Degree: Bachelor of Arts (BA)
Major: Gerontological Studies

Program Overview

The Gerontological Studies Program is a multidisciplinary program designed to integrate research and theory about age, aging and human development over the life course.

Rapidly occurring social change is compelling social scientists, policymakers, human service professionals, and others to focus on aging as both an individual and global force. Beyond the rapid graying of the world's population, other frontiers of change include knowledge developments in the biosocial domain (epigenetic and other types of gene-environment interaction), growing awareness of economic inequality and powerful trends in the political and economic spheres (e.g., cumulative disadvantage, pension policy, generational equity), and cultural changes (e.g., the development of forward-thinking institutional arrangements and the growth of the anti-aging industry).

Courses are drawn from five departments: Anthropology, Nursing, Psychological Sciences, Social Work and Sociology. Students may choose from a variety of courses according to their own interests. Some approved elective courses are not specifically gerontology courses but cover topics that contribute to the understanding of aging and the life course. The perspectives gained in the core courses will provide the student with the background needed to relate the material in the more general courses to gerontological issues. The program is firmly grounded in the liberal arts and thus provides the student with the challenge to think and communicate effectively and to integrate diverse information, theories, and practice.

Gerontological Studies is an appropriate second major or minor for students with a wide variety of career goals. Persons with baccalaureate degrees in this field are eligible for entry-level positions in organizations that provide health and social services to older people and that formulate policy related to aging and older adults. For those whose careers will require professional or graduate training, this program can be valuable preparation. This includes pre-health students, especially those with an interest in geriatrics or family practice. It is also excellent preparation for those who are working toward careers in social work, family law, and financial planning. Students planning to pursue these professional degrees will find that an increasing number of their clients or patients will be older adults and problems with which they must deal are related to aging.

Gerontological Studies faculty members are engaged in a variety of funded research projects. These include studies of health disparities and cumulative disadvantage over the life course; patterns of care for the elderly; visual perception changes that accompany aging; the impact of high levels of physical activity on the biological aging process; grandparent-grandchild relationships; and stress, coping, and adaptation among older adults in a wide range of settings.

Undergraduate Policies

For undergraduate policies and procedures, please review the Office of Undergraduate Studies section of the General Bulletin.

Program Faculty

Dale Dannefer, PhD
(Rutgers University)

Selah Chamberlain Professor of Sociology and Chair, Department of Sociology; Co-Director, Gerontological Studies Program

Aging and the life course; theory; work and family; research methods

Brian Gran, PhD (Northwestern University), JD (Indiana University-Bloomington)
Professor, Department of Sociology

Sociology of law; comparative sociology; health care policy; human rights

Eva Kahana, PhD
(University of Chicago)

Distinguished University Professor and Pierce T. and Elizabeth D. Robson Professor of the Humanities, Department of Sociology

Sociology of aging; medical sociology; social factors in stress and coping

Jessica Kelley, PhD
(Purdue University)

Professor, Department of Sociology

Health disparities; sociology of disability; sociology of the life course; race/ethnicity

Lihong Shi, PhD
(Tulane University)

Associate Professor

Sociocultural anthropology; reproduction; gender and family relations; grief and healing; population aging and sex-ratio imbalance; China, East Asia

Program Requirements

This program is available only as a second major for a BA degree; as a secondary major for a student completing a BS degree; or as the sole major for a BA degree if a student is also completing a BS degree, in which case the student must meet the general requirements of the College of Arts and Sciences in addition to the general requirements associated with the BS degree.

The interdisciplinary program in Gerontological Studies offers a major as part of the Bachelor of Arts degree. Gerontological Studies may be selected only as a second major, since the primary major must be based in a traditional academic department. The major consists of a minimum of 30 credits; 9 are in required core courses and 21 are in approved elective courses.
