leaders often point to role models as being important to the development of “natural” or acquired ability. This course is appropriate for both those who are intellectually curious about leadership. The course will be divided into three sections. The first part will involve reading and discussions to explore and identify what leaders are like and what they do. During the second part you will observe leaders in action and talk to them about what they think makes them successful. Some examples of what you may observe will include a surgeon in the operating room (theater), a coach with his/her players, an executive in the board room, a concertmaster with his/her musicians and a judge in a courtroom. The third part of the course will involve readings and discussions during which you will develop a personal approach to the level of leadership to which you aspire. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 249. Paris: From Revolution to Globalization. 3 Units.
This course explores the history of Paris as it became the center of French national life, international culture and politics in the 19th century and a global city in the late 20th. The course acquaints students with the history of Paris as a dynamic environment deeply influenced by industrializing forces during this period. We will study contemporary writings, art and popular culture economic developments, political and military events, and architectural and engineering projects that have profoundly shaped the city and popular responses to it. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 250. Medical Narratives. 3 Units.
This course examines the relationship between medicine and narrative by exploring the representational structures and narrative conventions that have been used to understand and communicate the experience of illness, to tell stories about the human body, and to diagnose and treat disease. The course focuses on literary texts (including novels, plays, short stories and memoirs) written by doctors, patients, nurses and creative writers, as well as on medical case histories from different cultures and historical periods. It examines such topics as the uses of narrative in medical practice; the uses of metaphor in conceptualizing and representing disease; the ethical dilemmas posed by medical research and practice; the therapeutic value of narrative; the structural similarities (and historical links) between detective fiction and medical case histories; the imaginative function of illness in literature; the cultural myths and iconography of disease in different historical periods; the representation of physical and mental illness and the human body in language and art, and cultural responses to major health crises such as bubonic plague, syphilis, and AIDS. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

Leonardo da Vinci is often regarded as the Renaissance epitome of the “universal man.” This seminar will help students reach a deeper understanding of Leonardo’s achievements and working methods as an engineer, anatomist, architect, and artist. As our own age moves towards narrow specialization, the myth of Leonardo looms large as an unreachable ideal of “genius.” Yet some contemporary artists and collaborative groups do claim to be a part of Leonardo’s legacy. This seminar will include debate over the relevancy of Leonardo’s example, the success of uniting humanistic and artistic thinking with the latest advances in science and engineering, and the ethical issues of “art” emerging in the fields of robotics and genetic engineering. Students will learn fundamental methods of art historical analysis, formulate ethical positions, and discover some of the basic scientific methods used to analyze and authenticate artworks. The course will begin with historical study, then move to modern applications. In the process, each student will be encouraged to find ways to make Leonardo’s example relevant to his or her own intellectual development. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 254. Nonverbal Communication. 3 Units.
Our purpose is to explore the nature of nonverbal communications and analysis in several different contexts. Because nonverbal communication is so closely related to emotional processes, we will also become acquainted with basic ideas surrounding communication and emotion. Within this framework, we will discuss and apply a variety of theoretical approaches to understanding this channel of human communication. Upon completion of this course, students will have a better understanding of decoding and encoding nonverbal messages. Additionally, the student will have a thorough understanding of the functions of nonverbal communication in social and rhetorical life. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 256. Violence and Identity. 3 Units.
One need only look at the “War on Terror” to see the deep relationship between violence and identity. Can violence help to create identities as well as destroy them? By exploring historical and cultural constructions of violence, the processes by which identities are created and maintained through violence come to light. Starting from the assumption that cultural positions are always multiply defined, this course will look not only at contemporary film and print media, but also Renaissance texts such as Marlowe, Malory, and Shakespeare to try and understand how these texts both create identities for their characters and impact our own understanding of ourselves. We will use the comparison of these two cultural moments to explore how different representations of violence impact constructions of identity categories such as race, gender, and class. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
USSY 257. Women and Folklore in the Bible. 3 Units.
From Ishtar to Esther, the Virgin Mary to Mary Madalene, we will examine women in biblical text to determine how these texts came to be, and how their traditional interpretation has shaped images of, and attitudes toward, women in western civilization. Following this line of inquiry, we will examine key distinctions between traditional and academic sense-making strategies to account for differences between traditional and modern visions of womanhood. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSSC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 258. What is Soul? A Cross-cultural Investigation. 3 Units.
Soul food. Soul music. Soulless. No-soul. Over-soul. Who will save your soul? WHAT IS SOUL? Do some people have it while others don’t? Do some things (a song, a chicken wing) have it while others don’t? Can it be lost? Found? Does it live beyond the body, the grave? In this seminar, we will explore the different meanings of soul in different cultural contexts, from the teachings of Moses, Jesus, and the Buddha to the music of Sam Cooke, Zap Mama, and the Black Eyed Peas, from the church to the kitchen to the hospital bed. Co-led by a professor of medicine and a professor of religion, we will be especially interested in how people understand illness and death in relation to ideas about the soul. How do different concepts of soul figure into the ways people make sense of their sickness and mortality? Course requirements include class preparation and participation, weekly short papers, discussion leadership in one seminar session, and a final essay. Three field trips (to the Rock Hall, the VA Hospital, and a good soul food joint) will be scheduled. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSSC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 260. Divisiveness or Dialogue: How We Deal with Difference. 3 Units.
Students in this seminar will explore how the language and images that shape our national discourse contribute to the increasing polarization of American society. What techniques do partisan media manipulators, including politicians, political pundits, bloggers, documentary film makers and televangelists use to shape the perceptions of their audience to reflect an "us vs. them," "good vs. evil" worldview? Students will also learn how individuals like Martin Luther King and Robert Kennedy used language and imagery to draw us together, and we will explore and practice the use of dialogue as a method of non-polarizing communication in discussions of contemporary issues. The primary reading will be "The Argument Culture," by Deborah Tannen, a well-known, linguist, and this will be supplemented with articles on dialogue and social psychology. In addition to these readings, the class will view samplings of recent documentaries, political speeches, print and television punditry. Students will be asked to write several papers designed to help them identify polarizing language and see through its manipulation. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSSC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 264. Censorship and Iconoclasm. 3 Units.
How are new symbols created out of the ashes of the old? In this seminar we explore the history and interpretation of the destruction of images. We will consider several diverse world historical case studies: from Byzantium and the Reformation to Islamic art, the Modernist avant garde, and attacks against monuments during the fall of the Soviet and apartheid ideologies in Russia and South Africa. We will read classic theoretical texts on the question of iconoclasm, and examine the connections between a number of categories of the "Image" that often share symbolic destruction as one of their important aspects: propaganda, pornography, avant-gard art, and censorship. We will also explore how destruction is integral to the creation of new symbols, new ideas, and new ideologies. This seminar is reading-and writing-intensive. It is a student-led reading group whose object is to understand the symbolic life of destructive acts and the destructive life of symbolism. Individual students will be responsible for introducing readings and initiating class discussion several times during the semester. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSSC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 265. Nature Writing: From the Arctic to the Gulf Coast. 3 Units.
From the Galapagos to the Arctic, from the Laguna Pueblo to the barrier islands of Mississippi, the course explores the territory of "nature writing." We’ll read Aldo Leopold’s account of life in a Wisconsin "sand county," a short book nicknamed "the environmentalist’s Bible." With Barry Lopez as our guide and interpreter, we’ll imagine visiting the frozen tundra. In a memoir of life with the artist and nature writer Walter Anderson, we’ll ponder the limits of passion and sacrifice. Through reading a poetic novel by Leslie Marmon Silko, we’ll experience an unforgettable vision of a journey toward salvation and harmony. Additional readings include essays, poems, and other short works, plus a survey of commentary from interdisciplinary fields like environmental ethics; ecocriticism; feminism; and biography. We’ll visit Cleveland nature centers and museums, and we’ll hope to have a few guest speakers. After several short assignments (both written and oral), each student’s individually designed research project will recommend a specific means of integrating nature writing into the activities of a local organization or school. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSSC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 266. Writing Difference. 3 Units.
How does one attempt to understand people who seem radically different from oneself? This is a question that fiction writers and anthropologists grapple with in different ways. In this course, we will examine how difference is performed in a variety of texts ranging from ethnographic studies to science fiction. By juxtaposing fiction with ethnography, we will explore the history and interpretation of the destruction of images. We will consider several diverse world historical case studies: from Byzantium and the Reformation to Islamic art, the Modernist avant garde, and attacks against monuments during the fall of the Soviet and apartheid ideologies in Russia and South Africa. We will read classic theoretical texts on the question of iconoclasm, and examine the connections between a number of categories of the "Image" that often share symbolic destruction as one of their important aspects: propaganda, pornography, avant-gard art, and censorship. We will also explore how destruction is integral to the creation of new symbols, new ideas, and new ideologies. This seminar is reading-and writing-intensive. It is a student-led reading group whose object is to understand the symbolic life of destructive acts and the destructive life of symbolism. Individual students will be responsible for introducing readings and initiating class discussion several times during the semester. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSSC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
USSY 267. Medieval Love Songs: Poetry, Music, Spirituality. 3 Units.
In the high and late Middle Ages (c1100-c1450), love songs accounted for much of the poetry and music composed at the secular courts and urban centers of Europe. At the same time, spiritual love songs were an important element of medieval Christian theology and worship. What may surprise a modern audience is that the worldly love songs were often intensely spiritual, while the religious ones were often highly sensual and erotic. This seminar investigates the convergence of worldly and spiritual elements in the poetry and music of medieval love songs. Students will learn basic tools for analyzing medieval poetry and music, and through such analysis, coupled with discussion of readings from the scholarly literature, they will explore the provocative interactions between literal and allegorical, sacred and profane, and ascetic and erotic elements in medieval culture. Primary texts will be drawn from Bernard of Clairvaux's commentaries on the Song of Songs, the courtly lyrics and melodies of the troubadours and trouvères, and the lyric poetry of Dante, Petrarch, and Boccaccio. No prior musical training required. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 269. The Symbolism of Evil. 3 Units.
The tapestry of history is replete with the irrational, complex, and hidden motives, genius, madness, deeds of religious inspiration, frenzy, and devotion. From the Slaughter of the Innocents, to the Crusades, to the rise of the Third Reich, we know evil from violence and destruction, from insidious and malicious acts, from immoral choices and the sting of conscience. But is evil what one intends to do, or is evil what happens when we remain ignorant, apathetic, unconcerned, or just follow orders? Do we define evil according to religious inspiration or by what frightens us? Tribal religions often conceive of evil as taboo, pollution, and dangerous magic. Religion in the Western tradition has alternately defined evil as the breaking of covenants, straying from the path of God, sinful acts, and malicious thoughts. Kierkegaard experienced evil as the experience of dread at one's finiteness and nothingness. This course will attempt to understand evil as the symbolization of human fear, rage, shame, and suffering. Readings will bridge anthropology, psychology, sociology, and history to delve into the nature of the human encounter and imagination of evil. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 273. Intellectual Property: Pirates and Privateers. 3 Units.
We take it for granted that our cars and camels are our “property” but what about intangible objects like poems or songs on CDs? In this seminar we will examine the development of this relatively recent form of property through the lens of piracy. We will begin with piracy on the high seas. Through analysis of historical, literary, and cinematic representations of piratical activity in the early modern era we will develop a critical methodology to aid us when we turn our attention to the newer “intellectual” property. Intellectual property is rapidly becoming the linchpin of the burgeoning global “information economy,” and the U.S. is among its staunchest and most powerful enforcers. Yet only a century ago the U.S. was itself a pirate nation. After examining this piratical moment in the history of intellectual property we will turn for comparison to a selection of present-day transgressions--from peer-to-peer file sharing, to Asian software and CD/DVD bootlegging, and South American patent busting. Our aim will be to develop an informed position in the current public debate about the legitimacy and limits of private ownership of ideas in our globalizing information economy. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 275. Colors, Capes, and Characters: American Comics Symbolism. 3 Units.
The history of the comic book is a vital site for critical questions about intersections of art and popular culture in America. In this course we will not simply read “funny books,” but will examine a genre that is as unique as its many colorful protagonists: from Popeye to Superman, Wonder Woman to the X-men, comics have given us larger-than-life characters who are often caricatures of dominant (and sometimes subversive) American ideologies. We will learn not only the history of this unique genre, but will interrogate what it means to truly read comics artistically, politically, culturally, and symbolically. At heart, reading comics in an exercise in interpretation: given visual symbols, what meanings can we take from them? What can comics tell us? And how can we write about them in intelligent, critical ways? In this course we will learn to approach comics through critical thinking strategies; that is, questioning what they are, what they say, and where they come from. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 278. Cognitive Estrangement: Science Fiction and Otherness. 3 Units.
The idea of estrangement or alienation is seen as being central to science fiction; after all this is a genre that explores worlds that are different from ours. However, influential theorists of the genre have made the claim that science fiction offers ways of representing the present while appearing to be focused on the future. According to Darko Suvin’s classic definition of science fiction, a tension between cognition and estrangement is built into this genre. The alien worlds of science fiction are perhaps not that strange and distant from our own, even when they seem to be on the surface. In this seminar, we will read a variety of science fiction texts in order to explore the idea of cognitive estrangement that is crucial to these narratives. We will also attempt to situate these narratives in specific historical and cultural contexts. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 279. Navigating Contemporary Art. 3 Units.
Art has always had a shifting, complicated relationship to the general public. In today’s world, contemporary art is sometimes regarded as a detached, self-reflexive, and elite mystery reserved for in-the-know connoisseurs and aspiring scene-makers. Yet there are many points of entry for meaningful dialogue about the art, the artists, and the audience that comprise the world of contemporary art. This seminar will explore the critical and cultural contexts that can help foster this conversation. It will include visits to local museums, galleries, and artists’ studios, and culminate in a tour of the Progressive Art Collection. The goal of the seminar is to inspire a genuine interest in contemporary art and provide students with the tools required to think, speak, and write more clearly about it. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
USSY 280. Passport to Eastern Europe. 3 Units.
Images and texts shape rather than merely reflect the world and its geopolitical structures. Novels, films, and myths make significant contributions to the varied ways that people make sense of continents, nations, and other (often too conveniently used) geopolitical categories such as the East and West. After considering the ways in which the European continent has been imagined over the centuries, we will explore texts and films that have contributed to the invention of East Central Europe and the Balkans and continue to shape our understanding of the eastern parts of Europe. The class will include analyses of current news coverage of this area to unpack representations disseminated by the media and to reflect on the forces that aim to shape our understanding of geopolitical entities. Ultimately, the course hopes to address geopolitical assumptions, evaluate cultural contexts, and help you think critically about the constructed nature of geopolitical categories. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 281. Defining the Animal. 3 Units.
Since the Darwinian revolution of the mid-nineteenth century, the relationship between humans and animals has become an increasingly significant area of inquiry in fields as diverse as literature, the fine arts, anthropology, evolutionary theory, the biological sciences and philosophy. In this course, we will explore the way humans have sought to understand and explain the animal, beginning with several contemporary ethical debates surrounding animal treatment. Such works will lead us to a range of related social and institutional places and practices, such as the zoo, the insane asylum, biometrics, the treatment of women, and the concentration camp. At the same time, we will examine the way artists, writers and filmmakers explore the human/animal divide through painting (Franz Marc, Marc Chagall and Max Ernst), literature (Franz Kafka, D. H. Lawrence and Rainer Marie Rilke), and cinema, through representations of a donkey (Bresson, Au hasard Balthazar), a fly (Cronenberg, The Fly), a Great White shark (Spielberg, Jaws) and a grizzly bear (Herzog, The Grizzly Man). We will end with J.M. Coetzee’s The Lives of Animals, which moves seamlessly between moral philosophy and literature, tying together a wide variety of concerns and themes raised throughout the semester. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 283. Popular Culture, Collective Memory, and History. 3 Units.
In this seminar, we will investigate how popular culture reflects and shapes our understanding of the past. In the process, we will explore the interplay between history, popular culture, and collective memory. Examples of the questions we will ponder throughout the semester are: What is popular culture and how does it shape and reshape our grasp of history? Is there a difference between collective memory, historical memory, and “plain” history? Any number of possible case studies could help us answer these questions. We may look at how successive generations of Japanese anime writers have reinterpreted the nature of the Pacific War; how movies and television shows have influenced or reflected changing understandings of the Roman Empire; or how “The Simpsons” has asserted a coherent historical interpretation of the 1980s in the United States. What we read and discuss in the seminar will depend on the research topics you propose; you may choose a particular historical event, personage, or controversy, or a specific pop cultural medium Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 284. The Art of Madness. 3 Units.
Taking a historical approach, this course will examine the relationship between the evolution of social and medical attitudes toward mental illness and fictional representations of madness in literature. Beginning with the early modern period, students will compare period sociological and medical narratives on mental illness to fiction works with representations of madness. In so doing, students will consider how the interactive dynamics of art and science contribute to cultural and social thought. Specific areas of inquiry will include: the development of psychology and its effect on societal perceptions of mental illness; cultural developments that occurred in response to changing perceptions of mental illness over the centuries; and the use of representational structures and narrative conventions in understanding and communicating the experience of mental illness. Other interrogations will include the imaginative function of mental illness in literature (e.g., melancholy’s role in creativity); the cultural myths in iconography of mental illness in different historical periods; and ethical dilemmas regarding mental illness as reflected in both medical and literary narratives. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285C. Conviction and Fiction. 3 Units.
How do our beliefs shape who we are? How do they shape how we tell others who we are? What can fiction tell us about our beliefs and about ourselves? This seminar will explore how authors reflect their beliefs through their writing--how fiction becomes a form of self expression, particularly of worldview, even when that is not the intent. Students will analyze 20th century fiction and the religious, cultural or psychological texts which influenced that fiction. Students will also be encouraged to think about how their own writing is influenced by belief systems, and to explore how our convictions cannot help but affect our writing and the way we understand our minds, our live, our inner selves. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285D. The World of African Literature. 3 Units.
In this seminar, we will look at how a diverse number of African writers have responded, in both form and content, to three periods in Africa’s literary history: the 1960s, or the decolonization period, which produced nationalist literature; the 1970s and 1980s, or the neocolonial period, which produced revolutionary novels; and the 1990s through the present, a period producing literature that contends with globalization. In an attempt to answer the riddle of what makes an African novel African, we shall grapple with fundamental questions concerning the origin of the novel; how it came to Africa; African literary traditions; and the language of the African novel. We will also use African literature to explore universal questions about politics and literature: What is a protest novel? What is the role of the writer and of art in society? The goal of the seminar is to increase your appreciation of African literature and literature in general, and at the same time sharpen your analytical, critical, oral and written skills. You will be expected to lead discussions, engage in peer critiques and, through scholarly essays, engage African literature. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
USSY 285F. Embattled Images of War. 3 Units.
Throughout history, from Pompeii to Abu Ghraib, images of war have captivated, inspired, shocked, and repulsed viewing audiences. As historical reflection, propaganda, documentation, a call-to-arms, a plea for peace, and/or personal creative expression, many of these images are fraught with controversy, questions of intentionality, integrity, and multiple agendas. From Pollaiuolo to Ken Burns, this course will examine how artists have confronted large-scale human conflict over the centuries in paintings, sculptures, and prints, photographs and film as a way to consider the cultural and historical effect of war images within and outside the original context in which they were produced. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285H. Renaissance Figures. 3 Units.
This course explores the period of European history from 1400 to 1600. Is this period better understood as the Renaissance, the "rebirth" of Antiquity, or the Early Modern Period, the emergence of a world that leads directly to our own? We will look at the period and its famous figures from two different perspectives: Machiavelli in a bio-intro and in his work, The Prince; Luther as history's first best-selling author (the importance of the printing press) and in John Osborne's play; Elizabeth I in a short biography and a recent "Hollywood" bio-pic; Galileo in the historic accounts and in Bertolt Brecht's play; Joan of Arc in a short biography and Bernard Shaw's play; and Hamlet, the play and the character, in text and performance. Do the two different representations present two different people (characterizations) or a unified composite that we understand in greater depth? Do Shaw, Brecht, and Osborne depict three figures from the period to understand better the person, the history, or the 20th Century/Modernity? Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285I. Representing the Immigrant. 3 Units.
For many the world over AMERICA is a dream, a powerful myth, whether imagined through TV and movies, metaphors such as The Gold Mountain, or as symbolized by the Statue of Liberty. Following those visions may lead to success or disenchantment or both. Through fiction, memoir, films, and photographs we will explore the experience of immigrants: the tensions, generational conflicts, and difficulties with communication and culture their families undergo. We will examine expressions of those varied and complex experiences, especially how language represents them. We will also look at the significance of language itself--think about what and how words mean, and the difficulties of linguistic and cultural translation. Students will share their reactions to what we read and see in class discussion and also in writing informally, even (if they wish) personally. Formal requirements: two shorter analytical papers and a longer paper using sources and possibly interviews, also to be presented in oral reports. There will be conferences on papers and revision. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285K. African American Performance. 3 Units.
This course follows the historical trajectory of African American performance from slavery to the present. The "texts" of the course are wide-ranging, and include poems, songs, stage plays, stage musicals, comedy acts, films, and music videos. Our objectives are to understand the nature of performance, how performances and their meanings changed over time, how media were adapted to serve historical people's needs, and what performances can convey about performers and audiences. Through the course, students will build an understanding of the history and evolution of American and African American cultural production, while developing tools to analyze the arts. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285N. The American Dream: Real and Imagined. 3 Units.
What is meant when we or our leaders talk about "the American dream"? Is it a political cliché, a myth, or something fundamental to our national ethos? In this seminar students will explore what is meant by "the American dream." We will pose the questions: how it has been defined by artists, writers, political leaders, immigrants and the native-born; how it has changed over time; and to what extent the dream is real and/or imagined? Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285Q. The Documentary Impulse. 3 Units.
The course is structured around a historical overview of documentary film from 1920 to the present. We begin with Robert Flaherty's Nanook of the North (1922) and focus on a different documentary style each week, from the city symphony films of the late 20s and early 30s (Jean Vigo, On the Subject of Nice, 1930) to avant-garde experiment (Dziga Vertov, The Man with a Movie Camera, 1929), to cinema verite (Rouch and Marin, Confessions of a Summer, 1955) and its effects on the French New Wave (Jean-Luc Godard, Breathless, 1959). Other style will include direct Cinema (Drew and Pennebaker, Primary, 1960), the improvisational style of John Cassavetes, the use of time-lapse photography (Reggio, Koyaanisqatsi, 1982), and, finally the documentary (Bob Roberts, 1992). The course will emphasize the importance of ideology, bias, and efforts to capture the "real" through the work of Leni Riefenstahl (Triumph of the Will, 1935), and 1970's examples of Third Cinema in Cuba, Brazil, and Argentina. Each student in The Documentary Impulse will be required to create on five-minute video using a particular documentary mode examined in class, paying attention to ideology, narrative structure, transitions, sounds, and video editing techniques. The final project will use either found stills, or newly shot filmed images, and will include a sound track either from the Freedman Center's archives, or of the student's own creation. Equal time will be devoted to written assignment that analyze the documentary style of particular films. The first half of the course will include a weekly film screening in KSL; after midterms, the location will alternate with the Freedman Center, where students will spend time creating and editing video projects. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
USSY 285R. Crime and Punishment in German Literature. 3 Units.
How societies define and punish crime is related to a web of interconnected considerations including the form of government, the legal code, social mores, evolving conceptions of justice, the purpose of punishment, and attitudes toward individual criminals and criminality in general. These social, historical, and ethical norms give rise to questions such as: What constitutes a crime? How is the violation of the law different from or similar to transgressions of morality or ethical norms? What is the purpose of punishment and why is this important? To what extent are we interested in the circumstances that lead to crime? In what ways is punishment an insufficient answer to crime? This course will explore the social and historical questions raised by the perpetrators and victims of crime as well as attending punishment in the literary works of Friedrich Schiller, Heinrich von Kleist, Annette von Droste-Hulshoff, Franz Kafka, Bertolt Brecht, Primo Levi, Hannah Arendt, and Bernhard Schlink. Focusing on short stories, detective fiction, novels, drama, and personal essay, we will pay particular attention to the way that criminal transgression is defined, the role of society and history in producing criminals, when and why punishment is justified or necessary, and the degree to which these resolutions are "just." Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285T. Art, Music and Culture. 3 Units.
This course uses the intersections of art and music as a way to understand how the arts reflect, interact with, and influence the cultures in which they develop. After an introduction to research and writing in the arts (week 1), the course continues with a survey of certain historical periods and masterpieces of European and American art and music from 1700 to the present (weeks 2-6). It then takes up a few important themes in the interaction of music and the visual: 1) the concert hall as the intersection of architecture and acoustics (week 7); 2) the art museum and its music (week 8); 3) music and film (week 9); 4) the Broadway musical (week 10), and 5) rock music and its artifacts (week 11). A full week (12) of instruction on writing and oral presentation then prepares students for a seminar paper and seminar report, the creation and refining of which constitutes the final phase (weeks 12-15) of the course. Requirements and activities include, in addition to the seminar paper and report, a series of activities including three optional and three required events centered on the Cleveland Museum of Art and its concerts, the Cleveland Orchestra at Severance Hall, and the Rock and Roll Hall of Fame Museum. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285U. Popular Music and Film. 3 Units.
This course takes an interdisciplinary approach to studying music in American film. Students will learn to analyze film and music with greater sophistication, to contextualize them in time and place, and to interpret their meanings. The films predominantly feature jazz and popular music. We will discuss several aspects of a film: filmmaking techniques, visual composition, the film's available interpretations, audience reception, and so on. We will also discuss musical composition and performance, artists' self-representation, the link between music and commerce, and so on. Course sources include films and critical literature. The primary focus of the class will be on the ways music and film intersect as entertainment and art. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285X. Living in the Digital Age. 3 Units.
Digital technologies have changed the world we live in. This brave new world is populated by new-media, video, games, and social networks. To survive this world we need a vocabulary of criticism and authorship, a "New Media Literacy" that we can use to effectively and efficiently embrace our roles as both artist and critic. This course explores a wide variety of New Media themes in both contemporary and historical contexts. Students in the course will analyze their ever-evolving relationship to New Media as both viewers and creators. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285V. Castaways and Cannibals: Stories of Empire. 3 Units.
Through a study of texts that exploit "new world" images like the castaway, the cannibal, the wild man, and the exotic woman, this course explores the ideologies that propelled nineteenth-century imperialism, particularly regarding the British in Australia and South Africa. The class will consider how British settlers made "homes" in hostile and unfamiliar climates, how they addressed the problem of unfriendly and unequal contact with indigenous peoples, and how contemporary novelists reevaluate the historical past. The course will work under the premise that contemporary geopolitical realities have been shaped by the imaginative work of British colonialists who, under the principle of terra nullius or "no man's land," claimed the land and the resources of these southern territories and dismissed the very existence of the indigenous peoples that populated them. The scope of the course will be broadly historical, exploring works that participated in British imperialism, as well as those that take a modern perspective. Course materials will be drawn from a variety of genres, including fiction, poetry, film, ethnography, natural history, history, and criticism. Ultimately, students will consider how narratives participate in the shaping of reality and of real-world relations of power. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 285Y. Musical Acts: The Performer in Western Culture. 3 Units.
Much of music history emphasizes the text/composition and its author/composer. Yet music is unique among the arts in that a musician must bring the work to life; arguably, a piece of music can only be said to exist in real time, in performance. This course will examine musical performance as it has evolved over the centuries and consider how thinking about performance and performers continues to change. Although an understanding of the rudiments of music will be helpful, students will not need advanced training in music for this course to be of interest. Readings will include historical accounts and reviews as well as articles about performance and musical aesthetics. Further sources will be recorded audio, video and live performances, as well as interactions with performers (and teachers of performers) from the Cleveland Institute of Music and the university’s departments of music, theater and dance. The interests and needs of the students will help set the tempo and line of our class discussions. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
USSY 285Z. The Ubiquitous Frankenstein. 3 Units.
This seminar will explore the birth, evolution, devolution, and undead nature of the Frankenstein myth in popular culture. Using Mary Shelley’s novel, her source texts, 19th- and 20th-century critical accounts, and 19th- and 20th-century popular cultural manifestations, the seminar participants will discover how “Frankenstein” found its way into the Western mind and continues to provoke responses both in those familiar and in those completely unfamiliar with the novel. The course will touch on issues of literary influence, science/technology, religion, ethics, education, literary merit, popular culture relevance, and adaptation as art form. Central questions for the seminar include: (1) Does the Frankenstein myth as we perceive it today have anything to do with Mary Shelley’s original novel? (2) What were the moral and ethical implications of Shelley’s novel for her time and for the generations afterward? (3) Is an “accurate” film adaptation of a literary work possible or needed? (4) Is being ubiquitous a blessing or a blight for a literary work? Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 286C. How Photos Shape What We See. 3 Units.
Because of both its special ability to convince and its ubiquity, photography has had a major impact on the way we view the world, and particularly in our view of “the other.” Just like other major forms of discourse, photography should be approached with a thoughtful and critical attitude. Some of the techniques of critical looking are different from the techniques of critical reading, but the fundamental tasks are very similar. The aim of this seminar is to help students develop an awareness of why and how photographs are such effective media of communication, and to help them develop an ability to read photographs critically. This is, of course, set within a general context of developing critical reading and writing skills. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 286J. Creativity and Constraint. 3 Units.
The purpose of this course is to explore creative problem-solving as it relates to different disciplines and types of problems and to encourage a passion for finding best solutions, not merely obvious ones. We will use and evaluate case studies of real-world projects and complex decisions, readings about creativity, firsthand accounts from creative professionals, and in-class exercises to hone strategic thinking skills. The seminar is specifically concerned with how constraints—ranging from budgets and schedules to the laws of physics—can encourage, rather than inhibit, creative solutions. But we will also consider general questions about the process and psychology of problem-solving. Areas of investigation will include steps in establishing problem scope and defining and recognizing successful solutions; the dynamics of group versus individual problem-solving; and strategies for communicating complex ideas to teammates and leading the creative process. Students will be expected to participate actively in shaping class discussions and activities. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 286S. Shakesploitation of an Icon: Four Hundred Years of Shakespeare Marketing. 3 Units.
Following the interregnum in England, William Shakespeare began a long, sustained trajectory as a cultural icon, first in England, but eventually among all English-speaking cultures. In the process, Shakespeare’s works have been reinterpreted, adapted, re-contexted, commoditized, and re-purposed for the sake of art, educational relevance, and entertainment. In the process, Shakespeare has often become the tool of unabashed commercialism, a practice which has come to be known as “Shakesploitation.” But why is Shakespeare’s work so frequently purloined? Why are out of context references to him so ubiquitous? Why do people tend to equate the name of Shakespeare with qualities of genius? Why have his works been continually adapted (often shamelessly) not only for the stage, but into other genres, including operas, paintings, novels and films? How do we account for the proliferation of Shakespeare-based self-help books such as Shakespeare on Leadership? Why is the infant stimulation video Baby Shakespeare a best-seller? This course will explore these questions not only by reading a selection of Shakespeare’s most enduring works, but also by examining criticism, adaptations, and marketing strategies that have been applied to Shakespeare’s image and works over the last four centuries. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 286U. Puzzled. 3 Units.
"Puzzled" will look at the practice of puzzle making and puzzle-solving and explore the meaning of puzzles for different cultures throughout history. We will read works from the disciplines of math, history, anthropology, philosophy, and literature. We will explore why certain types of puzzles became popular and how puzzles have transferred from one culture to another. We will examine the role of code writing and code-breaking in the military and in the world of business. We will read examples of fiction and watch films that adopt the form of the puzzle as a narrative device. We will think about the function of puzzles as instruments to exercise the faculties of reason and logic and as a means of leisure or pleasant distraction. Students will be asked to both solve and create puzzles over the course of the semester. They will write analytical essays on topics related to the practice and history of puzzle making and puzzle solving, and they will pursue a research topic that revolves around an issue or problem that has "puzzled" them. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
USSY 286V. Food Craze: (No) Reservations. 3 Units.
The great number of food-related TV-shows indicate an unprecedented interest in questions about and fascination with food; in fact, these TV shows allure viewers with the appeal of a myth: eating involves discovery (Anthony Bourdain’s No Reservations, On the Road Again with Mario Batali, Planet Food), thrill (Bizarre Foods), or “supernatural” competition (Man vs. Food, Top Chef). These television shows and food-related writings that accompany them in earnest “worship” food and often promote ideas of multiculturalism by which exciting and novel locales, foods, and meal preparatory techniques are discovered. The objective of this course is to “indulge” in these shows and food writings and scrutinize them: What explains such fascination with the viewing of and reading about food? In what ways can food-exploration trips expand on ideas and critiques of multiculturalism and globalization? What explains the centrality and “mythical” nature of food in the twenty-first century? To begin these conversations, we will touch on a plethora of food writing works including works motivated by environmental and health concerns such as Michael Pollan’s essays. Then we look at the world of cookbooks (including the cookbooks of Julia Child and Rachel Ray), food blogs and TV-shows, and essays by Bill Buford and Calvin Trillin among many others. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 287F. Telling True Stories: Literary Journalism in America. 3 Units.
Literary journalism is a genre of nonfiction writing that employs all of the reportorial and truth-telling covenants of traditional journalism, while employing rhetorical and storytelling techniques more commonly associated with fiction. In short, it is journalism as literature. This course will introduce you to major themes in American literary journalism, the genre’s representative writers, and the enduring questions of the field. For example, we will ask how these stories work as narratives, as scientific explanations, as political tools, and as entertainment. How do these categories overlap? How do they motivate us to act? Where are these stories published and who is the readership? How do historical and cultural contexts influence and appear in the works? What is the relationship between (literary) journalism and democracy? What is the relationship between form and content? Is there a difference between physical truth and emotional truth? In the process of answering these questions, this course will emphasize close reading, interdisciplinary thinking, and the writing process. Through reading assignments, class discussions and presentations, and paper writing we will have the opportunity to examine, analyze, and develop our own interpretations about these multifaceted writings and the diverse cultural experiences and meanings they chronicle. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 287G. Shadowplay/East and West. 3 Units.
Shadows flicker across the screen, drawing us back to the precursors of the cinema and forward to digital effects. To borrow Gorki’s phrase, the cinema is truly a “train of shadows.” This course focuses on interactions between shadow theatre, dance, visual arts, the cinema, and traditional forms of play. While the main focus is on traditional artistic forms, we also explore modern variants, including the use of shadows in contemporary photography. We will look at shadows in different (yet overlapping) contexts, and compare the effects of still and moving shadows. All of these contexts involve moments of narrative and silence. Through a series of short papers which will be integrated into a longer paper, each student will explore his/her approach to a central question: What does it mean to play with shadows? Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100

USSY 287H. Cityscapes in 20th-Century and Contemporary Visual Culture. 3 Units.
This seminar will explore the dynamic meanings of modern and contemporary urban environments through visual representation. What does a city look like? As great complex entities of constant change, we will see that cities have been portrayed in a myriad of ways. What social ideals have engaged the vision of architects, urban planners, and landscape designers in the making of the metropolis since the late 19th century? How have artists interpreted major cities as sites of modernity, technological advancement, civilization and cultural vanguard; or, in contrast as sites of failed experiment? How can forms of representation help us envision the entirety of urban spaces of diverse geographies, including typically un-aesthetic forms of fringe areas, the abandoned zones of prior use, and infrastructures? What recent developments in convergent media might be employed as catalyst for achieving an enhanced understanding of the interrelationship of urban structures, spaces, and human need? Our chief objective is to begin to comprehend the enormity of these questions. Thus, we will view and discuss selected examples of architecture, design, art, photography, film and video, in essence sampling the roles they have played in the process of conceiving and imagining the design and significance of cities. Our examination of visual material will be organized over the course of the semester according to three major overlapping themes: the utopian and visionary city, the visual culture of cities, and the emerging city. The methods by which we will seek to interpret the visual component of our studies in the three categories will be adapted from the perspectives of visual culture, urban studies, urban design and landscape urbanism, and architectural history. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
USSY 287N. Fantasy and Philosophy. 3 Units.
Fantasy novels and films can be philosophical catalysts. One can read philosophical arguments and debate ethical and epistemological issues. Or, one can become immersed in a work of art and imagination that presents a fiction expressing the same profound human issues. Such a work dramatizes philosophical debates and conflicts, and hurls readers and viewers into poignant, gripping, suspenseful, horrific, or beautiful stories that convey those very same struggles with truth and morality. Indeed, while many philosophical works are inaccessible to everyone but those with a specialized vocabulary (or prescient ability to discern tortured language), literary and cinematic works actually stimulate a different part of the brain. The ideas are conveyed and processed differently, and this is why works of fiction can have such poignant and lasting effects on the emotions, provoke us to meditate on the grave and constant in human sufferings, and revisit those works as we relive our own struggles with truth, morality, love, identity, conflict, violence, and death. In this course students will read short works of fiction and philosophy, and watch films that delve into philosophical issues. These include selections from The Seventh Seal, Dr. Strangelove, Lord of the Rings, Harry Potter and the Half-Blood Prince, Star Trek, Futurama, House, M.D., True Blood, Dexter, Woman in the Dunes, The Denial of Death, The Dharma of Dragons and Daemons, Death's Dream Kingdom, Thus Spake Zarathustra, Philosophy and the Mirror of Nature, Serial Killers and Philosophy, and The Bhagavad Gita. Students who have taken USSO 286W for credit may not take this course. Prereq: Passing letter grade in a 100 level first year seminar in USFS, FSSY, FSCC, FSNA, FSSO or FSCS. Prereq or Coreq: FSTS 100
Undergraduate Academic Advising

Academic Advising

Academic advising is an important component of the educational program at Case Western Reserve University. Academic advisors assist students in the exploration of academic opportunities at the university and in the selection of courses. Advisors may refer students to other sources of information and assistance at Case Western Reserve. Students are expected to initiate and maintain regular contact with their advisors to address the student’s curricular and career concerns, and to review progress towards graduation. Students are expected to meet with advisors when declaring a major or minor, before registering for classes each semester, and when making corrections to their academic requirements reports.

Advising during the First Year

During a student’s first year at Case Western Reserve University, the faculty member instructing the student’s SAGES First Seminar serves as the student’s academic advisor. Students and their advisors are expected to explore the student’s academic interests and concerns, as well as educational and career goals, and to seek expert information and advice about academic policies and procedures and about specific academic programs from the General Bulletin, from newsletters and websites, from the academic representatives in the majors and minors designated as first year resources, and from other sources of advice and counseling on campus. Staff in the Office of Undergraduate Studies (http://www.cwru.edu/provost/ugstudies/undstud.html) (including the coordinators of first-year residence education in the First-Year Residential Colleges), the University Career Center (http://studentaffairs.case.edu/careers), Educational Services for Students (http://studentaffairs.case.edu/education), the Office of Multicultural Affairs (http://studentaffairs.case.edu/multicultural), the University Counseling Service (http://studentaffairs.case.edu/counseling), and specialized programs such as Co-op (http://engineering.case.edu/coop) (co-operative education), SOURCE (http://www.cwru.edu/source) (research and creative projects), the Center for International Affairs (http://case.edu/international) (study abroad, international student services), and the Center for Civic Engagement and Learning (http://studentaffairs.case.edu/civicengagement) (community service) are available to support first year students and their advisors with publications, workshops, websites, experiential learning opportunities, and individual communications.

Advising in the Majors and Minors

Although some first year undergraduates enter with definite goals, they are not assigned to advisors in the majors until they have declared their major. Opportunities for exploration of majors and minors during the first and second semesters include a Choices Fair, departmental information sessions, and individual conversations with faculty and academic advisors. First year students who are ready to declare a major in their first year may do so beginning in November.

Students engaging in further exploration of majors are expected to declare a major no later than the end of the second year (See Declaring a Major in the section on Academic Policies and Procedures). When a student selects a specific major or minor, the academic representative assigns a faculty advisor. A choice or change of major or minor is not recorded for any student until the major or minor declaration form, bearing the signature of the student, the name of the advisor, and the signature of the academic representative of the major or minor, has been completed and submitted to the Office of Undergraduate Studies, 357 Sears Bldg.

After the first year, students who have not declared a major should consult their assigned advisor (noted in their online student information) or the academic representative of an academic department of interest for advice and schedule approval.

Advising in the Office of Undergraduate Studies

The deans and advisors in the Office of Undergraduate Studies, including the coordinators of first-year residence education in the First-Year Residential Colleges, are available to answer student and faculty questions about university rules, practices, programs, and resources and to meet with students who are interested in accelerated undergraduate to graduate and professional school programs, academic awards, and fellowship and scholarship opportunities. All students who have not declared a major should consult with their first year advisor or with one of the advisors in the Office of Undergraduate Studies for advising and schedule approval. Students with interests in health professions and/or law school are encouraged to seek advice from the director of health career advising, Steven Scherger (http://www.cwru.edu/provost/ugstudies/prehlth.htm), and the pre-law advisor, Terri Mester (http://www.case.edu/provost/ugstudies/prelaw.htm), in the Office of Undergraduate Studies.
Undergraduate Academic Policies and Procedures

Academic Regulations

All academic regulations governing undergraduates are administered by the Office of Undergraduate Studies. Academic regulations are subject to change by action of the Faculty Senate, its Committee on Undergraduate Education, and the various committees responsible for the oversight of curriculum and academic standing.

When circumstances so warrant, a student may submit to the Office of Undergraduate Studies a petition requesting an exception to a specific regulation. Petition forms are available in the Office of Undergraduate Studies, 357 Sears Bldg.

Academic Grievance Policy

A student who wants to register a complaint about course instruction or evaluation should first bring the matter to the direct attention of the professor or instructor involved. If the matter is not satisfactorily resolved, the student should go to the chair of the academic department in question and seek departmental review. If neither step resolves the complaint, the student may take the matter to the faculty member's college or school dean for final review and decision.

Academic Integrity Policy

See the Case Student Handbook for more information about the academic integrity policy.

Attendance

Students are expected to attend classes regularly. Each instructor is free to determine the extent to which absences affect the final grades of students but should make the policy regarding attendance known at the start of the course. Instructors should report excessive absences to the Office of Undergraduate Studies. Instructors who judge a student's absences from class to be excessive may drop the student from the course with a grade of F. Instructors taking such action must notify the student's dean in writing.

Students unable to attend classes because of illness should notify their instructors and make the appropriate arrangements directly with the instructor. The University Health Service and the Office of Undergraduate Studies do not provide medical excuses for class absence. Information concerning the policy of the Health Service and the Office of Undergraduate Studies is available in those offices.

Any student who is unable to attend classes or participate in any examination, study, or work requirement on a particular day because of his or her religious beliefs is excused from any such activity. The student will be given the opportunity to make up the examination or work that is missed, provided the make-up work does not create any unreasonable burden upon the university. When possible, students should give notice to instructors early in the semester about missing classes because of religious observance.

Audit

A student may audit a course with the dean's or advisor's approval and the consent of the instructor of the course. An auditor receives no credit for the course. Registration in a course cannot be changed from audit to credit or the reverse after the end of the drop/add period. However, a student may take for credit a course he or she audited in an earlier semester. At the beginning of the course, the student and instructor should reach agreement regarding the requirements to be met for a grade of AD. The grade of AD is entered on the student’s transcript if approved by the instructor of the course. If the instructor does not approve the grade AD, the enrollment is not posted on the transcript.

Course Loads and Overloads

In order to be classified as a full-time student, a student must enroll for a minimum of 12 semester hours by the end of the drop/add period. The normal full-time load is 12-19 semester hours. Eligibility for many forms of financial aid and for participation on intercollegiate, varsity sports teams requires full time status. Students registering for fewer than 12 semester hours are classified as part-time and charged tuition on the basis of the number of semester hours being taken.

Continuing students may carry 20-21 hours if they have a cumulative average of 3.200 or better. To register for 22 or 23 hours, a minimum average of 3.500 is required. Any schedule of more than 19 hours requires a dean’s approval. Graduating seniors may be approved for overloads if they need such a schedule in order to graduate at the end of the semester in question.

Course Placement

No credit will be allowed to count towards degree requirements for foreign language or mathematics courses which duplicate work taken earlier in high school or in another institution. First year undergraduates who have questions regarding their eligibility to receive credit for foreign language or mathematics courses should see the assistant dean for first year students in the Office of Undergraduate Studies.

Course Repetition

Students have the opportunity to retake a course in which they have received an evaluative grade (A, B, C, D, or F) in order to improve their performance. When a course is repeated, the first grade will remain visible on the transcript, but will be removed from the calculation of the cumulative grade point average and the grade point average for the semester in which the course was first taken. Also, credits earned for that enrollment will be deleted. The new grade will then be used for calculation of the cumulative grade point average and the grade point average for the semester in which it was earned, regardless of whether the new grade is higher or lower than the first grade. The student’s transcript will show the comment “REPEATED: NO CREDIT AWARDED” directly below the original grade. Similarly, if a student repeats a course for which he or she has already received either test (AP, IB, etc.) or transfer credit, the original credit will be removed and the transcript will show the comment “REPEATED: NO CREDIT AWARDED;” credit will instead be awarded for the course taken at Case Western Reserve University and the grade will be included in grade point average calculations. However, if the first attempt of the course resulted in a passing grade, but the second attempt results in a failing grade, then the original grade will remain, both grades will be included in the grade point average calculation, and the student will continue to earn credit for the first attempt. Similarly, if a student withdraws from a course that is being repeated, the original grade will stand. Course repetition may be exercised according to the following conditions:

1. A student may not use the Pass/No Pass Option on a course that is being repeated.
2. An academic action that occurred under the earlier grade is neither reversed nor removed from the record as a result of a change in the semester or cumulative averages that results from the repetition of one or more courses.
3. All grades earned at Case Western Reserve University, including those grades removed as a result of the application of the course repeat policy, will be applied to the Scholarship GPA that is reviewed in order to determine retention of certain Case Western Reserve University scholarships awarded to students who matriculated prior to August 2011.

4. The course repeat option may not be exercised after a degree has been awarded.

CAUTION: Students who are the recipients of any form of federal financial aid (grants, loans, work study, etc.) and repeat a course that previously earned a passing grade must enroll for a minimum of 12 credits for which credit had not been earned previously.

Credit by Examination

Advanced Placement/International Baccalaureate Examinations

Students may earn degree credit on the basis of advanced examinations taken while in secondary school. Examinations eligible for credit and/or advanced placement include, but are not limited to College Board Advanced Placement Examinations and International Baccalaureate Higher Level Examinations. Determination of the criteria for granting credit and/or placement is made by the appropriate department. In assigning credit or granting advanced placement for credentials from outside the United States, the university is guided by the placement recommendations and grade equivalencies approved by the National Council on the Evaluation of Foreign Educational Credentials.

Proficiency Examinations

Departments within each academic unit offering undergraduate programs may choose to offer students the opportunity to earn course credit in specific courses by proficiency examination. To qualify for proficiency examination credit for a course, the student’s examination performance must demonstrate knowledge and skills at a level no lower than that of an average student who successfully completes the course. Upon notification from the academic department, the Office of Undergraduate Studies will post credit for the course on the transcript. The grade will be recorded as PR, and will not be included in a student's grade point average.

Declaring a Major or Minor

Students who enroll at Case Western Reserve University as first-year students are expected to declare a major before registering for classes for their fifth semester of enrollment. Transfer students are expected to declare a major before registering for their third semester at Case Western Reserve. Beyond that point, students who have not declared a major will have a registration hold placed on their accounts until they have done so. Those who will have earned fewer than 60 credit-hours (including transfer, AP, IB, and proficiency credit) by the end of the fourth semester for students who started as first-year students, or by the end of their second semester for transfer students, may request that their dean in Undergraduate Studies allow them to register for the next semester by lifting the registration hold. Students may later change their majors should their academic interests change.

A choice or change of major or minor is not recorded for any student until the major or minor declaration form, bearing the signature of the student, the name of the advisor, and the signature of the academic representative for the major or minor, has been completed and submitted to the Office of Undergraduate Studies, 357 Sears Bldg.

Enrollment Changes

Drop/Add

Changes in course schedules must be submitted to the Registrar’s Office using the Student Information System or a drop/add form before the end of the second week of classes during the fall and spring semesters and on or before the second day of classes during the summer session.

Withdrawal from a Course

The First Undergraduate Year:

For the first two semesters of enrollment, matriculated students who are beginning their college studies may withdraw from a course at any time during the semester, but no later than the last day of classes. Any course for which a grade of W is assigned will be deleted from the transcript at the end of the semester. This policy is not available for transfer students and does not apply to the summer session.

After the First Undergraduate Year:

A student may withdraw from a course no later than the end of the 11th week of the semester and receive a grade of W. In extenuating circumstances, a student may petition for permission to withdraw from a course after the final date and receive a W. The grade of W will be posted on the student's transcript.

For all course withdrawals:

Students in good academic standing (i.e., not on probation, probation incomplete, or continued on probation) may withdraw from courses through the Student Information System, provided that this does not take them to be actively enrolled in fewer than 12 credit hours. All other course withdrawals (those by students who are not in good standing and those that take a student below 12 credit hours of active enrollments) must be transmitted by the student to the Registrar’s Office on the appropriate form, signed by a dean in the Office of Undergraduate Studies. Failure to attend class, or providing notice only to the instructor, does not constitute an official withdrawal from a course. Such an unofficial withdrawal normally will result in the student’s being assigned the grade of F.

Withdrawal from the University

To withdraw from the university during a semester or session, a student must complete an official withdrawal form in the Office of Undergraduate Studies. If unable to complete the withdrawal in person, the student must send written notice to the Office of Undergraduate Studies. If the withdrawal is necessary for reasons of health, a statement from the student’s physician to the University Health Service may be required as a condition of readmission. Grades of WD will be assigned in all courses in which a student is registered at the time of withdrawal, provided that a student follows the procedures stated above. Failure to attend classes or notification of instructors only, does not constitute withdrawal from the university. A student who ceases to attend or otherwise participate in courses without officially withdrawing will be assigned the grade F for each course in which he or she is enrolled.

Students who do not plan to return for the following semester must notify the Office of Undergraduate Studies (http://bulletin.case.edu/undergraduatestudies/policies/mailto:ugstudies@case.edu), 357 Sears Bldg., 216.368.2928, in person or in writing.

Final Examinations

Final examinations normally are required in all courses and must be given during the final examination period at the time assigned by the Registrar; they may not be given during the final week of classes or on Reading
Days. Any exception must be approved by the dean of undergraduate studies.

No student will be required to take more than two final examinations on a single day. A student who has three final examinations scheduled for a single day should go to the Office of Undergraduate Studies and obtain the assistance of the dean in arranging to take one of those examinations on an alternative day during the final examination period. Similarly, a student with conflicting examinations should seek the assistance of the dean of undergraduate studies in arranging to have the time of one examination changed.

A student must explain immediately and in writing to the dean of undergraduate studies an absence from a final examination. If the explanation is acceptable, the dean will authorize the assignment of the grade Incomplete and the administration of a make-up examination by the instructor. In the event of an unexcused absence from a final examination, the instructor should assign the student a final grade that assumes a grade of zero on the final examination and is consistent with the grading policy established for the course.

Incompletes
See section on Grades

Pass/No Pass
See section on Grades

Promotion
The standards for promotion are:
- To the sophomore class, 27 hours completed
- To the junior class, 60 hours completed
- To the senior class, 90 hours completed

Reading Days
Prior to and/or during the final examination period two weekdays are set aside as Reading Days to be used by students for completing assignments and preparing for final examinations. In the fall semester there will be one reading day on Monday of the first exam week and one reading day on Friday of the first exam week. In the spring semester, the two days prior to the beginning of the final exam period are set aside as reading days. These days are not to be used by faculty for scheduling examinations or other course activities that require the attendance of students. They can be used by faculty to schedule review sessions for which attendance is optional.

Readmission After Separation
See section on Academic Standing

Re-Enrollment After Voluntary Withdrawal
Students who have voluntarily withdrawn from the university and have not taken courses elsewhere following their withdrawal may re-enroll in any semester. Students who have taken courses elsewhere following withdrawal must provide official transcripts of their work with their request for re-enrollment. Upon re-enrollment following a voluntary withdrawal, students retain the hours earned and quality points for courses completed prior to withdrawal. In the first semester of re-enrollment, their academic status is the status in effect at the time of withdrawal, unless that status is changed by action of the Academic Standing Board.

Registration
For continuing students, registration for the fall semester begins in April, and registration for the spring semester begins in November. Complete registration instructions and regulations appear on-line on the web site of the University Registrar (http://www.case.edu/registrar).

Student Access to Records
The academic records of all students are in the Office of Undergraduate Studies, 357 Sears Building. Students may review their files in that office by appointment. A student must sign a request and present his/her ID card at the time of the appointment.

Study at Other Colleges and Transfer Credit
Students may receive transfer credit for work completed at another accredited college, university, or technological institute in the United States or from institutions of higher education outside the United States.

At the time of admission to Case Western Reserve University and upon presentation of an official transcript from each institution previously attended, credit will be awarded for courses equivalent or comparable to those offered by the university and completed with a grade of C or better. Any such courses taken prior to the student’s graduation from high school must be listed in the college’s catalog among courses offered for degree credit to the college’s undergraduates, taken in the company of matriculated college students, and organized and taught by college faculty. In addition, to be considered for transfer credit, such courses must not have been used to fulfill high school graduation requirements. The awarding of transfer credit is determined by the Office of Undergraduate Studies in consultation with the appropriate department.

After matriculation at Case Western Reserve University, students are permitted to earn at other accredited colleges or universities no more than a total of 15 semester hours, including courses taken through the cross-registration program. However, students participating in approved study abroad programs may earn up to 36 credit hours for work completed during the program. Permission of a dean in the Office of Undergraduate Studies must be obtained in advance if the student wishes to enroll elsewhere. Further, if a student wishes to take elsewhere a course to satisfy a major or minor requirement, it must also be approved by the department chair or academic representative.

Upon presentation of an official transcript from each institution previously attended, credit will be awarded for courses equivalent or comparable to those offered by the university and completed with a grade of C or better. Credit earned elsewhere after matriculation at Case Western Reserve University is not applied toward the residence requirement of a minimum of 60 hours, including at least 30 after achieving senior status, earned at Case Western Reserve. The Off-Campus Study Request Forms are available in the Office of Undergraduate Studies, 357 Sears Bldg.

Credit is not awarded for work done at an unaccredited institution in the United States except by proficiency examination in those departments of Case Western Reserve University offering that opportunity. The awarding of transfer credit for work done at institutions outside the United States is subject to departmental evaluation and to the recommendations of the National Council on the Evaluation of Foreign Credentials.

A student separated for poor scholarship may not earn transfer credit for courses taken in the first two sessions after that dismissal.
Grades for courses taken at other institutions will not be entered on the student’s record nor will they be computed in the student’s grade point average.

In addition to the regulations concerning transfer credit outlined above, the following special restrictions apply to credit for summer courses taken at other colleges, universities, or technical institutes:

1. Students ordinarily will not be permitted to take elsewhere in Cuyahoga County courses offered at Case Western Reserve University. Exceptions to this policy will be permitted only in the event of significant extenuating circumstances. Students who desire the opportunity to take elsewhere in Cuyahoga County a course being offered at Case Western Reserve must petition the Office of Undergraduate Studies in advance for permission to do so.

2. Students must be in good standing. If a student is placed on probation between receiving permission and the start of off-campus enrollment, the student is no longer eligible to enroll for and receive transfer credit for this work. Students on probation require special approval and should contact a dean in the Office of Undergraduate Studies.

3. Students may register for no more than 12 semester hours of credit. One quarter-hour equals two-thirds of one semester-hour.

4. Students may transfer credit only for courses in which a student’s work is completed in a minimum of four weeks.

**Academic Standing Regulations**

The Academic Standing Board monitors the progress of all undergraduate degree candidates at the end of each fall and spring semester to ensure that they are making appropriate progress toward earning their degrees in terms of the grades and number of credit hours earned each semester; see below for information about the summer session. All degree candidates begin their academic careers in good standing. Those who fail to meet the requirements to continue in good standing, as defined below, are automatically placed on academic probation for the following semester in order to signal the need to improve their academic performance. Those who fail to meet a minimum set of academic standards defined below or who do not return to good standing after a semester of academic probation are ordinarily separated from the university for a period of two academic sessions, including the summer session.

### Good Academic Standing

**Full-time First Year Students and Transfer Students in the First Semester**

In order to maintain good academic standing at the end of the first semester at Case Western Reserve University, a full-time (i.e., enrolled in at least 12 credit hours at the end of the drop/add period) first year student or new transfer student must:

1. earn a semester grade point average of 2.000 or higher AND
2. earn a minimum of 9 credit hours in that semester.

**Full-time Students After the First Semester**

Following the first semester of the first year, full-time students (i.e., those enrolled in at least 12 credit hours at the end of the drop/add period) will be in good standing provided they:

1. earn a semester grade point average of 2.000 or higher AND
2. earn a minimum of 12 credit hours in that semester.

### Part-time Students

Part-time students (i.e., those enrolled in fewer than 12 credit hours at the end of the drop/add period) will be in good standing if he or she earns a semester grade point average of 2.000 or higher.

**NOTE:** Any student with incomplete grades at the end of a semester may be placed on “probation (incomplete)” or made “ineligible to register,” as described below.

### Academic Probation

Students who, at the end of any semester, fail to maintain the standard of performance required for good standing as specified above will be automatically placed on probation. Students placed on probation are ineligible to represent the university in intercollegiate activities and may not hold an elective or appointed office or chair a committee in any campus organization. In addition, they may not earn degree credit for work completed at another college or university during the period of probation without special permission.

When placed on academic probation students will be expected to perform at a level that will return them to good standing at the end of the next semester. If they fail to return to good standing at the end of the following semester, they will be considered for separation from the university for a period of two academic sessions, the summer session being the second.

A full-time student placed on probation who subsequently enrols as a part-time student will not be reviewed for further academic action until he or she has completed sufficient semesters to total at least 12 credit hours. At that time, the student will be reviewed on the basis of a composite of those semesters.

Similarly, a student who goes on probation as a part-time student will not be reviewed for further academic action until he or she has completed sufficient semesters to total at least the number of credit hours attempted in the semester for which the student was placed on probation. At that time, the student will be reviewed on the basis of a composite of those semesters and will be expected to have earned at least the number of credit-hours attempted in the semester for which he or she was placed on probation.

### Probation (Incomplete):

A student will be placed on Probation (Incomplete) if he or she has Incomplete grades which would result in the student’s being placed on academic probation if those Incomplete grades were converted to F’s. Once the Incompletes are converted to grades, the student shall be restored to good standing or placed on academic probation as determined by the semester grade point average and the number of credit hours earned.

### Separation

Students on academic probation who fail to return to good standing at the end of the following semester will be considered for separation from the university for at least two academic sessions, including the summer session.

Also, full-time students at the end of their first semester at Case Western Reserve University will be considered for separation without a semester of probation if they:

1. earn a semester grade point average less than 1.000 AND
2. earn fewer than 9 credit hours in that semester.

After the first semester, full-time students will be considered for separation without a semester of probation if they:
1. earn a semester grade point average less than 1.000 OR
2. earn fewer than 9 credit hours in that semester.

Part-time students are not eligible for separation without already being on probation, but will be considered for separation if they fail to return to good standing after a period of probation.

Separation because of academic performance is not an automatic process. Students being considered for separation will be asked to prepare a statement explaining the difficulties that interfered with their ability to earn a satisfactory record; if a student thinks he or she should not be separated, the statement should include an explanation of why the Academic Standing Board should have confidence in the student’s ability to return to good standing at the end of the next semester. The Academic Standing Board will decide to separate the student or to place the student on academic probation or to continue the student on academic probation based on a review of the student’s statement and the academic record.

Students separated for reasons of academic performance may not earn transfer credit for work completed elsewhere.

**Readmission from Separation**

Students who have been separated because of poor academic performance may petition for readmission after two academic sessions, including the summer session, have elapsed. Students readmitted after being separated for reasons of academic performance will retain the credits they earned before separation only for those courses passed with a grade of C or better. Readmitted students do not retain quality points earned before separation, and the cumulative grade point average will be restarted and include only those grades earned after readmission.

**Permanent Separation**

A second academic separation following review by the Academic Standing Board will ordinarily be permanent.

**Ineligible to Register**

Students will be declared “ineligible to register” when they have Incomplete grades which would make them eligible for separation if those Incomplete grades were converted to F’s. Such students will be required to finish the incomplete courses with grades that justify their retention before they will be allowed to continue for the next academic session, unless they successfully petition the Academic Standing Board for permission to enroll.

**Summer Enrollment at Case Western Reserve University**

Students will not be reviewed for academic action at the end of the summer session except in the following two situations:

1. A student on academic probation as of the end of the spring semester will be returned to good standing at the end of the summer session if he or she has completed at least 6 credit hours at Case Western Reserve University with a summer grade point average of at least 2.000.
2. Nursing students who enroll during the summer session for a full course load (at least 12 credit hours) that includes the capstone course will be reviewed according to the standards of a regular fall or spring semester.

**Application for Graduation**

A student who has completed all graduation requirements in fewer than four years has the choice of graduating early or deferring graduation in order to graduate with his or her class. A student who completes all graduation requirements in four years or more must graduate at that time.

The student must file an on-line application for the degree through the Student Information System by October 1 for January graduation, by February 1 for May graduation, and by June 1 for August graduation; and the student must have discharged all financial obligations to Case Western Reserve University.

**Graduation Check**

Students must ensure that their Academic Requirement reports reflect accurately their progress toward their degrees. All requested corrections and exceptions must be submitted to the Office of Undergraduate Studies at least one semester prior to graduation. Academic Requirement reports are available on-line through the Student Information System.

**Participation in Commencement**

Students are eligible to participate in May commencement activities provided that they have completed all degree requirements during that spring semester or the immediately preceding fall semester or summer session, or have an appropriate plan to complete their degree requirements in the upcoming summer session or fall semester. A student may participate in Commencement only once as a bachelor’s degree candidate, though exceptions are sometimes made for students receiving a second bachelor’s degree at least one year after the first.
Undergraduate Collaborative Programs

Collaborative Programs with Other Colleges

Cross Registration in Northeast Ohio

If approved by the Office of Undergraduate Studies, full-time undergraduates in good academic standing may cross-register at Baldwin-Wallace College, Chanellor University, the Cleveland Institute of Art, the Cleveland Institute of Music, Cleveland State University, Cuyahoga Community College, Hiram College, John Carroll University, Lake Erie College, Lakeland Community College, Lorain County Community College, Notre Dame College of Ohio, and Ursuline College for one course per semester. Approval is normally limited to courses that are not offered at Case Western Reserve University.

To cross-register for studio courses at the Cleveland Institute of Art, a student must have permission from Case Western Reserve University’s director of art studios, Mr. Timothy Shuckerow (http://bulletin.case.edu/undergraduatestudies/collaborativeprograms/mailto:timothy.shuckerow@case.edu), 2215 Adelbert Road, 216.368.2714.

Private music lessons can be arranged through the Department of Music in collaboration with the Cleveland Institute of Music. Students interested in pursuing this opportunity must obtain a permit at the Music Department in Haydn Hall to enroll for credit in Applied Music. Charges for private lessons will be covered by the full tuition rate for music and music education majors only. All other students will pay an additional fee.

Joint Program in Art Education

The joint program in art education of Case Western Reserve University and the Cleveland Institute of Art (CIA) enrolls students pursuing the BS in Art Education, combining studio art courses at the Cleveland Institute of Art with liberal arts and education courses at Case Western Reserve University. Admission to the program requires application to Case Western Reserve University and presentation of an art portfolio to the Cleveland Institute of Art; credentials must be acceptable to both institutions.

Joint Program in Music

All programs in music are conducted jointly by Case Western Reserve University and the Cleveland Institute of Music, and provide the intimacy and specialization of a professional conservatory, together with the resources of a comprehensive university. Students pursuing a major in music or music education take music theory and lessons at the Cleveland Institute of Music, and take music history and other liberal arts and music education courses at Case Western Reserve University. Students pursuing the BA with a major in music, or the BS in Music Education apply to and enroll in Case Western Reserve University, while students seeking the BM degree apply to and enroll in the Cleveland Institute of Music.

Joint Program in Teacher Licensure

Ohio teacher licensure may be attained by those undergraduate students who complete the approved curriculum of the Case Western Reserve University/John Carroll University Joint Program in Teacher Licensure (http://www.cwru.edu/artsci/teachlic/secondary.html?nw_view=13093798998). Degrees in these programs are awarded by Case Western Reserve University and licensure is obtained through John Carroll University. Adolescence/Young Adult Teacher Licensure (grades 7-12) is available in Integrated Language Arts (English major), Integrated Social Studies (history major), Integrated Mathematics (mathematics major), Life Sciences (biology major), and Physical Sciences (chemistry or physics major). Multi-age licensure is available in French, Latin, and Spanish. The program requires 35 credit hours in professional education: 15 taken at Case Western Reserve University and 20 taken at John Carroll University.

The undergraduate/graduate programs in art education and music education meet the requirements for teacher licensure, grades pre-K-12. For further information, see departmental information in this bulletin.

Reserve Officer Training Corps (ROTC)

Reserve Officer Training Corps (ROTC) programs are available to Case Western Reserve University students through cooperative arrangements with Kent State University for Air Force ROTC and with John Carroll University for Army ROTC. Each of these universities offers military studies, leadership and training courses. Participating students may seek transfer credit at Case Western Reserve for these courses, and may be exempted from the undergraduate physical education requirement. Students who are not recipients of ROTC scholarships may enroll in the first and second year ROTC courses without incurring any military obligation. University students enrolling in ROTC programs are eligible to compete for ROTC scholarships awarded by the Air Force or the Army.

Air Force ROTC

The Air Force Reserve Officer Training Corps (http://www.kent.edu/afrotc) (AFROTC) program provided by Kent State University prepares students for service as officers in the United States Air Force. Through courses in history, management, and leadership, and through practical training, students acquire leadership and management skills, and learn about Air Force career opportunities, the role of the military in American society, the history of air power, and national defense policy.

An agreement between Case Western Reserve University and Kent State University allows full-time Case Western Reserve students to complete aerospace studies courses. The courses are held at Kent State University, which is approximately 35 miles from Case Western Reserve, and are usually scheduled on one or two afternoons during the week. This arrangement allows Case Western Reserve students to participate in either the four- or two-year AFROTC program. Students wanting to enter the two-year program in the junior year must contact the professor of aerospace studies before March of the year before their planned entry.

Air Force ROTC scholarships are available on a competitive basis. Information about courses, registration, and scholarships may be obtained from the Air Force ROTC DET 630, 125 Terrace Drive, Kent State University, Kent, Ohio 44242; telephone: 330-672-2182. Case Western Reserve students planning to register for AFROTC courses at Kent State University should consult with the Office of Undergraduate Studies for information regarding registration procedures.

Army ROTC

The Army ROTC (http://www.jcu.edu/rotc) program is designed to prepare students for service as a commissioned Army officer in either the active duty U.S. Army or the reserve components of the Army Reserve or National Guard. Classes and practical training focus on military skills, officer professionalism, leadership training, and the development of military-related officer and management techniques and procedures. Army ROTC is offered as part of a collaboration with John Carroll University with some of the first- and second-year courses ROTC classes being offered on the Case Western Reserve University campus.
those courses offered at Case Western Reserve (MLSC 101, MLSC 102, MLSC 199, MLSC 201, MLSC 202, and MLSC 299), students register in the ordinary way. For other Army ROTC classes, students may enroll through cross-registration in the Department of Military Science at John Carroll University, which is approximately five miles from Case Western Reserve.

Army ROTC scholarships are available on a competitive basis. Information about courses, registration, and scholarships may be obtained from the Department of Military Science (ARMY-ROTC), John Carroll University, University Heights, OH 44118-4581; telephone: 216.397.4421. Case Western Reserve students planning to register for Army ROTC courses at John Carroll University should consult with the Office of Undergraduate Studies for information regarding registration procedures.

Fisk University Exchange Program

An exchange program between Fisk University and Case Western Reserve University enables up to four Case Western Reserve students to spend a semester as visiting students at Fisk each year. Up to four Fisk students may spend a semester at Case Western Reserve each year. Fisk University was founded in 1866 as the first integrated, coeducational school in the United States, and, at its founding, focused on providing a quality liberal arts education to the children of former slaves. Fisk University has a distinguished history as a liberal arts institution. Fisk University was the first historically black college to have chapters of the Phi Beta Kappa and Mortar Board national honorary societies.

Case Western Reserve students who participate in the Case Western Reserve-Fisk Exchange pay tuition to Case Western Reserve University, pay the Fisk room and board fees, and maintain their student status during the period of the exchange. Information about the exchange program is available from the Fisk exchange advisor in the Office of Undergraduate Studies.

The Dual Degree (3-2) Program in Engineering

Students of superior scholarship who have attended one of a group of select liberal arts colleges with which Case Western Reserve University has a dual degree agreement are eligible to participate in the Dual Degree (3-2) (http://engineering.case.edu/desp) program at Case Western Reserve University. This program allows outstanding students to begin their studies at a liberal arts college for three years and pursue an engineering degree at Case Western Reserve University for two years. Once requirements at both institutions are completed, students will receive a degree from the liberal arts college and a degree from Case Western Reserve University in a designated engineering discipline. For additional information, contact Debbie Fatica (http://bulletin.case.edu/undergraduates/programs/collaborativeprograms/mailto:dxf3@case.edu), 304 Nord Hall, 216.368.4449.
Undergraduate Criteria for Scholarship Retention

Undergraduate Criteria for Scholarship Retention

Students who are awarded scholarships based on academic achievement or potential by Case Western Reserve University are expected to perform at an appropriate academic level and maintain good conduct in the community. These scholarships will be automatically renewed each semester, provided that the student meets the retention criteria established for his or her scholarship at the time of the initial award. These retention criteria, as defined for students who matriculated at Case Western Reserve University prior to August 2011 and for students who matriculated at the university in August 2011 or later, are outlined on the following pages, along with information about the duration of these scholarships and the appeal process for students who fail to meet the established retention criteria.

Criteria for Scholarship Retention for Students Matriculating in August 2011 or Later

Full-Tuition (Andrew Squire, Albert W. Smith, Adelbert Alumni, Alexander Treuhaft, and Warren E. Rupp), University, Michelson-Morley STEM, and Bolton Scholarships

The academic records of scholarship recipients are ordinarily reviewed at the end of each semester. To have a scholarship renewed for the following semester, the student must be in good academic and disciplinary standing.

In exceptional cases, Academic Standing Board will continue a scholarship for a student whose achievement or whose attendance does not meet the standards outlined above. It is the student's responsibility to write to the Academic Standing Board, c/o the Office of Undergraduate Studies, within 7 business days of the end of the exam period each semester to request special consideration for continuation of a scholarship. This appeal should inform the committee of any special circumstances which may have affected performance and/or attendance during the preceding academic semester, provide any relevant documentation, and describe a plan for how academic performance will be improved in the future.

Students who lose their scholarships because of unsatisfactory academic or disciplinary standing will have their scholarships automatically reinstated at the start of the next semester if they return to good standing. However, students lose a semester of scholarship eligibility for each semester that they fail to achieve good standing; that is, students will not receive these scholarships while on probation or during their first semester back from an academic separation, and the maximum number of semesters for which they can receive their scholarships will be reduced.

Other Scholarships Awarded by Case Western Reserve University

Recipients of scholarships other than the ones listed above should refer to their scholarship award letter for specific scholarship retention criteria.

Duration

A student who meets the standards for scholarship retention may receive scholarship assistance for no more than eight semesters of full-time undergraduate study (less any semesters lost due to falling out of good academic or disciplinary standing, as described above). The scholarship is awarded for full-time enrollment in regular (fall and spring) semesters.

A scholarship recipient who does a complete withdrawal during a semester will have used up a semester of scholarship eligibility, but will be eligible to receive the scholarship again when he or she next enrolls, provided that his or her leave of absence does not last more than one semester (as described below). If a scholarship recipient completes a bachelor's degree in fewer than eight semesters of full-time study at Case Western Reserve University, the scholarship will be terminated upon completion of the degree.

In the eighth semester (or in the final semester for a student completing the bachelor's degree in fewer than eight semesters), a recipient may request permission for part-time enrollment with pro-rated scholarship support if completion of the degree does not require full-time enrollment in that final semester.

Semesters spent participating in the Cooperative Education Program or on a leave of absence are not counted against a student’s eight full-time semesters of scholarship eligibility.

Leave of Absence Policy

A scholarship recipient may take a one-semester leave of absence during the student's undergraduate career and put his/her scholarship “on hold” for reactivation upon the student’s return to Case Western Reserve University. Requests for a one semester leave of absence must be submitted in advance to the Office of Undergraduate Studies. Requests for leaves of absence longer than one semester must be submitted to the Academic Standing Board and will be reviewed on an individual basis.

A scholarship is automatically terminated upon a student’s transfer to another institution or upon permanent separation from the university.

Criteria for Scholarship Retention for Students Who Matriculated Prior to August 2011

Full-Tuition (Andrew Squire, Albert W. Smith, Adelbert Alumni, Alexander Treuhaft, and Warren E. Rupp), Trustees’, President’s, Provost’s, Dean’s, Faculty Honors, and Faculty Scholarships

The academic records of scholarship recipients are ordinarily reviewed at the end of each spring semester. To have a scholarship renewed for the following academic year, a recipient is expected to satisfy two requirements: a minimum number of hours earned after enrollment at Case Western Reserve University and a minimum cumulative scholarship grade point average**. The cumulative scholarship GPA requirement is 2.500 at the end of the first year and 3.000 at the end of each succeeding year. Scholarship recipients will be required to have earned at Case Western Reserve University at least 24 semester hours in the first year, 54 semester hours by the end of the second year, and 84 semester hours by the end of the third year.

Students participating in the Cooperative Education Program or taking a leave of absence or who completely withdraw from a semester will have
their scholarship reviewed based on an adjusted credit hour standard: first-year students will be expected to earn at least 12 semester hours and a 2.500 cumulative scholarship GPA while upper class students will be expected to earn 15 semester hours fewer than the expected credit hour criterion and a 3.000 cumulative scholarship GPA (e.g. a second year student will be expected to earn 39 hours as opposed to 54 hours).

Students who study abroad and for whom official overseas transcripts have not been received at the time of scholarship review will retain their scholarships provided that they meet the overall semester hours required when their records are complete or that they successfully complete a full courseload during study abroad as defined by the host institution.

**Scholarship Grade Point Average:** All courses completed for an evaluative grade at Case Western Reserve University are included in the computation of the scholarship GPA. The scholarship GPA matches the student's cumulative GPA unless the student has repeated a course. If a scholarship recipient has used the Course Repeat Option, both the original grade and the subsequent grade will be included in the computation of the cumulative average for the purpose of determining eligibility for scholarship continuation.

**Provost’s Special Scholarships**

Recipients of Provost’s Special Scholarships must maintain academic good standing to be eligible for continuation of their scholarships. Students who do a complete withdrawal for a semester will still have their scholarship reviewed on the basis of good academic standing.

**Other Scholarships Awarded by Case Western Reserve University**

Recipients of scholarships other than the ones listed above should refer to their scholarship award letter for specific scholarship retention criteria.

**Duration**

A student who meets the standards for scholarship retention may receive scholarship assistance for no more than eight semesters of full-time undergraduate study. The scholarship is awarded for full-time enrollment in regular (fall and spring) semesters. A scholarship recipient who does a complete withdrawal for a semester will lose that semester of scholarship eligibility. If a scholarship recipient completes a bachelor’s degree in fewer than eight semesters of full-time study at Case Western Reserve University, the scholarship will be terminated upon completion of the degree. In the eighth semester (or in the final semester for a student completing the bachelor’s degree in fewer than eight semesters), a recipient may request permission for part-time enrollment with pro-rated scholarship support if completion of the degree does not require full-time enrollment in that final semester.

**Leave of Absence Policy**

A scholarship recipient may take a one-semester leave of absence during the student’s undergraduate career and put his/her scholarship “on hold” for reactivation upon the student’s return to Case Western Reserve University. Requests for a one semester leave of absence must be submitted in advance to the Office of Undergraduate Studies. Requests for leaves of absence longer than one semester must be submitted to the Academic Standing Board, c/o the Office of Undergraduate Studies, and will be reviewed on an individual basis. The leave of absence policy does not apply to a student who transfers to another institution and subsequently returns to Case Western Reserve University.

**Scholarship Termination**

Once a scholarship has been terminated for failure to meet the retention standard, it cannot be reinstated unless reinstatement has been granted by the Academic Standing Board after review of an appeal. A scholarship is automatically terminated upon a student’s transfer to another institution.

**Appeal Process**

Evaluation of student records for scholarship renewal will take place at the end of each academic year, in June. In exceptional circumstances, the Academic Standing Board will continue a scholarship for a student whose achievement or whose attendance does not meet the standards outlined above. It is the student’s responsibility to write to the Academic Standing Board, c/o the Office of Undergraduate Studies, before June 1, to request special consideration for continuation of a scholarship. This appeal should inform the committee of any special circumstances which may have affected performance and/or attendance during the preceding academic year, provide any relevant documentation, and describe a plan for how academic performance will be improved in the future.
Undergraduate Experiential Learning

Experiential Learning

Case Western Reserve University offers undergraduates a variety of experiences inside and outside the classroom that are built on a process of guided inquiry, preparation, action and reflection. Many research, internship, and employment opportunities are aligned with academic programs. Linguistic and cultural immersion characterize the study abroad experience. Courses that incorporate community service or internships into the curriculum forge links between Case Western Reserve undergraduates and schools, neighborhoods, businesses, and governmental and health care institutions in Cleveland and elsewhere.

Course-Based Experiential Learning

In disciplines as diverse as psychology, journalism, engineering, Spanish, Russian, nursing, anthropology, history, and biology, Case Western Reserve students engage in experiential learning beyond the on-campus classrooms and laboratories. Experiences that form the basis for reflection and synthesis under the guidance of faculty include working with hospitalized children, designing engineering solutions for a problem presented by a municipality, interning at a local media outlet, tutoring in Cleveland’s Hispanic community, gaining experience in public health clinics, studying history with “the city as classroom,” or collecting aquatic specimens from the ponds at the university’s 389-acre farm.

International Experience

Undergraduate students who have completed at least 24 semester hours of coursework at Case Western Reserve University, have declared a major, and are in good academic and disciplinary standing, with no pending judicial actions, and are otherwise eligible to register on campus at Case Western Reserve University for the proposed semester(s) (no financial holds, e.g.) are eligible to participate in programs of study or practical experience that immerse them in the culture and language of another country. Up to 36 semester hours of credit may be granted for an approved program of study at a foreign university by enrollment as an exchange student at a university with which Case Western Reserve University has an agreement, by direct enrollment at a foreign university, or by enrollment in a foreign study program offered through an accredited American university or program provider.

Case Western Reserve does not require students to complete any foreign language prerequisites before studying abroad, though students wishing to study in a country where the native language is not English are advised to develop their language skills to the extent possible. However, students studying in a single location where English is not an official language for at least a semester must take a course that advances their skills in a language of the host country during each semester of study abroad, provided such courses are available; this may be a course of language instruction or a course taught in a language of the host country. Students participating in study abroad experiences that are comparative in nature and visit several sites with the same semester are not required to include language study in their academic programs.

Specific study abroad programs may have their own admissions guidelines that exceed these standards; students need to be accepted by those programs.

Students participating in study abroad pay tuition to Case Western Reserve University and maintain their student status during the period of study abroad. Case Western Reserve University will, in turn, pay the tuition costs for the student’s program, but the student will be responsible for all non-tuition costs associated with study abroad. Students eligible for financial aid continue their eligibility during study abroad.

In addition, some Case Western Reserve courses for undergraduates incorporate short-term overseas experience into the curriculum. Students are encouraged to seek such opportunities by contacting academic departments of interest.

Bilateral Exchange Programs

Case Western Reserve University has bilateral exchange agreements enabling students from overseas institutions to attend the University as visiting students and permitting Case Western Reserve undergraduates to receive academic credit for study at the following institutions:

- University of Lancaster, UK (all majors)
- University of Manchester, UK (humanities, social sciences)
- University of Sheffield, UK (all majors)
- University of Sydney, Australia (management, accounting, economics, sociology, political science)
- ESC de Montpellier, France (management, accounting)
- University of Frankfurt, Germany (management, accounting)
- Universidad Carlos III, Spain (management, economics)
- Bilkent University, Turkey (all majors)
- National University of Singapore (all majors)
- Chulalongkorn University, Thailand (engineering)
- Wuhan University, China (nursing)
- University of the Virgin Islands (nursing)

Information about bilateral exchange programs with other overseas universities is available from the study abroad advisor in the Office of International Affairs, Tomlinson Hall.

Global Engineering Exchange Program (GE3)

The Global Engineering Education Exchange (http://www.iie.org/programs/globe3) (GE3) program enables qualified engineering and computer science students to receive academic credit for courses taken at selected engineering institutions and universities in Europe, Asia, Mexico, and Australia, and to have an internship experience in a foreign setting. The program is administered by the Institute for International Education in collaboration with an international consortium of universities offering engineering programs that includes Case Western Reserve. Information about the GE3 program is available from the study abroad advisor in the Office of International Affairs, Tomlinson Hall.

Other Approved Study Abroad Programs

Opportunities exist for students to study abroad in almost all parts of the world through direct enrollment at leading foreign universities or by enrolling in a foreign study program offered through an accredited American university or program provider. In recent years, Case Western Reserve University undergraduates have studied in Argentina, Australia, Austria, Chile, Denmark, England, Finland, France, Germany, Ghana, India, Ireland, Israel, Italy, Japan, Kenya, Nepal, the Netherlands, New Zealand, Russia, Scotland, Senegal, South Africa, Spain and Sweden. The selection of location and institution for study abroad is made in consultation with the study abroad advisor in the Office of International Affairs, Tomlinson Hall.
Research Experience

Undergraduate Research

Case Western Reserve University is a research-intensive community with a historic tradition of involving undergraduates in research and creative endeavors. Regardless of a student’s major or academic interests, there are numerous opportunities to engage in research either on campus with Case Western Reserve faculty or elsewhere during both the academic year and the summer. The SOURCE (http://www.case.edu/provost/source) (Support of Undergraduate Research and Creative Endeavors) Office provides assistance to students in identifying research and creative project opportunities, provides funding for on-campus summer research and travel for students presenting their work at national conferences, and sponsors “Intersections: SOURCE Symposium and Poster Session” and Discussions, the University’s peer-reviewed undergraduate research journal. For more information, contact the SOURCE Director, Sheila Pedigo (http://bulletin.case.edu/undergraduatestudies/learningprograms/mailto:sheila.pedigo@case.edu), Sears 451, 216.368.8508.

In many cases, students pursuing research under the guidance of a faculty member may earn degree credit by registering for “Undergraduate Research” or “Independent Study” in the appropriate department. These are advanced-level courses and require departmental approval. However, students may not earn both degree credit and pay for the same work.

Work Experience

The Center for Civic Engagement and Learning

The Center for Civic Engagement and Learning (p. 601) connects students and the community through service. The center coordinates both curricular and co-curricular activities that promote learning through service to communities locally, nationally, and internationally. Service learning venues include academic course work, work-study positions, residence hall and Greek Life programs, the University Circle Literacy Corps, and weekly service opportunities.

The Center for Civic Engagement also offers regular, weekly and bi-monthly opportunities for community service through the Case SERVES projects; assists faculty and students in designing and implementing community-based courses and SAGES capstone projects; coordinates on-going volunteer and work-study tutoring; and schedules Days of Service for one-time community service projects.

Cooperative Education

Cooperative Education (Co-op) (http://engineering.case.edu/coop) is an academic program that enables students to alternate classroom studies with career based experiences in industry. It is a learning experience designed to integrate classroom theory with practical experience and professional develop. Co-op is a paid full time work experience designed to enhance the student’s education. Case co-op assignments are typically for two seven-month periods, each period consisting of a summer and a contiguous spring or fall semester. While participating in co-op, students maintain their full-time student status. This program is available to students pursuing degrees in engineering, accounting, management and all science majors except astronomy. For additional information, contact Ms. Mary Rose Tichar (http://bulletin.case.edu/undergraduatestudies/learningprograms/mailto:mrt2@case.edu), 304B Nord Hall, 216.368.4447.

Professional Practicum

Practicum (http://studentaffairs.case.edu/careers/jobs/practicums) is an experiential learning collaboration between a student, an employer, and the student’s practicum advisor (a faculty member), that is coordinated by the Career Center’s Experiential Learning Specialist. The program is open to undergraduate students enrolled in the College of Arts and Sciences and/or the Weatherhead School of Management. The primary goal of a practicum is the intellectual, personal and professional growth of the student. In order to ensure that this goal is achieved, the collaborators establish and agree upon learning objectives prior to the start of the practicum. These objectives are reviewed throughout the semester, and the student’s progress is evaluated at both the mid-point and end of the practicum.

While completing a practicum assignment, a student works full-time for a minimum of 14 weeks in a professional setting and does not take classes. The student will maintain full-time student status during the practicum period. Though credit is not awarded, students who successfully complete the practicum assignment will receive transcript notation. A student may participate in up to two practica, but it is recommended that at least one intervening semester be spent on campus. Students interested in participating in a practicum should contact the Career Center a semester prior to the intended practicum assignment.

Washington Study Program

The Washington Study Program (http://politicalscience.case.edu/undergraduate/washington-center-program) provides students with the opportunity to complete a full-time, research-intensive internship in Washington, D.C. By participating in a semester-length program during the fall or spring (WASH 2A (p. 440) Washington Center Internship), students earn 9 credit hours; for a summer internship (WASH 2D (p. 440) Washington Center Summer Internship), they earn 3 credit hours. In addition, students earn 3 credit hours by developing a portfolio based on their internship experiences (WASH 2C (p. 440) Washington Center Summer Internship). The credits earned can be counted as general electives or applied to a student’s major or minor, with the prior consent of the individual department(s). Finally, as part of the Washington Study Program, students participate in a seminar and attend a weekly lecture/discussion group (WASH 2B (p. 440) Washington Center - Politics and Public Policy Course).

To be eligible for the program, a student is expected to be a junior or senior and have at least a 3.000 GPA. The program director (Professor Kathryn Lavelle (http://bulletin.case.edu/undergraduatestudies/learningprograms/mailto:kathryn.lavelle@case.edu), 111 Mather House, 216.368.2691), the student’s major advisor, and the appropriate dean must approve each application. Students must ensure that their participation will not prevent them from meeting on-campus residency or other university requirements.
Undergraduate General Degree Requirements

Case Western Reserve University offers a broad range of programs in the liberal arts and sciences, engineering, management, accountancy, and nursing leading to the Bachelor of Arts (BA) and the Bachelor of Science (BS) degrees. These programs provide depth through concentrated study in a major field, breadth through the fulfillment of general education or core curriculum requirements, and open electives.

The BA is available in more than forty fields in the humanities and arts, the social and behavioral sciences, and the natural sciences and mathematics. In addition, BS programs are offered in accounting, management, the natural sciences, mathematics, computer science, statistics, nutrition, art education, music education, and nursing. The BS in Engineering is available in twelve major fields.

The Bachelor of Music (BM) degree is offered through the Joint Program in Music of Case Western Reserve University and the Cleveland Institute of Music. Students who are candidates for the BM enroll in the Cleveland Institute of Music.

General Requirements for all Bachelor’s Degrees

The bachelor’s degree programs require students to study one field in depth (the major) and to complete general education requirements or a core curriculum as appropriate to the major field and degree program selected. There is overlap among core curricula and general education requirements, which allows students flexibility in the choice of majors and degree programs.

Every candidate for a baccalaureate degree from the university must:

1. complete a foundation curriculum (core curriculum or general education requirements), as specified for the degree sought, that incorporates the requirements of the Seminar Approach to General Education and Scholarship (SAGES);
2. complete two semesters of physical education. This is completed through a combination of half and/or full semesters in Physical Education activity courses;
3. complete a course of studies with a cumulative grade point average of no less than 2.00 for work taken at Case Western Reserve University; and
4. earn in residence at Case Western Reserve University a minimum of 60 semester hours, of which at least 30 must be earned after the student achieves senior status.

There are four foundation curricula that incorporate the SAGES requirements:

1. Arts and Sciences General Education Requirements, required for the Bachelor of Arts (BA) and the following Bachelor of Science (BS) degrees: applied mathematics, art education, astronomy, biochemistry, biology, chemistry, geological sciences, mathematics, mathematics and physics, music education, nutrition, nutritional biochemistry and metabolism, physics, statistics, and systems biology.
2. Engineering Core Curriculum, required for the Bachelor of Science in Engineering (BSE) degree and, with specific course exceptions, for the Bachelor of Science (BS) degree in computer science.
3. School of Nursing General Education Requirements, required for the Bachelor of Science in Nursing (BSN) degree.
4. Weatherhead School of Management General Education Requirements, required for the Bachelor of Science (BS) degree in accounting, and in management.

SAGES

The Seminar Approach to General Education and Scholarship (SAGES) provides a foundation in critical thinking, written and oral communication, the use of information, quantitative reasoning, engagement with ethical issues and diversity, and exposure to experimental and theoretical approaches to understanding human culture and behavior, scientific knowledge, and methods of research through the following:

1. First Seminar, taken in the first semester, introduces students to the seminar format through reading, discussion, and intensive writing, and incorporates activities with University Circle institutions. First Seminar will be selected from offerings in the Life of the Mind, the Natural World, the Social World, or the Symbolic World.

*Transfer Students only: Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC 100-TR (3 – 6 semester hours) and will be required to complete a supplemental 1-semester-hour SAGES introductory seminar – FSTS 100 SAGES Transfer Supplement.

2. Two University Seminars, taken after the First Seminar and before the end of the student’s second year, and selected from seminars that address specific topics that fall under broad themes: Thinking About the Social World, Thinking About the Symbolic World, Thinking About the Natural World.

3. Writing Portfolio, comprising writing assignments selected from the First Seminar and University Seminars. The Writing Portfolio is submitted for evaluation after completing the final University Seminar.

4. Department Seminar, generally taken in the junior year in the student’s major field, that focuses on discipline-specific methods and modes of inquiry and communication.

5. Senior Capstone, a one- or two-semester capstone project integrating the knowledge, initiative, problem-solving skills, and powers of communication developed by the student. Substantial writing and a final public presentation are required.

Information about specific department seminars and capstones is available from department academic representatives and on the searchable schedule of classes on the University Registrar’s website (http://www.case.edu/registrar).

Requirements for Specific Degrees

Students are expected to complete a bachelor’s degree in a timely fashion and will ordinarily be subject to the degree requirements in place at the time of matriculation at Case Western Reserve University, although they may choose to update their requirements to those included in a later General Bulletin.

If a student extends study towards a bachelor’s degree beyond 10 years after first matriculating as an undergraduate student, the major-field department(s) will review the student’s academic record and may update major field requirements. Also, if the student has not already completed the applicable general education requirements in place at the time of matriculation, the appropriate dean in the school offering the major will also review the student’s academic record and may update general education requirements.
Dual Undergraduate Degree Programs

To qualify for two undergraduate degrees, i.e., a BA and a BS degree, or two BS degrees, a student must satisfy all requirements for each degree, and complete for the second degree thirty semester hours of study beyond the hours required for the first degree. A student may, however, complete two or more Arts and Sciences majors within the 120 hour minimum requirement for the BA degree or two or more Engineering majors within the 128-133 hour minimum requirement for the BS in Engineering degree. Students who seek a dual-degree program that involves the BM must meet Cleveland Institute of Music and Case Western Reserve admission requirements, and seek approval of both the Cleveland Institute of Music and Case Western Reserve University.

Students completing both a BA and a BS degree are exempted from six hours of the 90-hour arts and sciences requirement for the BA.

A student pursuing two degrees is encouraged to meet with a dean in the Office of Undergraduate Studies, 357 Sears Bldg., to discuss requirements.
Undergraduate Grades

Grades

Grades at Case Western Reserve University are issued on the following scale with good standing based on the Academic Standing Regulations presented in the section on Academic Policies and Procedures and the requirement of a 2.000 average for graduation. Academic averages are computed by dividing the number of quality points earned by the number of hours completed, excluding transfer credit, credit based on examinations (AP, IB, proficiency, etc.), and courses graded P/NP.

<table>

Grade of Incomplete

Assignment of the Incomplete Grade:
The Incomplete grade (I) is assigned by and at the discretion of the instructor when a) there are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justify an extension of time beyond the requirements established for and met by other students in the class, and b) the student has been passing the course and only a small segment of the course, such as a term paper, remains to be completed. It is the student's responsibility to notify the instructor of the circumstances preventing completion of all assigned work. In the absence of notification or adequate justification, the instructor has the authority to assign the student a final grade that assumes a failing grade for the missing work. An Incomplete grade should not be assigned a) when a student has been absent for much of the semester and/or has done little of the work required for a course, or b) because a student is absent from a final examination, unless the dean of undergraduate studies has authorized the grade.

The amount of additional time allowed the student to make up incomplete work should serve to accommodate the student while being fair to other students in the course. It should be proportional to the duration of a student's illness or absence and might be no more than a few days or weeks. At the extreme, it should not extend past the eleventh week of the session following the one in which the Incomplete grade was received. In certain cases (such as students on probation) the dean of undergraduate studies may establish an earlier date for completion of courses with Incomplete grades.

Changing the Incomplete Grade:
When the student has completed the required work, the instructor shall enter in the Student Information System a final evaluative grade to replace the Incomplete. When a student fails to submit the work required for removing the Incomplete by the date established, the instructor shall enter a final grade that assumes a failing performance for the missing work. In the absence of the assignment of a grade by the instructor, the Registrar will convert the I to F when the deadline for making up Incomplete grades from a previous semester has passed.

Audit
See section on Academic Policies and Procedures

Pass/No Pass

Undergraduate students (degree candidates and non-degree students enrolled at the undergraduate level), other than students participating in the Pre-College Scholars program, may elect to take one course each fall and spring semester on a Pass/No Pass grading basis, provided they remain enrolled in at least 3 semester hours of courses for regular evaluative grades. Enrollment in courses that are graded on a Pass/No Pass basis (e.g., PHED 55A Cardio-Fitness (First Half)) does not preclude a student's use of the Pass/No Pass option in another courses taken that same term. The Pass/No Pass option is not available during the summer session or to undergraduate degree candidates enrolled at the graduate or professional levels through the IGS program or Senior Year in Professional Studies.

Instructors are not notified of a student’s use of this option. They submit evaluative grades for all students and these are converted to Pass/No Pass in the Registrar’s Office. Courses elected on a Pass/No Pass basis and completed with a grade of D or higher will be entered with the grade P on the student's transcript. Courses taken Pass/No Pass for which a grade of F is earned will have NP entered on the transcript. Students who earn a P grade will earn credit for the course, while those who earn NP will not. Grades of P and NP are not included in computing the grade point average.

Students may submit an on-line Pass/No Pass Option form at any time in the fall or spring semester after the end of the drop/add period and before 5:00 p.m. on the day of the course withdrawal deadline for that semester (currently the 11th Friday of the semester for upperclass students, including new transfer students; and the last day of classes for first year students).

Use of the Pass/No Pass option is subject to the following restrictions:
1. All courses to be counted toward major, minor, or SAGES/general education/core requirements must be taken for regular evaluative grades. If a student opts for the Pass/No Pass option in a course, that course will not be counted toward any of these requirements.
2. Students majoring in any Weatherhead School of Management major (accounting or management) may not use the Pass/No Pass option for any Weatherhead School of Management courses (ACCT, BAFI, BLAW, ENTP, LHRP, MGMT, MIDS, MKMR, OPMT, ORBH, OPRE, PLCY), either required or elective.

Students who earn a P grade will earn credit for the course. If a student opts for the Pass/No Pass option in a course, that course will not be counted toward any of the requirements.
3. The Pass/No Pass Option cannot be used for courses that are being repeated.

4. A decision to use the Pass/No Pass option is irrevocable unless the student needs that course to complete requirements for a major or minor declared in a subsequent semester. In that event, the student may request that the Office of Undergraduate Studies reveal the grade on the transcript at the start of the student’s final term at Case Western Reserve University.

Course Repetition
See section on Academic Policies and Procedures.

Grade Reports and Transcripts
Students may view their grades on the Student Information System (https://sis.case.edu/psp/saprd/EMPLOYEE/PSFT_HR/c/CW_SR_MENU.CW_CONFID_AGREEMNT.GBL?). Students can request official copies of their transcripts (http://www.case.edu/registrar/transcripts.html) from the Registrar’s Office. The University considers the grades earned by a student and other information about the student’s performance at the University confidential and will release such information only upon written request by the student. Transcripts will not be issued to or on behalf of students who have not discharged all obligations to the University.

Midterm Grades
Midterm grades are assigned in undergraduate courses at the end of the eighth week of each semester. The purpose of midterm grades is advisory; the grades are not part of a student’s official academic record or transcript. At midterm, an instructor may assign to undergraduates evaluative letter grades (A, B, C, D, or F) or grades to indicate satisfactory (S) or unsatisfactory (U). (S and U may not be assigned as final course grades in undergraduate courses). Students may view their midterm grades on the Student Information System (https://sis.case.edu/psp/saprd/EMPLOYEE/PSFT_HR/c/CW_SR_MENU.CW_CONFID_AGREEMNT.GBL?). Students who have any low or unreported midterm grades should discuss their progress with their instructors and with their advisors.
Undergraduate Honors and Awards

Dean's Honor Lists
The Dean's Honor Lists consist of the names of those undergraduate students who have distinguished themselves by achieving during the previous semester the grade point averages required with a minimum of 12 hours earned and who have no Fs or NPs, during the same period. Students with a grade point average of 3.750 or higher will be placed on the Dean's High Honors List. Students with a grade point average of at least 3.500 but less than 3.750 will be placed on the Dean’s Honors List. Students whose records include Incompletes become eligible for the Dean’s Honor Lists once all Incompletes have been converted to final grades. Having earned a place on the Dean’s Honors List or Dean’s High Honors List is noted on the transcript.

Commencement Honors
Commencement Honors are awarded to the top 35 per cent of the graduating class.

- Top 10 per cent: summa cum laude
- Next 10 per cent: magna cum laude
- Next 15 per cent: cum laude

The specific GPA cutoffs are determined each year after the awarding of August degrees on the basis of the GPAs of students who graduated over the past five years. These cutoffs are then applied to degrees awarded in the following January, May, and August.

To be eligible for commencement honors, candidates must have:
1. Earned a minimum of 54 hours for evaluative grades (A, B, C, D) in residence at the university.
2. Attained the required percentile ranking on the basis of all work for which grades are averaged at the university, including any grades earned before an academic separation.

Honors in the Major
Some majors offer outstanding students the opportunity to complete an honors program. Students who participate in an honors program in the major and satisfy the requirements for such a distinction, as specified by the major, may qualify to receive the degree “with honors in the major.” The academic representative for the major can provide information regarding requirements for graduation with honors in the major.

Phi Beta Kappa
Phi Beta Kappa, a national honor society, recognizes outstanding scholarship in the arts and sciences. The Alpha Chapter of Ohio, established in Western Reserve College in 1847, was one of the first ten established nationally. Students may qualify for election to membership in the second semester of the senior year. A few outstanding students may be elected to membership as juniors.

Tau Beta Pi
Tau Beta Pi is a national honor society that recognizes full-time engineering students for outstanding scholarship, leadership, and service.

Mortar Board
Mortar Board is a national honor society that recognizes full-time senior students for outstanding scholarship, leadership, and service.

Fellowships and Scholarships
Outstanding students may obtain information about national competitive scholarships (Goldwater, Truman, Rhodes, etc.) in the Office of Undergraduate Studies, 357 Sear Building.

Departmental and Collegiate Awards
At honors assemblies at the end of each spring semester, the university presents awards recognizing the outstanding achievement of individual students. The departmental awards are based on achievement in specific academic disciplines. Some of the departmental and collegiate awards are based on a combination of leadership, scholarship, and service. The collegiate awards for students with the best academic records take into account credit load, grades, and the proportion of courses taken for evaluative grades (i.e., not taken Pass/No Pass).

Accountancy
- The Apple Growth Partners Scholarship Award
- The Beta Alpha Psi Award for excellence in accounting
- The Beta Alpha Psi Scholars Recognition Award for outstanding scholarship among members of the Pi Chapter
- The Andrew D. Braden Award for Excellence in Auditing and Financial Reporting Studies
- The Cashy Family Scholarship Award
- The Cohen & Co./Beta Alpha Psi Leadership Award
- The Dean's Award in Accounting
- The Dean’s Award in Accounting/The Deloitte Award to an outstanding junior majoring in Accounting
- The Department of Accountancy Academic Achievement Award
- The Thomas Dickerson Award for Excellence in Professional Accountancy Studies
- The Accounting Achievement Award/Ernst and Young Award
- The Louis E. Levy Scholars in Accountancy
- The Ohio Society of Certified Public Accountants Cleveland Endowment Scholarship
- Saltz, Shamis & Goldfarb/SS&G Scholarship Award
- The Dean's Award in Accounting/Skoda, Minotti & Company Award for an outstanding underclassman
- The Wallach-Lee Families Scholarship Award

Anthropology
- The Callender Memorial Award for outstanding achievement in anthropology
- The James Dysart Magee Award for the senior year to an outstanding student in social and behavioral sciences
- The Jonathan F. Plimpton Award to a graduating senior for outstanding achievement in anthropology
- The Ruth and Newbell Niles Puckett Award to a graduating senior for outstanding achievement in anthropology

Art History
- The Muriel S. Butkin Art History Prize for overall best performance and highest grade point average by an undergraduate art history major
- The Noah L. Butkin Award for the best term paper on an art history topic written by an undergraduate
- Friends of Art Prize awarded to an undergraduate senior art history major for distinction in the field of art history
Art Studio
• The Charles E. Clemens Prize for outstanding talent and accomplishment in art
• The William Grauer Award for excellence in art studio courses
• The Doris Young Hartsook Prize for excellence in art education
• The Hazel Gibbs Herbruck Prize for excellence in art education
• The Kennedy Prize for creative work in art
• The Arnold Philip Award for excellence in art

Astronomy
• The Jason J. Nassau Prize to an outstanding senior student in astronomy

Biochemistry
• The Merton F. Utter Prize to a candidate for the BA majoring in biochemistry for outstanding achievement
• The Harland G. Wood Prize for outstanding performance by a graduating senior majoring in biochemistry who is a candidate for the BS in Biochemistry

Biology
• The Daniel Burke Prize for excellence in both biology and chemistry
• The Francis Hobart Herrick Prize for outstanding biological research and academic excellence in biology
• The Russell M. Lawall Prize in Biological Sciences for excellence in biology
• The Flora Stone Mather Alumnae Award in Biology for outstanding academic performance in biology
• The Carl F. Prutton Chemical Engineering Award to the senior whose academic performance merits his or her selection as outstanding.
• The William H. Schuette Memorial Award to an outstanding senior in chemical engineering
• The A. W. Smith Prize to a senior for academic achievement in chemical engineering in the junior and senior years
• Outstanding Sophomore Student in Chemical Engineering

Chemical Engineering
• The Monroe J. Bahnsen Award to a senior for achievement in chemical engineering whose work in design and research projects has been outstanding.
• The Connie Ilcin Award to the student who exhibits outstanding performance in chemical engineering
• The Carl F. Prutton Chemical Engineering Award to the senior whose academic performance merits his or her selection as outstanding.
• The William H. Schuette Memorial Award to an outstanding senior in chemical engineering
• The A. W. Smith Prize to a senior for academic achievement in chemical engineering in the junior and senior years

Biomedical Engineering
• The Jose Ricardo Alcala Memorial Award for biomedical engineering research
• The Mark Bernstein Memorial Award to a senior biomedical engineering major for outstanding achievement in academics and leadership, contributions to research, and service to the university, department or community
• The Biomedical Engineering Chairman’s Award for outstanding academic achievement and service to the biomedical engineering community
• The Biomedical Engineering Faculty Award for outstanding academic achievement, and service to the biomedical engineering community
• The Biomedical Engineering Research and Engineering Award for outstanding performance in biomedical engineering research combined with outstanding academic achievement
• The Biomedical Engineering Scholarship Award
• The Cristina A. Camardo Award to a biomedical engineering student in recognition of his or her leadership and service within the university community
• The Srinivasa (Vasu) P. Gutti Chairman’s Award to a biomedical engineering student for outstanding scholarship and leadership in biomedical engineering
• Outstanding Senior Project Presentation Award
• Outstanding Undergraduate Teaching Assistant Award
• The Gheorghe and Claudia Mateescu Award for Research in Imaging
• The J. Thomas Mortimer Cooperative Education Award

Civil Engineering
• The Kenneth M. Haber Award to the outstanding senior in civil engineering
• The Roy Harley Prize to a promising senior or graduate student in civil engineering
• The Craig J. Miller Memorial Award to a student who has shown outstanding academic achievement
• The Allison C. Neff Memorial Award in recognition of high proficiency in professional studies and participation in professional activities to a junior whose major field is civil engineering
• The Richard and Opal Vanderhoof Award to an outstanding senior in civil engineering

Classics
• The Crawford Summer Scholarship to the American School of Classical Studies in Athens
• The Abraham Lincoln Fuller Prizes for excellence in the study of Greek or Latin
• The Emma Maud Perkins Prize for excellence in classical studies

Cognitive Science
• The Cognitive Science Award to the graduating senior for outstanding academic achievement in cognitive science
• The Award in Cognition and Culture

Dance
• The Lily Dreyfuss Memorial Award for excellence in dance
• The Bradford W. Petot Award for Excellence in Dance for a non-major

Earth, Environmental and Planetary Sciences
• The Charles S. Bacon Award for outstanding contributions to the Department of Geological Sciences
• The Philip O. Banks Award for outstanding academic achievement in geological sciences
• The Carol W. Walker Award for an outstanding senior project in the Department of Geological Sciences

Economics
• The Robert N. Baird Award for academic excellence and leadership in extracurricular activities
• The Marvin J. Barloon Book Award for outstanding performance in economics
• The Dean’s Achievement Award for scholarship and leadership in economics
• The Gardiner Scholarship to a junior majoring in economics and also interested in finance
• The H. W. Kniesner Prize to an outstanding senior in economics
• The James Dysart Magee Award to an outstanding student in economics for the senior year
• The Howard T. McMyler Award to an outstanding student majoring in economics

Electrical Engineering and Computer Science
• The ACM Award to the senior judged by the student chapter of the Association for Computing Machinery most likely to have an outstanding professional career
• The Chairman’s Award to a student in the Department of Electrical Engineering and Computer Science who shows exceptional academic or leadership potential
• The Donald P. Eckman Award to the outstanding senior in systems and control engineering
• The Electrical Engineering and Computer Science Award for the best senior project in electrical and computer engineering
• The Senior Project Award in Systems and Control Engineering
• The Best Senior Project Award
• The Electrical Engineering Service Award to the senior performing outstanding service to his or her class
• The IEEE/HKN Award to the senior judged by the student chapters of the Institute of Electrical and Electronics Engineers and Eta Kappa Nu to possess the qualities necessary for an outstanding professional career in a general field of electrical engineering
• The National Electrical Engineering Consortium William L. Everitt Award to a student who has excelled academically in communications or computers
• The Andrew R. Jennings Award to a senior for excellence in Computer Engineering and Sciences
• The Carolyn J. and John A. Massie ’66 Prize for Computer Engineering and Science awarded to the outstanding junior in computer engineering and science with exceptional research and leadership potential
• The Carolyn J. and John A. Massie ’66 Prize for Computer Engineering and Science awarded to the outstanding sophomore in computer engineering and science with exceptional research and leadership potential
• The W. Bruce Johnson Award to a senior for an outstanding project in the area of electrical sciences and applied physics
• The EECS Research Award to the senior demonstrating exceptional research potential
• The Undergraduate Alumni Capital Award in Systems and Control Engineering to a senior for academic excellence and professional promise.

Engineering
• First Robotics Scholarship

English
• The Charles E. Clemens Award for talent and accomplishment in writing
• The Finley Foster/Emily M. Hills Poetry Prize for the best poem or group of poems
• The Emily M. Hills Award for the best poem or essay written by a woman in the College of Arts and Sciences
• The Holden Prize for the best English paper written by an upperclass student
• The Kennedy Prize for creative work in English
• The Edith Garber Krotinger Prize for excellence in creative writing
• The Karl Lemmerman Prize for the best paper by a first-year student
• The Eleanor Leuser Award for outstanding writing for or about children by a student enrolled in a creative writing course at the university
• The Nemet Scholarships for the demonstration of excellence in creative writing
• The Harriet Pelton Perkins Prize to an outstanding student majoring in English
• The Helen B. Sharnoff Award for formal poetry submitted by undergraduate students

Environmental Studies
• The Henry David Thoreau Award for an outstanding senior in environmental studies

History
• The Donald Grove Barnes Award to a senior for excellence in history
• The Clarence H. Cramer Award for excellence in research and writing of history
• The Annie Spencer Cutter Prize to a senior for outstanding achievement in history
• The History Department Award for outstanding achievement in history
• The Sigma Psi Prize for excellence in history
• The John Hall Stewart Prize for excellence in historical studies

Judaic Studies
• The Ira and Ruth Bressler Prize to a student who has done outstanding work in the area of Jewish studies
• The Eudese and Elmer Paull Prize to one or several undergraduate or graduate students who demonstrate an interest in Jewish studies or Jewish contemporary life

Macromolecular Science and Engineering
• The Hal Loranger Award to the outstanding senior in polymer science
• The Samuel Maron Memorial Award to an undergraduate for excellence in polymer research

Management
• The Robert O. Berger Jr. Award to a junior who demonstrates overall achievement in scholarship, as well as notable community participation and leadership
• The Nellie Chittenden Carlton Prize to a senior in management whose outstanding work in the general field of economics shows the greater promise
• The Dean's Achievement Award for excellence in scholarship and leadership in management
• The Excellence in Finance Award
• The Excellence in Marketing Award
• The Outstanding Marketing Student Award
• The Roulston Performance Award for outstanding performance in management
• The Kevin J. Semelsberger Prize for excellence in management
• The Iris Wolstein Award for Excellence in Business Venture History to a student whose work on projects and/or course work related to the study of Cleveland business venture history is determined to have made a significant contribution to the understanding of the business development in Northeast Ohio and related environs
• The Wolstein Family Award for Excellence in Business Venture Plan Development to a student enrolled in a major or minor in Weatherhead undergraduate programs whose business venture development plan is considered to have the highest promise to be successfully initiated

Materials Science and Engineering
• The Wesley P. Sykes Prize to a senior majoring in materials science and engineering who shows outstanding ability in scientific research, especially as evidenced by the quality of his or her senior project.
• The Professor Jack F. Wallace Award to the materials science and engineering student who embodies the dedication and spirit of Professor Wallace

Mathematics
• The Case Alumni Award to an outstanding senior mathematics major
• The Chair’s Award to a student contributing to the intellectual life of the majors program
• The Max Morris Prize to an outstanding undergraduate student in mathematics who is pursuing the BS degree.
• The Webster Godman Simon Mathematics Award to a sophomore or junior pursuing a BA degree, for excellence in mathematics

Mechanical and Aerospace Engineering
• The Robert and Leona Garwin Prize to a student who has demonstrated theoretical scientific ability with experimental competence and inventive talent
• The Gustav Kuerti Award to the senior in mechanical and aerospace engineering who has demonstrated the highest level of scholarship
• The Anish Shah '91 Award to an outstanding senior in mechanical and aerospace engineering based on academic achievement, extracurricular activities, and community service
• The Fred Hale Vose Prize to the senior in mechanical engineering who has demonstrated the greatest promise for professional leadership

Modern Languages and Literatures
• The Arabic Book Prize for high achievement in Arabic
• The Louise Burke French Prize to an outstanding French student
• The Chinese Book Prize for high achievement in Chinese
• The Susie Scott Christopher Prize for excellent contributions to the French program
• The Department of Modern Languages and Literatures Award for outstanding achievement
• The Emile B. deSauze Award for attaining the highest honors in modern languages and literatures
• The Folberth German Prize for excellence in German language and literature
• The French Book Prize for high achievement in French
• The German Book Prize for high achievement in German
• The Hebrew Book Prize for high achievement in Hebrew
• The Italian Book Prize for high achievement in Italian
• The Japanese Book Prize for high achievement in Japanese
• The Max Kade Excellence in German Award
• The Florence Keuerleber Prize to an undergraduate student who has seriously pursued and excelled in the study of a modern language while majoring in another area
• The Russian Book Prize for high achievement in Russian
• The Spanish Book Prize for high achievement in Spanish

Music
• The Arthur H. Benade Prize to a senior with a major other than music who has made a notable contribution to music on campus during his or her undergraduate years
• The Charles E. Clemens Prize for talent and accomplishment in music
• The Doris Young Hartsock Prize for outstanding performance in music education
• The Kennedy Prize for creative work in music
• The Lyman Piano Award
• The Joan Terr Ronis Recital Prize to an outstanding undergraduate majoring in music who has made an exceptional contribution to the musical life of the University

Nursing
• The Bolton Scholar Award for Excellence in Acute Care Nursing
• The Bolton Scholar Award for Excellence in Community Health Nursing
• The Bolton Scholar Award for Excellence in Critical Care Nursing
• The Bolton Scholar Award for Excellence in Gerontology
• The Bolton Scholar Award for Excellence in Maternal-Child Nursing
• The Bolton Scholar Award for Excellence in Nursing Informatics
• The Bolton Scholar Award for Excellence in Pediatric Nursing
• The Bolton Scholar Award for Excellence in Psychiatric/Mental Health Nursing

Nutrition
• The Mary Eliza Parker Award for excellence in nutrition and dietetics

Philosophy
• The Truman P. Handy Philosophical Prizes to outstanding juniors or seniors for excellence in philosophy

Physical Education
• The Emily Russell Andrews Award to the senior woman who makes the greatest contribution to the physical education department through scholarship, leadership, participation, and service
• The Philip K. “Nip” Heim Award to the senior man who makes the most outstanding contribution to Case Western Reserve University through the athletic program
• The Dorothy L. Hoza Award to the outstanding freshman, sophomore or junior who has made a strong contribution to the department and university
• The Patricia B. Kilpatrick Award to the four-year varsity participant with the highest grade point average
• The Arthur P. Leary Award to the outstanding first-, second- or third-year student who has demonstrated leadership, good sportsmanship, maintained good academic standing, and made contributions to the department and university

Physics
• The B.S. Chandrasekhar Prize awarded upon completion of the junior year to a physics major who has demonstrated superior performance
• The Leslie L. Foldy Award to the outstanding senior in physics
• The Dayton C. Miller Award to an outstanding senior in physics for the best thesis
• The Elmer C. Stewart Memorial Award to an outstanding senior in Physics who has demonstrated achievement in the applications of physics
• The Senior Award for service and scholarship in physics

Political Science
• The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
• The Flora Stone Mather Alumnae Award for outstanding academic performance in political science

Psychological Sciences
• The Stephen Bednarik Memorial Award to an outstanding senior majoring in psychology
• The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
• The Professor Edwin P. Hollander, Adelbert 1948, and Mrs. Patricia A. Hollander Capstone Research Award
• The Flora Stone Mather Alumnae Award for outstanding academic performance in psychology
• The National Student Speech-Language-Hearing Association Award for outstanding leadership and achievement in communication sciences

Religious Studies
• The Ratner Family Prize to a graduating senior for the highest academic achievement in the study of religion

Sociology
• The Stella Berkeley-Friedman Award to a graduating senior for the highest academic achievement in the study of sociology
• The Robert C. Davis Award for demonstrated commitment to sociological studies
• The Mark Lefton Award for excellence in sociological studies
• The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
• The Schermerhorn Award for an outstanding student in sociology

Theater
• The Dionysus Award for an outstanding contribution to theater for a student not majoring in theater arts
• The Barclay Leathem/Nadine Miles Award for creativity and general excellence in theater

Women’s and Gender Studies
• The George Sand Award in Women’s and Gender Studies to a graduating senior majoring or minoring in the field for excellence in academic performance
• The Sojourner Truth Award to an outstanding student who combines academic excellence in Women’s and Gender Studies with commitment to community service, advocacy of women’s and gender-related issues, and activism
• The Mary Wollstonecraft Award to a graduating senior majoring or minoring in the field for excellence in academic performance

Awards for Study Abroad
• The Brookes Friebohm Award to an outstanding student for study in France
• The Eva L. Pancost Memorial Fellowship for graduating senior women in the College of Arts and Sciences or women students in the School of Graduate Studies interested in extending their education by foreign travel or study
• The Alice Seagraves Award to outstanding students for study abroad

Collegiate Awards
• The Robert J. Adler Award to the senior student in the Case School of Engineering who, through high scholarship, technical creativity, and service to his or her peers, best exemplifies the ideals and talents of Professor Robert J. Adler
• The Bolton Scholar Award for Academic Excellence
• The Bolton Scholar Award for excellence in leadership and community service
• The Bolton Scholar Award for Excellence in Nursing for the student who has attained the highest academic record at the junior level
• The Bolton Scholar Award for Excellence in Nursing for the student who has attained the highest academic record at the sophomore level
• The Carol and Edward Breznyak G’64 Cooperative Education Student of the Year Award to a student in the Case School of Engineering who has demonstrated outstanding performance in the Cooperative Education Program based on industry evaluations, written reports and student initiative
• The Case Alumni Association Prize for Achievement to the senior with the best academic record in the Case School of Engineering
• The Case Western Reserve University Women’s Club Prize for a student completing an outstanding Capstone Project
• The Edward J. “Ted” Corcoran Award to a senior for outstanding leadership, character and service
• The Director’s Award for the Outstanding BSN Graduate
• The Russell A. Griffin Award to a senior in the College of Arts and Sciences who has made the most significant contribution to campus life
• The George T. Hunt Awards to a junior and a senior outstanding in leadership, scholarship, and service
• The Junior Award of the College of Arts and Sciences to juniors with the best academic records at the end of five semesters
• The Matthew Leskiewicz Award to a senior in the Weatherhead School of Management for outstanding leadership and service
• The Louis K. Levy Prize for an outstanding junior in the College of Arts and Sciences
• The P. G. “Jerry” Lind Award for a graduating senior in engineering or science who has made a significant contribution to campus life
• The Flora Stone Mather Alumnae Award for outstanding academic performance in the humanities
• The Outstanding Junior Awards of the Case School of Engineering to juniors with the best academic records at the end of five semesters in the Case School of Engineering
• The Outstanding Sophomore Awards of the Case School of Engineering to the sophomores with the best academic record at the end of three semesters in the Case School of Engineering
• The Phi Beta Kappa Prize to sophomores with the best academic records in a liberal arts curriculum after three semesters
• The Harriet Levion Pullman Award to a sophomore outstanding in scholarship, leadership, and service
• The John Schoff Millis Award to the senior with the best academic record in the College of Arts and Sciences
• The Sylvia Green Rosenberg Award to a part-time or full-time non-traditional student
• The Robert L. Shurter Prize to a senior for leadership in extracurricular activities in the 2009-2010 Award to an outstanding premedical student for the senior year
• The Joseph Skigin Memorial Award to an outstanding premedical student for the senior year
• The Kent H. Smith Award to an outstanding senior displaying extraordinary leadership, character, and scholarship in the Case School of Engineering
• The Stephanie Tubbs-Jones Award for significant contributions to campus life, scholarship and community service
• The Weatherhead School of Management Award to a senior, for outstanding achievement in the Weatherhead School of Management
• The Stanley E. Wertheim Prize for an outstanding junior in the Case School of Engineering who has demonstrated leadership skills through involvement in campus or co-op activities
• The Peter Witt Scholarship to a deserving student who demonstrates a vital and active interest in the improvement of life in Cleveland

**Major**

Available only as 2nd major for a BA; may be sole major for a BA student who also completes a BS.

### Minor

Minors are not required. Students have the option of completing a minor in a discipline other than the major. A minor concentration normally requires 15-18 semester hours and will be indicated on a student’s transcript if the following requirements are fulfilled:

**Major**

A program of ten or more courses (required)

**Minor**
1. A minor program shall consist of no fewer than 15 and no more than 18 semester hours of specified course work.

2. The responsibility for designating the requirements for a minor shall lie with the department or program offering the minor.

3. With the exception of minors offered by the Case School of Engineering, students must earn a minimum cumulative average of 2.000 for all courses taken to satisfy minor requirements and for which grades are averaged. Transfer students who wish to complete a minor must complete at Case Western Reserve University at least half the requirements for the minor.

**Foundation Curriculum**

For each degree/major a student must complete the foundation curriculum required for that degree/major:

- A&S - SAGES = based on College of Arts and Sciences - SAGES
- EC - SAGES = based on Case School of Engineering - SAGES CORE
- FPB - SAGES = based on FPB School of Nursing – SAGES
- WSOM - SAGES = based on Weatherhead School of Management - SAGES
Undergraduate Non Degree Students

Non-Degree Students

Transient (Visiting) Students

A transient student is one who has begun his or her education at another college or university and intends to return there. The university permits full- or part-time study as a transient student in the summer as well as during the fall and spring semesters. Enrollment must be for credit-bearing courses.

Applications for enrollment as a transient student may be obtained from the Office of Undergraduate Studies, 357 Sears Building. Before enrollment, the transient student must present a statement of good standing from the registrar of his or her home college. A degree candidate from another institution may not enroll as a transient student at Case Western Reserve University if the student would not be eligible to enroll for that semester at his or her home institution. Exceptions may be granted by appeal to the Academic Standing Board, c/o the Office of Undergraduate Studies.

Enrollment is limited to 30 semester hours and is subject to the regulations of the student’s college. Transient students must meet all requirements for prerequisites before being admitted to specific courses. Transient students are expected to perform at the same academic standards as degree candidates. In particular, transient students whose records would make them eligible for separation as degree candidates may not continue as transient students unless they successfully petition the Academic Standing Board.

Transient students are not eligible to receive financial aid from Case Western Reserve University. If the student’s home institution has entered into a consortium agreement with Case Western Reserve University, the student should inquire of the home institution regarding eligibility to receive aid through the home institution.

Non-Degree Students

Adults who do not already hold a bachelor’s degree may apply through the Office of Undergraduate Studies to enroll for credit in courses for which their education or experience has qualified them, even though they are not pursuing a baccalaureate degree. These non-degree students may study full- or part-time and enroll in the same classes as degree students. They are required to perform up to the same academic standards as degree students.

Non-degree students may be eligible for admission to candidacy for an undergraduate degree program if they meet the requirements for admission to the university. Courses taken for credit as a non-degree student may be applied toward the degree upon acceptance as a degree candidate. A non-degree student who wishes to become a degree candidate must apply through the Office of Undergraduate Admission.

Persons who already hold degrees and wish to continue their studies without actively pursuing an additional degree are welcome to apply to the School of Graduate Studies.

Pre-College Scholars

The Pre-College Scholars Program (http://www.cwru.edu/provost/ugstudies/precollege.htm) at Case Western Reserve University is designed to give highly motivated and able secondary school students the opportunity to enroll in challenging college courses prior to graduation from high school, either in the summer or during the academic year.

Admission to the Pre-College Scholars Program is selective and competitive. Case Western Reserve University has limited seats available for this program and preference is given to qualified juniors and seniors who have exhausted academic options at their high schools and who are looking for unique educational opportunities. Students must have pursued a rigorous curriculum and achieved academic excellence in all course work. Additional factors considered in admission are the applicant’s standardized test scores (ACT, PSAT, SAT, or other tests of aptitude and/or academic achievement), and the applicant’s academic goals and level of maturity. Pre-College Scholars attend regularly scheduled classes with undergraduate students at Case Western Reserve, and must be able to work well independently at the college level. Questions about the program should be directed to the Office of Undergraduate Studies at 216.368.2928.

Special Audit

The Special Audit Program provides the adult student with the opportunity to attend a regular university course as a serious but informal observer at half the regular tuition. This program is available only to those not enrolled in a degree program at Case Western Reserve University. Special audit students receive no grades and no academic credit for the courses attended. No transcripts will be issued, but a certificate of attendance will be provided if requested.

Registration for this program is handled by the Office of Undergraduate Studies. No transcripts are necessary to register.

Course Audit Program for Senior Citizens

Case Western Reserve University’s Course Audit Program for Senior Citizens (http://www.case.edu/provost/seniorauditprogram) (CAPSC) allows senior citizens (age 65 and older) to take on campus courses at a reduced tuition rate.
Weatherhead School of Management Undergraduate Degree Requirements

Bachelor of Science Degree
(Weatherhead School of Management)
Candidates for the Bachelor of Science in Accounting and the Bachelor of Science in Management degrees, in addition to meeting the general requirements for bachelor’s degrees as described above, must also complete the following requirements:

1. A minimum of 122 hours.
2. The Weatherhead School of Management SAGES General Education Requirements.
3. A minimum of 30 semester hours of courses at the 300-400 level.
4. The requirements for a major field as presented in this bulletin in the section devoted to each department or program. For all courses taken in the major department and for which grades are averaged, and for all courses taken to satisfy major requirements and for which grades are averaged, a candidate for a BS from the Weatherhead School of Management must earn a minimum cumulative average of 2.000. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields. Transfer students must complete at Case Western Reserve University at least half the hours required for the major.

Bachelor of Science degrees conferred by the Weatherhead School of Management are offered in the following fields:

- Accounting
- Management

SAGES General Education Requirements of the Weatherhead School of Management
The SAGES General Education Requirements of the Weatherhead School of Management are based upon the SAGES General Education Requirements of the College of Arts and Science, and provide a broad educational foundation for programs in accounting and management, leading to the Bachelor of Science degree.

SAGES is an innovative undergraduate experience designed to establish foundations for academic inquiry. Students fulfill their Weatherhead School of Management General Education Requirements with a sequence of specially developed seminars and selected courses. Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy general education requirements.

SAGES Program Seminars
The First Seminar*
(4 semester hours, to be taken in the first semester of enrollment)
The First Seminar focuses on the development of critical thinking and communication skills through the use of a variety of approaches, media, and perspectives to explore the human mind and the nature of inquiry.

This course is designed to strengthen writing and analytical skills while building a foundation in ethics, information literacy, and cultural diversity. Select from:
- First Seminar: Social World (FSSO 1xx)
- First Seminar: Natural World (FSNA 1xx)
- First Seminar: Symbolic World (FSSY 1xx)

- Transfer Students only: Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC 100-TR (3 – 6 semester hours) and will be required to complete a supplemental 1-semester hour SAGES introductory seminar – FSTS 100 SAGES Transfer Supplement.

University Seminars
(6 semester hours, minimum of two seminars, to be completed in the first two years of enrollment as specified below)
After completion of the First Seminar with a passing evaluative grade, students must complete two University Seminars chosen from different thematic groups; one of these may fall in the same thematic group as the student’s First Seminar. Each University Seminar explores one of three themes, with the content determined according to the interests of the faculty. University Seminars provide continued experience in critical reading, writing, and oral communication as well as information literacy, ethics, and cultural diversity. Select from:
- University Seminar: Thinking About the Natural World (USNA 2xx)
- University Seminar: Thinking About the Social World (USSO 2xx)
- University Seminar: Thinking About the Symbolic World (USSY 2xx)

University Composition Requirement
Students develop a Writing Portfolio comprised of final graded writing assignments from the First Seminar and University Seminars. The Writing Portfolio is submitted for evaluation after completing the final University seminar.

Department Seminar
(3 semester hours)
The Department Seminar includes seminar-based discussion as well as instruction and experience in the kinds of writing characteristic of the Department Seminar’s discipline. The Department Seminar may be taken in the department of the student’s major or in another department. A course used to fulfill the Department Seminar Requirement may not also be used to fulfill a Breadth Requirement. Most students pursuing a degree from the Weatherhead School of Management will take three one-credit MGMT 395 Advanced Seminar seminars to complete the Department Seminar requirement.

Senior Capstone
The Senior Capstone assimilates the knowledge and skills gained throughout the educational process. Students engage in a unique one or two semester experience designed in consultation with a faculty member. Each Senior Capstone must include key elements (3 – 6 semester hours):

1. Demonstration of critical thinking and writing skills;
2. Regular oversight by the Capstone advisor;
3. Periodic reporting of progress;
4. Regular writing (e.g. drafts, progress reports, critiques) throughout
   the project including a final written report which may be a thesis or
   equivalent document associated with the project or activity (e.g.,
   such pursuits as performance, experiment, live case analysis, or
   creative writing), as approved by the department of capstone origin;
   and

5. Oral reports including a final public presentation at the Senior
   Capstone Fair, a conference, a performance, a public lecture,
   a teaching presentation, or another setting, as approved by the
   department of capstone origin.

Courses meeting this requirement include the designation “Approved
SAGES Capstone” in their course descriptions. Some majors include and
specify a senior capstone.

**Physical Education**
(Must total 2 full semesters at zero credits)

Students choose from half-semester and full-semester course offerings to
be completed in the first year.

**Breadth Requirements**
(at least 27 semester hours – minimum of nine 3 or 4-semester hour
courses)

NOTE: Two courses used to fulfill requirements for the major may be
used also to fulfill the breadth requirements.

**Arts and Humanities**

Two 3- or 4-semester hour Arts and Humanities courses. Select from (6 –
8 semester hours):

- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)
- Dance (DANC)
- English (ENGL)
- French (FRCH)
- German (GRMN)
- Greek (GREK)
- Hebrew (HBRW)
- History (HSTY)
- Italian (ITAL)
- Japanese (JAPN)
- Latin (LATN)
- Music - General (MUGN)
- Music - History (MUHI)
- Music - Popular Music (MUPM)
- Music - Theory (MUTH)
- Philosophy (PHIL)
- Portuguese (PORT)
- Religion (RLGN)
- Russian (RUSN)
- Spanish (SPAN)
- Theater (THTR)
- World Literature (WLIT)

**Natural and Mathematical Sciences**

Physical Education and Athletics

The Department of Physical Education and Athletics (http://studentaffairs.case.edu/athletics/default.html) offers the student a variety of opportunities from challenging academic classes to vigorous recreational activities.

Case Western Reserve University sponsors 19 intercollegiate varsity sports. These are football, soccer, cross country, basketball, wrestling, swimming, baseball, tennis, and indoor and outdoor track for men and volleyball, basketball, swimming, indoor and outdoor track, tennis, cross country, soccer, and softball for women.

The Spartans are charter members of the University Athletic Association, (UAA), sharing the belief that academic excellence and athletic excellence are equally important. The UAA includes Brandeis University, Carnegie Mellon University, Emory University, New York University, University of Chicago, University of Rochester, and Washington University in St. Louis.

The department sponsors a variety of intramural and club sport activities, including archery, cheerleading, crew, cycling, fencing, ice hockey, lacrosse, kendo, kung fu, squash, table tennis, taekwondo, ultimate frisbee, and volleyball. Sport clubs are available to all students, faculty, and staff. Intramural competition is available in more than 40 activities, and more than one-half of undergraduates participate for relaxation, physical fitness, and a chance to improve skills.

Lifetime Sports Program

The department has designed an instructional program of modern activities and lifetime sports. Each semester, fifteen to twenty-five co-educational lifetime sports classes are offered.

Undergraduates have a one-year physical education requirement to be completed in the first year. Required classes, for zero credits, are offered for either half-semester or full-semester. First year students have first priority in electing PHED 010-199. Others who have completed the requirement may audit classes.

A number of popular, advanced lifetime sports activities are also offered for one hour of academic credit. Advanced skills, strategy, and coaching are taught (PHED 200-299).

Recreational Activities and Intercollegiate Athletics

The intramural program provides a continuous schedule of activities throughout the year. Individual and team sports are available to students in several divisions: university housing, fraternity, women, coed, graduate, and open. Intercollegiate varsity athletic competition is available in ten sports for men and nine sports for women.

(Northeastern University)
Instructor
Assistant Women’s Basketball Coach

James Cerullo, PhD
(University of Pittsburgh)
Instructor
Head Athletic Trainer

Mariana Cobra, MA
(Northern Illinois University)
Instructor
Assistant Women’s Tennis Coach

Tiffany Crooks, BS
(Ashland University)
Instructor
Head Women’s Soccer Coach

Greg Debeljak, MA
(John Carroll University)
Assistant Professor
Head Football Coach

David Diles, EdD
(University of Michigan)
Professor
Director of Athletics & Chair, Department of Physical Education and Athletics

Matthew Englander, BA
(The College of Wooster)
Instructor
Head Baseball Coach

Karen Farrell, MS
(University of Massachusetts at Amherst)
Assistant Professor
Head Women’s Volleyball Coach; Associate Athletic Director; Senior Woman Administrator

Jeff Gorski, BA
(Utica College)
Instructor
Assistant Men’s Basketball Coach

Mark Hawald, MBA
(John Carroll University)
Instructor
Head Wrestling Coach

Josie Henry, MA
(Minnesota State University)
Instructor
Head Fast Pitch Softball Coach

Kevin Kamlowsky
Instructor

Patrick Kennedy, MS
(University of Maryland)
Assistant Professor
Associate Athletic Director & Intramural and Club Sports Director

Kathy Lanese, BS
(Ohio University)
Instructor
Head Women’s Cross Country Coach and Assistant Men’s Track and Field Coach

Marcus Macalla, MA
(John Carroll University)
Assistant Professor
Assistant Head Football Coach

Sean McDonnell, MS
(LeMoyne College)
Assistant Professor
Head Men’s Basketball Coach

Doug Milliken, MS
(Indiana State University)
Instructor
Head Men’s and Women’s Swimming & Diving Coach

Dan Palmer, MA
(Northeastern Illinois University)
Assistant Professor
Head Men’s and Women’s Track Coach

Jennifer Reimer, MEd
(Bowling Green State University)
Instructor
Head Women’s Basketball Coach

Stephen Rubin, BA
(Emory University)
Instructor
Head Men’s and Women’s Track Coach

Jerry Schuplinski, MBA
(John Carroll University)
Instructor
Special Teams Coordinator/Linebackers, Football

Dereck Slesh, MBA
(Cleveland State University)
Assistant Professor
Offensive Coordinator, Football

Jessica White, MA
(Defiance College)
Instructor
Assistant Head Athletic Trainer

Todd Wojtkowski, MBA
(The Citadel)
Instructor
Head Men’s and Women’s Tennis Coach

Emily Wylam, MA
(University of the Pacific)
Instructor
Assistant Men’s & Women’s Swimming and Diving Coach

Courses

PHED 100. Independent Activity. 0 - 10 Units.
This course is designed to allow the student to write individual fitness goals, compose an individual fitness program specific to the goals and execute the individual program. Students are required to participate in a pre- and post-testing program and must achieve a minimum of 75% for each test component (national norms) in order to participate in Independent Activity. The course instructor must approve all programs. The student will be required to maintain a detailed activity log.

PHED 108. Fencing. 0 Units.
Fencing is the art of swordsmanship. Students will learn fencing skills such as on guard, lunge, attack, parry and touch. Students will learn the rules of competition and have the opportunity to compete during class time.

PHED 10A. Cardio Games (First Half). 0 Units.
Cardio Games emphasizes conditioning of the aerobic and anaerobic systems through fun and energetic games such as Ultimate Frisbee, Tag, Dodge Ball, Flicker Ball and more. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 10B. Cardio Games (Second Half). 0 Units.
Cardio Games emphasizes conditioning of the aerobic and anaerobic systems through fun and energetic games such as Ultimate Frisbee, Tag, Dodge Ball, Flicker Ball and more. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 111. Sport Orienteering/Rock Wall Climbing. 0 Units.
This course combines the sport of orienteering in which orienteers use a map and compass to locate points in the landscape and the activity of rock climbing.

PHED 11A. Jump Rope Training (First Half). 0 Units.
This class is designed to help students develop quickness, agility, balance, strength, power, and endurance through jump rope training. Students will learn rope-handling skills, jumping techniques and training routines to help supplement training for fitness and performance. Workouts and progressions are included for warm-up, cool-down, fitness components and sport-specific training. Prereq: Undergraduate degree seeking student.

PHED 11B. Jump Rope Training (Second Half). 0 Units.
This class is designed to help students develop quickness, agility, balance, strength, power, and endurance through jump rope training. Students will learn rope-handling skills, jumping techniques and training routines to help supplement training for fitness and performance. Workouts and progressions are included for warm-up, cool-down, fitness components and sport-specific training. Prereq: Undergraduate degree seeking student.

PHED 12A. Badminton (First Half). 0 Units.
This class provides the student with the basic skills, footwork and strategies necessary to play the sport of badminton. Emphasis is placed on skill development through instruction and drills as well as singles and doubles match play. This class is appropriate for all students. Students with special needs can be accommodated. Prereq: Undergraduate degree seeking student.
PHED 12B. Badminton (Second Half). 0 Units.
This class provides the student with the basic skills, footwork and strategies necessary to play the sport of badminton. Emphasis is placed on skill development through instruction and drills as well as singles and doubles match play. This class is appropriate for all students. Students with special needs can be accommodated. Prereq: Undergraduate degree seeking student.

PHED 130. Wellness. 0 Units.
This lecture class teaches the components of physical fitness as well as evaluation techniques, fitness assessment, body composition, nutrition and weight control information. This class is appropriate for all students.

PHED 131. Personal Fitness. 0 Units.
Personal Fitness is a full semester class that teaches the components of physical fitness through both lecture and activity. Students will assess their fitness levels and learn conditioning activities to improve flexibility, cardiovascular endurance, muscular strength and endurance. Nutrition, weight control and concepts of wellness are covered in this class. This class is appropriate for most students.

PHED 13A. Rock Wall Climbing (First Half). 0 Units.
This course is designed to give students a comprehensive introduction to the skills, safety, terminology and equipment used in the sport of recreational activity of rock climbing. Prereq: Undergraduate degree seeking student.

PHED 13B. Rock Wall Climbing (Second Half). 0 Units.
This course is designed to give students a comprehensive introduction to the skills, safety, terminology and equipment used in the sport of recreational activity of rock climbing. Prereq: Undergraduate degree seeking student.

PHED 141. Dance. 0 Units.
This course is designed to introduce the student to dance. Students will be exposed to a variety of dances including contemporary, jazz, folk and formal dancing. Students will learn how choreography is mounted and how dancers remember it. The class is appropriate for beginners as well as students with dance experience.

PHED 14A. Indoor Rowing (First Half). 0 Units.
This course introduces the student to basic indoor rowing techniques, skills, and equipment. Students will learn conditioning programs to prepare the student to continue in recreational, fitness or competitive rowing programs. Prereq: Undergraduate degree seeking student.

PHED 14B. Indoor Rowing (Second Half). 0 Units.
This course introduces the student to basic indoor rowing techniques, skills, and equipment. Students will learn conditioning programs to prepare the student to continue in recreational, fitness or competitive rowing programs. Prereq: Undergraduate degree seeking student.

PHED 170. Varsity Baseball. 0 Units.

PHED 171. Varsity Basketball (Men). 0 Units.

PHED 172. Varsity Basketball (Women). 0 Units.

PHED 174. Varsity Cross Country (Men). 0 Units.

PHED 175. Varsity Cross Country (Women). 0 Units.

PHED 178. Varsity Football. 0 Units.

PHED 180. Varsity Soccer (Men). 0 Units.

PHED 181. Varsity Soccer (Women). 0 Units.

PHED 182. Varsity Swimming (Men). 0 Units.

PHED 183. Varsity Swimming (Women). 0 Units.

PHED 184. Varsity Tennis (Men). 0 Units.

PHED 185. Varsity Tennis (Women). 0 Units.

PHED 186. Varsity Track and Field (Men). 0 Units.

PHED 187. Varsity Track and Field (Women). 0 Units.

PHED 188. Varsity Volleyball. 0 Units.

PHED 189. Varsity Wrestling. 0 Units.

PHED 190. Varsity Softball (Women). 0 Units.

PHED 216. Weight Training II. 1 Unit.
This class is for the student with weight training experience and/or the student who has successfully completed the basic weight training program and wishes to continue training in an advanced program. Advanced skill development, program development and safety are emphasized. This class section does not satisfy the Physical Education requirement.

PHED 218. Wellness. 1 Unit.

PHED 21A. Hatha Yoga (First Half). 0 Units.
This course provides an introduction to Hatha Yoga, presenting body awareness, basic philosophy, breathwork, postures and meditation techniques. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 21B. Hatha Yoga (Second Half). 0 Units.
This course provides an introduction to Hatha Yoga, presenting body awareness, basic philosophy, breathwork, postures and meditation techniques. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 22A. Intermediate Hatha Yoga (First Half). 0 Units.
This course utilizes the basics of Hatha Yoga including body awareness, philosophy, breathwork, and postures with emphasis on increased strengthening, increased aerobic segments, and more challenging postures. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 22B. Intermediate Hatha Yoga (Second Half). 0 Units.
This course utilizes the basics of Hatha Yoga including body awareness, philosophy, breathwork, and postures with emphasis on increased strengthening, increased aerobic segments, and more challenging postures. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 24A. Jogging (First Half). 0 Units.
Prereq: Undergraduate degree seeking student.

PHED 24B. Jogging (Second Half). 0 Units.
Prereq: Undergraduate degree seeking student.
PHED 25A. Power Volleyball (First Half). 0 Units.
This class introduces volleyball skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 25B. Power Volleyball (Second Half). 0 Units.
This class introduces volleyball skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 26A. Racquetball (First Half). 0 Units.
This course teaches racquetball skills and strategies for team and individual play. Course content includes terminology, skill development, scoring, etiquette and safety. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 26B. Racquetball (Second Half). 0 Units.
This course teaches racquetball skills and strategies for team and individual play. Course content includes terminology, skill development, scoring, etiquette and safety. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 27A. Indoor Group Cycling (First Half). 0 Units.
A stationary cycling program set to motivational music. Students will learn how to use and set up the bike and how to create a challenging workout using sprints, jumps and climbs. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 27B. Indoor Group Cycling (Second Half). 0 Units.
A stationary cycling program set to motivational music. Students will learn how to use and set up the bike and how to create a challenging workout using sprints, jumps and climbs. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 28A. Squash (First Half). 0 Units.
Students will be introduced to the skills, techniques and strategies necessary to play the sport of squash. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 28B. Squash (Second Half). 0 Units.
Students will be introduced to the skills, techniques and strategies necessary to play the sport of squash. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 29A. Swimming - Beginning and Intermediate (First Half). 0 Units.
This class focuses on basic swimming skills and safety. This class is appropriate for non-swimmers to those students with mid-range swimming skills. Students with disabilities may be accommodated. Prereq: Undergraduate degree seeking student.

PHED 29B. Swimming - Beginning and Intermediate (Second Half). 0 Units.
This class focuses on basic swimming skills and safety. This class is appropriate for non-swimmers to those students with mid-range swimming skills. Students with disabilities may be accommodated. Prereq: Undergraduate degree seeking student.

PHED 30A. Swimming - Endurance (First Half). 0 Units.
This class is for individuals who have mastered intermediate swimming skills and wish to develop advanced swimming skills and greater swimming endurance. Prereq: Undergraduate degree seeking student.

PHED 30B. Swimming - Endurance (Second Half). 0 Units.
This class is for individuals who have mastered intermediate swimming skills and wish to develop advanced swimming skills and greater swimming endurance. Prereq: Undergraduate degree seeking student.

PHED 31A. Tennis (First Half). 0 Units.
Students will learn the tennis skills and strategies necessary for both singles and doubles play. Emphasis is placed on stroke development, rules, scoring and etiquette. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 31B. Tennis (Second Half). 0 Units.
Students will learn the tennis skills and strategies necessary for both singles and doubles play. Emphasis is placed on stroke development, rules, scoring and etiquette. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 325. Officiating Basketball. 2 Units.
Administrative procedures, promotion, managerial relationships, scheduling, tournaments, budgeting, scoring systems, and officiating.

PHED 332. Introduction to Sports Medicine. 3 Units.
This class provides a detailed introduction to the foundation of Sports Medicine. Students will understand the complexities of sports medicine and athletic training through classroom lecture, structured laboratory and clinical hours. Topics covered in this class include roles and responsibilities of the sports medicine team, injury pathology, injury prevention, evaluation and management of injury.

PHED 334. Orthopedic Assessment of the Upper Extremity. 3 Units.
This class provides students with hands on experience that prepares them to perform orthopedic assessments within the field of athletic training. Students learn to take medical histories, palpate bony and soft structures, perform range of motion, neurological and circulatory tests. Students will learn to perform orthopedic tests of the upper extremities, head, cervical spine and abdomen. This class involves lectures, laboratory and clinical hours. Prereq: PHED 332 and PHED 342.

PHED 339. Orthopedic Assessment of the Lower Extremity. 3 Units.
This class provides students with hands on experience that prepares them to perform orthopedic assessments within the field of athletic training. Students learn to take medical histories, palpate bony and soft structures, perform range of motion, neurological and circulatory tests; and perform orthopedic special test of the lower extremities, pelvis, and lumbar spine. This class involves lectures, labs, and clinical hours. Prereq: PHED 332 and PHED 342.

PHED 341. Physiology of Exercise. 3 Units.
The classroom and laboratory experiences in this class are intended to provide an understanding of physiological adaptations of the human body to acute and chronic exercise. The classroom portion will focus mainly on the response and adaptation of bodily systems to exercise and the relationship of physiology to sport, health and exercise programs. The laboratory portion will focus on evaluation of the physiological response to exercise. Prereq: PHED 332, PHED 342, PHED 334, PHED 339.
PHED 342. Kinesiology. 3 Units.
The purpose of this course is to present the conceptual ideas and general principles of the science of human movement. It reviews and applies the pertinent aspects of anatomy, physiology and mechanics. Subject matter is drawn from research and clinical findings of widely dispersed kinesiological subdisciplines and professional specializations. Prereq: PHED 332.

PHED 34A. Weight Training (First Half). 0 Units.
This class focuses on muscular strength and endurance training through individualized weight training programs. Emphasis is placed on appropriate use of equipment and safety procedures. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 34B. Weight Training (Second Half). 0 Units.
This class focuses on muscular strength and endurance training through individualized weight training programs. Emphasis is placed on appropriate use of equipment and safety procedures. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 350. Therapeutic Rehabilitation and Modalities. 3 Units.
Topics covered in this class include concepts and practices associated with the conditioning and reconditioning (rehabilitation) of athletic injuries. Principles and practical skills associated with therapeutic modalities used in the treatment and rehabilitation of athletic injuries are also covered. This class involves lectures, labs and clinical hours. Prereq: PHED 332, PHED 334, PHED 339, and PHED 342.

PHED 40A. Basketball (First Half). 0 Units.
This class introduces basketball skills, techniques, rules and basic offense and defense. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 40B. Basketball (Second Half). 0 Units.
This class introduces basketball skills, techniques, rules and basic offense and defense. This class is appropriate for most students.

PHED 42B. Indoor Soccer (Second Half). 0 Units.
Students will learn the skills, techniques and strategies to play the sport of indoor soccer. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 44A. Core Yoga (1st Half). 0 Units.
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will combine stretching and strengthening to improve posture and flexibility and create balance in the physical body. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 44B. Core Yoga (2nd Half). 0 Units.
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will combine stretching and strengthening to improve posture and flexibility and create balance in the physical body. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 45A. Introduction to Speed and Agility Training. 0 Units.
This introductory course is intended for the student with an interest in training of speed and agility specific to their sport interest. The course will focus on the aspects of physical training necessary for the development of speed and agility and improved athletic performance. Prereq: Undergraduate degree seeking student.

PHED 45B. Introduction to Speed and Agility Training. 0 Units.
This introductory course is intended for the student with an interest in training of speed and agility specific to their sport interest. The course will focus on the aspects of physical training necessary for the development of speed and agility and improved athletic performance. Prereq: Undergraduate degree seeking student.

PHED 50A. Personal Safety Awareness (First Half). 0 Units.
This class focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 50B. Personal Safety Awareness (Second Half). 0 Units.
This class focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 55A. Cardio-Fitness (First Half). 0 Units.
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 55B. Cardio-Fitness (Second Half). 0 Units.
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 60A. CPR/First Aid (1st half). 0 Units.
Students will learn the basic first aid and CPR skills necessary to act in an emergency. Automated external defibrillation training is included. This class involves both lecture and hands-on work. Students will have the opportunity to achieve Basic Rescuer certification at the completion of the class.

PHED 60B. CPR/First Aid (2nd half). 0 Units.
Students will learn the basic first aid and CPR skills necessary to act in an emergency. Automated external defibrillation training in included. This class involves both lecture and hands-on work. Students will have the opportunity to achieve Basic Rescuer certification at the completion of this class.
PHED 65B. Team Building, Leadership, and Creative Movement (2nd half). 0 Units.
The primary purpose of this course is to provide an opportunity for Orientation leaders to: work as a team and build transferable skills for collaboration, active listening, communication, and motivation; learn dance movement as a form of communication and stress reduction; create the Orientation Leader Boogie Dance (performed at Welcome Days tradition and football game halftime show); understand the value in personal decision making and awareness (stress reduction, drug/alcohol awareness, sexual assault, etc.); learn campus resources; build Orientation Leader esprit de corps and enhance school spirit. This course will develop more effective and competent university ambassadors. In addition, the course will facilitate the development of leadership skills.
School of Dental Medicine

The Case Western Reserve University School of Dental Medicine (http://dental.case.edu) is a professional school offering a curriculum leading to the Doctor of Dental Medicine degree (DMD). Advanced education programs in the dental specialties are also available.

The School of Dental Medicine was organized June 21, 1892, as the Dental Department of Western Reserve University. For the first 25 years of its existence, the school was located in downtown Cleveland. In 1917, the School of Dental Medicine became an integral part of the university and now occupies a building adjacent to the School of Medicine, the School of Nursing, and University Hospitals of Cleveland. In 2003, the name of the school officially changed from the School of Dental Surgery to the School of Dental Medicine, and the degree offered changed from Doctor of Dental Surgery to Doctor of Dental Medicine. Since its organization, it has conferred degrees on approximately 4,900 graduates.

The Profession of Dentistry

The mission of dentistry is the protection and improvement of the health of individuals and society with a concentration on oral health. Professional activities encompass a wide variety of endeavors including the clinical care of individuals, the prevention of disease, the discovery of new knowledge, and the development of procedures and policies that protect and improve health, especially for those populations at risk for disease.

Because oral health is an important concern of society, the role of the dentist continues to be essential and rewarding. Men and women who are interested in scientific studies directly related to the welfare of people should find a strong appeal in dentistry as a life work. It offers an unusual opportunity for public service, community respect, and the use of originality, compassion, and substantial skill and independent judgment on a daily basis.

Mission Statement

The mission of the Case Western Reserve University School of Dental Medicine is to provide outstanding programs in oral health education, patient care, focused research and scholarship, and service that are of value to our constituents. We will accomplish this in an environment that fosters collegiality and professionalism, and that enables a diverse group of students to become competent practitioners of dentistry and contribute to the health and well-being of individuals and populations.

Dental Education Program

The students who enter the School of Dental Medicine are very carefully selected and have already had many opportunities for intellectual and social development. The years in dental school should permit the continued maturation of the individual and should emphasize the basic knowledge and skills which are common to all dentists. Graduates should continue their dental education during their professional careers and add to the basic concepts taught in dental school by studying the scientific literature and by attending continuing education courses. While in dental school, the student develops an attitude of professionalism and a sense of responsibility toward the patient's welfare, which will provide optimal dental care.

License to Practice Dentistry in Ohio

Specific information about licensure in Ohio and other states should be obtained from the individual state boards of dentistry.

Accreditation

The School of Dental Medicine is an institutional member of the American Dental Education Association and the programs of the School of Dental Medicine are accredited by the Commission of Dental Accreditation.

Student Affairs

The University Office of Student Affairs serves as an ombudsman focusing attention on the rights and responsibilities of students within the university community. In addition, it serves as a central source of information about university policies and procedures that affect student life and extracurricular programs and services. Students may contact the University Office of Student Affairs for resolution of specific problems and for referral to other university offices or campus agencies.

Facilities

The entire Health Sciences Center has been designed so that students can travel from the School of Dental Medicine to the School of Medicine, the School of Nursing, the Health Sciences Library, and any component of University Hospitals without having to go outside.

The dental school building was designed to provide a modern teaching facility. The Multimedia Laboratories are designed and equipped so that the basic sciences (except for anatomy), technique and simulated clinical experience can be carried on by the student in his or her individual area. The 50,000 square foot dental clinic floor consists of two major clinical areas and five specialty clinics. The major clinics are made up of individual cubicles, fully equipped as private operatories. Each student clinician is assigned to one of the individual operatories for the academic year.

Drawing from a local population of more than one million, the clinics provide a broad spectrum of care to the population, affording the student substantial clinical experience. The school cooperates with various organizations of the city in caring for their clients, an arrangement that provides additional clinical experience for students.

Libraries

The Cleveland Health Sciences Library (CHSL) was formed in 1966 by an agreement between the Cleveland Medical Library Association (CMLA) and Western Reserve University. CHSL operates in two locations: the Allen Memorial Medical Library and the Health Center Library (HCL). The total collection currently numbers over 430,000 volumes, including print and electronic journal subscriptions numbering in excess of 60,000.

The Allen collection, strongly clinical, serves private and institutional members of the Cleveland Medical Library Association as well as faculty and students of Case Western Reserve University.

The Health Center Library collection of basic science materials is primarily for faculty and students of the schools of dental medicine, medicine, and nursing and the department of biology.

The Dittrick Museum of Medical History, located on the third floor of the Allen Library, contains nearly 20,000 objects related to the history of medicine, dentistry, and pharmacy, with special emphasis on Cleveland and the Western Reserve. The museum also contains a medical archives collection and a rare book room.

Reference staff in both libraries help and instruct patrons in the use of the library and its bibliographic resources. Items not available on campus may be obtained through inter-library loan. Other services provided are
quick telephone reference, citation verification, computerized or manual bibliographic searches, access to the internet, and online searching of a multitude of databases.

**Hospital Affiliations**

The School of Dental Medicine has working relationships with hospitals and health clinics in the Greater Cleveland community. Students have the opportunity to function as dentists and observe hospital routine and operating room techniques in these hospitals. Many members of the faculty hold staff appointments in these extramural health facilities.

University Hospitals is a 974-bed tertiary care facility located across the street from the School of Dental Medicine. Graduate departments in oral and maxillofacial surgery and pediatric dentistry are based at this facility. A variety of educational and research opportunities exist in relation to this affiliation.

**Community Health Clinics**

Dental students participate in clinical care at several community health clinics in and around the greater Cleveland area. As part of the curriculum, dental students spend two weeks at one of the community clinics and additionally may volunteer their services in their free time. An example of a community health clinic is The Free Medical Clinic of Greater Cleveland, at 12201 Euclid Avenue. It is a nonprofit community service organization that offers medical, dental, podiatric, and legal services, as well as family planning and psychological counseling programs for adults and children; provides a patient advocacy program and speakers for community education and training at other health agencies; and operates a hotline seven evenings a week.

**Administration**

Jerold S. Goldberg, DDS  
(Case Western Reserve University)  
*Dean of the School of Dental Medicine; Professor of Oral and Maxillofacial Surgery*

Ronald L. Occhionero, DDS  
(Case Western Reserve University)  
*Associate Dean for Administration; Professor of Comprehensive Care*

Kristin Z. Victoroff, DDS (Dalhousie University), PhD (Case Western Reserve University)  
*Associate Dean for Education, Associate Professor of Community Dentistry*

Mark G. Hans, DDS, MS  
(Case Western Reserve University)  
*Associate Dean of Graduate Studies; Professor of Orthodontics and Chair*

John W. Smolik, MBA, CPA  
(Baldwin Wallace College)  
*Assistant Dean of Finance, Operations and Information Technology*

Simon P. Bisson, MA, CFRM BA  
(Christ Church University College, Canterbury, England, Ed; Indiana University, MA)  
*Assistant Dean of Development and Alumni Relations*

Emil T. Chuck, PhD  
(BSE, Duke University; PhD, Case Western Reserve University)  
*Director of Admissions*

Philip C. Aftoora, MA  
(University of Dayton, BS; Case Western Reserve University, MA)  
*Director of Student Services*
Advanced Education in General Dentistry (AEGD)

The AEGD program is a one-year experience with a major emphasis in clinical general dentistry designed to provide the resident with training beyond that received in the pre-doctoral curriculum.

Formal courses, seminars and literature review, as well as one week of "on call" per month, enhance the resident's ability to handle dental and medical emergencies encountered in everyday practice.

The AEGD program provides the resident the opportunity to deliver the highest quality of comprehensive dental care to the broadest range of the population with a knowledge, comfort, and ease in treating the high risk patient and under-served segment of the population including: HIV/AIDS, medically compromised, physically handicapped, and geriatric populations with considerable experience in implantology and full mouth rehabilitation.

The AEGD program enables the resident to become proficient in diagnosis and treatment planning for the more challenging and complex cases to identify and treat many medical and/or dental emergencies encountered in every day dental practice. The AEGD program introduces the resident to the basic concepts of hospital dentistry and help them interact with their medical colleagues and other health care providers to integrate medical and dental care.

Goals and Objectives

• To provide the residents with the didactic knowledge and clinical experience to deliver multi disciplinary comprehensive oral health care to a wide range of the population beyond the level of predoctoral education. (This includes providing community services through the management of the medically and/or immunocompromised patient, the physically handicapped patient, as well as the geriatric and the under served segment of the population.)

• Enable the residents to identify and treat the most common medical and/or dental emergencies encountered in every day dental practice.

• To develop in the residents the values of professional ethics, and acceptance of cultural diversity in the practice of dentistry.

• To develop the skills of self evaluation and critical thinking.

• To provide the residents with experience to improve their ability to interact, function and communicate effectively with other health care professionals in the delivery of comprehensive treatment.

• To encourage the resident to continue the process of life long learning through continuing education, professional meetings, and review of literature.

• To provide the residents with training in patient, practice and risk management in order to manage a private dental practice.

Admission

Information about admission to the AEGD Program (http://dental.case.edu/aegd) can be found on the School of Dental Medicine website.

The didactic component of the AEGD program is conducted in both the formal courses as well as the departmental seminars.

Formal Courses

• Management of Medical Emergencies
• Pharmacology
• Orthodontic
• Interdisciplinary Seminars
• Occlusion
• Correlative Medical Sciences

Seminars

• Literature review
• Case Presentation
• Endodontics
• Periodontics
• Oral Surgery
• Implantology
• Oral Diagnosis and Treatment Planning
• Preventive Dentistry
• Pain and Anxiety Control in the Conscious Patient
• Geriatric Dentistry
• Special Care Patients including the Medically Compromised
• Aspesis and Infection Control
• Pediatric Dentistry
• Operative Dentistry
• Fixed and Removable Prosthodontics
• Oral Medicine
• Practice Management

Service: Pediatric Rotation

- Length of Rotation or Experience (in weeks): 12
- Number of Hours per week: 4

Objectives:
1. To provide residents with both clinical and didactic training in pediatric dentistry beyond that received in the pre-doctoral curriculum.
2. To improve the resident’s ability in diagnosis, treatment planning, oral examination, and physical evaluation of the pediatric patient.
3. To improve the resident’s ability to use non-pharmacologic management techniques to appropriately manage and guide the behavior of the child patient to accept needed treatment and to provide advice or guidance to the parent to enhance the child’s acceptance.
4. To assist the resident in developing a working knowledge of preventive and corrective dental procedures relating to the growth and development of the stomatognathic system.
5. To increase both the confidence and competence of residents in meeting the general oral health needs of the pediatric patient.

Service: Geriatric Dentistry

- Length of Rotation or Experience (in weeks): 16
- Number of Hours per week: 8

Objectives:
1. See the variability of patient disability/ability/cognitive impairment in a diverse patient population.
2. Apply the principles of rational treatment planning to patients with limited access to dental care.
3. Practice behavioral management techniques for patients who are uncooperative.
4. Learn how to manage institutionalized patients and coordinate care with staff of the long-term care facilities.
5. Know how to deal with treatment of patients who cannot give informed consent.
6. Realize how much dental care is needed by older patients; and you will know what a significant positive impact that your work can have on the quality of life of older individuals.
7. Become a patient, empathetic caregiver.

Craniofacial, Surgical, and Special Care Orthodontics Fellowship Program

Fellows accepted into the Craniofacial, Surgical and Special Care Orthodontics Fellowship Program will be provided with advanced clinical, didactic, and research training during the 1 year program of study in the management of children with facial differences. We anticipate most fellows to go through a 1 year program of study. However, individuals who intend to devote the majority of their career in this area may be provided with the opportunity to enroll in a second year of study.

Graduates of the program will be exposed to the diagnoses, treatment planning, and clinical execution of orthodontic and dentofacial orthopedic services to a large clinical volume of pediatric, adolescent, and adult patients who have congenital and acquired craniofacial abnormalities. The goal of the Fellowship Program is to train the fellow to attain a level of competency that enables him or her to recognize, diagnosis and treat patients with craniofacial anomalies and special needs in a hospital-based, team care setting.

Fellows participate in the craniofacial and cleft conferences, review treatment plans and progress notes, and provide clinical care to the patients under direct supervision. All complex treatments are discussed with the attending on a case-by-case basis. New patient exams are done on regular basis and the fellows work up cases (clinical exam, study models analysis, CBCT evaluations) and reviews the treatment plans with the faculty. The fellows will perform all the surgical treatment plans, cephalometric prediction tracings, model surgery, and splint construction. The fellow will also scrub in and participate in the OR activities/surgical procedures.

Rotations with other services will form an integral part of the Fellowship Program. The principal rotations will be with the departments of plastic surgery, oral and maxillofacial surgery, and pediatric dentistry. In addition, the fellow will be exposed to speech pathology, pediatric otolaryngology, genetics, and occupational therapy.

The format of the program allows for constant one-on-one supervision that will allow for subjective assessments of the fellow's understanding of the subject matter, clinical skills, and patient management skills. This will be supplemented by weekly sessions with the faculty, where the fellow’s understanding will be further tested. At the end of each semester, a written examination will form part of the assessment of the fellow’s progress.

Admission

More information about admission to the program can be obtained by contacting the following:

Manish Valiathan (http://bulletin.case.edu/schoolofdentalmedicine/cranio@mailto:manish.valiathan@case.edu), DDS, MSD, Program Director, at 216.368.0673; Stephanie Leasure (http://bulletin.case.edu/schoolofdentalmedicine/cranio@mailto:stephanie.leasure@case.edu), Craniofacial Clinic Assistant, at 216.368.4331; or Colleen Friday (http://bulletin.case.edu/schoolofdentalmedicine/cranio@mailto:colleen.friday@case.edu), Graduate Studies Administrator, at 216.368.1188.
DMD Special Programs for Undergraduates

Pre-Professional Scholars in Dentistry
The Pre-Professional Scholars Program in Dentistry offers exceptionally well qualified high school students two options: the six-year program where students join the CWRU School of Dental Medicine after completing two years of undergraduate course work or the eight-year program that begins after the completion of the bachelor’s degree. For more information about the program, see Pre-Professional Scholars Program (p. 550) in the Office of Undergraduate Studies section of this bulletin. For more information about admission to the Pre-Professional Scholars Program, see the Office of Undergraduate Admission website (http://admission.case.edu/apply/ppsp.aspx).

Senior Year in Professional Studies
The Senior Year in Professional Studies offers Case Western Reserve undergraduate students, who are candidates for the Bachelor of Arts (BA) degree and who are admitted to Case Western Reserve University School of Dental Medicine by the end of the junior year, the opportunity to shorten their entire course of studies by one year. For more information about the program and admission, see Acceleration Toward Professional Degrees (p. 548) in the Office of Undergraduate Studies section of this bulletin.
DMD/MPH DMD and Master of Public Health

Dual-Degree Program

DMD and Master of Public Health

The Case School of Dental Medicine, in collaboration with the School of Medicine, offers a dual-degree program in dental medicine and public health (DMD/MPH). The program is funded by the Health Resources and Services Administration (HRSA), Predoctoral Training in Public Health Dentistry Training Grant.

Purpose

One of the primary goals of the American Dental Association (ADA) is to “Promote the oral health of the public.” Dental public health is one of the nine recognized specialties of the ADA, and is defined as “the art and science of preventing oral diseases and promoting oral health through organized community efforts.” The objective for the five-year dual degree program is to impart knowledge and skills necessary to expand the practice of dentistry into the community in a proactive way that fosters improved oral health, and as a direct result, yields improved overall health of the populations involved.

Curriculum

The DMD curriculum consists of 141.5 credit hours and the MPH curriculum consists of 42 credit hours: 24 credit hours of didactic MPH courses, 9 credit hours for DMD coursework, participation in a seminar series, and 9 credit hours for the required capstone project. A total of 9 credits will be applied from the dental curriculum to the MPH degree. Of the 24 credit hours of didactic curriculum, 18 must be from core MPH courses. Dual degree students may choose to enroll in electives as well. One of the five years of the dual degree program must be dedicated to MPH courses, which can be either before the first DMD year, between the 1st and 2nd DMD years, or between the 2nd and 3rd DMD years. Other possible options for the dedicated MPH year will be considered on a case-by-case basis. Information about the MPH program can be found here. (http://mph.case.edu)

Features

Each dual degree student will be assigned two advisors who will advise and guide them towards completing the MPH program. In addition to didactic courses, the DMD/MPH program requires field experiences/rotations at extramural sites/clinics. The student will also be required to complete a capstone project and present the findings at the Innovations in Population Health conference, the School of Dental Medicine Professional Day, and at a national conference.

Admission

Admission to the DMD program is required for consideration for the dual-degree program. Prospective students are eligible to apply to the MPH program at any time prior to the start of the third DMD year. Applicants must complete an online application form for the MPH program that includes a personal statement about the applicants’ interest in public health and professional goals; three letters of recommendation; GRE or DAT test scores, and TOEFL or IELTS if applicable; and official transcripts for all higher education degrees.

Sample Template for Course Schedule for DMD/MPH (with MPH-dedicated year prior to DMD Year 1)

| Year 1, Fall (12) | MPH 405 Statistical Methods in Public Health * | 3 |
| Year 1, Spring (12) | MPH 411 Introduction to Health Behavior * | 3 |
| Year 2-5 (9) | Capstone Experience * | 9 |

* Indicates core course
DMD/MS Clinical Research Training

Dual-Degree Program
DMD and Master of Science in Clinical Research Training

The Case School of Dental Medicine, in collaboration with the School of Medicine, presents a dual-degree program made possible by the National Institute of Health (NIH) Ruth L. Kirschstein National Research Service (T32) Training Grant.

Purpose

The objective for the five-year joint DMD and Master in Clinical Research Training (DMD-MCRT) at the School of Dental Medicine is to train dental scholars for an academic career and for utilizing scientific advances to solve clinical problems. Part of this goal is training in clinical research so that the dental graduate may promote progress in biomedical research and develop innovative and effective strategies for the oral health needs of the population.

Curriculum

The DMD curriculum consists of 141.5 credit hours and the MCRT curriculum consists of 36 credit hours. The MCRT curriculum consists of 15 graded hours of core curriculum, 6 graded hours of DMD coursework, 3-6 graded hours of elective course(s), participation in a seminar series, and 9-12 graded hours of research work culminating in a thesis project. Components of the dental curriculum are equivalent to clinical research material that is taught at the graduate level. Thus a total of 6 credits will be applied from the dental curriculum to the master’s degree.

A full year of research is a requirement. The student will be required to take one year off (either between the 2nd and 3rd or 3rd and 4th DMD years or immediately after DMD completion) for fulfillment of the master’s program. The one-year research training can also be accomplished in 2-3 month blocks between DMD years. A successful passing of the oral defense of the master’s research thesis is also required.

Features

Key features of this dual-degree program are that it is a five-year program where each student is assigned an advisor, a mentor, and the student will receive “protected time” to complete their master’s requirements. This program will highlight core dental and master’s courses as well as research rotations. The student will be required to complete a master’s thesis research project and make a scientific presentation at the International Association of Dental Research or the American Association of Dental Research conferences.

Admission

Prospective students are eligible to apply to the program anytime after their first year of DMD studies, but prior to the start of the fourth DMD year. Applicants must complete an online application form that includes a personal statement describing the reason for seeking admission along with a summary of career goals and submit a non-refundable application fee, three sealed recommendation letters or online recommendation forms, a recent curriculum vitae including previous research experience, letters of support from training director and research mentor ensuring protected time, and official transcripts for all higher education degrees. Applicants will also be required to submit a photograph and Visa/ Permanent Resident Card/ECFMG (if applicable). Admission to the program is contingent upon good DMD academic standing and recommendation letters from the Associate Dean for Education and the Director of the DMD-MCRT program.

**Doctor of Dental Medicine (DMD)**

**Doctor of Dental Medicine (DMD)**

The program will accomplish its goals through academic work in four themes and two threads, which are woven throughout the four years of the program. The program includes a variety of educational formats to deliver the curricula, including problem-based learning sessions, team-based learning, independent study, seminars, experiential learning opportunities, traditional lectures, virtual reality clinical simulation, laboratories, standardized patient experiences, and patient-based comprehensive care. An important goal of the curriculum is to help students become better prepared in independent learning, critical thinking skills, and the use of evidence. The curriculum is a program of study that includes traditional and newly organized integrated educational modules in the following themes and threads:

**Themes**

**Health and Well-Being**

This theme contains all curricula — both didactic and clinical — that apply to health and the normal structure and functioning of the body and of the oral complex. The traditional content areas of physiology, biochemistry, anatomy, histology, among other dental science classes, are integrated through cases to form a better bridge between the basic sciences and the clinical sciences.

**Disease Processes**

The Disease Processes theme includes content related to general and oral diseases. These topics are often melded with healthy structure and function content to provide students with a global perspective of the implications of disease on usual functioning.

**Restoration of Health**

This theme contains content related to therapies necessary for treatment of medical disease and dental disease. A focus on restoring oral health is accomplished through virtual reality clinical skills training, training on models and progression to comprehensive dental care in conjunction with didactic knowledge.

**Maintenance of Health**

The Maintenance of Health theme focuses on curriculum which explores strategies for preserving health through general and oral health therapies, patient education, disease risk assessment, and disease prevention. This theme provides viewpoint from which students can develop life-long care plans for their patients.

**Threads**

**Inquiry**

This thread that runs throughout the four-year program supports student growth in skills in clinical decision making. Students develop an understanding of what scientific evidence is, how to make clinical decisions, and to value scientific discovery in all aspects of dentistry.

**Leadership**

This thread contains curriculum for the development of students as ethical, sensitive, caring practitioners who are stewards of oral health of the individual patient, the community, and society. An important focus in Leadership curriculum is content that helps students advance in their role as a professional. It also supports the integration of all students into the practice management curriculum centered within their clinical preceptor groups.

**Years**

**Year 1**

This year includes curriculum describing normal healthy functioning and disease processes. Basic science content is taught in the context of clinical cases. Foundational work in understanding human structure and function is paired with learning about disease. Dental clinical sciences study the foundational elements of oral health.

**Year 2**

This year continues with an integrated approach to curricula in health and disease with an emphasis on the development of dental clinical skills. Further development of students as clinicians proceeds with their involvement in the clinical preceptor groups. Students will make a transition to increasing patient-centered clinical care as they demonstrate competency in clinical skills and didactic knowledge.

**Year 3**

This year includes didactic work related to advancing levels of knowledge and clinical experience. Students spend time in didactic classes that are directly related to clinical practice and in rotations to specialty clinical areas while accomplishing comprehensive patient care.

**Year 4**

Students gain clinical experience in the Comprehensive Care Clinics and finish didactic work which may include enrichment courses. They participate in practice management activities of their preceptor group, developing critical skills for general practice dentistry.

Endodontics

Endodontics

The graduate endodontics program is a continuous 24-month master’s degree (Master of Science in Dentistry) and certificate program commencing the beginning of July each year. It has a full-time director and 5 part-time clinical faculty members. It is concerned with developing competent, skilled clinicians with teaching and research abilities.

To achieve these objectives, the program provides extensive background in both scientific and clinical knowledge. The curriculum is designed to fulfill the requirements of the American Board of Endodontics and promote Diplomates.

The program will prepare specialists in the fields of diagnosis, all phases of treatment and prevention of pulpal and periapical dental disease. It will provide training in research design and methodology as it relates to pulpal, dentinal, periodontal, and related clinical areas, preparing the resident for teaching responsibilities in undergraduate, postgraduate, and graduate levels.

A top of the line surgical microscope with a complete and full documentation package is provided for teaching a variety of microscopic surgery techniques.

The curriculum includes bone grafting and guided tissue regeneration. The IV sedation and general anesthesia training are provided by University Hospitals of Cleveland for the second year resident. Presentation of multiple table clinics is required. The endodontic residents have placed first the last three years at the annual meeting of the Ohio Dental Association.

Admission

Information about admission to the endodontics program (http://dental.case.edu/endodontics/residency/howtoapply) can be found on the School of Dental Medicine website.

Expanded Function Dental Auxiliary (EFDA)

Expanded Function Dental Auxiliary Program

The School of Dental Medicine offers a non-degree certificate course in expanded dental functions to dental auxiliaries with requisite training and experience. This continuing education program prepares the student to take an examination administered by the Ohio Commission on Dental Testing for Expanded Function Dental Auxiliaries.

The Expanded Function Dental Auxiliary course is a less than part-time program and includes didactic, pre-clinical laboratory, and clinical training. It is affiliated with several hospitals and health agencies in the Cleveland metropolitan area, where a portion of the clinical training takes place. Students are selected for admission on the basis of their performance on an entrance examination administered by the program faculty.

Upon successful completion of this accredited program, an auxiliary is eligible to sit for the state certifying examination provided by the Commission on Dental Testing in Ohio.

Admission

Information about admission to the EFDA program (http://dental.case.edu/efda) can be found on the School of Dental Medicine website.

Students begin the program learning tooth anatomy, contour and contact using wax. Then students gradually advance through one, two, three, and complex surface restorations of amalgam and composite on the typodont. Rubber dam placement and sealant placement are also learned.

Part of the responsibility for being in the program will be for the employer dentist to allow the EFDA trainee to perform intra-oral procedures (restorations) in the office once the student has successfully passed semester one amalgam, composite, and sealant competencies.

Clinical/patient experience occurs during the second semester at MetroHealth Hospital/clinics, Case School of Dental Medicine Clinic, Rainbow Hospital Tapper Pedodontic Clinic, The Free Clinic of Cleveland, or St. Elizabeth Hospital Dental Clinic in Youngstown, Ohio, and the office in which the student is employed.

Mock board exams are given the second semester, simulating the testing atmosphere of the actual state examination.

After successful completion of the course, the student will be eligible to sit for the state board examination administered by the Commission on Dental Testing in Ohio (http://www.codtohio.org). Examination candidates will be expected to bring their own instruments and materials (not school-owned) to the exam.

According to various sections of the Ohio Law and Regulations for Certification and Licensure Boards, persons convicted of any felony or misdemeanor may not be able to take the licensure or certification examinations; may be refused acceptance of placement by the clinical/practicum sites; or may have restrictions placed on their ability to practice. For more information, contact the Dean of Student Services and the applicable licensure/certification board.

Lecture and labs

- Nomenclature
- Caries classification
- Cavity preparation
- Oral anatomy
- Dental morphology
- Periodontium
- Histology
- Basics of occlusion
- Ergonomics
- Instrumentation
- Pulp protection
- Dental materials
- Matrix and wedge techniques
- Temporization
- Amalgam placement and carving
- Polishing amalgams
- Composite placement
- Composite finishing and polishing
- Posterior composites
- Pit and fissure sealant placement
- Rubber dam placement

Total Units in Sequence: 9.5
Graduate Studies at School of Dental Medicine

Academic Regulations

Registration

Graduate studies programs operate on a twelve-month basis, from July 1 to June 30. The year is divided into two six-month semesters. The fall semester is from July 1 to December 31; and spring semester is from January 1 to June 30. The act of registration includes submission of a course schedule approved by the department, the payment of semester tuition, and the completion of the online registration form. Each semester, registration must be completed as scheduled. Students enrolled in fall and spring semesters may arrange to pay bills for tuition and fees in two installments. At least half of the total bill must be paid at registration; the remainder must be paid in accordance with university policy. Fees may be charged for late registration or late payment. Students who fail to register within 30 days after the published dates will be considered to have withdrawn from the program. In the School of Dental Medicine, students who are not registered are not considered students of record, lose the protections of the university in matters of liability, and therefore, may not treat patients. They can no longer attend class or receive grades and will have to formally reestablish their matriculation. In any circumstance, all lost course and/or clinical time will be added to the end of the program’s original completion date.

Grading

The responsibility for assigning grades rests exclusively with the course director, who must announce the general method of grading at the beginning of the course. Course grades are reported to the registrar of the School of Dental Medicine at the end of the course or when a final grade has been determined, if prior to the scheduled completion time for the course. Incomplete or conditional grades can be changed only by the course director as described in the University Registrar (p. 942) section of this bulletin. Grading in the School of Dental Medicine Graduate Programs is A, B, C, or F.

Transfer Credit

Transfer of credit from another university is limited to six semester hours of graduate-level courses. Such transfer requires approval from the student’s advisor, the department chair, and the Office of Graduate Studies. Courses must have been taken within five years prior or subsequent to matriculation in the graduate program at Case Western Reserve University, and only those with grades of “B” or better are transferable. No credit for a thesis may be transferred from another university.

Graduate credit is not awarded for 100- or 200-level courses or their equivalents.

Thesis Advisory Committee

Each master’s degree candidate is advised to consult with their Program Director as to when and how to form a thesis committee. The Graduate department chair, in consultation with the Program Director, chooses a faculty member to serve as the primary thesis advisor. This advisor also serves as the chair of the thesis committee. The primary thesis advisor will help identify other members of the faculty (at least two) to serve as secondary advisors and as members of the thesis committee. At least two members of the thesis committee must be from the department in which the student is enrolled, and one must be from another department. Additional membership is not restricted and may include persons from outside the university who have qualifications acceptable to the department chair. Members of the thesis committee continue in their capacity until the student graduates or leaves the program of study. The thesis committee will be responsible for guiding the student in the development of a thesis protocol. Once a protocol is acceptable, the thesis committee members advise the student on the conduct of the research and writing of the thesis document. Ultimately, the committee members will evaluate the student’s oral defense and final thesis document.

Research Project

For master’s degree programs, each student must carry out an original and meaningful research project acceptable to the department chair and the advisory committee. A written thesis, similarly acceptable, is to be prepared and must conform to the standard format determined by the Office of Graduate Studies of the School of Dental Medicine. The thesis must be submitted before the prescribed deadline. An oral examination (defense) of the thesis is required. This examination is administered by the student’s advisory committee before a standard date set by the Office of Graduate Studies of the School of Dental Medicine. Unanimous agreement of the committee is required to pass the thesis examination. A student must be registered for thesis credit or continuing graduate work during the semester in which the thesis examination is conducted. The thesis defense is ordinarily open to all members of the university faculty, student body, and guests.

Extra Courses

Individual students enrolled in an advanced education program, whether or not a master’s degree is involved, may be required to take courses beyond the general requirements set forth by the department in order to complete the program. In such instances, the student must be notified in writing by the department chair, with a copy filed in the Office of Graduate Studies of the School of Dental Medicine.

Time Limits

Each student is expected to maintain continuous registration and all requirements must be completed within five consecutive calendar years immediately following matriculation as an advanced education student, including approved periods of leave of absence. A student who fails to complete the requirements within five years must be formally readmitted with full standing in order to continue study, subject to terms of readmission, future time limits, and revised requirements for the award of the degree. Prior status in the program is no guarantee of readmission and should not be assumed.

Leave of Absence

A student may request a leave of absence for personal reasons or reasons of health when anticipated or actual absence is in excess of three weeks. A written request for a leave of absence must include the reason for the request and the length of time requested. A leave of
absence cannot exceed one calendar year. It must be submitted to the
program director and to the associate dean of graduate studies of the
School of Dental Medicine. The program director will forward the request
with his/her response to the Committee on Graduate Studies. In order to
be eligible for such requests, the student must be currently enrolled and
in regular attendance prior to the time or circumstances that necessitated
the request. At the expiration of the leave, the student must resume
registration unless formally granted an extension. A leave of absence
does not extend the maximum time permitted for the completion of
degree requirements. A student who fails to obtain an approved leave, or
who fails to resume registration at the time expected, may be separated
from the program. During the period of leave, it is expected that the
student will not avail himself or herself of the teaching and research
resources of the School of Dental Medicine or the university. At the
end of an approved leave, reentry into the program is reviewed by the
program director in concert with the Committee on Graduate Studies,
and may not be at the same level attained at the time the leave was
granted. Programs with a high patient case component may require that
the clinical portion of the program be repeated in its entirety. Finally, the
committee also reserves the right to place a student on leave of absence
where it has been determined that the circumstances warrant, even in the
absence of a formal request.

Maintenance of Good Standing
A minimum cumulative grade point average of 2.75 is required for good
standing in a graduate program for all courses taken for graduate credit
(excluding those graded Satisfactory/Unsatisfactory or Pass/No Pass).

The associate dean for graduate studies reviews student performance
and may recommend a course of action to the Committee on Graduate
Studies. The committee may require remedial work, place a student
on academic review or probation, set conditions for continuation in
the student’s course of study or program, and may require withdrawal
for failure to meet the academic standards set by the department or
school. A student who receives a grade deemed unsatisfactory in any
course is placed on probation and must remove himself or herself from
probation within a time period specified by the committee. It is expected
that removal from probation will ordinarily require repetition of the course
with an acceptable grade or the successful completion of work deemed
equivalent by the student’s advisory committee and the departmental
chair.

In this regard, a student may be separated from the university for any one
of the following reasons:

1. Failure to correct probationary status within the specified time
   period.
2. Failure to achieve a minimum grade point average of 2.50 or above
   upon completion of 12 semester hours or a grade point average of
   2.75 or higher upon completion of 21 semester hours of graduate
   study.
3. Failure to complete all requirements for the master’s degree within
   five consecutive calendar years from the term of matriculation,
   unless granted an extension of a maximum of one year upon
   recommendation of the advisor and chair and approved by the
   associate dean for graduate studies.

In calculating the grade point average, all courses for which quality
points are given are counted, including courses which may be required
to be repeated. In addition, on the recommendation of the student’s
department, and with due process, the School of Dental Medicine may
suspend or separate a student from the university for failure to maintain
appropriate standards of conduct and integrity in discharging their

Graduation
The minimum requirements for the master’s degree in the School
of Dental Medicine are 36 semester hours of course work, including
six or more semester hours of thesis/equivalent registration, and the
submission of an accepted thesis. Individual departments may require
additional semester hours of specific course work and/or thesis. Not less
than 24 semester hours may be at the 500 level or higher.

A candidate for a Master of Science in Dentistry degree must make
application for the degree to the Office of Graduate Studies of the School
of Dental Medicine no later than three months before the commencement
at which the degree is expected.

The awarding of the degree is dependent upon the satisfactory
completion of all requirements, and the recommendations of department
chair, Committee on Graduate Studies, and faculty of the School of
Dental Medicine. The student must complete all requirements for both the
master’s degree and certificate in order to receive either.

Degrees will not be awarded to candidates with delinquent financial
accounts that include, but are not limited to, tuition payments, fees, and
library fines.

Delayed Graduation
A candidate who has successfully defended his or her thesis, but who
fails to meet the deadline for thesis submission for graduation in one
semester, will be permitted to receive his or her degree at the next
scheduled graduation, without further registration or payment of tuition
if the completed thesis is submitted within fourteen days of the date
originally scheduled for graduation. If all requirements are not met
within this grace period, the candidate must register for the subsequent
semester.
Oral and Facial Maxillofacial Surgery

Oral and Maxillofacial Surgery

The residency program at Case Western Reserve University in Oral and Maxillofacial Surgery is a joint program with the School of Medicine leading to an MD degree and certificate in oral and maxillofacial surgery. Case Western Reserve University is the only program in the country that enables residents to obtain their medical degree and certificate in five years.

Residents rotate through several institutions: the Department of Oral & Maxillofacial Surgery at University Hospitals of Cleveland, Cleveland's Veterans Administration Hospital, the School of Dental Medicine at Case Western Reserve University, the Department of Oral and Maxillofacial Surgery at the Cleveland Clinic, Aultman Hospital in Canton, and the Cleveland Clinic Hospital. This diversity of institutions ensures that residents gain experience in the essential areas of clinical surgery in preparation for all types of practices.

Admission

More information about admission to the oral and maxillofacial surgery (http://dental.case.edu/omfs/residency/howtoapply) program can be found on the School of Dental Medicine website.

- University Hospitals/OMFS - 3 months
Orthodontics

The graduate program in orthodontics is a master’s (Master of Science in Dentistry) and certificate program dedicated to advancing the art and science of orthodontics through research, teaching, and service.

The clinical training of orthodontic residents encompasses all aspects of current orthodontic practice including, full treatment cases with bands and brackets, early treatment, adult treatment, craniofacial anomalies, orthognathic surgery and TMJ/occlusion. The length of the orthodontic program is 30 months. Given this time frame the clinical teaching of orthodontics will be divided according to the importance of the above topics to the private practice of orthodontics. In a program of 30 months it is not possible to produce a seasoned and skilled orthodontist, therefore, our program strives to produce a competent beginner. Accordingly, the clinical load of patients is chosen to match the teaching goals of the department.

There is an option to extend the program to 36 months to satisfy European specialty training standards (ERASMUS).

Admission

More information about admission to the orthodontics program (http://dental.case.edu/orthodontics/residency/howtoapply) can be found on the School of Dental Medicine website.

Pediatric Dentistry

The graduate program in pediatric dentistry is a master’s (Master of Science in Dentistry) and certificate program that takes place at Case Western Reserve University School of Dental Medicine and Rainbow Babies and Children's Hospital.

The two-year post doctoral residency program follows closely the principles and policies as outlined in the Guidelines for Advanced Education in Pediatric Dentistry prepared by the American Academy of Pediatric Dentistry and the American Board of Pediatric Dentistry. It is fully accredited by the Commission on Dental Accreditation. Successful completion results in a certificate of specialty education in pediatric dentistry which qualifies the resident for examination by the American Board of Pediatric Dentistry.

Students who elect to complete the master’s program pay full tuition. The MSD program is open to non-US citizens and foreign-trained dentists. Foreign-trained dentists must complete a US GPR or AEGD before applying to the program.

Our purpose is to train the specialist as a qualified practitioner, consultant and advocate for complete dental treatment of healthy and special needs children.

The acquired skills prepare the pediatric dental resident to prevent, diagnose and treat common and unusual oral problems that might arise during the physical, psychological and emotional development of the child and adolescent. In addition to the oral aspects of childcare, the resident becomes cognizant of the general health problems related to children.

Our program offers a balanced clinical and didactic curriculum in advanced infant, child and adolescent dental care.

The pediatric dentistry curriculum is designed to have the resident play an integral role in the health care of children, side by side with his/her medical colleagues, and to prepare the resident for successful entry into the contemporary practice setting while providing the foundation for future growth in the field.

Admission

More information about admission to the pediatric dentistry program (http://dental.case.edu/pediatrics/residency/howtoapply) can be found on the School of Dental Medicine website.

The following courses are required for the postdoctoral student:

- Behavioral Management
- Anatomy
- Epidemiology & Biostatistics
- Microbiology
- Facial Growth and Development
- Craniofacial Anomalies
- Hospital Dentistry
- Conscious Sedation
- Conferences
- Pediatric Dentistry Literature Review
- Preventive and Interceptive Orthodontics
- Genetics
- Pharmacology

- Hospital Rotations in the departments of Anesthesia, Pediatric, and Emergency Medicine

A research requirement must be fulfilled for certification in pediatric dentistry. Students enrolled in the MSD program must complete a formal thesis.

1 Taught every 2 years, take in either first year fall or first year spring
Periodontics

The graduate program in periodontics is a thirty-six month, continuous course of study, leading to both a certificate in Periodontics and a Master of Science in Dentistry degree. It is a fully accredited program by the American Dental Association, and meets all the clinical and didactic requirements of the American Board of Periodontology.

The general goals of the program are to train expert clinicians in this specialty, and/or to prepare individuals for an academic (research-teaching) career in Periodontics.

This postdoctoral program offers broad clinical experience and research training.

Completion and defense of a research thesis is one of the requirements of this program. Limited teaching experience is offered to the graduate student so that his/her exposure to clinical, research, and teaching facets of periodontics is complete. All of the faculty of the Department of Periodontics involved in teaching graduate students in this program are educationally or board certified periodontists. Additional instruction within this program is by faculty members of the School of Dental Medicine and the School of Medicine. Because of the multiplicity of training programs our professors have completed, the student is exposed to diverse views of diagnosis, prevention, and treatment of periodontal diseases. A brief initial review of basic aspects of periodontology introduces the new graduate student to the specialty training during the summer session. Extensive contact with practicing periodontists, sufficient exposure to hospital periodontal practice, and clinical training in dental implants are additional features of this program.

Admission

More information about admission to the periodontics program (http://bulletin.case.edu/schoolofdentalmedicine/periodontics/%20http://dental.case.edu/periodontics/residency/howtoapply) can be found on the School of Dental Medicine website.

The following courses are required for the postdoctoral student:

- Advanced Periodontal Seminar - ongoing for 3 years
- Literature Review in Periodontology - ongoing for 3 years
- Periodontal Conferences - ongoing for 3 years
- Clinical Periodontics - ongoing for 3 year
- Advanced Principles of Occlusion - 1 semester
- Conscious Sedation - 1 semester (didactic, 2nd year), ongoing for 2 years (clinical)
- Implant Dentistry - 1 semester (didactic, 2nd year), ongoing for 2 years (clinical)
- Research Thesis - ongoing for 2 year
- Periodontal Prosthesis - one semester
- Microbiology, Immunology and the Immune Response - 1 semester
- Management of Medical Emergencies - 1 summer session
- Anatomy of the Head and Neck - 1 summer session
- Limited Tooth Movement - 1 summer session
- Biological Aspects of the Stomatological System - 1 semester
- Correlative Medical Science - 1 semester
- Introduction to Research Methods - one semester
- Advanced Oral Pathology - one semester
- Epidemiology and Biostatistics - 1 semester
- Interdisciplinary Seminar - one semester
- Clinical Pharmacology - one semester
- Creative Thinking in Research Development - 1 semester
- 2-week hospital rotation

School of Dental Medicine Courses

COMP Courses

COMP 322. Surgical Periodontics. 1 Unit.
Companion clinical component to REHE 351. Clinical treatment in conjunction with residents and faculty.

COMP 328. Oral Diagnosis and Treatment Planning. 1 Unit.
Treatment planning based on the correlation of fundamentals taught in diagnosis, preventive dentistry and restorative dentistry. Clinical experience in the application of didactic training consists of four components; assignments in the admitting and radiology service where students carry out examinations of the newly admitted patients and evaluate their problems and needs; radiology seminars where the technique and interpretation of the radiographs taken by the students are discussed; assignments to the emergency service; and clinical conferences with a staff member.

COMP 348. Endodontics. 1 Unit.
Companion clinical component to DSRE 391. Clinical application of endodontic techniques.

COMP 358. Clinical Oral Surgery I. 1 Unit.

COMP 378. Pediatric Dentistry Clinic. 1 Unit.
Companion clinical component of REMA 341

COMP 384. General Dentistry Clinical Qualifying. 1 Unit.
This course consists of the successful completion of the recall clinical qualifying exam and two diagnosis and treatment planning clinical qualifying exams. It is also necessary for the student to successfully fulfill the recall needs of their assigned clinic patients in order to pass this course.

COMP 386. Quality Assurance. 1 Unit.
This course entails quality assurance issues including, but not limited to: providing students with the working knowledge of dental record keeping, as it relates to diagnosis and treatment of pathology; recognition and management of medical illness and disabilities; treatment planning; documentation of pre-existing conditions, current and past treatment; established laboratory protocols; evaluation of reasons for remakes and re-dos; post-treatment evaluation of care. Recommended preparation: LDRS 313.

COMP 387. General Practice Dentistry A. 1.5 Unit.
Comprehensive dental care. Each student is assigned for clinical training to a preceptor group led by a practicing general dentist. The preceptor guides the students in diagnosis, treatment planning, and actual patient treatment with consultation in various specialties as required. Experience in the provision of emergency dental care. The preceptor directs the total dental health care of the patients of each of his students. Biweekly seminars are provided for each preceptor group. Special topics, student cases, techniques, and journal articles are discussed. Recommended preparation: Concurrent enrollment in DENC 387.

COMP 389. General Practice Dentistry B. 1.5 Unit.
Comprehensive dental care. Each student is assigned for clinical training to a preceptor group led by a practicing general dentist. The preceptor guides the students in diagnosis, treatment planning, and actual patient treatment with consultation in various specialties as required. Experience in the provision of emergency dental care. The preceptor directs the total dental health care of the patients of each of his students. Biweekly seminars are provided for each preceptor group. Special topics, student cases, techniques, and journal articles are discussed. Recommended preparation: Concurrent enrollment in DENC 387.

COMP 390. General Practice Dentistry A. 1.5 Unit.
Clinical application of the principles of general practice dentistry. Recommended preparation: Concurrent enrollment in DENC 394.

COMP 394. General Practice Dentistry B. 1.5 Unit.
Clinical applications of the principles of general practice dentistry. Recommended preparation: Concurrent enrollment in DENC 390.

COMP 417. Community Oral Health Capstone Experience. 1.5 Unit.
The goals of this particular course are to provide experience delivering dental care to a population of patients in a community health center while working with and communicating with a dental health care team and to gain experience in cultural sensitivity.

COMP 422. Periodontics. 0.5 Units.
Clinical application of surgical and nonsurgical techniques used in the treatment of moderate periodontal disease. Students exposed to more advanced cases through clinical demonstrations by instructors. Students encouraged to gain additional experience and become more confident in the management of periodontal patients.

COMP 428. Oral Diagnosis and Radiology. 0.5 Units.
Clinical experience in the admitting and radiology service.

COMP 448. Endodontics. 1 Unit.
Clinical application of the principles of endodontics therapy. Diagnosis and treatment planning. Management of endodontic emergencies and prognosis of endodontic treatment.

COMP 458. Clinical Oral Surgery II. 1 Unit.
Clinical application of the principles of oral surgery.

COMP 464. Operative Dentistry. 2.5 Units.
Clinical application of the principles of operative dentistry.

COMP 468. Removable Prosthodontics. 1.5 Unit.
Clinical application of the principles of prosthodontic dentistry.

COMP 474. Fixed Prosthodontics. 2.5 Units.
Treatment of patients requiring simple and advanced fixed prostheses as an integrated part of total patient care.

COMP 478. Pediatric Dentistry. 2 Units.
Emphasizes comprehensive oral health care of the well child to provide experience in examining, diagnosing, treatment planning, and completing treatment of a selected number of children. Preventive aspects of pediatric dentistry emphasized. Additional voluntary experiences in clinical practice of pediatric dentistry available.

COMP 482. Clinical Orthodontics. 1 Unit.
Clinical application of the principles of orthodontics.
COMP 487. General Practice Dentistry A. 2.5 Units.
Comprehensive dental care. Each student is assigned for clinical training to a preceptor group led by a practicing general dentist. The preceptor guides the students in diagnosis, treatment planning, and actual patient treatment with consultation in various specialties as required. Experiences in the provision of emergency dental care. The preceptor directs the total dental health care of the patients of each of his students. Biweekly seminars are provided for each preceptor group. Special topics, students cases, techniques, and journal articles are discussed. Recommended preparation: Concurrent enrollment in COMP 489.

COMP 489. General Practice Dentistry B. 2.5 Units.
Comprehensive dental care. Each student is assigned for clinical training to a preceptor group led by a practicing general dentist. The preceptor guides the students in diagnosis, treatment planning, and actual patient treatment with consultation in various specialties as required. Experiences in the provision of emergency dental care. The preceptor directs the total dental health care of the patients of each of his students. Biweekly seminars are provided for each preceptor group. Special topics, students cases, techniques, and journal articles are discussed. Recommended preparation: Concurrent enrollment in COMP 487.

COMP 490. General Practice Dentistry A. 2.5 Units.
Clinical application of the principles of general practice dentistry. Recommended preparation: Concurrent enrollment in COMP 494.

COMP 492. General Dentistry Clinical Competency. 0.5 Units.
This course consists of the successful completion of the recall, emergency, diagnosis and treatment planning, and patient outcomes clinical competencies. It is also necessary for the student to successfully fulfill the recall needs of their assigned clinic patients in order to pass this course. Recommended preparation: Completion of Basic Core Program.

COMP 494. General Practice Dentistry B. 2.5 Units.
Clinical application of the principles of general practice dentistry. Recommended preparation: Concurrent enrollment in COMP 490.

COMP 495. Directed Clinical Studies. 1 Unit.
This course is intended to provide students with the opportunity to advance their dental clinical patient skills in the comprehensive care clinics of the School while also providing advanced opportunity for students who are so inclined to focus in individual areas of clinical skills development.

COMP 498. Quality Assurance. 1 Unit.
This course reinforces quality assurance skills and knowledge provided in the prerequisite course including, but not limited to: providing students with the working knowledge of dental record keeping, as it relates to diagnosis and treatment of pathology; recognition and management of medical illness and disabilities; treatment planning; documentation of pre-existing conditions, current and past treatment; established laboratory protocols; evaluation of reasons for remakes and re-dos; post-treatment evaluation of care. Recommended preparation: COMP 394.

DENF Courses

DENF 422. Comprehensive Periodontics. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the periodontic procedures associated with general dentistry.

DENF 428. Comprehensive Oral Medicine. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the radiologic and oral diagnostic procedures associated with general dentistry.

DENF 448. Comprehensive Endodontics. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the endodontic procedures associated with general dentistry.

DENF 455. Comprehensive Oral Surgery. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the oral surgery procedures associated with general dentistry.

DENF 464. Comprehensive Operative Dentistry. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the operative procedures associated with general dentistry.

DENF 468. Comprehensive Removable Prosthodontics. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the removable prosthodontics procedures associated with general dentistry.
DENF 474. Comprehensive Fixed Prosthodontics. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the fixed prosthodontic procedures associated with general dentistry.

DENF 478. Comprehensive Pedodontics and Orthodontics. 3 Units.
This course is available only to dental school faculty who have earned dental degrees from foreign institutions and who have the approval of their Chairperson and the Dean to register. Successful completion of the course is accomplished by fulfilling the unit requirements, competency exams and any other written or practical requirements set forward by the Dental Education Committee and approved by the general faculty of the School of Dental Medicine in order to assure competency in the pediatric and orthodontic procedures associated with general dentistry.

DENT Courses

DENT 501. Biological Aspects of the Stomatological System. 2 Units.
This course is a review of biochemistry, molecular and cellular biology, histology, and oral anatomy and an expansion of oral biological topics that underlie the disciplines of endodontics, orthodontics, periodontics, and pediatric dentistry.

DENT 502. Correlative Medical Science. 2 Units.
Case-based discussion of selected systemic disease commonly encountered by the dentist.

DENT 503. Facial Growth and Development. 1 Unit.
Emphasis on the qualitative, quantitative, and integrative changes during postnatal craniofacial growth and development.

DENT 504. Advanced Facial Growth. 1 Unit.
Student participation in seminar evaluation series dealing with problems and controversies apparent in the literature in regard to theories of growth, development, and aging. Emphasis on the craniofacial literature, but not exclusively.

DENT 505. Dentofacial Anomalies. 1 Unit.
This course is designed to provide the student with the practical experience regarding the multidisciplinary aspects of diagnosis and treatment of patients with craniofacial anomalies. Observation of team sessions and active participation in patient examinations, diagnosis, and treatment planning.

DENT 508. Master's Thesis Protocol. 2 Units.
The requirements for the degree of Master of Science in Dentistry include the successful completion of a suitable research experience, demonstration of scholarly attainment, and the ability to conduct directed research.

DENT 509. Research Methods: Preparation. 1 Unit.
A detailed presentation of epidemiological and biostatistical techniques designed to acquaint the student with a broad spectrum of scientific approaches and to prepare for a research project. Topics include design of observational and experimental studies, common biostatistical techniques encountered in the dental literature such as t-test, ANOVA, chi-square, correlation and regression, and assessing the validity of diagnostic tests. Instruction includes lectures, critique of selected literature and computer analysis of data.

DENT 510. Epidemiology and Biostatistics. 3 Units.
Lectures and seminars on the clinical and histopathologic characteristics of many of the common oral diseases. Special emphasis on developing a logical approach to clinical and histopathologic diagnosis. Participation is expected for in-class discussion of the clinical and histopathologic material presented.

DENT 512. Advanced Oral Pathology. 3 Units.
This course deals with the structural, functional, and clinical relationships of the many organs and organ systems which comprise the head, neck, and pharyngeal regions of the human body.

DENT 514. Research Methods: Preparation. 1 Unit.
The goal of this course is to facilitate a formal statement of the student's research idea as preparation for working with a thesis committee or undertaking independent research.

DENT 515. Multidisciplinary Seminar. 0.5 Units.
This seminar meets monthly to discuss multidisciplinary cases to develop treatment recommendations for the patients presented. Each graduate department selects a clinical case that requires the services of at least three dental specialties. Ideally, patients should be in the beginning stage of treatment planning so the input from the various specialties can be used to develop a comprehensive plan to establish a health oral environment. It is expected that several alternative treatments will be discussed and the relative merits of each approach evaluated. To maximize the benefit of this seminar to the student learning process, an attending faculty member should be present from each of the dental specialty programs. In addition, all seminars have a Prosthodontist to provide input on the restorative treatment options.

DENT 516. Microbiology, Immunology, and Immune Systems. 1 Unit.
This course reviews bacterial structure and classification, provides insight into oral bacterial pathogenesis. Principles of antibiotic use and mechanisms of resistance are reviewed. Microbial diagnostic methodologies are discussed. Integration of periodontics, endodontics, and pediatric dentistry is stressed as it relates to the inflammatory process in the human host.

DENT 518. Behavioral Considerations in Oral Health Care. 1 Unit.
This course focuses on the behavioral knowledge and skills the oral health practitioner must possess in order to deliver effective, patient-centered care. Specifically, the course is designed to enhance graduate students’ existing knowledge and skills in relation to dentist-patient communication, management of diverse patient populations, and patient education and facilitation of health behavior change.
DENT 520. Skeletal Anchorage. 0.5 Units.
This course provides 1st year orthodontic residents with the theoretical knowledge and practical skills necessary to successfully treat orthodontic patients in need of absolute anchorage with orthodontic mini-implants. In addition, the most current articles in the orthodontic literature pertaining to this topic are read and discussed. The theory will be supplemented by practical exercises as necessary.

DENT 522. Orthodontic Biomechanics. 1 Unit.
This course provides first year orthodontic residents with the theoretical biomechanical knowledge necessary to successfully treat a wide range of orthodontic malocclusions using the preadjusted straight wire appliance, the segmented arch technique, treatment auxiliaries, and orthodontic mini-implants. In addition, the most current articles in the orthodontic literature pertaining to this topic are read and discussed. The theory will be supplemented by practical exercises as necessary.

DENT 523. Clinical Specialty Seminar I - Orthodontics. 2 Units.
This course is a companion to clinical training in orthodontics and involves faculty and student evaluation of past and present literature. Sessions are used to evaluate current timely literature, and lectures and seminars complement the clinical experiences with topics including patient management, treatment of various aged populations and malocclusions, orthopedic appliances, treatment of patients with special needs, and various aspects of fixed and removable mechanotherapy. First in a series of four courses.

DENT 524. Clinical Specialty Seminar II - Orthodontics. 2 Units.
Second in a series of four courses. (See DENT 523.)

DENT 527. Clinical Specialty Seminar III - Orthodontics. 2 Units.
Third in a series of four courses. (See DENT 523.)

DENT 528. Clinical Specialty Seminar IV - Orthodontics. 2 Units.
Fourth in a series of four courses. (See DENT 523.)

DENT 529. Endodontontology I. 3 Units.
Scientific rationale for endodontic practice. Endodontic anatomy, physiology, pathology, and microbiology. All treatments and techniques studied and substantiated by current and classical research. First in a series of four courses.

DENT 530. Endodontontology II. 3 Units.
Second in a series of four courses. (See DENT 529.)

DENT 531. Endodontontology III. 3 Units.
Third in a series of four courses. (See DENT 529.)

DENT 532. Endodontontology IV. 3 Units.
Fourth in a series of four courses. (See DENT 529.)

DENT 533. Pediatric Dentistry Literature Review I. 2 Units.
Review of the literature in preparation for the specialty board examination in pediatric dentistry. Includes articles on various topics including growth and development, special needs patients, oral pathology and oral medicine, and clinical and hospital practice.

DENT 534. Pediatric Dentistry Literature Review II. 2 Units.
Second in a series of four courses. See DENT 533 Pediatric Literature Review I.

DENT 535. Fundamentals in Pediatric Dentistry I. 3 Units.
Students present selected chapters from major pediatric dentistry review books for critique and discussion. Major strengths and weaknesses are emphasized. The course director then presents the most current information on the subject.

DENT 536. Fundamentals in Pediatric Dentistry II. 3 Units.
Second in a series of two courses. See DENT 535 Fundamentals in Pediatric Dentistry I.

DENT 537. Advanced Clinical Pediatric Dentistry I. 3 Units.
Students develop skills in diagnosis, radiographic technique, treatment planning, preventive and restorative dentistry, space management, trauma management, and nonpharmacologic behavior management. There is an opportunity to attend hospital grand rounds and physician conferences.

DENT 538. Advanced Clinical Pediatric Dentistry II. 3 Units.
Students develop skills in diagnosis, radiographic technique, treatment planning, preventive and restorative dentistry, space management, trauma management, and nonpharmacologic behavior management. There is an opportunity to attend hospital grand rounds and physician conferences.

DENT 539. Endodontic Literature Review I. 3 Units.
Provides scientific basis for present and future treatment. Instructs students in critically evaluating literature. Provides format for lifelong self-education. Specific journal assignments summarized, evaluated, and presented for group discussion weekly. First in a series of four courses.

DENT 540. Endodontic Literature Review II. 3 Units.
Second in a series of four courses. (See DENT 539.)

DENT 541. Endodontic Literature Review III. 3 Units.
Third in a series of four courses. (See DENT 539.)

DENT 542. Endodontic Literature Review IV. 3 Units.
Fourth in a series of four courses. (See DENT 539.)

DENT 550. Clinical Pharmacology. 1 Unit.
This course is designed to enable residents to obtain an understanding of the pharmacology of the most commonly prescribed medications; pharmacotherapeutic concepts in relationship to disease pathophysiology; rational drug therapy in the treatment of disease; drug-drug interactions and drug-disease interactions; adverse drug events. Residents will be expected to apply information on disease pathophysiology and pharmacotherapy to clinical cases. The ultimate goal is to provide relevant information to assist clinicians in practice.

DENT 551. Clinical Endodontic Specialty I. 3 Units.
Students present case histories as they encounter them in clinic. Cases discussed in detail and critically evaluated by colleagues and graduate endodontic faculty. Past endodontic literature discussed in detail as each student presents a topic assigned by faculty. Problems in clinic discussed. Several guest endodontists present various techniques and perform them. First in a series of four courses.

DENT 552. Clinical Endodontic Specialty II. 3 Units.
Second in a series of four courses. (See DENT 551.)

DENT 553. Clinical Endodontic Specialty III. 3 Units.
Third in a series of four courses. (See DENT 551.)
DENT 554. Clinical Endodontic Specialty IV. 3 Units.
Fourth in a series of four courses. (See DENT 551.)

DENT 555. Management of Medical Emergencies. 1 Unit.
This course covers the diagnosis and management of common medical emergencies, with special emphasis on patient evaluation and history taking to prevent such emergencies in the dental office. Venipuncture technique and the use of emergency equipment are demonstrated. Also included is a basic course in cardiopulmonary resuscitation, with practical demonstrations and examinations that lead to certification in basic CPR.

DENT 557. Periodontal Conference I. 1 Unit.
Presentation of treated patients with advanced periodontal disease. Discussion of the clinical findings, etiology, diagnosis, and treatment plan. Critical review of the different surgical procedures used in therapy and evaluation of postoperative results. First in a series of four courses.

DENT 558. Periodontal Conference II. 1 Unit.
Second in a series of four courses. (See DENT 557.)

DENT 559. Periodontal Conference III. 1 Unit.
Third in a series of four courses. (See DENT 557.)

DENT 560. Periodontal Conference IV. 1 Unit.
Fourth in a series of four courses. (See DENT 557.)

DENT 561. Orthodontics for Pediatric Dentists I. 1 Unit.
The course is designed to familiarize the pediatric dentistry residents with (1) the clinical evaluation of patients to determine appropriateness of orthodontic intervention, (2) record taking, (3) diagnosis, (4) treatment planning of cases in the mixed and permanent dentition, (5) treatment administration and (6) retention strategies. The primary focus will be on interceptive orthodontics including growth modification and corrective orthodontics in the permanent dentition. First in a series of four courses.

DENT 562. Orthodontics for Pediatric Dentists II. 1 Unit.
Second in a series of four courses. See DENT 561 Orthodontics for Pediatric Dentists.

DENT 564. Advanced Principles of Occlusion. 1 Unit.
This course is designed to provide in-depth knowledge of the structure and function of all anatomic components involved in occlusion, biomechanics of articulation and mastication; recording of mastication patterns; diagnosis of occlusal dysfunction; relationship to neuromuscular and temporomandibular joint anatomy and pathology; evidence based therapy used in the management of occlusal and temporomandibular disorders and its significance to inflammatory periodontal disease.

DENT 565. Practice Management I (Ortho). 1 Unit.
Seminar and demonstration course designed to prepare the student for all phases of the "business" of orthodontics as well as the responsibility of being a "professional." Management of the department clinic, private practice management, office visitations, and the business community, and ethics through the use of guest speakers on jurisprudence, personal and professional insurance, accounting, estate planning, risk management, informed consent, banking, office design, organized dentistry and investments. First in a series of four courses.

DENT 566. Practice Management II (Ortho). 1 Unit.
Third in a series of four courses. (See DENT 565.)

DENT 567. Practice Management IV (Ortho). 1 Unit.
Fourth in a series of four courses. (See DENT 565.)

DENT 569. Orthodontic Literature Review I. 1 Unit.
The course will focus on contemporary and classic literature selected to cover a wide range of orthodontic topics. The selected literature includes the reading list suggested by the American Board of Orthodontics in preparation for the Part II of the ABO examination. Students will be required to discuss the articles and answer questions pertaining to the reviewed material.

DENT 570. Orthodontic Literature Review II. 1 Unit.
The course will focus on contemporary and classic literature selected to cover a wide range of orthodontic topics. The selected literature includes the reading list suggested by the American Board of Orthodontics in preparation for the Part II of the ABO examination. Students will be required to discuss the articles and answer questions pertaining to the reviewed material.

DENT 572. Pre-Clinical Principles in Orthodontics. 1 Unit.
This course is comprised of a series of seminars presented by orthodontic faculty covering topics that will prepare the first orthodontic resident for the initial phases of clinical training.

DENT 573. Advanced Specialty Principles: Clinical I. 2 Units.
Full fixed orthodontic appliance treatment of patients in an educational setting. First in a series of four courses.

DENT 574. Advanced Specialty Principles: Clinical II. 2 Units.
Second in a series of four courses. (See DENT 573.)

DENT 575. Advanced Specialty Principles: Clinical III. 2 Units.
Third in a series of four courses. (See DENT 573.)

DENT 576. Advanced Specialty Principles: Clinical IV. 1 Unit.
Fourth in a series of four courses. (See DENT 573.)

DENT 577. Clinical Periodontics I. 3 Units.
Clinical practice of periodontics supplemented by case evaluation and treatment planning. A comprehensive study of normal and diseased periodontal tissues including etiology and diagnosis. Current modes of therapy-rationale technique, and prognosis. First in a series of four courses.

DENT 578. Clinical Periodontics II. 3 Units.
Second in a series of four courses. (See DENT 577.)

DENT 580. Orthodontics-Oral Surgery Conference. 0 Units.
A seminar series involving a multidisciplinary approach to the treatment of patients with severe craniofacial deformities. Begins in the fall of each year (continuing for four semesters) with a series of lectures, followed by assignment of patients supervised jointly by the departments of orthodontics and oral surgery. Meetings held bimonthly to review patient progress, plan treatment, and present cases for discussion. Each student involved in all phases of treatment: presurgical orthodontics, the surgical procedure, finishing orthodontics, and retention.

DENT 581. Clinical Periodontics III. 3 Units.
Third in a series of four courses. (See DENT 577.)

DENT 582. Clinical Periodontics IV. 3 Units.
Fourth in a series of four courses. (See DENT 577.)
DENT 583. Orthodontic Diagnostic Seminar I. 1 Unit.
Series of lectures and seminars covering the science of orthodontic
diagnosis. Course consists of lectures on techniques of diagnosis,
treatment planning, and critique of cases from the department or from
faculty private practices. Content also includes long-term follow-up of post
retention cases. First in a series of three courses.

DENT 584. Orthodontic Diagnostic Seminar II. 1 Unit.
Second in a series of three courses. (See DENT 583.)

DENT 585. Orthodontic Diagnostic Seminar III. 1 Unit.
Third in a series of three courses. (See DENT 583.)

DENT 586. Limited Tooth Movement for the Dental Specialist. 1 Unit.
A review of the rationale for orthodontic treatment in periodontally
diseased patients and in pre-restorative dentitions. Lectures, audio-visual
programs, and technique sessions. Diagnosis, treatment planning, and
various methods of tooth movement.

DENT 587. Periodontal Prosthesis. 1 Unit.
This course examines and defines the periodontal prosthetic
interrelationships beginning with treatment planning and continuing
with discussing the utilization of the combined treatment modalities. It
focuses on provisionalization, furcation treatment, occlusion, aesthetics,
removable appliances, and special advanced treatment problems.

DENT 588. Hospital Rotation. 2 Units.
Students are assigned full time to anesthesia service and perform such
duties as directed by anesthesiology staff: preoperative evaluation of
patients, indications and contraindications for specific methods
of anesthesia, relationship of medical problems to anesthesia risks,
assisting in preparation of patients for anesthesia, intubation and
anesthesia management, assisting in the management of complications,
and post-anesthetic recovery management including monitoring of vital
signs, blood gases, EKG, etc., and participation in post-anesthesia
rounds and conferences.

DENT 589. Orthodontic Diagnostic Seminar IV. 1 Unit.
The fourth course in a series which consists of weekly lectures and
seminars covering the science of orthodontic diagnosis. Consists of
lectures on the techniques of diagnosis, various diagnostic aids, and
case planning. Also consists of seminars where the students perform
diagnosis, plan treatment and critique cases from the department. This
course is used for long-term follow-up clinic.

DENT 591. Orthodontics for Pediatric Dentists III. 1 Unit.
Third in a series of four courses. See DENT 561 Orthodontics for
Pediatric Dentists.

DENT 592. Orthodontics for Pediatric Dentists IV. 1 Unit.
Fourth in a series of four courses. See DENT 561 Orthodontics for
Pediatric Dentists.

DENT 595. Advanced Periodontal Seminar I. 1.5 Unit.
Series of seminars covering clinical, histological, and physiological
aspects of the periodontium in health and disease, etiology, diagnosis,
prognosis, prevention, and treatment of periodontal disease, as well as
the relationship of periodontics to other phases of dentistry. First in a
series of four courses.

DENT 596. Advanced Periodontal Seminar II. 1.5 Unit.
Second in a series of four courses. (See DENT 595.)

DENT 597. Advanced Periodontal Seminar III. 1.5 Unit.
Third in a series of four courses. (See DENT 595.)

DENT 598. Advanced Periodontal Seminar IV. 1.5 Unit.
Fourth in a series of four courses. (See DENT 595.)

DENT 631. Pediatric Dentistry Literature Review III. 2 Units.
Third in a series of four courses. See DENT 533 Pediatric Dentistry
Literature Review I.

DENT 632. Pediatric Dentistry Literature Review IV. 2 Units.
Fourth in a series of four courses. See DENT 533 Pediatric Dentistry
Literature Review I.

DENT 637. Advanced Clinical Pediatric Dentistry III. 3 Units.
Third in a series of four courses. See DENT 537 Advanced Clinical
Pediatric Dentistry I. Additionally, residents learn to manage children
with complex special health care needs, including inpatients. Residents
interact and coordinate with other medical departments within the
hospital, and with outside clinics and practitioners.

DENT 638. Advanced Clinical Pediatric Dentistry IV. 3 Units.
Fourth in a series of four courses. See DENT 637 Advanced Clinical
Pediatric Dentistry III.

DENT 639. Advanced Seminar in Pediatric Dentistry I. 3 Units.
Students present patient cases for in-depth discussion of specific clinical
problems.

DENT 640. Advanced Seminar in Pediatric Dentistry II. 3 Units.
Second in a series of two courses. See DENT 637 Pediatric Dental
Seminar I.

DENT 651. Thesis M.S.D.. 1 - 9 Unit.
Subsections for each program area of study: endodontics, orthodontics,
periodontics, or pediatric dentistry.

DENT 661. Conscious IV Sedation I. 2 Units.
Didactic portion covers physical evaluation, physiology, pharmacology,
emergencies, and techniques. Cardiac monitoring, basic life support, and
advanced cardiac life support.

DENT 662. Conscious IV Sedation II. 1 Unit.
(See DENT 661.) Supervised clinical experience in conscious IV
sedation.

DENT 663. Implant Dentistry I Periodontics. 1 Unit.
Designed to enhance the understanding of current concepts and their
role in the multidisciplinary treatment of the patient.

DENT 664. Implant Dentistry II Periodontics. 1 Unit.
(See DENT 663.) Clinical demonstration, participation, and case
presentation in implant dentistry.

DENT 682. Cephalometrics. 1 Unit.
A lecture and laboratory course in cephalometric roentgenography
leading to a thorough understanding of craniofacial radiographic
techniques. Use of x-rays and radiation hygiene, and technical and
interpretive proficiency.

DENT 683. Imaging and IT. 1 Unit.
This course is designed to give some basic computer knowledge and
prepare the resident for the use of computers in the orthodontic office.
DENT 684. Radiology and Cephalometrics. 1 Unit.
Fundamentally related to cephalometric radiography, skeletal morphology, and cephalogram interpretations of historic analyses via the Krogman-Sassouni Syllabus. Also, clinical evaluations of hard and soft tissue relationships of the airway and skeletal maturation are presented. The use of Bolton Standards in craniofacial analysis is stressed.

DENT 685. Literature Review in Periodontics I. 1 Unit.
Comprehensive discussion of selected articles related to clinical periodontology and basic sciences of significance to periodontal research and therapy.

DENT 686. Literature Review in Periodontics II. 1 Unit.
Third in a series of four courses. See DENT 685.

DENT 687. Literature Review in Periodontics III. 1 Unit.
Fourth in a series of four courses. See DENT 685.

DENT 688. Literature Review in Periodontics IV. 1 Unit.
Fourth in a series of four courses. See DENT 685.

DENT 690. Pediatric Dental Residency. 1 - 10 Unit.
Allows registration for non-degree-seeking students in graduate level courses at the direction of the department.

DENT 692. Restorative Fellowship. 6 Units.
Provides for 12 months of clinical and didactic training in all phases of general dentistry beyond the scope of predoctoral dental education. Areas of emphasis include advanced restorative techniques, proper selection of restorative materials, restoration of implants, fixed and removable prosthodontics, and esthetic dentistry. At the discretion of the course director, students may register for an additional 12 months, during which time the student will build on knowledge attained during the first year, continue with advanced didactic instruction, expand their clinical experience through continued patient care, participate in clinical research, and have teaching opportunities.

DENT 694. Fellowship in Dentistry. 6 Units.
The Fellowship in Dentistry provides for advanced clinical, didactic and research training beyond the scope of the pre-doctoral dental education.

DENT 695. Oral Surgery Residency. 1 - 10 Unit.
Allows registration for non-degree-seeking students in graduate level courses at the direction of the department.

DENT 696. Advanced Dental Training. 1 Unit.
This course is a one year advanced training in dental medicine at Case Western Reserve University School of Dental Medicine. Responsibilities may include clinical and didactic responsibilities. The course is designed to give students clinical experience in a defined focus area. Prereq: D.D.S. or equivalent.

DENT 697. Advanced Dental Training II. 1 Unit.
Continuation of Advanced Dental Training I. Prereq: D.D.S. or equivalent.

DENT 698. Multidisciplinary Seminar II. 0 Units.
This seminar meets monthly to discuss multidisciplinary cases to develop treatment recommendations for the patients presented. Each graduate department selects a clinical case that requires the services of at least three dental specialties. Ideally, patients should be in the beginning stage of treatment planning so the input from the various specialties can be used to develop a comprehensive plan to establish a healthy oral environment. It is expected that several alternative treatments will be discussed and the relative merits of each approach evaluated. To maximize the benefit of this seminar to the student learning process, an attending faculty member should be present from each of the dental specialty programs. In addition, all seminars have a Prosthodontist to provide input on the restorative treatment options. Prereq: D.D.S. or equivalent.

DENT 699. AEGD Residency Training. 1 - 8 Unit.
This is a multidisciplinary course that encompasses didactic and clinical training in general dentistry.

DSPR Courses

DSPR 232. Periodontics. 1 Unit.
A comprehensive course in periodontology including etiology, diagnosis, radiographic, interpretations and prognosis.

DSPR 234. Oral Pathology. 3.5 Units.
Diseases and abnormalities of the teeth and adjacent hard and soft tissues. Includes periodontal, pulpal, and periapical diseases as well as cysts, tumors, developmental anomalies, and oral aspects of systematic disease.

DSPR 236. Cariology. 1 Unit.
Etiology, clinical and radiologic features, risk assessment, and prevention of caries.

DSPR 239. Neoplasia. 1 Unit.
Topics covered in this educational module include tumor nomenclature, features of benign versus malignant tumors, cytologic characteristics of cancer cells, pathogenesis and prognosis.

DSPR 333. Management of Medical Emergencies. 1 Unit.
Patient evaluation, diagnosis and treatment of life-threatening emergencies that may arise in the course of dental treatment. Includes instruction in basic life support and cardiopulmonary resuscitation.

DSPR 341. Oral Diagnosis and Radiology. 2 Units.
This course helps the beginning clinician develop and understand the diagnostic process. It is designed to present to the student a method by which the common oral problems facing the dental practitioner can be recognized, diagnosed, evaluated and managed.

DSPR 342. Oral Cancer Diagnosis. 1 Unit.
DSPR 344. Dental Management of Medical Disease. 0.5 Units.
Hospital procedures and protocol and the management of surgical complications and emergencies. General principles of surgery as applied to selected topics.

DSPR 426. Oral Diagnosis Seminar. 1 Unit.
Case-based review of oral diagnosis, radiology, and medicine.

DSRE Courses

DSRE 335. Clinical Pharmacology. 2 Units.
This course is designed to review common pharmacologic agents encountered in the general population. Emphasis is placed on the prescription, action, and interaction of dental pharmacologic agents as well as the implication of medical prescriptions on dental therapy. The course culminates in the evaluation of case studies and problem solving in drug therapy.

DSRE 374. Fixed Prosthodontics. 1.5 Unit.
Diagnosis and treatment planning in fixed prostodontics and construction of simple crowns and bridges. Lecture series concerning the discussions and demonstration of elementary and advanced methods of restoring occlusion, esthetics, and speech using fixed prosthesis.

DSRE 391. Endodontics. 1 Unit.
Recognition of endodontic pulpal health and the changes that occur in the transition from health to disease. The didactic component focuses on scientific basis for recognition of degenerative states of the dental pulp and the philosophy of endodontic therapy. The clinical component focuses on the treatment of diseased, pulpally-involved teeth of actual patients. It provides practical instruction on how to render endodontic therapy under the direct supervision of qualified endodontic personnel.

DSRE 392. Nitrous Oxide and Conscious Sedation. 0.5 Units.
Physiopharmacology of nitrous oxide use. Indications, contraindications, and complications.

DSRE 393. Principles of Oral and Maxillofacial Surgery I. 1 Unit.

DSRE 395. Introduction to Oral and Maxillofacial Surgery. 0.5 Units.
This didactic course is designed to prepare the student for oral surgery clinical rotations and is comprised of the following topics, review of local anesthesia, review of applied anatomy, infection control, patient assessment and case presentation, informed consent, oral surgical armamentarium, and principles of exodontia.

DSRE 397. Occlusion Seminar. 2 Units.
An introduction to gnathological principles: terminology, procedures and instrumentation. Correlation of history and clinical symptoms with treatment modalities emphasized. Use of bite planes, centric relation registration, and diagnostic waxup on mounted casts.

EFDA Courses

EFDA 111. Tooth Morphology for the EFDA. 1 Unit.
Instructional laboratory sessions provide experience with viewing models of teeth as well as reproducing teeth in wax. Mastery of terminology and basic facts of dental anatomy and tooth positions of permanent and primary teeth. Introduction of proper instrumentation begins.

EFDA 113. Dental Materials for the EFDA. 1 Unit.
Instructional laboratory sessions cover the physical and chemical properties and uses and manipulation of materials used in protection of the pulp and intracoronal temporization. Composition, properties and manipulation of dental amalgam, composite and pit and fissure sealant materials are also introduced. Isolation techniques and rubber dam placement lab.

EFDA 115. Restorative Dentistry for the EFDA I. 3 Units.
Skill development in the placement and carving of Class I, II, V and complex amalgam restorations on the typodont. Skill development in the placement and finishing and polishing of Class I, II, III, IV, and V composite restoration and amalgam restoration finishing and polishing on the typodont. Continued skill development in instrumentation, body positioning and ergonomics. Skill development in the use of low and high speed handpieces for rotary instrument use in finishing and polishing restorations. Skill development in self-evaluation using specific criteria. Pit and fissure sealant applications. **Student must show competency of skills acquired to be able to progress in Clinical Practicum for the EFDA**.

EFDA 116. Restorative Dentistry for the EFDA II. 2 Units.
Students begin preparation for the state board examination by demonstrating successful completion of amalgam and composite restorations with increasingly difficult grading evaluation, mastery of self evaluation skills, decreasing restoration placement time and by completing 3 mock board examinations. Students must pass a final clinical and didactic examination to pass the course. Emphasis on understanding Ohio EFDA Registration protocol.

EFDA 120. Clinical Practicum for the EFDA. 2 Units.
Students fulfill the Ohio State Dental Board requirement of having clinical experience on patients in CWRU approved dental clinics. Clinic sessions include a variety of restorative experiences on many patients. One 8 hour session is required for 4 weeks. Students will restore patients' teeth under the supervision of a licensed dentist and a clinical supervisor in clinics affiliated with CWRU. Emphasis is placed on restoring metallic and non-metallic restorations.

EFDA 122. Clinical Board Review. 0.5 Units.
Review of Restorative Expanded Functions for the Dental Auxiliary. This two day course is designed to prepare the Registered Dental Hygienist or Certified Dental Assistant for the EFDA certification examination administered by the Commission on Dental Testing in Ohio. Successful completion of an approved EFDA course is a prerequisite for attendance. This course meets the requirements as remediation for auxiliaries who have not passed the certifying examination after two attempts. The course will involve both laboratory reviews and practice, preparing the participant for the clinical examination.
HEWB Courses

HEWB 121. Foundations of Life Science. 4.5 Units.
This course includes an introduction to basic elements of cell structure and function. This includes the characteristics and role of different types of cells, the cell cycle, mechanisms for cell damage, repair and death, cell signaling, differentiation and gene expression. This course serves as a foundation for the modules in Health and Wellbeing and Disease Processes.

HEWB 123. Facial Growth. 1 Unit.
Introduction to the normal growth and development of the human face from embryology to adult.

HEWB 124. Masticatory Dynamics. 2 Units.
Descriptive anatomy of masticatory structures with emphasis on deciduous and permanent teeth and the temporomandibular-mandibular movements, and the fundamental concepts of the functional relationships between the dentition and the temporomandibular joint. Lectures on comparative anatomy and variations in tooth morphology.

HEWB 126. Masticatory Dynamics Lab. 1.5 Unit.
Companion pre-clinical component to HEWB 124. Laboratory exercises and assignments include drawings, waxups and tooth identification, and use of semi-adjustible articulator.

HEWB 128. Body as Host. 4.5 Units.
This educational module focuses on the role of bacteria, viruses, and fungi in immune function that preserves and maintains health and discusses host changes that occur during oral and systemic disease processes.

HEWB 130. Oral Histology. 1.5 Unit.
Development of teeth and supporting tissues. Histology and ultrastructure cytology of the oral region with emphasis on the calcified tissues.

HEWB 134. Head and Neck Structure and Function. 4.5 Units.
This course explores the developmental, cellular, physiologic, anatomic and biochemical components of the head and neck region. The focus is both healthy functioning and disease of the head and neck area.

HEWB 200. Directed Studies. 1 - 6 Unit.
Directed study under faculty supervision and with special permission of the Associate Dean for Education.

HEWB 349. Dentofacial Morphology. 1 Unit.
This course provides the dental student with an introduction to the assessment of dynamic faces and the relatively static dentition. The course details the etiologies and characteristics of various malocclusions including developmental disharmonies observed during the growth and development of a child. Primary emphasis is laid on empowering the student in the diagnoses of malocclusions employing study casts, intra and extra-oral photographs and, cephalograms.

HWDP Courses

HWDP 131. Heart and Lungs in Disease and Health. 4.5 Units.
This course provides students with the understanding of the structural and functional relationships of the cardiovascular and respiratory systems. This integrated approach serves as a foundation for understanding the health and well-being of these systems. This education module also facilitates student recognition of cardiovascular and respiratory dysfunction that may be present in their patients and help students understand how such conditions may affect their patients’ general and oral health.

HWDP 232. Health and Disease: Renal and Hematologic Systems. 2 Units.
This educational module focuses on the understanding of the structural and functional relationships of the renal and hematologic systems. This integrated approach serves as a foundation for understanding the maintenance of health and well-being as well as disease processes within the body.

HWDP 241. Gastrointestinal System in Health and Disease. 2 Units.
This educational module focuses on the understanding of the structural and functional relationships of the many components of the gastrointestinal system in health and disease.

HWDP 243. Endocrine and Reproductive Systems in Health and Disease. 1.5 Unit.
This educational module focuses on the understanding of the structural and functional relationships of the many components of the endocrine and reproductive systems in health and disease.

HWDP 245. Musculoskeletal System in Health and Disease. 1.5 Unit.
This educational module focuses on the understanding of the structural and functional relationships of the many components of the musculoskeletal system in health and disease.

HWDP 246. Neuroscience in Health and Disease. 2 Units.
An integrated approach to the anatomy and physiology of the human nervous system. Analyzes neuronal phenomena at both cellular and systems levels.

INQU Courses

INQU 102. ACE: Knowing the Patient. 2 Units.
This ACE introduces the student to professional patient interaction and evaluation in a simulated environment. Students will develop interview techniques, learn patient appraisal skills, and techniques for communicating effectively in a health care environment. Students will experience patient interviews and assessment in a simulated environment with live patients.

LDRS Courses

LDRS 111. Epidemiology for Public Health and Clinical Practice. 2.5 Units.
This 3 week intensive sequence provides the first experience with the problem-based learning format and focuses on the content foundation in epidemiology and skills for evidence-based practice in dentistry. Problem-based cases will use oral health topics to present the skills for critical appraisal of health literature. Small-group settings will permit students to gain experience in applying these skills to relevant dental literature.
LDRS 310. Professional Development II. 1 Unit.
Major issues and trends that affect oral health and the mission of dentistry in the United States. Behavioral knowledge and skills essential to the oral health practitioner’s ability to deliver effective patient-centered care.

LDRS 313. Dental Patient Management/Risk Management. 1 Unit.
Principles of patient management and risk management are reviewed. The primary focus is directed toward the skills associated with communication. A variety of examples of malpractice are reviewed and discussed. Other areas of risk are discussed such as infection and occupational hazards related to EPA and OSHA standards.

LDRS 316. Practice Management I. 1 Unit.
This course is designed to develop practical knowledge and skills in dental practice management. It is organized around initial topics that will lay the foundation for adequate planning for practice success after graduation. The subsequent courses build upon this foundation knowledge so that students will have a general perspective of where to begin their strategies for success in the future. This course discusses topics that include analysis of practice configurations, choosing the appropriate consultants, basic tools for fiscal management and evaluation, and identifying opportunities that match the student’s life goals.

LDRS 317. Dental Auxiliary Management. 0.5 Units.
This course introduces students to each type of auxiliary personnel in the dental office and describes their training, testing, duties delegated legally and how their utilization in the office setting can be optimized. Basic management considerations and theories of leadership are presented and various leadership styles are recommended for situations presented. This course provides an understanding of interacting with auxiliary and the process of delegation. The course defines state dental board rules and regulations that guide dentists in the utilization of auxiliary personnel. Such items as overhead costs are explored in relation to each auxiliary category.

LDRS 415. Practice Management II. 1 Unit.
Students deal with entrepreneurship applications and experiences specific to dentistry and are introduced to the process of formulating a business plan. Personal finance and investment strategies are covered in this course, particularly as they pertain to developing a business plan for the students’ careers. Each student constructs a business plan specific to the goals and situation of that student.

LDRS 416. Practice Management III. 1.5 Unit.
This course is designed to develop practical knowledge and skills in dental practice management. As the student prepares for clinical practice, topics surrounding negotiation of working contracts, insurance contract evaluation, policies, compliance, and marketing are among some of the most important issues to be familiar with. Skills acquired in the preceding course are applied to the student’s “practice” (panel of patients) for evaluation of practice productivity and growth.

LDRS 420. Jurisprudence and Professional Ethical Responsibility. 0.5 Units.
Ethical and legal issues, civil and criminal law, contracts, malpractice and current ethical and legal dilemmas encountered in practice.

MAHE Courses

MAHE 141. Preventive Periodontics. 1 Unit.

MAHE 144. Preventive Periodontics Clinic. 1 Unit.
Companion clinical component to MAHE 141. Clinical application of methods for the prevention and maintenance of periodontal health in patients. The importance of patient education, motivation, and cooperation in present methods of prevention and plaque control.

MAHE 145. ACE: Outreach Preventive Dentistry. 1.5 Unit.
This ACE introduces the student to professional patient interaction and evaluation in a simulated environment. Students will develop interview techniques, learn patient appraisal skills, and techniques for communicating effectively in a health care environment. Students will experience patient interviews and assessment in a simulated environment with live patients.

MAHE 214. ACE: Family First. 1 Unit.
The overarching goal of the clinical experience (ACE) is to incorporate the concepts of risk assessment and the importance of the family unit to oral health. The Family First ACE will allow students to explore the interaction between genetic and environmental factors in oral diseases and certain systemic conditions (diabetes, hypertension, and asthma). At the end of the "Family First" rotation the students would have achieved certain didactic and clinical objectives and the experience is linked to the second year didactic courses: Cariology, Periodontology, and Oral Pathology. This experiential learning includes clinical experience, didactic lectures, and small group discussions. Risk assessment for common oral diseases such as caries and periodontal diseases as well as for oral cancer is part of the clinical activities. Students will review the risk assessment and systemic health to delineate genetic and environmental factors through small group discussions.

MAHE 242. Periodontics. 1 Unit.
Companion clinical component for DSPR 232. Students observe and assist at periodontal surgical procedures on moderately advanced periodontal diseases. Treatment includes root planing, curettage, occlusal adjustment, minor tooth movement and case maintenance.

MAHE 340. Nutrition for Dentistry. 1 Unit.
General nutrition concepts are presented in addition to aspects pertinent to the practice of dentistry.

REHE Courses

REHE 151. Dental Anatomy. 3 Units.
Descriptive anatomy of masticatory structures with emphasis on deciduous and permanent teeth and the temporomandibular-mandibular movements, and the fundamental concepts of the functional relationships between the dentition and the temporomandibular joint. Lectures on comparative anatomy and variations in tooth morphology.
REHE 152. Basic Procedures in Fixed Prosthetics. 2 Units.
To introduce and familiarize the dental student to basic principles related to fixed prosthodontics. The introduction will emphasize principles of engineering and preparation designs, full coverage retains for both metal and ceramic restorations.

REHE 153. Dental Anatomy Laboratory. 1 Unit.
Companion preclinical component to REHE 151. Laboratory exercises and assignments include drawings, waxups, tooth identification, and use of semi-adjustable articulator.

REHE 154. Basic Procedures in Fixed Prosthetics Lab. 1.5 Unit.
Laboratory component of REHE 152.

REHE 156. DentSim Laboratory. 1 Unit.
This course covers the criteria, techniques and practice of preparing ‘ideal/standard’ operative preparations. The restorative procedures will be performed on typodont teeth mounted in a computer assisted simulator (DentSim).

REHE 158. Dental Materials I. 0.5 Units.
The primary goal is to introduce basic material science concepts needed to evaluate, compare and select materials for a specific application. Knowledge of properties, indications and limitations of different clinical and laboratory materials will be presented. The effect of manipulation variables on material properties will be emphasized.

REHE 229. Introduction to Radiography. 1.5 Unit.
Initial course consisting of lecture and laboratory covering basic principles of radiography. Included are: instructions on taking intraoral radiographs, radiation physics involved in x-ray generation and the parts and function of the x-ray unit, radiation biology of x-ray interaction with tissue, head and neck anatomy and pathology with regards to radiographic interpretation. Each student will have a clinic rotation.

REHE 252. Pain Control. 1 Unit.
Anatomy pertaining to local anesthesia. Drugs used in local anesthesia and technique of administration. Management of complications. Slides and clinical demonstrations.

REHE 253. Basic Procedures in Esthetics. 1 Unit.

REHE 254. Pharmacology. 4 Units.
This course introduces students to the principles of pharmacology and to the mechanisms of drug action in the context of common disease states.

REHE 256. Radiology. 0.5 Units.
This is a continuation of REHE 229. This course will explore alternative intraoral radiographic techniques, extraoral radiography techniques, their uses and limitation. Included is a discussion of radiation safety in the dental office and film processing. Each student will have an opportunity to gain “hands-on” experience in patient alignment for a panoramic radiograph and alternative tools for taking quality films. Each student will have a clinic rotation.

REHE 257. Prosthodontic Technology. 2 Units.
A lecture-demonstration-laboratory approach to complete denture prosthesis construction. Emphasis on certain fundamental biological considerations of the edentulous patient, such as the oral membranes, muscles, bones, and phonetics and how they relate to the technical aspects of denture constructions.

REHE 258. Principles of Treatment Planning I. 1 Unit.
This course provides lecture presentations to help prepare the student to develop skills in patient diagnosis and treatment planning. The lectures will guide the students through the thought processes necessary in the development of workable treatment plans. The emphasis will be on exposing the students to the approach used in our clinic of providing the patients with options of optimal, alternative and emergency diagnostic or recall treatment plans using decisional analysis.

REHE 259-1. Basic Procedures in Fixed Prosthodontics II. 0 Units.
This course builds upon those core elements covered in REHE 152/154. Emphasis on principles of engineering for fixed partial dentures, preparation and design of fixed partial dentures, considerations for the restoration of endodontically involved teeth, and definitive and provisional fixed partial denture restorations. Introduces dental material topics related to fabrication of a fixed partial denture restoration, including: chemomechanical soft tissue retraction, die spacers, investments, casting and casting alloys, ceramics, soldering, provisional materials, prefabricated and custom post and core systems. Emphasis on principles of engineering for fixed partial dentures, preparation and design of fixed partial dentures, considerations for the restoration of endodontically involved teeth, and definitive and provisional fixed partial denture restorations. Introduces dental material topics related to fabrication of a fixed partial denture restoration, including: chemicomechanical soft tissue retraction, die spacers, investments, casting and casting alloys, ceramics, soldering, provisional materials, prefabricated and custom post and core systems.

REHE 259-2. Basic Procedures in Fixed Prosthodontics II. 2 Units.
This course builds upon those core elements covered in REHE 152/154. Emphasis on principles of engineering for fixed partial dentures, preparation and design of fixed partial dentures, considerations for the restoration of endodontically involved teeth, and definitive and provisional fixed partial denture restorations. Introduces dental material topics related to fabrication of a fixed partial denture restoration, including: chemomechanical soft tissue retraction, die spacers, investments, casting and casting alloys, ceramics, soldering, provisional materials, prefabricated and custom post and core systems. Emphasis on principles of engineering for fixed partial dentures, preparation and design of fixed partial dentures, considerations for the restoration of endodontically involved teeth, and definitive and provisional fixed partial denture restorations. Introduces dental material topics related to fabrication of a fixed partial denture restoration, including: chemomechanical soft tissue retraction, die spacers, investments, casting and casting alloys, ceramics, soldering, provisional materials, prefabricated and custom post and core systems.

REHE 260-1. Basic Procedure Fixed Prosthodontics II Lab. 0 Units.
Laboratory component of REHE 259.

REHE 260-2. Basic Procedure Fixed Prosthodontics II Lab. 2 Units.
Laboratory component of REHE 259-1.

REHE 262. Basic Procedures in Operative Dentistry. 1 Unit.
This course, together with REHE 253, covers the criteria, techniques, and practice of preparing “ideal/standard” operative preparations and placement of operative restorations. The emphasis is on posterior amalgam preparations and restorations, as well as an introduction to cast gold inlay and onlays. Students will be introduced to basic cariology and radiology as it relates to operative dentistry. In addition, the composition and properties of amalgam, liners and bases, investment material, and gold will be reviewed. Students will work on typodont and extracted teeth.
REHE 263. Basic Procedure in Esthetics Lab. 0.5 Units.

REHE 264. Endodontics. 0.5 Units.
Introduction to methods and materials necessary for successful root canal therapy.

REHE 266. Partial Denture Design. 2 Units.
Recognition of clinical situations that require partial denture therapy are developed. Introduction to the terms used in removable partial prosthodontics. Partially edentulous casts diagnosed, designed, surveyed, contoured for path of insertion, prepared for rest seat areas, and finally tripoded for further orientation by each student on his or her own casts. Thus the design, surveying, and clinical applications for removable partial service are presented in order to maintain optimal oral health conditions and to provide a sound basis for the prosthesis.

REHE 267. Prosthodontic Technology Lab. 2 Units.
Companion preclinical component to REHE 257. Each student constructs a complete set of dentures using laboratory manikin as patient. Although REHE 267 was conceived as a technique course, one of its principal objectives is to prepare the student for the clinical aspect of dental education.

REHE 268. Basic Procedures Competency. 1.5 Unit.

REHE 272. B P Operative Dentistry Lab. 1 Unit.
Laboratory component of REHE 262.

REHE 274. Endodontics Lab. 1 Unit.
Companion laboratory component to REHE 264. Complete endodontic treatment performed by each student on extracted teeth using gutta percha.

REHE 276. Partial Denture Design Lab. 1.5 Unit.
Theories of removable partial denture construction which enable the student to perform exercises that are associated with the techniques used to achieve a successful result. Students will be evaluated by various testing methods.

REHE 350. Oral Rehabilitation. 1 Unit.
The didactic curriculum provides a series of lectures that emphasize the importance of evaluation of the entire stomatognathic system for treatment planning. Causal relationships influenced by misdirected forces and hyperfunction are discussed.

REHE 351. Surgical Periodontics. 1 Unit.
Case analysis and treatment planning for various conditions of periodontal disease. Case presentation to patients. Basic surgical technique and advanced types of periodontal surgery demonstrated. Occlusal analysis and occlusal adjustment considered.

REHE 353. Principles of Treatment Planning II. 0.5 Units.
This course provides formal instruction designed to prepare the students for patient management, practice management, and treatment planning. Emphasis on devising optimal, alternative and emergency diagnostic treatment plans.

REHE 355. Esthetic Dentistry. 1 Unit.
Lectures and demonstrations. The indications, contraindications, limitations, and use of modern techniques and materials in esthetic dentistry.

REHE 358. Dental Materials II. 0.5 Units.
This is a didactic course that defines and describes properties, composition, indications and contraindications of uses of different dental materials

REHE 360. Implant Dentistry. 1 Unit.
Didactic and laboratory instruction that introduces the concepts used in implantology. These include the scientific basis of implant tissue reactions, and the surgical and restorative protocols. Emphasis is placed on slide presentation of actual cases. An opportunity is given to students to place an implant in an artificial mandible and to manipulate implant components on a typodont.

REHE 414. Advanced Implant Dentistry Elective. 0.5 Units.
This is a Senior elective course. This elective is designed to expose the student to advance implant therapies for the dentate and edentulous patient. Through lecture, discussions and treatment planning sessions the student will discover the multitude of variations of care available for these patients and the restorative processes necessary to deliver that care. They should also more fully understand the limitations of each of these modalities within the scope of dental implant therapy allowing them to provide for their patients the most appropriate treatment direction.

REHE 416. Basic Principles of Digital Radiology and Cone Beam CT Elective. 0.5 Units.
This is a Senior elective course. This course will be a continuation of REHE 256, Advanced Principles of Radiology. Students will be introduced to digital radiographic techniques, their uses and limitations. Principles of CBCT, anatomy, basic pathology, and working with CBCT volumetric dataset.

REHE 421. Periodontal Medicine and Cases. 1 Unit.
Further application of the knowledge and skills learned in prior periodontal courses. Focus is on how selective periodontal treatment can be integrated into a treatment plan considering the parameters presented by a special situation. Some examples are treatment related to endodontics, prosthodontics, geriatrics, esthetics, orthodontics and implantology.

REHE 455. General Anesthesia, Oral Surgery. 0.5 Units.
REHE 473. Introduction to CEREC Dentistry Elective. 1 Unit.
This is a Senior elective course. The didactic portion of the course will describe the use of CAD/CAM (computer-aided design/computer-aided manufacture) systems. The use of this chairside technology is readily available for the general dentist. An increase in public demand for esthetic procedures has made “all ceramic” restorations a popular treatment choice in restorative dentistry. This elective course will encompass the basic concepts of CAD/CAM dentistry, in particular utilizing the CEREC acquisition and milling machine by Sirona. The course will describe basic concepts of this technology including theoretical and clinical considerations of preparation and design. In the laboratory portion, students will learn the technique of tooth preparation, powdering and capturing an optical impression. In addition, the student will design, mill (manufacturing) and polish the restoration prior to cementation. This course will include both lecture and laboratory sessions. In the laboratory sessions, students will be able to apply the information gained in lecture material through laboratory projects. Following the completion of the lecture and laboratory portions, students will be eligible for clinical experience.

REHE 482. Orthodontics. 1 Unit.
Instruction through lectures and audio-visual programs enabling the student to gain judgment, knowledge, and skills to select and treat uncomplicated tooth irregularities in children and adults. Advanced topics in comprehensive orthodontics, such as surgical orthodontics and cleft-palate treatment.

REHE 488. Case Presentations I. 1 Unit.
First Semester of case presentation is dedicated to the review of comprehensive treatment planning slide material in preparation for National Boards part II and the Northeast Regional Board Dental Simulated Clinical Examination DSCE and the Case Based Examination (CBE) and the Western Regional Board (WREB) treatment planning examinations. Cases treated in the CASE SODM clinics will be reviewed by the preceptor faculty along with clinical specialty faculty and biological science faculty where appropriate. Diagnostic information will be on Blackboard preceding the schedule case review. During the case review questions will be presented for all students to interject through either the PRS format or Blackboard. In addition to the interactive format three disciplined based quizzes will be provided. The semester final will present a case based problem similar to the regional boards in which students identify the components of the diagnosis, treatment plan, treatment modifiers, treatment sequence and prognosis.

REHE 489. Case Presentations II. 1 Unit.
Second Semester. This course provides formal lecture presentations in the discipline of comprehensive dental care to assist students in the development of appropriate and successful diagnoses and treatment plans and the use of techniques and technology to achieve the goals of optimal dentistry. The course provides examples of cases in diagnosis and treatment planning in lecture, and include expertise from other departments in both the clinical and basic biological sciences. This course also provides the methodology for the treatment of moderate to severely mutilated dentitions and information regarding treatment modalities used related to the cases under discussion. The treatment plans are to be evidence based and used in concert with the outcomes of treatment. Techniques and Technology associated with the case shall be described as cases are reviewed. Both didactic lecture presentations and case reviews will utilize the interactive questioning and survey opportunities as needed through either the PRS format or Blackboard. The semester grade will be based on participation in the interactive sessions, a case based examination and each student is to turn in a fully documented senior case that is both diagnostic and treatment demanding. All cases will be approved prior to being considered as an acceptable senior case.

REMA Courses

REMA 261. Preclinical Orthodontics. 1 Unit.
Preclinical orthodontics includes relevant areas of applied growth and development, diagnostic methods and treatment planning. Topics included are: Histology and Physiology of Tooth movement and Laboratory Techniques related to the fabrication and use of suitable orthodontic appliances including material and biologic background necessary for proper clinical management of these appliances.

REMA 270. Introduction to Pediatrics. 1 Unit.
This course will provide instruction in the areas of preventive dentistry, restorative dentistry, pulp therapy, trauma, space maintenance and non-pharmacologic behavior management techniques for the pediatric patient. Particular attention will be paid to those areas that are essential in order to treat a pediatric patient appropriately. It is the hope that this course will communicate expectations and will provide significant preparation that will enhance the dental students' clinical learning experience.

REMA 380. Dental Care for the Aging Population. 1 Unit.
The didactic curriculum provides a general background on the changing demographics of our population as well as knowledge about the medical, social, psychological, and dental problems many older Americans face today. Dental problems common to the elderly, approaches to treatment planning and the provision of care for this unique group in traditional and non-traditional settings are explored.
School of Dental Medicine Faculty

Faculty

Anita Aminosharaie, DDS, MS
(Case Western Reserve University; Virginia Commonwealth University)
Assistant Professor of Endodontics

Cecil S. Ash, DDS, MS
(Dalhousie University; University of Manitoba)
Assistant Professor of Oral and Maxillofacial Surgery

Hussein M. Assaf, DDS
(The Ohio State University)
Associate Professor of Comprehensive Care

Dale A. Baur, DDS
(Case Western Reserve University)
Associate Professor of Oral and Maxillofacial Surgery and Chair

Dennis C. Beeson, DDS, MS
(Case Western Reserve University)
Assistant Professor of Orthodontics

Nabil F. Bissada, DDS, MSD, BDS
(Case Western Reserve University; University of Minnesota; University of Cairo)
Professor of Periodontics and Chair

Jon P. Bradrick, DDS
(University of Iowa)
Associate Professor of Oral and Maxillofacial Surgery

Maya Chane, DDS
(Damascus University)
Senior Instructor of Comprehensive Care

Catherine Demko, PhD
(Case Western Reserve University)
Assistant Professor of Community Dentistry

Fady F. Faddoul, DDS, MSD
(Case Western Reserve University)
Associate Professor of Comprehensive Care

Zhimin Feng, PhD
(Chinese Academy of Sciences)
Instructor of Biological Sciences

Gerald A. Ferretti, DDS, MS, MPH
(Georgetown University; University of Connecticut; University of Kentucky)
Professor of Pediatric Dentistry and Chair

Steven W. Fox, DDS
(Case Western Reserve University)
Assistant Professor of Comprehensive Care

Sharon Freudenberger, DDS
(New York University)
Associate Professor of Pediatric Dentistry

Jerold S. Goldberg, DDS
(Case Western Reserve University)
Professor of Oral and Maxillofacial Surgery; Dean

Angela R. Graves, DDS, MS
(Meharry Medical College; Columbia University)
Assistant Professor of Comprehensive Care

Yiping W. Han, MS, PhD
(University of Illinois at Urbana-Champaign)
Professor of Periodontics

Mark G. Hans, DDS, MS
(Case Western Reserve University)
Professor of Orthodontics and Chair; Associate Dean for Graduate Studies

Masahiro Heima, DDS, PhD
(Okayama University Japan)
Assistant Professor of Pediatric Dentistry

Alfredo Hernandez, DDS, MS
(Javeriana University Columbia; The Ohio State University)
Associate Professor of Comprehensive Care

Stanley A. Hirsch, DDS, MS
(Case Western Reserve University; Indiana University)
Associate Professor of Oral Pathology and Chair

Jean M. Iannadrea, DDS
(Case Western Reserve University)
Assistant Professor of Community Dentistry

T. Roma Jasinevicius, DDS, MEd
(Case Western Reserve University; Cleveland State University)
Associate Professor of Comprehensive Care

Ge Jin, PhD
(Case Western Reserve University)
Assistant Professor of Biological Sciences

Richard J. Jurevic, DDS, MSD and PhD
(The Ohio State University; University of Washington)
Assistant Professor of Biological Sciences

Zinaida Kaleinikova, DDS
(Kaunas Medical University, Lithuania)
Assistant Professor of Comprehensive Care

James A. Lalumandier, DDS, MPH
(Georgetown University; University of North Carolina)
Professor of Community Dentistry and Chair

Michael A. Landers, DDS, MA
(Case Western Reserve University; The Ohio State University)
Associate Professor of Oral Diagnosis and Radiology

Lisa A. Lang, DDS, MS
(University of Michigan; University of Texas San Antonio)
Associate Professor of Comprehensive Care and Chair

Charles J. Love, DDS
(Case Western Reserve University)
Associate Professor of Comprehensive Care

André K. Mickel, DDS, MSD
(Case Western Reserve University)
Associate Professor of Endodontics and Chair

Thomas A. Montagnese, DDS, MS
(The Ohio State University)
Assistant Professor of Endodontics

Sena Narendran, BDS, MS
(University of Ceylon Sri-Lanka; University of London England)
Associate Professor of Community Dentistry

Suchitra S. Nelson, PhD
(Case Western Reserve University)
Professor of Community Dentistry
Ronald L. Occhionero, DDS
(Case Western Reserve University)
Professor of Comprehensive Care; Associate Dean for Administration

Juan Martin Palomo, DDS, MSD
(Ponta Grossa State University Brazil; Case Western Reserve University)
Associate Professor of Orthodontics

Leena Palomo, DDS, MSD
(Case Western Reserve University)
Assistant Professor of Periodontics

Faisal A. Quereshy, DDS, MD
(State University of New York at Buffalo; Case Western Reserve University)
Assistant Professor of Oral and Maxillofacial Surgery

Danny Sawyer, DDS, PhD
(Medical College of Virginia)
Professor of Oral Diagnosis and Radiology and Chair

Benjamin L. Schechter, DDS
(Case Western Reserve University)
Assistant Professor of Comprehensive Care

Robert C. Skillicorn, DDS, MS
(Ohio State University; University of Michigan)
Associate Professor of Periodontics

Sorin T. Teich, DMD, MBA
(Hebrew University of Jerusalem Israel; Northwestern University-Chicago/Tel Aviv University-Israel)
Associate Professor of Comprehensive Care

Manish Valiathan, MSD, BDS
(Case Western Reserve University; College of Dental Surgery-Manipal
India)
Assistant Professor of Orthodontics

Lance Vernon, DMD, MPH
(University of Pittsburgh)
Senior Instructor of Biological Sciences

Kristin Z. Victoroff, DDS, PhD
(Dalhousie University; Case Western Reserve University)
Associate Professor of Community Dentistry; Associate Dean for
Education

Russell Wang, DDS, PhD, MSD
(PhD: University of Toronto; MSD: Indiana University)
Associate Professor of Comprehensive Care

Aaron Weinberg, DMD, PhD
(The Hebrew University of Jerusalem, Israel)
Professor of Biological Sciences and Chair

Tim S. Whittingham, PhD, MBA
(University of Wisconsin; Case Western Reserve University)
Associate Professor of Biological Sciences

Kristin A. Williams, DDS, MPH
(Case Western Reserve University; The Ohio State University)
Assistant Professor of Community Dentistry
Office of Postdoctoral Affairs

The Office of Postdoctoral Affairs located within the School of Graduate Studies is responsible for the appointment of postdoctoral scholars and fellows, as well as the development, implementation and monitoring of all university policies applicable to these positions. Additional information is available on the Postdoctoral Affairs website (http://postdoc.case.edu).

Administration of the School

Charles E. Rozek, PhD
Wayne State University
Vice Provost and Dean of Graduate Studies

Denise M. Douglas, PhD
University of Minnesota
Senior Associate Dean of Graduate Studies

Faculty Senate Committee on Graduate Studies

General responsibility for overseeing postdoctoral affairs, programs of graduate study and for academic and other general regulations applicable to all graduate students and programs is delegated to the Faculty Senate Committee on Graduate Studies (http://case.edu/gradstudies.case.edu/prospect/admissions/apply.html) through the School of Graduate Studies website (http://gradstudies.case.edu). Each department, school, or interdisciplinary committee is responsible for its particular graduate programs within the framework of the general regulations. The Committee on Graduate Studies consists of the dean of graduate studies, the associate vice president for research, nine faculty members elected by the University Faculty Senate, one appointed postdoc and four graduate students – three elected by the Graduate Student Senate and one appointed from the professional schools.

Graduate Student Senate

Students in the School of Graduate Studies are represented by a Graduate Student Senate (http://gss.case.edu), which consists of one student elected from each department that offers graduate programs. The officers of the senate are elected by the graduate student senators, who also select graduate student representatives to the University Faculty Senate and various campus committees.

Financial Aid

Tuition payments and fees (http://www.case.edu/finadmin/controller/bursar/tuition.htm) are administered through the Bursar’s office. For more information about financial assistance, students should contact the Office of University Financial Aid (http://financialaid.case.edu).

Admission

Applicants with good academic records from fully accredited universities and colleges will be considered for admission to graduate study (http://gradstudies.case.edu/prospect/admissions/admission.html) at Case Western Reserve University. Admission must be recommended by the department or professional school of the university in which the applicant proposes to work and must be approved by the dean of graduate studies. Prospective students apply for admission (http://gradstudies.case.edu/prospect/admissions/apply.html) through the School of Graduate Studies.

Admission of International Students

The admission criteria for international students are the same as U.S. residents except for the following:

1. International students whose first language is not English must be able to speak, read, write and comprehend English. English proficiency must be demonstrated by taking the Test of English as a Foreign Language (http://www.toefl.org) (TOEFL). Please see the School of Graduate Studies website (http://gradstudies.case.edu/prospect/admissions/apply.html) for additional information.

Applicants are exempt from the TOEFL requirements if they:
- speak English as their native language
- have completed a bachelor’s degree or higher at a foreign university where the instruction was in English
- have a earned a bachelor’s degree or higher in a U.S. college or university with instruction in the English language.

2. To obtain a student visa, international students must demonstrate financial sufficiency by submitting bank statements and other financial documents indicating sufficient funds to support the tuition and living expenses for one academic year.

3. For those students who are to receive financial aid from the department, the amount of funds required will depend on the amount of the aid award. In some cases it will be living expenses, and in others more funds will be required.

When a letter of acceptance for an international student has been issued, a copy is sent to the Office of International Student Services (http://www.case.edu/international/resources/internationalservices.html) where the I-20 is processed and sent to the student who must then obtain a student visa in order to begin study in the U.S.
Non-Degree Students

Individuals with earned bachelor’s degrees who want to enroll in classes for personal enrichment or to satisfy prerequisite course requirements for later admission to graduate programs may enroll as non-degree students through the School of Graduate Studies. Prospective non-degree students should apply for admission (http://gradstudies.case.edu/prospect/nondegree.html) through the School of Graduate Studies. Students may enroll in undergraduate and graduate level courses. Continuation in non-degree status is at the discretion of the dean of graduate studies. Non-degree students are not permitted to enroll in more than 21 hours of coursework in one program. In order to continue taking courses in that program, the student must be accepted into the graduate degree program. More information about enrolling as a non-degree student can be found at School of Graduate Studies (http://gradstudies.case.edu/prospect/nondegree.html).

Transferring Non-degree course work

Applicants who are interested in transferring course work into graduate degree programs are encouraged to seek early advice from the departments to which they intend to apply to insure that courses taken as non-degree students will satisfy departmental requirements. Non-degree students cannot assume that they will be admitted to any graduate degree program, or that all course work taken will transfer into the program. Only 400 level and higher course work will be considered for graduate transfer. The term of the earliest approved, transferred course will establish the date of entrance into the degree program. Courses transferred from non-degree status must have been taken within five years of the first term of matriculation as a degree seeking student and passed with a grade of B or better. Students considering transfer into a degree program will need to meet a minimum matriculation requirement of two semesters and six semester hours of course work.

Postgraduate Audit Program

A postgraduate audit program allowing registration for coursework is available to individuals who hold a doctoral degree such as, MD, DNP, DDS, or PhD and are involved in research or clinical programs at Case Western Reserve University. Additional information is available on the Office of Postdoctoral Affairs (http://postdoc.case.edu/current/benefits.html) website.
School of Graduate Studies
Academic Policies

Graduate Academic Policies
Fellowship Tuition Policy for Graduate Students

The purpose of this policy is to allow students pursuing graduate degrees to take courses beyond their degree requirements without additional financial burden to the student and little or no cost to the university. Such courses, referred to as “fellowship” courses, can broaden the educational experience of graduate students by allowing them to pursue studies according to their own intellectual needs.

1. A student pursuing a graduate degree shall be charged tuition at the standard hourly rate for all of the credit hours which are intended to count toward the degree. In any semester for which students are registered for a minimum number (as determined by the school) of credits that will be applied toward the degree, fellowship courses will not incur a tuition charge.

2. In order to enroll in a fellowship course, the student must be in good standing, meet course prerequisites, and obtain consent of instructor. In addition, the student must obtain permission from his/her advisor and the School of Graduate Studies. Up to eight fellowship courses may be permitted in aggregate.

3. Thesis research (651 and 701) and similar courses cannot be taken as fellowship courses and prior rules for 701 and 703 (dissertation fellowship) are not changed by this policy.

4. Fellowship courses can not be audited. The grade that a student receives in the course will count in the cumulative GPA, but will not count towards the degree program GPA.

5. Fellowship courses can not be used toward a degree program at Case Western Reserve University.

6. Notwithstanding any of the foregoing provisions and policies, the rules, regulations, and terms of tuition and credit enrollments for each school shall remain in full force and effect.

Guidelines for Multidisciplinary Graduate and Graduate Professional Studies

Purposes
Multidisciplinary studies have as their goal the education of individuals who can make contributions to academic disciplines or professional endeavors that would be less likely to be accomplished by individuals with a background in a single discipline. Departments or faculty members may design a joint degree program, which will generally result in two degrees, or a multidisciplinary degree, which will generally result in a single degree which has a broader perspective than similar existing degrees. Such programs should meet challenges of new interdisciplinary knowledge and/or developments requiring new combinations of talent. In addition, such programs or degrees should enhance and not duplicate existing programs in the university. Individual students with specific multidisciplinary interests that desire to pursue them at Case Western Reserve University and faculty members who wish to run pilots for joint degree programs or multidisciplinary degrees are encouraged to do so, even if no official joint or multidisciplinary degree program currently exists by organizing an individual joint degree or an individual multidisciplinary degree. Such degrees require faculty and departmental support. Guidance for the design and approval of both such programs and such individual degrees is available from the School of Graduate Studies.

Graduate Student Rights and Responsibilities

It is the responsibility of the student to become familiar with the general rules and regulations of the university, not just those of the School of Graduate Studies. A member of the University community who is accused of violating any of these rules and regulations is subject to university disciplinary action. Due process procedures of adequate notice of all charges and a fair hearing will apply. Case Western Reserve University has established a mechanism whereby students may express a grievance against the actions of other students or members of the faculty and staff. A statement of the policies and procedures to be followed in the case of academic infractions by graduate students may be obtained through the School of Graduate Studies. The policies and procedures governing all other infractions are detailed in the university’s Case Student Handbook (http://studentaffairs.case.edu/handbook). The University Office of Student Affairs (http://studentaffairs.case.edu) should be consulted for non-academic infractions.

It is also the responsibility of the student to become acquainted with the general regulations and administrative procedures governing graduate study, together with the departmental or school regulations which apply to the student’s course of study, and, in consultation with the faculty advisor or advisory committee of the supervising unit, to plan the program and carry out the work in accordance with these regulations and procedures.

Departmental Responsibility for Requirements
Requirements for master’s and doctoral degrees beyond those set forth in these regulations may be established by departments or curricular program committees with the approval of the dean of graduate studies. Individual students may be required to take courses beyond the published requirements in order to successfully complete their degree programs. In such instances the student must be notified in writing upon matriculation by the chair of the department or curricular program, with a copy to be filed in the School of Graduate Studies.

Maintenance of Good Standing
A student maintains good standing in the School of Graduate Studies by registering each fall and spring semester unless on an official leave of absence which has been approved by the School of Graduate Studies. A student is in good standing who meets the standards set by the academic department and the School of Graduate Studies to ensure normal progress toward the fulfillment of the stated requirements at levels of quality without warning or probation or extension of the allowable time limit for degree completion. Students whose quality point averages fall below minimum standards (3.00 for doctoral students; 2.75 for master’s) will automatically be placed on probation until the minimum standards are achieved. In addition, a student will be subject to separation from the university for any of the following reasons:

1. Failure to achieve a quality-point average of 2.50 or higher at the completion of 12 semester hours or 2 semesters of graduate study.

2. Failure to achieve a quality-point average of 2.75 or higher at the completion of 21 semester hours or 4 semesters of graduate study.

3. Failure to receive a grade of S in thesis research 651 or dissertation research 701. A student who receives a grade of U in thesis (Course 651) or dissertation research (Course 701) will be placed on probation and be subject to separation. The probationary status will be recorded on the student’s transcript. The student must be removed from probation by the end of the semester immediately.
following receipt of the grade of U by repeating the course for the same number of credit hours, and achieving a grade of S. Although removal from probation restores the student’s good standing, the grade of U received will not be canceled or substituted by the grade of S subsequently received. Separation will occur if the student placed on probation receives another grade of U in the following semester; or, if the dean of graduate studies, in consultation with the academic unit, determines that the student is unlikely to be successful in working independently and productively toward the completion of the thesis or dissertation research.

4. Failure of a conditionally or provisionally admitted student to satisfy the conditions or provisions stated in the letter of acceptance by the end of the first academic year (2 semesters) or after 18 credits of course work.

5. Failure to make progress towards degree completion. If the student is not making progress towards degree completion, and it has been judged that the student is unlikely to be successful in working independently and productively toward the completion of clinical requirements, thesis or dissertation research the department and/or the dean of graduate studies (in consultation with the department) can recommend academic separation.

6. In addition to disciplinary actions based on academic standards, on recommendation of the student’s department or school, the dean of graduate studies can suspend or separate a student from the university for failure to maintain appropriate standards of conduct and integrity. Such a suspension or separation will be implemented only for serious breaches of conduct that threaten to compromise the standards of a department or create concern for the safety and welfare of others. In the event of such suspension or separation, the student will be entitled to an appeal through the grievance procedure of the Graduate School.

**Maintenance of Quality-Point Average**

In calculating the quality-point average, courses taken as a student in the School of Graduate Studies at the 400 level or above, as well as any courses accepted toward fulfillment of degree requirements for which quality points are given, will be counted, including courses which may need to be repeated. Unless otherwise stated by the department a minimum cumulative quality-point average of 2.75 is required for the award of the master’s degree, and a minimum cumulative quality-point average of 3.00 is required for award of the doctoral degree.

Any department, school, or curricular program committee may choose to establish quality standards higher than those stated above if such additional requirements are made known in writing to the students upon matriculation, and are recorded with the dean of graduate studies. In that case, the departmental standards supersede the minimum standards. Students who do not maintain the minimum quality point average will be placed on academic probation until the minimum standard has been achieved.

**Course Repeat Policy**

Graduate students may petition their department chair to repeat a maximum of two courses during their degree program in order to improve their performance. When a course is repeated the first grade will remain visible on the transcript, but will be removed from the calculation of the cumulative grade point average and the grade point average for the semester in which the course was first taken. The new grade will then be used for calculation of the cumulative grade point average and the grade point average for the semester in which it was earned, regardless of whether the new grade is higher or lower than the first grade. The student’s transcript will show the comment “Repeated: No credit awarded” directly below the original grade. However, if the first attempt of the course resulted in a passing grade, but the second attempt results in a failing grade, then the original grade will remain. Similarly, if a student withdraws from a course that is being repeated, the Course Repeat Option will not be applied and the original grade will stand.

Course repetition may be exercised according to the following conditions:

1. The course repeat option can only be used on course in which a C or lower was earned. Courses with a grading basis of P/NP are not eligible under this policy
2. A student may not use the Pass/No Pass Option on a course that is being repeated
3. A student may only use the repeat option on the same course
4. Research based courses 651, 601 and 701 are exempt from this repeat policy. Thesis research course 651 and dissertation research course 701 grading policies can be found in this bulletin.
5. The course repeat option may not be exercised after a degree has been awarded
6. Approval from advisor and department chair required. Some departments may also require the signature of the Director of Graduate Studies and/or the Graduate Affairs committee
7. The tuition and associated fees for a repeated course may be the responsibility of the student

**Residency Requirement**

The doctoral residency requirement is intended to insure a period of intensive academic interaction with faculty and peers and of sustained independent research. Graduate students are considered to be in residence when they are fully engaged in academic work. As resident students they may teach at the university, take graduate courses, assist in course development, and engage in research or in other scholarly activities at the university. Regardless of the nature of the work, the student’s regular presence at the university is expected during fulfillment of the residency requirement.

The formal fulfillment of residency requires continuous registration in at least six consecutive academic terms (fall, spring and/or summer) from matriculation to a period not exceeding five years after the first credited hour(s) of dissertation research (701). The period while students are on a leave of absence do not count towards fulfilling the residency requirement. Within the context of continuity of registration, departments may enact other restrictions. In such instances, the departmental requirements take precedence and must formally be disclosed to the student at matriculation. This is meant to be a reflection of the appropriate reality that departments and fields have different norms and traditions of graduate study. For example, to fulfill the residency requirement, some departments may require the doctoral student to be registered for 9 or more semester hours of graduate credit in each of two consecutive semesters. Fulfillment of residency by all engineering Ph.D. candidates will be certified by their research advisors and department chairs based on an assessment of active, concentrated involvement for a period of two consecutive semesters during their pursuit of the doctorate.

**Time Limitation**

All the requirements for the master’s degree must be completed within five consecutive calendar years after matriculation as a graduate student, including any leaves of absence. Doctoral students have five consecutive calendar years from the semester of the first credited 701 registration, including leaves of absence, to complete all requirements for the doctorate. Any graduate student who fails to complete the requirements within the five year limit for his or her degree program will be subject to separation from further study unless granted an extension by the dean
of graduate studies with the recommendation of the faculty advisor or advisory committee and approval by the department chair. An extension may be granted if the student and his or her advisor work out a plan of action for degree completion within a specified time frame which must be endorsed by the department chair. Students will be expected to meet all the specified deadlines outlined in the plan of action. The minimum acceptable registration during this extended period for each semester until graduation is three credit hours of 651 or 701, or, for Plan B master’s students, an appropriate course.

Leave of Absence from Graduate Study

Students undertaking graduate work are expected to pursue their studies according to a systematic plan each year whether registered for full or part-time study. Occasionally a student finds it necessary to interrupt his or her studies before completion of the graduate program. A leave of absence is not to be requested unless the circumstances are such that the student cannot continue graduate study. Under such circumstances the student must request in writing a leave of absence for a period not to exceed two consecutive regular academic semesters. Forms (http://gradstudies.case.edu/current/forms.html) can be found at the School of Graduate Studies website. In exceptional circumstances, the leave can be extended for another two semesters. However, the maximum amount of leave permitted per graduate program is four semesters. The reason for the leave must be stated clearly, and the request must be submitted to the dean of graduate studies with the written endorsement of the student’s academic department. During a leave of absence the student must not seek aid from faculty members or use of the facilities of the university. This means that students may not take exams or defend theses and dissertations while on a leave. A leave of absence does not extend the maximum time permitted for the completion of degree requirements, and a leave cannot be taken while students are on extension of the five-year limit. At the expiration of the leave the student must resume registration unless formally granted an extension of the leave. Retroactive leaves are not permitted. A student who fails to obtain a leave of absence, or who fails to register following an official leave, must petition the dean of graduate studies for reinstatement in order to resume work as a student in good standing at the university.

A student who is granted a maternity or paternity leave of absence related to infant care, as well as those who must fulfill military duty obligations, can petition to extend the five-year time limit associated with completion of the degree. The length of the extension may not exceed two years. International students must check with the Office of International Student Services before petitioning for a leave of absence, as such a leave can affect their visa status.

Withdrawal, Resignation, and Reinstatement

Students must maintain continuous registration throughout their degree programs unless granted an official leave of absence. Students who fail to register for any academic term will be automatically withdrawn from their programs. Students who are withdrawn from their programs must petition for reinstatement in order to continue graduate study. The petition must be approved by both the student’s department and the dean of graduate studies before the student may register for further course work as a student in full standing. In each case of readmission with full standing, the official letter will state the terms of readmission, including future time limits for the degree program, and the past course work that will be credited toward the degree. If more than 24 months have elapsed since the last registration, students may have to resubmit file materials if requested by the School of Graduate Studies.

Transfer of Credit

Transfer of credit from another university toward master’s and doctoral degree requirements is awarded for appropriate course work (not applied to another degree program) taken prior to admission. Transfer of credit must be requested in the student’s first academic year, and must be appropriate for the student’s planned program of study. For master’s candidates, transferred credit is limited to six semester hours of graduate-level courses, and no credit for master’s thesis may be transferred from another university. No transfer of credit will be awarded towards the PhD degree except by petition, and no credit for the doctoral dissertation may be transferred from another university. Transfer of credit does not include the transfer of grades and therefore can not be used to fulfill GPA or percentage of graded coursework policies.

Students who wish to receive credit for courses taken outside the university once they are enrolled must petition for approval. All transfer of credit requires approval from the student’s advisor, the departmental chair or graduate committee, and the dean of graduate studies. Such courses must have been taken within five years of first matriculation at Case Western Reserve University and passed with grades of B or better. Forms can be found at the School of Graduate Studies (http://gradstudies.case.edu/current/forms.html).

Internal Transfer of Credit

Students of exceptional ability in the undergraduate programs of Case Western Reserve University who have the approval of the dean of undergraduate studies and the dean of graduate studies may apply to receive credit for graduate courses completed in excess of the undergraduate degree requirements.

Graduate students who internally transfer to another degree program may seek approval to transfer coursework from the original degree program by petition. (http://gradstudies.case.edu/downloads/TransferDept.pdf)

Changes in Registration

To add or withdraw from courses or to change registration from credit to audit or the reverse, a student must obtain the appropriate official form to submit to the University Registrar in accordance with the dates published each academic term for such actions to be taken. Students must make appropriate changes to their schedules by the end of the first week of classes in order to avoid paying full tuition for courses withdrawn after the final drop/add date. Only complete withdrawal for the semester entitles a student to a percentage refund of the withdrawn courses after the first week of classes. (See the “Financial Information” section of this Bulletin under Refunds). Failure to attend class or merely giving notice to the instructor will not be regarded as official notice of withdrawal or change. When making changes in registration, the international student must be aware of maintaining full-time status. Full-time status requires registration for a minimum of 9 semester hours per semester. Students financed by federal loans must remain registered for at least 6 semester hours (defined as half-time) each semester to maintain continued eligibility for that funding or to initiate such a loan.

Graduation

A candidate for a degree awarded by the School of Graduate Studies must make application for the degree to the School of Graduate Studies by the deadline established for that semester, which is approximately twelve weeks before the commencement date for which the degree is expected to be awarded. Students are encouraged to either contact the School of Graduate Studies or visit our website at the beginning of the semester in which they intend to graduate to obtain a packet of graduation materials for either the Master’s (http://
The candidate must meet all the deadlines for completion of degree requirements set forth in the calendar. All candidates must be registered for credit and in good standing during the semester in which the degree is awarded. Payment of tuition, fees, and fines is a prerequisite to the award of a degree.

Delayed Graduation

It is a requirement of the School of Graduate Studies that a student be registered for credit in the semester in which he or she completes all the requirements to graduate in accordance with established deadlines for that semester. For a student engaged in thesis or dissertation research the completion of all requirements to graduate is not easily predicted, making it difficult to adhere to scheduled deadlines. If a student will not be able to meet the degree requirements to graduate in one semester, but will finish before the next semester begins, he or she can petition for a waiver of the requirement to be registered in the semester of graduation. To be granted a waiver of registration students must be registered for the appropriate thesis or dissertation credit hours in the semester (or summer session) immediately preceding the semester of graduation, complete all degree requirements including a current application to graduate, and submit all required materials to the School of Graduate Studies by the last day scheduled for the Drop/Add period of the next semester.

A student who qualifies for the waiver will be awarded the degree at the next graduation without the need to be registered or to pay a special fee. If a student fails to meet the waiver deadline, he or she will be required to register for the appropriate thesis or dissertation credit hours in the next semester, and to reapply for graduation in that semester.

Exceptions to Regulations

Students have the right to petition for exceptions to these regulations. Such a petition should be addressed to the dean of graduate studies. In most cases the student’s department or program committee must endorse the petition.

Graduate Student Grievance Procedure

It is the responsibility of the School of Graduate studies to assure that all students enrolled for graduate credit at Case Western Reserve University have adequate access to faculty and administrative consideration of their grievances concerning academic issues. A three-step procedure has been established for graduate students to present complaints about academic actions they feel are unfair.

1. Students with complaints should first discuss their grievances with the person against whom the complaint is directed.
2. In those instances in which this discussion does not resolve a grievance to the student’s satisfaction, a complaint should be presented in writing to the department chairperson. If the complaint is against the department chair and is not resolved with this individual, the complaint should be presented to the Dean of the School/College.
3. In the event that a decision still appears unfair to the student, the student may bring the matter to the attention of the dean of graduate studies. The dean may ask the student to put the complaint in writing. The dean will then discuss the case with the student and the department chair to evaluate the particulars and to make a ruling on it. As the situation warrants, the dean may appoint a Grievance Committee to recommend what action should be taken. In this event the Committee will be composed of two faculty members selected from the Committee on Graduate Studies of the Faculty Senate and two graduate students selected either from the Executive Committee of the Graduate Student Senate or from the student members of the Committee on Graduate Studies.

The dean of graduate studies has the responsibility for the final decision, and the ruling from the School of Graduate Studies will be considered final and binding on the persons involved in the grievance. Additional information about the grievance procedure can be obtained from the School of Graduate Studies.

It should be understood that this grievance procedure relates solely to graduate student complaints concerning academic issues. The procedure for handling complaints about other matters is detailed in the Graduate Student Handbook (http://gradstudies.case.edu/webfm_send/100).

Procedures and Sanctions for Graduate Student Academic Infractions

Graduate students accused of violating the university’s standards of conduct, which are detailed in this Academic Integrity Policy (http://gradstudies.case.edu/downloads/AcadInteg.pdf), are entitled to adequate notice of all charges and to a fair hearing and may subsequently be subject to disciplinary action. The process that is outlined in the Academic Integrity Policy will apply to academic infractions, e.g., cheating on examinations, plagiarism, and other forms of dishonesty in academic activities. Additional information is available from the School of Graduate Studies.
School of Graduate Studies

Academic Requirements

Master Requirements I Doctoral Requirements I Grading

Academic Requirements for Master Degrees

In recognition that the objectives of master’s degrees differ for various departments and for individual students, especially in the importance given to research, two general plans for master’s degrees may be followed. Plan A is for MA or MS degrees with a thesis based on individual research and a final oral examination. Plan B is for MA, MFA, MPH, or MS degrees without a thesis but requiring a comprehensive examination and/or a major project to be administered by the academic unit.

Within the framework of these general regulations, it is expected that a relevant program of study (http://gradstudies.case.edu/current/ppos.html) will be planned for each candidate for the master’s degree by the student and the faculty advisor or advisory committee. Such a program should include appropriate courses, thesis and/or project hours, and may also include, where relevant, such experiences as field work or practicum.

Master’s Thesis (Plan A)

The minimum requirements for the master’s degree under Plan A are 18 semester hours of course work plus a thesis equivalent to at least 9 semester hours of registration, or 21 semester hours of course work plus a thesis equivalent to at least 6 semester hours of registration. Once registered for thesis credit (Course 651), a student must continue 651 registration each succeeding regular semester until graduation. However, if a student is registered for course work or research toward the doctorate in the semester in which the thesis examination is expected to occur, concurrent registration for 651 is not required. At least 18 semester hours of course work, in addition to thesis hours, must be at the 400-level or higher.

Each student must prepare an individual thesis. Joint theses are not permitted. The written thesis must conform to regulations concerning format, quality, and time of submission as established by the dean of graduate studies. Detailed instructions (http://gradstudies.case.edu/current/graduation/masters.html) can be obtained from the School of Graduate Studies website.

For completion of master’s degrees under Plan A, an oral examination (defense) of the master’s thesis is required. This examination is conducted by a committee of at least three members of the university faculty. The candidate’s thesis advisor customarily serves as the chair of the examining committee. The other members of the committee are appointed by the chair of the department or curricular program faculty supervising the candidate’s course of study. The examining committee must agree unanimously that the candidate has passed the thesis examination. Because theses are made public immediately upon acceptance, they should not contain proprietary or classified material. When the research relates to proprietary material, the student and advisor are responsible for making preliminary disclosures to the sponsor sufficiently in advance to permit timely release of the thesis, and these plans should be disclosed when the thesis is submitted to the School of Graduate Studies.

Master’s Comprehensive (Plan B)

The minimum requirements for the master’s degree under Plan B are 27 semester hours of course work, a comprehensive examination, and in some fields, an approved project. At least 18 semester hours of course work must be at the 400 level or higher.

Each candidate for the master’s degree under Plan B must pass satisfactorily a comprehensive examination to be administered by the department or curricular program committee. The examination may be written or oral or both. A student must be registered during the semester in which any part of the comprehensive examination is taken. If not registered for other courses, the student will be required to register for one semester hour of EXAM 600 Master’s Comprehensive Exam, before taking the examination.

Engineering students are required to complete 3 to 6 semester hours of Special Problems (Project) course work, which must consist of an engineering project approved by the chair of the department offering the degree program, and may be carried out at the student’s place of employment with nominal supervision by a faculty advisor or in the departmental laboratories under direct supervision. The project must culminate in a written report and examination by at least three professors including approval by the chair of the department.

Performance evaluation for Course 601 (Independent study/Research) is limited to P/NP grading.

Theatre students in the MFA program are required to register for six semester hours of Thesis Production (creative project), followed by an oral and written defense.

Academic Requirements for Doctoral Degrees

The degree of Doctor of Philosophy is awarded in recognition of in-depth knowledge in a major field and comprehensive understanding of related subjects together with a demonstration of ability to perform independent investigation and to communicate the results of such investigation in an acceptable dissertation.

Curricular Requirements

Within the framework of these general regulations, it is expected that a relevant program of study (http://gradstudies.case.edu/current/ppos.html) will be planned for each candidate for the doctorate by the student and the faculty advisor or advisory committee. Such a program should include appropriate courses, together with work on the doctoral dissertation, and may also include, where relevant, such experiences as field work or practicum.

Although specific requirements vary among departments, students entering with a bachelor’s degree will satisfactorily complete a minimum of 36 semester hours of courses (which may include independent study/research, course 601), tutorials, and seminars. For students entering with an approved master’s degree, completion of at least 18 semester hours of course work is required. A minimum of 18 semester hours of dissertation research (Course 701) is required for all doctoral students.

Examination Requirements

In order to meet the requirements for the doctorate, a student must pass satisfactorily a general examination (or a series of examinations covering different fields) specified and administered by the student’s department or supervising committee. The examination generally precedes advancement to candidacy. A student must be registered during the semester in which any part of the general or qualifying examination is taken. If not registered for other courses, the student will be required to register for one semester hour of EXAM 700 PhD General/Qualifier Exam, before taking the examination. A student who fails the
examination on the first attempt may be permitted to take the examination a second time within one year at the discretion of the department. Except in unusual circumstances, a student who fails the examination a second time will be separated from further graduate study within the same department or program.

**Advancement to Candidacy**

The formal acceptance of a student as a candidate for the doctoral degree is the responsibility of the student’s department or the committee supervising the doctoral program in accordance with the written procedures of the academic unit. At its discretion the supervising unit may require a student to pass qualifying examinations before candidacy is granted. Generally, advancement to candidacy allows the student to enter the dissertation research phase of the degree program, and occurs after all course work and exam requirements are satisfied. Students are expected to make regular and continuous progress toward the degree. Advancement to candidacy in a PhD program should occur within a maximum of 6 years post-matriculation with a bachelor’s degree (no later than at the completion of 36 semester hours of graduate study) and 4 years post-matriculation with a master’s degree (no later than at the completion of 18 semester hours of graduate study). Students may continue in pre-candidacy status beyond this time by means of a petition to the School of Graduate Studies by a program director, based on evidence of student progress toward the degree. Individual programs can require advancement to candidacy before the time limit set in this policy.

The dean of graduate studies must promptly be notified in writing of the decision concerning a student’s advancement to candidacy, and a copy of the notification must be sent to the student concerned. A student who is refused candidacy status may not undertake further study for credit toward the doctoral degree within the same department or supervising unit. With the approval of both the department concerned and the dean of graduate studies, such a student may:

1. Take additional courses, if required, in order to complete an approved master’s degree in that department.
2. Seek admission to the graduate program of another department.

**Course 701 Requirements**

**Pre- and Post-Candidacy**

**Dissertation Research**

When a student has been advanced to candidacy, he or she may begin dissertation research by formally registering for course 701 credits. At the point at which students begin registering for course 701, the department must identify a university faculty member who will serve as the doctoral student’s principal research advisor, and formally notify the dean of graduate studies. Students who have been advanced to candidacy may register for 1-9 credits of course 701 each fall and spring semester (or up to 6 credits for the summer when needed). In certain cases, students who have not advanced to candidacy may begin registering for up to 6 credit hours of course 701 per semester at the discretion of the department and upon written notification to the dean of graduate studies. Pre-Candidacy 701 hour(s) may be taken concurrently with course work. Once a student begins registration of 701 hours, he or she must register for at least one credit hour of 701 each semester until graduation. Once 701 registration begins doctoral students have five consecutive calendar years from the semester of the first credited 701 registration, including leaves of absence, to complete all requirements for the doctorate.

**Foreign Language Requirements**

Although there is no general foreign language requirement for the doctorate, each department or supervising committee may set such requirements as are appropriate to the student’s program of study. It is the student’s responsibility to ascertain the foreign language requirements approved by the supervising unit. Each department must notify the dean of graduate studies in writing of the specific language(s) required and the date of examination determining the student’s proficiency in the required language(s).

**Dissertation Requirements**

All candidates for the PhD degree must electronically submit a dissertation as evidence of their ability to conduct independent research at an advanced level. The dissertation must represent a significant contribution to existing knowledge in the student’s field, and at least a portion of the content must be suitable for publication in a reputable professional journal or as a book or monograph. Students must prepare their own dissertations. Joint dissertations are not permitted. The dissertation must conform to regulations concerning format, quality, and time of submission as established by the dean of graduate studies. Detailed instructions can be obtained from the School of Graduate Studies (http://gradstudies.case.edu/current/graduation/phd.html). Research work connected with a dissertation is to be carried out under the direct supervision of a member of the university faculty selected by the student in consultation with departmental faculty and approved by the chair of the department.

Approved dissertations are to be uploaded to OhioLink (http://etd.ohiolink.edu) before certification for the doctorate. Because dissertations are made public immediately upon acceptance, they should not contain proprietary or classified material. When the research relates to proprietary material, the student and advisor are responsible for making preliminary disclosures to the sponsor in advance to permit timely release of the dissertation. These arrangements must be disclosed when the dissertation is submitted to the School of Graduate Studies. The required form can be found in the graduation packet. (http://gradstudies.case.edu/current/graduation/phd.html)

**Dissertation Advisory Committee**

Each doctoral student is responsible for become sufficiently familiar with the research interests of the department or program faculty to choose in a timely manner a faculty member who will serve as the student’s research advisor. The research advisor is expected to provide mentorship in research conception, methods, performance, and ethics, as well as focus on development of the student’s professional communication skills, building professional contacts in the field, and fostering the professional behavior standard of the field and research in general. The research advisor also assists with the selection of at least two other faculty to serve as members of the dissertation advisory committee.

The composition of each student’s dissertation defense committee must have formal approval by the Dean or Senior Associate Dean of Graduate Studies on recommendation of the chair of the department, division or curricular program committee. The dissertation committee must consist of a minimum of four members of the University faculty (any tenured or tenure-track Case Western Reserve University faculty member, and any CWRU full-time faculty member whose primary duties include research who is authorized to serve on a PhD dissertation committee by the school or college through which they are affiliated with the university). At least one of these CWRU faculty must hold a primary appointment that is outside of the student’s department, program or school. The chair of the committee must be a CWRU tenured or tenure-track faculty member in
the student’s program. The student’s dissertation/research advisor MUST be a member of the committee and may serve as chair if consistent with departmental policy.

Persons who are not members of the University faculty may serve as additional members of the examining committee, subject to approval by the Graduate Dean. A petition with the rationale for the request must be submitted to the dean along with the proposed member’s curriculum vitae. Under special conditions, a former faculty member whose time of leaving the university has not exceeded 18 months may be approved as a committee member by the dean of graduate studies.

Throughout the development and completion of the dissertation, members of the dissertation defense committee are expected to provide constructive criticism and helpful ideas generated by the research problem from the viewpoint of their particular expertise. Each member will make an assessment of the originality of the dissertation, its value, the contribution it makes, and the clarity, with which concepts are communicated, especially to a person outside the field. The doctoral student is expected to arrange meetings and maintain periodic contact with each committee member. A meeting of the full committee for the purpose of assessing the student’s progress should occur at least once a year until the completion of the dissertation.

Final Oral Examination
(Defense of Dissertation)

Each doctoral candidate is required to pass a final oral examination in defense of the dissertation. The examination may also include an inquiry into the candidate’s competence in the major and related fields.

The defense must be scheduled with the School of Graduate Studies no later than three weeks before the date of the examination. The chair of the examining committee should give approval to schedule the defense when the written dissertation is ready for public scrutiny. The candidate must provide to each member of the committee a copy of the completed dissertation at least ten days before the examination so that the committee members have an opportunity to read and discuss it in advance.

Scheduled defenses are made know through on-campus publication, and any member of the university may be present at that portion of the examination pre-designated as public by the chair of the dissertation defense committee. Others may be present at the formal defense only by invitation of that chair.

It is expected that all members of the dissertation defense committee by present at the defense. Exceptions to this rule: a) must be approved by petition to the dean of graduate studies and only under extraordinary circumstances, b) no more than one voting member can ever be absent, c) the absent member must participate through real-time video conferencing at the department’s expense; however, if such video conferencing is not available, the absent member may participate through telephone conferencing; and d) the student must always be physically present.

The dissertation defense committee is responsible for certifying that the quality and suitability of the material presented in the dissertation meet acceptable scholarly standards. A student will be certified as passing the final oral examination if no more than one of the voting members of the committee dissents.

Institutional Review Board (IRB)
The promotion of scholarship and the discovery of new knowledge through research are among the major functions of Case Western Reserve University. If this research is to be meaningful and beneficial to humanity, involvement of human subjects as experimental participants is necessary. It is imperative that investigators in all disciplines strive to protect human subjects. University policy and federal regulations demand compliance. Per federal regulations (45 CFR 46), all research involving human subjects requires submission of an IRB application (http://ora.ra.cwru.edu/research/orc/Cas%20IRB%20System/CaseIRB.cfm) prior to initiation of research to the Case Western Reserve IRB.

Each IRB application must have a faculty member noted as the Responsible Investigator. Applications that are not fully completed as instructed will not be accepted. See university policy on the involvement of human participants in research for guidelines under which investigations involving human subjects may be pursued.

Course Designations
Courses numbered 100 to 399 are undergraduate-level courses. Courses numbered 400 and higher are graduate-level courses.

Grading System
See the University Registrar (p. 942) section of this Bulletin for a list of valid grades for the School of Graduate Studies and their appropriate use in assigning to graduate students. The only grades that can be changed after they have been assigned by the instructor are Incompletes (I). All others will remain permanently on the student’s academic record. Additional work cannot be done to change an existing grade to a higher grade.

There are some grading schemes in the School of Graduate Studies that have important policy implications. They are:

Incomplete (I)

Grades of I should only be assigned for letter-graded and Pass/No Pass courses for extenuating circumstances, and only when a student fails to complete a small segment of the course. Students may not sit in the same course in a later semester to complete the work required for the original course. All work for the incomplete grade must be made up, and the change of grade recorded in the Office of the University Registrar, by the date specified by the instructor, but no later than the last day of class in the semester following the one in which the I was received. Grade changes received after that date must be accompanied by a petition signed by both the advisor and the chair of the department indicating the reason for the late change and must be approved by the Deputy Provost. Unresolved Incomplete grades will remain permanently on the student’s academic record, if the work is not made up by the designated deadline. A student who has a permanent Incomplete for a required course must retake the course in a later term. When an I grade is assigned by the instructor, he or she must also submit to the School of Graduate Studies the completed “Arrangement to Resolve a Grade of Incomplete” form (http://gradstudies.case.edu/current/forms.html) indicating the date that the I grade will be resolved. If the student cannot complete the work for the Incomplete by the specified deadline, he or she must petition for an extension which must be endorsed by the instructor, and explain the reasons why the work has not been completed, and include a new date for completion. Students will be allowed only one extension of no more than one additional semester to complete the work for an I grade.

Pass/No Pass (P/NP)

Some graduate courses are graded on a pass or no pass basis, and students need to be aware of the regulations governing letter graded and pass/no pass credits. Of the minimum credit hours required beyond the bachelor’s degree to complete course work requirements, at least
12 credits must be letter graded for the master’s degree, and at least 24 credits must be letter graded for the Ph.D. degree. For students with approved master’s degrees who are admitted to Ph.D. programs, at least 12 credits of the required minimum of 18 credits of course work must be letter graded. Letter graded courses should be the courses most central to the student’s plan of study. Additional credit hours of letter graded course work may be specified by departmental policy. Performance evaluation for course 601 (Independent study/Research) is limited to P/NP grading.

**Satisfactory/Unsatisfactory (S/U)**

Grades of Satisfactory (S) and Unsatisfactory (U) are to be used exclusively for two courses: 651 thesis research and 701, dissertation research. “Satisfactory” indicates an acceptable level of progress towards completion of the research required for the degree, and Unsatisfactory indicates an unacceptable level of progress towards completion of the research for the degree. Any student who receives a grade of U will automatically be put on academic probation, and if a second U is received, the student will be separated from further study in his or her degree program.

School of Law

Founded in 1892, the Case Western Reserve University School of Law (http://bulletin.case.edu/schooloflaw/http://law.case.edu) is a charter member of the Association of American Law Schools and of the national law honorary society, the Order of the Coif. It was among the first law schools accredited by the American Bar Association.

The school has a student body of about 700 and a full-time faculty of about fifty. In the school’s early years, most students came from Ohio and remained in Ohio after graduation. Today, students come from all parts of the country, and there are CWRU law graduates in virtually every state (and in several foreign countries), and certainly in every major U.S. city. An active and aggressive Career Services Office works with students, graduates, and prospective employers from all over the nation to maximize job opportunities.

The Law Library

The law library’s holdings include more than 390,000 books and volume-equivalents, complete collections of federal and state law, law reviews, current law services, an extensive British and Commonwealth collection, and special collections in taxation, labor law, foreign investments, international law, and environmental law. The law library is building strong collections in law and medicine, intellectual property, and law of the European Union. It is a selective depository for both U.S. and Canadian government documents. The law school itself has computer workstations on every floor of the library, providing access to hundreds of electronic services and library catalogs, and a wide range of software services. The university boasts a fast and powerful network and wireless access, and the university network links the law school to the vast resources of the Internet. The law library is a member of OhioLINK, which is a consortium of Ohio’s college and university libraries and the State Library of Ohio. OhioLINK offers access to more than 31 million library items from 79 institutions. These materials include items from law, medical, and special collections.

The law library offers its users access to an ever-expanding list of electronic research databases as well as e-books. Electronic resources are accessible through the library catalog and the Law Library Services page on our website. Web-based databases offered include Lexis/Nexis and Westlaw as well as over 100 OhioLINK databases (including Index to Legal Periodicals and Medline). Many of these OhioLINK databases contain the full text of journal articles. Housed within the law library is a computer laboratory and a computer training classroom.

Special Programs

Litigation Program

Since the mid-1970s, the School of Law has invested heavily in its litigation program. Students practice the basic skills of trial advocacy in such courses as LAWS 6110 Trial Tactics, LAWS 6111 Appellate Practice, and in the co-curricular moot court and mock trial programs.

Student Activities

Publications

The School of Law publishes three scholarly journals, all student-edited. The oldest is the Case Western Reserve Law Review, published quarterly. The Journal of International Law is published two to three times a year; the JIL editorial board also has responsibility for the Canada-U.S. Law Journal (sponsored by the Canada-U.S. Law Institute), published once a year. Health Matrix: Journal of Law-Medicine began as a joint undertaking of all six of the university’s professional schools but since 1990, has been sponsored solely by the law school and its Law-Medicine Center.

Competitions

Moot Court

A student board administers the Dean Dunmore Competition, a year long program in which second-year (and a very few third-year) students participate. It culminates in a round-robin tournament involving 16 finalists. From those finalists, the board selects teams who will compete the following year in the National Moot Court Competition, the Craven Competition in constitutional law, and the Niagara Competition (sponsored by the Canada-U.S. Law Institute). Case Western Reserve also enters the Jessup International Competition; that team is selected by another student group, the Society of International Law Students.

Mock Trial

The Jonathan M. Ault Mock Trial Board sponsors an intramural competition from which emerge the members of interscholastic teams. Currently, the law school sends student representatives to the National Trial Competition, the National Student Trial Competition of the Association of Trial Lawyers of America, and a competition sponsored by the Academy of Trial Lawyers of Allegheny County, Pennsylvania.

Regulations and Rules of Conduct

The Academic Regulations of the School of Law are provided to each student upon matriculation through the law school’s website.

In addition to the university’s rules of conduct, law students are expected to comply with the American Bar Association’s Model Code of Professional Responsibility and Model Rules of Professional Conduct, to the extent that these are applicable, and with the law school’s own Code of Conduct. The Model Code and Model Rules are available in the law library. The school’s Code of Conduct, like the Academic Regulations, is provided to each student upon matriculation through the law school’s Intranet website.

Centers of Academic Excellence

Milton A. Kramer Law Clinic Center

The Supreme Court of Ohio authorizes student practice under attorney supervision in the final year of law school. Through the clinic, students provide legal representation to indigent clients and community groups and receive academic credit. The supervising attorneys are full-time members of the law faculty. The clinical program is the capstone of the skills curriculum and offers specialized practice experiences in Criminal Justice, Community Development, Civil Litigation Practice, focused on consumer matters, predatory lending, social security disability, and other public benefit issues, Immigration, Health Law, and Family Law.

Center for Business Law and Regulation

To better prepare its students and future leaders with a thorough understanding of the business issues facing entrepreneurs, entities, and other clients, the School of Law created the Center for Business Law and Regulation. The center focuses on expanding curricular offerings and programs as well as engaging in opportunities for legal, empirical, and interdisciplinary research, assessing the role and impact of government in the regulation of business. The center will also host special lectures and

Centers of Academic Excellence
The Law-Medicine Center at Case Western Reserve University has been in operation for over 50 years. It began with a focus on forensic medicine, but has broadened to include the whole range of legal, social, economic, scientific, and ethical issues in which law and medicine are interrelated. Besides the regular course offerings, the center frequently presents lectures, symposia, and workshops, and sponsors major conferences. It publishes a student-edited journal, Health Matrix: Journal of Law-Medicine. Participants in the center’s activities include not only university personnel, but also professionals from such institutions as University Hospitals of Cleveland and the Cleveland Clinic.

Center for Social Justice
The School of Law has a proud but little-known history of providing a welcoming atmosphere that attracted African American students in the years before desegregation. Many of those graduates went on to distinguished careers. The purpose of the Center for Social Justice is to honor those graduates and the School of Law’s historic commitment to racial equality, as well as to promote social justice now and in the future for various groups that experience discriminatory treatment today. Its activities include holding conferences and speaker programs, hosting scholars from academia and practice, expanding curricular coverage, and providing financial support to students working in the area of social justice full-time after graduation or during summers while in law school.

Canada-United States Law Institute
The Canada-U.S. Law Institute, established in 1976, is jointly sponsored by the law schools of Case Western Reserve University and the University of Western Ontario. Its primary educational purpose is to give students of both schools a comparative perspective on their own country’s legal system. Each semester, up to six students from each school spend the term in residence at the other school. The school in which the student is a degree candidate gives full credit for the semester’s work. The two schools also exchange faculty, usually for periods of one or a few days, but occasionally to teach one or more courses for a full semester.

A second purpose of the institute is to provide a framework for the exploration of transnational and international legal issues affecting the relationship between Canada and the United States. In addition to the regularly scheduled courses on Canadian-U.S. topics, the institute sponsors workshops and conferences, including annual conferences in Cleveland, which, in recent years, have dealt with Canadian-U.S. economic ties.

The institute also sponsors a regular publication, the Canada-U.S. Law Journal; the annual Niagara Moot Court Competition, in which students from U.S. and Canadian law schools participate; and special research projects, often with funding support.

Center for Global Security Law and Policy
The School of Law offers opportunities for faculty to study and teach abroad. It also supports the development of international information resources. Through a series of sister law school relationships, it seeks to attract foreign students to the law school and provide opportunities for Case Western Reserve law students to study abroad; it also provides opportunities for faculty to study and teach abroad.

Institute for Global Security Law and Policy
The events and aftermath of 9/11 have made security and counter-terrorism fundamental, if not defining, concerns for the world community, nations, companies, the legal system, and individuals. The Institute for Global Security Law and Policy was established in 2005 to provide a uniquely comprehensive hub for addressing the legal, financial, political, social, religious and cultural ramifications of counterterrorism, using an innovative multifaceted approach that integrates theory with practical application. The Institute develops and integrates the best learning from all sources, including the real world and draws on numerous disciplines and experiences to provide innovative and world class programs, research, teaching, and service on the issues of security and counter-terrorism. The work of the Institute serves as an invaluable resource to governments, businesses, organizations, the legal profession, and the general community.

Law-Medicine Center
The Law-Medicine Center at Case Western Reserve University has been in operation for over 50 years. It began with a focus on forensic medicine, and experiences to provide innovative and world class programs, research, teaching, and service on the issues of security and counter-terrorism. The work of the Institute serves as an invaluable resource to governments, businesses, organizations, the legal profession, and the general community.

Center for the Interdisciplinary Study of Conflict and Dispute Resolution (CISCDR)
During this age of globalization, our world has begun to steadfastly look toward negotiation, mediation, arbitration and other forms of dispute resolution as alternative methods of solving conflict. Since the 1970s, the Alternative Dispute Resolution (ADR) movement has gained momentum in judicial and academic circles and is currently reflected in courses in most law schools, while the number of established mediation and arbitration practices continues to rise. To best prepare students for meeting these societal and legal changes, the School of Law has established the Center for the Interdisciplinary Study of Conflict and Dispute Resolution (CISCDR). CISCDR’s core mission is to encourage greater sensitivity to appropriate dispute resolution and skill development, preparing School of Law students for the multiple roles they will perform as lawyers in a global economy.

Center for Law, Technology and the Arts
The Center for Law, Technology, and the Arts was established as an internationally recognized forum for the interdisciplinary study of law, technology, and the arts. The Center focuses on teaching, research, and programs pertaining to intellectual property, technological innovation and technology transfer, the intersection of science, economics, philosophy, and the law, legal issues concerning biotechnology and computer technologies, and laws and cultural issues relating to the creative arts. Through the Center, the law school is able to offer students opportunities to address important, topical issues relating to law and technology and law and the arts through a variety of courses, lectures, events, and symposia.

Frederick K. Cox International Law Center
The International Law Center serves as the stimulus for enhancing programs in international, comparative, and transnational law at the law school. It supports visiting scholars and visiting faculty at the law school to enrich the curriculum and research capacity of the resident faculty. It also supports the development of international information resources. Through a series of sister school relationships, it seeks to attract foreign students to the law school and provide opportunities for Case Western Reserve law students to study abroad; it also provides opportunities for faculty to study and teach abroad.

Institute for Global Security Law and Policy
The events and aftermath of 9/11 have made security and counter-terrorism fundamental, if not defining, concerns for the world community, nations, companies, the legal system, and individuals. The Institute for Global Security Law and Policy was created in 2005 to provide a uniquely comprehensive hub for addressing the legal, financial, political, social, religious and cultural ramifications of counterterrorism, using an innovative multifaceted approach that integrates theory with practical application. The Institute develops and integrates the best learning from internationally recognized forum for the interdisciplinary study of law, technology, and the arts. The Center focuses on teaching, research, and programs pertaining to intellectual property, technological innovation and technology transfer, the intersection of science, economics, philosophy, and the law, legal issues concerning biotechnology and computer technologies, and laws and cultural issues relating to the creative arts. Through the Center, the law school is able to offer students opportunities to address important, topical issues relating to law and technology and law and the arts through a variety of courses, lectures, events, and symposia.

Center for Social Justice
The School of Law has a proud but little-known history of providing a welcoming atmosphere that attracted African American students in the years before desegregation. Many of those graduates went on to distinguished careers. The purpose of the Center for Social Justice is to honor those graduates and the School of Law’s historic commitment to racial equality, as well as to promote social justice now and in the future for various groups that experience discriminatory treatment today. Its activities include holding conferences and speaker programs, hosting scholars from academia and practice, expanding curricular coverage, and providing financial support to students working in the area of social justice full-time after graduation or during summers while in law school.

Canada-United States Law Institute
The Canada-U.S. Law Institute, established in 1976, is jointly sponsored by the law schools of Case Western Reserve University and the University of Western Ontario. Its primary educational purpose is to give students of both schools a comparative perspective on their own country’s legal system. Each semester, up to six students from each school spend the term in residence at the other school. The school in which the student is a degree candidate gives full credit for the semester’s work. The two schools also exchange faculty, usually for periods of one or a few days, but occasionally to teach one or more courses for a full semester.

A second purpose of the institute is to provide a framework for the exploration of transnational and international legal issues affecting the relationship between Canada and the United States. In addition to the regularly scheduled courses on Canadian-U.S. topics, the institute sponsors workshops and conferences, including annual conferences in Cleveland, which, in recent years, have dealt with Canadian-U.S. economic ties.

The institute also sponsors a regular publication, the Canada-U.S. Law Journal; the annual Niagara Moot Court Competition, in which students from U.S. and Canadian law schools participate; and special research projects, often with funding support.

Administration
Lawrence E. Mitchell, JD
Columbia University
Dean
Alyson Suter Alber, JD
University of Virginia
Associate Dean for Enrollment Planning and Strategic Initiatives

Crystal D. Taylor, MBA
(Indiana University)
*Assistant Dean for Finance and Administration*

Kathleen M. Carrick, JD (Cleveland State University), MLS (University of Pittsburgh)
*Director of the Law Library*
Dual Degree Programs

Dual Degree Programs

For students in dual degree programs, 12 hours of elective credits in the JD program are waived in consideration of completion of the dual degree. Students must be separately admitted to both degree programs in order to pursue a dual degree, the qualitative requirements of both degrees must be fully met, and the two degrees must be earned simultaneously. Students must begin coursework in the second degree program prior to beginning the fifth semester of law school work. Also, no coursework completed prior to official matriculation in the law school may be counted towards the law school degree.

JD/MBA (Master of Business Administration)

Students may complete the three-year JD program and the two-year MBA program in four academic years by completing 133 credit hours (including a 7-credit-hour overload which can be taken during the academic year or during the summer semester).

The School of Law allows dual degree students to use 12 credit hours from the MBA to fulfill both JD and MBA requirements. The Weatherhead School of Management allows dual degree students to use 12 credit hours from the School of Law to fulfill both MBA and JD requirements. Students must achieve a grade of C or better to receive double credit for the courses. This reduces the total number of hours required for the two degrees by 24 credit hours.

JD/MBA students may enroll only on a full-time basis, except during summer sessions. Dual degree students must receive both the JD and the MBA degrees simultaneously upon completion of degree requirements at both schools in order to receive the 24 hours of cross-credits described above.

Throughout the dual degree program, JD/MBA students continue to register in the first school they attended. After completion of both degree programs, two separate diplomas are awarded. Course work for both programs must be completed within six years of the date of initial enrollment in either program.

JD/MA or JD/MS (Master of Arts or Master of Science)

Enrolling in both the School of Law and the School of Graduate Studies, a student complete a Juris Doctor (JD) and a Master of Arts (MA) or Master of Science (MS) degree and earn the two degrees in seven semesters or six semesters plus two summers. Current options for this dual degree are:

- MA – Legal History
- MA – Bioethics
- MS – Biochemistry

JD/MSSA (Master of Science in Social Administration)

A dual degree program established by the Mandel School of Applied Social Sciences and the School of Law makes it possible for selected full-time students to pursue an integrated program of studies and receive the MSSA and JD degrees within four years rather than the normal five years that would be required to earn the two degrees separately. Applicants for the dual degree program must apply to and meet the admission requirements of both professional schools and are encouraged to apply for admission to both programs simultaneously.

Dual degree students must receive the MSSA and JD degrees simultaneously to be granted credit for specific courses taken in the other program.

JD/MD (Doctor or Medicine)

The School of Law and the School of Medicine offer a dual degree program that allows a student to complete both degrees in six years. A student who begins at the law school spends two years studying law, then four years studying medicine. Alternatively, a student may spend the first two years and the last two years at the medical school, and the two middle years at the law school.

JD/MPH (Master of Public Health)

The MPH degree will generally add a year of additional course work to the JD degree, creating a four-year program. Law students enrolled in the dual JD/MPH degree program may earn up to 12 credits toward the JD in graduate level MPH courses. The law school offers several health law courses that meet the MPH elective requirements.
Juris Doctor (JD)

Juris Doctor

The School of Law offers the Juris Doctor (JD) degree as well as dual-degree programs. The JD degree requires successful completion of 88 credit hours, of which 38 hours are in required courses and 50 hours are elective courses - at least 2 of the elective credits must be used for the writing of a substantial research paper. The first year program for the JD degree consists mainly of the required basic courses. In addition, in the spring semester students select a 2-credit elective “perspectives” course; the menu of first-year perspectives courses varies from year to year.

Total Units: 15

Curricular Concentrations

Seven curricular concentrations are offered for the Juris Doctor. These optional concentrations allow students to provide a concentrated focus for some of their elective coursework. The current available curricular concentrations are:

- Business Organizations
- Criminal Law
- Litigation / Alternate Dispute Resolution
- Health Law
- International Law
- Law, Technology, and the Arts
- Public Law – Public and Regulatory Institutions track or Individual Rights and Social Reform track
- National Security Law

Graduate School Option

Students in the School of Law who are not enrolled in a dual-degree program may take up to nine hours of approved courses in the other graduate and professional schools of Case Western Reserve University and have such courses counted for credit toward the JD degree.

JD Curricular Concentrations

JD students have an option to earn a curricular concentration by focusing their course selections within a particularly area of legal study. Requirements for each particular concentration are listed below. In order to receive the concentration, students must earn at least 15-18 credits (varies by the specific concentration) in courses within the concentration, and earn an overall grade point average of 3.000 or higher amongst all courses defined by that concentration. Each concentration has a number of required courses along with a menu of courses that can counted as elective hours. Each concentration also has a writing requirement: a substantial research paper on a topic applicable to the concentration must be completed with a grade of B+ or higher; contact the concentration advisor for more details. Specific courses applicable to each concentration are subject to change by faculty review. Please obtain the most current concentration curriculum sheet from the Law School Academic Services Office. Each concentration has an assigned faculty leader who can assist students with course selection and curriculum planning.

Master of Laws (LLM)

Master of Laws

Programs for foreign-educated lawyers

Three different Master of Laws (LLM) programs are offered to students who have completed legal training outside of the United States. These programs allow students to spend one year in an intensive study program to gain exposure and immersion into the legal theory and practices of the U.S., and to engage in comparative study of the U.S. and other international legal systems. Building on a base of required courses specific to the International LLM programs, each LLM student will develop an individual plan of study leading to a Master of Laws degree in general United States and Global Legal Studies, or the more focused fields of Intellectual Property Law or International Business Law. Students in general United States and Global Legal Studies have the option to pursue a particular curricular concentration by consulting with the director of Foreign Graduate Studies and choosing a focus area in their elective courses.

Each student's courses will be determined by the program director in consultation with the student and will be based on the student's prior legal education and interests. After completion of the degree requirements, students may elect to spend a summer internship with a law firm or corporate legal department in the United States. Further information and admission materials may be requested from the Foreign Graduate Studies Program office. (http://www.case.edu/law/llm)

International Criminal Law

The Master of Laws (LLM) program in International Criminal Law is a one-year advanced study program to students who hold the JD degree from a U.S. law school, or equivalent training from a school outside of the USA. It provides students with an in-depth knowledge of international criminal law and procedure, international humanitarian law, and national security law, and will equip them to practice international criminal law before international tribunals or national courts. Students will plan their course of study by working closely with the Program Director. Selected students will also have the opportunity to participate in one of our International Criminal Tribunal Externships during one of their semesters in the program.
School of Law Courses

Courses

LAWS 1100. Introduction to Lawyering. 1 Unit.
This course is the first component of the CaseArc Integrated Lawyering Skills Program. It is an introduction and orientation to the study of law and lawyering skills. The course introduces students to issues of professionalism, interviewing skills, the trial and appellate processes as well as legal analysis, writing and argumentation. It also introduces students to skills for preparation and participation in the law school classroom and to comparative analysis of different legal systems. The course is required for all entering students and is scheduled each day of the week prior to the beginning of regular classes in the fall semester.

LAWS 1101. Contracts. 4 Units.
The formation of a contract; problems of offer and acceptance; consideration; the question of contract breach; damages and remedies for a breach. Required.

LAWS 1102. Criminal Law. 4 Units.
A basic course in substantive criminal law, dealing with the standards to be used in defining and punishing criminal behavior. The course includes discussion of crimes and criminality; culpable mental states; causation; insanity; attempt and complicity; homicide; and rape. Required.

LAWS 1103. Torts. 4 Units.
This course covers compensation of an injured party for harm resulting from intentional or unintentional acts and omissions of others. Consideration is given to the rules, rationale, and policy underlying tort liability. The course includes analysis of assault and battery, false imprisonment, negligence, standard of care, duty, risk, causation, liabilities and rights of landowners and land users, liability relating to dangerous activities and defective products, liabilities arising from special relationships or specially recognized legal interests, and defenses. Required.

LAWS 1201. Civil Procedure. 4 Units.
A broad survey of the procedural development of a lawsuit is undertaken, tracing the various steps from pleading and discovery to trials and judgments. Modern procedural issues involved in jurisdiction of the courts, venue, choice of law, and former adjudications are discussed. Throughout the course principal attention is given to the Federal Rules of Civil Procedure. Required.

LAWS 1202. Constitutional Law I. 4 Units.
The constitutional system of the United States; judicial function in constitutional cases; the division of powers between the nation and the states and within the national government; the powers of the president; national and state citizenship; and constitutional limitations on the powers of the states and nation for the protection of individual liberties. Required.

LAWS 1203. Property. 4 Units.
The nature of property interests; estates in land and future interests; concurrent ownership; landlord-tenant; transfer of property interests; easements, covenants, and equitable servitudes; nuisance; and zoning. Required.

LAWS 1801. Core 1: Research, Writing, and Skills. 0 Units.
This course is the first of a sequence of required courses in the CaseArc Program which trains students in the fundamental skills of practicing law. Students are introduced to the fundamentals of legal analysis and rhetoric beginning with objective written legal analysis. In addition, they receive instruction in manual and, to a limited extent, computerized legal research. Finally, students begin to develop the basic skills of interviewing, fact gathering and client counseling. The course is taught by a combination of classroom instruction, small group discussions and through performance and critique of simulation exercises. The goal is to integrate the learning and application of legal theory, doctrine and practice in an authentic manner. Students are assigned to an instructional team consisting of a doctrinal professor, a research, analysis and writing professor, a clinical professor, a skills professor and a librarian. The team coordinates the assignments and exercises so that students are provided a learning experience that combines lecture, discussion, and hands-on experience. Students must take this course in the fall semester of their first year.

LAWS 1802. Core 2: Research, Writing, and Skills. 4 Units.
This course is the second of the sequence of required courses in the CaseArc Program which trains students in the fundamental skills of practicing law. Students build on their learning in CORE 1 by confronting more complex and challenging problems. The format of the course and teaching methods are similar to CORE 1, but the writing component of the course shifts from the objective mode to the persuasive, and the research component incorporates electronic research in depth. In addition, the students learn more complex fact gathering, document analysis, and counseling. Finally, students are introduced to negotiation theory and technique and to the principles of effective oral presentation in formal and informal settings. Students must take this course in the spring semester of their first year. Recommended preparation: LAWS 801.

LAWS 2001. Professional Responsibility. 3 Units.
This course deals with questions underlying the responsibilities of the lawyer, as a professional, to self, society, client, and the profession. Premises concerning the lawyer’s role or roles within the context of the adversary system are examined in some detail, as is the idea of professionalism. The Model Code of Professional Responsibility and the Model Rules of Professional Conduct are analyzed as generalized statements of the aspirations and obligations of lawyers, and as applied to concrete problems. Required.

LAWS 2803. Core 3: Transaction, Writing, and Skills. 2 Units.
This is the third of the required sequence of four courses in which students are introduced to the fundamental skills of practicing law. Students build on their learning in CORE 1 and CORE 2 by applying the principles of legal research, analysis, writing, interviewing, counseling and negotiation in the transactional setting. Students also learn about the challenges of applying these lawyering skills in the representation of groups and entities. The format of the course and teaching methods are similar to CORE 1 and CORE 2. Students must take this course sometime during the second year of law school, in either the fall or spring semester.
LAWS 2804. Strategic Representation and Communication. 2 Units.
This is the fourth of the required courses in the CaseArc program in which students are introduced to the fundamental skills of practicing law. Students perform the major steps in the process of representing one client from initial interview through a negotiated resolution. As in actual law practice, students will mix independent individual work with collaboration with other student lawyers. Students independently interview and counsel their clients, research, negotiate and communicate with the client and opposing counsel. Students collaborate with their colleagues to share investigation facts, explore legal issues, assess the client’s situation, decide how best to present the client’s position, form legal strategies, and prepare for negotiation. Students perform and receive extensive individual feedback on interviews, client counseling and negotiation, and produce a variety of associated writing assignments. Each class section is organized around a single legal case involving two parties, in one of three subject areas: civil litigation, transactional practice, and criminal practice. Prereq: LAWS 803.

LAWS 4101. International Law. 2 Units.
An introduction to basic comparative, transnational, and international law disciplines. Using areas of substantive and procedural law familiar to first-year students, the course examines issues arising from cross-national activity. Students are exposed to choice of law, comparative law, international law, and international institutions.

LAWS 4200. Bioethics and Law. 2 Units.
This course will explore how the legal and policy systems reconcile competing values and interests in controversies surrounding the practice of medicine. Case law, legislation, administrative law, and institutional policies will be examined, as well as selected commentary from the legal, medical, and philosophical perspectives. Substantive topics will include end-of-life issues, informed consent, use of new reproductive technologies, and other timely subjects in bioethics.

LAWS 4201. Health Law. 3 Units.
The course examines the nature and structure of the health care system; the relationship between patient, provider, and payer; private legal controls on health care delivery such as malpractice and informed consent law; and public controls in the form of government regulatory and payment programs. Offered as HSMC 427 and LAWS 227.

LAWS 4300. Intellectual Property Survey. 2 Units.
This course is designed to provide students with an overview of several areas of law traditionally associated with intellectual property or IP, including copyright law, which pertains to the protection of literary, musical, and artistic creations and has issues replete with First Amendment implications; patent law and trade secret law, which focus on the protection of technological works ranging from chemical formulae, to software, to biotechnology; and trademark law, which relates to the goodwill associated with corporate identity and product recognition. We will also devote time to the study of the philosophy and economics of intellectual property keeping in mind, throughout the course, the need to strike an optimal balance between incentives to create and commercialize intellectual creations on the one hand and public access to these creations on the other hand.

LAWS 4301. Copyright Law. 3 Units.
Copyright law is the in-depth study of the legal doctrine and policy relating to the protection of one’s artistic, literary, musical, and computer-related expression. We will focus primarily on the 1976 Copyright Act and amendments thereto, such as the Digital Millennium Copyright Act of 1998.

LAWS 4302. Patent Law. 2 - 3 Units.
Basic concepts of patent law as property considered primarily in its substantive aspects, including the relationship to other forms of protection and intellectual property, infringement, and statutory requirements for patents.

LAWS 4303. Trademark Law. 3 Units.
Trademark Law is the study of how commercial entities use words and designs to identify the source their products and services in the minds of consumers and competitors. This course focuses on domestic and international trademark acquisition, retention, transfer, registration, and infringement. In addition to the common law of trademarks and unfair competition, much of this course will be devoted to studying the statutory scheme of federal trademark law.

LAWS 4401. Business Associations. 5 Units.
This course is an introduction to the law of business associations, including general and limited partnerships, limited liability companies, and corporations. The functions and relationships of enterprise participants, primarily promoters, equity owners, creditors, and managers are investigated. The course covers pre-organizational problems and then canvasses the roles of ownership and management, with emphasis on the special duties (fiduciary and other) imposed on certain participants in publicly and closely-held entities. The regulation of securities fraud, proxy voting and solicitations, and the issuance of securities under the federal securities laws is explored. Fundamental concepts of business financing, including valuation of the concern and claim structure, are investigated. Organic changes, including dissolutions, mergers, and tender offers, are discussed.

LAWS 4402. Nonprofit Organizations. 3 Units.
Explores the rationales for the existence of the nonprofit sector and the allocation of certain functions to it. The focus is on the legal framework for the structure and operation of nonprofit organizations under state nonprofit corporation statutes and the policy and practice of preferred tax treatment for selected organizations and gifts to them under the Internal Revenue Code.

LAWS 4404. Sales. 3 Units.
One of the basic courses in commercial law. It serves equally as an introduction to the general organization, structure, and appropriate application of the Uniform Commercial Code. Primarily we study the law of Sale of Goods under Article 2 of the U.C.C. Necessarily this includes a study of products liability law, which is explored under both sales warranty and strict tort liability theories. The interrelationship between these competing theories of products liability law are also investigated. Other specific topics studied are the legal rules applicable to 1) the formation of sale contract, including the battle of the forms, statute of frauds, and parol evidence rule, 2) performance of and excuse of performance from the sales contract, 3) title warranties and title transfers, and 4) remedies for breach of the sales contract. Students may not take both LAWS 381 and LAWS 266 (Sales and Secured Financing).

LAWS 4405. Federal Income Tax. 4 Units.
An introductory course in federal income taxation of the individual taxpayer, including a consideration of the nature of income, specific statutory exclusions, business and nonbusiness deductions, the treatment of capital gains and losses, and elementary tax accounting.
LAWS 4701. Dispute Resolution. 2 Units.
This course will examine the characteristic methods by which American courts resolve disputes, and will then compare those methods with those used by alternative institutions of dispute resolution such as administrative agencies, arbitration, and mediation negotiation. In resolving disputed issues of law, American courts are constrained by doctrines of precedent, stare decisis, and the principles of statutory interpretation, all of which will be treated in some depth in the course. Disputed issues of fact in American courts are commonly decided by juries consisting of ordinary citizens, and the course will explore a number of features of the jury as it impacts litigation in courts. The portion of the course devoted to alternative dispute resolution will involve some simulations and role-playing exercises. There will be a single examination at the end of the term which will be the primary basis for grading.

LAWS 4702. Courts, Public Policy, and Social Change. 2 Units.
Examines the social impact of law and use of social research in the legal process, assesses efforts to use law to effect social reform, and empirical studies of legal processes and institutions. Recommended preparation: Graduate standing or consent of department. Offered as LAWS 285 and POSC 429.

LAWS 4703. Executive Compensation: An Introduction to Business Law. 2 Units.
This course introduces students to the broad area known as business law. Among the areas introduced will be the laws of business organizations (including differences in management and corporate governance among different types of entities), securities regulation (both disclosure and registration requirements), drafting of complex contracts, taxation (of entities and individuals), and professional responsibility, and the business lawyer’s interface with other lawyers (specialists in intellectual property, employment, or litigation) and non-lawyers such as board members, accountants and business consultants.

LAWS 4806. Administrative Law. 3 Units.
This course examines the legal and institutional framework within which agencies administer regulatory statutes, with emphasis on procedural and constitutional issues. Major themes include limiting arbitrary action, controlling agency discretion, and promoting governmental accountability. Examples and problems are drawn from a wide range of substantive areas, including business, communications, consumer protection, education, environmental, health and safety, intellectual property, labor and employment law, and real estate law.

LAWS 4807. Criminal Procedure I. 3 Units.
The investigatory stage of the criminal process. Constitutional limitations on searches and seizures, interrogation practices, and pretrial identification procedures are examined. In addition, the exclusionary rule, the principal method for enforcing Fourth, Fifth, and Sixth Amendment rights, is considered.

LAWS 4808. Evidence. 4 Units.
A comprehensive course in the law of evidence as applied in civil and criminal cases. Subjects include relevance, hearsay, judicial notice, privileges, examination of witnesses, expert and lay opinion testimony, and real, demonstrative, and scientific evidence. This course deals with both the practical applications and theoretical underpinnings of the Federal Rules of Evidence and common law precedents. Students may not take both LAWS 207 and LAWS 212.

LAWS 4809. Wills, Trusts, and Future Interests. 4 Units.
A survey of the law of intestate and testate succession, will substitutes, private and charitable trusts, fiduciary administration, and future interests (including the Rule Against Perpetuities).

LAWS 4810. Entering the Profession. 2 Units.
This course provides an introduction to the testing formats and required skills common to bar exams in United States jurisdictions, including the Multistate Bar Exam (MBE, multiple-choice format); the Multistate Performance Test (MPT, task-oriented essay); and essay questions in various substantive areas (which generally incorporate some state-specific content). Substantive content will be presented to provide raw material for practice testing. Students will earn the course credit by attending at least 80% of class sessions and completing 100% of written assignments with at least 65% success rate. Rewrites and retests will be allowed on request. The course does not comprise complete preparation for any bar exam. Rather, it provides familiarity, study strategies, and test-taking instruction along with limited substantive content.

LAWS 4901. Foreign Graduate Seminar. 2 Units.
This seminar is the required introductory course for foreign students enrolled in the Graduate Program in U.S. Legal Studies. It begins with a series of lectures introducing students to American legal education; American government, courts, and culture; various common law subjects; and professional responsibility. Throughout the year seminar sessions are held with legal practitioners from law firms and corporations in the Cleveland area who are involved in an international practice. Limited to the foreign LL.M. students.

LAWS 4902. U.S. Legal Writing for Foreign Law Graduates. 0 Units.
This course is designed to teach English compositional skills and grammar for legal studies. With an English-as-a-second-language focus, this course will seek to teach students the various steps of the writing process, English grammar, and certain aspects of legal composition. The main goal of this course is to enable students to write clearly and correctly within U.S. legal studies and the U.S. legal work place. The course will meet twice a week for one hour. Students will be required to take this course based on a written exam administered at the beginning of the semester. Students must receive a grade of at least a C to pass out of the course.

LAWS 4903. U.S. Contract Law. 3 Units.
The subject matter and coverage of this course is approximately the same as the subject matter and coverage of first-year Contracts (LAWS 123) as abbreviated and modified to reflect that it (a) is limited to foreign students who are candidates for the LL.M. in U.S. Legal Studies and (b) consists of 3 (not 5) credit hours.

LAWS 4904. Doing Business in the United States. 3 Units.
The course is designed to introduce foreign students to many areas of U.S. domestic law through consideration of a transnational business transaction. Examples of areas of law covered: restrictions on foreign investment, regulatory agencies, banking and finance, importing and exporting, business entities, litigation and alternative dispute resolution, labor relations, immigration law, taxation. Limited to candidates for the LL.M. in the U.S. Legal Studies.

LAWS 4905. Business Associations for LL.M. Students. 3 Units.
This course is an introduction to the law of business associations including general and limited partnerships, limited liability companies, and corporations tailored to their specific needs.
LAWS 4906. Evidence. 3 Units.
This is a comprehensive course in the law of evidence as applied in civil and criminal cases. Subjects include relevance, direct and cross-examination, impeachment, character, expert and lay opinion testimony, and hearsay. A problem-oriented approach is used to highlight both the practical applications and theoretical underpinnings of rules of evidence. Students may not take both LAWS 207 and LAWS 212.

LAWS 5110. Contemporary Issues in International and Comparative Law. 1 Unit.
The objectives of the course will revolve around initiating students to the basic concepts and principles of comparative law reasoning and helping students make sense of the increasing dialogue between jurisdictions practicing constitutionalism in a global context with a focus on human rights issues. The coverage of the proposed course will select from the following themes depending on student interest and availability of materials: (a) Freedom of religion, secularism and culture; (b) Freedom of expression and hate propaganda; (c) Freedom of expression and sexual representation; (d) Equality and same sex unions; (e) Assisted suicide; (f) Death penalty; (g) Implementation of human rights in federal or quasi-federal politics; (h) Socio-economic rights; and/or (i) Cultural rights.

LAWS 5111. Admiralty Law. 2 Units.
The general principles of admiralty law including jurisdiction, practice, maritime liens, collisions, salvage, limitation of liability, and the rights of injured maritime workers.

LAWS 5112. Canada-United States Law Institute Seminar. 2 Units.
Canada-US Legal Relations provides students with a broad examination of the issues confronting the Canada-US relationship. Topics discussed include comparative constitutional law, North American trade & investment law, immigration, Canada-US border security, and environmental issues -- including the Great Lakes. The course includes lectures by practitioners and government officials. Students are required to author a paper that may be published in Canada-US Law Institute material and journals.

LAWS 5113. Counter-Terrorism Law. 3 Units.
This course will take an in-depth look at counter-terrorism in the United States, Israel, and other countries. The course will examine the competing conceptions and definitions of terrorism at the national and international level and the institutions and processes designed to execute the "war on terrorism." This will include study of the balance between security and liberty policies in the U.S. Patriot Act, the use of military tribunals or civil courts, the use of assassination or targeted killings, and the emerging law on enemy combatants and their detention, and the arguable need for new self-defense doctrines at the global level. Prereq: LAWS 327.

LAWS 5114. European Union Law. 2 - 3 Units.
After a brief introduction to the institutions and organs of the European Community, the legal aspects of the internal operations of the Community will be discussed. Special emphasis will be placed on the external impact of Community law, for example, its trading rules, company law, and business competition law, as well as its rules governing the free movement of goods, services, capital, and persons. The concept of European citizenship will also be dealt with.

LAWS 5115. International Arbitration. 2 Units.
An advanced course covering the current status of arbitration as a dispute settlement mechanism in international affairs. This course will cover the use of arbitration as a means of resolving international disputes: a) between private parties; b) between private and governmental parties; and c) between governments. It will cover possible forums and rules of arbitral dispute resolution and the problems of the enforcement of foreign arbitral awards. Special aspects of dispute resolution in certain geographical and subject areas will be covered as will be the problem of sovereign immunity. Disputes arising from multinational business transactions will be focused on as will be maritime, environmental, and border disputes.

LAWS 5116. International Human Rights. 3 Units.
This course will cover a variety of issues in the area of international human rights. Issues covered will include the law of treaties and treaty interpretation; international organizations' and non-governmental organizations' roles in protecting human rights; the rights of women and minorities; critiques of the idea of "universal" human rights; and the Alien Tort Claims Act. In addition to covering the procedure and substance of the international system for protection of human rights, we will also discuss human rights under various domestic legal systems from a comparative perspective. Grade is based on the final exam, class participation and possibly a group project.

LAWS 5117. International Organizations. 3 Units.
Deals with legal issues surrounding some common characteristics of intergovernmental organizations having wide membership, with an emphasis on the United Nations systems. Many of the issues are constitutional or procedural; that is, they have to do with the powers of, and restrictions upon, the organizations or their members as set forth in the constituent instruments of the organizations or as developed in practice. Issues such as eligibility for membership and termination thereof, rights and obligations of members, dispute resolution, and legislative procedures will be addressed comparatively. The growth of international law through intergovernmental organizations is also addressed.

LAWS 5118. International War Crimes Project. 3 Units.
Students in this unique course undertake legal research projects for various international criminal tribunals (including the International Criminal Court and the tribunals in Cambodia and Sierra Leone, among others). They prepare memoranda on selected issues related to current tribunal cases. The course sessions explore the development of international criminal law and the establishment of the tribunals, as well as their jurisprudence and their Rules of Procedure and Evidence. Grades are based on the quality of student papers and in-class presentations. Completed research projects along with their accompanying source notebooks become part of the tribunal libraries.

LAWS 5119. Intervention Law: Iraq and Vietnam. 3 Units.
Using the examples of American intervention in Vietnam and Iraq, this course examines some of the international and domestic legal issues raised by war and military intervention. Among the topics covered will be the legal justifications for intervention and the arguments for the illegality of the two wars; constitutional limits on executive war making powers; the justiciability of issues of war and peace under U.S. law; the draft, the volunteer army, and conscientious objection; GI rights and GI dissent; the law of war and international humanitarian law and the recurring problems of massacre, murder, and torture.
LAWS 5120. International Business Transactions. 3 Units.
This course examines various types of international business activities from a transactional perspective. It focuses on international sales, international payments, and international licensing transactions and examines the different legal systems (state, federal, international) that may impact on these transactions. It also considers commercial aspects of the interpretation of cross-border contracts, dispute resolution concerning cross-border contracts, and the role of lawyers. Some basic issues relating to private international law/conflicts of law are also addressed. There is also some introductory coverage of international electronic commerce transactions and related legal issues.

LAWS 5121. International Criminal Law and Procedure. 3 Units.
This course surveys selected issues and current problems involving the criminal aspects of international law and the international aspects of criminal law. The course begins with an introduction to the origins and purposes of international criminal law. We will then explore the contours of the duty to prosecute those who commit international crimes. Next, we will focus on application of domestic and international law to the question of jurisdiction over international criminal activities. This is followed by three units examining substantive international criminal law as contained in multilateral treaties concerning terrorism, war crimes and crimes against humanity. Next, we will explore the procedural aspects of international cooperation in criminal matters, with particular attention to extradition and problems associated with obtaining evidence from abroad. We will also analyze the reach of U.S. constitutional protections to U.S. investigative and law enforcement activities overseas. Finally, we will study the new Yugoslavia and Rwanda War Crimes Tribunals and the permanent International Criminal Court. The class will be seminar-format, with short writing assignments, weekly simulations, and role-play exercises designed to bring the materials to life. There will be no final exam.

LAWS 5122. International Litigation Research Seminar. 2 Units.
This seminar focuses on the litigation of transnational disputes in domestic courts. Topics include jurisdiction, international service of process procedures for obtaining evidence internationally, and the international enforcement of judgments. Students will complete a substantial research paper and will present the results of their research to the class.

LAWS 5123. International Trade and Development. 3 Units.
The public international and United States law regulating international trade. (The private law of international trade and investment is dealt with in International Business Transactions, LAWS 354.) It includes the economic theory of international trade (although no exposure to a course in economics in secondary or undergraduate education is necessary) as well as a legal examination of issues regulating global and regional (e.g., the Canada-U.S. Free Trade Agreement, EEC) international trade. Primary emphasis is on the General Agreement of Tariffs and Trade (GATT) and the World Trade Organization (WTO) as well as such United States legislation implementing the GATT as antidumping and countervailing duties legislation and escape clause relief. The roles of trade and aid are also explored, as well as U.S. legislation affecting the transfer of resources to less developed countries.

LAWS 5124. Islamic Law. 2 Units.
This course will cover major aspects of the Islamic Law. It will provide students with a better understanding of Islam and its adherents. Many topics related to Islam and its basic beliefs, including some contemporary issues, will be covered in this course.

LAWS 5125. Jewish Law. 2 Units.
LAWS 5126. NAFTA and Bilateral Trading Agreements. 1 Unit.
Since the World Trade Organization Doha Negotiations have stalled, countries increasingly look to bilateral and regional trading arrangements as a viable alternative to multilateral negotiations. This course is a four day, one credit course examining the legal and policy considerations with respect to bilateral and regional trading arrangements, using the Canada-U.S. FTA, NAFTA, U.S.-Chile FTA, Canada-Chile FTA, and various United States, Australian and Asian bilateral trading arrangements. The faculty will cover both the legal aspects considered in the negotiations and also the practical considerations of negotiators.

LAWS 5131. Global Corporate Governance Lab. 3 Units.
This Lab will involve students in an integrated experience of academic research and public service. Students will work on research projects on corporate governance law and policy for publicly owned companies in emerging markets such as India, Russia, Turkey, and South Africa. The course will engage students in projects for a variety of organizations involved in improving corporate governance in emerging markets, including the Organization for Economic Cooperation and Development (OECD), the International Fiscal Corporation, the Institute of International Finance (IIF), and locally based governmental and non-governmental organizations. Students will study and research key aspects of corporate governance, including minority shareholder protection, the structure and responsibility of the board of directors, accounting and auditing requirements, transparency of shareholder ownership and control, and enforcement as they apply to emerging markets. Special attention will be paid to the importance of fashioning rules appropriate for the economic, social, and legal environment of each jurisdiction.

LAWS 5132. Homeland Security/USCG Lab. 3 Units.
The DHS/USCG Lab will provide students with the opportunity to conduct research and prepare legal memoranda addressing issues submitted by the US Department of Homeland Security and the United States Coast Guard. Students will meet for lecture sessions that provide a background into the issues presented, including border security, Great Lakes laws, immigration, administrative law, and the environment. The student’s work product will be submitted to, and utilized by, DHS/USCG.

LAWS 5133. Terrorism Prosecution Lab. 3 Units.
This lab will involve students in an integrated experience of academic research and public service. Students will work on research projects in counter-terrorism law in the United States, Israel and other countries. The course will engage students in projects for a variety of organizations that are trying to develop expertise in counter-terrorism law, including U.S. attorney offices, thinktanks, defense attorneys, international governmental and non-governmental organizations. Students will study and research various aspects of counter-terrorism in the U.S., foreign countries, and at the international level, including the balance between security and liberty policies in the U.S. Patriot Act, the use of military tribunals or civil courts, the use of assassination or targeted killings, and the emerging law on enemy combatants and their detention, and the arguable need for new self-defense doctrines at the global level. Prereq or Coreq: LAWS 78.
LAWS 5136. International Humanitarian Law. 1 Unit.
This course is designed to prepare the student members of the Jean Pictet Competition team, but is open to all students with an interest in international humanitarian law. The course will be taught in two all-day Friday-Saturday sessions in January and February by international humanitarian law expert Gregory Noone, who is currently a fellow at the U.S. Institute of Peace and was previously Head of the Foreign Military Rights Affairs Branch of the Office of the Judge Advocate General at the Pentagon. Using case studies as well as simulations and role-playing exercises, the course will address the field of international humanitarian law as a whole, including the law of armed conflict, international criminal law, international human rights law, and the role of international organizations such as the ICRC and U.N. The objective of the course is to convey the reality of international law. Like humanitarian law itself, the course will not deal solely with legal disputes or judicial matters, but with practice and real life situations. The course grade will be based on a paper that will not satisfy the Writing Requirement.

LAWS 5137. Chinese Law. 3 Units.
This seminar will introduce students to the functions, purposes, and ongoing institutionalization of the law in the People’s Republic of China. After briefly examining China’s modern and traditional history, we examine the legal system’s role in the political, social and economic development of China. Over the semester, we will investigate several areas of law--constitutional law, criminal law, economic law, property and intellectual property--and then highlight topics of particular concern to the international community, such as human rights, the WTO and China’s commitment to international law. The goal is for students to understand both internal legal developments within China, the increasingly important role China plays on the global stage, and (ideally) to reflect upon the American legal system.

LAWS 5161. Legal History of European Union Seminar. 3 Units.
The seminar introduces students to the history, development, and present structure of the legal system of the European Union from the ECSC in 1951, through the Treaty of Rome in 1957, to the Treaty of Amsterdam in 1997. The seminar will examine the “constitutional” structures and institutions of the European Union, including the emergence of a binding jurisprudence from the European Court of Justice; will look at general interpretive principles emanating from the European civil law tradition, such as the doctrines of subsidiarity and proportionality; will explore the public law of the European Union, the "four freedoms," human rights, and equal treatment of women and men; and will briefly treat private law rights emergent not only from treaty and parliamentary enactment but from Union jurisprudence. The seminar will concentrate on the historical and economic context, but legal doctrine and practice will also be considered.

LAWS 5202. Bioethics and Law. 3 Units.
Students will be introduced to the basic principles of bioethics and health care law, and to the ways in which these principles apply to specific problems arising in clinical and policy settings. Readings and class discussion will first examine the philosophical framework and the basic moral theories relevant to modern bioethics. After the survey, bioethical issues in the following broad topics may be covered: defining life, including human reproduction, surrogacy and fetal-maternal conflict; euthanasia and the prolonging of life including the right-to-die, medical futility, and advance directives; termination of treatment for children; genetic screening; hospital ethics committees; access to care and the politics of health care in the 90s; and ethics in the business of medicine. Readings will consist of legal cases and documents, statutes, regulations and articles from the academic and the lay press. Grade is primarily based on an exam. Both an oral class presentation and a short paper are optional to supplement the grade, but not to replace the exam. Attendance and class participation are also considered for grading purposes.

LAWS 5203. Food And Drug Law. 2 Units.
This course examines the federal Food, Drug and Cosmetic Act. It will entail a detailed look at the law, policy statements, and literature related to approving new drugs and devices. The course covers such topics as human subjects research; product labeling and testing; OTC vs. prescription status; compassionate use exceptions; control of biotechnology techniques; differences between food, drugs and devices; and FDA enforcement. We will also explore how law and the legal system anticipate and also respond to changes in technology in ways that may enhance or inhibit the development of new technologies and new applications of old technologies. Attendance at classes is mandatory. Grade is based on final exam.

LAWS 5204. Genetics and Law. 3 Units.
The current federal Human Genome Project is attempting to understand the health and behavioral implications of the 50,000 to 100,000 genes in the human body. Genetic tests are being offered to let people know if they are at risk of having a child with a genetic defect or if they will later in life suffer from cancer or other disease. Genetic predispositions are also being investigated for certain behaviors such as gay sexual preference, intelligence, and anti-social behavior. This course will cover the tort law, family law, constitutional law, criminal law, employment law, and insurance implications of developments in genetics.

LAWS 5205. Public Health Law. 2 Units.
This course surveys a range of issues in public health law including contagious diseases, health surveillance and privacy, tobacco, controlled substances, obesity, firearms, emergency preparedness and bioterrorism. It is designed to introduce students studying law or public health to the basic constitutional principles involved in public health law; the scope of local, state and federal authority to regulate; and the variety of ethical issues that arise.

LAWS 5210. Biotechnology Law and Practice. 2 Units.
Through the lenses of being counsel to a fictional start-up biotechnology company, the class will discuss, analyze and address the typical legal issues such a company faces in its first year of existence. In particular, the course will cover: 1. Corporate formation and governance issues; 2. Intellectual property protection and licensing; and 3. Fund-raising. Prereq: LAWS 261 and LAWS 229.
LAWS 5211. Biotechnology Law and Policy. 2 Units.
This course is designed to expose the law student and graduate student in science or business to the legal, business, and policy issues relevant to the biotechnology industry. We will cover issues related to patents, corporate organization and financing (particularly venture capital as it relates to the Start-Up Biotech Company), licensing and other transactions, regulatory issues relevant to the Food and Drug Administration, university technology transfer, and academic conflicts of interest. Prereq: LAWS 229.

LAWS 5212. Civil Law and Psychiatry. 2 Units.
The interaction between law and psychiatry in the rights of persons with mental disabilities in the community and in treatment settings. Topics include involuntary commitment, suicide, guardianship, psychiatric malpractice, psychic damages, special education, confidentiality and child abuse and custody. Students will test the analysis of legal issues against actual experience (videotaped interviews, visit to a state mental hospital). The course is jointly taught by a psychiatrist and an attorney specializing in mental health law.

LAWS 5213. Criminal Law and Psychiatry. 2 Units.
The interaction between criminal law and psychiatry: psychiatric diagnosis and treatment, competence to stand trial, the insanity defense, malingered mental illness, infanticide, stalking, violence, sexual predator laws, and direct and cross-examination of mental health experts. Videotaped examples serve as a basis for discussion. A visit to the Justice Center Court Psychiatric Clinic is included. The course is taught jointly by a psychiatrist and an attorney specializing in mental health law.

LAWS 5214. Current Topics in Health Law. 2 Units.
The course will cover 13 different current topics that students are likely to confront in the practice of health care law. Each topic will be presented by a leading practitioner in the field, who will provide appropriate reading materials. The presentations will be followed by student discussion led by a visiting faculty member. The grade will be based on class participation and an examination.

LAWS 5215. Health Care and Human Rights. 3 Units.
This course combines two areas of law of increasing importance and public attention. In light of emerging medical, research, and genetic technology, courts, legislatures, administrative agencies and ordinary citizens around the world often face issues of health law. At the same time, in a world that is becoming both globalized and plagued by repeated instances of ethnic cleansing and other catastrophic abuses, issues of human rights are at the forefront of public debate. The intersection of health care and human rights, therefore, constitutes a worthy and fascinating area of study. Topics to be covered will be selected from among the following: 1) an overview of relevant human rights doctrines; 2) the concept of public health; 3) the status of the right to health care in different countries; 4) biomedical research involving human subjects; 5) genetic technologies; 6) disability rights; 7) women’s reproductive and health issues; 8) environmental abuses and human rights; 9) infectious disease, bioterrorism, and human rights; and 10) war crimes and other human rights abuses, as they impact public health.

LAWS 5216. Health Care and the Constitution. 3 Units.
Is there a constitutional right to resist all unwanted medical interventions? Is there a constitutional right to access medical interventions at one’s own expense? What, if any, are the constitutional limits on the government’s ability to regulate health care and the practice of medicine? This seminar will focus on the constitutional aspects of health care law. Topics will vary year to year but may include abortion, the “right to die,” compulsory vaccination, medical marijuana, access to unapproved drugs, and minors’ rights to make medical treatment decisions.

LAWS 5217. Health Care Professions. 2 Units.
Class is intended for (and limited to) students interested in health law who do not have training or experience in a health care profession. Instructors and guest speakers will cover the history of medicine, the scientific method, clinical research, medical ethics, techniques for researching medical and scientific questions, medical training, and medical professionalism. Letter grades will be given based on regular attendance and participation, an oral presentation, and a paper. Prereq or Coreq: LAWS 227. The course is not open to bioethics Master’s degree candidates. (BETH)

LAWS 5218. Health Care Regulation. 3 Units.
Course covers the administrative regulation of health law. The course will discuss the intersection of health law and administrative law by first reviewing administrative law concepts, such as delegation, and then discuss how these concepts are applied in health law.

LAWS 5219. Health Care Transactions. 2 Units.
This course will examine a variety of typical transactions among health care providers and payors. Students will have the opportunity to understand the financial motivation behind these transactions and to identify the unique health care law issues presented by them. Students will learn to develop alternative methods for structuring transactions to minimize or avoid such issues. The types of transactions to be examined include: physician recruitment, physician practice acquisitions, physician practice management companies, joint ventures between hospitals and physicians, mergers and acquisitions of health care providers, and formation of integrated delivery networks. Enrollment is limited to 25. Recommended preparation: LAWS 295.

LAWS 5221. Hospital and Physician Organization Law. 2 Units.
This course presents an overview of corporate health care law issues including: public and private reimbursement systems, fraud and abuse, physician self-referrals, corporate practice of medicine/fee splitting, certificate of need, tax-exempt status of health care providers, and antitrust and insurance regulation of health care providers. The course will examine the origins and public behind current corporate health care law and regulations and the issues they present for health care providers. Enrollment is limited to 25. Prereq or Coreq: LAWS 227.

LAWS 5222. Master Classes in Health Law, Policy and Ethics. 2 Units.
Leading experts in the fields of health law, health policy, and bioethics will each teach one master class on a topic of their choice under the coordination of the instructor. The course will be open to graduate and professional students. The grade will be based on class participation and an examination.
LAWS 5225. Research Ethics and Regulation. 2 Units.
This course is designed to introduce students to the ethical, policy, and legal issues raised by research involving human subjects. It is intended for law students, post-doctoral trainees in health-related disciplines and other students in relevant fields. Topics include (among others): regulation and monitoring of research; research in third-world nations; research with special populations; stem cell and genetic research; research to combat bioterrorism; scientific misconduct; conflicts of interest; commercialization and intellectual property; and the use of deception and placebos. Course will meet once per week for 2 hours throughout the semester. Grades will be given based on class participation and a series of group projects and individual short writing assignments. Offered as BETH 503, CRSP 603 and LAWS 603.

LAWS 5311. Computer Law and Policy. 2 Units.
This course will address the ever-evolving issues that relate to intellectual property protection for computer software, with a particular emphasis on patent, copyright, and trade secret protection. The relationship of the Internet to such protection will also be explored. Throughout the semester, the course will consider the nuances of this dynamic area of the law and will also provide pragmatic approaches to common problems faced by intellectual property practitioners. Prereq: LAWS 229 or LAWS 235.

This course will be the first Contemporary Issues in Law and Technology template course. The course will be co-taught by Craig Nard and Declan McCullagh (LTA Fellow in Law and Technology and Washington Bureau Chief for Wired News). The course will cover (1) overview of principles of First Amendment analysis and its relationship to the Internet and the Communications Decency Act; (2) filtering and private restrictions on Internet Speech; (3) threats and the compilation of personal information; and (4) tensions between the First Amendment and the Copyright clause in digital content.

LAWS 5313. Copyright Litigation. 2 Units.
This course will begin with an overview of a copyright litigation case and then proceed to discuss issues relating to pre-litigation strategy, infringement, and defenses to infringement. Thereafter, the course will explore the drafting of a complaint and the answer thereto, including counterclaims; drafting discovery documents; preparing witnesses; and taking and defending a deposition, which will take place in the context of a mock trial, many of the issues that pertain to a trial, including the roles of judge and jury, jury instructions, direct and cross-examination, jury selection, and post-trial motions. Prereq: LAWS 235.

LAWS 5314. Cyberlaw. 3 Units.
This subject deals with how the law regulates and otherwise applies to activities taking place in ‘cyberspace.’ It considers how existing legal principles are being modified and extended in the digital information age to meet the needs of society, particularly in relation to electronic commerce. As the nature of dealings in cyberspace develops and new legal problems emerge over time, the focus of the subject may change to reflect current legal issues. However, topics for discussion will be drawn from the following: the nature of the internet, legal regulation of cyberspace vs. self-regulation, the relevance of international law/ international regulation, e-commerce contracting, ‘property’ in cyberspace with particular reference to intellectual property, trademarks and domain names, defamation on the Internet, online crime (e.g., fraud, pornography, etc.), information privacy and security, online dispute resolution and associated conflicts of law issues.

LAWS 5315. Entertainment Law. 1 - 3 Unit.
This course is designed to introduce students to the basic legal issues relevant to the film and television industries, as well as live performances, theatre, and various other aspects of the entertainment industry.

LAWS 5316. I.T. Principles for Lawyers. 1 Unit.
This course is designed to allow students to achieve an overview of information technology terms and concepts.

LAWS 5317. The Intersection of Unfair Competition and Intellectual Property. 2 Units.
Traces the role of tort, contract, and property in filling the gaps between copyright, trademark, and patent. The trace implicates federal and state systems and a cluster of rights such as trade secrets, ideas, industrial design, common law copyright, and moral rights.

LAWS 5318. Intellectual Property Transactions. 3 Units.
Students will explore how companies develop business and legal strategies to protect their intellectual property assets through agreements with strategic business partners, content providers, vendors, and licensees. As part of the course, students will select a company name and protect it, draft and negotiate agreements, and hold a mock negotiation at the end of the semester. One prior course in patent, trademark, or copyright is required. Grade is based on a final examination.

LAWS 5319. International Intellectual Property. 3 Units.

LAWS 5320. Internet Business and Law. 1 Unit.
This course provides Law students with an understanding of legal issues that need to be addressed in the development of digital business at the level of web site management and transactions. The course also highlights the critical role of technology as a source of new legal requirements, and also as a means to address and enforce legal requirements that are critical in conducting on-line business (e.g., demand for authenticity, or non-repudiation).

LAWS 5321. International Issues in Intellectual Property Seminar. 3 Units.
This seminar will examine selected issues in comparative and international law affecting patents, copyrights, trademarks, and trade secrets. By looking at comparative systems, we will understand the differing philosophies underlying intellectual property in different legal cultures. By examining the movements to harmonize and unify national systems (looking at the process of harmonization, extraterritorial enforcement of rights, conflicts of law, and global protection), we will see how the different cultures are being merged. May satisfy the writing requirement. Recommended preparation: LAWS 370.
LAWS 5322. Intellectual Property & Dealmaking. 2 Units.
This course will provide you the opportunity to engage as an Intellectual Property (IP) specialist in a simulated M&A (merger and acquisition) corporate transaction. You will assume the role of an associate attorney in a law firm and handle certain aspects of the sale of assets of a business, including engaging in due diligence, reviewing and drafting documents, conducting research, analyzing negotiation techniques, learning about the specialist’s role in the transaction, and preparing for the closing of the transaction. Particular emphasis will be upon IP licensing (e.g., patent licenses, trademark licenses, etc.), such as reviewing and drafting IP licensing documents. You will learn skills that an IP lawyer should have by working on and resolving IP issues from actual projects. Accordingly, it is vital to your success in this course that you complete all assignments on time and actively participate in each class. Although this course is set within the context of a company acquisition, most of the IP issues you will be analyzing are generally applicable to many other projects that an IP associate will confront. Prereq: LAWS 261 and (LAWS 229 or LAWS 370).

LAWS 5323. Intellectual Property from a Business and Strategic Planning Perspective. 1 Unit.
Intellectual property rights are legally created business assets used by companies to provide a competitive advantage in the marketplace. Companies use intellectual property differently depending on many factors, such as industry, business strategy, culture and maturity. Intellectual property attorneys are considered valuable members of business teams, contributing to business strategy, business planning and other executive level business decisions. Indeed, IP is a boardroom issue. This class will study the ways intellectual property is used by different companies and how the intellectual property laws impact not only the intellectual property assets, but also the business strategy and business planning. In addition to learning how intellectual property is being used by major corporations, universities, and entrepreneurs/start-ups, the students will pick one company and study how that company manages its intellectual property. Prereq: LAWS 229 and LAWS 261.

LAWS 5324. Law of the Music Industry. 2 Units.
This course will cover the major components of the music industry, including recording agreements (major label and independent labels), record producer deals, songwriting and music publishing concepts, group issues, personal appearances, and music in cyberspace. There will be an extensive discussion of fundamental copyright, trademark, and cyberlaw concepts, as well as advanced copyright concepts specifically related to the recording and publishing industry. Special attention will be paid to the topic of musical copyright infringement litigation. Course materials will include selected cases, forms of the above agreements, and selected handouts. Guest speakers will include a variety of industry professionals, including personal managers, recording artists, record company executives, and concert promoters. Students will be invited to participate in a variety of special events, including attending a music industry seminar at The Rock and Roll Hall of Fame sponsored by Cleveland’s volunteer Lawyers for the Arts and attending the annual Mountain Dew High School Rock-Off held at the Odeon. Prereq: LAWS 235 or LAWS 370.

LAWS 5325. Law of the Visual Arts. 2 - 3 Units.
This seminar is concerned with the relationship between the art world and the law. The art world is comprised of numerous players, such as artists, dealers, museums, auction houses, art critics, forgers, thieves, looters, and the American and various foreign governments. This course focuses on the law’s relationship with each of these entities and how these entities relate to one another in both a cultural and legal sense. In particular, this course will explore at least three of the following issues: theft and plunder of art (especially from 1933-45); the illicit international art trade; artists’ rights such as First Amendment rights, copyright, moral rights, and the resale right; and the role and practice of museums in the art world, including provenance studies, and the museum’s relationship with the artist and community. The first class (and some subsequent classes) will be held at the Cleveland Museum of Art. After a lecture by a museum curator, the students will be given a tour of the museum’s collection that will focus on works of art that have particular relevance to the intersection of law and art. Prereq: LAWS 235.

LAWS 5326. Patent Litigation. 1 Unit.
This course will simulate a patent infringement case. Students will be asked to represent a client, and in that capacity will identify issues, provide legal advice, and prepare papers and pleadings as necessary. In particular, students will be asked to conduct a limited number of the following simulations: draft a complaint and an answer to the complaint, including counterclaims; draft discovery documents; perform a mock Markman hearing; prepare witnesses, including expert witnesses; take and defend a deposition; or prepare pre-trial.

LAWS 5327. Patent Prosecution. 3 Units.
This course will expose students to the issues and concepts of drafting a patent application. Topics include defining an invention, drafting a patent application, responding to Office Actions issued by the USPTO. Patent law is a prerequisite. Grade is based on three short papers and a multiple choice final.

LAWS 5328. Strategic Management of Intellectual Property. 2 Units.
The course will focus on real-world issues encountered by intellectual property attorneys (in-house and outside counsel). Issues and relevant case law relating to due diligence, litigation strategy, procurement, licensing, enforcement, and defense will be discussed. Specific areas will include: (1) How to identify and classify IP as well as develop a corporate framework for fostering creation of IP, extracting it, documenting it, securing internal rights (e.g., forbidding employees to search others patents to mitigate willful infringement liability), or searching in only non-patent literature. There are numerous issues that will be presented and discussed during the course.

LAWS 5330. Business of Baseball. 3 Units.
This course will bring the "business of baseball" to the students, and present them with an interactive "hypothetical" problem-solving dialogue with the instructor, which would deal with the most important issues facing major and minor league baseball today. Prereq: LAWS 261 and LAWS 391.
LAWS 5331. Representing the Athlete. 3 Units.
The emphasis of this course will be placed various aspects involved in
the providing legal services to professional athletes, including negotiation
tactics and letter and contract drafting. The class will include several
negotiation and drafting exercises as well as a simulated representative
relationship between the student and the entertainer/athlete. In the
context of a mock litigation/arbitration, students will also be required to
draft legal briefs in support of the contractual positions taken during the
contract drafting exercises.

LAWS 5332. Sports Law. 3 Units.
Sports and Entertainment Law is the study of legal issues and problems
relating to the music, television, and sports industries. This course
focuses on the applicability of various legal doctrines to these industries,
such as intellectual property law, labor law, and contract law. Also,
emphasis will be placed on negotiation tactics and letter and contract
drafting by conducting several negotiation and drafting exercises as well
as a simulated representative relationship between the student and the
entertainer/athlete. In the context of a mock litigation/arbitration, students
will also be required to draft legal briefs in support of the contractual
positions taken during the contract drafting exercises. Prereq: LAWS 211
and LAWS 261.

LAWS 5333. Representing the Professional Athlete. 2 - 3 Units.
This course will begin with an overview of the sports marketing industry
and then proceed to discuss one of the more important legal doctrines
relating to that industry, involving intellectual property, labor law, and
contract law. In that context, the course will explore the skills necessary
to conduct a series of sports-related contract negotiations. Students will
participate in group-based contract drafting exercises, including drafting
product endorsements and license agreements, with an emphasis on client
representations. Next, in the context of mock litigation, students
will assume a contract breach, and will be required to draft deposition
questions and legal briefs in support of their respective contractual
positions.

LAWS 5334. Representing the Musical Artist. 2 - 3 Units.
This course focuses on practical training in counseling the musical artist
with a particular focus on lawyering skills such as contract drafting,
strategic thinking and negotiation. We follow the artist from the early days
as a "baby band" to when the artist becomes "classic" or "heritage." You
will observe the artist in the recording studio, the interactions among
the band members, the creation of songs/sound recordings. You will
introduced to the cast of characters: the producer; the first manager;
the label's A&R person; the recording engineer, and others. You will-as
music lawyers commonly do- observe the artist creating in the studio
and on a live stage and get a chance to speak with prominent managers,
concert promoters, club owners, and artists.

LAWS 5335. Negotiation Strategies in Sports Management. 2 - 3
Units.
This course covers drafting of sophisticated contractual documents in
the Sports Law world. Document that will be negotiated and drafted
include a lease agreement between a municipality that is constructing a
new stadium/arena and the owner/operator of a team that will play in the
new venue. Also covered will be naming rights, presenting sponsorship
agreements for beverage/food, automobile/rental cars, and financial/
medical services. We will also examine coordination of all sponsorships in
the team's print-multimedia advertising, as well as with the broadcasts of
the team's games.

LAWS 5336. Intellectual Property Theory Seminar. 3 Units.
This course is designed to provide students with an overview of several areas of law traditionally associated with intellectual property
or IP, including copyright law, which pertains to the protection of
literary, musical, and artistic creations and has issues replete with First
Amendment implications; patent law and trade secret law, which focus
on the protection of technological works ranging from chemical formulae,
to software, to biotechnology; and trademark law, which relates to the
goodwill associated with corporate identity and product recognition.
We will also devote time to the study of the philosophy and economics
of intellectual property keeping in mind, throughout the course, the
need to strike an optimal balance between incentives to create and
commercialize intellectual creations on the one hand and public access to
these creations on the other hand. Prereq: LAWS 229 or LAWS 235.

LAWS 5341. Commercialization and Intellectual Property
Management. 3 Units.
This interdisciplinary course covers a variety of topics, including principles
of intellectual property and intellectual property management, business
strategies and modeling relevant to the creation of start-up companies
and exploitation of IP rights as they relate to biomedical-related
inventions. The goal of this two-semester course is to address issues
relating to the commercialization of biomedical-related inventions by
exposing law students, MBA students, and Ph.D. candidates (in genetics
and proteomics) to the challenges and opportunities encountered when
attempting to develop biomedical intellectual property from the point
of early discovery to the clinic and market. Specifically, this course
seeks to provide students with the ability to value a given technological
advance or invention holistically, focusing on issues that extend beyond
scientific efficacy and include patient and practitioner value propositions,
legal and intellectual property protection, business modeling, potential
market impacts, market competition, and ethical, social, and healthcare
practitioner acceptance. The course will meet over two consecutive
semesters--fall and spring--and is six credit hours (three credits each
semester). During these two semesters, law students, MBA students,
and Ph.D. candidates in genomics and proteomics will work in teams of
two (two laws students, two MBA students and one Ph.D. candidate),
focusing on issues of commercialization and IP management of
biomedical-related inventions. The instructors will be drawn from the law
school, business school, and technology-transfer office. To be eligible for
this course, law students must also have a B.S or equivalent in the life
sciences, such as biology, biochemistry, genomics, molecular biology,
etc. Offered as LAWS 367, MGMT 467, GENE 367 and GENE 467.
LAWS 5342. Commercialization and Intellectual Property Management. 3 Units.
This interdisciplinary course covers a variety of topics, including principles of intellectual property and intellectual property management, business strategies and modeling relevant to the creation of start-up companies and exploitation of IP rights as they relate to biomedical-related inventions. The goal of this two-semester course is to address issues relating to the commercialization of biomedical-related inventions by exposing law students, MBA students, and Ph.D. candidates (in genetics and proteomics) to the challenges and opportunities encountered when attempting to develop biomedical intellectual property from the point of early discovery to the clinic and market. Specifically, this course seeks to provide students with the ability to value a given technological advance or invention holistically, focusing on issues that extend beyond scientific efficacy and include patient and practitioner value propositions, legal and intellectual property protection, business modeling, potential market impacts, market competition, and ethical, social, and healthcare practitioner acceptance. The course will meet over two consecutive semesters—fall and spring—and is six credit hours (three credits each semester). During these two semesters, law students, MBA students, and Ph.D. candidates in genomics and proteomics will work in teams of five (two law students, two MBA students, and one Ph.D. candidate), focusing on issues of commercialization and IP management of biomedical-related inventions. The instructors will be drawn from the law school, business school, medical school, and technology-transfer office. To be eligible for this course, law students must also have a B.S. or equivalent in the life sciences, such as biology, biochemistry, genomics, molecular biology etc. Offered as MGMT 467, LAWS 367, GENE 367 and GENE 467. Prereq: LAWS 229 and LAWS 261.

LAWS 5361. Contexts of Invention Seminar. 3 Units.
This seminar will explore the social and cultural construction of invention, the diverse ways in which invention has been conceptualized, from an interdisciplinary perspective—from the perspective, that is, not only of the law but of the arts and sciences in the broadest sense, including literature, the fine arts, entertainment, economics, medicine, engineering, education, and business. Emphasis will be on the cultures, rhetorics, and histories of invention across these fields. As such, this seminar represents an extension of the inquiry initiated at a conference held at Case Law School on "Intellectual Property and the Construction of Authorship." This seminar will help prepare students to participate in a conference to be held in the Spring 2006 entitled (Con)texts of Invention.

LAWS 5362. Copyright in the Digital Millennium Seminar. 3 Units.
Copyright in the Digital Millennium is a seminar that explores the challenges to traditional copyright law presented by the advent of digital technology and the Internet. Beginning with the current litigation involving Internet file-sharing, we explore the legal and doctrinal issues raised by efforts to apply copyright and other legal and technological measures to digital works. In order to evaluate the competing arguments in this debate, students will examine the doctrinal, historical, and theoretical underpinnings of copyright law from multiple perspectives.

LAWS 5363. Intellectual Property Theory Seminar. 3 Units.
We will explore and ask several questions from a philosophical and historical perspective, including: Should one's intellectual product be entitled to protection? What are the reasons for granting or denying protection? What form, if any, should this protection take? What are the costs and benefits to society of protecting one's intellectual product?

LAWS 5401. International Tax. 3 Units.
This course examines the U.S. taxation of transactions undertaken by foreign individuals or entities in the U.S. as well as the U.S. taxation of transactions undertaken by U.S. individuals or entities abroad. Major topics that will be covered include determination of the source of income, the taxation of income derived from a U.S. trade or business, the withholding tax regime, taxation of various entities, controlled foreign corporations, the U.S. anti-deferral rules, the U.S. foreign tax credit, taxation of foreign currency transactions and the role of tax treaties. Prereq: LAWS 72 or LAWS 343

LAWS 5402. Estate Planning and Taxation. 3 Units.
This course covers the federal law of estate and gift taxation. Topics include the computation of the estate tax, the taxation of gifts, the assets included in the gross estate, deductions from the gross estate to compute the taxable estate, credits against the tax, the generation-skipping transfer tax, and estate planning ideas and techniques, such as the use of trusts. The income taxation of estates and trusts is also covered. Grade is based on class participation and a major written paper on a topic chosen by the student and approved in advance by the instructor. Prereq: LAWS 211 and LAWS 232.

LAWS 5403. Federal Taxation of Corporations and Shareholders. 3 Units.
This course provides a comprehensive background in the taxation of corporations and shareholders, including the tax treatment of transfers of property to a corporation; distributions from a corporation to its shareholders; redemptions; liquidations; and the simpler forms of corporate reorganizations.

LAWS 5404. Federal Taxation of Partnerships and Partners. 3 Units.
This course will examine the basics of partnership taxation. The topics will include the tax consequences of capital contributions to and distributions from a partnership, the receipt of a partnership interest in exchange for services, the allocation of profits and losses among the partners, the computation of the adjusted basis of a partner’s interest, the sale or liquidation of a partner’s interest, and the liquidation and termination of the partnership. Prereq: LAWS 211.

LAWS 5405. State Taxation. 3 Units.
This course will mainly explore restraints on the states’ power to tax imposed by the Due Process Clause, Equal Protection Clause, Commerce Clause, and Privileges and Immunities Clause. We will also explore issues of tax policy and politics as well as tax minimization strategies and administration. The course will primarily focus on the sales and use and corporate income taxes. We will focus on the states generally and not the laws of any particular state. Prior tax classes are not required.

LAWS 5406. Tax Law of Charitable Giving. 2 Units.
This course will examine the tax law that relates to charitable giving during life and at death, including the rules of deductibility of charitable gifts of cash and other kinds of property, various vehicles for planned giving (charitable remainder trusts, charitable gift annuities, and others), and the impact of other existing and proposed tax provisions on charitable giving.
LAWS 5408. International Tax Policy Seminar. 3 Units.
This survey seminar will examine the broad policies underlying income
taxation in the international arena with a focus on residence- and source-
based justifications for income taxation, the ways that these bases of
taxation come into conflict, and the various methods that countries use
to mitigate the potential damage from competing tax claims. The
seminar will explore these concepts by focusing on a variety of specific
international tax problems including harmful tax competition, negotiation
of bilateral tax treaties, and the effect of e-commerce on source rules.
Other topics that may be covered include offshore financial centers, or
"tax havens," tax treaties and treaty tax shelters. Limit 12. Recommended
preparation: LAWS 211.

LAWS 5409. Tax Policy Seminar. 3 Units.
This advanced seminar for students interested in fundamental issues
of tax policy and tax reform considers the favorable treatment of capital
gains, the advisability of adopting a comprehensive tax base under a
new definition of gross income, the use of tax incentives to achieve
non-tax policy goals, and the basic system of taxing corporations and
shareholders. May satisfy the writing requirement. Recommended
preparation: LAWS 211.

LAWS 5411. Advanced Real Estate Development: Shopping Centers.
2 Units.
The course takes the point of view of the attorney for a real estate
developer with a strong emphasis on shopping center development,
including apartment complex and office building developments, but
provides insights useful to an attorney for the other side: a tenant,
financial institution, or major department store. The approach is practical
as well as academic; the course may be considered a capstone for
students interested in real estate. Topics include negotiations and
documentation; actual documents are used.

LAWS 5412. Advanced Securities Regulation. 3 Units.
This course will expand on the disclosure and enforcement themes
discussed in the Securities Regulation (LAWS 307) survey course to
engage in an in-depth examination of selected real-world securities
topics. The focus will be to deepen the student’s understanding of the
SEC regulatory regime through consideration of current “hot topics” in
securities law (such as executive compensation, 8-K disclosures, loss
contingencies and Management’s Discussion & Analysis), by reviewing
SEC pronouncements and working with actual or hypothetical disclosure
and counseling situations. In addition to analyzing rules, students will
participate in drafting, analyzing and commenting on sample disclosure
documents and client advice memos. The course is designed to further
the student’s understanding of a corporate/securities law practice as well
as deepen the student’s substantive knowledge in securities regulation

LAWS 5413. Antitrust Law. 3 Units.
A study of the implementation of federal trade regulation statutes with
emphasis on the interrelationship of these laws with the competitive
tensions of the contemporary economy.

LAWS 5414. Banking Law & Regulation. 3 Units.
This course will provide an overview of basic U.S. Federal banking
law in the context of evolving international standards. The course will
begin by examining the roles played by banks in the world economy
and why a specialized set of regulation is justified. The course will then
examine each of the major U.S. Federal laws and international standards
that govern banking activities against the background of the various
regulatory theories discussed. Topics will include entry, expansion/merger,
capital, reserves, investments, lending, interest, insolvency, non-
banking financial activities, money laundering, and international activities.
Close attention will be given to the role of supervision in both domestic
and international contexts. Extensive use will be made of international
and comparative materials

LAWS 5415. Bankruptcy. 3 Units.
An introduction to bankruptcy law, with emphasis on the current Federal
Bankruptcy Code. The course includes Chapter 7 (liquidation bankruptcy
proceedings), Chapter 11 (business reorganizations), and Chapter 13
(simplified reorganizations for individuals and sole proprietorships). Also
considered are various state law debtor-creditor remedies and the impact
of bankruptcy on such remedies. Prior enrollment in the UCC and debtor-
creditor courses may be helpful but is not mandatory.

LAWS 5416. Business Planning. 3 Units.
Major events in the creation and development of a business are
examined in light of partnership, corporate, and tax law problems.
Students are presented with a series of hypothetical client-suggested
transactions. Students seek the most appropriate means of attaining
the business ends desired by the principals. From time to time, brief
written memoranda covering issues raised by the problem scenarios may
be required. Emphasis is placed on the interaction among partnership,
corporate, tax, and securities concepts and doctrine. The significant
business events that may be covered in the course include formation of
a partnership; incorporation of a going concern; corporate distributions,
recapitalizations, and repurchases of shares; sale of the corporate
business; and corporate combination. Prereq: LAWS 211 and LAWS 261.

for Lawyers. 1 Unit.
This course is designed as an introductory course for second- and third-
year law students who want to understand the way in which businesses
are managed and financed, the various roles that capital markets play
in their development, and the methods for measuring business success.
Intensive case studies will be used as a framework for looking at real
world situations. The course will integrate guest lectures from visiting
business leaders. CFOs will explain how they measure the success
of their business and what financial information is required to do their
job. Finally, a part of each class will evaluate real time business issues,
applying the lessons learned from the case studies and modeling the
expected outcomes. James Bildner, CWRU alumnus and CEO of Tier
Technologies, will teach the course. Students will write a paper based on
a case study. This course will count toward the nine-credit limit on non-
law school courses. Prereq: LAWS 261.
LAWS 5418. Corporate Real Estate Transactions. 2 Units.
Real estate is typically the largest single category of capital investment and the second largest category of repeat expense (after total personnel costs) for most businesses. Major industrial and service sector companies are increasingly focused on the opportunities and challenges inherent in the real estate portfolios that support their core operations. This course will highlight the strategic case for effective corporate real estate management and the role of inside and outside legal counsel in the commercial real estate context. The course will consider advanced transactional situations, including purchase and sale of commercial properties, leasing of business properties, and complex industrial facilities. The course’s emphasis on case studies and commercial transaction scenarios are also designed to act as a capstone course that complements and draws upon the students’ prior coursework in contracts, real estate and commercial transactions, ethics and government regulation. Three parallel case studies will run throughout the course, illustrating the application of each topic to different types of client organizations: a Fortune 500 industrial company, a small family-owned retail business, and a medium-sized not-for-profit organization with several sites. Each client organization will have mock client representatives who will have different business and style preferences, which the class will need to accommodate and will come to anticipate in fashioning and recommending solutions for each client. The final exam will build from these same client scenarios, offering the class participants an opportunity to apply their learning to make recommendations to each client with respect to specific situations and goals.

LAWS 5419. Debtor-Creditor Law. 3 Units.
The creditor’s power to enforce its judgments through such judicial processes as attachment, execution, levy, garnishment, and creditors’ bills. The debtor’s power to resist creditors’ claims through statutory exemptions or federal bankruptcy discharge, or because the creditor has acted inappropriately or in bad faith. Also studied is the creditor’s power to set aside and avoid fraudulent transfers made by the debtor, a power which has generated much litigation in recent years. We also study the special rights of the federal government to enforce its claims, through the Federal Debt Collection Act of 1990, the Federal Priority Statute, and the Federal Tax Lien Statute. Finally, we survey collective creditors’ remedies under state law, including assignments for the benefit of creditors, creditors’ arrangements, and receiverships.

LAWS 5420. ERISA. 4 Units.
This class will cover employee benefits law. (ERISA): defined benefit plans, including in-depth consideration of defined benefit plan documents; VEBA’s, their use and regulation; group life, Accidental Death & Dismemberment, and Long Term Disability plans and related insurance documents; insured and non-insured medical benefit plans; reporting and disclosure requirements of ERISA, including summary plan descriptions, summary of material modifications, Form 5500, and "top hat" elections; and requests for favorable determinations of qualified plans, including Form 5300 and Notices to Interested Parties.

LAWS 5421. Financial Principles for Lawyers. 3 Units.
This course provides an introduction to the use of financial economics that are frequently relevant in many areas of law. Topics to be covered include the time value of money, uncertainty, claim structure (including the characteristics of debt, equity, and hybrid securities, and the benefits and detriments of debt and equity financing), behavior of securities markets, and analysis of financial statements. Use of these concepts in specific areas of legal practice will be discussed.

LAWS 5422. Financial Markets: Law, Theory, and Practice. 2 Units.
Explores the interactions of law, principles of finance, and the theoretical underpinnings of financial markets. It introduces students to the roots of evolving financial market liabilities affecting the interests and conduct of people at all levels in those markets by examining (a) the structure and purpose of financial markets, (b) the financial and capital market theories which today shape the contours of the law, (c) intermediation in financial markets, and (d) the challenges of global market regulation.

LAWS 5423. Financial Integrity in Emerging Markets Lab. 3 Units.
In this course, which is offered alternately as either a lab or a seminar, students study and research key aspects of the international financial system integrity rules, with a focus on the anti-money laundering and terrorism financing standards of the Financial Action Task Force (FATF) and the Basel Core Principles on Banking Supervision of the Basel Committee (as well as similar standards promulgated for other financial institutions). When offered as a lab, the course engages students in projects for a variety of organizations involved in improving the integrity of financial institutions, including the FATF (as well as FATF-style regional bodies), the International Monetary Fund, the World Bank, the United Nations Office on Drugs and Crime, and locally based governmental and non-governmental organizations. Students satisfactorily completing this course will be eligible to apply for a fully paid summer internship with a local bank that will involve work in the bank’s legal, anti-money laundering and financial intelligence units. Recommended preparation: LAWS 211 and LAWS 307.

LAWS 5424. Insurance. 3 Units.
A comprehensive introduction to the regulation of the insurance industry and to the legal issues arising from relations between the parties to insurance contracts. The course examines statutory regulation of the industry by state and federal agencies and analyzes cases involving aggressive regulation by the judiciary as well. Insurance decisions on the cutting edge of developments in contract, tort, and agency law are studied. Students are required to study the policy forms most frequently encountered in practice: the automobile policy, the homeowner’s policy, and the life insurance policy. The course also provides exposure to problems relating to other areas of insurance including commercial general liability coverage, fire insurance, professional liability (malpractice) coverage, and health insurance.

LAWS 5425. International Business Organizations. 3 Units.
This course offers a combined classroom and field experience designed to help students understand why U.S. multinational corporations engage in transactions through offshore financial centers or "tax havens." To this end, the course will provide an introduction to and address the tax and other policy implications of various international business structures and strategies including captive insurance arrangements, asset securitizations, hedge funds and offshore banking. The course will consist of four Friday afternoon sessions in the early part of the spring semester, followed by a week-long visit to the Cayman Islands during spring break, when students will meet and hear from academics, private-sector professionals and government officials based in the Cayman.
LAWS 5426. International Real Estate Transactions. 2 Units.
The course will explore selected topics involved in international real estate transactions, from the perspective of an American counsel representing an American entity doing business abroad. Topics may include structuring, transactional goals, due diligence, letters of intent and documentation, deal implementation, title protection, and others. The course will use traditional learning techniques as well as case studies and simulations, with a major focus on letters of intent/documentation. Students will be graded based on class participation and presentations, written assignments, and a final paper/take home exam. Recommended preparation: LAWS 385 (may be taken concurrently).

LAWS 5427. Mergers and Acquisitions. 3 Units.
Topics include the corporate and securities law governing various forms of mergers and acquisitions; business motivations for mergers; concerns of acquiring and acquired companies in friendly mergers; bidders’ techniques and targets’ defenses in hostile tender offers and proxy contests; valuation of businesses and investments, portfolio theory, and capital markets; concerns of companies and investors in negotiating corporate financing. Prereq: LAWS 261.

LAWS 5428. Products Liability. 2 Units.
Explores in depth the liability of manufacturers and sellers for physical injury to persons or property caused by defective products. The relevant law includes UCC warranty provisions, Restatement of Tort (Second) section 402A and other tort law, state "tort reform" statutes, and federal and state statutes regulating product safety, such as the FDA and the Consumer Product Safety Act. The course will also examine proposals to "reform" the law of products liability.

LAWS 5429. Real Estate Transactions and Finance. 2 - 3 Units.
Covers basic real estate transactions as well as issues involved in complex finance and development. Topics include: brokers, land contracts of sale, deeds and title covenants, the recording system, title insurance, mortgages, shopping center development, cooperatives and condominiums, ground lease financing, construction lending, distressed properties, selected federal income tax issues, and the real estate attorney’s professional responsibilities. Whenever possible, issues will be examined in the context of model transactions.

LAWS 5431. Securities Regulation. 3 Units.
This course explores the policies and techniques of state and federal investor protection, with emphasis on the distribution of securities by issuers and their affiliates. After an analysis of express general anti-fraud remedies, the "security" concept, and the diverse philosophies underlying "value judgment" and "disclosure" approaches to regulation of business fund-raising practices, the course proceeds to a full consideration of the impact of the Federal Securities Act of 1933 on primary and secondary distributions. Concurrent as well as independent effects of state blue sky laws, typified by the Uniform Securities Act, are also treated. To round out the total pattern of investor protection in the distributional setting, the course includes limited excursions into the anti-fraud, periodic reporting, public information availability, and broker-dealer aspects of the Securities Exchange Act of 1934. Prereq: LAWS 261.

LAWS 5432. Selected Topics in Business and Law. 1 Unit.
This course will focus on the key principles of business operations and the financial tools necessary to measure business performance and the roles that lawyers play in advising business clients in today's environment, as well as the intersection of law and business in our economy. Coverage and emphasis will vary from year to year. The course will use case studies, real time filings by corporations, and 2-3 books written about well-known business transactions and is co-taught by a visiting practitioner or business leader and a member of the regular faculty.

LAWS 5433. Commercial Paper. 3 Units.
One of the basic courses in commercial law, dealing with the law of negotiable instruments and bank collections and deposits. These topics are considered primarily under the Uniform Commercial Code and, to some extent, recent federal banking and consumer credit legislation.

LAWS 5434. Secured Transactions. 2 Units.
This course deals with Article 9 of the UCC and other legal and equitable rules relating to the use of personal property as security for debts. Topics covered include creation of a security interest (mortgage), rights and obligations of the debtor (mortgagor) and the secured party (mortgagee), priority of interests in the same property, redemption rights of the debtor, and foreclosure of a security interest by the mortgagee. May not be taken by students who have taken or are taking the 4-credit Sales and Secured Transactions course (LAWS 266). Students who have taken or are planning to take the 3-credit Sales (LAWS 381) course may enroll.

LAWS 5435. Sales and Secured Financing. 4 Units.
A concentrated survey of the law relating to the sale and lease of goods and secured financing. (1) Sales. The primary focus will be on the law relating to the sale of goods in commercial setting, i.e., Article 2 of the Uniform Commercial Code. Some attention will be given to the United Nations Convention on the International Sale of Goods. Considerable attention will also be given to consumer sales issues, e.g., the Uniform Consumer Sales Practices Act and similar legislation. There will be some coverage of leasing of goods under Article 2A of the UCC. (2) Secured Financing. Personal property security interests under Article 9 of the UCC will be examined in considerable depth. Real property mortgages will not be covered. Not open to students who are taking or have taken Sales (LAWS 381) or Property Security (LAWS 377). Students taking this course are precluded from subsequently taking either of those courses.

LAWS 5436. Financial Institutions Regulation. 3 Units.

LAWS 5437. Credit Transactions in Global Economy. 1 Unit.
This course offers a comparative and international view of secured credit transactions. Students will examine recent conventions that attempt to harmonize the law of secured credit, including the UN Convention on the Assignment of Receivables, the Unidroit Convention on International Factoring, the EBRD Model Law on Secured Transactions, the Unidroit Convention on the International Interests in Mobile Equipment and the UNCITRAL Legislative Guide on Secured Transactions. Students will consider the policy and theory underlying the law of secured transactions and will examine how much transactions relate to the broader global economy. Coreq: LAWS 289.
LAWS 5438. Business Organizations Research Seminar. 2 Units.
An opportunity to undertake significant research and writing on the law of business organizations. Each student will be expected to complete a major paper in satisfaction of the upper level writing requirement. A satisfactory paper will meet the writing requirement for the concentration in Business Organizations. Limited to 12. Prereq: LAWS 261.

LAWS 5460. Advanced Nonprofit Organizations Seminar. 3 Units.
In this seminar, students will explore selected topics related to structure, governance, tax exemption, and government oversight of nonprofit organizations. Class readings and discussions for the first several weeks will build on the basic understanding developed in LAWS 234, Law of Nonprofit Organizations. Topics will be selected to consider framework in context, using recent real-life case studies. Students will write a significant paper on a chosen topic and present it to the class. The course grade will be based on the paper, the presentation, and class participation. Paper may satisfy writing requirement. Prereq: LAWS 234.

LAWS 5461. Commercial Information and the Law. 3 Units.
This seminar focuses on defining 'commercial information' from a lawyer's perspective and analyzing ways in which laws in different jurisdictions are developing to protect owners and developers of such information from unauthorized access, interference, disclosure and/or use of their information products and services. The subject will be taught from a comparative/international perspective because of the increasingly global nature of many of the issues for discussion. Class discussion topics will include: the nature of commercial information and its relationship to the legal concept of property; the relationship between commercial information and intellectual property law (specifically copyright, patent, and trade secret law); case studies involving Internet business methods, computer software and electronic databases and the way in which intellectual property laws have developed in relation to these information products; the use of contract law and technological protection measures to protect the value of information stored and accessed electronically; and problems of financing businesses, and generally valuing business assets, where the main valuable assets are commercial information products.

LAWS 5470. Alternative Dispute Resolution. 2 Units.
Students will examine the processes of alternative dispute resolution (ADR) through reading materials, videotapes, guest lectures, and simulation exercises. Particular emphasis will be given to the interaction of lawyers and clients in business negotiations and in litigation. Negotiation, arbitration, mediation, the summary jury trial, and the mini-trial will be examined. The class will also cover impediments to ADR, such as lack of understanding or hostility on the part of clients or lawyers. Offered as LAWS 351 and LHRP 451.

LAWS 5508. American Indian Law. 2 Units.
An introduction to the body of law governing the relationship among Indian tribes and state and federal governments. Major themes include tribal sovereignty; the federal-tribal relationship; criminal, tax, and regulatory jurisdiction on reservations; and the rights of individual Indians. Does not fulfill writing requirement.

LAWS 5704. Adoption Law. 2 Units.
This course surveys adoption law in the United States, including public and private adoptions, international adoptions, and the legal issues involving reproductive law and surrogacy.

LAWS 5705. Advanced Family Law. 2 Units.
This is a simulation course in advanced family law. Students will conduct the preparation, strategy, and execution of a civil family law hearing in selected areas, e.g., domestic violence. The student will study a major statute (e.g., Domestic Violence Statute, Ohio Code Section 3113.31), and simultaneously master the techniques of hearing, including opening statement, direct examination, cross examination, closing argument, and learn the use of evidentiary objections and the handling of documents at trial. The choice of topic may change from year to year. Prereq: LAWS 63 or LAWS 210.

LAWS 5706. Advanced Legal Research. 3 Units.
This course provides in-depth exposure to the sources of law and legal commentary generated in American and other legal systems, and provides hand-on exposure to sophisticated methodologies for effective legal research in all media. Upon completion of the course, students will be equipped to plan and execute effective research on familiar or unfamiliar legal topics.
LAWS 5713. Complex Federal Criminal Investigation and Prosecution. 3 Units.
The course will explore some of the practical, substantive, and ethical issues that arise in complex federal investigations and prosecutions. Students will read cases and articles concerning topics such as the use of electronic surveillance, plea bargaining, and contacts with persons represented by counsel. They will also discuss how the law limits or enhances the powers of federal prosecutors conducting criminal investigations and prosecutions. Grade will be based on class participation and a take-home examination. Prereq: LAWS 131 and LAWS 327.

LAWS 5714. Complex Litigation. 2 Units.
Analysis of key issues typically encountered in complex civil litigation including substantive implications of seemingly procedural choices. Class actions, multidistrict litigation, joinder and consolidation. Exploration of practical and ethical issues encountered in complex civil litigation.

LAWS 5715. Computers and Crime. 1 Unit.
The course will cover both the new kinds of criminal activity made possible by computer technology and the use of computer technology to commit traditional crimes like embezzlement and terrorism. The class will examine Internet gambling and the distribution of child pornography on the Internet to illustrate issues that arise in connection with the use of computer technology in criminal activity. The class will also focus on procedural issues like jurisdiction and venue that become problematic in the context of computer crime. Limited to 20. Prereq: LAWS 131.

LAWS 5716. Conflict of Laws. 2 Units.
Competing approaches to choice of law in cases having multi-state and/or multi-national contacts. The course also covers personal jurisdiction, constitutional and international limitations on choice of law, and enforcement of judgments. Comparative and international perspectives are integrated throughout. Students develop their own choice of law theory in a simulated restatement conference.

LAWS 5717. Constitutional Law II. 3 Units.
This course explores the individual freedoms protected by the First Amendment. Primary attention is devoted to the freedoms of speech, assembly, and association. The course analyzes what is protected, why it is protected, and to what degree it is protected. Topics covered include prior restraint, advocacy of unlawful conduct, the hostile audience, defamation, commercial speech, obscenity, offensive speech, expression on public property, and symbolic speech.

LAWS 5718. Criminal Procedure II. 2 Units.
The adjudicatory stage of the criminal process. Pretrial release, preliminary hearings, grand jury practice, speedy and public trial, discovery, right to jury trial, guilty pleas, right to counsel, and double jeopardy are examined. Prereq: LAWS 327.

LAWS 5719. Cross-cultural Dispute Resolution. 2 Units.
Students will explore a wide range of domestic, foreign, and international dispute resolution processes, with emphasis on dispute resolutions amongst parties of different cultural and legal traditions.

LAWS 5720. Death Penalty Law and Process. 2 Units.
The course offers a review of the death penalty process, theory, and law from trial through execution, including examination of state laws and federal habeas corpus law. The course focuses on the legal principles implicated by the death penalty and also examines the social issues it raises including the social/legal arguments against the death penalty, race and gender issues, and the influence of political and other factors on the process. Recommended preparation: LAWS 327.

LAWS 5721. Death Penalty Lab. 3 Units.
This Lab will involve students in an integrated experience of academic research and public service. Students will work on semester-long research projects arising from actual death penalty cases that will be of assistance to practitioners in death penalty cases or research projects for governmental and non-governmental organizations engaged in support for, opposition to, or reform of the death penalty at a local state, national, or global level. Issues may include: victim’s rights; jury selection (race/gender discrimination); proportionality (disparities in geographic application or application to different fact patterns); economic impact on the system; clemency; and transnational problems with foreign accused; systemic review (e.g., Illinois commission); and other specific recurring issues arising from innocence, assistance of counsel, experts, jury instructions, or misconduct (judge, attorney, jury). The students will have no direct representation responsibilities.

LAWS 5722. Death Penalty Lab II. 2 Units.
This lab will involve students in an integrated experience of academic research and public service. As enrollment is limited to students who have successfully completed Lab I, these students will assume a supervisory role working with Lab I students. Students will work on research projects arising from actual death penalty cases that will be of assistance to practitioners in death penalty cases or research projects for governmental and non-governmental organizations engaged in support for, opposition to, or reform of the death penalty at a local state, national, or global level. Issues may include: jury selection issues; proportionality issues; economic impact of the application of the death penalty; examination of issues surrounding a specific state’s ability to provide a viable clemency; issues of international law; research, investigation, and litigation of case specific issues ranging from actual innocence, ineffective assistance of counsel, ineffective assistance of experts, prosecutorial misconduct, judicial misconduct, juror misconduct, etc. Prereq: LAWS 407.

LAWS 5723. Disability Law. 3 Units.
Disability Law provides a comprehensive overview of the federal laws relating to individuals with disabilities. The course focuses on issues of nondiscrimination and affirmative rights in the areas of employment, government programs and services, places of public accommodation and education. Beyond analyzing the legal framework that shapes disability rights, the course will also discuss issues related to disability rights from a social policy perspective.

LAWS 5724. Discrimination in Employment. 3 Units.
This course will examine the federal laws concerning discrimination in the workplace. These include Title VII of the 1964 Civil Rights Act, the Equal Pay Act, the Age Discrimination in Employment Act, the Americans with Disabilities Act, the Genetic Information Nondiscrimination Act. We will study the regulation of discrimination based on race, sex, religion, national origin, age, disability, and genetic status, including policy and ethical question and strategic considerations in prosecuting and defending employment-based civil rights actions.
This course surveys the legal and social policy challenges related to public education settings. Students will study relevant constitutional issues, legislative mandates, school vouchers to supplement tuitions in private schools, charter schools, and more recent attempts under state constitutions to provide a quality education for all children. Beyond analyzing the legal frameworks that shape public education, the course will also cover the difficulties confronting public education from a sociological perspective.

This course examines employer-employee relations in non-union settings. Topics include wrongful discharge, occupational safety and health regulation, minimum wage, and workplace privacy issues. The course emphasizes written work, including advanced legal research training. Minimal overlap with Labor Law (LAWS 359) and Discrimination in Employment (LAWS 328).

The course is designed to provide an overview of both the breadth and depth of environmental regulation in the United States and to consider ways our environmental regulatory system might be improved. Although all of the major environmental laws will be surveyed, several statutes will be examined in greater detail. Students will be expected to navigate select provisions of statutes and regulations through in-class problem sets. Guest speakers will also be invited to speak on topics of current interest.

This seminar builds on the foundation established during the first-year curriculum and focuses on the law and technology of payment systems. Such topics will include the contractual relationship amongst and between the various organizations transacting to enable a b2c payment; the various elements of such agreements; the various impacts of a payment system (criminal, civil, and administrative); the implications for legal structure and policy; and the ethical considerations of a lawyer advising clients within this domain. Grade is based on a paper, a presentation, and class attendance and participation.

This course addresses the use of expert witnesses in civil trials, focusing on evidentiary issues. We will first examine several theoretical and conceptual issues concerning the role of experts as well as the pertinent standards of admissibility. We will give careful attention to what it means to make an argument from expert opinion. Then we will examine the use of expertise in a variety of contexts, including the proof of identity, proof of causation, proof of breach of duty, and proof of damages. Prereq: LAWS 104 and LAWS 207 or LAWS 212.

This survey course covers law relating to the creation, functioning, and dissolution of the family as a legal unit. Topics include legitimacy, adoption, procreative rights, cohabitation, marriage, family obligations, division of marital property, divorce and annulment, and child custody. Particular attention is given to the social forces that affect the development of rules and policies.

This course explores the relationships between the federal courts, Congress, and state courts and governments. Topics include congressional control of federal jurisdiction, justiciability, federal court abstention, suits against state and federal governments and officials, habeas corpus, and federal injunctions on state proceedings.

Government procurement law continues to interest policymakers, corporations, and legal employers. The federal government’s annual acquisition of services, supplies, and construction accounts for more than $500 billion. This is a survey course of the many issues involved in federal contract and procurement law. Subjects covered include the bidding process and bid protests, acquisition planning, negotiation procedures, contract pricing, collateral policies, contract award controversies, and lawsuits against the government and government employees.

The general principles of immigration law and procedure, including federal authority to regulate immigration, removal of aliens (deportation and exclusion), administrative and judicial review, fleeing persecution (refugees, asylees, and others), immigrant and nonimmigrant visas, and consular practice. The course will emphasize practical application of current immigration law.

The course is dedicated to the study of visas for visitors and aliens of extraordinary ability in the sciences, arts, or entertainment. Course materials will be drawn from Legomsky’s Immigration and Refugee Law and Policy, the Immigration and Nationality Act, and Title 8 (CFR). Students will be required to write a paper or prepare a visa petition. The course will likely be offered every other year. Prereq: LAWS 277.

This course examines selected issues and current problems in international environmental law, with a particular focus on transboundary environmental problems, global “commons,” and the development, implementation and enforcement of international environmental agreements. Requirements for the class will include several short writing assignments and weekly simulations and role-play exercises. There will be no final exam. Limited enrollment of 20 students.

The role of the juvenile court in society: Its jurisdiction, procedures, and dispositional alternatives. Students study both the quasi-criminal aspects of the juvenile court (jurisdiction over juvenile delinquents and status offenders) and the civil-protective aspects of the court (termination of parental rights and the handling of neglected, dependent, and abused children). In addition, the rights afforded juveniles are compared with the rights afforded adults in comparable circumstances. Many related juvenile justice issues, such as the right of a minor female to have an abortion without parental notice and the constitutionality of capital punishment for juvenile offenders, are also examined.
LAWS 5737. Labor Law. 3 Units.
The basic course in the area of union-management relations, designed both for students desiring to pursue the field further and for those whose interest lies in an introduction to legal principles in this area. The course begins with a brief historical study of the evolution of the labor movement and prestatutory law. It then considers federal regulation under the National Labor Relations Act of union organizational efforts, management-union interaction, and the representational process, then proceeds to the collective bargaining process. The collective bargaining process is examined in some depth with special emphasis on the scope and substance of the duty to bargain in good faith, the enforcement of collective bargaining agreements in courts and by arbitrators, and the legal regulation of industrial warfare, the strike and lockout.

LAWS 5738. Land Use Control. 3 Units.
This course analyzes the public control of land use, primarily at the local and state levels. Both legal and policy perspectives are considered. Attention is given to constitutional limitations such as the takings doctrine, equal protection, and due process. Topics considered include zoning, subdivision controls, exclusionary regulations, and historic preservation.

LAWS 5739. Law of Archeological Relics. 2 Units.
This course addresses the private and public law relating to the ownership, sale, use, and repatriation of archeological artifacts other than human remains. The readings include excerpts from articles and books regarding the international trade (legal and illegal) in such artifacts. Significant attention is given to international law, such as the UNESCO Convention on Cultural Property.

LAWS 5740. Leadership and Communication Skills for Lawyers. 2 Units.
This 13-week interactive course will provide students with the tools and techniques needed to be more capable speakers and communicators. While the course will include some training for persuasive public speaking in a courtroom, most of the focus will be on developing effective communication skills so that students will have the requisite confidence, focus, and control to speak in a variety of settings. A section of the class will also concentrate on handling the media including how to control a message and advice for clients who may be in the public spotlight. The program will be interactive so that students have numerous opportunities to participate and speak. Role-playing exercises will be utilized as well as video-taped playback. Grading is based on participation and improvement and there will not be a final exam.

LAWS 5741. Legal History of the Corporation. 3 Units.
This course will examine the history of the modern corporate form, beginning with the revolutionary changes of the late nineteenth and early twentieth centuries. The goal is to explore the contingent nature of the corporation through a focus on its history as well as to examine the social, ecological and political consequences of what has become the most powerful economic institution in world history.

LAWS 5742. Legal Theory, Selected Topics. 2 Units.
This two-semester sequence examines selected issues in legal theory. The subject matter varies from year to year and will be announced at the time of registration for the first of the two semesters. The first semester (Selected Topics in Legal Theory I), will entail a close reading of one or more selected scholarly works that have advanced our understanding of the deep structures of the law. Students will be required to write one or more short, non-research papers during the term that engage the readings, and a separate grade will be assigned for the term based on these papers and class participation. At the end of the term, students wishing to continue during the second semester of the sequence and complete their writing requirement for graduation will select their topics; the topic must be the examination and critique of some argument or thesis presented in or arising from the readings for the fall semester. Prereq or coreq: LAWS 207 or LAWS 212.

LAWS 5743. Legislation. 2 - 3 Units.
This course is a study of the legislative process and product. The class will examine theories of the legislative function; campaign and election regulation; the processes through which the legislature acts; and the drafting and interpreting of statutes.

LAWS 5744. Mediation Representation: Theory, Principle and Practice. 2 Units.
An advanced course exploring the fundamentals of conflict, mediation theory, doctrine and practice, its historical evolution and increasing use as a centerpiece of modern legal dispute resolution. The course will cover the theory, doctrine, history and practice of mediation; the mediation process; the mediator’s, client’s, and advocate’s role in mediation; the underlying principles of bargaining, risk and value and how to adapt these negotiation skills for a mediation setting. Students will also learn how to use mediation as a problem-solver for the client. Format is lecture, discussion and student presentation and simulation. The course includes the writing of mediation memoranda, as well as mediation role playing, with critique from the teachers and invited guest mediation practitioners.

LAWS 5745. National Security Law. 3 Units.
Provides a study of the separation of powers in national security matters, presidential war powers, congressional and presidential emergency powers, the domestic effect of international law, the use of military force in international relations, investigating national security threats, the Freedom of Information and Privacy Acts, access to national security information in the federal courts, and restraints on disclosing and publishing national security information. The course builds upon a strong foundation of constitutional law and addresses the fundamental tension that exists in our foreign and domestic affairs by virtue of the constitutional separation of powers between the respective branches of government. Several classroom hours will be spent dealing with constitutional war powers and how the executive and legislative branches have tried to define their respective measures of expressed and implied power with regard to the Vietnam War, the War Powers Resolution of 1973, and more recent US incursions such as the first Persian Gulf War and the most recent invasion of Iraq.
LAWS 5746. Ohio Constitutional History. 3 Units.
This course will focus on the constitutional history of Ohio and the economic, social, and political forces that influenced the development of the Ohio Constitution. The approach will be both chronological and thematic. The course will place Ohio constitutional history in its larger historical context—the Founding Era, the Northwest Ordinance and the Path to Statehood, the Age of Jackson, the Progressive Movement, the New Federalism, and Modern Constitutional Revision. The course will also examine the following topics: the treatment of African-Americans, the rights of women, judicial review, separation of powers, the temperance movement, municipal home rule, tort reform, judicial selection, and the bill of rights. Students will be expected to work with primary source documents; there will be a required paper but no final exam. Students papers will not be limited to Ohio topics.

LAWS 5747. Philosophy of Law. 3 Units.
This is an examination of the general nature of law, the broad concerns of jurisprudence, the study of comparative law, and many of the issues raised in the literature of legal philosophy. Students will examine the principles of legal positivism, mitigated natural law, and rights theory. Selected readings and cases will illustrate these theories, which will also be examined in the context of rule selection by new governments in developing or revolutionary societies. The course also looks at the general nature of legal systems: how politics, morality, and individual views of justice and rights affect particular court cases and the course and development of law generally. Topics will include abortion, obscenity and sin, civil disobedience, affirmative action, surrogatehood, and the death penalty. This is unlike any other of the legal theory or jurisprudence courses, and those who have sampled legal theory elsewhere in a different form are welcome and encouraged to enroll. Recommended preparation: PHIL 101. Offered as LAWS 353, PHIL 335, and PHIL 435.

LAWS 5748. Poverty, Social Inequality, and the Law. 3 Units.
An overview of the way the law impacts on disadvantaged people, and the law that supports advocacy on their behalf. Students will learn about legal problems that are common to poor people and identify potential solutions. The course will analyze the effectiveness of various legal interventions such as administrative advocacy, and litigation (including individual and class representation) in various contexts. Past and current means of using and changing the law on behalf of low-income people will be studied. Students will analyze the responsibilities of lawyers to represent low-income clients. Many of the concepts will be taught through the use of case studies; a client interview will be conducted, and court observation is required. Grade is based on oral case study presentation, written assignments, and class participation.

LAWS 5749. Prisoner Rights & Litigation. 3 Units.
This course explores the complex areas of habeas corpus and prisoner § 1983 litigation. The course explores the legal, procedural, social, economic and other issues surrounding federal court review of state court criminal convictions, conditions of confinement for prisoners, and prisoner rights. Topics will include standards of review, substantive rights, federal jurisdiction, and Constitutional reaches and limits.

LAWS 5750. Religion, Ethics, and the Law. 3 Units.
This is a paper seminar, limited to 12 students. The course will explore the interrelationship between religion, ethics, and the law in the American legal system. We will begin with a series of general questions. To what extent do we have true separation of church and state in American jurisprudence? Why should religious beliefs be given more deference than political opinions or other personal expressions? Does the law set the standard for public morality or reflect it? In order to establish a successful legal system, does society need to reach a consensus as to its moral and ethical values? When is the government ethically justified in punishing individuals for their misconduct, and what theories justify punishment within the criminal justice systems? In the second part of the course we will focus on a variety of issues that raise legal, ethical, and religious questions. Topics may include capital punishment, euthanasia, genetic testing, war crimes, and others.

LAWS 5751. Scientific Evidence in Criminal Litigation. 2 Units.
The legal issues associated with the use of scientific evidence at trial. It examines the admissibility of scientific evidence, expert testimony, and related issues. In addition, it considers specific techniques such as forensic pathology, fingerprint comparison, firearms identification, bite mark comparisons, questioned document examinations, and polygraph and DNA evidence testing. Outside experts are used to present many of the topics.

LAWS 5752. Selected Topics on American Legal Professions. 3 Units.
This seminar will consider the history, structure and demographics of the American legal profession. We will focus primarily on recent changes in the organization and operation of law practice and the effect of those trends on the delivery of legal services and the working lives of lawyers. Students will be required to write and present a substantial paper, which may satisfy the writing requirement. Grade is based on class participation, a presentation, and a paper.

LAWS 5753. Selected Topics in Family Law. 3 Units.
This course explores in depth the theory, doctrine and practical application of various topics within family law. The topics explored may include marriage, divorce, property division, spousal support, parent-child relations, child custody, visitation, child support, domestic violence, rights of unmarried partners, etc.

LAWS 5755. Sexual Orientation & the Law. 3 Units.
The course will address the development of legislation and case law dealing with LBGT rights in different practice areas including family law, estate planning, and employment law. Further, the course will deal with possible scenarios for future legislative and judicial activity.

LAWS 5759. Topics in Advanced Labor Law. 2 Units.
Covers relations between employers, employees, and unions not covered in the basic Labor Law Course (LAWS 359). Among topics included are hot cargo agreements, obligations of successor employers, duty to fair representation, union security, federal preemption of state labor legislation, internal union affairs, and labor law reform. Prereq: LAWS 359.
LAWS 5761. Control of Toxins in Products and Workplaces. 3 Units.
This seminar will explore the regulation of potentially dangerous levels of toxic substances in products and workplaces. Particular attention will be devoted to considering the structure of the current legal framework for ensuring that the public is adequately represented in these highly complicated regulatory programs that impose substantial costs on manufacturers. After studying key aspects of the major federal programs that oversee the manufacture and marketing of toxins in products and workplaces, seminar participants will consider the role that the market and tort law play in supplementing regulation. Students will be expected to write a substantial research paper related to one to the themes of the course.

LAWS 5762. Urban Development Lab. 2 Units.
This course will involve students in an integrated experience of academic research and public service to the Greater Cleveland area. Students will work on semester-long research projects arising from issues raised by local nonprofit development organizations and the development arms of other local nonprofit groups and government agencies. Specific topics will vary from semester to semester, but will generally fall within (i) barriers to development of urban properties, (ii) the role of local government and communities in encouraging or discouraging development projects and (iii) solutions for making urban areas, in general, and Cleveland, in particular, more livable and sustainable. When possible, students will present their findings directly to the organization(s) raising the issue. Students can expect direct or indirect exposure to aspects of real estate, finance, land use, tax and other regulatory law. Note: LL.M. courses have been inactivated.

LAWS 5763. White Collar Crime: Prosecution and Defense. 2 Units.
This course will engage students in a study of issues relating to the prosecution and defense of white collar crime in America, e.g., defining/ understanding "white collar crime," the role of the federal government in investigating and prosecuting white collar crime, corporate vs. individual responsibility, analyzing various white collar offenses: mail fraud and wire fraud, RICO, perjury/false statements/obstruction, securities fraud, and analysis of current white collar criminal prosecutions in the news (US v. Martha Stewart, the Adelphia prosecution, the Tyco prosecution, the Worldcom prosecution, the Traficant prosecution here in Cleveland), and exercises in prosecuting and defending white collar crime: investigations, charging decisions, and strategies in structuring a trial presentation and crafting jury addresses in complex white collar cases. As part of their final exam, students will be required to prepare and deliver a live jury summation (either for the government or the defense) in a mock white collar criminal case. Students will also sit for a short essay exam dealing with the various topics covered in class.

LAWS 5764. Workers’ Compensation. 2 Units.
Workers’ Compensation law and theory continue to evolve through statutory change and judicial decisions. The statutes deal with benefits for work-connected injury and disability. Course material is national in scope with an emphasis on corresponding Ohio cases. The course also touches on related areas of law, such as torts.

LAWS 5765. State and Local Government. 3 Units.
Examines the power of state and local governments. Among the topics considered are the purpose and role of local governments; the source and scope of local governmental power; state and federal constitutional restraints on local governmental activity; the distribution of powers between state government and local governments; and the various options by which state and local governments finance their activities.

LAWS 5766. Non-Capital Habeas Lab. 2 - 3 Units.
Students will be assigned to research, write, and litigate issues on live cases of both state and federal prisoners. As part of the course, students will learn how to properly and effectively represent clients in criminal cases through lecture, written assignments, oral advocacy and other skills-related activities. Prereq: LAWS 207 or LAWS 212. Prereq or Coreq: LAWS 327

LAWS 5901. Advanced Civil Procedure. 4 Units.
This course will pick up where the 1L Civil Procedure course leaves off, exploring in greater depth topics raised by the Federal Rules of Civil Procedure. Among the planned topics are the following: discovery (ranging from the practical, Pretrial Practice-type approach to a more conceptual, casebook-style approach); sanctions; multi-district litigation; finality (starting off from collateral estoppel/res judicata, through Rule 60, and including issues pertaining to the legislative revival of time-barred claims); appealability; class actions; injunctions.

LAWS 5902. Advanced Contracts. 3 Units.
We will examine the methodology of law and economics and of deontological approaches to contracts, legal realism, the methodology of default rules, gap filling and incomplete contracts, adjustment of long-terms contracts, employment contracts and the employment at will doctrine, promissory estoppel, relational contracts, incorporation strategies in the U.C.C. and the new formalism in Contracts.

LAWS 5903. Advanced Criminal Law Seminar. 3 Units.
This seminar focuses on substantive criminal law rather than criminal procedure. It uses the first-year criminal law course as a foundation and examines a number of issues not typically covered in that course. Student interests will influence the topics chosen for examination, which will include: theft offenses, conspiracy, fetal abuse, decriminalization of drug use and commercial sex, and the roles of the executive, judicial, and legislative branches in making criminal law. Grade is based on class participation, a presentation, and a research paper.

LAWS 5904. Famous American Trials Seminar. 3 Units.
This seminar is in part a course of American legal history and in part advanced evidence course. We will consider in some detail several (probably five) famous trials in American history, starting with the Salem witchcraft trials and ending (probably) with the trial of Charles Manson. For each trial considered, except the first, students will be expected to read an assigned book that concerns the trial and to address various issues for class discussion. Each student will also write a paper about a famous trial not covered in the assigned readings and make a presentation to the class regarding that case at the end of the semester. This seminar will be limited to 12 students and may be used to satisfy the writing requirement.

LAWS 5905. Advanced Evidence. 3 Units.
This seminar is designed to cover specific issues in evidence, e.g., privilege, toxic torts, computer-generated evidence, expert testimony, syndrome evidence, and profile evidence. A paper and presentation are required. The paper may satisfy the writing requirement.
LAWS 5906. African-American Lawyers Seminar. 3 Units.
This seminar takes an interdisciplinary approach to the study of African-American lawyers. It examines aspects of the history of black lawyers in America, as well as topics relating to black lawyers in contemporary America. The course will situate these experiences in the context of both the history of the legal profession and the history of race relations and the struggle for civil rights in the United States. Students will prepare a substantial research paper and make an oral presentation of their research to the class. Limited to 12.

LAWS 5907. Arbitration Law and Practice Seminar. 2 Units.
This seminar will cover arbitration as a form of adjudication focusing on the law, processes, uses, and practice of arbitration. The seminar begins with a conceptual exploration of adjudication and arbitration and proceeds with discussions of the uses of arbitration to resolve commercial, international, labor, and consumer disputes. The seminar will next explore the relationship between arbitration and the courts examining the Federal Arbitration Act and State Law which includes preemption and choice of law issues, the agreement to arbitrate focusing on contract formation and arbitrability issues, and judicial supervision and review. Finally, the seminar will cover the arbitration proceeding itself with detailed looks at the selection and impartiality of the arbitrator as well as the role of lawyers, evidence, discovery, and interim measures in the conduct of the proceeding. Both trial and appellate simulations will be a feature of this seminar experience.

LAWS 5908. Constitutional Law Research Seminar. 2 Units.
This seminar permits students to write an in-depth paper, exploring an area of Constitutional Law most interesting to them. There are no explicit rules governing subject matter except that the paper must have, as its central focus, constitutional doctrine, policy, and/or analysis. Several classes will be held during the semester. The focus of these classes will be the process of writing a paper and the research tools available. A thesis statement, an outline, and at least one draft before the final paper are required. The grade will be based solely on the quality of the paper. The paper may be used to satisfy the writing requirement.

LAWS 5909. Current Controversies in Environmental Law. 3 Units.
This seminar will explore current legal and policy controversies in environmental law. Special attention will be paid to recent Supreme Court decisions and forthcoming environmental protection, federal courts, including current constitutional challenges to environmental programs and regulations. Issues likely to be discussed include the impact of recent federalism decisions on environmental protection, federal preemption of state regulation, environmental standing, the non-delegation doctrine, and cost-benefit analysis, among other topics. Students will read recent Supreme Court and Circuit court opinions, appellate briefs, academic commentary and supporting materials. Grade is based on class participation, final presentation, and a paper. Limited to 12.

LAWS 5910. Environmental Law Research Seminar. 2 Units.
This course is for those students who wish to fulfill the writing requirement by writing on a contemporary environmental law subject.
LAWS 5916. Religion Clauses of First Amendment Seminar. 3 Units.
This seminar will explore the constitutional doctrines relating to the Free Exercise Clause and the Establishment Clause of the First Amendment. The readings will include key Supreme Court cases demonstrating the evolution of free exercise and Establishment Clause doctrines, as well as some historical materials, but we will also maintain a focus on current First Amendment controversies, such as school vouchers, faith-based government funding initiatives, and religious symbols on public property. Grade is based on class participation, final presentation, and a paper. Limited to 12.

LAWS 5917. Remedies Seminar. 3 Units.
This seminar provides students with both a broad survey of the law of civil remedies and a chance to focus individual research on a particular area of interest within that broad survey. The law of remedies focuses on what happens after the merit of a case has been decided; how does the court provide redress to the successful litigant? This seminar examines concepts of corrective justice, the institutional incentives created by different types of remedies, and related policy issues. Topics include "private" remedies (tort, contract, etc.), "public remedies," such as civil rights actions in which plaintiffs seek broad injunctive relief, and specialized areas of public-policy concern such as punitive damages and remedies in class-action suits.

LAWS 5918. Reproductive Rights Seminar. 3 Units.
This seminar will cover the basics of the Supreme Court's reproductive rights jurisprudence and will look at a series of topics relating to the reproductive rights law and policy, including "partial-birth" abortion and the health exception; minors' access to abortion, contraception, and sex education; reproductive rights and religion; and assisted reproductive technologies. In addition to various interim writing assignments, you will be required to submit a substantial paper by the end of the semester. Prereq: LAWS 202.

LAWS 5919. Scientific Evidence and Advanced Research. 2 Units.
Students must be concurrently enrolled in LAWS 214 (no exceptions). Enrollment limited to six students.

LAWS 5920. Settlement Law Seminar. 2 - 3 Units.
This seminar will examine the theory and practice of settlement of disputes. Matters to be considered include: the practical issues of how one negotiates the settlement and drafts settlement documents; the theoretical issues of why some cases settle and why some do not; the appropriate role of judges and mediators in facilitating settlements, and the procedural and substantive law affecting the settlement of law suits. Grade is based on a presentation and a paper. Enrollment is limited to 12.

LAWS 5921. Social History of Crime Seminar. 3 Units.
This course is designed to offer students a somewhat different optic on the way that law operates in society, different, that is, from the sense one might get from reading case books. Here our concern is with the meaning of law in the largest sense, not so much from the standpoint of legal doctrine, but in the sense of how it works as a system of power to advance certain interests in society at the expense of less powerful groups. By "social history" I refer to the study of ordinary people, as opposed to political leaders and rulers. Thus the course explores how the law played out in the lives of ordinary men and women during the period from the eighteenth century to the present. What is a crime? How have certain customary rights been criminalized and why? What are the ideological underpinnings of the law? These are some of the questions we will take up as we examine crime in Britain and the U.S. from a thematic perspective.

LAWS 5922. Supreme Court Seminar. 3 Units.
Students will examine the judicial process in the U.S. Supreme Court, including the nature of decision-making in a multi-member tribunal, procedural and jurisdictional issues, and the development of a justice's jurisprudential philosophy. Students follow and analyze a particular justice or an aspect of the Court's operation. May satisfy the writing requirement.

LAWS 5923. Torts Theory Seminar. 3 Units.
This seminar will allow students to examine theories of justice in the context of tort law. In the seminar, we will be reading and discussing a series of articles that seek to provide a basis for understanding and evaluating tort doctrine. This will include readings concerning the economic approach, the corrective justice approach, and approaches based on distributive justice. The doctrine that we study will be that which is familiar from the first year course: strict liability, the requirements of the reasonable person, proximate cause, duty and product liability. Students will pick an area of tort doctrine and write a paper that will apply one or more theories to that area. A student might, for example, examine a manufacturer's duty to warn customers about possible harm in the use of the product, and write a paper helping us to understand that duty in light of economic and corrective justice theories.

LAWS 5924. White Collar Crime Research Seminar. 2 Units.
This seminar focuses on white collar crime. Topics include insider trading, extortion, loansharking, bribery, embezzlement, corporate fraud, blackmail and internet-related criminal activity. Students will complete a substantial research paper and will present the results of their research to the class.

LAWS 5925. Wrongful Convictions Seminar. 3 Units.
This course focuses on the causes of wrongful convictions, including eyewitness misidentifications, false confessions, jailhouse informants, scientific fraud, prosecutorial misconduct, and ineffective assistance of defense counsel. Remedies to prevent the conviction of the innocent are also discussed. A paper and presentation are required. Prereq: LAWS 212 or LAWS 327. Coreq: LAWS 212 or LAWS 327.

LAWS 5926. 14th Amendment Seminar. 3 Units.
This seminar focuses on the Fourteenth Amendment through Supreme Court cases and the social implications of these holdings. We will discuss the definition of equality under the law and approaches to reaching equity goals. Students should gain a frame work for comparing equity arguments asserted in a variety of settings for different groups, e.g., gender in employment settings, wealth discrimination, and race in education.
LAWS 6001. Civil Litigation Clinic. 3 Units.
In this course, students handle various kinds of civil disputes on behalf of consumers who need legal assistance but cannot afford to pay for a private lawyer. Students are responsible for all phases of litigation, including the initial client interview and case assessment, preparation of pleadings and motions, conducting discovery, settlement negotiations, and, if necessary, trying the case before a judge or jury. A weekly two-hour seminar session provides a regular forum for learning the substantive law that applies to the students’ caseloads, as well as discussion of the various legal, professional, and ethical issues that arise in the cases. In addition, after completing required basic mediation training, students act as mediators in small claims and/or landlord-tenant cases in municipal court. Students must be enrolled in and complete both semesters to receive credit. Prereq: LAWS 207 or LAWS 212 and LAWS 432.

LAWS 6002. Civil Litigation Clinic. 3 Units.
Continuation of LAWS 6001. Both semesters must be completed before credit is given.

LAWS 6011. Community Development Clinic I. 3 Units.
This is a year-long course; students must complete both semesters of work to receive credit. Students represent business and non-profit entities in formation of their businesses and to obtain tax exemption for non-profit corporations. They act as general counsel helping their clients plan for future projects and activities and operate in compliance with law that regulates their activities. Students may also help to structure tax, real estate and corporate transactions for entities. Students may have the opportunity to work on simple intellectual property matters including trademark, tradename and copyright registrations, as well as website issues and nondisclosure agreements. This clinic is primarily transactional in nature and is designed to expose students to the special problems encountered in representing entities and in structuring transactions. Seminar sessions will be devoted to discussions of applicable law pertaining to specific cases students are working on and development of the skills necessary to represent individuals and entities in transactional matters. Students also will be exposed to the ethical problems associated with entity representation. Prereq or Coreq: LAWS 261.

LAWS 6012. Community Development Clinic II. 3 Units.
(See LAWS 6011.)

LAWS 6021. Criminal Justice Clinic I. 3 Units.
Students handle a limited number of misdemeanor cases in municipal courts throughout Cuyahoga County. The seminar sessions are devoted to discussions of cases being handled by the students and to ethical and strategic considerations of criminal law practice, trial tactics, and plea bargaining. Hypothetical case studies are also used to increase the breadth of the students’ exposure to the criminal justice system. Each student also handles some prosecution in local court. Prereq: LAWS 327.

LAWS 6022. Criminal Justice Clinic II. 3 Units.
Continuation of LAWS 413. Both semesters must be completed before credit is given.

LAWS 6031. Health Law Clinic I. 3 Units.
Students represent clients in social security disability claims, adult guardianships, health insurance claims and disputes, access to health care, special education for disabled children, nursing home transfers and discharges, and other health and disability law-related issues. They investigate complaints in nursing home and represent clients in administrative and court proceedings. A major part of the student’s responsibilities is to analyze the problems and determine the best way of resolving them. Seminar sessions are primarily devoted to specific skills and to discussions of matters being handled by the students. The ethical and practical problems encountered in health law practice are emphasized, as well as legal theory. This is a year-long course; students must be enrolled in and complete both semesters of work to receive credit. Prereq: LAWS 207 or LAWS 212 and LAWS 227 or LAWS 373.

LAWS 6032. Health Law Clinic II. 3 Units.
Continuation of LAWS 6031. Both semesters must be completed before credit is given.

LAWS 6041. Intellectual Property Entrepreneurship Clinic. 3 Units.
This clinic will provide students with the opportunity to represent start-up companies as they develop their plans to commercialize their technology. The clinic will be based out of the Shaker LaunchHouse or other local incubator sites. In particular, students will focus on intellectual property issues that arise in the cases. Students will work on pending matters that may include preparation of legal memoranda or briefs, applications for relief (such as asylum, cancellation of removal, protection under the Violence Against Women, protections of non-citizen victims of domestic violence), and evidentiary submissions for pending cases. Students are required to attend master (preliminary) and individual hearings, and a pro bono refugee clinic offered with the Catholic Charities or Legal Aid Society. This is a year-long course. Prereq: LAWS 229.

LAWS 6042. Criminal Justice Clinic II. 3 Units.
The immigration Practicum provides an opportunity for students of achieve practical immigration experience by working with real-life situations before the immigration Court and the USCIS. Students will work on pending matters that may include preparation of legal memoranda or briefs, applications for relief (such as asylum, cancellation of removal, protection under the Violence Against Women, protections of non-citizen victims of domestic violence), and evidentiary submissions for pending cases. Students are required to attend master (preliminary) and individual hearings, and a pro bono refugee clinic offered with the Catholic Charities or Legal Aid Society. This is a year-long course. Prereq: LAWS 277.

LAWS 6010. Basic Mediation Training. 1 Unit.
This course provides students with basic mediation training. After successful completion, students will be certified, allowing them to serve as volunteer mediators in forums where basic training is required.
LAWS 6104. Eminent Domain Law: Litigation Techniques and Trial Practice. 2 Units.
This course will provide students with a study of the law of eminent domain as it has evolved under the US Constitution and State of Ohio laws, with a special focus on the emerging law that has developed on the last decade. Will provide a special opportunity for students to understand the techniques and strategy of the litigation of modern eminent domain actions, both from the perspective of the acquiring agency as well as the private property owner. Also, provides exposure to the trial of an eminent domain action, both from the perspective of the acquiring agency as well as the private property owner. Also, provides exposure to the trial of an eminent domain action and special techniques, strategies, and practice pointers related to the successful trial of right to take proceedings before a judge and the trial of jury actions on issues of compensation.

LAWS 6106. Pretrial Practice: Medical Malpractice. 2 Units.
This advanced skills course is a specialized version of the Pretrial Practice (Civil) course. The focus is on the work of counsel for plaintiffs and defense counsel in medical malpractice cases including pleading, discovery, motion practice, and settlement negotiation. The course will emphasize the special problems confronted in medical malpractice cases such as obtaining and interpreting medical records and dealing with expert medical witnesses.

LAWS 6107. Pretrial Practice: Civil. 2 Units.
This course picks up where most first-year legal research and writing courses leave off. We will examine intensively, among other things, the various discovery devices (including depositions, interrogatories, document requests, and requests to admit), pretrial motion practice, litigation as a means of achieving the best possible negotiated result, and alternative dispute resolution mechanisms (including mediation and arbitration). In other words, we will study the things that litigators spend most of their time doing and thinking about: how lawyers go about gathering and preserving evidence, the everyday interactions they have with courts, and the reasons they do all these things even though they rarely expect to get all the way to trial. The course will include simulations and extensive drafting assignments.

LAWS 6108. Pretrial Practice: Criminal. 2 Units.
This course introduces students to the key activities lawyers undertake in a criminal case in advance of trial. This course examines the various steps leading up to trial, such as the preparation of an indictment, the drafting of discovery requests, motion practice related to discovery and the suppression of evidence, preparation and negotiation of plea agreements, and other motion practice related to the pre-trial phase. This course is designed to expose students to the pretrial phase in a criminal case from the perspective of both the prosecution and defense. Anticipated topics for discussion will include case investigation, the gathering of evidence, pretrial problems typically encountered in a criminal case, and the role sentencing guidelines can have in shaping plea negotiations and other pretrial negotiations. The course will include simulations, drafting assignments, opportunities for mock oral argument, and negotiating exercises. Limited to 12 students.

LAWS 6109. Trial Tactics. 4 Units.
An intensive course in trial tactics, techniques, and advocacy. The emphasis during the first half of the semester is on practice in the separate components of a trial: direct examination, objections, cross-examination, use of rehabilitative devices, examination of expert witnesses, jury selection, opening statements, closing argument, and pretrial preparation. During the second half of the semester each student acts as co-counsel in a full trial. Videotape recording is used for critiquing student performance throughout the semester. Students may not take both LAWS 397 and LAWS 395 (Trial Practice). Prereq: LAWS 207 or LAWS 212.

LAWS 6111. Appellate Practice. 3 Units.
This course is designed to teach students the rules and formalities of appellate practice and help students develop the skills necessary to write an effective appellate brief and present a persuasive oral argument. During the first semester students research and write an appellate brief and engage in short in-class oral arguments. During the second semester students receive instruction on the organization and presentation of longer oral arguments, engage in a practice oral round and receive an individualized critique of their performance. They complete the course by competing in the Dunmore Moot Court Tournament, which culminates in a final round oral argument before sitting judges in the spring. Prereq: LAWS 801 and LAWS 802.

LAWS 6501. Canada - United States Law Journal. 0 Units.
Students enrolled in this non-credit course will serve as writers and editors for the annually published Canada - U.S. Law Journal.

LAWS 6503. Health Matrix Seminar. 2 Units.
Students write their Health Matrix notes throughout the year long Health Matrix Seminar. Students work closely with the instructor to develop their topics, outlines, several drafts, and final notes. The course will include multiple individual meetings with the professor, extensive feedback, and oral presentations of the papers. Students will develop their writing and oral presentation skills and will receive training concerning advanced legal research, plagiarism, and statutory interpretation. 2L associates also will have responsibilities for journal production work, such as verifying footnotes.

LAWS 6504. Law Review Seminar. 2 Units.
The seminar will provide training in writing, editorial skills, and advanced legal research for students writing notes for the Case Western Reserve Law Review. Topics to be covered include plagiarism, selecting a topic, web-based research, advanced Lexis and Westlaw research, advanced research training in selected substantive areas, and writing techniques. Satisfactory completion of the note will satisfy the upper-level writing requirement. Grade based on the quality of the note and class participation.
LAWS 6505. Law, Technology and Internet Journal. 0 - 3 Units.
The Journal of Law, Technology and the Internet Seminar offers students interested in technology and intellectual property the opportunity to write their notes through a year-long seminar. Students work closely with the instructor to develop their topics, thesis, outlines, and final note. Students will have numerous individual meetings with the professor and extensive feedback of the papers. Students will develop their writing skills, learn about plagiarizing, and will receive training concerning advanced legal research. 2L associates will be trained for journal production work such as verifying citations. The course will also include 3-4 whole group meetings through the quarter. Second year students will also be responsible for performing an in-depth evaluation of the article accepted through the peer-review process. 2L editors will ensure that submitted articles have not been preempted by any article already in print. Once an article has been approved by the Faculty Peer-Reviewers, 2L editors will be given portions of the article for which they are responsible for verifying all citations, and performing textual edits required to bring the article into compliance with Journal policies.

LAWS 6512. Int’l Law Journal Board. 2 Units.
LAWS 6513. Health Matrix. 2 Units.
LAWS 6514. Law Review Editorial Board. 2 Units.
LAWS 6550. Mock Trial. 2 Units.
LAWS 6560. Moot Court Team. 2 Units.
LAWS 6570. Transactional Lawyering Team Competition. 2 Units.
Participants take part in national competition of drafting and negotiating sophisticated contracts and are judged on their drafting and negotiating skills. Course obligations include a competitive round internally to determine the team composition, research and drafting a sophisticated transactional agreement including classroom sessions on relevant topics, participation in practice sessions, and travel to and participation in a regional competitive meet and, if successful there, a national competitive meet.

LAWS 6600. Supervised Research Seminar. 1 - 2 Unit.
Second- and third-year students may earn graded credit for an individual research project of scholarly depth and scope, under the close supervision of a faculty member. Approval of the faculty supervisor is required before registration. No student may undertake more than two Supervised Research projects or earn more than a total of four hours of Supervised Research credit. No student may work on more than one Supervised Research project in one semester. May satisfy the writing requirement.

LAWS 6701. Access to Justice Externship. 3 Units.
This is an externship program in which students work at the Legal Aid Society of Cleveland for 12 hours per week with and under the direct supervision of Legal Aid attorneys. (For the summer program, students will work full time for 10 weeks during the summer months.) Students will research substantive and procedural legal issues, draft memoranda, and assist with preparation of cases. Students will work on a variety of issues, depending on student interest and agency need. In the past students have worked on substantive matters in the areas of family law, bankruptcy, housing, worker’s compensation, government benefits, special education and immigration. Students will interact with the law school faculty liaison through journals and periodic meetings to discuss and further reflect upon the externship experience. For more information about the Legal Aid Society of Cleveland, students are encouraged to visit http://www.lasclev.org/.

LAWS 6705. Curricular Training: Law Field Research. 0 Units.
This course is intended exclusively for the foreign national J.D. or LL.M. law student who wishes to gain applied legal experience based on their intended career path with an organization that offers course credit for internship experience. These internships may be either paid or unpaid. This course will provide a means for the student to build required skills and bridge the gap between the classroom and real world application. The student is encouraged to explore and discover additional avenues to assist in the management and advancement of his/her career. Does not count toward J.D. credit.

LAWS 7001. Access to Justice Externship. 3 Units.
This is an externship program in which students work at the Legal Aid Society of Cleveland for 12 hours per week with and under the direct supervision of Legal Aid attorneys. (For the summer program, students will work full time for 10 weeks during the summer months.) Students will research substantive and procedural legal issues, draft memoranda, and assist with preparation of cases. Students will work on a variety of issues, depending on student interest and agency need. In the past students have worked on substantive matters in the areas of family law, bankruptcy, housing, worker’s compensation, government benefits, special education and immigration. Students will interact with the law school faculty liaison through journals and periodic meetings to discuss and further reflect upon the externship experience. For more information about the Legal Aid Society of Cleveland, students are encouraged to visit http://www.lasclev.org/.
LAWS 7009. Equal Employment Opportunity Commission Externship. 3 - 4 Units.
This is an externship program in which students approved by the EEOC Chief Administrative Judge will work at the EEOC’s local office for 12 hours per week during the academic semester, or 40 hours per week for nine weeks during the summer, with and under the direct supervision of Administrative Judges primarily on litigation matters. Students will gain legal and practical experience in administrative law and employment discrimination issues, including those that fall under the statutes that the EEOC enforces: Title VII, the Americans with Disabilities Act, the Age Discrimination in Employment Act, and the Equal Pay Act. The students will work with EEOC’s local Administrative Judges who adjudicate cases brought by federal employees against various federal agencies under these statutes. Students will also attend periodic meetings in which they will review and reflect upon the work engaged in on the matters assigned, learn about other EEOC matters, and discuss various topics relating to the EEOC’s mission and jurisdiction. Topics in these discussions may include substantive law dealt with the various cases before the EEOC and various lawyering skills, including drafting opinions, as well as topics like negotiation, settlement, and professionalism. Students will interact with the law school faculty liaison through journals and periodic meetings to discuss and further reflect upon the externship experience.

LAWS 7015. Federal Public Defender Externship. 3 Units.
This externship program will give students an opportunity to observe and participate in many facets of federal criminal procedure and practice. Under the supervision of the Federal Public Defender and his staff, students will research and draft legal memoranda, pre-trial motions, sentencing motions, and appellate briefs. Students will also observe court proceedings and assist in trial and hearing preparation. Students will work on a variety of cases, including drug, firearm, fraud, and white collar crime. Given the pace and work demands of the Office of the Federal Defender, this externship program will have students assisting with substantive legal work.

LAWS 7019. Federal Trade Commission Externship. 3 Units.
This externship program will expose students to federal civil practice involving the Federal Trade Commission in a range of civil matters primarily focused on the FTC’s consumer protection mission. The externship includes seminar-style discussions with both junior and senior FTC litigators in the East Central Region office. Students will assist FTC attorneys and staff in the preparation and presentation of their cases.

LAWS 7022. General Counsel Externship. 3 - 4 Units.
This is an externship program in which students selected by the law school will work at the Office of the General Counsel of John Carroll University, for approximately 12 hours per week during the fall or spring semester. During the summer, students will work full time for approximately 9 weeks. Students will work under the direct supervision of the General Counsel or her staff on pending matters. They will engage in a variety of activities including legal research, fact investigation, preserving testimony of witnesses via affidavits, client interviews, reviewing and drafting of memoranda and policies, contracts and other corporate documents. Students will focus on legal issues involving corporate law and governance, contracts, employment law, as well as other legal issues unique to higher education. Students will also attend regularly scheduled discussions in which they will review the work they have completed, and various topics relating to the practice of the Office of General Counsel. Students will interact with a law school faculty liaison through journals and periodic meetings to discuss and further reflect upon the externship experience. Students must be approved by the Office of General Counsel.

LAWS 7028. Hospital Law Externship. 3 Units.
This is an externship program in which students will work in the general counsel’s office of a large hospital center. Participating hospitals are the MetroHealth System, Summa Health System, University Hospitals of Cleveland, and the Cleveland Clinic Foundation. Students will be selected by the law school and, in some cases, with the participation of the supervising hospital attorney. Students will work in the office of the general counsel for approximately 12 hours per week during the spring semester. Students will work under the direct supervision of a supervising attorney. They will engage in a variety of activities including conducting legal research, drafting memoranda, letters, and other documents, and preparing presentations to hospital attorneys. Students also will shadow their supervising attorney and participate in day-to-day activities of the office. Additionally, students will work with client departments and departmental staff to gather information and to gain insight into and understanding of the clinical, business, and health care operations of a large health system.

LAWS 7035. International Tribunal Externship. 12 Units.
This program provides opportunity for students to participate in a semester long program with a tribunal program arranged through the Cox International Law Center.

LAWS 7040. Internal Revenue Service Externship. 3 Units.
This externship program will expose students to federal civil tax practice involving the IRS and Office of IRS Chief Counsel, including a broad range of issues involving the assessment and collection of federal taxes. The externship includes seminar discussions and placement in the local office of IRS Chief Counsel. Students will assist the attorneys in providing legal assistance to IRS personnel, in federal tax litigation in the U.S. Tax Court, and providing legal assistance to the U.S. Attorney’s Office in federal tax litigation.

LAWS 7045. Judicial Externship Seminar. 4 Units.
Students in the spring of their first year are selected for summer externships with specific federal district and circuit judges. Classes in the spring of the first year, during the externship summer, and in the fall of the second year complement the eight weeks of externing in the judge’s chamber. Recommended preparation: Permission of the instructors.
LAWS 7048. Ohio Appeals Court Externship. 3 - 4 Units.
This is an externship program in which students approved by the judges involved will work at an Ohio appellate court for 12 hours per week during the academic semester, or 40 hours per week for 9 weeks during the summer, with and under the direct supervision of the judges and their staff. The externship will involve research and writing support for one or more of the appellate judges. It will expose the student to the inner workings of the appellate courts, including the process of preparing for oral argument, review of briefing, and drafting of opinions. The extern will also have direct and regular contact with the assigned judge(s) and other court personnel and will have several opportunities to observe oral arguments. Students will also attend periodic meetings in which they will review and reflect upon their work on the matters assigned, learn about other pending matters, and discuss various topics relating to the work of the courts. Topics in these discussions may include substantive or procedural issues dealt with in the various cases before the courts and various lawyering skills, including drafting opinions, as well as topics including ethics and professionalism is appellate practice. The faculty supervisor will meet weekly with the extern to discuss the experience, provide feedback on the extern’s weekly journal, and to amplify the extern’s understanding of the substantive legal issues involved in the extern’s work.

LAWS 7050. Prosecutor’s Office Externship. 3 - 4 Units.
This externship program will expose students to many facets of state criminal practice through their placement in a particular division of the Prosecutor’s office including, for example, the Grand Jury Division, Children and Family Services Division, Juvenile Division, Felony Trial Division, and the Appellate Division.

LAWS 7061. United States Attorney Externship: Criminal. 3 Units.
This is an externship program in which students selected by the law school will work at the United States Attorney’s Office in Cleveland for 12 hours per week, with and under the direct supervision of Assistant U.S. Attorneys on cases under investigation or being prosecuted by that office. Most cases will involve general crimes (robbery, theft, immigration, etc.), or offenses involving drugs or firearms. Students will observe and, in some cases, participate (as assistants to the AUSA on the case) in pretrial and court proceedings, and will work on projects to assist in the prosecution of the cases to which they are assigned. Students will research significant legal issues, draft briefs and pleadings and assist with witness and exhibit preparation. Students will also attend a 1-hour weekly seminar in which they will review and reflect upon the court proceedings observed and the work engaged in on the cases assigned, and discuss various topics relating to federal civil litigation involving the government. Topics in the seminar may include authority and responsibility of the U.S. Attorney, ethics, litigation with the government, discovery and pre-trial practice, expert witnesses, damages, compromise and settlement, sanctions and civility. Students must be approved by the United States Attorney following completion, review and approval of a security clearance application.

LAWS 7062. U.S. Attorney Externship: Civil. 3 Units.
This is an externship program in which students selected by the law school will work at the United States Attorney’s Office in Cleveland for 12 hours per week, with and under the direct supervision of Assistant US Attorneys on civil cases being handled by that office. Most cases will involve torts, employment discrimination, immigration and prisoner habeas, administrative appeals, environmental enforcement, bankruptcy, debt collection and civil fraud. Students will observe and, in some cases, participate (as assistants to the AUSA on the case) in pretrial and court proceedings, and will work on projects to assist in the prosecution of the cases to which they are assigned. Students will research significant legal issues, draft briefs and pleadings and assist with witness and exhibit preparation. Students will also attend a 1-hour weekly seminar in which they will review and reflect upon the court proceedings observed and the work engaged in on the cases assigned, and discuss various topics relating to federal civil litigation involving the government. Topics in the seminar may include authority and responsibility of the U.S. Attorney, ethics, litigation with the government, discovery and pre-trial practice, expert witnesses, damages, compromise and settlement, sanctions and civility. Students must be approved by the United States Attorney following completion, review and approval of a security clearance application.

LAWS 7071. Cuyahoga County Law Department Externship. 3 - 4 Units.
This is an externship program in which students approved by the Department attorneys will work at the Cuyahoga County Law Department for 12 hours per week during the academic semester, or 40 hours per week for nine weeks during the summer, with an under the direct supervision of Law Department attorneys primarily on transactional and legislative matters. Students will gain legal and practical experience in economic development issues, the legislative process, government contracting, including competitive - bidding requirements, negotiating and drafting contracts. Students will also attend periodic meetings in which they will review and reflect upon the work engaged in on the matters assigned, learn about other law department matters, and discuss various topics relating to the law department’s mission and jurisdiction. Topics in these discussions may include substantive law dealt with in the various sections of the law department, various lawyering skills including drafting, negotiation and settlement and professionalism. Students will interact with the law school faculty liaison through journals and periodic meetings to discuss and further reflect upon the externship experience. Students must be approved following a security clearance application.

LAWS 7080. Sports/Entertainment Law Externship. 3 Units.
This externship is offered to selected students who participate in the summer Great Lakes Sports and Entertainment Law Academy. This externship offers academic credit for placement with various high-profile sports and entertainment law institutions.

(University of Pittsburgh; Cleveland State University)
Associate Professor of Law; Director of the Judge Ben C. Green Law Library

Juscelino Colares, JD, PhD
(Cornell University; University of Tennessee)
Professor of Law; Associate Director of the Frederick K Cox International Law Center

Avidan Y. Cover, JD
(Cornell University)
Assistant Professor of Law; Associate Director of the Institute for Global Security Law & Policy

Jennifer I. Cupar, JD
(Case Western Reserve University)
Professor of Law

Carol T. Fox, JD, PhD
(Case Western Reserve University)
Senior Instructor in Law

George W. Dent Jr., JD, LLM
(Columbia University; New York University)
Professor of Law

Jonathan L. Entin, JD
(Northwestern University)
David L. Brennan Professor of Law; Professor of Political Science

Leon Gabinet, JD
(University of Chicago)
Coleman P. Burke Professor of Law

Peter M. Gerhart, JD
(Columbia University)
Professor of Law

Paul C. Giannelli, JD & LLM, MSFS
(University of Virginia; George Washington University)
Albert J. Weatherhead III and Richard W. Weatherhead Professor of Law; Distinguished University Professor

Jonathan C. Gordon, JD
(Columbia University)
Professor of Law

Richard K. Gordon, JD
(Harvard University)
Professor of Law; Director of the Institute for Global Security Law and Policy

B. Jessie Hill, JD
(Harvard University)
Professor of Law

Sharona Hoffman, JD, LLM
(Harvard University; University of Houston)
Edgar A. Hahn Professor of Law and Bioethics; Co-Director of the Law-Medicine Center

Daniel A. Jaffe, JD
(Columbia University)
Associate Professor of Law

Erik M. Jensen, JD
(Cornell University)
Schott - van den Eynden Professor of Law

Lewis R. Katz, JD
(Indiana University)
John C. Hutchins Professor of Law, Director of Foreign Graduate Legal Studies

Maureen Sheridan Kenny, JD
(Cleveland State University)
Professor of Law

Charles R. Korshom, JD
(Yale University)
Assistant Professor of Law

Juliet P. Kostritsky, JD
(University of Wisconsin)
Everett D. and Eugenia S. McCurdy Professor of Contract Law

Raymond Shih Ray Ku, JD
(New York University)
Professor of Law; Co-Director of the Center for Law, Technology, and the Arts

Yuri R. Linetsky, JD
(Case Western Reserve University)
Senior Instructor in Law

Judith P. Lipton, JD
(University of Connecticut)
Professor of Law; Co-Director of the Milton A. Kramer Law Clinic Center

Kenneth R. Margolis, JD
(Case Western Reserve University)
Professor of Law

Kevin C. McMenigal, JD
(University of California, Berkeley)
Judge Ben C. Green Professor of Law

Laura E. McNally, JD
(Syracuse University)
Professor of Law

Maxwell J. Mehlman, JD
(Yale University)
Arthur E. Petersilge Professor of Law; Professor of Bioethics; Director of the Law-Medicine Center

Kathryn Sords Mercer, MSSW, JD (Case Western Reserve University)

Professor of Law

Lawrence E. Mitchell, JD (Columbia University)

Dean and Joseph C. Hostetler-Baker & Hostetler Professor of Law

Dale A. Nance, JD (Stanford University)

John Homer Kapp Professor of Law

Craig Allen Nard, JD, JSD & LLM (Capital University; Columbia University)

Tom J.E. and Bette Lou Walker Professor of Law; Director of the Center for Law, Technology and the Arts

Andrew Pollis, JD (Harvard University)

Assistant Professor of Law

Cassandra Burke Robertson, JD (University of Texas)

Associate Professor of Law

Matthew Rosman, JD (New York University)

Professor of Law; Co-Director of the Milton A. Kramer Law Clinic Center

Michael P. Scharf, JD (Duke University)

John Deaver Drinko-Baker & Hostetler Professor of Law; Director of the Frederick K. Cox International Law Center

Carolyn K. Seymour, JD (University of Michigan)

Professor of Law

Calvin William Sharpe, JD (Northwestern University)

Galen J. Roush Professor of Law

Ted Steinberg, PhD (Brandeis University)

Adeline Barry Davee Distinguished Professor of History and Professor of Law

Barbara R. Snyder, JD (University of Chicago)

University President and Professor of Law

Robert N. Strassfeld, JD (University of Virginia)

Professor of Law

Timothy Webster, JD, LLM (Cornell University)

Assistant Professor of Law

Ruqaiijah Yearby, JD, MPH (Georgetown University; Johns Hopkins University)

Professor of Law

Professor for the Practice of Banking & Finance and Law

Shannon E. French, PhD (Brown University)

Inamori Professor of Ethics; Professor of Law; Director of the Inamori International Center for Ethics and Excellence

Brian K. Gran, JD, PhD (Indiana University; Northwestern University)

Associate Professor of Sociology and Law

Kenneth F. Ledford, JD (University of North Carolina), PhD (Johns Hopkins University)

Associate Professor of History and Law

Martha A. Woodmansee, PhD (Stanford University)

Professor of English and Law

Secondary Faculty

Scott Fine, MBA (Stanford University)
School of Medicine

The mission of the Case Western Reserve University School of Medicine (http://casemed.case.edu) is to advance the health of humankind through the four interrelated components of Education, Research, Clinical Care and Public Service.

The School of Medicine provides two tracks leading to the MD degree: the longstanding School of Medicine program, also called the University track, and the Cleveland Clinic Lerner College of Medicine at Case Western Reserve University, also known as the College track, which first admitted students in 2004. The School boasts a longstanding Medical Scientist Training Program, or MSTP, and, through the School of Graduate Studies, programs resulting in PhD and MS degrees, as well as certificates in disciplines led by faculty in the School of Medicine.

As a research institution, the School of Medicine has a tradition of national leadership. The School of Medicine consistently ranks in the top tier of the nation’s medical schools for federal research funding from the National Institutes of Health, and is proud of its Clinical Translational Service Award in partnership with its affiliates. In fiscal year 2010, the School earned more than $340 million in grants from the NIH including grants through the affiliated Cleveland Clinic Lerner College of Medicine. Faculty and trainee research is routinely reported in the nation’s top journals, leading to biomedical discoveries and improved health.

The School of Medicine engages the community in public service in many ways. The School of Medicine’s commitment links researchers and medical students to the community. The school’s faculty provide 90 percent of the indigent health care in Cuyahoga County and a majority of the care for indigent patients in Ohio. A major economic influence on the northern Ohio area, the School of Medicine and its affiliated hospitals are among the largest employers of personnel in the area and further stimulate the economy by providing concepts for technology transfer to the business sector. On the international level, the School of Medicine has a global health and diseases program focusing on AIDS, tuberculosis, malaria and other diseases that directly threaten world health.

The school is very proud of the contributions made by its educators and graduates but doesn’t rest on its laurels. The curriculum constantly responds to the latest findings in education and medicine and sets the pace for other schools with input from gifted and committed scholars.

At least eleven Nobel Prize holders have ties to the School of Medicine:

• John J.R. Macleod, MB, ChB, DPH, physiology professor at Case from 1903 to 1918, shared the 1923 Nobel Prize in Physiology or Medicine for the discovery of insulin. Dr. Macleod completed much of his groundwork on diabetes in Cleveland.

• Corneille J.F. Heymans, MD, who was a visiting scientist in the Department of Physiology in 1927 and 1928, received the Nobel Prize in Physiology or Medicine in 1938 for work on carotid sinus reflexes.

• Frederick C. Robbins, MD, shared the 1954 Nobel Prize in Physiology or Medicine for his work on the polio virus, which led to the development of polio vaccines. He received the award two years after joining the medical school. Dr. Robbins was active at the school until his death in 2003, at which time he held the titles of medical school dean emeritus, University Professor emeritus, and emeritus director of the Center for Adolescent Health.

• Earl W. Sutherland Jr., MD, who had been professor and director of pharmacology from 1953 to 1963, won the 1971 Nobel Prize in Physiology or Medicine for establishing the identity and importance of cyclic adenosine monophosphate (AMP) in the regulation of cell metabolism.

• Paul Berg, PhD, who earned his biochemistry degree at the university in 1952, received the 1980 Nobel Prize in Chemistry for pioneering research in recombinant DNA technology.

• H. Jack Geiger, MD, a 1958 alumnus of the medical school, is a founding member and past president of Physicians for Social Responsibility, which shared the 1985 Nobel Peace Prize as part of International Physicians for the Prevention of Nuclear War, and Physicians for Human Rights (PHR), which shared the 1997 Nobel Peace Prize as part of the International Campaign to Ban Landmines.

• George H. Hitchings, PhD, who had been a biochemistry instructor from 1939 to 1942, shared the 1988 Nobel Prize in Physiology or Medicine for research leading to the development of drugs to treat leukemia, organ transplant rejection, gout, the herpes virus and AIDS-related bacterial and pulmonary infections.

• Alfred G. Gilman, MD, PhD, a 1969 graduate of the medical school, shared the 1994 Nobel Prize for Physiology or Medicine for identifying the role of G proteins in cell communication.

• Ferid Murad, MD, PhD, a 1965 graduate of the medical school, shared the 1998 Nobel Prize in Physiology or Medicine for discoveries concerning nitric oxide as a signaling molecule in the cardiovascular system.

• Paul C. Lauterbur, PhD, a 1951 graduate of the engineering school and a visiting professor of radiology at Case in 1993, shared the 2003 Nobel Prize in Physiology or Medicine for pioneering work in the development of magnetic resonance imaging.

• Peter C. Agre, MD, who completed a fellowship in hematology at Case while a medical student at Johns Hopkins, shared the 2003 Nobel Prize in Chemistry for discoveries that have clarified how salts and water are transported out of and into the cells of the body, leading to a better understanding of many diseases of the kidneys, heart, muscles and nervous system.

Two other distinguished alumni have served as U.S. surgeon general: Jesse Steinfeld, MD, a 1949 graduate, was surgeon general from 1969 to 1973, and David Satcher, MD, PhD, who graduated in 1970 and was surgeon general from 1998 to 2002.

Dr. Satcher also served as director of the Centers for Disease Control and Prevention from 1993 to 1998, and another medical school graduate, Julie Gerberding, MD, MPH, followed in his footsteps, in 2002 becoming the first woman to be named CDC director.

History

Since its founding in 1843, the Case Western Reserve University School of Medicine has been an innovator in medical education and a leader in pioneering research. Beginning as the Medical Department of Western Reserve College (and popularly known then as the Cleveland Medical College), the school moved into its first permanent home, in downtown Cleveland, in 1846. In 1915, a 20-acre site was secured for a medical center in University Circle, the current home of Case Western Reserve University, its School of Medicine, and two of the school’s affiliated hospitals, University Hospitals of Cleveland and the Louis Stokes Cleveland Department of Veterans Affairs Medical Center. University
Circle also is home to many of the country’s outstanding cultural and educational institutions.

The school was one of the first medical schools in the country to employ instructors devoted to full-time teaching and research. Six of the first seven women to receive medical degrees from accredited American medical schools graduated from Western Reserve College (as it was called then) between 1850 and 1856.

Already a leading educational institution for more than a century, in 1952 the School of Medicine initiated the most advanced medical curriculum in the country, pioneering integrated education, a focus on organ systems and team teaching in the preclinical curriculum. This curriculum instituted a pass/fail grading system for the first two years of medical school to promote cooperation among students instead of competitiveness, introduced students to clinical work and patients almost as soon as they arrived on campus, and provided free, unscheduled time in an era when doing so seemed unthinkable. Many other medical schools followed suit, and these components remain at the core of the medical school’s curriculum today.

In 1924, the School of Medicine moved into the most modern and best-equipped preclinical science building in the country at that time. That building, donated by Cleveland industrialist Samuel Mather, remains an integral part of the medical school complex. It was named the Harland Goff Wood Building in 1993 in honor of the late chair and professor of biochemistry and former provost of the university.

In 1971, the Health Sciences Center was completed to house the university’s medical, dental and nursing schools, as well as the Health Center Library. In 1994, the health sciences complex was named for now-retired U.S. Congressman Louis Stokes. The proximity of these excellent research and educational centers to other prestigious university departments, including science, engineering and social sciences, stimulates uniquely creative interaction among researchers and educators.

Another giant leap in research capabilities came in the early 1990s, when the Richard F. Celeste Biomedical Research Building, named for the former Ohio governor, was opened. The $70 million building, attached to the Wood Building, added 154,000 square feet of research space and includes conference spaces, a lecture hall, public spaces and a cafeteria.

The School of Medicine was the first medical school to provide laptop computers to all its students. Today, students use their laptops to access the entire syllabus as well as numerous electronic resources deemed essential by faculty. Students have access to the WiFi network at the medical school and across campus. Technology is used to enhance, not replace, the faculty-student interaction that occurs in the classroom, the laboratory and small group discussions.

In 2002, the School of Medicine became only the third institution in history to receive the best review possible from the body that grants accreditation to U.S. and Canadian medical degree programs, the Liaison Committee on Medical Education. Also in 2002, the school built on its tradition of innovation in education when the university and the Cleveland Clinic entered into an agreement to form the Cleveland Clinic Lerner College of Medicine of Case Western Reserve University, with the first students matriculating in 2004. The “College Track” is a program within the Case Western Reserve University School of Medicine. The Cleveland Clinic serves as an outstanding teaching site for all medical students in the School of Medicine, in addition to being the site for pre-clerkship education in the College Track.

In 2002, the university and Cleveland Clinic entered into a landmark agreement to form the Cleveland Clinic Lerner College of Medicine of Case Western Reserve University, with the first students matriculating in 2004. The “College Track” is a program within the Case Western Reserve University School of Medicine. The Cleveland Clinic serves as an outstanding teaching site for all medical students in the School of Medicine, in addition to being the site for pre-clerkship education in the College Track.

Cleveland Clinic was founded in 1921 by four Case Western Reserve faculty members, three of whom are counted among the alumni of the Case School of Medicine. Cleveland Clinic’s main campus, where much of the activity associated with the program will occur, is located on 180 acres adjacent to the Case Western Reserve campus.

Occupying 50 buildings, the main campus includes a hospital, an outpatient clinic, a children’s hospital, heart and vascular institute, cancer institute, eye institute, research institute and supporting labs and facilities. To better serve the Cleveland suburbs with primary care services, Cleveland Clinic operates 16 family health centers, eight regional hospitals and medical offices throughout Northeast Ohio, staffed with Cleveland Clinic primary care physicians, as well as many medical and surgical specialists. State-of-the-art imaging services are available, and several locations contain pharmacies and outpatient surgery centers that provide same-day surgical services close to home. In 2011, the clinic recorded more than 4.2 million outpatient visits throughout the health system and 155,000 hospital admissions. Among them were patients from all 50 states and more than 100 countries. More than 2,800 full-time physicians and scientists and 11,000 nurses represent 120 medical specialties and subspecialties. Cleveland Clinic is consistently named as one of the nation’s top hospitals by U.S. News & World Report, and our heart and heart surgery program has been ranked No. 1 by U.S. News since 1995. Go here (http://my.clevelandclinic.org/default.aspx) for more information.
The MetroHealth System (http://metrohealth.org)

The MetroHealth System is one of the largest, most comprehensive health care providers in Northeast Ohio, caring for people in and around Greater Cleveland for more than 170 years. This academic health care system is committed to the communities it serves by saving lives, restoring health, promoting wellness, and providing outstanding, lifelong care that is accessible to all.

Affiliated with Case Western Reserve University School of Medicine since 1914, MetroHealth is a center for medical research and education, with all active staff physicians holding CWRU faculty appointments. More than 400 primary care and specialty care physicians practice within The MetroHealth System. At the core of the MetroHealth system, is the MetroHealth Medical Center. The system’s main health care provider, research facility and teaching hospital is also home to the region’s only Level 1 trauma and burn center. However, The MetroHealth System also serves Greater Cleveland with more than a dozen urban and suburban primary and specialty healthcare centers in Cleveland, Strongsville, Westlake, Lakewood, Pepper Pike and Beachwood.

MetroHealth has received many accolades for its high level of care and the innovation of its physicians. Surgeons at MetroHealth are pioneering new techniques in minimally-invasive surgery for faster recoveries, while its primary care physicians are developing cutting-edge ways to manage common and chronic diseases through the use of electronic medical records and a patient-centered medical home model called Partners in Care. Its maternal-fetal medicine specialists are successfully managing the riskiest of pregnancies and saving the tiniest of lives. In addition, MetroHealth is nationally recognized by the American Heart Association for cardiac and stroke care and the cancer center has earned outstanding achievement awards for the treatment of cancer patients. Every year, MetroHealth provides care to more than 28,000 inpatients and delivers approximately 3,000 newborns. More than 790,000 visits are recorded each year in the medical center’s outpatient centers, and patient visits to the emergency department exceed 99,000. To learn more about MetroHealth and its locations and services, go here (http://metrohealth.org).

The Louis Stokes Cleveland Department of Veterans Affairs Medical Center (http://www.cleveland.va.gov)

The Louis Stokes Cleveland Department of Veterans Affairs Medical Center (VAMC) is a major teaching hospital of the School of Medicine and is an important site for the education of medical students. The Cleveland VAMC also supports more than 100 residency and fellowship training positions in medicine, surgery, and psychiatry and their subspecialties. Most VAMC physicians hold faculty appointments within the School of Medicine. The affiliation is overseen by the Deans Committee, consisting of the dean, department chairpersons from the School of Medicine, and key VAMC officials.

The Cleveland VAMC is a part of the VA Healthcare System of Ohio, linking VA health care facilities in Ohio in an integrated service network. Inpatient care is provided at the Wade Park location and includes medicine, surgery, psychiatry, spinal cord injury, neurology and rehabilitation medicine as well as a nursing home and a domiciliary. Outpatient care is delivered in primary and specialty care clinics located at Wade Park, Akron, Canton, Cleveland, East Liverpool, Lorain, Mansfield, New Philadelphia, Painesville, Ravenna, Sandusky, Warren and Youngstown. The medical center serves more than 100,000 individual veterans annually through approximately 11,600 hospital admissions and 1,884,000 outpatient visits.

An active research program includes activities funded through the Department of Veterans Affairs and other governmental and private funding sources. Total funding of approximately $21.5 million annually (from all sources) supports more than 50 principal investigators in a broad range of research endeavors. For more information, go here (http://www.cleveland.va.gov).
Institutes and Centers

Advanced Platform Technology Research Center of Excellence
216.791.3800 x6003
Ronald J. Triolo, PhD, Executive Director
Gilles Pinault, MD, Medical Director

The Advanced Platform Technology (APT) Research Center of Excellence (http://www.aptcenter.research.va.gov) is a multi-institutional center composed of investigators from Case Western Reserve University and the Louis Stokes Cleveland Department of Veterans Affairs. Building on the 25+ year history of rehabilitation research in northeast Ohio, the Center was created in 2005 with a $5.0 million award from the Veterans Health Administration [VHA] Rehabilitation Research and Development Service as a national VA Research Center of Excellence. This commitment was subsequently renewed in 2010 for a second 5-year term with an additional award of $5.0 million. An additional $6 million award in 2010 from the State of Ohio’s Department of Development further validated the Center’s ability to achieve its primary mission to serve the clinical needs of veterans with motor, sensory and cognitive deficits and limb loss. The total value of the APT-related research portfolio is presently $45 million.

The APT Center is providing leadership to create and deliver innovative devices based on cutting-edge microelectronics, materials and MEMS fabrication and is a catalyst for the discovery and development of new technologies and techniques that can be employed in the rehabilitation process to provide independence for veterans and other individuals with disabilities. These techniques include basic and clinical research programs and the development and administration of new device-based therapies to patients within the emphasis areas of neural interfaces, prosthetics and orthotics, health monitoring & maintenance and enabling technologies. The Center provides affiliated investigators seed funding, administrative support (grants preparation and management, regulatory and statistical support), professional engineering & prototyping and an established quality system for the documentation and control of device design and production. Leveraging its investigators’ exceptional track records in a variety of disciplines, the Center is promoting the translation of its research into clinical and commercial applications. Current clinical applications being investigated include intelligent braces, respiratory support, sensation and control of a prosthetic hand, urinary incontinence, behavioral recovery after traumatic brain injury and, monitoring brain activity.

Case Cardiovascular Center

216.368.3391
Mukesh K. Jain, MD, Director, Case Cardiovascular Research Institute
Daniel I. Simon, MD, Director, University Hospitals Harrington-McLaughlin Heart & Vascular Institute
Director, Case Cardiovascular Center

The Case Cardiovascular Center (CCC) (http://casemed.case.edu/casecardiovascularcenter) was established in 2006 with the central mission to develop premier clinical, research, and education programs in heart and vascular disease. The structure of the Center includes clinical (University Hospitals Harrington-McLaughlin Heart & Vascular Institute—UH-HMHVI) and research (Case Cardiovascular Research Institute—CVRI) arms.

The UH-HMHVI (http://www.uhhospitals.org/tabid/2210/default.aspx) is a multi-disciplinary team of nearly 60 full-time faculty members dedicated to (a) the prevention, diagnosis, and treatment of heart and vascular disease to both local and regional patient populations in Northeast Ohio, (b) the education and training of medical students, residents and fellows,
and (c) the development of breakthrough medical advancements and practices to deliver superior clinical outcomes. These clinical services range from primary to quaternary levels of expertise and are provided at all health care facilities within the University Hospitals healthcare system. The clinical programs are organized into 11 program centers that comprise the Institute.

The research activities of the CCC are focused on the development of premier research programs that span the full spectrum of activities from basic bench-side research to translational research (“first-in-man”) and clinical trials. The CVRI is focused on basic and translational studies. The Research & Innovation Center (RIC) of the UH-HMHVI is dedicated to innovative clinical trials and applied technology. The major areas of research focus in the CVRI include cardiovascular biology, mechanisms of gene regulation, innate immunity & inflammation, and stem cell & regenerative medicine. Investigators in the CVRI have full access to two laboratories for in vivo research in small and large animals. The RIC oversees all clinical research activities within cardiovascular medicine and surgery and is supported by a lead administrator along with nurse coordinators and staff to facilitate patient enrollment as well as regulatory/grant activities. Active areas of clinical research include interventional cardiology, vascular medicine, heart failure, electrophysiology, preventive cardiology & rehabilitative medicine, and cardiovascular imaging.

Case Center For Imaging Research
216.844.8076
Jeffrey L. Duerk, PhD, Director
Chris Flask, PhD, Scientific Director
The CCIR (http://ccir.case.edu) is a joint venture between Case Western Reserve University School of Medicine and University Hospitals of Cleveland. The CCIR through its ~40 faculty and state-of-the-art clinical and preclinical imaging capabilities promotes interdisciplinary and translational imaging research. The CCIR also serves as a shared resource for CWRU’s Cystic Fibrosis Center, the Case Comprehensive Cancer Center, the Center for Stem Cell and Regenerative Medicine, and the Clinical and Translational Science Collaborative (CTSC). As the imaging research program at CWRU continues to grow, we strive to make the CCIR imaging capabilities available to the broader research community. This overriding goal has led to a strong collaborative relationship between the CCIR imaging faculty and basic researchers in many disciplines.

Preclinical imaging facilities includes four high resolution MRI scanners, a microPET/CT scanner, a microSPECT/CT imaging system, and three bioluminescence/fluorescence systems. In addition, magnetic relaxometry scanners for high throughput screening of developmental MRI contrast agents, and recent addition of a cryofluorescence imaging system to obtain high resolution, 3D optical imaging capabilities enhance our technologies. CCIR staff provides quantitative image analysis as needed for specific applications. The CCIR clinical imaging research facilities offer a full range of imaging support. The facility includes 4 MRI scanners and one human PET/CT for clinical research studies. The CCIR has also recently completed a $1.2M construction project to create a new radiopharmaceutical facility. Together with our existing cyclotron and radioisotope delivery system, our imaging center now has the capacity to conduct a variety of molecular PET imaging studies from preclinical animal studies all the way to routine clinical studies.

The Center for AIDS Research
216.368.0271
Jonathan Karn, PhD, Director
Michael Lederman, MD, Co-Director
Since its founding in 1994, the Case Western Reserve University/University Hospitals Center for Aids Research (Case CFAR (http://cfar.case.edu)) has been a center of excellence for both clinical and basic science AIDS research. Investigators participating in the Case CFAR draw on resources from the Case Western Reserve University School of Medicine, University Hospitals Case Medical Center, MetroHealth Medical Center and the Cleveland Clinic Foundation and the Joint Clinical Research Center in Kampala Uganda. As the only NIH-funded CFAR in the Midwestern United States, the CFAR plays an important role in ensuring that cutting-edge AIDS research and well received community outreach is supported in our region of the country. Major strengths in the Case CFAR include international research, especially with respect to research in tuberculosis and HIV malignancy, microbicides, pathogenesis, virology, clinical trials, and training, at the national and international levels. As the first CFAR to make a major investment in international research, we have been able to expand a highly productive and long-standing scientific relationship with Makerere University, Kampa.

The Case CFAR shares and supports the mission of the National CFAR program to support a multi-disciplinary environment that promotes basic, clinical, epidemiologic, behavioral, and translational research in the prevention, detection, and treatment of HIV infection and AIDS. The Case CFAR provides: Leadership and strategic planning that promotes and supports outstanding HIV/AIDS research at our participating institutions, laboratory cores with expertise, state-of-the-art instrumentation and technologies; pilot grant awards and mentoring to develop junior faculty interested in HIV; educational and training efforts which encompass the whole range of contemporary HIV/AIDS research; community outreach programs, and the promotion of and participation in collaborative research efforts within the national CFAR network and in Uganda.

### The Center for Child Health and Policy at Rainbow Babies & Children’s Hospital

216.844.6253
Leona Cuttler, MD, Director
Ann Nevar, MPA, Supervisor

Established in 2007, the Center for Child Health and Policy at Rainbow (http://bulletin.case.edu/schoolofmedicine/www.rainbowbabies.org/healthpolicy) focuses on major health policy issues that are central to the well-being of children and youth. The Center recognizes that health policy forms a framework for all health care delivery, and that health policy is therefore essential to improving children’s health. In this way, the Center focuses on the nexus between policy and practice of pediatric medicine.

The Center fills the need to amalgamate expertise in pediatric medicine and research with expertise in health policy. Operating as a think tank, the Center brings together experts in child health, health finance, law and policy to perform policy analyses, consultations, research, educational programming, and community outreach to advance child health through policy. Work is focused on several areas including: Maternal/Fetal/Newborn Health; Chronic Illness; Quality; and Care Delivery Systems. The Center is the only program devoted to child health policy in Cleveland and one of few nationwide.

To date, the Center has accrued many products and achievements including: Ohio Health Policy Researcher of the Year in 2006; Ohio Health Policy Researcher of the Year for Independent Research in 2009; programs designated Centers of Excellence; multiple white papers, reports, and peer-reviewed publications; grants and awards from the National Institutes of Health, The Centers for Disease Control and Prevention, the Ohio Department of Health, the Ohio Department
of Job and Family Services, and numerous foundations; and invited/ elected memberships in state and national policy committees.

**Center For Health Care Research And Policy**

216.778.3902

Randall D. Cebul, MD, Director

The mission of the Center for Health Care Research & Policy (http://casemed.case.edu/mims) is to: 1) improve the health of the public by conducting research that improves access to health care, increases the quality and value of health care services, and informs health policy and practice; and 2) lead education and training programs that promote these goals. Formally established in 1994, the Center’s mission is carried out by a cross-disciplinary faculty who both lead and collaborate with other scholars in Northeast Ohio and beyond. A core faculty of 17 is extended by affiliated Senior Scholars throughout the university, assisted by an able staff and over 30 grant-supported research associates. The Center’s home at MetroHealth’s Rammelkamp Research and Education Building is an outstanding venue for collaborative research, mentoring of students and junior faculty, and cross-disciplinary seminars. The Center’s research and training focuses in programmatic areas that reflect national health care priorities as well as high impact problems in adults. Center Programs pertain to chronic conditions, especially stroke, obesity and diabetes, and kidney disease. Programs are supported by methods units, including biostatistics and evaluation, health care decision making, and health economics and health policy. Research using clinical informatics capitalizes on growing institutional capacities in electronic medical records (EMR) and clinical decision support. Center faculty view Northeast Ohio as a laboratory for research, recognizing the national relevance of regional challenges and opportunities. For over four years, the Center has served as the administrative home for Better Health Greater Cleveland, an EMR-catalyzed initiative to measure, publicly report, and improve health outcomes for the region’s residents with chronic medical problems. Center faculty also assume leadership roles in federally-supported degree programs in Health Services Research and Clinical Investigation and teach in the core curriculum of the School of Medicine.

**Center for Modeling Integrated Metabolic Systems**

216.368.4066

Gerald M. Saidel, PhD, Director

The Center for Modeling Integrated Metabolic Systems (MIMS) (http://casemed.case.edu/mims) combines mathematical modeling, computersimulation, and in vivo experimentation to quantify relationships between cellular metabolism and physiological responses of tissue-organ systems and the whole body. The MIMS Center was inspired by Dr. Marco E. Cabrera (deceased), who together with Prof. Gerald M. Saidel, co-directed this Center. It was established in 2002 with a $11.8 million grant (P50-GM066309) from NIGMS of the National Institutes of Health as a Center of Excellence in Complex Biomedical Systems (later Systems Biology). The MIMS Center involves multi-disciplinary research teams from Case Western Reserve University, Case Medical Center of University Hospitals of Cleveland, and Cleveland Clinic.

The primary aim of the MIMS Center is to develop mechanistic, mathematical models to simulate cellular metabolism in various tissues and organs (i.e., skeletal muscle, heart, brain, and adipose tissue) and to integrate these components in whole-body models. These biologically and physiologically based computational models incorporate cellular metabolic reactions and transport processes of a large number of chemical species. Model parameters quantitatively characterize metabolic pathways and regulatory mechanisms under normal and abnormal conditions including obesity and hypoxia as well as in disease states including type-2 diabetes, cystic fibrosis, and chronic kidney disease. The large-scale, complex mathematical models are solved numerically using sophisticated computational algorithms to simulate and analyze experimental responses to physiological and metabolic changes. Model parameters are optimally estimated by minimizing differences between model simulated outputs and experimental data using large-scale, nonlinear optimization algorithms. Experimentally validated models are used to predict the effects of altering metabolic processes with disease states, pharmacological agents, diet, and physical training.

**The Center for Translational Neuroscience**

216.368.5473

Robert M. Miller, PhD, Director

The goals of the Center for Translational Neuroscience (http://www.case.edu/med/CTN) are to develop scientific interactions that promote understanding of the pathology of neurological diseases and to develop novel therapeutic strategies for the treatment of those diseases. The Center pursues these goals through Translational Interest Group meetings and events, and through the Neurological Institute, in the University Hospitals Case Medical Center, where clinicians and investigators have a direct conduit between research and developing treatments.

**Cleveland Functional Electrical Stimulation (FES) Center**

216.231.3257

Robert F. Kirsch, PhD, Executive Director

Robert Ruff, MD, PhD, Medical Director

The Cleveland Functional Electrical Stimulation (FES) Center (http://fescenter.org) is a consortium of three nationally recognized institutions: Department of Veterans Affairs, MetroHealth Medical Center and Case Western Reserve University. Through the support of these partners, the Cleveland FES Center is able to provide a continuum of advancement. Created in 1991 with a grant from the Department of Veterans Affairs, the FES Center currently has research funding at the federal, state and local levels and additional industry and foundation funding in excess of $17M in order to achieve its mission.

The Center focuses on the application of electrical currents to either generate or suppress activity in the nervous system. This technique is known as functional electrical stimulation (FES). FES can produce and control the movement of otherwise paralyzed limbs for standing and hand grasp, activate visceral bodily functions such as bladder control or respiration, create perceptions such as skin sensibility, arrest undesired activity such as pain or spasm, and facilitate natural recovery and accelerate motor relearning. Founded to introduce FES into clinical practice, the Center provides innovative options for restoring neurological health and function by developing advanced technologies and integrating them into clinical care.

**Institute for Transformative Molecular Medicine**

216.368.5725

Jonathan S. Stamler, MD, Director

The Institute for Transformative Molecular Medicine (ITMM), which operates under the combined aegis of Case Western Reserve University and University Hospitals, is composed of physician-scientists and basic discovery researchers who work to acquire fundamental scientific knowledge within the field of molecular medicine. Founded in 2010, the ITMM provides physician-scientists with the opportunity for professional advancement based on their contributions to life sciences, protected from demanding clinical schedules or administrative responsibilities. The mission of the ITMM is to foster the unrestricted pursuit of new knowledge that can be cultivated as the basis for therapeutic innovation, and to join new generations of physician-scientists.
Endowed Lectures

Publications
Publications describing the School of Medicine are produced by the Office of Development, Alumni Relations, and Communications. Many articles and news reports are accessible via the Web under news and publications. (http://casemed.case.edu) The medical school produces an annual report highlighting accomplishments in research, education, and service.

For example, AlumniNews, produced by the Office of Alumni Relations, features updates to keep alumni connected to past colleagues, current students, and happenings at the School of Medicine. This biannual newsletter publishes in the spring and fall, and all alumni who spent the majority of their time within the School of Medicine (MD and PhD alumni) should receive a printed issue in the mail. Copies are also delivered to locations around the medical school to reach MD and PhD students, and a link to a PDF version is emailed to all students. This university-wide publication is distributed electronically to all CWRU alumni once a month. Each school within the university submits one news bulletin for publication and can be viewed online (http://www.cwru.edu/alumni/news). The Reunion Newsletter is distributed to all alumni who are celebrating milestone reunion years from the School of Medicine. This newsletter is published three times during the year for celebratory years. The third issue each year serves as a follow-up on the celebration. This last publication is also sent to the next year’s reunion classes to create momentum and get alumni involved in upcoming reunions.

Endowed Lectures

The Nikaan B. Anderson Lecture
Established in 1974 by friends of the late professor of anesthesiology (from 1969 until his death in 1974), this annual lecture is presented by teachers of the science of anesthesia.

The Claude S. Beck Scholarship Visiting Lectureship
This lecture, about cardiovascular surgery, was established in 1989. At what is now known as the Case Western Reserve University School of Medicine, Claude S. Beck, MD, was demonstrator of surgery in 1924 to 1925; professor of neurosurgery in 1940; and the first professor of cardiovascular surgery in the United States from 1952 until 1965.

The Richard E. Behrman, MD, Lecture In Child Development
Established in 2001 with contributions from friends of colleagues of this former School of Medicine dean (1980 to 1989), this annual lecture is delivered by distinguished scholars in child development.

The Jack H. Berman, MD, Lecture
Established in 1999 by family, friends and colleagues of this alumnus and associate clinical professor, guest lecturers discuss the basic science behind disease and its application to patient care through this program.

The Louis A. Bloomfield Memorial Lecture
Established in 1955 in memory of the Cleveland attorney Theodore R. Bloomfield by his widow and his son, this lecture brings outstanding members of the medical profession from around this country and abroad to discuss new concepts and developments in medicine with the medical community and allied professions.

The William E. Bruner, MD, DSc, Lecture in Ophthalmology
This lecture was established in 2002 in memory of the father of Clark E. Bruner and grandfather of William E. Bruner II, MD, a 1975 medical school alumnus, with gifts coming from them as well as Susan F. Bruner.

The Courtney Burton Frontiers of Medicine Lecture
This annual lecture is presented by an outstanding individual who has achieved or helped achieve a significant advance in medicine or a closely related field and whose presentation would be of great interest to members of the medical profession. It is supported by a fund established in 1993. Courtney Burton Jr., was chair of the board of Oglebay Norton Co. from 1957 until shortly before his death in 1992.

The Alfred Cahen Memorial Lecture
This lecture series in gastroenterology has been supported by a fund established in 1965 by Lottie Cahen, widow of the founder and former president of World Publishing Co., in memory of her late husband.

The Frohring Presidential Lectureship in Medicine and Engineering
Lecturers in medicine and engineering deliver this lectureship at the discretion of the University president thanks to a fund begun in 1993 by Paul R. Frohring.

Nathan S. Greenfield Family Visiting Lecturers in Pharmacology
Through an endowment, Rosalee Greenfield Weiss, PhD, and Raymond A. Weiss, PhD, established this annual lecture in 1997 to honor her father, Nathan S. Greenfield, a pharmacist who owned Wade Park Pharmacy in Cleveland from 1914 to 1956; her mother, Corinne Sternheimer Greenfield; and Lynn Stuart Weiss, daughter of the benefactors, who died of cancer in her mid-20s in 1971.

The Zella Hall Lecture
This annual lecture or series of lectures is presented by one or more distinguished visiting researchers selected by the dean of the School of Medicine or his or her designee. It/they are made possible because of support received in 1998 by the estate of Zella Hall.

The Hanna Lectures
Founded in 1913 by G. W. Crile, 1864-1943, in honor of H. Melville Hanna, philanthropist and founder of the MA Hanna Co., the Hanna Lectures are delivered by distinguished basic scientists from this country and abroad.

The William D. Holden Lectureship in Surgery
Established in 1985 by the members of the Department of Surgery of MetroHealth Medical Center in honor of their former chair and Payne Professor of Surgery, this series of lectures in surgery is delivered by distinguished leaders in American surgery.

The Lorand V. Johnson Lecture
This lecture, for residents and visiting staff members in ophthalmology, was established in 1967 by the Wright Foundation.
The Kaiser Permanente Endowed Lectureship in Bioethics
This lecture is presented by a distinguished visiting lecturer with the goal of advancing the study of bioethics. It was established in 1994.

The Rita Ann Kicher Lecture
In this annual lecture, established in 1996, a distinguished visiting lecturer promotes quality health care by emphasizing new developments in the identification and treatment of life-threatening cardiac arrhythmia. Rita Ann Kicher was the daughter of Thomas Kicher, PhD, a triple alumnus, long-time faculty member, and dean (1992-1997) of the Case School of Engineering. At the time of her death, she was a systems analyst at University Hospitals of Cleveland’s Center for Quality Assessment and Utilization Management.

The Clifford L. Kiehn, MD, and John Desprez, MD, Visiting Lecturers in Plastic and Reconstructive Surgery
These lecturers are distinguished visitors whose presentations advance the study of plastic and reconstructive surgery. The lectureship was established in 1994. Dr. Kiehn is the former head of plastic and reconstructive surgery, and Dr. Desprez followed him in that role.

The Jerome I. Kleinerman, MD, Lectureship in Pulmonary Pathobiology
This lectureship is named for an internationally respected lung specialist and professor emeritus of pathology at the School of Medicine. Established in 2000 by the late Dr. Kleinerman’s daughters, friends and colleagues, the lectureship each year supports a distinguished visiting lecturer whose presentation advances the study of pulmonary pathobiology. The lecturer is selected by a faculty committee that includes members having appointments at MetroHealth Medical Center. The members of the committee are chosen by the dean of the School of Medicine.

The Robert R. Kohn Lecture
The lecture honors an alumnus of the Class of 1957 and was established in his memory in 1989 by family, friends and colleagues to advance the study of pathology.

The Lester Krampitz Lecture and Education Fund
The fund was established in 1982 by family, friends and colleagues of former faculty member Lester Krampitz, MD, to honor him with a lecture fund in microbiology. It is intended to facilitate the interchange of ideas, a process Dr. Krampitz, who joined the faculty in 1946 and retired in 1978, believes is vital to scientific research.

The Carl H. Lenhart Surgical Lecture
Established in 1955 by friends of this alumnus of the Class of 1904, in his memory, this lecture presents outstanding speakers on clinical developments in surgery.

The Alan Moritz, MD, Endowment Fund
This fund was established in 1991 by friends and colleagues of the late forensic pathologist, medical school faculty members, and university provost.

The Olof H. Pearson, MD, Lecture
Established in 1999 by family and friends of the late endocrinologist, oncologist and faculty member, this lecture features a cancer-related topic at the School of Medicine.

The Robert S. Post, MD, Visiting Lectureship
Established in 1995 by Dr. Post’s friends and colleagues in the Community Dialysis Center, in memory of the former faculty member and head of nephrology, this lecture features a distinguished visiting expert in the field of nephrology.

The Edward W. Purnell Lectureship in Ophthalmology
Established in 1991 and named for the late physician, surgeon, researcher, and medical school head of ophthalmology, this lecture features a visiting expert in the Department of Ophthalmology.

The Frederick C. Robbins Lecture in the Department of Medicine Visiting Lecturer
Established in 1995 by the Department of Medicine in honor of Frederick C. Robbins, MD, dean emeritus of the School of Medicine, university professor emeritus, and Nobel Prize winner, this lecture features a distinguished visiting expert each year in the Department of Medicine.

The Henry Z. Sable, MD, PhD, Endowment Fund
Established in 1997 by Mrs. Florence M. Sable in honor of her late husband, who was professor emeritus of biochemistry, this lecture advances the study of biochemistry via a visiting expert selected by the chairperson of the Department of Biochemistry.

The Roy Scott Lecture
Established by colleagues, students, family and friends in memory of the former head of the Department of Medicine of MetroHealth Medical Center, this lecture involves an annual two-day visit of a leading cardiologist, who presents the lecture and grand rounds to house officers and students of the School of Medicine.

The Robert Sternlicht Visiting Lecturers in Pharmacology and Cancer Biology
Originally established in 1990 by friends and family and named the Robert Sternlicht Memorial Fund, these lectures feature distinguished experts whose presentations will advance the study of oncology at the School of Medicine. Lecturers are chosen by the chair of the Department of Pharmacology and the director of the comprehensive cancer center. Robert Sternlicht was the son of Himan Sternlicht, PhD, associate professor emeritus of pharmacology.

The Merton F. Utter Memorial Lecture
Established in 1981 in memory of the former professor of biochemistry and chair of the Department of Biochemistry, this lecture is delivered by a scientist of the highest caliber in a field related to those in which Dr. Utter was interested. Lecturers are chosen by the chair of the Department of Biochemistry.

The Austin S. Weisberger Lecture
Established in 1972 in the Department of Medicine, this lecture honors the memory of the man who, at the time of his death in 1970, was the John Huntington Hord Professor and chair of the Department of Medicine of the School of Medicine and University Hospitals.
The Harland G. Wood Endowment Fund in the Department of Biochemistry

Established in 1994 in memory of the late chair and professor of biochemistry and former provost of the university, this fund supports an annual Page-Wood symposium, co-sponsored by the School of Medicine and the Cleveland Clinic Foundation, featuring a leader in the field of biochemistry, an annual guest lecturer in biochemistry, and an annual guest lecturer selected by faculty with the rank of assistant professor in the Department of Biochemistry.

Administration

Pamela B. Davis, MD, PhD
Dean, School of Medicine and Vice President for Medical Affairs

Achilles A. Demetriou, MD, PhD
Vice Dean for Clinical Affairs for the Case Medical Center

George E. Kikano, MD
Vice Dean for Community Health

Clint W. Snyder, PhD
Interim Vice Dean for Education and Academic Affairs

Carol L. Moss, MS
Vice Dean for External Affairs and VP for Medical Development

Christopher Masotti, CPA, MBA
Vice Dean for Finance and Administration

Mark Chance, PhD
Vice Dean for Research

Lisa M. Mencini, CPA, MBA
Senior Associate Dean and Chief of Staff

Murray D. Altose, MD
Associate Dean for Louis Stokes Veterans Affairs Medical Center

Alfred Connors, Jr. MD
Senior Associate Dean for the MetroHealth System

C. Kent Smith, MD
Senior Associate Dean for Students

James Young MD
Executive Dean for Cleveland Clinic Lerner College of Medicine

Alan Hull, MD, PhD
Associate Dean for Curricular Affairs, Cleveland Clinic Lerner College of Medicine

Lina Mehta, MD
Associate Dean for Admissions

Terry M. Wolpaw, MD
Associate Dean for Curricular Affairs

Robert Daroff, MD
Associate Dean for Development

Gene H. Barnett, MD
Associate Dean for Faculty Affairs for Cleveland Clinic Lerner College of Medicine

Daniel E. Anker, PhD, JD
Associate Dean for Faculty Affairs and Human Resources

Alison K. Hall, PhD
Associate Dean for Graduate Education

Jerry M. Shuck, MD, DSc
Associate Dean and Director of Graduate Medical Education

Jill Stanley
Associate Dean for Space and Facilities Planning

Kathleen N. Franco, MD
Associate Dean for Admissions and Student Affairs, Cleveland Clinic Lerner College of Medicine

Robert L. Haynie, MD, PhD
Associate Dean for Student Affairs

Amy Wilson-Delosse, PhD
Assistant Dean for Basic Science Education

J. Harry Isaacson, MD
Assistant Dean for Clinical Education for Cleveland Clinic Lerner College of Medicine

Nicole Addington, CPA
Assistant Dean for Finance and Planning

James P. Bruzik, PhD

Interim Registrar
Anesthesiology and Perioperative Medicine

Laura Bishop (http://bulletin.case.edu/schoolofmedicine/anesthesiologyandperioperativemedicine/mailto:laura.bishop@case.edu), Coordinator

The Department of Anesthesiology and Perioperative Medicine medical division of the University Hospitals Case Medical Center includes more than four dozen Attending Anesthesiologists on staff supervising Resident Anesthesiologists and Anesthetists to provide the best patient care.

The Anesthesiologist Assistant Program at Case Western Reserve University began in 1969 and originally awarded a baccalaureate degree, evolving into a professional postgraduate curriculum in 1987 and granting the Master of Science degree. In general, admission to an AA program requires a bachelor’s degree with prescribed prerequisites typical of premedical course work, and successful completion of the MCAT.

Application Deadline: October 1 of each year for admission into June class. The 24-month AA program is accredited by the Commission on Accreditation of Allied Health Education Programs (CAAHEP) and is based on the Standards for Anesthesiologist Assistant Program.

Graduates must complete a curriculum which includes 63 credit hours (six semesters) of classroom and clinical instruction. The first three semesters integrate basic science and clinical instruction.

The program is led by Joseph M. Rifici, MEd, (http://bulletin.case.edu/schoolofmedicine/anesthesiologyandperioperativemedicine/mailto:Joseph.Rifici@uhhospitals.org) and Matthew Norcia, MD (http://bulletin.case.edu/schoolofmedicine/anesthesiologyandperioperativemedicine/mailto:Matthew.Norcia@UHhospitals.org). More information can also be obtained from Laura Bishop (http://bulletin.case.edu/schoolofmedicine/anesthesiologyandperioperativemedicine/mailto:Laura.Bishop@uhhospitals.org), Education Coordinator, Cleveland.

CWRU also oversees the Master of Science in Anesthesia Program - Houston, Texas Campus (http://casemed.case.edu/anesthesiaprogram/program/houston.cfm) and Washington, D.C. Campus (http://casemed.case.edu/anesthesiaprogram/program/dc.cfm).

Master of Science in Anesthesia Degree

The Master of Science in Anesthesia (MSA) Program mission is to graduate skilled and compassionate anesthesiologist assistants. The admission policy reflects this goal. Applicants are considered on a variety of parameters which measure academic ability, communication skills, clinical aptitude, and personality traits.

Admission to the MSA program requires that the following criteria are met:

A. Bachelor’s degree from an accredited college or university

Documentation of each of the prerequisites listed below having been completed with a grade of B or higher within five (5) years prior to the application deadline at an accredited American or Canadian institution of higher learning. For those courses that have been repeated, the highest grade will be used in the calculation.

- one semester of biochemistry
- one year of biology with laboratory*
- one year of anatomy with laboratory (human preferred)

B. Medical College Admission Test

- minimum composite score of 20
- test must have been completed within 3 years of application deadline
- when the MCAT has been taken more than once, component scores from different exams may not be combined

Applicants with international undergraduate, graduate or advanced degrees must meet the standard admission requirements listed above. International application requirements also include the TOEFL (Test of English as a Foreign Language) OR the IELTS (International English Language Testing System) and Education Credential Evaluation Reports for foreign transcripts.

All information must be received by the deadline, October 1st. Candidates participate in interviews with members of the Admission Committee, which is comprised of faculty and staff members of the MSA program. All academic requirements must be completed satisfactorily before matriculation. Prospective candidates are permitted and encouraged to shadow an anesthetist in the OR. Prior approval for this visitation is required.

The 24-month program includes 66 credit hours (six semesters) of classroom and clinical instruction. The first three semesters integrate basic science and clinical instruction. During the remaining 3 semesters, students complete month-long rotations in all subspecialties of anesthesiology: ambulatory surgery, burns and trauma, cardiothoracic surgery, general surgery, neurosurgery, obstetrics, pediatrics, surgical intensive care unit. Clinical training focuses on all types of anesthesia including general, epidural, spinal and peripheral nerve blockade.

Instruction is also provided in advanced patient care monitoring techniques and pre-testing, calibration and operation of anesthesia delivery systems and monitors. At Case our personal approach and rigorous educational standards produce compassionate and highly skilled anesthesiologist assistants.

The MSA Program is accredited by the Commission on Accreditation of Allied Health Education Programs (CAAHEP) and is based on the Standards for Anesthesiologist Assistant Programs. Graduates sit for the Certification Examination administered by the National Commission for Certification of Anesthesiologist Assistants (NCCAA) and co-sponsored by the National Board of Medical Examiners (NBME).

Additional information may be found on the Master of Science in Anesthesia Program Web site (http://casemed.case.edu/anesthesiaprogram).

**Year Total:**

- Total Units 66

## Courses

### ANES 403. Cardiac Electrophysiology. 2 Units.
In this course students will learn basic and advanced Electrocardiogram interpretation using simulators and electrocardiograms to understand an overview of heart anatomy, function, and neurophysiology.

### ANES 440. Patient Monitoring and Instrumentation I. 2 Units.
Students are taught the proper balance between circuits and engineering concepts and the clinical application of anesthesia instrumentation. Monitors and devices used in the operating room are studied with respect to principles of operation, calibration, and interpretation of data. A hands-on laboratory is utilized to maximize direct contact to the instrumentation of the profession.

### ANES 441. Patient Monitoring and Instrumentation II. 2 Units.
Continuation of ANES 440. Recommended preparation: ANES 440.

### ANES 456. Applied Physiology for Anesthesiologist Assistants I. 3 Units.
Basic and applied human systems physiology with emphasis on topics and areas of special concern to the anesthetist.

### ANES 458. Applied Physiology for Anesthesiologist Assistants II. 3 Units.
Continuation of ANES 456. Recommended preparation: ANES 403 and ANES 456.

### ANES 460. Introduction to Anesthesia. 2 Units.
Introduction to basic concepts dealing with clinical anesthesia. Medical terminology, human anatomy, medical chart interpretation and drug dosage calculations.

### ANES 461. Orientation to Clinical Experience. 3 Units.
Introduction to experience in the operating room with emphasis on the fundamental procedures and techniques used in administering an anesthetic. Preoperative assessment, IV placement techniques, airway management, intraoperative patient care and postoperative management are all emphasized in this course. BLS (basic life support) certification is required for course completion. Recommended preparation: Acceptance in the M.S.A. program.

### ANES 462. Anesthesia Clinical Correlation I. 1 Unit.
A series of conferences presented by students that applies to anesthetic theory as it relates to the clinical experience. Specific anesthetic situations are emphasized. Recommended preparation: ANES 460.

### ANES 463. Anesthesia Clinical Experience I. 3 Units.
A continuation of the preparation, observation, and hands-on learning format initiated in ANES 461. Patient management and technical skills are refined with close attention to the didactic course work. A comprehensive clinical examination is administered at the end of the semester. ACLS (Advanced Cardiac Life Support) certification is required for course completion. Recommended preparation: ANES 461.
ANES 464. Anesthesia Clinical Correlation II. 1 Unit.
A spectrum of case presentation conferences presented by the students dealing with basic and major problems in anesthesia management. Medical and surgical history of individual patients and the outcomes of anesthesia and surgery are emphasized. Journal Club and Mortality and Morbidity conferences are included. Recommended preparation: ANES 462.

ANES 465. Anesthesia Clinical Experience II. 4 Units.
A continuation of ANES 463. A comprehensive clinical examination is administered at the end of the semester. PALS (Pediatric Advanced Life Support) and ACLS (Advanced Cardiac Life Support) certification is required for course completion. Recommended preparation: ANES 463, BLS Certification, ACLS Certification.

ANES 467. Anesthesia Clinical Experience III. 4 Units.
Extended exposure to all of the clinical subspecialties of anesthesiology (obstetrics, pediatrics, neurosurgery, cardiovascular, etc.). Students alternate through rotations at several area hospitals. Recommended preparation: ANES 465, ACLS certification and PALS.

ANES 468. Anesthesia Clinical Correlation III. 1 Unit.

ANES 469. Anesthesia Clinical Experience IV. 8 Units.
A continuation of ANES 467. A comprehensive clinical examination is administered at the end of the semester. Recommended preparation: ANES 467.

ANES 470. Anesthesia Clinical Correlation IV. 1 Unit.

ANES 471. Anesthesia Clinical Experience V. 8 Units.
A continuation of ANES 469. A comprehensive clinical examination is administered at the end of the semester. Recommended preparation: ANES 469.

ANES 475. Pharmacology for Anesthesiologist Assistants I. 2 Units.
Pharmacodynamics, pharmacokinetics, uptake, distribution and action of the volatile and intravenous anesthetics, muscle relaxants, narcotics, hypnotics and other pharmaceuticals used in the administration of an anesthetic. Prereq: Consent of Department.

ANES 476. Pharmacology for Anesthesiologist Assistants II. 2 Units.
Continuation of ANES 475. Prereq: ANES 475.

ANES 477. Clinical Decision Making in Anesthesia. 2 Units.
An introduction to thinking about clinical situations and problems and coming to safe and effective solutions to these problems. This course focuses on common clinical situations where appropriate decision making is important to the outcome of the case. Numerous areas of medicine and anesthesiology will be covered to provide the student with a wide sampling of decisions made each day with patient care. This course supplements the other courses offered during the spring semester by integrating and applying basic science knowledge to the care of patients. Prereq: Consent of department.

ANES 480. Fundamentals of Anesthetic Sciences I. 1 Unit.
A continuum of courses over the fall and spring semesters that covers a series of topics in basic medical science with special emphasis on the effect of anesthetics on normal physiology. An examination is administered at the end of each semester.

ANES 481. Fundamentals of Anesthetic Sciences II. 1 Unit.
A series of topics in basic medical science with special emphasis on the effect of anesthetics on normal physiology. An examination is administered at the end of the semester. Prereq: ANES 480.

ANES 485. Introduction to Physiological Model-Based Simulation. 1 Unit.
Introduction to physiological model-based simulation using on-screen computer simulation and mannequins. Emphasis is placed on improving appropriate anesthesia-related basic science knowledge, manual skills in anesthesia machine checkout, drug and equipment setup, safety inspections, and performing anesthesia for uncomplicated surgical cases.

ANES 486. Physiological Model-Based Simulation I. 1 Unit.
An extension of ANES 485 with emphasis on improving or exercising knowledge of anesthesia-appropriate basic science, the use of more advanced equipment and techniques for uncomplicated surgical cases with an introduction to crisis management. Recommended preparation: ANES 485.

ANES 487. Physiological Model-Based Simulation II. 1 Unit.
An extension of ANES 486 emphasizing the physical techniques aspects of crisis management, team work and rescue in anesthesia, including support for and review of training in Basic Life Support and Advanced Cardiac Life Support. Recommended preparation: ANES 486.

ANES 488. Anesthesia Non-Technical Skills Lab. 1 Unit.
In this course the student will learn anesthesia non-technical skills, which are used integrally with medical knowledge and clinical techniques. They encompass both interpersonal skills (e.g. communication, team working, leadership) and cognitive skills (e.g. situation awareness, decision making). This course uses modified Crew Resource Management techniques taught in the aviation industry and considers the limitations of human performance and the nature of human error. The goals are to train individuals to avoid, capture and mitigate against the consequences of error. During the course, behaviors shown to minimize errors and maximize patient safety are highlighted and then practiced, with feedback being given to students on their performance.

ANES 490. Ethics, Law and Diversity for Anesthesiologist Assistants. 2 Units.
This course will focus on three topics. First, a discussion of legal practice as it applies to health care including basics of medical jurisprudence, negligence, and how to avoid a lawsuit. Second, a discussion of ethical theory including the principles of medical ethics, do not resuscitate, truth telling, and assessment of competence. Last, a discussion on diversity that will focus on the differences and similarities among people and how these factors influence patient care. The final grade will be based on an essay and a multiple choice exam.

ANES 499. Clinical Remediation. 1 - 10 Unit.
(Credit as arranged.) Course offered to the student one time during the program of study which remediates “C” or below work in a clinical course.
ANES 580. Fundamentals of Anesthetic Sciences III. 1 Unit.
The second-year equivalent of ANES 480 and 481. An examination is administered at the end of the semester. Recommended preparation: ANES 480 and 481.

ANES 581. Fundamentals of Anesthetic Sciences IV. 1 Unit.
The second year equivalent of ANES 481. An examination is administered at the end of the semester. Prereq: ANES 580.

ANES 584. Physiological Model-Based Simulation III. 1 Unit.
An extension of ANES 487 emphasizing the physical techniques and aspects of crisis management, team work, and rescue in anesthesia. Prereq: ANES 487.

ANES 585. Physiological Model-Based Simulation IV. 1 Unit.
Extension of ANES 584 emphasizing the physical techniques and aspects of crisis management, team work, and rescue in anesthesia. Prereq: ANES 584.

ANES 599. Clinical Remediation. 1 - 10 Unit.
(Credit as arranged.) Course offered to the student one time during the program of study which remediates "C" or below work in a clinical course.
Department of Anatomy

Ms. Christine Marshall (http://bulletin.case.edu/schoolofmedicine/anatomy/mailto:christine.marshall@case.edu), Department Administrator

The goal of the Department of Anatomy is to provide individuals with the skills and experiences that will allow them to develop and maintain successful careers as researchers and teachers. The strengths of both the faculty and students of the department help lead to the achievement of this goal. Graduate studies in the Department of Anatomy can lead to the master of science degree in applied anatomy. The master’s degree may be obtained as part of a joint degree program for qualified individuals participating in other programs at the university, such as the joint MD/MS degree. Every MS graduate student in the Department of Anatomy must successfully complete 21 credits in the core curriculum of anatomical sciences, human gross anatomy, histology, neuroanatomy and embryology. An additional two credits offered by the department in seminar and research presentations also are required. Elective course work and, for the thesis MS students, laboratory rotations and research, complete the graduate students’ program of study. Research areas of particular strength among faculty in the Department of Anatomy include biological anthropology, cell injury, control of respiration, and non-molecular developmental neurobiology. The department has existing collaborative research efforts with basic scientists in several clinical departments, including medicine, orthopedics, pediatrics, neurology and neurosurgery.

MS Applied Anatomy

The Applied Anatomy program is designed for students who seek a comprehensive education in the anatomical sciences, particularly those individuals pursuing careers as medical health professionals and teachers who desire an advanced degree to enhance their skills and credentials. The Anatomical Sciences Core Curriculum (ASCC) courses emphasize the traditional aspects of anatomical structure, function, and nomenclature with critical aspects of cell and developmental biology, biochemistry, and physiology of cells, tissues, and organs integrated into their content. The elective courses allow curriculum flexibility for students to emphasize their diverse individual interests. The Master of Science in Applied Anatomy serves as an excellent preparation for students to emphasize their diverse individual interests. The Master of Science in Applied Anatomy is an advanced degree that provides comprehensive education in the anatomical sciences, human gross anatomy, histology, neuroanatomy and embryology. The research experience may be obtained as elective coursework ANAT 499: Independent Study with individual faculty members.

Comprehensive written and oral exams covering the basic scientific principles presented in the core curriculum must be passed after successful completion of the core coursework comprising the Anatomical Sciences Core Curriculum. All degree requirements must be completed within five years; most students complete the program in 11/2-21/2 years. Tuition or stipends will not be provided for the master of science program (no additional tuition is required for enrolled medical students).

These specific sequences of classes, while common, are not exclusive and are meant only to exemplify the typical program of study leading to the Master of Science in Applied Anatomy degree. The required courses (21 credits) comprising the Anatomical Sciences Core Curriculum are specifically delineated, whereas the elective courses (9 credits minimum) are not identified since they vary significantly between individual students. Students become eligible to take the MS Comprehensive Examination upon successful completion of the ASCC courses.

Degree Requirements

The Master of Science in Applied Anatomy degree requires a minimum of 30 graduate course credits. Required courses include 21 credits of the Anatomical Sciences Core Curriculum; the remaining credits are elective courses selected to fulfill individual student interests and goals. Medical students are required to take at least one of the Surgical Anatomy courses. As a type B “comprehensive” program, a research thesis is not required for the MS Applied Anatomy, although research experience may be obtained as elective coursework ANAT 499: Independent Study with individual faculty members.

Admission

Acceptance into the Master of Science in Applied Anatomy program requires a baccalaureate degree from an accredited institution and is based on undergraduate and/or graduate GPAs, results of admission examinations (GRE, MCAT, DAT), plus letters of recommendation; an Educational Credential Evaluation and Authentication Report is required for foreign transcripts plus documentation (TOEFL) of English language skills for foreign applicants. Acceptance into the joint MD/MS program requires that the medical student be in good academic standing in the CWRU medical curriculum at the time of matriculation into the program, and a letter of approval from their respective Associate (‘Society’) Dean of Student Affairs. Each student in the Applied Anatomy program has a faculty advisor from the Department of Anatomy Graduate Executive Committee which coordinates the program and reviews the graduate Planned Program of Study for individual students. Contact the Department of Anatomy for additional program and application information.

Total Units in Sequence: 31-39

1 Surgical Anatomy I, worth 4 credit hours, to be taken in the fall; Surgical Anatomy II, worth 4 credit hours, to be taken in the spring.

Courses

ANAT 312. Basic Histology. 3 Units.
Fundamental histology course covering microscopic structure, nomenclature, and function of normal cells, tissues, and organs (human emphasis) to provide a sound foundation for bioengineering, pre-medical and pre-dental students.

ANAT 353. Anatomy for the Artist. 3 Units.
Reflecting the interdisciplinary nature of medical illustration, the course will have two complementary components. Morning sessions will involve instruction in human anatomy followed by direct observation and drawing of that anatomy from the cadaver. The entire body will be covered, including both the internal structures as well as those that directly impact the surface anatomy, to provide the student with a comprehensive understanding of the human form in its totality. Afternoon sessions will have students study the perceptual problems of drawing from the live model, focusing on the anatomical structure and functionality of the skeletal and muscular system. Muscle action and involvement in human movement and form will be analyzed and applied.

ANAT 375. Human Evolution: The Fossil Evidence. 3 Units.
This course will survey the behavioral and developmental changes that occurred in the hominid lineage during the past five million years. In addition to a thorough review of the fossil evidence for human evolution, students will develop the theoretical framework in evolutionary biology. Recommended preparation: ANTH 377, BIOL 225. Offered as ANAT 375, ANTH 375, ANAT 475 and ANTH 475. Prereq: ANTH 103.

ANAT 377. Human Osteology. 4 Units.
This course for upper division undergraduates and graduate students will review the following topics: human skeletal development and identification; and forensic identification (skeletal aging, sex identification and population affiliation). Offered as ANAT 377, ANTH 377, ANAT 477 and ANTH 477.

ANAT 391. Embryology. 3 Units.
A detailed description of development will be presented, focusing mainly on the developing human. Discussions and presentations will also include several developing systems that have served as useful models in experimental embryology for deciphering mechanisms responsible for producing adult metazoan organisms. Offered as ANAT 391 and ANAT 491.

ANAT 399. Independent Study. 1 - 4 Unit.
Laboratory research project. Student must obtain approval of a supervising Anatomy department professor before registration and list the professor’s name on the schedule card.

ANAT 411. Gross Anatomy. 6 Units.
This in-depth, cadaver dissection-based, course covers all aspects of human gross anatomy. The course is modeled after a traditional medical school gross anatomy curriculum and taught by the CWRU School of Medicine, Department of Anatomy faculty. It is divided into three sections: thorax and abdomen; pelvis/periene and limbs/back; and head and neck. One hour of lecture will precede 3 hours of dissection laboratory Monday, Wednesday, and Friday. Lectures and dissection labs will cover all human anatomy, and students should be prepared to devote more time that the scheduled hours of 1:00 to 5:00pm. Dissection labs are open 24 hours 7 days a week. Recommended preparation: B.A./B.S., or fourth year undergraduate science major.

ANAT 412. Histology and Ultrastructure. 4 Units.
Comprehensive functional histology course integrating microscopic identification (‘structure plus nomenclature’) of normal cells, tissues, and organs with aspects of their cell biology, biochemistry, and physiology (‘function’). Topical coverage includes complete (‘head-to-toe’) tissue and organ survey with human emphasis.
ANAT 413. General Histology Laboratory. 2 Units.
Microscopic structure of tissues and organs. Laboratory course associated with ANAT 412 (see ANAT 412 description). Recommended preparation: ANAT 312 or ANAT 412 or concurrent enrollment.

ANAT 414. Neurological Anatomy, 4 Units.
This course employs a variety of teaching-learning methods—among them lectures, small-group discussions, hands-on "construction" of pathways, and brain dissection. Regional morphology will be studied via examination of the preserved brain and of sections through the CNS; functional systems will be "followed" through the spinal cord, brain stem and/or forebrain.

ANAT 415. Neurological Anatomy Laboratory, 1 Unit.
This laboratory course provides an adjunct to ANAT 414, Neurological Anatomy. It affords the student the opportunity to learn the complex three-dimensional anatomy of the human central nervous system from photographs of brain slices and sections, from glass slides of human brain sections, from actual brain slices, and from dissection of the brain. The material will be approached not only through traditional methods of studying regional morphology but also by "following" the components of functional systems through the spinal cord, brain stem, and/or forebrain. Animated, three-dimensional, and color imagery will also be employed. Recommended preparation: ANAT 414 or concurrent enrollment.

ANAT 420. Forensic Pathology. 3 Units.
Forensic Pathology is that discipline where medicine and the law meet. Forensic pathologists strive to determine the cause, manner, and mechanism of death, and how to prevent unnatural death from occurring. This course reviews the field of forensic pathology, from sudden natural death, to homicide, to child abuse. Students will be exposed to an autopsy, and tour a crime laboratory. These tours are mandatory. Grading is based on performance on an examination and review and presentation of a forensic paper. Actual case material will be used. Students are therefore expected to maintain the highest professional and ethical standards.

ANAT 424. Neural Integrative and Regulatory Mechanisms. 3 Units.
This course is designed as a sequence to ANAT 414, Neurological Anatomy, or any other "introductory" course in neuroanatomy. Topics to be addressed include central regulation of pain, the regulation of somatic and visceral motor activity, neurotransmitter substances, the basal forebrain, the blood-brain barrier, levels of consciousness, sleep-wake mechanisms, cognitive behaviors and memory. Appreciation of the three-dimensional anatomy and vasculature of the spinal cord and brain will be gained through brain dissection and study of stained and unstained sections. Recommended preparation: ANAT 414 or permission.

ANAT 431. Statistical Methods I. 3 Units.
Application of statistical techniques with particular emphasis on problems in the biomedical sciences. Basic probability theory, random variables, and distribution functions. Point and interval estimation, regression, and correlation. Problems whose solution involves using packaged statistical programs. First part of year-long sequence. Offered as ANAT 431, BIOL 431, CRSP 431, EPBI 431, and MPH 431.

ANAT 445. Mammal Diversity and Evolution. 3 Units.
This course focuses on the morphologic and taxonomic diversity of mammals in a phylogenetic context. By the end of the course, students will be able to (1) describe the key morphological and physiological features of mammals; (2) identify the main anatomical characteristics of all orders and most families of extant, non-volent mammals; (3) interpret a phylogenetic tree and the data used to generate it; (4) appreciate major historical patterns in mammal diversity and biogeography. Two lectures and one lab each week; most labs will be specimen-based and will take place at the Cleveland Museum of Natural History. One weekend field trip to Cleveland Metroparks Zoo. This course satisfies a laboratory requirement for the biology major. Offered as ANAT 445, BIOL 345, and BIOL 445. Prereq: BIOL 214.

ANAT 452. Writing a Scientific Paper. 2 Units.
For graduate and post-doctoral students. Participants must have experimental data (not necessarily complete) with which they will write a full scientific paper. Course is limited to two participants.

ANAT 462. Advanced Principles of Developmental Biology. 3 Units.
Same as BIOL 362 except the required term paper is an NIH-format research proposal. Recommended preparation: BIOL 216. Offered as ANAT 462 and BIOL 462.

ANAT 467. Topics in Evolutionary Biology. 3 Units.
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/EEPS/PHIL/PHOL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation. Offered as ANTH 367, BIOL 368, EEPS 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, EEPS 467, PHIL 467 and PHOL 467.

ANAT 475. Human Evolution: The Fossil Evidence. 3 Units.
This course will survey the biological and behavioral changes that occurred in the hominin lineage during the past five million years. In addition to a thorough review of the fossil evidence for human evolution, students will develop the theoretical framework in evolutionary biology. Recommended preparation: ANTH 377, BIOL 225. Offered as ANAT 375, ANTH 375, ANAT 475 and ANTH 475. Prereq: ANTH 103.

ANAT 477. Human Osteology. 4 Units.
This course for upper division undergraduates and graduate students will review the following topics: human skeletal development and identification; and forensic identification (skeletal aging, sex identification and population affiliation). Offered as ANAT 375, ANTH 377, ANAT 475 and ANTH 477.

ANAT 491. Embryology. 3 Units.
A detailed description of development will be presented, focusing mainly on the developing human. Discussions and presentations will also include several developing systems that have served as useful models in experimental embryology for deciphering mechanisms responsible for producing adult metazoan organisms. Offered as ANAT 391 and ANAT 491.
ANAT 497. Scientific Presentations. 1 Unit.
These courses provide a foundation and experience for making scientific presentations. Scheduled simultaneously with ANAT 498 and students from both courses are present, but the requirements for passing differ. Students in ANAT 497 prepare PowerPoint and poster presentations. Oral presentations by students taking ANAT 498 will occur during the class periods for the remainder of the semester. Students taking 497 and 498 must participate in these discussions. Students must take ANAT 497: Scientific Presentations before ANAT 498: Applied Anatomy Seminar.

ANAT 498. Applied Anatomy Seminar. 1 Unit.
These courses provide a foundation and experience for making scientific presentations. Scheduled simultaneously with ANAT 497 and students from both courses are present, but the requirements for passing differ. Students in ANAT 497 prepare PowerPoint and poster presentations. Oral presentations by students taking ANAT 498 will occur during the class periods for the remainder of the semester. Students taking 497 and 498 must participate in these discussions. Students must take ANAT 497: Scientific Presentations before ANAT 498: Applied Anatomy Seminar.

ANAT 499. Independent Study. 1 - 4 Unit.
Laboratory research project. Student must obtain approval of a supervising Anatomy department professor before registration and list the professor's name on the schedule card.

ANAT 503. Readings and Discussions. 1 - 3 Unit.
In-depth consideration of special selected topics through critical evaluation of the literature. Student must obtain approval of supervising Anatomy department professor before registration.

ANAT 513. Surgical Anatomy of the Thorax and Abdomen. 4 Units.
This course is intended for graduate and fourth-year medical students interested in surgery and surgical subspecialties. This integrated course will review basic gross anatomy, provide advanced training in gross and surgical anatomy, introduce common clinical problems and their anatomical consequences, and basic surgical approaches. Recommended preparation: ANAT 411 and permission of instructor.

ANAT 515. Surgical Anatomy: Orthopaedic Musculoskeletal. 4 Units.
This orthopaedic musculoskeletal anatomy course is offered to M.S. in Applied Anatomy students and fourth-year medical students. The course will familiarize participants with surgical approaches used to treat musculoskeletal disease. Students will learn to correlate normal and abnormal anatomical findings with radiographical studies. Recommended preparation: ANAT 411.

ANAT 516. Surgical Anatomy: Head and Neck. 4 Units.
This cadaver-based advanced anatomy course is offered to M.S. in Applied Anatomy students and fourth-year medical students. Students will build on their understanding of basic gross, histological, pathologic, and embryonic anatomy of the head and neck. The course will familiarize participants with surgical approaches used to treat pathological conditions of the head and neck including cranial cavity, cranial base, orbit, maxillofacial, oral, otic, pharyngeal, and airway. Students are required to attend and participate in lectures, surgical labs, and discussions in order to successfully complete the course. Instructor consent is required. Recommended preparation: ANAT 411.

ANAT 523. Histopathology of Organ Systems. 3 Units.
Comprehensive course covering the underlying basic mechanisms of injury and cell death, inflammation, immunity, infection, and neoplasia followed by pathology of specific organ systems. Material will include histological (structure) and physiological (function) aspects related to pathology (human emphasis). Recommended preparation: ANAT 412 or permission of instructor. Offered as ANAT 523 and PATH 523.

ANAT 530. Medical Sculpture: Basic Facial Reconstruction. 2 Units.
This introductory course takes a step-by-step approach to forensic facial reconstruction. Students will study the placement and function of head and neck muscles and learn about average tissue depths. An oil-based clay will be used to add muscles and contours to a human skull cast at the depth indicated by tissue markers to successfully recreate facial features.

ANAT 531. Medical Sculpture: Advanced Facial Reconstruction. 2 Units.
Students must be able to interpret soft tissue data with a minimal amount of help. Students will be provided a cast human skull on which to complete a facial reconstruction using an oil-based clay using tissue depth data information from that skull. Once completed, a photograph of that individual is available to compare the achieved likeness. A final exercise will have students advance the age of the individual using age rendering techniques (adaptable to work with fugitives and missing persons). Recommended preparation: ANAT 530.

ANAT 610. Oxygen and Physiological Function. 3 Units.
Lecture/discussion course which explores the significance and consequences of oxygen and oxygen metabolism in living organisms. Topics to be covered include oxygen transport by blood tissues, oxygen toxicity, and mitochondrial metabolism. Emphasis will be placed on mammalian physiology with special reference to brain oxidative metabolism and blood flow as well as whole body energy expenditure and oxidative stress related to disease. Offered as ANAT 610 and PHOL 610.

ANAT 611. Practicum in Human Gross Anatomy. 1 - 3 Unit.
A course of study designed especially for the preparation of teachers that involves the supervised practical application of previously studied theory. Students accepted into ANAT 611 must participate in one of three sections of the course (as described below). Participation is defined as preparing a prospection prior to each dissection laboratory and being present to teach in each dissection laboratory. The opportunity exists, at the discretion of the course director, to present classroom lectures. Presentation of classroom lectures is not required. The teaching experience obtained will be obtained in ANAT 411 - Human Gross Anatomy. Teaching will be guided, supervised, and evaluated by the appropriate faculty from the department of anatomy. The three sections of ANAT 611 and the subjects covered are: Trunk Gross Anatomy (6 weeks), Musculoskeletal Gross Anatomy (3 weeks), Head & Neck Gross Anatomy (4 weeks). Recommended preparation: ANAT 411 and permission of instructor.
ANAT 612. Practicum in Histology and Ultrastructure. 2 Units.
A course of study designed especially for the preparation of teachers that involves the supervised practical application of previously studied theory. The prerequisite knowledge required for ANAT 612 must have been obtained previously in ANAT 412: Histology and Ultrastructure and the associated laboratory ANAT 413: Histology Laboratory. Required participation in ANAT 612 is defined as: 1. Meet weekly with course instructor to (pre)review course material; 2. Attend all ANAT 412 lectures; 3. Participate/assist in all ANAT 413 laboratory sessions. Teaching will be guided, supervised, and evaluated by the course instructor with reference to the graduate student's overall progress and performance as a teacher. Required prerequisites: ‘A’ grades on ANAT 412 and ANAT 413; permission of instructor required.

ANAT 614. Practicum in Neurological Anatomy. 1 Unit.
A course of study designed especially for the preparation of teachers that involves the supervised practical application of previously studied theory. The graduate student will administer all laboratory sessions, assisting students with identification of structures and with understanding the functional aspects of neuroanatomical pathways. The graduate student will meet with the course director once per week to discuss the student’s performance and progress and to plan for upcoming class sessions. The course director will assist the student in developing the organizational skills necessary to be a course director as the student learns to anticipate questions, define problematic areas, and recognize varying learning styles. The graduate student will be evaluated by the course director with reference to the graduate student's overall progress and performance as a teacher. Recommended preparation: ANAT 414.

ANAT 651. Thesis M.S.. 1 - 9 Unit.
Master’s Thesis Plan A.

(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
Department of Biochemistry

Sakeenah Bari-Harold (http://bulletin.case.edu/schoolofmedicine/biochemistry/mailto:sakeenah.bari-harold@case.edu), Coordinator

Biochemistry is the study of the molecular basis of cellular function, making it a central discipline in the biological sciences. Biochemists ask the question, "How do life processes work at the molecular level?" The Department of Biochemistry offers undergraduate programs leading to the bachelor of arts degree and bachelor of science degree in biochemistry and graduate programs leading to the master of science, doctor of philosophy, and dual-degree programs as follows: doctor of medicine/doctor of philosophy degree; doctor of medicine/masters of science in biomedical investigation; juris doctor/masters of science in biochemistry.

The department also participates in several interdisciplinary and interdepartmental programs in the School of Medicine and at Case Western Reserve University that provide additional avenues of study. Research interests within the department include a spectrum of modern biochemical topics in six broad areas: enzymology, protein chemistry, structural biology, gene expression, cell biology, and molecular medicine/gene therapy. The department has state-of-the-art equipment and facilities for research in modern biochemistry. More complete information about the undergraduate and graduate programs may be obtained by contacting the departmental office or by using the URL above.

Research Areas

Research of Department of Biochemistry faculty members covers a broad spectrum of topics from events at the level of electron movement in biochemical reactions to the intracellular trafficking of proteins. Research in the department is broadened by collaborations with faculty in other university departments and with scientists at other Cleveland research institutions. The specific areas of active research within the department are outlined below.

Proteins and Enzymes

Proteins are components of all living tissue, and their function is critical for life processes. Understanding the chemical mechanisms of enzymatic catalysis is essential for determining the role of individual proteins in human disease. Biochemistry faculty study a variety of proteins and enzymes ranging from growth factors to oncogenes.

Structural Biology

The function of a protein is determined by its three-dimensional structure and interactions. Faculty apply many modern techniques to the determination of macromolecular structure, including X-ray crystallography, and multidimensional heteronuclear NMR, fluorescence, Raman, and circular dichroism spectroscopy. Macromolecules under investigation include, transcarboxylase, ribosomes, DNA-protein complexes, and neurochemical enzymes.

Regulation of Gene Expression

The elucidation of mechanisms regulating gene expression is a major goal of modern biology. Biochemistry faculty study the control of transcription by hormones and other regulatory molecules, the interaction between proteins and DNA, the function of oncogenes, the basal and hormone mediated transcriptional machinery, and the processing and translation of RNA.

Cell Biology

The control of the metabolism, differentiation and cell signaling within and between cells is an area of active investigation.

Metabolic Regulation

Biochemistry faculty investigate the control of metabolism in animals, such as dietary and hormonal regulation of gene expression. Transgenic murine technology allows the study of the impact of gene ablation on metabolic processes.

BA Biochemistry I BS Biochemistry I Minor

Undergraduate Programs

Major

The two undergraduate major programs in Biochemistry, BA and BS, are based on the Arts & Sciences General Education Requirements, but differ in amount and intensity of the mathematics and physical sciences required. Either degree is excellent for students planning to undertake graduate work in biochemistry or in related areas of the biomedical sciences. Both the BA and the BS programs permit students to follow many options after graduation. Graduates are well prepared to pursue further studies in the biological sciences, for a career in medicine, for Doctor of Pharmacy programs, for employment in the chemical, pharmaceutical, and biotechnology industries, or as research assistants in research laboratories. The BA has a reduced emphasis on the quantitative aspects of science and makes available a considerable amount of elective time that permits a student to either concentrate on biochemistry even more intensively than the curriculum requires, or pursue other subjects in science or liberal arts. The BS degree is for the student who has a particularly strong interest in the quantitative physical sciences.

In both programs, undergraduate research is strongly encouraged. As many as nine hours of Research in Biochemistry (BIOC 391 Research Project) may be credited toward the requirements for graduation. The capstone in Biochemistry (BIOC 393 Senior Capstone Experience) is a thesis and presentation of a student’s undergraduate research studies.

**Total Units**: 118-151

Note: At least the 3 credits of undergraduate research, BIOC 391 Research Project, is minimally recommended for the Capstone. An additional 3 credits of BIOC 391 is highly recommended. Students should consult their academic advisers about the elective parts of the curriculum.

a Selected students may be invited to take CHEM 323 Organic Chemistry I, CHEM 324 Organic Chemistry II.

b One of the approved electives in Biochemistry taken must be either BIOC 312 Proteins and Enzymes or BIOC 334 Structural Biology.

### Total Units in Sequence: 121-151

Note: At least the 3 credits of undergraduate research, BIOC 391 Research Project, is a prerequisite to the Capstone. An additional 3 credits of BIOC 391 is highly recommended. Students should consult their academic advisers about the elective parts of the curriculum.

### Honors Program

Biochemistry majors who have excellent academic records may be admitted to the department's Undergraduate Honors Program. To graduate with departmental honors in biochemistry, a student must satisfy the following requirements:

1. A combined grade point average of at least 3.6
2. A minimum of 6 credit hours of undergraduate research BIOC 391 in one laboratory
3. A BIOC 393 report approved by the Undergraduate Education Committee of the department on the basis of the quality of the research, the written report, and an oral presentation. An acceptable report:
   A. Should follow a standard journal format
   B. Should demonstrate the student's understanding of the research area, experimental techniques, goals and implications of the project
   C. Should show that the student has advanced his/her knowledge of the applicable techniques and the underlying scientific concepts
4. The research mentor must write a letter recommending the student for honors on the basis of the student's contribution to the overall efforts of the laboratory.

### Minor

**Required Courses:**
- BIOC 307 General Biochemistry 4
- BIOC 308 Molecular Biology: Genes and Genetic Engineering 4

**One of the following:**
- BIOC 312 Proteins and Enzymes 3
Students may obtain credit for a minor in biochemistry by completing one year of freshman chemistry (including laboratory), one year of organic chemistry (including laboratory), two semesters of approved biology courses, and three semesters of didactic courses in biochemistry.

Masters Degrees

The Biochemistry Department offers four Masters degrees. The three-year Masters of Science in Biochemical Research provides training in laboratory research. The two-year Masters of Science in Biochemistry provides students with advanced study in biochemistry and related fields. Two other programs provide advanced study in biochemistry in conjunction with degrees in medicine (MD/MS) and law (JD/MS).

Prerequisites for admission into any of the Biochemistry Graduate Programs are one year each of chemistry, organic chemistry, calculus, biology and physics. Applicants must also have a BA, BS or equivalent undergraduate degree. As part of the application process, students are required to take the Graduate Record Examination (verbal, quantitative and an advanced area test, usually biology, biochemistry or chemistry). Some students with otherwise excellent qualifications, but lacking some of the prerequisites may be conditionally admitted with the understanding that specified deficiencies will be made up within a stipulated time span. Students with advanced training (coursework, laboratory research, MS degree, etc.) may be given advanced standing. Please visit the Department’s web page (http://www.cwru.edu/med/biochemistry) for details about the application process.

MS Biochemical Research Plan of Study

The program leading to the MS degree in biochemical research is uniquely designed to provide interested students with sufficient background and laboratory experience to enable them to function as senior research assistants and eventually as laboratory supervisors in university departments, research institutes, or industrial laboratories. Students in this three-year program receive a stipend, and tuition costs are covered by the department. The students pursue flexible and individually designed schedules, which prepare them for independent research projects in the second and third years of the program. The program simultaneously develops background knowledge and technical skills in modern biochemistry, which can be applied to several career paths. A more complete description of the program, admission policies, and financial aid is available from the departmental office.

The duration of the MSBR program is 33 months. Applicants who have been working as full time laboratory technicians may be granted 1 semester credit for one full year of work, and up to 2 semesters credit for two or more years of work. Credit for acceptable didactic coursework may be awarded up to a total of 14 hours. All decisions concerning advanced standing or transfer of credit will be made by the Graduate Education Committee following acceptance into the program and in consultation with the advisor. Courses taken to satisfy other degree requirements (i.e. BA or BS) may not be transferred for credit. A maximum of 6 hours can be transferred toward the course requirements, as set by the Graduate School. The program shall not be extended on the basis of work that needs to be completed in order to achieve a publishable result.

The degree follows Plan A for the Master’s degree. The program requires 36 hours of academic credit (including both research and didactic courses) as well as the writing and defense of a thesis. All courses must be at the 400 level or higher. The course credits include didactic courses (minimum of 12 hours of graded coursework), research (BIOC 610 Biochemical Research) and (BIOC 651 Thesis M.S.). BIOC 651 Thesis M.S. is taken only in the second and third years and requires an examination by the student’s pre-thesis committee and a written thesis. The student’s transcript will be annotated M.S. in Biochemical Research, including the title of the student’s independent project.

Prior to the student’s matriculation, she/he chooses an academic advisor. In general the selection process involves communication with those faculty members who have announced their interest in taking a Master’s student. In some cases the student may be invited to spend up to a week in the prospective advisor’s laboratory to facilitate the decision making process. In the early spring of the first year, pre-thesis committee of three faculty members (at least two of whom must be members of the Biochemistry faculty) is chosen by the student, in consultation with the advisor. In yearly meetings, this committee provides additional scientific expertise, offers support in overcoming research difficulties and evaluates the student’s progress in research and course work.

MS Biochemistry

The program leading to the MS degree in biochemistry is designed to provide students with knowledge of the latest advancements in biochemistry and related fields. It is intended for students who desire to pursue a career not directly involved with research, such as teaching, or various administrative positions in the pharmaceutical industry. Students typically enroll in three courses for each of four semesters. The duration of the MSB program is 21 months; it follows the Plan B for the Master’s degree (p. 662). The default advisor for this program is the Graduate Advisor, but another advisor may be selected. The student’s progress is monitored by the Biochemistry Graduate Advisor and by the Graduate Education Committee. The program requires 36 hours of academic credit of which 18 hours must be graded coursework.
Although a “coursework Masters degree”, students in the program often take 6 to 12 hours of BIOC 601 (Biochemical Research) as part of their requirements. All courses must be at the 400 level; they must be on the list of approved electives, or be approved by the advisor.

### MD/MS Biomedical Investigation-Biochemistry Track

The tracks proposed in the joint MD/MS program are derived from existing type B MS programs (p. 662) at the School of Medicine into a joint program with the MD, using a common template. The core activities for this degree include limited credit from the medical core curriculum, 3-6 graduate courses in specific tracks, participation in a common seminar series, scientific integrity training, and a requirement for a special problems project that reflects a full year of research (18 hours of 601 non-graded credits) culminating in a written report and examination. This program will require 5 years overall to complete the requirements for both degrees. Students who wish to join the MD/MS program may apply to the Program after arriving at the University any time prior to Fall of their second year of medical school. For more information, please see MD Dual Degrees (p. 792).

The Biochemistry track is designed to provide students with knowledge of the latest advances in biochemistry and related fields. It is also appreciated that a number of courses offered by other departments may be considered “biochemistry” in the broader sense. Depending on the research project, it may be appropriate for the student to substitute one of the courses below in lieu of one of the biochemistry electives. Should this be the case, the student must receive permission from the Graduate Program Advisor for this substitution prior to registering for the course.

**Students in the Biochemistry track must complete:**

### JD/MS in Biochemistry

This program allows students admitted to the School of Law an opportunity to pursue a master of science degree in Biochemistry as part of an additional year of study. Such training adds expertise to students who anticipate careers in patent law or in areas related to biotechnology or pharmaceutical research. Please see the separate listing in the publication materials provided by the School of Law on this program.

Entrance into this program is achieved first by acceptance into the CWRU School of Law. Upon acceptance, students can then apply to the Biochemistry program for admission into the JD/MS program. As a result of participating in the dual degree program, students complete 12 fewer hours of law school coursework than they would if they were in the JD program alone. The Department of Biochemistry accepts 9 hours of law school classwork in courses dealing with science issues, in place of 9 credits of other elective work. Thus, the student will take a total of 27 hours of Biochemistry coursework of which at least 12 hours must be letter graded.

Dual degree students are advised concerning matters related to the JD degree by the Associate Dean for Academic Affairs at the School of Law. In addition, dual degree students are granted priority registration for upper level courses, ensuring that they will be able to accommodate their scheduling needs in obtaining required classes. Dual degree students are advised concerning matters related to the MS in Biochemistry by a JD/MS Advisor as designated by the Graduate Education Committee of the Department of Biochemistry.

**JD/MS in Biochemistry (plan B (p. 662))**

**Research Oriented MS*”**
PhD Biochemistry

The aim of the PhD in biochemistry program is to prepare students for careers in teaching and research in biochemistry. The emphasis of the doctoral program is on research culminating in the completion of an original independent research project under the guidance of a faculty member in the biochemistry program. The research areas in the department are described later in this section. In addition to the research activities, graduate students participate in formal courses both within and outside the department, formal and informal seminars, and discussions of current literature. Although students choose from the various tracks within the department, all are broadly trained in modern aspects of biochemistry and become familiar with techniques and literature in a variety of areas. Many collaborative projects with other departments also are available to broaden the spectrum of training offered. Most students begin with an integrated curriculum in cellular and molecular biology in addition to specialized courses in biochemistry. Admissions to the Biochemistry program may be obtained through the Biomedical Sciences Training Program, by direct admission to the department or via the MSTP program.

Prerequisites for admission into the Biochemistry PhD Program include one year each of chemistry, organic chemistry, calculus, biology and physics. Applicants must also have a BA, BS or equivalent undergraduate degree. Students must submit scores from the Graduate Record Examination and may submit scores from an advanced area test, usually in biology, biochemistry or chemistry. Some students with otherwise excellent qualifications, but lacking some of the prerequisites may be conditionally admitted with the understanding that specified deficiencies will be made up within a stipulated time span. Please visit the Department’s web page (http://www.cwru.edu/med/biochemistry) for details about the application process.

To earn a PhD in Biochemistry, a student must complete rotations in at least three laboratories followed by selection of a research advisor, and complete Core and Elective coursework including responsible conduct of research as described in the Course of Study, below. Students who previously completed relevant coursework, (for example, with a MS) may petition to complete alternative courses.

In addition, each PhD student must successfully complete a qualifier examination for advancement to candidacy in the form of a short grant proposal with oral defense. The qualifier is generally completed in the summer after year two. During the dissertation period, students are expected to meet twice a year with the thesis committee, present seminars in the department, and fulfill journal publication requirements. Throughout the doctoral training, students are expected to be enthusiastic participants in seminars, journal clubs, and research meetings in the lab and program. Completion of the PhD degree will require 36 hours of coursework (24 hours of which are graded) and 18 hours of BIOC 701 Dissertation Ph.D..

Total Units in Sequence: 58-90

Courses

BIOC 307. General Biochemistry. 4 Units.

Overview of the macromolecules and small molecules key to all living systems. Topics include: protein structure and function; enzyme mechanisms, kinetics and regulation; membrane structure and function; bioenergetics; hormone action; intermediary metabolism, including pathways and regulation of carbohydrate, lipid, amino acid, and nucleotide biosynthesis and breakdown. One semester of biology is recommended. Offered as BIOC 307, BIOC 407, and BIOL 407. Prereq: CHEM 223 and CHEM 224.
BIOC 308. Molecular Biology: Genes and Genetic Engineering. 4 Units.
An examination of the flow of genetic information from DNA to RNA to protein. Topics include: nucleic acid structure; mechanisms and control of DNA, RNA, and protein biosynthesis; recombinant DNA; and mRNA processing and modification. Where possible, eukaryotic and prokaryotic systems are compared. Special topics include yeast as a model organism, molecular biology of cancer, and molecular biology of the cell cycle. Current literature is discussed briefly as an introduction to techniques of genetic engineering. Recommended preparation for BIOC 408 and BIOL 408: BIOC 307 or BIOL 214. Offered as BIOC 308, BIOL 308, BIOC 408, and BIOL 408. Prereq: BIOC 307 or BIOL 215.

BIOC 312. Proteins and Enzymes. 3 Units.
Aspects of protein and nucleic acid function and interactions are discussed, including binding properties, protein-nucleic acid interactions, kinetics and mechanism of proteins and enzymes, and macromolecular machines. Recommended Preparation: CHEM 301. Offered as BIOC 312 and BIOC 412. Prereq: BIOC 307.

BIOC 315. Nuclear Receptors in Health and Disease. 3 Units.
This course focuses on hormone-gene interactions mediated by the ligand-inducible transcription factors termed nuclear hormone receptors. The class will address the mechanisms of action, regulatory features, and biological activities of several nuclear receptors. The usage of nuclear receptors as therapeutic targets in disease states such as cancer, inflammation, and diabetes will also be discussed. The course aims to teach students to critically evaluate primary literature relevant to nuclear hormone receptors biology, and to reinforce presentation/discussion skills. Grades for undergraduates will be based on midterm, final exam; grades for graduates will be based on midterm, final exam, and presentation of a recently published research article related to the role of nuclear receptors in health and disease. Offered as PHRM 315, BIOC 315, PHRM 415 and BIOC 415.

BIOC 334. Structural Biology. 3 Units.
Introduces basic chemical properties of proteins and discusses the physical forces that determine protein structure. Topics include: the elucidation of protein structure by NMR and by X-ray crystallographic methods; the acquisition of protein structures from databases; and simple modeling experiments based on protein structures. Offered as BIOC 334, BIOL 334, BIOC 434, and BIOL 434. Prereq: BIOC 307.

BIOC 373. Biochemistry SAGES Seminar. 3 Units.
Discussion of current topics in biochemical research using readings from the scientific literature. The goals are for the student: 1) to discuss and critically analyze selections from the biochemical literature; 2) to gain a broader understanding of important topics not formally covered in the didactic courses; and 3) to learn to write in the style of journals in the field of biochemistry. Prereq: BIOC 307 and BIOC 308. Restricted to majors in Biochemistry.

BIOC 391. Research Project. 1 - 9 Unit.
(Credit as arranged.) Offered on a pass/fail basis only. Maximum 9 hours total credit.

BIOC 393. Senior Capstone Experience. 3 Units.
Students will complete their Capstone Projects, begun in BIOC 391. Pertinent research activities will depend on the nature of the student’s project. The student will meet regularly with their Capstone adviser, at least twice monthly, to provide progress reports, discuss the project, and for critique and guidance. By the end of this course, the student will have completed their SAGES Senior Capstone research project, written a project report in the form of a manuscript, and presented their project reports orally in the department and at the Senior Capstone Fair, or its equivalent. Prereq: BIOC 307 and BIOC 308.

BIOC 401. Impacts of Intellectual Property on Biomedical Research. 1 Unit.
This course will expose students to the challenges and opportunities related to intellectual property when developing biomedical technologies within the context of nonprofit research institutions. The course will examine the effects that patent law has on research strategy, funding availability and follow-on funding availability. Special attention will be paid to the dynamics between the potential for profit, the need for translational research and institutional and individual conflicts of interest.

BIOC 407. General Biochemistry. 4 Units.
Overview of the macromolecules and small molecules key to all living systems. Topics include: protein structure and function; enzyme mechanisms, kinetics and regulation; membrane structure and function; bioenergetics; hormone action; intermediary metabolism, including pathways and regulation of carbohydrate, lipid, amino acid, and nucleotide biosynthesis and breakdown. One semester of biology is recommended. Offered as BIOC 307, BIOC 407, and BIOL 407. Prereq: CHEM 223 or CHEM 224.

BIOC 408. Molecular Biology: Genes and Genetic Engineering. 4 Units.
An examination of the flow of genetic information from DNA to RNA to protein. Topics include: nucleic acid structure; mechanisms and control of DNA, RNA, and protein biosynthesis; recombinant DNA; and mRNA processing and modification. Where possible, eukaryotic and prokaryotic systems are compared. Special topics include yeast as a model organism, molecular biology of cancer, and molecular biology of the cell cycle. Current literature is discussed briefly as an introduction to techniques of genetic engineering. Recommended preparation for BIOC 408 and BIOL 408: BIOC 307 or BIOL 214. Offered as BIOC 308, BIOL 308, BIOC 408, and BIOL 408.

BIOC 412. Proteins and Enzymes. 3 Units.
Aspects of protein and nucleic acid function and interactions are discussed, including binding properties, protein-nucleic acid interactions, kinetics and mechanism of proteins and enzymes, and macromolecular machines. Recommended Preparation: CHEM 301. Offered as BIOC 312 and BIOC 412.

BIOC 413. Advanced Topics in Molecular and Biochemical Research Ethics. 0 Units.
This course offers continuing education in responsible conduct of research for advanced graduate students. The course will cover the nine federally defined responsible conduct of research (RCR) areas through a combination of lectures, on-line course material and small group discussions. Six 2-hour meetings per semester are planned. Maximum enrollment of 15 students with preference to graduate students in the Department of Molecular Biology and Microbiology, the Department of Biochemistry, and trainees of the Cell and Molecular Biology Training Grant. Offered as: BIOC 413, MBIO 413.
BIOC 415. Nuclear Receptors in Health and Disease. 3 Units.
This course focuses on hormone-gene interactions mediated by the ligand-inducible transcription factors termed nuclear hormone receptors. The class will address the mechanisms of action, regulatory features, and biological activities of several nuclear receptors. The usage of nuclear receptors as therapeutic targets in disease states such as cancer, inflammation, and diabetes will also be discussed. The course aims to teach students to critically evaluate primary literature relevant to nuclear hormone receptors biology, and to reinforce presentation/discussion skills. Grades for undergraduates will be based on midterm, final exam; grades for graduates will be based on midterm, final exam, and presentation of a recently published research article related to the role of nuclear receptors in health and disease. Offered as PHRM 315, BIOC 315, PHRM 415 and BIOC 415.

BIOC 420. Molecular Genetics of Cancer. 3 Units.
Cancer is a genetic disease, not only in the Mendelian sense of inheritance, but also in the sense that it is caused by somatic mutation. The targets of mutation are a set of proto-oncogenes and tumor suppressor genes whose products govern cellular proliferation, death and differentiation. The objectives of this course are to examine the types of genes that are the targets of mutational activation or inactivation and the mechanistic outcome of mutational changes that lead to oncogenesis. The course will also probe viral mechanisms of oncogenesis related to the products of cellular proto-oncogenes or tumor suppressor genes. In the course of these examinations we will explore the genetic and molecular genetic approaches used to identify and study oncogenes and tumor suppressor genes. Students should be prepared to present and discuss experimental design, data and conclusions from assigned publications. There will be no exams or papers but the course will end with a full-day, student-run symposium on topics to be decided jointly by students and instructors. Grades will be based on class participation and symposium presentation. Offered as BIOC 420, MBIO 420, MVIR 420, PATH 422, and PHRM 420. Prereq: CBIO 453 and CBIO 455.

BIOC 430. Advanced Methods in Structural Biology. 1 - 6 Unit.
The course is designed for graduate students who will be focusing on one or more methods of structural biology in their thesis project. This course is divided into 3-6 sections (depending on demand). The topics offered will include X-ray crystallography, nuclear magnetic resonance spectroscopy, optical spectroscopy, mass spectrometry, cryo-electron microscopy, and computational and design methods. Students can select one or more modules. Modules will be scheduled so that students can take all the offered modules in one semester. Each section is given in 5 weeks and is worth 1 credit. Each section covers one area of structural biology at an advanced level such that the student is prepared for graduate level research in that topic. Offered as BIOC 430, CHEM 430, PHOL 430, and PHRM 430.

BIOC 432. Current Topics in Vision Research. 3 Units.
Vision research is an exciting and multidisciplinary area that draws on the disciplines of biochemistry, genetics, molecular biology, structural biology, neuroscience, and pathology. This graduate level course will provide the student with broad exposure to the most recent and relevant research currently being conducted in the field. Topics will cover a variety of diseases and fundamental biological processes occurring in the eye. Regions of the eye that will be discussed include the cornea, lens, and retina. Vision disorders discussed include age-related macular degeneration, retinal ciliopathies, and diabetic retinopathy. Instructors in the course are experts in their field and are members of the multidisciplinary visual sciences research community here at Case Western Reserve University. Students will be exposed to the experimental approaches and instrumentation currently being used in the laboratory and in clinical settings. Topics will be covered by traditional lectures, demonstrations in the laboratory and the clinic, and journal club presentations. Students will be graded on their performance in journal club presentations (40%), research proposal (40%), and class participation (20%). Offered as NEUR 432, PATH 432, PHRM 432 and BIOC 432.

BIOC 434. Structural Biology. 3 Units.
Introduces basic chemical properties of proteins and discusses the physical forces that determine protein structure. Topics include: the elucidation of protein structure by NMR and by X-ray crystallographic methods; the acquisition of protein structures from data bases; and simple modeling experiments based on protein structures. Offered as BIOC 334, BIOL 334, BIOC 434, and BIOL 434.

BIOC 452. Nutritional Biochemistry and Metabolism. 3 Units.
Mechanisms of regulation of pathways of intermediary metabolism; amplification of biochemical signals; substrate cycling and use of radioactive and stable isotopes to measure metabolic rates. Recommended preparation: BIOC 307 or equivalent. Offered as BIOC 452 and NTRN 452.

BIOC 460. Introduction to Microarrays. 3 Units.
Microarray technology is an exciting new technique that is used to analyze gene expression in a wide variety of organisms. The goal of this course is to give participants a hands-on introduction to this technology. The course is intended for individuals who are preparing to use this technique, including students, fellows, and other investigators. This is a hands-on computer-based course, which will enable participants to conduct meaningful analyses of microarray data. Participants will gain an understanding of the principles underlying microarray technologies, including: theory of sample preparation, sample processing on microarrays, familiarity with the use of Affymetrix Microarray Suite software and generation of data sets. Transferring data among software packages to manipulate data will also be discussed. Importation of data into other software (GeneSpring and DecisionSite) will enable participants to mine the data for higher-order patterns. Participants will learn about the rationale behind the choice of normalization and data filtering strategies, distance metrics, use of appropriate clustering choices such as K-means, Hierarchical, and Self Organizing Maps. Course Offered as BIOC 460, PATH 460, CNCR 460. Prereq: CBIO 455.
BIOC 475. Protein Biophysics. 3 Units.
This course focuses on in-depth understanding of the molecular biophysics of proteins. Structural, thermodynamic and kinetic aspects of protein function and structure-function relationships will be considered at the advanced conceptual level. The application of these theoretical frameworks will be illustrated with examples from the literature and integration of biophysical knowledge with description at the cellular and systems level. The format consists of lectures, problem sets, and student presentations. A special emphasis will be placed on discussion of original publications. Offered as BIOC 475, CHEM 475, PHOL 475, PHRM 475, and NEUR 475.

BIOC 476. Cellular Biophysics. 4 Units.
This course focuses on a quantitative understanding of cellular processes. It is designed for students who feel comfortable with and are interested in analytical and quantitative approaches to cell biology and cell physiology. Selected topics in cellular biophysics will be covered in depth. Topics include theory of electrical and optical signal processing used in cell physiology, thermodynamics and kinetics of enzyme and transport reactions, single ion channel kinetics and excitability, mechanotransduction, and transport across polarized cell layers. The format consists of lectures, problem sets, computer simulations, and discussion of original publications. The relevant biological background of topics will be provided appropriate for non-biology science majors. Offered as BIOC 476, NEUR 477, PHOL 476, PHRM 476.

BIOC 519. Molecular Biology of RNA. 3 Units.
Selected topics regarding editing, enzymatic function, splicing, and structure of RNA. Offered as BIOC 519, CLBY 519, and MBIO 519.

BIOC 521. Chromatin, Epigenetics, and Disease. 3 Units.
The Departments of Genetics and Biochemistry are pleased to announce "Chromatin, Epigenetics, and Disease advanced graduate students. This course will review the history of chromatin and cover the relationships between chromatin structure and the processes of transcription, gene silencing, cell fate determination, DNA methylation, and RNA interference and other biological processes. The course will also cover epigenetic mechanisms and their effects on human disease. The course will emphasize critical reading of articles from the primary literature, presentations by students, and be predominantly discussion based. Limit: 12 students. Offered as BIOC 521 and GENE 521.

BIOC 599. RNA Structure and Function. 3 Units.
This course will cover fundamental aspects of modern RNA biology with emphasis on the interplay of three dimensional structure of nucleic acids and their function. The main focus of the course is on the recent discoveries that indicate a prominent role of RNA as a major regulator of cellular function. Topics discussed will include an introduction to RNA structure, folding and dynamics, RNA/RNA and RNA-protein interactions, and role of RNA in catalysis of biological reactions in ribosome and the role of other catalytic RNAs in rRNA biogenesis, pre-mRNA splicing, and viral replication. The course also covers the recently discovered RNA regulatory switches, large noncoding regulatory RNAs, and the role of RNA in human diseases and novel, RNA-based therapeutics. Offered as BIOC 599, CLBY 599, and MBIO 599.

BIOC 601. Biochemical Research. 1 - 18 Unit.
Credit as arranged.

BIOC 605. Independent Project in Biochemical Research. 1 - 18 Unit.
Credit as arranged. Limited to students in the M.S. program in biochemical research. Prereq: BIOC 407 and BIOC 601.

BIOC 611. Biochemistry Seminar I. 1 Unit.
Student presentations of topics from the current scientific literature unrelated to the student’s research project. Participants are required to present a seminar.

BIOC 612. Biochemistry Seminar II. 1 Unit.
Discussion of current research.

BIOC 617. Special Topics in Biochemistry. 3 Units.
Special topics courses on areas of current interest in biochemistry.

BIOC 618. Special Topics in Biochemistry. 3 Units.
Special topics courses on areas of current interest in biochemistry.

BIOC 620. Transcription and Gene Regulation. 3 Units.
This course covers mechanisms of transcription that play critical roles in biological processes. It is designed to develop scientific thinking in designing experiments and evaluating the merits of research papers. Students will be able to present two to three 30-minute talks. Topics include: 1) structure and function of RNA polymerases; 2) accessory factors involved in initiation, elongation, and termination; 3) regulation transcription; 4) transcriptional coactivators and corepressors; 5) regulation of transcription factor activity. A take-home exam will be conducted at the final week. Grades will be based on presentations and take-home exam. Offered as BIOC 620 and MBIO 620.

BIOC 641. Proposition I. 2 Units.
Design of research proposal.

BIOC 643. Proposition II. 2 Units.
Design of research proposal.

BIOC 651. Thesis M.S.. 1 - 6 Unit.
(Credit as arranged.)

BIOC 701. Dissertation Ph.D.. 1 - 18 Unit.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
Department of Bioethics

Marie Norris (http://bulletin.case.edu/schoolofmedicine/bioethics/mailto:marie.norris@case.edu), Program Assistant

The mission of the Department of Bioethics is to improve public and professional understanding of the ethical issues involved in health sciences research, health care delivery, and health policy development through teaching, research and community dialogue.

The department has offices at the Case’s School of Medicine and at MetroHealth Medical Center and has faculty from multiple disciplines, including philosophy, religion, law, political science, anthropology, history, sociology, nursing and medicine.

Department faculty teach in both core and elective components of the medical school curriculum, undergraduate courses in ethics, and an intensive course in responsible conduct of research for PhD students in the School of Medicine. The department also has a highly successful master’s degree program in bioethics.

Department faculty have gained international prominence for research in many areas of biomedical ethics that collectively address the concerns of the School of Medicine’s spectrum of biomedical disciplines.

The Department of Bioethics publishes a newsletter, Bioethics Update. Bioethics Update contains information and articles on a variety of ethical issues of interest to both professional and lay communities. It is published three times a year and features faculty research and activities, department events, and master’s degree alumni information.

Please visit the department website (http://www.case.edu/med/bioethics/bioethics.html), where visitors can read Bioethics Update online, obtain information about the master’s degree and PhD programs, and learn about department and faculty activities.

Master of Arts in Bioethics Degree

The Department of Bioethics offers a program leading to the Master of Arts degree in bioethics, emphasizing the interdisciplinary and interprofessional nature of the field. This graduate program is designed to provide advance training in bioethics for students and professionals who anticipate encountering ethical issues in the course of their primary careers.

The 27 credit-hour degree can be earned full-time in one year or part-time in up to three years. Core courses are taught by department faculty and are scheduled so that part-time students can continue their professional responsibilities while completing the degree.

The Master of Arts program provides students with a firm understanding of the intellectual content of the study of bioethics, of bioethical literature, and of the underlying philosophical arguments and empirical assumptions that inform it. Students are taught to understand the institutions and structures of health care and the ethical issues that arise in medical practice. They are trained to identify and analyze a range of clinical ethics issues.

All students pursuing a Master of Arts degree in bioethics are required to complete the interdisciplinary core of 12 credit hours (the equivalent of four courses) in the first two semesters of their first year of study.

The courses, BETH 401 Foundations in Bioethics I, and BETH 402 Foundations in Bioethics II, each six credits, examine 10 basic topic areas in bioethics: death and dying, the therapeutic relationship, method and theory in bioethics, organ transplantation, health care justice, defining health care needs, reproduction and fertility, families, babies and children, research ethics and genetics. Classes meet two evenings per week for seminar sessions (two hours per session).

Another required course is BETH 405 Clinical Ethics Rotation. This course requires a minimum of 8 hours of clinical experience per week during two 10-week rotations. Students spend most of their time observing rounds in relevant services (intensive care units, pediatrics, geriatrics, etc.) with leading clinicians at several area hospital sites. Students must complete rotations at two sites. At the conclusion of each rotation, students are familiar with the clinical, psychological, social, professional, and institutional contexts in which ethical problems arise. Also, they are able to identify, analyze and understand ethical issues as they develop.

In addition, all students must complete 12 credit hours of electives. Electives are selected in consultation with a faculty advisor. Electives must enhance the student’s understanding of bioethical issues and must be relevant to the student’s academic goals.

The department currently offers dual-degree programs with the School of Medicine (MD/MA), the School of Medicine’s Department of Genetics (PhD/MA), the School of Law (JD/MA), the Frances Payne Bolton School of Nursing (MSN/MA) the School of Medicine’s Public Health program (MPH/MA) and Mandel School of Applied Social Sciences (MSSA/MA) at CWRU. Students must apply and be accepted to each program to qualify.

Commencing in the fall semester of 2007, the department will offer a new research ethics track within the MA program, designed to prepare specialists who will pursue research ethics-related work as a primary career (IRB coordinators, research administration, etc.) or who will use this specialized training to enhance their primary careers (investigators, regulators, etc.). In addition to the core seminars BETH 401 Foundations in Bioethics I and BETH 402 Foundations in Bioethics II, discussed above, the research ethics track will feature a modified clinical ethics rotation, focused on IRB work and research ethics activities, and four research ethics electives.

Admission policies conform to those of Case Western Reserve University School of Graduate Studies. In general, an applicant for admission and concurrent financial consideration must have completed application forms on file by March 1 for the fall semester.

PhD in Bioethics

The increasing complexity of the health care system has resulted in a growing need for investigators who can conduct research to address pressing social problems in bioethics. The objective of the bioethics doctoral program is to train scholars who will have specific expertise
in the conceptualization, design and conduct of empirical research concerning bioethics questions. Graduates will:

- obtain grounding in the philosophical basis of bioethics to conceptualize and analyze moral problems
- develop a theoretical perspective to guide their research
- be proficient in empirical methodologies (both qualitative and quantitative) so that they can conduct research in bioethics problems
- become researchers who can develop and conceptualize timely and meaningful research questions in bioethics

Graduates of the program have a wide range of opportunities, including careers as independent investigators, serving as a bridge between colleagues in the traditional medical humanities and those in clinical and basic-science departments, and employment in academic bioethics centers, clinical and basic science departments in medical schools and schools of public health, government agencies, and public policy institutes.

PhD students receive a full tuition scholarship, health insurance support and a $20,000-per-year graduate assistantship.

**Course of Study**

Completion of the PhD requires

- Minimum of 51 credit hours of course work for candidates with bachelor’s degrees; minimum of 42 credit hours for candidates with master’s degrees
- 18 credit hours of dissertation course work
- 125 research hours (supervised research experiences with Department faculty)
- Training in research ethics
- Comprehensive examination preceding advancement to candidacy
- Defense of dissertation proposal
- Completion of dissertation
- Defense of dissertation

**Core Coursework**

- Foundations in Bioethics I & II
- Clinical Ethics Rotation
- Advanced Seminar on Methods in Normative Bioethics I & II
- Empirical Research Methods and Design in Bioethics I & II
- Statistical Methods and Data Management in Bioethics I & II
- Grant Writing
- Critical Readings in Bioethics
- Research hours

Additional course work: three credit hours each in advanced statistics, methods and study design, and theory from the social sciences, and six credit hours of elective courses

**Enrollment in the Doctoral Program**

The doctoral program is highly selective. Candidates should have a strong theoretical background in the social sciences or philosophy, preferably in the form of a master’s degree in a relevant discipline or a clinical degree. Candidates also must demonstrate an ability to work with quantitative data and demonstrate promise of integrating theory and empirical application.

**Applicants must complete an interview and submit:**

- CWRU Graduate School Application
- Transcripts (undergraduate and graduate if applicable)
- GRE scores — verbal, analytic and quantitative sections. Scores will be considered in relation to the applicant’s other credentials. Applicants may submit scores of other standardized tests in addition to the GRE.
- Three letters of recommendation
- A letter to the admission committee detailing the applicant’s general interests in bioethics and the candidate’s past training and current research interests

**PhD Bioethics, Plan of Study**

**Total Units in Sequence:** 85.5
Courses
BETH 271. Bioethics: Dilemmas. 3 Units.
We have the genetic technology to change nature and human nature, but should we? We have the medical technology to extend almost any human life, but is this always good? Should we clone humans? Should we allow doctor-assisted suicide for the terminally ill? This course invites students from all academic disciplines and fields to examine current and future issues in bioethics—e.g., theory and methods in bioethics; death and dying; organ transplantation; genetics; aging and dementia; fertility and reproduction; distributive justice in health care access. The course will include guest lecturers from nationally-known Bioethics faculty. Offered as BETH 271, PHIL 271.

BETH 314. Global Health: India. 3 Units.
Bioethics is the study of ethical controversies arising at the intersection of biology, medicine, technology, politics, law, philosophy, religion and culture. This course will discuss and analyze the issue of health in India; recognizing that health is more than the diagnosis and treatment of a disease. Using three diseases (HIV/AIDS, leprosy and tuberculosis) students will explore the relationship between culture and health care outcomes. Relevant issues addressed in the course include the history of British rule in India, Hinduism, the Caste system, poverty, access to education and public policy. Faculty will introduce readings on the history of India, medical anthropology, religion and the law. Students will then be given the opportunity to focus on a particular topic, research the existing literature, present their findings to the class and create a plan to observe the chosen topic while in India during the Summer semester. Course instructors include Nicole Deming, JD, MA Assistant Professor of Bioethics; Deepak Sarma, PhD. Associate Professor of South Asian Religions; and Gopal Yadavalli, MD Assistant Professor of Medicine and Chief of the Infectious Diseases Clinic at the Cleveland VA Medical Center. The course will also invite guest lectures from many different departments and schools to share their expertise and experience in the areas of Global Justice, Anthropology, and Human Rights.

BETH 315. International Bioethics: Policy and Practice. 3 Units.
Taught by Case and international faculty, this course will include 7-10 days of intensive didactic and experiential learning in one of several "host" countries. Examples of sites include: Free University of Amsterdam and University of Utrecht in the Netherlands; University of Paris in France; and Ben Gurion University in Israel. It will afford a unique opportunity to gain perspective on important bioethics issues in different societies, i.e., euthanasia, public health policies, access to healthcare, and stem cell research. At the international site, students will spend 6 hours per day (5 days) in seminar (involving didactics, discussion, and guided-observation clinical experience). There will be two 3-hour preparatory sessions, required reading, and two 3-hour post trip sessions. Requirements: preparation, attendance, and class participation, a 12-15 page paper (undergraduate credit) and a 15-20 page paper (graduate credit). Graduate credit will also require students to prepare a presentation for a post-intensive session. Enrollment will be capped at 25. This course has an additional fee to cover costs of travel and lodging. Limited scholarships are available. Offered as BETH 315 and BETH 415.

BETH 315A. International Bioethics Policy and Practice: Women’s Health in the Netherlands. 3 Units.
This 3-credit course allows students to familiarize themselves with social policies and practices related to women’s health in the United States and the Netherlands. Issues covered in the course include birth control and family planning, abortion, prenatal testing, childbirth, health care disparities, cosmetic surgery, prostitution and trafficking in women. This course also addresses the US and Dutch national policies regarding the public provision of health care for women. The course places an emphasis on the ways in which social norms shape policies over time, which political actors are involved in shaping women’s health policy, and the balance between women’s health as a matter of the public good or individual responsibility. This course substantively explores gender-specific cultural values and practices in relation to women’s health in the United States and the Netherlands and will help students develop the analytical skills necessary for evaluating social policy and ethical issues related to women’s health. Offered as BETH 315A and BETH 415A.

BETH 315B. International Bioethics Policy and Practice: Public Health in the Netherlands. 3 Units.
This one week 3-credit intensive course will be held in Amsterdam, The Netherlands. Taught by faculty from Case and Utrecht University, this course offers students a cross-cultural perspective on ethical dilemmas raised by the practice of public health in the United States and Northern Europe. Additionally, this course examines policies related to prostitution, drug use, sex education, infectious disease prevention, and access to health care and how they differ in the cultural and political settings of U.S. and the Netherlands. We will examine both the rationales and outcomes of Dutch and American policies, stimulating course participants to consider their own views on these often controversial issues. Prior to the trip, students will attend lectures at Case, which will acquaint them with the theoretical approaches to public health ethics and major issues raised in the practice of public health. In these pre-trip sessions, students will also analyze and report on a case study designed to stimulate critical thinking on comparative public health ethics. In Amsterdam, students will attend lectures that will be supplemented by site visits and discussion sessions aimed at exploring the ethics of public health policy and practice in the Netherlands. Following the intensive week in Amsterdam, students will meet with instructors at Case for two hours to discuss their experiences and compare policies and practices in the United States and the Netherlands. Offered as BETH 315B and BETH 415B.

BETH 315C. International Bioethics Policy and Practice: Health Care Costa Rica. 3 Units.
This 3-credit course gives students the unique opportunity to observe patients and practitioners encounter in a radically different health care system. Costa Rica has one of the most comprehensive health care systems in the Western hemisphere, featuring the innovative use of mid-level health care workers organized in basic comprehensive health care teams. This has resulted in a longer life expectancy than the United States, despite a per capita GDP of only $10,000 per person. Students will gain first-hand experience of Costa Rican health care through field experiences at sites including a national hospital in the capital city, San Jose; a peripheral treatment clinic in a smaller town; and observation of the work of an integrated basic health care team in an indigenous reserve. Following each visit, students will discuss the practical and ethical dilemmas that practitioners face in the context of the Costa Rican health care system. Specific topics include: health inequalities within and between nations; the ethics of transplantation, medical research, and end-of-life care; and health care in rural environments and with indigenous populations. Offered as BETH 315C and BETH 415C.
BETH 315D. International Bioethics Policy and Practice: Issues at the Beginning and End of Life in France. 3 Units.
This 3-credit course gives students the unique opportunity to observe patients and practitioners in a radically different health care system. France has one of the most comprehensive and successful health care systems in the world which covers all citizen and non-citizen residents of France. Instruction is by Case and French faculty and includes 3 classes of intensive didactic learning in the US and 5 days of intensive didactic and experiential learning in Paris, France. Students will gain first-hand experience of the French health care through lectures and readings with French bioethicists and physicians who, generally, are one and the same. Field experiences at sites include the principal medical school in Paris, as well as hospitals, clinics, assisted reproduction facilities and hospices in order to explore the ethical issues related to life and death. Specific topics include: of lectures at home and in Paris include medical education in France, the ethics of a national health care system, reduction/elimination of health care inequalities, gender issues in medical education and medical practice, genetic research, abortion, assisted reproductive technologies, end of life decision making in adult and pediatric medicine, transplantation technologies and immigrant health. Offered as BETH 315D and BETH 415D.

BETH 315E. International Bioethics: Policy and Practice-US and Spanish Perspectives, Salamanca Spain. 3 Units.
This 3-credit hour course will introduce advanced undergraduate and graduate students to theoretical and practical aspects of bioethics in a European context. Continental health professionals and bioethicists work in an environment that differs from the American context in at least three important dimensions: the political structure of their health care systems, the cultural influence of their religious histories, and the theoretical perspective of continental moral philosophy. The University of Salamanca in Spain, one of the oldest universities in Europe (known as the "Oxford of Spain"), will be used in this course as a focal point for examining the interplay of these three dimensions in shaping institutional and professional approaches to specific problems in bioethics, including end of life decisions, organ procurement and allocation, reproductive ethics, health care justice, and environmental bioethics ("eco-ethics"). This course will help advanced students who are already grounded in American bioethics develop the analytical skills necessary for evaluating European bioethical scholarship and policy-making, while helping less advanced students develop a familiarity with fundamental similarities and differences between bioethics in Spain and the U.S. The course will include a one week trip to Salamanca, Spain where students will be taught by instructors and faculty from the University of Salamanca. Teaching will include some guided field experiences and regular discussion sessions with the course faculty. Prior to the trip, students will attend 4 hours of class at Case to become familiar with elements of political theory and moral philosophy relevant to the in-country discussions. Following the trip, students will meet with instructors for an additional 2 hours. Offered as BETH 315E and BETH 415E.

BETH 315F. Looking at Bioethics through the Lens of Both American and Spanish Films. 3 Units.
This one week 3-credit intensive course will be held in San Sebastian, Spain. Taught by faculty from CWRU and University of the Basque Country, this course offers students a cross-cultural perspective on bioethics in the United States and Spain. This course uses the medium of film, complemented by readings in bioethics, film criticism, and medical research, to introduce students to a number of compelling bioethics problems facing physician-scientists today, including: when life begins, the nature and limits of informed consent, use of randomization without equipoise, medical imperialism (or the appearance thereof), the treatment of so-called "orphan" diseases, use of deception in research, and financial conflicts of interests caused by among other things, the involvement of the pharmaceutical industry in the drug invention process. Offered as BETH 315F and BETH 415F.

BETH 401. Foundations in Bioethics I. 6 Units.
The first of the two required seminar courses, this course covers five basic topic areas in bioethics: death and dying; health professional-patient relationship; method and theory in bioethics; organ transplantation; and ethics and children. The course meets twice weekly and is taught in seminar format by Center faculty members who are experts on specific topics. Preentry.

BETH 402. Foundations in Bioethics II. 6 Units.
This course completes the required seminar core and covers the basic bioethics topic areas: health care justice; defining 'health care needs;' reproduction and fertility ethics; research ethics; and ethics in genetics. The course meets twice weekly and is taught in seminar format by Center faculty members who are experts on specific topics. Recommended preparation: BETH 401.

BETH 405. Clinical Ethics Rotation. 1.5 - 3 Unit.
In this course students will become familiar with the clinical, psychological, social, professional, and institutional context in which ethical problems arise. This course exposes students to clinical cases, to hospital ethics committees and ethics consultation programs, to institutional review boards (IRB), and to hospital policies covering the "do not resuscitate" orders (DNR), advance directives, withdrawal of artificial feeding, organ procurement and transplantation, and medical futility. Requires minimum of 8 total hours of rotation experience per week during two semester 10-week rotations. Locations for this course include: MetroHealth Medical Center, University Hospitals of Cleveland, and the Hospice of the Western Reserve. Recommended preparation: BETH 401 or concurrent enrollment.

BETH 408. Ethics, Law and Health Research. 3 Units.
This course focuses on an examination of issues arising at the juncture of law, ethics, and health research, such as informed consent, the assessment of risks and benefits, conflict of interest, and scientific misconduct. Particular attention is placed on issues arising in the context of study design and community based research. To the extent possible, the class will utilize a case-focused approach.
BETH 409. Global Justice and Bioethics. 3 Units.
This course aims to introduce students to the problem of global distributive justice, with an emphasis on both theoretical accounts of justice, and the practical implications of those accounts for important topics in global bioethics. The first half of this course will be devoted to important contemporary works which bring out core philosophical ideas about justice and how we address concerns of justice globally. The second half of this course will focus on current global bioethics topics, such as inequality and poverty, global intellectual property rights, the allocation of healthcare resources, the setting of research priorities, exploitation & the distribution of the benefits of research, and medical tourism. In addition to familiarizing students with the contemporary literature regarding global justice and related topics in bioethics, this course also seeks to help students strengthen their skills in reading, analyzing, interpreting, and engaging with philosophy and bioethics texts. This course is a seminar and will therefore emphasize in-class discussion rather than lecture. Students are expected to prepare by reading all assigned readings before class.

BETH 410. Reproductive Ethics. 3 Units.
Reproductive ethics is a sub-discipline of bioethics that deals with moral issues related to pregnancy, reproduction, and reproductive health care. Relevant issues include procreative liberty and reproductive rights, sterilization, contraception, abortion, conscientious refusals by health care professionals to participate in abortions or in other reproductive practices, reproductive genetic testing, prenatal healthcare, birthing practices, in vitro fertilization, surrogacy, gamete and embryos donation, and research involving reproductive materials. Particular attention will be paid to why each of these issues is controversial.

BETH 412. Ethical Issues in Genetics/Genomics. 3 Units.
This course is designed to familiarize graduate students with the major controversies over the generation and use of new human genetic information. Topics will include the spread of predictive genetic testing, prenatal diagnosis, genetic discrimination, human genetic variation research, eugenics, genetic counseling, and the limits of human gene therapy. The course will be conducted as a seminar, involving discussions of readings, guest speakers, and student presentations.

BETH 414. International Health Research Ethics. 3 Units.
This course will introduce students in the health and social sciences to key ethical issues that arise in international health research. The course will include intensive reading and case-based discussion of current ethical and moral quandaries posed by research conducted in the international arena. Five full-day sessions are planned. Each day will be divided into a series of formal presentations and active, group-based discussions around topics that include: the historical context of international health research; current international ethics principles, standards, and declarations; key tools and concepts for unpacking ethical issues in international health research; issues in informed consent and conflict of interest; “reasonable availability” and the conduct of clinical trials; cutting-edge international genetics research; and, the responsibility of researchers to the international health community. Course evaluation is based on class participation, a written exercise, and a case analysis.

BETH 415. International Bioethics: Policy and Practice. 3 Units.
Taught by Case and international faculty, this course will include 7-10 days of intensive didactic and experiential learning in one of several “host” countries. Examples of sites include: Free University of Amsterdam and University of Utrecht in the Netherlands; University of Paris in France; and Ben Gurion University in Israel. It will afford a unique opportunity to gain perspective on important bioethics issues in different societies, i.e., euthanasia, public health policies, access to healthcare, and stem cell research. At the international site, students will spend 6 hours per day (5 days) in seminar (involving didactics, discussion, and guided-observation clinical experience). There will be two 3-hour preparatory sessions, required reading, and two 3-hour post trip sessions. Requirements: preparation, attendance, and class participation, a 12-15 page paper (undergraduate credit) and a 15-20 page paper (graduate credit). Graduate credit will also require students to prepare a presentation for a post-intensive session. Enrollment will be capped at 25. This course has an additional fee to cover costs of travel and lodging. Limited scholarships are available. Offered as BETH 315 and BETH 415.

BETH 415A. International Bioethics Policy and Practice: Women’s Health in the Netherlands. 3 Units.
This 3-credit course allows students to familiarize themselves with social policies and practices related to women’s health in the United States and the Netherlands. Issues covered in the course include birth control and family planning, abortion, prenatal testing, childbirth, health care disparities, cosmetic surgery, prostitution and trafficking in women. This course also addresses the US and Dutch national policies regarding the public provision of health care for women. The course places an emphasis on the ways in which social norms shape policies over time, which political actors are involved in shaping women’s health policy, and the balance between women’s health as a matter of the public good or individual responsibility. This course substantively explores gender-specific cultural values and practices in relation to women’s health in the United States and the Netherlands and will help students develop the analytical skills necessary for evaluating social policy and ethical issues related to women’s health. Offered as BETH 315A and BETH 415A.

BETH 415B. International Bioethics Policy and Practice: Public health in the Netherlands. 3 Units.
This one week 3-credit intensive course will be held in Amsterdam, The Netherlands. Taught by faculty from Case and Utrecht University, this course offers students a cross-cultural perspective on ethical dilemmas raised by the practice of public health in the United States and Northern Europe. Additionally, this course examines policies related to prostitution, drug use, sex education, infectious disease prevention, and access to health care and how they differ in the cultural and political settings of U.S. and the Netherlands. We will examine both the rationales and outcomes of Dutch and American policies, stimulating course participants to consider their own views on these often controversial issues. Prior to the trip, students will attend lectures at Case, which will acquaint them with the theoretical approaches to public health ethics and major issues raised in the practice of public health. In these pre-trip sessions, students will also analyze and report on a case study designed to stimulate critical thinking on comparative public health ethics. In Amsterdam, students will attend lectures that will be supplemented by site visits and discussion sessions aimed at exploring the ethics of public health policy and practice in the Netherlands. Following the intensive week in Amsterdam, students will meet with instructors at Case for two hours to discuss their experiences and compare policies and practices in the U.S. and the Netherlands. Offered as BETH 315B and BETH 415B.
BETH 415C. International Bioethics Policy and Practice: Health Care Costa Rica. 3 Units.
This 3-credit course gives students the unique opportunity to observe patients and practitioners encounter in a radically different health care system. Costa Rica has one of the most comprehensive health care systems in the Western hemisphere, featuring the innovative use of mid-level health care workers organized in basic comprehensive health care teams. This has resulted in a longer life expectancy than the United States, despite a per capita GDP of only $10,000 per person. Students will gain first-hand experience of Costa Rican health care through field experiences at sites including a national hospital in the capital city, San Jose; a peripheral treatment clinic in a smaller town; and observation of the work of an integrated basic health care team in an indigenous reserve. Following each visit, students will discuss the practical and ethical dilemmas that practitioners face in the context of the Costa Rican health care system. Specific topics include: health inequalities within and between nations; the ethics of transplantation, medical research, and end-of-life care; and health care in rural environments and with indigenous populations. Offered as BETH 315C and BETH 415C.

BETH 415D. International Bioethics Policy and Practice: Issues at the Beginning and End of Life in France. 3 Units.
This 3-credit course gives students the unique opportunity to observe patients and practitioners encounter in a radically different health care system. France has one of the most comprehensive and successful health care systems in the world which covers all citizen and non-citizen residents of France. Instruction is by Case and French faculty and includes 3 classes of intensive didactic learning in the US and 5 days of intensive didactic and experiential learning in Paris, France. Students will gain first-hand experience of the French health care through lectures and readings with French bioethicists and physicians who, generally, are one and the same. Field experiences at sites include the principal medical school in Paris, as well as hospitals, clinics, assisted reproduction facilities and hospices in order to explore the ethical issues related to life and death. Specific topics include: of lectures at home and in Paris include medical education in France, the ethics of a national health care system, reduction/elimination of health care inequalities, gender issues in medical education and medical practice, genetic research, abortion, assisted reproductive technologies, end of life decision making in adult and pediatric medicine, transplantation technologies and immigrant health. Offered as BETH 315D and BETH 415D.

BETH 415E. International Bioethics: Policy and Practice-US and Spanish Perspectives, Salamanca Spain. 3 Units.
This 3-credit hour course will introduce advanced undergraduate and graduate students to theoretical and practical aspects of bioethics in a European context. Continental health professionals and bioethicists work in an environment that differs from the American context in at least three important dimensions: the political structure of their health care systems, the cultural influence of their religious histories, and the theoretical perspective of continental moral philosophy. The University of Salamanca in Spain, one of the oldest universities in Europe (known as the “Oxford of Spain”), will be used in this course as a focal point for examining the interplay of these three dimensions in shaping institutional and professional approaches to specific problems in bioethics, including end of life decisions, organ procurement and allocation, reproductive ethics, health care justice, and environmental bioethics (“eco-ethics”). This course will help advanced students who are already grounded in American bioethics develop the analytical skills necessary for evaluating European bioethical scholarship and policy-making, while helping less advanced students develop a familiarity with fundamental similarities and differences between bioethics in Spain and the U.S. The course will include a one week trip to Salamanca, Spain where students will be taught by instructors and faculty from the University of Salamanca. Teaching will include some guided field experiences and regular discussion sessions with the course faculty. Prior to the trip, students will attend 4 hours of class at Case to become familiar with elements of political theory and moral philosophy relevant to the in-country discussions. Following the trip, students will meet with instructors for an additional 2 hours. Offered as BETH 315E and BETH 415E.

BETH 415F. Looking at Bioethics through the Lens of Both American and Spanish Films. 3 Units.
This one week 3-credit intensive course will be held in San Sebastian, Spain. Taught by faculty from CWRU and University of the Basque Country, this course offers students a cross-cultural perspective on bioethics in the United States and Spain. This course uses the medium of film, complemented by readings in bioethics, film criticism, and medical research, to introduce students to a number of compelling bioethics problems facing physician-scientists today, including: where life begins, the nature and limits of informed consent, use of randomization without equipoise, medical imperialism (or the appearance thereof), the treatment of so-called “orphan” diseases, use of deception in research, and financial conflicts of interests caused by among other things, the involvement of the pharmaceutical industry in the drug invention process. Offered as BETH 315F and BETH 415F.

BETH 417. Introduction to Public Health Ethics. 3 Units.
The course will introduce students to theoretical and practical aspects of ethics and public health. This course will help students develop the analytical skills necessary for evaluating ethical issues in public health policy and public health prevention, treatment, and research. Will include intensive reading and case-based discussions. Evaluation based on class participation, a written exercise and a case analysis. Open to graduate students with permission from instructors.
BETH 419. Ethics and the Business of Biomedicine. 3 Units.
Central to current national discourse are concerns about ethics, costs, and profits in relation to health care. These concerns are primarily driven by major shifts in health care during the 20th century. These shifts include: the transformation of professional medical practice from a service orientation to a market orientation; the emergence of powerful pharmaceutical and health care corporations; the development of new, innovative, and expensive biomedical technologies by for-profit enterprises. This course will focus on questions about values (e.g., distributive justice, rights, human dignity, community welfare in relation to the business of medicine. Topics covered include: 1) commodification in relation to health care; 2) the just distribution of health care goods and services in market economies; 3) pharmaceutical research, development, and marketing; and 4) ethical issues in the sale of human body parts and ethically contentious services (like contract surrogacy). While course topics will be addressed primarily in reference to the United States, students will have some opportunity to analyze specific issues regarding these topics from an international perspective.

BETH 420. Critical Issues in Research Ethics. 3 Units.
This course is open to graduate students with an interest in health-related research ethics. Enrollment preference will be given to Masters-level bioethics students in the Research Ethics Track (RET). The course provides students with a comprehensive study of critical issues in research ethics, including the modern history of research ethics in science and medicine, the ethics of clinical trial design and conduct, advanced issues in informed consent, the ethics of animal experimentation, and key issues in genetics research. Coursework will include case studies and in-depth readings to highlight topic areas. Discussions of ethical and regulatory frameworks that influence decision-making, policy development, and the conduct of biomedical and social-behavioral science research will allow students to explore the nuances, gaps, challenges, and concerns present in research, particularly research involving human subjects. Topics will be addressed within the framework of integrating research ethics into the scientific process. Students are expected to lead class discussions and write a course-relevant paper. Enrollment will be limited to 15 students. Class will meet weekly for 3 hours.

BETH 421. Research Ethics Practicum. 1.5 Unit.
The Research Ethics Practicum (80 hours, 1.5 CREDITS) is designed to complement the theoretical and conceptual training received in the course, Critical Issues in Research Ethics. By way of a series of campus-wide rotations, students learn about the practical, everyday side of research administration, compliance, and scientific review. Students will work with key staff in research ethics centers, and observe their day-to-day operations, as well as attend institutional review board (IRB) and Institutional Animal Care and Use Committee (IACUC) meetings. They will become familiar with human subjects, animal, and tissue research regulations and policies as these are applied in an institutional/academic research context. Students will also spend time in a clinical trials unit and tour animal care facilities. The practicum has the following overall objectives: (1) students will be able to identify, analyze, and understand research ethics issues as they develop in the context of actual institutional research governance (2) students will gain an understanding of methods of ethical research design and implementation.

BETH 422. Clinical Ethics: Theory & Practice. 3 Units.
This course will focus on both theoretical and practical issues in clinical ethics. Clinical ethics will be distinguished from other areas of bioethics by highlighting distinctive features of the clinical context which must be taken into account in clinical ethics policy and practice. Fundamental moral and political foundations of clinical ethics will be examined, as will the role of bioethical theory and method in the clinical context. Topical issues to be considered may include informed consent; decision capacity; end of life decision making; confidentiality and privacy; the role and function of ethics committees; ethics consultation; the role of the clinical ethicist; decision making in various pediatric settings (from neonatal through adolescent); the role of personal values in professional life (e.g., rights of conscience issues, self disclosure and boundary issues); dealing with the chronically non-adherent patient; ethical issues in organ donation and transplant; health professional-patient communication; medical mistakes; and other ethical issues that emerge in clinical settings.

BETH 425. Stem Cells: Ethics and Policy. 3 Units.
This graduate-level course addresses major issues in the science, ethics, and politics of stem cell research. Over the past decade, embryonic stem cell research has emerged as one of the world’s most controversial areas of biomedical research. While new forms of stem cell research have emerged recently which appear to sidestep the debate over the use of human embryos, these new forms of stem cell research raise a host of problems in their own right. Furthermore, as stem cell research marches toward clinical applications for patients, the scientific and ethical issues will continue to evolve in evermore complex directions. In order to fully appreciate the ethical and policy issues at the cutting edge of stem cell science, one needs a sound grasp of the science of stem cell research. Thus this course is designed to take a science-based approach to the ethics of stem cell research. (No prior knowledge of stem cell biology is presupposed.)

BETH 430. Bioethics in Literature. 1 Unit.
This course complements the Foundation course in the MA bioethics program by introducing students to narrative literature (fiction, nonfiction and poetry) that addresses ethical issues in medicine. The material is frequently the work of physicians and patients who narrate their respective experiences. As such, narrative provides direct insights into the practice of modern medicine tested against both accepted and controversial moral norms and serves as a vehicle for discussion and analysis of ethical issues. These issues involve topics such as death and dying, reproduction, pediatrics, women as patients and clinicians, public health and medicine as a profession and its practice as a privilege. Students will sample the work, among others, of William Carlos Williams, Lewis Thomas, Toni Morrison, Margaret Atwood, John Donne, Dylan Thomas and Abraham Verghese.
BETH 440. Science and Society Through Literature. 3 Units.
This course will examine the interaction of scientific investigation and discovery with the society it occurred in. What is the effect of science on society and, as importantly, what is the effect of society on science? An introduction will consider the heliocentric controversy with focus on Galileo. Two broad areas, tuberculosis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art and music will be examined to understand the changing views of society towards the disease, how society's perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and film, the transformation of the original story into myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials. Offered as PHRM 340, BETH 440, PHRM 440, and HSTY 440.

BETH 466. Promoting Health Across Boundaries. 3 Units.
This course examines the concepts of health and boundary spanning and how the synergy of the two can produce new, effective approaches to promoting health. Students will explore and analyze examples of individuals and organizations boundary spanning for health to identify practice features affecting health, compare and contrast practices and approaches, and evaluate features and context that promote or inhibit boundary spanning and promoting health. Offered as MHPH 466, EPBI 466, and BETH 466. Prereq: Graduate student status or instructor consent.

BETH 496. Public Policy and Aging. 3 Units.
Overview of aging and the aged. Concepts in the study of public policy. Policies on aging and conditions that they address. The politics of policies on aging. Emergent trends and issues. Offered as ANTH 498, BETH 496, EPBI 408, GERO 496, HSTY 480, MHPH 408, NURS 479, NURS 579, POSC 480, and SOCI 496.

BETH 503. Research Ethics and Regulation. 2 Units.
