This course provides an introduction to English grammar in context for academic writers. It focuses on the study of language in use, including parts of speech, sentence grammar, paragraph structure, and text cohesion. This course is specifically designed for multilingual students, but native speakers of English may take the course with the approval of the instructor.

**ENGL 147. Writing Across Disciplines. 3 Units.**
In this course, students will develop their genre knowledge and metacognitive skills to prepare for the advanced writing, reading, and research tasks required in upper-level writing and disciplinary courses across the university. Through individual and group inquiry, students will analyze and discuss the conventions of academic genres to understand the textual and linguistic features and disciplinary expectations of each form of writing. Then, students will apply these generic conventions through the production and revision of writing within each genre. Throughout the semester, students will engage in workshops and discussions that foster skills in the areas of seminar participation, collaboration, rhetorical awareness, and critical thinking. This course is specifically designed for non-native speakers of English, but native speakers may take the course with the approval of the instructor.

**ENGL 148. Introduction to Composition. 3 Units.**
Practice and training in various modes and genres of writing. Undergraduate CIM students placed into ENGL 148 must complete the course with a grade of C or higher in order to enroll in ENGL 150.

**ENGL 149. Emerging Writers Studio. 3 Units.**
Introduction to the academic writing process in an intensive seminar and workshop environment. Course includes training and practice in prewriting, drafting, revising and editing.

**ENGL 150. Expository Writing. 3 Units.**
Substantial training and practice in academic writing.
ENGL 155. Introduction to Rhetoric and Public Speaking. 3 Units.
This course will focus on the theories of rhetoric, the work of developing and preparing a speech and on the art and skill of delivering various kinds of oral presentations. The assignments will: a) Introduce students to the traditions, theories and core principles of public speaking, from Aristotle’s Rhetoric to Cicero to Kenneth Burke. b) Engage them in the five-part "canon of rhetoric" for developing speeches. c) Give them opportunities to develop and deliver several different types of classic speeches, both as a speaker and as a speechwriter.

ENGL 180. Writing Tutorial. 1 Unit.
Substantial scheduled tutorial work in writing.

ENGL 181. Academic Skills Tutorial. 1 Unit.
Substantial tutorial work on academic skills such as: reading and vocabulary development, academic interactions and resources, critical thinking, time management, and/or study strategies. Students may work individually with instructor or in small groups. The course may be repeated, but only one semester-hour will count towards the degree.

ENGL 183. Academic Writing Studio. 1 Unit.
Practice and training in various aspects of academic writing in a small group workshop environment. Please note: only one semester hour of ENGL 183 will count toward a degree, but the course may be repeated.

ENGL 186. Writing Workshop for Researchers. 2 Units.
Individualized writing workshop/tutorial for graduate students, faculty, and staff. Includes small group workshops and individualized instruction in genres and forms of academic and research writing.

ENGL 200. Literature in English. 3 Units.
This course introduces students to the reading of literature in the English language. Through close attention to the practice of reading, students are invited to consider some of the characteristic forms and functions imaginative literature has taken, together with some of the changes that have taken place in what and how readers read.

ENGL 203. Introduction to Creative Writing. 3 Units.
A course exploring basic issues and techniques of writing narrative prose and verse through exercises, analysis, and experiment. For students who wish to try their abilities across a spectrum of genres.

ENGL 204. Introduction to Journalism. 3 Units.
Students will learn the basics of reporting and writing news stories, but also the traditions behind the craft and the evolving role of journalism in society. Instruction will include interviewing skills, fact-checking, word choice and story structure—all framed by guidance on making ethically sound decisions. Assignments could include stories from a variety of beats (business, entertainment, government, science), along with deadline stories and breaking news Web updates, profiles and obituaries.

ENGL 213. Introduction to Fiction Writing. 3 Units.
A beginning workshop in fiction writing, introducing such concepts as voice, point of view, plot, characterization, dialogue, description, and the like. May include discussion of literary examples, both classic and contemporary, along with student work.

ENGL 214. Introduction to Poetry Writing. 3 Units.
A beginning workshop, focusing on such elements of poetry as verse-form, syntax, figures, sound, tone. May include discussion of literary examples as well as student work.

ENGL 217A. Business and Professional Writing. 3 Units.
An introduction to professional communication in theory and practice. Special attention paid to audience analysis, persuasive techniques in written and oral communication, document design strategies, and ethical communication practices. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 217B. Writing for the Health Professions. 3 Units.
This course offers practice and training in the professional and technical writing skills common to health professions (e.g., medicine, nursing, dentistry). Attention will be paid to the writing processes of drafting, revising, and editing. Typical assignments include: letters, resumes, personal essays, professional communication genres (e.g., email, reports, patient charts, and histories), and scholarly genres (e.g., abstracts, articles, and reviews). Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 257A. The Novel. 3 Units.
Introductory readings in the novel. May be organized chronologically or thematically. Some attention to the novel as a historically situated genre.

ENGL 257B. Poetry. 3 Units.
Introductory readings in poetry. May be organized chronologically or thematically. Attention to the formal qualities of poetry in relation to meaning, expressivity, etc.

ENGL 270. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women’s studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women’s and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 285. Special Topics Seminar. 3 Units.
Seminars on special topics in literature or language. Maximum of 3 credits.

ENGL 290. Masterpieces of Continental Fiction. 3 Units.
Major works of fiction from the 19th century and earlier. Offered as ENGL 290 and WLIT 290.

ENGL 300. English Literature to 1800. 3 Units.
A survey of major British authors from Chaucer to Milton and Dryden. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 301. Linguistic Analysis. 3 Units.
Analysis of modern English from various theoretical perspectives: structural, generative, discourse analytical, sociolinguistic, psycholinguistic, and cognitive linguistic. Some attention to the major dialects of American English. Offered as ENGL 301 and ENGL 401. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 302. English Literature since 1800. 3 Units.
A survey of major British authors from Wordsworth to the present. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 303. Intermediate Writing Workshop: Fiction. 3 Units.
Continues developing the concepts and practice of the introductory courses, with reading, writing, and discussion of fiction in various forms, including the short story, the novella and the novel. Maximum 6 credits. Offered as ENGL 303 and ENGL 303C. Prereq: ENGL 203 or ENGL 213.
ENGL 303C. Intermediate Fiction Capstone. 3 Units.
This Capstone course continues developing the concepts and practice of the introductory courses, with reading, writing, and discussion of fiction in various forms, including the short story, the novella and the novel. Offered as ENGL 303 and ENGL 303C. Students taking this course for their SAGES Capstone will not be repeating material they covered in ENGL 303. Students registering for ENGL 303C will be required to develop and complete a Capstone project, which will include a minimum of two short stories (or an alternative writing project developed in conjunction with the instructor) and a critical introduction to the project. Capstone students will also make a public presentation of their work. Offered as ENGL 303 and ENGL 303C. Counts as SAGES Senior Capstone. Prereq: (ENGL 203 or 213), ENGL 303 and ENGL 380.

ENGL 304. Intermediate Writing Workshop: Poetry. 3 Units.
Continues developing the concepts and practice of the introductory courses, with emphasis on experiment and revision as well as consideration of poetic genres through examples from established poets. Maximum 6 credits. Offered as ENGL 304 and ENGL 304C. Prereq: ENGL 203 or ENGL 214.

ENGL 304C. Poetry Writing Capstone. 3 Units.
This Capstone course continues developing the concepts and practice of the introductory courses, with emphasis on experiment and revision as well as consideration of poetic genres through examples from established poets. Offered as ENGL 304 and ENGL 304C. There will be a midterm presentation and a Capstone poetry project. Students taking this course for their SAGES Capstone will not be repeating material they covered in ENGL 304. They will be required to complete 25 pages of creative writing and 15 pages of critical writing and attend some separate meetings to discuss their progress on the Capstone project. Capstone students will also be required to present reports on their research projects at a public Capstone presentation at the end of the semester. Offered as ENGL 304 and ENGL 304C. Counts as SAGES Senior Capstone. Prereq: (ENGL 214 or 203), ENGL 304 and ENGL 380.

ENGL 305. Playwriting. 3 Units.
Theory and practice of dramatic writing, in the context of examples, classic and contemporary. Recommended preparation: ENGL 203 or ENGL 213 or ENGL 214 or ENGL 303 or ENGL 304. Offered as ENGL 305, THTR 312 and THTR 412.

ENGL 306. Intermediate Writing Workshop: Creative Non-Fiction. 3 Units.
A writing workshop that focuses on non-fiction. Students will study and write narrative journalism, the memoir, and the personal essay. Maximum 6 credits. Prereq: ENGL 203 or ENGL 213 or ENGL 214.

ENGL 307. Feature/Magazine Writing. 3 Units.
Continues developing the concepts and practices of the introductory course, with emphasis on feature writing for magazines (print and online), story structure, fact-checking, reporting techniques and freelancing. A student may not receive credit for both ENGL 307 and ENGL 307C. Offered as ENGL 307 and ENGL 307C. Prereq: ENGL 204 or instructor approval.

ENGL 307C. Feature/Magazine Writing Capstone. 3 Units.
This Capstone course continues developing the concepts and practices of the introductory course, with emphasis on feature writing for magazines (print and online), story structure, fact-checking, reporting techniques and freelancing. Students registering for 307C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. The Capstone version of the class (307C) will expand the requirements to include a student-conceived magazine-length feature story independently overseen by the instructor, along with a reflective essay, pitch letter to a magazine, and oral presentation. A student may not receive credit for both ENGL 307 and ENGL 307C. Offered as ENGL 307 and ENGL 307C. Counts as SAGES Senior Capstone. Prereq: ENGL 204 and ENGL 380 or requisites not met permission.

ENGL 308. American Literature. 3 Units.
A survey of major American authors from the Puritans to the present. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 309. Immersion Journalism/Multimedia Storytelling. 3 Units.
Students will spend the bulk of the semester documenting lives and stories from a local nursing home through audio slideshows and video projects. A student may not receive credit for both ENGL 309 and ENGL 309C. Offered as ENGL 309 and ENGL 309C. Prereq: ENGL 204 or instructor approval.

ENGL 309C. Multimedia Storytelling Capstone. 3 Units.
This Capstone course will require that students spend the bulk of the semester documenting lives and stories from a local nursing home through audio slideshows and video projects. Students who register for 309C to fulfill their SAGES Capstone requirement will individually plan, shoot and edit a 7-10 minute documentary, compose a 15 page reflective essay, and complete an oral presentation. A student may not receive credit for both ENGL 309 and ENGL 309C. Offered as ENGL 309 and ENGL 309C. Counts as SAGES Senior Capstone. Prereq: ENGL 204 and ENGL 380 or requisites not met permission.

ENGL 310. History of the English Language. 3 Units.
An introductory course covering the major periods of English language development: Old, Middle, and Modern. Students will examine both the linguistic forms and the cultures in which the forms were used. Offered as ENGL 310 and ENGL 410. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 312. Chaucer. 3 Units.
An introduction to the work of Geoffrey Chaucer, with emphasis on "The Canterbury Tales." A student may not receive credit for both ENGL 312 and ENGL 312C. Offered as ENGL 312 and ENGL 312C. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 312C. Chaucer Capstone. 3 Units.
This capstone course is an introduction to the work of Geoffrey Chaucer, with emphasis on "The Canterbury Tales." Students registering for 312C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student may not receive credit for both ENGL 312 and ENGL 312C. Offered as ENGL 312 and ENGL 312C. Counts as SAGES Senior Capstone. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS).
ENGL 314. Advanced Playwriting. 3 Units.
Theory and practice of dramatic writing with special focus on the craft of writing a full-length play. Offered as ENGL 314, THTR 314 and THTR 414. Prereq: ENGL 305 or THTR 312.

ENGL 316. Screenwriting. 3 Units.
A critical exploration of the craft of writing for film, in which reading and practicum assignments will culminate in the student submitting an original full-length screenplay. Offered as ENGL 316, THTR 316 and THTR 416. Prereq: THTR 316 or ENGL 305 or THTR 412.

ENGL 320. Renaissance Literature. 3 Units.
Aspects of English Renaissance literature and its contexts from 1500-1620. Genres studied might include poetry, drama, prose fiction, expository and polemic writing, or some works from Continental Europe. Writers such as Spenser, Marlowe, Robert Browning, Shakespeare, Donne. Maximum 6 credits. Offered as ENGL 320 and ENGL 420. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 323. Milton. 3 Units.
Poetry and selected prose, including the careful study of "Paradise Lost." Offered as ENGL 323 and ENGL 423. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 324. Shakespeare: Histories and Tragedies. 3 Units.
Close reading of a selection of Shakespeare's tragedies and history plays (e.g., "Richard the Third," "Julius Caesar," "Hamlet," "King Lear"). Topics of discussion may include Renaissance drama as a social institution, the nature of tragedy, historical and political contexts of Shakespeare's plays, and the state and its服役, theatrical conventions. Assessment may include opportunities for performance. A student may not receive credit for both ENGL 324 and ENGL 324C. Offered as ENGL 324, ENGL 324C, ENGL 424, and THTR 334. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 324C. Shakespeare: Histories and Tragedies Capstone. 3 Units.
Close reading of a selection of Shakespeare's tragedies and history plays (e.g., "Richard the Third," "Julius Caesar," "Hamlet," "King Lear"). Topics of discussion may include Renaissance drama as a social institution, the nature of tragedy, historical and political contexts of Shakespeare's plays, and the state and its服役, theatrical conventions. Assessment may include opportunities for performance. Students registering for 324C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student who has previously taken ENGL 324 may receive credit for ENGL 324C only if the themes/topics are different. Offered as ENGL 324, ENGL 324C, and ENGL 424. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 325. Shakespeare: Comedies and Romances. 3 Units.
Close reading of selected plays of Shakespeare in the genres of comedy and romance (e.g., "The Merchant of Venice," "Twelfth Night," "Measure for Measure," "The Tempest"). Topics of discussion may include issues of sexual desire, gender roles, marriage, the family, genre conventions. Assessment may include opportunities for performance. A student may not receive credit for both ENGL 325 and ENGL 325C. Offered as ENGL 325, ENGL 325C, ENGL 425, and THTR 335. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 325C. Shakespeare: Comedies/Romances Capstone. 3 Units.
Close reading of selected plays of Shakespeare in the genres of comedy and romance (e.g., "The Merchant of Venice," "Twelfth Night," "Measure for Measure," "The Tempest"). Topics of discussion may include issues of sexual desire, gender roles, marriage, the family, genre conventions. Assessment may include opportunities for performance. Students registering for 325C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student may not receive credit for both ENGL 325 and ENGL 325C. Offered as ENGL 325, ENGL 325C, ENGL 425, and THTR 335. Counts as SAGES Senior Capstone. Prereq: ENGL 380 and (ENGL 310 or ENGL 312 or ENGL 320 or ENGL 323 or ENGL 324 or ENGL 327 or ENGL 328 or ENGL 329).

ENGL 327. Eighteenth-Century Literature. 3 Units.
Survey of a variety of writings from or relevant to the eighteenth century. Writers discussed may include Dryden, Behn, Defoe, Pope, Swift, Gay, Fielding, Richardson, Burney, Wollstonecraft and others working in drama, lyric and epic poetry, biography and autobiography, political and philosophical writings and prose fiction. Thematic approaches may include: satire, journalism and literature, the rise of the novel. Maximum 6 credits. Offered as ENGL 327 and ENGL 427. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 328. Studies in the Eighteenth Century. 3 Units.
This course examines selected topics in the English literary culture of the eighteenth century, a culture which extended to the Americas and other English colonies. Literary writings will be examined in relation to other aspects of the century's culture, which may include visual arts, marital institutions, the printing industry, property law, medicine, and other topics. Maximum 6 credits. Offered as ENGL 328, ENGL 328C and ENGL 428. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 328C. Studies in 18th Century Capstone. 3 Units.
This Capstone course examines selected topics in the English literary culture of the eighteenth century, a culture which extended to the Americas and other English colonies. Literary writings will be examined in relation to other aspects of the century's culture, which may include visual arts, marital institutions, the printing industry, property law, medicine, and other topics. Students registering for 328C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student who has previously taken ENGL 328 may receive credit for ENGL 328C only if the themes/topics are different. Offered as ENGL 328, ENGL 328C and ENGL 428. Counts as SAGES Senior Capstone. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS).

ENGL 329. English Literature, 1780-1837. 3 Units.
Aspects of English literature and its contexts in the early 19th century. Genres might include poetry, prose fiction, and philosophical writing, literary theory of the period. Writers such as Wordsworth, Coleridge, Blake, Austen, Byron, the Shelleys. Maximum 6 credits. Offered as ENGL 329 and ENGL 429. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.
ENGL 330. Victorian Literature. 3 Units.  
Aspects of English literature and its contexts during the reign of Queen Victoria. Genres studied might include poetry, prose fiction, political and philosophical writing. Writers such as the Brontes, Gaskell, Dickens, Eliot, Hardy, Tennson, the Brownings, Arnold, Carlyle, Ruskin, Gosse, Swinburne, and Hopkins. Maximum 6 credits. Offered as ENGL 330, ENGL 330C and ENGL 430. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSSC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 330C. Victorian Literature Capstone. 3 Units.  
This Capstone course studies aspects of English literature and its contexts during the reign of Queen Victoria. Genres studied might include poetry, prose fiction, political and philosophical writing. Writers such as the Brontes, Gaskell, Dickens, Eliot, Hardy, Tennson, the Brownings, Arnold, Carlyle, Ruskin, Gosse, Swinburne, and Hopkins. Students registering for 330C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student who has previously taken ENGL 330 may receive credit for ENGL 330C only if the themes/topics are different. Offered as ENGL 330, ENGL 330C and ENGL 430. Counts as SAGES Senior Capstone. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSSC, FSNA, FSSO, FSSY, FSTS, or FSCS).

ENGL 331. Studies in the Nineteenth-Century. 3 Units.  
Individual topics in English literary culture of the 19th century. Topics might be thematic or formal, such as literature and science; medicine; labor; sexuality; Empire; literature and other arts; Gothic fiction; decadence. Maximum 6 credits. Offered as ENGL 331, ENGL 331C and ENGL 431. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSSC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 331C. Studies in the Nineteenth Century Capstone. 3 Units.  
This Capstone course studies individual topics in English literary culture of the 19th century. Topics might be thematic or formal, such as literature and science; medicine; labor; sexuality; Empire; literature and other arts; Gothic fiction; decadence. Students registering for 331C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student who has previously taken ENGL 331 may receive credit for ENGL 331C only if the themes/topics are different. Offered as ENGL 331, ENGL 331C and ENGL 431. Counts as SAGES Senior Capstone. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSSC, FSNA, FSSO, FSSY, FSTS, or FSCS).

ENGL 332. Twentieth-Century British Literature. 3 Units.  
Aspects of British literature (broadly interpreted) and its contexts during the 20th century. Genres studied might include poetry, fiction, and drama. Such writers as Joyce, Woolf, Conrad, Ford, Lawrence, Mansfield, Shaw, Beckett, Stoppard, Yeats, Edward or Dylan Thomas, Stevie Smith, Bowen, Spark. Maximum 6 credits. Offered as ENGL 332 and ENGL 432. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSSC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 333. Studies in the Twentieth and Twenty-first Centuries. 3 Units.  
Individual topics in twentieth- and twenty-first century literary culture. Particular issues and topics may cross national boundaries and genre lines as well as exploring political, psychological, and social themes, such as movements, comparative studies across the arts, literature and war, literature and occultism. Maximum 6 credits. Offered as ENGL 333 and ENGL 433. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSSC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 334. Rhetoric of Science and Medicine. 3 Units.  
This course explores the roles language and rhetoric play in constructing, communicating, and understanding science and medicine. It surveys current and historical debates, theories, research, and textual conventions of scientific and medical discourse. May be taught with a specific focus, such as scientific controversies, concepts of health and illness, visualizations of science, the body in medicine, and the history of scientific writing. A student may not receive credit for both ENGL 341 and ENGL 341C. Offered as: ENGL 341, ENGL 341C, and ENGL 441. Prereq: ENGL 150 or letter grade in SAGES First Seminar.

ENGL 341C. Rhetoric of Science & Medicine Capstone. 3 Units.  
This course explores the roles language and rhetoric play in constructing, communicating, and understanding science and medicine. It surveys current and historical debates, theories, research, and textual conventions of scientific and medical discourse. May be taught with a specific focus, such as scientific controversies, concepts of health and illness, visualizations of science, the body in medicine, and the history of scientific writing. Students registering for 341C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student may not receive credit for both ENGL 341 and ENGL 341C. Offered as ENGL 341, ENGL 341C and ENGL 441. Counts as SAGES Senior Capstone. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSSC, FSNA, FSSO, FSSY, FSTS, or FSCS).

ENGL 343. Language and Gender. 3 Units.  
This course introduces students to the study of language and gender by exploring historical and theoretical trends, methods, and research findings on the ways gender, sexuality, language, and discourse interact with and even shape each other. Topics may include "grammatical" versus "biological" gender, feminine escritura, the women and language debate, speech acts and queer performativity, nonsexist language policy, discourses of gender and sexuality, feminist stylistics, and LGBT sociolinguistics. Offered as ENGL 343, ENGL 443, and WGST 343. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSSC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 345. Topics in LGBT Studies. 3 Units.  
This course will focus on selected topics in the study of LGBT literature, film, theory, and culture. Individual courses may focus on such topics as queer theory, LGBT literature, queer cinema, gay and lesbian poetry, LGBT graphic novels, the AIDS memoir, AIDS/Gay Drama, and queer rhetoric and protest. Maximum 6 credits. Offered as ENGL 345, ENGL 445 and WGST 345. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSSC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 345C. Topics in LGBT Studies Capstone. 3 Units.  
This Capstone course will focus on selected topics in the study of LGBT literature, film, theory, and culture. Individual courses may focus on such topics as queer theory, LGBT literature, queer cinema, gay and lesbian poetry, LGBT graphic novels, the AIDS memoir, AIDS/Gay Drama, and queer rhetoric and protest. Maximum 6 credits. Offered as ENGL 345C only if the themes/topics are different. Counts as SAGES Senior Capstone. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSSC, FSNA, FSSO, FSSY, FSTS, or FSCS).
ENGL 353. Major Writers. 3 Units.
Close and detailed study of the work of one or two writers: development, social and aesthetic contexts, reception, interpretation, significance. Maximum 6 credits. Offered as ENGL 353 and ENGL 453. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 356. American Literature Before 1865. 3 Units.
Aspects of American literature and its contexts from the colonial period through the end of the Civil War. Writers such as Bradstreet, Taylor, Franklin, Poe, Stowe, Alcott, Melville, Hawthorne, Emerson, Douglass. Maximum 6 credits. Offered as ENGL 356 and ENGL 456. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 358. American Literature 1914-1960. 3 Units.
Aspects of American literature and its contexts from the First World War to the Cold War. Genres studied might include fiction, poetry, drama, polemics. Writers such as T.S. Eliot, Pound, Stevens, Moore, W.C. Williams, Dos Passos, West, Fitzgerald, Hemingway, Cather, Faulkner, Barnes, Miller, T. Williams, O'Neill. Maximum 6 credits. Offered as ENGL 358 and ENGL 458. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 358C. American Literature, 1914-1960 Capstone. 3 Units.
This Capstone course presents aspects of American literature and its contexts from the First World War to the Cold War. Genres studied might include fiction, poetry, drama, polemics. Writers such as T.S. Eliot, Pound, Stevens, Moore, W.C. Williams, Dos Passos, West, Fitzgerald, Hemingway, Cather, Faulkner, Barnes, Miller, T. Williams, O'Neill. Students registering for 358C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student who has previously taken ENGL 358 may receive credit for ENGL 358C only if the themes/topics are different. Counts as SAGES Senior Capstone. Offered as ENGL 358E, ENGL 358EC, ETHS 358E, WLIT 358E, and WLIT 458E. Counts as SAGES Senior Capstone. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS).

ENGL 359. Studies in Contemporary American Literature. 3 Units.
Individual topics in literary culture since the 1960s. Topics may include the Beats, literature of the Vietnam war, post-modern fiction, contemporary poetry, the documentary novel. Maximum 6 credits. Offered as ENGL 359 and ENGL 459. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 360. Studies in American Literature. 3 Units.
Individual topics in American literary culture such as regionalism, realism, impressionism, literature and popular culture, transcendentalism, the lyric, proletariat literature, the legacy of the Civil War. Maximum 6 credits. Offered as ENGL 360 and ENGL 460. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 363H. African-American Literature. 3 Units.
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature of protest and assimilation. Maximum 6 credits. Offered as AFST 363H, ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 363E. The Immigrant Experience. 3 Units.
Study of fictional and/or autobiographical narrative by authors whose families have experienced immigration to the U.S. Among the ethnic groups represented are Asian-American, Jewish-American, Hispanic-American. May include several ethnic groups or focus on a single one. Attention is paid to historical and social aspects of immigration and ethnicity. Maximum 6 credits. Offered as ENGL 363E, ENGL 363EC, ENGL 463E, WLIT 363E and WLIT 463E. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 365E. The Immigrant Experience Capstone. 3 Units.
Study of fictional and/or autobiographical narrative by authors whose families have experienced immigration to the U.S. Among the ethnic groups represented are Asian-American, Jewish-American, Hispanic-American. May include several ethnic groups or focus on a single one. Attention is paid to historical and social aspects of immigration and ethnicity. Students registering for 365EC will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student who has previously taken ENGL 358 may receive credit for ENGL 358C only if the themes/topics are different. Counts as SAGES Senior Capstone. Offered as ENGL 358E, ENGL 358EC, ENGL 458E, WLIT 358E and WLIT 465E. Counts as SAGES Senior Capstone. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS).

ENGL 365N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Offered as AFST 365N, ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 365NC. Topics in African American Literature Capstone. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Students registering for 365NC will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student who has previously taken ENGL 358, ENGL 358N, or WLIT 358N may receive credit for ENGL 365NC only if the themes/topics are different. Offered as ENGL 358N, ENGL 465N, ETHS 358N, WLIT 358N, WLIT 465N, and WLIT 465N. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS).

ENGL 365Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Offered as AFST 365Q, ENGL 365Q, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 365Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Offered as AFST 365Q, ENGL 365Q, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.
ENGL 365QC. Post-Colonial Literature-Capstone. 3 Units.
Readings in national and regional literature of former Anglophone European colonies. Students may receive credit both for ENGL 365Q and for ENGL 365QC when course topics differ between the offerings. Offered as ENGL 365Q, ENGL 365QC, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q. Counts as SAGES Senior Capstone. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 380 and a declared major in English.

ENGL 366G. Minority Literatures. 3 Units.
A course dealing with literature produced by ethnic and racial minority groups within the U.S. Individual offerings may include works from several groups studied comparatively, or focus on a single group, such as Native Americans, Chicanos/Chicanas, Asian-Americans, Caribbean-Americans. African-American works may also be included. May cover the entire history of the U.S. or shorter periods. Maximum 6 credits. Offered as ENGL 366G, WLIT 366G, ENGL 466G, and WLIT 466G. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 367. Introduction to Film. 3 Units.
An introduction to the art of film. Each week we’ll take an element of film form (editing, cinematography, sound, and so on) and ask how filmmakers work with this element to produce effects. Most weeks we’ll also screen a whole film and discuss it in light of the week’s focus. Films screened will include masterworks of the silent era, foreign films, Hollywood studio-era classics, and more recent cinema. This course has no prerequisites and welcomes first year students. Offered as ENGL 367 and ENGL 467.

ENGL 368. Topics in Film. 3 Units.
Individual topics include Horror Films, Storytelling & Cinema, Science Fiction Films, Films of Alfred Hitchcock, American Cinema & Culture, History of Cinema, and many others. This course has no prerequisites and welcomes first year students. Other than the number of credits from one department a student can apply toward graduating, there is no limit to the number of times Topics in Film can be taken. A student who has previously taken ENGL 368C may receive credit for ENGL 368 only if the themes/topics are different. Offered as ENGL 368, ENGL 468, WLIT 368, and WLIT 468.

ENGL 368C. Topics in Film Capstone. 3 Units.
Individual topics include Horror Films, Storytelling & Cinema, Science Fiction Films, Films of Alfred Hitchcock, American Cinema & Culture, History of Cinema, and many others. Students registering for ENGL 368C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. Students must be a declared English Major with Concentration in Film or both English Major and Film Minor. Permission of instructor must be received prior to the last day of classes the previous semester. A student who has previously taken ENGL 368C may receive credit for ENGL 368 only if the themes/topics are different. Counts as SAGES Senior Capstone. Counts as SAGES Senior Capstone. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS).

ENGL 369. Children's Literature. 3 Units.
Individual topics in 19th-, 20th-, and 21st-century children's literature. Topics may focus on narrative and thematic developments in the genre, historical contexts, literary influences, or adaptations of children’s literature into film and other media. Offered as ENGL 369 and ENGL 469. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 370. Comics and the Graphic Novel. 3 Units.
Selected topics in the study and analysis of comics and the graphic novel. Topics may include historical contexts of the genre, visual rhetoric, thematic developments, influence of literature, adaptations into film. A student may not receive credit for both ENGL 370 and ENGL 370C. Offered as ENGL 370, ENGL 370C, and ENGL 470. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 370C. Comics and the Graphic Novel Capstone. 3 Units.
Selected topics in the study and analysis of comics and the graphic novel. Topics may include historical contexts of the genre, visual rhetoric, thematic developments, influence of literature, adaptations into film. Students registering for 370C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student may not receive credit for both ENGL 370 and ENGL 370C. Offered as ENGL 370, ENGL 370C, and ENGL 470. Counts as SAGES Senior Capstone. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS).

ENGL 371. Topics in Women's and Gender Studies. 3 Units.
Individual topics and issues in women's studies relating to writing by and about women, such as feminist theory and criticism; the politics of gender and sexuality; women in popular culture; women in the writing business. Maximum 6 credits. Offered as ENGL 371 and ENGL 471. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 372. Studies in the Novel. 3 Units.
Selected topics in the history and formal development of the novel, such as detective novels; science fiction; epistolary novels; the rise of the novel; the stream of consciousness novel; the Bildungsroman in English. Maximum 6 credits. Offered as ENGL 372 and ENGL 472. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 372C. Studies in the Novel Capstone. 3 Units.
This Capstone course studies selected topics in the history and formal development of the novel, such as detective novels; science fiction; epistolary novels; the rise of the novel; the stream of consciousness novel; the Bildungsroman in English. Students registering for 372C will be required to develop and complete a Capstone project in the wider field of study covered by the course and to make a public presentation of this project. A student who has previously taken ENGL 372 may receive credit for ENGL 372C only if the themes/topics are different. Counts as SAGES Senior Capstone. Prereq: ENGL 380 and (ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS).

ENGL 373. American Women's Poetry. 3 Units.
This course surveys American women's poetry from the seventeenth century to the present. We will read a range of poetry illustrating the roles of women poets in the development of the nation's literary, cultural, and social history. We will pay close attention to how women poets use traditional and innovative poetic forms to represent lived experiences and to engage the political realities of their varying historical moments. Offered as ENGL 373, ENGL 473, and WGST 374. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.
ENGL 374. Internship in Journalism. 3 - 6 Units.
Students work as interns at area newspapers, magazines, trade publications, radio or television and meet as a class to share their experiences as interns and to focus on editorial issues—reporting, writing, fact-checking, editing—that are a part of any journalistic enterprise. Students are responsible for pre-arranging their internship prior to the semester they intend to take the class but can expect guidance from the instructor in this regard. Recommended preparation: ENGL 204 or permission of the department.

ENGL 376. Studies in Genre. 3 Units.
Topics in literary genres, such as comedy, biography and autobiography, satire, allegory, the short story, the apologue, narrative poetry. May cross over the prose/poetry boundary. Maximum 6 credits. Prereq: ENGL 376 and ENGL 476. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 378. Topics in Visual and New Media Studies. 3 Units.
This course will focus on selected topics in the study of visual rhetoric and/or new media, including theoretical, critical, and historical issues raised by texts and media platforms that communicate largely through visual means or through the interaction of visual and verbal modes. Possible syllabi may focus on topics such as visual rhetoric; new media story-telling; historical perspectives on visual rhetoric and/or new media; concentrations on a particular genre (for instance, the graphic novel, video games, etc.); visual narrative; theories of new media; etc. Offered as ENGL 378 and ENGL 478. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 379. Topics in Language Studies. 3 Units.
Aspects of contemporary language studies. Topics might include history/theories of rhetoric, discourse studies, cognitive linguistics, metaphor, language acquisition, stylistics. Maximum 9 credits. Offered as ENGL 379 and ENGL 479. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 380. Departmental Seminar. 3 Units.
A topical course, emphasizing disciplinary forms of writing. Required of all English majors, preferable in the junior year; also fulfills a SAGES requirement. Counts as SAGES Departmental Seminar. Prereq: ENGL 300.

ENGL 385. Special Topics in Literature. 3 Units.
Close study of a theme or aspect of literature not covered by traditional generic or period rubrics, such as "spatial imagination," "semiotics of fashion in literature," "epistemology." Maximum 9 credits. Offered as ENGL 385 and ENGL 485. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 386. Studies in Literature and Culture. 3 Units.
Boundary-crossing study of the relations between literary and other aspects of a particular culture or society, including theoretical and critical issues raised by such study. For example, literature and medicine, law and literature, gay and lesbian literature, Asian/Western literary relations, emotion in literature, philosophy and literature, literature and music. Maximum 9 credits. Offered as ENGL 386 and ENGL 486. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 387. Literary and Critical Theory. 3 Units.
A survey of major schools and texts of literary and critical theory. May be historically or thematically organized. Maximum 6 credits. Offered as ENGL 387, WLIT 387, ENGL 487, and WLIT 487. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 390. Independent Study and Creative Projects. 1 - 3 Units.
Up to three semester hours of independent study may be taken in a single semester. Must have prior approval of faculty member directing the project. Projects may be critical or creative in nature.

ENGL 392. Classroom Teaching. 3 Units.
For undergraduate students who assist in the teaching of ENGL 150, 180, or 181. Interested students should check with the director of composition (for ENGL 150, 180, 181) before the beginning of the semester in which they wish to participate. May be repeated only once; not more than three semester hours in ENGL 392 may be counted toward the major. May also include up to three semester hours of supervised peer tutoring at the University Writing Center.

ENGL 398. Professional Communication for Engineers. 2 Units.
A writing course for Engineering students only, covering academic and professional genres of written and oral communication. Taken in conjunction with Engineering 398, English 398 constitutes an approved SAGES Departmental Seminar. Counts as SAGES Departmental Seminar. Prereq or Coreq: ENGR 398. Prereq: 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ENGL 400. Rhetoric and Teaching of Writing. 3 Units.
Classical and modern theories of rhetoric; their application in the classroom. Required of graduate assistants and tutors who have had no prior experience in the teaching of composition. Prereq: Graduate standing.

ENGL 401. Linguistic Analysis. 3 Units.
Analysis of modern English from various theoretical perspectives: structural, generative, discourse analytical, sociolinguistic, psycholinguistic, and cognitive linguistic. Some attention to the major dialects of American English. Offered as ENGL 301 and ENGL 401. Prereq: Graduate standing.

ENGL 404. Academic Reading and Critical Thinking. 3 Units.
In this class, graduate students develop strategies to process texts in their discipline more quickly, efficiently, and accurately, while at the same time reading more analytically and critically. Participants expand their vocabulary for both speaking and reading fluency.

ENGL 405. Academic Writing and Grammar. 3 Units.
The course is designed to develop the academic reading and writing skills necessary for graduate study in the United States. Graduate students will learn how to understand, summarize, respond to, and integrate graduate-level texts (from academic journals, high-quality journalism, professional websites, and textbooks). In addition, the course provides a comprehensive review of the essential grammar for research writing.

ENGL 406. Advanced Creative Writing. 3 Units.
Workshop for serious undergraduate and graduate writers. Offered alternate years; alternates between poetry and fiction. Admission requires review of writing sample by faculty. Maximum 6 credits. Prereq: Graduate standing.

ENGL 410. History of the English Language. 3 Units.
An introductory course covering the major periods of English language development: Old, Middle, and Modern. Students will examine both the linguistic forms and the cultures in which the forms were used. Offered as ENGL 310 and ENGL 410. Prereq: Graduate standing.
ENGL 414. Advanced Academic Communication and Presentation. 3 Units.
In this course, graduate students develop the interactive speaking skills needed to participate effectively in seminar-style discussions and other formal group situations. In addition, the class focuses on the skills international graduate students need to organize and deliver presentations for academic and professional audiences. This class will reinforce and expand on oral communication strategies students learned in the previous semester.

ENGL 415. Academic Research and Writing. 3 Units.
The course focuses on the skills graduate students need to write research papers. This class will reinforce reading strategies students learned in the previous semester and graduate students will learn to organize ideas, synthesize material from written and other sources, and develop organizational and rhetorical skills appropriate to their discipline. Students will also learn to use reflection and self-assessment to become more independent and competent writers. This class will reinforce and expand on writing strategies students learned in the previous semester. Activities include small group work, analysis of academic texts, writing in a variety of academic genres, revising and editing, and tutorial sessions.

ENGL 420. Renaissance Literature. 3 Units.
Aspects of English Renaissance literature and its contexts from 1500-ca. 1620. Genres studied might include poetry, drama, prose fiction, expository and polemic writing, or some works from Continental Europe. Writers such as Skelton, More, Erasmus, Wyatt, Sidney, Spenser, Marlowe, Lanier, Wroth, Shakespeare, Donne. Maximum 6 credits. Offered as ENGL 320 and ENGL 420. Prereq: Graduate standing.

ENGL 423. Milton. 3 Units.
Poetry and selected prose, including the careful study of "Paradise Lost." Offered as ENGL 323 and ENGL 423. Prereq: Graduate standing.

ENGL 424. Shakespeare: Histories and Tragedies. 3 Units.
Close reading of a selection of Shakespeare's tragedies and history plays (e.g., "Richard the Third," "Julius Caesar," "Hamlet," "King Lear"). Topics of discussion may include Renaissance drama as a social institution, the nature of tragedy, national history, gender roles, sexual politics, the state and its opponents, theatrical conventions. Assessment may include opportunities for performance. A student may not receive credit for both ENGL 324 and ENGL 324C. Offered as ENGL 324, ENGL 324C, ENGL 424, and THTR 334. Prereq: Graduate standing.

ENGL 425. Shakespeare: Comedies and Romances. 3 Units.
Close reading of selected plays of Shakespeare in the genres of comedy and romance (e.g., "The Merchant of Venice," "Twelfth Night," "Measure for Measure," "The Tempest"). Topics of discussion may include issues of sexual desire, gender roles, marriage, the family, genre conventions. Assessment may include opportunities for performance. A student may not receive credit for both ENGL 325 and ENGL 325C. Offered as ENGL 325, ENGL 325C, ENGL 425, and THTR 335. Prereq: Graduate standing.

ENGL 427. Eighteenth-Century Literature. 3 Units.
Survey of a variety of writings from or relevant to the eighteenth century. Writers discussed may include Dryden, Behn, Defoe, Pope, Swift, Gay, Fielding, Richardson, Burney, Wollstonecraft and others working in drama, lyric and epic poetry, biography and autobiography, political and philosophical writings and prose fiction. Thematic approaches may include: satire, journalism and literature, the rise of the novel. Maximum 6 credits. Offered as ENGL 327 and ENGL 427. Prereq: Graduate standing or permission of instructor.

ENGL 428. Studies in the Eighteenth Century. 3 Units.
This course examines selected topics in the English literary culture of the eighteenth century, a culture which extended to the Americas and to other English colonies. Literary writings will be examined in relation to other aspects of the century's culture, which may include visual arts, marital institutions, the printing industry, property law, medicine, and other topics. Maximum 6 credits. Offered as ENGL 328, ENGL 328C and ENGL 428. Prereq: Graduate standing.

ENGL 429. English Literature, 1780-1837. 3 Units.
Aspects of English literature and its contexts in the early 19th century. Genres might include poetry, prose fiction, political and philosophical writing, literary theory of the period. Writers such as Wordsworth, Coleridge, Blake, Austen, Byron, the Shelleys. Maximum 6 credits. Offered as ENGL 329 and ENGL 429. Prereq: Graduate standing.

ENGL 430. Victorian Literature. 3 Units.
Aspects of English literature and its contexts during the reign of Queen Victoria. Genres studied might include poetry, prose fiction, political and philosophical writing. Writers such as the Brontes, Gaskell, Dickens, Eliot, Hardy, Tennyson, the Brownings, Arnold, Carlyle, Ruskin, Gosse, Swinburne, and Hopkins. Maximum 6 credits. Offered as ENGL 330, ENGL 330C and ENGL 430. Prereq: Graduate standing or permission of instructor.

ENGL 431. Studies in the Nineteenth-Century. 3 Units.
Individual topics in English literary culture of the 19th century. Topics might be thematic or formal, such as literature and science; medicine; labor; sexuality; Empire; literature and other arts; Gothic fiction; decadence. Maximum 6 credits. Offered as ENGL 331, ENGL 331C and ENGL 431. Prereq: Graduate standing.

ENGL 432. Twentieth-Century British Literature. 3 Units.
Aspects of British literature (broadly interpreted) and its contexts during the 20th century. Genres studied might include poetry, fiction, and drama. Such writers as Joyce, Woolf, Conrad, Ford, Lawrence, Mansfield, Shaw, Beckett, Stoppard, Yeats, Edward or Dylan Thomas, Stevie Smith, Bowen, Spark. Maximum 6 credits. Offered as ENGL 332 and ENGL 432. Prereq: Graduate standing.

ENGL 433. Studies in the Twentieth and Twenty-first Centuries. 3 Units.
Individual topics in twentieth- and twenty-first century literary culture. Particular issues and topics may cross national boundaries and genre lines as well as exploring political, psychological, and social themes, such as movements, comparative studies across the arts, literature and war, literature and occultism. Maximum 6 credits. Offered as ENGL 333 and ENGL 433. Prereq: Graduate standing.

ENGL 441. Rhetoric of Science and Medicine. 3 Units.
This course explores the roles language and rhetoric play in constructing, communicating, and understanding science and medicine. It surveys current and historical debates, theories, research, and textual conventions of scientific and medical discourse. May be taught with a specific focus, such as scientific controversies, concepts of health and illness, visualizations of science, the body in medicine, and the history of scientific writing. A student may not receive credit for both ENGL 341 and ENGL 341C. Offered as: ENGL 341, ENGL 341C, and ENGL 441. Prereq: Graduate standing.
ENGL 443. Language and Gender. 3 Units.
This course introduces students to the study of language and gender by exploring historical and theoretical trends, methods, and research findings on the ways gender, sexuality, language, and discourse interact with and even shape each other. Topics may include "grammatical" versus "biological" gender, feminine escritura, the women and language debate, speech acts and queer performativity, nonsexist language policy, discourses of gender and sexuality, feminist stylistics, and LGBT sociolinguistics. Offered as ENGL 343, ENGL 443, and WGST 343. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

ENGL 445. Topics in LGBT Studies. 3 Units.
This course will focus on selected topics in the study of LGBT literature, film, theory, and culture. Individual courses may focus on such topics as queer theory, LGBT literature, queer cinema, gay and lesbian poetry, LGBT graphic novels, the AIDS memoir, AIDS/Gay Drama, and queer rhetoric and protest. Maximum 6 credits. Offered as ENGL 345, ENGL 445 and WGST 345. Counts for CAS Global & Cultural Diversity Requirement.

ENGL 453. Major Writers. 3 Units.
Close and detailed study of the work of one or two writers: development, social and aesthetic contexts, reception, interpretation, significance. Maximum 6 credits. Offered as ENGL 353 and ENGL 453. Prereq: Graduate standing.

ENGL 456. American Literature Before 1865. 3 Units.
Aspects of American literature and its contexts from the colonial period through the end of the Civil War. Writers such as Bradstreet, Taylor, Franklin, Poe, Stowe, Alcott, Melville, Hawthorne, Emerson, Douglass. Maximum 6 credits. Offered as ENGL 356 and ENGL 456. Prereq: Graduate standing.

ENGL 458. American Literature 1914-1960. 3 Units.
Aspects of American literature and its contexts from the First World War to the Cold War. Genres studied might include fiction, poetry, drama, polemics. Writers such as T.S. Eliot, Pound, Stevens, Moore, W.C. Williams, Dos Passos, West, Fitzgerald, Hemingway, Cather, Faulkner, Barnes, Miller, T. Williams, O'Neill. Maximum 6 credits. Offered as ENGL 358 and ENGL 458. Prereq: Graduate standing.

ENGL 459. Studies in Contemporary American Literature. 3 Units.
Individual topics in literary culture since the 1960s. Topics may include the Beats, literature of the Vietnam war, post-modern fiction, contemporary poetry, the documentary novel. Maximum 6 credits. Offered as ENGL 359 and ENGL 459. Prereq: Graduate standing.

ENGL 460. Studies in American Literature. 3 Units.
Individual topics in American literary culture such as regionalism, realism, impressionism, literature and popular culture, transcendentalism, the lyric, proletarian literature, the legacy of the Civil War. Maximum 6 credits. Offered as ENGL 360 and ENGL 460. Prereq: Graduate standing or permission of instructor.

ENGL 463H. African-American Literature. 3 Units.

ENGL 465E. The Immigrant Experience. 3 Units.
Study of fictional and/or autobiographical narrative by authors whose families have experienced immigration to the U.S. Among the ethnic groups represented are Asian-American, Jewish-American, Hispanic-American. May include several ethnic groups or focus on a single one. Attention is paid to historical and social aspects of immigration and ethnicity. Maximum 6 credits. Offered as ENGL 365E, ENGL 365EC, ENGL 465E, WLIT 365E and WLIT 465E. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

ENGL 465N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Offered as AFST 365N, ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

ENGL 465Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Offered as ENGL 365Q, ENGL 365QC, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

ENGL 466G. Minority Literatures. 3 Units.
A course dealing with literature produced by ethnic and racial minority groups within the U.S. Individual offerings may include works from several groups studied comparatively, or focus on a single group, such as Native Americans, Chicanos/Chicanas, Asian-Americans, Caribbean-Americans. African-American works may also be included. May cover the entire history of the U.S. or shorter periods. Maximum 6 credits. Offered as ENGL 366G, WLIT 366G, ENGL 466G, and WLIT 466G. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

ENGL 467. Introduction to Film. 3 Units.
An introduction to the art of film. Each week we’ll take an element of film form (editing, cinematography, sound, and so on) and ask how filmmakers work with this element to produce effects. Most weeks we’ll also screen a whole film and discuss it in light of the week’s focus. Films screened will include masterworks of the silent era, foreign films, Hollywood studio-era classics, and more recent cinema. This course has no prerequisites and welcomes first year students. Offered as ENGL 367 and ENGL 467. Prereq: Graduate standing.

ENGL 468. Topics in Film. 3 Units.
Individual topics include Horror Films, Storytelling & Cinema, Science Fiction Films, Films of Alfred Hitchcock, American Cinema & Culture, History of Cinema, and many others. This course has no prerequisites and welcomes first year students. Other than the number of credits from one department a student can apply toward graduating, there is no limit to the number of times Topics in Film can be taken. A student who has previously taken ENGL 368C may receive credit for ENGL 368 only if the themes/topics are different. Offered as ENGL 368, ENGL 468, WLIT 368, and WLIT 468. Prereq: Graduate standing.

ENGL 469. Children’s Literature. 3 Units.
Individual topics in 19th-, 20th-, and 21st-century children’s literature. Topics may focus on narrative and thematic developments in the genre, historical contexts, literary influences, or adaptations of children’s literature into film and other media. Offered as ENGL 369 and ENGL 469. Prereq: Graduate standing.
ENGL 470. Comics and the Graphic Novel. 3 Units.
Selected topics in the study and analysis of comics and the graphic novel. Topics may include historical contexts of the genre, visual rhetoric, thematic developments, influence of literature, adaptations into film. A student may not receive credit for both ENGL 370 and ENGL 370C. Offered as ENGL 370, ENGL 370C, and ENGL 470.

ENGL 471. Topics in Women's and Gender Studies. 3 Units.
Individual topics and issues in women's studies relating to writing by and about women, such as feminist theory and criticism; the politics of gender and sexuality; women in popular culture; women in the writing business. Maximum 6 credits. Offered as ENGL 371 and ENGL 471

Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

ENGL 472. Studies in the Novel. 3 Units.
Selected topics in the history and formal development of the novel, such as detective novels; science fiction; epistolary novels; the rise of the novel; the stream of consciousness novel; the Bildungsroman in English. Maximum 6 credits. Offered as ENGL 372 and ENGL 472. Prereq: Graduate standing.

ENGL 473. American Women's Poetry. 3 Units.
This course surveys American women's poetry from the seventeenth century to the present. We will read a range of poetry illustrating the roles of women poets in the development of the nation's literary, cultural, and social history. We will pay close attention to how women poets use traditional and innovative poetic forms to represent lived experiences and to engage the political realities of their varying historical moments. Offered as ENGL 373, ENGL 473, and WGST 374. Prereq: Graduate standing.

ENGL 476. Studies in Genre. 3 Units.
Topics in literary genres, such as comedy, biography and autobiography, satire, allegory, the short story, the apologue, narrative poetry. May cross over the prose/poetry boundary. Maximum 6 credits. Offered as ENGL 376 and ENGL 476. Prereq: Graduate standing.

ENGL 477. Topics in Visual and New Media Studies. 3 Units.
This course will focus on selected topics in the study of visual rhetoric and/or new media, including theoretical, critical, and historical issues raised by texts and media platforms that communicate largely through visual means or through the interaction of visual and verbal modes. Possible syllabi may focus on topics such as visual rhetoric; new media story-telling; historical perspectives on visual rhetoric and/or new media; concentrations on a particular genre (for instance, the graphic novel, video games, etc.); visual narrative; theories of new media; etc. Offered as ENGL 378 and ENGL 478. Prereq: Graduate standing.

ENGL 479. Topics in Language Studies. 3 Units.
Aspects of contemporary language studies. Topics might include history/theories of rhetoric, discourse studies, cognitive linguistics, metaphor, language acquisition, stylistics. Maximum 9 credits. Offered as ENGL 379 and ENGL 479. Prereq: Graduate standing.

ENGL 485. Special Topics in Literature. 3 Units.
Close study of a theme or aspect of literature not covered by traditional generic or period rubrics, such as "spatial imagination," "semiotics of fashion in literature," "epistolarity." Maximum 9 credits. Offered as ENGL 385 and ENGL 485. Prereq: Graduate standing.

ENGL 486. Studies in Literature and Culture. 3 Units.
Boundary-crossing study of the relations between literary and other aspects of a particular culture or society, including theoretical and critical issues raised by such study. For example, literature and medicine, law and literature, gay and lesbian literature, Asian/Western literary relations, emotion in literature, philosophy and literature, literature and music. Maximum 9 credits. Offered as ENGL 386 and ENGL 486. Prereq: Graduate standing.

ENGL 487. Literary and Critical Theory. 3 Units.
A survey of major schools and texts of literary and critical theory. May be historically or thematically organized. Maximum 6 credits. Offered as ENGL 387, WGIT 387, ENGL 487, and WGIT 487. Prereq: Graduate standing.

ENGL 501. Writing History and Theory. 3 Units.
This course addresses general research methods and theories specific to the study of writing, and functions as a required core course and overview for the Writing, History and Theory (WHIT) sequence in the English Department's Ph.D. program. Prereq: Graduate standing.

ENGL 504. Creative Writing Theory and Practice. 3 Units.
This course is designed to prepare MA and PhD candidates in English to teach ENGL 203 (Introduction to Creative Writing). It is a required course for any graduate student seeking a concentration in creative writing. The course will operate as a hybrid seminar/workshop. Students will examine and discuss traditional creative writing and teaching practices while producing their own works of creative writing for exchange and critique. Recommended Preparation: a creative writing workshop at the undergraduate or graduate level or permission of the instructor. While the overriding objective of this course is to prepare graduate students to teach ENGL 203, the multiple objectives coordinated toward that outcome are as follows: -- to exercise and refine creative writing practices of participants -- to share resources for professional development in creative writing (e.g. publication opportunities, conferences, etc.) -- to provide critical/historical view of creative writing's relationship with the academy -- to examine and debate received creative writing pedagogies -- to position creative writing pedagogy in resistance to hegemony and monoculture -- to develop genre-specific, and genre-adaptable creative writing pedagogies -- to consider intersections of digital media and creative writing.

ENGL 506. Professional Writing: Theory and Practice. 3 Units.
Prepares graduate students to teach disciplinary forms of writing, including technical and professional writing, in academic and non-academic settings. Prereq: ENGL 400.

ENGL 508. Seminar: English Literature 1550-1660. 3 Units.
Prereq: Graduate standing.

ENGL 510. Research Methods. 3 Units.
This course focuses on methods and resources for research in English, including substantial treatments of narrative, poetics, and close-reading skills. It also introduces graduate students to questions of textuality, genre, medium, authorship, reception, historiography, and bibliography. Prereq: Graduate standing or permission of instructor.

ENGL 517. Seminar: American Literature. 3 Units.
Prereq: Graduate standing.

ENGL 518. Seminar: English Literature 1660-1800. 3 Units.
Prereq: Graduate standing.

ENGL 519. Seminar: English Literature 1800-1900. 3 Units.
Prereq: Graduate standing.

ENGL 520. Seminar: 20th Century Literature. 3 Units.
Prereq: Graduate standing.
ENGL 521. Seminar: The Novel. 3 Units.
Prereq: Graduate standing.

ENGL 522. Seminar: Topics in Poetry. 3 Units.
Prereq: Graduate standing.

ENGL 524. Seminar: Criticism and Other Special Topics. 3 Units.
Prereq: Graduate standing.

ENGL 550. External Seminar. 3 Units.
Coursework offered in cooperation with participating English departments in the region; content and approach vary. Requires prior approval of the Graduate Director.

ENGL 590. Special Reading or Research. 3 Units.
Independent study as arranged with individual instructors. Prereq: Graduate status or consent of department.

ENGL 601. Directed Reading. 1 - 6 Units.
Guided reading for academic and professional development. Prereq: Graduate status.

ENGL 651. Thesis M.A.. 1 - 18 Units.
(Credit as arranged.) Prereq: Graduate standing.

ENGL 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Environmental Studies Program

211 A. W. Smith Building
www.case.edu/artsci/estd (http://www.case.edu/artsci/estd/)
Phone: 216.368.3676; Fax: 216.368.3691
Peter McCall, Program Director
peter.mccall@case.edu

Environmental Studies is a multidisciplinary program that introduces students to the societal determinants and implications of environmental problems. The program emphasizes the moral, cultural, and political dimensions of environmental problems and solutions as well as scientific understanding of the environment, bringing to bear the issues and methods of the humanities and social sciences as well as those of the sciences and the professions. The program is designed to serve the needs of students seeking a liberal education or a broad intellectual base for more technical training in environmental sciences. Students can pursue a major or a minor in environmental studies.

Program Faculty
Peter L. McCall, JD, PhD
Professor, Department of Earth, Environmental, and Planetary Sciences; Director, Environmental Studies Program

Timothy Beal, PhD
Florence Harkness Professor of Religion, Department of Religious Studies

Jeremy Bendik-Keymer, PhD
Elmer G. Beamer-Hubert H. Schneider Professor in Ethics; Associate Professor, Department of Philosophy

John Ruhl, PhD
Connecticut Professor, Department of Physics

Peter Shulman, PhD
Associate Professor, Department of History

Theodore Steinberg, PhD
Adeline Barry Davee Distinguished Professor of History, Department of History

Undergraduate Programs

Major
The Environmental Studies Program offers a major (30 credit hours) leading to the Bachelor of Arts degree. However, it may be elected only as a second or secondary major. The double major is required so that the program's multidisciplinary perspective will be complemented by a concentrated disciplinary major. Students may apply up to six credits from required and elective courses in their first major to the Environmental Studies major. None of the required courses may be taken pass/no pass.

The required courses are:

Required Courses

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>

<td>ESTD 388</td>
<td>Politics, Policy, and the Global Environment</td>
<td></td>
</tr>
</tbody>
</table>

Fifteen additional hours chosen in consultation with the departmental advisor. An approved Washington Study internship or summer field course may be used to satisfy part or all of the elective requirement. Courses taken to satisfy General Education Requirements of a school might also qualify as ESTD electives. All programs of study must be approved by the director.

Total Units 30

If a required course is not offered, substitution of a course to fulfill the distribution requirement is possible only with permission of the program director.

Minor
The minor in Environmental Studies (15 credit hours) consists of:

Required course:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESTD 101</td>
<td>Introduction to Environmental Thinking</td>
</tr>
</tbody>
</table>
One course each from two of the following disciplinary groups:

**Humanities**
- RLGN 206 Religion and Ecology
- ESTD 318 People and Planet
- HSTY 378 North American Environmental History

**Social Science**
- ESTD 303 Environmental Law
- ECON 368 Environmental Economics
- PHIL 384 Ethics and Public Policy
- ESTD 388 Politics, Policy, and the Global Environment

**Science and Engineering**
- ESTD 202 Global Environmental Problems
- ECSE 342 Introduction to Global Issues
- BIOL 351 Principles of Ecology

Courses from the disciplinary groups may also be selected as electives.

Six additional hours chosen in consultation with the departmental advisor. Courses taken to satisfy General Education Requirements of a school might also qualify as ESTD electives.

Total Units: 15

**Courses**

**ESTD 101. Introduction to Environmental Thinking. 3 Units.**
Critical comparison of scientific, historical, religious, and literary conceptions of nature. Theories of environmental ethics, legal, and economic conceptions of environmental goods. Current controversies concerning human population growth, energy use, the consumer society, and attitudes towards animals.

**ESTD 202. Global Environmental Problems. 3 Units.**
Global Environmental Problems is a course designed to provide students with an understanding of, and an appreciation for, human-influenced environmental changes that are global in scope. Accordingly, much of the material will focus on the nature and structure of natural global systems, how and where in those systems human influences occur, and will delve deeply into a few particular problems and solutions of current interest, such as population growth, climate change, ozone depletion, and fisheries, from a variety of viewpoints. Offered as ESTD 202 and EEPS 202.

**ESTD 303. Environmental Law. 3 Units.**
Introduction to treatment of environmental issues in legal proceedings. Sources of environmental law, legal procedure, common law remedies (toxic torts and human health, nuisance, contract law), statutes and regulations, endangered species, public lands, toxics regulation, nuclear power, coal. The course employs the case method of reading and recitation of appellate judicial opinions. We read both classic cases in environmental law as well as current controversies. Offered as ESTD 303 and EEPS 303.

**ESTD 318. People and Planet. 3 Units.**
In this course, we study the way in which the environment is a matter of politics. Our approach is philosophical, examining the concept of politics in light of how societies shape their environment on Earth. This elucidation’s aim is practical. We want to know not only what environmental politics is, but what we should do about it. Students from any major are welcome, without prerequisite. Offered as PHIL 318, POLS 318 and ESTD 318.

**ESTD 382. Art, Eco-criticism, and the Environment. 3 Units.**
As issues of sustainability and environmental impact have become increasingly dominant concerns in contemporary society, eco-criticism has emerged as a vital methodological thread across the humanities. Motivated by ethical as well as scholarly concerns, eco-criticism not only enriches a fundamental examination of nature as an ideological construct, but also seeks to investigate the complex interrelationship between humanity and the environment. Concurrently, there has been a marked interest in studying the role of “green issues” in contemporary art, particularly in tracing the development of earth art or eco-art from the early 1970s to the present. The goal of this seminar is to forge a link between these two emergent strands by tracing the complex relationship between art and the environment from the nineteenth-century to the present, seeking to thereby assess the capaciousness of eco-criticism as a methodological approach to art history. Offered as ARTH 382, ARTH 482 and ESTD 382. Counts for CAS Global & Cultural Diversity Requirement.

**ESTD 388. Politics, Policy, and the Global Environment. 3 Units.**
This course examines the law, politics and policy surrounding global environmental challenges such as climate change. The course aims to provide a broad overview of the key concepts, actors, debates, and issues in global environmental politics. It aims to illustrate the complexities of addressing environmental problems—from the proliferation of global institutions and international actors, to the absence of central enforcement mechanisms. We examine the causes of environmental degradation and competing views on the gravity of the problem. Using concepts from political science and economics, we investigate the challenges in getting states to act jointly to address environmental problems. We examine the actors and institutions of global environmental politics, to understand how conditions are defined as problems and responses are chosen and implemented. The course concludes by applying the tools and concepts to the case of climate change. Offered as ESTD 388, POLS 388 and POLS 488.

**ESTD 398. Seminar in Environmental Studies. 3 Units.**
Small group discussion and student presentations concerning the cultural determinants of environmental attitudes and policies. Each student participates in all weekly discussions and leads at least one seminar. Prereq: ESTD 101 or previous credit for ESTD 398.

**ESTD 399. Departmental Seminar in Environmental Studies. 3 Units.**
Discussion and critique of recent publications in Environmental Studies. Students write weekly short essays on readings and participate in weekly group discussion. Reading list changes annually and is typically comprised of 7-9 books that center on a few unifying themes for that year (food, energy, futures, toxic torts, attitudes toward animals, consumer culture, climate crises for example). Students research, write, and defend a critical review of academic literature concerning some topic contained in the readings. Prior enrollment in ESTD 101 is recommended but not required. Students may not enroll in both ESTD 399 and ESTD 398 in the same year. Counts as SAGES Departmental Seminar.

**Ethnic Studies Program**

204 Guilford House
The goal of the Ethnic Studies Program is to expand and enhance the university's course offerings on ethnicity and race in the United States and around the world. The program's objectives are:

1. to examine relationships among racial/ethnic groups, the processes of racial/ethnic formation, and their intersections with class, gender, and sexuality at the personal and collective levels
2. to foster the development of research skills in a broad range of disciplines in the humanities
3. to contribute to an interdisciplinary knowledge of the challenges and contributions of ethnic minorities in the United States
4. to impart to students a deep knowledge of the cultures of Africa and Latin America
5. to help students develop competencies for working with people of different racial/ethnic backgrounds and to foster an understanding of racial/ethnic diversity
6. to support students and faculty in the transmission of knowledge, in the discovery and development of new ideas, and in research and writing in the field of ethnic studies
7. to inculcate in students an understanding of the complexity and challenges of multiethnic societies, and to prepare them for careers in education, business, law, government service, social work, social welfare, health care, teaching, public policy, law enforcement, urban and community development, and the arts.

Ethnic Studies is an interdisciplinary program. The program aims to develop fundamental skills in critical and global thinking and in comparative analysis, as well as an understanding of the interactions of race, class, gender, and sexuality in the experiences of a range of social groups. It is designed to bring together a community of students, faculty, and staff devoted to the transmission of knowledge and the discovery of new ideas in the field of ethnic studies. Ethnic Studies also offers diverse perspectives that challenge monolithic thinking about the formation of identities and societies.

The program's core courses focus on the exploration and comparison of the cultures, history, politics, and economics of Africa, Latin America, and their diasporas. Program offerings explore ethnicity and cross-cultural exchange globally and in postcolonial frames. Ethnic Studies supports research pertinent to the field and encourages cultural and academic exchange among scholars and students.

The program is part of the university's mission to enhance the recruitment, retention, and excellence of a diverse faculty and student body. Our long-term goals are to extend program offerings to encompass other ethnic minority groups and to develop a center that will foster an appreciation of ethnic diversity and difference in the learning and research communities of Case Western Reserve University.

**Program Faculty**

Gilbert Doho, PhD  
*(University of Paris—Sorbonne Nouvelle)*  
*Associate Professor, Department of Modern Languages and Literatures; Director, Ethnic Studies Program*  
African theater and film, people theater

Katia Almeida, PhD  
*Senior Instructor, Department of Anthropology*  
Latin America and Brazil, globalization and electronic technologies in higher education

Damaris Punales-Alpizar, PhD  
*(University of Iowa)*  
*Associate Professor, Department of Modern Languages and Literatures*  
Latin American studies

Joy Bostic, PhD  
*(Union Theological Seminary)*  
*Associate Professor, Department of Religious Studies; Associate Dean, College of Arts and Sciences*  
African-American religion and culture

M. Gabriela Copertari, PhD  
*(Georgetown University)*  
*Associate Professor, Department of Modern Languages and Literatures*  
Latin American literature and film

Jacqueline Nanfíto, PhD  
*(UCLA)*  
*Associate Professor, Department of Modern Languages and Literatures*  
Latin American studies / Women's studies

Cristián Gómez Olivares, PhD

*Associate Professor, Department of Modern Languages and Literatures*  
Latin American literature and theory

Deepak Sarma, PhD  
*(University of Chicago)*  
*Professor, Department of Religious Studies*  
Hinduism; Indian philosophy; philosophy of religion; method and theory

Jonathan Tan, PhD  
*(Catholic University of America)*  
*Archbishop Paul J. Hallinan Professor in Catholic Studies; Associate Professor, Department of Religious Studies*  
Asian/Asian American Studies and Chinese/Chinese American Studies

**Undergraduate Program**

**Minor**

The Ethnic Studies minor is open to all undergraduate students. It requires a minimum of 15 credit hours. Students are required to take 6 credits from among Ethnic Studies core courses and 9 credits in their chosen areas of concentration. Community projects are strongly recommended, and students are encouraged to carry out field research in their areas of concentration.

The core courses are designed to introduce students to the interdisciplinary field of ethnic studies. Courses may be individually or team taught and will sometimes be conducted in seminar format. Students are encouraged to use the tools and perspectives of several disciplines (history, literature, art history, anthropology, film, sociology, and political science, for example) to address the experiences of African-Americans and Latino/a Americans. Courses center on the examination of social, cultural, political, and economic structures that shape the lives of these ethnic minorities in the United States. They examine how race, class, and gender have impacted their identities as well as their economic, social, political, and cultural productions. Assignments and
Required Courses:

ETHS 251 Perspectives in Ethnicity, Race, Religion and Gender
ETHS 252A Introduction to African-American Studies
ETHS 252B Introduction to Latina/o Studies
ETHS 253A/HSTY 135 Introduction to Modern African History
ETHS 253B Introduction to Latin American History

Nine hours chosen from one of the concentrations listed below

Total Units 15

Concentrations

African Studies Concentration

Any three of the following courses:

COSI 260 Multicultural Aspects of Human Communication
ECON 375 Economics of Developing Countries
ETHS 235 Theater and Identity
ETHS 251A Oral Performances and Ethnic Identities
ETHS 252A Introduction to African-American Studies
FRCH/WLIT 295 The Francophone World
FRCH/WLIT 308 Immigration and the Paris Experience

Total Units 9

African-American Studies Concentration

Any three of the following courses:

COSI 260 Multicultural Aspects of Human Communication
ECON 375 Economics of Developing Countries
ENGL 270 Introduction to Gender Studies
ENGL/WLIT 365Q Post-Colonial Literature
FRCH/WLIT 295 The Francophone World
POSC 374 Politics of Development in the Global South

Total Units 9

Latin American and Caribbean Studies Concentration

Any three of the following courses:

COSI 260 Multicultural Aspects of Human Communication
ECON 375 Economics of Developing Countries
POSC 364 Dictatorship and Democracy in Modern Latin America
SPAN 322 Latin American Short Story

Courses

ETHS 153. Introducing Chinese Religions. 3 Units.
This "topics" course offers an introduction to the academic study of Chinese religions. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and a basic religious literacy in the nuances and complexities in Chinese religions within various historical and socio-cultural contexts. Section topics might include, but are not limited to: Confucianism, Daoism, Chinese Buddhism, Gender and Sexuality in Chinese Religions. Students may repeat the course for credit once (two times total for 6 credits), provided that the two sections are different. Offered as RLGN 153, ETHS 153 and CHIN 253. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 218. Jews in Early Modern Europe. 3 Units.
This course surveys the history of Jews in Europe and the wider world from the Spanish expulsion through the French Revolution. Tracking peregrinations out of the Iberian Peninsula to the British Isles, France, Holland, Italy, Germany, Poland-Lithuania, the Ottoman Empire, and the American colonies, it examines the diverse ways Jews organized their communities, interacted with their non-Jewish neighbors, and negotiated their social, economic, and legal status within different states and empires. What role did Jews play and what symbolic place did they occupy during a period of European expansion, technological innovation, artistic experimentation, and religious and political turmoil? What internal and external dynamics affected Jewish experiences in the sixteenth, seventeenth, and eighteenth centuries? Through a selection of inquisitorial transcripts, government records, memoirs, and historical literature, we will explore topics such as persecution, conversion, messianism, toleration, emancipation, and assimilation. Offered as HSTY 218, JDST 218, and ETHS 218. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.
ETHS 220. The Early Modern Mediterranean. 3 Units.
For centuries before Columbus crossed the Atlantic Ocean, travelers and traders, pirates and pilgrims, mercenaries and missionaries explored the contours of the Mediterranean Sea—and engaged in commerce, as well as religious, economic and military competition. If religion and ethnicity divided Muslims, Christians and Jews from Algiers to Athens, did shared geography, foodstuffs, and cultural values bind them together? This course examines the unity and diversity of this maritime region by considering the peoples, beliefs, commodities and diseases that circulated through it during the sixteenth, seventeenth, and eighteenth centuries. Does the early modern Mediterranean showcase a clash of civilizations or provide an enduring model for coexistence? Topics include merchant culture, diplomacy, honor and shame, slavery and colonization. Offered as ETHS 220 and HSTY 220. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 222. African-American Religions. 3 Units.
This course is an exploration of the rich diversity of African American religions from the colonial period to the present. Attention will be given to key figures, institutional expressions, and significant movements in African American religious history. Major themes include African traditions in American religions, slavery and religion, sacred music, social protest, Black Nationalism in religion, Islam, African American women and religion, and black and womanist theologies. Course requirements will include field trips to local religious sites. Offered as AFST 222, ETHS 222 and RLGN 222.

ETHS 224. The Many Faces of Contemporary U.S. Catholicism. 3 Units.
This course explores the implications of immigration and changing demographics on the contemporary U.S. Catholic Church. The course investigates the diverse racial and ethnic communities that increasingly define U.S. Catholicism and includes a particular focus on African Americans and African Americans, Latina/os, and Asian Americans. Attention will be given to the intersections of faith, ethnicity, race, and identity constructions in contemporary U.S. Catholicism, as well as issues of racism and racial justice in the U.S. Catholic Church and other social, cultural, and political dynamics that are shaping and transforming contemporary Catholic identities in the United States. Offered as ETHS 224 and RLGN 224. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 228. Asian Americans: Histories, Cultures, Religions. 3 Units.
This course introduces students to Asian American Studies as an interdisciplinary academic discipline. It critically examines the global and transnational dimensions of U.S. history, the constructions of “modernity” in the U.S., and the shaping of U.S. culture and religion, race and racialization, identity constructions and contestations, law and law-making, colonialism and empire building, labor and migration, politics and public policy making, and social movements through a critical study of Asian Americans and their diverse histories, cultures, religions, identity negotiations and contestations, social movements, and political activism. Offered as ETHS 228, HSTY 228 and RLGN 228. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 234. France and Islam. 3 Units.
This seminar examines French encounters with the Muslim world from the Middle Ages to the present. Over the last millennium, France has viewed Saracens, Moriscos, Turks, Berbers, and Arabs with admiration and fear, disdain and incomprehension. Between the eleventh and thirteenth centuries, French soldiers battled in the Holy Land; for several hundred years after that, France and the Ottoman Empire exchanged diplomats, traders and slaves. The colonial occupation of Algeria that began in 1830 ended violently in 1962. By then, the empire that struck back had also come home through large waves of immigration. Today, the social and economic status, religious affiliation, political significance and cultural impact of French citizens of North African descent are the subject of burning national debate. Taking a long view on Franco-Muslim relations, the course will explore such topics as the Crusades, Mediterranean piracy and captivity, Napoleon’s Egyptian campaign, the Algerian War of Independence, the “veil affair,” riots in the suburbs of Paris and World Cup soccer. Offered as ETHS 234 and HSTY 234. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 235. Theater and Identity. 3 Units.
This course aims at surveying identities in dramatic and performance texts in the modern era. It will help students develop skills to study plays and related theatrical forms, to analyze images for their social and political meanings, to investigate issues of identity, to appreciate the complexities of identity and images of self and other as related in theater, media and the larger political and social contests. African and African-American identities, Latina/o-American and Latin American identities, Native-American identities, Asian-American and Asian identities, Gender identities will be examined. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 243. Bollywood and Social Justice: Contemporary Bollywood Movies with a Social Message. 3 Units.
India, where over-the-top, melodramatic films dominate, produces more than 1,000 films a year. With lavish action sequences punctuated by periodic songs in picturesque locales, these films, popularly referred to as Bollywood, traditionally have been known for depicting imaginary worlds, very far from reality. Among these are movies that are deeply immersed in issues of religion, religious conflict, caste, and social injustice. These issues range from ones concerning purity and the class system and Hindu-Muslim conflict, to women’s rights and human trafficking. This class will be looking at a number of Bollywood films with focal points of matters pertaining to social justice. Students will learn about the foundations of these inequalities and intolerances so that they can more completely understand the themes addressed in the movies. The class will thus focus on the religion(s) of cultures outside the United States. It will address in a substantive way ethnic, gender, sexual, religious, or other cultural practices outside the United States, so as to provide students with fresh perspectives on their own cultural assumptions, traditions, and experiences. Offered as ETHS 243 and RLGN 243. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 251. Perspectives in Ethnicity, Race, Religion and Gender. 3 Units.
This course is designed to introduce students to the study of ethnicity. Basic concepts such as race, gender, class, and identity construction will be examined. Students are encouraged to use the tools and perspectives of several disciplines to address the experiences of ethnic groups in the United States. Offered as ETHS 251 and RLGN 251. Counts for CAS Global & Cultural Diversity Requirement.
ETHS 251A. Oral Performances and Ethnic Identities. 3 Units.
This course is an in-depth study of performances that have helped to shape and anchor the identities of different non-Western ethnic groups. The course will explore the multi-generic composition of the oral epic, which combines forms as diverse as narrative, song, praise poetry, theater, music and historical oratory. ETHS 251A will provide a comprehensive overview of oral performances while focusing on a particular area or areas of Africa, Asia, the United States, or Latin America. In the African continent, for example, the focus will be on the Madinka Sundjata corpus, dealing with the empire of Mali; the life of Shaka, the Zulu in South Africa; while in the United States, the narrative life of Frederick Douglass, blues and negro-spiritual will be considered as the sites of ethnic discourse. Using a comparative approach, the course will examine aesthetic issues of oral performance, the written word, interactions between music and voice, and interaction between poetic and prose narrative forms. The performance texts will be augmented by field recordings and in-class demonstrations by griots and other storytellers from Africa and the United States.

ETHS 252A. Introduction to African-American Studies. 3 Units.
This course is designed to introduce students to the study of Black History, cultures, economics, and politics. Students will learn about the development of the field by exploring theoretical questions, methodological approaches, and major themes that have shaped the study of black people, primarily in the U.S. context. This is a seminar-style, discussion-based course that emphasizes critical analysis and expository writing. Offered as ETHS 252A and HSTY 252A. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 252B. Introduction to Latina/o Studies. 3 Units.
Interdisciplinary introduction to the basis for a Latina/o ethnicity through an exploration of commonalities and differences in the peoples of Latin American and Caribbean origin within the continental United States. Topics include methodological and theoretical formulations central to the field (e.g., racial, gender, and sexual formations, modes and relations of production and class, nation and transnation), history and contemporary issues of identity, family, community, immigration, and the potential for a pan-ethnic identity. Discussions will focus on major demographic, social, economic and political trends: historical roots of Latinas/os in the U.S.; the evolution of Latina/o ethnicity and identity; immigration and the formation of Latina/o communities; schooling and language usage; tendencies and determinants of socioeconomic and labor force status; discrimination, segregation and bias in contemporary America; racial and gender relations; and political behavior among Latinas/os. Offered as: ETHS 252B and HSTY 259. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 253A. Introduction to Modern African History. 3 Units.
A general introduction to major themes in modern African history, with an emphasis on the nineteenth and twentieth centuries. Topics include oral tradition and narrative, economic structure and dynamics, religious movements, colonialism, nationalism, and the dilemmas of independent African states. Offered as AFST 135, ETHS 253A and HSTY 135. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 253B. Introduction to Latin American History. 3 Units.
This course provides an introduction to the historical and cultural development of Latin America, in an attempt to identify the forces, both internal and external, which shape the social, economic and political realities in present day Latin America. Beginning with its pre-Columbian civilizations, the course moves through the conquest and colonial period of the Americas, the wars of independence and the emergence of nation-states in the nineteenth century, and the issues confronting the region throughout the turbulent twentieth century, such as migration and urbanization, popular protest and revolution, environmental degradation, great power intervention, the drug trade and corruption, and the integration of the region into the global economy. Offered as ETHS 253B and HSTY 136. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 253C. Religion and Philosophy in China. 3 Units.
This course critically examines the three principal religious and philosophical traditions of China: the Confucian, Daoist, and Chinese Buddhist traditions. Through a combination of assigned print and online readings, video clips and documentaries, class discussions, and written assignments, students explore the origins and historical developments, principal thinkers, central religious and doctrinal themes, ethics, spirituality, popular deviations, social movements, and contemporary developments of these three major religious and philosophical traditions of China. Students will consider the wider social, cultural, ethical, economic, and political dimensions of Chinese religions and philosophies generally, and themes of community and society, identity constructions, personal experiences, movements, as well as their socio-cultural reproductions in contemporary China, and where appropriate, the Chinese Diaspora in North America. Offered as CHIN 253C, ETHS 253C, PHIL 253 and RLGN 253. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 254. The Holocaust. 3 Units.
This class seeks to answer fundamental questions about the Holocaust: the German-led organized mass murder of nearly six million Jews and millions of other ethnic and religious minorities. It will investigate the origins and development of racism in modern European society, the manifestations of that racism, and responses to persecution. An additional focus of the course will be comparisons between different groups, different countries, and different phases during the Nazi era. Offered as HSTY 254, RLGN 254, ETHS 254, and JDST 254. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 255. Global Judaism: Diversity Across the Jewish World. 3 Units.
Scattered across the globe over the course of millennia, Jews’ diverse histories and environments have given rise to a great range of religious, cultural and social forms. Using ethnographies as our primary texts, we will think critically and comparatively about Judaism and Jewishness in the Americas, Europe, Africa, and Asia. Along our journey, we examine how Jews have navigated their experiences as minorities in their many diaspora homelands, and how they have they adapted their cultural and religious practices to the various environments in which they have found themselves. In addition to exploring their Jewishness vis-à-vis others, we also examine questions of exclusion and belonging that Jews have faced as they have encountered each another in recent decades through tourism, mass migration, globalization, and the internet. How do the world’s varied Jewish groups - who are of different skin colors, who speak different languages, and who carry different historical memories - navigate ethnic divides, race relations, and religious diversity? Should we speak of a single Jewish religion and Jewish people at all? Offered as ANTH 255, ETHS 255, JDST 255 and RLGN 255. Counts for CAS Global & Cultural Diversity Requirement.
ETHS 258. History of Southern Africa. 3 Units.
A survey of southern Africa from about 1600. Topics include the social structure of pre-colonial African societies, the beginnings of European settlement, the rise of Shaka, the discovery of minerals and the development of industry, Zimbabwe’s guerrilla war and independence, and the rise and apparent demise of apartheid. Offered as AFST 258, ETHS 258 and HSTY 258. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 260. U.S. Slavery and Emancipation. 3 Units.
 Begins with the African encounter with Europeans during the emergence of the modern slave trade. Students are introduced to the documents and secondary literature on the creation and maintenance of slavery, first in colonial America, and then in the United States. The course concludes with the destruction of slavery. Offered as AFST 260, ETHS 260 and HSTY 260. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 261. African-American History 1865-1945. 3 Units.
Explores the fashioning of a modern African-American culture between emancipation and the end of World War II. Emergence of a northern-based leadership, the challenge of segregation, emergence of bourgeois culture, the fashioning of racial consciousness and black nationalism, the shift from a primarily southern and rural population to one increasingly northern and urban, the creation and contours of a modern African-American culture, the construction of racial/gender and racial/class consciousness. Offered as AFST 261, ETHS 261 and HSTY 261. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 262. African-American History Since 1945. 3 Units.
Completes the three-term sequence of the African-American history survey (although the first two courses are not prerequisites for this course). Explores some of the key events and developments shaping African-American social, political, and cultural history since 1945. Offered as AFST 262, ETHS 262 and HSTY 262. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 265. Malcolm and Martin. 3 Units.
An examination of the lives, religious thought, and ideological frameworks of Malcolm X and Martin Luther King, Jr. The course will investigate Malcolm X and Martin King’s religious beliefs and activist strategies; the ideas and strategies of other civil rights and Black Nationalist leaders who influenced and challenged Martin and Malcolm’s ideas on race, gender, class, and sexuality; and the historical antecedents for these strategies within nineteenth-century black religious, social, and political movements. Their impact on modern African American religious thought, American political culture, and international human rights movements will also be explored. Offered as AFST 265, ETHS 265 and RLGN 265. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 280. History of Modern Mexico. 3 Units.
This course explores the major issues that have influenced the formation of modern Mexico. This class is organized around three major themes. First, we will examine Mexican identity formation and its political implications. Second, we will assess Mexican life in relation to the development of the Mexican economy. Finally, we will survey how elite and popular forms of violence have affected Mexican society. Throughout the course, we will discuss the significance of the colonial heritage, regional distinctions, racial and gender stratification, and the creation and reconfiguration of various types of borders. Offered as HSTY 280 and ETHS 280. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 295. The Francophone World. 3 Units.
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (and where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle-East (Lebanon, Syria); the Caribbean (Martinique, Guadeloupe, Haiti); Southeast Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg). FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. Offered as AFST 295, ETHS 295, FRCH 295, and WLIT 295. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 302. The Lemonade Class: Religion, Race and Black Music. 3 Units.
Charles Long suggests that black musical forms are creative responses to the particular circumstances of black peoples’ presence in the U.S and black notions of the sacred. In April of 2016, Beyoncé released her visual album Lemonade two days after the death of Prince. This course is organized around the album’s title cuts and links these two artists together in an examination of religion and musical performance as creative response to the racial and gendered conditions of black life. The course investigates how both artists have used music as a platform to explore issues of race, gender, commerce, sexuality, power and divinity. The course also looks at examples from the works of earlier artists who address similar themes such as Ma Rainey, Bessie Smith, Muddy Waters, Billie Holiday, Nina Simone, Little Richard, James Brown, Marvin Gaye, and Aretha Franklin. Offered as AFST 302, ETHS 302, MUHI 316, RLGN 302, RLGN 402, and WGST 302. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 306. The Cuban Experience: an immersion in its culture and society. 3 Units.
This is a three-week study-abroad intensive course that takes place in Matanzas and Havana, Cuba. The course combines the unique advantages of a total immersion environment in the Cuban culture with a classroom curriculum that includes the study of relevant cultural, literary and historical issues. Students complete three hours of classroom instruction and an hour and a half of workshop four days per week. Also, they participate in organized visits to historic sites and museums connected to the culture curriculum. The focus of the culture curriculum is the study of Cuban history and culture through its literature, visual arts, films, and music. After applying and being accepted into the program, students meet for personal advising with the program director and attend four different one-hour orientation-information meetings in the spring semester. After successful completion of the study-abroad program, students receive three upper-level credits in Spanish or Ethnic Studies. The course is interdisciplinary in its approach and provides students with the tools they need to analyze and understand the complexities of modern Cuba. Students will have formal classes taught by their professor and talks, and meetings with specialists on Cuban literature, art, architecture, history and other aspects of culture and society. Also, they will attend lectures, participate in discussions, and take field trips that will expose them to many aspects of Cuban culture, such as art, architecture, music, dance, film, literature, artisan work, folklore, history and urban growth. Offered as SPAN 306, SPAN 406, and ETHS 306. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 202.
ETHS 307. Body, Health and Medicine in Chinese Religions: Historical and Contemporary Perspectives. 3 Units.

This course critically evaluates the history and development of traditional Chinese approaches to health and medicine in the context of Chinese religious, philosophical, and socio-cultural history. It examines the constructions of the body in Chinese religious and philosophical thought across different historical periods and evaluates their significance and implications for understanding Chinese approaches to health and medicine. It discusses the conceptions of “health” and “good health” in ancient China, the distinction between “healing” and “curing,” the development of the complementary yin-yang and five phases (wuxing) theories, understandings of nature (xing) and body (ti), the concept of qi as life force, and various microcosm-macrocosm analogies that emerged from Chinese religious and philosophical traditions. It explores how these religious and philosophical frameworks, beginning with the Daoist classic, Basic Questions in the Inner Classic of the Yellow Emperor (Huangdi Neijing Suwen) have evolved to understand the development of diet, acupuncture, moxibustion, meditation, and various alchemical practices within Chinese holistic conceptions of health and practices of Traditional Chinese Medicine. Offered as RLGN 307, RLGN 407, CHIN 307, HSTY 308, and ETHS 307. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 308. Immigration and the Paris Experience. 3 Units.

Three-week immersion learning experience living and studying in Paris. The focus of the course is the culture, literature, and the arts of the African, Arab, and Asian communities of Paris. At least half of the course looks at issues surrounding immigration that affect women in particular. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308/408 do coursework in French. WLIT 308/408, ETHS 308, and WGST 308 students have the option of completing coursework in English. Graduate students have additional course requirements. Offered as FRCH 308, WLIT 308, ETHS 308, WGST 308, FRCH 408, and WLIT 408. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 311. Representations of Black Religion in Film. 3 Units.

In this course we will explore cinematic representations of black religion in the Americas and the Caribbean. Each week we will view a film representing diverse religious traditions such as Christianity, Candomble, Santeria, Vodou, and Islam. Films will include Cabin in the Sky, The Color Purple, Black Orpheus, The Serpent and the Rainbow, Malcolm X, Eve’s Bayou, and The Princess and the Frog. Throughout the course we will analyze the ways in which notions of gender, the history of colonialism, modern notions of race, and geographical landscapes have informed representations of black religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas of black religion in the Americas. Offered as AFST 311, ETHS 311, RLGN 311, and RLGN 411. Counts for CAS Global & Cultural Diversity Requirement. Prereq: RLGN 222 or ETHS 251 or ENGL 367 or by permission of Instructor.

ETHS 314. Cultures of the United States. 3 Units.

This course considers the rich ethnic diversity of the U.S. from the perspective of social/cultural anthropology. Conquest, immigration, problems of conflicts and accommodation, and the character of the diverse regional and ethnic cultures are considered as archetypes of racism, discrimination, and their consequences. Groups of interest include various Latina/o and Native peoples, African-American groups, and specific ethnic groups of Pacific, Mediterranean, European, Asian, and Caribbean origin. Offered as ANTH 314, ETHS 314, and ANTH 414.

ETHS 318. History of Black Women in the U.S.. 3 Units.

Chronologically arranged around specific issues in black women’s history organizations, participation in community and political movements, labor experiences, and expressive culture. The course will use a variety of materials, including autobiography, literature, music, and film. Offered as AFST 318, ETHS 318, HSTY 318, and WGST 318.

ETHS 325. Hispanic Intellectuals and Society: A Critical Approach. 3 Units.

This course offers an overview of the most important critical approaches to Spanish American culture and literature, with a socio-historical emphasis. Some of the authors we will discuss are Angel Rama, Jose Antonio Cornejo Polar and Nestor Garcia Canclini. We will analyze how the Latin American intellectuals had thought about specific issues such as identity, race, ideology, colonial and post-colonial relations with the metropolis and the process of formation of the nations in the continent. The class, the discussions, exams, oral presentations and papers will be in Spanish. Some of the readings must be in English, but most of them will be in Spanish. Offered as SPAN 325, SPAN 425, ETHS 325, WLIT 325 and WLIT 425. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 326. Christianity in China. 3 Units.

This course critically evaluates Christianity’s long history in China, beginning with the “Luminous Religion” (Jingjiao) that was propagated by Assyrian Christian missionaries in Tang China (7th century CE), the missionary endeavors of Catholic and Protestant foreign missionaries and mission societies, the rise of indigenous Chinese Christianities that sought independence from foreign missionaries, the impact of communist rule and the Cultural Revolution, and current developments involving both the official government-approved churches (i.e., the Three Self Patriotic Movement and the Chinese Patriotic Catholic Association) on the one hand, and the house church movement (jiating jiaohui) on the other hand. Students will critically discuss and analyze the historical dimensions of Christianity’s presence in China and engagement with various social, cultural, political, philosophical, and religious aspects of Chinese society, past and present, and consider the implications of emergent forms of contemporary indigenous Chinese Christian movements for the future of Chinese Christianity. Offered as RLGN 316, RLGN 416, HSTY 322, CHIN 316 and ETHS 326. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 333. Contemporary Caribbean Literature. 3 Units.

In addition to developing a general familiarity with the literature and history of this region, students will acquire an awareness of the interrelation of national identity, memory, and language in the texts produced by contemporary Caribbean authors, and of the cultural hybridity characteristic of this production. The themes treated by these authors include colonialism and postcolonialism, cultural and religious syncretism, and sexual politics. Offered as SPAN 333, SPAN 433, and ETHS 333. Counts for CAS Global & Cultural Diversity Requirement.
ETHS 337. Women in the Arab World. 3 Units.
The purpose of this course is twofold: It is a course that allows students an in-depth look at the diverse women who represent a number of cultures in the Arab world in nations from the Mashreq to the Maghreb. The second primary goal of the course is to study such women through the eyes of leading Arab women theorists who have made an impact not only in their own countries, but also on disciplines intersecting with women's studies worldwide. We will study the Arab woman's place in her respective society, in political and economic systems, in education, and in the family. We will also analyze her contributions to art and literature as well as to the sciences. The course will provide an overview of the Arab woman throughout history, from her origins to her place within recent movements within the Arab Spring and other current world events. As Arab women are Muslim, Christian, and Jewish, views of women within these major world religions will also be taken into account as we study the Arab woman as well as religion's impact on culture in the Middle East and in the Maghreb in particular. In the course, we will utilize theoretical texts, but also case studies as well as examples from media and the arts. During the semester, we will take advantage of teleconferencing opportunities between CWRU and two major academic units for Women's Studies in the Arab world: The Institute for Women's Studies in the Arab World (IWSAW) in Beirut, Lebanon, and the University of Jordan's Center for Women's Studies in Amman. Offered as FRCH 337, FRCH 437, ARAB 337, ETHS 337 and WGST 337. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 339. Black Women and Religion. 3 Units.
This course is an exploration of the multidimensional religious experiences of black women in the United States. These experiences will be examined within particular historical periods and across diverse social and cultural contexts. Course topics and themes include black women and slave religion, spirituality and folk beliefs, religion and feminist/womanist discourse, perspectives on institutional roles, religion and activism, and spirituality and the arts. Offered as ETHS 339, RLGN 338 and WGST 339. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 340. A History of Workers in the United States. 3 Units.
This course examines the experience of working people in the United States with an emphasis on twentieth-century social movements. It explores the lives of the women and men, skilled and unskilled, and rural and urban laborers that produce the goods and provide the services that society consumes. At crucial moments, working people have created or helped sustain national social movements in an effort to improve some aspect of their lives. We therefore will assess laborers in relation to several known and less known American social movements, such as the eight-hour day movement during the late nineteenth century, the peace movement during WWI, and the Civil Rights movement in the wake of WWII. Throughout the course we will also discuss the politics of time-managed work; the influence of public policy and government institutions; the role of unions within a competitive market economy; the relationship between industrial economies and functional blue-collar communities; and the correlation between immigration and globalization. Offered as HSTY 340, HSTY 430 and ETHS 340. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 342. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in the literary production of Latin American women writers, particularly from the 1920s to the present. Close attention paid to the dominant themes of love and dependency; imagination as evasion; alienation and rebellion; sexuality and power; the search for identity and the self-preservation of subjectivity. Readings include prose, poetry, and dramatic texts of female Latin American writers contributing to the emerging of feminist ideologies and the mapping of feminist identities. Offered as SPAN 342, SPAN 442, ETHS 342, and WGST 342. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 343. The New Drama in Latin American. 3 Units.
Representative works of contemporary Latin American drama. Critical examination of selected dramatic works of Twentieth-century Latin America provides students insight into the nature of drama and into the structural and stylistic strategies utilized by Latin American dramatists to create the "new theater," one which is closely related to Latin American political history. Offered as SPAN 343, SPAN 443 and ETHS 343. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 349. The Arab World Experience. 3 Units.
Taught and led by Case faculty, The Arab World Experience is a spring semester course with a spring break study abroad component in a Middle Eastern or North African country supplemented by course meetings before and after travel. It will rotate among countries such as Jordan, Lebanon, Morocco, etc. and be taught by faculty with appropriate area expertise in Arabic, Women's and Gender Studies, and/or Ethnic Studies. The course focuses on topics such as history, politics, culture, and gender relations within the society of study. Workload and learning outcomes are commensurate with a semester-long three credit hour course. Guest lectures in the host country are an important component of the course as they bring a fresh, authentic perspective to the aforementioned topics discussed. There will be three three-hour meetings prior to travel, required reading, and one three-hour meeting after travel. In the host country, students will spend seven days (five-eight hours per day) in seminars, discussions, and site visits. Student grades are determined on the basis of participation, attendance, a daily experiential learning journal, interviews with guest speakers, and a final exam. Offered as ARAB 349, ETHS 349 and WGST 349. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 352. African Feminisms. 3 Units.
This course traces the history of African feminism from its origins within traditions through to a more contemporary theoretical analysis of gender, marriage, and motherhood seen from a Afrocentric perspective. Approaches studied are those that pertain to anthropology, history, literature, sociology, and culture. African feminist theory of scholars such as Filomina Steady, Cheikh Anta Diop, Buchi Emecheta, Ifi Amadiume, Obioma Nnameka, Oyeronko Oyewumi, and Calixthe Beyala will be studied and there will be some comparative analysis of Western theories to show how African feminisms are clearly distinct. Theories on these feminisms will be presented, and in the process, students will look at cases of women in Cameroon, Nigeria, Ghana, Kenya, and Senegal. It is commonly believed that African women were defined for a long time according to constructs of Western anthropology. This course will thus look at social institutions such as woman-to-woman marriage, matriarchy, and various women's rituals in order to identify African constructs of gender, family, kinship, marriage, and motherhood. Offered as ETHS 352 and WGST 352. Counts for CAS Global & Cultural Diversity Requirement.
ETHS 353. Hindu and Jain Bioethics: Special Focus on Women's and Gender Studies. 3 Units.
This course will provide both an introduction to basic Hinduism and Jainism and an introduction to Hindu and Jain bioethics. We will focus primarily on bioethical issues that pertain to women and that are gender related. These issues include abortion, menstruation, surrogacy, intersex, and other topics of controversy. Offered as ETHS 353, RLGN 353, RLGN 453, and WGST 355. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 356. Afro-Hispanic Literature. 3 Units.
This course will survey the literary and cultural production of writers and artists of African descent in Latin America and the Caribbean, paying attention to both their creative and theoretical texts. Discussion of questions of race and ethnicity will allow students to explore the ways in which these texts reformulate the idea of national identity and cultural belonging in the context of the nation-state, whose traditional centrality is being weakened through the effects of migration and exile. Readings include works by writers from Cuba, Puerto Rico, Dominican Republic, Costa Rica, Colombia, Panama, Ecuador, and Peru. Offered as SPAN 356, SPAN 456 and ETHS 356. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 358. Latin American Cinema. 3 Units.
This course is designed to introduce students to the basic tools of film analysis as well as to the major trends and movements in Latin American cinema from the 1960s to the present. Through the analysis of representative films from Latin America, the course will examine the development of a variety of cinematic styles, paying particular attention to the historical contexts in which the films were produced and to the political, cultural, and aesthetic debates that surrounded their production. Offered as SPAN 358, SPAN 458 and ETHS 358. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 363H. African-American Literature. 3 Units.
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature of protest and assimilation. Maximum 6 credits. Offered as AFST 363H, ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ETHS 364. Dictatorship and Democracy in Modern Latin America. 3 Units.
Examination of political leadership in 20th-century Latin America, exploring the nature, causes, and consequences of dictatorship and democracy in the region, moving from the collapse of oligarchic rule and the emergence of populism in the 1930s and 1940s, to the end of democracy and establishment of military regimes in the 1960s and 1970s, and ultimately to the contemporary processes of democratization and economic liberalization. Offered as ETHS 364, POSC 364, and POSC 464. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 365N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Offered as AFST 365N, ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ETHS 365Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Offered as ENGL 365Q, ENGL 365QC, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

ETHS 369. Social Justice Issues in Latin America. 3 Units.
This course explores ethnicity, gender, and religion in Latin American politics and society, and then tackles revolution, democracy, and populism. Throughout, the region's history, geography, and culture are taken into account—for example, the European and indigenous legacies in Mexico and Perú, Bolivia, Chile, and Ecuador; the Asian presence in Perú and Brazil; the African contributions to Cuba and Brazil; female heads of state, such as Nicaragua’s Violeta Chamorro, Chile’s Michelle Bachelet, Argentina’s Cristina Fernández de Kirchner, Costa Rica’s Laura Chinchilla, and Brazil’s Dilma Rousseff. Liberation Theology and the current Pope's worries about the declining number of Catholics in the region are also addressed. Today's multiparty democracy in Mexico, Hugo Chávez’s legacy in Venezuela, and Cuba’s international humanitarian aid and ideological aims would not be possible without revolution(s) and populism. They are inevitably intertwined with ethnicity, gender, and religion. This course aims to encourage a better understanding of Latin America and its relation to the rest of the world. Offered as ETHS 369, POSC 369 and POSC 469. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 374. Politics of Development in the Global South. 3 Units.
Exploration of the post-WWII emergence of the Global South nations of Africa, Asia, the Middle East, Latin America, and the Eastern Europe arena. Offered as ETHS 374, POSC 374, and POSC 474.

ETHS 385. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 391. Advanced Readings in Black History. 3 Units.
This is an advanced readings course that may change from semester to semester. This course will provide students with an opportunity to more deeply explore special themes and theoretical issues in the field of black history that are often quickly and briefly covered in broad survey courses. Readings may be organized around specific topics such as resistance and social protest, black intellectual history, black nationalism and identity, black film and historical literacy black cultural forms and politics, black urban history, or some such other combination. Students may take this course more than once and receive credit as long as the course topic differs. Students should contact the History Department for more details on course content during any given semester. Offered as AFST 399, ETHS 391, HSTY 399 and HSTY 499.
ETHS 393. Advanced Readings in the History of Race. 3 Units.
This course examines the concept of race as a social construction that carries political and economic implications. We begin by examining the histories of the early racial taxonomists (e.g., Bernier, Linnaeus, and Blumenbach among others) and the contexts that informed their writings. We then assess how the concept of race changed from the nineteenth to the twentieth century in the United States. We conclude by evaluating how the ideology of race has influenced U.S. domestic life and foreign policy at specific historical moments. Offered as AFST 393, HSTY 393, HSTY 493, and ETHS 393. Counts for CAS Global & Cultural Diversity Requirement.

ETHS 485. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Counts for CAS Global & Cultural Diversity Requirement.

Evolutionary Biology Program
217 Rockefeller, Institute for the Science of Origins
Phone: 216.368.4257
Patricia Princehouse, Program Director
patricia.princehouse@case.edu

The Evolutionary Biology Program is designed to provide students with knowledge of macro- and micro-evolutionary processes underlying the evolution and diversification of life on Earth and an understanding of the meta-scientific issues involved in this unique field of study.

The program includes grounding in the history and philosophy of evolutionary thought and alternative conceptualizations of the mechanisms, patterns, and processes of evolution. It emphasizes evolutionary theory, foundations of ecology and genetics, focused study of particular organisms or groups of organisms, and the dynamics of evolutionary principles in scientific inquiry.

Program Faculty
Patricia Princehouse, PhD
Senior Research Associate, Department of History; Director, Evolutionary Biology Program

Radhika Atit, PhD
Professor, Department of Biology

Cynthia M. Beall, PhD
Distinguished University Professor and Sarah Idell Pyle Professor of Anthropology, Department of Anthropology

Michael Benard, PhD
Associate Professor, Department of Biology

Darin Croft, PhD
Associate Professor, Department of Anatomy, School of Medicine

Yohannes Haile-Selassie Ambaye, PhD
Adjunct Professor, Department of Anthropology; Curator and Head of Physical Anthropology, Cleveland Museum of Natural History

Emmitt Jolly, PhD
Associate Professor, Department of Biology

Bruce Latimer, PhD
Adjunct Professor of Anthropology; Adjunct Associate Professor, Department of Anatomy, School of Medicine

Peter McCall, JD, PhD
Professor, Department of Earth, Environmental, and Planetary Sciences

Scott Simpson, PhD
Associate Professor, Department of Anatomy, School of Medicine

Mark Willis, PhD
Professor, Department of Biology

Peter A. Zimmerman, PhD
Professor, Center for Global Health and Diseases, School of Medicine

Undergraduate Programs
Major
Evolutionary biology is a second major, to be pursued in conjunction with a conventional disciplinary major. Up to 12 credits in required and elective courses taken by students for their first major may be applied to their evolutionary biology major.

The 30-credit interdisciplinary major in evolutionary biology consists of:
1. Three foundation courses
2. One course in ecology
3. One course in the philosophy/history of science
4. Four approved electives

The approved electives may include additional philosophy/history of science courses from the list below. In consultation with a major advisor, students will tailor intensive study to suit particular interests within the major.

Required courses:
<table>
<thead>
<tr>
<th>Course Code</th>

**French and Francophone Studies Program**

203 Clark Hall

Phone: 216.368.2633; Fax: 216.368.6078

Designed to develop cross-cultural awareness and to foster international understanding, the French and Francophone Studies (FFS) Program adds an exciting dimension to the traditional liberal arts curriculum. The French and Francophone Studies major differs from the traditional French major in two respects: its interdisciplinary nature and its greater flexibility in accommodating students’ areas of interest. The FFS major answers the needs of students with a strong interest in cultural issues in general and in French and Francophone history and society in particular. By allowing students to take coursework in English, the FFS major allows them to profit from the many courses in various departments that focus on France and the Francophone world.

The FFS Program is an interdisciplinary, integrated program that understands the term “French” in its broadest sense. It thus reflects the diversity of the field of French studies, which explores varied cultures of Francophone expression: Canada, the Caribbean, North and West Africa, the Middle East, and Southeast Asia. Reaching beyond disciplinary and national boundaries, the program encourages students to choose from a large selection of courses in the humanities, the arts, and the social sciences. In this way, it provides both a meaningful course of study and an outstanding preparation for graduate or professional schools and for careers in international business and finance, law, journalism, diplomatic service, nonprofit and other international organizations, health, teaching, or the arts.

**Program Advisory Committee**

Gilbert Doho, PhD
*Associate Professor, Department of Modern Languages and Literatures*

Laura E. Hengehold, PhD
*Professor, Department of Philosophy*

**Affiliated faculty**

Gillian Weiss, PhD
*Associate Professor, Department of History*

For information about the major and minor in French, please see the Department of Modern Languages and Literatures (p. 428).

**Major**

Each student prepares a program of study in close consultation with a faculty advisor drawn from the advisory committee. Students should also discuss their choice of a minor or a second major with their advisor.

French and Francophone Studies (FFS) majors should demonstrate French language ability by completing French 201-202 or the equivalent. They will also take at least one 300-level FRCH course (see Foundations in Culture courses below).

The major in French and Francophone Studies requires a minimum of 33 credit hours in the following areas:

1. **Foundations in Language (8 hours)**
   
   For students entering at the 200-level of French language:
   
<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>FRCH 201</td>
<td>Intermediate French I</td>
<td>4</td>
</tr>
<tr>
<td>FRCH 202</td>
<td>Intermediate French II</td>
<td>4</td>
</tr>
</tbody>
</table>
Students entering at the 300-level of language study complete 21 credits in courses from the Electives section below.

| Total Units | 8 |

### 2. Foundations in Culture: Introduction to French and Francophone cultures (9 hours)

| FRCH/WLIT 295 | The Francophone World | 3 |

Two of the following:

| FRCH 316 | Contemporary France |
| FRCH 318 | The Origins of France |
| FRCH 319 | Modern France |
| HSTY 310 | The French Revolutionary Era |

Total Units | 9 |

### 3. Electives: Related Courses in French and Other Disciplines (15-21 hours)

Students select from courses that focus on French and Francophone cultures in FRCH and other disciplines (art history, political science, history, etc.). These are chosen from the approved list (see below) and in conjunction with a program advisor. No more than 9 of these credits may be chosen from FRCH courses.

#### Anthropology

| ANTH 399 | Independent Study | 1 - 6 |

#### Art History

| ARTH 260 | Art in Early Modern Europe | 3 |
| ARTH 280 | Modern Art and Modern World | 3 |
| ARTH 284 | History of Photography | 3 |
| ARTH 340 | Issues in the Art of China | 3 |
| ARTH 374 | Impressionism to Symbolism | 3 |
| ARTH 379 | Issues in 19th Century Art | 3 |
| ARTH 392 | Issues in 20th/21st Century Art | 3 |
| ARTH 398 | Independent Study in Art History | 1 - 3 |

#### Economics

| ECON 372 | International Finance | 3 |
| ECON 373 | International Trade | 3 |
| ECON 375 | Economics of Developing Countries | 3 |

#### English

| ENGL/WLIT 290 | Masterpieces of Continental Fiction | 3 |
| ENGL 301 | Linguistic Analysis | 3 |
| ENGL 368C | Topics in Film Capstone | 3 |
| ENGL 379 | Topics in Language Studies | 3 |
| ENGL/WLIT 387 | Literary and Critical Theory | 3 |

#### History

| HSTY 151 | Technology in European Civilization | 3 |
| HSTY 201 | Science in Western Thought I & Science in Western Thought II | 6 |
| HSTY 215 | Europe in the 20th Century | 3 |
| HSTY 234 | France and Islam | 3 |
| HSTY 250 | Issues and Methods in History | 3 |
| HSTY 310 | The French Revolutionary Era | 3 |
| HSTY/RLGN 315 | Heresy and Dissidence in the Middle Ages | 3 |

| HSTY 332 | European International Relations 1789-1945 | 3 |
| HSTY/POSC 348 | History of Modern Political and Social Thought | 3 |
| HSTY 397 | Undergraduate Tutorial | 1 - 3 |

#### International Studies

| INTL 396 | International Independent Study | 1 - 3 |

#### Philosophy

| PHIL 302 | Modern Philosophy | 3 |
| PHIL 315 | Selected Topics in Philosophy | 3 |
| PHIL 325 | Philosophy of Feminism | 3 |
| PHIL 399 | Philosophy Honors Thesis | 3 |

#### Political Science

| POSC 326 | Constitutions in Practical Politics | 3 |
| POSC/HSTY 348 | History of Modern Political and Social Thought | 3 |
| POSC 351 | Modern Political Thought | 3 |
| POSC 367 | Western European Political Systems | 3 |
| POSC 370A | Political Economy | 3 |
| POSC 373 | Politics of the European Union | 3 |
| POSC 374 | Politics of Development in the Global South | 3 |
| POSC 395 | Special Projects | 1 - 6 |

#### Religious Studies

| RLGN/HSTY 315 | Heresy and Dissidence in the Middle Ages | 3 |
| RLGN 392 | Independent Study | 1 - 3 |

#### Theater

| THTR 329 | Modern and Contemporary Drama | 3 |
| THTR 399 | Independent Study in Theater Arts | 1 - 3 |

#### World Literature

| WLIT 211 | World Literature I | 3 |
| WLIT 212 | World Literature II | 3 |
| WLIT/ENGL 290 | Masterpieces of Continental Fiction | 3 |
| WLIT 300 | The City in Literature | 3 |
| WLIT 390 | Topics in World Literature | 3 |
| WLIT 399 | Independent Study | 1 - 3 |

**Study Abroad**

Study abroad in France, Belgium, Switzerland, French Canada, the Francophone Caribbean, or a Francophone African or Middle Eastern country is strongly encouraged but not required for FFS majors. The Department of Modern Languages and Literatures offers a summer study abroad program in Paris (FRCH 308 Immigration and the Paris Experience / WLIT 308 Immigration and the Paris Experience). FRCH 208 The Montreal Experience is a spring break service-learning excursion to Montreal. There are also opportunities for study in Cameroon.
Minor
The minor requires 15-17 credits. Students entering at the 200 level of language competence take:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>FRCH 201</td>
<td>4</td>
</tr>
<tr>
<td>FRCH 202</td>
<td>4</td>
</tr>
</tbody>
</table>

Total Units: 9

At least 6 credits should be taken in disciplines other than FRCH. Students entering at the 300 level of language competence take five courses at the 200 and 300 levels in FRCH and from the approved list. At least 3 credits should be in courses from FRCH taught in the French language, and at least 6 credits should be taken in disciplines other than FRCH.

Under Construction
Gerontological Studies Program
226 Mather Memorial
www.case.edu/artsci/soci/gerontological.html
Phone: 216.368.2703; Fax: 216.368.2676
Dale Dannefer, Program Co-Director
dale.dannefer@case.edu

Gary Deimling, Program Co-Director
gary.deimling@case.edu

The Gerontological Studies Program is a multidisciplinary program designed to integrate research and theory about human aging and human development over the life course.

Rapidly occurring social change is compelling social scientists, policymakers, human service professionals, and others to focus on aging as both an individual and global force. Beyond the rapid graying of the world's population, other frontiers of change include knowledge developments in the biosocial domain (epigenetic and other types of gene-environment interaction), powerful trends in the political and economic spheres (e.g., cumulative dis/advantage, pension policy, generational equity), and cultural changes (e.g., the development of forward-thinking institutional arrangements and the growth of the anti-aging industry).

Courses are drawn from three departments: Anthropology, Psychological Sciences, and Sociology. Students may choose from a variety of courses according to their own interests. Some approved elective courses are not specifically gerontology courses but cover topics that contribute to the understanding of aging and the life course. The perspectives gained in the core courses will provide the student with the background needed to relate the material in the more general courses to gerontological issues. The program is firmly grounded in the liberal arts and thus provides the student with the challenge to think and communicate effectively and to integrate diverse information, theories, and practice.

Gerontological Studies is an appropriate second major or minor for students with a wide variety of career goals. Persons with baccalaureate degrees in this field are eligible for entry-level positions in organizations that provide health and social services to older people and that formulate policy related to aging and older adults. For those whose careers will require professional or graduate training, this program can be valuable preparation. This includes pre-health students, especially those with an interest in geriatrics or family practice. It is also excellent preparation for those who are working toward careers in social work, family law, and financial planning. Students planning to pursue these professional degrees will find that an increasing number of their clients or patients will be older adults and problems with which they must deal are related to aging.

Gerontological Studies faculty members are engaged in a variety of funded research projects. These include studies of Alzheimer's disease; cancer survivorship; health disparities and cumulative dis/advantage over the life course; patterns of care for the elderly; visual perception changes that accompany aging; the impact of high levels of physical activity on the biological aging process; grandparent-grandchild relationships; and stress, coping, and adaptation among institutionalized older adults and elderly residents of urban communities.

Program Faculty
Dale Dannefer, PhD
(Rutgers University)
Selah Chamberlain Professor of Sociology and Chair, Department of Sociology; Co-Director, Gerontological Studies Program
Aging and the life course; theory; work and family; research methods

Gary T. Deimling, PhD
(Bowling Green State University)
Professor, Department of Sociology; Co-Director, Gerontological Studies Program
Medical sociology; sociology of aging; family sociology

Brian Gran, PhD (Northwestern University), JD (Indiana University-Bloomington)
Professor, Department of Sociology
Sociology of law; comparative sociology; health care policy; human rights

Eva Kahana, PhD
(University of Chicago)
Distinguished University Professor and Pierce T. and Elizabeth D. Robson Professor of the Humanities, Department of Sociology
Sociology of aging; medical sociology; social factors in stress and coping

Jessica Kelley, PhD
(Purdue University)
Professor, Department of Sociology
Health disparities; sociology of disability; sociology of the life course; race/ethnicity

Lihong Shi, PhD
(Tulane University)
Associate Professor
Sociocultural anthropology; reproduction; gender and family relations; grief and healing; population aging and sex-ratio imbalance; China, East Asia

Undergraduate Programs
Major
The interdisciplinary program in Gerontological Studies offers a major as part of the Bachelor of Arts degree. Gerontological Studies may be selected only as a second major, since the primary major must be based in a traditional academic department. The major consists of a minimum
of 30 credits; 9 are in required core courses and 21 are in approved elective courses.

**Required core courses:**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COSI 345</td>
<td>Communication and Aging</td>
</tr>
<tr>
<td>PSCL 369</td>
<td>Adult Development and Aging</td>
</tr>
<tr>
<td>SOCI 361</td>
<td>The Life Course</td>
</tr>
<tr>
<td>or SOCI 369/469</td>
<td>Aging in American Society</td>
</tr>
</tbody>
</table>

**Additional courses that will bring the major total to 30 can include any of the courses listed below plus those that are approved by one of the co-directors of Gerontological Studies.**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANTH 215</td>
<td>Health, Culture, and Disease:</td>
</tr>
<tr>
<td></td>
<td>An Introduction to Medical Anthropology</td>
</tr>
<tr>
<td>SOCI 311</td>
<td>Health, Illness, and Social Behavior</td>
</tr>
<tr>
<td>SOCI 313</td>
<td>Sociology of Stress and Coping</td>
</tr>
<tr>
<td>SOCI 365</td>
<td>Health Care Delivery</td>
</tr>
</tbody>
</table>

**Total Units**

<table>
<thead>
<tr>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>30</td>
</tr>
</tbody>
</table>

**Minor**

Students may also elect a minor in Gerontological Studies. The minor requires a minimum of 15 credit hours, including at least two of the following four courses.

**At least two of the following:**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COSI 345</td>
<td>Communication and Aging</td>
</tr>
<tr>
<td>PSCL 369</td>
<td>Adult Development and Aging</td>
</tr>
<tr>
<td>SOCI 361</td>
<td>The Life Course</td>
</tr>
<tr>
<td>SOCI 369/469</td>
<td>Aging in American Society</td>
</tr>
</tbody>
</table>

*The remaining nine hours needed to fulfill the minor requirement may consist of any combination of the approved electives and core courses listed for the Gerontological Studies major.*

**Total Units**

<table>
<thead>
<tr>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>15</td>
</tr>
</tbody>
</table>

**Department of History**

The Department of History offers comprehensive undergraduate and graduate programs in all fields of history, with particular strengths in American history; the history of science, technology, environment, and medicine; and social history and policy. Historical studies are sometimes categorized among humanistic studies and sometimes among the social sciences. Allied with both traditions, historians seek an understanding of the past by analyzing societies and how they change over time.

The Department of History offers instruction within the customary frameworks that have formed the basis of historical studies, and it also has developed special emphases in social, cultural, political, and economic perspectives that allow instruction and research on such topics as the African-American experience, the environment, business and economy, technology and science, medicine, women's history and gender studies, legal history, and comparative social history. Courses in history, or a formal major or minor in history, traditionally have been attractive to students as preparation for a wide variety of career and professional interests, including teaching, law, government, medicine, and journalism, and such public history activities as archival administration, historical museum administration, restoration and preservation of historic sites, and writing.

**Facilities**

Case Western Reserve University, the other institutions in University Circle, and the Cleveland area, in general, offer excellent facilities for historical research. These facilities are especially strong in the fields of social history and policy and in the history of medicine, health care, nonprofit organizations, technology, and science. The university library’s extensive collections in these fields are significantly augmented by the holdings of the nationally ranked Allen Memorial Library in the history of medicine and health care and of the equally distinguished Western Reserve Historical Society in regional economic, social, nonprofit, ethnic, African-American, and Jewish history. Both the Allen Memorial Library
and the Western Reserve Historical Society Library are adjacent to the campus. The Cleveland Public Library, just five miles from campus in downtown Cleveland, is the third largest public library in the U.S.; it maintains excellent research collections in Ohio, U.S., and British history, technology, and business. The university has also pioneered the development of electronic connections to other libraries and to research resources in general; Ohio’s many colleges and universities have one of the nation’s leading interlibrary loan programs.

**Department Faculty**

Kenneth F. Ledford, PhD, JD  
(Johns Hopkins University; University of North Carolina)  
**Associate Professor and Chair**  
Modern German history; Modern European history; European legal history; history of the professions

John Broich, PhD  
(Stanford University)  
**Associate Professor**  
British history; British empire; environmental history; history of public health

Daniel Cohen, PhD  
(Brandeis University)  
**Associate Professor, Director of Graduate Studies**  
Colonial America; U.S. cultural history

Ananya Dasgupta, PhD  
(University of Pennsylvania)  
**Assistant Professor**  
History of modern South Asia; secularism in South Asia; gender and community in South Asia

John H. Flores, PhD  
(University of Illinois at Chicago)  
**Associate Professor**  
Mexican American history; immigration; labor

Jay Howard Geller, PhD  
(Yale University)  
**Samuel Rosenthal Professor of Judaic Studies**  
Jewish history, modern European history, modern German history

John Grabowski, PhD  
(Case Western Reserve University)  
**Krieger-Mueller Joint Professor of History; Associate Professor**  
United States history; immigration and ethnicity; local history

Aviva Rothman, PhD  
(Princeton University)  
**Assistant Professor**  
History of science; intellectual history, early modern Europe

Jonathan Sadowsky, PhD  
(Johns Hopkins University)  
**Theodore J. Castele Professor**  
Medical history; African history; comparative history

Renée M. Sentilles, PhD  
(College of William and Mary)  
**Henry Eldridge Bourne Professor of History; Co-Director, Women’s and Gender Studies Program**  
American women’s history; U.S. cultural history; American studies; children's studies

Peter Shulman, PhD  
(Massachusetts Institute of Technology)  
**Associate Professor, Director of Undergraduate Studies**  
History of science, technology and American politics; environmental history and the history of energy; United States foreign relations

Theodore L. Steinberg, PhD  
(Brandeis University)  
**Adeline Barry Davee Distinguished Professor of History**  
U.S. environmental and legal history

Ben Vinson III, PhD  
(Columbia University)  
**Hiram C. Haydn Professor of History; Provost and Executive Vice President**  
Latin American history

Noël M. Voltz, PhD  
(The Ohio State University)  
**Assistant Professor**  
African American history; African diasporic history; women of color in slavery and freedom in the United States and the Atlantic world

Gillian L. Weiss, PhD  
(Stanford University)  
**Professor**  
Early modern France; comparative slavery; the Mediterranean

**Emeritus Faculty**

Molly Berger, PhD  
**Associate Dean and Instructor of History Emerita**  
19th-century American technology

David Hammack, PhD  
(Columbia University)  
**Hiram C. Haydn Professor of History Emeritus**  
American social and urban history

Miriam Levin, PhD  
(University of Massachusetts, Amherst)  
**Henry Eldridge Bourne Professor of History Emerita**  
History of industrial societies and cultures; history of modern France; women in science

Carroll Pursell, PhD  
(University of California, Berkeley)  
**Adeline Barry Davee Distinguished Professor of History Emeritus**  
History of technology

Alan Rocke, PhD  
(University of Wisconsin, Madison)  
**Distinguished University Professor and Henry Eldridge Bourne Professor of History Emeritus**  
History of science; science, technology, and society
Secondary Faculty
Rachel Sternberg, PhD
(Bryn Mawr College)
Associate Professor, Department of Classics
Greek language and literature; Greek social history; history of emotion; reception of the classical tradition in the age of Jefferson

Adjunct Faculty
Virginia Dawson, PhD
(Case Western Reserve University)
Adjunct Associate Professor
History of science and technology

Amanda L. Mahoney, PhD
(University of Pennsylvania)
Chief Curator, Dittrick Medical History Center
History of health and social policy; history of nursing

Lecturers
David Busch, PhD
(Carnegie Mellon University)
Lecturer and SAGES Fellow
Modern U.S. history; history of student activism

Vicki Daniel, PhD
(University of Wisconsin, Madison)
Lecturer and SAGES Fellow
History of medicine

Bernard Jim, PhD
(Case Western Reserve University)
Lecturer and SAGES Fellow
19th- and 20th-century US history; American history of science and technology; gender; methodology

Andrea Milne, PhD
(University of California, Irvine)
Lecturer and SAGES Fellow
History of gender, sexuality and medicine

Einav Rabinovitch-Fox, PhD
(New York University)
Fulltime Lecturer
Modern American History, Women’s and Gender History

Luke Reader, PhD
(University of California, Irvine)
Lecturer and SAGES Fellow
Modern British history

Elizabeth Todd, PhD
(The Ohio State University)
Lecturer
Medieval history; Reformation Europe

Undergraduate Programs
Major
The history major may be elected in one of two formats: the regular major or the teacher licensure major.

Regular Major
The regular major requires a minimum of 30 hours in history courses, including:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>HSTY 113</td>
<td>Introduction to Modern World History</td>
<td>3</td>
</tr>
<tr>
<td>HSTY 250</td>
<td>Issues and Methods in History</td>
<td>3</td>
</tr>
<tr>
<td>HSTY 398</td>
<td>Senior Research Seminar</td>
<td>3</td>
</tr>
</tbody>
</table>

The remaining seven electives must include one course in U.S. history, one course in pre-modern history, and one course each in at least two other, different geographical areas. Each course can only fulfill one requirement. These distribution requirements are new and replace the old requirement that each student have a "concentration" of four related courses.

Teacher Licensure Program
The teacher education major for licensure in Integrated Social Studies (Adolescence to Young Adult) requires 30 hours of history, including the same three courses required for the regular major and a minimum of six semester hours in each of three focus areas: United States history, world/European studies, and Asian, African, and Latin American studies. Candidates for teacher licensure must also take courses in economics, political science, and sociology (6 hours) and 36 hours in education courses, culminating in student teaching. Students interested in pursuing this option should confer with the department’s undergraduate advisor. See the Teacher Licensure (p. 589) section in this bulletin.

(With advisor approval, the sociology requirement may be met with HSTY 212 U.S. Politics, Culture, and Society, 1790-1860 or HSTY 262 African-American History Since 1945.)

Integrated Graduate Studies
The Department of History participates in the Integrated Graduate Studies (IGS) Program (p. 1298). Interested students should note the
general requirements and procedures of the School of Graduate Studies, but they must also consult the departmental advisor about the specific requirements, guidelines, and opportunities for IGS in history.

**Minor**
The history minor consists of five courses (15 credit hours) in history. At least one course must be above the 100 level. Minor advisors will encourage students to take courses across a variety of fields. Elective courses can be chosen from all HSTY courses. The history minor is available to all undergraduate students.

**Advanced Placement Credit**
Beginning with the Fall 2018 semester, the Department of History will grant credit for one 3-hour elective to any student who has scored a 5 on any of the AP History tests, has been invited to participate in the 1-hour HSTY 100 Introduction to History, and has successfully completed that course. That 3-hour elective cannot be applied to the GER Breadth Requirement or to the major or minor in history.

**Graduate Programs**
The Department of History offers both the MA and the PhD in history. Many, but not all, of our PhD students work within one of the department’s two focused PhD programs: (1) Social History and Policy, and (2) History of Science, Technology, Environment and Medicine. In practice, these two programs are often closely related. The department also joins with the Law School to offer an MA/JD dual-degree program. Applicants for graduate degrees in history must submit transcripts from all previous undergraduate, graduate, and professional study; scores on the GRE or a comparable standardized test; three letters of recommendation; application essays; and a writing sample.

**Master of Arts**
The MA in history requires 30 hours of course work, including 9 hours of carefully supervised work on a master’s thesis (a work of original research based on primary sources). For the joint JD/MA program, students must be admitted to both the history graduate program and the law school. They can earn the degree in either three and one-half years or three years and two summers of study, completing a total of 106 hours (including double credits of up to nine hours).

**Doctor of Philosophy**
Students are admitted into the history department’s graduate programs with or without a master’s or professional degree. Students who do not have a master’s degree in history will generally be required to complete that degree in the department before moving on to the PhD; those who have earned graduate or professional degrees closely related to their PhD programs may petition for direct admission to the PhD program. Students who first complete their MA in history at Case Western Reserve must complete an additional 24 hours of course work, pass the qualifying exams required by their program of study, and prepare a PhD dissertation while enrolling in at least 18 hours of supervised dissertation-writing work. Students who have completed their master’s-level work before coming to Case Western Reserve must complete at least 24 hours of course work before taking their qualifying exams and proceeding to their dissertation. All PhD students are required to take:

**General PhD Program**
In addition to the specialized SHP and STEM programs, the Department of History also offers a general PhD in history, allowing students to specialize in any geographical, temporal, or topical area of history adequately covered by department faculty. In the past, this general program has been largely restricted to students pursing topics in U.S. history (including American women’s history, African-American history, U.S. cultural history, and the history of social movements), but the gradual expansion of the department now allows us to support PhD work in certain comparative or non-U.S. fields. All prospective graduate applicants are strongly encouraged to examine the research specialties of department faculty before applying to the program.

**Social Justice History (SJH)**
The PhD Track in Social Justice History (SJH) examines the origins of oppression, as well as the history of peoples who have struggled to create a more just world. Topics may include slavery, patriarchy, settler colonialism, racial capitalism, and the carceral state. Students may also explore radical social justice movements (from abolitionism to LGBTQIA activism) and theories that explain the current world system founded on global inequality, systemic health inequities, environmental degradation, unlimited private wealth accumulation, and economic expansion. The program will teach students the power of historical methods to understand the world and to change it.

The Social Justice History Track represents a reconfiguration of the History Department’s longstanding Social History and Policy (SHP) Track, whose participating faculty have become increasingly oriented toward social justice topics and issues. From its launch in 1983, aided by a major grant from the National Endowment for the Humanities, the program in Social History and Policy awarded more than 40 PhDs, placing graduates in both academic institutions and a variety of policy-oriented nonprofit organizations. Over the years, graduates have received tenure at the University of Michigan, Kent State University, Oberlin College, the University of Cincinnati, the University of Western Ontario, the College of Wooster, and Cleveland State University. One graduate is executive director of National History Day.

**History of Science, Technology, Environment and Medicine Program (STEM)**
The History of Science, Technology, Environment and Medicine Program was established in 1961 as the first in the nation to emphasize the history of technology as well as the history of science. The program’s areas of particular strength include the social and cultural history of technology, both American and European; technology and science policy; the history of the physical sciences since the Renaissance; gender issues in technology and science; the history of medicine; and the history of the environment. The course of study for the PhD includes the MA requirements, written and oral qualifying examinations, and a dissertation. While most graduates of the program teach at colleges or universities, others work in museums or archives or deal with science policy questions.
Courses

HSTY 100. Introduction to History. 1 Unit.
Team-taught by the faculty of the Department of History, under the cooperation of the Chair or Director of Undergraduate Studies of the Department, HSTY 100 introduces students to the various theories and methods that underlie historical scholarship, and to the value of historical analysis to disciplines, careers, and professions that American popular culture depicts, wrongly, as being distant from historical understanding. HSTY 100 goes beyond high-school level teaching and analysis contained in Advanced Placement and International Baccalaureate courses to lead students to think about history as an analytical tool to understand every aspect of the lives that our students will lead in the 21st century. Students who successfully complete HSTY 100 will receive recognition of one three-credit course for a 5 on an AP History exam or a 6 or 7 on an IB Higher Level History exam. Prereq: Score of 5 on AP History Exam or Score of 6 or 7 on IB Higher Level History Exam.

HSTY 102. Introduction to Byzantine History, 500-1500. 3 Units.
Development of the Byzantine empire from the emperor Constantine’s conversion to Christianity and founding of the eastern capital at Constantinople to the fall of Constantinople to Turkish forces in 1453. Offered as CLSC 102 and HSTY 102. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 103. Introduction to Medieval History, 500-1500. 3 Units.
Medieval history and civilization from the fall of the Roman Empire to the age of the Renaissance. Interactions between medieval Europe and other Mediterranean and Eurasian cultures. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 104. Introduction to Early Modern European History, 1500-1800. 3 Units.
Europe has not always existed. To find out who created it and when, this course will ask two fundamental questions: First, how did the geographic, linguistic, religious and ethnic characteristics of European identity develop over the course of the sixteenth, seventeenth and eighteenth centuries? Second, how did Europeans in this period influence other parts of the world? Through close readings of memoirs, treatises and chronicles, and discussions of secondary literature, we will explore the political, social, and religious history of Europe from roughly 1500 to 1800. Topics include: exploration and conquest; Protestant and Catholic reforms; witchcraft and popular culture; science and medicine; Enlightenment and Revolution. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 107. Introduction to the Ancient Near East and Egypt. 3 Units.
This is an introduction to the history and culture of the Ancient Near East and Egypt, a land spanning from modern Iraq to Egypt that was home to the earliest known societies in written history. In this course we will learn about the relatively recent discoveries of these ancient civilizations, the first deciphering of their scripts, about the political, social, and cultural history of the peoples who gave rise to the Babylonian, Assyrian, and Egyptian empires (besides other Levantine and Anatolian powers and smaller nations such as Israel). Various aspects of the literary/scientific production of these societies will also be discussed, while reflecting upon their cultural legacy. Offered as ANEE 107 and HSTY 107. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 108. Introduction to Early American History. 3 Units.
This course offers an introduction to American history through a thematic survey of colonial British North America and the early United States, from the first permanent English settlements of the early seventeenth century to the onset of the American Civil War. It focuses on (1) the emergence and development of contrasting social systems in the various colonies; (2) the causes and consequences of the American Revolution; and (3) the political, religious, and economic transformations of the period 1790 through 1860. Readings include a mix of primary sources (historical documents) and secondary sources (books and articles written by modern scholars). Students will examine a variety of historical methods and approaches but will particularly explore past social experiences and values through the personal (or autobiographical) writings of individual Americans of varying backgrounds. Particular attention will be paid to the experiences of women and African Americans. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 109. Modern American History Since 1877. 3 Units.
This course provides an introductory survey of American history from the end of Reconstruction through the early 21st century, focusing on politics, foreign relations, the economy, and culture and social life. It is designed not to replicate high school American history courses, but introduce undergraduates to major themes in how academic historians approach the past, as well as instructing students on how to read, discuss, and write about primary sources. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 111. What is Science? Introduction to the History and Philosophy of Science. 3 Units.
We look at historical and philosophical aspects of modern science. The objective of the course is to develop a sense of (1) what forms scientific research has taken historically, and (2) what it is about scientific research that makes it distinctive as a form of human knowledge. Offered as HPSC 111, PHIL 111 and HSTY 111.
HSTY 113. Introduction to Modern World History. 3 Units.
The history of the nineteenth and twentieth centuries in global context. Emphasis on the forces that have created or shaped the modern world: industrialization and technological change; political ideas and movements such as nationalism; European imperialism and decolonization; and the interplay of cultural values. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 117. Exploring American History Through Biography. 3 Units.
This discussion and lecture class uses various forms of biography to explore issues of American Identity throughout the course of American history. The class will discuss how certain biographies have created archetypal American identities, and how issues such as race, class, gender, sexuality, religion, and historical context have shaped the writing, reading and purpose of biography. The last third of the class will consider the process of "national memory" the way the United States has decide to remember its past. Here the "biography" is collective, and created by myriad strands of mass culture woven together to create a national mythology. We will explore the works of those striving to pull apart these different strands, and explore what these memories tell us about established national identity. Students will explore biographical process through their assignments, and consider such questions as: How do American biographies influence our understanding of what it means to be American? How does biographical medium affect the message? Can we accept biography as history? This course investigates biography as a constructed genre that comes in a variety of forms, including autobiography, biographical novels, oral histories, and film. Offered as AMST 117 and HSTY 117. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 124. Sex and the City: Gender and Urban History. 3 Units.
Gender is an identity and an experience written onto the spaces of the city. The urban landscape—with its streets, buildings, bridges, parks and squares—shapes and reflects gender identities and sexual relations. This course examines the relationship between gender and urban space from the 19th century to the present, giving special attention to the city of Cleveland. Using Cleveland as our case study, this course will explore some of the many ways in which cities and the inhabitants of cities have been historically sexed, gendered, and sexualized. We will explore the ways in which gender was reflected and constructed by the built environment, as well as how urban space and urban life shaped gender and sexual identities. The course is organized thematically and explores different aspects of city life such as prostitution, urban crime, labor, politics, urban renewal and decay, consumption and leisure and the ways in which sex and gender intersects with these issues. Offered as HSTY 124 and WGST 124.

Clothing is one of the most visible and accessible means through which we express our identities. Hence, it is hardly surprising that political and social tensions are embedded and embodied in dress. As an expressive medium, clothing and appearance became crucial in the construction of political identities and in serving as a means of control, oppression, as well as protest and resistance. This seminar will examine the links between clothing, sartorial practices and political significance. Special attention will be given to the role of clothes in negotiating and constructing gender, race, class, sexual, and national identities. Readings will address the question of sartorial politics from a historical perspective and will focus on American history and culture from the 18th century to the present. Students may not earn credit for both this course and USSO 290U. Counts for CAS Global & Cultural Diversity Requirement.
HSTY 137. Introduction to Modern South Asia. 3 Units.
This course will introduce students to the history of the region that today includes India, Pakistan and Bangladesh. The course will deal with the following themes: global trade between the Indian subcontinent and the West in the 17th century; the rise of the East India Company's dominance over the Indian subcontinent in the 18th century; the transformation of India into a colonial economy; social and religious reform movements of the 19th century; changing modalities of colonial rule after the transfer of governing power from the East India Company to the British Crown-in-Parliament; the emergence and trajectories of elite and popular anti-colonial nationalisms; the struggles of women, low status groups, and other minorities in the region; decolonization; and the partition of the subcontinent. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 138. Radical History in America. 3 Units.
This course examines the radical tradition in America from the time of the American Revolution until the present. Topics will include abolitionism, suffrage, anarchism, socialism, communism, black power, feminism, the New Left, radical environmentalism, and queer liberation. Recommended Preparation: High school American history. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 145. Utopia, Dystopia, and Scientific Modernity Sixteenth-Century to the Present. 3 Units.
A utopia is a dream of a better world, a dystopia is a nightmare of a worse one. Both are fantasies. Yet both respond to the very real technological, political and cultural conditions in which they are written. This multidisciplinary course uses utopian and dystopian literature from the sixteenth century to the present to investigate the rise of scientific modernity and the responses it provoked. Starting with Thomas More's Utopia, and ending with Octavia Butler's The Parable of the Sower and a contemporary film, students will read important utopian and dystopian works of fiction and connect them to themes that run through the history of science: the relationship between knowledge and power; the impact of new technologies; voyages of exploration and exploitation; industrialization and forms of production; ideas of gender, race, and class; nuclear power; genetics; and climate change. We encourage students to ask what led to these specific critiques or ideas, and why? What limits or determines the boundaries of the possible or the desirable to each author? And how might these still be relevant today? Offered as ENGL 145 and HSTY 145. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 151. Technology in European Civilization. 3 Units.
The history of technology in ancient Mediterranean, medieval, and modern European society until the First World War. The course introduces students to the relationship between technology and its social, political, and cultural settings, and to the values invested in technology at significant historical moments. There will be visits to local industrial sites, architectural and engineering monuments, and the Cleveland Museum of Art.

HSTY 152. Technology in America. 3 Units.
Origins and significance of technological developments in American history, from the first settlements to the present. Emphasis on the social, cultural, political, and economic significance of technology in American history.

HSTY 157. Women's Histories in South Asia. 3 Units.
This course traces the history of women in South Asia from pre-colonial times to the present. Themes explored in the course will include (but not be limited to): the historical transformations of institutions shaping women's lives such as state, family, religious and legal traditions; the impact of colonialism, nationalism, and decolonization on women, as well as the history of women's movements in various parts of South Asia. As we acquaint ourselves with the vibrant historiography on women in South Asia, we will also examine the theoretical and methodological challenges involved in writing histories using the analytical lens of gender. While a significant portion of the readings will focus on South Asia, we will occasionally bring in insights from histories of women in other parts of the world to help develop comparative perspectives and evaluate the South Asian cases and examples within the broader field of women's history. Offered as HSTY 157 and WGST 257. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 163. Introduction to Modern Britain and its Empire. 3 Units.
This lecture and discussion course covers the history of Britain at the height of its political and industrial power and the history of the expanding and contracting British Empire. Britain was a nation of great technological, economic, and military power, but it also experienced extraordinary stresses. Industrialization meant material prosperity for some, but hardship and dehumanization for others. Many questioned how overwhelming poverty and ignorance could be allowed to stand beside such vast affluence. And subjects of the British in India, Ireland, and elsewhere struggled for independence from an empire that claimed to bring freedom, reason, and equality. The British learned to their cost, too, that decolonization often meant being caught in the crossfire of ethnic rivals. This course will explore the many paradoxes of the history of the British at their most dominant. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 193. The Ancient World. 3 Units.
Ancient Western history from the origins of civilization in Mesopotamia to the dissolution of the Roman Empire in the West. Offered as CLSC 193 and HSTY 193. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 194. Catapults and Cavalry: Warfare in the Ancient Mediterranean. 3 Units.
This course examines the development of warfare in the ancient Mediterranean, including the debated origins of war in prehistory, the rise of the great armies of Assyria and Egypt, the heyday of hoplite infantry in Greece, Alexander the Great's vast conquests, and the domination of the Mediterranean by the legions of the Roman Empire. Using written, visual, and archaeological evidence from the ancient Near East, Egypt, Greece, and Rome, we will focus on three main topics: 1) warfare and ancient Mediterranean geopolitics; 2) warfare and innovation, including developments in strategy, tactics, and technology; and 3) the perception and experience of ancient Mediterranean warfare, including social, literary, and artistic responses to violent, interstate conflict. Class sessions will consist primarily of lecture with regular discussion of assigned readings. For the final project, students may either write a traditional research paper or complete a creative project such as building a working scale model of a catapult, reconstructing a historic battle in a video game platform, or creating an educational website or short documentary. All readings are in English. Offered as ANEE 194, CLSC 194, and HSTY 194. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 201. Science in Western Thought I. 3 Units.
The development of Western thinking about the natural world and our relation to it, as part of culture, from pre-classical civilizations to the age of Newton.
HSTY 202. Science in Western Thought II. 3 Units.
The development of Western thinking about the natural world and our relation to it, as part of culture, from Newton to the modern age. HSTY 201 is not a prerequisite.

HSTY 203. Revolutions in Science. 3 Units.
Historical and philosophical interpretation of some epochal events in development of science. Copernican revolution, Newtonian mechanics, Einstein's relativity physics, quantum mechanics, and evolutionary theory; patterns of scientific growth; structure of scientific "revolutions;" science and "pseudo-science." First half of a year-long sequence. Offered as HSTY 203 and PHIL 203.

HSTY 204. Introduction to the Nonprofit Sector. 3 Units.
The United States has by far the largest and most important "nonprofit sector" in the world, a sector consisting of voluntary non-governmental organizations that provide health care, education and social services as well as arts, religious, and advocacy activities. Using mostly primary sources, this course considers the significance of the nonprofit sector in the U.S., its advantages and disadvantages, its uses for different groups of Americans, and current trends. Students have the option of writing either a standard term paper, or a study of strategic challenges facing a contemporary nonprofit organization. Offered as HSTY 204 and HSTY 404. Counts as SAGES Departmental Seminar.

HSTY 205. Climate Change Science and Society. 3 Units.
This course provides a synoptic, multi-disciplinary understanding of the past, present, and future of anthropogenic climate change by integrating three distinct fields: the earth and environmental sciences, biology and ecology, and history. What is changing in the global climate? Why? How do we know? What should we expect in the future? What can be done? No single discipline can answer these questions fully, and by organizing the course around these big questions, we will demonstrate how different disciplines each contribute essential answers. Course covers diverse sources of evidence for climate change in the past and present, the core mechanisms of climate change at different timescales and their consequences, the impact of climate change on human history and history of the discovery of climate change, climate models and ecological forecasts, the modern politics and diplomacy of climate, climate communication, and multiple paths forward for the earth's physical, ecological, and social systems. Offered as BIOL 205, EEPS 205, and HSTY 205.

HSTY 206. Ancient and Medieval Spain: Prehistory to 1492. 3 Units.
This course focuses on the history of the Iberian peninsula from before the Roman conquest from the Iberians, Greek, and Carthaginian settlements, through Roman, Visigothic, and Muslim rule to the conquest of Ferdinand and Isabella of the last non-Christian territory on the peninsula in 1492. The issues of conquest, frontier, cultural diversity, and change, tolerance, and intolerance will be examined. Offered as CLSC 206 and HSTY 206. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 207. Philosophy of Science. 3 Units.
Conceptual, methodological, and epistemological issues about science: concept formation, explanation, prediction, confirmation, theory construction and status of unobservables; metaphysical presuppositions and implications of science; semantics of scientific language; illustrations from special sciences. Second half of a year-long sequence. Offered as HSTY 207 and PHIL 204.

HSTY 208. Social History of Crime. 3 Units.
This course explores the relationship between law and history in American society. It uses social history methodology to suggest new ways of understanding how the law works as a system of power to advance certain interests at the expense of less powerful groups. Emphasis is on issues of pressing concern to America's poor and working class, including the death penalty, abortion, rape, the war on drugs, and the prison industry.

HSTY 209. The Copernican Revolution. 3 Units.
This course will introduce students across the disciplines to the story of the Copernican Revolution, beginning with pre-Copernican astronomy and then moving from Copernicus' first writings to Newton's Principia of 1687, which united the new heavenly laws of Kepler with the new earthly laws of Galileo. Throughout the course, students will chart the Copernican Revolution's pathways, forms, and effects, through texts, letters, maps, images, and fiction. Students also will consider various historical interpretations of the Copernican Revolution in order to explore different conceptions of what science is and how science works. The course will include a number of hands-on activities and trips to help students consider the meaning and implications of the Copernican Revolution outside of our readings and classroom discussions.

HSTY 210. Colonial America, 1607-1763. 3 Units.
Survey of colonial British North America from the first permanent English settlements to the onset of the Revolutionary era, tracing the development of distinctive societies in the New England, Chesapeake, Delaware Valley, and southern backcountry regions. Topics include the struggles and accomplishments of free African Americans in early Virginia; the divergent experiences and representations of women in early New England, ranging from exemplary Puritan role models to condemned witches and other capital criminals; the rise of large-scale race slavery in the Chesapeake; the radical gender egalitarianism of Quakers in the Delaware Valley; the belligerent libertarianism of Scotch-Irish settlers in the southern backcountry; and the evolving responses of Native Americans to the ongoing Anglo-American invasion. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 211. The Era of the American Revolution, 1763 - 1789. 3 Units.
This is a survey of the Revolutionary period of American history, from the end of the French and Indian War in 1763 to the ratification of the U.S. Constitution in 1789. It begins with some background coverage of the colonial period (1607-1763), but focuses primarily on the underlying causes of the American Revolution, the chain of events leading to the Declaration of Independence, the war with England, postwar conflicts of the 1780s, the Constitutional Convention, and the ratification struggle that followed, with a look forward to the so-called Whiskey Rebellion of 1794. Lectures, readings, and discussions explore the Revolutionary crisis as a complex, multi-racial, transatlantic struggle involving Native Americans, African Americans (enslaved and free), poor whites, wealthy Anglo-American planters and merchants, Scottish traders, and British administrators, as well as multi-racial and multi-national military forces organized on radically opposing principles. The course also examines competing scholarly interpretations of the Revolution as a progressive or retrograde watershed in American gender relations. Counts for CAS Global & Cultural Diversity Requirement.
HSTY 212. U.S. Politics, Culture, and Society, 1790-1860. 3 Units.
This is a survey of U.S. history during the years between the Revolutionary era and the Civil War, exploring the transformation of American politics, religion, and culture, as well as the emergence of distinctive regional economies and social systems in the South, the Midwest, and the Northeast. It focuses especially on the emergence of the social institutions, patterns, and conflicts that still characterize the United States during the early twenty-first century. Lectures, readings, and discussions will also explore race slavery in the South, abolitionism, the social and economic struggles of free African Americans in the North, the gender ideology of domesticity, the changing social and economic status of women, and the emergence of the women's rights movement. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 214. Comparative Slavery. 3 Units.
People around the world have been enslaving one another since the beginning of time. From the seventeenth to the nineteenth centuries, millions of African chattel labored on southern plantations, supporting an institution whose terrible legacy remains with us today. For hundreds of years before European slave traders began ferrying human cargo across the Atlantic, however, coercive bondage was a well entrenched feature of Mediterranean civilizations, justified by religious and secular law alike. This course will explore diverse types of unfree labor, from slavery in ancient Greece and Rome, servdom in medieval Europe, captivity in North Africa and indentured servitude in colonial America. Did earlier systems of domination around the Mediterranean prepare the way for the establishment of Atlantic slavery? How did ideologies about religious difference, ethnicity and race help justify this ultimate form of human degradation? Counts for CAS Global & Cultural Diversity Requirement.

HSTY 215. Europe in the 20th Century. 3 Units.
The twentieth century has seen stupendous transformations in the internal structures of European politics, economics, society, and culture and in Europe's place in the world. This course traces Europe's transition from a continent of sovereign nation-states or empires ruled by monarchs with starkly hierarchical social structures, through wars, revolution, dictatorships, destruction, division, and destitution, to a conflicted present. The contradictory combination of peace, freedom, and pluralism combined with cultural critique of the very consumer society that has reduced conflict challenges students' linear notions of historical development. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 216. Vikings and Medieval Scandinavia. 3 Units.
A survey of the history of the Vikings and medieval Scandinavia, covering approximately the eighth to the fifteenth centuries AD. Topics explored include: causes of the "outbreak" and cessation of Viking expeditions, the role of the Vikings as raiders and/or traders in Western Europe, the role of the Vikings in the emerging states of Russia, Iceland and medieval Scandinavian law, the history of the saga literature, and Viking descendents—Normans and "Rus." Counts for CAS Global & Cultural Diversity Requirement.

HSTY 218. Jews in Early Modern Europe. 3 Units.
This course surveys the history of Jews in Europe and the wider world from the Spanish expulsion through the French Revolution. Tracking peregrinations out of the Iberian Peninsula to the British Isles, France, Holland, Italy, Germany, Poland-Lithuania, the Ottoman Empire, and the American colonies, it examines the diverse ways Jews organized their communities, interacted with their non-Jewish neighbors, and negotiated their social, economic, and legal status within different states and empires. What role did Jews play and what symbolic place did they occupy during a period of European expansion, technological innovation, artistic experimentation, and religious and political turmoil? What internal and external dynamics affected Jewish experiences in the sixteenth, seventeenth, and eighteenth centuries? Through a selection of inquisitorial transcripts, government records, memoirs, and historical literature, we will explore topics such as persecution, conversion, messianism, toleration, emancipation, and assimilation. Offered as HSTY 218, JDST 218, and ETHS 218. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 219. Berlin in the Tumultuous 20th Century. 3 Units.
The tumultuous but short twentieth century began and ended with a united Germany, with Berlin as its capital. But in between, Berlin, and Berliners, experienced the extremes of the economic, technological, and cultural progress that the century brought, and the devastation, violence, division, and uncertainty that it also brought. This course, taught with Berlin as its laboratory, introduces students to the German tumult of the twentieth century. We will read about historical events and developments, and then visit the places where those events and developments occurred. We will address persistent questions, such as why and how did Hitler come to power; what was life like behind the Berlin wall; why is there a Forever 21 across from the Kaiser-Wilhelm-Memorial Church; how does one come to grips with a history like Germany's in the twentieth century; and what has life been like for ordinary Berliner/innen. Students are welcome to take this course before they have any background or acquaintance with the German language, although the instructor expects students to be able to navigate independently in Berlin after he provides them with an introduction. German proficiency will enrich the student's experience in Berlin, and the instructor hopes that some of the students who enroll will already be pursuing the study of the German language. The instructor further hopes that students who have never before studies German language will be inspired to begin to learn German after they return to Case Western Reserve. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 220. The Early Modern Mediterranean. 3 Units.
For centuries before Columbus crossed the Atlantic Ocean, travelers and traders, pirates and pilgrims, mercenaries and missionaries explored the contours of the Mediterranean Sea—and engaged in commerce, as well as religious, economic and military competition. If religion and ethnicity divided Muslims, Christians and Jews from Algiers to Athens, did shared geography, foodstuffs, and cultural values bind them together? This course examines the unity and diversity of this maritime region by considering the peoples, beliefs, commodities and diseases that circulated through it during the sixteenth, seventeenth, and eighteenth centuries. Does the early modern Mediterranean showcase a clash of civilizations or provide an enduring model for coexistence? Topics include merchant culture, diplomacy, honor and shame, slavery and colonization. Offered as ETHS 220 and HSTY 220. Counts for CAS Global & Cultural Diversity Requirement.
HSTY 221. Epidemics in History. 3 Units.
The history of epidemics and pandemics, focusing on select cases. Topics will include social origins of epidemics, the evolution of scientific responses, stigma and blame, the comparative study of political and state responses, social and cultural effects of epidemics, and the representation of infectious disease in fiction.

HSTY 222. Becoming Ken Burns: An introduction to Public History. 3 Units.
This course focuses on the practice of public (applied) history in the United States. Its purpose is to familiarize students with the background (historical and contemporary) of the manners in which history is taught and used outside of the school or college classroom as well to familiarize them with potential careers in public history, including museum work; editing; documentary film production; and the growing business of "history for hire." This overview will be complemented by an examination of a number of major issues in public history including the debate as to whether it can be as authoritative and insightful as academic scholarship, and the potential influences of the marketplace and politics on the topical focus and accuracy of public history "products." The course combines lecture and seminar-style classroom sessions with a variety of assigned readings, site visits, and an examination of public history products ranging from documentaries to monuments and recreated historical "landscapes" in order to provide students with a theoretical and "actual" introduction to the field. All assignments and examinations will be structured as essays based upon readings, lectures, discussion, site visits, and independent research conducted by the student.

HSTY 223. The Cold War: U.S. and the World. 3 Units.
This course provides an introduction to the history of the Cold War from both American and global perspectives. What explains the origins and maintenance of the conflict? Can it really be considered a "cold" war when so much actual "hot" conflict took place during its organization of the international system? Why did the U.S. go to war in Korea and Vietnam and with what results? How did the rest of the world not directly aligned with the United States or the Soviet Union experience the conflict? How were American domestic politics and social life shaped by the conflict? How did earlier sites of conflict in Europe and East Asia give way to new ones in the Middle East and Latin America? How did the conflict reshape global science, technology, and ecologies? How did the conflict reshape ideas about human rights? Why did the Cold War end when it did and what international system replaced it—or did it even end at all? Counts for CAS Global & Cultural Diversity Requirement.

HSTY 225. Evolution. 3 Units.
Multidisciplinary study of the course and processes of organic evolution provides a broad understanding of the evolution of structural and functional diversity, the relationships among organisms and their environments, and the phylogenetic relationships among major groups of organisms. Topics include the genetic basis of micro- and macro-evolutionary change, the concept of adaptation, natural selection, population dynamics, theories of species formation, principles of phylogenetic inference, biogeography, evolutionary rates, evolutionary convergence, homology, Darwinian medicine, and conceptual and philosophic issues in evolutionary theory. Offered as ANTH 225, BIOL 225, EEPS 225, HSTY 225, and PHIL 225.

HSTY 228. Asian Americans: Histories, Cultures, Religions. 3 Units.
This course introduces students to Asian American Studies as an interdisciplinary academic discipline. It critically examines the global and transnational dimensions of U.S. history, the constructions of "modernity" in the U.S., and the shaping of U.S. culture and religion, race and racialization, identity constructions and contestations, law and law-making, colonialism and empire building, labor and migration, politics and public policy making, and social movements through a critical study of Asian Americans and their diverse histories, cultures, religions, identity negotiations and contestations, social movements, and political activism. Offered as ETHS 228, HSTY 228 and RLGN 228. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 229. Asian Christianity: Historical Perspectives. 3 Units.
The history of Christianity in Asia is as old as the history of Christianity itself. But while much has been told about Christianity as it grew from an obscure Jewish sect to mighty Western Christendom, not enough attention has been given to the Christianity which spread eastwards to Asia in the first millennium of the Christian era. This course seeks to correct the imbalance by introducing students to a historical exploration of the eastward movement of Christianity from Jerusalem to different parts of Asia. Topics include the Assyrian Church of the East in Persia, India and China, European Catholic and Protestant colonial missions in the age of European imperialism, and the Jesuit missions to Japan and China. By the end of the semester, students should have a good grasp of the historical encounter of Christianity with the political, social, cultural and religious realities of Asia. Its dialogue and confrontation with these realities and the forces that led to its growth and decline. Offered as HSTY 229 and RLGN 229. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 230. Colonial Latin America. 3 Units.
Colonial Latin American history is a period fraught with bloodshed, deadly disease, and the brutal enslavement of Africans and Indigenous peoples, yet was also a time of resistance, mobilization, and the flourishing of arts, culture, and unique hybrid religious practices. This course is an invitation to focus on primary sources and wrestle with the writing of colonial history throughout the last 500 years, with all its discrepancies, biases, and unanswered questions. We look especially at the role that women, Indigenous peoples, and Africans played in society—voices that have traditionally been silenced. How can we resurrect those voices? We ponder the construction of colonial society and conclude with how the wars of Independence fundamentally altered society. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 231. Athens to Alexandria: The World of Ancient Greece. 3 Units.
This course constitutes the first half of a year-long sequence on classical civilization. It examines the enduring significance of the Greeks studied through their history, literature, art, and philosophy. Lectures and discussion. (For the second course in the sequence, see CLSC 232 and HSTY 232.) Offered as CLSC 231 and HSTY 231. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 232. Gods and Gladiators: The World of Ancient Rome. 3 Units.
The enduring significance of the Romans studied through their history, literature, art, and philosophy. Lectures and discussion. Offered as CLSC 232 and HSTY 232. Counts for CAS Global & Cultural Diversity Requirement.
HSTY 234. France and Islam. 3 Units.
This seminar examines French encounters with the Muslim world from the Middle Ages to the present. Over the last millennium, France has viewed Saracens, Moriscos, Turks, Berbers, and Arabs with admiration and fear, disdain and incomprehension. Between the eleventh and thirteenth centuries, French soldiers battled in the Holy Land; for several hundred years after that, France and the Ottoman Empire exchanged diplomats, traders and slaves. The colonial occupation of Algeria that began in 1830 ended violently in 1962. By then, the empire that struck back had also come home through large waves of immigration. Today, the social and economic status, religious affiliation, political significance and cultural impact of French citizens of North African descent are the subject of burning national debate. Taking a long view on Franco-Muslim relations, the course will explore such topics as the Crusades, Mediterranean piracy and captivity, Napoleon’s Egyptian campaign, the Algerian War of Independence, the “veil affair,” riots in the suburbs of Paris and World Cup soccer. Offered as ETHS 234 and HSTY 234. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 235. Pirates in the Early Modern World. 3 Units.
From the Caribbean to Somalia, pirates have captivated the American imagination. Beyond examining images of heroic outlaws and bloodthirsty criminals in popular culture and current affairs, this course investigates maritime predators of the early modern period (16th-18th centuries). With a focus on the Mediterranean and the Atlantic—and forays into the Indian Ocean, the Red Sea and elsewhere—it considers the motivations and strategies of sea robbers and the responses of states. What, it asks, can Barbary corsairs, Dutch freebooters, Spanish “sea dogs,” and Catholic privateers, teach us about social rebellion, religious conflict, economic development, political authority, legal norms, naval power and imperial expansion? Counts for CAS Global & Cultural Diversity Requirement.

HSTY 236. World War I: Crucible of the 20th Century. 3 Units.
World War I changed everything about Europe and ushered in a changed century of turmoil, war, and division. The European experience of the regimentation of the economy and daily life, the impact of new technology on warfare, and the very personal suffering of separation and loss changed how those on that continent viewed their countries and their world. The war affected everything from gender relations to class relations to religious and ethnic relations and laid the foundation for even more disruption ahead. Its legacy reaches our day and colors our own views of what is normal and what is possible. This course will explore those multiple and manifold legacies of this founding experience of modernity. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 237. WWII from the British Empire Perspective. 3 Units.
This lecture and discussion course gives students the opportunity to learn about the Second World War from the perspective of the British and their soldiery from around the globe. Many might come to the course with images of the American “Bands of Brothers” fighting across France in 1944. But that was the end of the war. In the beginning, it fell to the British leadership (famously embodied by Winston Churchill), British people, and to an extraordinary extent the Indian Army to withstand a pummeling at the hands of the Axis powers long enough for America to join the conflict. The course will examine those in Britain who might have preferred a move towards Fascism in the late 1930s. It will investigate why imperial subjects who lacked democracy in their own lands fought for the British in the name of democracy against totalitarianism. And it will scrutinize those in the Empire who instead sided with the Axis. In sum, students will have an opportunity to learn what led to those many moments of choice and chance that led to Allied victory and the defeat of Fascism. Offered as HSTY 237 and HSTY 447. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 239. Freud and the Psychoanalytic Movement. 3 Units.
This is a course in the social history of ideas, which will examine the roots and development of psychoanalysis, and consider several major post-Freudian innovators. It will conclude with interpretations of the social context and social effects of psychoanalysis. Offered as HSTY 239 and HSTY 439.

HSTY 240. Shopping for Change: Consumer Culture and Social Movements in America. 3 Units.
Consumption has been central to American political, economic, and social life. Americans have engaged in individual and collective action as consumers to fight corporate malfeasance, to influence legislators, and to assert consumers’ rights. Yet being a consumer is also a political practice, and forms of consumer activism have been central to some of the most important struggles for social justice, political rights, and freedom in America. This seminar examines the connections between consumption and politics by looking at the role that consumer identities and activism played in various social movements throughout the twentieth century, from the Kosher Meat Boycott of 1902 to the present. By reading primary and secondary sources, we will examine how consumption was a means to challenge gender, race, and class barriers, to claim equality and citizenship, and to fight social injustice. However, in looking at these struggles over access, control, and rights, we will also examine how the focus on consumption was used to co-opt subversive political messages and to contain radicalism.
HSTY 241. Inventing Public Health. 3 Units.
The core principle of this course is that public health is a concept that was formed in different ways at different times in different places. It had no existence as we know it before the nineteenth century, but course participants will learn how it grew out of an ancient tradition of the political elite’s concern that its subjects were a threat to them and the stability of the realm. Course participants will discover how, in the nineteenth century, it became a professional practice as we know it and realized advances in human health, longevity, and security perhaps greater than any made since. At the same time, the course will also cover how many of the assumptions of those that inaugurated public health were completely alien to present-day practitioners—even though in many ways it is a practice that helped inaugurate the modern world so familiar to us. Course participants will learn about the close relationship between public health agencies and agendas and various kinds of social authority: political power, moral influence, colonial power, and others. Ultimately, the aim of the course is to show participants that even though public health seems a supremely common sense practice, it had a highly contested birth and early life that was anything but natural or pre-ordained. That complicated birth continues to shape public health to this day. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 242. History of the Body. 3 Units.
The human body has always had an important role in constructing social, political and cultural relations. Although it seems as though the body is a fixed, a-historical category, in recent years, historians found it to be a valuable source to understand questions of race, gender, sexuality, class, nationalism, citizenship, as well as political and social institutions. This course will explore the body as a locus of social meaning, giving a special attention to the aesthetics of the body and notions of beauty. We will examine how different bodies—male and female, slave and free, healthy and sick, able and disable, active and idle, natural and artificial, normal and deviant—were constructed and imagined for different purposes, and how the lived experiences of bodies as well as their symbolic meanings can shed light on social, political and historical processes. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 243. The Age of Prozac: Social and Cultural Aspects of Depression. 3 Units.
Although often experienced as an intensely individual, private, and painfully isolated affliction, depression has profound social and cultural dimensions. This course will neglect neither biological (neurochemical or genetic) perspectives, nor personal or psychological aspects, but will emphasize perspectives derived from history, anthropology, and sociology. While there may be tangential attention to bi-polar disorder (“manic depression”), the emphasis will be on unipolar depression. The course will conclude with an in-depth exploration of the rise of pharmaceutical treatments.

HSTY 245. History of Capitalism. 3 Units.
This course will explore the history of capitalism, from its origins to its recent past, from different angles. Themes under discussion will include, but not be limited to, industrialization, slavery, corporate capitalism, and neoliberalism. We will also study capitalism’s impact on gender, race, environment, education, and time. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 247. American Capitalism Since 1945. 3 Units.
This course explores the history of capitalism since the end of World War II when the United States emerged as a superpower and capitalist system expanded across the globe. It will explore the postwar economic boom, the crisis of the 1970s, and the rise of neoliberalism by using the historical method. It will help students understand the world in which they live which is characterized by precarious employment, homelessness, and radical extremes in income and wealth.

HSTY 248. Digital History Internship with the Encyclopedia of Cleveland History. 3 Units.
This directed digital history internship focuses on familiarizing students with the evolving nature of on-line, vetted historical resources, most particularly encyclopedias and other multi-authored datasets, and providing experience in expanding and maintaining a major web-based historical resource. Students will work with the editor (the instructor for the course) and the graduate student associate editors of the on-line edition of the Encyclopedia of Cleveland History (https://case.edu/ech/) in creating new content for the on-line edition of the Encyclopedia and in modifying and enhancing its website, as well as assisting with the management of its social media components. The Encyclopedia of Cleveland History was the first urban encyclopedia on the Web, and today its site averages over 800,000 “hits” per month. Work on the Encyclopedia will be complemented by weekly assigned readings relating to the evolution of digitally-based historical works and more generally to the issues of professional authority and veracity that have come to complicate historical discourse on the Web. These readings will serve as the basis for a seminar-style weekly meeting and for a topicically focused research paper due at the end of the semester. The internship itself will require students to research and write at least ten new short entries for inclusion in the Encyclopedia; to assist the staff in preparing social media announcements; and to engage as needed in modifying the website.

HSTY 250. Issues and Methods in History. 3 Units.
A methodological introduction to historical research. Students use a variety of approaches to interpret and study historical problems. Specific topics and instructors normally vary from year to year.

HSTY 252A. Introduction to African-American Studies. 3 Units.
This course is designed to introduce students to the study of Black History, cultures, economics, and politics. Students will learn about the development of the field by exploring theoretical questions, methodological approaches, and major themes that have shaped the study of black people, primarily in the U.S. context. This is a seminar-style, discussion-based course that emphasizes critical analysis and expository writing. Offered as ETHS 252A and HSTY 252A. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 254. The Holocaust. 3 Units.
This class seeks to answer fundamental questions about the Holocaust: the German-led organized mass murder of nearly six million Jews and millions of other ethnic and religious minorities. It will investigate the origins and development of racism in modern European society, the manifestations of that racism, and responses to persecution. An additional focus of the course will be comparisons between different groups, different countries, and different phases during the Nazi era. Offered as HSTY 254, RLGN 254, ETHS 254, and JDST 254. Counts for CAS Global & Cultural Diversity Requirement.
HSTY 257. Immigrants in America. 3 Units.
Immigration to America has constantly reshaped the way the nation views itself. This course examines the overall history of immigration to the United States, but places that movement within a global context. It also pays particular attention to the roles that policy and technology have played in controlling or defining immigration to America. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 258. History of Southern Africa. 3 Units.
A survey of southern Africa from about 1600. Topics include the social structure of pre-colonial African societies, the beginnings of European settlement, the rise of Shaka, the discovery of minerals and the development of industry, Zimbabwe’s guerrilla war and independence, and the rise and apparent demise of apartheid. Offered as AFST 258, ETHS 258 and HSTY 258. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 259. Introduction to Latina/o Studies. 3 Units.
Interdisciplinary introduction to the basis for a Latina/o ethnicity through an exploration of commonalities and differences in the peoples of Latin American and Caribbean origin within the continental United States. Topics include methodological and theoretical formulations central to the field (e.g., racial, gender, and sexual formations, modes and relations of production and class, nation and transnation), history and contemporary issues of identity, family, community, immigration, and the potential for a pan-ethnic identity. Discussions will focus on major demographic, social, economic and political trends: historical roots of Latinas/os in the U.S.; the evolution of Latina/o ethnicity and identity; immigration and the formation of Latina/o communities; schooling and language usage; tendencies and determinants of socioeconomic and labor force status; discrimination, segregation and bias in contemporary America; racial and gender relations; and political behavior among Latinas/os. Offered as: ETHS 252B and HSTY 259. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 260. U.S. Slavery and Emancipation. 3 Units.
 Begins with the African encounter with Europeans during the emergence of the modern slave trade. Students are introduced to the documents and secondary literature on the creation and maintenance of slavery, first in colonial America, and then in the United States. The course concludes with the destruction of slavery. Offered as AFST 260, ETHS 260 and HSTY 260. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 261. African-American History 1865-1945. 3 Units.
Explores the fashioning of a modern African-American culture between emancipation and the end of World War II. Emergence of a northern and urban, the creation and contours of a modern African-American culture, the construction of racial/gender and racial/class consciousness. Offered as AFST 261, ETHS 261 and HSTY 261. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 262. African-American History Since 1945. 3 Units.
Completes the three-term sequence of the African-American history survey (although the first two courses are not prerequisites for this course). Explores some of the key events and developments shaping African-American social, political, and cultural history since 1945. Offered as AFST 262, ETHS 262 and HSTY 262. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 270. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

HSTY 272. Sports in America: From Play to Profit. 3 Units.
This course reviews the history of sports in America from the colonial period to the present. It gives particular attention to the evolution of sports as a major business and to the roles of gender, ethnicity, and race in the history of America sport, as well as to the emergence of sport as a major defining characteristic of America life and society. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 273. Race and Gender in Popular Culture. 3 Units.
This course explores how notions of race and gender have been constructed, reflected and contested through American popular culture from the nineteenth century to the present. A special focus will be given to the reciprocal relationship between culture, politics and the economy, and the ways in which class, gendered, and racial identities reflected and shaped them. We will examine how different forms of popular culture, broadly defined as both cultural artifacts and as cultural practices provide us with new types of historical sources and how historians are using them to rethink historical questions such as labor struggles, empire, immigration, and democracy. Readings includes both primary and secondary documents and topics are organized chronology. In considering the multifaceted aspects of popular culture, we will examine how it became a useful prism to shape, express and influence notions of gender, sexuality, and race. Offered as HSTY 273 and WGST 273. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 274. Race and Medicine. 3 Units.
Race, racism, and medicine have long been intertwined. Medicine has had a major role in the formation of the concept of race, and racism has had important roles in the development of modern medicine, and in the production of health inequalities. This course looks at these relationships from a historical point of view. Designed to be a part of the minor in African and African-American studies, it emphasizes African and African American history, though there will be opportunities for students who wish to explore other aspects of race, ethnicity, medicine. Topics will include the medical construction of race, African medical systems, medicine and slavery, human experimentation, health and segregation, anti-racist medicine, and continuing problems of health inequality.

HSTY 278. Nineteenth-Century Europe. 3 Units.
This course examines the history of Europe during the so-called long nineteenth century, lasting from the French Revolution, which signaled the end of the Old Order, through World War I, which led to the end of the European primacy in the world. Major themes include decline of aristocratic hegemony, the emergence of new ideologies (especially nationalism, liberalism, and socialism), the rise of the bourgeoisie, culture in Europe’s golden age, and increasing national rivalry and competition. Counts for CAS Global & Cultural Diversity Requirement.
HSTY 280. History of Modern Mexico. 3 Units.
This course explores the major issues that have influenced the formation of modern Mexico. This class is organized around three major themes. First, we will examine Mexican identity formation and its political implications. Second, we will assess Mexican life in relation to the development of the Mexican economy. Finally, we will survey how elite and popular forms of violence have affected Mexican society. Throughout the course, we will discuss the significance of the colonial heritage, regional distinctions, racial and gender stratification, and the creation and reconfiguration of various types of borders. Offered as HSTY 280 and ETHS 280. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 288. Imperial China: The Great Qing. 3 Units.
This course is an introduction to the history of Imperial China, from the fall of the Ming Dynasty in 1644 to the creation of the Chinese republic in 1912. We will explore the major historical transformations (political, economic, social, and cultural) of the last imperial dynasty, the Qing (1644-1911), and develop an understanding of the major social, political, economic, and intellectual cultural forces shaping the formation of modern China. Contrary to commonly-held ideas in both West and in China that traditional Chinese society was timeless or stagnant, historians now see dramatic and significant changes during this period--to the economy, to gender relations, to religion, and to many other aspects of life. This course surveys the social, political, economic, and cultural history of this era, with emphasis on recent research. The main goals of the course will be to acquaint students with the key changes and to show the interplay between economic, social, and cultural changes on the one hand and political developments on the other. By the end of the semester you should have a good sense of how Chinese society was transformed over the course of the 17th through early 20th centuries. The topics we will discuss include urbanization and commerce; gender, family and kinship; education and the examination system; opium and free trade; and ethnicity and nationalism. Offered as ASIA 288 and HSTY 288. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 289. Reform, Revolution, Republics: China 1895 to Present. 3 Units.
Completes a two-term sequence of the Chinese history survey, although HSTY 288 is not a prerequisite for this course. Beginning with the First Sino-Japanese War (1895), we review the historical development of intellectual discourse, public reaction, and political protest in later imperial China through the creation of the People's Republic in 1949 forward to contemporary times. In contrast to the conventional description of China from a Western point of view, this course tries to explain the emergence of modern China in the context of its intellectual, political, and socio-economic transformation as experienced by Chinese in the late 19th and into the 20th century. By discussing the influence of the West, domestic rebellions, and political radicalism, we examine how the Chinese state and society interacted in search for modernization and reforms, how these reforms were continued during the Republican period, and to what extent historical patterns can be identified in China's present-day development. Offered as ASIA 289 and HSTY 289. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 294. History of Nature. 3 Units.
What is nature, and what counts as natural? This course will examine the complicated and varied historical relationships between people and the natural world in the west. Like humans, nature, too, has a history, and its meanings, boundaries, and uses have changed dramatically over time. By studying these changes, we gain insight not merely into the world we inhabit and the ways that we have shaped it, for better or worse, but also into ourselves--our beliefs, values, and ambitions. The course will cover approaches to nature from the ancient Greeks to the modern anthropocene. We will look at how nature has been understood over time not only through texts but also through art, objects, and film. The course will include visits to various local sites in order for us to pursue these themes in a hands-on way.

HSTY 299. Topics in History. 3 Units.
Subject matter will vary with instructor but will focus on some particular topic or historical approach. Course description available from departmental office.

HSTY 302. Ancient Greece: Archaic, Classical, and Hellenistic Periods. 3 Units.
The rise of Hellenic thought and institutions from the eighth to the third centuries B.C., the rise of the polis, the evolution of democracy at Athens, the crises of the Persian and Peloponnesian Wars, fifth-century historiography, the growth of individualism, and the revival of monarchy in the Hellenistic period. Offered as CLSC 302 and HSTY 302. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 303. History of the Early Church: First Through Fourth Centuries. 3 Units.
Explores the development of the diverse traditions of Christianity in the Roman Empire from the first through the fourth centuries C.E. A variety of New Testament and extra-Biblical sources are examined in translation. Emphasis is placed on the place of Christianity in the larger Roman society, and the variety of early Christian ideals of salvation, the Church, and Church leadership. Offered as HSTY 303 and RLGN 373. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 304. Ancient Rome: Republic and Empire. 3 Units.
Growth and development of the Roman state from the unification of Italy in the early third century B.C. to the establishment of the oriental despotism under Diocletian and Constantine. The growth of empire in the Punic Wars, the uncertain steps toward an eastern hegemony, the crisis in the Republic from the Gracchi to Caesar, the new regime of Augustus, the transformation of the leadership class in the early Empire, and the increasing dominance of the military over the civil structure. Offered as CLSC 304 and HSTY 304. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 306. History of Museums: Theory and Reality. 3 Units.
This course is an intensive summer internship (10 hours per week) at the Western Reserve Historical Society, complemented by extensive readings in museum/archival theory and public historical perception. It is designed both to introduce students to museum/archival work and to compare theoretical concepts with actual museum situations. Interns will be assigned a specific project within one of the Society’s curatorial or administrative divisions, but will have the opportunity to work on ancillary tasks throughout the Historical Society’s headquarters in University Circle. Offered as HSTY 306 and HSTY 406.
HSTY 308. Body, Health and Medicine in Chinese Religions: Historical and Contemporary Perspectives. 3 Units.
This course critically evaluates the history and development of traditional Chinese approaches to health and medicine in the context of Chinese religious, philosophical, and socio-cultural history. It examines the constructions of the body in Chinese religious and philosophical thought across different historical periods and evaluates their significance and implications for understanding Chinese approaches to health and medicine. It discusses the conceptions of "health" and "good health" in ancient China, the distinction between "healing" and "curing," the development of the complementary yin-yang and five phases (wuxing) theories, understandings of nature (xing) and body (ti), the concept of qi as life force, and various microcosm-macrocosm analogies that emerged from Chinese religious and philosophical traditions. It explores how these religious and philosophical frameworks, beginning with the Daoist classic, Basic Questions in the Inner Classic of the Yellow Emperor (Huangdi Neijing Suwen) have evolved to undergird the development of diet, acupuncture, moxibustion, meditation, and various alchemical practices within Chinese holistic conceptions of health and practices of Traditional Chinese Medicine. Offered as RLGN 307, RLGN 407, CHIN 307, HSTY 308, and ETHS 307. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 310. The French Revolutionary Era. 3 Units.
Causes, progress, and results of the internal transformation of France from 1789 to 1815; impact of revolutionary ideas on other European and non-European societies.

HSTY 311. Seminar: Modern American Historiography. 3 Units.
This seminar examines the approaches that professional historians of the United States have taken to the writing of American history in the past fifty years, with emphasis on changes in historical concerns, master debates among historians, and contemporary interests. Topics covered include national politics and government, economic development, social history, the history of ethnicity, race, and gender, and foreign policy and international relations. Each student will read widely and will prepare a series of reports on selected books and authors. Offered as HSTY 311 and HSTY 411.

HSTY 313. Comparative White Supremacy. 3 Units.
White supremacy is a set of assumptions, ideas, and practices that pervade the globe. Far from an outgrowth of something inscrutable like "hate" or "human nature," white supremacy emerged in history amid specific circumstances. Topics will include colonialism, slave trades, the history of the nation state, scientific racism, Social Darwinism, and institutionalized racism in liberal democracies. It will be globally-comparative, focusing on former "white settler colonies." Having taken the class, seminar participants will understand whence today's manifestations of white supremacy came. Put another way, hope for dismantling white supremacy depends on understanding its historical footings. Offered as HSTY 313 and HSTY 413. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 314. Innovation and French Science: Past, Present, and Future. 3 Units.
The French scientific enterprise over the past 250 years has been buffeted by politics, war, civil unrest, and economic and societal changes. This study abroad course examines the evolution of science in France in light of these influences, how women have play an outsized role relative to the U.S., and the centrality of the French to humanity's scientific endeavor over the centuries. Students will visit many important scientific venues, both historical and modern, around Paris and elsewhere in the country. Readings from a variety of sources -- scientific, literary, historical -- and informal meetings with French scientists, engineers, and students will provide a comprehensive portrait of French science and scientific history from a variety of perspectives. The course will be conducted in English, although there is ample opportunity to interact in French if the student desires. The course meets the CAS Global & Cultural Diversity Requirement and may meet breadth requirements in certain programs. Not available for credit to students who have completed FRCH 328/428, PHYS 333, WGST 333, or WLIT 353/453. Offered as CHEM 314, HSTY 314, PHYS 314, and WGST 314. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 315. Heresy and Dissidence in the Middle Ages. 3 Units.
Survey of heretical individuals and groups in Western Europe from 500 - 1500 A.D., focusing on popular rather than academic heresies. The development of intolerance in medieval society and the problems of doing history from hostile sources will also be explored. Offered as HSTY 315 and RLGN 315. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 318. History of Black Women in the U.S. 3 Units.
Chronologically arranged around specific issues in black women's history organizations, participation in community and political movements, labor experiences, and expressive culture. The course will use a variety of materials, including autobiography, literature, music, and film. Offered as AFST 318, ETHS 318, HSTY 318, and WGST 318.

HSTY 319. The Crusades. 3 Units.
This course is a survey of the history of the idea of "crusade," the expeditions of Western Europeans to the East known as crusades, the Muslim and Eastern Christian cultures against which these movements were directed, as well as the culture of the Latin East and other consequences of these crusades. Offered as HSTY 319 and RLGN 319. Counts for CAS Global & Cultural Diversity Requirement.
HSTY 320. Alexander the Great: Materials and Methods. 3 Units.
This course is the Classics Departmental Seminar in the SAGES sequence (normally taken in the Spring semester of a major’s Junior year), though it can also be taken for regular credit in Classics or History by both undergraduate and graduate students. The seminar offers students a firm grounding in the discipline of Classics with an emphasis on the diverse materials (particularly primary source material), methods and approaches that can be brought to bear on the study of Greco-Roman antiquity. Students will read and discuss the ancient sources and contemporary scholarship on the enigmatic Alexander the Great drawn from various fields of classics, including history, archaeology, art history, philosophy, gender studies, epigraphy, numismatics, and the reception of Alexander. Based upon this, they will then write a research paper that employs conventions found in the field of Classics. Much of this training, however, will also be transferable to other fields and periods. Because the scope of the seminar moves (along with Alexander himself) beyond Europe and examines the historical foundations of the antagonism between East and West, this course qualifies as a Global and Cultural Diversity course. Offered as CLSC 320, CLSC 420, HSTY 320 and HSTY 420. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 322. Christianity in China. 3 Units.
This course critically evaluates Christianity’s long history in China, beginning with the “Luminous Religion” (Jingjiao) that was propagated by Assyrian Christian missionaries in Tang China (7th century CE), the missionary endeavors of Catholic and Protestant foreign missionaries and mission societies, the rise of indigenous Chinese Christianities that sought independence from foreign missionaries, the impact of communist rule and the Cultural Revolution, and current developments involving both the official government-approved churches (i.e., the Three Self Patriotic Movement and the Chinese Patriotic Catholic Association) on the one hand, and the house church movement (jiating jiaohui) on the other hand. Students will critically discuss and analyze the historical dimensions of Christianity’s presence in China and engagement with various social, cultural, political, philosophical, and religious aspects of Chinese society, past and present, and consider the implications of emergent forms of contemporary indigenous Chinese Christian movements for the future of Chinese Christianity. Offered as RLGN 316, RLGN 416, HSTY 322, CHIN 316 and ETHS 326. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 323. Fascism in America. 3 Units.
In recent years, there is a growing public discussion about the rise of fascist trends and movements in America. This course will explore the historic roots of this discussion, focusing on the period between the late nineteenth century and McCarthyism in the early 1950s. Using both primary and secondary sources, we will examine in class the origins and manifestations of fascist ideals in the American context, looking at topics such as government repression, racism, nativism, the rise of the surveillance state, red scares, and immigration persecution. Students will engage in thinking of the long history of undemocratic forces in America and their place in American culture, as well as how their legacies shape our political landscape today. Offered as HSTY 323 and HSTY 423.

HSTY 328. Comparative Perspectives on Museum and Archive History and Practice. 3 Units.
Comparative Perspectives on Archives and Museum History and Practice is a distance learning based course shared with students at Bilkent University in Ankara, Turkey. The course focuses on a comparison of the history and development of archives and museums in the United States and in late Ottoman and Republican Turkey. Topics considered include the “ownership” of culture; state vs. private control of heritage; marketing of museums; and the impact of evolving technologies on the presentation and preservation of culture. Students work together via a shared, live lecture format. In addition to the instructor, museum and archive professionals from both the US and Turkey provide lectures and lead discussions during the semester. The primary intellectual product of the course is a final paper/project which compares the history, operational structure, and mission of a museum/archive in the US with a similar institution in Turkey. The paper/project is created by collaborative effort between a student at CWRU and one at Bilkent. Provided grant funding is available, the course may involve exchange visits to Turkey and the US. Offered as HSTY 328 and HSTY 428. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 332. European International Relations 1789-1945. 3 Units.

HSTY 333. Reading Capital: Political Economy in the Age of Modern Industry. 3 Units.
Since its first publication in German in 1867, and its appearance in English in 1886, Karl Marx's Capital: A Critique of Political Economy, Volume I, has occupied a seminal position in European thought. Beginning with the presumptions of classical liberal political economy, Marx employed his technique of the materialist dialectic to unmask, in his view, the contradictions and structural limitations that the capitalist mode of production imposed upon capitalists and proletarians alike. Much mentioned, but seldom read, Volume I of Capital remains a crucial window into understanding the intellectual, economic, social, and cultural currents of the 19th century, and its impact extends into the 21st . This course consists of a close, directed reading of the entire text of this volume, combined with discussion, research, and coordinated exploration, so that students can bring this powerful critique to bear on their reading of history and economics in the modern era. Offered as HSTY 333 and HSTY 433. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 334. History of 19th Century Germany. 3 Units.
Examines the political, social, economic, and cultural history of Germany from the late eighteenth century to 1914. Explores the intellectual and social background to the rise of German liberalism and nationalism, the struggle with bureaucratic absolutism, the revolutions of 1848, industrial capitalism and the emergence of a class society, unification under Bismarck, the role of the state, culture, religion, and changes of mentality, the development of mass politics, and the coming of World War I. Counts for CAS Global & Cultural Diversity Requirement.
HSTY 335. History of 20th Century Germany. 3 Units.
Examines the tumultuous history of Germany from 1914 to the unification of the two Germanys in 1989-1990. From the totalizing and traumatic experience of World War I, through a failed revolution, the republican experiment of Weimar, the National Socialist dictatorship under Hitler and the divided Germany suspended between the superpowers, to the newly unified democratic Federal Republic. Examines the ways in which Germans have tried to reconcile the state to their society, economy, and individual lives. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 337. Ancient Medicine. 3 Units.
This course offers a general survey of the history of medicine from its origins in pre-historical times to Galen (2nd c. CE) with a view to gaining a better understanding of the path that eventually lead to modern medical practice. The various medical systems considered, including the ancient Babylonian, Egyptian, Jewish, Chinese, Ayurvedic, Greek and Roman traditions, will be examined through the study of primary and secondary sources, while key conceptual developments and practices are identified within their cultural and social context. Special issues, such as epidemics, women's medicine, and surgery, are also explored and discussed. Offered as ANEE 337, CLSC 337, CLSC 437, HSTY 337, and HSTY 437. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 338. History of the American West. 3 Units.
The U.S. West has meant many things throughout American history–early explorers called it the Great American Desert, railroad boosters lured settlers to it by promising to make the arid land bloom into an agricultural Eden, urban immigrants looked to its limitless stretches of land as an escape from industrial labor, children read dime novels that glorified its heroes, and millions of tourists celebrate its raw beauty by visiting Yellowstone, Yosemite, and the Grand Canyon. The West has also been home diverse native societies for thousands of years, Asian immigrants who viewed it as an eastern frontier, women who struggled to feed their children in an arid land, and Latin Americans, whose ancestors often preceded the entry of White Americans. This course introduces students to the themes, questions, and debates central to the study of the American west by drawing in primary source material and scholarly interpretations. The goal of this course is to provide students with an understanding of the human history of the American west and the ability to express that history in clear, passionate writing and in-class discussion. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 339. The Origins of the Arab-Israeli Conflict, 1900-1948. 3 Units.
The British Empire took control of Palestine after driving the Germans and Turks from the region near the end of World War I. From that moment on, the British had an increasingly difficult time administering the region. Jewish colonists had already been settling in the land for decades, and with their takeover, the British gave them and other Zionists reason to believe that the Empire would facilitate Jewish efforts. At the same time, the indigenous Arabs of Palestine appealed to the British to protect their very birthright, to keep their country from passing into someone else's hands. The British gave Arabs, too, reason to believe that they would recognize and defend their claims. In the few decades that the British Mandate governed Palestine it oversaw riots, revolution, and terrorist bombings. When it withdrew from Palestine, its legacy was a brutal war between Arabs and Jews; and the legacy of that war holds an iron grip on the course of world history to this day. Had the British Empire not been in Palestine, and not made the fateful decisions that it did, there would be no Israel and no Arab-Israeli conflict as we know them. Course materials include histories of Zionism, pre-Zionist Palestine, the British Mandate years, the British Empire in other Arab lands, and the 1948 war and aftermath. Primary sources from the perspective British officials on the ground in Palestine receive much attention. The histories of engineering and agriculture are highlighted alongside traditional social and political perspectives. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 340. A History of Workers in the United States. 3 Units.
This course examines the experience of working people in the United States with an emphasis on twentieth-century social movements. It explores the lives of the women and men, skilled and unskilled, and rural and urban laborers that produce the goods and provide the services that society consumes. At crucial moments, working people have created or helped sustain national social movements in an effort to improve some aspect of their lives. We therefore will assess laborers in relation to several known and less known American social movements, such as the eight-hour day movement during the late nineteenth century, the peace movement during WWI, and the Civil Rights movement in the wake of WWII. Throughout the course we will also discuss the politics of time-managed work; the influence of public policy and government institutions; the role of unions within a competitive market economy; the relationship between industrial economies and functional blue-collar communities; and the correlation between immigration and globalization. Offered as HSTY 340, HSTY 430 and ETHS 340. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 341. Jewish Urban History. 3 Units.
This course examines the relationship between Jews and the modern urban environment. It seeks to answer questions such as: How did the modernization of cities affect Jews and Jewish communities? In what ways did Jews contribute to modern urban cultural and social forms? What is Jewish urban space, is it unique, and how is it remembered later on? Are there differences between the patterns in Europe, the Middle East, and the Americas? Offered as HSTY 341 and JDST 341. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.
HSTY 345. The European City. 3 Units.
An examination of architectural, social, cultural, philosophical, political, and economic aspects of life in European cities. The principle focus will be the transition of medieval and early modern cities to modern metropolises, both spatially and socially. An additional theme will be urban development and concomitant social questions in non-European cities that were built either to serve expatriate Europeans or to emulate European modernity. Case studies may include London, Paris, Berlin, Vienna, Moscow, the provincial and national capitals of East-Central Europe, and cities in Africa, Asia, and Latin America. Offered as HSTY 345 and HSTY 445. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 346. Guns, Germs, and Steel. 3 Units.
Jared Diamond’s Guns, Germs, and Steel won the Pulitzer for non-fiction in 1998. Diamond, a physiologist, explains that Western Europe came to occupy and dominate large areas of the globe because of natural resources present in certain regions of the Old World since the end of the last Ice Age. Where a historian might look for answers in the written evidence left by historical individuals, Diamond examines ancient patterns of plant diffusion or the place of mountain ranges and deserts in the development of technologies. This seminar is about applying the history of a specific time and place namely North America from European contact to 1850 - to Diamond’s general environmental explanations and models. Placing Diamond’s broad explanations within specific historical contexts is revealing. A range of alternative methods, perspectives, primary sources from North America, and case studies (especially within environmental history) help develop a critical understanding of the complexities of European expansion into the New World. The course engages in an extended comparative exploration of the worldviews of different world cultures, most extensively comparing European worldviews with Native American, but also paying significant attention to Asian worldviews. The Native American cultures under consideration include those of both North and South America. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 348. History of Modern Political and Social Thought. 3 Units.
This course explores the responses of philosophers, economic theorists, culture critics, and public policy makers to changes in western society wrought by industrialization by focusing on their concerns with technological change. Offered as HSTY 348, HSTY 448 and POSC 348.

HSTY 353. Women in American History I. 3 Units.
The images and realities of women’s social, political, and economic lives in early America. Uses primary documents and biographers to observe individuals and groups of women in relation to legal, religious, and social restrictions. Offered as HSTY 353, WGST 353, and HSTY 453. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 354. Women in American History II. 3 Units.
With HSTY 353, forms a two-semester introduction to women’s studies. The politics of suffrage and the modern woman’s efforts to balance marriage, motherhood, and career. (HSTY 353 not a prerequisite.) Offered as HSTY 354, WGST 354, and HSTY 454. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 355. Age of American Civil War 1815-80. 3 Units.
This course examines the causes and consequences of the Civil War, focusing on the rise of sectionalism, the dynamics of conflict, and reconstruction. Heavy emphasis is placed on archival research in relevant first person accounts from the period.

HSTY 356. Industrial America: 1880-1940. 3 Units.
This course will explore the history of the United States from 1880 to 1940 as the nation organized itself into a modern industrial society. We will examine the rise of a corporate and technological society, the development of cities and urban problems, the growth of government, and the way in which immigrants, women, and African-Americans negotiated a shifting social organization. This class will also focus on the growing dominance of consumerism and the cultural and intellectual critique of the changes that occurred during these events.

HSTY 358. America Since 1945. 3 Units.
This course provides an advanced survey of American history from 1945 through the early 21st century, focusing on politics, foreign relations, the economy, culture, and social life. Particular emphasis will be given to political economy and the development of postwar consumerism; race, segregation, and Civil Rights; social movements for women’s liberation, Indian rights, and gay rights; the accomplishments and failures of postwar liberalism and the rise of modern conservatism; the emergence of the Cold War at home and abroad; the collapse of the New Deal Order and the new partisan realignment; the construction of the postwar international system and its late-century fraying; globalization and its discontents; the emergence of neoliberalism and its consequences; and the collapse of the Cold War and the creation of the War on Terror.

HSTY 359. Books as Bombs: Books that Reshaped American Culture. 3 Units.
Every now and again a piece of prose profoundly reshapes American society and culture. In this advanced undergraduate seminar, students will read and discuss a selection of such works under the tutelage of Professors Shulman, a specialist in the History of Science and Technology, and Sentilles, who specializes in social and cultural history. The professors will set up the context of the work’s publication or creation and then lead the class in a lively dissection of both the work and its impact. The main question asked of each book is “how and why did this work have such an effect?” In attempting to answer that question, students will come to a greater understanding of society that created and then responded to each work. Offered as HSTY 359 and HSTY 459. Counts as SAGES Departmental Seminar.

HSTY 361. Crime and Culture in Early America. 3 Units.
This course explores the intersection of crime, punishment, and popular culture in colonial British America and the early United States through 1860 by closely examining a series of popular crime genres, including execution sermons, criminal conversion narratives, criminal autobiographies, and trial reports. Readings in modern scholarship—drawing on several disciplines—will shed light on the popular literature and on underlying patterns of crime and punishment, while students will critically evaluate modern scholarly interpretations in light of the early crime publications. Types of crimes explored in the readings include witchcraft, piracy, burglary, robbery, and various types of murder, such as infanticide, familicide (cases of men murdering their wives and children), and sexual homicide. Each student will write several short analytical papers drawn from the shared readings and, at the end of the semester, produce an independent research paper. Offered as HSTY 361 and HSTY 461.

HSTY 363. Gender and Sexuality in America. 3 Units.
This multicultural seminar uses a mixture of historical text, gender theory, personal biography, and artistic expression to explore changing notions of gender and sexuality over the past two centuries in the United States. Offered as HSTY 363, HSTY 463 and WGST 363. Counts for CAS Global & Cultural Diversity Requirement.
HSTY 371. Jews Under Islam and Christianity. 3 Units.
This course examines the social and political status of Jews under Muslim and Christian rule since the Middle Ages. Themes include interfaith relations, Islamic and Christian beliefs regarding the Jews, Muslim and Christian regulation of Jewry, and the Jewish response. Offered as HSTY 371, JDST 371 and RLGN 371. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 373. Women and Medicine in the United States. 3 Units.
Students in this seminar will investigate the experiences of American women as practitioners and as patients. We will meet weekly in the Dittrick Medical Museum for discussion of texts and use artifacts from the museum's collection. After a unit exploring how the female body was viewed by medical theorists from the Galenic period to the nineteenth-century, we will look at midwives, college-trained female doctors and nurses, and health advocacy among poor populations. We will then look at women's experiences in terms of menstruation, childbirth, and menopause, before exploring the cultural relationship between women and psychological disorders. Offered as HSTY 373, HSTY 473, and WGST 373. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 378. North American Environmental History. 3 Units.
This course introduces major questions and approaches in the study of environmental history. Taking North American as our subject, we explore how humans have shaped the environment of the continent and how human history has, in turn, been shaped by the natural world form antiquity to the present. Major topics include Pleistocene extinctions, the Columbian exchange, the market revolution in agriculture, American epidemics, industrialization, the origins of conservation, the environmental movement, and the globalization of America's environmental footprint. Offered as HSTY 378 and HSTY 468.

HSTY 381. City as Classroom. 3 Units.
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface--both literally and figuratively--with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 387. Growing Up in America: 1607 - 2000. 3 Units.
Children have been growing up in the United States since it was declared independent, in 1776, but how adults conceive of (and therefore legislate and interpret) children and childhood constantly changes to fit current circumstances. The experiences of children themselves have varied not only in terms of race, class, gender, and religion but also depending on specific events (i.e., coming of age during the Civil War versus the Civil Rights movement) or geography (i.e., growing up in rural Hawaii vs. urban New Jersey). We cannot cover all of those histories in one course, so this seminar course instead focuses on exploring the interplay of ideas about children and the expressed or historical experiences of children. When the puritans and plantations members (slave, bonded and free) came to the Atlantic shore, they brought with them particular ideas about what is meant to be a child, and to experience childhood. They encountered already established residents who also had ideas about childhood. How did those concepts adjust/meld/contrast over time, and how do we see those ideas reflected or reshaped by actual experiences? This course engages particular lines of inquiry: How and why do understanding about what is "natural" for children change over time? How do variables like race, class, gender, etc., uphold effects the manifestation of such concepts? What is the role of the state in children's lives and how has that changed over time? What is the impact of mass culture on modern childhood? Counts for CAS Global & Cultural Diversity Requirement.

HSTY 389. History of Zionism. 3 Units.
This course seeks to elucidate the major strands of Zionism, their origins, how they have interacted, and their impact on contemporary Israeli society. These may include political Zionism, cultural Zionism, socialist (labor) Zionism, Revisionist Zionism, and religious Zionism. This course will also examine the differences in the appeal of Zionism to Jews in different places, such as Western Europe, Eastern Europe and the United States. Offered as HSTY 389 and JDST 389. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 390. Senior Research Seminars in History and Philosophy of Science. 3 Units.
Directed independent research seminar for seniors who are majors in the History and Philosophy of Science program. The goal of the course is to develop and demonstrate command of B.A.-level factual content, methodologies, research strategies, historiography, and theory relevant to the field of history of science and/or philosophy of science. The course includes both written and oral components. Offered as HSTY 380 and PHIL 390. Counts as SAGES Senior Capstone.

HSTY 393. Advanced Readings in the History of Race. 3 Units.
This course examines the concept of race as a social construction that carries political and economic implications. We begin by examining the histories of the early racial taxonomists (e.g., Bernier, Linnaeus, and Blumenbach among others) and the contexts that informed their writings. We then assess how the concept of race changed from the nineteenth to the twentieth century in the United States. We conclude by evaluating how the ideology of race has influenced U.S. domestic life and foreign policy at specific historical moments. Offered as AFST 393, HSTY 393, HSTY 493, and ETHS 393. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 395. History of Medicine. 3 Units.
This course treats selected topics in the history of medicine, with an emphasis on social and cultural history. Focusing on the modern period, we examine illnesses, patients, and healers, with attention to the ways sickness and medicine touch larger questions of politics, social relations and identity. Offered as HSTY 395 and HSTY 495.
HSTY 396. Advanced Topics in History. 3 Units.
Advanced topics in history, changing from semester to semester. The course provides students an opportunity to explore special themes or theoretical issues in history that are too briefly covered in broader surveys. Students may take this course more than once for credit, when different topics are covered. Offered as HSTY 396 and HSTY 496.

HSTY 397. Undergraduate Tutorial. 1 - 3 Units.
Individual instruction with members of the history faculty. Recommended preparation: 12 hours of History.

HSTY 398. Senior Research Seminar. 3 Units.
Training in the nature and methods of historical writing and research. Counts as SAGES Senior Capstone. Prereq: Majors only, Senior standing.

HSTY 399. Advanced Readings in Black History. 3 Units.
This is an advanced readings course that may change from semester to semester. This course will provide students with an opportunity to more deeply explore special themes and theoretical issues in the field of black history that are often quickly and briefly covered in broad survey courses. Readings may be organized around specific topics such as resistance and social protest, black intellectual history, black nationalism and identity, black film and historical literacy black cultural forms and politics, black urban history, or some such other combination. Students may take this course more than once and receive credit as long as the course topic differs. Students should contact the History Department for more details on course content during any given semester. Offered as AFST 399, ETHS 391, HSTY 399 and HSTY 499.

HSTY 400. Graduate Topical Seminar. 3 Units.
A rotating graduate seminar, offered every semester by a different faculty member. Each semester focuses on a topic of central historiographical or methodological importance. Prereq: Graduate standing or instructor permission.

HSTY 402. Introduction to Historiography of Science. 3 Units.
A graduate-level historiographic review of the history of the sciences from the seventeenth century to the present. Prereq: Graduate standing or instructor permission.

HSTY 404. Introduction to the Nonprofit Sector. 3 Units.
The United States has by far the largest and most important "nonprofit sector" in the world, a sector consisting of voluntary non-governmental organizations that provide health care, education and social services as well as arts, religious, and advocacy activities. Using mostly primary sources, this course considers the significance of the nonprofit sector in the U.S., its advantages and disadvantages, its uses for different groups of Americans, and current trends. Students have the option of writing either a standard term paper, or a study of strategic challenges facing a contemporary nonprofit organization. Offered as HSTY 204 and HSTY 404. Counts as SAGES Departmental Seminar. Prereq: Graduate standing or instructor permission.

HSTY 406. History of Museums: Theory and Reality. 3 Units.
This course is an intensive summer internship (10 hours per week) at the Western Reserve Historical Society, complemented by extensive readings in museum/archival theory and public historical perception. It is designed both to introduce students to museum/archival work and to compare theoretical concepts with actual museum situations. Interns will be assigned a specific project within one of the Society's curatorial or administrative divisions, but will have the opportunity to work on ancillary tasks throughout the Historical Society's headquarters in University Circle. Offered as HSTY 306 and HSTY 406. Prereq: Graduate standing or instructor permission.

HSTY 410. Seminar: Early American Historiography. 3 Units.
This seminar examines the historiography of early America. It is designed to acquaint history doctoral students with the major themes, methods, and scholars of American history from the seventeenth century to the mid-nineteenth century. Students will be expected to read and report on major works in the field. Prereq: Graduate standing or instructor permission.

HSTY 411. Seminar: Modern American Historiography. 3 Units.
This seminar examines the approaches that professional historians of the United States have taken to the writing of American history in the past fifty years, with emphasis on changes in historical concerns, master debates among historians, and contemporary interests. Topics covered include national politics and government, economic development, social history, the history of ethnicity, race, and gender, and foreign policy and international relations. Each student will read widely and will prepare a series of reports on selected books and authors. Offered as HSTY 311 and HSTY 411. Prereq: Graduate standing or instructor permission.

HSTY 413. Comparative White Supremacy. 3 Units.
White supremacy is a set of assumptions, ideas, and practices that pervade the globe. Far from an outgrowth of something inscrutable like "hate" or "human nature," white supremacy emerged in history amid specific circumstances. Topics will include colonialism, slave trades, the history of the nation state, scientific racism, Social Darwinism, and institutionalized racism in liberal democracies. It will be globally-comparative, focusing on former "white settler colonies." Having taken the class, seminar participants will understand whence today's manifestations of white supremacy came. Put another way, hope for dismantling white supremacy depends on understanding its historical footings. Offered as HSTY 313 and HSTY 413. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 420. Alexander the Great: Materials and Methods. 3 Units.
This course is the Classics Departmental Seminar in the SAGES sequence (normally taken in the Spring semester of a major's Junior year), though it can also be taken for regular credit in Classics or History by both undergraduate and graduate students. The seminar offers students a firm grounding in the discipline of Classics with an emphasis on the diverse materials (particularly primary source material), methods and approaches that can be brought to bear on the study of Greco-Roman antiquity. Students will read and discuss the ancient sources and contemporary scholarship on the enigmatic Alexander the Great drawn from various fields of classics, including history, archaeology, art history, philosophy, gender studies, epigraphy, numismatics, and the reception of Alexander. Based upon this, they will then write a research paper that employs conventions found in the field of Classics. Much of this training, however, will also be transferable to other fields and periods. Because the scope of the seminar moves (along with Alexander himself) beyond Europe and examines the historical foundations of the antagonism between East and West, this course qualifies as a Global and Cultural Diversity course. Offered as CLSC 320, CLSC 420, HSTY 320 and HSTY 420. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 421. Epidemics in History. 3 Units.
The history of epidemics and pandemics, focusing on select cases. Topics will include social origins of epidemics, the evolution of scientific responses, stigma and blame, the comparative study of political and state responses, social and cultural effects of epidemics, and the representation of infectious disease in fiction.
HSTY 423. Fascism in America. 3 Units.
In recent years, there is a growing public discussion about the rise of fascist trends and movements in America. This course will explore the historic roots of this discussion, focusing on the period between the late nineteenth century and McCarthyism in the early 1950s. Using both primary and secondary materials, we will examine in class the origins and manifestations of fascist ideas in the American context, looking at topics such as government repression, racism, nativism, the rise of the surveillance state, red scares, and immigration persecution. Students will engage in thinking of the long history of undemocratic forces in America and their place in American culture, as well as how their legacies shape our political landscape today. Offered as HSTY 323 and HSTY 423.

HSTY 428. Comparative Perspectives on Museum and Archive History and Practice. 3 Units.
Comparative Perspectives on Archives and Museum History and Practice is a distance learning based course shared with students at Bilkent University in Ankara, Turkey. The course focuses on a comparison of the history and development of archives and museums in the United States and in late Ottoman and Republican Turkey. Topics considered include the "ownership" of culture; state vs. private control of heritage; marketing of museums; and the impact of evolving technologies on the presentation and preservation of culture. Students work together via a shared, live lecture format. In addition to the instructor, museum and archive professionals from both the US and Turkey provide lectures and lead discussions during the semester. The primary intellectual product of the course is a final paper/project which compares the history, operational structure, and mission of a museum/archive in the US with a similar institution in Turkey. The paper/project is created by collaborative effort between a student at CWRU and one at Bilkent. Provided grant funding is available, the course may involve exchange visits to Turkey and the US. Offered as HSTY 328 and HSTY 428. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 430. A History of Workers in the United States. 3 Units.
This course examines the experience of working people in the United States with an emphasis on twentieth-century social movements. It explores the lives of the women and men, skilled and unskilled, and rural and urban laborers that produce the goods and provide the services that society consumes. At crucial moments, working people have created or helped sustain national social movements in an effort to improve some aspect of their lives. We therefore will assess laborers in relation to several known and less known American social movements, such as the eight-hour day movement during the late nineteenth century, the peace movement during WWII, and the Civil Rights movement in the wake of WWII. Throughout the course we will also discuss the politics of time-managed work; the influence of public policy and government institutions; the role of unions within a competitive market economy; the relationship between industrial economies and functional blue-collar communities; and the correlation between immigration and globalization. Offered as HSTY 340, HSTY 430 and ETHS 340. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 433. Reading Capital: Political Economy in the Age of Modern Industry. 3 Units.
Since its first publication in German in 1867, and its appearance in English in 1886, Karl Marx's Capital: A Critique of Political Economy, Volume I, has occupied a seminal position in European thought. Beginning with the presumptions of classical liberal political economy, Marx employed his technique of the materialist dialectic to unmask, in his view, the contradictions and structural limitations that the capitalist mode of production imposed upon capitalists and proletarians alike. Much mentioned, but seldom read, Volume I of Capital remains a crucial window into understanding the intellectual, economic, social, and cultural currents of the 19th century, and its impact extends into the 21st. This course consists of a close, directed reading of the entire text of this volume, combined with discussion, research, and coordinated exploration, so that students can bring this powerful critique to bear on their reading of history and economics in the modern era. Offered as HSTY 333 and HSTY 433. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 437. Ancient Medicine. 3 Units.
This course offers a general survey of the history of medicine from its origins in pre-historical times to Galen (2nd c. CE) with a view to gaining a better understanding of the path that eventually lead to modern medical practice. The various medical systems considered, including the ancient Babylonian, Egyptian, Jewish, Chinese, Ayurvedic, Greek and Roman traditions, will be examined through the study of primary and secondary sources, while key conceptual developments and practices are identified within their cultural and social context. Special issues, such as epidemics, women's medicine, and surgery, are also explored and discussed. Offered as ANEE 337, CLSC 337, CLSC 437, HSTY 337, and HSTY 437. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 439. Freud and the Psychoanalytic Movement. 3 Units.
This is a course in the social history of ideas, which will examine the roots and development of psychoanalysis, and consider several major post-Freudian innovators. It will conclude with interpretations of the social context and social effects of psychoanalysis. Offered as HSTY 239 and HSTY 439.

HSTY 440. Science and Society Through Literature. 3 Units.
This course will examine the interaction of scientific investigation and discovery with the society it occurred in. What is the effect of science on society and, as importantly, what is the effect of society on science? An introduction will consider the heliocentric controversy with focus on Galileo. Two broad areas, tuberculosis and the Frankenstein myth, will then be discussed covering the period 1800-present. With tuberculosis, fiction, art and music will be examined to understand the changing views of society towards the disease, how society's perception of tuberculosis victims changed, and how this influenced their treatments and research. With Frankenstein, the original novel in its historical context will be examined. Using fiction and film, the transformation of the original story into myth with different connotations and implications will be discussed. Most classes will be extensive discussions coupled with student presentations of assigned materials. Offered as PHRM 340, BETH 440, PHRM 440, and HSTY 440.
HSTY 445. The European City. 3 Units.
An examination of architectural, social, cultural, philosophical, political, and economic aspects of life in European cities. The principle focus will be the transition of medieval and early modern cities to modern metropolises, both spatially and socially. An additional theme will be urban development and concomitant social questions in non-European cities that were built either to serve expatriate Europeans or to emulate European modernity. Case studies may include London, Paris, Berlin, Vienna, Moscow, the provincial and national capitals of East-Central Europe, and cities in Africa, Asia, and Latin America. Offered as HSTY 345 and HSTY 445. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 447. WWII from the British Empire Perspective. 3 Units.
This lecture and discussion course gives students the opportunity to learn about the Second World War from the perspective of the British and their soldiers from around the globe. Many might come to the course with images of the American “Bands of Brothers” fighting across France in 1944. But that was the end of the war. In the beginning, it fell to the British leadership (famously embodied by Winston Churchill), British people, and to an extraordinary extent the Indian Army to withstand a pummeling at the hands of the Axis powers long enough for America to join the conflict. The course will examine those in Britain who might have preferred a move towards Fascism in the late 1930s. It will investigate why imperial subjects who lacked democracy in their own lands fought for the British in the name of democracy against totalitarianism. And it will scrutinize those in the Empire who instead sided with the Axis. In sum, students will have an opportunity to learn what led to those many moments of choice and chance that led to Allied victory and the defeat of Fascism. Offered as HSTY 237 and HSTY 447. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 448. History of Modern Political and Social Thought. 3 Units.
This course explores the responses of philosophers, economic theorists, culture critics, and public policy makers to changes in western society wrought by industrialization by focusing on their concerns with technological change. Offered as HSTY 348, HSTY 448 and POSC 348.

HSTY 451. History of European Technology. 3 Units.
A graduate-level, research seminar on the history of European technology from the Industrial Revolution to the present. Special emphasis is on cultural history of technology with a transatlantic view. The themes of the seminar vary from year to year, but include: communications, industrialization, control, cultural and intellectual approaches to the history of technology. Required work includes a research paper based on original sources. Prereq: Graduate standing or instructor permission.

HSTY 453. Women in American History I. 3 Units.
The images and realities of women’s social, political, and economic lives in early America. Uses primary documents and biographers to observe individuals and groups of women in relation to legal, religious, and social restrictions. Offered as HSTY 353, WGST 353, and HSTY 453. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing or instructor permission.

HSTY 454. Women in American History II. 3 Units.
With HSTY 353, forms a two-semester introduction to women’s studies. The politics of suffrage and the modern woman’s efforts to balance marriage, motherhood, and career. (HSTY 353 not a prerequisite.) Offered as HSTY 354, WGST 354, and HSTY 454. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing or instructor permission.

HSTY 459. Books as Bombs: Books that Reshaped American Culture. 3 Units.
Every now and again a piece of prose profoundly reshapes American society and culture. In this advanced undergraduate seminar, students will read and discuss a selection of such works under the tutelage of Professors Shulman, a specialist in the History of Science and Technology, and Sentilles, who specializes in social and cultural history. The professors will set up the context of the work’s publication or creation and then lead the class in a lively dissection of both the work and its impact. The main question asked of each book is “how and why did this work have such an effect?” In attempting to answer that question, students will come to a greater understanding of society that created and then responded to each work. Offered as HSTY 359 and HSTY 459. Counts as SAGES Departmental Seminar.

HSTY 461. Crime and Culture in Early America. 3 Units.
This course explores the intersection of crime, punishment, and popular culture in colonial British America and the early United States through 1860 by closely examining a series of popular crime genres, including execution sermons, criminal conversion narratives, criminal autobiographies, and trial reports. Readings in modern scholarship—drawing on several disciplines—will shed light on the popular literature and on underlying patterns of crime and punishment, while students will critically evaluate modern scholarly interpretations in light of the early crime publications. Types of crimes explored in the readings include witchcraft, piracy, burglary, robbery, and various types of murder, such as infanticide, filicide (cases of men murdering their wives and children), and sexual homicide. Each student will write several short analytical papers drawn from the shared readings and, at the end of the semester, produce an independent research paper. Offered as HSTY 361 and HSTY 461. Prereq: Graduate standing or instructor permission.

HSTY 463. Gender and Sexuality in America. 3 Units.
This multicultural seminar uses a mixture of historical text, gender theory, personal biography, and artistic expression to explore changing notions of gender and sexuality over the past two centuries in the United States. Offered as HSTY 363, HSTY 463 and WGST 363. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 468. North American Environmental History. 3 Units.
This course introduces major questions and approaches in the study of environmental history. Taking North American as our subject, we explore how humans have shaped the environment of the continent and how human history has, in turn been shaped by the natural world form antiquity to the present. Major topics include Pleistocene extinctions, the Columbian exchange, the market revolution in agriculture, American epidemics, industrialization, the origins of conservation, the environmental movement, and the globalization of America’s environmental footprint. Offered as HSTY 378 and HSTY 468. Prereq: Graduate standing or instructor permission.

HSTY 470. Historiography, Method, and Theory. 3 Units.
A graduate level survey of fundamental themes in historiography, method, and theory, as well as interdisciplinary methods and theories. Prereq: Graduate standing or instructor permission.
HSTY 473. Women and Medicine in the United States. 3 Units.
Students in this seminar will investigate the experiences of American women as practitioners and as patients. We will meet weekly in the Dittrick Medical Museum for discussion of texts and use artifacts from the museum’s collection. After a unit exploring how the female body was viewed by medical theorists from the Galenic period to the nineteenth-century, we will look at midwives, college-trained female doctors and nurses, and health advocacy among poor populations. We will then look at women’s experiences in terms of menstruation, childbirth, and menopause, before exploring the cultural relationship between women and psychological disorders. Offered as HSTY 373, HSTY 473, and WGST 373. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing or instructor permission.

HSTY 474. Race and Medicine. 3 Units.
Race, racism, and medicine have long been intertwined. Medicine has had a major role in the formation of the concept of race, and racism has had important roles in the development of modern medicine, and in the production of health inequalities. This course looks at the history of these relationships. Designed for graduate students interested in African and African American Studies. It emphasizes African and African American history, though there will be opportunities for students who wish to explore other aspects of race, ethnicity, medicine. Topics will include the medical construction of race, African medical systems, medicine and slavery, human experimentation, health and segregation, anti-racist medicine, and continuing problems of health inequality.

HSTY 476. Seminar in Comparative History. 3 Units.
An introduction to comparative method for historians. The topics will vary year to year, but the course will require exposure to historical contexts outside of the United States. Prereq: Graduate standing or instructor permission.

HSTY 477. Modern Policy History of the United States. 3 Units.
This course offers a historical perspective on policy and policy making in the United States since the late nineteenth century. It emphasizes the increasing role of the federal government, the persisting importance of the states, the significance of the courts, the revolutionary impact of the women’s and civil rights movements, and the consequences of the growth and transformation of the American economy. Each student selects a policy area for detailed exploration; students often choose topics related to civil rights, women’s rights, health care, environmental reform, non-profit and non-governmental organizations, the arts, and education, but other topics are also appropriate. Prereq: Graduate standing or instructor permission.

HSTY 479. Historical Research and Writing. 3 Units.
Research seminar for graduate students. Intensive focus on processes of historical research and writing. Students produce conference paper and research paper based on primary sources. Prereq: Graduate standing or instructor permission.

HSTY 481. City as Classroom. 3 Units.
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface—both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 493. Advanced Readings in the History of Race. 3 Units.
This course examines the concept of race as a social construction that carries political and economic implications. We begin by examining the histories of the early racial taxonomists (e.g., Bernier, Linnaeus, and Blumenbach among others) and the contexts that informed their writings. We then assess how the concept of race changed from the nineteenth to the twentieth century in the United States. We conclude by evaluating how the ideology of race has influenced U.S. domestic life and foreign policy at specific historical moments. Offered as AFST 393, HSTY 393, HSTY 493, and ETHS 393. Counts for CAS Global & Cultural Diversity Requirement.

HSTY 495. History of Medicine. 3 Units.
This course treats selected topics in the history of medicine, with an emphasis on social and cultural history. Focusing on the modern period, we examine illnesses, patients, and healers, with attention to the ways sickness and medicine touch larger questions of politics, social relations and identity. Offered as HSTY 395 and HSTY 495. Prereq: Graduate standing or instructor permission.

HSTY 496. Advanced Topics in History. 3 Units.
Advanced topics in history, changing from semester to semester. The course provides students an opportunity to explore special themes or theoretical issues in history that are too briefly covered in broader surveys. Students may take this course more than once for credit, when different topics are covered. Offered as HSTY 396 and HSTY 496.

HSTY 497. Graduate Independent Study. 1 - 3 Units.
Independent reading and research programs with individual members of the faculty.

HSTY 499. Advanced Readings in Black History. 3 Units.
This is an advanced readings course that may change from semester to semester. This course will provide students with an opportunity to more deeply explore special themes and theoretical issues in the field of black history that are often quickly and briefly covered in broad survey courses. Readings may be organized around specific topics such as resistance and social protest, black intellectual history, black nationalism and identity, black film and historical literacy black cultural forms and politics, black urban history, or some such other combination. Students may take this course more than once and receive credit as long as the course topic differs. Students should contact the History Department for more details on course content during any given semester. Offered as AFST 399, ETHS 391, HSTY 399 and HSTY 499. Prereq: Graduate standing or instructor permission.

HSTY 601. Independent Studies. 1 - 18 Units.
(Credit as arranged.)

HSTY 651. Thesis M.A.. 1 - 18 Units.
(Credit as arranged.)

HSTY 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Limited to Ph.D. candidates actively engaged in the research and writing of their dissertations. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

History and Philosophy of Science Program

Clark Hall 203
www.case.edu/artsci/hpst (http://www.case.edu/artsci/hpst/)
Phone: 216.368.2632
Colin McLarty, Program Director
colin.mclarty@case.edu
The Department of Philosophy and the Department of History together offer an undergraduate major in the history and philosophy of science. The purpose of the major is to develop a humanistic understanding of the nature and development of science through the combined use of philosophical and historical methods. The major provides a foundation for graduate study in a range of academic disciplines and for careers in such areas as business, medicine, law, public policy, and science journalism. It also may be profitably combined with a program in one of the sciences. Within the major, a student may seek an emphasis on the philosophy of science, the history of the physical sciences, or the history of the biological and medically related sciences.

**Department Faculty**

Colin McLarty, PhD  
*Truman P. Handy Professor of Philosophy and Chair, Department of Philosophy; Director, History and Philosophy of Science Program*

Chris Haufe, PhD  
*Associate Professor, Department of Philosophy*

Aviva Rothman, PhD  
*Assistant Professor, Department of History*

Jonathan Sadowsky, PhD  
*Theodore J. Castele Professor, Department of History*

**Undergraduate Programs**

### Major

The history and philosophy of science major requires 30 credit hours from courses in philosophy and in history of science and technology.

Any four of the following seven classes:  
- PHIL 101 Introduction to Philosophy  
- HSTY 151 Technology in European Civilization  
- HSTY 201 Science in Western Thought I  
- HSTY 202 Science in Western Thought II  
- HSTY/PHIL 203 Revolutions in Science  
- PHIL 204 Philosophy of Science  
- HSTY 207

| PHIL 302 Modern Philosophy |

| Five electives approved by the major advisor |

| Total Units |

Students who major in the history and philosophy of science are not permitted to take a second major in philosophy or to minor in philosophy.

### Minor

Students who minor in history and philosophy of science are required to complete 15 credit hours, as follows:

Any three of the following five classes:  
- PHIL 101 Introduction to Philosophy  
- HSTY 202 Science in Western Thought II  
- HSTY/PHIL 203 Revolutions in Science  
- HSTY 207/PHIL 204 Philosophy of Science  
- PHIL 302 Modern Philosophy

| Two electives approved by the minor advisor |

| Total Units |

**AMST (AMST)**

**AMST 117. Exploring American History Through Biography. 3 Units.** This discussion and lecture class uses various forms of biography to explore issues of American Identity throughout the course of American history. The class will discuss how certain biographies have created archetypal American identities, and how issues such as race, class, gender, sexuality, religion, and historical context have shaped the writing, reading and purpose of biography. The last third of the class will consider the process of "national memory," the way the United States has decide to remember its past. Here the "biography" is collective, and created by myriad strands of mass culture woven together to create a national mythology. We will explore the works of those striving to pull apart these different strands, and explore what these memories tell us about established national identity. Students will explore biographical process through their assignments, and consider such questions as: How do American biographies influence our understanding of what it means to be American? How does biographical medium affect the message? Can we accept biography as history? This course investigates biography as a constructed genre that comes in a variety of forms, including autobiography, biographical novels, oral histories, and film. Offered as AMST 117 and HSTY 117. Counts for CAS Global & Cultural Diversity Requirement.

**AMST 270. American Art and Culture Before 1900. 3 Units.** Survey of the development of American art from colonial times to the present which explores how art has expressed both American values and American anxieties. Painting is emphasized, but the course also considers architecture, the decorative arts, film, literature, and music. Offered as AMST 270 and ARTH 270.

**AMST 271. American Art and Culture: The Twentieth Century. 3 Units.** Survey of the development of American art from 1900 to the present (and the future) which will explore how art has expressed both American values and American anxieties. Painting will be emphasized, but the course will also consider architecture, the decorative arts, film, literature, and music. Offered as AMST 271 and ARTH 271.

**HPSC (HPSC)**

**Course**

**HPSC 111. What is Science? Introduction to the History and Philosophy of Science. 3 Units.** We look at historical and philosophical aspects of modern science. The objective of the course is to develop a sense of (1) what forms scientific research has taken historically, and (2) what is about scientific research that makes it distinctive as a form of human knowledge. Offered as HPSC 111, PHIL 111 and HSTY 111.

**International Studies Program**

111 Mather House  
http://artsci.case.edu/international-studies/  
Phone: 216.368.5565; Fax: 216.368.4681  
Kelly McMann, Program Director  
kelly.mcmann@case.edu

By completing a major in international studies, students develop expertise in a region of the world, including one of its languages, and in a transnational topic. They also become familiar with a variety of...
international issues and frameworks. They use this expertise and knowledge to understand and analyze the dynamics and complexity of the human world.

Popular transnational topics include international security and diplomacy, global environment, international development, global health, international business, intercultural communications, global arts, and international law. Common languages to study are Arabic, French, German, Italian, Japanese, Mandarin, Russian, and Spanish.

Students majoring in international studies earn a BA degree. The major is useful for careers in the arts, business, engineering, government, health, law, media, and the nonprofit sector, among other fields.

**Faculty**
Kelly McMann, PhD
(University of Michigan)
Professor, Department of Political Science; Director, International Studies Program

**Undergraduate Program**

**Major**
The major in international studies requires a minimum of 33 credit hours, chosen from approved topical and area studies courses, plus satisfaction of a language competency requirement. Each student will prepare a program of study that includes course selections meeting the seven requirements below. Two courses from each other major or minor can count simultaneously toward the international studies major if they fit the requirements. Courses taken to satisfy the language competency requirement are exempted from this rule, and several international studies courses contribute to the completion of general education requirements.

**Requirements for the Major**

1. **Multidisciplinary Foundations** (required courses; 12 hours). These courses provide students with the analytical tools and frameworks to understand global issues.

   - ANTH 102 Being Human: An Introduction to Social and Cultural Anthropology 3
   - ECON 103 Principles of Macroeconomics 3
   - HSTY 113 Introduction to Modern World History 3
   - POSC 172 Introduction to International Relations 3

2. **Area Focus** (6 hours): Two courses that concentrate on a single region of the world. Such courses are offered in many departments and programs. In order to count toward the area focus, courses from the Department of Modern Languages and Literatures must include content other than exclusively language learning, such as the study of literature or cinema. Area foci include Africa, Asia, Europe, Latin America and the Caribbean, and the Middle East and North Africa.

3. **Topical Focus** (6 hours): A related pair of courses that examine a transnational topic. Topical foci include, but are not limited to, international security and diplomacy, global environment, international business, global health, international development, and global arts.

4. **Elective Area or Topical Courses** (6 hours): Two additional courses toward the area focus or topical focus.

5. Students must include courses from at least two different departments or programs among their six area focus, topical focus, and elective area or topical courses. These courses should be selected in consultation with the International Studies Program director.

6. **Senior Project** (required course, INTL 399 International Studies Colloquium, 3 hours): The senior project offers students the opportunity to demonstrate their understanding of the complexity and dynamics of the human world as a result of majoring in international studies. In the required course, students analyze topics relevant to the foreign geographic area and broad theme they have chosen for their major foci. To do so, they draw on their international experience, knowledge acquired through a foreign language, and prior coursework for the major. Students share their conclusions in the seminar itself and in a public presentation. This course meets the requirements of a SAGES capstone.

7. **Language Competency** (0 to 16 credit hours): In addition to the 33 credit hours of international studies course work, students must demonstrate competency in a language other than their native language. This may be done by:

   1. completing a language course at the 300 level or above
   2. completing four semesters in a single language
   3. demonstrating to the Department of Modern Languages and Literatures a non-native language competency equivalent to that attained by completing a 300-level or above course

**Honors**: Honors are awarded to students who meet three requirements: an exceptional senior project (grade of A), a 3.3 overall GPA, and a 3.7 GPA in international studies courses (area focus, topical focus, and electives).

There is no minor in international studies. International studies can be a secondary major.

**Courses**

**INTL 396. International Independent Study. 1 - 3 Units.**
Study of a topic within the scope of international studies. The student must complete a prospectus form, approved and signed by the supervising faculty member, no later than the second week of classes. The prospectus must outline the goals of the project and the research methodology to be used and is part of the basis for grading. Open to juniors and seniors majoring in international studies.

**INTL 398. International Studies Senior Research Project. 3 Units.**
Individual work with a faculty tutor leading to the writing of a major research paper. Open only to seniors majoring in international studies.

**INTL 399. International Studies Colloquium. 3 Units.**
This course offers seniors the opportunity to demonstrate their understanding of the complexity and dynamics of the human world as a result of majoring in International Studies. Students analyze topics relevant to the foreign geographic areas and broad themes they have chosen for their major foci. To do so, they draw on their international experiences, knowledge acquired through foreign languages, and prior coursework for the major. Students share their conclusions in the seminar itself and in a public presentation. Counts as SAGES Senior Capstone.

**Japanese Studies Program**

103 Guilford House
Today's students find themselves in a world of increasingly multi-ethnic, multi-religious, and multicultural contexts. Through a long history of receiving, reworking, and incorporating influences from nearby cultural centers on the Asian mainland, from surrounding Pacific islands, and from the world beyond (including Europe and the Americas), Japan has developed a tradition of multiculturalism—a tradition that is best understood through interdisciplinary study. Following this thread, the Japanese Studies Program seeks to foster the student's global and interdisciplinary perspectives, while at the same time maintaining a flexibility that allows individuals to pursue their own areas of interest. To further foster the students' linguistic and cultural development, the Japanese Studies Program strongly encourages study abroad in Japan for a year, a semester, or a summer.

Students may pursue a major or a minor in Japanese studies. The program offers a variety of courses to fulfill the requirements, ranging from five levels of the Japanese language to courses about Japanese cinema, literature, and pop culture. Besides these core courses, we encourage the student to take related courses in such interdisciplinary areas as Asian art, cinema, comparative literature of Japan and the West, Japanese religion and history, and international business. Taking advantage of the varied resources of the university and University Circle institutions, the Japanese Studies Program makes the study of Japanese culture an integral part of the student's undergraduate education. Furthermore, the Japanese Studies Program provides an excellent foundation for graduate or professional school or for careers in international business and finance, careers involving technological or medical exchange, and careers in law, journalism, foreign service, or the arts.

**Program Faculty**

Beth M. Carter, PhD  
(University of Pennsylvania)  
**Assistant Professor, Department of Modern Languages and Literatures; Co-section head, Japanese Studies Program; Undergraduate studies advisor; Japanese Studies Program**  
Premodern Japanese literature  

Takao Hagiwara, PhD  
(University of British Columbia)  
**Associate Professor, Department of Modern Languages and Literatures; Co-section head, Japanese Studies Program**  
Modern Japanese literature

**Lecturers**

Margaret M. Fitzgerald, MA  
(Ohio State University)  
**Lecturer, Department of Modern Languages and Literatures**  
Japanese Linguistics  

Yoshiko Kishi, MA  
(New York University)  
**Lecturer, Department of Modern Languages and Literatures**  
Japanese pedagogy

Yukiko (Nishida) Onitsuka, EdD  
(University of Cincinnati)  
**Lecturer, Department of Modern Languages and Literatures**  
Literate and second-language studies

**Undergraduate Program**

**Major**

The BA major in Japanese studies requires a minimum of 35 credit hours. For students beginning the major at the 200 level, the course requirements are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>JAPN 201</td>
<td>Intermediate Japanese I</td>
<td>4</td>
</tr>
<tr>

</tbody>
</table>

Four Asian studies, world literature, or other related courses  

Total Units 40

* JAPN 450/451, if not taken as replacement(s) for JAPN 350/351, can be counted toward the four Asian studies, world literature, or other related courses.

** This course requires a substantial research paper in Japanese or English. Students are required to identify their faculty advisors and the topic of their paper by the end of the junior year. Exceptional papers may be considered for honors.

*** “Other related courses” may include courses in Japanese literature, film, theater, art history, anthropology, philosophy, religion, sociology, political science, or history. Permission of Japanese Studies advisor required.

Students beginning the major at the 300 level do not take JAPN 201 Intermediate Japanese I and JAPN 202 Intermediate Japanese II, but do take one “directed reading” in Japanese in an area related to their major research. All other requirements for the BA are the same.

Please note: Normally, no more than two courses taken for Japanese Studies credit may simultaneously count toward a minor or toward another major.

While some language courses can be skipped in a sequence, progression is not allowed in reverse order. Additionally, students may not waive the language requirement.

Courses in other disciplines also form an important component of the Japanese Studies Program. They provide an international, as well as interdisciplinary, perspective on Japanese culture. A faculty advisor supervises each student's selection of these courses.

In addition to the courses required for the major, the following courses are offered in the Japanese Studies Program:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>

Japanese Studies Program

JAPN 235 The Japan Experience: Kyoto - Language, Culture & Exchanges 3
JAPN/WLIT 245 Classical Japanese Literature in Translation 3
JAPN/WLIT 255 Modern Japanese Literature in Translation 3
JAPN/WLIT 265 Constructing the Samurai: Images of Japanese Warriors from 1100’s to the Present 3
JAPN/WLIT 315 Origins of Anime: Classical Texts, Modern Manga, Anime, and Tales 3
JAPN 335 Japanese Linguistics 3
JAPN/WLIT 337 Love and Loss: Reading The Tale of Genji 3
JAPN/WLIT 345 Japanese Women Writers 3
JAPN/WLIT 355 Modern Japanese Novels and the West 3
JAPN 399 Independent Study 1 - 3

* This course counts toward the General Education Requirements.

Program Honors
Exceptional papers written for the senior thesis may qualify for program honors. In addition, to qualify for the BA with honors in Japanese, students must achieve a minimum GPA of 3.5 in courses taken for the Japanese major.

Study Abroad
Study abroad in Japan is highly recommended, preferably for a year, a semester, or even short term (see JAPN 235 The Japan Experience: Kyoto - Language, Culture & Exchanges). All efforts are made to grant appropriate credit for courses taken at a Japanese university during the study abroad experience.

Minor
For students beginning Japanese at the introductory level, the course requirements for the minor are as follows:

JAPN 101 Elementary Japanese I 4
JAPN 102 Elementary Japanese II 4
JAPN 201 Intermediate Japanese I 4
JAPN 202 Intermediate Japanese II 4
One 300-level course 3
Total Units 19

For students beginning Japanese at the 200 level or above, the requirements for the minor are five courses at the 200 or above, through JAPN 450/451, approved by the program director.

Courses
JAPN 101. Elementary Japanese I. 4 Units.
Introduction to understanding, speaking, reading, and writing Japanese. Students learn to read and write hiragana and katakana syllabaries and 50 kanji characters. Students are expected to achieve control of the sound system and basic structure of the language. Emphasizes aural comprehension and speaking.

JAPN 102. Elementary Japanese II. 4 Units.

JAPN 201. Intermediate Japanese I. 4 Units.
Further study of fundamental structures of Japanese. Students improve aural comprehension, speaking, reading, and writing abilities and learn approximately 100 new characters. Recommended preparation: JAPN 102 or equivalent. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 202. Intermediate Japanese II. 4 Units.
Continuation of JAPN 201. Students learn an additional 100 kanji characters. With the completion of JAPN 201 - 202, students should have control of the fundamentals of modern Japanese and a firm foundation in the writing system. Recommended preparation: JAPN 201 or equivalent. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 215. The World of Manga. 3 Units.
Manga (comic books and graphic novels) is one of the most important aspects of contemporary visual culture in Japan. It is consumed by millions of Japanese every day, and has attracted intense attention around the world. As it constitutes one third of the annual publications in Japan today, its breadth and scope are limitless. What does manga reveal about contemporary cultural production and consumption in Japan? What kind of special features are used in manga to attract people so much? What kind of genres do they have and what kind of readers do they have? These are some of the questions we will explore by surveying a large number of works produced in the last fifty years. Introducing graphic novels by major artists and writers, the course will expand your understanding of key components, social movements and discourses associated with manga. You will examine the history of manga, its aesthetics, and social impact through assigned readings, including scholarly papers and manga books, as well as works selected by each student (in original Japanese or in English translation). Offered as JAPN 215 and WLIT 215. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 225. Japanese Popular Culture. 3 Units.
This course highlights salient aspects of modern Japanese popular culture as expressed in animation, comics and literature. The works examined include films by Hayao Miyazaki, writings by Kenji Miyazawa, Haruki Murakami and Banana Yoshimoto, among others. The course introduces students to essential aspects of modern Japanese popular culture and sensibility. Offered as JAPN 225 and WLIT 225. Counts for CAS Global & Cultural Diversity Requirement.
JAPN 235. The Japan Experience: Kyoto - Language, Culture & Exchanges. 3 Units.
The Japan Experience: Kyoto is designed to provide students an opportunity to use Japanese language skills they have acquired in real life situations and deepen their understanding of Japanese language and culture through experiential learning. The course has three major learning components: "Japanese Language Learning through Activities and Cultural Experiences," "Japanese Exploration Project," and "Exchanges with Local College Students" and will consist of class meetings before the trip focused on preparation followed by 15 days in Kyoto. Japanese Language Learning through Activities and Cultural Experiences: In Kyoto students will explore the local neighborhood and report their findings in class. Several cultural activities will be organized: Zen meditation, tea activity, Japanese cooking class, etc. The tea activity will include a rare opportunity for students to meet a tea ceremony master and experience the way of Japanese traditional tea. Exchanges with Local College Students: Students from CWRU will be able to take advantage of Ritsumeikan University's "Buddies" program where Japanese student volunteers are paired with participants to improve conversational skills and become better acquainted with the campus and Kyoto. CWRU students will also visit classes at a local college in Osaka for exchanges with students there. These exchanges will allow participants to reinforce their language skills, develop better communication skills, and deepen cultural understanding in both classroom and real-life settings. Japan Exploration Project: Students will complete individual projects during the course. They will design their own projects using resources available in Kyoto before the trip and prepare for it. Project themes will be chosen by students based on their interests. At the end of course, students will give presentations in Japanese, demonstrating their language proficiency development. Counts for CAS Global & Cultural Diversity Requirement. Prereq: JAPN 201.

JAPN 245. Classical Japanese Literature in Translation. 3 Units.
Readings, in English translation, of classical Japanese poetry, essays, narratives, and drama to illustrate essential aspects of Japanese culture and sensibility before the Meiji Restoration (1868). Lectures explore the sociohistorical contexts and the character of major literary genres; discussions focus on interpreting the central images of human value within each period. Japanese sensibilities compared to and contrasted with those of Western and other cultures. Offered as JAPN 245 and WLIT 245. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 255. Modern Japanese Literature in Translation. 3 Units.
Focus on the major genres of modern Japanese literature, including poetry, short story, and novel (shosetsu). No knowledge of Japanese language or history is assumed. Lectures, readings, and discussions are in English. Films and slides complement course readings. Offered as JAPN 255 and WLIT 255. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 265. Constructing the Samurai: Images of Japanese Warriors from 1100's to the Present. 3 Units.
From concepts of premmoden warriors calling out their names before doing hand-to-hand combat to modern salary men crushing the world with their economic prowess, samurai have come to be an iconic image of the Japanese people. Throughout the semester we will pay particular attention to the central themes in the historiography of warrior society, roughly, the years between ca. 1110 and 1850 C.E. We will investigate how these documents were translated by modern societies, both east and west, in samurai film. Students will explore the category of "samurai" through reading selections from The Tale of the Heike, as well as selected Noh plays, legal documents, travel diaries, autobiographies, short stories, and historical texts. In addition, we will investigate other genres contributing to the construction of the idea of "samurai," such as film. This seminar will closely examine the concept of "samurai," particularly its connection to the Japanese identity using an interdiscipliary context of the arts, history, religion, and literature. We will also explore the ways in which daimyo (feudal lords), authors, Buddhist officials, and filmmakers throughout the world created, shaped, and altered the ideal image of the samurai. Key to understanding the concept of samurai will be wrestling with questions of authorship, spirit pacification, nationality, and patronage, with specific focus on the Japanese relationship with Western nations and cultures. We will focus on language and its role in legitimizing the global concepts of "samurai" and "bushido." This class will provide additional insight geared toward the cultural study of linguistic identities beyond those informed by the English language and will include terms expressed in Japanese. Many of the resources used in this course will be translated from the Japanese, allowing us to consider Naoki Sakai's theories of enunciation/ translation/ subjectivity, Haruo Shirane's theory of reception, and Michael Emmerich's theory of replacement. Especially important will be to focus on terms in Japanese with no, or poor, English equivalent (such as samurai, shogun, daimyo, bushido, etc.) but with clear images in the English-speaking imagination(s). The instructor will provide background information on social, cultural, and religious history. Class sessions will be conducted in English and combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. All readings and films will be in English or with English subtitle. Offered as JAPN 265 and WLIT 265. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 301. Advanced Japanese I. 4 Units.

JAPN 302. Advanced Japanese II. 4 Units.
Continuation of JAPN 301; emphasizes conversational proficiency and reading. Recommended preparation: JAPN 301 or equivalent. Counts for CAS Global & Cultural Diversity Requirement.
JAPN 306. Readings in Manga. 3 Units.
This course aims to enhance students' reading skills in Japanese as well as in the other three main areas of language learning (speaking, listening, and writing) through the use of the extensive reading (a.k.a. Graded reading) method with manga in Japanese. In this course, the emphasis is put on acquiring the skill needed to enjoy reading content without translation. Students will review and learn Japanese structures and expressions as well as have the opportunity to explore colloquialisms, speech styles, onomatopoeia, contractions, interjections, and other elements of speech. The class also will incorporate individual reading activities such as oral reading sessions, timed reading, speed reading, and book discussion groups. We will also explore how Japanese scripts such Hiragana, Katakana, and Kanji, as well as Roman alphabets, are integrated in manga. Our primary textbooks will be manga in Japanese; however, some additional readings in English will be given to students as a point of reference for the course lectures. The classes will primarily be conducted in Japanese. Counts for CAS Global & Cultural Diversity Requirement. Prereq: JAPN 202 with a C or higher.

JAPN 315. Origins of Anime: Classical Texts, Modern Manga, Anime, and Tales. 3 Units.
Modern anime and manga authors and artists captivate audiences with rich stories and stylized art. This course investigates the origins of these stories by engaging premodern Japanese texts (in English language translation) and modern literary theory. Throughout the semester we will pay particular attention to commonalities among these literatures and narrative genres, as well as the extent they differ due to temporal/socio/religio/political concerns. Western and Asian literary theories, especially those concerning topics of translation, replacement, negotiation with classics, and gender and sexuality will also be extensively explored. We will interpret the historic human endeavor of story telling within the contexts of time and space and through a critical self-awareness of our own positions in the modern world. Students will prepare individual research projects and be responsible for finding and presenting primary sources and secondary research. The instructor will provide background information on political, cultural, and religious history as well as present on details of literary theory. The aim is to encourage students to critically analyze the modern perception of past events. Every topic will be addressed in three phases. First, the students will discover historical events, literature, and people through reading primary sources in English translation. In a second phase, we will see how these stories are depicted in movies, animation, or manga. Finally, students will perform research to explore the differences between the premodern sources and their modern adaptation and determine how we can use such a comparison to critically analyze the way modern storytellers recreate the past. Class sessions will combine lectures, discussion, and audio-visual materials. Offered as JAPN 315 and WLIT 315. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 335. Japanese Linguistics. 3 Units.
The purpose of this course is to survey the principal research in Japanese linguistics for students who have basic knowledge of Japanese and are interested in more in-depth treatment of linguistic phenomena (phonetics, phonology, morphology, syntax, semantics, etc.). Lectures and discussions will cover many different aspects of the Japanese language. There is a great deal of analytic studies of the Japanese language done both inside and outside Japan, which will be surveyed in this course. Students will become familiar with the major issues through lectures and class discussions, as well as through their reading of both primary and secondary sources. Both formal and functional approaches to the analysis of Japanese will be examined, and the acquisition of these structures will also be discussed. The course will also be useful for the improvement of students' Japanese language proficiency. Recommended preparation: JAPN 101 and JAPN 102, or equivalent competence in Japanese. Offered as COGS 335, COGS 435, JAPN 435, LING 335 and LING 435. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 337. Love and Loss: Reading The Tale of Genji. 3 Units.
Murasaki Shikibu's The Tale of Genji (c. 1000 CE), the great Japanese classic often referred to as "the world's first novel," has been praised by countless readers and scholars since it was first circulated within the imperial court. In this course we will read the entire text in English translation. We will focus on themes of love and loss, paying special attention to the substitution that results from the hero, the shining prince Genji, losing his mother at a tender age and attempting to fill the void she left. Since Genji is popularly thought of as a "playboy," we will investigate the thematic, historic, political, social, and religious descriptions within Genji's (many) love affairs, with a special emphasis on issues of gender. We will also consider the poetry, imagery, costume, music, religion, theater, and material culture of the mid-Heian era, which is encapsulated in the tale. Students will prepare individual research projects and be responsible for finding and presenting primary sources and secondary research. The instructor will provide background information on political, cultural, and religious history as well as present on details of literary theory. The aim is to encourage students to critically analyze the modern perception of the past. Class sessions will combine lectures, discussion, and audio-visual materials. All material is in English translation. There are no prerequisites. The course is conducted in English. Offered as JAPN 337 and WLIT 337. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 345. Japanese Women Writers. 3 Units.
Contributions of women writers to the literature of pre-modern and modern Japan; investigations of how their works exemplify and diverge from "mainstream" literary practices. Emphasis on the social and cultural contexts of the texts. Offered as JAPN 345 and WLIT 345. Counts for CAS Global & Cultural Diversity Requirement.
JAPN 347. Power of Words: Ritual Uses of Premodern Japanese Literature. 3 Units.
In premodern Japan, it was not only death and mourning ritual and practice that could pacify the spirit of the deceased, but also language. Authors consciously crafted the words of their works to simultaneously express the grief associated with longing and pacify the spirits of the dead. These words are called kotodama (power of words). From as far back as the eighth-century Kojiki (Records of Ancient Matters) and Nihon Shoki (The Chronicles of Japan) textual representations of mourning were linked with special uses of language and spirit pacification. At the death of Ame-no-wakahiko (a mythological god), his parents constructed a mourning hut and performed songs to secure his spirit in the afterworld. As several authors have demonstrated, from kotodama in the mid-eighth-century poetic anthology Man’yosh, (Collection of Ten Thousand Leaves) to linked verse (renga) in medieval Japan, carefully constructed literary language also had a place in ritual pacification of the spirits of the dead. Words were not simple expressions of grief; they held power. All material is in English translation. The course is conducted in English. All material will be provided via PDF. Offered as JAPN 347 and WLIT 347 and RLGN 347. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 350. Contemporary Japanese Texts I. 3 Units.
The primary aim of this course is to develop communication skills in Japanese based on those that the students have acquired in JAPN 302 or equivalent. The students will read and discuss various texts such as daily conversations, essays, and news scripts with the assistance of vocabulary and kanji (Chinese character) lists and formal grammar explanations. Attention also will be given to enhancing the students’ writing and aural/oral proficiencies through regularly assigned homework, presentations, tape listening, video viewing, and classroom discussion. Recommended preparation: JAPN 302 or equivalent. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 351. Contemporary Japanese Texts II. 3 Units.
This course is a continuation of JAPN 350 and its primary aim overlaps with that of JAPN 350: to develop more sophisticated communication skills in Japanese. Students will read and discuss various texts such as daily conversations, essays, and news scripts largely with the assistance of vocabulary and kanji (Chinese character) lists. Attention will be given to enhancing the students’ writing and aural/oral proficiencies through regularly assigned homework, presentations, tape listening, video viewing, and classrooms discussion. Counts for CAS Global & Cultural Diversity Requirement. Prereq: JAPN 350 or consent of instructor.

JAPN 355. Modern Japanese Novels and the West. 3 Units.
This course will compare modern Japanese and Western novels, drama, and novels. Comparisons will focus on the themes of family, gender and alienation, which subsume a number of interrelated sub-themes such as marriage, home, human sexuality, amae (dependence), innocence, experience, death, God/gods, and nature (the ecosystem). Offered as JAPN 355 and WLIT 355. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 396. Senior Capstone - Japanese. 3 Units.
The Senior Capstone in Japanese is an independent study project chosen in consultation with a capstone advisor. The capstone project should reflect both the student’s interest within Japanese and the courses he or she has taken to fulfill the major. The project requires independent research using an approved bibliography and plan of action. In addition to written research, the student will also present the capstone project in a public forum that is agreed upon by the project advisor and the student. Counts as SAGES Senior Capstone. Prereq: Senior status required. Major in Japanese required.

JAPN 397. Senior Thesis I. 3 Units.
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper in English or Japanese. Limited to senior majors. Permit required.

JAPN 398. Senior Thesis II. 3 Units.
Continuation of JAPN 397. Limited to senior majors. Prereq: JAPN 397.

JAPN 399. Independent Study. 1 - 3 Units.
Directed study for students who have progressed beyond available course offerings.

JAPN 435. Japanese Linguistics. 3 Units.
The purpose of this course is to survey the principal research in Japanese linguistics for students who have basic knowledge of Japanese and are interested in more in-depth treatment of linguistic phenomena (phonetics, phonology, morphology, syntax, semantics, etc.). Lectures and discussions will cover many different aspects of the Japanese language. There is a great deal of analytic studies of the Japanese language done both inside and outside Japan, which will be surveyed in this course. Students will become familiar with the major issues through lectures and class discussions, as well as through their reading of both primary and secondary sources. Both formal and functional approaches to the analysis of Japanese will be examined, and the acquisition of these structures will also be discussed. The course will also be useful for the improvement of students’ Japanese language proficiency. Recommended preparation: JAPN 101 and JAPN 102, or equivalent competence in Japanese. Offered as COGS 335, COGS 435, JAPN 435, LING 335 and LING 435. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 450. Japanese in Cultural Context I. 3 Units.
The primary aim of this graduate course is to develop sophisticated communication skills (listening, speaking, reading, and writing) in Japanese. The students will read and discuss various texts in the original, such as essays, news scripts, and literary works. Classroom instruction and discussion will be conducted in Japanese. The students also will be required to write a research paper of 4000-6000 letters/characters (10-15 genkoyoshi pages) in Japanese on a topic related to Japan and the student’s specialty. Recommended preparation: JAPN 351 or equivalent.

JAPN 451. Japanese in Cultural Context II. 3 Units.
This course is a continuation of JAPN 450 and it aims at a further development of sophisticated communication skills (listening, speaking, reading, and writing) in Japanese. The students will read and discuss various texts in the original, such as essays, news scripts, and literary works. Classroom instruction and discussion will be conducted in Japanese. The students also will be required to write a research paper of 6000-8000 letters/characters (15-20 genkoyoshi pages) in Japanese on a topic related to Japan and the student’s specialty. Recommended preparation: JAPN 351 or equivalent.

Judaic Studies Program

Jther House 215
https://artsci.case.edu/judaic-studies/
Phone: 216.368.5156
Jay Geller, Program Director
jay.geller@case.edu

The Judaic Studies Program offers an interdisciplinary approach to the study of the history, religion, social experience, and culture of the Jewish people. By bringing a variety of fields and disciplines to bear on its subject, the program intends to convey to students the complex interaction of forces that create and express Jewish ethnic and religious identity. Students completing the program will have a broad knowledge
of the field along with the tools necessary for continued study of Jewish civilization in all its manifestations.

**Program Faculty**

Jay Geller, PhD  
(Yale University)  
**Samuel Rosenthal Professor of Judaic Studies; Professor, Department of History; Director, Judaic Studies Program**  
Modern European Jewish history

Alanna Cooper, PhD  
(Boston University)  
**Abba Hillel Silver Chair of Jewish Studies; Visiting Assistant Professor, Department of Religious Studies**  
Anthropology, material culture, Jews of Muslim lands, the American Jewish community

**Undergraduate Program**

**Minor**

The minor consists of a minimum of five or six courses, according to the following scheme, to be chosen in consultation with the program director.

A. Introduction to Judaic Studies. One of the following two courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>JDST 101</td>
<td>Jews and Judaism</td>
<td>3</td>
</tr>
<tr>
<td>JDST 173</td>
<td>Introducing Judaism</td>
<td>3</td>
</tr>
</tbody>
</table>

B. Nine additional credit hours of courses that have a JDST cross-listing.

Alternatively, students may take 6 credit hours of JDST courses, plus 3 credit hours from one course on the following list:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGL 365E</td>
<td>The Immigrant Experience</td>
</tr>
<tr>
<td>HBRW 201</td>
<td>Intermediate Modern Hebrew I</td>
</tr>
<tr>
<td>HBRW 202</td>
<td>Intermediate Modern Hebrew II</td>
</tr>
<tr>

C. Two semesters of Hebrew (HBRW 101 and HBRW 102)

Students who place out of the 100-level HBRW courses must take an additional course from B above. (3)

**Total Units:**  
20 (or 15)

**Courses**

**JDST 101. Jews and Judaism. 3 Units.**  
This course provides an introduction to Jewish religion, culture, history, and life. It does not presuppose any previous study of Judaism or experience with Judaism, and it prepares students for additional coursework in Judaic studies, Jewish history, or religious studies with an emphasis on Judaism. Required for the minor in Judaic Studies. Offered as JDST 101 and RLGN 213. Counts for CAS Global & Cultural Diversity Requirement.

**JDST 173. Introducing Judaism. 3 Units.**  
This “topics” course offers an introduction to the academic study of Judaism. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and basic religious literacy in Jewish religious tradition, exploring forms of it in a diversity of cultural contexts around the world. Section topics could include, but are not limited to: Festivals and Holy Days, Women and Gender, Jewish Ethics. Students may repeat the course for credit (up to 6 credits), provided that the two sections are different. Offered as RLGN 173 and JDST 173. Counts for CAS Global & Cultural Diversity Requirement.

**JDST 218. Jews in Early Modern Europe. 3 Units.**  
This course surveys the history of Jews in Europe and the wider world from the Spanish expulsion through the French Revolution. Tracking peregrinations out of the Iberian Peninsula to the British Isles, France, Holland, Italy, Germany, Poland-Lithuania, the Ottoman Empire, and the American colonies, it examines the diverse ways Jews organized their communities, interacted with their non-Jewish neighbors, and negotiated their social, economic, and legal status within different states and empires. What role did Jews play and what symbolic place did they occupy during a period of European expansion, technological innovation, artistic experimentation, and religious and political turmoil? What internal and external dynamics affected Jewish experiences in the sixteenth, seventeenth, and eighteenth centuries? Through a selection of inquisitorial transcripts, government records, memoirs, and historical literature, we will explore topics such as persecution, conversion, messianism, toleration, emancipation, and assimilation. Offered as HSTY 218, JDST 218, and ETHS 218. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

**JDST 220. Jewish Traditional Art and Architecture. 3 Units.**  
Tradition and transformation in Jewish artistic expression over time and across space. Course will begin with biblical period and continue down to the present day in Israel and America. Examination of how concepts such as “Jewish” and “art” undergo change within the Jewish community over this period. Offered as ARTH 220 and JDST 220. Counts for CAS Global & Cultural Diversity Requirement.

**JDST 228. The Jewish Image in Popular Film. 3 Units.**  
This course will explore film as social practice from the flickering silent era, through Hollywood’s Golden Age, to the techno-dazzle of today. Standing at the confluence of society, history, ideology and culture, students will come to understand how popular film is shaped by, and how it actively shapes, the constant reconstruction of Jewish identity in the American mainstream. Counts for CAS Global & Cultural Diversity Requirement.
**JDST 233. Introduction to Jewish Folklore. 3 Units.**
Exploration of a variety of genres, research methods and interpretations of Jewish folklore, from antiquity to the present. Emphasis on how Jewish folk traditions and culture give us access to the spirit and mentality of the many different generations of the Jewish ethnic group, illuminating its past and informing the direction of its future development. Offered as ANTH 233, RLGN 233, and JDST 233. Counts for CAS Global & Cultural Diversity Requirement.

**JDST 254. The Holocaust. 3 Units.**
This class seeks to answer fundamental questions about the Holocaust: the German-led organized mass murder of nearly six million Jews and millions of other ethnic and religious minorities. It will investigate the origins and development of racism in modern European society, the manifestations of that racism, and responses to persecution. An additional focus of the course will be comparisons between different groups, different countries, and different phases during the Nazi era. Offered as HSTY 254, RLGN 254, ETHS 254, and JDST 254. Counts for CAS Global & Cultural Diversity Requirement.

**JDST 255. Global Judaism: Diversity Across the Jewish World. 3 Units.**
Scattered across the globe over the course of millennia, Jews’ diverse histories and environments have given rise to a great range of religious, cultural and social forms. Using ethnographies as our primary texts, we will think critically and comparatively about Judaism and Jewishness in the Americas, Europe, Africa, and Asia. Along our journey, we examine how Jews have navigated their experiences as minorities in their many diaspora homelands, and how they have adapted their cultural and religious practices to the various environments in which they have found themselves. In addition to exploring their Jewishness vis-à-vis others, we also examine questions of exclusion and belonging that Jews have faced as they have encountered each another in recent decades through tourism, mass migration, globalization, and the internet. How do the world’s varied Jewish groups - who are of different skin colors, who speak different languages, and who carry different historical memories - navigate ethnic divides, race relations, and religious diversity? Should we speak of a single Jewish religion and Jewish people at all? Offered as ANTH 255, ETHS 255, JDST 255 and RLGN 255. Counts for CAS Global & Cultural Diversity Requirement.

**JDST 268. Women in the Bible: Ethnographic Approaches to Rite and Ritual, Story, Song, and Art. 3 Units.**
Examination of women in Jewish and Christian Biblical texts, along with their Jewish, Christian (and occasionally Muslim) interpretations. Discussion of how these traditions have shaped images of, and attitudes toward, women in western civilization. Offered as RLGN 268, WGST 268, and JDST 268.

**JDST 280. Religion and Politics in the Middle East. 3 Units.**
An in-depth look at the relationship between politics and religion in the Middle East. Students will spend the first week on the CWRU campus and the last three weeks in Israel, where time will be divided between classroom teaching, guest lectures, and “field trips” to important sites. Students will have the opportunity to interact directly with members of the region’s diverse religious groups within the political, social, and cultural contexts in which they live. A final research paper will be required. Knowledge of Hebrew is not necessary. Offered as JDST 280 and RLGN 280.

**JDST 314. Mythologies of the Afterlife. 3 Units.**
This course provides a multidisciplinary approach to the idea of an afterlife, and its manifestation in diverse cultures. We will examine the way varying views of the afterlife influence religion, popular culture and palliative care, and how human creativity has shaped the heavens, hells, hauntings and holidays of diverse populations over time and across space. Students will come to see the afterlife as an integral part of human history and experience, not only because it helps people die with better hope, but because it helps them to live more richly. Offered as RLGN 314 and JDST 314.

**JDST 341. Jewish Urban History. 3 Units.**
This course examines the relationship between Jews and the modern urban environment. It seeks to answer questions such as: How did the modernization of cities affect Jews and Jewish communities? In what ways did Jews contribute to modern urban cultural and social forms? What is Jewish urban space, is it unique, and how is it remembered later on? Are there differences between the patterns in Europe, the Middle East, and the Americas? Offered as HSTY 341 and JDST 341. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

**JDST 350. Jewish Ethics. 3 Units.**
An exploration of Jewish moral and ethical discourse. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abortion, euthanasia, and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of moral rhetoric in the Jewish community today. Readings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as JDST 350, RLGN 350, and RLGN 450. Counts as SAGES Departmental Seminar.

**JDST 371. Jews Under Islam and Christianity. 3 Units.**
This course examines the social and political status of Jews under Muslim and Christian rule since the Middle Ages. Themes include interfaith relations, Islamic and Christian beliefs regarding the Jews, Muslim and Christian regulation of Jewry, and the Jewish response. Offered as HSTY 371, JDST 371 and RLGN 371. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

**JDST 379. History of Zionism. 3 Units.**
This course seeks to elucidate the major strands of Zionism, their origins, how they have interacted, and their impact on contemporary Israeli society. These may include political Zionism, cultural Zionism, socialist (labor) Zionism, Revisionist Zionism, and religious Zionism. This course will also examine the differences in the appeal of Zionism to Jews in different places, such as Western Europe, Eastern Europe and the United States. Offered as HSTY 389 and JDST 389. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

**JDST 392. Independent Study. 1 - 3 Units.**
Up to three semester hours of independent study may be taken in a single semester.

**Department of Mathematics, Applied Mathematics, and Statistics**
231 Yost Hall
http://mathstats.case.edu/
Phone: 216.368.2880; Fax: 216.368.5163
Stanislaw J. Szarek, Interim Chair
The Department of Mathematics, Applied Mathematics, and Statistics at Case Western Reserve University is an active center for mathematical and statistical research. Faculty members conduct research in algebra, analysis, applied mathematics, convexity, dynamical systems, geometry, imaging, inverse problems, life sciences applications, mathematical biology, modeling, numerical analysis, probability, scientific computing, statistics, stochastic systems, and other areas.

The department offers a variety of programs leading to both undergraduate and graduate degrees in traditional and applied mathematics and statistics. Undergraduate degrees are Bachelor of Arts or Bachelor of Science in mathematics, Bachelor of Science in applied mathematics, and Bachelor of Arts or Bachelor of Science in statistics. Graduate degrees are Master of Science and Doctor of Philosophy. Integrated BS/MS programs allow a student to earn a Bachelor of Science in either mathematics or applied mathematics and a Master of Science in this department or another department in five years; there is a similar integrated bachelor's/master's degree program in statistics. The department, in cooperation with the college's Teacher Licensure Program, offers a course of study for individuals interested in pre-college teaching. Together with the Department of Physics, it offers a specialized joint Bachelor of Science in Mathematics and Physics.

Mathematics plays a central role in the physical, biological, economic, and social sciences. Because of this, individuals with degrees in mathematics enjoy excellent employment prospects and career opportunities. A bachelor's degree in mathematics or applied mathematics provides a strong background for graduate school in many areas (including computer science, medicine, and law, in addition to mathematics and science) or for a position in the private sector. A master's degree in mathematics or applied mathematics, or an undergraduate degree in applied mathematics combined with a master's in a different area, is an excellent basis for private-sector employment in a technical field. A PhD degree is usually necessary for college teaching and research.

Statistics links mathematics to other disciplines in order to understand uncertainty and probability, both in the abstract and in the context of actual applications to science, medicine, actuarial science, social science, management science, business, engineering, and contemporary life. As technology brings advances, the statistical theory and methodology required to do them justice becomes more challenging: higher-dimensional, dynamic, or computer-intensive. The field of statistics is rapidly expanding to meet the three facets of these challenges: the underlying mathematical theory, data analysis, and modeling methodology, and interdisciplinary collaborations and new fields of application.

Students in the department, both undergraduate and graduate, have opportunities to interact personally with faculty and other students, participate in research, and engage in other activities. In addition, undergraduates can obtain teaching experience through the department's supplemental instruction program.

**Department Faculty**

Stanislaw J. Szarek, PhD  
(Mathematical Institute, Polish Academy of Science)  
*Kerr Professor of Mathematics and Interim Chair*  
Analysis and applied analysis; convex and differential geometry; mathematical physics

Jenny Brynjarsdóttir, PhD  
(The Ohio State University)  
*Associate Professor*  
Bayesian statistics; spatial statistics; uncertainty quantification

Christopher Butler, MS  
(Case Western Reserve University)  
*Senior Instructor and Theodore M. Focke Professorial Fellow*  
Teaching of mathematics

Daniela Calvetti, PhD  
(University of North Carolina)  
*James Wood Williamson Professor*  
Imaging and inverse problems; numerical analysis and scientific computing; uncertainty quantification

Julia Dobrosotskaya, PhD  
(University of California, Los Angeles)  
*Assistant Professor*  
Analysis and applied analysis; imaging and inverse problems; numerical analysis and scientific computing

Weihong Guo, PhD  
(University of Florida)  
*Professor*  
Imaging and inverse problems; numerical analysis and scientific computing

David Gurarie, PhD  
(Hebrew University, Jerusalem, Israel)  
*Professor*  
Continuum and fluid mechanics; dynamical systems; life sciences and biomedical research

Nick Gurski, PhD  
(University of Chicago)  
*Associate Professor*  
Algebra; category theory, algebraic topology

Mary Ann Horn, PhD  
(University of Virginia)  
*Professor*  
Analysis and applied analysis; dynamical systems; life sciences/biomedical research

Michael Hurley, PhD  
(Northwestern University)  
*Professor*  
Dynamical systems

Steven H. Izen, PhD  
(Massachusetts Institute of Technology)  
*Professor*  
Imaging and inverse problems; numerical analysis and scientific computing

Joel Langer, PhD  
(University of California, Santa Cruz)  
*Professor and Theodore M. Focke Professorial Fellow*  
Convex and differential geometry
Undergraduate Programs

Majors

A Bachelor of Arts in mathematics, a Bachelor of Science in mathematics, a Bachelor of Science in applied mathematics, a Bachelor of Science in mathematics and physics, a Bachelor of Arts in statistics, and a Bachelor of Science in statistics are available to students at Case Western Reserve University. All undergraduate degrees in the department are based on a four-course sequence in calculus and differential equations and have a computational component. The mathematics degrees all require a further mathematics core in analysis and algebra. The statistics degrees all require a further statistics core. Each of these cores consists of four courses. There are additional technical requirements particular to each degree.

Bachelor of Arts in Mathematics

The BA degree in mathematics requires at least 38 hours of mathematics and 3 hours of computer programming or scientific computing. The specific requirements are as follows:

<table>
<thead>
<tr>
<th>A. Mathematics requirements:</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 121 Calculus for Science and Engineering I</td>
</tr>
<tr>
<td>MATH 122 Calculus for Science and Engineering II</td>
</tr>
<tr>
<td>or MATH 124 Calculus II</td>
</tr>
<tr>
<td>MATH 223 Calculus for Science and Engineering III</td>
</tr>
<tr>
<td>or MATH 227 Calculus III</td>
</tr>
<tr>
<td>MATH 224 Elementary Differential Equations</td>
</tr>
<tr>
<td>or MATH 228 Differential Equations</td>
</tr>
<tr>
<td>MATH 307 Linear Algebra</td>
</tr>
<tr>
<td>MATH 308 Introduction to Abstract Algebra</td>
</tr>
<tr>
<td>MATH 321 Fundamentals of Analysis I</td>
</tr>
<tr>
<td>MATH 322 Fundamentals of Analysis II</td>
</tr>
<tr>
<td>MATH 324 Introduction to Complex Analysis</td>
</tr>
<tr>
<td>or MATH 425 Complex Analysis I</td>
</tr>
<tr>
<td>Three approved technical electives *</td>
</tr>
</tbody>
</table>

B. Computing requirement:
Teacher Licensure

The Department offers a special option for undergraduate students who wish to pursue a mathematics major and a career in teaching. The Adolescent to Young Adult (AYA) Teacher Licensure Program in Integrated Mathematics prepares CWRU students to receive an Ohio Teaching License for grades 7-12. Students declare a second major in education—which involves 36 hours in education and a practicum requirement—and complete a planned sequence of mathematics content courses within the context of a mathematics major. The program is designed to offer several unique features not found in other programs and to place students in mentored teaching situations throughout their teacher preparation career. This small, rigorous program is designed to capitalize on the strengths of the department, the CWRU Teacher Licensure Program, and the relationships the university has built with area schools.

The requirements of the program are:

(a) Completion of the BA program in mathematics, including the following as the three approved technical electives:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 150</td>
<td>Mathematics from a Mathematician’s Perspective</td>
<td>3</td>
</tr>
<tr>
<td>MATH 304</td>
<td>Discrete Mathematics</td>
<td>3</td>
</tr>
<tr>
<td>STAT 312</td>
<td>Basic Statistics for Engineering and Science</td>
<td>3</td>
</tr>
</tbody>
</table>

(b) The completion of a second major in education. Students interested in this option should consult the description of the Teacher Licensure Program (p. 589) elsewhere in this bulletin or contact the director of teacher licensure.

**Bachelor of Science in Mathematics**

The BS degree in mathematics requires at least 50 hours of mathematics courses and at least 17 hours in basic science. The specific requirements are as follows:

<table>
<thead>
<tr>
<th>A. Mathematics requirements:</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 121</td>
<td>4</td>
</tr>
<tr>
<td>Calculus for Science and Engineering I</td>
<td></td>
</tr>
<tr>
<td>MATH 122</td>
<td>4</td>
</tr>
<tr>
<td>Calculus for Science and Engineering II</td>
<td></td>
</tr>
<tr>
<td>or MATH 124</td>
<td></td>
</tr>
<tr>
<td>Calculus II</td>
<td></td>
</tr>
<tr>
<td>MATH 223</td>
<td>3</td>
</tr>
<tr>
<td>Calculus for Science and Engineering III</td>
<td></td>
</tr>
<tr>
<td>or MATH 227</td>
<td></td>
</tr>
<tr>
<td>Calculus III</td>
<td></td>
</tr>
<tr>
<td>MATH 224</td>
<td>3</td>
</tr>
<tr>
<td>Elementary Differential Equations</td>
<td></td>
</tr>
<tr>
<td>or MATH 228</td>
<td></td>
</tr>
<tr>
<td>Differential Equations</td>
<td></td>
</tr>
<tr>
<td>MATH 307</td>
<td>3</td>
</tr>
<tr>
<td>Linear Algebra</td>
<td></td>
</tr>
<tr>
<td>MATH 308</td>
<td></td>
</tr>
<tr>
<td>Introduction to Abstract Algebra</td>
<td></td>
</tr>
<tr>
<td>MATH 321</td>
<td>3</td>
</tr>
<tr>
<td>Fundamentals of Analysis I</td>
<td></td>
</tr>
<tr>
<td>MATH 322</td>
<td>3</td>
</tr>
<tr>
<td>Fundamentals of Analysis II</td>
<td></td>
</tr>
<tr>
<td>MATH 324</td>
<td>3</td>
</tr>
<tr>
<td>Introduction to Complex Analysis</td>
<td></td>
</tr>
<tr>
<td>or MATH 425</td>
<td></td>
</tr>
<tr>
<td>Complex Analysis I</td>
<td></td>
</tr>
<tr>
<td>MATH 330</td>
<td></td>
</tr>
<tr>
<td>Introduction to Scientific Computing</td>
<td>3</td>
</tr>
</tbody>
</table>

Six approved technical electives * 18

Total Units 41

* No more than one can be from outside the department.

** Or other approved computer science course.

B. Non-mathematics requirements:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYS 121</td>
<td>General Physics I - Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>PHYS 122</td>
<td>General Physics II - Electricity and Magnetism</td>
<td>4</td>
</tr>
<tr>
<td>PHYS 221</td>
<td>Introduction to Modern Physics</td>
<td>3</td>
</tr>
</tbody>
</table>

One of the following sequences:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 105 &amp; CHEM 106</td>
<td>Principles of Chemistry I &amp; Principles of Chemistry II</td>
<td>6</td>
</tr>
<tr>
<td>CHEM 111 &amp; ENGR 145</td>
<td>Principles of Chemistry for Engineers &amp; Chemistry of Materials</td>
<td></td>
</tr>
<tr>
<td>EEPS 110 &amp; EEPS 115</td>
<td>Physical Geology &amp; Introduction to Oceanography</td>
<td></td>
</tr>
<tr>
<td>EEPS 110 &amp; EEPS 210</td>
<td>Physical Geology &amp; Earth History: Time, Tectonics, Climate, and Life</td>
<td></td>
</tr>
</tbody>
</table>

Total Units 67

* No more than 9 hours may be from outside the department.

In addition to the major requirements above, students must satisfy various university and college requirements. See https://bulletin.case.edu/undergraduates/ and https://bulletin.case.edu/casdegree/#bachelorofsciencedegreetext.

Enough open electives to bring the total number of hours to at least 120 are required.

**Bachelor of Science in Applied Mathematics**

A student in this degree program must design a program of study in consultation with his or her academic advisor. This program of study must explicitly list the mathematics electives and the professional core in the area of application.

Areas of research in applied mathematics well represented in the department include:

- Applied dynamical systems
- Applied probability and stochastic processes
- Imaging
- Life science
- Scientific computing

Study plans with emphasis on areas of application closely related to mathematics but centered in other departments will also be considered. Such areas might include engineering applications, biology, cognitive science, or economics.

The BS degree in applied mathematics requires at least 50 hours of coursework in mathematics and related subjects, a 12 hour professional
core that is specific to the area of application of interest to the student, and at least 17 hours in basic science.

A. Mathematics requirements:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 121</td>
<td>Calculus for Science and Engineering I</td>
<td>4</td>
</tr>
<tr>
<td>MATH 122</td>
<td>Calculus for Science and Engineering II</td>

<td>Fundamentals of Analysis II</td>
<td>3</td>
</tr>
<tr>
<td>MATH 330</td>
<td>Introduction to Scientific Computing</td>
<td>3</td>
</tr>
<tr>
<td>One of the following two courses:</td>
<td></td>
<td>3</td>
</tr>
<tr>
<td>MATH 324</td>
<td>Introduction to Complex Analysis</td>
<td></td>
</tr>
<tr>
<td>MATH 425</td>
<td>Complex Analysis I</td>
<td></td>
</tr>
<tr>
<td>Approved mathematics electives:</td>
<td></td>
<td>21</td>
</tr>
<tr>
<td>Four courses specific to the concentration area of interest to the student (12 units)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Three MATH courses at the 300 level or higher (9 units)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

B. Professional Core requirement

12 approved credit hours specific to an area of application. This requirement is intended to promote scientific breadth and encourage application of mathematics to other fields.

C. Other non-mathematics requirements

The following three courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYS 121</td>
<td>General Physics I - Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>PHYS 122</td>
<td>General Physics II - Electricity and Magnetism</td>
<td></td>
</tr>
<tr>
<td>PHYS 221</td>
<td>Introduction to Modern Physics</td>
<td>3</td>
</tr>
</tbody>
</table>

One of the following sequences: 6-8

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 105 &amp; CHEM 106</td>
<td>Principles of Chemistry I and Principles of Chemistry II</td>
<td></td>
</tr>
<tr>
<td>CHEM 111 &amp; ENGR 145</td>
<td>Principles of Chemistry for Engineers and Chemistry of Materials</td>
<td></td>
</tr>
<tr>
<td>EEPS 110 &amp; EEPS 115</td>
<td>Physical Geology and Introduction to Oceanography</td>
<td></td>
</tr>
<tr>
<td>or EEPS 210</td>
<td>Earth History: Time, Tectonics, Climate, and Life</td>
<td></td>
</tr>
</tbody>
</table>

Total Units: 67-69

In addition to the major requirements above, students must satisfy various university and college requirements. See https://bulletin.case.edu/undergraduates/studies/degreeprograms/ and https://bulletin.case.edu/undergraduates/studies/casdegree/ #bachelorofscience#degreeText.

Enough open electives to bring the total number of hours to at least 120 are required.

Bachelor of Science in Mathematics and Physics

In contrast to the BS in applied mathematics or the BS in physics with a mathematical physics concentration, this degree provides a synergistic, coherent, and parallel education in mathematics and physics. To a close approximation, the challenging coursework corresponds to combining the mathematics and physics cores, with the Physics Laboratory cluster replaced by a single, fourth-year laboratory semester. The program is jointly administered by the Department of Physics and the Department of Mathematics, Applied Mathematics, and Statistics. Students may be advised by faculty members from either department.

The BS degree in mathematics and physics requires a total of 120 credits, including:

A. Mathematics requirements

<table>
<thead>
<tr>

- PHYS 320  Introduction to Biological Physics
- PHYS 326  Physical Optics
- PHYS 327  Laser Physics
- PHYS 328  Cosmology and the Structure of the Universe
- PHYS 336  Modern Cosmology
- PHYS 365  General Relativity

**PHYS 315**  Introduction to Solid State Physics  3

**PHYS 316**  Introduction to Nuclear and Particle Physics  3

**PHYS 320**  Introduction to Biological Physics  3

**PHYS 326**  Physical Optics  3

**PHYS 327**  Laser Physics  3

**PHYS 328**  Cosmology and the Structure of the Universe  3

**PHYS 336**  Modern Cosmology  3

**PHYS 365**  General Relativity  3

Mathematical physics; two of the following: 6

- PHYS 250  Computational Methods in Physics  3
- PHYS 349  Methods of Mathematical Physics I  3
- PHYS 350  Methods of Mathematical Physics II  3

**C. Senior project and seminar; one of two options:** 6-7

**C. (i) Mathematics option**

- MATH 351  Senior Project for the Mathematics and Physics Program  3
- MATH 302  Departmental Seminar (or any SAGES departmental seminar in Mathematics)  3

**C. (ii) Physics option**

- PHYS 303  Advanced Laboratory Physics Seminar  3
- PHYS 351  Senior Physics Project  3
- PHYS 352  Senior Physics Project Seminar  3

**D. Other science requirements**

- CHEM 105  Principles of Chemistry I  3
- CHEM 111  Principles of Chemistry for Engineers  4
- CHEM 106  Principles of Chemistry II  3
- ENGR 145  Chemistry of Materials  4
- ENGR 131  Elementary Computer Programming  3
- or ECSE 132  Introduction to Programming in Java  3

**Total Units**  88-91

* If approved by the M&P committee, other science sequence courses may be substituted.

In addition to the major requirements above, students must satisfy various university and college requirements. See https://bulletin.case.edu/undergraduatestudies/degreeprograms/ and https://bulletin.case.edu/undergraduatestudies/graddegree/ bachelorofsciencedegreetext.

The total number of credit hours required for this degree is 120. (Because some requirements can be met in different ways, with different numbers of credit hours, the sample schedule below does not show exactly 120 hours; however, the credit hour requirement is 120 hours.)

**First Year**

- General Physics I - Mechanics (PHYS 121)  4
- or Physics and Frontiers I - Mechanics (PHYS 123)  4
- Calculus for Science and Engineering I (MATH 121)  4
- or Calculus II (MATH 127)  4
- Principles of Chemistry I (CHEM 105)  3
- or Principles of Chemistry for Engineers (CHEM 111)  4
- SAGES First Seminar  4
- General Physics II - Electricity and Magnetism (PHYS 122)  4
- or Physics and Frontiers II - Electricity and Magnetism (PHYS 124)  4
- Calculus for Science and Engineering II (MATH 122)  4
- or Calculus II (MATH 124)  4
- Principles of Chemistry II (CHEM 106)  3
- or Chemistry of Materials (ENGR 145)  4
- Other non-major course  3

Psychology, economics, accounting, or management science. Computer science, biology (molecular, organismal, or ecological), a second major. For example, students may combine statistics with actuarial theory and computation.

For the undergraduate student looking toward graduate school, the Bachelor of Arts in Statistics is the logical choice of program. The specific requirements are as follows:

**Bachelor of Arts in Statistics**

Students in statistics begin with a foundation in mathematics. Then they add statistical theory, plus intensive modern data analysis and a concentration in a field of their choice. The goal is to develop an appreciation of each facet of the discipline and a mastery of technical skills. This prepares students to enter a growing profession with opportunities in the academic, governmental, actuarial, and industrial spheres.

The BA degree in statistics requires a minimum of 50 hours of approved coursework, including 27 hours in statistics and the remainder in related disciplines and a substantive field of application. The specific requirements are as follows:

**Bachelor of Science in Statistics**

The BS degree in statistics requires a minimum of 62 hours of approved coursework, including 27 hours in statistics and the remainder in related disciplines and a substantive field of application. In addition to the requirements for the BA, the BS degree includes a laboratory science requirement. For students seriously interested in basic science, a natural science is the logical choice as a focus for the application, and the BS degree is the logical choice of program. The specific requirements are as follows:
A student in either the BA or the BS program in statistics may opt for a concentration in Actuarial Science, described below.

Actuarial Science

A student in either the BA or the BS program in statistics may opt for a concentration in Actuarial Science, the requirements of which exceed the basic major requirements. The basic major requirement of 15 hours in statistical methodology is increased to 18 hours, and these must include STAT 317, 318, and at least six additional hours of approved STAT courses. A student finishing this concentration will have completed at least 30 hours in statistics. Students in this concentration should consult with their advisors before choosing these courses, and for information about additional non-required courses that might be useful for actuarial science.

### Integrated BS/MS Program in Mathematics and/or Applied Mathematics

The integrated BS/MS program is intended for highly motivated candidates for the BS in mathematics and applied mathematics who wish to pursue an advanced degree. Application to the BS/MS program must be made after completion of 75 semester hours of coursework and prior to attaining senior status (completion of 90 semester hours). Generally, this means that a student will submit the application during his/her sixth semester of undergraduate course enrollment and will have no fewer than two semesters of remaining BS requirements to complete. Applicants should consult the dean of undergraduate studies.

A student admitted to the program may, in the senior year, take up to nine hours of graduate courses (400 level and above) that will count towards both BS and MS requirements. The courses to be doubled-counted must be specified at the time of application. Any undergraduate coursework that is to be applied to the MS must be beyond that used to satisfy BS degree requirements and must conform to university, graduate school, and department rules. Students may petition to transfer graduate coursework taken prior to application to the BS/MS program subject to the rules of the graduate school.

Students for whom the master’s project or thesis is a continuation and development of the senior project should register for (or the appropriate course) during the senior year and are expected to complete all other courses for the BS before enrolling in further MS coursework and thesis (continuing the senior project). Students for whom the master’s thesis or project is distinct from the senior project will be expected to complete the BS degree before taking further graduate courses for the master’s degree.

### Integrated BS/MS in Applied Mathematics and Another Discipline

There is the possibility of an integrated five-year study plan leading to a BS in applied mathematics and an MS in the area of application. In order to complete the requirements for the BS/MS in five years, students must choose an area outside mathematics that integrates well with mathematics, such as computing/information science, operations research, systems engineering, control theory, biology, or cognitive science. The general academic requirements for Integrated BS/MS programs must be followed. (Since the graduate courses required for the MS degree are determined by the respective department, each student in the dual-degree program should have a secondary advisor in that department, starting no later than the junior year, and should consult with this advisor concerning requirements for the MS degree.)
In addition to the BS or BA requirements, a combined degree program must include:

1. STAT 455 (3 credits) and STAT 495A (3 credits).
2. At least 15 additional (beyond courses counted in requirement 1) credit hours of approved courses in statistical theory and methodology. Of these, at least 6 credit hours have to be chosen from STAT offerings numbered 400 and higher. The remaining credits can be chosen from STAT offerings numbered 300 and higher, or approved courses in statistical methodology or probability taught in biostatistics, computer science, economics, mathematics, operations research, systems engineering, etc. Credit hours for an MS thesis (STAT 651) or project (STAT 621) may be counted towards this requirement.
3. The student must pass a comprehensive exam. In conjunction with a faculty mentor, the student may substitute the comprehensive examination requirement with an expository or original thesis, which will count as 6 credit hours of coursework (STAT 651). This thesis will be defended in the course of an oral examination, during which the student would be questioned about the thesis and related topics. These two variants correspond to the graduate school’s Master’s (non-thesis) and Master’s (thesis) options.

Students are strongly encouraged to include advanced expository or technical writing courses in their programs. In the course of completing this integrated bachelor’s/master’s program, a student must have taken at least 48 credit hours of statistical coursework.

**Minor in Mathematics**

A minor in mathematics is available to all undergraduates. The minor in mathematics requires 17 hours in MATH, at least 6 of which must be at the 300 level (or above).

**Minor in Statistics**

A minor in statistics requires a minimum of 15 credit hours of approved coursework. The minor must satisfy the requirements below and must include a minimum of 12 credit hours in STAT courses.

**Graduate Programs**

The Department of Mathematics, Applied Mathematics, and Statistics offers the following degree programs:

- Mathematics MS
- Applied Mathematics MS
- Mathematics PhD
- Applied Mathematics PhD
- Statistics MS
- Statistics PhD (not currently admitting students)
- various Integrated Bachelor/Master programs, which are described in the Undergraduate section (p. 407).

A student must satisfy all of the general requirements of the School of Graduate Studies (p. 1333) as well as the more specific requirements of the department to earn either a master’s or doctoral degree. Each graduate student is assigned an academic advisor upon matriculation. The academic advisor’s primary responsibility is to help the student plan an appropriate and sufficiently broad program of coursework and study that will satisfy both the degree requirements and the special interests of the student. With the aid of the academic advisor, each student must present a study plan indicating how he or she intends to satisfy the requirements for a graduate degree. At the appropriate time, PhD students are also required to form a thesis advising committee, including a research advisor, in order to draft a syllabus for and schedule an area exam. Master’s students completing a thesis as part of their program will also form a thesis committee, chaired by their research advisor, to advise on and evaluate both the thesis and its oral defense.

The main requirements for each degree program are below.

**Master of Science in Mathematics**

A minimum of 30 credit hours of approved coursework, at least 18 of which must be at the 400 level or higher, is required for the MS degree in mathematics. The 30 credit hours required for graduation must include 6 credits each from two of the following three basic areas:

<table>
<thead>
<tr>
<th>Area</th>
<th>Courses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abstract Algebra</td>
<td>MATH 401 (Abstract Algebra I) MATH 402 (Abstract Algebra II)</td>
</tr>
<tr>
<td>Analysis</td>
<td>MATH 423 (Introduction to Real Analysis I) MATH 424 (Introduction to Real Analysis II) MATH 425 (Complex Analysis I)</td>
</tr>
<tr>
<td>Geometry and Topology</td>
<td>MATH 461 (Introduction to Topology) MATH 462 (Algebraic Topology) MATH 465 (Differential Geometry) MATH 467 (Differentiable Manifolds)</td>
</tr>
</tbody>
</table>

The student must pass a comprehensive oral examination on three areas, two of which must be selected from the basic ones listed above (although no particular courses are specified). The third area for the examination may be any approved subject.

A student in the MS program in mathematics may substitute an expository or original thesis, which will count as 6 credit hours of coursework, for the comprehensive examination requirement. The thesis will be defended in the course of an oral examination, during which the
A student will be questioned about the thesis and related topics. These two variants correspond to the graduate school’s Master’s Thesis and Master’s Non-Thesis options.

**Master of Science in Applied Mathematics**
The department offers specialized programs in applied mathematics. For each of the programs, there is a minimum requirement of 30 credit hours of coursework, at least 18 of which must be at the 400 level or higher. Students in the program must complete coursework requirements in each of the following groups:

- At least 15 hours of courses designated MATH
- At least 6 hours of courses not designated MATH
- 6 hours of thesis work (see below) or successful completion of a comprehensive exam

Given the great diversity of topics used in applications, there cannot be a large common core of requirements for the MS in applied mathematics. Still, all students pursuing this degree are strongly advised to take MATH 431 Introduction to Numerical Analysis I and MATH 441 Mathematical Modeling. In addition, to add breadth to the student’s education, the set of courses taken within the department must include three credit hours of approved coursework in at least three of the following seven breadth areas. Examples of acceptable courses in each area are listed below; other courses require approval of a student petition by the department graduate committee. Although some courses are listed in multiple areas, a course may be used to satisfy only one breadth area requirement.

**Applied Mathematics Breadth Areas**

**Analysis and Linear Analysis:**
- MATH 471 Advanced Engineering Mathematics
- MATH 423 Introduction to Real Analysis I
- MATH 405 Advanced Matrix Analysis

**Probability and its Applications:**
- MATH 439 Bayesian Scientific Computing
- MATH 491 Probability I
- MATH 419 Applied Probability and Stochastic Processes for Biology

**Numerical Analysis and Scientific Computing:**
- MATH 431 Introduction to Numerical Analysis I
- MATH 432 Numerical Differential Equations
- MATH 433 Numerical Solutions of Nonlinear Systems and Optimization

**Differential Equations:**
- MATH 435 Ordinary Differential Equations
- MATH 445 Introduction to Partial Differential Equations
- MATH 449 Dynamical Models for Biology and Medicine

**Inverse Problems and Imaging:**
- MATH 439 Bayesian Scientific Computing
- MATH 440 Computational Inverse Problems
- MATH 473 Introduction to Mathematical Image Processing and Computer Vision

**Logic and Discrete Mathematics:**
- MATH 406 Mathematical Logic and Model Theory
- MATH 408 Introduction to Cryptology

**Life Science:**
- MATH 419 Applied Probability and Stochastic Processes for Biology
- MATH 444 Mathematics of Data Mining and Pattern Recognition
- MATH 478 Computational Neuroscience

* Not suitable for credit towards the PhD requirements.

Other suitable courses for students in applied mathematics include:

- MATH 424 Introduction to Real Analysis II 3
- MATH 425 Complex Analysis I 3
- MATH 427 Convexity and Optimization 3
- MATH 444 Mathematics of Data Mining and Pattern Recognition 3
- MATH 492 Probability II 3

The student must pass a comprehensive oral examination on three areas, two of which must be on the list of breadth areas (although no particular courses are specified). The third area for the examination may be any approved subject.

A student in the MS program in applied mathematics may substitute the comprehensive examination requirement with an expository or original thesis, which will count as 6 credit hours of coursework. The thesis will be defended in the course of an oral examination, during which the student will be questioned about the thesis and related topics. These two variants correspond to the graduate school’s Master’s Thesis and Master’s Non-Thesis options.

**PhD Programs in Mathematics and Applied Mathematics**

The doctorate is conferred not merely upon completion of a stipulated course of study, but rather upon clear demonstration of scholarly attainment and capability of original research work in mathematics. A doctoral student may plan either a traditional program of studies in mathematics or a program of studies oriented toward applied mathematics.

In addition to the doctoral coursework, all PhD students must complete the following specific requirements:

**Qualifying Exams**

Each student will be required to take two written qualifying exams. In the mathematics program the exams will be in real analysis and abstract algebra, and in the applied mathematics the exams will be in numerical analysis and modeling. Syllabi for the exams are available to students. Exams will be offered twice a year, usually in January and May. Students may attempt each exam up to two times. Under normal circumstances, students are expected to have passed both exams by the end of their fifth semester.

**Area Exam**
Each student will be required to pass an oral area examination showing knowledge of the background and literature in the chosen area of specialization. The exam will be administered by the student’s advising committee, chaired by the research advisor. The exam should normally take place within one year after final passage of the qualifying examinations and at least one year before the defense takes place. A student may retake the area exam once.

A written syllabus, with a list of the papers for which the student will be responsible, should be prepared and agreed upon by the student and advising committee at least two months before the exam takes place, at which time a specific date and time for the exam should be decided. Both the syllabus and the scheduled date of the exam should then be reported to the graduate committee. Once the syllabus and exam date have been reported to the graduate committee, the student will advance to PhD candidacy.

**Yearly Progress Reports**

After passing the area exam, students will present yearly progress reports to their advising committees, usually in April. These reports will consist of both a written summary of progress and an oral presentation delivered to the advising committee.

**Dissertation, Expository Talk, and Defense**

Students are required to produce a written dissertation and present an oral defense. The dissertation is expected to constitute an original contribution to mathematical knowledge. It must be provided to the defense committee (the composition of which is discussed below) at least 10 days prior to the defense. Students are required to give a colloquium-level presentation of their thesis work, open to all students and faculty, followed by an oral defense of the thesis work to the defense committee. The committee consists of at least four faculty members, including the student’s research advisor and at least one outside faculty member.

Deadlines for the thesis defense and approval of the dissertation are determined by the School of Graduate Studies. It is the student’s responsibility to be aware of deadlines and make sure they are met.

**Petitions**

Any exceptions to departmental regulations or requirements must have the formal approval of the department’s graduate committee. Such exceptions are to be sought by a written petition, approved by the student’s advisory committee or research advisor, to the graduate committee.

Any exception to university rules and regulations must be approved by the dean of graduate studies. Such exceptions are to be sought by presenting a written petition to the graduate committee for departmental endorsement and approval prior to forwarding the petition to the dean.

**Mathematics PhD**

A student in the traditional mathematics program must demonstrate knowledge of the basic concepts and techniques of algebra, analysis (real and complex), and topology. This includes taking all courses in the three basic areas and successfully completing qualifying examinations in algebra and analysis. Mathematics PhD students must take 36 credit hours of approved courses with a grade average of B or better. For students entering with a master’s degree in a mathematical subject compatible with our program, as determined by the graduate committee, this requirement is reduced to 18 credit hours of approved courses.

**Qualifying Examination**

The written qualifying examination requirements are listed above.

**Area Examination**

A doctoral student in the mathematics program must pass an oral area examination in his or her chosen area of specialization. The subjects for the area exam will be determined by the student and their advising committee. Past topics have included complex analysis, control and calculus of variations, differential equations, dynamical systems, functional analysis, geometry, probability, and topology.

18 credit hours of approved coursework 18

**Total Units** 36

A student with a master’s degree in a mathematical subject compatible with our program, as determined by the graduate committee, must take 18 credit hours of approved courses. The graduate committee will determine which of the specific course requirements stated above have been satisfied by the master’s coursework.

**Applied Mathematics PhD**

A student in the applied mathematics program must demonstrate knowledge of scientific computing, mathematical modeling, and differential equations. Students must take 36 credit hours of approved courses with a grade average of B or better. For students entering with a master’s degree in a mathematical subject compatible with our program, as determined by the graduate committee, this requirement is reduced to 18 credit hours of approved courses. This includes taking qualifying examinations in the areas of computational mathematics and mathematical modeling, and taking certain courses in these three areas, as specified below.

**Qualifying Examination**

The written qualifying examination requirements are listed above.

**Area Examination**

A doctoral student in the applied mathematics program must take an oral area examination in his or her chosen area of specialization. The subjects for the area exam will be determined by the student and their advising committee. Past topics have included fluid mechanics, statistical mechanics, epidemiology, neuroscience, inverse problems, and imaging.

24 hours of approved courses * 24

Total Units 36

* Must include at least 9 hours of courses designated MATH and at least 9 credit hours not designated MATH.

Applied Mathematics PhD students are subject to the same breadth requirements as students pursuing the MS degree in applied mathematics (see above). For students entering with a master's degree, this can be modified, as described below.

A student with a master's degree in a mathematical subject compatible with our program, as determined by the graduate committee, must take 18 credit hours of approved courses, which must include at least 6 credit hours of courses offered outside the Department of Mathematics, Applied Mathematics, and Statistics and at least 9 credit hours offered by the Department of Mathematics, Applied Mathematics, and Statistics. The graduate committee will determine which of the specific course requirements stated above have been satisfied by the master's coursework.

Sample study plans for students with concentrations in scientific computing, imaging, mathematical biology, and stochastics follow. Alternate study plans may also be approved by the graduate committee.

Master of Science in Statistics

The dual core of the MS program in statistics is mathematical statistics and modern data analysis, with the option of a special Entrepreneurial Track. Expanding from this core, students develop technical facilities in a variety of statistical methodologies. This breadth of competence is designed to equip graduates to go beyond the appropriate choice of method for implementation and to be able to adapt these techniques and to construct new methods to meet the specific objectives and constraints of new situations. The MS degree in statistics requires a minimum of 30 hours of approved coursework in statistics and related disciplines, at least 18 of which must be at the 400 level or higher. Each student's program is developed in consultation with a faculty mentor. Required courses are the following:

</table>

* Must include at least 9 hours of courses designated MATH and at least 9 credit hours not designated MATH.
The student must pass a comprehensive written exam. In conjunction with a faculty mentor, the student may substitute the comprehensive examination requirement with an expository or original thesis, which will count as 6 credit hours of coursework (STAT 651). This thesis would be defended in the course of an oral examination, during which the student would be questioned about the thesis and related topics. These two variants correspond to the graduate school's Master's Non-Thesis and Master's Thesis options.

Entrepreneurial Track

The Master of Science in Statistics—Entrepreneurial Track (MSS-ET) is a professional degree designed to provide training in statistics focused on developing data analysis and decision-making skills in industrial, government, and consulting environments where uncertainties and related risks are present. It expands our master's program in statistics by creating a professional track that includes some business training. The Entrepreneurial Track provides instruction and real-world business experience to students who have a background in statistics and a vision for new and growing ventures. The MSS–ET program requires a minimum of 30 credit hours.

The required New Venture Creation and Technology Entrepreneurship courses will be offered by the Weatherhead School of Management. Students on internships will sign up for the consulting forum sequence. In addition, students are required to participate in an intensive (up to 30 hours) one-week annual workshop on the industrial use of statistics from the management perspective. This non-credit workshop will take place during the fall or spring undergraduate breaks.

Statistics PhD

Please note: Currently, admission to the doctoral program in Statistics is frozen due to reorganization of the program (students are being accepted into the master's program in Statistics). Please check with the department for the latest update.

The doctoral program focuses on research, with a plan of study devoted to the development of statistical methodology or theory with innovative applications. Graduates will be able both to extend the theoretical basis for statistics and to bring statistical thought to scientific research in other fields. The objective of preparing students to collaborate in interdisciplinary work demands breadth as well, so advanced knowledge of a substantive field and participation in the collaborative experience are also integral to the program.

Students planning to enter the doctoral program in statistics should obtain information from the departmental office. Plans of study are prepared individually by the graduate student and a faculty advisor to develop the talents and interests of each student.

MATH Courses

MATH 120. Elementary Functions and Analytic Geometry. 3 Units.
Polynomial, rational, exponential, logarithmic, and trigonometric functions (emphasis on computation, graphing, and location of roots) straight lines and conic sections. Primarily a precalculus course for the student without a good background in trigonometric functions and graphing and/or analytic geometry. Not open to students with credit for MATH 121 or MATH 125. Prereq: Three years of high school mathematics.

MATH 121. Calculus for Science and Engineering I. 4 Units.
Functions, analytic geometry of lines and polynomials, limits, derivatives of algebraic and trigonometric functions. Definite integral, antiderivatives, fundamental theorem of calculus, change of variables. Recommended preparation: Three and one half years of high school mathematics. Credit for at most one of MATH 121, MATH 123 and MATH 125 can be applied to hours required for graduation. Counts for CAS Quantitative Reasoning Requirement. Prereq: MATH 120 or a score of 30 on the mathematics diagnostic test or exempt from the mathematics diagnostic test.

MATH 122. Calculus for Science and Engineering II. 4 Units.
Continuation of MATH 121. Exponentials and logarithms, growth and decay, inverse trigonometric functions, related rates, basic techniques of integration, area and volume, polar coordinates, parametric equations. Taylor polynomials and Taylor's theorem. Credit for at most one of MATH 122, MATH 124, and MATH 126 can be applied to hours required for graduation. Prereq: MATH 121, MATH 123 or MATH 126.

MATH 123. Calculus I. 4 Units.
Limits, continuity, derivatives of algebraic and transcendental functions, including applications, basic properties of integration. Techniques of integration and applications. Students must have 31/2 years of high school mathematics. Credit for at most one of MATH 121, MATH 123, and MATH 125 can be applied to hours required for graduation. Counts for CAS Quantitative Reasoning Requirement.

MATH 124. Calculus II. 4 Units.
Review of differentiation. Techniques of integration, and applications of the definite integral. Parametric equations and polar coordinates. Taylor's theorem. Sequences, series, power series. Complex arithmetic. Introduction to multivariable calculus. Credit for at most one of MATH 122, MATH 124, and MATH 126 can be applied to hours required for graduation. Prereq: MATH 121 and placement by department.

MATH 125. Math and Calculus Applications for Life, Managerial, and Social Sci I. 4 Units.
Discrete and continuous probability; differential and integral calculus of one variable; graphing, related rates, maxima and minima. Integration techniques, numerical methods, volumes, areas. Applications to the physical, life, and social sciences. Students planning to take more than two semesters of introductory mathematics should take MATH 121. Recommended preparation: Three and one half years of high school mathematics. Credit for at most one of MATH 121, MATH 123, and MATH 125 can be applied to hours required for graduation. Counts for CAS Quantitative Reasoning Requirement. Prereq: MATH 120 or a score of 30 on the mathematics diagnostic test or exempt from the mathematics diagnostic test.

MATH 126. Math and Calculus Applications for Life, Managerial, and Social Sci II. 4 Units.
Continuation of MATH 125 covering differential equations, multivariable calculus, discrete methods. Partial derivatives, maxima and minima for functions of two variables, linear regression. Differential equations; first and second order equations, systems, Taylor series methods; Newton's method; difference equations. Credit for at most one of MATH 122, MATH 124, and MATH 126 can be applied to hours required for graduation. Prereq: MATH 121, MATH 123 or MATH 125.
MATH 150. Mathematics from a Mathematician’s Perspective. 3 Units.
An interesting and accessible mathematical topic not covered in the standard curriculum is developed. Students are exposed to methods of mathematical reasoning and historical progression of mathematical concepts. Introduction to the way mathematicians work and their attitude toward their profession. Should be taken in freshman year to count toward a major in mathematics. Prereq: Three and one half years of high school mathematics. Counts for CAS Quantitative Reasoning Requirement.

MATH 201. Introduction to Linear Algebra for Applications. 3 Units.
Matrix operations, systems of linear equations, vector spaces, subspaces, bases and linear independence, eigenvalues and eigenvectors, diagonalization of matrices, linear transformations, determinants. Less theoretical than MATH 307. Appropriate for majors in science, engineering, economics. Prereq: MATH 122, MATH 124 or MATH 126.

MATH 223. Calculus for Science and Engineering III. 3 Units.
Introduction to vector algebra; lines and planes. Functions of several variables: partial derivatives, gradients, chain rule, directional derivative, maxima/minima. Multiple integrals, cylindrical and spherical coordinates. Derivatives of vector valued functions, velocity and acceleration. Vector fields, line integrals, Green’s theorem. Credit for at most one of MATH 223 and MATH 227 can be applied to hours required for graduation. Prereq: MATH 122 or MATH 124.

MATH 224. Elementary Differential Equations. 3 Units.
A first course in ordinary differential equations. First order equations and applications, linear equations with constant coefficients, linear systems, Laplace transforms, numerical methods of solution. Credit for at most one of MATH 224 and MATH 228 can be applied to hours required for graduation. Prereq: MATH 223 or MATH 227.

MATH 227. Calculus III. 3 Units.
Vector algebra and geometry. Linear maps and matrices. Calculus of vector valued functions. Derivatives of functions of several variables. Multiple integrals. Vector fields and line integrals. Credit for at most one of MATH 223 and MATH 227 can be applied to hours required for graduation. Prereq: MATH 124 and placement by the department.

MATH 228. Differential Equations. 3 Units.
Elementary ordinary differential equations: first order equations; linear systems; applications; numerical methods of solution. Credit for at most one of MATH 224 and MATH 228 can be applied to hours required for graduation. Prereq: MATH 227 or placement by the department.

MATH 301. Undergraduate Reading Course. 1 - 3 Units.
Students must obtain the approval of a supervising professor before registration. More than one credit hour must be approved by the undergraduate committee of the department.

MATH 302. Departmental Seminar. 3 Units.
A seminar devoted to understanding the formulation and solution of mathematical problems. SAGES Department Seminar. Students will investigate, from different possible viewpoints, via case studies, how mathematics advances as a discipline—what mathematicians do. The course will largely be in a seminar format. There will be two assignments involving writing in the style of the discipline. Enrollment by permission (limited to majors depending on demand). Counts as SAGES Departmental Seminar.

MATH 303. Elementary Number Theory. 3 Units.
Primes and divisibility, theory of congruencies, and number theoretic functions. Diophantine equations, quadratic residue theory, and other topics determined by student interest. Emphasis on problem solving (formulating conjectures and justifying them). Prereq: MATH 122 or MATH 124.

MATH 304. Discrete Mathematics. 3 Units.
A general introduction to basic mathematical terminology and the techniques of abstract mathematics in the context of discrete mathematics. Topics introduced are mathematical reasoning, Boolean connectives, deduction, mathematical induction, sets, functions and relations, algorithms, graphs, combinatorial reasoning. Offered as CSDS 302, ECSE 302 and MATH 304. Prereq: MATH 122 or MATH 124 or MATH 126.

MATH 305. Introduction to Advanced Mathematics. 3 Units.
A course on the theory and practice of writing, and reading mathematics. Main topics are logic and the language of mathematics, proof techniques, set theory, and functions. Additional topics may include introductions to number theory, group theory, topology, or other areas of advanced mathematics. Prereq: MATH 122, MATH 124 or MATH 126.

MATH 307. Linear Algebra. 3 Units.
A course in linear algebra that studies the fundamentals of vector spaces, inner product spaces, and linear transformations on an axiomatic basis. Topics include: solutions of linear systems, matrix algebra over the real and complex numbers, linear independence, bases and dimension, eigenvalues and eigenvectors, singular value decomposition, and determinants. Other topics may include least squares, general inner product and normed spaces, orthogonal projections, finite dimensional spectral theorem. This course is required of all students majoring in mathematics and applied mathematics. More theoretical than MATH 201. Prereq: MATH 122 or MATH 124.

MATH 308. Introduction to Abstract Algebra. 3 Units.
A first course in abstract algebra, studied on an axiomatic basis. The major algebraic structures studied are groups, rings and fields. Topics include homomorphisms and quotient structures. This course is required of all students majoring in mathematics. It is helpful, but not necessary, for a student to have taken MATH 307 before MATH 308. Prereq: MATH 122 or MATH 124.
MATH 319. Applied Probability and Stochastic Processes for Biology. 3 Units.
Applications of probability and stochastic processes to biological systems. Mathematical topics will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random samples from specified probability distributions), Markov processes in discrete and continuous time with discrete and continuous sample spaces, point processes including homogeneous and inhomogeneous Poisson processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using a combination of MATLAB, the R statistical package, MCell, and/or URDME, at the discretion of the instructor. Student projects will comprise a major part of the course. Offered as BIOL 319, ECSE 319, MATH 319, SYBB 319, BIOL 419, EBiME 419, MATH 419, PHOL 419, and SYBB 419. Prereq: MATH 224 or MATH 223 and BIOL 300 or BIOL 306 and MATH 201 or MATH 307 or consent of instructor.

MATH 321. Fundamentals of Analysis I. 3 Units.
Abstract mathematical reasoning in the context of analysis in Euclidean space. Introduction to formal reasoning, sets and functions, and the number systems. Sequences and series; Cauchy sequences and convergence. Required for all mathematics majors. Additional work required for graduate students. (May not be taken for graduate credit by graduate students in the Department of Mathematics.) Offered as MATH 321 and MATH 421. Prereq: MATH 223 or MATH 227.

MATH 322. Fundamentals of Analysis II. 3 Units.
Continuation of MATH 321. Point-set topology in metric spaces with attention to n-dimensional space; completeness, compactness, connectedness, and continuity of functions. Topics in sequences, series of functions, uniform convergence, Fourier series and polynomial approximation. Theoretical development of differentiation and Riemann integration. Required for all mathematics majors. Additional work required for graduate students. (May not be taken for graduate credit by graduate students in the Department of Mathematics.) Offered as MATH 322 and MATH 422. Prereq: MATH 321.

MATH 324. Introduction to Complex Analysis. 3 Units.

MATH 327. Convexity and Optimization. 3 Units.
Introduction to the theory of convex sets and functions and to the extremes in problems in areas of mathematics where convexity plays a role. Among the topics discussed are basic properties of convex sets (extreme points, facial structure of polytopes), separation theorems, duality and polars, properties of convex functions, minima and maxima of convex functions over convex set, various optimization problems. Offered as MATH 327, MATH 427, and OPRE 427. Prereq: MATH 223 or MATH 227.

MATH 330. Introduction to Scientific Computing. 3 Units.
An introductory survey to Scientific Computing from principles to applications. Topics which will be covered in the course include: solution of linear systems and least squares, approximation and interpolation, solution of nonlinear systems, numerical integration and differentiation, and numerical solution of differential equations. Projects where the numerical methods are used to solve problems from various application areas will be assigned throughout the semester. Prereq: MATH 224 or MATH 228. Coreq: MATH 201 or MATH 307.

MATH 332. Equations that Changed the World. 3 Units.
This course will introduce students to some of the fundamental equations that changed the worlds. One equation a week, the students will investigate the mathematics behind some of the most influential equations or ideas, e.g., the Fourier Transform, Maxwell’s equations, Schrödinger’s equation and the wave equation. Students will research the scientific and social climate in which the equations emerged, and report the impact that the equations have had on the way we see the world and live our lives today. The class will alternate between lectures, where the instructor introduce the mathematical background needed to state and understand for the equation, and presentations, in which the students will present the results of their investigations. The students will be required to write a term paper related to a particular equation and to give a final presentation. The grading will address both the mathematical maturity of the students and the organization and presentation of the paper. Counts as SAGES Departmental Seminar. Prereq: (MATH 223 or MATH 227) and (MATH 224 or 228).

MATH 333. Mathematics and Brain. 3 Units.
This course is intended for upper level undergraduate students in Mathematics, Cognitive Science, Biomedical Engineering, Biology or Neuroscience who have an interest in quantitative investigation of the brain and its functions. Students will be introduced to a variety of mathematical techniques needed to model and simulate different brain functions, and to analyze the results of the simulations and of available measured data. The mathematical exposition will be followed—when appropriate—by the corresponding implementation in Matlab. The course will cover some basic topics in the mathematical aspects of differential equations, electromagnetism, inverse problems and imaging related to brain functions. Validation and falsification of the mathematical models in the light of available experimental data will be addressed. This course will be a first step towards organizing the different brain investigative modalities within a unified mathematical framework. Lectures will include a discussion portion. A final presentation and written report are part of the course requirements. Counts as SAGES Departmental Seminar. Prereq: MATH 224 or MATH 228.

MATH 338. Introduction to Dynamical Systems. 3 Units.
Nonlinear discrete dynamical systems in one and two dimensions. Chaotic dynamics, elementary bifurcation theory, hyperbolicity, symbolic dynamics, structural stability, stable manifold theory. Prereq: MATH 223 or MATH 227.

MATH 343. Theoretical Computer Science. 3 Units.
Introduction to different classes of automata and their correspondence to different classes of formal languages and grammars, computability, complexity and various proof techniques. Offered as CSDS 343 and MATH 343. Prereq: MATH 304 and CSDS 310.
MATH 351. Senior Project for the Mathematics and Physics Program. 2 Units.
A two-semester course (2 credits per semester) in the joint B.S. in Mathematics and Physics program. Project based on numerical and/or theoretical supervision under the supervision of a mathematics faculty member, possibly jointly with a faculty member from physics. Study of the techniques utilized in a specific research area and of recent literature associated with the project. Work leading to meaningful results which are to be presented as a term paper and an oral report at the end of the second semester. Supervising faculty will review progress with the student on a regular basis, including detailed progress reports made twice each semester, to ensure successful completion of the work. Counts as SAGES Senior Capstone.

MATH 352. Mathematics Capstone. 3 Units.
Mathematics Capstone Project. Students pursue theoretical, experimental, or teaching research under the supervision of a Capstone Advisor—ordinarily a member of the MAMS Department faculty. Results and conclusions of the project are summarized in written form and in a public presentation, e.g., in the annual MAMS Capstone Symposium, or in the CWRU Intersections Symposium and Poster Sessions. In order to register, a student must first obtain the consent of a Capstone Advisor. Students are strongly encouraged to begin well in advance of registration to initiate discussions with a potential Capstone Advisor. Before granting approval, an advisor may require a Capstone Proposal outlining the goals, expected background, methodology and time frame of the project. The determination as to whether the expectations for the Capstone Project and for the SAGES Capstone Requirement have been met are the sole responsibility of the Capstone Advisor. Counts as SAGES Senior Capstone.

MATH 357. Mathematical Modeling Across the Sciences. 3 Units.
A three credit course on mathematical modeling as it applies to the origins sciences. Students gain practical experience in a wide range of techniques for modeling research questions in cosmology and astrophysics, integrative evolutionary biology (including physical anthropology, ecology, paleontology, and evolutionary cognitive science), and planetary science and astrobiology. Offered as ORIG 301, ORIG 401 and MATH 357. Prereq: ORIG 201, ORIG 202, BIOL 225, MATH 122, CHEM 106 and (PHYS 122 or PHYS 124).

MATH 361. Geometry I. 3 Units.
An introduction to the various two-dimensional geometries, including Euclidean, spherical, hyperbolic, projective, and affine. The course will examine the axiomatic basis of geometry, with an emphasis on transformations. Topics include the parallel postulate and its alternatives, isometries and transformation groups, tilings, the hyperbolic plane and its models, spherical geometry, affine and projective transformations, and other topics. We will examine the role of complex and hypercomplex numbers in the algebraic representation of transformations. The course is self-contained. Counts as SAGES Departmental Seminar. Prereq: MATH 224.

MATH 363. Knot Theory. 3 Units.
An introduction to the mathematical theory of knots and links, with emphasis on the modern combinatorial methods. Reidemeister moves on link projections, ambient and regular isotopies, linking number tricolorability, rational tangles, braids, torus knots, self surfaces and genus, the knot polynomials (bracket, X, Jones, Alexander, HOMFLY), crossing numbers of alternating knots and amphicheirality. Connections to theoretical physics, molecular biology, and other scientific applications will be pursued in term projects, as appropriate to the background and interests of the students. Prereq: MATH 223 or MATH 227.

MATH 365. Introduction To Algebraic Geometry. 3 Units.
This is a first introduction to algebraic geometry—the study of solutions of polynomial equations—for advanced undergraduate students. Recent applications of this large and important area include number theory, combinatorics, theoretical physics, robotics, cryptography and coding theory. The contents of the course may vary from one semester to another, and may include, for example: the classical theory of algebraic curves in the setting of affine and projective planes over the real or complex fields; affine and projective equivalence; invariants; tangents; singularities; intersection multiplicities; resultants and Bezout’s Theorem; linear systems; rational curves; flexes and group structure on a cubic. Prereq: MATH 307 and Coreq: MATH 308.

MATH 376. Mathematical Analysis of Biological Models. 3 Units.
This course focuses on the mathematical methods used to analyze biological models, with examples drawn largely from ecology but also from epidemiology, developmental biology, and other areas. Mathematical topics include equilibrium and stability in discrete and continuous time, some aspects of transient dynamics, and reaction-diffusion equations (steady state, diffusive instabilities, and traveling waves). Biological topics include several “classic” models, such as the Lotka-Volterra model, the Ricker model, and Michaelis-Menten/type II/saturating responses. The emphasis is on approximations that lead to analytic solutions, not numerical analysis. An important aspect of this course is translating between verbal and mathematical descriptions: the goal is not just to solve mathematical problems but to extract biological meaning from the answers we find. Offered as BIOL 306 and MATH 376. Prereq: BIOL 300 or MATH 224 or consent of instructor.

MATH 378. Computational Neuroscience. 3 Units.
Computer simulations and mathematical analysis of neurons and neural circuits, and the computational properties of nervous systems. Students are taught a range of models for neurons and neural circuits, and are asked to implement and explore the computational and dynamic properties of these models. The course introduces students to dynamical systems theory for the analysis of neurons and neural learning, models of brain systems, and their relationship to artificial and neural networks. Term project required. Students enrolled in MATH 478 will make arrangements with the instructor to attend additional lectures and complete additional assignments addressing mathematical topics related to the course. Recommended preparation: MATH 223 and MATH 224 or BIOL 300 and BIOL 306. Offered as BIOL 378, COGS 378, MATH 378, BIOL 478, CSDS 478, EBME 478, ECSE 478, MATH 478 and NEUR 478.

MATH 380. Introduction to Probability. 3 Units.
MATH 382. High Dimensional Probability. 3 Units.
Behavior of random vectors, random matrices, and random projections in high dimensional spaces, with a view toward applications to data sciences. Topics include tail inequalities for sums of independent random variables, norms of random matrices, concentration of measure, and bounds for random processes. Applications may include structure of random graphs, community detection, covariance estimation and clustering, randomized dimension reduction, empirical processes, statistical learning, and sparse recovery problems. Additional work is required for graduate students. Offered as MATH 382, MATH 482, STAT 382 and STAT 482. Prereq: MATH 307 and (MATH 380 or STAT 345 or STAT 445).

MATH 386. Quantum Computing, Information, and Devices. 3 Units.
An introduction to the math, physics, engineering, and computer science underlying the rapidly emerging fields of quantum computing, quantum information, and quantum devices. The course is taught by a group of faculty from physics, engineering, computer science, and math, and is geared towards students with diverse backgrounds and interests in these fields. Students will select a concentration in one of these four areas, and the coursework, while still covering all topics, will be adjusted to focus on the selected area in the most detail. Note that the listed prerequisites depend on choice of concentration. Topics will include: 1. (Mathematics) Introduction to linear algebra, convex geometry, fundamental theory of quantum information. 2. (Physics) Introduction to the quantum mechanics of two-level systems (qubits). Survey of physics and materials for qubit technologies. 3. (Computer Science) Basic quantum gates and circuits, introduction to the theory of algorithms, survey of quantum algorithms. 4. (Engineering) Quantum architectures, mapping algorithms onto circuits. The course consists of lectures, homework, and group projects. Group projects will aim to synthesize the diverse backgrounds of the students and instructors to capture the interdisciplinary nature of the field. Students taking the course for graduate credit will complete an additional literature research project and presentation, in addition to enhanced problem sets. Offered as CSDS 386, CSDS 486, ECSE 386, ECSE 486, MATH 386, MATH 486, PHYS 386, and PHYS 486. Prereq: (MATH 223 or MATH 227) and (MATH 224 or MATH 228) and (MATH 201 or MATH 307) and (PHYS 122 or PHYS 124) and PHYS 221.

MATH 394. Introduction to Information Theory. 3 Units.
This course is intended as an introduction to information and coding theory with emphasis on the mathematical aspects. It is suitable for advanced undergraduate and graduate students in mathematics, applied mathematics, statistics, physics, computer science and electrical engineering. Course content: Information measures-entropy, relative entropy, mutual information, and their properties. Typical sets and sequences, asymptotic equipartition property, data compression. Channel coding and capacity: channel coding theorem. Differential entropy, Gaussian channel, Shannon-Nyquist theorem. Information theory inequalities (400 level). Additional topics, which may include compressed sensing and elements of quantum information theory. Recommended preparation: MATH 201 or MATH 307. Offered as MATH 394, CSDS 394, ECSE 394, MATH 494, CSDS 494 and ECSE 494. Prereq: MATH 223 and MATH 380 or requisites not met permission.

MATH 401. Abstract Algebra I. 3 Units.
Basic properties of groups, rings, modules and fields. Isomorphism theorems for groups; Sylow theorem; nilpotency and solvability of groups; Jordan-Holder theorem; Gauss lemma and Eisenstein's criterion; finitely generated modules over principal ideal domains with applications to abelian groups and canonical forms for matrices; categories and functors; tensor product of modules, bilinear and quadratic forms; field extensions; fundamental theorem of Galois theory, solving equations by radicals. Prereq: MATH 308.

MATH 402. Abstract Algebra II. 3 Units.
A continuation of MATH 401. Prereq: MATH 401.

MATH 405. Advanced Matrix Analysis. 3 Units.
An advanced course in linear algebra and matrix theory. Topics include variational characterizations of eigenvalues of Hermitian matrices, matrix and vector norms, characterizations of positive definite matrices, singular value decomposition and applications, perturbation of eigenvalues. This course is more theoretical than MATH 431, which emphasizes computational aspects of linear algebra Prereq: MATH 307.

MATH 406. Mathematical Logic and Model Theory. 3 Units.
Propositional calculus and quantification theory; consistency and completeness theorems; Gödel incompleteness results and their philosophical significance; introduction to basic concepts of model theory; problems of formulation of arguments in philosophy and the sciences. Offered as PHIL 306, MATH 406 and PHIL 406.

MATH 408. Introduction to Cryptology. 3 Units.
Introduction to the mathematical theory of secure communication. Topics include: classical cryptographic systems; one-way and trapdoor functions; RSA, DSA, and other public key systems; Primality and Factorization algorithms; birthday problem and other attack methods; elliptic curve cryptosystems; introduction to complexity theory; other topics as time permits. Recommended preparation: MATH 303.

MATH 410. Graph Theory. 3 Units.
This course is more theoretical than MATH 431, which emphasizes value decomposition and applications, perturbation of eigenvalues. and vector norms, characterizations of positive definite matrices, singular value decomposition and applications, perturbation of eigenvalues. This course is more theoretical than MATH 431, which emphasizes computational aspects of linear algebra Prereq: MATH 307.

MATH 413. Graph Theory. 3 Units.
Building blocks of a graph, trees, connectivity, matchings, coverings, planarity, NP-complete problems, random graphs, and expander graphs; various applications and algorithms. Prereq: MATH 201 or MATH 307.

MATH 419. Applied Probability and Stochastic Processes for Biology. 3 Units.
Applications of probability and stochastic processes to biological systems. Mathematical topics will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random samples from specified probability distributions), Markov processes in discrete and continuous time with discrete and continuous sample spaces, point processes including homogeneous and inhomogeneous Poisson processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using a combination of MATLAB, the R statistical package, MCell, and/or URDME, at the discretion of the instructor. Student projects will comprise a major part of the course. Offered as BIOL 319, ECSE 319, MATH 319, SYBB 319, BIOL 419, EBME 419, MATH 419, PHOL 419, and SYBB 419.
MATH 307. Numerical Linear Algebra. 3 Units.

MATH 321. Fundamentals of Analysis I. 3 Units.
Abstract mathematical reasoning in the context of analysis in Euclidean space. Introduction to formal reasoning, sets and functions, and the number systems. Sequences and series; Cauchy sequences and convergence. Required for all mathematics majors. Additional work required for graduate students. (May not be taken for graduate credit by graduate students in the Department of Mathematics.) Offered as MATH 321 and MATH 421.

MATH 322. Fundamentals of Analysis II. 3 Units.
Continuation of MATH 321. Point-set topology in metric spaces with attention to n-dimensional space; completeness, compactness, connectedness, and continuity of functions. Topology in Euclidean space, metric topology, continuity of functions, uniform convergence. Fourier series and polynomial approximation. Theoretical development of differentiation and Riemann integration. Required for all mathematics majors. Additional work required for graduate students. (May not be taken for graduate credit by graduate students in the Department of Mathematics.) Offered as MATH 322 and MATH 422. Prereq: MATH 321 or MATH 421.

MATH 421. Fundamentals of Analysis I. 3 Units.
Abstract mathematical reasoning in the context of analysis in Euclidean space. Introduction to formal reasoning, sets and functions, and the number systems. Sequences and series; Cauchy sequences and convergence. Required for all mathematics majors. Additional work required for graduate students. (May not be taken for graduate credit by graduate students in the Department of Mathematics.) Offered as MATH 321 and MATH 421.

MATH 422. Fundamentals of Analysis II. 3 Units.

MATH 423. Introduction to Real Analysis I. 3 Units.

MATH 424. Introduction to Real Analysis II. 3 Units.

MATH 425. Complex Analysis I. 3 Units.
Analytic functions. Integration over paths in the complex plane. Index of a point with respect to a closed path; Cauchy's theorem and Cauchy's integral formula; power series representation; open mapping theorem; singularities; Laurent expansion; residue calculus; harmonic functions; Poisson's formula; Riemann mapping theorem. More theoretical and at a higher level than MATH 324. Prereq: MATH 322 or MATH 422.

MATH 427. Convexity and Optimization. 3 Units.
Introduction to the theory of convex sets and functions and to the extremes in problems in areas of mathematics where convexity plays a role. Among the topics discussed are basic properties of convex sets (extreme points, facial structure of polytopes), separation theorems, duality and polars, properties of convex functions, minima and maxima of convex functions over convex set, various optimization problems. Offered as MATH 327, MATH 427, and OPRE 427.

MATH 431. Introduction to Numerical Analysis I. 3 Units.

MATH 432. Numerical Differential Equations. 3 Units.

MATH 433. Numerical Solutions of Nonlinear Systems and Optimization. 3 Units.
The course provides an introduction to numerical solution methods for systems of nonlinear equations and optimization problems. The course is suitable for upper-undergraduate and graduate students with some background in calculus and linear algebra. Knowledge of numerical linear algebra is helpful. Among the topics which will be covered in the course are Nonlinear systems in one variables; Newton's method for nonlinear equations and unconstrained minimization; Quasi-Newton methods; Global convergence of Newton's methods and line searches; Trust region approach; Secant methods; Nonlinear least squares. Prereq: MATH 223 or MATH 227, and MATH 431 or permission.

MATH 435. Ordinary Differential Equations. 3 Units.
A second course in ordinary differential equations. Existence, uniqueness, and continuation of solutions of ODE. Linear systems, fundamental matrix, qualitative methods (phase plane). Dependence on initial data and parameters (Gronwall's inequality, nonlinear variation of parameters). Stability for linear and nonlinear equations, linearization, Poincare-Bendixson theory. Additional topics may include regular and singular perturbation methods, autonomous oscillations, entrainment of forced oscillators, and bifurcations. Prereq: MATH 224 and either MATH 201 or MATH 307.

MATH 439. Bayesian Scientific Computing. 3 Units.
This course will embed numerical methods into a Bayesian framework. The statistical framework will make it possible to integrate a priori information about the unknowns and the error in the data directly into the most efficient numerical methods. A lot of emphasis will be put on understanding the role of the priors, their encoding into fast numerical solvers, and how to translate qualitative or sample-based information--or lack thereof--into a numerical scheme. Confidence on computed results will also be discussed from a Bayesian perspective, at the light of the given data and a priori information. The course should be of interest to anyone working on signal and image processing statistics, numerical analysis and modeling. Recommended Preparation: MATH 431. Offered as MATH 439 and STAT 439.

MATH 440. Computational Inverse Problems. 3 Units.
This course will introduce various computational methods for solving inverse problems under different conditions. First the classical regularization methods will be introduced, and the computational challenges which they pose, will be addressed. Following this, the statistical methods for solving inverse problems will be studied and their computer implementation discussed. We will combine the two approaches to best exploit their potentials. Applications arising from various areas of science, engineering, and medicine will be discussed throughout the course.
MATH 441. Mathematical Modeling. 3 Units.
Mathematics is a powerful language for describing real world phenomena and providing predictions that otherwise are hard or impossible to obtain. The course gives the students pre-requisites for translating qualitative descriptions given in the professional non-mathematical language into the quantitative language for mathematics. While the variety in the subject matter is wide, some general principles and methodologies that a modeller can pursue are similar in many applications. The course focuses on these similarities. The course is based on representative case studies that are discussed and analyzed in the classroom, the emphasis being on general principles of developing and analyzing mathematical models. The examples will be taken from different fields of science and engineering, including life sciences, environmental sciences, biomedical engineering and physical sciences. Modeling relies increasingly on computation, so the students should have basic skills for using computers and programs like Matlab or Mathematica. Prereq: MATH 224 or MATH 228.

MATH 444. Mathematics of Data Mining and Pattern Recognition. 3 Units.
This course will give an introduction to a class of mathematical and computational methods for the solution of data mining and pattern recognition problems. By understanding the mathematical concepts behind algorithms designed for mining data and identifying patterns, students will be able to modify to make them suitable for specific applications. Particular emphasis will be given to matrix factorization techniques. The course requirements will include the implementations of the methods in MATLAB and their application to practical problems. Prereq: MATH 201 or MATH 307.

MATH 445. Introduction to Partial Differential Equations. 3 Units.
Method of characteristics for linear and quasilinear equations. Second order equations of elliptic, parabolic, type; initial and boundary value problems. Method of separation of variables, eigenfunction expansions, Sturm-Liouville theory. Fourier, Laplace, Hankel transforms; Bessel functions, Legendre polynomials. Green’s functions. Examples include: heat diffusion, Laplace’s equation, wave equations, one dimensional gas dynamics and others. Appropriate for seniors and graduate students in science, engineering, and mathematics. Prereq: MATH 201 or MATH 307 and MATH 224 or MATH 228.

MATH 446. Numerical Methods for Partial Differential Equations. 3 Units.
This course is an introduction to numerical methods of PDEs, and in particular, to finite element methods (FEM), emphasizing the interconnection between the functional analytic viewpoint of PDEs and the practical and effective computation of the numerical approximations. In particular, the emphasis is on showing that many of the useful and elegant ideas in finite dimensional linear algebra have a natural counterpart in the infinite dimensional setting of Hilbert spaces, and that the same techniques that guarantee the existence and uniqueness of the solutions in fact provide also stable computational methods to approximate the solutions. The topics covered in this course include Fourier analysis, weak derivatives, weak forms, generalized functions; Sobolev spaces, trace theorem, compact embedding theorems, Poincare inequalities; Riesz theory, Fredholm theory; Finite Element Method (FEM): Grid generation, existence, stability and convergence of solutions for elliptic problems; Semi-discretization of parabolic and hyperbolic equations; Stiffness; Numerical solution of linear systems by iterative methods. A quintessential part of this course comprises numerical implementation of the finite element method. Matlab is used as the programming tool both in demonstrations and examples in the class as well as in home assignments. Recommended Preparation: linear algebra, multivariate calculus, and ordinary differential equations.

MATH 449. Dynamical Models for Biology and Medicine. 3 Units.
Introduction to discrete and continuous dynamical models with applications to biology and medicine. Topics include: population dynamics and ecology; models of infectious diseases; population genetics and evolution; biological motion (reaction-diffusion and chemotaxis); Molecular and cellular biology (biochemical kinetics, metabolic pathways, immunology). The course will introduce students to the basic mathematical concepts and techniques of dynamical systems theory (equilibria, stability, bifurcations, discrete and continuous dynamics, diffusion and wave propagation, elements of system theory and control). Mathematical exposition is supplemented with introduction to computer tools and techniques (Mathematica, Matlab). Prereq: MATH 224 or MATH 228, or BIOL/EBME 300, and MATH 201.

MATH 461. Introduction to Topology. 3 Units.

MATH 462. Algebraic Topology. 3 Units.
The fundamental group and covering spaces; van Kampen’s theorem. Higher homotopy groups; long-exact sequence of a pair. Homology theory; chain complexes; short and long exact sequences; Mayer-Vietoris sequence. Homology of surfaces and complexes; applications. Prereq: MATH 461.

MATH 465. Differential Geometry. 3 Units.
Manifolds and differential geometry. Vector fields; Riemannian metrics; curvature; intrinsic and extrinsic geometry of surfaces and curves; structural equations of Riemannian geometry; the Gauss-Bonnet theorem. Prereq: MATH 321.

MATH 467. Differentiable Manifolds. 3 Units.
Differentiable manifolds and structures on manifolds. Tangent and cotangent bundle; vector fields; differential forms; tensor calculus; integration and Stokes’ theorem. May include Hamiltonian systems and their formulation on manifolds; symplectic structures; connections and curvature; foliations and integrability. Prereq: MATH 322.

MATH 471. Advanced Engineering Mathematics. 3 Units.

MATH 473. Introduction to Mathematical Image Processing and Computer Vision. 3 Units.
This course introduces fundamental mathematics techniques for image processing and computer vision (IPCV). It is accessible to upper level undergraduate and graduate students from mathematics, sciences, engineering and medicine. Topics include but are not limited to image denoising, contrast enhancement, image compression, image segmentation and pattern recognition. Main tools are discrete Fourier analysis and wavelets, plus some statistics, optimization and a little calculus of variation and partial differential equations if time permitting. Students gain a solid theoretical background in IPCV modeling and computing, and master hands-on application experiences. Upon completion of the course, students will have clear understanding of classical methods, which will help them develop new methodical approaches for imaging problems arising in a variety of fields. Recommended preparation: Some coursework in scientific computing and ability to program in (or willingness to learn) a language such as Matlab or C/C++. Prereq: MATH 330 or MATH 431 or equivalent.
MATH 478. Computational Neuroscience. 3 Units.
Computer simulations and mathematical analysis of neurons and neural circuits, and the computational properties of nervous systems. Students are taught a range of models for neurons and neural circuits, and are asked to implement and explore the computational and dynamic properties of these models. The course introduces students to dynamical systems theory for the analysis of neurons and neural learning, models of brain systems, and their relationship to artificial and neural networks. Term project required. Students enrolled in MATH 478 will make arrangements with the instructor to attend additional lectures and complete additional assignments addressing mathematical topics related to the course. Recommended preparation: MATH 223 and MATH 224 or BIOL 300 and BIOL 306. Offered as BIOL 378, COGS 378, MATH 378, BIOL 478, CSDS 478, EBME 478, ECSE 478, MATH 478 and NEUR 478.

MATH 482. High Dimensional Probability. 3 Units.
Behavior of random vectors, random matrices, and random projections in high dimensional spaces, with a view toward applications to data sciences. Topics include tail inequalities for sums of independent random variables, norms of random matrices, concentration of measure, and bounds for random processes. Applications may include structure of random graphs, community detection, covariance estimation and clustering, randomized dimension reduction, empirical processes, statistical learning, and sparse recovery problems. Additional work is required for graduate students. Offered as MATH 382, MATH 482, STAT 382 and STAT 482. Prereq: MATH 307 and (MATH 380 or STAT 345 or STAT 445).

MATH 486. Quantum Computing, Information, and Devices. 3 Units.
An introduction to the math, physics, engineering, and computer science underlying the rapidly emerging fields of quantum computing, quantum information, and quantum devices. The course is taught by a group of faculty from physics, engineering, computer science, and math, and is geared towards students with diverse backgrounds and interests in these fields. Students will select a concentration in one of these four areas, and the coursework, while still covering all topics, will be adjusted to focus on the selected area in the most detail. Note that the listed prerequisites depend on choice of concentration. Topics will include: 1. (Mathematics) Introduction to linear algebra, convex geometry, fundamental theory of quantum information. 2. (Physics) Introduction to the quantum mechanics of two-level systems (qubits). Survey of physics and materials for qubit technologies. 3. (Computer Science) Basic quantum gates and circuits, introduction to the theory of algorithms, survey of quantum algorithms. 4. (Engineering) Quantum architectures, mapping algorithms onto circuits. The course consists of lectures, homework, and group projects. Group projects will aim to synthesize the diverse backgrounds of the students and instructors to capture the interdisciplinary nature of the field. Students taking the course for graduate credit will complete an additional literature research project and presentation, in addition to enhanced problem sets. Offered as CSDS 386, CSDS 486, ECSE 386, ECSE 486, MATH 386, MATH 486, PHYS 386, and PHYS 486. Prereqs: MATH 223 or MATH 227 and (MATH 224 or MATH 228) and (MATH 201 or MATH 307) and (PHYS 122 or PHYS 124) and PHYS 221.

MATH 491. Probability I. 3 Units.

MATH 492. Probability II. 3 Units.

MATH 494. Introduction to Information Theory. 3 Units.
This course is intended as an introduction to information and coding theory with emphasis on the mathematical aspects. It is suitable for advanced undergraduate and graduate students in mathematics, applied mathematics, statistics, physics, computer science and electrical engineering. Course content: Information measures-entropy, relative entropy, mutual information, and their properties. Typical sets and sequences, asymptotic equipartition property, data compression. Channel coding and capacity channel coding theorem. Differential entropy, Gaussian channel, Shannon-Nyquist theorem. Information theory inequalities (400 level). Additional topics, which may include compressed sensing and elements of quantum information theory. Recommended preparation: MATH 201 or MATH 307. Offered as MATH 394, CSDS 394, ECSE 394, MATH 494, CSDS 494 and ECSE 494.

MATH 497. Stochastic Models: Time Series and Markov Chains. 3 Units.
Introduction to stochastic modeling of data. Emphasis on models and statistical analysis of data with a significant temporal and/or spatial structure. This course will analyze time and space dependent random phenomena from two perspectives: Stationary Time Series: Spectral representation of deterministic signals, autocorrelation. Power spectra. Transmission of stationary signals through linear filters. Optimal filter design, signal-to-noise ratio. Gaussian signals and correlation matrices. Spectral representation and computer simulation of stationary signals. Discrete Markov Chains: Transition matrices, recurrences and the first step analysis. Steady rate. Recurrence and ergodicity, empirical averages. Long run behavior, convergence to steady state. Time to absorption. Eigenvalues and nonhomogeneous Markov chains. Introduction to Gibbs fields and Markov Chain Monte Carlo (MCMC). This course is related to STAT 538 but can be taken independently of it. Offered as: MATH 497 and STAT 437. Prereq: STAT 243/244 (as a sequence) or STAT 312 or STAT 312R or STAT 313 or STAT 332 or STAT 333 or STAT 345 or MATH 380 or MATH 491 or Requisites Not Met permission.

MATH 499. Special Topics. 3 Units.
Special topics in mathematics.

MATH 528. Analysis Seminar. 1 - 3 Units.
Continuing seminar on areas of current interest in analysis. Allows graduate and advanced undergraduate students to become involved in research. Topics will reflect interests and expertise of the faculty and may include functional analysis, convexity theory, and their applications. May be taken more than once for credit. Consent of department required.

MATH 535. Applied Mathematics Seminar. 1 - 3 Units.
Continuing seminar on areas of current interest in applied mathematics. Allows graduate and advanced undergraduate students to become involved in research. Topics will reflect interests and expertise of the faculty and may include topics in applied probability and stochastic processes, continuum mechanics, numerical analysis, mathematical physics or mathematical biology. May be taken more than once for credit.
MATH 549. Mathematical Life Sciences Seminar. 1 - 3 Units.
Continuing seminar on areas of current interest in the applications of mathematics to the life sciences. Allows graduate and advanced undergraduate students to become involved in research. Topics will reflect interests and expertise of the faculty and may include mathematical biology, computational neuroscience, mathematical modeling of biological systems, models of infectious diseases, computational cell biology, mathematical ecology and mathematical biomedicine broadly constructed. May be taken more than once for credit.

MATH 598. Stochastic Models: Diffusive Phenomena and Stochastic Differential Equations. 3 Units.
Introduction to stochastic modeling of data. Emphasis on models and statistical analysis of data with significant temporal and/or spatial structure. This course will analyze time and space dependent random phenomena from two perspectives: Brownian motion and diffusive processes; Classification of stochastic processes, finite dimensional distributions, random walks and their scaling limits, Brownian motion and its paths properties, general diffusive processes, Fokker-Planck-Kolmogorov equations, Poisson and point processes, heavy tail diffusions, Levy processes, tempered stable diffusions. Stochastic calculus and stochastic differential equations: Wiener random integrals, mean-square theory, Brownian stochastic integrals and Ito formula, stochastic integrals for Levy processes, martingale property, basic theory and applications of stochastic differential equations. This course is related to STAT 437 but can be taken independently of it. Offered as MATH 598 and STAT 538.

MATH 601. Reading and Research Problems. 1 - 18 Units.
Presentation of individual research, discussion, and investigation of research papers in a specialized field of mathematics.

MATH 651. Thesis (M.S.). 1 - 9 Units.
(Credit as arranged.)

MATH 701. Dissertation (Ph.D.). 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

STAT Courses

STAT 201. Basic Statistics for Social and Life Sciences. 3 Units.
Designed for undergraduates in the social sciences and life sciences who need to use statistical techniques in their fields. Descriptive statistics, probability models, sampling distributions. Point and confidence interval estimation, hypothesis testing. Elementary regression and analysis of variance. Not for credit toward major or minor in Statistics. Counts for CAS Quantitative Reasoning Requirement.

STAT 201R. Basic Statistics for Social and Life Sciences Using R Programming. 3 Units.
Designed for undergraduates in the social sciences and life sciences who need to use statistical techniques in their fields. Descriptive statistics, probability models, sampling distributions. Point and confidence interval estimation, hypothesis testing. Elementary regression and analysis of variance. Not for credit toward major or minor in Statistics. Students may earn credit for only one of the following courses: STAT 201, STAT 201R, ANTH 319, PSCL 282 or SYBB 201R. Offered as STAT 201R and SYBB 201R. Counts for CAS Quantitative Reasoning Requirement.

STAT 243. Statistical Theory with Application I. 3 Units.

STAT 244. Statistical Theory with Application II. 3 Units.

STAT 312. Basic Statistics for Engineering and Science. 3 Units.
For advanced undergraduate students in engineering, physical sciences, life sciences. Comprehensive introduction to probability models and statistical methods of analyzing data with the object of formulating statistical models and choosing appropriate methods for inference from experimental and observational data and for testing the model's validity. Balanced approach with equal emphasis on probability, fundamental concepts of statistics, point and interval estimation, hypothesis testing, analysis of variance, design of experiments, and regression modeling. Note: Credit given for only one (1) of STAT 312, 312R, 313; SYBB 312R. Prereq: MATH 122 or equivalent.

STAT 312R. Basic Statistics for Engineering and Science Using R Programming. 3 Units.
For advanced undergraduate students in engineering, physical sciences, life sciences. Comprehensive introduction to probability models and statistical methods of analyzing data with the object of formulating statistical models and choosing appropriate methods for inference from experimental and observational data and for testing the model's validity. Balanced approach with equal emphasis on probability, fundamental concepts of statistics, point and interval estimation, hypothesis testing, analysis of variance, design of experiments, and regression modeling. Note: Credit given for only one (1) of STAT 312, STAT 312R, STAT 313 or SYBB 312R. Offered as STAT 312R and SYBB 312R. Prereq: MATH 122 or equivalent.

STAT 313. Statistics for Experimenters. 3 Units.
For advanced undergraduates in engineering, physical sciences, life sciences. Comprehensive introduction to modeling data and statistical methods of analyzing data. General objective is to train students in formulating statistical models, in choosing appropriate methods for inference from experimental and observational data and to test the validity of these models. Focus on practicalities of inference from experimental data. Inference for curve and surface fitting to real data sets. Designs for experiments and simulations. Student generation of experimental data and application of statistical methods for analysis. Critique of model; use of regression diagnostics to analyze errors. Note: Credit given for only one (1) of STAT 312, 312R, 313, SYBB 312R. Prereq: MATH 122 or equivalent.
STAT 317. Actuarial Science I. 3 Units.
Practical knowledge of the theory of interest in both finite and continuous time. That knowledge should include how these concepts are used in the various annuity functions, and apply the concepts of present and accumulated value for various streams of cash flows as a basis for future use in: reserving, valuation, pricing, duration, asset/liability management, investment income, capital budgeting, and contingencies. Valuation of discrete and continuous streams of payments, including the case in which the interest conversion period differs from the payment period will be considered. Application of interest theory to amortization of lump sums, fixed income securities, depreciation, mortgages, etc., as well as annuity functions in a broad finance context will be covered. Topics covered include areas examined in the American Society of Actuaries Exam 2. Offered as STAT 317 and STAT 417. Prereq: MATH 122 or MATH 126 or requisites not met permission.

STAT 318. Actuarial Science II. 3 Units.
Theory of life contingencies. Life table analysis for simple and multiple decrement functions. Life and special annuities. Life insurance and reserves for life insurance. Statistical issues for prediction from actuarial models. Topics covered include areas examined in the American Society of Actuaries Exam 3. Offered as STAT 318 and STAT 418. Prereq: STAT 312 or STAT 312R or STAT 317 or STAT 345 or requisites not met permission.

STAT 325. Data Analysis and Linear Models. 3 Units.
Basic exploratory data analysis for univariate response with single or multiple covariates. Graphical methods and data summarization, model-fitting using S-plus computing language. Linear and multiple regression. Emphasis in model selection criteria, on diagnostics to assess goodness of fit and interpretation. Techniques include transformation, smoothing, median polish, robust/resistant methods. Case studies and analysis of individual data sets. Notes of caution and some methods for handling bad data. Knowledge of regression is helpful. Offered as STAT 325 and STAT 425. Prereq: STAT 243 or STAT 312 or STAT 312R or PQHS/EPBI 431 or PQHS/EPBI 441 or PQHS/EPBI 458.

STAT 326. Multivariate Analysis and Data Mining. 3 Units.

STAT 332. Statistics for Signal Processing. 3 Units.
For advanced undergraduate students or beginning graduate students in engineering, physical sciences, life sciences. Introduction to probability models and statistical methods. Emphasis on probability as relative frequencies. Derivation of conditional probabilities and memoryless channels. Joint distribution of random variables, transformations, autocorrelation, series of irregular observations, stationarity. Random harmonic signals with noise, random phase and/or random amplitude. Gaussian and Poisson signals. Modulation and averaging properties. Transmission through linear filters. Power spectra, bandwidth, white and colored noise. ARMA processes and forecasting. Optimal linear systems, signal-to-noise ratio, Wiener filter. Completion of additional assignments required from graduate students registered in this course. Offered as STAT 332 and STAT 432. Prereq: MATH 122.

STAT 333. Uncertainty in Engineering and Science. 3 Units.
Phenomena of uncertainty appear in engineering and science for various reasons and can be modeled in different ways. The course integrates the mainstream ideas in statistical data analysis with models of uncertain phenomena stemming from three distinct viewpoints: algorithmic/computational complexity; classical probability theory; and chaotic behavior of nonlinear systems. Descriptive statistics, estimation procedures and hypothesis testing (including design of experiments). Random number generators and their testing. Monte Carlo Methods. Mathematica notebooks and simulations will be used. Graduate students are required to do an extra project. Offered as STAT 333 and STAT 433. Prereq: MATH 122 or MATH 223.

STAT 345. Theoretical Statistics I. 3 Units.
Topics provide the background for statistical inference. Random variables; distribution and density functions; transformations, expectation. Common univariate distributions. Multiple random variables; joint, marginal and conditional distributions; hierarchical models, covariance. Distributions of sample quantities, distributions of sums of random variables, distributions of order statistics. Methods of statistical inference. Offered as STAT 345, STAT 445, and PQHS 481. Prereq: MATH 122 or MATH 223 or Coreq: PQHS/EPBI 431.

STAT 346. Theoretical Statistics II. 3 Units.
Point estimation: maximum likelihood, moment estimators. Methods of evaluating estimators including mean squared error, consistency, "best" unbiased and sufficient. Hypothesis testing; likelihood ratio and union-intersection tests. Properties of tests including power function, bias. Interval estimation by inversion of test statistics, use of pivotal quantities. Application to regression. Graduate students are responsible for mathematical derivations, and full proofs of principal theorems. Offered as STAT 346, STAT 446 and PQHS 482. Prereq: STAT 345 or PQHS 445 or PQHS/EPBI 481.

STAT 382. High Dimensional Probability. 3 Units.
Behavior of random vectors, random matrices, and random projections in high dimensional spaces, with a view toward applications to data sciences. Topics include tail inequalities for sums of independent random variables, norms of random matrices, concentration of measure, and bounds for random processes. Applications may include structure of random graphs, community detection, covariance estimation and clustering, randomized dimension reduction, empirical processes, statistical learning, and sparse recovery problems. Additional work is required for graduate students. Offered as MATH 382, MATH 482, STAT 382 and STAT 482. Prereq: MATH 307 and (MATH 380 or STAT 345 or STAT 445 or PQHS/EPBI 481).

STAT 395. Senior Project in Statistics. 3 Units.
An individual project done under faculty supervision involving the investigation and statistical analysis of a real problem encountered in university research or an industrial setting. Written report. Counts as SAGES Senior Capstone.
STAT 417. Actuarial Science I. 3 Units.
Practical knowledge of the theory of interest in both finite and continuous time. That knowledge should include how these concepts are used in the various annuity functions, and apply the concepts of present and accumulated value for various streams of cash flows as a basis for future use in: reserving, valuation, pricing, duration, asset/liability management, investment income, capital budgeting, and contingencies. Valuation of discrete and continuous streams of payments, including the case in which the interest conversion period differs from the payment period will be considered. Application of interest theory to amortization of lump sums, fixed income securities, depreciation, mortgages, etc., as well as annuity functions in a broad finance context will be covered. Topics covered include areas examined in the American Society of Actuaries Exam 2. Offered as STAT 317 and STAT 417. Prereq: MATH 122 or MATH 126 or requisites not met permission.

STAT 418. Actuarial Science II. 3 Units.
Theory of life contingencies. Life table analysis for simple and multiple decrement functions. Life and special annuities. Life insurance and reserves for life insurance. Statistical issues for prediction from actuarial models. Topics covered include areas examined in the American Society of Actuaries Exam 3. Offered as STAT 318 and STAT 418. Prereq: STAT 312 or STAT 312R or STAT 317 or STAT 345 or requisites not met permission.

STAT 425. Data Analysis and Linear Models. 3 Units.
Basic exploratory data analysis for univariate response with single or multiple covariates. Graphical methods and data summarization, model-fitting using S-plus computing language. Linear and multiple regression. Emphasis on model selection criteria, on diagnostics to assess goodness of fit and interpretation. Techniques include transformation, smoothing, median polish, robust/resistant methods. Case studies and analysis of individual data sets. Notes of caution and some methods for handling bad data. Knowledge of regression is helpful. Offered as STAT 325 and STAT 425.

STAT 426. Multivariate Analysis and Data Mining. 3 Units.

STAT 432. Statistics for Signal Processing. 3 Units.
For advanced undergraduate students or beginning graduate students in engineering, physical sciences, life sciences. Introduction to probability models and statistical methods. Emphasis on probability as relative frequencies. Derivation of conditional probabilities and memoryless channels. Joint distribution of random variables, transformations, autocorrelation, series of irregular observations, stationarity. Random harmonic signals with noise, random phase and/or random amplitude. Gaussian and Poisson signals. Modulation and averaging properties. Transmission through linear filters. Power spectra, bandwidth, white and colored noise. ARMA processes and forecasting. Optimal linear systems, signal-to-noise ratio, Wiener filter. Completion of additional assignments required from graduate students registered in this course. Offered as STAT 332 and STAT 432. Prereq: MATH 122.

STAT 433. Uncertainty in Engineering and Science. 3 Units.
Phenomena of uncertainty appear in engineering and science for various reasons and can be modeled in different ways. The course integrates the mainstream ideas in statistical data analysis with models of uncertain phenomena stemming from three distinct viewpoints: algorithmic/computational complexity; classical probability theory; and chaotic behavior of nonlinear systems. Descriptive statistics, estimation procedures and hypothesis testing (including design of experiments). Random number generators and their testing. Monte Carlo Methods. Mathematica notebooks and simulations will be used. Graduate students are required to do an extra project. Offered as STAT 333 and STAT 433. Prereq: MATH 122 or MATH 223.

STAT 437. Stochastic Models: Time Series and Markov Chains. 3 Units.
Introduction to stochastic modeling of data. Emphasis on models and statistical analysis of data with a significant temporal and/or spatial structure. This course will analyze time and space dependent random phenomena from two perspectives: Stationary Time Series: Spectral representation of deterministic signals, autocorrelation. Power spectra. Transmission of stationary signals through linear filters. Optimal filter design, signal-to-noise ratio. Gaussian signals and correlation matrices. Spectral representation and computer simulation of stationary signals. Discrete Markov Chains: Transition matrices, recurrences and the first step analysis. Steady rate. Recurrence and ergodicity, empirical averages. Long run behavior, convergence to steady state. Time to absorption. Eigenvalues and nonhomogeneous Markov chains. Introduction to Gibbs fields and Markov Chain Monte Carlo (MCMC). This course is related to STAT 538 but can be taken independently of it. Offered as: MATH 497 and STAT 437. Prereq: STAT 243/244 (as a sequence) or STAT 312 or STAT 313 or STAT 332 or STAT 345 or MATH 380, or MATH 491 or Requisites Not Met permission.

STAT 439. Bayesian Scientific Computing. 3 Units.
This course will embed numerical methods into a Bayesian framework. The statistical framework will make it possible to integrate a priori information about the unknowns and the error in the data directly into the most efficient numerical methods. A lot of emphasis will be put on understanding the role of the priors, their encoding into fast numerical solvers, and how to translate qualitative or sample-based information–or lack thereof–into a numerical scheme. Confidence on computed results will also be discussed from a Bayesian perspective, at the light of the given data and a priori information. The course should be of interest to anyone working on signal and image processing statistics, numerical analysis and modeling. Recommended Preparation: MATH 431. Offered as MATH 439 and STAT 439.

STAT 445. Theoretical Statistics I. 3 Units.
Topics provide the background for statistical inference. Random variables; distribution and density functions; transformations, expectation. Common univariate distributions. Multiple random variables; joint, marginal and conditional distributions; hierarchical models, covariance. Distributions of sample quantities, distributions of sums of random variables, distributions of order statistics. Methods of statistical inference. Offered as STAT 345, STAT 445, and PQHS 481. Prereq: MATH 122 or MATH 223 or Coreq: PQHS/EPBI 431.
STAT 446. Theoretical Statistics II. 3 Units.
Point estimation: maximum likelihood, moment estimators. Methods of evaluating estimators including mean squared error, consistency, "best" unbiased and sufficiency. Hypothesis testing; likelihood ratio and union-intersection tests. Properties of tests including power function, bias. Interval estimation by inversion of test statistics, use of pivotal quantities. Application to regression. Graduate students are responsible for mathematical derivations, and full proofs of principal theorems. Offered as STAT 346, STAT 446 and PQHS 482. Prereq: STAT 345 or STAT 445 or PQHS/EPBI 481.

STAT 448. Bayesian Theory with Applications. 3 Units.
Principles of Bayesian theory, methodology and applications. Methods for forming prior distributions using conjugate families, reference priors and empirically-based priors. Derivation of posterior and predictive distributions and their moments. Properties when common distributions such as binomial, normal or other exponential family distributions are used. Hierarchical models. Computational techniques including Markov chain, Monte Carlo and importance sampling. Extensive use of applications to illustrate concepts and methodology. Recommended preparation: STAT 445.

STAT 455. Linear Models. 3 Units.
Theory of least squares estimation, interval estimation and tests for models with normally distributed errors. Regression on dummy variables, analysis of variance and covariance. Variance components models. Model diagnostics. Robust regression. Analysis of longitudinal data. Prereq: MATH 201 and STAT 346 or STAT 446

STAT 482. High Dimensional Probability. 3 Units.
Behavior of random vectors, random matrices, and random projections in high dimensional spaces, with a view toward applications to data sciences. Topics include tail inequalities for sums of independent random variables, norms of random matrices, concentration of measure, and bounds for random processes. Applications may include structure of random graphs, community detection, covariance estimation and clustering, randomized dimension reduction, empirical processes, statistical learning, and sparse recovery problems. Additional work is required for graduate students. Offered as MATH 382, MATH 482, STAT 382 and STAT 482. Prereq: MATH 307 and (MATH 380 or STAT 345 or STAT 445).

STAT 495A. Consulting Forum. 1 - 3 Units.
This course unifies what students have learned in their course work to apply their knowledge in consulting. It recognizes the fact that the essence of the statistical profession is continuing interaction with practitioners in the sciences, engineering, medicine, economics, etc. The course presents the views of prominent experts in the field as obtained from the literature and other sources. The responsibilities of the consultant and the client are discussed. Sample consulting problems are presented and strategies for solving them are provided. Prereq: STAT 325 or STAT 425.

STAT 538. Stochastic Models: Diffusive Phenomena and Stochastic Differential Equations. 3 Units.
Introduction to stochastic modeling of data. Emphasis on models and statistical analysis of data with significant temporal and/or spatial structure. This course will analyze time and space dependent random phenomena from two perspectives: Brownian motion and diffusive processes: Classification of stochastic processes, finite dimensional distributions, random walks and their scaling limits, Brownian motion and its paths properties, general diffusive processes, Fokker-Planck-Kolmogorov equations, Poisson and point processes, heavy tail diffusions, Levy processes, tempered stable diffusions. Stochastic calculus and stochastic differential equations: Wiener random integrals, mean-square theory, Brownian stochastic integrals and Ito formula, stochastic integrals for Levy processes, martingale property, basic theory and applications of stochastic differential equations. This course is related to STAT 437 but can be taken independently of it. Offered as MATH 598 and STAT 538. Prereq: STAT 312 or equivalent.

STAT 601. Reading and Research. 1 - 9 Units.
Individual study and/or project work.

STAT 621. M.S. Research Project. 1 - 9 Units.
Completion of statistical design and/or analysis of a research project in a substantive field which requires substantial and/or nonstandard statistical techniques and which leads to results suitable for publication. Written project report must present the context of the research, justify the statistical methodology used, draw appropriate inferences and interpret these inferences in both statistical and substantive scientific terms. Oral presentation of research project may be given in either graduate student seminar or consulting forum.

STAT 651. Thesis M.S.. 1 - 18 Units.
(Credit as arranged.) May be used as alternative to STAT 621 (M.S. Research Project) in fulfillment of requirements for M.S. degree in Statistics.

STAT 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Modern Languages and Literatures

103 Guilford House
www.cse.edu/artsci/dmll (http://www.cse.edu/artsci/dmll/)
Phone: 216.368.8976; Fax: 216.368.2216
Damaris Punales-Alpizar, Department Chair
dxp204@case.edu

The Department of Modern Languages and Literatures is committed to helping students become informed and liberally educated citizens of the world. Through the acquisition of language skills and cultural knowledge, our students prepare for careers that have an international dimension. Course offerings focus on language, literature, cinema, and culture, as well as language-specific skills for health and business professionals. The department offers short-term study abroad programs oriented towards students of French, German, Italian, Japanese, Spanish, and Arabic, and we encourage students to spend a semester or an academic year abroad in order to immerse themselves fully in a foreign language and culture. Service-learning opportunities exist in the greater Cleveland area for students of Russian and Spanish.

Department faculty work closely with other departments throughout the university as well as with the cultural institutions of University
Circle to provide students with a broad understanding of the many opportunities that language, literature, and culture study offer. The department has strong ties with interdisciplinary programs in the College of Arts and Sciences, including Asian Studies, Ethnic Studies, French and Francophone Studies, International Studies, Women's and Gender Studies, and World Literature.

**Department Faculty**

**Damaris Punales-Alpizar, PhD**  
(University of Iowa)  
*Associate Professor and Chair*  
Contemporary Cuban and Caribbean Literature; Soviet Cuba; Transatlantic Studies; Post-Soviet Cultures; Cold War Studies; Translation Studies

**Christine M. Cano, PhD**  
(Yale University)  
*Associate Professor*  
Modern and contemporary French literature, cinema, and culture

**Beth M. Carter, PhD**  
(University of Pennsylvania)  
*Assistant Professor*  
Pre-modern Japanese literature

**Denise Caterinacci, MA**  
(Kent State University)  
*Senior Instructor*  
Italian language and culture; language pedagogy; the role of motivation in language learning

**M. Gabriela Copertari, PhD**  
(Georgetown University)  
*Associate Professor*  
Latin American literature and film, especially Argentinian; women's writing; the modernista novel

**Margaretmary Daley, PhD**  
(Yale University)  
*Associate Professor*  
18th- and 19th-century German literature; German women writers; women's studies; literary criticism

**Gilbert Doho, PhD**  
(Université Sorbonne Nouvelle-Paris 3)  
*Associate Professor*  
French drama; African Francophone theater and film; people theater and social movements; playwriting; African performing arts

**Cristián G. Gómez Olivares, PhD**  
(University of Iowa)  
*Associate Professor*  
20th-century Latin American narrative and poetry; detective/mystery novels; translation studies

**Takao Hagiwara, PhD**  
(University of British Columbia)  
*Associate Professor*  
Japanese literature, especially modern prose and poetry; classical and modern Japanese literature; pre-modern Japanese sensibilities and (post) modernism

**Jacqueline C. Nanfito, PhD**  
(University of California, Los Angeles)  
*Associate Professor*  
Colonial and 19th-century Latin American literature; Golden Age Hispanic literature; literary theory; Chicano literature; contemporary Latin American women writers

**Susanne Vees-Gulani, PhD**  
(University of Illinois, Urbana-Champaign)  
*Associate Professor*  
20th- and 21st-century literature and literary movements; German cultural studies; science and literature; medicine and literature; trauma studies; victim discourses; literary and cultural responses to World War II; German civil defense strategies in World War II

**Peter Jianhua Yang, PhD**  
(University of Utah)  
*Associate Professor*  
German literature, especially 20th-century; German theater; technology-enhanced language teaching; teaching pedagogy; business German; theatricality

**Tatiana Zilotina, PhD**  
(University of Virginia)  
*Senior Instructor*  
19th- and 20th-century Russian literature; the poetry of Marina Tsvetaeva; women writers; Russian culture; Russian folklore

**Lecturers**

**Man-Lih Chai, MA**  
(University of Illinois, Urbana-Champaign)  
*Lecturer (Chinese)*

**Elena Fernández, MA**  
(Cleveland State University)  
*Lecturer (Spanish)*

**Margaret M. Fitzgerald, MA**  
(Ohio State University)  
*Lecturer (Japanese)*

**Ramez Islambouli, MA**  
(Case Western Reserve University)  
*Lecturer (Arabic)*

**Yoshiko Kishi, MA**  
(New York University)  
*Lecturer (Japanese)*

**Clara Lipszyc-Arroyo, MA**  
(University of Western Ontario)  
*Lecturer (Portuguese and Spanish)*

**Enno Lohmeyer, PhD**  
(University of Kansas)  
*Lecturer (German)*

**Crystal Yun-Ming Myhre, MA**  
(University of Kansas)  
*Lecturer (Chinese)*
Yukiko (Nishida) Onitsuka, EdD  
(University of Cincinnati)  
Lecturer (Japanese)

Alessandra Parry, MA  
(University of Akron)  
Lecturer (Spanish)

Fabienne Pizot-Haymore, MA  
(Université Paul Valéry, Montpellier III)  
Lecturer (French)

Charlotte Sanpere, PhD  
(Université Sorbonne Nouvelle-Paris 3)  
Lecturer (French)

**Undergraduate Programs**

The Department of Modern Languages and Literatures offers courses of study leading to the following degrees:

- Bachelor of Arts in Chinese
- Bachelor of Arts in French
- Bachelor of Arts in German
- Bachelor of Arts in Japanese Studies
- Bachelor of Arts in Spanish

The department is affiliated with the interdisciplinary programs in French and Francophone Studies (p. 371) and World Literature (p. 610).

In addition, the department offers minors in Chinese, French, German, Italian, Japanese Studies, Russian, and Spanish, and it offers coursework in Arabic, Hebrew, and Portuguese. All courses in modern languages and literatures are taught primarily in the target language, unless the course is cross-listed with the World Literature Program or other interdisciplinary programs. In addition to scheduled class meetings, elementary and intermediate language courses require that students work with audio or audiovisual materials outside of class.

Career opportunities for students majoring in these areas exist in college and university teaching, translation and interpretation, diplomatic and other government service, business, international nonprofit agencies, and the arts, and can be enhanced by a double major or a secondary major.

**Placement Procedure**

Students with prior experience in Chinese, French, German, Italian, Japanese, Russian, or Spanish, however acquired (e.g., in high school, at another institution, or via study abroad), work with department faculty members to determine an appropriate level at which to start. In general, one year of high school language instruction is the equivalent to one university-level course. Therefore, Spanish I in high school is the equivalent of Spanish 101 at CWRU. Students who have taken four years or more of one language in high school are generally eligible to take 300-level language courses at CWRU, but the department recommends starting with a course numbered under 320.

**Departmental Honors**

The departmental honors program is for especially dedicated majors. Requirements for honors in modern languages and literatures are:

1. a GPA of at least 3.5 in the major;
2. an honors thesis (CHIN 397, CHIN 398, FRCH 397, FRCH 398, SPAN 397, SPAN 398) in addition to the major credit hour requirements

For students majoring in Japanese Studies, the completion of a senior thesis (JAPN 397, JAPN 398) is required. The senior thesis can fulfill the requirement of an honors thesis for students pursuing departmental honors.

The thesis is devoted to a literary, linguistic, or cultural topic and must be written in the target language, except in the case of Japanese Studies. It must be read and approved by two readers and will be accepted for honors only if it achieves a grade of B or better. Students who qualify receive their degree "with Honors in Modern Languages and Literatures.” A registration form for students applying for honors is available in the departmental office.

**Majors**

**Chinese**

Majors in Chinese are expected to acquire the ability to understand, speak, read, and write in Chinese and to develop a sound understanding of the relevant literatures and cultures.

**Course Requirements**

The major in Chinese requires a minimum of 10 courses, equivalent to 30-35 credit hours.

Course requirements are as follows:

- For students placed into 200-level coursework, the major requirements include CHIN 201 Intermediate Chinese I, CHIN 202 Intermediate Chinese II, and eight 300-level courses taught in the target language. Please see the courses tab (p. ).
- For students placed into 300-level coursework, the major requirements include ten 300-level courses taught in the target language. Please see the courses tab (p. ).

Students may replace up to two 300-level courses with related courses. Related courses are those outside the department which are closely related to Chinese culture, as well as those departmental courses cross-listed with World Literature.

Students majoring in Chinese need to meet the major requirements outlined above in addition to the General Degree Requirements (p. 1212) and Arts and Sciences Undergraduate Degree Requirements (p. 1273).

**French**

Majors in French are expected to acquire the ability to understand, speak, read, and write in French and to develop a sound understanding of the relevant literatures and cultures.

**Course Requirements**

The major in French requires a minimum of 10 courses, equivalent to 30-35 credit hours.

Course requirements are as follows:

- For students placed into 200-level coursework, the major requirements include FRCH 201 Intermediate French I, FRCH 202 Intermediate French II, FRCH 320 Introduction to
French Literature, and seven additional 300-level courses taught in the target language, at least two of which must be numbered above 320.

• For students placed into 300-level coursework, the major requirements include FRCH 320 and nine additional 300-level courses taught in the target language, at least two of which must be numbered above 320. Please see the courses tab (p. 1273).

Students may replace up to two 300-level courses with related courses. Related courses are those outside the department which are closely related to French and Francophone culture, as well as those departmental courses cross-listed with World Literature.

Students majoring in French need to meet the major requirements outlined above in addition to the General Degree Requirements (p. 1212) and Arts and Sciences Undergraduate Degree Requirements (p. 1273).

Integrated Graduate Studies (French)

French majors may participate in the Integrated Graduate Studies Program (p. 1298), which makes it possible to complete both a BA and an MA in French in about five years of full-time study. The department particularly recommends the program to qualified students who are interested in seeking admission to professional schools or PhD programs. Upon admission to the program, IGS students register as students in the School of Graduate Studies and are subject to its policies, rules, and regulations.

German

Majors in German are expected to acquire the ability to understand, speak, read, and write in German and to develop a sound understanding of the relevant literatures and cultures.

Course Requirements

The major in German requires a minimum of 10 courses, equivalent to 30-35 credit hours.

Course requirements are as follows:

• For students placed into 200-level coursework, the major requirements include GRMN 201 Intermediate German I, GRMN 202 Intermediate German II, and eight 300-level courses taught in the target language from among those on the courses tab (p. 1212).

• For students placed into 300-level coursework, the major requirements include ten 300-level courses taught in the target language from among those on the courses tab (p. 1212).

Students may replace up to two 300-level courses with related courses. Related courses are those outside the department which are closely related to German culture, as well as those departmental courses cross-listed with World Literature.

Students majoring in German need to meet the major requirements outlined above in addition to the General Degree Requirements (p. 1212) and Arts and Sciences Undergraduate Degree Requirements (p. 1273).

Japanese Studies

Majors in Japanese Studies are expected to acquire the ability to understand, speak, read, and write in Japanese and to develop a sound understanding of the relevant literatures and cultures.

Course Requirements

For further information and course requirements for the major in Japanese Studies requirements, please see the Japanese Studies Program (p. 399).

Spanish

Majors in Spanish are expected to acquire the ability to understand, speak, read, and write in Spanish and to develop a sound understanding of the relevant literatures and cultures.

Course Requirements

The major in Spanish requires a minimum of 10 courses, equivalent to 30-35 credit hours.

Course requirements are as follows:

• For students placed into 200-level coursework, the major requirements include: SPAN 201 Intermediate Spanish I, SPAN 202 Intermediate Spanish II, and eight 300-level courses taught in the target language from among those on the courses tab (p. 1212).

• For students placed into 300-level coursework, the major requirements include ten 300-level courses taught in the target language from among those on the courses tab (p. 1212).

Students may replace up to two 300-level courses with related courses. Related courses are those outside the department which are closely related to Spanish culture, as well as those departmental courses cross-listed with World Literature.

Additional Information for Spanish majors:

• At least three of the 300-level courses should be numbered above 320.

Students majoring in Spanish need to meet the major requirements outlined above in addition to the General Degree Requirements (p. 1212) and Arts and Sciences Undergraduate Degree Requirements (p. 1273).

Minors

The Department of Modern Languages and Literatures offers courses of study leading to the following minors:

• Chinese Minor
• French Minor
• German Minor
• Japanese Studies Minor
• Italian Minor
• Russian Minor
• Spanish Minor

Hebrew language courses may also count toward the Judaic Studies Minor (p. 404).

Chinese Minor

The minor in Chinese requires a minimum of 5 courses, equivalent to 15-19 credit hours.

• For students placed into the introductory level (no previous knowledge of the language), the following courses are required:
Required Courses

CHIN 101  Elementary Chinese I  4
CHIN 102  Elementary Chinese II  4
CHIN 201  Intermediate Chinese I  4
CHIN 202  Intermediate Chinese II  4
One additional CHIN course at the 300-level  3
Total Units  19

- For students placed into 200-level coursework or higher, the minor requirements include five 200- and 300-level courses from among those on the courses tab (p.  ).

French Minor

The minor in French requires a minimum of 5 courses, equivalent to 15-19 credit hours.

- For students placed into the introductory level (no previous knowledge of the language), the following courses are required:

Required Coursework

Required Courses

FRCH 101  Elementary French I  4
FRCH 102  Elementary French II  4
FRCH 201  Intermediate French I  4
FRCH 202  Intermediate French II  4
One additional 300-level FRCH course taught in French  3
Total Units  19

- For students placed into 200-level coursework or higher, the minor requirements include five 200- and 300-level courses taught in the target language from among those on the courses tab (p.  ).

German Minor

The minor in German requires a minimum of 5 courses, equivalent to 15-19 credit hours.

- For students placed into the introductory level (no previous knowledge of the language), the following courses are required:

Required Courses

GRMN 101  Elementary German I  4
GRMN 102  Elementary German II  4
GRMN 201  Intermediate German I  4
GRMN 202  Intermediate German II  4
One additional GRMN course at the 300-level  3
Total Units  19

- For students placed into 200-level coursework or higher, the minor requirements include five 200- and 300-level courses from among those on the courses tab (p.  ).

Italian Minor

The minor in Italian requires a minimum of 5 courses, equivalent to 15-19 credit hours.

- For students placed into the introductory level (no previous knowledge of the language), the following courses are required:

Required Courses

ITAL 101  Elementary Italian I  4
ITAL 102  Elementary Italian II  4
ITAL 201  Review and Progress in Italian  4
ITAL 202  Read and Discuss Italian Texts  4
One additional ITAL course at the 300-level  3
Total Units  19

- For students placed into 200-level coursework or higher, the minor requirements include five 200- and 300-level courses from among those on the courses tab (p.  ).

Japanese Studies Minor

For further information and course requirements for the minor in Japanese Studies requirements, please see the Japanese Studies Program (p. 399).

Russian Minor

The minor in Russian requires a minimum of 5 courses, equivalent to 15-19 credit hours.

- For students placed into the introductory level (no previous knowledge of the language), the following courses are required:

Required Courses

RUSN 101  Elementary Russian I  4
RUSN 102  Elementary Russian II  4
RUSN 201  Intermediate Russian I  4
RUSN 202  Intermediate Russian II  4
One additional RUSN course at the 300-level  3
Total Units  19

- For students placed into 200-level coursework or higher, the minor requirements include five 200- and 300-level courses from among those on the courses tab (p.  ).

Spanish Minor

The minor in Spanish requires a minimum of 5 courses, equivalent to 15-19 credit hours.

- For students placed into the introductory level (no previous knowledge of the language), the following courses are required:

Required Courses

SPAN 101  Elementary Spanish I  4
SPAN 102  Elementary Spanish II  4
SPAN 201  Intermediate Spanish I  4
SPAN 202  Intermediate Spanish II  4
One additional SPAN course at the 300-level  3
Total Units  19

- For students placed into 200-level coursework or higher, the minor requirements include five 200- and 300-level courses from among those on the courses tab (p.  ).

Graduate Programs

The department offers the Master of Arts degree in French. This program is associated with the master’s degree program in World Literature.
The MA in French requires 10 courses, equivalent to 30 semester hours. An MA in French with a minor concentration in German, Japanese, or Spanish requires 36 semester hours. Full-time students are expected to complete the MA within two academic years.

The MA in French is conducted under the non-thesis option as described under the School of Graduate Studies (p. 1333) in the General Bulletin.

**ARAB Courses**

**ARAB 101. Beginning Arabic I. 4 Units.**
The course introduces learners of Arabic to the sound and writing systems of this language and provides them with basic structural and lexical knowledge to enable them to say things in Arabic, such as greeting others, thanking someone, introducing oneself, describing one's background, seeking and providing info and so forth. The ability to perform these language functions in real-life or lifelike situations is developed by engaging the learner in structured functional activities and grammatical exercises.

**ARAB 102. Beginning Arabic II. 4 Units.**
ARAB 102 builds on the proficiency that students should have acquired in ARAB 101. The course follows a student-centered communicative approach in which class time is used in active learning through pair or group activities, role-play, games, selective listening and reading and other activities. The course emphasizes the four basic skills, reading, speaking, listening and writing. Students will be exposed to real audiovisual material in order to enhance comprehension and they will have to develop short oral and written responses about it. Aspects of culture across the Arab world will be included as an element of learning the language. Recommended preparation: ARAB 101

**ARAB 201. Intermediate Arabic I. 4 Units.**
Intensive review of grammar and conversational skills in modern Arabic through readings, discussions and other activities that explore contemporary Arab life and culture. Recommended preparation: ARAB 102 or equivalent.

**ARAB 202. Intermediate Arabic II. 4 Units.**
ARAB 202 is a continuation of ARAB 201 and will enable the students to develop advanced communicative skills for the use of Modern Arabic. It will focus on speaking, listening, reading and writing skills, and emphasize creative use of the language. Recommended preparation: ARAB 201 or equivalent.

**ARAB 301. Advanced Arabic I. 3 Units.**
This is a higher level of Arabic study. The course objectives are to enhance the student's language skills and to develop ability to use high-level Arabic effectively. It is designed to help students move from the intermediate level of proficiency, which centers on daily life and the immediate world, to the advanced, which broadens to include topics of general and professional interest. Recommended preparation: ARAB 202 or equivalent.

**ARAB 307. Women in the Arab World. 3 Units.**
The purpose of this course is twofold: It is a course that allows students an in-depth look at the diverse women who represent a number of cultures in the Arab world in nations from the Mashrek to the Maghreb. The second primary goal of the course is to study such women through the eyes of leading Arab women theorists who have made an impact not only in their own countries, but also on disciplines intersecting with women's studies worldwide. We will study the Arab woman's place in her respective society, in political and economic systems, in education, and in the family. We will also analyze her contributions to art and literature as well as to the sciences. The course will provide an overview of the Arab woman throughout history, from her origins to her place within recent movements within the Arab Spring and other current world events. As Arab women are Muslim, Christian, and Jewish, views of women within these major world religions will also be taken into account as we study the Arab woman as well as religion's impact on culture in the Middle East and in the Maghreb in particular. In the course, we will utilize theoretical texts, but also case studies as well as examples from media and the arts. During the semester, we will take advantage of teleconferencing opportunities between CWCU and two major academic units for Women's Studies in the Arab world: The Institute for Women's Studies in the Arab World (IWSAW) in Beirut, Lebanon, and the University of Jordan's Center for Women's Studies in Amman. Offered as ARAB 337, ETHS 337 and WGST 337. Counts for CAS Global & Cultural Diversity Requirement.

**ARAB 349. The Arab World Experience. 3 Units.**
Taught and led by Case faculty, The Arab World Experience is a spring semester course with a spring break study abroad component in a Middle Eastern or North African country supplemented by course meetings before and after travel. It will rotate among countries such as Jordan, Lebanon, Morocco, etc. and be taught by faculty with appropriate area expertise in Arabic, Women's and Gender Studies, and/or Ethnic Studies. The course focuses on topics such as history, politics, culture, and gender relations within the society of study. Workload and learning outcomes are commensurate with a semester-long three credit hour course. Guest lectures in the host country are an important component of the course as they bring a fresh, authentic perspective to the aforementioned topics discussed. There will be three three-hour meetings prior to travel, required reading, and one three-hour meeting after travel. In the host country, students will spend seven days (five-eight hours per day) in seminars, discussions, and site visits. Student grades are determined on the basis of participation, attendance, a daily experiential learning journal, interviews with guest speakers, and a final exam. Offered as ARAB 349, ETHS 349 and WGST 349. Counts for CAS Global & Cultural Diversity Requirement.

**ARAB 399. Independent Study in Arabic. 1 - 3 Units.**
Topics will be constructed to fit the interest of a student who has already taken an advanced course in Arabic. Prereq: ARAB 301.

**CHIN Courses**

**CHIN 101. Elementary Chinese I. 4 Units.**
Introductory course in speaking, understanding, reading and writing Chinese. Students are expected to achieve control of the sound system and basic sentence patterns of standard Mandarin Chinese. The course emphasizes speaking and aural comprehension.

**CHIN 102. Elementary Chinese II. 4 Units.**
Continuation of CHIN 101. Recommended preparation: Consent of department.
CHIN 201. Intermediate Chinese I. 4 Units.
Emphasizes basic structures of standard Mandarin Chinese; helps students improve reading, writing, listening and speaking abilities. Chinese culture, society, and people introduced through supplementary materials and activities. Recommended preparation: CHIN 102 or equivalent.

CHIN 202. Intermediate Chinese II. 4 Units.
Continuation of CHIN 201. Students must use course material offered by the Online Language Learning Center in addition to class meetings. Recommended preparation: CHIN 201.

CHIN 203. Intermediate Chinese III. 4 Units.
As the continuation of CHIN 202, CHIN 203 is the third course at the intermediate level in Chinese language at CWRU. In this course, students focus on conversation combined with further study of grammatical and syntactic rules, and of cultural elements. The objective is a further development of communicative skills in listening, speaking, reading, and writing. Upon completion of this course, students' proficiency will be optimal for entering CHIN 301. The course is a 4 credit course. The course uses integrated Chinese Level 2, Part 1, from the same series of textbooks for CHIN 201 and 202. The course covers 7 lessons of the book, two weeks for each lesson, in average. Students are expected to preview each lesson before class, to complete the assigned homework, and to study after class the content covered that day. The final grade will be based on the mid-term and final exams, and on quizzes. There will be a quiz at the end of each lesson. Chinese word-processing ability is one of the objectives of this course. Students will learn how to type Chinese texts using the Pinyin input method. Prereq: CHIN 202, or two years of study, or prerequisites not met permission.

CHIN 240. Modern Chinese Literature in Translation. 3 Units.
This course examines Modern Chinese Literature from the beginning of the 20th century to contemporary period in the contexts of Chinese historical and cultural transformations. It examines representative works of the major literary genres, including fiction, poetry, drama, and prose writing. We will be making the following inquiries: What is modern Chinese literature? What does it tell us about the cultural, social, psychological, and historical changes that occurred in modern China? Who are the main literary and cultural figures, and what did they contribute to the construction of the Chinese nation? How did Western thoughts impact on the ways in which Chinese reflected on their own cultural identities and social and gender relationships? This course is taught in English. Offered as CHIN 240, ASIA 240 and WLIT 240. Counts for CAS Global & Cultural Diversity Requirement.

CHIN 250. Classical Chinese Literature in Translation. 3 Units.
This course is a survey of the classical Chinese literature from the pre-Qin Period to the fall of Qing Dynasty in 1911. Students will be introduced to a variety of forms and genres, including classical poetry, lyric, ari, elegy, rhapsody, folk song, narrative verse, parallel prose, classical-language short story, vernacular short story, novel, drama, etc. This course is taught in English. Offered as CHIN 250, ASIA 250 and WLIT 250. Counts for CAS Global & Cultural Diversity Requirement.

CHIN 253. Introducing Chinese Religions. 3 Units.
This “topics” course offers an introduction to the academic study of Chinese religions. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and a basic religious literacy in the nuances and complexities in Chinese religions within various historical and socio-cultural contexts. Section topics might include, but are not limited to: Confucianism, Daoism, Chinese Buddhism, Gender and Sexuality in Chinese Religions. Students may repeat the course for credit once (two times total for 6 credits), provided that the two sections are different. Offered as RLGN 153, ETHS 153 and CHIN 253. Counts for CAS Global & Cultural Diversity Requirement.

CHIN 253C. Religion and Philosophy in China. 3 Units.
This course critically examines the three principal religious and philosophical traditions of China: the Confucian, Daoist, and Chinese Buddhist traditions. Through a combination of assigned print and online readings, video clips and documentaries, class discussions, and written assignments, students explore the origins and historical developments, principal thinkers, central religious and doctrinal themes, ethics, spirituality, popular deviations, social movements, and contemporary developments of these three major religious and philosophical traditions of China. Students will consider the wider social, cultural, ethical, economic, and political dimensions of Chinese religions and philosophies generally, and themes of community and society, identity constructions, personal experiences, movements, as well as their socio-cultural reproductions in contemporary China, and where appropriate, the Chinese Diaspora in North America. Offered as CHIN 253C, ETHS 253C, PHIL 253 and RLGN 253. Counts for CAS Global & Cultural Diversity Requirement.

CHIN 301. Advanced Chinese I. 4 Units.
Students work to achieve fluency in listening, speaking, reading and writing. Students must attend Language Resource Center in addition to class meetings. Recommended preparation: CHIN 202 or equivalent. Counts for CAS Global & Cultural Diversity Requirement.

CHIN 302. Advanced Chinese II. 4 Units.
Continuation of CHIN 301. Counts for CAS Global & Cultural Diversity Requirement.

CHIN 307. Body, Health and Medicine in Chinese Religions: Historical and Contemporary Perspectives. 3 Units.
This course critically evaluates the history and development of traditional Chinese approaches to health and medicine in the context of Chinese religious, philosophical, and socio-cultural history. It examines the constructions of the body in Chinese religious and philosophical thought across different historical periods and evaluates their significance and implications for understanding Chinese approaches to health and medicine. It discusses the conceptions of “health” and “good health” in ancient China, the distinction between “healing” and “curing,” the development of the complementary yin-yang and five phases (wuxing) theories, understandings of nature (xing) and body (ti), the concept of qi as life force, and various microcosm-macrocosm analogies that emerged from Chinese religious and philosophical traditions. It explores how these religious and philosophical frameworks, beginning with the Daoist classic, Basic Questions in the Inner Classic of the Yellow Emperor (Huangdi Neijing Suwen) have evolved to undergird the development of diet, acupuncture, moxibustion, meditation, and various alchemical practices within Chinese holistic conceptions of health and practices of Traditional Chinese Medicine. Offered as RLGN 307, RLGN 407, CHIN 307, HSTY 308, and ETHS 307. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.
CHIN 316. Christianity in China. 3 Units.
This course critically evaluates Christianity's long history in China, beginning with the "Luminous Religion" (Jingjiao) that was propagated by Assyrian Christian missionaries in Tang China (7th century CE), the missionary endeavors of Catholic and Protestant foreign missionaries and mission societies, the rise of indigenous Chinese Christianities that sought independence from foreign missionaries, the impact of communist rule and the Cultural Revolution, and current developments involving both the official government-approved churches (i.e., the Three Self Patriotic Movement and the Chinese Patriotic Catholic Association) on the one hand, and the house church movement (jiaoting jiaohui) on the other hand. Students will critically discuss and analyze the historical dimensions of Christianity's presence in China and engagement with various social, cultural, political, philosophical, and religious aspects of Chinese society, past and present, and consider the implications of emergent forms of contemporary indigenous Chinese Christian movements for the future of Chinese Christianity. Offered as RLGN 316, RLGN 416, HSTY 322, CHIN 316 and ETHS 326. Counts for CAS Global & Cultural Diversity Requirement.

CHIN 320. Chinese Popular Culture. 3 Units.
In this course we are going to study Chinese (including Mainland China, Hong Kong, Taiwan, and Chinese Diaspora) popular culture since the 1980s. By examining different forms of popular culture, including popular literature, film, music, TV programs, posters, the Internet, etc., we will be looking into their political, ideological, sociological, cultural, and psychological mechanisms. The film viewing will take place outside the class. Offered as: CHIN 320, ASIA 320 and WLIT 320. Counts for CAS Global & Cultural Diversity Requirement.

CHIN 330. Chinese Cinema. 3 Units.
This course is an exploration to the history of and critical issues in Chinese cinema: we will discuss early film making in Shanghai, leftist melodrama, Socialist films, the Chinese New Wave, underground films, the film making in the era of globalization, and etc. Themes and genres that will be investigated include melodrama, the "Fifth Generation", underground film making, filmic representations of women, minority films, and historical epics. Films from mainland China, Hong Kong, Taiwan, and diasporic communities will be discussed to illuminate what it means to be "Chinese." All of the films in this course come with English subtitles; the film viewing will take place outside the class. Offered as CHIN 330 and ASIA 330. Counts for CAS Global & Cultural Diversity Requirement.

CHIN 340. China Modernizes. 3 Units.
This three credit-hour course is a content-based Chinese language course, which combines Chinese language learning with an introduction to various dimensions of modernization in contemporary China, including economic, cultural, social, political, and technological changes such as business and jobs, urban and rural development and migration, housing and tourism, as a result of economic reforms, trade expansion, international relations, foreign investments, technology transfer, education, science and technology advancement, especially in the production, research and development, and market expansion. The course will also assess the impacts of these changes on various aspects of globalization and vice versa. This class is taught in both Chinese and English. At the end of the class, the students are expected to have improved both their Chinese language proficiency and their competence of understanding, communicating, and critically thinking the covered China related topics. Counts for CAS Global & Cultural Diversity Requirement. Prereq: CHIN 202.

CHIN 350. China and Green Cultural Transformation. 3 Units.
Taught in Chinese, this course aims at enhancing the students' proficiency in listening to, speaking, reading and writing Chinese at the intermediate and higher levels. As a content-driven course, it introduces students to the recent major green culture movements in China, focusing on the way the green cultural changes took place in relation to globalization, environment and climate change, technology innovation, income redistribution, domestic consumption, and education, to meet the challenges of financial crisis, climate change, energy insecurity, and international competition. At the end of the semester, the students are expected to be able to understand readings and audiovisual materials, as well as communicate and present orally and in written formats green cultural issues covered in the course. Students who take CHIN350 are not allowed to earn credit for CHIN350D (Department Seminar), vice versa. Counts for CAS Global & Cultural Diversity Requirement. Prereq: CHIN 301.

CHIN 350D. China and Green Cultural Transformation. 3 Units.
Taught in Chinese, this course aims at enhancing the students' proficiency in listening to, speaking, reading and writing Chinese at the intermediate and higher levels. As a content-driven course, it introduces students to the recent major green culture movements in China, focusing on the way the green cultural changes took place in relation to globalization, environment and climate change, technology innovation, income redistribution, domestic consumption, and education, to meet the challenges of financial crisis, climate change, energy insecurity, and international competition. At the end of the semester, the students are expected to be able to understand readings and audiovisual materials, as well as communicate and present orally and in written formats green cultural issues covered in the course. Students who take CHIN350 are not allowed to earn credit for CHIN350D (Department Seminar), vice versa. Counts for CAS Global & Cultural Diversity Requirement. Prereq: CHIN 301.

CHIN 350E. China and Globalization. 3 Units.
Taught in Chinese, this course aims at enhancing the students' proficiency in listening to, speaking, reading and writing Chinese at the intermediate and higher levels. As a content-driven course, it introduces students to the recent major green culture movements in China, focusing on the way the green cultural changes took place in relation to globalization, environment and climate change, technology innovation, income redistribution, domestic consumption, and education, to meet the challenges of financial crisis, climate change, energy insecurity, and international competition. At the end of the semester, the students are expected to be able to understand readings and audiovisual materials, as well as communicate and present orally and in written formats green cultural issues covered in the course. Students who take CHIN350 are not allowed to earn credit for CHIN350D (Department Seminar), vice versa. Counts for CAS Global & Cultural Diversity Requirement. Prereq: CHIN 301.

CHIN 380. Contemporary Chinese Texts I. 3 Units.
This course is designed for students who have completed CHIN 302 or equivalent. It provides intensive trainings in communicational skills by reading, watching, and discussing a variety of texts. Counts for CAS Global & Cultural Diversity Requirement. Prereq: CHIN 302 or equivalent.

CHIN 381. Contemporary Chinese Texts II. 3 Units.
This course is designed for students who have completed CHIN 380 or equivalent. It provides intensive training in communication skills by reading, watching, and discussing a variety of texts. Counts for CAS Global & Cultural Diversity Requirement. Prereq: CHIN 380.

CHIN 396. Senior Capstone - Chinese. 3 Units.
This course is a required capstone course for Chinese majors. Students will complete a substantial research thesis in Chinese or English and make a public presentation in English with significant Chinese elements. Students take this course under the supervision of their faculty advisor. Permission required.

CHIN 397. Senior Thesis I. 3 Units.
This course is the first of the two-semester thesis-writing sequence for majors in Chinese pursuing honors in the major. The two-semester sequence leads to a substantial research paper in Chinese or English with significant Chinese elements. Students take this course under the supervision of their faculty advisor. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Chinese major with Senior standing.
CHIN 398. Senior Thesis II. 3 Units.
This course is the second of the two-semester thesis-writing sequence required for Chinese majors pursuing honors in the major. The two semester sequence leads to a substantial research paper in Chinese or English with significant Chinese elements. Students take this course under the supervision of their faculty advisor. Prereq: CHIN 397.

CHIN 399. Independent Study. 1 - 3 Units.
Directed study for those students who have progressed beyond available course offerings and who want to continue study of Chinese language, Chinese culture, Chinese literature, or other Chinese Studies topics in Chinese. Counts for CAS Global & Cultural Diversity Requirement. Prereq: CHIN 302.

FRCH Courses

FRCH 101. Elementary French I. 4 Units.
Emphasizes conversational skills. Students are expected to achieve control of sound system and basic sentence structures of French. Students must complete assignments at the Online Language Learning Center in addition to attending scheduled class meetings.
FRCH 102. Elementary French II. 4 Units.

FRCH 201. Intermediate French I. 4 Units.
Intensive review of grammar and usage through readings, discussions and other activities that emphasize contemporary French life. Students must complete assignments at the Online Language Learning Center in addition to attending scheduled class meetings. Recommended preparation: FRCH 102 or equivalent.

FRCH 202. Intermediate French II. 4 Units.
A continuation of FRCH 201, the course focuses on the acquisition of intermediate-level skills in language and culture. Students must complete assignments at the Online Language Learning Center in addition to attending scheduled class meetings. Recommended preparation: FRCH 201 or equivalent.

FRCH 208. The Montreal Experience. 1 Unit.
One-week immersion learning experience performing community service in Montreal, Canada. Students meet several times for orientation before spending spring break in French-speaking Montreal. Community service may include volunteering in a homeless center, a hospital, or school. Application available from Department office. This course may be repeated once. Permit required. Prereq or Coreq: FRCH 202 or equivalent.

FRCH 295. The Francophone World. 3 Units.
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (and where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle-East (Lebanon, Syria); the Caribbean (Martinique, Guadeloupe, Haiti); Southeast Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg). FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. Offered as AFST 295, ETHS 295, FRCH 295, and WLIT 295. Counts for CAS Global & Cultural Diversity Requirement.

FRCH 308. Immigration and the Paris Experience. 3 Units.
Three-week immersion learning experience living and studying in Paris. The focus of the course is the culture, literature, and the arts of the African, Arab, and Asian communities of Paris. At least half of the course looks at issues surrounding immigration that affect women in particular. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308/408 do coursework in French. WLIT 308/408, ETHS 308, and WGST 308 students have the option of completing coursework in English. Graduate students have additional course requirements. Offered as FRCH 308, WLIT 308, ETHS 308, WGST 308, FRCH 408, and WLIT 408. Counts for CAS Global & Cultural Diversity Requirement. Prereq: FRCH 202.

FRCH 309. French for Diplomacy and International Relations. 3 Units.
French for Diplomacy is an upper-level course with a focus on learning the linguistic and socio-cultural competency specific to the professions associated with diplomacy and international relations within the Francophone world. The course will outline the characteristics of European institutions and will focus on interpersonal and social relations necessary for working within them. In this course, students will develop their communication and comprehension skills through oral and written activities in the context of authentic situations of negotiations, thematic presentations and reports including missions and projects. Some examples of themes covered are negotiations in the professional world, economics, social and human rights, finance, education, peacekeeping and ecology. Finally, whenever possible, the course will be complemented by cultural exchanges in conjunction with programs featured by the French Consulate in Chicago. Counts for CAS Global & Cultural Diversity. This course prepares students for the French for Professions Diploma (DFP Diplômes de Français Professionnel) in International Relations offered by the French Chamber of Commerce and Industry of Paris. Students may undertake the DFP on a voluntary basis. Students must pay a nominal fee for certification testing. Counts for CAS Global & Cultural Diversity Requirement. Prereq: FRCH 202.

FRCH 310. Advanced Composition and Reading. 3 Units.
An initiation to the literature of Francophone expression with a focus on close reading. Texts may include short stories, essays, and novels. Students engage in the discussion of their readings and learn how to express their ideas both orally and in written form. Counts for CAS Global & Cultural Diversity Requirement. Prereq: FRCH 202 or equivalent.

FRCH 311. Advanced Conversation I. 3 Units.
Designed to enhance pronunciation, speaking and listening-comprehension through the discussion of French literature and media for children. Required for Teacher Licensure candidates. Prereq: FRCH 202 or equivalent.

FRCH 312. Advanced Conversation II. 3 Units.
A functional approach to conversation. Students work to develop fluency in spoken French using current colloquial vocabulary and focusing on current issues. Practice in using speech appropriate to a variety of situations, including public debates. Counts for CAS Global & Cultural Diversity Requirement. Prereq: FRCH 202 or equivalent.
FRCH 313. Medical French. 3 Units.
Medical French is an upper-level course with a focus on health care in France and other Francophone countries. Students gain knowledge of the health care structures of various Francophone countries, as well as the vocabulary used in professional medical communication. Special emphasis on Doctors without Borders (Medecins sans frontieres). There will be visits to local hospitals and health care sites. Press articles, media reports, films, videos, and short literary texts are used as resources. Offered as FRCH 313 and FRCH 413. Counts for CAS Global & Cultural Diversity Requirement. Prereq: FRCH 202 or equivalent.

FRCH 314. Translation Techniques. 3 Units.
Contrastive grammar analysis and stylistics are used to foster linguistic awareness and to introduce students to the methods and skills of translation. Recommended preparation: FRCH 310. Counts for CAS Global & Cultural Diversity Requirement. Prereq: FRCH 202 or equivalent.

FRCH 315. French for Business. 3 Units.
Business French is an upper-level course with a focus on the economic life of France and other Francophone countries. In this course, students will enhance their comprehension and communications skills through oral and written activities in the context of authentic situations of negotiations as related to the economic structures and the business organization of Francophone countries. Some examples of themes covered are negotiations in the professional world, economics, social rights, finance, and business and commercial contexts. Finally, whenever possible, the course will be complemented by cultural exchanges in conjunction with programs featured by the French Consulate in Chicago and/or internships in French-speaking companies in the region or abroad. Counts for CAS Global & Cultural Diversity Requirement. This course prepares students for the French for Professions Diploma (DFP, Diplômes de Français Professionnel) in Business offered by the French Chamber of Commerce and Industry of Paris. Students may undertake the DFP on a voluntary basis. Students must pay a nominal fee for certification testing. Counts for CAS Global & Cultural Diversity Requirement. Prereq: FRCH 202 or equivalent.

FRCH 316. Contemporary France. 3 Units.
A study of contemporary France, this course features discussions and lectures on a variety of topics (geography, political and social life, contemporary culture) to develop factual knowledge about France and a sound understanding of current issues as presented in the media. Counts for CAS Global & Cultural Diversity Requirement. Taught in French. An introduction to literary analysis through the study of important works of French literature. Written assignments are designed to develop skills in close reading, to introduce students to literary terminology in French, and to develop a capacity for clear, precise communication of an argument. Classes are discussion-based. Recommended preparation: FRCH 310. Counts as SAGES Departmental Seminar. Prereq: FRCH 202 or equivalent.

FRCH 317. French Cinema. 3 Units.

FRCH 318. The Origins of France. 3 Units.
Examination through texts, films, and other media of major historical, intellectual, and artistic influences that have shaped the evolution of French civilization. Students will attempt to identify the values and myths that have contributed to the ongoing formation of modern France. Recommended preparation: FRCH 310. Counts for CAS Global & Cultural Diversity Requirement. Prereq: FRCH 202.

FRCH 319. Modern France. 3 Units.

FRCH 320. Introduction to French Literature. 3 Units.
Taught in French. An introduction to literary analysis through the study of important works of French literature. Written assignments are designed to develop skills in close reading, to introduce students to literary terminology in French, and to develop a capacity for clear, precise communication of an argument. Classes are discussion-based. Recommended preparation: FRCH 310. Counts as SAGES Departmental Seminar. Prereq: FRCH 202 or equivalent.

FRCH 321. Twelfth to Sixteenth-Century French Literature. 3 Units.
Medieval and Renaissance literature, from the chanson de geste and the roman courtois to Rabelais and Montaigne. Authors, works and topics may vary. May be offered on both Medieval and Renaissance, or on either. May be repeated if time period is different. Maximum 6 credits. Offered as: FRCH 321 and FRCH 421. Counts for CAS Global & Cultural Diversity Requirement. Prereq: FRCH 202. Coreq: FRCH 320.

FRCH 328. Science and Technology in France. 3 Units.
This course is an exploration of the development of science and technology in France, from their rise in the 18th and 19th centuries to their recent renaissance, from both a scientific and a humanities perspective. A significant component will focus on the contributions of women to science in France. Site visits in France will include the Marie Curie laboratory, the Pasteur Institute, and the Museum of Natural History. Readings will come from the fields of history of science, French cultural history, and French literature. Offered as FRCH 328, FRCH 428, WGST 333, WLIT 353 and WLIT 453. Counts for CAS Global & Cultural Diversity Requirement. Prereq: FRCH 202 or Requisites Not Met permission.

FRCH 331. Seventeenth-Century French Literature. 3 Units.
The Age of Classicism, from Racine to Mme de Lafayette. Authors, works and topics may vary. Prereq: FRCH 320.
FRCH 337. Women in the Arab World. 3 Units.
The purpose of this course is twofold: It is a course that allows students an in-depth look at the diverse women who represent a number of cultures in the Arab world in nations from the Mashrek to the Maghreb. The second primary goal of the course is to study such women through the eyes of leading Arab women theorists who have made an impact not only in their own countries, but also on disciplines intersecting with women's studies worldwide. We will study the Arab woman's place in her respective society, in political and economic systems, in education, and in the family. We will also analyze her contributions to art and literature as well as to the sciences. The course will provide an overview of the Arab woman throughout history, from her origins to her place within recent movements within the Arab Spring and other current world events. As Arab women are Muslim, Christian, and Jewish, views of women within these major world religions will also be taken into account as we study the Arab woman as well as religion's impact on culture in the Middle East and in the Maghreb in particular. In the course, we will utilize theoretical texts, but also case studies as well as examples from media and the arts. During the semester, we will take advantage of teleconferencing opportunities between CWRU and two major academic units for Women's Studies in the Arab world: The Institute for Women's Studies in the Arab World (IWSAW) in Beirut, Lebanon, and the University of Jordan's Center for Women's Studies in Amman. Offered as FRCH 337, FRCH 437, ARAB 337, ETHS 337 and WGST 337. Counts for CAS Global & Cultural Diversity Requirement.

FRCH 341. Eighteenth Century French Literature. 3 Units.
Topics from the Age of Enlightenment, from libertinage to revolution. Authors and works may vary. Offered as FRCH 341 and FRCH 441. Prereq or Coreq: FRCH 320.

FRCH 351. Nineteenth-Century French Literature. 3 Units.
Romanticism, realism, and naturalism in the novel and the dramatic tradition. Authors, works, and topics may vary. Offered as FRCH 351 and FRCH 451. Counts for CAS Global & Cultural Diversity Requirement. Prereq or Coreq: FRCH 320.

FRCH 361. Twentieth-Century French Literature. 3 Units.
A study of representative novelists (e.g., Proust, Gide, Colette, Sartre, Beauvoir) and playwrights (e.g., Claudel, Beckett, Genet) in historical context. Authors, works, and topics may vary. Offered as FRCH 361 and FRCH 461. Prereq or Coreq: FRCH 320.

FRCH 372. Topics in French Drama. 3 Units.
A topical approach to issues and problems specific to drama. Plays, playwrights, aesthetic theories, and historical periods studied in this course may vary. Offered as FRCH 372 and FRCH 472. Counts for CAS Global & Cultural Diversity Requirement. Prereq or Coreq: FRCH 320.

FRCH 373. The Novel and the Novella. 3 Units.
A study of narrative fiction focused on either a particular genre (the novel, the short story) or a particular type of novel (psychological novel, realist novel, detective novel), tale (the fantastic tale, the fairytale), or novella. Offered as FRCH 373 and FRCH 473. Prereq or Coreq: FRCH 320.

FRCH 374. Major Writers and Literary Movements. 3 Units.
In-depth study of the work of a major writer, film director, or intellectual figure; or of a significant literary, intellectual, or artistic movement. Approaches, content, and instructor will vary. Offered as FRCH 374 and FRCH 474. Counts for CAS Global & Cultural Diversity Requirement. Prereq: FRCH 320.

FRCH 375. Francophone Literature. 3 Units.
An examination of Francophone literature focused on the problematics of identity within the colonial and post-colonial context. Writers and works may vary. Offered as FRCH 375 and FRCH 475. Counts for CAS Global & Cultural Diversity Requirement. Prereq or Coreq: FRCH 320.

FRCH 377. Special Topics. 3 Units.
The special topics course is designed to provide a forum for specific themes or subjects not otherwise covered in the curriculum. Approaches and content will vary. Maximum 6 credits. Offered as FRCH 377 and FRCH 477. Counts for CAS Global & Cultural Diversity Requirement. Prereq or Coreq: FRCH 320.

FRCH 395. French Literature in Translation. 3 Units.
Topics vary according to student and faculty interest. May include Francophone literature, literature and cinema, women writers, contemporary literature. Counts toward French major only as related course. No knowledge of French required. Offered as FRCH 395 and FRCH 495.

FRCH 396. Senior Capstone - French. 3 Units.
The Senior Capstone in French in an independent study project chosen in consultation with a capstone advisor. The capstone project should reflect both the student's interest within French and/or Francophone Studies and the courses he or she has taken to fulfill the major. The project requires independent research using an approved bibliography and plan of action. In addition to written research, the student will also present the capstone project in a public forum that is agreed upon by the project advisor and the student. Counts as SAGES Senior Capstone. Prereq: Senior status required. Major in French or Francophone Studies required.

FRCH 397. Honors Thesis I. 3 Units.
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper in French. Limited to senior majors. Permit required.

FRCH 398. Honors Thesis II. 3 Units.
Continuation of FRCH 397. Limited to senior majors. Permit required. Prereq: FRCH 397.

FRCH 399. Independent Study. 1 - 3 Units.
The course is for students who have special interests and commitments that are not addressed in regular courses, and who wish to work independently.

FRCH 408. Immigration and the Paris Experience. 3 Units.
Three-week immersion learning experience living and studying in Paris. The focus of the course is the culture, literature, and the arts of the African, Arab, and Asian communities of Paris. At least half of the course looks at issues surrounding immigration that affect women in particular. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308/408 do coursework in French. WLIT 308/408, ETHS 308, and WGST 308 students have the option of completing coursework in English. Graduate students have additional course requirements. Offered as FRCH 308, WLIT 308, ETHS 308, WGST 308, FRCH 408, and WLIT 408. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.
FRCH 413. Medical French. 3 Units.
Medical French is an upper-level course with a focus on health care in France and other Francophone countries. Students gain knowledge of the health care structures of various Francophone countries, as well as the vocabulary used in professional medical communication. Special emphasis on Doctors without Borders (Medecins sans frontieres). There will be visits to local hospitals and health care sites. Press articles, media reports, films, videos, and short literary texts are used as resources. Offered as FRCH 313 and FRCH 413. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate Standing.

FRCH 421. Twelfth to Sixteenth-Century French Literature. 3 Units.
Medieval and Renaissance literature, from the chanson de geste and the roman courtois to Rabelais and Montaigne. Authors, works and topics may vary. May be offered on both Medieval and Renaissance, or on either. May be repeated if time period is different. Maximum 6 credits. Offered as: FRCH 321 and FRCH 421. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate Standing.

FRCH 428. Science and Technology in France. 3 Units.
This course is an exploration of the development of science and technology in France, from their rise in the 18th and 19th centuries to their recent renaissance, from both a scientific and a humanities perspective. A significant component will focus on the contributions of women to science in France. Site visits in France will include the Marie Curie laboratory, the Pasteur Institute, and the Museum of Natural History. Readings will come from the fields of history of science, French cultural history, and French literature. Offered as FRCH 328, FRCH 428, WGST 333, WLIT 353 and WLIT 453. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate Standing.

FRCH 437. Women in the Arab World. 3 Units.
The purpose of this course is twofold: It is a course that allows students an in-depth look at the diverse women who represent a number of cultures in the Arab world in nations from the Mashrek to the Maghreb. The second primary goal of the course is to study such women through the eyes of leading Arab women theorists who have made an impact not only in their own countries, but also on disciplines intersecting with women's studies worldwide. We will study the Arab woman's place in her respective society, in political and economic systems, in education, and in the family. We will also analyze her contributions to art and literature as well as to the sciences. The course will provide an overview of the Arab woman throughout history, from her origins to her place within recent movements within the Arab Spring and other current world events. As Arab women are Muslim, Christian, and Jewish, views of women within these major world religions will also be taken into account as we study the Arab woman as well as religion's impact on culture in the Middle East and in the Maghreb in particular. In the course, we will utilize theoretical texts, but also case studies as well as examples from media and the arts. During the semester, we will take advantage of teleconferencing opportunities between CWRU and two major academic units for Women's Studies in the Arab world: The Institute for Women's Studies in the Arab world (IWSA/W) in Beirut, Lebanon, and the University of Jordan's Center for Women's Studies in Amman. Offered as FRCH 337, FRCH 437, ARAB 337, ETHS 337 and WGST 337. Counts for CAS Global & Cultural Diversity Requirement.

FRCH 441. Eighteenth Century French Literature. 3 Units.
Topics from the Age of Enlightenment, from libertinage to revolution. Authors and works may vary. Offered as FRCH 341 and FRCH 441.

FRCH 451. Nineteenth-Century French Literature. 3 Units.
Romanticism, realism, and naturalism in the novel and the dramatic tradition. Authors, works, and topics may vary. Offered as FRCH 351 and FRCH 451. Counts for CAS Global & Cultural Diversity Requirement.

FRCH 461. Twentieth-Century French Literature. 3 Units.
A study of representative novelists (e.g., Proust, Gide, Colette, Sartre, Beauvoir) and playwrights (e.g., Claudel, Beckett, Genet) in historical context. Authors, works, and topics may vary. Offered as FRCH 361 and FRCH 461.

FRCH 472. Topics in French Drama. 3 Units.
A topical approach to issues and problems specific to drama. Plays, playwrights, aesthetic theories, and historical periods studied in this course may vary. Offered as FRCH 372 and FRCH 472. Counts for CAS Global & Cultural Diversity Requirement.

FRCH 473. The Novel and the Novella. 3 Units.
A study of narrative fiction focused on either a particular genre (the novel, the short story) or a particular type of novel (psychological novel, realist novel, detective novel), tale (the fantastic tale, the fairytale), or novella. Offered as FRCH 373 and FRCH 473.

FRCH 474. Major Writers and Literary Movements. 3 Units.
In-depth study of the work of a major writer, film director, or intellectual figure; or of a significant literary, intellectual, or artistic movement. Approaches, content, and instructor will vary. Offered as FRCH 374 and FRCH 474. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

FRCH 475. Francophone Literature. 3 Units.
An examination of Francophone literature focused on the problematics of identity within the colonial and post-colonial context. Writers and works may vary. Offered as FRCH 375 and FRCH 475. Counts for CAS Global & Cultural Diversity Requirement.

FRCH 477. Special Topics. 3 Units.
The special topics course is designed to provide a forum for specific themes or subjects not otherwise covered in the curriculum. Approaches and content will vary. Maximum 6 credits. Offered as FRCH 377 and FRCH 477. Counts for CAS Global & Cultural Diversity Requirement.

FRCH 495. French Literature in Translation. 3 Units.
Topics vary according to student and faculty interest. May include Francophone literature, literature and cinema, women writers, contemporary literature. Counts toward French major only as related course. No knowledge of French required. Offered as FRCH 395 and FRCH 495. Coreq: Graduate standing.

FRCH 601. Independent Study. 1 - 18 Units.
For individual students or larger groups with special interests.

FRCH 651. Thesis M.A.. 6 - 9 Units.
Thesis M.A. serves the graduate plan A of the Graduate Handbook.

GRMN Courses

GRMN 101. Elementary German I. 4 Units.
Introductory course emphasizing conversational skills. Students achieve control of the sound system and basic sentence structures of spoken and written German. Students must use the course material offered by the Online Language Learning Center in addition to class meetings.

GRMN 102. Elementary German II. 4 Units.
Continuation of GRMN 101, emphasizing conversational skills. Prereq: GRMN 101 or equivalent.

GRMN 201. Intermediate German I. 4 Units.
Emphasizes both language and culture and is taught in German. Review of grammar and usage of German while studying texts and videotapes which focus on contemporary life in Germany. Prereq: GRMN 102 or equivalent.
GRMN 202. Intermediate German II. 4 Units.
Continuation of GRMN 201; conducted in German. Study of texts and videotapes which focus on contemporary life in Germany. Prereq: GRMN 201 or equivalent.

GRMN 303. German Culture & Civilization. 3 Units.
Examines aspects of contemporary Germany, including political and social systems and cultural life through seminar discussions of texts, films, and other media. Along with oral presentations and essay tests, students must select a research topic of interest to the discipline and write an analytic essay in German on the topic. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: GRMN 202.

GRMN 310. Advanced German Reading and Composition. 3 Units.
This advanced-level course focuses on reading and writing on the German-speaking world for students who have already studied intermediate German. Develops abilities to read authentic cultural texts, such as contemporary newspaper and magazine articles on current affairs; readings increase progressively in length and vary in genre. It also builds advanced writing skills through composition, such as summaries, reviews, opinion pieces, letters, short creative texts, and analytic essays. Includes instruction on use of English- and German-language research tools. Taught in German. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: GRMN 202 or equivalent.

GRMN 311. Advanced Conversation. 3 Units.
Students work to improve fluency in spoken German. Topics include contemporary issues; current vocabulary is stressed. Students practice using speech appropriate to various situations and participate in topical discussions. Prereq: GRMN 202 or equivalent.

GRMN 312. German Proficiency Through Drama. 3 Units.
Readings begin with single scenes and progress to full length radio plays and theater plays which gradually increase in linguistic difficulty and complexity of central themes. Introduction to the elements of drama such as dialogue, character and dramatic structure, as well as the genres of tragedy, comedy, and tragicomedy. Focus: effective communication of critical, interpretative, and analytic ideas in discussion and in writing. Counts as SAGES Departmental Seminar. Prereq: GRMN 202 or equivalent.

GRMN 313. Intro to German Literature. 3 Units.
Introduction to German literature and the cultural issues it addresses. Readings include the main literary and folk genres (short texts or excerpts), gradually increasing in linguistic difficulty and complexity of central themes. They cover the major literary periods from the 18th to the 21st centuries. Focus: effective communication of critical, interpretative, and analytic ideas in discussion and in writing. Counts as SAGES Departmental Seminar. Prereq: GRMN 202 or equivalent.

GRMN 315. Business German. 3 Units.
This course is taught in German. It is designed to enhance students' German listening, speaking, reading, and writing skills through a variety of activities. It also aims at developing students' cross-cultural awareness and communicative competence in the specialized field of German for Business and Economics in an increasingly global workplace. The course will explore German demography and economic geography; the European Union, the Euro, and Germany's role in this union; German economic systems, industries, banking systems, advertising and sales, transportation and tourism; Germany's corporate culture, industrial relations, codetermination in German companies, etc. Counts for CAS Global & Cultural Diversity Requirement. Prereq: GRMN 202 or equivalent.

GRMN 320. Topics in Narrative. 3 Units.
This course examines representative prose works (tales, novellas, short novels, letters, and essays) chosen to present reactions and impressions to social and aesthetic conditions in German-speaking countries and to introduce students to different styles and varieties of German prose. Counts for CAS Global & Cultural Diversity Requirement. Prereq: One 300-level GRMN course.

GRMN 326. Witches, Weddings, and Wolves. 3 Units.
Intensive study of German Folk Tales as collected and altered by the Brothers Grimm. The Maerchen as both children's and adult literature. Counts for CAS Global & Cultural Diversity Requirement. Prereq: One 300-level GRMN course.

GRMN 330. Topics in German Cinema. 3 Units.
This course has the following objectives: 1) View and comprehend 14 German movies; 2) discuss German language, history, and culture as well as film making as they are reflected in the German movies featured in this course; and 3) learn how to write film reviews on German movies in German and English. It provides an overview of German Cinema from the beginning to the present. Film selection representative of major directors, major periods (such as expressionism or The New German Cinema), particular themes from different historical perspectives, and literature in film. All films are in German. The course will be mainly taught in German. It counts to SAGES Departmental Seminar Requirement. Counts as SAGES Departmental Seminar. Prereq: One 300-level GRMN course.

GRMN 340. Topics in German Drama. 3 Units.
Overview of German drama from the beginning to the present. Explores German plays by applying different disciplinary approaches such as historical, cultural, and literary analyses. All plays are in German. Taught in German. Counts for CAS Global & Cultural Diversity Requirement. Prereq: One 300-level GRMN course.

GRMN 350. Topics in German Lyric. 3 Units.
This course presents a detailed study of German lyric through the frequent writing of critical papers and literary analysis of the formal elements of poetry: rhyme schemes, diction, meter, figures of speech. The poems selected cover a variety of styles, a range of historical periods, and a sampling of authors. Readings and discussions in German. Counts for CAS Global & Cultural Diversity Requirement. Prereq: One 300-level GRMN course.

GRMN 360. Topics in Major German Authors. 3 Units.
Concentrates on a specific author or small group of authors within an aesthetic or historical context, for example: Goethe, Heine, Bachmann, Junges Deutschland, or die Gruppe 47. Examines the breadth of themes and styles and may include literary, philosophical, biographical, and other kinds of texts. Readings and discussions in German. Counts for CAS Global & Cultural Diversity Requirement. Prereq: One 300-level GRMN course.

GRMN 365. German Literature in Translation. 3 Units.
Goethe defined "World Literature" (Weltliteratur) as "Intellectual Trade Relations" (geistiger Handelsverkehr). This course gives students the opportunity to study German literary works in translation and thus to trade intellectual relations with a literary culture previously unknown to them. Counts toward the German major only as a related course. No knowledge of German required. Offered as GRMN 365 and WLIT 365.

GRMN 367. German Classicism/Romanticism. 3 Units.
Selected works of Goethe, Schiller, Hoelderlin, von Kleist, and others. Counts for CAS Global & Cultural Diversity Requirement. Prereq: One 300-level GRMN course.
GRMN 370. Topics in Literary Periods. 3 Units.
Overview of German literary periods from the beginning to the present. Explores German literary works in all three major genres from the historical, social, and literary perspectives. All works are in German. Taught in German. Counts for CAS Global & Cultural Diversity Requirement. Prereq: One 300-level GRMN course.

GRMN 380. Topics in Advanced German Culture Studies. 3 Units.
Exploration of the culture of the arts, political culture, and the cultural self-expression of the German-speaking countries from their beginnings to the present. Focus: The cultural changes within certain historical periods. Examination of particular aspects such as culture as mass deception in fascist Germany and the GDR, the reflection of contemporary culture in literature and cinema, problems of cultural identity and multiculturalism, and the role of postmodern culture industry and the critical discourse today. Taught in German. Counts for CAS Global & Cultural Diversity Requirement. Prereq: One 300-level GRMN course.

GRMN 395. Special Topics in German Literature. 3 Units.
An advanced seminar on German literature with a specific focus that transcends author, period or genre, probably but not limited to theme or motif, such as "Faust and Monsters." Counts for CAS Global & Cultural Diversity Requirement. Prereq: One 300-level GRMN course.

GRMN 396. Senior Capstone - German. 3 Units.
The Senior Capstone in German in an independent study project chosen in consultation with a capstone advisor. The capstone project should reflect both the student's interest within German and/or German studies and the courses he or she has taken to fulfill the major. The project requires independent research using and approved bibliography and plan of action. In addition to written research, the student will also present the capstone project in a public forum that agreed upon by the project advisor and the students. Counts as SAGES Senior Capstone. Prereq: Senior status required. Major in German required.

GRMN 399. Independent Study in German. 1 - 3 Units.
For majors and advanced students under special circumstances. Permit required.

HBRW Courses

HBRW 101. Elementary Modern Hebrew I. 4 Units.
The course objective is to enable students to develop basic communicative skills in standard Modern Hebrew. Students will become acquainted with the Hebrew alphabet and vowels, and with basic grammar and vocabulary.

HBRW 102. Elementary Modern Hebrew II. 4 Units.
The course objective is to continue to develop the students' basic communicative skills in standard Modern Hebrew. Students will be introduced to more complex grammatical constructs, linguistic forms and vocabulary. Prereq: HBRW 101 or consent of department.

HBRW 201. Intermediate Modern Hebrew I. 4 Units.
The course objective is to advance the students' Hebrew communicative skills by studying the language in its cultural context. The focus will be on speaking, reading, and writing, with an emphasis on the use of the language as reflected in Israeli culture. Prereq: HBRW 102 or consent of department.

HBRW 202. Intermediate Modern Hebrew II. 4 Units.
The course objectives are to enhance and strengthen the students' Hebrew language skills, and to develop the ability to express thoughts, ideas and opinions freely, in both verbal and written forms. Prereq: HBRW 201 or consent of department.

HBRW 301. Advanced Modern Hebrew I. 3 Units.
The course objectives are to enhance the students' language skills and to develop their ability to use an advanced level of Hebrew effectively. Classes will be conducted in Hebrew, and will focus on speaking, reading, and writing with an emphasis on active and creative use of the language. Prereq: HBRW 202 or consent of department.

HBRW 302. Advanced Modern Hebrew II. 3 Units.
The course objectives are to enhance the students' language skills within the domain of Modern Hebrew literature, and to enable them to use their Hebrew skills to perform detailed literary analyses in Hebrew. Classes will be conducted in Hebrew. Prereq: HBRW 301 or consent of department.

HBRW 399. Independent Studies. 1 - 3 Units.
The course is for students with special interests and commitments that are not fully addressed in regular courses, and who wish to work independently. Prereq: HBRW 301 or consent of department.

ITAL Courses

ITAL 101. Elementary Italian I. 4 Units.
Introductory course; stress on mastery of the sound system and basic sentence structure of spoken and written Italian. Independent laboratory practice is a requirement.

ITAL 102. Elementary Italian II. 4 Units.
Continuation of ITAL 101; independent laboratory practice is required in addition to scheduled class meetings. Prereq: ITAL 101.

ITAL 201. Review and Progress in Italian. 4 Units.
Emphasizes language and culture. Review of Italian grammar and usage while studying written forms. Independent laboratory practice is required in addition to scheduled class meetings. Prereq: ITAL 102 or equivalent.

ITAL 202. Read and Discuss Italian Texts. 4 Units.
Focus on increasing proficiency acquired in elementary Italian and on mastering short narratives. Review of Italian grammar and usage through reading, conversation, and media. Independent laboratory practice is required in addition to scheduled class meetings. Prereq: ITAL 201 or equivalent.

ITAL 308. The Italian Experience. 3 Units.
A three-week summer study abroad course spent at a university in an Italian city well-known for its cultural and linguistic heritage and at other important sites during travel. Focus: Language immersion and processing of cultural experience. Main features: 1. Intense collaboration with an Italian university. Students interact with Italian peers; seminars are co-taught by Italian faculty. 2. Creation of an individual journal that synthesizes students' perception of and reflections on their experience, records the progress of their final project, and documents their improvement in language proficiency. 3. Final project. Students meet M-F in a formal setting for advanced language study designed to improve proficiency in speaking, comprehension, reading, and writing. They attend seminars on varied topics in literature, history, and civilization. Visits to museums, galleries, and attendance at cultural events are included. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ITAL 202 or equivalent.

ITAL 311. Conversation in Italian. 3 Units.
Focused on oral communication, ITAL 311 is designed to enhance listening/comprehension skills in Italian. Using audio-visual materials, students acquire the skills necessary to understand conversations between native-speakers and to emulate them. The situational and functional approach to the course facilitates progress towards advanced-level fluency in Italian. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ITAL 202 or equivalent.
JAPN Courses

JAPN 101. Elementary Japanese I. 4 Units.
Introduction to understanding, speaking, reading, and writing Japanese. Students learn to read and write hiragana and katakana syllabaries and 50 kanji characters. Students are expected to achieve control of the sound system and basic structure of the language. Emphasizes aural comprehension and speaking.

JAPN 102. Elementary Japanese II. 4 Units.

JAPN 201. Intermediate Japanese I. 4 Units.
Further study of fundamental structures of Japanese. Students improve aural comprehension, speaking, reading, and writing abilities and learn approximately 100 new characters. Recommended preparation: JAPN 102 or equivalent. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 202. Intermediate Japanese II. 4 Units.
Continuation of JAPN 201. Students learn an additional 100 kanji characters. With the completion of JAPN 201 - 202, students should have control of the fundamentals of modern Japanese and a firm foundation in the writing system. Recommended preparation: JAPN 201 or equivalent. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 215. The World of Manga. 3 Units.
Manga (comic books and graphic novels) is one of the most important aspects of contemporary visual culture in Japan. It is consumed by millions of Japanese every day, and has attracted intense attention around the world. As it constitutes one third of the annual publications in Japan today, its breadth and scope are limitless. What does manga reveal about contemporary cultural production and consumption in Japan? What kind of special features are used in manga to attract people so much? What kind of genres do they have and what kind of readers do they have? These are some of the questions we will explore by surveying a large number of works produced in the last fifty years. Introducing graphic novels by major artists and writers, the course will expand your understanding of key components, social movements and discourses associated with manga. You will examine the history of manga, its aesthetics, and social impact through assigned readings, including scholarly papers and manga books, as well as works selected by each student (in original Japanese or in English translation). Offered as JAPN 215 and WLIT 215. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 225. Japanese Popular Culture. 3 Units.
This course highlights salient aspects of modern Japanese popular culture as expressed in animation, comics and literature. The works examined include films by Hayao Miyazaki, writings by Kenji Miyazawa, Haruki Murakami and Banana Yoshimoto, among others. The course introduces students to essential aspects of modern Japanese popular culture and sensibility. Offered as JAPN 225 and WLIT 225. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 235. The Japan Experience: Kyoto - Language, Culture & Exchanges. 3 Units.
The Japan Experience: Kyoto is designed to provide students an opportunity to use Japanese language skills they have acquired in real life situations and deepen their understanding of Japanese language and culture through experiential learning. The course has three major learning components: "Japanese Language Learning through Activities and Cultural Experiences," "Japan Exploration Project," and "Exchanges with Local College Students" and will consist of class meetings before the trip focused on preparation followed by 15 days in Kyoto. Japanese Language Learning through Activities and Cultural Experiences: In Kyoto students will explore the local neighborhood and report their findings in class. Several cultural activities will be organized: Zen meditation, tea activity, Japanese cooking class, etc. The tea activity will include a rare opportunity for students to meet a tea ceremony master and experience the way of Japanese traditional tea. Exchanges with Local College Students: Students from CWRU will be able to take advantage of Ritsumeikan University's "Buddies" program where Japanese student volunteers are paired with participants to improve conversational skills and become better acquainted with the campus and Kyoto. CWRU students will also visit classes at a local college in Osaka for exchanges with students there. These exchanges will allow participants to reinforce their language skills, develop better communication skills, and deepen cultural understanding in both classroom and real-life settings. Japan Exploration Project: Students will complete individual projects during the course. They will design their own projects using resources available in Kyoto before the trip and prepare for it. Project themes will be chosen by students based on their interests. At the end of course, students will give presentations in Japanese, demonstrating their language proficiency development. Counts for CAS Global & Cultural Diversity Requirement. Prereq: JAPN 201.

JAPN 245. Classical Japanese Literature in Translation. 3 Units.
Readings, in English translation, of classical Japanese poetry, essays, narratives, and drama to illustrate essential aspects of Japanese culture and sensibility before the Meiji Restoration (1868). Lectures explore the sociohistorical contexts and the character of major literary genres; discussions focus on interpreting the central images of human value within each period. Japanese sensibilities compared to and contrasted with those of Western and other cultures. Offered as JAPN 245 and WLIT 245. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 255. Modern Japanese Literature in Translation. 3 Units.
Focus on the major genres of modern Japanese literature, including poetry, short story, and novel (shosetsu). No knowledge of Japanese language or history is assumed. Lectures, readings, and discussions are in English. Films and slides complement course readings. Offered as JAPN 255 and WLIT 255. Counts for CAS Global & Cultural Diversity Requirement.
JAPN 265. Constructing the Samurai: Images of Japanese Warriors from 1100’s to the Present. 3 Units.
From concepts of premodern warriors calling out their names before doing hand-to-hand combat to modern salary men crushing the world with their economic prowess, samurai have come to be an iconic image of the Japanese people. Throughout the semester we will pay particular attention to the central themes in the historiography of warrior society, roughly, the years between ca. 1110 and 1850 C.E. We will investigate how these documents were translated by modern societies, both east and west, in samurai film. Students will explore the category of “samurai” through reading selections from The Tale of the Heike, as well as selected Noh plays, legal documents, travel diaries, autobiographies, short stories, and historical texts. In addition, we will investigate other genres contributing to the construction of the idea of “samurai,” such as film. This seminar will closely examine the concept of “samurai,” particularly its connection to the Japanese identity using an interdisciplinary context of the arts, history, religion, and literature. We will also explore the ways in which daimyo (feudal lords), authors, Buddhist officials, and filmmakers throughout the world created, shaped, and altered the ideal image of the samurai. Key to understanding the concept of samurai will be wrestling with questions of authorship, spirit pacification, nationality, and patronage, with specific focus on the Japanese relationship with Western nations and cultures. We will focus on language and its role in legitimizing the global concepts of “samurai” and “bushido.” This class will provide additional insight geared toward the cultural study of linguistic identities beyond those informed by the English language and will include terms expressed in Japanese. Many of the resources used in this course will be translated from the Japanese, allowing us to consider Naoki Sakai’s theories of enunciation/translation/subjectivity, Haruo Shirane’s theory of reception, and Michael Emmerich’s theory of replacement. Especially important will be to focus on terms in Japanese with no, or poor, English equivalent (such as samurai, shogun, daimyo, bushido, etc.) but with clear images in the English-speaking imagination(s). The instructor will provide background information on details of linguistic identities beyond those informed by the English language and will include terms expressed in Japanese. Many of the resources used in this course will be translated from the Japanese, allowing us to consider Naoki Sakai’s theories of enunciation/translation/subjectivity, Haruo Shirane’s theory of reception, and Michael Emmerich’s theory of replacement. Especially important will be to focus on terms in Japanese with no, or poor, English equivalent (such as samurai, shogun, daimyo, bushido, etc.) but with clear images in the English-speaking imagination(s). The instructor will provide background information on political, cultural, and religious history. Class sessions will be conducted in Japanese. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 301. Advanced Japanese I. 4 Units.

JAPN 302. Advanced Japanese II. 4 Units.
Continuation of JAPN 301; emphasizes conversational proficiency and reading. Recommended preparation: JAPN 301 or equivalent. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 306. Readings in Manga. 3 Units.
This course aims to enhance students’ reading skills in Japanese as well as in the other three main areas of language learning (speaking, listening, and writing) through the use of the extensive reading (a.k.a. Graded reading) method with manga in Japanese. In this course, the emphasis is put on acquiring the skill needed to enjoy reading content without translation. Students will review and learn Japanese structures and expressions as well as have the opportunity to explore colloquialisms, speech styles, onomatopoeia, contractions, interjections, and other elements of speech. The class also will incorporate individual reading activities such as oral reading sessions, timed reading, speed reading, and book discussion groups. We will also explore how Japanese scripts such Hiragana, Katakana, and Kanji, as well as Roman alphabets, are integrated in manga. Our primary textbooks will be manga in Japanese; however, some additional readings in English will be given to students as a point of reference for the course lectures. The classes will primarily be conducted in Japanese. Counts for CAS Global & Cultural Diversity Requirement. Prereq: JAPN 202 with a C or higher.

JAPN 315. Origins of Anime: Classical Texts, Modern Manga, Anime, and Tales. 3 Units.
Modern anime and manga authors and artists captivate audiences with rich stories and stylized art. This course investigates the origins of these stories by engaging premodern Japanese texts (in English language translation) and modern literary theory. Throughout the semester we will pay particular attention to commonalties among these literatures and narrative genres, as well as the extent they differ due to temporal/socio/religio/political concerns. Western and Asian literary theories, especially those concerning topics of translation, replacement, negotiation with classics, and gender and sexuality will also be extensively explored. We will interpret the historic human endeavor of story telling within the contexts of time and space and through a critical self-awareness of our own positions in the modern world. Students will prepare individual research projects and be responsible for finding and presenting primary sources and secondary research. The instructor will provide background information on political, cultural, and religious history as well as present on details of literary theory. The aim is to encourage students to critically analyze the modern perception of past events. Every topic will be addressed in three phases. First, the students will discover historical events, literature, and people through reading primary sources in English translation. In a second phase, we will see how these stories are depicted in movies, animation, or manga. Finally, students will perform research to explore the differences between the premodern sources and their modern adaptation and determine how we can use such a comparison to critically analyze the way modern storytellers recreate the past. Class sessions will combine lectures, discussion, and audio-visual materials. Offered as JAPN 315 and WLIT 315. Counts for CAS Global & Cultural Diversity Requirement.
JAPN 335. Japanese Linguistics. 3 Units.
The purpose of this course is to survey the principal research in Japanese linguistics for students who have basic knowledge of Japanese and are interested in more in-depth treatment of linguistic phenomena (phonetics, phonology, morphology, syntax, semantics, etc.). Lectures and discussions will cover many different aspects of the Japanese language. There is a great deal of analytic studies of the Japanese language done both inside and outside Japan, which will be surveyed in this course. Students will become familiar with the major issues through lectures and class discussions, as well as through their reading of both primary and secondary sources. Both formal and functional approaches to the analysis of Japanese will be examined, and the acquisition of these structures will also be discussed. The course will also be useful for the improvement of students' Japanese language proficiency. Recommended preparation: JAPN 101 and JAPN 102, or equivalent competence in Japanese. Offered as COGS 335, COGS 435, JAPN 435, LING 335 and LING 435. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 337. Love and Loss: Reading The Tale of Genji. 3 Units.
Murasaki Shikibu's The Tale of Genji (c. 1000 CE), the great Japanese classic often referred to as "the world's first novel," has been praised by countless readers and scholars since it was first circulated within the imperial court. In this course we will read the entire text in English translation. We will focus on themes of love and loss, paying special attention to the substitution that results from the hero, the shining prince Genji losing his mother at a tender age and attempting to fill the void she left. Since Genji is popularly thought of as a "playboy," we will investigate the thematic, historic, political, social, and religious descriptions within Genji's (many) love affairs, with a special emphasis on issues of gender. We will also consider the poetry, imagery, costume, music, religion, theater, and material culture of the mid-Heian era, which is encapsulated in the tale. Students will prepare individual research projects and be responsible for finding and presenting primary sources and secondary research. The instructor will provide background information on political, cultural, and religious history as well as present on details of literary theory. The aim is to encourage students to critically analyze the modern perception of the past. Class sessions will combine lectures, discussion, and audio-visual materials. All material is in English translation. There are no prerequisites. The course is conducted in English. Offered as JAPN 337 and WLIT 337. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 345. Japanese Women Writers. 3 Units.
Contributions of women writers to the literature of pre-modern and modern Japan; investigations of how their works exemplify and diverge from "mainstream" literary practices. Emphasis on the social and cultural contexts of the texts. Offered as JAPN 345 and WLIT 345. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 347. Power of Words: Ritual Uses of Premodern Japanese Literature. 3 Units.
In premodern Japan, it was not only death and mourning ritual and practice that could pacify the spirit of the deceased, but also language. Authors consciously crafted the words of their works to simultaneously express the grief associated with longing and pacify the spirits of the dead. These words are called kotodama (power of words). From as far back as the eighth-century Kojiki (Records of Ancient Matters) and Nihon Shoki (The Chronicles of Japan) textual representations of mourning were linked with special uses of language and spirit pacification. At the death of Ame-no-wakahiko (a mythological god), his parents constructed a mourning hut and performed songs to secure his spirit in the afterworld. As several authors have demonstrated, from kotodama in the mid-eighth-century poetic anthology Man'yoshū (Collection of Ten Thousand Leaves) to linked verse (renga) in medieval Japan, carefully constructed literary language also had a place in ritual pacification of the spirits of the dead. Words were not simple expressions of grief; they held power. All material is in English translation. The course is conducted in English. All material will be provided via PDF. Offered as JAPN 347 and WLIT 347 and RLGN 347. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 350. Contemporary Japanese Texts I. 3 Units.
The primary aim of this course is to develop communication skills in Japanese based on those that the students have acquired in JAPN 302 or equivalent. The students will read and discuss various texts such as daily conversations, essays, and news scripts with the assistance of vocabulary and kanji (Chinese character) lists and formal grammar explanations. Attention also will be given to enhancing the students' writing and aural/oral proficiencies through regularly assigned homework, presentations, tape listening, video viewing, and classroom discussion. Recommended preparation: JAPN 302 or equivalent. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 351. Contemporary Japanese Texts II. 3 Units.
This course is a continuation of JAPN 350 and its primary aim overlaps with that of JAPN 350: to develop more sophisticated communication skills in Japanese. Students will read and discuss various texts such as daily conversations, essays, and news scripts largely with the assistance of vocabulary and kanji (Chinese character) lists. Attention will be given to enhancing the students' writing and aural/oral proficiencies through regularly assigned homework, presentations, tape listening, video viewing, and classroom discussion. Counts for CAS Global & Cultural Diversity Requirement. Prereq: JAPN 350 or consent of instructor.

JAPN 355. Modern Japanese Novels and the West. 3 Units.
This course will compare modern Japanese and Western novellas, drama, and novels. Comparisons will focus on the themes of family, gender and alienation, which subsume a number of interrelated sub-themes such as marriage, home, human sexuality, amae (dependence), innocence, experience, death, God/gods, and nature (the ecosystem). Offered as JAPN 355 and WLIT 355. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 396. Senior Capstone - Japanese. 3 Units.
The Senior Capstone in Japanese is an independent study project chosen in consultation with a capstone advisor. The capstone project should reflect both the student's interest within Japanese and the courses he or she has taken to fulfill the major. The project requires independent research using an approved bibliography and plan of action. In addition to written research, the student will also present the capstone project in a public forum that is agreed upon by the project advisor and the student. Counts as SAGES Senior Capstone. Prereq: Senior status required. Major in Japanese required.
JAPN 397. Senior Thesis I. 3 Units.
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper in English or Japanese. Limited to senior majors. Permit required.

JAPN 398. Senior Thesis II. 3 Units.
Continuation of JAPN 397. Limited to senior majors. Prereq: JAPN 397.

JAPN 399. Independent Study. 1 - 3 Units.
Directed study for students who have progressed beyond available course offerings.

JAPN 435. Japanese Linguistics. 3 Units.
The purpose of this course is to survey the principal research in Japanese linguistics for students who have basic knowledge of Japanese and are interested in more in-depth treatment of linguistic phenomena (phonetics, phonology, morphology, syntax, semantics, etc.). Lectures and discussions will cover many different aspects of the Japanese language. There is a great deal of analytic studies of the Japanese language done both inside and outside Japan, which will be surveyed in this course. Students will become familiar with the major issues through lectures and class discussions, as well as through their reading of both primary and secondary sources. Both formal and functional approaches to the analysis of Japanese will be examined, and the acquisition of these structures will also be discussed. The course will also be useful for the improvement of students' Japanese language proficiency. Recommended preparation: JAPN 101 and JAPN 102, or equivalent competence in Japanese. Offered as COGS 335, COGS 435, JAPN 435, LING 335 and LING 435. Counts for CAS Global & Cultural Diversity Requirement.

JAPN 450. Japanese in Cultural Context I. 3 Units.
The primary aim of this graduate course is to develop sophisticated communication skills (listening, speaking, reading, and writing) in Japanese. The students will read and discuss various texts in the original, such as essays, news scripts, and literary works. Classroom instruction and discussion will be conducted in Japanese. The students also will be required to write a research paper of 4000-6000 letters/characters (10-15 genkoyoshi pages) in Japanese on a topic related to Japan and the student's specialty. Recommended preparation: JAPN 351 or equivalent.

JAPN 451. Japanese in Cultural Context II. 3 Units.
This course is a continuation of JAPN 450 and it aims at a further development of sophisticated communication skills (listening, speaking, reading, and writing) in Japanese. The students will read and discuss various texts in the original, such as essays, news scripts, and literary works both classical and modern. Classroom instruction and discussion will be conducted in Japanese. The students also will be required to write a research paper of 6000-8000 letters/characters (15-20 genkoyoshi pages) in Japanese on a topic related to Japan and the student's specialty. Recommended preparation: JAPN 450 or equivalent.

LING Courses

LING 301. Second Language Acquisition I. 3 Units.
This course is an introduction to the growing field of second language acquisition (SLA). SLA seeks to understand the linguistic, psychological and social processes that underlie the learning and use of second language(s). The goal of research is to identify the principles and processes that govern second language learning and use. SLA is approached from three perspectives in the course: 1) as linguistic knowledge; 2) as a cognitive skill; and 3) as a socially and personality-mediated process. Important factors in second language learning will be identified and discussed. These include: age-related differences, the influence of the first language, the role played by innate (universal) principles, the role of memory processes, attitudes, motivation, personality and cognitive styles, and formal versus naturalistic learning contexts. The objective of this course is to survey the principal research in second language acquisition. Students will become familiar with the major research issues through their reading of both primary and secondary sources, as well as through lectures and class discussions. Offered as COGS 312, COGS 412, LING 301 and LING 401.

LING 302. Second Language Acquisition II: Second Language Acquisition Research and Second Language Teaching. 3 Units.
This course will examine various issues in second language acquisition research that are particularly relevant to foreign language teaching and learning. Topics covered will include: the role of input (listening/reading) vs. output (speaking/writing); implicit vs. explicit learning; negative vs. positive evidence (including the role of error correction); affective factors (motivation, anxiety); individual differences; teachability hypothesis and syllabus construction, program design/evaluation, language testing, among others. The purpose of this course is to survey the principal research in the acquisition of second language that is relevant to second language teaching in a classroom setting, and to obtain the state-of-the-art knowledge of the SLA research literature that is relevant to L2 teaching. The focus is not necessarily on the practical application of the SLA research, although we will not exclude discussion of classroom application. Rather, we critically examine and evaluate SLA research and come up with our own syntheses with respect to various issues. To achieve this goal, we should ask following questions in reading and discussing the relevant literature: 1) What are the main claims that the author(s) make(s)? 2) Are the author's claims sound? If not why? 3) What further research is needed to answer remaining questions? Students will become familiar with the major research issues through their reading of both primary and secondary sources, as well as through lectures and class discussions. The students are required to complete a term project that addresses the issues treated in the course. Offered as LING 302, LING 402, COGS 314 and COGS 414. Prereq: LING 301 or requisites not met permission.

LING 309. Introduction to Applied Linguistics. 3 Units.
This course provides students with answers to the question, "Linguistics? What can you do with that?" We will survey the ways that linguistics has been used (i.e. applied) to solve 'real world' problems. Some of these, like computational linguistics and the teaching of language, are intimately involved in language, even though they do not necessarily concern themselves with linguistic theory. Others, such as language and the law, use linguistics as a tool to do their work. We will be concerned with understanding the various ways that linguistic inquiries have been used or neglected, and also with the implications of applied fields for linguistic theories. Offered as LING 309, LING 409, COGS 331 and COGS 431. Counts for CAS Global & Cultural Diversity Requirement.
LING 335. Japanese Linguistics. 3 Units.
The purpose of this course is to survey the principal research in Japanese linguistics for students who have basic knowledge of Japanese and are interested in more in-depth treatment of linguistic phenomena (phonetics, phonology, morphology, syntax, semantics, etc.). Lectures and discussions will cover many different aspects of the Japanese language. There is a great deal of analytic studies of the Japanese language done both inside and outside Japan, which will be surveyed in this course. Students will become familiar with the major issues through lectures and class discussions, as well as through their reading of both primary and secondary sources. Both formal and functional approaches to the analysis of Japanese will be examined, and the acquisition of these structures will also be discussed. The course will also be useful for the improvement of students’ Japanese language proficiency. Recommended preparation: JAPN 101 and JAPN 102, or equivalent competence in Japanese. Offered as COGS 335, COGS 435, JAPN 435, LING 335 and LING 435. Counts for CAS Global & Cultural Diversity Requirement.

LING 401. Second Language Acquisition I. 3 Units.
This course is an introduction to the growing field of second language acquisition (SLA). SLA seeks to understand the linguistic, psychological and social processes that underlie the learning and use of second language(s). The goal of research is to identify the principles and processes that govern second language learning and use. SLA is approached from three perspectives in the course: 1) as linguistic knowledge; 2) as a cognitive skill; and 3) as a socially and personality-mediated process. Important factors in second language learning will be identified and discussed. These include: age-related differences, the influence of the first language, the role played by innate (universal) principles, the role of memory processes, attitudes, motivation, personality and cognitive styles, and formal versus naturalistic learning contexts. The objective of this course is to survey the principal research in second language acquisition. Students will become familiar with the major research issues through their reading of both primary and secondary sources, as well as through lectures and class discussions. Offered as COGS 312, COGS 412, LING 301 and LING 401.

LING 402. Second Language Acquisition II: Second Language Acquisition Research and Second Language Teaching. 3 Units.
This course will examine various issues in second language acquisition research that are particularly relevant to foreign language teaching and learning. Topics covered will include: the role of input (listening/reading) vs. output (speaking/writing); implicit vs. explicit learning; negative vs. positive evidence (including the role of error correction); affective factors (motivation, anxiety); individual differences; teachability hypothesis and syllabus construction, program design/evaluation, language testing, among others. The purpose of this course is to survey the principal research in the acquisition of second language that is relevant to second language teaching in a classroom setting, and to obtain the state-of-the-art knowledge of the SLA research literature that is relevant to L2 teaching. The focus is not necessarily on the practical application of the SLA research, although we will not exclude discussion of classroom application. Rather, we critically examine and evaluate SLA research and come up with our own syntheses with respect to various issues. To achieve this goal, we should ask following questions in reading and discussing the relevant literature: 1) What are the main claims that the author(s) make(s)? 2) Are the author’s claims sound? If not why? 3) What further research is needed to answer remaining questions? Students will become familiar with the major research issues through their reading of both primary and secondary sources, as well as through lectures and class discussions. The students are required to complete a term project that addresses the issues treated in the course. Offered as LING 302, LING 402, COGS 314 and COGS 414. Prereq: LING 401 or requisites not met permission.

LING 409. Introduction to Applied Linguistics. 3 Units.
This course provides students with answers to the question, “Linguistics? What can you do with that?” We will survey the ways that linguistics has been used (i.e. applied) to solve ‘real world’ problems. Some of these, like computational linguistics and the teaching of language, are intimately involved in language, even though they do not necessarily concern themselves with linguistic theory. Others, such as language and the law, use linguistics as a tool to do their work. We will be concerned with understanding the various ways that linguistic inquiries have been used or neglected, and also with the implications of applied fields for linguistic theories. Offered as LING 309, LING 409, COGS 331 and COGS 431. Counts for CAS Global & Cultural Diversity Requirement.

LING 435. Japanese Linguistics. 3 Units.
The purpose of this course is to survey the principal research in Japanese linguistics for students who have basic knowledge of Japanese and are interested in more in-depth treatment of linguistic phenomena (phonetics, phonology, morphology, syntax, semantics, etc.). Lectures and discussions will cover many different aspects of the Japanese language. There is a great deal of analytic studies of the Japanese language done both inside and outside Japan, which will be surveyed in this course. Students will become familiar with the major issues through lectures and class discussions, as well as through their reading of both primary and secondary sources. Both formal and functional approaches to the analysis of Japanese will be examined, and the acquisition of these structures will also be discussed. The course will also be useful for the improvement of students’ Japanese language proficiency. Recommended preparation: JAPN 101 and JAPN 102, or equivalent competence in Japanese. Offered as COGS 335, COGS 435, JAPN 435, LING 335 and LING 435. Counts for CAS Global & Cultural Diversity Requirement.
MLIT Course

MLIT 327. Gesture in Cognition and Communication. 3 Units.
Most people never notice that when they are talking, they’re also gesturing. Why do we produce these gestures? What can studying them tell us about the human mind? This course surveys scientific research on gesture, exploring topics such as the role of gesture in communication, cross-cultural differences in gesture, and the relationship between gesture and signed languages. The course will focus on gestures produced with speech, but will cover symbolic and ritualized gesture in the visual arts and in dance. Offered as COGS 327, COGS 427 and MLIT 327. Counts as SAGES Departmental Seminar.

PORT Courses

PORT 101. Elementary Portuguese I. 4 Units.
Introductory course. Students achieve control of the sound system and basic sentence structures of spoken and written Portuguese. Students use materials offered through the Language Center in addition to class meetings.

PORT 102. Elementary Portuguese II. 4 Units.
Continuation of PORT 101, emphasizing conversational skills. Prereq: PORT 101 or equivalent.

PORT 201. Intermediate Portuguese I. 4 Units.
PORT 201 is an intermediate language course. It assumes a fair knowledge of basic grammar that is reviewed and expanded. The course needs the student to show a strong determination to engage in conversation in Portuguese, and to commit to develop better writing in Portuguese. The student learns more about cultural aspects in the Portuguese-speaking world. The course is taught completely in Portuguese. Prereq: PORT 102 or equivalent.

PORT 399. Independent Study. 1 - 3 Units.
This course is for students with special interests and commitments that are not addressed in regular courses and who wish to work independently.

RUSN Courses

RUSN 101. Elementary Russian I. 4 Units.
An introductory course with emphasis on oral skills. Students learn the Cyrillic alphabet and grammatical case structure while building their basic vocabulary and elementary conversational skills. In addition to scheduled class meetings, students must complete interactive lab assignments done outside of class.

RUSN 102. Elementary Russian II. 4 Units.
Continuation of RUSN 101 with emphasis on oral skills. Students continue to learn cases, verb conjugations, and other major grammar concepts necessary to effective communication in spoken Russian. In addition to scheduled class meetings, students must complete interactive lab assignments done outside of class.

RUSN 201. Intermediate Russian I. 4 Units.
Special attention to Russian grammar, more detailed study of grammatical issues, vocabulary building, and word-formation, reading of intermediate-level spoken and written texts in Russian. Students engage with some historical and contemporary aspects of Russian culture. In addition to scheduled class meetings, students must complete interactive lab assignments done outside of class.

RUSN 202. Intermediate Russian II. 4 Units.
Continuation of RUSN 201. Students continue to increase their knowledge of grammar and vocabulary. Emphasis on developing oral fluency and using authentic language materials. Students deepen their engagement with Russian culture in the target language. In addition to scheduled class meetings, students must complete interactive lab assignments done outside of class.

RUSN 305. Russian Song. 1 Unit.
The Russian Song course is dedicated to the exploration and performance of vocal music from Russia and the former USSR. Russia comprises many ethnic groups and has a vast repertoire of folk music, folk instruments, and singing styles. Students will learn children’s songs, art songs, "city" romances, Cossack songs, Georgian polyphony and folk dances. Each song is placed in context, with an eye towards culture, symbolism, history, poetry/lyrics, and customs. Students will look at how classical composers use Russian folk music in their long forms. The study of Chastushki, an ancient Russian village phenomenon which continues to evolve, will lead to creating students' own stylistically appropriate poetry and ostinato. Russian percussion and other instruments will enhance the song and dance, all culminating in a final performance at the end of the semester. Offered as RUSN 305 and MUGN 310.

RUSN 311. Advanced Conversation. 3 Units.
Students work to improve fluency in spoken Russian. Topics of conversation include aspects of contemporary civilization; current vocabulary is stressed. Recommended preparation: RUSN 202.

RUSN 370. Special Topics in Russian. 3 Units.
This course is designed to address the students’ and faculty interests in specific themes or issues not otherwise covered in the curriculum. Approaches and content will vary. This course may have a focus that crosses generic, artistic, historical, disciplinary and geographical boundaries. The honing of the analytical and interpretive skills as well as development of Russian language skills are also integral objectives of the course. The class is conducted in Russian. All written assignments are in Russian. Recommended preparation: Two years of Russian. Counts for CAS Global & Cultural Diversity Requirement.

RUSN 375. Russian Literature in Translation. 3 Units.
Topics vary according to student and faculty interest. May include Russian classical and modern literature, cinema, women writers, individual authors. May count towards Russian minor. No knowledge of Russian required. Offered as RUSN 375 and WLIT 375. Counts for CAS Global & Cultural Diversity Requirement.

RUSN 380. Russian Culture and Civilization: From Varangians to Revolutionaries (862-1917). 3 Units.
This course will explore the history, art, and literature of the Eastern Slavic/Russian people from the ninth century to the end of the Russian empire in 1917. Students will trace the formation and transformation of the Slavic/Russian state, from Kievan Rus' to the Tsardom of Muscovy and to the Russian empire. The historical background will be illuminated by the literary and artistic works created by outstanding Russian writers, poets, painters, and composers. At the end of the course, students will gain a solid knowledge of the Russian cultural ground and understand the roots of Russian national and cultural identity. Offered as RUSN 386 and WLIT 386. Counts for CAS Global & Cultural Diversity Requirement.
SPAN 101. Elementary Spanish I. 4 Units.
This course is for students who wish to establish a solid foundation in the language. Open to students who have little or no prior knowledge of Spanish. The course will introduce the learner to all regular, stem-changing and irregular verbs. In addition, the comparison of ser v estar, saber v conocer, tener with noun expressions, emotional and mental states and prepositions of location. Students will learn the mechanics of pronoun usage; reflexive, direct object, indirect object and double object pronouns. Lexical expressions, useful vocabulary, nouns, adverbs and adjectives will be acquired via themed chapters. Cultural topics are also explored, providing a glimpse into the daily life of Spanish-speaking countries. This course concludes with learning the past tense forms: preterit and imperfect. Upon completion of the course, the student will be able to master basic conversation, listening, reading comprehension and writing skills related to everyday life, including appreciation and awareness of Hispanic multiculturalism.

SPAN 102. Elementary Spanish II. 4 Units.
This is a course for students who have a solid foundation in the language and who wish to advance their grammar. This is a course open to students who have mastered the topics outlined in SPAN 101, or for students who successfully completed 101 at CWRU. This course is a continuation of 101, and begins with an in-depth comparison of preterit and imperfect during the first few weeks. SPAN 102 will go on to cover all other indicative verb forms such as the imperative, future, present perfect, conditional and pluperfect. The subjunctive mood is also explored in depth; both present and imperfect subjunctive. A variety of cultural topics will help the student develop a stronger appreciation of Hispanic society and multiculturalism. Lexical expressions and useful vocabulary will be acquired via themed chapters. Upon completion of this course, the student will be able to read, write, listen and speak Spanish with reasonable accuracy on a wider variety of everyday topics within the indicative and subjunctive moods. Prereq: SPAN 101 or SPAN 101H.

SPAN 201. Intermediate Spanish I. 4 Units.
This course is an intermediate language course with a focus on advanced grammar and conversation. The student must be equipped with a fair amount of grammatical proficiency that includes knowing the simple verb tenses of the present, future, and past tenses of the indicative mood, along with the present and imperfect subjunctive. This course will introduce the learner to more advanced applications of these grammar topics. Along with other grammatical explorations, this course will help the student to critically think about real world topics such as familial, generational, and personal relationships, customs, traditions, and values, food and eating habits, leaders and politics, and contemporary society and technology. Students will develop better articulation of their opinions, perspectives and commentary in Spanish; both verbally and written. Students will acquire some knowledge and appreciation of Spanish-speaking authors and literature. This course will also explore the cultural traditions, customs and diversity shared by the people of countries in which Spanish is spoken. Students will also work on building confidence to deliver oral presentations in Spanish regarding different cultural topics. The course is taught completely in Spanish. Prereq: SPAN 102.

SPAN 202. Intermediate Spanish II. 4 Units.
This course is an intermediate language course with a focus on advanced grammar and conversation. The student must be equipped with a fair amount of grammatical proficiency that includes knowing the differences between preterit and imperfect, the indicative and subjunctive moods (both present and imperfect), conditional and future tenses and the imperative and present perfect. This course will introduce the learner to more advanced compound verb constructions such as the present perfect (both in the indicative and subjunctive) and the pluperfect, the future perfect, conditional perfect and pluperfect subjunctive. Students will learn how to accurately construct ‘si clauses’, the passive voice and ‘se’ constructions, as well as know the difference between resultant and passive states. Along with other advanced grammar topics, this course will help the student to critically think about real world topics such as film and entertainment, work and finances, urban and rural life, music, musical instruments and literature. Students will develop better articulation of their opinions, perspectives and commentary in Spanish; both verbally and written. The course will also explore the cultural traditions, customs and diversity shared by the people of countries in which Spanish is spoken. Students will acquire some knowledge and appreciation of Spanish-speaking authors and literature, while learning the differences between narrative, biographical, argumentative and descriptive texts. This course will also help students to build confidence to deliver oral presentations in Spanish regarding different cultural topics. The course is taught completely in Spanish. Prereq: SPAN 201.
SPAN 301. Multicultural Spain: Christian, Jewish and Muslim Coexistence. 3 Units.

Why is Medieval Iberia so often depicted as an example of tolerant multiculturalism? What constituted tolerance in the Middle Ages? In what sense can we speak of medieval multiculturalism? Is Americo Castro’s optimistic model of convivencia (coexistence) valid, or is Brian Catlos’ idea of conveniencia (convenience) more accurate? In this course we will study cultural theory, medieval and modern historiography, and literature from medieval Castile to the present to approach an understanding of Medieval Iberian ‘multiculturalism.’ This class will allow students to get in contact with the history of Spain through the study of the presence and influence of the Roman Empire, the Jewish and Muslim cultures and religions in the Peninsula. Through literature, cinema and art students will learn how the Spanish civilization and culture developed through the years. The class will be offered during a regular semester, with a study abroad component at the end of it. Students will receive a handout about how to prepare for the class abroad. Students will have the option of completing the class by traveling to Spain, or completing a cultural project at the end of the semester if they are not able to travel. Offered as RLGN 303 and SPAN 301. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 305. Spanish for Political Science and International Relations. 3 Units.

Spanish 305 is an upper-level Spanish language course designed to give students interested in political science and international relations specific field-related vocabulary and cultural information not found in basic textbooks. The course is divided into two parts: the first deals with political science; the second with international relations. Readings, discussions, and lectures are conducted in Spanish. Prereq: SPAN 202 or requisites not met permission.

SPAN 306. The Cuban Experience: an immersion in its culture and society. 3 Units.

This is a three-week study-abroad intensive course that takes place in Matanzas and Havana, Cuba. The course combines the unique advantages of a total immersion environment in the Cuban culture with a classroom curriculum that includes the study of relevant cultural, literary and historical issues. Students complete three hours of classroom instruction and an hour and a half of workshop four days per week. Also, they participate in organized visits to historic sites and museums connected to the culture curriculum. The focus of the culture curriculum is the study of Cuban history and culture through its literature, visual arts, films, and music. After applying and being accepted into the program, students meet for personal advising with the program director and attend four different one-hour orientation-information meetings in the spring semester. After successful completion of the study-abroad program, students receive three upper-level credits in Spanish or Ethnic Studies. The course is interdisciplinary in its approach and provides students with the tools they need to analyze and understand the complexities of modern Cuba. Students will have formal classes taught by their professor and talks, and meetings with specialists on Cuban literature, art, architecture, history and other aspects of culture and society. Also, they will attend lectures, participate in discussions, and take field trips that will expose them to many aspects of Cuban culture, such as art, architecture, music, dance, film, literature, artisan work, folklore, history and urban growth. Offered as SPAN 306, SPAN 406, and ETHS 306. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 307. Spanish Phonetics and Phonology. 3 Units.

Spanish Phonetics and Phonology is designed to introduce students to the study and practice of the sound system of Spanish. The course will focus on the articulatory descriptions of native pronunciations, the differences between letters and sounds, and the classification of sounds. The course will focus mainly on the sounds of Spanish but will also include the differences with English Language sounds. It will also develop awareness of the different dialectal variations of Spanish across the world. In addition, cultural competency will be achieved through a contextualized approach. The main goal of this course is to improve pronunciation and intonation in Spanish with special emphasis in the production of native-like sounds. Prereq: SPAN 202.

SPAN 310. Advanced Composition and Reading. 3 Units.

Designed to facilitate the transition between lower and upper division courses in Spanish, and focus upon the simultaneous development of the reading and writing skills expected of students in all advanced Spanish courses. Prereq: SPAN 202.

SPAN 311. Advanced Spanish Conversation. 3 Units.

SPAN 312. Business Spanish. 3 Units.

Spanish for business is an upper-level language and culture course which is designed for students at the advance intermediate level. The course stresses the vocabulary and expressions used to describe economic and commercial structure, the language to solve problems and conduct negotiations, and the culture of specific aspects of the Spanish world of the business. Students will continue being exposed to listening, speaking, reading and writing through a variety of activities. Prereq: SPAN 202 or permission.

SPAN 313. Spanish for Health Professionals. 3 Units.

Designed for students who are majoring in, or considering a major in, a health-related field. Focus on the vocabulary and expressions needed for the workplace, task-based practical skills, and grammatical structures. Prereq: SPAN 202 or equivalent.

SPAN 314. Practice of Translation. 3 Units.

Students learn necessary skills and techniques for solving linguistic problems in translation. Texts with a variety of contents, including articles from current press, will be translated from English into Spanish and occasionally from Spanish into English. Prereq: SPAN 202.

SPAN 315. Latin American Cultural Conflicts. 3 Units.

Evolution of Latin American socioeconomic characteristics and artistic production up to the present. Class discussions of diverse literary works, social research essays, and testimonials focus on conflicting elements in class structures, ethnicity, and urban modernization as well as family ethos, religious trends, cultural identity, and educational problems. Offered as SPAN 315 and SPAN 415. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 202.

SPAN 317. Contemporary Latin American Culture. 3 Units.

An intensive study of Latin American culture and civilization through the examination of its arts: literature, music, film, painting, photography, popular art. Designed to bring together the various strands of Latin American realities, emphasis is placed on the predominant view among Latin American intellectuals that artists and intellectuals have the power and the obligation to modify society. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 202.
SPAN 318. Contemporary Spanish Culture. 3 Units.
Study of several key historical moments and several key aspects in contemporary Spain: Spanish civil war, Franco's dictatorship, and democratic Spain; rural-urban differences, industrialization and migratory movements; nationalism and terrorism; foreign immigration and tourism, the cultural renaissance and the cultural wars in Madrid and Barcelona. Feature films and literary texts will illustrate the issues under study. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 202.

SPAN 320. Introduction to Readings in Hispanic Literature. 3 Units.
Introduction to major literary movements and genres, and the works of outstanding authors of Spanish and Latin American literature through close readings and seminar-based discussions of the texts, as well as to disciplinary modes of inquiry and presentation. Requirements include active participation in seminar discussions, oral presentations, tests, and several written assignments, such as response papers, in-class writing exercises, and an analytic essay in Spanish on a research topic of interest to the discipline. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 202.

SPAN 322. Latin American Short Story. 3 Units.
The history and development of the Latin American short story from the nineteenth century to the present. Intertextuality, rise of the Nuevo Cuento, and major characteristics of the works. Offered as SPAN 322 and SPAN 422. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 325. Hispanic Intellectuals and Society: A Critical Approach. 3 Units.
This course offers an overview of the most important critical approaches to Spanish American culture and literature, with a socio-historical emphasis. Some of the authors we will discuss are Angel Rama, Jose Antonio Cornejo Polar and Nestor Garcia Canclini. We will analyze how the Latin American intellectuals had thought about specific issues such as identity, race, ideology, colonial and post-colonial relations with the metropolis and the process of formation of the nations in the continent. The class, the discussions, exams, oral presentations and papers will be in Spanish. Some of the readings must be in English, but most of them will be in Spanish. Offered as SPAN 325, SPAN 425, ETHS 325, WLIT 325 and WLIT 425. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 326. The Fantastic in Latin American Prose. 3 Units.
Introduction to a distinctive trend in contemporary Latin American literature, the prose portrayal of the "fantastic," a new narrative mode in Latin America. Critical examination of selected texts reveals new concepts of space and time and an increasing complexity of structure and style, one which juxtaposes and analyzes fantasy and reality. Offered as SPAN 326 and SPAN 426. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 331. Spanish Golden Age Literature. 3 Units.
Through close reading and discussion of representative texts, we will study different examples of Spanish and Latin American writing from the Middle Ages, Renaissance and Baroque periods. We will stress connections between Spain and Latin America, as well as cultural and literary topics of special relevance for contemporary Hispanic cultures. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 333. Contemporary Caribbean Literature. 3 Units.
In addition to developing a general familiarity with the literature and history of this region, students will acquire an awareness of the interrelation of national identity, memory, and language in the texts produced by contemporary Caribbean authors, and of the cultural hybridity characteristic of this production. The themes treated by these authors include colonialism and postcolonialism, cultural and religious syncretism, and sexual politics. Offered as SPAN 333, SPAN 433, and ETHS 333. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 334. Mexican Literature. 3 Units.
The course studies, through a series of representative literary works, the most significant literary movements and styles in 20th and 21st Centuries Mexican Literature. Special attention will be paid to the political, aesthetic, and philosophical debates that have shaped the development of Mexican literature from the 1920s to the present, and to the different narrative techniques and ideologies that have characterized different historical periods, literary movements, and individual authors' styles in contemporary Mexican literature. Offered as SPAN 334 and SPAN 434. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 339. Latin American Poetic Revolt. 3 Units.
Introduction to some of the most important poets in contemporary Latin America, focusing on the political and social struggles of the poets and how they are expressed in the poetry. Students explore Latin American literature through a series of representative literary works, focusing on the dominant themes of the period. Offered as SPAN 339 and SPAN 439. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 340. Contemporary Latin-American Narrative. 3 Units.
Students explore the most significant narrative techniques since 1945 in Latin American fiction: Borges, Cortazar, Garcia Marquez, Vargas Llosa, Isabel Allende. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 342. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in the literary production of Latin American women writers, particularly from the 1920s to the present. Close attention paid to the dominant themes of love and dependency; imagination as evasion; alienation and rebellion; sexuality and power; the search for identity and the self-preservation of subjectivity. Readings include prose, poetry, and dramatic texts of female Latin American writers contributing to the emergence of feminist ideologies and the mapping of feminist identities. Offered as SPAN 342, SPAN 442, ETHS 342, and WGST 342. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 343. The New Drama in Latin America. 3 Units.
Representative works of contemporary Latin American drama. Critical examination of selected dramatic works of twentieth-century Latin America provides students insight into the nature of drama and into the structural and stylistic strategies utilized by Latin American dramatists to create the "new theater," one which is closely related to Latin American political history. Offered as SPAN 343, SPAN 443 and ETHS 343. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.
SPAN 345. Hispanic Autobiographical Writing. 3 Units.
The course studies issues of self-representation through the reading of autobiographical works from different periods from Latin America, Spain, and the U.S., and of theoretical works that address topics of first-person narratives, autobiography, and sub-alternity. Satisfies Global and Cultural Diversity Requirement. Offered as SPAN 345 and SPAN 445. Prereq: SPAN 320.

SPAN 350. Spanish Fiction. 3 Units.

SPAN 351. Hispanic Turn of the Century Literature. 3 Units.
Cultural and political transitions between 19th and 20th Centuries, between Spain and Latin America, and between literary models. Study of Spanish and Latin American writers and their literary connections (Generation of 1898, modernistas) in the context of colonial conflicts and economic changes. Offered as SPAN 351 and SPAN 451. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 353. Transatlantic Vanguard. 3 Units.
Presentation of transatlantic tendencies of the early vanguard movements represented by poets from Spain, Central and South America. Beginning with the advent of Modernism in Latin America and Symbolism in Spain, this course will trace the development of resulting movements in the early twentieth century. Surrealism, Creationism, Futurism, Ultraism and Dadaism forged a vital link between poets and artists from the Americas and their European counterparts. We will focus on the similarities and differences between these "isms" while drawing conclusions about the uniqueness of vanguard movements on both sides of the Atlantic. Offered as SPAN 353 and SPAN 453. Prereq: SPAN 320.

SPAN 356. Afro-Hispanic Literature. 3 Units.
This course will survey the literary and cultural production of writers and artists of African descent in Latin America and the Caribbean, paying attention to both their creative and theoretical texts. Discussion of questions of race and ethnicity will allow students to explore the ways in which these texts reformulate the idea of national identity and cultural belonging in the context of the nation-state, whose traditional centrality is being weakened through the effects of migration and exile. Readings include works by writers from Cuba, Puerto Rico, Dominican Republic, Costa Rica, Colombia, Panama, Ecuador, and Peru. Offered as SPAN 356, SPAN 456 and ETHS 356. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 358. Latin American Cinema. 3 Units.
This course is designed to introduce students to the basic tools of film analysis as well as to the major trends and movements in Latin American cinema from the 1960s to the present. Through the analysis of representative films from Latin America, the course will examine the development of a variety of cinematic styles, paying particular attention to the historical contexts in which the films were produced and to the political, cultural, and aesthetic debates that surrounded their production. Offered as SPAN 358, SPAN 458 and ETHS 358. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320 or equivalent.

SPAN 370. Special Topics in Spanish. 3 Units.
This course is designed to respond to students' and faculty interest in specific themes or issues not otherwise covered in the curriculum. Approaches, content, and instructor will vary and this course may have a focus that crosses generic, artistic, historical, disciplinary, and geographical boundaries. The honing of analytical and interpretative skills as well as the further development of Spanish language skills also are integral objectives of this course. The class is conducted in Spanish. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320 or equivalent.

SPAN 385. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 396. Senior Capstone - Spanish. 3 Units.
The Senior Capstone in Spanish is an independent study project chosen in consultation with a capstone advisor. The capstone project should reflect both the student's interest within Spanish and the courses he or she has taken to fulfill the major. The project requires independent research using an approved bibliography and plan of action. In addition to written research, the student will also present the capstone project in a public forum that is agreed upon by the project advisor and the student. Counts as SAGES Senior Capstone. Counts for CAS Global & Cultural Diversity Requirement. Senior status required. Major in Spanish required.

SPAN 397. Honors Thesis I. 3 Units.
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper in Spanish. Limited to senior majors. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 398. Honors Thesis II. 3 Units.
Continuation of SPAN 397. Limited to senior majors. Permit required. Prereq: SPAN 397.

SPAN 399. Independent Study. 1 - 3 Units.
The course is for students with special interests and commitments that are not fully addressed in regular courses, and who wish to work independently.

SPAN 400. Foreign Language Teaching Methodology Practicum. 3 Units.
This class is a requirement for first year MA students. This class will allow the Graduate students in Hispanic Studies to improve their teaching skills. Students will learn the most recent theories and methodologies regarding the teaching of a foreign language and will have practical experience dealing with pedagogical situations in a classroom while teaching a foreign language. Students will work and study under the supervision of their instructor. The course is designed as a practicum and it will work as an independent study while the student attends different language and culture classes to observe them. The combination of study and practice will allow the students to reflect about the teaching techniques they will learn.
SPAN 401. Introduction to Critical Theory. 3 Units.
This course is an introduction to the field of critical theory. It examines many of the major theoretical approaches to the study of literary and cultural texts such as Marxism, Post-structuralism, Feminism, and Post-colonial studies. It provides students with a critical map of some of the most influential theoretical approaches to the study of culture as well as with the necessary analytical tools for the interpretation of texts. The course is a requirement for first-year MA students in Hispanic Studies.

SPAN 406. The Cuban Experience: an immersion in its culture and society. 3 Units.
This is a three-week study-abroad intensive course that takes place in Matanzas and Havana, Cuba. The course combines the unique advantages of a total immersion environment in the Cuban culture with a classroom curriculum that includes the study of relevant cultural, literary and historical issues. Students complete three hours of classroom instruction and an hour and a half of workshop four days per week. Also, they participate in organized visits to historic sites and museums connected to the culture curriculum. The focus of the culture curriculum is the study of Cuban history and culture through its literature, visual arts, films, and music. After applying and being accepted into the program, students meet for personal advising with the program director and attend four different one-hour orientation-information meetings in the spring semester. After successful completion of the study-abroad program, students receive three upper-level credits in Spanish or Ethnic Studies. The course is interdisciplinary in its approach and provides students with the tools they need to analyze and understand the complexities of modern Cuba. Students will have formal classes taught by their professor and talks, and meetings with specialists on Cuban literature, art, architecture, history and other aspects of culture and society. Also, they will attend lectures, participate in discussions, and take field trips that will expose them to many aspects of Cuban culture, such as art, architecture, music, dance, film, literature, artisan work, folklore, history and urban growth. Offered as SPAN 306, SPAN 406, and ETHS 306. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 202.

SPAN 415. Latin American Cultural Conflicts. 3 Units.
Evolution of Latin American socioeconomic characteristics and artistic production up to the present. Class discussions of diverse literary works, social research essays, and testimonials focus on conflicting elements in class structures, ethnicity, and urban modernization as well as family ethos, religious trends, cultural identity, and educational problems. Offered as SPAN 315 and SPAN 415. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 422. Latin American Short Story. 3 Units.
The history and development of the Latin American short story from the nineteenth century to the present. Intertextuality, rise of the Nuevo Cuento, and major characteristics of the works. Offered as SPAN 322 and SPAN 422. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 425. Hispanic Intellectuals and Society: A Critical Approach. 3 Units.
This course offers an overview of the most important critical approaches to Spanish American culture and literature, with a socio-historical emphasis. Some of the authors we will discuss are Angel Rama, Jose Antonio Cornejo Polar and Nestor Garcia Canclini. We will analyze how the Latin American intellectuals had thought about specific issues such as identity, race, ideology, colonial and post-colonial relations with the metropolis and the process of formation of the nations in the continent. The class, the discussions, exams, oral presentations and papers will be in Spanish. Some of the readings must be in English, but most of them will be in Spanish. Offered as SPAN 325, SPAN 425, ETHS 325, WLIT 325 and WLIT 425. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 426. The Fantastic in Latin American Prose. 3 Units.
Introduction to a distinctive trend in contemporary Latin American literature, the prose portrayal of the “fantastic,” a new narrative mode in Latin America. Critical examination of selected texts reveals new concepts of space and time and an increasing complexity of structure and style, one which juxtaposes and analyzes fantasy and reality. Offered as SPAN 326 and SPAN 426. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 433. Contemporary Caribbean Literature. 3 Units.
In addition to developing a general familiarity with the literature and history of this region, students will acquire an awareness of the interrelation of national identity, memory, and language in the texts produced by contemporary Caribbean authors, and of the cultural hybridity characteristic of this production. The themes treated by these authors include colonialism and postcolonialism, cultural and religious syncretism, and sexual politics. Offered as SPAN 333, SPAN 433, and ETHS 333. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 434. Mexican Literature. 3 Units.
The course studies, through a series of representative literary works, the most significant literary movements and styles in 20th and 21st Centuries Mexican Literature. Special attention will be paid to the political, aesthetic, and philosophical debates that have shaped the development of Mexican literature from the 1920s to the present, and to the different narrative techniques and ideologies that have characterized different historical periods, literary movements, and individual authors’ styles in contemporary Mexican literature. Offered as SPAN 334 and SPAN 434. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SPAN 320.

SPAN 439. Latin American Poetic Revolt. 3 Units.
Introduction to the most important poets in contemporary Latin America, a region home to a significant number of eminent poets, including Nobel Laureates from Chile, Gabriela Mistral and Pablo Neruda. The course focuses on detailed textual analysis of pivotal works, combined with historical-literary perspective, so students gain insight into the diverse styles and tendencies that reflect the tumultuous history of poetry’s development in a relentless search for a Latin American cultural identity. Offered as SPAN 339 and SPAN 439. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 442. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in the literary production of Latin American women writers, particularly from the 1920s to the present. Close attention paid to the dominant themes of love and dependency; imagination as evasion; alienation and rebellion; sexuality and power; the search for identity and the self-preservation of subjectivity. Readings include prose, poetry, and dramatic texts of female Latin American writers contributing to the emerging of feminist ideologies and the mapping of feminist identities. Offered as SPAN 342, SPAN 442, ETHS 342, and WGST 342. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 443. The New Drama in Latin American. 3 Units.
Representative works of contemporary Latin American drama. Critical examination of selected dramatic works of twentieth-century Latin America provides students insight into the nature of drama and into the structural and stylistic strategies utilized by Latin American dramatists to create the “new theater,” one which is closely related to Latin American political history. Offered as SPAN 343, SPAN 443 and ETHS 343. Counts for CAS Global & Cultural Diversity Requirement.
SPAN 445. Hispanic Autobiographical Writing. 3 Units.
The course studies issues of self-representation through the reading of autobiographical works from different periods from Latin America, Spain, and the U.S., and of theoretical works that address topics of first-person narratives, autobiography, and sub-alternity. Satisfies Global and Cultural Diversity requirement. Offered as SPAN 345 and SPAN 445. Prereq: SPAN 320.

SPAN 451. Hispanic Turn of the Century Literature. 3 Units.
Cultural and political transitions between 19th and 20th Centuries, between Spain and Latin America, and between literary models. Study of Spanish and Latin American writers and their literary connections (Generation of 1898, modernistas) in the context of colonial conflicts and economic changes. Offered as SPAN 351 and SPAN 451. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 453. Transatlantic Vanguard. 3 Units.
Presentation of transatlantic tendencies of the early vanguard movements represented by poets from Spain, Central and South America. Beginning with the advent of Modernism in Latin America and Symbolism in Spain, this course will trace the development of resulting movements in the early twentieth century. Surrealism, Creationism, Futurism, Ultraiism and Dadaism forged a vital link between poets and artists from the Americas and their European counterparts. We will focus on the similarities and differences between these "isms" while drawing conclusions about the uniqueness of vanguard movements on both sides of the Atlantic. Offered as SPAN 353 and SPAN 453.

SPAN 456. Afro-Hispanic Literature. 3 Units.
This course will survey the literary and cultural production of writers and artists of African descent in Latin America and the Caribbean, paying attention to both their creative and theoretical texts. Discussion of questions of race and ethnicity will allow students to explore the ways in which these texts reformulate the idea of national identity and cultural belonging in the context of the nation-state, whose traditional centrality is being weakened through the effects of migration and exile. Readings include works by writers from Cuba, Puerto Rico, Dominican Republic, Costa Rica, Colombia, Panama, Ecuador, and Peru. Offered as SPAN 356, SPAN 456 and ETHS 356. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 458. Latin American Cinema. 3 Units.
This course is designed to introduce students to the basic tools of film analysis as well as to the major trends and movements in Latin American cinema from the 1960s to the present. Through the analysis of representative films from Latin America, the course will examine the development of a variety of cinematic styles, paying particular attention to the historical contexts in which the films were produced and to the political, cultural, and aesthetic debates that surrounded their production. Offered as SPAN 358, SPAN 458 and ETHS 358. Counts for CAS Global & Cultural Diversity Requirement.

SPAN 485. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

SPAN 499. Graduate Independent Study. 3 Units.
This class will fulfill the requirement of graduate students who need to complete their course-loud focusing on specific topics related to their fields of study.
A top-ranked private research university with programs spanning the arts and sciences, engineering, health sciences, law, management, and social work, CWRU excels in musicology, historical performance practice, and music education. CIM is one of just three independent conservatories in the United States devoted exclusively to classical music performance. For over half a century, these distinguished institutions have used the Joint Music Program (JMP) to share collective resources, focusing on the strengths of each institution.

Students enrolled at CWRU take applied music lessons/studio instruction, chamber music, theory, and eurhythmics courses taught by CIM faculty (https://music.case.edu/about/associated-cim-faculty/), while students enrolled at CIM take music history, music education, and general electives in the humanities and sciences taught by CWRU faculty.

Both CWRU and CIM are located in University Circle (http://universitycircle.org/), giving students access to a wealth of cultural institutions within a short walking distance from campus.

Facilities, Centers, and Partnerships
Details about our operating hours, usage guidelines, building access, practice rooms, and more, can be found on the Department of Music Facilities webpage (https://case.edu/artsci/music/about/facilities/).

Haydn Hall
Haydn Hall (https://goo.gl/ghQde8/) houses the Department of Music faculty and staff offices, a small lounge, three classrooms, four practice rooms (2nd floor), HPP studio spaces, the Music Education Resource Room, and a Macintosh computer classroom/lab (The Core). It is located in the heart of the Mather Quad. Originally a combination of a dormitory and classrooms, this building served as the only student center on campus. It was given to the college by Flora Stone Mather (https://case.edu/ech/articles/m/mather-flora-stone/) and named in honor of Hiram Collins Haydn (https://case.edu/ech/articles/h/haydn-hiram-collins/), fifth president of Western Reserve University, pastor of the Old Stone Church, and the individual most active in convincing Western Reserve College to move to Cleveland. Charles F. Schweinfurth (https://case.edu/ech/articles/s/schweinfurth-charles-f/), the prominent residential architect of Euclid Avenue (https://case.edu/ech/articles/e/euclid-ave/) (“Millionaires’ Row”) mansions, who also rebuilt the interior of the Old Stone Church (https://case.edu/ech/articles/f/first-presbyterian-church-old-stone/) in 1884 and designed Trinity Cathedral (https://case.edu/ech/articles/t/trinity-cathedral/), designed Haydn Hall. Scheduling is controlled by the Department of Music.

The Core is actively involved in bringing technology to the community and it works closely with faculty in providing support facilities for technology-related courses.

Florence Harkness Memorial Chapel
Harkness Chapel (https://case.edu/artsci/music/about/facilities/florence-harkness-memorial-chapel/), built during 1902, features neo-Gothic architecture, antique oak and Georgia pine woodwork, and Tiffany windows. It is a warm, intimate, and acoustically resonant space for the performance of vocal and instrumental chamber music. The building provides space for concerts, music classes, and department recitals. Harkness Chapel was built to honor Florence Harkness Severance (https://case.edu/ech/articles/s/severance-louis-henry/) (Louis Henry Severance), the only daughter of Stephen V. Harkness (https://case.edu/ech/articles/h/harkness-stephen-v/) and his second wife, Anna M. Richardson Harkness (https://case.edu/ech/articles/h/harkness-anna-m-richardson/).

Harkness Chapel, Classroom
Harkness Classroom (https://case.edu/utech/departments/client-experience/mediavision/technology-enhanced-classroom-tec/list-classrooms/harkness-classroom/) is located inside of Harkness Chapel and serves as an academic classroom, and a backstage area during performances. This room features a capacity of 45 desks on risers with Level 2 Technology, including video projection, stereo sound system, and a grand piano. Scheduling is controlled by the University Registrar and available for non-music classes with permission from the Department of Music.

Denison Hall
Denison Hall (https://goo.gl/uauDeZ/), located next to Wade Commons near the North Residential Village, is used primarily for ensemble rehearsals. This facility houses six Wenger practice modules, one of which is a “virtual reality” acoustic room; a percussion studio; and a music library. The four classrooms include the Spartan Rehearsal Hall (Rm. 197), Wade Rehearsal Hall (Rm. 119), Denison Rehearsal Hall (Rm. 160), and Denison Classroom (Rm. 152). The facility also has storage rooms for marching band uniforms, equipment and instrument storage lockers (available to music majors and students enrolled in ensembles). In general, the classrooms in Denison Hall are to be utilized by music majors or CWRU students enrolled in music ensembles or applied music lessons. Scheduling is controlled by the Department of Music.

Denison Hall is a Macintosh computer classroom and lab dedicated to mind, sound, and vision. The Core is a collaborative space for all CWRU students, faculty and staff, as well as the University Circle community, to gather and collaborate, design visual and aural mediums, and create masterpieces. It not only offers computers and software, but also video and digital cameras and microphones for checkout, one-on-one tutorial time, course instruction, and space for meetings/demonstrations. The Core is actively involved in bringing technology to the community and it works closely with faculty in providing support facilities for technology-related courses.

Kulas Music Collection
The Kulas Music Collection (https://case.edu/library/spaces/kulas-music-collection/), located on the first floor of the Kelvin Smith Library (https://case.edu/library/spaces/kulas-music-collection/), contains more than 42,000 items, including books, scores, media, microforms, and music periodicals. Users can borrow books and scores; the library provides listening and reading areas to use media and reference collections. In addition to print resources, access is provided to online databases and research guides. A partnership with the Robinson Music Library (https://www.cim.edu/about/muslib/) at the Cleveland Institute of Music,
which coordinates acquisitions and services, is available to faculty, staff and students with a valid ID.

**Kulas Collection of Historical Instruments**
The Department of Music maintains an impressive collection of modern reproductions of early instruments. The Historical Performance Practice (https://case.edu/artsci/music/academics/areas-study/historical-performance-practice/) program offers a wide range of ensembles from Medieval to romantic, and the Kulas Collection of historical instruments (renaissance, medieval and baroque string, wind, and brass instruments) is available to all students. The program also owns a wide range of historical keyboard instruments (French, Italian, and German Harpsichords, a continuo organ, and two fortepianos).

**Music Education Resource Room**
The Music Education Resource Center (https://case.edu/artsci/music/academics/areas-study/music-education/) (Haydn Hall, Rm. 10) is a space for music education students to prepare educational materials and research projects, and it contains a variety of audiovisual media, including a library of education-oriented music software. Students may borrow items from a large collection of music textbooks, educational recordings, testing materials, vocal and instrumental books, curriculum guides, and classroom instruments. The use of this center is encouraged and sometimes required for many of the projects/assignments throughout the music education curriculum.

**Center for Popular Music Studies**
The Center for Popular Music Studies (https://case.edu/artsci/music/academics/center-popular-music-studies/) exists to promote scholarship and teaching about the history and significance of popular music, which includes collaborations and partnerships with institutions in Cleveland and around the world. The goals and objectives of the CPMS include: supporting collaboration between researchers and historians of popular music, investigating and creating new approaches to teaching popular music (including performance), providing opportunities for graduate students to learn about popular music in an active, critically robust program, and advancing emerging research in popular music through sponsorship of visiting scholars.

**Maltz Performing Arts Center**
The Milton and Tamar Maltz Performing Arts Center at The Temple–Tifereth Israel (https://case.edu/maltzcenter/) opened in 2015 after extensive restoration and renovation of the structure, which first served as a synagogue in 1924. Today, the center is an active venue for performances and events, including lectures and music concerts, including the Silver Hall Concert Series (https://case.edu/maltzcenter/silverhallsseries/) (during which our department ensembles perform). *Phase One* includes Silver Hall, a 1,000-seat concert hall for large ensemble performances, and Koch Hall, a 90-seat recital hall for smaller performances. *Phase Two*, which includes a proscenium theater, a blackbox studio theater, rehearsal studios, practice rooms, and costume and scene shops, is scheduled to open in 2021.

**News and Events**
Enjoy events and performances presented by the Department of Music, find an archive of past concerts, recitals and more, discover our weekly forum for presentation and discussion of recent research, and explore some of our latest news and headlines! Find all of this information in the News and Events section on the Department of Music webpage (https://case.edu/artsci/music/news-events/).

**Ensembles and Lessons**
The Department of Music is pleased to offer a variety of academic ensembles open to all students and Case Western Reserve University affiliated individuals. Applied music lessons are available to all students through our Joint Music Program with the Cleveland Institute of Music. Find a list of ensembles, audition and participation details, and general information about private lessons in the Ensembles and Lessons section of the Department of Music webpage (https://case.edu/artsci/music/ensembles-lessons/).

**Department Faculty**
David J. Rothenberg, PhD  
(Yale University)  
*Associate Professor and Chair*  
Medieval and Renaissance music

Julie Andrijeski, DMA  
(Case Western Reserve University)  
*Senior Instructor; Artistic Coordinator of Historical Performance Ensembles*  
Historical performance; dance

L. Peter Bennett, D Phil  
(Oxford University)  
*Professor; Head of Historical Performance Practice*  
17th-century French music; historical performance

Francesca Brittan, PhD  
(Cornell University)  
*Associate Professor*  
19th-century France; Romantic aesthetics; popular music

Eric Charnofsky, MM  
(The Juilliard School)  
*Senior Instructor; Coordinator of Undergraduate Studies in Music (BA); Coordinator of Undergraduate Enrollment*  
20th-century music; collaborative piano; keyboard ensemble

Georgia J. Cowart, PhD  
(Rutgers University)  
*Professor; Coordinator of Graduate Studies in Musicology*  
17th and 18th centuries; music, the arts, and politics

Paul S. Ferguson, MM  
(Eastman School of Music)  
*Senior Instructor*  
Jazz studies and arranging

Matthew L. Garrett, PhD  
(Florida State University)  
*Associate Professor; Coordinator of Undergraduate Studies in Music Education (BS); Director, University Center for Innovation in Teaching and Education (UCITE)*  
Music teacher education; choral music education

Daniel Goldmark, PhD  
(University of California, Los Angeles)  
*Professor; Head of Popular Music Studies; Director of the Center for Popular Music Studies*  
American popular music; film music; history of the music industry
Benjamin C. Helton, PhD  
(University of Illinois)  
Assistant Professor; Director of Spartan Marching Band  
Music teacher education; instrumental music education

Kathleen A. Horvath, PhD  
(The Ohio State University)  
Professor; Director of Orchestras  
Music teacher education; string education and pedagogy

Lisa Huisman Koops, PhD  
(Michigan State University)  
Professor; Head of Music Education; Coordinator of Graduate Studies in Music Education  
Music teacher education; general music; early childhood music

Nathan B. Kruse, PhD  
(Michigan State University)  
Associate Professor  
Music teacher education; research methods

Susan McClary, PhD  
(Harvard University)  
Fynette H. Kulas Professor of Music; Head of Musicology  
16th- and 17th-century music; cultural criticism; music theory and analysis; 21st-century opera

Ryan Scherber, PhD  
(Florida State University)  
Assistant Professor; Director of Bands  
Music teacher education; instrumental education; quantitative research methods

## Undergraduate Programs

### Admission

Students interested in a music major can pursue a BA in Music (https://case.edu/artsci/music/academics/undergraduate-degree-programs/ba-music/) or a BS in Music Education (https://case.edu/artsci/music/academics/undergraduate-degree-programs/bs-music-education/). Both degree programs require submission of the Common Application and Music Arts Supplement on an acceptable primary instrument or voice (the BS in Music Education also requires a live interview component). All incoming music majors take a music theory placement exam. Students may pursue the minor in music (https://case.edu/artsci/music/academics/undergraduate-degree-programs/minor-music/) or participate in ensembles and lessons as non-majors without passing an audition. However, all students applying for music scholarship must submit a Music Arts Supplement with the Common Application. More information about the undergraduate admission and audition process is provided in the Undergraduate Application Procedures on the Department of Music Webpage (https://case.edu/artsci/music/admissions/undergraduate/application-procedures/).

For students who do not major in music but want to participate in musical activities on campus, our many ensembles (https://case.edu/artsci/music/ensembles-lessons/) are open to all CWRU students (regardless of major), and we offer music lessons (https://case.edu/artsci/music/ensembles-lessons/) through the Joint Music Program with faculty from the Cleveland Institute of Music.

### Academics

The Department of Music offers majors in music (a BA degree in the College of Arts and Sciences or a BS degree in a unit other than the college with music as a secondary major) and music education (BS degree).

**Double Major, Dual-Degree, and Secondary Major Opportunities.** The department encourages qualified students to consider a double major in music and another BA degree program. Most music majors at CWRU also pursue a second major. Once the SAGES and General Education Requirements have been met, a BA student can add another major within the College of Arts and Sciences by meeting the course and credit unit requirements found in this bulletin under the appropriate department. In most cases, it is possible to finish a double major with music in four years.

It is also possible to receive two degrees, although this may take more than four years. Typical combinations of dual degrees include the BA in music (College of Arts and Sciences) with the BS in engineering (School of Engineering). All admissions requirements must be met for each school, and course and credit unit requirements for each degree must be fulfilled. Students interested in double degrees should declare their intent as early as possible and receive advice from faculty about both degrees.

Finally, students completing a BS in a unit other than the College of Arts and Sciences (for example, a BS in engineering) can choose music as a secondary major within that BS degree. Students pursuing music as a secondary major only need to meet the SAGES and General Education Requirements of the school in which they are earning their degree.

### Bachelor of Arts in Music (BA) or a BS degree with a secondary major in music

The Bachelor of Arts (BA) in Music (https://case.edu/artsci/music/academics/undergraduate-degree-programs/ba-music/) allows students to study music within a larger context of a liberal arts education. This degree is designed for students whose interests are not fully encompassed by a more specialized degree track. It is usually the case that students in this degree program have other interests that will shape their studies. These may include engineering, computer science, business, psychology, or any other field of study. The BA in Music is designed to accommodate this diversity while still providing a thorough grounding in fundamental musical skills and knowledge.

Many of our students combine musical study with study in other areas through a double major or dual degree (https://case.edu/artsci/music/academics/undergraduate-degree-programs/double-major-secondary-major-dual-degree/). Students are encouraged to collaborate with each other across disciplines. This creative atmosphere provides the unique opportunity for students to learn about specializations from some of the leading faculty in diverse areas (historical performance practice, musicology, and music education).

CWRU students participate in a SAGES Capstone (https://case.edu/artsci/music/sagescapstone_musicmajors/) project over one or two semesters, culminating in a final public presentation of their work in a university-wide celebration of scholarship and service. This is a self-designed project, which explores a subject of particular interest. It may take the form of a research paper, a presentation, a presentation with a performance component, a recording project, or any other format that demonstrates the student’s achievement.

After completing the BA in Music, students are able to do the following:
• Demonstrate technical and artistic proficiency on a primary performance medium (instrument or voice)
• Contribute positively to musical ensembles of various sizes and types, and collaborate effectively with fellow ensemble members and ensemble directors
• Demonstrate facility with the major concepts and techniques of tonal and post-tonal music theory and analysis
• Demonstrate familiarity with the major musicians, musical thinkers, musical styles, techniques, procedures, and cultural trends of all periods in the history of Western music
• Draw on knowledge and skills in performance, music theory, music history, and/or music education to write a substantial critical assessment of musical works, concepts, and/or practices in the Western classical and/or popular traditions

The Music BA program requires that 43–51 of the total 120 credit units necessary for the degree be devoted to music study, with the remaining credits devoted to the SAGES and College of Arts and Sciences general education requirements, a possible minor program, and a liberal selection of elective courses.

Requirements for the major in music:

**Applied Music**

Private instruction on primary instrument in sequence (department consent required):

MUAP 121  Principal Performance Area I  2
MUAP 122  Principal Performance Area II  2
MUAP 10  Progress Jury Examination  0
MUAP 221  Principal Performance Area III  2
MUAP 222  Principal Performance Area IV  2
MUAP 20  Level 300 Applied Music Entrance Jury Exam  0
MUAP 321  Principal Level Performance Area V  2
MUAP 322  Principal Level Performance Area VI  2
MUAP 30  BA Performance Exit Jury Examination  0

Recital Class component required (auto-enrolled) with each principal performance area. Participation in weekly Recital Class (W 3:20-4:10pm), including a performance one per academic year required.

**Ensembles**

Eight semesters of ensemble participation for 0–1 credits each, of which six semesters must be a Primary Ensemble designated for the student’s primary instrument. ¹

Primary Ensembles:

MUEN 385  Case/University Circle Orchestra (Strings)
MUEN 383  Symphonic Winds (Winds/Percussion)
MUEN 382  Case Concert Choir (Voice)
MUEN 389  Keyboard Ensemble (Piano)
MUEN 355  Miscellaneous Ensembles (Guitar)
MUEN 395  Collegium Musicum (Historical Performance Practice)
MUEN 396  Early Music Singers (Historical Performance Practice)

MUEN 397  Baroque Orchestra (Historical Performance Practice)
MUEN 370  Popular Music Ensemble (Popular Music)

Additional Ensembles (two semesters, one full year):

MUEN 324  Case Percussion Ensemble
MUEN 371A  Klezmer Music Ensemble
MUEN 371B  Klezmer Music Ensemble
MUEN 373  Jazz Ensemble I
MUEN 374  Jazz Ensemble II
MUEN 380A  Case Men's Glee Club
MUEN 380B  Case Men's Glee Club
MUEN 384  Spartan Marching Band
MUEN 386  Case Camerata Chamber Orchestra
MUEN 388A  University Chorale
MUEN 388B  University Chorale
MUEN 393  Baroque Chamber Ensembles
MUEN 394  Baroque Dance Ensemble
MUEN 355 (Woodwind & Brass Chamber Music or studio classes in flute, guitar, horn, saxophone)

**Music Theory and Eurhythmics**

MUTH 101  Theory and Aural Skills I  4
or MUTH 101I  Intensive Theory and Aural Skills 1
Students who do not place into MUTH 101 must take MUTH 101I.

MUTH 102  Theory and Aural Skills II  4
MUTH 201  Harmony-Keyboard IV  4
MUDE 101  Eurhythmics I  0
MUDE 102  Eurhythmics II  0

**Music History**

MUHI 201  History of Western Music I [pre-req MUTH 102]  3
MUHI 202  History of Western Music II [pre-req MUHI 201]  3

**Music Electives**

Music majors must take 9 credit units of elective courses drawn from the Electives table below.

Total Units  43–51

¹ The faculty may place you in an alternate primary ensemble in certain semesters (see the Undergraduate Music Handbook (https://case.edu/artsci/music/academics/current-students/undergraduate-music-majors/)). The two additional semesters may be any combination of primary ensembles or one or more additional ensembles.

**Electives (Music Major)**

MUHI at 300 level or higher

MUHI 309  Christian Music: Historical and Global Perspectives  3
MUHI 310  Music Cultures of the World  3
MUHI 312  History and Analysis of Rock and Roll  3
MUHI 314  Blues Histories and Cultures  3
MUHI 315 History of Jazz and American Popular Music 3
MUHI 316 The Lemonade Class: Religion, Race, Sex and Black Music 3
MUHI 320 Global Pop 3
MUHI 341 Introduction to Historical Performance Practice 3
MUHI 342 Seminar in Historical Performance Practice 3
MUHI 350 Topics in Music History 3
MUHI 390 Undergraduate Seminar in Music History 3
MUHI 395A Capstone for Music Majors A pre-req MUHI 201 and MUHI 202 2
MUHI 395B Capstone for Music Majors B 1-4
MUTH at 300 level
MUTH 311 16th Century Counterpoint 2
MUTH 312 Eighteenth Century Counterpoint 3
MUTH 319 Jazz Skills 3
MUTH 320 Form and Analysis 3
MUTH 390 Music Theory Literature Review 2
General Musicianship
MUGN 308 Digital Music: Composition and Production 3
Music Education
MUED 240 Foundations of Music Education 3
MUED 275 Elements of Conducting (instructor permission required) 3
MUED 276 Advanced Conducting, Score Analysis and Rehearsal Techniques (instructor permission required) 3
MUED 310 Instrumental and Choral Arranging 3
MUED 391 Music in Early Childhood 3
Skills and Pedagogy
instructor permission required
MUED 200A Basic Skills and Pedagogy: Voice 2
MUED 200B Basic Skills and Pedagogy: Guitar 2
MUED 200C Basic Skills and Pedagogy: Brass 2
MUED 200E Basic Skills and Pedagogy: Clarinet and Saxophone 2
MUED 200F Basic Skills and Pedagogy: Double Reeds and Flute 2
MUED 200H Basic Skills and Pedagogy: Strings 2
MUED 200J Basic Skills & Pedagogy: Piano for Music Educators 2
MUED 200P Basic Skills and Pedagogy: Percussion 2
SAGES Capstone for Music Majors & Departmental Honors
The Music Capstone (https://case.edu/artsci/music/sagescapstone_musicismajors/) is focused on a major project, such as a senior thesis or senior recital with supporting document. A project must have a substantial writing component and must include a public presentation. For recitalists, this requirement is satisfied by the recital. The written component should represent an original argument, beyond the scope of a typical term paper. In MUHI 395A Capstone for Music Majors A, offered for 2.00 credit units in the fall, students will begin research and complete a formal Capstone Prospectus consisting of a 5 - 6 page proposal followed by a detailed outline and annotated bibliography. In MUHI 395B Capstone for Music Majors B, offered for 1.00-4.00 credit units in the spring, students will complete the written component of the project and deliver a public presentation. Students are urged to complete the department seminar and as many music history electives as possible before embarking upon a Capstone project, which represents the culmination and synthesis of the totality of previous undergraduate study.

Double majors and dual degree candidates may opt to take the Capstone in a department other than music. All other music majors must do a Capstone in music or another program of interest to which they are accepted. Students must take the 2-semester sequence in order (strictly enforced), usually in the senior year.

Music majors who maintain a GPA of 3.75 or above in the major, and who complete an ambitious and outstanding Music Capstone project, can earn Departmental Honors by music faculty nomination and vote. This distinction appears on the transcript, is announced at commencement, and is printed in the commencement program.

More information about registration, applied instruction, document length, and public presentation can be found in the Capstone for Music Majors on the Department of Music webpage (https://case.edu/artsci/music/sagescapstone_musicismajors/).

BS in Music Education
The Bachelor of Science in Music Education (BS) (https://case.edu/artsci/music/academics/undergraduate-degree-programs/bs-music-education/) requires a total of 127 credit units and is designed to educate professional teachers of music education in K12 schools. Students develop skills, concepts, and methodologies in music theory, composition, general musicianship, music history, arranging/orchestrating, improvising, conducting, and music performance. The program meets the requirements of the Ohio Department of Education to prepare students to take state-mandated teacher exams (Ohio Assessments for Educators) and apply for teacher licensure. Most states recognize the Ohio teaching license through reciprocity.

Requirements for the BS in music education are as follows

A. Core Courses
Music Theory/Musicianship; Eurhythmics:
MUTH 101 Theory and Aural Skills I 4
or MUTH 101I Intensive Theory and Aural Skills I

Students who do not place into MUTH 101 must take MUTH 101I.

MUTH 102 Theory and Aural Skills II 4
MUTH 201 Theory and Aural Skills III 4
MUTH 202 Harmony-Keyboard IV 4
MUDE 101 Eurhythmics I (fulfills SAGES Phys Ed requirement) 0
MUDE 102 Eurhythmics II (fulfills SAGES Phys Ed requirement) 0

Music History/Literature (must be taken in sequential order):

More information about registration, applied instruction, document length, and public presentation can be found in the Capstone for Music Majors on the Department of Music webpage (https://case.edu/artsci/music/sagescapstone_musicismajors).

**Admission and Retention in Music Education**

There are five decision points in the Music Education Program. For each of the decision points, there are three possible outcomes: unconditional admission to the next level; conditional admission with a prescribed action plan which when successfully completed will result in unconditional admission; or denial of admission. Denial of admission at any decision point means the student is no longer able to pursue a music education degree at Case Western Reserve.

**Decision Point 1: Application for Admission to the Program**

Official admission to the Music Education Program generally occurs at the end of the third semester of study or after the completion of MUED 240 Foundations of Music Education. Admission to the program requires:

1. admission to Case Western Reserve University
2. acceptance as a music major through an audition and interview process before matriculation
3. successful completion of MUED 240 Foundations of Music Education, including evaluation of an initial Teaching ePortfolio
4. a cumulative Case Western Reserve University GPA of 2.7 or better
5. submission of a signed Statement of Assurance of Good Moral Character, and
6. a satisfactory interview with music education faculty, documented on the Teacher Licensure Admission Assessment Form

**Decision Point 2: Application for Advanced Standing**

Application for Advanced Standing should be submitted by the end of the second semester after Decision Point 1 (usually during the fifth semester of study). Application for Advanced Standing requires:

1. a successful review of the updated Teaching ePortfolio
2. submission of a current Academic Requirements Report documenting the following: a cumulative GPA of 2.7 or better, a music GPA of 2.7 or better, and an education GPA of 3.0 or better
3. a passing score on the Candidate Disposition Assessment Inventory completed by the student and the music education faculty

**Decision Point 3: Application for Student Teaching**

Application for Student Teaching should be completed by the end of the semester prior to student teaching (seventh semester of study). The application requires:

1. a successful review of the updated Teaching ePortfolio
2. submission of a current Academic Requirements Report documenting the following: a cumulative GPA of 2.7 or better, a music GPA of 2.7 or better, and an education GPA of 3.0 or better
3. a passing score on the Candidate Disposition Assessment Inventory completed by the student and the music education faculty
4. passing a TB test
5. presenting documentation of Hepatitis B vaccination
6. passing an official criminal background check
7. a satisfactory interview with music education faculty

**Decision Point 4: Retention during Student Teaching**

Retention during Student Teaching should be completed by midterms of the student teaching semester. The assessment requires:

1. a passing score on the Candidate Disposition Assessment Inventory completed by the student and the music education faculty
2. passing scores on the Case Student Teaching Mid-Semester Assessment by the cooperating teacher(s) and university supervisor
3. completion of a self-reflective essay

**Decision Point 5: Application for Initial Licensure**

Application for Initial Licensure occurs after successful completion of all degree requirements. This application requires:

1. a successful review of the updated Teaching ePortfolio
2. submission of a current Academic Requirements Report documenting the following: a cumulative GPA of 2.7 or better, a music GPA of 2.7 or better, and an education GPA of 3.0 or better
3. a passing score on the Candidate Disposition Assessment Inventory completed by the student and the music education faculty
4. passing scores on Ohio licensure exams
5. completion of the Case Teacher Licensure Exit Interview and Survey
6. passing scores on the Case Student Teaching Final Assessment by the cooperating teacher(s) and university supervisor
7. successful completion of Student Teaching coursework with a grade of B or better

After successfully completing all requirements at the five decision points, the student is recommended by the university's director of teacher education for the Ohio Provisional Music (Pre-K-12) License to teach music in public schools in Ohio and more than 40 reciprocating states. Completion of the BS degree does not ensure that the State of Ohio music teacher license will be awarded. Additional information is available from the Teacher Licensure (p. 589) section in this bulletin.

**Departmental Honors**

Music education majors who maintain a GPA of 3.75 or above in the major and who receive a high score on their Teacher Work Sample (TWS) from the music education faculty, can earn Departmental Honors by vote of the music faculty. The distinction appears on the transcript, is announced at commencement, and is printed in the commencement program.

**Undergraduate General Degree Requirements**

Candidates for a baccalaureate degree in music, in addition to meeting the general requirements for bachelor's degrees (https://bulletin.case.edu/undergraduatestudies/degreeprograms/), including the SAGES and physical education requirements, must also complete the College of Arts and Sciences undergraduate degree requirements (https://bulletin.case.edu/undergraduatestudies/casdegree/#bachelorofartsdegreetext), as described in the relevant sections of the General Bulletin (https://bulletin.case.edu/undergraduatestudies/).

**Undergraduate Music Handbook and Advising**

Current undergraduate music majors should review departmental policies and procedures in the Undergraduate Music Handbook (https://case.edu/artsci/music/academics/resources-current-students/undergraduate-music-majors/undergraduate-handbooks/). Music majors can use the Advising Forms (https://case.edu/artsci/music/resources-students/current-undergraduate-music-major-information/advising-forms-music-degree-programs/) to track academic progress in all performance and course requirements.

Additional resources, tutorials, and forms are available on the Resources for Current Undergraduate Music Majors webpage.

Music Minors or Non-Majors Resources and Advising

Current undergraduate music minors or non-majors should review departmental policies and procedures in the Resources for Minors or Non-Majors on the Department of Music webpage (https://case.edu/artsci/music/academics/current-students/music-minors-or-non-majors/). This page also provides recommended courses, registration information, and student forms.

Graduate Programs

Admission

Admission to each degree program follows established guidelines of the School of Graduate Studies (https://case.edu/gradstudies/). Applicants with good academic records from fully accredited universities and colleges will be considered for admission to graduate study at Case Western Reserve University. Admission must be recommended by the department or professional school of the university in which the applicant proposes to study and must be approved by the dean of graduate studies. More information about the graduate application and audition process in music is provided in the Graduate Application Procedures on the Department of Music webpage (https://case.edu/artsci/music/admissions/graduate/application-procedures/).

Academics

The Department of Music offers graduate degree programs in three areas of study (https://case.edu/artsci/music/academics/areas-study/):

Historical Performance Practice

- Master of Arts (MA) in Historical Performance Practice (https://case.edu/artsci/music/academics/graduate-degree-programs/ma-historical-performance-practice.hppp/)
- DMA in Historical Performance Practice (https://case.edu/artsci/music/academics/graduate-degree-programs/dma-historical-performance-practice.hppp/)

Musicology

- Master of Arts (MA) in Music History (https://case.edu/artsci/music/academics/graduate-degree-programs/ma-music-history/)
- PhD in Historical Musicology (https://case.edu/artsci/music/academics/graduate-degree-programs/phd-musicology/)

Music Education

- Master of Arts (MA) in Music Education for Teacher Licensure (https://case.edu/artsci/music/academics/graduate-degree-programs/ma-music-education-teacher-licensure/)
- Master of Arts (MA) in Music Education (https://case.edu/artsci/music/academics/graduate-degree-programs/ma-music-education/)
MA in Historical Performance Practice

This program in early music (up to 1850) combines advanced study in performance, music history, and performance practices. Students should expect to spend two years in full-time study. Admission to the program is granted to those who demonstrate a high level of early music performance skills and good scholarship potential. An audition is required.

Degree Overview
The MA is a two-year degree that requires 21 credit units of coursework, together with 12 units of applied music, proficiency in one relevant foreign language, a jury, and a lecture recital in the second year (3 units).

Coursework and Applied Music
Coursework must include MUHI 610 Research Methods in Music, MUHI 441 Introduction to Historical Performance Practice, MUHI 443 Medieval/Renaissance Notation or MUTH 416 Pre-common Practice Theory and Analysis, and at least two seminars in MUHI 442 Seminar in Historical Performance Practice. Students are also expected to attend MUAP 698 Historical Performance Practice Studio Class each semester of study.

Ensemble Participation and Outside Engagements
Two or more early music ensembles are required each semester (MUEN). Students are encouraged to take outside engagements that will contribute to their professional development, but any engagements that might have a significant impact on class attendance, TA/RA duties, or ensemble participation must be cleared by the HPP committee. See the Graduate Music Handbook for the policy to request an absence for an outside engagement.

Jury
A jury is required in the spring of the first year (MUAP 600 Historical Performance Progress Jury). The program should be decided in consultation with the student's applied teacher and should consist of approximately 15 minutes of music. The jury will consist of the applied teacher with at least two other HPP faculty. If the performance is unsatisfactory, the student will have the opportunity to repeat the jury the following semester. If the second attempt is also unsatisfactory, the student will not be allowed to continue in the degree program.

Foreign Languages
Students must demonstrate the ability to read one language approved by the HPP committee as relevant to the student's research (generally drawn from German, French, Italian, and Latin, though exceptions can be made). For more details, see "Language Examinations" under the PhD requirements.

The minimum required level of reading ability is usually attained by the equivalent of two years of college-level study of the language plus further reading in musical and musicological writings in the language.

Lecture-Recital and Document
One juried lecture-recital is required, taken in the spring of the second year (MUAP 651 M.A. Lecture - Recital and Document M.A. Lecture - Recital and Document) at 3 credit units. The lecture-recital consists of a 45-minute performance generally preceded by a 30-45 minute researched-based lecture dealing with the musical, historical and performance practice issues relevant to the chosen repertoire. The entire lecture-recital should not exceed 90-minutes. See the Graduate Music Handbook for the policy to submit a proposal, prepare for the lecture-recital, and to complete the accompanying document.

Degree Overlap
Students in the MA in HPP program who wish to continue on to the DMA may audition after three semesters of study. If successful, coursework already completed will count toward the DMA requirements. A student who graduates with an MA in HPP but who subsequently wishes to return to the program, may, if readmitted, continue on to the DMA by completing the remaining DMA requirements (typically the final two years of the degree).

</table>
The DMA is a four-year degree. A minimum of 33 credit units of academic coursework is required together with a minimum of 18 units of applied music, proficiency in two relevant foreign languages, a jury, a recital and the first lecture-recital (3 credit units), all to be completed during the first three years of the degree. Qualifying examinations are taken early in the fall of the fourth year, after the successful completion of these examinations, the student will advance to candidacy and prepare and perform the second lecture-recital (6 units) by the end of the fourth year. (Students may also take academic classes during this year, but are not required to.)

**Coursework and Applied Music**
Coursework must include MUHI 610 Research Methods in Music, MUHI 441 Introduction to Historical Performance Practice, MUHI 443 Medieval/Renaissance Notation, MUTH 416 Pre-common Practice Theory and Analysis, and at least three seminars in MUHI 442 Seminar in Historical Performance Practice. Electives may include topics courses (MUHI 450 Topics in Music History), musicology seminars (MUHI 590 Seminar in Musicology), or independent study courses by special arrangement (MUHI 601 Special Readings Ph.D./D.M.A.). Students are also expected to attend MUAP 698 Historical Performance Practice Studio Class.

**Ensembles and Outside Engagement**
Two or more early music ensembles are required each semester (MUEN). Students are encouraged to take outside engagements that will contribute to their professional development, but any engagements that might have a significant impact on class attendance, TA/RA duties, or ensemble participation must be cleared by the HPP committee. See the Graduate Music Handbook (https://music.case.edu/graduate-handbooks/) for more details.

**Jury**
A jury is required in the spring of the first year (MUAP 600). The program should be decided in consultation with the student’s applied teacher and should consist of approximately 15 minutes of music. The jury will consist of the applied teacher with at least two other HPP faculty. If the performance is unsatisfactory, the student will have the opportunity to repeat the jury the following semester. If the second attempt is also unsatisfactory, the student will not be allowed to continue in the degree program.

**Foreign Languages**
Students must demonstrate the ability to read two languages approved by the HPP committee as relevant to the student’s research (generally drawn from German, French, Italian, and Latin, though exceptions can be made). See the Graduate Music Handbook (https://music.case.edu/graduate-handbooks/) for more details.

**Lecture-Recitals and Document**
Two or more early music ensembles are required each semester (MUEN). Students are encouraged to take outside engagements that will contribute to their professional development, but any engagements that might have a significant impact on class attendance, TA/RA duties, or ensemble participation must be cleared by the HPP committee. See the Graduate Music Handbook (https://music.case.edu/graduate-handbooks/) for more details.

**Lecture-Recitals and Document**
Two or more early music ensembles are required each semester (MUEN). Students are encouraged to take outside engagements that will contribute to their professional development, but any engagements that might have a significant impact on class attendance, TA/RA duties, or ensemble participation must be cleared by the HPP committee. See the Graduate Music Handbook (https://music.case.edu/graduate-handbooks/) for more details.
A juried recital is required by the end of the third year, MUAP 700 (0 credit units). The recital (50-60 minutes) should feature works from a variety of national school and periods, and should showcase the student's solo performing abilities: the program will be decided in consultation with the applied teacher and HPP advisor, and must be approved by the HPP committee. See the Graduate Music Handbook for the policy to submit a proposal, prepare for the recital.

Qualifying Examinations
Qualifying examinations are taken at the beginning of the fourth year. See the Graduate Music Handbook for detailed information.

Historical Performance Practice 33-39
- MUHI 610 Research Methods in Music
- MUHI 441 Introduction to Historical Performance Practice
- MUHI 442 Seminar in Historical Performance Practice (three required)

Notation and Pre-Tonal Theory
- MUHI 443 Medieval/Renaissance Notation
- MUTH 416 Pre-common Practice Theory and Analysis

Music History/HPP Electives
May include any of the following:
- MUHI 431, MUHI 432, MUHI 433, MUHI 434, MUHI 435, MUHI 436
- MUHI 450 Topics in Music History
- MUHI 590 Seminar in Musicology
- MUHI 601 Special Readings Ph.D./D.M.A. (by special arrangement)

Recital
- MUAP 700 Historical Performance Recital (required by the end of third year)

Lecture-Recital
- MUHI 751 Recital Document I - D.M.A. 3
- MUHI 753 Recital Document III-D.M.A. 6
  The 6 units of MUHI 753 can be split across two semesters.

Applied Music and Ensembles 18-24
Students are required to take 3 credit units of applied music lessons and ensembles every semester.
- MUAP 500 Applied Music/Ensembles (taken each semester for 1 credit unit to reflect participation in multiple ensembles)

Primary Lessons (2 credit units):
- MUAP 521 Principal Performance Area IX
- MUAP 522 Principal Performance Area IX
- MUAP 523 Principal Performance Area IX
- MUAP 524 Principal Performance Area IX
- MUAP 525 Principal Performance Area IX
- MUAP 526 Principal Performance Area IX

Secondary Lessons (optional):
- MUAP 531 Secondary Performance

Jury:

MUAP 600 Historical Performance Progress Jury (required in the spring of the first year)

Studio Class:
- MUAP 698 Historical Performance Practice Studio Class (taken each semester)

Ensembles:
- MUEN 393 Baroque Chamber Ensembles
- MUEN 394 Baroque Dance Ensemble
- MUEN 395 Collegium Musicum
- MUEN 396 Early Music Singers
- MUEN 397 Baroque Orchestra

Foreign Language
Proficiency in two relevant foreign languages.

Total Units 60-72

MA in Music Education
This program is for individuals with an undergraduate degree in Music Education, a teaching certificate/license, and at least one year of successful music classroom teaching experience, who wish to pursue further academic study as a means to develop professionally. Coursework combines the study of philosophical, research-based, and theoretical positions of teaching and learning music with pragmatic approaches to improving music learning. Additional courses and independent studies enable students to tailor programs to their interests and needs, while maintaining standard of musical and scholarly excellence.

The MA in Music Education has two options for final project:

Plan A (thesis and oral defense)
Students write a thesis based on original research and defend the thesis in an oral examination. Students in Plan A receive 6 credit units for thesis research.

Plan B (comprehensive written examination and oral defense)
Students complete a comprehensive examination in music education at the conclusion of coursework.

Applicants for Plans A or B should have an undergraduate degree in music education with a GPA of 3.0 or better and at least one year of successful music teaching experience, usually in the public schools.

A minimum of 30 credit units is required for Plan A and Plan B. MA students may take 300-level classes provided that 18 credit units of 400-level courses have been completed (faculty approval required).

Summary of MA in Music Education (Plan A, thesis)

Electives  6
Music education courses, seminars, and independent studies suited to the student's interests and approved by the music faculty.

Degree Credit  3
One additional core or elective course to meet the minimum of 30 credit units required to earn the MA in Music Education.

Comprehensive Exam  0
Total Units  30

MAL in Music Education

Plan C (MA for Licensure, or MAL)
The MAL option is for students with an undergraduate degree in music who wish to obtain a licensure to teach music in the public schools while simultaneously pursuing graduate study in music education. Applicants for the MAL should have an undergraduate degree in music (BA or BM) with a GPA of 3.0 or better and some prior experience in working with children.

Course requirements span six semesters and combine core graduate music and music education courses (30 credit units), licensure courses (31 credit units), with student teaching (12 credit units). The regulations for students in the BS program regarding advanced standing, grade point averages, and the Ohio Assessments for Educators exam apply to graduate students in Plan C as well. Completion of the Plan C degree does not ensure that the State of Ohio music teacher license will be awarded.

Plan C requires a minimum of 73 credit units. Classes at the 200-level, while required for teacher licensure, do not count toward the graduate degree and therefore are not included in GPA calculations. However, they do appear on the transcript with a grade and serve to satisfy the academic requirements for licensure. MAL students may take 300-level classes provided that 18 credit units of 400-level courses have been completed (faculty approval required).

To remain in the MAL program, students must meet GPA and professional standards each year. Please review the Graduate Music Handbook (https://music.case.edu/graduate-handbooks/) for more information.

PhD in Music Education

The doctorate in music education is offered to persons who have shown a strong and continuing dedication to music teaching and scholarship. Applicants must have completed at least three years of full-time music teaching, usually in the public schools. The degree is designed to prepare professionals to assume positions of leadership in elementary, secondary, and collegiate instruction. Prior to graduation, doctoral students demonstrate competency in teaching, research, and musicianship. Every effort will be made to plan a program based on individual student needs and interests while maintaining standards of musical and scholarly excellence. Electives, therefore, will be chosen in consultation with a faculty advisor in order to ensure a balance between individual interests and traditional graduate expectations. To remain in the program, students must meet GPA and professional standards each year. For more information, contact the area head of music education.

A qualifying examination follows the completion of coursework, prior to beginning research for the dissertation. Upon completion of the dissertation, an oral defense is held. The dissertation topic is chosen by the student in consultation with the faculty.

A total of 60 credit units is required for the doctoral degree beyond the master's level.

Total Units 30-36

PhD in Musicology

The PhD in Musicology is granted in recognition of superior scholarly ability and attainment. Award of the degree is based not only on computation of time or enumeration of courses, but also upon distinguished work. Highly qualified applicants may enter this program directly upon completion of a bachelor’s degree. All programs of study are formulated to suit the individual needs of the student and require the consent of the advisor.

The PhD requires 36 credit units of coursework and an additional 18 credit units of dissertation research MUHI 701 Dissertation Ph.D.. Required coursework includes MUHI 610 Research Methods in Music and MUHI 612 Analysis for Music Historians, as well as three doctoral MUHI 590 Seminar in Musicology courses. In the first two years, students will be expected to take three courses (or 9 credit units) per semester, for a total of 36 units.

Under the rules of the School of Graduate Studies, a student must complete the thesis no later than five years after registering for the first MUHI 701 Dissertation Ph.D. credits.

Students admitted to the program will take diagnostic examinations prior to the start of classes in their first year. Based on these examinations, students may be required to enroll in specific courses to address deficiencies; these course credits may be applied toward the degree requirements. In December of each year, students will submit an Academic Progress Report (APR).

Written evaluations included as part of this report, along with course grades and materials, will constitute the beginnings of the portfolio maintained by the coordinator of graduate studies that will be the basis for considering each student’s advancement into the PhD program.

At the beginning of the fall in the third year of study, students will take qualifying examinations. These examinations will consist of written and oral sections, and will be conducted and evaluated by the musicology faculty. Following the examinations, the faculty will review each student’s portfolio and, based on work contained therein, make a decision regarding advancement to candidacy in the PhD program. Students who do not advance but who have done satisfactory work will be eligible to receive the MA in music history at this juncture.
Students who advance to candidacy for the PhD will register for MUHI 701 Dissertation Ph.D. credits and begin research for the dissertation. Working with a faculty advisor, each student will develop a proposal for the dissertation, which will be presented in writing to the faculty no later than March 15 at the end of the third year of study. This document should be submitted at least two weeks prior to a prospectus defense, scheduled no later than April 1. It is expected that the fourth and fifth year of study will be devoted to work on the dissertation; during this time, students will enroll in MUHI 710 Dissertation Seminar. Upon completion of the thesis, each student will present a formal defense to the musicology faculty.

The Graduate Music Handbook (http://music.case.edu/graduate-handbooks/) outlines in detail the procedures and timeline for dissertation completion and graduation.

**School of Graduate Studies Academic Requirements**

The School of Graduate Studies (https://bulletin.case.edu/schoolofgraduatestudies/) (SGS) oversees the university-wide standards of performance in graduate study. Current music students are strongly encouraged to become familiar with their academic policies and requirements, as described in the relevant sections of the General Bulletin (https://bulletin.case.edu/schoolofgraduatestudies/).

For an organized breakdown of all exact policies, see the SGS Policies and Procedures webpage (https://case.edu/gradstudies/about-school/policies-procedures/).

**Graduate Music Handbook and Advising**

Current graduate and professional students in music should review departmental policies and procedures in the Graduate Music Handbook (https://music.case.edu/graduate-handbooks/). The handbook provides
additional information regarding graduate assistantships, general expectations and responsibilities, program outcomes, decision points, performances, scholarly activity, outside work, prizes/awards, deadlines, petitions, examinations, advancement to candidacy, and student record-keeping.

Additional resources, tutorials and forms are available on the Resources for Current Graduate and Professional Music Students webpage (https://case.edu/artsci/music/academics/current-students/graduate-and-professional-students/).

**MUAP Courses**

**MUAP 10. Progress Jury Examination. 0 Unit.**
Progress Jury Examination (All BA and BS Music Majors)

**MUAP 11. Recital Class. 0 Unit.**

**MUAP 20. Level 300 Applied Music Entrance Jury Exam. 0 Unit.**
Level Jury Examination

**MUAP 25. BA Exit Jury Examination. 0 Unit.**
BA Exit Jury Examination (Audio and General Music Concentrations)

**MUAP 26. BA Exit Jury Examination. 0 Unit.**
BA Exit Jury Examination (Music History, Music Theory, and Early Music Performance Practice)

**MUAP 30. BA Performance Exit Jury Examination. 0 Unit.**
BA Performance Exit Jury Examination

**MUAP 35. BS Music Education Jury Examination. 0 Unit.**
BS Music Education Jury Examination

**MUAP 121. Principal Performance Area I. 2 Units.**
Limited to music and music education majors. Recommended preparation: Entrance Jury/Audition

**MUAP 122. Principal Performance Area II. 2 Units.**

**MUAP 131. Secondary Performance. 1 - 2 Units.**
Secondary instrumental or vocal instruction (undergraduate level). Each student has the option of taking one-hour weekly lessons (2 credit units) or half-hour weekly lessons (1 credit unit). The applied lesson fee is waived for all music majors. Contact the Department of Music directly for registration consent.

**MUAP 221. Principal Performance Area III. 2 Units.**
Limited to music and music education majors. Prereq: (MUTH 101 or 101I) and MUAP 122 and MUAP 10. Coreq: MUTH 101 or 101I.

**MUAP 222. Principal Performance Area IV. 2 Units.**

**MUAP 225. Principal Performance Area VII. 2 Units.**
Limited to music and music education majors. Prereq: MUAP 224.

**MUAP 226. Principal Performance Area VIII. 2 Units.**
Limited to music and music education majors. Prereq: MUAP 225.

**MUAP 321. Principal Level Performance Area V. 2 Units.**
Limited to music and music education majors. Prereq: MUAP 222 and MUAP 20. Prereq or Coreq: MUTH 201.

**MUAP 322. Principal Level Performance Area VI. 2 Units.**

**MUAP 323. Principal Performance Area VII. 2 Units.**
Limited to music performance and music education majors.
MUAP 700. Historical Performance Recital. 0 Unit.
Historical Performance Recital. Intended to demonstrate mastery of historically-informed performance in a number of different national styles.

MUAR Courses

MUAR 200. Audio Recording I. 2 Units.
A study of basic recording principles and systems and techniques of recording and editing. Recommended preparation: Audio recording majors only.

MUAR 201. Audio Recording II. 2 Units.
Further study of basic recording principles and systems with an introduction to digital recording. Recommended preparation: MUAR 200.

MUAR 202. Pro Tools Production I. 2 Units.
Pro Tools is the Industry standard for digital Audio Production. This course follows the avid curriculum for Pro Tools user certification. Requires a personal laptop computer (Mac preferred) with Pro Tools 10 and the complete production toolkit software. Prereq: Audio Recording majors only.

MUAR 203. Pro Tools Production II. 2 Units.
Pro Tools is the Industry standard for digital Audio Production. This course follows the avid curriculum for Pro Tools user certification. Requires a personal laptop computer (Mac preferred) with Pro Tools 10 and the complete production toolkit software. Prereq: MUAR 203 and Audio Major.

MUAR 250. Audio Recording for Non-Majors. 2 Units.
This is a hands-on course for musicians who wish to understand the processes for recording music and speech that will be beneficial to their musical careers. Topics include microphone techniques, signal processing, delivering audio masters, computer workstations, audio software and the business of music.

MUAR 252B. Case Audio Recording Internship II. 0 Unit.

MUAR 253B. Case Audio Recording Internship III. 0 Unit.

MUAR 254B. Case Audio Recording Internship IV. 0 Unit.

MUAR 300. Advanced Recording Techniques I. 2 Units.
A study of advanced microphone, recording, and monitoring systems and techniques with an emphasis on two track digital recordings of classical music and critical listening. Recommended preparation: MUAR 201.

MUAR 301. Advanced Recording Techniques II. 2 Units.
Further study of advanced microphone, recording, and monitoring systems and techniques, with an emphasis on two track digital recordings of large ensemble classical music. Recommended preparation: MUAR 300.

MUAR 302. Multitrack Recording Techniques I. 2 Units.
A study of multitrack recording and mixdown techniques. Recommended preparation: MUAR 301. Audio recording majors only.

MUAR 303. Multitrack Recording Techniques II. 2 Units.
Further study of multitrack recording and mixdown techniques, with an emphasis on synchronization to video. Recommended preparation: MUAR 302.

MUAR 310. Recording Studio Maintenance I. 1 Unit.
Study of techniques for optimizing professional recording equipment performance. Recommended preparation: MUAR 201. Audio recording majors only.

MUAR 311. Recording Studio Maintenance II. 1 Unit.

MUAR 320. Acoustics of Music I. 1 Unit.
A seminar in the basic concepts of musical acoustics and research in this area. The students actively participate in experiments exploring various topics in musical acoustics.

MUAR 321. Acoustics of Music II. 1 Unit.
A seminar in the basic concepts of musical acoustics and research in this area. The students actively participate in experiments exploring various topics in musical acoustics.

MUAR 322. Recording Workshop I. 1 Unit.
Recording Workshop provides an increased level of hands-on intensive study of microphone placement. Each week a different instrument or group of instruments will be available for experimentation. Each class represents a recording session centered on a specific instrument, resulting in a comprehensive set of test recordings at the end of each semester. These will provide the basis of reference for future recording decisions. Recommended preparation: MUAR 200.

MUAR 323. Recording Workshop II. 1 Unit.
Recording Workshop provides an increased level of hands-on intensive study of microphone placement. Each week a different instrument or group of instruments will be available for experimentation. Each class represents a recording session centered on a specific instrument, resulting in a comprehensive set of test recordings at the end of each semester. These will provide the basis of reference for future recording decisions. Recommended preparation: MUAR 200.

MUAR 380. Junior Recording Techniques Thesis. 3 Units.

MUAR 385. Recording Studio Internship. 4 Units.

MUAR 390. Senior Recording Tech Thesis/Senior Capstone. 6 Units.
Students will originate, design, organize, and complete a project that will demonstrate and document proficiency with his/her accumulated audio recording technology skills. This project must include evidence of critical thinking, clear planning, and establishment of reasonable goals with an appropriate plan of action. There is a significant written component that requires regular submission of drafts, progress reports, evidence of project advancement, and a final written document. There must also be a public presentation of the project in a venue approved by the department. Counts as SAGES Senior Capstone.

MUCP Courses

MUCP 200. Composition Seminar. 0 Unit.

MUCP 399. Undergraduate Independent Studies. 1 - 3 Units.
Each student develops a topic of interest to be explored with a faculty member.

MUCP 400. Composition Seminar. 0 Unit.

MUCP 501. Composition Independent Study. 1 Unit.

MUED Courses

MUED 200A. Basic Skills and Pedagogy: Voice. 2 Units.
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 200B. Basic Skills and Pedagogy: Guitar. 2 Units.
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.
MUED 200C. Basic Skills and Pedagogy: Brass. 2 Units.
This course is designed to provide music education majors with basic skills and pedagogy in the areas of group and individual brass instruction techniques. The course will consist of two components: applied study on each brass instrument; and study/discussion of current pedagogical practices. Students need not have completed any prior music education courses prior to enrolling.

MUED 200E. Basic Skills and Pedagogy: Clarinet and Saxophone. 2 Units.
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 200F. Basic Skills and Pedagogy: Double Reeds and Flute. 2 Units.
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 200H. Basic Skills and Pedagogy: Strings. 2 Units.
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 200J. Basic Skills & Pedagogy: Piano for Music Educators. 2 Units.
Designed for music education majors to provide the fundamentals of using piano in the classroom for pedagogy and accompaniment. Prereq: MUED 240.

MUED 200P. Basic Skills and Pedagogy: Percussion. 2 Units.
Designed for music education majors to provide the fundamentals of teaching methods for various instruments. Recommended preparation: Music education majors. Non-music majors accepted with consent of department.

MUED 220. Marching Band Techniques. 1 Unit.
This course is designed to provide music education majors with the training and techniques to effectively direct a marching band. Topics will include rehearsal methodology, drill design, and arranging. The course will meet synchronously with the CWRU Marching Spartans as the lab portion of the class and at a time TBD once per week to cover the content areas. Coreq: MUEN 384.

MUED 240. Foundations of Music Education. 3 Units.
An introduction to and overview of the music education profession. Philosophical, historical and psychological perspectives on music education in schools, including contemporary topics and trends. Introduction of Ohio academic content standards and curriculum model for music, along with K-12 National Music Standards. Observation of area music teachers and peer-teaching experience. Recommended preparation: Music education major or permission. A student may not receive credit for both MUED 240 and MUED 410.

MUED 275. Elements of Conducting. 3 Units.
This course is designed to develop the cognitive, affective and psychomotor skills necessary for students to communicate effectively with performing ensembles. Students will learn to listen, think, and communicate verbally and nonverbally through systematic exercises, in order to prepare for ensemble rehearsal and performance experiences.

MUED 276. Advanced Conducting, Score Analysis and Rehearsal Techniques. 3 Units.
This course is designed to continue development of the cognitive, affective and psychomotor skills necessary for students to communicate effectively with performing ensembles. Students will learn to listen, think, and communicate nonverbally through systematic exercises, in order to prepare for ensemble rehearsal and performance experiences. In addition, students will apply foundational study of musical forms to score analysis and score preparation. Students will also develop a working vocabulary of rehearsal techniques for use with instrumental and vocal ensembles. Prereq: MUED 275.

MUED 300. Intensive Field Experience. 0 Unit.
This course is intended for BS and MA-Licensure music education majors, and acquaints students with various teaching settings in P-12 schools in the greater Cleveland area; allows students to observe and teach with practicing music teachers; and fosters critical thinking skills related to effective teaching, lesson planning, and other elements of teaching. Offered as MUED 300 and MUED 400. Prereq: MUED 240, MUED 305, and MUED 350. Coreq: MUED 355 and (MUED 352 or MUED 353).

MUED 305. World Music in Education. 3 Units.
This course acquaints students with the use of world music, or multicultural music, in the music education classroom. Students are given an overview of the history of world music within American music education, discuss topics related to world music in education, research diverse world music practices, and lead lessons based on this research. Topics and content include: definitions of world/multicultural music; philosophical basis for world music in education; diversity in our Cleveland community; authenticity; ethnomusicology; informal/formal music learning; international perspectives; pedagogical approaches; addressing the State and National Standards through world music in education; and the development of culturally informed music pedagogy based on the study of diverse music. Throughout the course students will become acquainted with the music of diverse cultures and people groups; these will be chosen in part based on student’s own research interests. In addition to the musical cultures chosen by students for study and presentation, the music of The Gambia, West Africa; the Caribbean; and India will be highlighted during in-class activities and lessons. Recommended preparation: MUED 240. Counts for CAS Global & Cultural Diversity Requirement.

MUED 310. Instrumental and Choral Arranging. 3 Units.
Techniques of writing and arranging for instruments of the band and orchestra and voice. Study of scoring problems for school instrumental and vocal groups of all ages and abilities.

MUED 320. Technology Assisted Music Teaching and Learning. 3 Units.
Fundamental concepts and skills for using technology in music teaching and learning. This project-oriented class will develop knowledge and competencies related to electronic musical instruments, MIDI sequencing, music notation software, computer-assisted instruction, digital media, the Internet, information processing, computer systems, and lab management as they relate to music education in K-12 schools. Recommended preparation: MUED 240. Offered as MUED 320 and MUED 420.
MUED 348. Arts Education Advocacy and Policy. 3 Units.
In arts education, policy experts operate as plumbers. They seem to only be acknowledged when a problem occurs - like when a newly implemented policy creates a barrier to licensure or a state department of education changes high school graduation requirements; not to mention perennial budgetary crises that have elective teachers jockeying for legitimacy in the eyes of the decision-makers. Through the study of arts advocacy, political science, and education policy, this course empowers arts advocates and teachers to participate in local policy activism by clarifying their goals and expectations as well as help them explore the education policy quagmire through the arts education lens. Recommended Preparation: moderate understanding of statistical reasoning. Offered as MUED 348, MUED 448, POSC 382B, and POSC 482B. Prereq: Junior or Senior Standing and (STAT 201 or STAT 312 or MATH 121).

MUED 350. General Music Methods. 3 Units.
General Music Methods introduces student to methods and materials for planning and implementing general music experiences for all ages, with concentration on Pre-K through sixth grade children. Topics of the course include: multiple meanings of music for children; characteristics/needs of young children and creating a supportive learning environment; theories of music learning and teaching; learning styles and collaborative learning; assorted teaching methods, rhythm, pitch, listening, movement, performing, composing; curriculum design; technology for music instruction; multicultural music; music for exceptional children; integrating music with the arts and other curricula; motivation and classroom management; lesson planning and record keeping; developing a personal philosophy of music education; national, state, and professional standards; and assessment. Clinical/Field experiences (Clinical-all ages; Field-focus on Pre-K through elementary) required.

MUED 352. Instrumental Methods and Materials. 3 Units.
This course acquaints students with effective ways to develop, organize and maintain a successful instrumental program for any age group, based on a comprehensive instrumental music education model. Students are given a "womb to tomb" view of the instrumentalists’ development, including physiological development and age appropriate instrumental exceptions. Topics and content include: philosophical basis for music education, considerations for selecting repertoire including multicultural music; rehearsal techniques; assessment and record keeping; planning for the rehearsal; recruitment, auditioning, and placement; motivation and classroom management; team teaching and collaborative learning; managing an instrumental program; participation in professional activities; effective use of technology in the instrumental program; philosophy; and national, state, and professional standards. Clinical/Field experiences (all ages) required.

MUED 353. Choral Methods and Materials. 3 Units.
This course acquaints students with effective ways to develop, organize and maintain a successful choral program for any age group, based on a comprehensive choral music education model. Students review fundamental vocal pedagogy of the singing voice, including physiological development, age appropriate vocal expectations, and establishing and maintaining vocal health. Topics include: philosophical basis for vocal music education; the child voice, the adolescent voice, and the adult voice; vocal tone; considerations for selecting repertoire including ensemble assessment, music evaluation, and multicultural music; rehearsal techniques, collaborative learning, and motivation; planning for the rehearsal; developing conducting technique; recruitment, auditioning, placement, score analysis and preparation; classroom management; managing a choral program; participation in professional activities; effective use of technology in a choral program; and national state, and professional standards. Clinical/Field experiences (all ages) required. Recommended preparation: MUED 276.

MUED 355. Vernacular Music in Education. 3 Units.
This Music Education Department Seminar brings together all strands of the Music Education program by focusing on curriculum as the organizational element of instruction. Topics and content include: understanding the issues presented by special learners; techniques for integrating special learners into the music teaching environment; developing learning outcomes; designing instruction; planning classroom experiences; defining assessment and measurement; assessment techniques and instruments for the music classroom; and exploring elements of school music program organization and administration. Professional writing and clinical and field experiences will be a large part of the activities in this course. This course is presented in a seminar format that provides for discussions of classroom topics and commentary on field experiences. Counts as SAGES Departmental Seminar.

MUED 391. Music in Early Childhood. 3 Units.
The goal of the course is to provide students with an understanding of the role of music in early childhood and approaches to music education with young children. Students will experience an overview of selected theories of musical development of young children, discuss the importance of music to various areas of child development, explore cultural perspectives and influences on musical development, evaluate curricular materials and methods used in early childhood music education, observe children’s music making in early childhood classrooms, and develop teaching skills for early childhood music settings. Topics and content of this course include: music’s role in early childhood development; music aptitude and its measurement; theories of early childhood music learning; early childhood making; evaluating curricular materials for early childhood music; the importance of play in early childhood musical development; incorporating State and National Music Education Standards; designing instruction for early childhood music settings; assessment in early childhood music education; cultural perspectives on music in early childhood; cultural influences on musical development; music therapy with young children; benefits of family interaction in music; the role of listening in early childhood musical development; and formal music instruction with young children. The class will participate in a weekly service learning project providing music instruction for young children and parents or caregivers from an underserved population. Offered as MUED 391 and MUED 491.
MUED 396A. Student Teaching in Music Education. 9 Units.
Teaching music in both elementary and secondary schools, full-time five days a week for 15 weeks. Closely supervised field experiences of all types with a wide variety of students. Emphasis on planning lessons and organizing materials, teaching methodologies, motivation, and student assessment. Topics addressed include communications and the arts, technology in learning, interdisciplinary learning, collaborative learning and teaching, creating a supportive environment, and professional development. Development of skills needed for self-assessment as well as student assessment. Clinical/Field experiences (all ages) required. Recommended preparation: Concurrent enrollment in MUED 396B. Offered as MUED 396A and MUED 496A. Counts as SAGES Senior Capstone. Prereq: EDUC 255 and MUAP 323 and MUAP 35.

MUED 396B. Student Teaching Seminar in Music Education. 3 Units.
This is the SAGES Senior Capstone requirement for students majoring in Music Education. Taken at the same time as the student teaching experience (MUED 396A/496A), this seminar will guide students through preparation for entering the professional world of music education, and mentor them in their preparation of their Senior Capstone Project and Presentation. Recommended preparation: Concurrent enrollment in MUED 496A. Offered as MUED 396B and MUED 496B. Counts as SAGES Senior Capstone.

MUED 399. Undergraduate Independent Studies. 1 - 3 Units.
Each student develops a topic of interest to be explored with a faculty member.

MUED 400. Intensive Field Experience. 0 Unit.
This course is intended for BS and MA-Licensure music education majors, and acquaints students with various teaching settings in P-12 schools in the greater Cleveland area; allows students to observe and teach with practicing music teachers; and fosters critical thinking skills related to effective teaching, lesson planning, and other elements of teaching. Offered as MUED 300 and MUED 400. Prereq: MUED 305, MUED 350, and MUED 410. Coreq: MUED 355 and (MUED 352 or MUED 353).

The role of a Music Educator is complex and involves the practical application of music content in various Pre K-12 teaching environments. This course is designed for entering Master of Arts with Teaching License majors who have a performance-based undergraduate education to give a comprehensive overview of the profession and facilitate the journey and transition from music student to professional music educator. Admission into the Master of Arts with Teacher License Music Education Program is a prerequisite for this course. A student may not receive credit for both MUED 240 and MUED 410. Prereq: Admission into the Master of Arts with Teacher License Music Education Program.

MUED 420. Technology Assisted Music Teaching and Learning. 3 Units.
Fundamental concepts and skills for using technology in music teaching and learning. This project-oriented class will develop knowledge and competencies related to electronic musical instruments, MIDI sequencing, music notation software, computer-assisted instruction, digital media, the Internet, information processing, computer systems, and lab management as they relate to music education in K-12 schools. Recommended preparation: MUED 240. Offered as MUED 320 and MUED 420.

MUED 440. Scholarship in Music Education. 3 Units.
In MUED 440 we will be examining critically the research of others. We will explore the various paradigms and methods in music education research and will learn to become educated consumers of published research. In addition, we will be learning the beginnings of how to conduct our own research. Specific topics of this course include utilizing music education research tools, resources, and materials; identifying and generating research problems; reviewing related literature; designing research procedures; conducting quantitative and qualitative research studies; and writing empirical research reports and proposals. Writing skills are an important part of this course, for unless one can convey the findings of his or her research to other people with clarity, that research will be of limited value. Prereq: Graduate Student in Music Education.

MUED 441. Philosophical Foundations of Music Education. 3 Units.
In this course, students explore major aesthetic philosophies that have influenced contemporary music education, and discuss current issues central to our field. Among topics included: basic views about art/music; creating art/music; meaning in art/music, experiencing art/music; music and aesthetic education; criticism in music; multicultural music; and critical theories and inquiry regarding music education. Students are asked to assess their own roles in music education, as well as their obligations and potential capacities for leadership in the profession. Students will work toward development of a personal professional philosophy of music education.

MUED 442. Curriculum and Assessment in Music Education. 3 Units.
This course is designed to give graduate music education students thorough knowledge of the overarching role of curriculum and assessment as the organizational elements of instruction. In depth coverage of such topics as: the role of assessment and measurement in teaching; epistemology; scope and sequence; backward design; instructional goals; validity; reliability; performance assessments; measuring assessment; curriculum design; and teaching for understanding. These concepts and procedures will be explored in depth to give daily music instruction a global framework in the larger organizational structure of profession, state, national, and accreditation standards for P-12 and college music settings.

MUED 443. Music Cognition and Learning. 3 Units.
Survey and critical review of the literature as it relates to music teaching and learning, and music performance. Specific topics may include basic psychoacoustical processes, auditory perception, cognitive organization of musical sound, tonal and musical memory, neuromuscular research, affective and physiological responses to music, learning theory, musical aptitude, developmental processes, and motivation.

MUED 444. Informal Music Learning in Education. 3 Units.
This course explores the tenets of informal music making as it relates to teaching school music. Students will learn how to create, compose, improvise, and perform on a variety of folk and traditional instruments. Specific topics of this course include songwriting, cover tunes, original songs, and creative warm-ups for traditional ensembles. This course also is designed to assist students in developing diverse school music offerings through utilizing research tools and resources on creativity, generating project-based learning opportunities for school students, assessing creativity, and fostering critical thinking, all within the contexts of formal and informal modes of music teaching and learning. Prereq: Graduate Student in Music Education or requisites not met permission of instructor.
MUED 445. Pedagogy in Practice. 3 Units.
This course is designed to help students better understand music teaching skills and characteristics of effective teachers, and to critique teaching practices and abilities through an examination of research-based and pedagogy-based scholarship. Students will learn to find, interpret, and use music education research to improve their own classroom pedagogy. Group class meetings will take place on campus, and individual, mentored lab experiences will be held via Skype or in students' schools. Prereq: Graduate Student in Music Education or requisites not met permission of instructor.

MUED 446. Sociology of Music Education. 3 Units.
In this course, students explore philosophical, social, cultural, and theoretical issues regularly encountered by music educators in classroom and rehearsal settings. Topics covered include: local, state, and national issues and policies intersecting with music education; social challenges and classroom realities facing music educators; social and cultural diversity issues in music education; and the role(s) of music education in society. Prereq: MUED 440.

MUED 447. Seminar in College Music Teaching. 3 Units.
Seminar in College Music Teaching is a course to help prepare CWRU and CIM music graduate students for careers in university teaching. This course includes information on creating class syllabi, assessing students, interviewing for college jobs, and understanding the university ecosystem. Coursework will be tailored to meet the needs and goals of each graduate student, regardless of content area. Perspectives will be drawn from music education, applied music, musicology, conducting, music theory, and music technology. Prereq: Graduate music student at CWRU and CIM.

MUED 448. Arts Education Advocacy and Policy. 3 Units.
In arts education, policy experts operate as plumbers. They seem to only be acknowledged when a problem occurs - like when a newly implemented policy creates a barrier to licensure or a state department of education changes high school graduation requirements; not to mention perennial budgetary crises that have elective teachers jockeying for legitimacy in the eyes of the decision-makers. Through the study of arts advocacy, political science, and education policy, this course empowers arts advocates and teachers to participate in local policy activism by clarifying their goals and expectations as well as help them explore the education policy quagmire through the arts education lens. Recommended Preparation: moderate understanding of statistical reasoning. Offered as MUED 348, MUED 448, POSC 382B, and POSC 482B.

MUED 450. Special Topics in Music Education. 3 Units.
Close study of a theme or aspect of music education, such as brain development in music education, biomechanics and music, gender studies in music education, and gerontology and music learning.

MUED 491. Music in Early Childhood. 3 Units.
The goal of the course is to provide students with an understanding of the role of music in early childhood and approaches to music education with young children. Students will experience an overview of selected theories of musical development of young children, discuss the importance of music to various areas of child development, explore cultural perspectives and influences on musical development, evaluate curricular materials and methods used in early childhood music education, observe children's music making in early childhood classrooms, and develop teaching skills for early childhood music settings. Topics and content of this course include: music's role in early childhood development; music aptitude and its measurement; theories of early childhood music learning; early childhood making; evaluating curricular materials for early childhood music; the importance of play in early childhood musical development; incorporating State and National Music Education Standards; designing instruction for early childhood music settings; assessment in early childhood music; cultural perspectives on music in early childhood; cultural influences on musical development; music therapy with young children; benefits of family interaction in music; the role of listening in early childhood musical development; and formal music instruction with young children. The class will participate in a weekly service learning project providing music instruction for young children and parents or caregivers from an underserved population. Offered as MUED 391 and MUED 491.

MUED 496A. Student Teaching in Music Education. 9 Units.
Teaching music in both elementary and secondary schools, full-time five days a week for 15 weeks. Closely supervised field experiences of all types with a wide variety of students. Emphasis on planning lessons and organizing materials, teaching methodologies, motivation, and student assessment. Topics addressed include communications and the arts, technology in learning, interdisciplinary learning, collaborative learning and teaching, creating a supportive environment, and professional development. Development of skills needed for self-assessment as well as student assessment. Clinical/Field experiences (all ages) required. Recommended preparation: Concurrent enrollment in MUED 396B. Offered as MUED 396A and MUED 496A. Counts as SAGES Senior Capstone. Prereq: EDUC 255.

MUED 496B. Student Teaching Seminar in Music Education. 3 Units.
This is the SAGES Senior Capstone requirement for students majoring in Music Education. Taken at the same time as the student teaching experience (MUED 396A/496A), this seminar will guide students through preparation for entering the professional world of music education, and mentor them in their preparation of their Senior Capstone Project and Presentation. Recommended preparation: Concurrent enrollment in MUED 496A. Offered as MUED 396B and MUED 496B. Counts as SAGES Senior Capstone.

MUED 501. Special Reading (M.A. and M.M.). 1 - 18 Units.

MUED 565. Graduate Chamber Ensemble. 1 Unit.
This course is intended for graduate music education students who desire to perform at a high level. The purposes of this course are to give students the opportunity to further their technical and musical development through the performance of chamber music repertoire; work collaboratively with colleagues in the preparation of this repertoire by functioning as both performer and coach; foster score study and repertoire research by planning each program, writing program notes, and running the performance; and work with other chamber groups and evaluate their performances and assist them with their preparation.
MUED 590. Seminar in Music Education. 3 Units.
This seminar is designed for music education doctoral students to pursue advanced research methodologies and procedures. Topics might include meta-analysis, multiple regression, advanced qualitative coding, and mixed methods research.

MUED 591. Music Education Seminar in Conducting. 3 Units.
In this course, students focus on advanced score study, preparation, and analysis. In depth conducting techniques on contemporary music and mixed meter compositions, along with the development of a comprehensive conducting bibliography are the major components in this seminar. Historical research, analytical evaluation, and the practical elements of the physical techniques required for one to conduct a chosen composition are all addressed for each composition studies. Seminar discussions include aesthetic and philosophical ideologies, and the practical issues a conductor faces when put in control of the advanced ensemble.

MUED 640. Qualitative Research in Music Education. 3 Units.
This course provides music education graduate students with an in-depth look at qualitative research techniques in educational settings, along with an emphasis on design and analysis, and a critical review of selected research studies in music education. The goals of this class include gaining an understanding of the qualitative research paradigm, learning to write effectively and efficiently as a qualitative researcher, and conducting a small-scale qualitative research project. Prereq: Graduate Music Education major and MUED 440 or requisites not met permission.

MUED 641. Quantitative Research Methods in Music Education. 3 Units.
Effective educators of all levels are expected to continually refine their knowledge of how students best learn music in practical applications through assimilation of current research. Implementation of research findings in one’s classroom, as well as contributions back to the profession through scholarship, should remain a priority. Quantitative Research Methods will explore fundamentals of research design and appropriate statistical methods for interpretation of data. Specific topics will include: identification of research issues, selection of appropriate experimental designs for investigation, application of statistical methods for data interpretation, and evaluation of available research. Effective and efficient skills in writing and presentation will be expected and reinforced in all course activities. Prereq: MUED 440.

MUED 650. Fieldwork and Advanced Qualitative Analysis in Music Education. 3 Units.
This course provides graduate students interested in music education research with an advanced work on fieldwork and analysis technique for qualitative research in educational setting, and a critical review of selected research studies within and beyond music education. The three main goals of this class are (1) to critique qualitative research paradigm in music education; (2) to learn to conduct data analysis for grounded theory, phenomenology, and narrative inquiry; and (3) to prepare a research proposal for one of the three methodologies listed in point 2. With these perspectives, students will be better prepared to understand qualitative research in music education, evaluate research, and know how to use it in their classrooms. Prereq: MUED 640 or Requisites Not Met permission.

MUED 651. Thesis (M.A. and M.M.). 1 - 6 Units.
(Credit as arranged.)

MUED 696. College Teaching Practicum. 0 Unit.

MUED 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

MUED 710. Music Education Doctoral Seminar. 0 Unit.
This seminar will provide PhD students in music education with a unique opportunity to examine, explore, and discuss topics relevant to their professional lives. Rotating topics will vary in nature and will include developing and presenting research presentations, publishing student work, discussing the political and social landscapes of academia, considering research-oriented collaborations between doctoral students and/or faculty members, preparing for the job hunt, planning for the tenure process, and other pertinent issues surrounding music teaching and learning in higher education. Prereq: PhD student in Music Education.

MUEN Courses

MUEN 324. Case Percussion Ensemble. 0 - 1 Units.
The Case Percussion Ensemble is open to all interested Case-affiliated individuals who seek to continue their musical development by performing percussion ensemble literature. Membership is contingent on an audition that demonstrates moderate percussion ability and the ability to read music. Audition materials can be acquired through the director. Recommended preparation: Audition required. Coreq: MUEN 383.

MUEN 355. Miscellaneous Ensembles. 0 - 2 Units.

MUEN 356. University Circle Wind Ensemble. 1 Unit.
Designed for the most advanced woodwind, brass, and percussion players. Stresses the single-performance concept utilizing only players needed for a given piece. Audition required.

MUEN 370. Popular Music Ensemble. 0 - 1 Units.
The Popular Music Ensemble at Case Western rehearses and performs a wide range of non-jazz popular music styles. Repertoire is usually suggested by students and chosen in collaboration with the instructor. Current popular music of the United States has tended to be favored, but the ensemble has also worked on music that originated as much as several decades ago. The group's instrumentation is typically drums, bass, guitars, keyboard, and a number of vocalists. Occasionally original material is brought into the repertoire.

MUEN 371A. Klezmer Music Ensemble. 0 Unit.
The Klezmer Music Ensemble is dedicated to learning and performing traditional East European Jewish folk music (Klezmer Music). This important genre of world music involves a specialized performance style, a unique repertoire, and chamber-music interaction. Classes will consist of two-hour sessions (once a week) culminating with a performance to be scheduled at the end of the semester. The ensemble is open by audition to all CWRU and CIM instrumentalists and vocalists.

MUEN 371B. Klezmer Music Ensemble. 1 Unit.
The Klezmer Music Ensemble is dedicated to learning and performing traditional East European Jewish folk music (Klezmer Music). This important genre of world music involves a specialized performance style, a unique repertoire, and chamber-music interaction. Classes will consist of two-hour sessions (once a week) culminating with a performance to be scheduled at the end of the semester. The ensemble is open by audition to all CWRU and CIM instrumentalists and vocalists.

MUEN 373. Jazz Ensemble I. 0 - 1 Units.
Recommended preparation: Audition required.
MUEN 374. Jazz Ensemble II. 0 - 1 Units.

MUEN 380A. Case Men's Glee Club. 0 Unit.
Case Mens Glee Club is a lower voice choral ensemble open to all students enrolled in the University who enjoy singing. The ensemble performs a wide variety of accompanied and a cappella repertoire written specifically for tenor, baritone, and bass voices. The ability to read music is not required for participation and there is no formal audition. The director will lead members in exercises to ensure everyone is singing the appropriate voice part. Goals of the Case Mens Glee Club include developing basic musicianship skills, learning healthy singing habits, and enjoying sharing music with fellow singers and the community.

MUEN 380B. Case Men's Glee Club. 1 Unit.
Case Mens Glee Club is a lower voice choral ensemble open to all students enrolled in the University who enjoy singing. The ensemble performs a wide variety of accompanied and a cappella repertoire written specifically for tenor, baritone, and bass voices. The ability to read music is not required for participation and there is no formal audition. The director will lead members in exercises to ensure everyone is singing the appropriate voice part. Goals of the Case Mens Glee Club include developing basic musicianship skills, learning healthy singing habits, and enjoying sharing music with fellow singers and the community.

MUEN 382. Case Concert Choir. 0 - 1 Units.
Case Concert Choir is open to any undergraduate or graduate student by audition. The ensemble performs both a cappella and accompanied choral music from a variety of time periods and genres. Concert Choir members have the opportunity to perform choral-orchestral repertoire through collaborations with the Case University Circle Orchestra and our other University Circle neighbors. The ensemble maintains a tradition of excellence in performance, strives to improve group and individual musicianship skills, and fosters community building. Recommended preparation: Audition required.

MUEN 383. Symphonic Winds. 0 - 1 Units.
Performance of advanced symphonic band repertoire. Open to all Case students, faculty and staff. Audition required for part placement only.

MUEN 384. Spartan Marching Band. 0 - 1 Units.

MUEN 385. Case/University Circle Orchestra. 0 - 1 Units.
The orchestra is comprised of Case students, faculty, staff and community players who play strings, woodwinds, brass and percussion. Recommended preparation: Audition required.

MUEN 386. Case Camerata Chamber Orchestra. 0 - 1 Units.
This chamber string ensemble is open to all interested Case affiliated individuals who seek to continue their music development by performing orchestral literature. Each person is required to audition to determine initial placement, section assignment, and seating. All members are required to perform a minimum of 2 concerts per academic year. Recommended preparation: Audition required.

MUEN 387. University Singers. 0 - 1 Units.
University Singers is open to all students enrolled in the University who enjoy singing. The ensemble performs a wide variety of accompanied and a cappella repertoire. The ability to read music is not required for participation and no audition is necessary. Students must be able to match pitch and can expect to sing for the conductor to determine their appropriate vocal parts. Goals of the University Singers include developing basic musicianship skills, learning to sing safely and efficiently, and enjoying sharing music with fellow singers and the community.

MUEN 388. University Chorale. 0 Unit.
University Chorale is a treble vocal ensemble open to all students enrolled in the University who enjoy singing. The ensemble performs a wide variety of accompanied and a cappella repertoire written specifically for treble voices. The ability to read music is not required for participation and there is no formal audition. The director will lead members in exercises to ensure everyone is singing the appropriate voice part. Goals of the University Chorale include developing basic musicianship skills, learning healthy singing habits, and enjoying sharing music with fellow singers and the community.

MUEN 388A. University Chorale. 0 Unit.
University Chorale is a treble vocal ensemble open to all students enrolled in the University who enjoy singing. The ensemble performs a wide variety of accompanied and a cappella repertoire written specifically for treble voices. The ability to read music is not required for participation and there is no formal audition. The director will lead members in exercises to ensure everyone is singing the appropriate voice part. Goals of the University Chorale include developing basic musicianship skills, learning healthy singing habits, and enjoying sharing music with fellow singers and the community.

MUEN 388B. University Chorale. 1 Unit.
University Chorale is a treble vocal ensemble open to all students enrolled in the University who enjoy singing. The ensemble performs a wide variety of accompanied and a cappella repertoire written specifically for treble voices. The ability to read music is not required for participation and there is no formal audition. The director will lead members in exercises to ensure everyone is singing the appropriate voice part. Goals of the University Chorale include developing basic musicianship skills, learning healthy singing habits, and enjoying sharing music with fellow singers and the community.

MUEN 389. Keyboard Ensemble. 0 - 1 Units.
Keyboard Ensemble is designed for music majors whose primary instrument is piano. The format involves coaching of in-class performances of solo literature, piano duets, and collaborative piano genres by enrolled students, as well as written and spoken presentations focusing on keyboard history, literature, and performance critique. The course meets once per week. It is highly recommended that students be concurrently enrolled in applied lessons. Non-majors who are pianists and majors whose primary instrument is not piano may enroll with instructor permission following a successful audition.

MUEN 393. Baroque Chamber Ensembles. 0 - 1 Units.
Designed for students interested in exploring baroque music in a chamber setting on historical instruments. Prereq: Audition required.

MUEN 394. Baroque Dance Ensemble. 0 - 1 Units.
This course allows musicians and dancers alike to explore historical dance steps and notation. History of dance and its relationships to music will be emphasized as students learn and perform historical dances. Prereq: MUHI 342 or MUHI 442 or permission of Instructor.

MUEN 395. Collegium Musicum. 0 - 1 Units.
Recommended preparation: Audition required.

MUEN 396. Early Music Singers. 0 - 1 Units.
Recommended preparation: Audition required.

MUEN 397. Baroque Orchestra. 0 - 1 Units.
Recommended preparation: Audition required.

MUGN Courses

MUGN 201. Introduction to Music: Listening Experience I. 3 Units.
A flexible approach to the study of the materials and literature of music. Aural and analytical skills primarily for classical music.

MUGN 212. History of Rock and Roll. 3 Units.
This course surveys the musical practices of the rock and roll era, broadly defined to include much popular music since the 1950s. Music majors are to enroll in MUHI 312. Offered as AFST 212 and MUGN 212. Counts for CAS Global & Cultural Diversity Requirement. Prereq: For Non-Music Majors only.
MUGN 220. Composers of the Musical on Stage and Screen. 3 Units.
This course is meant to provide students with an introduction to the role of music in the history, reception, and popularity of the Broadway and Hollywood musical, with a particular focus on the creators—the composers, lyricists, and orchestrators. We will survey the early history, going back to 19th century experiments, revues, and the origins of the "book" musical, going through the golden age of the 1930s to the 1950s, the nadir of output in the 1960s and 1970s (Oh, Calcutta!, anyone?), the revival in the 1980s with the rise of the megamusical, all the way to today's rock-music driven puppet extravaganzas. Classes will also discuss ever-shifting genres and styles of music, new approaches to songwriting, and changes to what qualifies as "acceptable" music. There's also the structure of the stories to consider, as well as gender roles, racial stereotypes, ethnic under/overtones, and camp.

MUGN 294. Stage Movement for Opera I. 1 Unit.
MUGN 296. Acting Technique I. 1 Unit.
MUGN 298. Opera Role Preparation. 1 Unit.
MUGN 308. Digital Music: Composition and Production. 3 Units.
Course focuses on digital music creation and composition using audio sequencing software. Topics include song writing, synthesizers, recording, editing, mixing, and film scoring. Course is open to music majors, minors, and non-majors with sufficient musical background. Emphasis on group work, creativity, and imagination. All work done on Macintosh computers in The Core, the Department of Music's multimedia classroom.

MUGN 309. Audio Production in Pro Tools. 3 Units.
Audio Production in Pro Tools. Practical training in contemporary audio production methods using the industry standard software, Pro Tools. Also covers the use of Pro Tools for musical analysis and evaluation of music copyright issues.

MUGN 310. Russian Song. 1 Unit.
The Russian Song course is dedicated to the exploration and performance of vocal music from Russia and the former USSR. Russia comprises many ethnic groups and has a vast repertoire of folk music, folk instruments, and singing styles. Students will learn children's songs, art songs, "city" romances, Cossack songs, Georgian polyphony and folk dances. Each song is placed in context, with an eye towards culture, symbolism, history, poetry/lyrics, and customs. Students will look at how classical composers use Russian folk music in their long forms. The study of Chastushki, an ancient Russian village phenomenon which continues to evolve, will lead to creating students' own stylistically appropriate poetry and ostinato. Russian percussion and other instruments will enhance the song and dance, all culminating in a final performance at the end of the semester. Offered as RUSN 305 and MUGN 310.

MUGN 323. Applied Diction: German. 1 Unit.
Intended for undergraduate/graduate voice and collaborative piano majors with insufficient background in the fundamental rules of German pronunciation and the International Phonetic Alphabet. Prereq: MUGN 321.

MUGN 324. Applied Diction: French. 1 Unit.
Intended for undergraduate/graduate voice and collaborative piano majors with insufficient background in the fundamental rules of French pronunciation and the International Phonetic Alphabet. Prereq: MUGN 321.

MUGN 370. Intro to Improvisation. 1 Unit.
MUGN 399. Undergraduate Independent Studies. 1 - 3 Units.
Each student develops a topic of interest to be explored with a faculty member.

MUGN 501. Special Reading (M.A. and M.M.). 1 - 18 Units.
MUGN 651. Thesis: (M.A. and M.M.). 1 - 6 Units.
(Credit as arranged.)

MUGN 751. Recital Document I-D.M.A.. 1 - 3 Units.
MUGN 752. Recital Document II - D.M.A.. 1 - 3 Units.

MUHI Courses
MUHI 201. History of Western Music I. 3 Units.
A survey of Western music from the earliest notations to c1800. Prereq: MUTH 102 or MUTH 104.

MUHI 202. History of Western Music II. 3 Units.
A survey of Western music from c1800 to the present. Prereq: MUHI 201.

MUHI 309. Christian Music: Historical and Global Perspectives. 3 Units.
Music has played an outsized role in the history and development of Christianity, from plainchant to polyphony, shape note singing to gospel, congregational hymns to contemporary genres and global musical expressions at Christian worship across different continents and cultures. Offered as an upper-division seminar for advanced undergraduate and graduate students, this seminar examines the history and development of Christian music around the world within the social, cultural, regional, ritual, and spiritual contexts that inspired their emergence and growth. While the primary approach in this seminar is historiographical, ethnomusicological principles may be utilized where appropriate to examine contemporary genres of Christian music from the Two-Thirds or Majority World. Offered as RLGN 318, RLGN 418, and MUHI 309. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

MUHI 310. Music Cultures of the World. 3 Units.
An introduction to musics of the world, focusing on the relationship of musical traditions and practices to culture and society. Counts for CAS Global & Cultural Diversity Requirement.

MUHI 312. History and Analysis of Rock and Roll. 3 Units.
This course surveys American popular song from the 1890s to the present, with an emphasis on rock 'n' roll and pop music of the last sixty years. The relationship of popular song to important currents in American life and culture will be examined. The origins of various styles of song in the cultures of different ethnic and national groups will be discussed, along with the subsequent diffusion and transformation of such music through mass mediation. The characteristics and meanings of music, lyrics, and images will be discussed with the aid of sound recordings, music videos and films. Students taking this course may not receive credit for MUGN 212. Counts for CAS Global & Cultural Diversity Requirement. Prereq: For Music Majors only.
MUHI 314. Blues Histories and Cultures. 3 Units.
An investigation of the blues as a musical and lyrical form as well as a set of social and cultural practices. Beginning in the Mississippi Delta with the country blues, the course moves roughly chronologically, looking at classic and urban blues, the role of blues language and culture during the Harlem Renaissance, and their 'revival' in Britain in the 1960s. Our aim will be to open up questions surrounding blues transformations and black authenticities, the relationship between blues cultures and the rise of modernism, the racial and sexual coding of both black and white blues, and the ways in which blues sounds and aesthetics have permeated American popular music since the 1920s. Offered as AFST 314 and MUHI 314. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

MUHI 315. History of Jazz and American Popular Music. 3 Units.
Musical styles and structures of jazz and American popular music; emphasis on music since 1900. Recommended preparation: MUTH 202 or MUHI 302. Offered as AFST 315 and MUHI 315. Counts for CAS Global & Cultural Diversity Requirement.

MUHI 316. The Lemonade Class: Religion, Race, Sex and Black Music. 3 Units.
Charles Long suggests that black musical forms are creative responses to the particular circumstances of black peoples' presence in the U.S and black notions of the sacred. In April of 2016, Beyoncé released her visual album Lemonade two days after the death of Prince. This course is organized around the album's title cuts and links these two artists together in an examination of religion and musical performance as creative response to the racial and gendered conditions of black life. The course investigates how both artists have used music as a platform to explore issues of race, gender, commerce, sexuality, power and divinity. The course also looks at examples from the works of earlier artists who address similar themes such as Ma Rainey, Bessie Smith, Muddy Waters, Billie Holiday, Nina Simone, Little Richard, James Brown, Marvin Gaye, and Aretha Franklin. Offered as AFST 302, ETHS 302, MUHI 316, RLGN 302, RLGN 402, and WGST 302. Counts for CAS Global & Cultural Diversity Requirement.

MUHI 320. Global Pop. 3 Units.
Exploration of popular music practices, particularly rock, pop, and hip hop, outside the United States. Counts for CAS Global & Cultural Diversity Requirement.

MUHI 341. Introduction to Historical Performance Practice. 3 Units.
Summary and perspective of the problems and issues associated with the field of historical performance practices. Offered as MUHI 341 and MUHI 441. Prereq: MUHI 301 and MUHI 302.

MUHI 342. Seminar in Historical Performance Practice. 3 Units.
Seminar in a specific instrument and/or vocal area of historical performance practices, such as baroque vocal, instrumental, or keyboard practices. May be repeated because topics vary. Offered as MUHI 342 and MUHI 442. Prereq: MUHI 341 or MUHI 441

MUHI 350. Topics in Music History. 3 Units.
Close study of a theme or aspect of music such as "Music and Gender," "Symphonies of Mahler," and "Wagner's Ring." Offered as MUHI 350 and MUHI 450.

MUHI 390. Undergraduate Seminar in Music History. 3 Units.
An intensive research seminar in music history for music majors. Counts as SAGES Departmental Seminar.

MUHI 395A. Capstone for Music Majors A. 2 Units.
Not required for the music major, but intended for music majors in concentrations other than Audio Recording who choose to complete a capstone project in music. Course consists of projects varying according to the students' area of study and interests, but each must include a document of appropriate length and scope and must be presented publicly in an appropriate forum. MUHI 395A guides students through the preliminary stages of the project and preparation of a formal Capstone proposal. Counts as SAGES Senior Capstone. Prereq: Successful completion of MUHI 201 and MUHI 202.

MUHI 395B. Capstone for Music Majors B. 1 - 4 Units.
Not required for the music major, but intended for music majors in concentrations other than Audio Recording who choose to complete a capstone project in music. Course consists of projects varying according to the students' area of study and interests, but each must include a document of appropriate length and scope and must be presented publicly in an appropriate forum. MUHI 395B guides students through completion of the project, including the document and public presentation. Counts as SAGES Senior Capstone. Prereq: Successful completion of MUHI 395A.

MUHI 399. Undergraduate Independent Studies. 1 - 3 Units.
Each student develops a topic of interest to be explored with a faculty member.

MUHI 401. Methodologies of Music History. 3 Units.
Introduction to the scholarly study of music, including principles of music bibliography, techniques of library research, and evaluation of editions. Special emphasis given to the relationship between musical performance and research in the history and criticism of music. Attention will also be given to design of program notes and essays. Required of first-year students in the Master of Music degree program.

MUHI 430. Music History for Educators. 3 Units.
Examines the intersections of composers' musical output as it overlaps with theories of general education, music education, and pedagogy.

MUHI 431. Medieval Music: Early Christian to 1425. 3 Units.
The mass, liturgical drama, and early polyphony through the Ars Nova.

MUHI 432. Music of the Renaissance. 3 Units.
Vocal polyphonic music from the Burgundian school through the Elizabethan madrigal.

MUHI 433. Music of the Baroque. 3 Units.
Musical developments from Monteverdi to Bach and Handel.

MUHI 434. Viennese Classicism. 3 Units.
Development of the symphony, concerto, chamber music, and opera in the works of the Mannheim composers, Haydn, Mozart, and Beethoven.

MUHI 435. Nineteenth Century Music. 3 Units.
Romanticism and other 19th century trends in music up to impressionism.

MUHI 436. Twentieth Century Music. 3 Units.
Critical and analytical study of music since 1900. Examination and discussion of stylistic characteristics and aesthetic aims of contemporary composers.

MUHI 441. Introduction to Historical Performance Practice. 3 Units.
Summary and perspective of the problems and issues associated with the field of historical performance practices. Offered as MUHI 341 and MUHI 441.
MUHI 442. Seminar in Historical Performance Practice. 3 Units.
Seminar in a specific instrument and/or vocal area of historical performance practices, such as baroque vocal, instrumental, or keyboard practices. May be repeated because topics vary. Offered as MUHI 342 and MUHI 442. Prereq: MUHI 341 or MUHI 441

MUHI 443. Medieval/Renaissance Notation. 3 Units.
Theory of chant, modal, mensural, and tablature notations. Practice in making literal transcriptions, editing, and preparing scores for performances.

MUHI 450. Topics in Music History. 3 Units.
Close study of a theme or aspect of music such as "Music and Gender," "Symphonies of Mahler," and "Wagner's Ring." Offered as MUHI 350 and MUHI 450.

MUHI 501. Special Reading (M.A. and M.M.). 1 - 18 Units.

MUHI 590. Seminar in Musicology. 3 Units.
Problems in musical criticism, aesthetics, and analysis, as well as interdisciplinary methodologies.

MUHI 601. Special Readings Ph.D./D.M.A.. 1 - 18 Units.

MUHI 610. Research Methods in Music. 3 Units.
Seminar in research methods and techniques, including a historical overview of modern musicology and an introduction to different research methodologies. Significant time will be spent on writing abilities related to writing for scholarly versus general audiences.

MUHI 611. DMA Lecture-Recital and Document Seminar. 3 Units.
This seminar prepares DMA students from CIM to produce either the Lecture-Recital or DMA Document, a crucial degree requirement for which students must demonstrate both scholarly and musical expertise. Over the course of the semester each student will identify a viable topic, develop a bibliography, and write a prospectus. Registered students are expected to attend and participate in every session.

MUHI 612. Analysis for Music Historians. 3 Units.
This seminar will be required of all first-year graduate students in Musicology and Historical Performance Practices. It seeks to develop the analytical skills of music historians, deepening their earlier technical training and teaching them how to approach repertories (music before 1700, after 1900, popular music) they are unlikely to have studied in depth previously. In contrast to the instruction offered at CIM, this seminar will present a range of ways in which to bridge between the details of a musical composition and the historical context within which it first appeared. The seminar deals with five case studies, one representative of each of the following repertories: Before 1700 (e.g., Josquin motets, Monteverdi madrigals, Frescobaldi toccatas) 1700-1820 (e.g., Rameau keyboard suites, Beethoven sonatas, Schubert string quartets) 1820-1910 (e.g., Berlioz Symphonie Fantastique, Brahms symphonies, Mahler songs) After 1910 (e.g., Stravinsky Sacre du Printemps, Webern Symphony, Ruth Crawford Seeger String Quartet, Ligeti Etudes) Popular Music (e.g. 12-bar blues, "rhythm changes," "Round Midnights") Of these, most students will have received training only in the analysis of music 1700-1820, and that training will have concentrated strictly on harmony and structure, without engagement with cultural context. Each unit of this seminar will proceed from basic grammatical norms for the repertory in question to formal criticism to cultural interpretation.

MUHI 651. Thesis (M.A. and M.M.). 1 - 6 Units.
(Credit as arranged.)

MUHI 699. Qualifying Exam Practicum. 0 Unit.
This class is meant to guide students as they prepare their bibliographies and works lists (if applicable) for their qualifying exams. We will discuss how best to address the broad topics they have chosen for their exams, and the manner in which they can begin to focus their research to an achievable list, one that they will craft with input from their exam committee. Beginning with the key works in their areas, they will be shown how best to expand the list to include current literature, and how to prioritize what should and should not be on the list.

MUHI 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

MUHI 710. Dissertation Seminar. 0 Unit.
This class is meant to give students a place to deal with writing their dissertation: discussion, critique, complaints, and questions are all an accepted and expected part of the process. Once during the semester students will provide the group with a chapter (or part of a chapter, or conference paper), which they will read. The group will discuss the work as a group, giving everyone a chance to provide suggestions, corrections, and other forms of critique. Everyone will get a chance to present their own work and will get many chances to read the work of others. Exposure to different topics and writing styles will not only broaden students’ approach to their own work, but will also prepare them for the multiplicity of research and writing styles they'll face on the job market and in the academy.

MUHI 751. Recital Document I - D.M.A.. 1 - 3 Units.

MUHI 753. Recital Document III-D.M.A.. 1 - 6 Units.

MULI Courses

MULI 330. Song Literature I. 2 Units.
This course traces the history of the art song genre, including its precursors, major figures, trends, representative works, musical style, and poetry. Primary focus will be on German Lieder. Prereq: MUHI 201.

MULI 331. Song Literature II. 2 Units.
This course traces the history of the art song genre, including its precursors, major figures, trends, representative works, musical style, and poetry. Primary focus will be on national trends in France and other countries, which may include Russia, Spain, England, the US and those in Latin America and Scandinavia. Prereq: MUHI 201.

MUPD Courses

MUPD 399. Undergraduate Independent Studies. 1 - 3 Units.
Each student develops a topic of interest to be explored with a faculty member.

MUPD 501. Special Reading (M.A. and M.M.). 1 - 18 Units.

MURP Courses

MURP 310. Trumpet Repertoire. 1 Unit.

MURP 311. Horn Repertoire Class. 1 Unit.

MURP 317. Flute Repertoire Class. 1 Unit.

MUSP Courses

MUSP 101. Keyboard Skills I. 1 Unit.
Keyboard Skills class is designed to build basic keyboard skills and musicianship and to provide the necessary skills for using the keyboard as a tool within one's musical studies and profession. Emphasis on reading, technique and study of solo and ensemble repertoire.
MUTH 104. Keyboard Skills IV. 1 Unit.
Keyboard Skills class is designed to build basic keyboard skills and musicianship and to provide the necessary skills for using the keyboard as a tool within one's musical studies and profession. Emphasis on reading, technique and study of solo and ensemble repertoire.

MUTH Courses

MUTH 101. Theory and Aural Skills I. 4 Units.
An investigation of common-practice tonality through written exercises, keyboard work, ear training, and sight singing. MUTH 101 contains four components: (1) written work emphasizing topics such as key signatures, scales, intervals, triad and seventh chord construction, voice leading, and harmonic analysis; (2) keyboard exercises that complement theoretical studies, including scales, folk melody accompaniment, chorale harmonization, and figured bass; (3) ear training consisting of various types of dictation and listening exercises; and (4) sight singing with an emphasis on diatonic materials. Placement by examination.

MUTH 101I. Intensive Theory and Aural Skills I. 4 Units.
An investigation of common-practice tonality through written exercises, keyboard work, ear training, and sight singing. MUTH 101I contains four components: (1) written work emphasizing topics such as key signatures, scales, intervals, triad and seventh chord construction, voice leading, and harmonic analysis; (2) keyboard exercises that complement theoretical studies, including scales, folk melody accompaniment, chorale harmonization, and figured bass; (3) ear training consisting of various types of dictation and listening exercises; and (4) sight singing with an emphasis on diatonic materials. This course includes a required Lab component. Each day students will meet for 20 minutes to drill the written and skills material covered in MUTH 101I. Placement by examination.

MUTH 102. Theory and Aural Skills II. 4 Units.
An investigation of common-practice tonality through written exercises, keyboard work, ear training, and sight singing. MUTH 102 contains four components: (1) written exercises including voice leading and analysis of topics including nondominant seventh chords, harmonic sequences, and tonization; (2) keyboard exercises that complement theoretical studies, including harmonic progressions, folk melody accompaniment, chorale harmonization, and figured bass realization; (3) ear training consisting of various types of dictation and listening exercises; and (4) sight singing with an emphasis on advanced diatonic and beginning chromatic materials. Prereq: MUTH 101 or MUTH 101I or placement by exam.

MUTH 103. Theory I. 3 Units.
Music theory for the nonmusic major. Intervals, scales, rhythmic drill, sight singing, ear training, keyboard work, and harmony through inversions of triads and seventh chords. Not open to music majors.

MUTH 104. Theory II. 3 Units.
(See MUTH 103.) Recommended preparation: MUTH 103 or consent of department.

MUTH 201. Theory and Aural Skills III. 4 Units.
An investigation of common-practice tonality through written exercises, keyboard work, ear training, and sight singing. MUTH 201 contains four components: (1) written exercises including voice leading and analysis of topics including tonization, modulation, mixture, and the Neapolitan chord; (2) keyboard exercises that complement theoretical studies, including modulatory progressions, folk melody accompaniment, chorale harmonization, and figured bass realization; (3) ear training consisting of harmonic dictation and listening exercises; and (4) sight singing with an emphasis on chromatic materials. Prereq: MUTH 102 or placement by exam.

MUTH 202. Harmony-Keyboard IV. 4 Units.
(See MUTH 201.) Recommended preparation: MUTH 102 or placement examination.

MUTH 311. 16th Century Counterpoint. 2 Units.
Sixteenth century modal counterpoint. Exercises in the five species. Writing of short compositions and motets in two, three and four voices. Recommended preparation: MUTH 202 or MUTH 206.

MUTH 312. Eighteenth Century Counterpoint. 3 Units.
Analysis and writing of inventions in two parts, and fugues in three and four parts. Recommended preparation: MUTH 202 or MUTH 206.

MUTH 319. Jazz Skills. 3 Units.
This class is designed to teach students basic skills in jazz improvisation, jazz keyboard, arranging/composition and pedagogy. Basic theory is required. Students will eventually arrange their own composition for big band, which will feature them as the improvising soloist. Prereq: MUTH 102 or MUTH 104.

MUTH 320. Form and Analysis. 3 Units.
Aural and visual analysis of structural and stylistic features of 16th through 20th century music. Prereq: MUTH 202 or MUTH 208.

MUTH 390. Music Theory Literature Review. 2 Units.

MUTH 399. Undergraduate Independent Studies. 1 - 3 Units.
Each student develops a topic of interest to be explored with a faculty member.

MUTH 400B. Sightsinging and Eartraining Review. 2 Units.
Background in fundamentals of sight singing in four clefs; melodic and harmonic dictation including chromatic harmony and modulation. Designed for graduate students; credit not applicable toward degree requirements.

MUTH 416. Pre-common Practice Theory and Analysis. 3 Units.
An exploration of treatises and analytical methods appropriate to music of the Medieval and Renaissance eras.

MUTH 422. Musical Analysis for Educators. 3 Units.
Musical Analysis for Educators is designed to strengthen the analysis skills of music educators and explore practical application of these skills. Recommended preparation: Placement exam.

MUTH 423. Analysis of Musical Styles. 3 Units.
Analysis of selected musical compositions from various periods of the common practice era. Emphasis on traditional structures, stylistic features, and the relationship of analysis and performance.

MUTH 424. Introduction to Schenkerian Analysis. 3 Units.

MUTH 461. Theory Pedagogy. 3 Units.
Principles of the teaching of theory at all levels, with examination and appraisal of teaching methods, textbooks, recent concepts, etc.
MUTH 495. Seminar in Music Theory. 3 Units.
MUTH 501. Special Reading (M.A. and M.M.). 1 - 18 Units.

MUDE (MUDE)

MUDE 100. First Year Eurhythmics Lab. 0 Unit.
First-Year Eurhythmics Lab is an experience designed to provide additional support for students as they take Eurhythmics I as first-year students. This class will allow students to review for Eurhythmics I assessments and seek clarification as needed. Materials will be presented aurally, visually, and kinesthetically to provide an immersive rhythmic experience. Coreq: MUDE 101.

MUDE 101. Eurhythmics I. 0 Unit.
(See MUDE 101.)
MUDE 102. Eurhythmics II. 0 Unit.
MUDE 501. Special Reading (M.M. and M.A.). 1 Unit.

Natural Sciences Program

112 AW Smith Bldg
www.case.edu/artsci/natsci (http://www.case.edu/artsci/natsci/)
Phone: 216.368.3989
Peter Whiting, Program Advisor
peter.whiting@case.edu

The Natural Sciences Program offers an interdepartmental major that leads to a Bachelor of Arts degree. It is intended to serve students who wish to acquire a broad background in the natural sciences while pursuing a separate major in the humanities, the social sciences, or the arts.

Undergraduate Programs

Major

Natural Sciences is available as a second major for the BA; the first major must be in a department or program within the arts, humanities, or social sciences, excluding the programs in Environmental Studies, Gerontological Studies, and Pre-Architecture. For a student who completes a BS degree in management or accounting, Natural Sciences may serve as the sole major for the BA degree.

The program requires a minimum of 50 semester hours of work in natural sciences and mathematics. The natural science departments included in the major are Astronomy; Biology; Chemistry; Earth, Environmental, and Planetary Sciences; and Physics. The student must complete a minimum of 20 hours in one of these departments, a minimum of 8 hours each in two of the other departments, and 3 hours each in the remaining two departments. In addition, all Natural Sciences majors must complete:

One of the following sequences:

<table>
<thead>
<tr>
<th>MATH 121 &amp; MATH 122</th>
<th>Calculus for Science and Engineering I and Calculus for Science and Engineering II</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Units</td>
<td>8</td>
</tr>
</tbody>
</table>

The courses used to satisfy the Natural Sciences major should be courses that would satisfy requirements of an existing science major. However, any 200-level or higher astronomy course is acceptable for the Natural Sciences major.

Minor

A minor is achieved through completion of the requirements listed below in any four of the six participating departments.

Astronomy

One of the following sequences: 6

<table>
<thead>
<tr>
<th>ASTR 221 &amp; ASTR 222</th>
<th>Stars and Planets and Galaxies and Cosmology</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASTR 101</td>
<td>Introduction to the Sun and Its Planets (and any other 100-level ASTR course - 3 credits or more)</td>
</tr>
<tr>
<td>Total Units</td>
<td>6</td>
</tr>
</tbody>
</table>

Biology

Two of the following sequences: 8

<table>
<thead>
<tr>
<th>BIOL 214 &amp; 214L</th>
<th>Genes, Evolution and Ecology and Genes, Evolution and Ecology Lab</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOL 215 &amp; 215L</td>
<td>Cells and Proteins and Cells and Proteins Laboratory</td>
</tr>
<tr>
<td>BIOL 216 &amp; 216L</td>
<td>Development and Physiology and Development and Physiology Lab</td>
</tr>
<tr>
<td>Total Units</td>
<td>8</td>
</tr>
</tbody>
</table>

Chemistry

One of the following sequences: 8-10

| CHEM 105 & CHEM 106 & CHEM 113 | Principles of Chemistry I and Principles of Chemistry II and Principles of Chemistry Laboratory |
| CHEM 111 & CHEM 113 & ENGR 145 | Principles of Chemistry for Engineers and Principles of Chemistry Laboratory and Chemistry of Materials |
| Total Units                  | 8-10                                                          |

Earth, Environmental, and Planetary Sciences

One of the following: 1-3

<table>
<thead>
<tr>
<th>EEPS 101</th>
<th>The Earth and Planets</th>
</tr>
</thead>
<tbody>
<tr>
<td>EEPS 110</td>
<td>Physical Geology</td>
</tr>
<tr>
<td>EEPS 115</td>
<td>Introduction to Oceanography</td>
</tr>
<tr>
<td>EEPS 117</td>
<td>Weather and Climate</td>
</tr>
<tr>
<td>EEPS 119</td>
<td>Geology Laboratory</td>
</tr>
</tbody>
</table>
One additional EEPS course  

<table>
<thead>
<tr>
<th>Total Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
</tr>
</tbody>
</table>

**Mathematics, Applied Mathematics, and Statistics**

One of the following sequences:

<table>
<thead>
<tr>
<th>Course Combination</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 125 &amp; MATH 126</td>
<td>Math and Calculus Applications for Life, Managerial, and Social Sci I</td>
</tr>
<tr>
<td></td>
<td>and Math and Calculus Applications for Life, Managerial, and Social Sci II</td>
</tr>
<tr>
<td>MATH 121 &amp; MATH 122</td>
<td>Calculus for Science and Engineering I and Calculus for Science and Engineering II</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Total Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
</tr>
</tbody>
</table>

**Physics**

One of the following sequences:

<table>
<thead>
<tr>
<th>Course Combination</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYS 115 &amp; PHYS 116</td>
<td>Introductory Physics I and Introductory Physics II</td>
</tr>
<tr>
<td>PHYS 121 &amp; PHYS 122 &amp; PHYS 221</td>
<td>General Physics I - Mechanics and General Physics II - Electricity and Magnetism and Introduction to Modern Physics</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Total Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>8-11</td>
</tr>
</tbody>
</table>

**Nutrition**

The College of Arts and Sciences awards the Bachelor of Arts and Bachelor of Science degrees in nutrition. The required courses for the majors and minors are offered by the Department of Nutrition (p. 882) in the School of Medicine.

**Major Programs**

The undergraduate degree in nutrition is appropriate for students who wish to:

1. pursue graduate programs in nutritional biochemistry, dietetics, public health and community nutrition or other biomedical sciences
2. enter professional schools of dentistry, medicine, physical therapy, or pharmacy
3. apply to dietetic internships or approved experience programs in order to prepare for the professional practice of dietetics
4. pursue careers with the government or in the food or pharmaceutical industry

This major offers flexibility in course selection within a framework of general program requirements. The selection of courses depends on the student’s choice of emphasis. Students wishing to qualify for admission to professional or graduate programs need to include specific courses considered prerequisites for admission. Students interested in applying to dietetic internships must meet specific course requirements (Didactic Program in Dietetics) as required by the Accreditation Council for Education in Nutrition and Dietetics of the Academy of Nutrition and Dietetics. These requirements are met in the courses that comprise the Didactic Program in Dietetics (DPD). The DPD at Case Western Reserve University is currently granted Accreditation by the Accreditation Council for Education in Nutrition and Dietetics of the Academy of Nutrition and Dietetics, 120 South Riverside Plaza, Suite 2000, Chicago, IL 60606-6995, 800.877.1600. A department advisor should be consulted in the freshman year to plan the dietetics coursework.

**Nutrition Bachelor of Science degree requires:**

Required Courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NTRN 201</td>
<td>Nutrition</td>
</tr>
<tr>
<td>NTRN 342</td>
<td>Food Science</td>
</tr>
<tr>
<td>NTRN 342L</td>
<td>Food Science Lab</td>
</tr>
<tr>
<td>NTRN 343</td>
<td>Dietary Patterns</td>
</tr>
<tr>
<td>NTRN 363</td>
<td>Human Nutrition I: Energy, Protein, Minerals</td>
</tr>
<tr>
<td>NTRN 364</td>
<td>Human Nutrition II: Vitamins</td>
</tr>
<tr>
<td>NTRN 397</td>
<td>SAGES Capstone Proposal Seminar</td>
</tr>
<tr>
<td>NTRN 398</td>
<td>SAGES Senior Capstone Experience</td>
</tr>
</tbody>
</table>

Three nutrition electives chosen from:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NTRN 300</td>
<td>Healthy Lifestyles as Preventive Medicine</td>

### Bachelor of Arts degree requires:

**Required courses:**

- NTRN 201 Nutrition 3
- NTRN 343 Dietary Patterns 3
- NTRN 363 Human Nutrition I: Energy, Protein, Minerals 3
- NTRN 364 Human Nutrition II: Vitamins 3
- NTRN 397 SAGES Capstone Proposal Seminar 3
- NTRN 398 SAGES Senior Capstone Experience 3
- NTRN 452 Nutritional Biochemistry and Metabolism 3

**Three nutrition electives at 300-level (or above with instructor consent) chosen from the following:**

- NTRN 300 Healthy Lifestyles as Preventive Medicine
- NTRN 328 Child Nutrition, Development and Health
- NTRN 338 Dietary Supplements
- NTRN 341 Food as Medicine: How what we eat influences how we feel, think, and our health status
- NTRN 351 Food Service Systems Management
- NTRN 360 Clinical Assessment and Diagnosis: Nutritional, Functional, Physical
- NTRN 361 Metabolic Dysregulation of Energy from Obesity to Anorexia
- NTRN 365 Nutrition for the Prevention and Management of Disease: Pathophysiology
- NTRN 366 Nutrition for the Prevention and Management of Disease: Clinical Applications
- NTRN 367 Nutrition Strategies and Wellness Programming
- NTRN 371 Special Problems
- NTRN 388 Seminar in Sports Nutrition
- NTRN 390 Undergraduate Research

**Additional required courses:**

- MATH 125 Math and Calculus Applications for Life, Managerial, and Social Sci I 4
- or MATH 121 Calculus for Science and Engineering I 4
- MATH 126 Math and Calculus Applications for Life, Managerial, and Social Sci II 4
- or MATH 122 Calculus for Science and Engineering II 4
- CHEM 105 Principles of Chemistry I 3
- CHEM 106 Principles of Chemistry II 3
- CHEM 113 Principles of Chemistry Laboratory 2
- CHEM 223 Introductory Organic Chemistry I 3
- or CHEM 323 Organic Chemistry I 3
- CHEM 224 Introductory Organic Chemistry II 3
- or CHEM 324 Organic Chemistry II 3
- CHEM 233 Introductory Organic Chemistry Laboratory I 2
- CHEM 234 Introductory Organic Chemistry Laboratory II 2
- BIOL 214 Genes, Evolution and Ecology 3
- BIOL 215 Cells and Proteins 3
- BIOL 216 Development and Physiology 3
- or BIOL 340 Human Physiology and Human Anatomy 3
- BIOL 216L Development and Physiology Lab 1
- PHYS 115 Introductory Physics I 4
- or PHYS 121 General Physics I - Mechanics 4
- PHYS 116 Introductory Physics II 4
- or PHYS 122 General Physics II - Electricity and Magnetism 4
- BIOC 307 Introduction to Biochemistry. From Molecules To Medical Science 4
- BIOC 334 Structural Biology 3

Origins Sciences Program

217 Rockefeller, Institute for the Science of Origins  
http://origins.case.edu/major/  
Phone: 216.368.4257  
Patricia Princehouse, Director of the Major  
patricia.princehouse@case.edu

The Origins Sciences Program offers the Bachelor of Arts degree. The major provides a rigorous course of study with great flexibility in the choice of specific topics and courses. Students play a creative role in designing their own individual educational plans within the major. As a result, they are free to explore nontraditional, multidisciplinary and transdisciplinary subjects.

The Origins Sciences major is designed to connect students with professors who are breaking through barriers to ask big questions in ways that matter, both at the highest theoretical levels and with immediate practical applications in areas such as medicine and technology. Its concerns range from the nanoscale to ecological relationships to galaxies at the edge of the universe itself. The major’s sponsor, the Institute for the Science of Origins (http://origins.case.edu/) (ISO), brings together scientists from Case Western Reserve University, (http://www.case.edu/) the Cleveland Museum of Natural History (https://www.cmnh.org/) and other partner institutions to answer questions about the origin and evolution of simple and complex systems, from the big bang to the human mind.

The curriculum emphasizes a broad grounding in the origins sciences, including fundamentals of physics, biology, chemistry and mathematics, and encompassing aspects of anthropology, cognitive science, astronomy and earth, environmental and planetary sciences, making it reasonable for students to consider a double or secondary major or a dual degree. A faculty actively engaged in research in these fields and beyond provides first-rate instruction and opportunities for undergraduate involvement in cutting-edge research, including laboratory and museum experience and fieldwork across the globe.

An undergraduate degree in Origins Sciences can be tailored to meet the needs of pre-med or other pre-health students or to prepare students for graduate programs in any of the allied disciplines, including anthropology, astronomy, biology, chemistry, cognitive science, geosciences, applied mathematics, paleontology and physics.

Majoring in Origins Sciences gives students added value in applying to medical school, graduate school or the increasingly technical science-related MBA and JD programs. The major also provides a strong background for students interested in pursuing careers in science writing; internships are available at ideastream, ISO’s public TV and radio partner institution.
Program Faculty

Patricia Princehouse, PhD  
Senior Research Associate, Department of History; Director, Origins Sciences Program; Director, Program in Evolutionary Biology; Outreach Director, Institute for the Science of Origins

Glenn Starkman, PhD  
Distinguished University Professor, Department of Physics; Director, Institute for the Science of Origins; Director, Center for Education and Research in Cosmology and Astrophysics (CERCA)

Cynthia Beall, PhD  
Distinguished University Professor and Sarah Idell Pyle Professor of Anthropology; Co-Director, Center for Research on Tibet

Daniela Calvetti, PhD  
James Wood Williamson Professor, Department of Mathematics, Applied Mathematics, and Statistics

Darin Croft, PhD  
Associate Professor, Department of Anatomy, School of Medicine

Christopher A. Cullis, PhD  
Francis Hobart Herrick Professor of Biology

Michael Decker, PhD  
Associate Professor, Frances Payne Bolton School of Nursing

Neil S. Greenspan, MD PhD  
Professor, Department of Pathology, School of Medicine

Mark Griswold, PhD  
Professor, School of Medicine

Yohannes Haile-Selassie, PhD  
Curator and Head of Physical Anthropology, Cleveland Museum of Natural History

Ralph Harvey, PhD  
Professor, Department of Earth, Environmental, and Planetary Sciences

Joseph LaManna, PhD  
Jeanne M. and Joseph S. Silber Professor, Department of Physiology and Biophysics, School of Medicine

Harsh Mathur, PhD  
Professor, Department of Physics

J. Christopher Mihos, PhD  
Worcester R. and Cornelia B. Warner Professor of Astronomy, Department of Astronomy

John E. Ruhl, PhD  
Connecticut Professor, Department of Physics

Scott W. Simpson, PhD  
Professor, Department of Anatomy, School of Medicine

Erkki Somersalo, PhD  
Professor, Department of Mathematics, Applied Mathematics, and Statistics

Giuseppe Strangi, PhD  
Professor and Ohio Research Scholar in Surfaces of Advanced Materials, Department of Physics

Kingman P. Strohl, MD  
Professor, School of Medicine

Wanda Strychalski, PhD  
Assistant Professor, Department of Mathematics, Applied Mathematics, and Statistics

James Van Orman, PhD  
Professor, Department of Earth, Environmental, and Planetary Sciences

Mark A. Willis, PhD  
Professor, Department of Biology

Major

Origins Sciences is a primary major, but may also be pursued in conjunction with a more traditional disciplinary major. Up to 12 credits in required and elective courses taken by students for their other major may be applied to their Origins Sciences major.

The 30-credit interdisciplinary major in Origins Sciences consists of:

1. Science Core
2. Origins Core
3. Origins Foci

Within the Origins foci, each student will design a curriculum that includes concentrations in at least two Origins Sciences fields, such as:

- Cosmology and astrophysics
- Integrative evolutionary biology (e.g., biochemistry, physical anthropology, paleontology, and evolutionary cognitive science)
- Planetary science and astrobiology

In consultation with a major advisor, students create individual plans of study to suit their particular interests within the major. A typical student will develop a proposal as a sophomore and submit that plan for approval by the Origins Sciences Major Advisory Committee. Each concentration must include at least two 300 or higher level classes and their prerequisites. Subsequent revisions to the plan are encouraged when appropriate but must be submitted for approval by the committee at least two weeks before the beginning of the semester preceding the one in which the revisions take effect. Students are strongly encouraged to include an Origins Sciences research experience in their educational plans.

### Total Units in Sequence: 32-33

#### Courses

**ORIG 101. Origins Prologue: Life, the Universe, and Everything. 1 Unit.**
This one-credit course introduces students to the research interests of Origins faculty, and thereby to some of the possibilities for student research or focused study. Topics range across cosmology, astronomy, planetary sciences, astrobiology, evolutionary biology, evolutionary cognitive science, anthropology, and evolutionary medicine.

**ORIG 201. Origins I: From the Beginning. 3 Units.**
A three-credit quantitative introduction to cosmology, astrophysics, planetary science and geology in which they are connected through the narrative of origins setting the stage for the development of life on Earth.
Prereq: PHYS 121 or PHYS 123.

**ORIG 202. Origins II: Life in all its diversity. 3 Units.**
An integrated introduction to the origins sciences including aspects of evolutionary biology, ecology, paleontology, physical anthropology and cognitive science. The course will generally meet at the Cleveland Museum of Natural History.

**ORIG 301. Mathematical Modeling Across the Sciences. 3 Units.**
A three-credit course on mathematical modeling as it applies to the origins sciences. Students gain practical experience in a wide range of techniques for modeling research questions in cosmology and astrophysics, integrative evolutionary biology (including physical anthropology, ecology, paleontology, and evolutionary cognitive science), and planetary science and astrobiology. Offered as ORIG 301, ORIG 401 and MATH 357.
Prereq: ORIG 201, ORIG 202, BIOL 225, MATH 122, CHEM 106 and (PHYS 122 or PHYS 124).

**ORIG 351. Topics in Origins. 3 Units.**
A three-credit special topics course in any Origins discipline or interdisciplinary combination. Instruction may take place on campus or at partner institutions such as the Cleveland Museum of Natural History, and may at times include fieldwork. Offered as ORIG 351 and ORIG 451.
Prereq: ORIG 201, ORIG 202, ORIG 301.

**ORIG 360. Independent Study in Origins. 1 - 3 Units.**
A 1-3 credit offering available on an ad hoc basis to students wishing to pursue in-depth study in an appropriate origins topic under the supervision of a willing faculty member.
Prereq: ORIG 201, ORIG 202, ORIG 301.

**ORIG 370. Research in Origins. 1 - 6 Units.**
A 1-6 credit offering available on an ad hoc basis to students wishing to pursue independent research in an origins topic under the supervision of a willing faculty member.
Prereq: ORIG 301, ORIG 470.
Prereq: ORIG 201, ORIG 202, ORIG 301.

**ORIG 401. Mathematical Modeling Across the Sciences. 3 Units.**
A three-credit course on mathematical modeling as it applies to the origins sciences. Students gain practical experience in a wide range of techniques for modeling research questions in cosmology and astrophysics, integrative evolutionary biology (including physical anthropology, ecology, paleontology, and evolutionary cognitive science), and planetary science and astrobiology. Offered as ORIG 301, ORIG 401 and MATH 357.
Prereq: ORIG 201, ORIG 202, BIOL 225, MATH 122, CHEM 106 and (PHYS 122 or PHYS 124).

**ORIG 451. Topics in Origins. 3 Units.**
A three-credit special topics course in any Origins discipline or interdisciplinary combination. Instruction may take place on campus or at partner institutions such as the Cleveland Museum of Natural History, and may at times include fieldwork. Offered as ORIG 351 and ORIG 451.
Prereq: ORIG 201, ORIG 202, ORIG 301.

**ORIG 470. Research in Origins. 1 - 6 Units.**
A 1-6 credit offering available on an ad hoc basis to students wishing to pursue independent research in an origins topic under the supervision of a willing faculty member.
Prereq: ORIG 301, ORIG 470.
**ORIG 485. Comparative & Evolutionary Physiology. 4 Units.**
This course presents physiological concepts from the comparative and evolutionary perspective. Aspects of vertebrate and mammalian evolution will be considered with respect to the generation of adaptive advantages for organisms to changing environmental challenges since the Cambrian. Comparative physiological concepts include scaling, variations in nutrition, energy metabolism and work efficiency. The important influences of time, temperature, water and energy on mammalian biology will be presented. The course is a lecture based course that can be taken in person or on-line. Evaluations will be by regular quizzes, a mid-term and a final exam, all MCQ. Offered as PHOL 485 and ORIG 485.

**Department of Philosophy**

211 A Clark Hall  
www.case.edu/artsci/phil (http://www.case.edu/artsci/phil/)  
Phone: 216.368.2810; Fax: 216.368.0814  
Colin McLarty, Department Chair  
colin.mclarty@case.edu

The Department of Philosophy offers an undergraduate major leading to the Bachelor of Arts degree. It also offers minor programs for undergraduates as well as graduate-level courses for candidates for the Master of Arts degree in such fields as biomedical ethics, history, English, mathematics, and the sciences.

The department’s course offerings are designed not only to provide knowledge and skills required for students whose main interest is in philosophy, but also to educate students in general about the intellectual issues that a reflective person is likely to encounter in various life contexts. The department emphasizes the relevance of philosophy to mathematics, computer science, the natural sciences, the social sciences, the humanities and arts, and law.

The major program in philosophy, besides offering a solid foundation for advanced study in philosophy and enriching programs in other disciplines, develops the skills for analytical and critical thinking, effective communication, and rational decision making needed in a wide range of endeavors. The program thus provides majors with unusual flexibility in the choice of subsequent careers, including law, medicine, and management, while complementing the pursuit of career objectives with a greater perspective and a richer quality of intellectual life.

In collaboration with the Department of History, the department participates in an interdisciplinary major in the History and Philosophy of Science Program (p. 396), leading to the Bachelor of Arts degree. The department also participates in, and contributes courses to, the interdisciplinary minor in artificial intelligence in the Department of Computer and Data Sciences (p. 88), Case School of Engineering.

**Department Faculty**

Colin McLarty, PhD  
(Case Western Reserve University)  
*Truman P. Handy Professor of Philosophy and Chair*  
Logic; philosophy of logic; philosophy of mathematics; philosophy of science; contemporary French philosophy

Jeremy Bendik-Keymer, PhD  
(University of Chicago)  
*Professor*  
Ethics and moral philosophy; environmental philosophy; philosophy of education; meta-philosophy; history of ethics and moral philosophy

Shannon D. French, PhD  
(Brown University)  
*Inamori Professor of Ethics*  
Military ethics; leadership ethics; professional ethics; moral psychology; biomedical and environmental ethics

Chris Haufe, PhD  
(Columbia University)  
*Associate Professor*  
Philosophy of science, philosophy of biology

Laura E. Hengehold, PhD  
(Loyola University of Chicago)  
*Professor*  
Political and social philosophy; philosophy of feminism; Foucault; contemporary continental philosophy

Anthony Jack, PhD  
(University College London, UK)  
*Associate Professor*  
Experimental psychology, extensive training in philosophy and neuroscience

Chin-Tai Kim, PhD  
(Harvard University)  
*Professor*  
History of philosophy (17th, 18th, and 19th centuries); theory of knowledge; metaphysics; foundations of ethics; phenomenology; comparative philosophy

**Adjunct Faculty**

Joel Levin, DPhil  
(University of Oxford, U.K.)  
*Adjunct Associate Professor; Adjunct Professor, Case Western Reserve University School of Law*  
Philosophy of law; political philosophy; ethical theory

David Whetham, PhD  
(King’s College London )  
*Director of King’s Centre for Military Ethics, King’s College London*

**Secondary Faculty**

Insoo Hyun, PhD  
(Brown University)  
*Associate Professor, Department of Bioethics*  
Bioethics; moral and political philosophy

Deepak Sarma, PhD  
(University of Chicago)  
*Professor, Department of Religious Studies*  
Hinduism; Indian philosophy; philosophy of religion; method and theory

**Undergraduate Programs**

**Major**

The major consists of 30 hours (ten 3-credit courses) in philosophy, including PHIL 101 Introduction to Philosophy, PHIL 201 Introduction to Logic, PHIL 301 Ancient Philosophy, PHIL 302 Modern Philosophy, and six other elective philosophy courses to be determined in consultation with the department’s undergraduate advisor. However, a student may request permission to take up to 6 hours (two 3-credit courses) of the
required 18 hours of philosophy electives in another field or other fields. Such a request should be supported by considerations showing how the substitution(s) would strengthen the student’s major in philosophy. The advisor must approve the substitution(s) in advance.

**Departmental Honors**

The department offers an honors program for students pursuing a major in philosophy. Students in this program must complete a substantial thesis, pass an oral examination on the thesis, and maintain a B average in philosophy courses. To be eligible for admission, a student should have an overall grade point average of B or better, and a grade of B or better in each philosophy course already taken. A student normally should have taken at least four, and at most seven, philosophy courses at the time of application for admission. An honors student should register for PHIL 399 Philosophy Honors Thesis to do honors work. Interested students should apply for admission to the program during the first semester of junior year. The honors thesis counts for capstone credit as well.

**Minor in Philosophy**

The department offers a range of possible minor programs, each of which must include PHIL 101 Introduction to Philosophy and four other courses in philosophy at the 200 or 300 level (excluding PHIL 390 Senior Research Seminars in History and Philosophy of Science and PHIL 399 Philosophy Honors Thesis), chosen to meet the specific needs of students majoring in other fields. The undergraduate advisor will assist students in devising minor programs.

**Minor in Ethics**

The minor in ethics allows undergraduate students in any field to pursue a concentration of studies in ethics from multiple perspectives: theoretical and practical, philosophical and empirical/interdisciplinary. The goal is to encourage analytical reflection on the principles and situations of ethical action, social, interpersonal, or individual, in historical and contemporary contexts.

The ethics minor requires a total of 15 credit hours (i.e., five 3-credit hour courses), as follows: PHIL 101 Introduction to Philosophy, PHIL 305 Ethics, two other PHIL courses at the 200-300 level, and one of several identified courses in a field other than philosophy.

**Philosophy Capstone**

Students may fulfill their SAGES capstone requirement in philosophy by registering for PHIL 398 Philosophy Capstone after devising a suitable project in consultation with the undergraduate advisor and the supervising faculty member. The honors thesis counts for capstone credit as well.
Master's Program in Military Ethics

Tinkham Veale University Center, Room 260
http://militaryethics.case.edu
Phone: 216.368.2579; Fax: 216.368.4455
Shannon French, Program Director
shannon.french@case.edu

Military ethics is a broadly interdisciplinary study, incorporating concerns about the conduct of war, decisions on how and when to engage in military operations, and issues relating to the moral psychology and care of those who serve and of veterans of military service. It focuses on the core values and moral principles that collectively govern the men and women serving in the military forces of nations around the world, as members of what is sometimes termed the “military profession” or “the profession of arms.” The ethical foundations that define the profession of arms have developed over millennia from the shared values and experiences, unique role responsibilities, and reflections of members of the profession on their own practices—eventually coming to serve as the basis for various warrior codes and the Law of Armed Conflict (LOAC). Traditional just war theory (political and moral philosophy governing when the use of military force is justified for the resolution of international conflicts) plays a key role in international relations as well as in international law, including the LOAC and international humanitarian law.

The Program

The program has been designed to educate students on and guide their research into vital global issues in military ethics. These issues include (but are not limited to) modern applications of classical just war theory and traditional warrior’s codes, the principle of noncombatant immunity, human rights, international humanitarian law, humanitarian intervention, the ethical use of emerging military technologies, civil-military relations and society’s obligations to troops and veterans, transitional justice, and the moral foundations of sustainable peace.

The study of military ethics supports long-term humanitarian goals, such as preventing unjust wars; decreasing incidents of war crimes, genocide, human rights abuses, and other atrocities produced by the dehumanizing effects of armed conflict; supporting the mental health and successful transitions of military service members and combat veterans; and fostering a lasting peace founded in justice.

Curriculum

The program curriculum is interdisciplinary, with a foundation in moral and political philosophy and international relations. Each student will complete a minimum of 30 credit hours, including a six-credit “capstone course” that will typically be completed during the summer term following a full academic year of course work.

Over a 12- to 15-month program of study (designed to facilitate the enrollment of military personnel on educational assignment and the academic student looking for an intensive program), students will study foundational topics in moral and political philosophy, together with advanced core and elective topics in military and professional ethics, military medical ethics, military law, ethical leadership, and other related subjects (including optional supplemental electives in areas such as religious studies, history, literature, journalism, political science, classics, and the arts).

Capstone

When students begin the program, the program director will work with them individually to develop initial concepts for their specific concentrations of study and their capstones. The capstone/culminating project involves both academic research and fieldwork, and is integrated with the degree candidate’s professional experience or interest. PHIL 501 Military Ethics MA Capstone will feature a summative project designed to integrate their common studies, but tailored to their individual future interests in teaching, further graduate study, or employment in public policy or foreign affairs, and may produce outcomes other than a traditional paper/thesis (such as the detailed and well-defended design of a military ethics training/education curriculum).

The outline of the project will typically be presented and defended by the spring recess of the candidate’s second semester in residence, and the project itself completed over the following summer term, for graduation in August the year following matriculation. If special circumstances prevent a student from completing the program in the intended time frame, the academic advisor will work with the student to create an alternative schedule.

Electives

Students will take a minimum of four elective courses. The selection of topic for the capstone project will dictate the selection of relevant elective courses by each student (in consultation with program faculty) to create an appropriate concentration of study. Electives may be in military and professional ethics, military medical ethics, military law, or ethical leadership, or in optional supplemental areas such as religious studies, history, literature, journalism, and the arts.

Elective courses from the College of Arts and Sciences and the School of Law include:

</table>
PHIL 203. Revolutions in Science. 3 Units.
Historical and philosophical interpretation of some epochal events in development of science. Copernican revolution, Newtonian mechanics, Einstein’s relativity physics, quantum mechanics, and evolutionary theory; patterns of scientific growth; structure of scientific "revolutions;" science and "pseudo-science." First half of a year-long sequence. Offered as HSTY 203 and PHIL 203.

PHIL 204. Philosophy of Science. 3 Units.
Conceptual, methodological, and epistemological issues about science: concept formation, explanation, prediction, confirmation, theory construction and status of unobservables; metaphysical presuppositions and implications of science; semantics of scientific language; illustrations from special sciences. Second half of a year-long sequence. Offered as HSTY 207 and PHIL 204.

PHIL 207. Good Relationships. 3 Units.
What is a good relationship? What is the difference between everyday work relationships, friendships, and romance? What is love? What is the role of desire in relationships? What is the role of respect and of moral judgment? What can a bad relationship teach us? In this class, we explore the logic of personal relationships by focusing on the central experience of being in love. However, our approach is indirect. We begin with what we can learn from a bad relationship. In addition to philosophical and psychological reading, students design exercises that might improve a personal relationship as found in fiction or history. By thus imaginatively studying relationships in narration, they are asked to develop their own concept of a good relationship.

PHIL 211. Indian Philosophy. 3 Units.
We will survey the origins of Indian philosophical thought, with an emphasis on early Buddhist, Hindu and Jain literature. Our concern will be the methods, presuppositions, arguments, and goals of these schools and trajectories of thought. What were their theories on the nature of the person, the nature of reality, and the nature and process of knowing? What were the debates between the schools and the major points of controversy? And, most importantly, are the positions/arguments internally incoherent? Offered as PHIL 221 and RLGN 221. Counts for CAS Global & Cultural Diversity Requirement.

PHIL 222. The Science of Happiness. 3 Units.
What actually makes us happy? Scientific research shows most of us get this badly wrong. For instance, money is far less important, and embracing negative emotions far more important, than most people realize. When philosophy first got started, it focused on the single most practically important question anyone can ask: How can I live a good life? A recent boom in scientific research is now validating insights from traditions that take this approach of philosophy as a way of life, including ancient greek, eastern & continental schools of philosophy. Open to all students (no pre-requisites), this course combines intellectual inquiry with experiential approaches, blending philosophical insight, evidence-based interventions and cutting-edge science. For instance, students will learn about approaches to emotion regulation and stress resilience all the way from the ancient Stoics to recently published work in psychological science. This course won’t make you happy. It will sometimes make you sad. It will expose you to tools that you can use to improve your physical and psychological well-being, and - most important of all - your sense of purpose in life.
PHIL 225. Evolution. 3 Units.
Multidisciplinary study of the course and processes of organic evolution provides a broad understanding of the evolution of structural and functional diversity, the relationships among organisms and their environments, and the phylogenetic relationships among major groups of organisms. Topics include the genetic basis of micro- and macro-evolutionary change, the concept of adaptation, natural selection, population dynamics, theories of species formation, principles of phylogenetic inference, biogeography, evolutionary rates, evolutionary convergence, homology, Darwinian medicine, and conceptual and philosophic issues in evolutionary theory. Offered as ANTH 225, BIOL 225, EEPS 225, HSTY 225, and PHIL 225.

PHIL 253. Religion and Philosophy in China. 3 Units.
This course critically examines the three principal religious and philosophical traditions of China: the Confucian, Daoist, and Chinese Buddhist traditions. Through a combination of assigned print and online readings, video clips and documentaries, class discussions, and written assignments, students explore the origins and historical developments, principal thinkers, central religious and doctrinal themes, ethics, spirituality, popular devotions, social movements, and contemporary developments of these three major religious and philosophical traditions of China. Students will consider the wider social, cultural, ethical, economic, and political dimensions of Chinese religions and philosophies generally, and themes of community and society, identity constructions, personal experiences, movements, as well as their socio-cultural reproductions in contemporary China, and where appropriate, the Chinese Diaspora in North America. Offered as CHIN 253C, ETHS 253C, PHIL 253 and RLGN 253. Counts for CAS Global & Cultural Diversity Requirement.

PHIL 261. Our Knowledge of Climate Change: What do we know and how do we know it?. 3 Units.
Traditional theories of knowledge have concentrated on the actions and beliefs of individuals, and how they marshal evidence from the world to support or refute their scientific hypotheses. This traditional epistemological framework has been challenged by the developments of the modern era of Big Science, resulting in the development of new approaches to a social epistemology of science. Reflective of how science is done, this epistemological framework in turn can provide guidance for the robust prosecution of the scientific enterprise. Perhaps nowhere is this more important than in climate science, where on the one hand the underlying dynamics of climate change pose an existential threat to our civilization, and on the other, there are active and well organized efforts to derail the scientific process and to denigrate the scientists. This course will first develop classical notions of the epistemology of science, including the role of models and issues of uncertainty (statistical, systematic, and gross) as well as the challenges of developing a robust scientific process resistant to fraud. These issues will be illustrated by consideration of various classical experiments. The course will then expand the epistemological framework to the collaborative context of modern big science, illustrating the issues by examples from the field of high energy physics (which saw the development of the World Wide Web by CERN, the European Organization for Nuclear Research, to allow physicists from around the world to share and collectively analyze data). With this in hand the course will explore the history and current state of climate science in the framework of a social epistemology of big science. Students will develop a good understanding of the role of hierarchical models of climate science, the empirical basis for our current understanding of anthropogenic climate change, the role and development of international coordination of climate science and its implications for policy, and the challenges posed by hostile, well-organized efforts to disrupt the scientific process, the public understanding of the science, and ultimately the processes necessary for addressing the challenges of climate change. Offered as PHIL 261 and PHYS 261.

PHIL 270. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women’s studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women’s and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

PHIL 271. Bioethics: Dilemmas. 3 Units.
We have the genetic technology to change nature and human nature, but should we? We have the medical technology to extend almost any human life, but is this always good? Should we clone humans? Should we allow doctor-assisted suicide for the terminally ill? This course invites students from all academic disciplines and fields to examine current and future issues in bioethics—e.g., theory and methods in bioethics; death and dying; organ transplantation; genetics; aging and dementia; fertility and reproduction; distributive justice in health care access. The course will include guest lecturers from nationally-known Bioethics faculty. Offered as BETH 271 and PHIL 271.
PHIL 301. Ancient Philosophy. 3 Units.
Western philosophy from the early Greeks to the Skeptics. Emphasis on the pre-Socratics, Plato and Aristotle. Recommended preparation: PHIL 101 and consent of department. Offered as CLSC 301 and PHIL 301.

PHIL 302. Modern Philosophy. 3 Units.

PHIL 303. Topics in Philosophy of Science. 3 Units.
In-depth study of selected topics in general philosophy of science or philosophy of physical, biological, or social science. Topics may include: theories of explanation, prediction, and confirmation; semantics of scientific language; reductionism; space, time and relativity; philosophical issues about quantum mechanics; philosophical issues about life sciences (e.g., evolution, teleology, and functional explanation); explanation and understanding in social sciences; value in social science. Recommended preparation: PHIL 101 or PHIL 201 or PHIL 203. Offered as PHIL 303 and PHIL 403.

PHIL 305. Ethics. 3 Units.
Analysis of ethical theories and concepts of goodness, right, and obligation. Discussion of nature of justice, problem of justification of moral principles, and relation between facts and values. Offered as PHIL 305 and PHIL 405. Prereq: PHIL 101 or PHIL 205.

PHIL 306. Mathematical Logic and Model Theory. 3 Units.
Propositional calculus and quantification theory; consistency and completeness theorems; Gödel incompleteness results and their philosophical significance; introduction to basic concepts of model theory; problems of formulation of arguments in philosophy and the sciences. Offered as PHIL 306, MATH 406 and PHIL 406.

PHIL 307. Philosophy of Biology. 3 Units.
This class looks at the philosophical dimensions of various problems in historical and contemporary evolutionary biology. Topics covered include (1) the theory of natural selection; (2) extinction; (3) human evolution; and (4) higher order evolutionary units and processes. Offered as PHIL 307 and PHIL 407.

PHIL 311. Neuroethics. 3 Units.
Ethics is traditionally a branch of Philosophy. However, research in neuroscience, psychology and behavioral economics is shedding new light on the underlying bases of ethical behavior and ethical thinking. The class will examine how this work informs and enriches traditional philosophical ethics. Topical focus of the class will depend on student interest, but potentially include: What determines how ethically we behave: our character or our situation? What role do and should emotions play in ethical thinking? Can science tell us whether utilitarian or deontological ethics is better? The dark tetrad: narcissism, Machiavellianism, psychopathy and; sadism. What is empathy and what roles does it play in generating both ethical and unethical behavior. Varieties of moral disengagement, including dehumanizing. Cognitive dissonance and the slide into unethical behavior. Radicalization into violent extremism. Promoting ethical behavior. Offered as PHIL 311 and PHIL 411.

PHIL 313. Philosophy of Mathematics. 3 Units.
Logical paradoxes and their effects on foundations of mathematics. Status of mathematical entities and nature of mathematical truths. Formalist, logicist, and intuitionist positions. Recommended preparation: PHIL 101 or PHIL 201. Offered as PHIL 313 and PHIL 413.

PHIL 315. Selected Topics in Philosophy. 3 Units.
Examination of views of a major philosopher or philosophical school, a significant philosophical topic, or a topic that relates to philosophy and another discipline. Recommended preparation: PHIL 101. Offered as PHIL 315 and PHIL 415. Counts as SAGES Departmental Seminar.

PHIL 317. War and Morality. 3 Units.
The aim of this course is to explore a wide range of ethical issues relating to the decision to take a nation to war, how wars are conducted, and efforts to establish order in the wake of a conflict. Topics include the Just War tradition, pacifism, humanitarian intervention, moral repair and the establishment of a just peace, conduct of war, warrior codes, warrior transitions, and civil-military relations. We will be examining the ethics of war from the perspectives of both states and individuals. War is a crucible that strips those caught up in its horrors down to their fundamental selves inspiring acts of both inhuman depravity and seemingly superhuman nobility. This course is presented in a seminar format with lively discussions centering on contemporary readings in military ethics from texts and journals. Offered as PHIL 317, PHIL 417, and LAWS 5135.

PHIL 318. People and Planet. 3 Units.
In this course, we study the way in which the environment is a matter of politics. Our approach is philosophical, examining the concept of politics in light of how societies shape their environment on Earth. This elucidation’s aim is practical. We want to know not only what environmental politics is, but what we should do about it. Students from any major are welcome, without prerequisite. Offered as PHIL 318, POSC 318 and ESTD 318.

PHIL 325. Philosophy of Feminism. 3 Units.

PHIL 330. Topics in Ethics. 3 Units.
Examination of views in ethics of a major philosopher or philosophical school, a significant philosophical topic in ethics, or a topic that relates ethics to philosophy and another discipline. Recommended preparation: PHIL 101 or PHIL 205. Offered as PHIL 330 and PHIL 430.

PHIL 333. Philosophy of Religion. 3 Units.
Topics include: classical and contemporary arguments for God’s existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433. Prereq: PHIL 101

PHIL 334. Political and Social Philosophy. 3 Units.
Justification of social institutions, primarily political ones. Such distinctions as that between de facto and legitimate authority; analysis of criteria for evaluation, such as social justice and equality; inquiry into theories of justification of the state; theory of democratic government and its alternatives. Readings from classical and contemporary sources. Recommended preparation: PHIL 101. Offered as PHIL 334, POSC 354, PHIL 434, and POSC 454.
PHIL 335. Philosophy of Law. 3 Units.
This is an examination of the general nature of law, the broad concerns of jurisprudence, the study of comparative law, and many of the issues raised in the literature of legal philosophy. Students will examine the principles of legal positivism, mitigated natural law, and rights theory. Selected readings and cases will illustrate these theories, which will also be examined in the context of rule selection by new governments in developing or revolutionary societies. The course also looks at the general nature of legal systems: how politics, morality, and individual views of justice and rights affect particular court cases and the course and development of law generally. Topics will include abortion, obscenity and sin, civil disobedience, affirmative action, surrogatehood, and the death penalty. This is unlike any other of the legal theory or jurisprudence courses, and those who have sampled legal theory elsewhere in a different form are welcome and encouraged to enroll. Recommended preparation: PHIL 101. Offered as LAWS 5747, PHIL 335, and PHIL 435.

PHIL 336. Military Ethics, the Military Profession, and International Law. 3 Units.
The aim of this course is to provide a foundational understanding of international law as it relates to war and to explore the relationship between international law, military ethics, and the military profession. In addition to traditional lectures and seminar-style discussions, this hybrid course will feature video lectures by international experts in the field of military ethics and online assignments, discussion sections led by the Visiting Distinguished Inamori Scholar in Military Ethics. Topics covered will concern the international legal framework pertaining to the use of force, viewed through the prism of a professional code of conduct that has been forged over centuries, across different warrior cultures. Offered as PHIL 336 and PHIL 436. Prereq: PHIL 317 or PHIL 417.

PHIL 345. Epistemology and Metaphysics. 3 Units.
Traditional problems of epistemology, such as definition of knowledge, justification of belief, nature of evidence and foundationalism, skepticism, the a priori, and the role of sense perception in knowledge. Metaphysical presuppositions and implications of epistemological views. Forms of realism and anti-realism. Recommended preparation: PHIL 101. Offered as PHIL 345 and PHIL 445.

PHIL 356. Comparative Philosophy. 3 Units.
Philosophy in the etymological sense of the term, love of wisdom, subsumes ontological, ethical and epistemological inquiries addressing fundamental questions about reality, the place of humans in that reality, the values of things and human obligations, and the sources of knowledge. The major purpose of this course is to discover, understand, explicate and articulate the affinities and differences in the way the fundamental questions are addressed in different cultural contexts, thereby to appreciate the cross-cultural kinship among human minds as well as to be challenged by the differences that may engender conflicts. We will explore the possibility of building a trans-cultural meta-cultural meta-discourse in which thinkers from many traditions can participate on equal footing. We will come to face up to the question whether truly universal philosophy is possible, upon what conditions. Representative texts from the Western, Chinese and Buddhist traditions including selected works of Plato, Aristotle, Augustine, Descartes, Kant, Nietzsche, Heidegger, Lao Tzu, Confucius, Chuang Tzu, Dhammapada of the Buddha and D. Suzuki's Zen Buddhism will be read. Offered as PHIL 356 and PHIL 456. Counts for CAS Global & Cultural Diversity Requirement. Prereq: PHIL 101 or requisites not met permission.

PHIL 360. Science and Society. 3 Units.
This course examines the complex ethical and other value relationships that exist between science and society. Students will be encouraged to question the simplistic view that science proceeds independently of societal values and contentious ethical commitments. A range of other social factors, such as ethical belief systems, political forces, and large-scale financial interests all influence new scientific and technological developments. In order to illuminate each of these larger themes, this course focuses on three exciting areas of scientific inquiry: stem cell research; synthetic biology; and nanotechnology. Each of these contentious scientific fields provides an excellent view into the challenging ethical, cultural, social, political, and economic issues that will face students, both as scholars and as citizens. No prior technical knowledge is necessary for any of these scientific areas. All relevant scientific information will be provided during the course by the professor. Offered as BETH 360, BETH 460 and PHIL 360.

PHIL 366. Brain, Mind and Consciousness: The Science and Philosophy of Mind. 3 Units.
The course introduces students to key topics in philosophy of mind from the perspective of our increasingly advanced scientific understanding of mind and brain (e.g. derived from neuroscience, psychology and cognitive science). Key philosophical topics covered include dualism, physicalism, idealism, consciousness and free will. Key scientific issues covered include methods and assumptions underlying research in psychology and neuroscience, introspection, essentialism, dehumanizing, and work on free will and consciousness. No pre-requisites other than curiosity are required, however students will benefit from having previously taken courses in philosophy, neuroscience, psychology and/or computer science. Students are expected to complete the assigned readings with care and attention, and to participate in discussion. The goal is for students to leave with an understanding of the rich ways in which different approaches can shed light on the human mind, including an appreciation of the limits of scientific inquiry into the mind. Offered as PHIL 366 and PHIL 466.

PHIL 367. Topics in Evolutionary Biology. 3 Units.
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/EEPS/PHIL/PHOL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation. Offered as ANTH 367, BIOL 368, EEPS 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, EEPS 467, PHIL 467 and PHOL 467. Prereq: PHIL 225 or equivalent.
PHIL 371. Advanced Bioethics. 3 Units.
This course offers upper-level instruction on many key bioethical issues introduced in BETH/PHIL 271. The class follows a discussion-intensive seminar format. Students begin with an in-depth analysis of ethical issues surrounding the conduct of clinical trials, both within the U.S. and through U.S.-sponsored research abroad. Next students examine the philosophical and practical challenges involved in medical decision making for adults and pediatric patients. This course concludes by addressing the broader ethical problem of what duties we owe to future generations in terms of our reproductive choices and the allocation of health-related public expenditures. Each of these general topic areas - clinical trials, medical decision making, and future generations - is of crucial importance for all students whether one plans to enter a career in biomedical research, the healthcare professions, or some other career path. Everyone is a potential patient or the family member of a potential patient. The topics covered in Advanced Bioethics will help prepare students to become responsible participants in an increasingly complex biomedical world. Offered as BETH 371 and PHIL 371. Prereq: BETH 271 or PHIL 271.

PHIL 375. Issues in Aesthetics. 3 Units.
This course will seek to offer insight into the nature of artistic expression, the role of criticism in the arts, and the place of the arts in society. The term "arts" will be construed broadly to include painting, photography, theater, film, music, dance, poetry, etc. The following are questions we will discuss. What does the term "beautiful" mean? Are there other measures of aesthetic value besides beauty? Do the arts, like the sciences, offer us knowledge of the world? What value do the arts have for society? Can aesthetic value conflict with moral value? Do artists have a responsibility to society? Should art ever be censored? What is the relationship between art and entertainment? Is the meaning and value of an artistic work a matter of individual opinion? What is the purpose of art criticism? How are interpretations and evaluations of art influenced by race, gender, class, etc.? What is creativity in the arts? Does it differ from creativity in the sciences? How important is originality in art? Offered as PHIL 375 and PHIL 475. Prereq: PHIL 101 or requisite not met permission.

PHIL 381. Philosophy and Cognitive Neuroscience. 3 Units.
This course will focus on the various methodologies used in the cognitive neurosciences, and explore their strengths and weaknesses from scientific and philosophical standpoints. We will begin by examining baseline measures (including IQ tests, tasks of cognitive flexibility, verbal and visual memory, causal/sequential thinking and narrative tasks) and their experimental design. Lesion methods will follow, with an eye toward understanding the strength of inferences that can be drawn from such data. The course will also focus on imaging techniques (CAT, PET, SPECT, fMRI, TMS, etc.) as well as measures of electrical activity such as EEG and single-cell recordings. Students will become familiar with many fundamental assumptions necessary for the implementation of each method, and philosophical questions associated with these endeavors and their potential impact on our knowledge and society. Recommend preparation: PHIL 101 or COGS 201. Offered as COGS 381 and PHIL 381.

PHIL 384. Ethics and Public Policy. 3 Units.
Evaluation of ethical arguments in contemporary public policymaking discourse. That is, approaches to evaluating not only the efficiency of policy (Will this policy achieve its end for the least cost?) but also the ethics of policy (Are a policy's intended ends ethically justified or "good"; and are our means to achieve those ends moral or "just"?). Overview of political ideologies that supply U.S. political actors with their ethical or moral arguments when proposing and implementing public policy, followed by an application of these differing perspectives to selected policy areas such as welfare, euthanasia, school choice, drug laws, censorship, or others. Offered as PHIL 384, PHIL 484, POSC 384 and POSC 484.

PHIL 390. Senior Research Seminars in History and Philosophy of Science. 3 Units.
Directed independent research seminar for seniors who are majors in the History and Philosophy of Science program. The goal of the course is to develop and demonstrate command of B.A.-level factual content, methodologies, research strategies, historiography, and theory relevant to the field of history of science and/or philosophy of science. The course includes both written and oral components. Offered as HSTY 380 and PHIL 390. Counts as SAGES Senior Capstone.

PHIL 396. Undergraduate Research in Evolutionary Biology. 3 Units.
Students propose and conduct guided research on an aspect of evolutionary biology. The research will be sponsored and supervised by a member of the CASE faculty or other qualified professional. A written report must be submitted to the Evolutionary Biology Steering Committee before credit is granted. Offered as ANTH 396, BIOL 396, EEPS 396, and PHIL 396.

PHIL 397. Directed Study. 3 Units.
Under faculty supervision, students will undertake a project that demonstrates critical thinking, has clear goals, features periodic reporting of progress, and will result in a final report.

PHIL 398. Philosophy Capstone. 3 Units.
Under faculty supervision, students will undertake a project that demonstrates critical thinking, has clear goals, features periodic reporting of progress, and will result in a final report and public presentation. Counts as SAGES Senior Capstone.

PHIL 399. Philosophy Honors Thesis. 3 Units.
Under faculty supervision, students will complete a substantial thesis that demonstrates critical thinking, has clear goals, features periodic reporting of progress, and will be the subject of an oral examination as well as a public presentation. Counts as SAGES Senior Capstone.

PHIL 403. Topics in Philosophy of Science. 3 Units.
In-depth study of selected topics in general philosophy of science or philosophy of physical, biological, or social science. Topics may include: theories of explanation, prediction, and confirmation; semantics of scientific language; reductionism; space, time and relativity; philosophical issues about quantum mechanics; philosophical issues about life sciences (e.g., evolution, teleology, and functional explanation); explanation and understanding in social sciences; value in social science. Recommended preparation: PHIL 101 or PHIL 201 or PHIL 203. Offered as PHIL 303 and PHIL 403.

PHIL 405. Ethics. 3 Units.
Analysis of ethical theories and concepts of goodness, right, and obligation. Discussion of nature of justice, problem of justification of moral principles, and relation between facts and values. Offered as PHIL 305 and PHIL 405.
PHIL 406. Mathematical Logic and Model Theory. 3 Units.
Propositional calculus and quantification theory; consistency and completeness theorems; Gödel incompleteness results and their philosophical significance; introduction to basic concepts of model theory; problems of formulation of arguments in philosophy and the sciences. Offered as PHIL 306, MATH 406 and PHIL 406.

PHIL 407. Philosophy of Biology. 3 Units.
This class looks at the philosophical dimensions of various problems in historical and contemporary evolutionary biology. Topics covered include (1) the theory of natural selection; (2) extinction; (3) human evolution; and (4) higher order evolutionary units and processes. Offered as PHIL 307 and PHIL 407.

PHIL 411. Neuroethics. 3 Units.
Ethics is traditionally a branch of Philosophy. However, research in neuroscience, psychology and behavioral economics is shedding new light on the underlying bases of ethical behavior and ethical thinking. The class will examine how this work informs and enriches traditional philosophical ethics. Topical focus of the class will depend on student interest, but potentially include: What determines how ethically we behave: our character or our situation? What role do and should emotions play in ethical thinking? Can science tell us whether utilitarian or deontological ethics is better? The dark tetrad: narcissism, Machiavellianism, psychopathy and sadism. What is empathy and what roles does it play in generating both ethical and unethical behavior. Varieties of moral disengagement, including dehumanizing. Cognitive dissonance and the slide into unethical behavior. Radicalization into violent extremism. Promoting ethical behavior. Offered as PHIL 311 and PHIL 411.

PHIL 413. Philosophy of Mathematics. 3 Units.
Logical paradoxes and their effects on foundations of mathematics. Status of mathematical entities and nature of mathematical truths. Formalist, logicist, and intuitionist positions. Recommended preparation: PHIL 101 or PHIL 201. Offered as PHIL 313 and PHIL 413.

PHIL 415. Selected Topics in Philosophy. 3 Units.
Examination of views of a major philosopher or philosophical school, a significant philosophical topic, or a topic that relates to philosophy and other discipline. Recommended preparation: PHIL 101. Offered as PHIL 315 and PHIL 415. Counts as SAGES Departmental Seminar.

PHIL 417. War and Morality. 3 Units.
The aim of this course is to explore a wide range of ethical issues relating to the decision to take a nation to war, how wars are conducted, and efforts to establish order in the wake of a conflict. Topics include the Just War tradition, pacifism, humanitarian intervention, moral repair and the establishment of a just peace, conduct of war, warrior codes, warrior transitions, and civil-military relations. We will be examining the ethics of war from the perspectives of both states and individuals. War is a crucible that strips those caught up in its horrors down to their fundamental selves inspiring acts of both inhuman depravity and seemingly superhuman nobility. This course is presented in a seminar format with lively discussions centering on contemporary readings in military ethics from texts and journals. Offered as PHIL 317, PHIL 417, and LAWS 5135.

PHIL 425. Philosophy of Feminism. 3 Units.
Dimensions of gender difference. Definition of feminism. Critical examination of feminist critiques of culture, including especially politics, ideology, epistemology, ethics, and psychology. Readings from traditional and contemporary sources. Offered as PHIL 325, PHIL 425 and WGST 325. Counts for CAS Global & Cultural Diversity Requirement.

PHIL 430. Topics in Ethics. 3 Units.
Examination of views in ethics of a major philosopher or philosophical school, a significant philosophical topic in ethics, or a topic that relates ethics to philosophy and another discipline. Recommended preparation: PHIL 101 or PHIL 205. Offered as PHIL 330 and PHIL 430.

PHIL 433. Philosophy of Religion. 3 Units.
Topics include: classical and contemporary arguments for God’s existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433.

PHIL 434. Political and Social Philosophy. 3 Units.
Justification of social institutions, primarily political ones. Such distinctions as that between de facto and legitimate authority; analysis of criteria for evaluation, such as social justice and equality; inquiry into theories of justification of the state; theory of democratic government and its alternatives. Readings from classical and contemporary sources. Recommended preparation: PHIL 101. Offered as PHIL 334, POSC 354, PHIL 434, and POSC 454.

PHIL 435. Philosophy of Law. 3 Units.
This is an examination of the general nature of law, the broad concerns of jurisprudence, the study of comparative law, and many of the issues raised in the literature of legal philosophy. Students will examine the principles of legal positivism, mitigated natural law, and rights theory. Selected readings and cases will illustrate these theories, which will also be examined in the context of rule selection by new governments in developing or revolutionary societies. The course also looks at the general nature of legal systems: how politics, morality, and individual views of justice and rights affect particular court cases and the course and development of law generally. Topics will include abortion, obscenity and sin, civil disobedience, affirmative action, surrogacy, and the death penalty. This is unlike any other of the legal theory or jurisprudence courses, and those who have sampled legal theory elsewhere in a different form are welcome and encouraged to enroll. Recommended preparation: PHIL 101. Offered as LAWS 5747, PHIL 335, and PHIL 435.

PHIL 436. Military Ethics, the Military Profession, and International Law. 3 Units.
The aim of this course is to provide a foundational understanding of international law as it relates to war and to explore the relationship between international law, military ethics, and the military profession. In addition to traditional lectures and seminar-style discussions, this hybrid course will feature video lectures by international experts in the field of military ethics and online assignments, discussion sections led by the Visiting Distinguished Inamori Scholar in Military Ethics. Topics covered will concern the international legal framework pertaining to the use of force, viewed through the prism of a professional code of conduct that has been forged over centuries, across different warrior cultures. Offered as PHIL 336 and PHIL 436. Prereq: PHIL 317 or PHIL 417.

PHIL 445. Epistemology and Metaphysics. 3 Units.
Traditional problems of epistemology, such as definition of knowledge, justification of belief, nature of evidence and foundationalism, skepticism, the a priori, and the role of sense perception in knowledge. Metaphysical presuppositions and implications of epistemological views. Forms of realism and anti-realism. Recommended preparation: PHIL 101. Offered as PHIL 345 and PHIL 445.
PHIL 456. Comparative Philosophy. 3 Units.
Philosophy in the etymological sense of the term, love of wisdom, subsumes ontological, ethical and epistemological inquiries addressing fundamental questions about reality, the place of humans in that reality, the values of things and human obligations, and the sources of knowledge. The major purpose of this course is to discover, understand, explicate and articulate the affinities and differences in the way the fundamental questions are addressed in different cultural contexts, thereby to appreciate the cross-cultural kinship among human minds as well as to be challenged by the differences that may engender conflicts. We will explore the possibility of building a trans-cultural meta-cultural meta-discourse in which thinkers from many traditions can participate on equal footing. We will come to face up to the question whether truly universal philosophy is possible, upon what conditions. Representative texts from the Western, Chinese and Buddhist traditions including selected works of Plato, Aristotle, Augustine, Descartes, Kant, Nietzsche, Heidegger, Lao Tzu, Confucius, Chuang Tzu, Dhammapada of the Buddha and D. Suzuki’s Zen Buddhism will be read. Offered as PHIL 356 and PHIL 456. Counts for CAS Global & Cultural Diversity Requirement.

PHIL 466. Brain, Mind and Consciousness: The Science and Philosophy of Mind. 3 Units.
The course introduces students to key topics in philosophy of mind from the perspective of our increasingly advanced scientific understanding of mind and brain (e.g. derived from neuroscience, psychology and cognitive science). Key philosophical topics covered include dualism, physicalism, idealism, consciousness and free will. Key scientific issues covered include methods and assumptions underlying research in psychology and neuroscience, introspection, essentialism, dehumanizing, and work on free will and consciousness. No pre-requisites other than curiosity are required, however students will benefit from having previously taken courses in philosophy, neuroscience, psychology and/or computer science. Students are expected to complete the assigned readings with care and attention, and to participate in discussion. The goal is for students to leave with an understanding of the rich ways in which different approaches can shed light on the human mind, including an appreciation of the limits of scientific inquiry into the mind. Offered as PHIL 366 and PHIL 466.

PHIL 467. Topics in Evolutionary Biology. 3 Units.
The focus for this course on a special topic of interest in evolutionary biology will vary from one offering to the next. Examples of possible topics include theories of speciation, the evolution of language, the evolution of sex, evolution and biodiversity, molecular evolution. ANAT/ANTH/EEPS/PHIL/PHOL 467/BIOL 468 will require a longer, more sophisticated term paper, and additional class presentation. Offered as ANTH 367, BIOL 368, EEPS 367, PHIL 367, ANAT 467, ANTH 467, BIOL 468, EEPS 467, PHIL 467 and PHOL 467.

PHIL 475. Issues in Aesthetics. 3 Units.
This course will seek to offer insight into the nature of artistic expression, the role of criticism in the arts, and the place of the arts in society. The term “arts” will be construed broadly to include painting, photography, theater, film, music, dance, poetry, etc. The following are examples of questions we will discuss. What does the term “beautiful” mean? Are there other measures of aesthetic value besides beauty? Do the arts, like the sciences, offer us knowledge of the world? What value do the arts have for society? Can aesthetic value conflict with moral value? Do artists have a responsibility to society? Should art ever be censored? What is the relationship between art and entertainment? Is the meaning and value of an artistic work a matter of individual opinion? What is the purpose of art critics? How are interpretations and evaluations of art influenced by race, gender, class, etc.? What is creativity in the arts? Does it differ from creativity in the sciences? How important is originality in art? Offered as PHIL 375 and PHIL 475.

PHIL 484. Ethics and Public Policy. 3 Units.
Evaluation of ethical arguments in contemporary public policymaking discourse. That is, approaches to evaluating not only the efficiency of policy (Will this policy achieve its end for the least cost?) but also the ethics of policy (Are a policy’s intended ends ethically justified or “good,” and are our means to achieve those ends moral or “just”?). Overview of political ideologies that supply U.S. political actors with their ethical or moral arguments when proposing and implementing public policy, followed by an application of these differing perspectives to selected policy areas such as welfare, euthanasia, school choice, drug laws, censorship, or others. Offered as PHIL 384, PHIL 484, POSC 384 and POSC 484.

PHIL 499. Independent Study MA Level. 1 - 3 Units.
This course enables graduate students in departments or interdisciplinary programs with an MA to pursue intensive directed study with a faculty member in Philosophy. Students should consult with the Instructor and with their MA director or graduate program director before enrolling. Prereq: Graduate Standing.
PHIL 501. Military Ethics MA Capstone. 3 - 6 Units.
This Military Ethics MA capstone course will feature a summative project designed to integrate the students' common studies for the MA program, while being tailored to their individual future interests in teaching, further graduate study, or employment in public policy or foreign affairs. The capstone project, culminating in a paper, may involve both academic research and fieldwork, integrated with the degree-candidate's professional experience or interest. If the student opts to write a more traditional thesis, then the paper should be approximately 10,000-20,000 words. The write up for a more project-based capstone should be approximately 5,000 words. An example of such a non-thesis project would be to design and defend a military ethics curriculum to use for PME (professional military education), domestically or internationally, including justifications of which readings, case studies, examples, theories, and principles to include, and which to exclude, and why, based on work in the field of Military Ethics. In either case, the outline of the capstone project must be presented to and accepted by a professor or instructor in the MA program who is willing to serve as the student's capstone advisor. The Master's capstone should build on the relevant elective courses by each candidate (in consultation with program faculty) around an appropriate area of concentration (e.g., military medicine and ethics; military law and ethics; psychology, history, or literature). Distribution of the 6 credits over one or two semesters will be decided through consultation with the student's MA advisor. This course will also fulfill the SAGES capstone requirement for undergraduate students enrolled in the Military Ethics MA through the IGS program. For these students, the capstone must be presented publicly either at Intersections or at an annual Philosophy Department event for other capstones and honors theses. Counts as SAGES Senior Capstone.

PHIL 599. Neuroscience of Positive Change: Using Brain Imaging to Promote the Good Life. 1.5 Unit.
The brain is the primary organ responsible for learning, decision making, social interaction, happiness, and self-regulation. Hence, neuroscience has the potential to inform numerous applied disciplines. Over the last few decades, fields from Organizational Behavior to Social Work, and Ethics to Nursing, have increasingly been drawing upon findings from neuroscience to inform their discipline. Researchers working in these disciplines are also now starting to conduct their own neuroscientific studies. However, applied researchers face an education gap that hinders progress in the productive use of neuroscience to inform their discipline. This course will provide an introduction to neuroscience methods for applied researchers, with a focus on how neuroscience can inform interventions designed to produce positive change in individuals. Students will gain an overview of the basic methods of cognitive neuroscience, effective experimental design, and the challenges of interpretation. In addition, students will be introduced to current research on the neuroscience of motivation, social-emotional competencies and behavior change. This is a graduate seminar class. Students must do the reading ahead of class. The majority of class time will be devoted to discussion.

PHIL 699. Advanced Tutorial and Dissertation for Candidates in fields related to Philosophy. 1 - 3 Units.
This course enables students in departments offering the Ph.D. to pursue intensive directed study with a faculty member in Philosophy, on philosophical aspects of their dissertation topic. Students should consult with the instructor and with their dissertation director before enrolling.

(University of Pittsburgh)  
Adjunct Associate Professor of Physics  
History and philosophy of science, nuclear and particle physics, and learning theory

Michael Thompson, PhD  
(Case Western Reserve University)  
Adjunct Assistant Professor of Physics; Director of Research, Development, and Advanced Applications, AllTech Medical Systems America  
MRI signal acquisition
Andrew Tolley, PhD  
(University of Cambridge)  
*Adjunct Professor of Physics*  
Early universe cosmology; dark energy; gravity; extra dimensions; branes

Mesfin Tsige, PhD  
(Case Western Reserve University)  
*Adjunct Professor of Physics*  
Theory of solids; polymers and other materials

---

**Emeritus Faculty**

B.S. Chandrasekhar, PhD  
(Oxford University)  
*Perkins Professor Emeritus of Physics*

Arnold J. Dahm, PhD  
(University of Minnesota)  
*Emeritus Professor of Physics*

David E. Farrell  
(London University)  
*Emeritus Professor of Physics*

William J. Fickinger, PhD  
(Yale University)  
*Emeritus Professor of Physics*

Kenneth L. Kowalski, PhD  
(Brown University)  
*Emeritus Professor of Physics*

Rolfe G. Petschek, PhD  
(Harvard University)  
*Emeritus Professor of Physics*

Benjamin Segall, PhD  
(Eberhard Karls Universität Tübingen)  
*Emeritus Professor of Physics*

Philip L. Taylor  
(Cambridge University)  
*Emeritus Professor of Physics*

---

**Majors**

Course requirements and typical schedules for the majors are summarized in the Plan of Study Grids. (To see them, click the link to the right of “Graduate” in the row along the top of this page. If you don’t see the link, expand the menu by clicking the three vertical dots at the far right end of the row.)

**Bachelor of Arts in Physics**

The BA physics major includes a large number of elective courses, making it easy for the student to pursue other interests or complete a second major while earning a degree in physics.

**Teacher Licensure Option**

The physics department offers a special option for undergraduate students who wish to pursue a physics major and a career in teaching. The Adolescent to Young Adult (AYA) Teacher Education Program in Physical Sciences prepares CWRU students to receive an Ohio Teaching License for grades 7-12. Students declare a second major in education, which involves 36 hours in education and practicum requirements, and complete a planned sequence of physics courses within the context of the BA Physics major. The program is designed to offer several unique features not found in other programs and to place students in mentored teaching situations throughout their teacher preparation career. This small, rigorous program is designed to capitalize on the strengths of CWRU’s physics department, its Teacher Education Program, and the relationships the university has built with area schools. (For details on education course work, see the program description for Teacher Licensure (p. 589) elsewhere in this bulletin.)

**Bachelor of Science in Physics**

The BS degree has two alternatives to the standard program: a mathematical physics concentration and a biophysics concentration.

**BSE Degree in Engineering Physics**

The BSE degree in engineering physics supplies an excellent background for graduate studies in physics, but is also designed for students who value an engineering credential and who are considering a career in engineering, either through employment following the BSE or through engineering graduate studies. This degree is awarded by the Case School of Engineering and includes the Engineering Core Curriculum. The technical electives in this program are concentrated in any of sixteen specific engineering areas.

**BS in Mathematics and Physics**

The BS in mathematics and physics is a single degree for students interested in advanced mathematics and theoretical physics. This degree is distinct from the mathematical physics concentration in the BS in physics degree. The program is jointly administered by the Department of Physics and the Department of Mathematics, Applied Mathematics, and Statistics. Students may be advised by faculty members from either department. All BS, BA, and BSE candidates have an opportunity to complete a year-long research project in which they work one-on-one with a faculty researcher, write a senior thesis, and present their work in public.

**Minor**

Course requirements for the minor in physics are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYS 121</td>
<td>General Physics I - Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>or PHYS 115</td>
<td>Introductory Physics I</td>
<td></td>
</tr>
<tr>
<td>or PHYS 123</td>
<td>Physics and Frontiers I - Mechanics</td>
<td></td>
</tr>
<tr>
<td>PHYS 122</td>
<td>General Physics II - Electricity and Magnetism</td>
<td>4</td>
</tr>
<tr>
<td>or PHYS 116</td>
<td>Introductory Physics II</td>
<td></td>
</tr>
<tr>
<td>or PHYS 124</td>
<td>Physics and Frontiers II - Electricity and Magnetism</td>
<td></td>
</tr>
<tr>
<td>PHYS 221</td>
<td>Introduction to Modern Physics</td>
<td>3</td>
</tr>
<tr>
<td>plus at least one additional 200 or higher-level course and one 300-level course, excluding the following: PHYS 260, 329*, 333*, 339*, 386*, 390*.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

*PHYS 329, 339, 386 and 390 might be allowed to count towards a minor in physics on an individual basis based on the specific content of the course taken by the student, with approval of the academic advisor for the minor.

**Total Units**

17
Graduate Programs in Physics

Overview

The graduate student in physics has two primary responsibilities: to broaden and deepen their own understanding of physics, and to contribute in a significant way to the progress of physics as a research discipline. Neither of these efforts can be completely separated from the other. Your understanding of physics is necessarily reflected in your research, and your research will help to deepen your understanding of physics. However, the relative emphasis gradually shifts during graduate study from early concentration on formal course work to the original research necessary for a PhD dissertation.

At Case Western Reserve University, the formal requirements for the PhD degree are a course requirement, a qualifying examination, and a dissertation requirement. Exceptions to these departmental requirements are possible, and individual requests for changes will be carefully considered. There is no foreign language requirement.

Although most students apply to the department's PhD program, the department maintains an active master's degree program to which it welcomes applications. This program involves fewer courses than the PhD program, and may or may not involve a dissertation, depending upon the student's needs and interests. The requirements for the master's degree are outlined in the relevant section below.

The department also has a master's track in Physics Entrepreneurship. This program is designed for students who have a background in physics and a passion for innovation, entrepreneurship, and working for small companies and startups. Students study graduate-level physics, practical business, and technology innovation while working on a real-world entrepreneurial project with an existing company or their own startup.

The Physics Entrepreneurship Program helps connect students with mentors, advisors, partners, funding sources and job opportunities. The requirements for this master's track are outlined in the relevant section below.

Requirements for Graduation

Requirements for the PhD degree include course work, the PhD qualifying examination, a topical oral examination, and submission and defense of a written thesis.

Requirements for the master's degree include course work and either a comprehensive examination or a thesis.

Requirements for the master's degree, Entrepreneurship Track, include course work and a thesis.

Required Courses for the PhD Degree

With the help of a faculty advisor, students choose a curriculum of course work from among a large array of offerings in physics and related science and engineering departments. The university requires a total of 36 hours of course work for students entering with a bachelor's degree, or 18 hours of course work for those students entering with a master's degree. This requirement may be met by supervised research, by lecture courses, by reading courses, or a combination. Twelve of the course hours involve required courses, but any of these requirements may be waived for students who have had the equivalent material elsewhere or, in the case of Graduate Laboratory, equivalent experience elsewhere. The required courses are:

Two from the following five:

- PHYS 427 Laser Physics
- PHYS 431 Physics of Imaging
- PHYS 441 Physics of Condensed Matter I
- PHYS 451 Empirical Foundations of the Standard Model
- PHYS 465 General Relativity or PHYS 436 Modern Cosmology

Additionally, students are required to take PHYS 472 Graduate Physics Laboratory plus one additional 400- or 500-level lecture course from the following list*:

- PHYS 442 Physics of Condensed Matter II
- PHYS 451 Empirical Foundations of the Standard Model
- PHYS 460 Advanced Topics in NMR Imaging
- PHYS 539 Special Topics Seminar
- PHYS 591 Gauge Field Theory I

*Other courses, either in physics or in other departments, may be substituted by petition. Note that courses that have dual listings with 300-level courses generally do not satisfy this requirement.

Although not required, most students take the following introductory courses during the first year, as much of the PhD qualifying exam is based on material in these courses:

- PHYS 481 Quantum Mechanics I and PHYS 482 Quantum Mechanics II
- PHYS 423 Classical Electromagnetism
- PHYS 413 Classical and Statistical Mechanics I and PHYS 414 Classical and Statistical Mechanics II

The classroom lecture courses will be augmented by official reading courses, which will have specified syllabi (published in the catalogue and monitored by the Graduate Committee), graded homework, and final examinations. Courses in special topics, as well as individualized study, can be arranged by mutual consent when the demand is sufficient.

Required Courses for the Master's Degree

The requirements for the MS degree depend on whether or not the candidate completes the research and writing for a master's thesis. A total of 30 credit hours of graduate course work must be completed. The two options corresponding to Program A (with thesis) and Program B (without thesis) are as follows:

**Program A: MS with Thesis**

- PHYS 413 Classical and Statistical Mechanics I (3 hours)
- PHYS 423 Classical Electromagnetism (3 hours)
- PHYS 651 Thesis M.S. (6 to 9 hours)
- Other graduate courses (18 to 15 hours, of which at least 6 must be in physics)
- Thesis and oral defense

**Program B: MS without Thesis**

- PHYS 413 Classical and Statistical Mechanics I (3 hours)
- PHYS 423 Classical Electromagnetism (3 hours)
- Other graduate courses (24 hours, of which at least 9 must be in physics)
- Comprehensive examination (Given in May and August)
of a written two-day examination. Several months in advance of the date
which they complete requirements and receive the degree, applications
for degree should be filed early in the third semester. Candidates for the
PhD degree may apply for and receive the MS degree on the basis of work
completed toward the PhD.

Required Courses for the Master's Degree, Entrepreneurship Track

The requirements for the master's degree, Entrepreneurship Track, are 30
credit hours as follows:

- PHYS 491 Modern Physics for Innovation I (3 hours)
- PHYS 492 Modern Physics for Innovation II (3 hours)
- LAWS 5341 Commercialization and Intellectual Property
  Management (3 hours)
- LAWS 5366 Venture Finance & Transactions (2 hours)
- 400-level Physics Elective (6 hours)
- Restricted Elective (4 - 7 hours)
- Thesis work (PHYS 651) (6 - 9 hours)

The program is typically completed in two years.

Additional Courses for Cultural Purposes

The university permits graduate students to enroll in up to eight
“fellowship” courses that are not counted toward the degree requirements
for no additional charge. These may include courses in foreign language,
history, philosophy, business and management, music, engineering, etc.
These courses will be graded, and a grade will appear on the student’s
transcript.

PhD Qualifying Examination and Master's Comprehensive Examination

The PhD qualifying examination is based on advanced undergraduate
material and on material covered in the introductory courses: Quantum
Mechanics I & II; Classical Electromagnetism; and Classical and
Statistical Mechanics I & II. Additionally, written material from the
graduate laboratory course and undergraduate courses (such as
relativity) may be incorporated into the qualifying exam.

A normally prepared student will be expected to take the qualifying
examination in May at the end of the first year of graduate study.
Students who fail the first time will speak with the chair of the qualifying
committee and Director of Graduate Studies to ascertain if there is a
disconnect between knowledge and performance on the exam. They
will discuss with the student how best to maximize the chance of
passing on the student’s second attempt, generally in mid to late August.
For students not passing the second time, the chair of the qualifying
committee and Director of Graduate Studies will discuss the student’s
future plans, or the unusual possibility of a third exam.

Program B candidates for the master’s degree (not Entrepreneurship
Track) must complete a comprehensive examination. This examination
is identical to, and offered the same time as, the PhD qualifying
examination. The passing grade for the master’s exam is set lower than
the passing grade for the PhD qualifying examination. Students who
fail the first time will be allowed a second opportunity in August. Under
special circumstances, students may be given an oral examination
instead of a written exam.

The PhD qualifying and master’s comprehensive examination consists
of a written two-day examination. Several months in advance of the date
for the qualifying examination, a written announcement is made which
gives more specific details about the forthcoming examination. Previous
examinations are on file and available to students.

Admission to PhD Candidacy

A student will be admitted to PhD candidacy upon passing the qualifying
exam and upon a vote of the faculty to determine whether the student is
making satisfactory academic progress.

Topical Oral Exam

Within one year of formal association with a research advisor, but no
later than the end of the fifth semester after a student matriculates,
each student will have an oral examination of her/his research progress
with the dissertation committee. The examination will consist of a
presentation by the student relating to literature in her/his thesis topic,
a proposed direction for work, and a progress report. Passing this
examination is a requirement for the PhD degree. If the time deadline
cannot be met because of extenuating circumstances, the student may
petition the graduate committee for an extension.

Advising

Upon entry to graduate school, the master's or PhD student's academic
advisor will be the department's Director of Graduate Studies. Eventually,
each successful student will acquire a research advisor and dissertation
committee. At that time, the responsibility of the Director of Graduate
Studies will greatly diminish, but not vanish entirely. It will remain the
Director’s responsibility to assist the research advisor in academic
matters. The Director of Graduate Studies, as well as the research advisor,
will countersign the student’s course program. It is the responsibility of
the Director of Graduate Studies to follow the career of the student and
see that all requirements for the degree are fulfilled.

The director of the Physics Entrepreneurship Program will be the
academic advisor for students in the Entrepreneurship Track of the
master’s program. Each successful student will also acquire a research
advisor and thesis committee, which will meet with the student at least
once per semester. It is the responsibility of the director of the Physics
Entrepreneurship Program to follow the career of the students in this
track and see that all requirements for the degree are fulfilled.

PhD Research and Dissertation

A PhD degree implies, in addition to the course and qualifying exam
requirements, the performance of a piece of original research and its
presentation as a doctoral dissertation. The research requirement for the
PhD is at the heart of the doctoral program. The final requirement for the
PhD degree is the written doctoral dissertation and oral defense.

Entering students should interest themselves in the available research
possibilities in the physics department at an early state of their careers.
They should be thinking about the area of interest, the kind of problem
they would like to tackle, and the faculty member under whose direction
they would like to work. As soon as they have passed the qualifying exam,
they should devote themselves increasingly to research.

By January or February of the first year, the student should begin to
speak with faculty members about their research, and ultimately find
a faculty member who will sponsor and supervise the student's work.
The relationship between a student and research advisor is a very close
one. It is in the course of this relationship that students develop their
skills in the actual doing of physics. Students should give much thought
to their choice of research area and research advisor. Once a student
has made this commitment, it takes the highest priority. Students must understand that they are unlikely to bring their thesis research to a successful conclusion without a total commitment on their part. Our policy on financial support of graduate students reflects the importance of such a commitment. Renewal of a student’s support will be contingent upon evidence of progress toward a degree.

Colloquia and Seminars

In addition to course work and individualized direction in research, the physics department provides a third medium of teaching, colloquia and seminars, which are shared by students and faculty alike.

Colloquia are talks of a general nature, given at a level that all graduate students in all areas of physics should be able to follow. They are usually held on Thursdays. Notices (and, whenever possible, brief introductions to the subject) will be distributed well in advance of each colloquium. Graduate students are urged and expected to attend all of these colloquia. (All graduate students are required to register each semester for the zero-credit-hour course PHYS 666 Frontiers in Physics, which consists of attendance at colloquia.)

Seminars tend to deal with more specific topics and often require some expertise in the field. Some groups hold weekly luncheon seminars; others meet whenever a speaker is available. Advanced students are expected not only to attend, but also to participate in the seminars in their fields. Students who have not yet chosen a field of research may find the seminars a valuable means of sampling the types of research available. Students in the Entrepreneurship Track are expected to attend all of that program’s seminars, and are encouraged to attend other relevant seminars.

Policy on Working Outside the Department

The teaching and research assistantships represent a rich and exciting experience and a total time commitment on the part of both the graduate student and his or her advisor. It is generally not advisable for a student to accept other employment or non-family responsibilities, inside or outside of the department or university. If a student nevertheless desires an additional position, written approval must first be obtained from the student’s advisor, and a petition then made to the Graduate Committee. Prior approval of the committee is required in order to avoid a possible reduction or termination in assistantship financial support.

A variety of special circumstances may arise in the case of students in the Entrepreneurship Track. Oversight will be provided by the Physics Entrepreneurship Committee, and approval of the director of the Physics Entrepreneurship Program is required.

Bachelor of Arts in Physics

The Bachelor of Arts degree with a physics major requires completion of the Arts and Sciences General Education Requirements (GER) and 120 total credits, of which 50 are specified by the physics department as shown below. Courses specified for this major satisfy the 6-credit Arts and Sciences GER in Sciences and Mathematics.

</table>
Students may choose only one of these two courses to satisfy the requirements of the BA degree.

A two-course science sequence chosen from ASTR 221 Stars and Planets and ASTR 222 Galaxies and Cosmology; CHEM 105 Principles of Chemistry I and CHEM 106 Principles of Chemistry II; CHEM 111 Principles of Chemistry for Engineers and ENGR 145 Chemistry of Materials; BIOL 214 Genes, Evolution and Ecology and BIOL 215 Cells and Proteins; EEPS 101 (Earth & Planets) or EEPS 110 (Physical Geology); and EEPS 115 (Introduction to Oceanography) or EEPS 117 (Weather and Climate) or another two-course sequence totaling 6 or more credits in a quantitative science (other than physics), with approval of the physics undergraduate program committee.

PHYS 303 + PHYS 352 can be used to satisfy this requirement.

The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the BA in Physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

The number of open electives will vary depending on course choices made by each student. The BA degree requires a minimum of 30 semester hours at the 300-400 level, of which only 16 are specified as PHYS courses. No more than 42 hours beyond the 100-level in any one department (the physics BA specifies 19 such credits) may be applied to the 120 credit total and at least 90 credits must be in the College of Arts and Sciences.

</tbody>
</table>

The Bachelor of Science in physics requires completion of the courses listed in the table below as well as the Arts and Sciences General Education Requirements, for a total of 12 credits. Many courses may be taken at times other than those shown in the "Typical Schedule" tables below.
PHYS 203  Analog and Digital Electronics 4
PHYS 204  Advanced Instrumentation 4
PHYS 221  Introduction to Modern Physics 3
PHYS 250  Computational Methods in Physics 3
PHYS 301  Advanced Laboratory Physics I 3
PHYS 302  Advanced Laboratory Physics II 4
PHYS 303  Advanced Laboratory Physics Seminar 1
PHYS 310  Classical Mechanics 3
PHYS 313  Thermodynamics and Statistical Mechanics 3
PHYS 324  Electricity and Magnetism I 3
PHYS 325  Electricity and Magnetism II 3
PHYS 331  Introduction to Quantum Mechanics I 3
PHYS 332  Introduction to Quantum Mechanics II 3
PHYS 351  Advanced Laboratory Physics Seminar 3

Choose one of the following:

PHYS 315  Introduction to Solid State Physics 3
PHYS 320  Introduction to Biological Physics 3
PHYS 326  Physical Optics 3
PHYS 327  Laser Physics 3

Choose one of the following:

PHYS 316  Introduction to Nuclear and Particle Physics 3
PHYS 328  Cosmology and the Structure of the Universe 3
PHYS 336  Modern Cosmology 3
PHYS 365  General Relativity 3
CHEM 105  Principles of Chemistry I 3-4
CHEM 111  Principles of Chemistry for Engineers 3-4
CHEM 106  Principles of Chemistry II 3-4
ENGR 145  Chemistry of Materials 3
ENGR 131  Elementary Computer Programming 3
ENGR 132  Introduction to Programming in Java 3

SAGES First and University Seminars 10
SAGES Departmental Seminar 2
SAGES Capstone 3
Breadth Requirements 12
Open Electives 16-12
PHED Physical Education (2 semesters) 0

Total Units 120

PHYS 303 Advanced Laboratory Physics Seminar + PHYS 352 Senior Physics Project Seminar can be used to satisfy this requirement.

PHYS 351 can be used to satisfy this requirement.

The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the BS in physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

The number of open electives may vary, depending on course choices made by the student, but the degree requires that the total number of credits be at least 120.

Bachelor of Science in Physics with Mathematical Physics Concentration

Students who are interested in theoretical physics and who have a strong background in mathematics may consider this concentration. The program is based on the BS in physics, but with certain substitutions in the course requirements. Several of the laboratory courses are replaced by advanced mathematics courses, and some of the undergraduate physics courses are replaced by graduate courses.

This program is not the same as the BS program in mathematics and physics, which provides a coherent and parallel education in both mathematics and physics.

The following table shows the requirements for the Bachelor of Science in physics with mathematical physics concentration.

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Fall</th>
<th>Spring</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYS 121</td>

### Bachelor of Science in Physics with Biophysics Concentration

This concentration is directed towards students interested in the combined study of biology and physics. The degree is a track within the standard BS in physics, in which four physics courses and certain open electives are replaced by a "biogroup" of five courses and a technical elective.

The following table illustrates the requirements for the Bachelor of Science in physics with biophysics concentration.

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
<th>Fall</th>
<th>Spring</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYS 121 or PHYS 123 General Physics I - Mechanics</td>

1 Suggested technical electives include PHYS 315 Introduction to Solid State Physics, PHYS 316 Introduction to Nuclear and Particle Physics, PHYS 320 Introduction to Biological Physics, PHYS 326 Physical Optics, PHYS 327 Laser Physics, PHYS 328 Cosmology and the Structure of the Universe, PHYS 336 Modern Cosmology, PHYS 356 General Relativity.

2 B-group 1-5 are to be chosen in consultation with the biophysics academic advisor from among approved biology, biophysics, biochemistry, and biomedical engineering courses, including certain prerequisites as needed (e.g., chemistry). BIOL 214 Genes, Evolution and Ecology and BIOL 215 Cells and Proteins are suggested for B-group 1 and 2. PHYS 320 may be used as a B-group option if it is not selected as a PHYS technical elective. The listing of credits includes numbers for the most likely choices of courses and, in parentheses, possible alternatives. PHYS 303 Advanced Laboratory Physics Seminar + PHYS 352 Senior Physics Project Seminar can be used to satisfy the SAGES departmental seminar requirement.

3 PHYS 351 can be used to satisfy the SAGES capstone requirement.

4 The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the B.S. in physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

5 The number of open electives may vary, depending on course choices made by the student, but the degree requires that the total number of credits be at least 120.
### Bachelor of Science in Engineering with Engineering Physics Major

The engineering physics major allows students with strong interests in both physics and engineering to concentrate their studies in the common areas of these disciplines. The major prepares students to pursue careers in industry, either directly after undergraduate studies, or following graduate study in engineering or physics. Many employers value the unique problem-solving approach of physics, especially in industrial research and development. Its engineering science and design components prepare students to work as professional engineers.

Students majoring in engineering physics complete the Engineering Core as well as a rigorous course of study in physics. Students select a concentration area from an engineering discipline and must complete a sequence of at least four courses in this discipline. In addition to engineering courses with design experience, students have the opportunity to conduct a senior research project under the guidance of a faculty member. The project includes a written report and participation in the senior seminar and symposium. The major requires the engineering general education requirements (p. 1292) and university general education requirements (p. 1212).

Total Units in Sequence: **129**

1. Selected students may be invited to take MATH 123, 124, 227, and 228 in place of MATH 121, 122, 223, and 224.
2. Selected students may be invited to take PHYS 123, 124 (Physics and Frontiers I, II Honors) in place of PHYS 121, 122.
3. Engineering physics concentration courses are flexible, but they must be in a specific engineering discipline or study area and approved by an advisor. Possible concentration areas include aerospace engineering, biomedical engineering "hardware," biomedical engineering "software," chemical engineering, civil engineering (solid mechanics, structural and geotechnical, environmental), computer science, computer systems hardware, computer systems software, control systems and automation, electrical engineering, macromolecular science, materials science and engineering, mechanical engineering, signal processing, systems analysis and decision making. One of the Engineering Physics concentration courses must provide an engineering design experience which can be satisfied by completing one of EBME 380, ECHE 399, ECIV 398, EECS 398, ENGR 378, EMAE 360, EMAE 398 or EMSE 379.
4. EECS 321, PHYS 315, PHYS 327, PHYS 332. Students may choose to fulfill this requirement in their third year.
5. Students may elect to satisfy the SAGES capstone requirement by completing one of the SAGES capstones course in another department in the Case School of Engineering in place of PHYS 352 and PHYS 353. Students selecting this option must also complete a 3-credit hour technical elective satisfied by any 200 level or above course in the Case School of Engineering.

Total Units: **123**
The "MP group" of four courses corresponds to two physics courses and two mathematics courses. The physics courses are chosen from PHYS 250 Computational Methods in Physics, PHYS 349 Methods of Mathematical Physics I, and PHYS 350 Methods of Mathematical Physics II. The mathematics courses are subject to approval by the MP committee and are hence referred to as "approved electives." They may be chosen from the general list of mathematics courses at the 300 level or higher. It may also be possible to choose a course outside the mathematics and physics departments as a substitute in the MP group, subject to approval by the committee.

Other science sequence courses may be substituted if approved by the mathematics and physics (MP) committee.

An advanced physics course to be selected from the following list: PHYS 315 Introduction to Solid State Physics, PHYS 316 Introduction to Nuclear and Particle Physics, PHYS 320 Introduction to Biological Physics, PHYS 326 Physical Optics, PHYS 327 Laser Physics, PHYS 328 Cosmology and the Structure of the Universe, PHYS 336 Modern Cosmology, PHYS 365 General Relativity.

Students are encouraged to take either the Math or Physics SAGES departmental seminar and capstone courses but should then take both courses from the same department. The physics departmental seminar consists of 1 credit of PHYS 303 Advanced Laboratory Physics Seminar + PHYS 352 Senior Physics Project Seminar.

The breadth requirements include 6 hours of Social Sciences and 6 hours of Arts and Humanities. This may increase by 3 credits if the required Global and Cultural Diversity course is not also one of the breadth requirement courses. Courses required for the BS in mathematics and physics satisfy the 6-credit GER for Natural Sciences and Mathematics as well as the Quantitative Reasoning course requirement.

The number of open electives may vary as determined by the degree requirement that the total number of credits be at least 120.

calculus; Maxwell’s equations in integral and differential form. The role
to dielectric and magnetic materials. Introduction to the usage of vector
laws of Coulomb, Gauss, Ampere, and Faraday. Microscopic approach
time-independent and time-dependent electric and magnetic fields. The
PHYS 124. Physics and Frontiers II - Electricity and Magnetism. 4 Units.
PHYS 124. Prereq or Coreq: MATH 122 or MATH 124 or MATH 126.
courses: PHYS 115, PHYS 121, PHYS 123. Prereq: PHYS 121 or
may earn credit for only one of the following courses: PHYS 115, PHYS 121, PHYS 123.
PHYS 115. Introductory Physics I. 4 Units.
First part of a two-semester sequence directed primarily towards
students working towards a B.A. in science, with an emphasis on the
life sciences. Kinematics; Newton’s laws; gravitation; simple harmonic
motion; mechanical waves; fluids; ideal gas law; heat and the first
and second laws of thermodynamics. This course has a laboratory
component. Students may earn credit for only one of the following courses: PHYS 115, PHYS 121, PHYS 123.
PHYS 116. Introductory Physics II. 4 Units.
Electrostatics, Coulomb’s law, Gauss’s law; capacitance and resistance;
DC circuits; magnetic fields; electromagnetic induction; RC and RL
circuits; light; geometrical optics; interference and diffraction; special
relativity; introduction to quantum mechanics; elements of atomic,
nuclear and particle physics. This course has a laboratory component.
Students may earn credit for only one of the following courses: PHYS 116,
PHYS 122, PHYS 124. Prereq: PHYS 115.
PHYS 121. General Physics I - Mechanics. 4 Units.
Particle dynamics, Newton’s laws of motion, energy and momentum
conservation, rotational motion, and angular momentum conservation.
This course has a laboratory component. Recommended preparation: MATH 121 or MATH 123 or MATH 125 or one year of high school
calculus. Students who do not have the appropriate background should
not enroll in PHYS 121 without first consulting the instructor. Students
may earn credit for only one of the following courses: PHYS 115,
PHYS 121, PHYS 123.
PHYS 122. General Physics II - Electricity and Magnetism. 4 Units.
Electricity and magnetism, emphasizing the basic electromagnetic laws
of Gauss, Ampere, and Faraday. Maxwell’s equations and electromagnetic
waves, interference, and diffraction. This course has a laboratory
component. Students may earn credit for only one of the following courses: PHYS 116, PHYS 122, PHYS 124. Prereq: PHYS 121 or
PHYS 123. Prereq or Coreq: MATH 122 or MATH 124 or MATH 126.
PHYS 123. Physics and Frontiers I - Mechanics. 4 Units.
The Newtonian dynamics of a particle and of rigid bodies. Energy,
momentum, and angular momentum conservation with applications. A
selection of special frontier topics as time permits, including fractals
and chaos, special relativity, fluid mechanics, cosmology, quantum
mechanics. This course has a laboratory component. Admission to this
course is by invitation only. Students may earn credit for only one of the following courses: PHYS 115, PHYS 121, PHYS 123.
PHYS 124. Physics and Frontiers II - Electricity and Magnetism. 4 Units.
Time-independent and time-dependent electric and magnetic fields. The
laws of Coulomb, Gauss, Ampere, and Faraday. Microscopic approach
to dielectric and magnetic materials. Introduction to the usage of vector
calculus; Maxwell’s equations in integral and differential form. The role
of special relativity in electromagnetism. Electromagnetic radiation. This
course has a laboratory component. Students may earn credit for only
one of the following courses: PHYS 116, PHYS 122, PHYS 124. Prereq:
PHYS 123 and (MATH 122 or MATH 124).

PHYS 166. Physics Today and Tomorrow. 1 Unit.
This course will provide students with an opportunity to learn about
the most exciting and timely research areas in physics, as well as other
topics germane to being a professional physicist. These discussions
will cover fields such as nanoscience, ultrafast optics, exotic materials,
biophysics, cosmology, string theory and the role of physicists in
developing new technologies. Each week a member of the faculty
will meet with students to discuss a topic of current interest, how a physicist
approaches the problem, and how physicists interact with others to find
a solution. Other topics germane to being a professional physicist also
will be discussed, including the relationship among academic, industrial,
and governmental laboratories; ethics, and non-traditional careers for
students trained in physics.

PHYS 203. Analog and Digital Electronics. 4 Units.
Elements of both analog and digital electronics from the practical
viewpoint of the experimental scientist; AC circuits, linear and non-
linear operation of op-amps, logic gates, flip-flops, counters, display,
memory, transducers, A/D and D/A conversion. Laboratory work involves
quantitative investigation of the operation of all these elements, together
with projects that explore their combination. Recommended preparation: PHYS 122 or PHYS 124.

PHYS 204. Advanced Instrumentation Laboratory. 4 Units.
Principles of experimental design; limits of resolution via band-width,
thermal noise, background signals; data acquisition and control by
computer; computer simulation; signal processing techniques in
frequency and time domains, FFT, correlations, and other transform
methods; counting techniques. Applications include lock-in amplifiers,
digitizing oscilloscopes and data acquisition systems. Recommended
preparation: PHYS 221. Prereq: PHYS 203.

PHYS 208. Instrumentation and Signal Analysis Laboratory. 4 Units.
AC circuit theory, Fourier series, discrete Fourier series. Fourier integral,
discrete Fourier integral; analysis in time and frequency domains,
correlation, cross-correlation and other transform techniques; computer
control of experiments via IEEE488 interface; advanced instrumentation;
DMM, arbitrary waveform generator; multiplexing and digitizing
oscilloscopes; experimental design, noise; design, construction, and
testing of a lock-in amplifier. Recommended preparation: PHYS 221.

PHYS 221. Introduction to Modern Physics. 3 Units.
Concepts in special relativity, statistical mechanics and quantum
mechanics. Applications to atomic structure, and selected topics in
nuclear, condensed matter physics, particle physics, and cosmology.
Prereq: PHYS 116 or PHYS 122 or PHYS 124.

PHYS 250. Computational Methods in Physics. 3 Units.
Numerical methods, data analysis, and error analysis applied to physical
problems. Use of personal computers in the solution of practical
problems encountered in physics. Interpolation, roots of equations,
integration, differential equations, Monte Carlo techniques, propagation
of errors, maximum likelihood, convolution, Fourier transforms. Prereq:
ENGR 131 or CSDS 132 or ECSE 132. Prereq or Coreq: MATH 224 and
PHYS 221.
PHYS 260. Introduction to Climate Change: Physics, Forecasts, and Strategies. 3 Units.
This is a one-semester introduction to the physical processes that determine Earth’s past, present, and future climate. The course focuses on quantitatively understanding the human impact on climate, including the historical development of steadily more sophisticated physical models, and ever more complete data. Particular emphasis will be placed on understanding climate change projections, as well as the ethical, political, economic, and communications challenges associated with various strategies going forward. The course is appropriate for all majors. Offered as EEPS 260 and PHYS 260.

PHYS 261. Our Knowledge of Climate Change: What do we know and how do we know it?. 3 Units.
Traditional theories of knowledge have concentrated on the actions and beliefs of individuals, and how they marshal evidence from the world to support or refute their scientific hypotheses. This traditional epistemological framework has been challenged by the developments of the modern era of Big Science, resulting in the development of new approaches to a social epistemology of science. Reflective of how science is done, this epistemological framework in turn can provide guidance for the robust prosecution of the scientific enterprise. Perhaps nowhere is this more important than in climate science, where on the one hand the underlying dynamics of climate change pose an existential threat to our civilization, and on the other, there are active and well organized efforts to derail the scientific process and to denigrate the scientists. This course will first develop classical notions of the epistemology of science, including the role of models and issues of uncertainty (statistical, systematic, and gross) as well as the challenges of developing a robust scientific process resistant to fraud. These issues will be illustrated by consideration of various classical experiments. The course will then expand the epistemological framework to the collaborative context of modern big science, illustrating the issues by examples from the field of high energy physics (which saw the development of the World Wide Web by CERN, the European Organization for Nuclear Research, to allow physicists from around the world to share and collectively analyze data). With this in hand the course will explore the history and current state of climate science in the framework of a social epistemology of big science. Students will develop a good understanding of the role of hierarchical models of climate science, the empirical basis for our current understanding of anthropogenic climate change, the role and development of international coordination of climate science and its implications for policy, and the challenges posed by hostile, well-organized efforts to disrupt the scientific process, the public understanding of the science, and ultimately the processes necessary for addressing the challenges of climate change. Offered as PHIL 261 and PHYS 261.

PHYS 301. Advanced Laboratory Physics I. 3 Units.
Problem solving approach with a range of available experiments in classical and modern physics. Emphasis on experimental techniques, data and error analysis, and the formal presentation of the work performed. Recommended preparation: PHYS 204. Prereq: Physics or Astronomy Major or Minor. Coreq: PHYS 303.

PHYS 302. Advanced Laboratory Physics II. 4 Units.
Several projects using research-quality equipment in contemporary fields of experimental physics. Each requires reading appropriate literature, choosing appropriate instrumentation, performing data acquisition and analysis, and writing a technical paper. Topics include particle counting techniques, neutron activation, gamma-ray spectroscopy, a range of condensed matter experiments including temperature dependent properties between 10 and 350 K, modern optics, ultrahigh vacuum surface science. Prereq: PHYS 301.

PHYS 303. Advanced Laboratory Physics Seminar. 1 Unit.
Students will discuss various issues associated with physics research. These include how to judge the quality of an experiment and data (error analysis), how to present your work in written and oral formats, safety and ethical concerns in the laboratory. Recommended preparation: PHYS 250. Counts as SAGES Departmental Seminar.

PHYS 310. Classical Mechanics. 3 Units.
Lagrangian formulation of mechanics and its application to central force motion, scattering theory, rigid body motion, and systems of many degrees of freedom. Recommended preparation: PHYS 221 and either MATH 223 or MATH 227.

PHYS 311. Thermodynamics and Statistical Mechanics. 3 Units.

PHYS 314. Innovation and French Science: Past, Present, and Future. 3 Units.
The French scientific enterprise over the past 250 years has been buffeted by politics, war, civil unrest, and economic and societal changes. This study abroad course examines the evolution of science in France in light of these influences, how women have play an outsized role relative to the U.S., and the centrality of the French to humanity’s scientific endeavor over the centuries. Students will visit many important scientific venues, both historical and modern, around Paris and elsewhere in the country. Readings from a variety of sources – scientific, literary, historical – and informal meetings with French scientists, engineers, and students will provide a comprehensive portrait of French science and scientific history from a variety of perspectives. The course will be conducted in English, although there is ample opportunity to interact in French if the student desires. The course meets the CAS Global & Cultural Diversity Requirement and may meet breadth requirements in certain programs. Not available for credit to students who have completed FRCH 328/428, PHYS 333, WGST 333, or WLIT 353/453. Offered as CHEM 314, HSTY 314, PHYS 314, and WGST 314. Counts for CAS Global & Cultural Diversity Requirement.

PHYS 315. Introduction to Solid State Physics. 3 Units.
Characterization and properties of solids; crystal structure, thermal properties of lattices, quantum statistics, electronic structure of metals and semiconductors. PHYS 415 for graduate students in engineering and science. (May not be taken for departmental credit by graduate students in the Department of Physics.) Prerequisite may be waived with consent of department. Recommended preparation for PHYS 415: PHYS 331. Offered as PHYS 315 and PHYS 415. Prereq: PHYS 331 or PHYS 481.

PHYS 316. Introduction to Nuclear and Particle Physics. 3 Units.
The physics of nuclei and elementary particles; experimental methods used to determine their properties; models and theories developed to describe their structure. Prereq: PHYS 331 or PHYS 481.
PHYS 317. Engineering Physics Laboratory I. 3 Units.
Laboratory course for engineering physics majors. Emphasis is on experimental techniques, data and error analysis, and written and oral presentation of work. Four experiments drawn from classical and modern physics are carried out. These emphasize condensed matter, material and optical physics. Experiments include electric fields, resistivity of materials, optical interference, chaotic systems, and spectroscopy. Design of data analysis systems and software is required. Prereq: PHYS 208. Coreq: PHYS 303.

PHYS 318. Engineering Physics Laboratory II. 4 Units.
Laboratory course for engineering physics majors. Several projects using research-quality equipment in contemporary fields of experimental physics. Open-ended experiments each require reading appropriate literature, designing the experiment, performing data analysis, and writing a technical paper. Topics are drawn from areas of modern physics, and concentrate on condensed matter, material, and optical physics. Prereq: PHYS 317.

PHYS 320. Introduction to Biological Physics. 3 Units.
This course explores the intersection of physics and biology: how do fundamental physical laws constrain life processes inside the cell, shaping biological organization and dynamics? We will start at the molecular level, introducing the basic ideas of nonequilibrium statistical physics and thermodynamics required to describe the fluctuating environment of the cell. This allow us to build up a theoretical framework for a variety of elaborate cellular machines: the molecular motors driving cell movement, the chaperones that assist protein folding, the information-processing circuitry of genetic regulatory networks. The emphasis throughout will be on simple, quantitative models that can tackle the inherent randomness and variability of cellular phenomena. We will also examine how to verify these models through the rich toolbox of biophysical experimental and computational technologies. The course should be accessible to students from diverse backgrounds in the physical and life sciences: we will explain both the biological details and develop the necessary mathematical / physical ideas in a self-contained manner. Offered as PHYS 320 and PHYS 420. Prereq: (MATH 122 or MATH 124) and (ENGR 131 or ECE 132).

PHYS 321. Advanced Computational Methods in Physics. 3 Units.
Advanced numerical methods applied to physical problems. Use of personal computers in the solution of practical problems encountered in physics. Topics may include ordinary and partial differential equations, linear algebra, and Monte Carlo techniques. Focus is placed on developing, documenting, testing, and presenting solutions to physical problems. Standard, collaborative tools commonly used in research groups will be employed. Offered as PHYS 321 and PHYS 421. Prereq: PHYS 250.

PHYS 324. Electricity and Magnetism I. 3 Units.
First half of a sequence that constitutes a detailed study of the basics of electromagnetic theory and many of its applications. Electrostatics and magnetostatics of free space, conductors, dielectric and magnetic materials; basic theory illustrated with applications drawn from condensed matter physics, optics, plasma physics, and physical electronics. Prereq: PHYS 116 or PHYS 122 or PHYS 124.

PHYS 325. Electricity and Magnetism II. 3 Units.
(Continuation of PHYS 324.) Electrodynamics, Maxwell’s equations, electromagnetic waves, electromagnetic radiation and its interaction with matter, potential formulation of electromagnetism, and relativity. Prereq: PHYS 324.

PHYS 326. Physical Optics. 3 Units.
Geometrical optics and ray tracing, wave propagation, interaction of electromagnetic radiation with matter, interference, diffraction, and coherence. Supplementary current topics from modern optics such as nonlinear optics, holography, optical trapping and optical computing. Prerequisite(s) may be waived with consent of department. Offered as PHYS 326 and PHYS 426. Prereq: PHYS 122 or PHYS 124.

PHYS 327. Laser Physics. 3 Units.
An introduction to theoretical and practical quantum electronics covering topics in quantum optics, laser physics, and nonlinear optics. Topics to be addressed include the physics of two-level quantum systems including the density matrix formalism, rate equations, and semiclassical radiation theory; laser operation including oscillation, gain, resonator optics, transverse and longitudinal modes, Q-switching, mode-locking, and coherence; and nonlinear optics including the nonlinear susceptibility, parametric interactions, stimulated processes, and self-action. Recommended preparation for PHYS 427: PHYS 331 or PHYS 481. Offered as PHYS 327 and PHYS 427. Prereq: PHYS 331 or PHYS 481.

PHYS 328. Cosmology and the Structure of the Universe. 3 Units.

PHYS 329. Independent Study. 1 - 4 Units.
An individual reading course in any topic of mutual interest to the student and the faculty supervisor.

PHYS 330. Experimental Methods in Biophysics. 3 Units.
There is an extensive array of powerful and elegant tools used to obtain quantitative and qualitative information about the physics of biology. New, cutting-edge techniques are being developed by labs around the world every day. To solve important problems in biophysics, an understanding of the capabilities and limitations of the current instrumental methods is needed. This course will focus on the physical principles of biological instrumentation so that appropriate choices and efficient use of measurement tools can be made. Exposure to instrumentation in core facilities around campus will link lectures to practical demonstrations of the operation of instrumentation. Techniques applied to a diversity of biological macromolecules and assemblies from the molecular level of proteins, nucleic acids, lipids, up to higher organization of cells, cellular organisms and tissues will be discussed. Topics covered include spectroscopic methods (IR/vis/UV/X-ray regions of the electromagnetic spectrum, absorption, fluorescence, circular dichroism, dynamic light scattering, Raman, electron paramagnetic resonance, NMR), microscopy techniques (electron, atomic force, scanning tunneling, optical), separation techniques (sedimentation, centrifugation, chromatography), crystallography, calorimetry, mass spectrometry, single molecule detection, cell sorting, functional genomics and proteomics and laboratory evolution. Biological examples from historical and current literature will be used to demonstrate the merits of each of the methods. Offered as PHYS 330 and PHYS 430. Prereq: PHYS 122 or PHYS 124.

PHYS 331. Introduction to Quantum Mechanics I. 3 Units.
Quantum nature of energy and angular momentum, wave nature of matter, Schrodinger equation in one and three dimensions; matrix methods; Dirac notation; quantum mechanical scattering. Two particle wave functions. Prereq: PHYS 221.
PHYS 332. Introduction to Quantum Mechanics II. 3 Units.
Continuation of PHYS 331. Spin and fine structure; Dirac equation; symmetries; approximation methods; atomic and molecular spectra; time dependent perturbations; quantum statistics; applications to electrons in metals and liquid helium. Prereq: PHYS 331.

PHYS 336. Modern Cosmology. 3 Units.
An introduction to modern cosmology and an exploration of current topics in the field. The first half of the course will cover the mathematical and physical basis of cosmology, while the second will delve into current questions and the observations that constrain them. Offered as PHYS 336 and PHYS 436. Prereq: PHYS 221.

PHYS 339. Seminar. 1 - 3 Units.
Conducted in small sections with presentation of papers by students and informal discussion. Special problem seminars and research seminars offered according to interest and need, often in conjunction with one or more research groups.

PHYS 349. Methods of Mathematical Physics I. 3 Units.
Analysis of complex functions: singularities, residues, contour integration; evaluation and approximation of sums and integrals; exact and approximate solution of ordinary differential equations; transform calculus; Sturm-Liouville theory; calculus of variations. Additional work required for graduate students. Offered as PHYS 349 and PHYS 449. Prereq: (PHYS 121 or PHYS 123) and (MATH 224 or MATH 228).

PHYS 350. Methods of Mathematical Physics II. 3 Units.
(Continuation of PHYS 349/449.) Special functions, orthogonal polynomials, partial differential equations, linear operators, group theory, tensors, selected specials topics. Additional work required for graduate students. Prereq: PHYS 349.

PHYS 351. Senior Physics Project. 2 Units.
A two semester course required for senior BS and BA physics majors. Students pursue a project based on experimental, theoretical or teaching research under the supervision of a physics faculty member, a faculty member from another CWRU department or a research scientist or engineer from another institution. A departmental Senior Project Committee must approve all project proposals and this same committee will receive regular oral and written progress reports. Final results are presented at the end of the second semester as a paper in a style suitable for publication in a professional journal as well as an oral report in a public symposium. Counts as SAGES Senior Capstone. Prereq: PHYS 303. Coreq: PHYS 352.

PHYS 352. Senior Physics Project Seminar. 1 Unit.
This two semester seminar is taken concurrently with the student’s two semester senior project. Students meet weekly to discuss their projects and the research experience. The class will include dialogues about professional issues such as ethics, graduate school, jobs, funding, professional organizations, public obligations, writing and speaking. Assignments include proposals, progress reports and posters. Counts as SAGES Departmental Seminar. Coreq: PHYS 351 or PHYS 353.

PHYS 353. Senior Engineering Physics Project. 2 Units.
A two semester course required for BSE Engineering Physics majors. Students are expected to complete a research project in their concentration area under the supervision of a faculty member in science, engineering, or, with approval, a researcher at another institution or company. The project may be calculational, experimental or theoretical, and will address both the underlying physics and appropriate engineering and design principles. A program Senior Project Committee must approve all project proposals and will receive regular oral and written progress reports. Final results are presented at the end of the second semester as a paper in a style suitable for publication in a professional journal as well as an oral report in a public symposium. Counts as SAGES Senior Capstone. Prereq: PHYS 318. Coreq: PHYS 352.

PHYS 355. General Relativity. 3 Units.
This is an introductory course in general relativity. The techniques of tensor analysis will be developed and used to describe the effects of gravity and Einstein’s theory. Consequences of the theory as well as its experimental tests will be discussed. An introduction to cosmology will be given. Additional work required for graduate students. Offered as PHYS 355 and PHYS 455.

PHYS 356. Quantum Computing, Information, and Devices. 3 Units.
An introduction to the math, physics, engineering, and computer science underlying the rapidly emerging fields of quantum computing, quantum information, and quantum devices. The course is taught by a group of faculty from physics, engineering, computer science, and math, and is geared towards students with diverse backgrounds and interests in these fields. Students will select a concentration in one of these four areas, and the coursework, while still covering all topics, will be adjusted to focus on the selected area in the most detail. Note that the listed prerequisites depend on choice of concentration. Topics will include: 1. (Mathematics) Introduction to linear algebra, convex geometry, fundamental theory of quantum information. 2. (Physics) Introduction to the quantum mechanics of two-level systems (qubits). Survey of physics and materials for qubit technologies. 3. (Computer Science) Basic quantum gates and circuits, introduction to the theory of algorithms, survey of quantum algorithms. 4. (Engineering) Quantum architectures, mapping algorithms onto circuits. The course consists of lectures, homework, and group projects. Group projects will aim to synthesize the diverse backgrounds of the students and instructors to capture the interdisciplinary nature of the field. Students taking the course for graduate credit will complete an additional literature research project and presentation, in addition to enhanced problem sets. Offered as CSDS 386, CSDS 486, ECSE 386, ECSE 486, MATH 386, MATH 486, PHYS 386, and PHYS 486. Prereq: PHYS 331 and (MATH 223 or MATH 227) and (MATH 224 or MATH 228) and (ENGR 131 or CSDS 132 or ECSE 132) and (PHYS 122 or PHYS 124).

PHYS 390. Undergraduate Research in Physics. 0 - 6 Units.
Research conducted under the supervision of a faculty member in the Department of Physics. Arrangements must be made with a faculty member and a written description of these arrangements must be submitted to and approved by the department before a permit will be issued to register for this course. A final report must be supplied to the department at the end of the semester.

PHYS 413. Classical and Statistical Mechanics I. 3 Units.
An integrated approach to classical and statistical mechanics. Lagrangian and Hamiltonian formulations, conservation laws, kinematics and dynamics, Poisson brackets, continuous media, derivation of laws of thermodynamics, the development of the partition function. To be followed by PHYS 414.
PHYS 414. Classical and Statistical Mechanics II. 3 Units.
A continuation of PHYS 413. Noninteracting systems, statistical mechanics of solids, liquids, gases, fluctuations, irreversible processes, phase transformations. Recommended preparation: PHYS 413 or consent of department.

PHYS 415. Introduction to Solid State Physics. 3 Units.
Characterization and properties of solids; crystal structure, thermal properties of lattices, quantum statistics, electronic structure of metals and semiconductors. PHYS 415 for graduate students in engineering and science. (May not be taken for departmental credit by graduate students in the Department of Physics.) Prerequisite may be waived with consent of department. Recommended preparation for PHYS 415: PHYS 331. Offered as PHYS 315 and PHYS 415. Prereq: Graduate standing.

PHYS 420. Introduction to Biological Physics. 3 Units.
This course explores the intersection of physics and biology: how do fundamental physical laws constrain life processes inside the cell, shaping biological organization and dynamics? We will start at the molecular level, introducing the basic ideas of nonequilibrium statistical physics and thermodynamics required to describe the fluctuating environment of the cell. This allow us to build up a theoretical framework for a variety of elaborate cellular machines: the molecular motors driving cell movement, the chaperones that assist protein folding, the information-processing circuitry of genetic regulatory networks. The emphasis throughout will be on simple, quantitative models that can tackle the inherent randomness and variability of cellular phenomena. We will also examine how to verify these models through the rich toolbox of biophysical experimental and computational technologies. The course should be accessible to students from diverse backgrounds in the physical and life sciences: we will explain both the biological details and develop the necessary mathematical / physical ideas in a self-contained manner. Offered as PHYS 320 and PHYS 420. Prereq: Graduate student standing.

PHYS 421. Advanced Computational Methods in Physics. 3 Units.
Advanced numerical methods applied to physical problems. Use of personal computers in the solution of practical problems encountered in physics. Topics may include ordinary and partial differential equations, linear algebra, and Monte Carlo techniques. Focus is placed on developing, documenting, testing, and presenting solutions to physical problems. Standard, collaborative tools commonly used in research groups will be employed. Offered as PHYS 321 and PHYS 421.

PHYS 423. Classical Electromagnetism. 3 Units.

PHYS 426. Physical Optics. 3 Units.
Geometrical optics and ray tracing, wave propagation, interaction of electromagnetic radiation with matter, interference, diffraction, and coherence. Supplementary current topics from modern optics such as nonlinear optics, holography, optical trapping and optical computing. Prerequisite may be waived with consent of department. Offered as PHYS 326 and PHYS 426. Prereq: Graduate standing.

PHYS 427. Laser Physics. 3 Units.
An introduction to theoretical and practical quantum electronics covering topics in quantum optics, laser physics, and nonlinear optics. Topics to be addressed include the physics of two-level quantum systems including the density matrix formalism, rate equations, and semiclassical radiation theory; laser operation including oscillation, gain, resonator optics, transverse and longitudinal modes, Q-switching, modelocking, and coherence; and nonlinear optics including the nonlinear susceptibility, parametric interactions, stimulated processes, and self-action. Recommended preparation for PHYS 427: PHYS 331 or PHYS 481. Offered as PHYS 327 and PHYS 427. Prereq: Graduate standing.

PHYS 428. Cosmology and the Structure of the Universe. 3 Units.

PHYS 430. Experimental Methods in Biophysics. 3 Units.
There is an extensive array of powerful and elegant tools used to obtain quantitative and qualitative information about the physics of biology. New, cutting-edge techniques are being developed by labs around the world every day. To solve important problems in biophysics, an understanding of the capabilities and limitations of the current instrumental methods is needed. This course will focus on the physical principles of biophysical instrumentation so that appropriate choices and efficient use of measurement tools can be made. Exposure to instrumentation in core facilities around campus will link lectures to practical demonstrations of the operation of instrumentation. Techniques applied to a diversity of biological macromolecules and assemblies from the molecular level of proteins, nucleic acids, lipids, up to higher organization of cells, cellular organisms and tissues will be discussed. Topics covered include spectroscopic methods (IR/vis/UV/X-ray regions of the electromagnetic spectrum, absorption, fluorescence, circular dichroism, dynamic light scattering, Raman, electron paramagnetic resonance, NMR), microscopy techniques (electron, atomic force, scanning tunneling, optical), separation techniques (sedimentation, centrifugation, chromatography), crystallography, calorimetry, mass spectrometry, single molecule detection, cell sorting, functional genomics and proteomics and laboratory evolution. Biological examples from historical and current literature will be used to demonstrate the merits of each of the methods. Offered as PHYS 330 and PHYS 430.

PHYS 431. Physics of Imaging. 3 Units.
Description of physical principles underlying the spin behavior in MR and Fourier imaging in multi-dimensions. Introduction of conventional, fast, and chemical-shift imaging techniques. Spin echo, gradient echo, and variable flip-angle methods. Projection reconstruction and sampling theorems. Bloch equations, T1 and T2 relaxation times, rf penetration, diffusion and perfusion. Flow imaging, MR angiography, and functional brain imaging. Sequence and coil design. Prerequisite may be waived with consent of instructor. Recommended preparation: PHYS 122 or PHYS 124 or EBME 410. Offered as EBME 431 and PHYS 431.

PHYS 436. Modern Cosmology. 3 Units.
An introduction to modern cosmology and an exploration of current topics in the field. The first half of the course will cover the mathematical and physical basis of cosmology, while the second will delve into current questions and the observations that constrain them. Offered as PHYS 336 and PHYS 436. Prereq: Graduate standing.

PHYS 441. Physics of Condensed Matter I. 3 Units.
Crystal structure, x-ray diffraction, band theory and applications. Free electron theory of metals and electrons in magnetic fields.
PHYS 442. Physics of Condensed Matter II. 3 Units.
Continuation of PHYS 441. Lattice vibrations, thermal properties of solids, semiconductors, magnetic properties of solids, and superconductivity. Prerequisite may be waived with consent of department. Recommended preparation: PHYS 441.

PHYS 449. Methods of Mathematical Physics I. 3 Units.
Analysis of complex functions: singularities, residues, contour integration; evaluation and approximation of sums and integrals; exact and approximate solution of ordinary differential equations; transform calculus; Sturm-Liouville theory; calculus of variations. Additional work required for graduate students. Offered as PHYS 349 and PHYS 449. Prereq: Graduate standing.

PHYS 451. Empirical Foundations of the Standard Model. 3 Units.
The experimental basis for modeling the electroweak and strong interactions in terms of fundamental fermions, quarks and leptons, and gauge bosons, photons, the weak bosons, and gluons; particle accelerators and detection techniques; phenomenology of particle reactions, decays and hadronic structure; space, time and internal symmetries; symmetries; symmetry breaking.

PHYS 460. Advanced Topics in NMR Imaging. 3 Units.
Frontier issues in understanding the practical aspects of NMR imaging. Theoretical descriptions are accompanied by specific examples of pulse sequences, and basic engineering considerations in MRI system design. Emphasis is placed on implications and trade-offs in MRI pulse sequence design from real-world versus theoretical perspectives. Recommended preparation: EBME 431 or PHYS 431. Offered as EBME 460 and PHYS 460. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

PHYS 465. General Relativity. 3 Units.
This is an introductory course in general relativity. The techniques of tensor analysis will be developed and used to describe the effects of gravity and Einstein's theory. Consequences of the theory as well as its experimental tests will be discussed. An introduction to cosmology will be given. Additional work required for graduate students. Offered as PHYS 365 and PHYS 465. Prereq: Graduate standing.

PHYS 472. Graduate Physics Laboratory. 3 Units.
A series of projects designed to introduce the student to modern research techniques such as automated data acquisition. Students will be assessed as to their individual needs and a sequence of projects will be established for each individual. Topics may include low temperature phenomena, nuclear gamma ray detection and measurement and optics. Prereq: Graduate student standing or Undergraduate with a Mathematics and Physics major.

PHYS 481. Quantum Mechanics I. 3 Units.
Quantum mechanics with examples of applications. Schroedinger method; matrix and operator methods. Approximation methods including WKB, variational and various perturbation methods. Applications to atomic, molecular and nuclear physics including both bound states and scattering problems. Applications of group theory to quantum mechanics.

PHYS 482. Quantum Mechanics II. 3 Units.
Continuation of PHYS 481, including quantum field theory. Prerequisite may be waived with consent of department. Recommended preparation: PHYS 481 or consent of department.

PHYS 486. Quantum Computing, Information, and Devices. 3 Units.
An introduction to the math, physics, engineering, and computer science underlying the rapidly emerging fields of quantum computing, quantum information, and quantum devices. The course is taught by a group of faculty from physics, engineering, computer science, and math, and is geared towards students with diverse backgrounds and interests in these fields. Students will select a concentration in one of these four areas, and the coursework, while still covering all topics, will be adjusted to focus on the selected area in the most detail. Note that the listed prerequisites depend on choice of concentration. Topics will include: 1. (Mathematics) Introduction to linear algebra, convex geometry, fundamental theory of quantum information. 2. (Physics) Introduction to the quantum mechanics of two-level systems (qubits). Survey of physics and materials for qubit technologies. 3. (Computer Science) Basic quantum gates and circuits, introduction to the theory of algorithms, survey of quantum algorithms. 4. (Engineering) Quantum architectures, mapping algorithms onto circuits. The course consists of lectures, homework, and group projects. Group projects will aim to synthesize the diverse backgrounds of the students and instructors to capture the interdisciplinary nature of the field. Students taking the course for graduate credit will complete an additional literature research project and presentation, in addition to enhanced problem sets. Offered as CSDS 386, CSDS 486, ECSE 386, ECSE 486, MATH 386, MATH 486, PHYS 386, and PHYS 486. Prereq: PHYS 331 and (MATH 223 or MATH 227) and (MATH 224 or MATH 228) and (ENGR 131 or CSDS 132 or ECSE 132) and (PHYS 122 or PHYS 124).

PHYS 491. Modern Physics for Innovation I. 3 Units.
The first half of a two-semester sequence providing an understanding of physics as a basis for successfully launching new high-tech ventures. The course will examine physical limitations to present technologies, and the use of physics to identify potential opportunities for new venture creation. The course will provide experience in using physics for both identification of incremental improvements, and as the basis for alternative technologies. Case studies will be used to illustrate recent commercially successful (and unsuccessful) physics-based venture creation, and will illustrate characteristics for success.

PHYS 492. Modern Physics for Innovation II. 3 Units.
Continuation of PHYS 491, with an emphasis on current and prospective opportunities for Physics Entrepreneurship. Longer term opportunities for Physics Entrepreneurship in emerging areas including, but not limited to, nanoscale physics and nanotechnology; biophysics and applications to biotechnology; physics-based opportunities in the context of information technology. Recommended preparation: PHYS 491.

PHYS 495. Applied Patent Law. 1 Unit.
This course is designed to equip STEM students with practical knowledge of patent law, the patenting process, intellectual property (IP) strategy and IP management. Specific areas of study include: law and policy of patents, requirements to obtain a patent, the anatomy of the patent document, patent portfolio strategies, preparing and filing a patent application, IP management and monetization, managing IP in a research and development environment, sponsored research and service agreements, trade secrets and their relationship to patents, and non-disclosure agreements.

PHYS 539. Special Topics Seminar. 1 - 3 Units.
Individual or small group instruction on topics of interest to the department. Topics include, but are not limited to, particle physics, astrophysics, optics, condensed matter physics, biophysics, imaging. Several such courses may run concurrently.
PHYS 591. Gauge Field Theory I. 3 Units.
Noether’s theorem, symmetries and conserved currents, functional integral techniques, quantization, Feynman rules, anomalies, QED, electroweak interactions, QCD, renormalization, renormalization group, asymptotic freedom and assorted other topics. Prereq: PHYS 581.

PHYS 601. Research in Physics. 1 - 9 Units.

PHYS 651. Thesis M.S.. 1 - 9 Units.
(Credit as arranged.)

PHYS 666. Frontiers in Physics. 0 Unit.
Weekly colloquia given by eminent physicists from around the world on topics of current interest in physics.

PHYS 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Department of Political Science

111 Mather House
politicalscience.case.edu (http://politicalscience.case.edu)
Phone: 216.368.2424; Fax: 216.368.4681
Elliot Posner, Department Chair
eap26@case.edu

The study of political science is primarily concerned with political power, governance, and the state, broadly understood. Our department offers courses that explore political behavior, institutions of government, international relations and international finance, policy-making, and protest and revolution. Our political science faculty employ a range of research methods and approaches, including game theory, elite interviewing, survey research, field and archival research, and comparative case study analysis.

Faculty specialties in the Department of Political Science include US political institutions; elections and political parties both in the United States and abroad; legislative politics and public policy; international relations with an emphasis on international political economy; the development and decline of nation-states; the politics of gender; constitutional law; public policy and public organizations; research methods; and comparative politics with regional concentrations including China, Central Asia and the Middle East, and Europe. The department offers degree programs leading to the BA, MA, and PhD.

The study of political science can build a foundation for many types of future employment. Many political science majors go on to graduate study or law school. Others pursue careers in journalism, nonprofit groups, public policy, government, or business.

Department Faculty

Elliot Posner, PhD
(University of California, Berkeley)
Professor and Chair
International relations; international and comparative political economy; politics of finance; international organizations; European Union

Karen Beckwith, PhD
(Syracuse University)
Flora Stone Mather Professor
Politics of gender; mass political participation; comparative political movements; democracy and representation

Justin Buchler, PhD
(University of California, Berkeley)
Associate Professor
Congress; redistricting; political strategy; parties and elections

Kathryn C. Lavelle, PhD
(Northwestern University)
Ellen and Dixon Long Professor in World Affairs
International relations; international organizations; Congress in world politics; politics of stock markets; governing institutions of national and international finance; U.S. foreign economic policy; Congress and banking policy

Kelly M. McMann, PhD
(University of Michigan)
Professor; Director, International Studies Program
Comparative politics; Central Asia; Russia and former East Bloc; democratization

Peter W. Moore, PhD
(McGill University)
M. A. Hanna Professor of Political Science; Associate Professor
Comparative politics and political economy of the Middle East and Africa

Laura Y. Tartakoff, JD, MA
(Case Western Reserve University School of Law; Tufts University)
Senior Instructor
Constitutional law; civil liberties; comparative constitutionalism

Joseph White, PhD
(University of California, Berkeley)
Luxenberg Family Professor in Public Policy; Director, Center for Policy Studies and Public Policy Program; Professor, Department of Epidemiology and Biostatistics, School of Medicine
American government; Congress; public policy; health and welfare policy; comparative politics of rich democracies

Visiting Faculty

Matthew Hodgetts, PhD
(Brown University)
Visiting Assistant Professor
Politics of climate change; environmental policy; contemporary political theory

Girma Parris, PhD
(Johns Hopkins University)
Visiting Assistant Professor
Politics of race, ethnic relations, issues of race and immigration in education, and comparative immigrant integration

Secondary Faculty

Juscelino Colares, JD, PhD
(Cornell Law School)
Professor, School of Law
International law; civil procedure
Further application procedures are posted on the department's website.

Andrew M. Lucker, PhD
(Case Western Reserve University)
Adjunct Assistant Professor
American government; state politics and government; history of political science

Howard Maier, MS
(Case Western Reserve University)
Adjunct Assistant Professor
Politics of China, environment, foreign

Michael Wager, JD
(New York University)
Adjunct Assistant Professor

Undergraduate Programs

Major
The major in political science leads to the Bachelor of Arts degree. The major requires 30 hours of coursework, distributed as follows:

Required Courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>POSC 109</td>
<td>The U.S. Political System</td>
<td>3</td>
</tr>
<tr>
<td>POSC 160</td>
<td>Introduction to Comparative Politics</td>
<td>3</td>
</tr>
<tr>
<td>POSC 172</td>
<td>Introduction to International Relations</td>
<td>3</td>
</tr>
<tr>
<td>Six POSC courses at the 300 level</td>
<td>18</td>
<td></td>
</tr>
<tr>
<td>POSC 396</td>
<td>Senior Project SAGES Capstone</td>
<td>3</td>
</tr>
<tr>
<td><strong>Total Units</strong></td>
<td><strong>30</strong></td>
<td></td>
</tr>
</tbody>
</table>

Students select courses based on their specific interests, with approval of the faculty advisor. No more than six hours of independent study (i.e., POSC 395 Special Projects and/or POSC 396 Senior Project SAGES Capstone) may count toward the major. Independent study completed through the Washington Center Program is excluded from this limitation.

Departmental Honors
Majors who maintain a grade point average of at least 3.3 overall on completion of senior year and 3.7 in political science courses, and who earn a grade of A in POSC 396 Senior Project SAGES Capstone, will be eligible to be nominated to receive their degrees "with Honors in Political Science."

Integrated Graduate Studies
The Integrated Graduate Studies (IGS) Program (p. 1298) in political science offers students the opportunity to earn an MA, in addition to their BA, within the usual period of undergraduate study or with a small amount of extra time. Students should notify the department of their interest no later than the beginning of the first semester of the junior year. Further application procedures are posted on the department’s website.

Upon completion of 90 undergraduate hours, the student must have satisfied all general requirements for the BA, including at least 21 hours in the political science major and the General Education Requirements, and must have a 3.5 grade point average in political science courses and 3.3 overall. If admitted to the IGS program, the student will take 30 hours of graduate-level political science courses during the senior year, adhering to the departmental regulations governing the master’s degree program. If completed successfully, these hours will count simultaneously toward both degrees in political science.

The BA will be awarded upon completion of all requirements for that degree, including total hours. The MA will be awarded upon successful completion of the 30 hours of graduate-level courses and the MA examination or thesis.

Minor
Political Science
A minor in political science consists of 15 hours (five courses) in the department, of which 9 hours must be at the 300 level. An elected minor sequence must be approved by a political science faculty advisor.

Public Policy
A minor in public policy is available to undergraduates in the College of Arts and Sciences and to undergraduates in the economics and management programs in the Weatherhead School of Management. Please see the Public Policy Program’s (p. 555) section of the bulletin for details.

Master of Arts
Applicants to the Master of Arts program in political science are required to submit their undergraduate transcripts and three letters of recommendation from former instructors. The admission requirements also include GRE results with minimum scores of 153 on Verbal (or 500 if taken before August 1, 2011), 144 on Quantitative (or 500 if taken before August 1, 2011), and 4.5 on Analytical sections. The department strongly prefers that applicants have a minimum GPA of 3.2 overall and a minimum GPA of 3.4 in political science courses. For students from other countries, the requirements are a minimum score of 550 on the paper version of the Test of English as a Foreign Language (TOEFL), or at least 215 on the computer version of the TOEFL; the minimum GRE scores indicated above; and transcripts of all undergraduate study, indicating completion of a Bachelor of Arts or Bachelor of Science degree program.

In addition to course work, students complete the Master of Arts program in political science either through a thesis (Graduate School Plan A) or a comprehensive examination (Graduate School Plan B), as described below.

The Master of Arts in political science is a broadly based program in which the student is expected to acquire and exhibit general knowledge and skills. Therefore, within the 30 hours of graduate-level course work (400 level and above) required for the master’s, 12 hours must be distributed as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>One course in the area of American government and politics</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>One course in the area of comparative politics</td>

Students who receive permission (due to special circumstances) from the graduate coordinator may take an alternative research methods course outside the department.

Among the remaining 18 hours of electives, the student will select courses to fit a plan to complete a thesis (in Plan A below) or complete an examination in two fields (Plan B below), as approved by the graduate studies director. A maximum of 9 hours may be taken outside the Department of Political Science, with prior approval from the graduate studies director, for specialized work related to the master’s degree for which no political science course is appropriate. A maximum of nine hours of independent study may count toward the degree.

A minimum grade point average of 3.0 must be maintained throughout the Master of Arts program. A master’s student who fails to maintain a GPA of 3.0 will be placed on academic probation for one semester. If the GPA is not returned to the 3.0 minimum by the end of the probationary semester, the student will be separated from further study in the department.

Plan A: MA Thesis

An MA Thesis should be a major research paper equivalent to at least six hours of registration. Students shall register for POSC 651 Thesis M.A., which will count towards the 30 hours of course work required for completion of the MA. An MA Thesis will be read by a committee of three members of the faculty, and defended in an oral examination with the faculty committee. The committee shall vote on approval of the thesis after the oral defense. A majority vote will suffice to approve the thesis.

Students must define their thesis topic no later than the last week of the semester before the semester in which they expect to defend the thesis. The thesis supervisor will be selected by mutual agreement between the student and the faculty member who agrees to supervise. The topic must be defined before the student registers for POSC 651 Thesis M.A., and a permit for the course must be issued by the faculty supervisor. The student must prepare a prospectus describing the research question and research plans before the permit can be issued. The prospectus must be approved by both the faculty supervisor and the department’s graduate studies director. The director shall appoint the two other members of the examination committee. The graduate studies director will also schedule the oral defense, with assistance from the department staff.

Plan B: MA Examination

For the MA Examination, students should be able to explain, critique, integrate and apply the arguments of leading works in two out of the three fields of American Politics and Government, Comparative Politics, and International Relations. The examination is a written test of five hours’ duration, with 150 minutes for each of the chosen subfields. A student who chooses Plan B must request scheduling of the examination upon completion of no fewer than 30 hours and no more than 42 hours of master’s-level course work.

The examination is administered in a controlled, closed-book setting. The department maintains, on its website, MA reading lists of major scholarly works within the three fields listed above, and test questions will be based upon an expectation that the student has thoroughly studied – whether in or outside of classes – the works designated on those lists. Faculty members within each subfield write the questions for that subfield, which are then assembled by the graduate studies director, who is responsible for scheduling the exam.

The student must notify his or her faculty advisor and the graduate studies director of intent to take the exam, and the two subfields chosen, at least six weeks before he or she wishes to take it. Each section of the examination will be graded by two members of the faculty. The two faculty members must agree that the student has performed acceptably on that section of the examination in order for the student to pass on that section. The student must pass both sections to pass the exam.

Grading for the exam is Honors, Pass, or Fail. If the exam is failed, a student will have one calendar year in which to retake the exam. We expect the student will need at least one semester to prepare for retaking the exam. During the interim, the political science faculty may require the student to take additional classes to help address the concerns raised by the failed exam segment or segments. If the student does not pass the exam on a second attempt, she or he will be separated from the department. Please note that university regulations require that students be registered for course work during any semester during which the MA Exam is taken. A student who does not enroll in other courses should enroll for one hour of EXAM 600, “Comprehensive Exam” (noncredit).

Doctor of Philosophy

Requirements for admission to the Doctor of Philosophy program in political science are the same as for admission to the Master of Arts program, with the following additions. The department strongly prefers that applicants without an MA in political science have a minimum GPA of 3.2 overall and a minimum GPA of 3.4 in undergraduate political science courses, and that applicants with an MA degree in political science have a minimum GPA of 3.4 overall in their MA work.

Because the department faculty is small, applicants should determine, prior to applying, whether one or more members of the department faculty are active in the applicant’s field of interest. PhD applications must specify the applicant’s field(s) of interest, as the Graduate Studies Committee will not recommend the admission of an applicant where the department faculty cannot support the applicant’s proposed course of study. Students who are accepted into the department’s MA program and then decide they would like to earn the PhD are expected to apply to the PhD program and meet the admission requirements. All PhD students must complete 45 hours of graduate-level courses, plus at least 18 hours of POSC 701 Dissertation Ph.D. credit. The required 45 hours of doctoral courses taken before dissertation credits must be distributed as follows:

<table>
<thead>
<tr>
<th>Hours</th>
<th>Field</th>
</tr>
</thead>
<tbody>
<tr>
<td>12</td>
<td>hours in a primary subfield (American, comparative, or international relations)</td>
</tr>
<tr>
<td>9</td>
<td>hours in secondary subfield (one of the remaining two fields)</td>
</tr>
<tr>
<td>6</td>
<td>hours in the remaining subfield</td>
</tr>
<tr>
<td>6</td>
<td>hours in Research Methods: POSC 449 Political Science Research Methods</td>
</tr>
<tr>
<td>12</td>
<td>hours of electives</td>
</tr>
<tr>
<td>45</td>
<td>Total Units</td>
</tr>
</tbody>
</table>

A maximum of 9 hours of independent study may be undertaken. University regulations require PhD students to spend at least one academic year in full-time residence (two consecutive regular semesters with a minimum of 9 hours’ registration each semester).

Doctoral students whose MA in political science has been certified, and doctoral students with an MA in political science from Case Western Reserve, need to complete only 18 of the 45 hours of doctoral course work. The graduate studies director will set distribution requirements on an individual basis, reflecting the course work completed for the MA.
Doctoral students without a completed MA must complete either Plan A (a thesis) or Plan B (the MA examination) upon completion of no fewer than 30 hours and no more than 36 hours of course work. A student who does not complete one of these requirements may not continue in the Ph.D. program past 36 hours of course work. See the descriptions of Plan A and Plan B above for further information. Upon completion of 45 hours of course work, the student must pass the PhD comprehensive examinations in his or her primary and secondary subfields. After passing the examinations, a student must complete a dissertation, typically 150-400 pages in length, that draws on the student's original research to make a contribution to the field of political science.

**Dual JD/MA**

Students accepted to the School of Law may pursue a Master of Arts in Political Science in conjunction with their JD degree. Completion of the program requires 97 hours of course work, and so would be expected to require seven semesters. Students wishing to enroll in the dual-degree program must be separately admitted to each program, but the department will waive the GRE requirement and accept the LSAT in the admissions process.

Students must complete a total of 21 hours of credit within the political science department, including at least three credit hours in American politics, comparative politics, international relations, and research methods. Dual-degree students will normally begin study in the law school and defer enrollment in the MA program until their second year. They must either pass the MA comprehensive examination or complete an MA Thesis upon completion of their political science course work. Up to six hours of POSC 651, Thesis M.A., may count towards the required credit hours for the degree. See the descriptions of Plan A and Plan B above for further information.

**Courses**

**POSC 109. The U.S. Political System. 3 Units.**  
This course provides an overview of governmental institutions and processes in the United States, the political forces that combine to shape them, and how we might best understand the system that government and politics create.

**POSC 160. Introduction to Comparative Politics. 3 Units.**  
Comparative politics is the study of processes and institutions within countries. Prompted by real-world puzzles, comparativists investigate broad, theoretical questions such as: What constitutes a revolution, and why do revolutions occur? How does one country become more democratic than another? Why do relations between some ethnic groups turn violent? This course introduces students to some of the central puzzles and theories of comparative politics in order to help them better understand world events. Counts for CAS Global & Cultural Diversity Requirement.

**POSC 172. Introduction to International Relations. 3 Units.**  
Why do countries fight wars? Can nuclear proliferation be curtailed? Does trade help developing countries or harm them? This survey of the field of International Relations examines "big questions" in world politics. It introduces themes including the rise, development and changes of the nation-state system; patterns and causes of international conflict and cooperation; international law, organizations, and transnational institutions; the roles of both state and non-state actors in international politics; and the methods used to understand this field.

**POSC 301. Decision-Making in American Cities. 3 Units.**  
Localities are the primary interface with government and provide the basic psychological place identification for most Americans. The course will explore this assertion in the context of urban America today. How are decisions made in cities? Who shapes these decisions and why? What role is played by shifting demographics, race, and poverty? What can the individual do to influence local decision-making? Offered as POSC 301 and POSC 401.

**POSC 306. Interest Groups in the Policy Process. 3 Units.**  
Introduction to the institutions and processes that make up the political environment of nonprofit and other organizations in the United States, beginning with an examination of the role of civil society in a democracy and continuing with the framing of issues, role of political entrepreneurs and organized interests, elections, the legislative process and strategies for influencing it, and the roles of executive institutions and the courts. Offered as POSC 306 and POSC 406.

**POSC 308. The American Presidency. 3 Units.**  
The sources of, strategies of, and restraints on presidential leadership in the United States. Emphasis on problems of policy formation, presidential relations with Congress and executive agencies, and the electoral process. Offered as POSC 308 and POSC 408.

**POSC 310. Congress in an Era of Polarization. 3 Units.**  
A study of Congress in the modern era with emphasis on the development of polarization, procedural changes, conflict between the legislative and executive branches during divided government, and the current state of representation. Offered as POSC 310 and POSC 410.

**POSC 318. People and Planet. 3 Units.**  
In this course, we study the way in which the environment is a matter of politics. Our approach is philosophical, examining the concept of politics in light of how societies shape their environment on Earth. This elucidation’s aim is practical. We want to know not only what environmental politics is, but what we should do about it. Students from any major are welcome, without prerequisite. Offered as PHIL 318, POSC 318 and ESTD 318.

**POSC 319. Politics and Money. 3 Units.**  
One of the most famous definitions of politics comes from Harold Laswell, who described it as the struggle over “who gets what, when, how.” Money is at the center of most political conflict. It is a resource, a motivation, and an end unto itself. This course will examine the role of money in politics, with particular emphasis on American politics. We will discuss the role of money in elections, in the policy-making process, and what it means for representation. The course will begin with the question of the role that financial consideration play in public opinion and voting behavior. We will then address the role that money plays in election results, both in terms of its role in financing campaigns, and the relationship between the state of the economy and election results. Finally, we will discuss the policy-making process. In that context, we will address the role that interest groups play in the process, and how the quest for economic benefits for one’s constituency motivates the behavior of elected officials. We will conclude by discussing how policy changes at the systematic level occur and the influence that various groups have on policy outcomes. Offered as POSC 319 and POSC 419.

**POSC 321. News Media and Politics. 3 Units.**  
Analysis of the political role of the news media in American government and politics. Examines the fascinating relationship between reporters and politicians. Covers the overall structure and legal position of the media as well as the media’s impact on the American political system. Offered as POSC 321 and POSC 421.
POSC 322. Political Movements and Political Participation. 3 Units.
Political Movements and Political Participation is concerned with the variety of ways citizens engage in collective activism in the United States and across national boundaries, and with the conditions under which citizens identify common concerns and join together in political movements to bring about change. The course begins with an examination of three general bodies of theory and research on political movements: resource mobilization, political opportunity structures, and cultural framing. We will also investigate frameworks of political participation for understanding the relationships among different expressions of collective activism and representation. In the context of these sometimes competing theories, we will consider 1) the conditions under which political movements are likely to emerge, as well as the circumstances in which collective political action is precluded; 2) how citizens come to recognize collective grievances and shared political identities; 3) the strategies and tactics of organized movements, and their likelihood of political success; and 4) the relationship between political movements, political parties, and the state. Offered as POSC 322 and POSC 422.

POSC 323. Judicial Politics. 3 Units.
Rejecting the view that judges mechanically apply the law, the study of judicial politics seeks to understand the behavior of judges as political actors with policy goals. Topics include judicial selection and socialization, judicial policy change, judicial strategy (especially the strategic interaction of judges on multi-judge panels), the interaction of courts in hierarchical judicial systems, the policy impact of judicial decisions, and the courts’ interactions with coordinate branches of government (the executive, Congress, state governments, state courts). Primary focus will be on the federal judiciary, with some discussion of state judicial systems. Offered as POSC 323 and POSC 423.

POSC 325. American Constitutional Law. 3 Units.
An introductory survey of U.S. constitutional law. Special attention given to the historical, philosophical, and political dimensions of landmark Supreme Court cases. Judicial review, federalism, separation of powers, due process, and equal protection. Supreme Court's involvement in major political controversies: the New Deal, abortion, physician-assisted suicide, school desegregation, and affirmative action. Offered as POSC 325 and POSC 425.

POSC 326. Constitutions in Practical Politics. 3 Units.
Overview of ancient Greek and Roman constitution-making, medieval principles, emergence of modern constitutionalism, and the constitutionalist vision of the American and French Revolutions. Examination of contemporary constitutional issues and developments in countries such as Canada, France, Germany, Great Britain, Ethiopia, India, and the United States. Offered as POSC 326 and POSC 426. Counts for CAS Global & Cultural Diversity Requirement.

POSC 327. Civil Liberties in America. 3 Units.
Supreme Court's interpretation of the First Amendment: liberty of religion through the establishment and free exercise clauses, freedoms of speech and the press, of assembly and association. The "pure tolerance" view examined against subversive speech, "fighting words," libel, and obscenity. Survey of content-neutral regulation, symbolic expression, and current efforts to limit expression (campus speech codes and the feminist anti-pornography movement). Offered as POSC 327 and POSC 427.

POSC 328. Topics in Civil Liberties. 3 Units.
Rights of the accused as outlined in the Fourth, Fifth, Sixth, and Eighth Amendments. Topics covered are (1) arrests, searches, and seizures, (2) the privilege against compelled self-incrimination, (3) the rights to counsel, confrontation, and jury trial, and (4) the prohibition against cruel and unusual punishments. Case-specific approach but presents interplay of history, philosophy, and politics as background of each topic. Offered as POSC 328 and POSC 428.

POSC 334. Comparative Political Violence. 3 Units.
This is a non-standard, simulation based course analyzing the causes and processes of political violence in comparative perspective. The course begins by engaging some classic philosophical work on power, conflict, and violence. It then moves to specific cases drawn at different historical periods and from across the world (North America, Asia, Africa, and the Middle East). For each case, students are organized into groups representing actual political actors. Collaborative research and written assignments serve to prepare each group for an in-class simulation exercise. Simulations vary in format and goals but each comprises a group grade and an individual written project. Offered as POSC 334 and POSC 434. Counts for CAS Global & Cultural Diversity Requirement.

POSC 341. US Political Parties and Elections. 3 Units.
Political Parties and Elections examines the development and history of political parties in the US, examining the impact of electoral systems and law at the national and local levels, the impact on key events in shaping the parties’ ideologies, policy preferences, and core constituencies. The course reviews key party realignments and asks whether the US is experiencing a party realignment in response to party polarization and populist challenges. It also considers candidate emergence, campaign strategies, and campaign finance in the context of the US political party system. Offered as POSC 341 and POSC 441.

POSC 343. Public Opinion and American Democracy. 3 Units.
Examination of theories, concepts and empirical research related to attitudes and the political behavior of mass publics. Offered as POSC 343 and POSC 443.

POSC 346. Women, Power, and Politics. 3 Units.
Women, Power, and Politics involves a critical examination of the impact of gender on the forms and distributions of power and politics, with primary reference to the experience of women in the United States. Major concerns of the course include the political meanings and import of "sex," "gender" and "politics;" the relationship between women and the state; how women organize collectively to influence state policies; and how the state facilitates and constrains women's access to and exercise of political power. The course is organized around four foci central to the study of women and politics. The first section of the course focuses on the meanings of "women," "gender," and "politics." In this section, we will consider how these concepts intersect and the ways in which each may be used to deepen our understanding of the workings of governments and political systems, and of women's relative political powerlessness. The second section of the course employs these concepts to understand the (re) emergence of the US feminist movement, its meanings, practices, and goals, and its transformation across US political history. In the third section, we turn to conventional electoral politics, focusing on women's candidacies, their campaigns, and women's voting behavior. In the final section of the course, we consider those general factors that might provide for increased gender equality and improved life status for women, in global, comparative perspective. Offered as POSC 346, POSC 446 and WGST 346. Counts as SAGES Departmental Seminar.
POS 348. History of Modern Political and Social Thought. 3 Units. This course explores the responses of philosophers, economic theorists, culture critics, and public policy makers to changes in western society wrought by industrialization by focusing on their concerns with technological change. Offered as HSTY 348, HSTY 448 and POSC 348.

POS 349. Political Science Research Methods. 3 Units. This course examines approaches that political scientists use to understand events and processes. In doing so, the course provides students with skills helpful to completing senior projects, such as the ability to evaluate and conduct research. Through exercises and projects, students will take part in the research process from constructing a question to developing a research design to interpreting results. Students will learn and apply key techniques, including inductive and deductive reasoning, hypothesis construction, operationalization of concepts, measurements, sampling and probability, causal inference, and the logic of controls. They will produce materials common to the discipline, such as research designs. Offered as POSC 349 and POSC 449. Counts as SAGES Departmental Seminar.

POS 350. Modern Political Thought. 3 Units. Examination of a limited topic in the study of modern political thought. Topics vary. Offered as POSC 351 and POSC 451.

POS 351. Modern Political Thought. 3 Units. Examination of the unique contribution to the science of government made by American political thinkers. Offered as POSC 352 and POSC 452.

POS 352. American Political Thought. 3 Units. Examination of a limited topic in the study of modern political thought. Topics vary. Offered as POSC 351 and POSC 451.

POS 353. Political Thought and Political Change in China. 3 Units. "No state is forever strong or forever weak," said Han Feizi, China's great legalist philosopher. He believed that as a country's conditions changed, the laws and institutions had to change to meet these new circumstances. China today faces new circumstances that have caused deep and broad challenges to its people. This has prompted serious debate among intellectuals, leaders, and average citizens about the possibility for and direction of political reform. But what might that reform look like, and how would it be conceived, if it could overcome the current barriers? This seminar will provide a fuller understanding of China's potential for political change by examining Chinese political thought from Confucius, Mencius and Han Feizi through Mao Zedong and Deng Xiaoping. These and other political philosophical traditions have influenced China's political culture, which will influence the form of any change. Offered as POSC 353 and POSC 453.

POS 354. Political and Social Philosophy. 3 Units. Justification of social institutions, primarily political ones. Such distinctions as that between de facto and legitimate authority; analysis of criteria for evaluation, such as social justice and equality; inquiry into theories of justification of the state; theory of democratic government and its alternatives. Readings from classical and contemporary sources. Recommended preparation: PHIL 101. Offered as PHIL 334, POSC 354, PHIL 434, and POSC 454.

POS 355. Modern Political Ideologies. 3 Units. Substance and nature of ideological thinking in the contemporary world via a survey of political "isms"—for example, liberalism, libertarianism, conservatism, fascism, socialism, and even more recent trends such as feminism, environmentalism, etc. Offered as POSC 355 and POSC 455.

POS 356. Transitions to Democracy and Dictatorship. 3 Units. Everyday life is dramatically different depending on whether one resides in a democracy or under a dictatorship. This course examines why some countries have democracies and others dictatorships. It explores successful, incomplete, and failed transitions to democracy. The incomplete transitions result in hybrid regimes, stuck between democracy and dictatorship, and the outright failures result in non-democracies, such as dictatorships. The course examines examples from most regions of the world, including Africa, Asia, Europe, the Middle East, the former Soviet Union, North America, and South America. Offered as POSC 356 and POSC 456. Counts for CAS Global & Cultural Diversity Requirement.

POS 357. Political Strategy. 3 Units. This course examines practical applications of prominent political science theories. It is partly a how-to course covering a broad range of political activities, but the primary objective is to link practical issues with theories to help you understand why events happen the way they do. The course focuses on American politics, but the materials will be applicable to a wide range of situations. The course is a seminar requiring regular student presentations that will generate discussion about the readings and current events. Papers consist of analysis of current events, and require students to analyze the strategies used by prominent figures in the context of the theories we discuss in class. Offered as POSC 358 and POSC 458. Counts as SAGES Departmental Seminar.

POS 358. Political Strategy. 3 Units. This course examines practical applications of prominent political science theories. It is partly a how-to course covering a broad range of political activities, but the primary objective is to link practical issues with theories to help you understand why events happen the way they do. The course focuses on American politics, but the materials will be applicable to a wide range of situations. The course is a seminar requiring regular student presentations that will generate discussion about the readings and current events. Papers consist of analysis of current events, and require students to analyze the strategies used by prominent figures in the context of the theories we discuss in class. Offered as POSC 358 and POSC 458. Counts as SAGES Departmental Seminar.

POS 359. Revolutions and Revolutions in Global Perspective. 3 Units. The Arab protests of 2011 gripped the attention of the world. Young protestors succeeded in unseating some long time rulers but in other cases tense standoffs have evolved. This course takes those events as a starting point to examine the broader political history of revolts and revolutions in the global south. The first part of the course examines some of the classic social science debates about what constitutes revolution, what leads to revolution, and what the effects can be. The second part of the course analyzes specific cases in Europe, Latin America, Africa, and Asia to understand the causes and consequences of revolt and revolution. What drives everyday persons to brave the dangers of protest? When and why do political leaders decide to resist or reform? What happens when revolts fail? What happens when they succeed? Material for the course will include classic social science narratives, revolutionary polemics, popular analyses of events since 2011, examples of social media as political action, and first person narratives. Offered as POSC 360 and POSC 460. Counts for CAS Global & Cultural Diversity Requirement.

POS 360. Revolutions and Revolutions in Global Perspective. 3 Units. This course explores the responses of philosophers, economic theorists, culture critics, and public policy makers to changes in western society wrought by industrialization by focusing on their concerns with technological change. Offered as HSTY 348, HSTY 448 and POSC 348.

POS 361. The Politics of Electoral Systems. 3 Units. Elections involve more than a simple act of voting to express individual preferences. The rules under which countries conduct elections determine who controls the executive and how votes are converted into legislative seats. The mechanics of various electoral arrangements will be examined in detail and the consequences for the political system discussed in terms of strategies and desired outcomes on the part of contestants in terms of democratic representation. Students will research individual countries and analyze recent elections from both qualitative and quantitative perspectives. Offered as POSC 363 and POSC 463. Counts as SAGES Departmental Seminar.
POSC 364. Dictatorship and Democracy in Modern Latin America. 3 Units.
Examination of political leadership in 20th-century Latin America, exploring the nature of autocracy, and consequences of dictatorship and democracy in the region, moving from the collapse of oligarchic rule and the emergence of populism in the 1930s and 1940s, to the end of democracy and establishment of military regimes in the 1960s and 1970s, and ultimately to the contemporary processes of democratization and economic liberalization. Offered as ETHS 364, POSC 364, and POSC 464. Counts for CAS Global & Cultural Diversity Requirement.

POSC 367. Western European Political Systems. 3 Units.
Comparative analysis of sociopolitical systems of selected Western European industrial democracies, using North American systems as a point of comparison. Offered as POSC 367 and POSC 467.

POSC 369. Social Justice Issues in Latin America. 3 Units.
This course explores ethnicity, gender, and religion in Latin American politics and society, and then tackles revolution, democracy, and populism. Throughout, the region's history, geography, and culture are taken into account—for example, the European and indigenous legacies in Mexico and Perú, Bolivia, Chile, and Ecuador; the Asian presence in Perú and Brazil; the African contributions to Cuba and Brazil; female heads of state, such as Nicaragua's Violeta Chamorro, Chile's Michelle Bachelet, Argentina's Cristina Fernández de Kirchner, Costa Rica's Laura Chinchilla, and Brazil's Dilma Rousseff. Liberation Theology and the current Pope's worries about the declining number of Catholics in the region are also addressed. Today's multiparty democracy in Mexico, Hugo Chávez's legacy in Venezuela, and Cuba's international humanitarian aid and ideological aims would not be possible without revolution(s) and populism. They are inevitably intertwined with ethnicity, gender, and religion. This course aims to encourage a better understanding of Latin America and its relation to the rest of the world. Offered as ETHS 369, POSC 369 and POSC 469. Counts for CAS Global & Cultural Diversity Requirement.

POSC 370A. Political Economy. 3 Units.
Focus on debates concerning the proper relationship between political and economic systems, including conservative, liberal, and radical perspectives. The politics of international economics and the economics of international politics receive separate attention. The course concludes with study of "modern" political economy and the application of economic theory to the study of political systems. Offered as POSC 370A and POSC 470A.

POSC 370C. The United States and Asia. 3 Units.
Survey and analysis of U.S.-Asia relations in the post-World War II period. Focus specifically is on the interaction of politics and economics in the United States' relations with Japan, China, and Southeast Asian countries. Topics will include the role of Asia in U.S. Cold War policies, the dynamics of U.S.-Japan alliance politics, post-Cold War issues involving U.S. foreign policy toward Asia, a history and analysis of economic conflict cooperation, and an examination of the move toward Asia-Pacific "regionalism." Offered as POSC 370C and POSC 470C.

POSC 370D. The Politics of China. 3 Units.
Now more than ever, the Chinese state and society are facing tremendous economic, social, and political challenges. This course presents an overview of current issues facing the People's Republic, including a changing (or not) political culture, policy processes and outcomes at the national and local levels, reform and economic growth, the resultant societal changes and pressures, and the consequent challenges the Communist Party faces as demand for political reform grows. The class involves a mixture of lectures and discussion and draws on a combination of primary and secondary sources, including current news reports and films. Offered as POSC 370D and POSC 470D. Counts for CAS Global & Cultural Diversity Requirement.

POSC 370F. Financial Politics in the United States and the World. 3 Units.
This course explores how political institutions make policy in the financial area with particular emphasis on the United States. Using a bureaucratic politics framework, it examines money, banks and the securities industry by integrating a wide range of literature in economics and political science. Specific objectives include familiarizing students with different approaches to the political economy of finance from different disciplines, exploring the historical evolution of finance, examining the changing relationship between public and private authority within the financial system, considering how politics operates in a crisis, and evaluating the role of international financial institutions in the global economy. By taking this course, students will equip themselves for further research into politics and economics, as well as offer them tools to analyze future policy developments as they unfold. Offered as POSC 370F and POSC 470F.

POSC 370H. China's Foreign Policy. 3 Units.
The rise of China is evident in the country's more forward and robust foreign policy that began in 1979. At every turn, nations throughout the world must now consider China wherever their interests are at stake, be it Korea and Northeast Asia, Indochina and Southeast Asia, India/Pakistan and South Asia, or Afghanistan and Iran in the Middle East, not to mention the many African states that welcome Chinese investment but chafe at China's presence. Further, China is increasingly aggressive in international trade, a major determinant of its foreign policy. This course describes the key factors that make up Chinese foreign policy, including its cultural tradition, policy-making institutions, the role of the military, and domestic determinants of foreign policy. The course also examines China's ever-changing foreign policy strategies, from an aggressive posture to charming its neighbors only to become more strident once again. The course will also examine China's role involving possible mercantilism, currency manipulation, and the hunt for traditional and alternative energy sources. Throughout the course, we will pay attention to how China's foreign policy relates to international relations theories and what strategies might be used to manage China's growing role in international affairs. Offered as POSC 370H and POSC 470H. Counts for CAS Global & Cultural Diversity Requirement.

POSC 370J. International Law and Organizations. 3 Units.
Study of international organizations and international law as two means for regulating and coordinating nation-state behavior. History of the two techniques will be traced, covering 19th century efforts at cooperation, the League of Nations and the United Nations, regional and specialized global organization. The functions of international law in global politics will be stressed, with primary focus on the evolving role of law in dealing with global problems, e.g., war, the environment, economic cooperation, and human rights. Offered as POSC 370J and POSC 470J.
POSC 370M. Theories of Political Economy. 3 Units.
This course is a SAGES departmental seminar in political economy that brings a wide range of theoretical perspectives to bear on the relations between market and state in the contemporary world. It focuses on three questions: What have been the major debates concerning the role of the government in the economy? How were these debates resolved in the compromise of embedded liberalism, and What experiences have individual states had with these questions of political economy? To answer these questions, we will read original literature to uncover the connections among politics, economics, and the world of ideas that has resulted in the political debates we confront today. Offered as POSC 370M and POSC 470M. Counts as SAGES Departmental Seminar.

POSC 370N. Economics and Politics in Global Governance. 3 Units.
The political and economic dynamics at work in a country both establish the conditions leading up to crises and frame the policy choices available to resolve it. This course addresses these interactive dynamics by combining the research and career expertise of the discipline of Political Science and Macroeconomics and Financial Regulation in a team-taught course. It explores how financial crises have been managed in world history by paying particular attention to the way governance structures operate to help or hurt the outcome. The emphasis combines a sophisticated understanding of the mechanics of the intervention as well as the politics inside each International Financial Institution involved. Specifically, the course begins by reviewing the history of the Federal Reserve and the gold standard, the Great Depression and the operations of the Bretton Woods System. Next, it looks at the sovereign debt crises of the 1980s and the International Monetary Fund. It picks up the history with Japan's crisis in the 1990s and the later interventions of the International Monetary Fund, Bank for International Settlements, Federal Reserve, European Commission, and European Central Bank to the present era. Offered as POSC 370N and POSC 470N.

POSC 371. Natural Resources and World Politics. 3 Units.
Examination of the political causes and ramifications of the uneven distribution of the valuable natural resources for modern industrial societies. Strategic and military issues and the exploitation of the sea bed. Examination in some detail of selected commodity issues, including petroleum, copper and uranium. Offered as POSC 371 and POSC 471.

POSC 373. Politics of the European Union. 3 Units.
The evolution of the European Union ranks among the most significant developments in contemporary European and international history. It is an extraordinary illustration of successful cooperation among sovereign countries and a fascinating laboratory for political scientists and others interested in the building of polities, markets and societies. Yet scholars have disagreed about nearly every important aspect of its origins, nature and implications; and with the United Kingdom's departure (Brexit), the pandemic and its consequences, democratic backsliding (in some member states) and other crises, they are arguing about whether and how the EU can endure recent and future challenges. The seminar's readings, discussions and written assignments will introduce students to the main debates and cover past and ongoing developments. Offered as POSC 373 and POSC 473.

POSC 374. Politics of Development in the Global South. 3 Units.
Exploration of the post-World War II emergence of the Global South nations of Africa, Asia, the Middle East, Latin America, and the Eastern Europe arena. Offered as ETHS 374, POSC 374, and POSC 474.

POSC 375. The International Politics of Technology. 3 Units.
Technology is deeply political. Nowhere is this statement more evident than in the realm of international relations, where governments perceive technology as a source of power and wealth and a symbol of relative position and modernity. Yet for centuries skeptics have questioned the economic rationale of government technology policies. Still, to this day, countries support emulation, innovation and a host of other strategies as means for catching up with leading nations or locking in current advantages. What lies behind such policies? What do they accomplish? And what are the domestic and international politics surrounding them? After reading classic arguments, including texts by Adam Smith, Alexander Hamilton and Friedrich List, students will consider 20th and 21st century debates and an array of experiments tried by poor, middle-income and rich countries. Cases include the development of new industries; the imposition of sanctions; the dilemma of dual technologies and military spillovers; the forging of national champions; the reorganization of banks and the creation of international financial centers; the copying of regional clusters (e.g. Silicon Valley) and stock markets (e.g. the Nasdaq); and the extraterritorial extension of domestic regulation and governance techniques. There are no prerequisites and first year students are welcome. Offered as POSC 375 and POSC 475. Counts as SAGES Departmental Seminar.

POSC 376. United States Foreign Policy. 3 Units.
Focus on U.S. foreign policy making with a dynamic network of executive and congressional actors and organizations; analysis of traditional and contemporary U.S. foreign policies from nuclear defense to current economic resource issues; future role of the United States in world affairs. Offered as POSC 376 and POSC 476.

POSC 377. Politics of Russia. 3 Units.
Russia faces three problems: the creation of a sovereign state, the development of a new political system, and the restructuring of its economy. In this course we will challenge the assumption that the outcome of these three transitions will be a strong, democratic, capitalist country. We will ask whether civil war, organized crime, an immature party system, poor social services, and nomenklatura privatization bode poorly for these three transformations. Offered as POSC 377 and POSC 477. Counts for CAS Global & Cultural Diversity Requirement.

POSC 378. International Relations Theory. 3 Units.
This course is a seminar in international relations theory. As such, we will bring a wide range of theoretical perspectives to bear on issues and debates in the area of international relations by systematically studying the evolution of the world system. The seminar is roughly divided into a first half focusing on war and the political system, and a second half focusing on trade, finance and the economic system. Each section devotes particular attention to ethical problems associated with political and economic issues. This course should develop students' ability to read and critically evaluate academic literature in the field of international relations, and enable students to produce a scholarly paper on one substantive area of the field. Offered as POSC 378 and POSC 478. Counts as SAGES Departmental Seminar.
POSC 379. Introduction to Middle East Politics. 3 Units.
This is an introductory course about Middle East Politics, in regional as well as international aspects. In this course we will explore broad social, economic, and political themes that have defined the region since the end of World War Two. Since this is an introductory course, a major goal will be to gain comparative knowledge about the region's states and peoples. The countries that comprise the modern Middle East are quite diverse; therefore, we will only be able to focus on a few cases in depth. A second goal is to use the tools and theories social scientists employ to answer broad questions related to the region, such as: How have colonial legacies shaped political and economic development in the Middle East? How do oil, religion, and identity interact with politics? How have external powers affected the region's political development? What do the uprisings of 2011 hold for the region's future? Offered as POSC 379 and POSC 479. Counts for CAS Global & Cultural Diversity Requirement.

POSC 380A. State and War in Africa and the Middle East. 3 Units.
The Middle East, North Africa, and Sub-Saharan Africa remain the most volatile and conflict prone regions of the world. Traditional approaches to war and state conflict have emphasized systemic variables, such as balance of power, military capabilities, perceptions, the security dilemma, and of course anarchy. While these concepts have generated much academic interest, their ability to explain and understand conflict in the developing world is severely limited. This is due to the basic fact that nearly all conflict in the world today is not between states but is taking place within state boundaries. What drives these conflicts? Are there common factors and patterns within the Middle East and Africa? How does sub-state conflict affect political and economic development? What are the most likely resolution strategies? Recommended preparation: POSC 379. Counts as SAGES Departmental Seminar.

POSC 381. City as Classroom. 3 Units.
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface—both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481. Counts for CAS Global & Cultural Diversity Requirement.

POSC 382A. Public Policy in Child Development. 3 Units.
This course introduces students to issues in public policy that impact children and families. Local, state, and federal child policy will be considered, and topics will include, for example, policies related to child poverty, education, child welfare, juvenile justice, and children's physical and mental health. Students will learn how policy is developed, how research informs policy and vice versa, and a framework for analyzing social policy. Recommended preparation: One social sciences course or consent. Offered as ANTH 305, ANTH 405, CHST 301, CHST 401, and POSC 382A.

POSC 382B. Arts Education Advocacy and Policy. 3 Units.
In arts education, policy experts operate as plumbers. They seem to only be acknowledged when a problem occurs—like when a newly implemented policy creates a barrier to licensure or a state department of education changes high school graduation requirements; not to mention perennial budgetary crises that have elective teachers jockeying for legitimacy in the eyes of the decision-makers. Through the study of arts advocacy, political science, and education policy, this course empowers arts advocates and teachers to participate in local policy activism by clarifying their goals and expectations as well as help them explore the education policy quagmire through the arts education lens. Recommended Preparation: moderate understanding of statistical reasoning. Offered as MUED 348, MUED 448, POSC 382B, and POSC 482B. Prereq: Junior or Senior Standing and (STAT 201 or STAT 312 or MATH 121).

POSC 383. Health Policy and Politics in the United States. 3 Units.
Overview of the principal institutions, processes, social forces, and ideas shaping the U.S. health system. Historical, political, economic, and sociological perspectives on the health system are explored as well as the intellectual context of recent policy changes, challenges, and developments. Students will acquire a sense of how health services are financed and delivered in the U.S. They will also learn how to assess its performance compared to that of other similar countries. Offered as POSC 383 and POSC 483.

POSC 384. Ethics and Public Policy. 3 Units.
Evaluation of ethical arguments in contemporary public policymaking discourse. That is, approaches to evaluating not only the efficiency of policy (Will this policy achieve its end for the least cost?) but also the ethics of policy (Are a policy’s intended ends ethically justified or “good,” and are our means to achieve those ends moral or “just”?). Overview of political ideologies that supply U.S. political actors with their ethical or moral arguments when proposing and implementing public policy, followed by an application of these differing perspectives to selected policy areas such as welfare, euthanasia, school choice, drug laws, censorship, or others. Offered as PHIL 384, PHIL 484, POSC 384 and POSC 484.

POSC 385. Doing Government Work: Public Administration in the U.S.. 3 Units.
This course focuses on how governments, particularly governments in the United States, do their work. The topic is often called “public administration," or "implementation," or "bureaucratic politics." It involves what James Q. Wilson calls government "operators" such as teachers, public health doctors, agricultural extension agents, grant administrators and Seal teams. Their actions depend on their own values; conflict among political authorities, and on what is needed to perform specific tasks. We will begin by discussing the challenges of organizing to do anything, or organization theory, turn to the peculiar political context of administration in the United States; and apply these understandings to specific government activities. Students should emerge with a better understanding of why government agencies do what they do, and why they succeed or fail. Offered as POSC 385 and POSC 485. Counts as SAGES Departmental Seminar.
POSC 386. Making Public Policy. 3 Units.
Politics is about who wins, who loses, and why. Policy, by contrast, is often depicted as more "neutral;" policies are the means through which political decisions are carried out. In this class, we examine the notion that policy is the rational, impartial counterpart to the political arena. We will ask: How are public policies made? Why do some issues make it on to the agenda, while others do not? Can we separate facts from values, or are both always contested? We will examine how decision-making in a group introduces distinct challenges for policymaking. The course focuses on widely applicable themes of policymaking, drawing on both domestic and international examples. Offered as POSC 386 and POSC 486.

POSC 388. Politics, Policy, and the Global Environment. 3 Units.
This course examines the law, politics and policy surrounding global environmental challenges such as climate change. The course aims to provide a broad overview of the key concepts, actors, debates, and issues in global environmental politics. It aims to illustrate the complexities of addressing environmental problems—from the proliferation of global institutions and international actors, to the absence of central enforcement mechanisms. We examine the causes of environmental degradation and competing views on the gravity of the problem. Using concepts from political science and economics, we investigate the challenges in getting states to act jointly to address environmental problems. We examine the actors and institutions of global environmental politics, to understand how conditions are defined as problems and responses are chosen and implemented. The course concludes by applying the tools and concepts to the case of climate change. Offered as ESTD 388, POSC 388 and POSC 488.

POSC 389. Special Topics in American Politics and Policy. 3 Units.
Specific topic will vary but will consist of an in-depth investigation of a particular policy area or political phenomenon. Topics will involve policy controversies of some current interest. Offered as AFST 389, POSC 389, and POSC 489.

POSC 390. Special Topics in International Relations. 3 Units.
This course will vary semester to semester and will focus on International Relations topics such as statecraft and diplomacy in contemporary world affairs; weak states and international sovereignty; and transnational soft law. A description of the topic(s) being covered will be available on the political science website each semester that the course is offered. Students may take this course more than once for up to 9 credits, when different topics are covered. Offered as POSC 390 and POSC 490.

POSC 391. Special Topics in Comparative Politics. 3 Units.
This course will vary semester to semester and will focus on comparative politics topics involving political issues and/or controversies of some current interest. These may include some of the following: federal vs unitary political systems, nationalism and national identity, independence movements in developed countries, comparative political behavior, national and supranational political organization, comparative public policy, political violence and violent conflict, comparative political economy, varieties of democracy, the comparative politics of gender, comparative race and ethnicity, among others. A description of the specific course topic focus will be available on the political science website each semester that the course is offered. Students may take this course more than once (up to 9 credits) so long as the topics are different. Offered as POSC 391 and POSC 491.

POSC 395. Special Projects. 1 - 6 Units.
Study of a topic of particular interest, and/or independent academic work associated with an approved internship. The student must submit to the departmental office a project prospectus form, approved and signed by the faculty supervisor, no later than the end of the second week of classes. The prospectus must outline the goals of the project and the research methodology to be used, and is part of the basis for grading. The prospectus form is available from the departmental office or from the department's webpage.

POSC 396. Senior Project SAGES Capstone. 3 Units.
Capstone experience for political science majors or senior POSC minors as part of the SAGES program, providing opportunity to do an in-depth paper on a topic of particular interest to them. Students must obtain approval from a faculty project advisor and list that advisor on the registration form. The advisor must sign and student submit to department a prospectus including goals, schedule, and research methodology. This paper should demonstrate, and ideally even extend, the skills and expertise developed over the course of study in the department. Upon completion of the capstone, students will be expected to present their work in a public forum. Recommended preparation: Junior or Senior political science major or senior political science minor and departmental prospectus form. Counts as SAGES Senior Capstone.

POSC 401. Decision-Making in American Cities. 3 Units.
Localities are the primary interface with government and provide the basic psychological place identification for most Americans. The course will explore this assertion in the context of urban America today. How are decisions made in cities? Who shapes these decisions and why? What role is played by shifting demographics, race, and poverty? What can the individual do to influence local decision-making? Offered as POSC 301 and POSC 401.

POSC 406. Interest Groups in the Policy Process. 3 Units.
Introduction to the institutions and processes that make up the political environment of nonprofit and other organizations in the United States, beginning with an examination of the role of civil society in a democracy and continuing with the framing of issues, role of political entrepreneurs and organized interests, elections, the legislative process and strategies for influencing it, and the roles of executive institutions and the courts. Offered as POSC 306 and POSC 406.

POSC 408. The American Presidency. 3 Units.
The sources of, strategies of, and restraints on presidential leadership in the United States. Emphasis on problems of policy formation, presidential relations with Congress and executive agencies, and the electoral process. Offered as POSC 308 and POSC 408.

POSC 410. Congress in an Era of Polarization. 3 Units.
A study of Congress in the modern era with emphasis on the development of polarization, procedural changes, conflict between the legislative and executive branches during divided government, and the current state of representation. Offered as POSC 310 and POSC 410.
POSC 419. Politics and Money. 3 Units.
One of the most famous definitions of politics comes from Harold Laswell, who described it as the struggle over “who gets what, when, how.” Money is at the center of most political conflict. It is a resource, a motivation, and an end unto itself. This course will examine the role of money in politics, with particular emphasis on American politics. We will discuss the role of money in elections, in the policy-making process, and what it means for representation. The course will begin with the question of the role that financial consideration play in public opinion and voting behavior. We will then address the role that money plays in election results, both in terms of its role in financing campaigns, and the relationship between the state of the economy and election results. Finally, we will discuss the policy-making process. In that context, we will address the role that interest groups play in the process, and how the quest for economic benefits for one’s constituency motivates the behavior of elected officials. We will conclude by discussing how policy changes at the systematic level occur and the influence that various groups have on policy outcomes. Offered as POSC 319 and POSC 419.

POSC 421. News Media and Politics. 3 Units.
Analysis of the political role of the news media in American government and politics. Examines the fascinating relationship between reporters and politicians. Covers the overall structure and legal position of the media as well as the media’s impact on the American political system. Offered as POSC 321 and POSC 421.

POSC 422. Political Movements and Political Participation. 3 Units.
Political Movements and Political Participation is concerned with the variety of ways citizens engage in collective activism in the United States and across national boundaries, and with the conditions under which citizens identify common concerns and join together in political movements to bring about change. The course begins with an examination of three general bodies of theory and research on political movements: resource mobilization, political opportunity structures, and cultural framing. We will also investigate frameworks of political participation for understanding the relationships among different expressions of collective activism and representation. In the context of these sometimes competing theories, we will consider (1) the conditions under which political movements are likely to emerge, as well as the circumstances in which collective political action is precluded; 2) how citizens come to recognize collective grievances and shared political identities; 3) the strategies and tactics of organized movements, and their likelihood of political success; and 4) the relationship between political movements, political parties, and the state. Offered as POSC 322 and POSC 422.

POSC 423. Judicial Politics. 3 Units.
Rejecting the view that judges mechanically apply the law, the study of judicial politics seeks to understand the behavior of judges as political actors with policy goals. Topics include judicial selection and socialization, judicial policy change, judicial strategy (especially the strategic interaction of judges on multi-judge panels), the interaction of courts in hierarchical judicial systems, the policy impact of judicial decisions, and the courts’ interactions with coordinate branches of government (the executive, Congress, state governments, state courts). Primary focus will be on the federal judiciary, with some discussion of state judicial systems. Offered as POSC 323 and POSC 423.

POSC 425. American Constitutional Law. 3 Units.
An introductory survey of U.S. constitutional law. Special attention given to the historical, philosophical, and political dimensions of landmark Supreme Court cases. Judicial review, federalism, separation of powers, due process, and equal protection. Supreme Court’s involvement in major political controversies: the New Deal, abortion, physician-assisted suicide, school desegregation, and affirmative action. Offered as POSC 325 and POSC 425.

POSC 426. Constitutions in Practical Politics. 3 Units.
Overview of ancient Greek and Roman constitution-making, medieval principles, emergence of modern constitutionalism, and the constitutionalist vision of the American and French Revolutions. Examination of contemporary constitutional issues and developments in countries such as Canada, France, Germany, Great Britain, Ethiopia, India, and the United States. Offered as POSC 326 and POSC 426. Counts for CAS Global & Cultural Diversity Requirement.

POSC 427. Civil Liberties in America. 3 Units.
Supreme Court’s interpretation of the First Amendment: liberty of religion through the establishment and free exercise clauses, freedoms of speech and the press, of assembly and association. The “pure tolerance” view examined against subversive speech, “fighting words,” libel, and obscenity. Survey of content-neutral regulation, symbolic expression, and current efforts to limit expression (census speech codes and the feminist anti-pornography movement). Offered as POSC 327 and POSC 427.

POSC 428. Topics in Civil Liberties. 3 Units.
Rights of the accused as outlined in the Fourth, Fifth, Sixth, and Eighth Amendments. Topics covered are (1) arrests, searches, and seizures, (2) the privilege against compelled self-incrimination, (3) the rights to counsel, confrontation, and jury trial, and (4) the prohibition against cruel and unusual punishments. Case-specific approach but presents interplay of history, philosophy, and politics as background of each topic. Offered as POSC 328 and POSC 428.

POSC 434. Comparative Political Violence. 3 Units.
This is a non-standard, simulation-based course analyzing the causes and processes of political violence in comparative perspective. The course begins by engaging some classic philosophical work on power, conflict, and violence. It then moves to specific cases drawn at different historical periods and from across the world (North America, Asia, Africa, and the Middle East). For each case, students are organized into groups representing actual political actors. Collaborative research and written assignments serve to prepare each group for an in-class simulation exercise. Simulations vary in format and goals but each comprises a group grade and an individual written project. Offered as POSC 334 and POSC 434. Counts for CAS Global & Cultural Diversity Requirement.

POSC 441. US Political Parties and Elections. 3 Units.
Political Parties and Elections examines the development and history of political parties in the US, examining the impact of electoral systems and law at the national and local levels, the impact on key events in shaping the parties’ ideologies, policy preferences, and core constituencies. The course reviews key party realignments and asks whether the US is experiencing a party realignment in response to party polarization and populist challenges. It also considers candidate emergence, campaign strategies, and campaign finance in the context of the US political party system. Offered as POSC 341 and POSC 441.

POSC 443. Public Opinion and American Democracy. 3 Units.
Examination of theories, concepts, and empirical research related to attitudes and the political behavior of mass publics. Offered as POSC 343 and POSC 443.
POSC 446. Women, Power, and Politics. 3 Units.
Women, Power, and Politics involves a critical examination of the impact of gender on the forms and distributions of power and politics, with primary reference to the experience of women in the United States. Major concerns of the course include the political meanings and import of "sex," "gender," and "politics," the relationship between women and the state; how women organize collectively to influence state policies; and how the state facilitates and constrains women's access to and exercise of political power. The course is organized around four foci central to the study of women and politics. The first section of the course focuses on the meanings of "women," "gender," and "politics." In this section, we will consider how these concepts intersect and the ways in which each may be used to deepen our understanding of the workings of governments and political systems, and of women's relative political powerlessness. The second section of the course employs these concepts to understand the (re) emergence of the US feminist movement, its meanings, practices, and goals, and its transformation across US political history. In the third section, we turn to conventional electoral politics, focusing on women's candidacies, their campaigns, and women's voting behavior. In the final section of the course, we consider those general factors that might provide for increased gender equality and improved life status for women, in global, comparative perspective. Offered as POSC 346, POSC 446 and WGST 346. Counts as SAGES Departmental Seminar.

POSC 449. Political Science Research Methods. 3 Units.
This course examines approaches that political scientists use to understand events and processes. In doing so, the course provides students with skills helpful to completing senior projects, such as the ability to evaluate and conduct research. Through exercises and projects, students will take part in the research process from constructing a question to developing a research design to interpreting results. Students will learn and apply key techniques, including inductive and deductive reasoning, hypothesis construction, operationalization of concepts, measurements, sampling and probability, causal inference, and the logic of controls. They will produce materials common to the discipline, such as research designs. Offered as POSC 349 and POSC 449. Counts as SAGES Departmental Seminar.

POSC 451. Modern Political Thought. 3 Units.
Examination of a limited topic in the study of modern political thought. Topics vary. Offered as POSC 351 and POSC 451.

POSC 452. American Political Thought. 3 Units.
Examination of the unique contribution to the science of government made by American political thinkers. Offered as POSC 352 and POSC 452.

POSC 453. Political Thought and Political Change in China. 3 Units.
"No state is forever strong or forever weak," said Han Feizi, China's great legalist philosopher. He believed that as a country's conditions changed, the laws and institutions had to change to meet these new circumstances. China today faces new circumstances that have caused deep and broad challenges to its people. This has prompted serious debate among intellectuals, leaders, and average citizens about the possibility for and direction of political reform. But what might that reform look like, and how would it be conceived, if it could overcome the current barriers? This seminar will provide a fuller understanding of China's potential for political change by examining Chinese political thought from Confucius, Mencius and Han Feizi through Mao Zedong and Deng Xiaoping. These and other political philosophies have influenced China's political culture, which will influence the form of any change. Offered as POSC 353 and POSC 453.

POSC 454. Political and Social Philosophy. 3 Units.
Justification of social institutions, primarily political ones. Such distinctions as that between de facto and legitimate authority; analysis of criteria for evaluation, such as social justice and equality; inquiry into theories of justification of the state; theory of democratic government and its alternatives. Readings from classical and contemporary sources. Recommended preparation: PHIL 101. Offered as PHIL 334, POSC 354, PHIL 434, and POSC 454.

POSC 455. Modern Political Ideologies. 3 Units.
Substance and nature of ideological thinking in the contemporary world via a survey of political "isms"—for example, liberalism, libertarianism, conservatism, fascism, socialism, and even more recent trends such as feminism, environmentalism, etc. Offered as POSC 355 and POSC 455.

POSC 456. Transitions to Democracy and Dictatorship. 3 Units.
Everyday life is dramatically different depending on whether one resides in a democracy or under a dictatorship. This course examines why some countries have democracies and others dictatorships. It explores successful, incomplete, and failed transitions to democracy. The incomplete transitions result in hybrid regimes, stuck between democracy and dictatorship, and the outright failures result in nondemocracies, such as dictatorships. The course examines examples from most regions of the world, including Africa, Asia, Europe, the Middle East, the former Soviet Union, North America, and South America. Offered as POSC 356 and POSC 456. Counts for CAS Global & Cultural Diversity Requirement.

POSC 458. Political Strategy. 3 Units.
This course examines practical applications of prominent political science theories. It is partly a how-to course covering a broad range of political activities, but the primary objective is to link practical issues with theories to help you understand why events happen the way they do. The course focuses on American politics, but the materials will be applicable to a wide range of situations. The course is a seminar requiring regular student presentations that will generate discussion about the readings and current events. Papers consist of analysis of current events, and require students to analyze the strategies used by prominent figures in the context of the theories we discuss in class. Offered as POSC 358 and POSC 458. Counts as SAGES Departmental Seminar.

POSC 460. Revolts and Revolutions in Global Perspective. 3 Units.
The Arab protests of 2011 gripped the attention of the world. Young protestors succeeded in unseating some long time rulers but in other cases tense standoffs have evolved. This course takes those events as a starting point to examine the broader political history of revolts and revolutions in the global south. The first part of the course examines some of the classic social science debates about what constitutes revolution, what leads to revolution, and what the effects can be. The second part of the course analyzes specific cases in Europe, Latin America, Africa, and Asia to understand the causes and consequences of revolt and revolution. What drives everyday persons to brave the dangers of protest? When and why do political leaders decide to resist or reform? What happens when revolts fail? What happens when they succeed? Material for the course will include classic social science narratives, revolutionary polemics, popular analyses of events since 2011, examples of social media as political action, and first person narratives. Offered as POSC 360 and POSC 460. Counts for CAS Global & Cultural Diversity Requirement.
POSC 463. The Politics of Electoral Systems. 3 Units.
Elections involve more than a simple act of voting to express individual preferences. The rules under which countries conduct elections determine who controls the executive and how votes are converted into legislative seats. The mechanics of various electoral arrangements will be examined in detail and the consequences for the political system discussed in terms of strategies and desired outcomes on the part of contestants in terms of democratic representation. Students will research individual countries and analyze recent elections from both qualitative and quantitative perspectives. Offered as POSC 363 and POSC 463. Counts as SAGES Departmental Seminar.

POSC 464. Dictatorship and Democracy in Modern Latin America. 3 Units.
Examination of political leadership in 20th-century Latin America, exploring the nature, causes, and consequences of dictatorship and democracy in the region, moving from the collapse of oligarchic rule and the emergence of populism in the 1930s and 1940s, to the end of democracy and establishment of military regimes in the 1960s and 1970s, and ultimately to the contemporary processes of democratization and economic liberalization. Offered as ETHS 364, POSC 364, and POSC 464. Counts for CAS Global & Cultural Diversity Requirement.

POSC 467. Western European Political Systems. 3 Units.
Comparative analysis of sociopolitical systems of selected Western European industrial democracies, using North American systems as a point of comparison. Offered as POSC 367 and POSC 467.

POSC 469. Social Justice Issues in Latin America. 3 Units.
This course explores ethnicity, gender, and religion in Latin American politics and society, and then tackles revolution, democracy, and populism. Throughout, the region's history, geography, and culture are taken into account—for example, the European and indigenous legacies in Mexico and Perú; Bolivia, Chile, and Ecuador; the Asian presence in Perú and Brazil; the African contributions to Cuba and Brazil; female heads of state, such as Nicaragua's Violeta Chamorro, Chile's Michelle Bachelet, Argentina's Cristina Fernández de Kirchner, Costa Rica's Laura Chinchilla, and Brazil's Dilma Rousseff. Liberation Theology and the current Pope's worries about the declining number of Catholics in the region are also addressed. Today's multiparty democracy in Mexico, Hugo Chávez's legacy in Venezuela, and Cuba's international humanitarian aid and ideological aims would not be possible without revolution(s) and populism. They are inevitably intertwined with ethnicity, gender, and religion. This course aims to encourage a better understanding of Latin America and its relation to the rest of the world. Offered as ETHS 369, POSC 369 and POSC 469. Counts for CAS Global & Cultural Diversity Requirement.

POSC 470A. Political Economy. 3 Units.
Focus on debates concerning the proper relationship between political and economic systems, including conservative, liberal, and radical perspectives. The politics of international economics and the economics of international politics receive separate attention. The course concludes with study of "modern" political economy and the application of economic theory to the study of political systems. Offered as POSC 370A and POSC 470A.

POSC 470C. The United States and Asia. 3 Units.
Survey and analysis of U.S.-Asia relations in the post-World War II period. Focus specifically is on the interaction of politics and economics in the United States' relations with Japan, China, and Southeast Asian countries. Topics will include the role of Asia in U.S. Cold War policies, the dynamics of U.S.-Japan alliance politics, post-Cold War issues involving U.S. foreign policy toward Asia, a history and analysis of economic conflict cooperation, and an examination of the move toward Asia-Pacific "regionalism." Offered as POSC 370C and POSC 470C.

POSC 470D. The Politics of China. 3 Units.
Now more than ever, the Chinese state and society are facing tremendous economic, social, and political challenges. This course presents an overview of current issues facing the People's Republic, including a changing (or not) political culture, policy processes and outcomes at the national and local levels, reform and economic growth, the resultant societal changes and pressures, and the consequent challenges to the Communist Party faces as demand for political reform grows. The class involves a mixture of lectures and discussion and draws on a combination of primary and secondary sources, including current news reports and films. Offered as POSC 370D and POSC 470D. Counts for CAS Global & Cultural Diversity Requirement.

POSC 470F. Financial Politics in the United States and the World. 3 Units.
This course explores how political institutions make policy in the financial area with particular emphasis on the United States. Using a bureaucratic politics framework, it examines money, banks and the securities industry by integrating a wide range of literature in economics and political science. Specific objectives include familiarizing students with different approaches to the political economy of finance from different disciplines, exploring the historical evolution of finance, examining the changing relationship between public and private authority within the financial system, considering how politics operates in a crisis, and evaluating the role of international financial institutions in the global economy. By taking this course, students will equip themselves for further research into politics and economics, as well as offer them tools to analyze future policy developments as they unfold. Offered as POSC 370F and POSC 470F.

POSC 470H. China's Foreign Policy. 3 Units.
The rise of China is evident in the country's more forward and robust foreign policy that began in 1979. At every turn, nations throughout the world must now consider China wherever their interests are at stake, be it Korea and Northeast Asia, Indochina and Southeast Asia, India/Pakistan and South Asia, or Afghanistan and Iran in the Middle East, not to mention the many African states that welcome Chinese investment but chafe at China's presence. Further, China is increasingly aggressive in international trade, a major determinant of its foreign policy. This course describes the key factors that make up Chinese foreign policy, including its cultural tradition, policy-making institutions, the role of the military, and domestic determinants of foreign policy. The course also examines China's ever-changing foreign policy strategies, from an aggressive posture to charming its neighbors only to become more strident once again. The course will also examine China's role involving possible mercantilism, currency manipulation, and the hunt for traditional and alternative energy sources. Throughout the course, we will pay attention to how China's foreign policy relates to international relations theories and what strategies might be used to manage China's growing role in international affairs. Offered as POSC 370H and POSC 470H. Counts for CAS Global & Cultural Diversity Requirement.
POSC 470J. International Law and Organizations. 3 Units.
Study of international organizations and international law as two means for regulating and coordinating nation-state behavior. History of the two techniques will be traced, covering 19th century efforts at cooperation, the League of Nations and the United Nations, regional and specialized global organization. The functions of international law in global politics will be stressed, with primary focus on the evolving role of law in dealing with global problems, e.g., war, the environment, economic cooperation, and human rights. Offered as POSC 370J and POSC 470J.

POSC 470M. Theories of Political Economy. 3 Units.
This course is a SAGES departmental seminar in political economy that brings a wide range of theoretical perspectives to bear on the relations between market and state in the contemporary world. It focuses on three questions: What have been the major debates concerning the role of the government in the economy? How were these debates resolved in the compromise of embedded liberalism, and What experiences have individual states had with these questions of political economy? To answer these questions, we will read original literature to uncover the connections among politics, economics, and the world of ideas that has resulted in the political debates we confront today. Offered as POSC 370M and POSC 470M. Counts as SAGES Departmental Seminar.

POSC 470N. Economics and Politics in Global Governance. 3 Units.
The political and economic dynamics at work in a country both establish the conditions leading up to crises and frame the policy choices available to resolve it. This course addresses these interactive dynamics by combining the research and career expertise of the discipline of Political Science and Macroeconomics and Financial Regulation in a team-taught course. It explores how financial crises have been managed in world history by paying particular attention to the way governance structures operate to help or hurt the outcome. The emphasis combines a sophisticated understanding of the mechanics of the intervention as well as the politics inside each International Financial Institution involved. Specifically, the course begins by reviewing the history of the Federal Reserve and the gold standard, the Great Depression and the operations of the Bretton Woods System. Next, it looks at the sovereign debt crises of the 1980s and the International Monetary Fund. It picks up the history with Japan's crisis in the 1990s and the later interventions of the International Monetary Fund, Bank for International Settlements, Federal Reserve, European Commission, and European Central Bank to the present era. Offered as POSC 370N and POSC 470N.

POSC 471. Natural Resources and World Politics. 3 Units.
Examination of the political causes and ramifications of the uneven distribution of the valuable natural resources for modern industrial societies. Strategic and military issues and the exploitation of the seabed. Examination in some detail of selected commodity issues, including petroleum, copper and uranium. Offered as POSC 371 and POSC 471.

POSC 473. Politics of the European Union. 3 Units.
The evolution of the European Union ranks among the most significant developments in contemporary European and international history. It is an extraordinary illustration of successful cooperation among sovereign countries and a fascinating laboratory for political scientists and others interested in the building of politics, markets and societies. Yet scholars have disagreed about nearly every important aspect of its origins, nature and implications; and with the United Kingdom's departure (Brexit), the pandemic and its consequences, democratic backsliding (in some member states) and other crises, they are arguing about whether and how the EU can endure recent and future challenges. The seminar's readings, discussions and written assignments will introduce students to the main debates and cover past and ongoing developments. Offered as POSC 373 and POSC 473.

POSC 474. Politics of Development in the Global South. 3 Units.
Exploration of the post-World War II emergence of the Global South nations of Africa, Asia, the Middle East, Latin America, and the Eastern Europe arena. Offered as ETHS 374, POSC 374, and POSC 474.

POSC 475. The International Politics of Technology. 3 Units.
Technology is deeply political. Nowhere is this statement more evident than in the realm of international relations, where governments perceive technology as a source of power and wealth and a symbol of relative position and modernity. Yet for centuries skeptics have questioned the economic rationale of government technology policies. Still, to this day, countries support emulation, innovation and a host of other strategies as means for catching up with leading nations or locking in current advantages. What lies behind such policies? What do they accomplish? And what are the domestic and international politics surrounding them? After reading classic arguments, including texts by Adam Smith, Alexander Hamilton and Friedrich List, students will consider 20th and 21st century debates and an array of experiments tried by poor, middle-income and rich countries. Cases include the development of new industries; the imposition of sanctions; the dilemma of dual technologies and military spillovers; the forging of national champions; the reorganization of banks and the creation of international financial centers; the copying of regional clusters (e.g. Silicon Valley) and stock markets (e.g. the Nasdaq); and the extraterritorial extension of domestic regulation and governance techniques. There are no prerequisites and first year students are welcome. Offered as POSC 375 and POSC 475. Counts as SAGES Departmental Seminar.

POSC 476. United States Foreign Policy. 3 Units.
Focus on U.S. foreign policy making with a dynamic network of executive and congressional actors and organizations; analysis of traditional and contemporary U.S. foreign policies from nuclear defense to current economic resource issues; future role of the United States in world affairs. Offered as POSC 376 and POSC 476.

POSC 477. Politics of Russia. 3 Units.
Russia faces three problems: the creation of a sovereign state, the development of a new political system, and the restructuring of its economy. In this course we will challenge the assumption that the outcome of these three transitions will be a strong, democratic, capitalist country. We will ask whether civil war, organized crime, an immature political system will bring a wide range of theoretical perspectives to bear on the relations between market and state in the contemporary world. It focuses on three questions: What have been the major debates concerning the role of the government in the economy? How were these debates resolved in the compromise of embedded liberalism, and What experiences have individual states had with these questions of political economy? To answer these questions, we will read original literature to uncover the connections among politics, economics, and the world of ideas that has resulted in the political debates we confront today. Offered as POSC 370M and POSC 470M. Counts as SAGES Departmental Seminar.

POSC 478. International Relations Theory. 3 Units.
This course is a seminar in international relations theory. As such, we will bring a wide range of theoretical perspectives to bear on issues and debates in the area of international relations by systematically studying the evolution of the world system. The seminar is roughly divided into a first half focusing on war and the political system, and a second half focusing on trade, finance and the economic system. Each section devotes particular attention to ethical problems associated with political and economic issues. This course should develop students' ability to read and critically evaluate academic literature in the field of international relations, and enable students to produce a scholarly paper on one substantive area of the field. Offered as POSC 378 and POSC 478. Counts as SAGES Departmental Seminar.
POSC 482. Arts Education Advocacy and Policy. 3 Units.
In arts education, policy experts operate as plumbers. They seem to only be acknowledged when a problem occurs - like when a newly implemented policy creates a barrier to licensure or a state department of education changes high school graduation requirements; not to mention perennial budgetary crises that have elective teachers jockeying for legitimacy in the eyes of the decision-makers. Through the study of arts advocacy, political science, and education policy, this course empowers arts advocates and teachers to participate in local policy activism by clarifying their goals and expectations as well as help them explore the education policy quagmire through the arts education lens. Recommended Preparation: moderate understanding of statistical reasoning. Offered as MUED 348, MUED 448, POSC 382B, and POSC 482B.

POSC 483. Health Policy and Politics in the United States. 3 Units.
Overview of the principal institutions, processes, social forces, and ideas shaping the U.S. health system. Historical, political, economic, and sociological perspectives on the health system are explored as well as the intellectual context of recent policy changes, challenges, and developments. Students will acquire a sense of how health services are financed and delivered in the U.S. They will also learn how to assess its performance compared to that of other similar countries. Offered as POSC 383 and POSC 483.

POSC 484. Ethics and Public Policy. 3 Units.
Evaluation of ethical arguments in contemporary public policymaking discourse. That is, approaches to evaluating not only the efficiency of policy (Will this policy achieve its end for the least cost?) but also the ethics of policy (Are a policy’s intended ends ethically justified or “good,” and are our means to achieve those ends moral or “just”?). Overview of political ideologies that supply U.S. political actors with their ethical or moral arguments when proposing and implementing public policy, followed by an application of these differing perspectives to selected policy areas such as welfare, euthanasia, school choice, drug laws, censorship, or others. Offered as PHIL 384, PHIL 484, POSC 384 and POSC 484.

POSC 485. Doing Government Work: Public Administration in the U.S.. 3 Units.
This course focuses on how governments, particularly governments in the United States, do their work. The topic is often called "public administration," or "implementation," or "bureaucratic politics." It involves what James Q. Wilson calls government "operators" such as teachers, public health doctors, agricultural extension agents, grant administrators and Seal teams. Their actions depend on their own values; conflict among political authorities, and on what is needed to perform specific tasks. We will begin by discussing the challenges of organizing to do anything, or organization theory, turn to the peculiar political context of administration in the United States; and apply these understandings to specific government activities. Students should emerge with a better understanding of why government agencies do what they do, and why they succeed or fail. Offered as POSC 385 and POSC 485. Counts as SAGES Departmental Seminar.

POSC 486. Making Public Policy. 3 Units.
Politics is about who wins, who loses, and why. Policy, by contrast, is often depicted as more "neutral," policies are the means through which political decisions are carried out. In this class, we examine the notion that policy is the rational, impartial counterpart to the political arena. We will ask: How are public policies made? Why do some issues make it on to the agenda, while others do not? Can we separate facts from values, or are both always contested? We will examine how decision-making in a group introduces distinct challenges for policymaking. The course focuses on widely applicable themes of policymaking, drawing on both domestic and international examples. Offered as POSC 386 and POSC 486.

POSC 488. Politics, Policy, and the Global Environment. 3 Units.
This course examines the law, politics and policy surrounding global environmental challenges such as climate change. The course aims to provide a broad overview of the key concepts, actors, debates, and issues in global environmental politics. It aims to illustrate the complexities of addressing environmental problems from the proliferation of global institutions and international actors, to the absence of central enforcement mechanisms. We examine the causes of environmental degradation and competing views on the gravity of the problem. Using concepts from political science and economics, we investigate the challenges in getting states to act jointly to address environmental problems. We examine the actors and institutions of global environmental politics, to understand how conditions are defined as problems and responses are chosen and implemented. The course concludes by applying the tools and concepts to the case of climate change. Offered as ESTD 388, POSC 388 and POSC 488.
POSC 489. Special Topics in American Politics and Policy. 3 Units.
Specific topic will vary but will consist of an in-depth investigation of a particular policy area or political phenomenon. Topics will involve policy controversies of some current interest. Offered as AFST 389, POSC 389, and POSC 489.

POSC 490. Special Topics in International Relations. 3 Units.
This course will vary semester to semester and will focus on International Relations topics such as statecraft and diplomacy in contemporary world affairs; weak states and international sovereignty; and transnational soft law. A description of the topic(s) being covered will be available on the political science website each semester that the course is offered. Students may take this course more than once for up to 6 credits, when different topics are covered. Offered as POSC 390 and POSC 490.

POSC 491. Special Topics in Comparative Politics. 3 Units.
This course will vary semester to semester and will focus on comparative politics topics involving political issues and/or controversies of some current interest. These may include some of the following: federal vs unitary political systems, nationalism and national identity, independence movements in developed countries, comparative political behavior, national and supranational political organization, comparative public policy, political violence and violent conflict, comparative political economy, varieties of democracy, the comparative politics of gender, comparative race and ethnicity, among others. A description of the specific course topic focus will be available on the political science website each semester that the course is offered. Students may take this course more than once (up to 9 credits) so long as the topics are different. Offered as POSC 391 and POSC 491.

POSC 495. Independent Study. 3 Units.
Graduate level independent study taken for a grade.

POSC 651. Thesis M.A.. 1 - 6 Units.
Independent study of a research question and completion of a major research paper. An approved prospectus is required. Prereq: Graduate standing.

POSC 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

WASH (WASH)

WASH 2A. Washington Center Internship. 9 Units.
Credit for semester-length internship experience taken as part of the Washington Center Program during Fall or Spring terms.

WASH 2B. Washington Center - Politics and Public Policy Course. 3 Units.
Credit for the Politics and Public Policy course taken as part of the Washington Center Program.

WASH 2C. Washington Center - Portfolio. 3 Units.
Credit for the student’s portfolio taken as part of the Washington Center Program.

WASH 2D. Washington Center Summer Internship. 3 Units.
Credit for semester-length internship experience taken as part of the Washington Center Program during Summer term.

Post-baccalaureate Readiness Instruction for bioMedical Education (PRIME) Certificate Program

www.case.edu/medicine/prime/ (http://www.case.edu/medicine/prime/)
Phone: 216.368.5296
Anthony Saar, MEd, Program Director
prime@case.edu

PRIME is a post-baccalaureate certificate (non-degree) program for students who need additional preparation to have a competitive application for MD or DO programs.

This program is designed for two types of students:

• Career changers – students who have not yet completed all their pre-med requirements
• Academic enhancers – students who need to improve their undergraduate GPA and their foundation in key pre-med content

Key features of this program include:

• A highly flexible and individually tailored program of study providing each student the preparation that they need to be competitive applicants
• A dedicated program director who has experience advising for medical school admissions and who meets regularly with students one-on-one
• Problem-based Clinical Inquiry (IQ) coursework designed to give students exposure to medical terminology and clinical reasoning and develop professional growth via self-reflection
• Specialized Medical College Admissions Test (MCAT) preparatory course designed to comprehensively review all MCAT content areas, as well as testing methods.
• Diverse opportunities for shadowing, volunteering, and research in affiliation with four world-class health systems (Cleveland Clinic, University Hospitals Cleveland Medical Center, Louis Stokes Cleveland VA Medical Center, and MetroHealth Medical Center)
• Opportunity to interview with the CWRU School of Medicine for select students

The PRIME program is highly flexible. To earn the certificate, students must complete at least 24 credit hours. A program of study must be approved by the program director. Each student will work closely with the program director to tailor the program to their needs. Based on their previous coursework, some students may need to take more than 24 credit hours to complete the prerequisite courses for medical school and earn the PRIME certificate. This program can be completed in 1-2 years, depending on a student’s individual needs.

professionals. For graduate students, our Psychology Program offers and in psychology. We also offer a minor in communication for health communication sciences departments. Our distinctive department found in many psychology departments with those typically found in The Department of Psychological Sciences combines the areas of study healthcare.demaree@case.edu Heath Demaree, Department Chair http://psychsciences.case.edu

Elective Coursework
In consultation with the program director, students will develop the best program of study for their needs. Typically, if a student has already taken the medical school prerequisites but needs to improve their overall undergraduate GPA, taking upper-level undergraduate courses would show more rigor than retaking lower-level courses. With successful grades, a student's undergraduate GPA will also improve.

Students who have completed some of the required courses prior to the start of the program would be eligible for exemption from taking them for the certificate. Depending on their grades, they may waive the required courses with the program director's approval. Students may also elect to retake these courses for reference and/or to improve their undergraduate GPA.

Elective Coursework
In consultation with the program director, students will develop the best program of study for their needs. Typically, if a student has already taken the medical school prerequisites but needs to improve their overall undergraduate GPA, taking upper-level undergraduate courses would show more rigor than retaking lower-level courses. With successful grades, a student's undergraduate GPA will also improve.

Students may take additional elective coursework (http://casemed.case.edu/gradprog/PRIME/electives.php) across the university with program director and instructor approval. Although science and math classes will be the primary focus for most students, some students may also seek to take graduate coursework to demonstrate academic rigor. Further, some students may also elect to take other courses based on interests or a desire to improve technical skills (such as writing or language skills).

Department of Psychological Sciences
http://psychsciences.case.edu
Heath Demaree, Department Chair
heath.demaree@case.edu

The Department of Psychological Sciences combines the areas of study found in many psychology departments with those typically found in communication sciences departments. Our distinctive department offers undergraduate majors and minors in communication sciences and in psychology. We also offer a minor in communication for health professionals. For graduate students, our Psychology Program offers accredited doctoral training in clinical psychology and experimental psychology within our Developmental, Cognitive and Affective Sciences Program. Our accredited Communication Sciences Program offers a master's degree in speech-language pathology as well as a doctorate in communication sciences.

Communication Sciences
Cleveland Hearing & Speech Center, 11635 Euclid Ave, Room 333
Phone: 216.368.2470

The Department of Psychological Sciences offers courses of study in communication sciences leading to Bachelor of Arts, Master of Arts, and Doctor of Philosophy degrees. The Communication Sciences Program prepares undergraduate and graduate students to address broad issues of human communication processes and disorders through the application of cutting-edge technology and rigorous clinical training. We provide a comprehensive foundation in normal and disordered human communication and combine it with innovative interdisciplinary experiences that capitalize on the extensive resources of the university and the surrounding medical community. The department enjoys a particularly close relationship with Cleveland Hearing & Speech Center (http://www.chsc.org), an outstanding independent, nonprofit provider of care in speech-language pathology and audiology; in fact, the program is housed within the center.

Many students pursue undergraduate study in communication disorders as preparation for further study in other fields or in conjunction with study in other fields. For example, one can combine a major in communication disorders with a major in sociology or psychology or with a minor in gerontological studies. Professionals in human services fields such as medicine, social work, nursing, or education often work with persons with communication disorders. For students interested in academic or research careers, investigation in the field of communication disorders is often done alongside investigation of normal human behavior. For example, one might study the word learning of children with normal language as well as that of children with language impairment.

Psychology
103 Mather Memorial Building
Phone: 216.368.2686

The Psychology Program offers the combined advantages of a strong liberal arts college and a major university. There are classes in all major areas of the psychology field. We encourage close student-faculty relationships and offer many opportunities for individualized study and research.

Psychology is the study of the mind and behavior. The discipline embraces all aspects of the human experience: from the functions of the brain to the actions of neurons, from child development to care for the aged. In settings ranging from scientific research centers to mental health care services, "the understanding of behavior" is the enterprise of psychologists. An undergraduate major in psychology offers a student preparation for a wide variety of careers. Many majors find psychology to be an excellent preparation for such service-oriented professions as social work, counseling and guidance, special education, and management. Those who pursue graduate work in one of the many fields of psychology often seek positions in teaching and research or applied human services. In addition, the study of psychology provides a knowledge and an understanding of behavior that has applications

Department Faculty

Heath A. Demaree, PhD
(Virginia Polytechnic Institute and State University)
Professor and Chair
Cerebral and psychophysiological bases of emotion

Jennifer L. Butler, PhD
(Case Western Reserve University)
Instructor
Social psychology

Lauren Calandrucio, PhD
(Syracuse University)
Associate Professor and Louis D. Beaumont University Professor II
Audiology

Angela Hein Ciccia, PhD
(Case Western Reserve University)
Associate Professor
Neuroscience of communication and communication disorders in adolescents/adults, with focus on traumatic brain injury

Arin M. Connell, PhD
(Emory University)
Professor
Internalizing problems; coping skills during adolescence

Anastasia Dimitropoulos, PhD
(Vanderbilt University)
Associate Professor; Director, Schubert Center for Child Studies
Genetic syndromes involving intellectual disabilities; compulsive behavior in MR/DD; functional neuroimaging

Julie J. Exline, PhD
(State University of New York, Stony Brook)
Professor
Social relationships; transgression; moral and religious issues

Norah C. Feeny, PhD
(Bryn Mawr College)
Professor
Evaluation of interventions for anxiety (e.g., post-traumatic stress disorder) and mood disorders

Grover C. Gilmore, PhD
(Johns Hopkins University)
Professor; Dean, Jack, Joseph and Morton Mandel School of Applied Social Sciences
Perceptual development and aging; visual information processing; memory; psychophysics

Robert L. Greene, PhD
(Yale University)
Professor
Human memory and cognition

Barbara Lewis, PhD
(Case Western Reserve University)
Professor
Familial and genetic bases of speech/language

Sarah Hope Lincoln, PhD
(Harvard University)
Assistant Professor
Social factors implicated in the etiology, trajectory, and treatment of mental illness

Brooke Macnamara, PhD
(Princeton University)
Associate Professor
Cognitive psychology, skill acquisition, learning, human performance, working memory, cognitive control, bilingualism, and communication

Kathryn (Kay) McNeal, MS, CCC-SLP
(Purdue University)
Instructor
Speech-language pathology

Rachel Mulheren, PhD
(University of New York)
Assistant Professor
Cognitive psychology, skill acquisition, learning, human performance, working memory, cognitive control, bilingualism, and communication

Kathryn (Kyra) Rothenberg, PhD
(Kent State University)
Instructor
Health communication

Sandra W. Russ, PhD
(University of Pittsburgh)
Distinguished University Professor and Louis D. Beaumont University Professor
Creativity; affective development in children; personality assessment; coping mechanisms in children

Elizabeth J. Short, PhD
(University of Notre Dame)
Professor
Cognitive psychology; applied developmental; learning disabilities
Lee A. Thompson, PhD
(University of Colorado, Boulder)
Professor; Associate Dean, College of Arts and Sciences
Human behavior genetics; child development

Lecturer
Patrice O. Carothers, MS, CCC-A
(Ithaca College)
Part-time Lecturer
Fluency disorders

Adjunct Faculty
Kelly Bhatnagar, PhD
(Case Western Reserve University)
Adjunct Assistant Professor; The Emily Program
Rachel Berkowitz, MA, CCC-SLP
Adjunct Instructor; Mayfield City School District
Laura Brady
Adjunct Instructor, Cleveland Hearing and Speech Center
Lisa Bruening
Adjunct Instructor; ALS Association
Jane R. Buder-Shapiro, PhD
Adjunct Assistant Professor; private practice
Barbara Choudhury, MA, CCC-SLP
(Case Western Reserve University)
Adjunct Instructor; Cleveland Hearing & Speech Center
Speech-language pathology
Kelly Christian, PhD
(Case Western Reserve University)
Adjunct Assistant Professor; Lawrence School
Michael Christie
Adjunct Assistant Professor; Private Law Practice
Tori Cordiano, PhD
(CWRU)
Adjunct Assistant Professor; private practice
Matthew Daly, PhD
Adjunct Assistant Professor; Ohio Department of Mental Health
Barbara Ekelman, PhD
Adjunct Associate Professor; PT MED - Pediatrics
Pediatrics
Christine Elliot, PhD
Adjunct Assistant Professor; Renew Psychological Services
Thomas Ference, PhD
Adjunct Assistant Professor; Northcoast Behavioral Healthcare
Michelle Foye, MA, CCC-SLP
(Kent State University)
Adjunct Instructor, Cleveland Hearing & Speech Center
Speech-language pathology

Thomas Frazier, PhD
Adjunct Assistant Professor; The Cleveland Clinic
Zara Gennert, PhD
Adjunct Instructor, University Hospitals Richmond Medical Center
Nicole Gerami
Adjunct Instructor; Western Reserve Speech and Language Partners
Clare Gideon, PhD
Adjunct Assistant Professor; Louis Stokes VA Medical Center

Lucene Wisniewski, PhD  
Adjunct Assistant Professor; The Emily Program

Leslie Heinberg, Ph.D.  
Professor; Cleveland Clinic Lerner College of Medicine of CWRU

Monica Hooper, PhD  
Professor; MED - Division of General Medical Sciences

Alissa Huth-Bocks, PhD  
Professor; School of Medicine - Pediatrics

Anthony Jack, PhD  
(University College London)  
Associate Professor, Department of Philosophy

Gunnur Karakurt, PhD  
Assistant Professor; MED - Family Medicine

Cynthia Kubu, PhD  
Professor; Psychiatry - Psychology, Cleveland Clinic

Carolyn Landis, PhD  
Associate Professor, School of Medicine/Rainbow Babies and Children's Hospital

Aarti Pyati, PhD  
(University of Chicago)  
Adjunct Assistant Professor; University Counseling Services

Natalie Reiss, PhD  
Clinical Instructor, CWRU - University Counseling Services

Lynn Singer, PhD  
Professor, School of Medicine/University Hospitals

Terry Stancin, PhD  
Professor, School of Medicine/MetroHealth Medical Center

Thomas P. Swales, PhD  
Assistant Professor, School of Medicine/MetroHealth Medical Center

Gerry Taylor, PhD  
Professor, Department of Pediatrics, School of Medicine

Abraham Wolf, PhD  
Professor, Department of Psychiatry, School of Medicine

James M. Yokely, PhD  
Assistant Professor, Department of Psychiatry, School of Medicine

Secondary Faculty

Britt Nielsen  
Associate Professor; School of Medicine - Psychiatry

Jennifer Anderson, PhD  
Clinical Instructor; School of Medicine - Pediatrics

Richard E. Boyatzis, PhD  
Professor of Organizational Behavior, Weatherhead School of Management

Alan Castro, PhD  
Senior Instructor; University Hospitals Case Medical Center

Howard Hall, PsyD, PhD  
Associate Professor, School of Medicine/Rainbow Babies and Children's Hospital

Rebecca Hazen, PhD  
Assistant Professor, School of Medicine/Rainbow Babies and Children's Hospital

Clinical Faculty

Kathleen Ashton, PhD  
(Ohio State University)  
Clinical Instructor  
Bariatrics

Karen Kernberg Bardenstein, PhD  
Adjunct Assistant Professor; private practice

Karen Broer, PhD  
Clinical Instructor; Cleveland Clinic

Richard A. Cirillo, PhD  
Clinical Assistant Professor; Cuyahoga County Board of Mental Health and Developmental Disabilities
Communication Sciences

Major in Communication Sciences

(Effective July 1, 2019, for those students who matriculate Fall 2019 or later)

The major in communication sciences leads to the Bachelor of Arts degree. For many students, a BA in communication sciences is a pre-professional degree in preparation for graduate study in speech-language pathology or audiology. The undergraduate course work emphasizes the basic processes and acquisition of normal communication in children and adults. Graduate study then focuses on the study of disordered communication. (Please see the description of the Integrated Graduate Studies Program below.)

Students pursuing the BA are required to take 45 credit hours of course work which includes study in communication sciences and disorders, psychology, and English/linguistics, as well as in statistics and research design. A recommended course sequence is shown below. Please note, however, that an individual student’s sequence may differ from this one. For example, undergraduate students may elect to take 400- or 500-level graduate courses with departmental/instructor permission.

Suggested Sequence of Required Courses for the Bachelor of Arts Degree (45 credits)

Departmental Honors
Juniors with a 3.0 overall grade point average and a 3.25 average in communication sciences are encouraged to apply to the honors program. The honors program consists of one three-credit course, COSI 395 Capstone and Honors Program, in which the student carries out an independent project in an area of interest, under the direction of a COSI faculty member. Satisfactory completion of the project qualifies the student to receive the Bachelor of Arts degree with departmental honors noted on the transcript. Admission to the honors program is by faculty approval.

The following are prerequisites to COSI 395 Capstone and Honors Program:

| STAT 201 | Basic Statistics for Social and Life Sciences | 3 |
| or PSCL 282 | Quantitative Methods in Psychology | 3 |
| PSCL 375 | Research Design and Analysis | 3 |

Additional information is available from each student’s academic advisor.

Integrated Graduate Studies
The Integrated Graduate Studies (IGS) Program (p. 1298) is intended for undergraduate students who are interested in obtaining a graduate degree in communication disorders (speech-language pathology). Qualified students may be accepted for admission to the School of Graduate Studies after completing 90 hours of undergraduate course work.

Typically, a master’s degree requires two additional years of study beyond the bachelor’s degree. Through the IGS Program, however, a student can complete an undergraduate degree in communication disorders and a master’s degree in communication disorders in five years. The recommended undergraduate sequence for students interested in the IGS Program is somewhat different from the recommended sequence presented above. Students should consult their academic advisor and the Office of Undergraduate Studies for additional information concerning IGS requirements.

Minor in Communication Sciences
The minor in communication sciences requires a minimum of 15 credit hours. It focuses on normal processes of speech, language, and hearing, as well as on the speech, language, and hearing disorders that result from breakdowns in these processes. Interested students should meet with an advisor for specific course requirements.

Departmental Honors
Juniors with a 3.0 overall grade point average and a 3.25 average in communication sciences are encouraged to apply to the honors program. The honors program consists of one three-credit course, COSI 395 Capstone and Honors Program, in which the student carries out an independent project in an area of interest, under the direction of a COSI faculty member. Satisfactory completion of the project qualifies the student to receive the Bachelor of Arts degree with departmental honors noted on the transcript. Admission to the honors program is by faculty approval.

The following are prerequisites to COSI 395 Capstone and Honors Program:

| STAT 201 | Basic Statistics for Social and Life Sciences | 3 |
| or PSCL 282 | Quantitative Methods in Psychology | 3 |
| PSCL 375 | Research Design and Analysis | 3 |

Additional information is available from each student’s academic advisor.

Integrated Graduate Studies
The Integrated Graduate Studies (IGS) Program (p. 1298) is intended for undergraduate students who are interested in obtaining a graduate degree in communication disorders (speech-language pathology). Qualified students may be accepted for admission to the School of Graduate Studies after completing 90 hours of undergraduate course work.

Typically, a master’s degree requires two additional years of study beyond the bachelor’s degree. Through the IGS Program, however, a student can complete an undergraduate degree in communication disorders and a master’s degree in communication disorders in five years. The recommended undergraduate sequence for students interested in the IGS Program is somewhat different from the recommended sequence presented above. Students should consult their academic advisor and the Office of Undergraduate Studies for additional information concerning IGS requirements.

Minor in Communication Sciences
The minor in communication sciences requires a minimum of 15 credit hours. It focuses on normal processes of speech, language, and hearing, as well as on the speech, language, and hearing disorders that result from breakdowns in these processes. Interested students should meet with an advisor for specific course requirements.
Although all psychology courses apply both perspectives to specific topics in psychology, subsets of psychology courses rely more heavily on one or the other; therefore, the major requirements below ensure training that reflects a balance of nomothetic and idiographic approaches.

The psychology major requires a total of 30 credit hours consisting of PSCL 101 General Psychology I and PSCL 282 Quantitative Methods in Psychology; two nomothetic courses; and two idiographic courses. The remaining 12 credits of elective coursework can be drawn from any combination of PSCL courses.

Psychology majors must complete 30 hours of coursework in the department.

Take the 2 required core courses below (total of 6 credit hours)

- **PSCL 101 General Psychology I**
- **PSCL 282 Quantitative Methods in Psychology**

Select 2 of the following nomothetic courses (total of 6 credit hours)

- **PSCL 315 Social Psychology**
- **PSCL 352 Physiological Psychology**
- **PSCL 353 Psychology of Learning**
- **PSCL 357 Cognitive Psychology**

Select 2 of the following idiographic courses (total of 6 credit hours)

- **PSCL 230 Child Psychology**
- **PSCL 313 Psychology of Personality**
- **PSCL 321 Abnormal Psychology**
- **PSCL 325 Psychotherapy and Personality Change**
- **PSCL 369 Adult Development and Aging**

Select elective courses (any combination of additional PSCL courses, total of 12 credit hours)

* Although not required for the Psychology Major, PSCL 375 (Research Design and Analysis) is a prerequisite for most of the senior capstone courses in psychology.

Psychology majors should work closely with their major advisors to customize the selection of required and elective courses to provide them with courses suited to their own individual career goals.

### Requirements for a Psychology Minor

Students who wish to minor in psychology must take General Psychology I (PSCL 101), plus a minimum of four other PSCL courses (http://psychsciences.case.edu/undergraduate/psychology/undergrad-psych-courses/), for a total of 15 hours. Students choose these courses in collaboration with their advisor. Practica and independent study are available, but may not be used to satisfy the minor requirement. Students must take at least 50% of their PSCL courses at CWRU.

### Declaring a Psychology Major or Minor

Students who wish to major in psychology must complete a Major Declaration Form, available from the Office of Undergraduate Studies (http://www.case.edu/ugstudies/), and then meet with Dr. Jennifer Butler, who will assign them an advisor and review the degree requirements.

### Special Programs for Psychology Majors

**Psychology Honors Program:** Qualified psychology majors are encouraged to consider the department’s honors program, which leads to a BA with honors in psychology. The program’s purpose is to provide intensive, supervised research experience. Completion of the honors program also satisfies the SAGES capstone graduation requirement.

The program consists of PSCL 375 Research Design and Analysis, which students take in their junior year, and PSCL 395 Capstone and Honors Program, which they take as seniors. By the end of the senior year, students design and execute a research project, write it up in scholarly form, and present it in a public setting. Psychology majors who successfully complete PSCL 395, and who attain at least a 3.25 GPA in psychology course work and an overall GPA of at least 3.0, will graduate with honors in psychology.

The selection of a faculty advisor is an important part of the honors program. The first step is to identify a faculty member whose interests are as close as possible to the research area the student wishes to pursue. Students should contact a potential advisor as early as possible (junior year is recommended) and ask about the possibility of registering for PSCL 395. Each section of PSCL 395 is assigned to a specific faculty member, and registration is by permit only.

Because the honors program requires significant time and commitment, only psychology majors with a serious interest in the behavioral sciences should consider completing it.

**Integrated Graduate Studies Program:** The IGS Program enables qualified undergraduates to complete the academic work for a BA and MA degree in four years. Students accepted into the program must complete at least 30 credit hours of graduate course work during their senior year, plus a thesis or comprehensive exam, for a Master of Arts in General Psychology. The minimum standards for acceptance are:

- an overall GPA of 3.2
- completion of the Arts and Sciences General Education or SAGES Requirements and two semesters of physical education
- 90 semester hours of undergraduate credit (the last 60 hours must have been earned while the student was in residence at CWRU)
- completion of the psychology major requirements with at least a 3.2 GPA

Students should meet with their major advisor and contact the Office of Undergraduate Studies during the fall semester of their junior year to receive pre-approval for eligibility for the IGS program.

Students seeking admission to the IGS Program complete the same application process as those seeking admission to the graduate program in experimental psychology; instructions are provided on the department’s website (http://psychsciences.case.edu/graduate/). However, prospective IGS Program students are not required to submit GRE scores. The application deadline each year is December 1 (for admission the following fall).

Participation in the IGS Program does not preclude involvement in the department’s honors program. For more information, consult the IGS Program section of this bulletin (p. 1298) or contact Dr. Heath Demaree.
Communication Sciences

Master of Arts

The principal goal of the Master of Arts program is to develop clinical scientists who are skilled in the management of individuals with speech and language disorders. The master's program in speech-language pathology is accredited by the Council on Academic Accreditation in Audiology and Speech-Language Pathology (CAA) of the American Speech-Language-Hearing Association, 2200 Research Boulevard #310, Rockville, Maryland 20850, 800-498-2071 or 301-296-5700. Upon successful completion of the Master of Arts degree, students will also meet the academic and clinical practicum requirements for certification by ASHA and licensure in the State of Ohio.

Degree requirements include completion of 42 credit hours of course work and a clinical practicum in communication disorders. In addition, students must satisfactorily complete a clinical research project or write a master's thesis.

Clinical Opportunities in Speech, Language, and Hearing Disorders

The program is affiliated with, and located in, Cleveland Hearing & Speech Center (CHSC), a nonprofit agency that serves children and adults with communication disorders. CHSC serves as the primary training site for graduate students enrolled in clinical practice. Its personnel and facilities provide exceptional clinical experiences for students seeking clinical certification in speech-language pathology.

The program also draws on clinical resources in University Circle and the Greater Cleveland area. In addition to clinical practicum experiences at CHSC, graduate students complete at least two externships at sites including University Hospitals of Cleveland, Rainbow Babies and Children's Hospital, MetroHealth Medical Center, Cuyahoga County Board of Mental Retardation and Developmental Disabilities, Cleveland Clinic Center for Autism, Legacy Health Services, and Western Reserve Speech and Language Partners.

Doctor of Philosophy

The Doctor of Philosophy is awarded in recognition of (1) mastery, at an advanced level, of a body of knowledge in the disciplines of communication sciences and speech-language pathology, and (2) a demonstrated ability to perform independent research and communicate the results of that research. With the major advisor, the student designs an individual plan of study based on his/her professional goals and previous experience. Doctoral students choose a content area (such as communication and aging, medically based speech disorders, or child language development and disorders) as their primary focus of study. However, they are also encouraged to enhance their scholarly preparation by completing coursework outside of their primary content area.

In addition to course work within the department, doctoral students may choose courses from graduate programs in other departments of the College of Arts and Sciences, as well as from several professional schools at the university, including the School of Medicine (e.g., neuroscience, genetics), the Case School of Engineering (e.g., biomedical engineering), the School of Dental Medicine, the Weatherhead School of Management, and the Jack, Joseph, and Morton Mandel School of Applied Social Sciences.

Requirements for the doctoral program include course work, research rotations, a supervised classroom teaching experience, written and oral comprehensive examinations, and a dissertation.

- A minimum of 36 hours of course work is required, including 9 credit hours in statistics and research design and 3 credit hours of directed study and research. Fifteen credit hours in the primary content area are required.
- Two research rotations are required. One rotation is completed in the primary content area with the major advisor. The second rotation is completed with a faculty member other than the major advisor. The dissertation research is not included in either of the two research rotations.
- A supervised classroom teaching experience is completed under the guidance of a faculty member in the program.
- Written and oral examinations are taken after all coursework and research rotations are completed.
- A dissertation prospectus is prepared under the guidance of a committee consisting of the dissertation advisor and two additional faculty members. A defense of the dissertation prospectus is required prior to commencing the dissertation study.
- An oral defense of the dissertation takes place at the end of the doctoral program.

Psychology

Doctor of Philosophy

The Department of Psychological Sciences offers full-time programs leading to a PhD in clinical or experimental psychology. These programs give students a thorough grounding in basic areas of psychological fact and theory and prepare them for careers as researchers, teachers, and practitioners. The Master of Arts degree can be earned in the department as part of work toward a doctorate.

Clinical Psychology Program. The department's program in clinical psychology, which has been approved by the American Psychological Association, emphasizes the scientist-practitioner model. Students participate in an integrated curriculum of basic and applied courses, research activities, and practicum and pre-internship placements. The program's goal is to prepare students to make meaningful contributions to the science and profession of psychology by instructing them in broad applications of clinical skills and research methods.

Developmental, Cognitive, and Affective Sciences Program. Doctoral training in developmental, cognitive, and affective sciences prepares the student for an academic career in teaching and research. The program offers concentrations in developmental psychology, adulthood and aging, cognitive psychology, developmental disabilities research, and social psychology. Faculty members help students develop flexible programs of study, according to individual interests.

Master of Arts

The Department of Psychological Sciences also offers a full-time program leading to an MA in developmental psychology. Students interested in working with very young children would be ideal for this program. Participation in this program will allow students to be eligible for an Early Intervention Services Certificate (Developmental Specialist) through the Ohio Department of Developmental Disabilities.

Developmental Psychology MA Program. The department's program in developmental psychology is an applied program that provides students with the hands-on skills and practical experience needed to work in early intervention with children aged 0 to 5.
Degree requirements include the completion of 38 credits of course work and placements, with 13 of these credits fulfilling the requirement of the Ohio Early Intervention Services Certificate. Students will be given opportunities to train in multiple placement sites, including hospital, school, and clinical settings. For more information, please visit https://psychsciences.case.edu/ma-in-developmental-psychology-with-an-early-intervention-specialization/.

**COSI Courses**

**COSI 101. Introduction to Health Communication. 3 Units.**
An introductory examination of the influences associated with the functions of human life, communication processes, and research related to health and the health care industry from interpersonal, cultural, and organizational communication perspectives. The course will include a review of the history and development of health communication and the understanding and application of communication theories.

**COSI 109. Introduction to Communication Disorders. 3 Units.**
Forty-two million Americans have some type of communication disorder. How does a person with a communication disorder cope with the challenges of daily living? This course will examine the characteristics of communication disorders via first hand and fictionalized accounts in books, films, and simulated communication disorders experiences. Topics will include disorders of speech, language, and hearing in children and adults. Effects of communication disorders on families.

**COSI 200. Interpersonal Communication. 3 Units.**
Communication is a primary means of initiating, maintaining, and dissolving relationships. Managing interpersonal relationships is a human concern across several contexts. Interpersonal communication is a highly interactive course whereby participants investigate the foundations, processes, and issues associated with communication in relationships. The student will become sensitized to theories and processes via traditional lectures and textbook readings. The student is also expected to participate in group discussions. The result is a continuous dialogue with others about communication processes, and outcomes. The goal of this course is to provide a forum for both investigation and increased competence.

**COSI 211. Phonetics and Phonology. 3 Units.**
Theoretical and applied study of the speech sounds of language. The use of the international phonetic alphabet as a tool for characterizing normal and deviant sound patterns. The linguistic structure and function of speech sound systems of both the adult and developing child.

**COSI 220. Introduction to American Sign Language I. 3 Units.**
This course offers basic vocabulary training and conversational interaction skills in American Sign Language. Syntactic and semantic aspects of American Sign Language will be addressed.

**COSI 221. Introduction to American Sign Language II. 3 Units.**
This course incorporates non-verbal communication techniques, intermediate vocabulary, grammatical rules and conversational skills. Deaf culture and history is also an important part of the course. Students will focus on general aspects of conversational signs and nonverbal aspects of American Sign Language. Using Signing Naturally Units 7-12 as a guide; students will also incorporate the use of expressive and receptive skills in every class. The full immersion model will be applied in each class. Instruction and student participation will only be in ASL. Prereq: COSI 220.

**COSI 260. Multicultural Aspects of Human Communication. 3 Units.**
Introduces intercultural/interracial communication by discussing specific communication principles and by putting theory into practice by exploring differences in perception, and verbal and nonverbal communication messages. Course emphasizes relationship between communication, race, culture; nature of race and culture; and how they influence the communication process. Various theories and approaches to study of intercultural/interracial communication will be discussed, along with significant concepts, processes and considerations. Practical outcomes of intercultural/interracial encounters also will be discussed. Counts for CAS Global & Cultural Diversity Requirement.

**COSI 261. Multicultural Aspects of Communication Disorders. 3 Units.**
Introduces intercultural/interracial communication principles and includes the exploration of differences in perceptions for communication messages. Provides students with a basic understanding of the differences associated with assessment, intervention, and identification of communication disorders for culturally and linguistically diverse populations. Students will critically analyze best practice approaches for communication disorders for diverse populations including differences in race, ethnicity/culture, sexual orientation, gender identity, and socio-economic status. Practical outcomes that can encourage more positive intercultural/interracial encounters will be discussed. Offered as COSI 261 and COSI 461. Counts for CAS Global & Cultural Diversity Requirement.

**COSI 280. Organizational Communication. 3 Units.**
This course includes a review of the development of organizational communication theories and how application of theories enhances our understanding of various types of organizations. COSI 280 addresses the communication challenges faced by contemporary organizational leaders and members. Knowledge of the theories and development of analytical skills should improve students’ chances for successful interactions in diverse organizational situations and cultures.

**COSI 305. Neuroscience of Communication and Communication Disorders. 3 Units.**
The course focus is neuroanatomy and neurophysiology related to motor control and cognition, particularly aspects of cognition involved in language functions. Topics to be addressed include: principles of neurophysiology and neurochemistry; functional neuroanatomy of the central and peripheral nervous systems; neurological and neuropsychological assessment of communication; neurodiagnostic methods. In part, the course material will be presented in a problem-based learning format. That is, normal aspects of human neuroscience will be discussed in the context of neurological disorders affecting communication. COSI 305 is an elective for undergraduate students. COSI 405 is an introduction to COSI 557 and COSI 561, and a required course for graduate students. Offered as COSI 305 and COSI 405.

**COSI 313. Language Development. 3 Units.**
Language acquisition theory and stages of development of syntax, semantics, pragmatics, and phonology in children. Contributions of biological, social, cognitive and environmental factors to process of language development. Information on language variation in multicultural populations. Open to majors and non-majors. Recommended prerequisite: Child Psychology. Offered as COSI 313 and COSI 413.
COSI 321. Speech and Hearing Science. 3 Units.
The course will focus on the aspects of normal speech production and perception and hearing perception. The purpose of this course is to provide a foundation in normal aspects of oral communication that will prepare students for advance study in the assessment and management of disorders of speech and hearing perception. Topics to be covered include motor speech control, aeromechanics, basic acoustics, phonatory acoustics, speech and hearing acoustics, psychoacoustics, and speech and hearing perception. Recommended preparation: COSI 325. Offered as COSI 321 and COSI 421.

COSI 325. Anatomy and Physiology of Speech and Hearing Mechanism. 3 Units.
The course will focus on normal anatomy and physiology of the body systems involved in the processes of speech, language, hearing, and swallowing including the following: the auditory, respiratory, phonatory, articulatory, resonatory, and nervous systems. In part, the course material will be presented in a problem-based learning format. That is, normal aspects of human anatomy and physiology will be discussed in the context of the disorders that affect the processes of human communication and swallowing.

COSI 332. Persuasion. 3 Units.
This survey course explores the history, theories, and dynamics of persuasion. There is an extensive focus on theoretical models of attitude change. Persuasion also plays a strong role in everyday aspects of our culture. Along these lines, we will investigate persuasion activities in everyday life from compliance gaining to media campaigns. Learning is conveyed through lecture, activities, and observation of the student's everyday life. At the end of the semester, the astute student will be literate in a variety of persuasion strategies and dynamics.

COSI 340. Advanced Health Communication. 3 Units.
Various communication processes assume a central role in the acquisition and enactment of health care. This course examines communication activity across a broad range of health care contexts. Attention will be given to provider-client communication, communication, and ethical concerns, persuasive health promotion efforts, media impact on health, and basics in health communication methodology and research. Students will consider source, message, and receiver aspects of health communication as well as cultural and illness-specific issues. Prerequisite of COSI 101 for 300-level only. Offered as COSI 340 and COSI 440. Prereq: COSI 101.

COSI 345. Communication and Aging. 3 Units.
The normal and abnormal psychobiological changes that occur during aging and their effects on communication are addressed, as are communicative interaction styles, disordered communication, and rehabilitation practices. Graduate students are given an opportunity to incorporate information from their own disciplines in a special project, where appropriate. Offered as COSI 345 and COSI 445. Counts as SAGES Departmental Seminar.

COSI 352. Introduction to Clinical Practice in Speech-Language Pathology. 3 Units.
Clinical assessment and teaching procedures as well as the role of research/theory in clinical practice. Procedures to observe, measure, analyze communication skills. Practical application through case studies. Students complete 25 hours of observation of speech/language assessment and intervention. Prereq: COSI 211 or COSI 313.

COSI 355. Introduction to Linguistics. 3 Units.
This course provides an introduction to linguistics, with application to clinical assessment, diagnosis and therapy of language disorders. In particular, the course provides an introduction to theory and methods of linguistics: universal properties of human language; phonetic, phonological, morphological, syntactic, and semantic structures and analysis; nature and form of grammar.

COSI 357. Acquired Neurogenic Communication Disorders. 3 Units.
This course is designed to provide knowledge about the theoretical foundations, etiologies, and characterizations of acquired language-based and cognitive-communication disorders in adults. The organization of the course is designed so that we will discuss communication disorders typically associated with left hemisphere lesions (e.g., aphasia), right hemisphere lesions (e.g., RHD), frontal lobe lesions (e.g., traumatic brain injury) and mesial temporal lesions (e.g., dementia). This course is intended to provide students with a framework for considering communication disorders of diverse medical etiologies rather than specific impairment types. The course is meant to provide information that can be used as a foundation for a clinically applied course in acquired language disorders. The course will focus on critical thinking, professional presentation (both oral and written), and critical consumption of research. Instructor consent for COSI 457 only. Offered as COSI 357 and COSI 457. Prereq: COSI 109.

COSI 370. Introduction to Audiology. 3 Units.
Disorders of hearing, assessment of hearing; including behavioral and objective measures; intervention strategies; and identification programs. Offered as COSI 370 and COSI 470. Prereq: COSI 321 and COSI 325.

COSI 390. Independent Study. 1 - 6 Units.
Individual study, under the guidance of a faculty member, involving specific programs of reading, research and special projects.

COSI 395. Capstone and Honors Program. 3 Units.
Supervision in carrying out an independent research study in the student’s area of interest. Offered every semester. Any student majoring in communication sciences (COSI) may take this course to fulfill the capstone requirement; qualified students may take this course to fulfill the capstone requirement AND to graduate with honors. During their Junior year, qualified COSI majors are encouraged to apply to the department’s Honors Program, which leads to a B.A. with Honors. The program's purpose is to provide students with an intensive, supervised research experience in areas of their choice. The program consists of PSCL 375 and COSI 395 and begins in the junior year, when students receive instruction in research design and methodology. This provides the foundation for students to work under close supervision with a department faculty member during the senior year. At the end of the semester, the research project is written in scholarly form, and presented for consideration of graduation with Honors. Junior majors with a minimum 3.25 average in COSI major courses are a 3.0 overall GPA may apply. The Honors Program requires a great deal of work, and only students with a serious interest in behavioral sciences should apply. Counts as SAGES Senior Capstone. Prereq: (STAT 201 or PSCL 282) and PSCL 375.
COSI 405. Neuroscience of Communication and Communication Disorders. 3 Units.
The course focuses on neuroanatomy and neurophysiology related to motor control and cognition, particularly aspects of cognition involved in language functions. Topics to be addressed include: principles of neurophysiology and neurochemistry; functional neuroanatomy of the central and peripheral nervous systems; neurological and neuropsychological assessment of communication; neurodiagnostic methods. In part, the course material will be presented in a problem-based learning format. That is, normal aspects of human neuroscience will be discussed in the context of neurological disorders affecting communication. COSI 305 is an elective for undergraduate students. COSI 405 is an introduction to COSI 557 and COSI 561, and a required course for graduate students. Offered as COSI 305 and COSI 405.

COSI 406. Academic English Proficiency: Speech Production. 3 Units.
In this module the provisional student will work in small groups with the instructor/s to develop new speech habits and patterns to improve production of spoken English for academic and professional success. Following successful completion of the course the student will demonstrate an improvement of 50% from baseline speech production scores, and demonstrate the ability to practice sound production independently to assure continued refinement over time. The course includes 90 minutes of small group instructions per week and a minimum of 50-60 minutes of daily practice. The student will be required to submit a minimum of 2 practice recordings per week for feedback. Students who successfully complete this course will demonstrate 50% improvement from baseline speech production scores.

COSI 413. Language Development. 3 Units.
Language acquisition theory and stages of development of syntax, semantics, pragmatics, and phonology in children. Contributions of biological, social, cognitive and environmental factors to process of language development. Information on language variation in multicultural populations. Open to majors and non-majors. Recommended prerequisite: Child Psychology. Offered as COSI 313 and COSI 413.

COSI 416. Academic English Proficiency Speech Production Module II. 3 Units.
In this module the provisional graduate student will work on refining speech production skills necessary for effective conversation and oral presentations in the academic and professional environments, through direct individualized instruction and individual and group practice. Each student enrolled will have an individualized plan and targets based on testing of spoken language at the word, sentence and conversational level. The focus in Module II will include: 1. Instruction on use of appropriate vocal measures such as volume, rate, intonation, rhythm and projection techniques 2. Development of the skills necessary to analyze one’s own speech production skills including articulation, volume, rate, and inflection consistent with Standard American English 3. Practice of speech production skills in conversation and short presentations. Successful completion of this module will assist the student in improving speech production and intelligibility in areas of articulation, rate, and prosody, in conversation and formal presentations, leading to increased successful communication in the academic and professional environments. In this module each provisional graduate student will be involved in 90 minutes of class time weekly and a minimum of 50 minutes per day of structured individualized homework assignments. Classroom instruction will be provided in small groups with a maximum of 4 students per group. The successful student will demonstrate achievement of their individual targets which includes a minimum of 85% sentence level intelligibility in conversation and a rate of 140-160 wpm in presentations. If a student does not pass the course they have opportunity to work with the instructor and resubmit assignments until success levels are met.

COSI 421. Speech and Hearing Science. 3 Units.
The course will focus on the aspects of normal speech production and perception and hearing perception. The purpose of this course is to provide a foundation in normal aspects of oral communication that will prepare students for advance study in the assessment and management of disorders of speech and hearing perception. Topics to be covered include motor speech control, aeromechanics, basic acoustics, phonatory acoustics, speech and hearing acoustics, psychoacoustics, and speech and hearing perception. Recommended preparation: COSI 325. Offered as COSI 321 and COSI 421.

COSI 431. Medical Aspects of Developmental Disabilities: Theory and Practice. 2 Units.
The practicum provides structured training activities to help the student become proficient in birth to three assessment and intervention and infant and toddler development. This intensive training experience will provide skills that students need when working in early intervention settings. Guided observation of children and developmental domains, parent-child interaction, and family based assessment will be included.

COSI 440. Advanced Health Communication. 3 Units.
Various communication processes assume a central role in the acquisition and enactment of health care. This course examines communication activity across a broad range of health care contexts. Attention will be given to provider-client communication, communication, and ethical concerns, persuasive health promotion efforts, media impact on health, and basics in health communication methodology and research. Students will consider source, message, and receiver aspects of health communication as well as cultural and illness-specific issues. Prerequisite of COSI 101 for 300-level only. Offered as COSI 340 and COSI 440.
COSI 443. Meta-Analysis of Communication Disorders Research Workshop. 1 Unit.
This course will guide students through the application of meta-analysis to the systematic literature review completed in COSI 444L to address a clinical question and will serve as the analysis and results section of the paper which will be used in partial fulfillment of the Plan B Master’s Project requirements. Prereq: COSI 444 and COSI 444L.

COSI 444. Evidence Based Practice in Communication Disorders. 2 Units.
Evidence-based practice is the conscientious, explicit and judicious use of current best evidence in making decisions about the care of individual clients. Having its origins in the fields of medicine and clinical epidemiology, EBP is now an essential component to clinical practice in speech-language pathology. The goal of COSI 444 is to instill in you a career-long desire to seek out high-quality relevant evidence pertinent to the clinical questions that affect your practice. To do this, you must first know how to find the evidence and evaluate the quality of evidence available. This course is intended to demystify the research process so that you can become critical consumers of the research literature in our field.

COSI 444L. Evidence Based Practice in Communication Disorders Lab. 1 Unit.
This course will guide students through the application of meta-analysis to the systematic literature review completed in COSI 444L to address a clinical question and will serve as the analysis and results section of the paper which will be used in partial fulfillment of the Plan B Masters Project requirements. Prereq: COSI 444.

COSI 445. Communication and Aging. 3 Units.
The normal and abnormal psychobiological changes that occur during aging and their effects on communication are addressed, as are communicative interaction styles, disordered communication, and rehabilitation practices. Graduate students are given an opportunity to incorporate information from their own disciplines in a special project, where appropriate. Offered as COSI 345 and COSI 445. Counts as SAGES Departmental Seminar.

COSI 452A. Graduate Clinical Practicum I: Case Management. 1 Unit.
Addresses professional issues in speech-language pathology including case management, clinical effectiveness, counseling and working with families from diverse backgrounds. Four to ten hours of clinic contact per week at the Cleveland Hearing and Speech Center. (Maximum of 2 credits.) Recommended preparation: COSI 352 and COSI 413.

COSI 452B. Graduate Clinical Practicum II: Professional Issues. 1 Unit.
Addresses professional issues in speech-language pathology including case management, managed health care, ethics and interviewing. Four to ten hours of clinic contact per week at the Cleveland Hearing and Speech Center. (Maximum of 2 credits.) Recommended preparation: COSI 352, COSI 413, COSI 452A, and COSI 453.

COSI 452C. Graduate Clinical Practicum III: Special Populations. 1 Unit.
Addresses professional issues in speech-language pathology including case management, special clinical populations, collaborating with other professionals, teaming, leadership, and use of technology. Fifteen to thirty hours of clinic contact per week at area skilled nursing facilities, hospitals, rehab centers, early intervention centers, centers for developmentally disabled, private practices, etc. (Maximum of 2 credits.) Recommended preparation: COSI 352, COSI 452A, COSI 452B, COSI 453, and COSI 456.

COSI 452E. Graduate Clinical Practicum V: Medical Speech Pathology. 1 Unit.
Addresses professional issues in speech-language pathology including case management, special clinical populations, collaborating with other professionals, documentation, managed health care, and use of technology. Fifteen to thirty hours of clinic contact per week at area skilled nursing facilities, hospitals. (Maximum of 2 credits.) Recommended preparation: COSI 352, COSI 452A, COSI 452B, COSI 452C, COSI 453, and COSI 456.

COSI 452S. Graduate Clinical Practicum III: Special Populations. 1 Unit.
Addresses professional issues in speech-language pathology including case management, special clinical populations, collaborating with other professionals, teaming, leadership and use of technology. This course confers full time student status in the summer term in recognition of an average of 25 hours of clinic contact per week at area skilled nursing facilities, hospitals, rehab centers, early intervention centers, centers for developmentally disabled, private practices etc. Prereq: COSI 452A and COSI 452B.

COSI 453. Articulation and Phonology Disorders. 3 Units.
Overview of normal speech sound development and characterization of children with speech sound disorders. Distinctions between phonology and articulation are drawn. Theoretical as well as assessment and treatment issues are addressed.

COSI 455. Fluency Disorders. 3 Units.
Stuttering and related disorders of rhythm and prosody in terms of the symptomatology, etiology, measurement, and treatment of nonfluent speaking behavior.

COSI 456. Child Language Disorders. 3 Units.

COSI 457. Acquired Neurogenic Communication Disorders. 3 Units.
This course is designed to provide knowledge about the theoretical foundations, etiologies, and characterizations of acquired language-based and cognitive-communication disorders in adults. The organization of the course is designed so that we will discuss communication disorders typically associated with left hemisphere lesions (e.g., aphasia), right hemisphere lesions (e.g., RHD), frontal lobe lesions (e.g., traumatic brain injury) and mesial temporal lesions (e.g., dementia). This course is intended to provide students with a framework for considering communication disorders of diverse medical etiologies rather than specific impairment types. The course is meant to provide information that can be used as a foundation for a clinically applied course in acquired language disorders. The course will focus on critical thinking, professional presentation (both oral and written), and critical consumption of research. Instructor consent for COSI 457 only. Offered as COSI 357 and COSI 457.
COSI 461. Multicultural Aspects of Communication Disorders. 3 Units.
Introduces intercultural/interracial communication principles and
includes the exploration of differences in perceptions for communication
messages. Provides students with a basic understanding of the
differences associated with assessment, intervention, and identification
of communication disorders for culturally and linguistically diverse
populations. Students will critically analyze best practice approaches for
communication disorders for diverse populations including differences
in race, ethnicity/culture, sexual orientation, gender identity, and socio-
economic status. Practical outcomes that can encourage more positive
intercultural/interracial encounters will be discussed. Offered as
COSI 261 and COSI 461. Counts for CAS Global & Cultural Diversity
Requirement.

COSI 470. Introduction to Audiology. 3 Units.
Disorders of hearing, assessment of hearing; including behavioral and
objective measures; intervention strategies; and identification programs.
Offered as COSI 370 and COSI 470. Prereq: COSI 325.

COSI 556. Language Disorders 2: Language and Literacy. 3 Units.
This course focuses on research-based theories of reading, cognition,
language, and learning disorders in the school-age and adolescent
student. Language development of the older child during the school age
and adolescent years will be reviewed. Topics include the development
of metalinguistic skills, the expanding lexicon, narration and discourse,
and advances in syntax and morphology. The relationship of spoken
language to literacy will be discussed. The course will examine common
language, literacy and learning disabilities during the school age years.
The student will explore interventions for word skills, reading decoding
and comprehension, oral expression, vocabulary, and written languages
as they apply to the Speech Language Pathologist. Assessment and
intervention strategies for the school-age child and adolescent with
a language/learning disorder are included. The class format includes
lectures, discussions of case studies, and experiential learning through the
observation of therapy with the school age/adolescent student.
Prereq: COSI 456.

COSI 557. Acquired Adult Language Disorders. 3 Units.
A model relating communication impairment to activities of daily
living and quality of life will serve as the study of acquired neurogenic
communication disorders in adults. The focus will be on dementia,
aphasia, and the communication disorders associated with traumatic
brain injury and right hemisphere stroke. Knowledge about the biological
basis of neurogenic communication disorders will be applied in
discussion on assessment and intervention for these disorders. Prereq:
COSI 405 or equivalent.

COSI 560. Medical Aspects of Speech Pathology I: Voice Disorders. 3
Units.
Aspects of normal and abnormal voice production, evaluation and
management of various voice and resonance disorders.

COSI 561. Med Aspects of Speech Path II: Neuromotor and Craniofacial
Anomalies. 4 Units.
Speech disorders resulting from conditions acting on motor speech
production including dysarthria and apraxia will be discussed. The
speech production system, diseases and acquired and congenital
neuropathological conditions that affect motor process and resulting
speech disorders of phonation, articulation, resonance and prosody
will be reviewed. Also covered will be the speech, language and hearing
disorders stemming from craniofacial anomalies; cleft lip and palate.
Principles and methods of assessment and treatment within an
interdisciplinary rehabilitation framework will be reviewed for both types
of disorders. Prereq: COSI 321 or COSI 421 and COSI 405 or equivalent.

COSI 562. Medical Aspects of Speech Pathology III: Dysphagia. 3 Units.
Course relates to medical speech-language pathology and includes
analysis of clinical problems involving dysphagia in high risk populations.
Course focus is on the anatomy and physiology of the normal swallow,
dysphagia, early identification and prevention, the clinical swallow
assessment, instrumental assessment and intervention in pediatric and
adult populations.

3 Units.
This course focuses on swallowing and dysphagia in infants and
children. Topics include typical development of anatomy and physiology
of pediatric swallowing, evaluation of pediatric swallowing function,
treatment modalities, and clinical populations. Prereq: COSI 562.

COSI 580. Aural Rehabilitation. 3 Units.
The effects of hearing impairment, especially related to speech
perception and language processing. Remediation and intervention
strategies for hearing impaired children and adults, including speech
reading, auditory training, and the use of hearing aids.

COSI 600. Special Problems and Topics. 1 - 3 Units.
Topics and instructors by arrangement of the department chair.

COSI 601. Directed Study and Research. 1 - 6 Units.
Individual study and research under the direction of a faculty member.

COSI 651. Thesis M.A.. 1 - 6 Units.
(Credit as arranged.)

COSI 690. Supervised Classroom Teaching. 3 Units.
Required of all doctoral students. Teaching of an undergraduate course
planned in conjunction with a supervising faculty member. Follows the
doctoral student's earlier experience of observing and assisting a faculty
member in classroom teaching.

COSI 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to
Ph.D. candidacy milestone.

PSCL Courses

PSCL 101. General Psychology I. 3 Units.
Methods, research, and theories of psychology. Basic research from such
areas as psychophysiology, sensation, perception, development, memory,
learning, psychopathology, and social psychology.

PSCL 102. General Psychology II. 3 Units.
The applications of psychological research in normal problems of
adjustment. Topics include: coping with anxiety, romance and marriage,
and interpersonal behavior.

PSCL 230. Child Psychology. 3 Units.
Basic facts and principles of psychological development from the
prenatal period through adolescence. Recommended preparation:
PSCL 101.

PSCL 282. Quantitative Methods in Psychology. 3 Units.
The theory and application of basic methods used in the analysis
of psychological data. Not available for credit to students who have
completed STAT 201 or ANTH 319. Counts for CAS Quantitative
Reasoning Requirement.

PSCL 313. Psychology of Personality. 3 Units.
The development and organization of personality; theories of personality
and methods for assessing the person; problems of personal adjustment.
PSCL 351. Social Psychology. 3 Units.

PSCL 371. Health Psychology. 3 Units.
Examines psychological processes that affect physical health. Covers the physiological factors affecting the immune system, chronic physical disorders, pain, compliance with prescribed medical treatments, the effects of stress and coping, the effects of the patient-physician interaction, and the psychological aspects of the hospital and the health care systems. Recommended preparation: PSCL 101.

PSCL 321. Abnormal Psychology. 3 Units.

PSCL 323. Consumer Psychology. 3 Units.
Examines psychological processes that affect buyer behaviors. Covers the basic psychological processes of purchasing behavior, marketing choices that influence consumer behaviors, and post-purchase behaviors such as brand loyalty. Explores behavior across a number of domains, including motivation, attention, persuasion, comprehension, automatic decision making, and biases. Recommended preparation: PSCL 101.

PSCL 325. Psychotherapy and Personality Change. 3 Units.
Three methods of psychotherapy (behavioral, psychoanalytic, and client-centered) are discussed. The therapy techniques and the manner by which personality change is effected are examined. Recommended preparation: PSCL 101.

PSCL 329. Adolescence. 3 Units.
Psychological perspectives on physical, cognitive, and social development. Recommended preparation: PSCL 101.

PSCL 333. Early Intervention I: Theories and Practice. 3 Units.
This course describes the characteristics of young children (aged between 0 to 5 years) with disabilities and examines the intervention models and practices that are used to address the developmental and social emotional needs of these children. The course covers the legislative and philosophical foundations for contemporary early intervention practice. It discusses the meaning of evidence-based practice and examines contemporary early intervention practices from this perspective. The readings and assignments for this course have been designed to reflect the course objectives. Offered as PSCL 333 and PSCL 434.

PSCL 334C. Seminar and Practicum: Hospitalized Children. 3 Units.
Supervised field placement and attendance at staff conferences in various child and adolescent settings. Regular seminar meetings. Prereq: PSCL 230.

PSCL 335C. Seminar and Practicum: Hospitalized Child. 3 Units.
Supervised field placement and attendance at staff conferences in various child and adolescent settings. Regular seminar meetings. Prereq: PSCL 230 and Junior or Senior Status.

PSCL 338. Seminar and Practicum in Adolescents. 3 Units.
Supervised field placement and attendance in early childhood, child and adolescent settings including preschools, schools, hospitals, and neighborhood centers. This course is an elective. Recommended preparation: PSCL 101. Offered as EDUC 338, PSCL 338 and SOCI 338.

PSCL 344. Developmental Psychopathology. 3 Units.
This course will focus on the interplay of biological, psychological, familial, and social determinants of disorders ranging from autism to delinquency and bulimia. Recommended preparation: PSCL 230 or PSCL 321.

PSCL 350. Behavior Genetics. 3 Units.
Examines the impact of both nature and nurture on human behavior. Basic quantitative genetic methodology will be covered. Current family, twin and adoption studies in the areas of personality, intelligence, alcoholism, criminality, and psychopathology will be reviewed. Recommended preparation: PSCL 101. Offered as PSCL 350 and PSCL 450.

PSCL 352. Physiological Psychology. 3 Units.
This course is designed to teach the fundamentals of neural communication and central nervous system structure. Special attention is placed on common neurological illnesses and their psychopharmacological treatments. Neural systems underlying sensory/perceptual, motor, and higher-order cognitive processes are also explored. Offered as PSCL 352 and PSCL 403. Prereq: PSCL 101.

PSCL 353. Psychology of Learning. 3 Units.
The basic methods in the study of learning. The major theories proposed to account for the learning process. Development of the fundamental concepts and principles governing the learning process in both humans and lower animal. Recommended preparation: PSCL 101.

PSCL 357. Cognitive Psychology. 3 Units.

PSCL 365. Psychology of Religion and Spirituality. 3 Units.
This course is designed to provide an undergraduate-level overview of the psychology of religion and spirituality. It will emphasize both theory and research in this topic area. Following the order outlined in the text for the course, we will cover religion/spirituality "from the inside out," beginning with biological aspects of r/s and working outward, all the way up to social aspects of r/s. The course will be primarily lecture- and textbook-based but will also include both large-group and small-group discussion. Grading will be based on three exams (with the lowest score dropped), a required final exam, and a variety of assignments. A major aim of the course is to encourage students to apply ideas from the course to their lives; however, because some issues raised in the class might be very personal and/or controversial, the class will not require personal sharing about r/s beliefs (in either discussion or written form). In designing the assignments, care has been taken to provide a menu of options that vary in terms of length/complexity and emphasis on personal experience vs. more abstract reflection. Prereq: PSCL 101.

PSCL 369. Adult Development and Aging. 3 Units.
An overview of concepts and research relating to adult development and aging. The lifespan perspective will be used in examining major developmental paradigms. Personality and cognitive lines of development will be traced across the lifespan. Data from both longitudinal and cross-sectional studies will be analyzed. Both normal and pathological aging will be discussed. Special emphasis will be given to areas of cognitive deterioration in aging. Implications for optimal adult development and aging will also be discussed.
PSCL 375. Research Design and Analysis. 3 Units.
Conceptual and methodological issues confronted by the behavioral scientist conducting research. Major experimental designs and statistical procedures. Intuitive understanding of the mathematical operations. Majors planning to apply to graduate school in Psychology are strongly encouraged to complete this course. Counts as SAGES Departmental Seminar. Prereq: PSCL 101 and (PSCL 282 or ANTH 319 or STAT 201 or STAT 201R).

PSCL 379. Neurodevelopmental Disabilities. 3 Units.
Ways in which neurobehavioral development can go awry, the causes of such deviations, and their consequences. The course builds on basic psychological and neuroscience concepts to explore the manner in which developmental disabilities occur; ways of preventing disabilities, and approaches to ameliorating and managing disabling conditions. Recommended preparation: PSCL 101 and PSCL 230. Offered as PSCL 379 and PSCL 479.

PSCL 381. Social Factors in the Development of Psychopathology. 3 Units.
Environmental risk factors for psychopathology are numerous; specific social factors, such as bullying, peer pressure, and social adversity are often linked with the development of psychiatric disorders. Which begs the questions: Can Facebook cause depression? Do television shows like 13 Reasons Why increase the rate of suicide? Are “fitspiration” communities dangerous? This course will review the role social factors (social support, social interactions, social functioning, and the broader social context of communities) relate to the development and maintenance of psychopathology on biological and behavioral levels. In the context of disorders such as autism, schizophrenia, depression (including suicide), eating disorders, and post-traumatic stress disorder, this course will look at how social factors might contribute to the development of mental illness, as well as how social factors might be indicators of mental illness, and finally how social factors might mediate the severity of or even prevent the development of mental illness. Prereq: PSCL 101 and PSCL 231.

PSCL 385. Science of Emotion and Aging. 3 Units.
In this course we will examine the multi-faceted nature of emotion with an emphasis on the development of emotion in adulthood. We will consider the history, theories, and most recent research and thinking in the science of emotion and aging. We will also be considering how we know what we know about emotions. So, one goal will be to increase our awareness of the assumptions underlying theorists, claims, researchers, findings, and our own belief structures. We will also work to strengthen our general thinking and communicative abilities as we study the psychology of emotion. Specifically, our goals will be to state theories and ideas clearly and concisely, to identify different parts of arguments and analyze the logic of these parts, to integrate the different aspects of emotion, and to generate new ideas based on the theories and research. My shorthand terms for these processes are: “summarizing”, “analyzing”, “integrating”, and “generating”.

PSCL 387. Psychology Capstone Seminar: Genocide and Mass Atrocities. 3 Units.
Human cruelty, ethnopoliical conflict, war, terrorism, and genocide continues presently to create destruction and suffering throughout the world. Psychology has an important role in contributing to an understanding of individual or group characteristics, and specific circumstances and psychological processes that lead individuals and groups to commit either acts of destruction or acts of goodness. This course will provide an overview of the psychological literature on genocide, mass atrocities and violence. Most people are aware of the Holocaust and less so regarding other past genocides. We will examine and discuss past genocides (e.g. the Holocaust and Rwanda among others) as well as present genocides and mass violence (e.g. Darfur, the mass killings of Yezidis, and other examples of violence, torture, and the mistreatment of human beings). The path from prejudice to hatred to mass violence will be explored. We will address rescuing behaviors and resistance during genocide and mass atrocities, as well as the impact of bystander behavior on human violence. In addition, we will explore how people can heal from the trauma of past victimization and the role of psychologists in this undertaking. Another important topic to be examined focuses on how an identity can be formed when one is a descendant of a genocide/mass atrocity survivor or perpetrator. We will also address how the past is remembered or forgotten. This course is a reading and writing intensive course. Counts as SAGES Senior Capstone. Prereq: PSCL 101 and at least 15 credit hours previously completed in PSCL.

PSCL 388. Human Sexual Behavior. 3 Units.
Sex is approached as a form of personal and interpersonal behavior. A broad range of theories from social psychology will be used to explain human sexual behavior, and these will be evaluated by using facts and findings from recent research studies. Topics include sexual relationships, gender differences, promiscuity, rape and coercion, finding and choosing sex partners, sexual risk-taking, harassment, sexual identity and orientation, cultural influences and differences, evolution of sexual motivations, prostitution, pornography, and love. Prereq: PSCL 101 and PSCL 315.

PSCL 389. Emotion and Emotion Regulation. 3 Units.
This course will focus on academic research associated with emotional processes and emotion regulation. Specifically, we will answer questions like: What are emotions, and why are they important? How are emotions communicated, and how do researchers measure them? How do emotions influence one’s thinking ability, and visa-versa? What is emotion regulation? How do people differ in terms of their overall happiness and well-being, the degree to which they seek/avoid positive/negative experiences, and how they try to control their emotions? And what brain mechanisms are involved in emotional processing and emotion regulation? This course is also intended to help students read research in a thorough, critical manner, which may have a positive impact on students considering an academic career. Prereq: PSCL 101 and PSCL 352.

PSCL 390. Seminars in Psychology. 1 - 3 Units.
Surveys of special subject areas. Topics vary in response to faculty and student interests. Small group discussion. Prerequisite depends on content.
PSCL 392. Capstone: Positive Psychology and Character Strengths. 3 Units.
This seminar-based course is designed to provide a senior capstone experience in the area of positive psychology and character strengths. Students will focus on one specific character strength or positive psychology concept for the class project. The project will include a literature review and critique as well as a self-reflective component. Students will present their projects in two formats: a classroom-based lecture presentation and a literature review (15-20 pages). Class periods will include a blend of lecture, discussion, and student presentations. All students will be assigned to small groups for classroom-based discussions. Assignments are designed to help students develop their projects and will focus on self-reflection, literature review skills, and effective strategies for writing, presenting, and evaluating the work of others. Counts as SAGES Senior Capstone. Prereq: Students must be seniors.

PSCL 394. Psychology Capstone Seminar: Current Problems. 3 Units.
This seminar course will revolve around the identification and critical examination of current problems in society. Insights gained from psychological research will be applied to better understand these problems. Successful completion of the course will require critical analysis of published research, integration of information from different areas of psychology and from different disciplines, an oral presentation, and a final written research report including a literature review. Counts as SAGES Senior Capstone. Prereq: PSCL 375.

PSCL 395. Capstone and Honors Program. 3 Units.
Supervision in carrying out an independent research study in the student’s area of interest. Counts as SAGES Senior Capstone. Prereq: PSCL 375.

PSCL 396. Capstone: Anxiety and Depression: Symptoms, Etiology, and Treatment. 3 Units.
Satisfies SAGES Capstone requirement: A research-based and writing-intensive presentation of current knowledge regarding the symptoms, etiology, and treatment of anxiety disorders and mood disorders. Counts as SAGES Senior Capstone. Prereq: PSCL 101 and PSCL 375.

PSCL 397. Independent Study. 1 - 3 Units.
Individual study involving specific programs of reading, research, and special projects. Prereq: PSCL 101.

PSCL 398C. Child Policy Externship and Capstone. 3 Units.
Exterships offered through CHST/ANTH/PSCL 398C give students an opportunity to work directly with professionals who design and implement policies that impact the lives of children and their families. Agencies involved are active in areas such as public health, including behavioral health, education, juvenile justice, childcare and/or child welfare. Students apply for the externships, and selected students are placed in local public or nonprofit agencies with a policy focus. Each student develops an individualized learning plan in consultation with the Childhood Studies Program faculty and the supervisor in the agency. Offered as CHST 398C, ANTH 398C, and PSCL 398C. Counts as SAGES Senior Capstone. Prereq: CHST 301.

PSCL 399. Evaluating Psychological Information. 3 Units.
This course is a capstone designed to encourage advanced psychology students to review the knowledge they have gained throughout their coursework and to evaluate new information using this knowledge. While many core classes focus on learning the foundations of psychology through textbook readings and lectures, this class is a seminar that focuses on engaged and active participation in discussions and assignments during class. Class work will focus on evaluating psychological research, considering psychology as a field of scientific inquiry, understanding misconceptions about psychology and psychological findings, and exercising critical thinking skills. The course will culminate for each student in a unique SAGES capstone project, including a final written report and a public presentation. Independent work outside of the classroom will focus mostly on the capstone project, though you will also complete some class readings and reflection papers. Counts as SAGES Senior Capstone. Prereq: PSCL 375.

PSCL 402. Cognition and Information Processing. 3 Units.
Aspects of cognition beyond the area of sensation and perception, involving symbolic processes, especially problems of meaning, conceiving, reasoning, judging, and thinking.

PSCL 403. Physiological Psychology. 3 Units.
This course is designed to teach the fundamentals of neural communication and central nervous system structure. Special attention is placed on common neurological illnesses and their psychopharmacological treatments. Neural systems underlying sensory/perceptual, motor, and higher-order cognitive processes are also explored. Offered as PSCL 352 and PSCL 403. Prereq: Graduate Standing or Requisites Not Met permission.

PSCL 404. Learning Theory. 3 Units.
The research literature in learning; theoretical formulations of contemporary learning theorists. Limited to graduate students.

PSCL 407. Research Design and Quantitative Analysis I. 3 Units.
Intermediate research design and statistical analysis used in psychological research. Statistical inference from single variables, elementary principles of probability, correlation and regression. Recommended preparation: PSCL 282.

PSCL 408. Research Design and Quantitative Analysis II. 3 Units.

PSCL 409. Advanced Social Psychology. 3 Units.
This seminar-based course provides a broad, graduate-level overview of the field of social psychology. The course draws on theory and basic research in social and personality psychology to teach basic principles of human nature that can be applied to daily life, research, and clinical/applied work. Major topic areas include the self (e.g., self-regulation; self-evaluation), social cognition and relationships (e.g., social comparison; transgression), and group processes (e.g., social influence; prejudice). The interface between social and personality psychology will also receive attention.

PSCL 410. Developmental Psychology. 3 Units.
The research literature and theoretical formulation in the area of developmental psychology. Limited to graduate students.

PSCL 412. Measurement of Behavior. 3 Units.
PSCL 417. Clinical Neuroscience. 3 Units.
This course focuses on the neurobiology of psychiatric disorders. The goal of this course is to better understand the biological factors that occur in the presence of a mind or brain disorder. In this course we will cover disorders such as schizophrenia, depression, bipolar disorder, substance use disorders, and anxiety disorders, as well as neurodevelopmental disorders (e.g. autism spectrum disorders).

PSCL 418. History and Systems. 3 Units.
Historical antecedents of modern psychology.

PSCL 424. Clinical Interviewing. 3 Units.
Introduction to diagnostic and therapeutic interviewing.

PSCL 425. Methods of Assessment I. 3 Units.
Limited to graduate students in clinical psychology. Recommended preparation: Graduate standing in psychology with department permission.

PSCL 426. Methods of Assessment II. 3 Units.
Methods of psychological assessment, emphasizing personality and family function in childhood and adulthood. Recommended preparation: Limited to Grad students in Clinical Psychology. Requires approval of the Director of Clinical Training.

PSCL 429. Practicum in Assessment I. 1 Unit.

PSCL 430. Practicum in Assessment II. 1 Unit.
Recommended preparation: Approval of the Director of Clinical Training or concurrent enrollment in PSCL 426.

PSCL 431. Supervised Field Placement Year 2. 0 Unit.
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all second-year students in the clinical psychology training program. Recommended preparation: PSCL 425, PSCL 426.

PSCL 432A. Early Intervention Graduate Practicum A: Foundations for Interpersonal Communication. 1 Unit.
This course is set up to provide students with information and practice in collaborative professional skills that are necessary for professional competence in a multidisciplinary world. Skill development will include inter-professional education (IPE) where students will take part in a CWRU-wide course and with students participating from a variety of disciplines (e.g., nursing, speech-language pathology, etc.). Students will develop attitudes and skills related to: 1. Promoting inter-professional practice and mutual respect 2. Inter-professional teamwork and communication 3. Understanding the roles and responsibilities of various individuals in early intervention.

PSCL 432B. Early Intervention Graduate Practicum B: School Practicum and Foundations for IPC. 1 Unit.
This course is part of a series of courses intended to offer students practical experience in the field of early intervention. As part of this course, students will be placed in a school setting and will gain professional experience related to working with young children and their families under professional supervision. This course is set up to provide students with information about, practice in, in addition to development and professional skills that are necessary towards achieving professional competence when working with young children and families.

PSCL 432C. Early Intervention Graduate Practicum C: Medical Placement. 0 - 2 Units.
This course is part of a series of courses intended to offer students practical experience in the field of early intervention. Students will be placed in a medical setting where they will gain professional experience related to working with young children and their families under professional supervision. This course is set up to provide students with information about, practice in, in addition to development and professional skills that are necessary towards achieving professional competence when working with young children and families.

PSCL 432D. Early Intervention Graduate Practicum D: Choice. 1 Unit.
This course is part of a series of courses intended to offer students practical experience in the field of early intervention. This course is the fourth in its series. At this point, students are allowed to choose their placement (e.g., medical, school). Students will gain further professional experience related to working with young children and their families under professional supervision in their placement of choice. This course is set up to provide students with information about, practice in, in addition to development and professional skills that are necessary towards achieving professional competence when working with young children and families.

PSCL 433. Early Intervention Child Psychology: Infant and Toddler Development. 2 Units.
This course is an introductory graduate seminar on child development in the context of psychology, communication science, and social work. Mastery of the theoretical and empirical literature of developmental psychology is critical to the practice of effective social workers and speech language pathologists. Course Objectives: You will gain an appreciation for human development with a focus on the infancy period to adolescence. You will recognize milestones (behavioral, cognitive, physical) throughout the different stages of child development. You will learn about modern and classical psychological theory and gain an appreciation that these various theories all contribute uniquely and invaluably to our understanding of child development. You will learn about prominent research findings as well as research methods unique to the area of developmental psychology. You will be able to demonstrate mastery of the developmental literature and apply it to authentic performance/practice in your chosen field.

PSCL 434. Early Intervention I: Theories and Practice. 3 Units.
This course describes the characteristics of young children (aged between 0 to 5 years) with disabilities and examines the intervention models and practices that are used to address the developmental and social emotional needs of these children. The course covers the legislative and philosophical foundations for contemporary early intervention practice. It discusses the meaning of evidence-based practice and examines contemporary early intervention practices from this perspective. The readings and assignments for this course have been designed to reflect the course objectives. Offered as PSCL 333 and PSCL 434.

PSCL 435. Early Intervention II: Evidence Based Practice. 2 Units.
This course is designed to cover evidence-based early intervention practices when working with young children aged between 0 to 6 years of age. The course covers recent evidence-based practices for contemporary early intervention practice. It discusses the meaning of evidence-based practice and the readings and assignments for this course have been designed to reflect the course objectives. Prereq: PSCL 434.
PSCL 436. Introduction to Applied Behavior Analysis. 3 Units.
This course examines the basic principles and concepts of applied behavior analysis as used to improve socially important behavior problems. Behavioral measurement procedures, single-subject designs, interpretation of single-subject data, and ethical considerations will be discussed. Prereq: PSCL 434.

PSCL 444. Developmental Psychopathology. 3 Units.
This course will focus on the interplay of biological, psychological, familial, and social determinants of disorders ranging from autism to delinquency and bulimia.

PSCL 450. Behavior Genetics. 3 Units.
Examines the impact of both nature and nurture on human behavior. Basic quantitative genetic methodology will be covered. Current family, twin and adoption studies in the areas of personality, intelligence, alcoholism, criminality, and psychopathology will be reviewed. Recommended preparation: PSCL 101. Offered as PSCL 350 and PSCL 450.

PSCL 451. Special Topics in Psychology. 1 Unit.
These 1 credit mini-courses should provide enjoyable opportunities for students to explore interesting material related to clinical psychology that has not been covered in other required courses. A primary goal is to stimulate interest and discussion in the area. Thus, students will not be expected to write term papers or take any exams. In terms of background reading, students should be provided with roughly one journal article per hour of class meeting. The course is graded pass/no pass, and grading will be based on class attendance and class participation.

PSCL 453. Seminars in Psychology. 1 - 3 Units.
A special problem or topic. Content varies with student and faculty interest. Recent offerings: creative thinking in research, community psychological, evaluation of community processes, experimental and computer methods, consultation, and psychoanalytic ego psychology.

PSCL 479. Neurodevelopmental Disabilities. 3 Units.
Ways in which neurobehavioral development can go awry, the causes of such deviations, and their consequences. The course builds on basic psychological and neuroscience concepts to explore the manner in which developmental disabilities occur, ways of preventing disabilities, and approaches to ameliorating and managing disabling conditions. Recommended preparation: PSCL 101 and PSCL 230. Offered as PSCL 379 and PSCL 479.

PSCL 497. Graduate Independent Study. 1 - 9 Units.
Independent research and reading programs with individual members of the faculty.

PSCL 501. Seminar in Health Psychology: Clinical Practice and Research Principles. 1 - 3 Units.
Seminar in Health Psychology: Clinical Practice & Research Principles is a one-credit seminar course intended for clinical psychology graduate students in the CWRU Department of Psychological Sciences and other related graduate programs in addition to upper-level undergraduates in related fields with the permission of the course instructors. This course is designed to provide students with exposure to psychologists at academic medical centers or universities in Northeast Ohio and across the U.S. regarding clinical practice and research as it pertains to the field of health psychology. It is intended for students with interests in either child or adult clinical psychology, including those with early childhood interests to those with a focus on geriatric clinical practice/research. This course is offered one semester/year, and the content and speakers rotate annually so students may enroll multiple times in consultation with their academic advisors. The clinical practice class sessions will include one or more case examples presented by each guest speaker (or by the course instructors), followed by class discussions of conceptualization and intervention strategies and integration of how psychologists with a health psychology specialty collaborate and consult with multiple other specialists. The research principles class sessions will include investigators (guest speakers/instructors) leading class discussions on the conduct of funded research projects (e.g., federal, foundation), clinical research, or other research endeavors specific to topics in health psychology; discussion of unique health psychology models/theories, and emphasis on the collaboration of many different disciplines conducting medical/health research with a behavioral/psychology component.

PSCL 502. Seminar: Pediatric Psychology. 1 - 3 Units.
Seminar examining specific topics in pediatric psychology. Topics will deal with issues of infant development. Infants at risk for disability, neuropsychology and learning disabilities, and childhood psychopathology. Recommended preparation: Limited to Graduate students in Psychology department.

PSCL 510. Psychology and Diversity. 3 Units.
Diversity and multiculturalism in psychological theory, research and practice.

PSCL 524. Advanced Psychopathology. 3 Units.
Theoretical issues and current research data bearing on major patterns of psychological disturbance.

PSCL 525. Ethical and Professional Issues in Psychology. 3 Units.
Consideration of legal and ethical principles in research and practice in clinical psychology and contemporary controversies in professional psychology. Recommended preparation: Graduate standing in Psychology.

PSCL 529A. Practicum in Intervention I: Behavior Therapy. 1 Unit.
Recommended Preparation: Graduate standing in clinical psychology.

PSCL 529C. Practicum in Intervention I: Psychodynamic. 1 Unit.
Recommended preparation: Graduate standing in clinical psychology.

PSCL 530A. Practicum in Intervention II: Behavior Therapy. 1 Unit.
Recommended preparation: Graduate standing in clinical psychology.

PSCL 530C. Practicum in Intervention II: Psychodynamic. 1 Unit.
Recommended preparation: Graduate standing in clinical psychology.

PSCL 531A. Seminar in Intervention I: Behavior Therapy. 2 Units.
Theoretical issues and research on psychological interventions. Recommended preparation: Graduate standing in clinical psychology.
PSCL 531C. Seminar in Intervention I: Psychodynamic. 2 Units.
Theoretical issues and research on psychological interventions.
Recommended preparation: Graduate standing in clinical psychology.
PSCL 532A. Seminar in Intervention II: Behavior Therapy. 2 Units.
Theoretical issues and research on psychological interventions.
Recommended preparation: Graduate standing in clinical psychology.
PSCL 532C. Seminar in Intervention II: Psychodynamic. 2 Units.
Theoretical issues and research on psychological intervention.
Recommended preparation: PSCL 531C and graduate standing in clinical psychology.
PSCL 534. Advanced Psychotherapy. 3 Units.
The goals of this course are: to provide an overview of a range of psychotherapeutic approaches, primarily those that address anxiety and depressive disorders, and to discuss the evidence for and implementation of such therapy approaches. Prereq: Must be enrolled in PhD Psychology with a concentration in Clinical Psychology or Requisites Not Met permission.
PSCL 535. Child and Family Intervention. 2 Units.
A course for advanced clinical graduate students that covers psychodynamic and cognitive behavioral approaches for working with children and adolescents and systems approaches for working with families.
PSCL 536. Advanced Child and Family Intervention. 2 Units.
A course for advanced clinical graduate students that covers evidence-based approaches to child and family therapy as well as parent training. Special emphasis on empirically guided treatment planning and outcome evaluation.
PSCL 537. Child and Family Case Seminar I. 1 Unit.
Clinical graduate students in child and family field placements present and receive group supervision on ongoing cases.
PSCL 538. Child and Family Case Seminar II. 1 Unit.
Clinical graduate students in child and family field placements present and receive group supervision on ongoing cases.
PSCL 539. Supervised Field Placement Year 3. 0 Unit.
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all third year students in the clinical psychology training program. Recommended preparation: PSCL 531A, PSCL 532A.
PSCL 540. Supervised Field Placement Year 4. 0 Unit.
Supervised training in clinical psychology in agency, hospital, or university settings. Required in Fall and Spring terms of all fourth year students in the clinical psychology training program. Recommended preparation: PSCL 531A, PSCL 532A.
PSCL 601. Special Problems. 1 - 18 Units.
(Credit as arranged.)
PSCL 651. Thesis M.A.. 1 - 18 Units.
(Credit as arranged.)
PSCL 700. Internship. 0 Unit.
Full-time predoctoral internship in clinical psychology. Required of all students in clinical psychology program. Registration requires written consent of director of clinical psychology training and must be for one calendar year.
PSCL 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Public Policy Program

113 Mather House
artsci.case.edu/public-policy/ (http://artsci.case.edu/public-policy/)
Phone: 216.368.2424
Joseph White, Program Director
joseph.white@case.edu

A minor in public policy is available to undergraduates in the College of Arts and Sciences and in the economics and management programs in the Weatherhead School of Management. The course requirements are in four categories: the public policy process; economic analysis; policy or political institutions or history; and a specific policy field. Courses are listed in the "Undergraduate" section (see link above). Substitutions can be made under exceptional circumstances, at the discretion of the program director.

Undergraduate or graduate courses with public policy content are offered through the Departments of Anthropology, Earth, Environmental and Planetary Sciences, History, Political Science, and Sociology in the College of Arts and Sciences; through the Department of Economics and other departments in the Weatherhead School of Management; through the School of Law, the School of Medicine, and the Frances Payne Bolton School of Nursing; and through the Jack, Joseph and Morton Mandel School of Applied Social Sciences. Students can engage with policy issues both through courses and through the extracurricular programming of the Center for Policy Studies and other university bodies.

Program Advisory Committee

Joseph White, PhD
Luxenberg Family Professor in Public Policy; Department of Political Science; Director, Center for Policy Studies; Director, Public Policy Program
Brian Gran, JD
Professor, Department of Sociology
Susan Helper, PhD
AT&T Professor of Regional Economic Development, Department of Economics, Weatherhead School of Management
Peter Shulman, PhD
Associate Professor, Department of History

Department of Religious Studies

243 Tomlinson Hall  
https://religion.case.edu/  
Phone: 216.368.2210  
Justine Howe, Department Chair  
justine.howe@case.edu

The academic study of religion at Case Western Reserve University is multicultural, non-sectarian, and both disciplinary and interdisciplinary. Students examine a range of past and present cultures and societies using methods and approaches drawn from the humanities, arts, social sciences, and sciences, all of which sharpen critical and evaluative skills. Religious beliefs, institutions, and practices are studied with emphasis placed on the critical problems and possibilities inherent in current theories, methods, and technologies.

The Department of Religious Studies offers both undergraduate (Bachelor of Arts) and graduate (Master of Arts) degrees. Undergraduates may pursue either a major or minor in the department; outstanding students may apply to the departmental honors program. Both the major and minor programs acquaint students with significant religious texts and traditions and with the cultures and societies in which these traditions are grounded. Majors are encouraged to participate in study abroad programs. Through the Reisacher Summer Fellowship program, majors and minors may apply for support for summer research projects and internships.

Where appropriate, courses are designed to utilize digital tools and other emerging technologies. Many courses also involve visits to the cultural institutions of University Circle and religious sites throughout greater Cleveland. Several 300-level courses may be taken for graduate credit by fulfilling additional course requirements. The Department of Religious Studies also contributes courses to and supports a number of the college's interdisciplinary programs and centers, such as Asian Studies, Environmental Studies, Ethnic Studies, Women's and Gender Studies, International Studies, and Judaic Studies.

The academic study of religion, combined with appropriate courses in other fields, provides an excellent background for any professional career that involves interaction with diverse populations—including law, engineering, medicine, and health care professions, journalism, and social work—and for graduate studies in a number of fields. A major in religious studies provides a well-rounded liberal arts education or can be combined conveniently with a second major. A minor in religious studies complements and broadens any field chosen as a major.

Department Faculty

Justine Howe, PhD  
(Northwestern University)  
Associate Professor and Chair; Armington Professor; Co-Director, Women's and Gender Studies Program

Timothy Beal, PhD

(Boston University)  
Abba Hillel Silver Chair of Jewish Studies; Visiting Assistant Professor

Major

Students majoring in religious studies must complete a minimum of 30 semester hours. The program is designed with three main learning objectives in mind: (a) to provide a solid grounding in the theories, methods, and critical questions of academic religious studies; (b) to ensure a depth and breadth of understanding in a diverse range of

religious traditions; and (c) to enable students to pursue a particular focus at an advanced level. The requirements for the major are as follows:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>RLGN 101</td>
<td>Religion and Culture</td>
<td>3</td>
</tr>
<tr>
<td>RLGN 201</td>
<td>Interpreting Religion: Approaches and Current Issues</td>
<td>3</td>
</tr>
</tbody>
</table>

Seven electives, with at least three being 300-level, to be determined in consultation with one’s religious studies advisor **

**ONE CAPSTONE EXPERIENCE:**

<table>

</tr>
</tbody>
</table>

Total Units 30

* RLGN 201 Interpreting Religion: Approaches and Current Issues focuses on the history and development of the field of academic religious studies, canonical theories and methodologies, and current academic approaches, issues, and debates. This course replaces the former RLGN 299.

** Up to six of these elective credit hours may be taken outside the Department of Religious Studies, provided that the courses relate to the overall character of the major.

**Integrated Graduate Studies**

The Integrated Graduate Studies (IGS) Program (p. 1298) in Religious Studies offers students the opportunity to earn credit toward the MA while also completing requirements for the BA. Students must apply to the School of Graduate Studies for acceptance into this program. Upon admission to the program, IGS students register as students in the School of Graduate Studies and are subject to its policies, rules, and regulations.

For more information and eligibility requirements, see the IGS Program website. (p. 1298)

**Minor in Religious Studies**

A minor in religious studies requires at least 15 credit hours, including the following:

Total Units 15

**Minor in African and African American Studies**

The minor in African and African American studies (AFST) provides students with a comprehensive, interdisciplinary academic program that focuses on 1) critical race theory; 2) African and African diasporic history, culture, and literature; and 3) the religious, political, and social dimensions of Black life. The program examines subject matter related to African contexts (both the historical study of such contexts and the study of current populations), as well as African diasporic cultures (including historic and contemporary migrations), with a focus on the African diasporic presence in the Americas. Thus, courses offered in the AFST minor address the experience of African Americans but also more broadly explore the global Black experience and its relationship to Black life in the Americas.

Minor Requirements (15 total credits required)

1. Introductory Course:

3. One elective, selected from one of the three domains above: History; Culture, Literature, and Religious Life; or Social and Behavioral Sciences

Please note that no more than 6 credit hours may overlap between this minor and requirements for another minor.
**General Information**

The department offers a graduate program leading to a Master of Arts degree in Religious Studies. This two-year program concentrates on method and theory in the study of religion. The MA is designed to give students from a variety of backgrounds a solid foundation in the methods used in the contemporary study of religion.

Total Units in Sequence: 30

**AFST Courses**

**AFST 135. Introduction to Modern African History. 3 Units.**

A general introduction to major themes in modern African history, with an emphasis on the nineteenth and twentieth centuries. Topics include oral tradition and narrative, economic structure and dynamics, religious movements, colonialism, nationalism, and the dilemmas of independent African states. Offered as AFST 135, ETHS 253A and HSTY 135. Counts for CAS Global & Cultural Diversity Requirement.

**AFST 151. Introducing Africana Religions. 3 Units.**

This “topics course” offers an introduction to the academic study of Africana Religions. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and basic religious literacy in religions of people of African origins in sub-Saharan Africa, the Caribbean, Europe, and the Americas and thus will explore forms of these traditions in a diversity of cultural contexts. Section topics could include, but are not limited to: Introducing Africana Religions: The Black Church in the U.S., Introducing Africana Religions: Yoruba Ifa Traditions, Introducing Africana Religions: Orisha Traditions in Latin America and the Caribbean, Introducing Africana Religions: African American Religions, Introducing Africana Religions: U.S. African-derived Religions. Students may repeat the course for credit (up to 6 credits), provided that the two sections are different. Offered as AFST 151 and RLGN 151. Counts for CAS Global & Cultural Diversity Requirement.

**AFST 201. Introduction to Africana Studies. 3 Units.**

This course examines the development of Africana Studies as an academic discipline. It traces multiple genealogies and trajectories of both the discipline and the experiences of Black people on the African continent and in the Americas and the Caribbean with a particular focus on the United States. The course explores these genealogies and trajectories through history, sociology, culture, religion and politics. It will focus on the various kinds of technologies and structures Black people have developed, adapted and adopted as they have created resistance strategies, political and religious institutions, addressed medical and health concerns and participated in the construction of national institutions and cultures. The course will cover diverse themes in Black intellectual thought such as gender, race, enslavement, colonialism, music, dance, politics, religious practice and ritual, nationalism, sexuality and blackness. Counts for CAS Global & Cultural Diversity Requirement.

**AFST 202. Race and Ethnic Minorities in The United States. 3 Units.**

This is a survey course that looks at the relations between racial and ethnic relations in the United States from an historical and contemporary perspective. This course will look at relations between: European colonists and native Americans; whites and blacks during the period of slavery, Jim Crow, the civil rights era and contemporary period; immigrants at the turn of the 20th and 21st century; Mexicans and Puerto Ricans; and the pan-ethnic groups such as Latinos, Asian Americans, and Arab Americans. We examine the origins of racial/ethnic hierarchies, the social construction of identities, and stratification of racial and ethnic groups. This course will take a macro perspective that examines larger structural forces (e.g., colonization, industrialization, and immigration) to explain inter-group relations, and a constructionist perspective to understand how power manufactures and maintains the social meaning of identities (looking at stereotypes and hegemonic discourse). Students who have received credit for SOCI 302 may not receive credit for SOCI 202. Offered as AFST 202 and SOCI 202. Counts for CAS Global & Cultural Diversity Requirement.

**AFST 212. History of Rock and Roll. 3 Units.**

This course surveys the musical practices of the rock and roll era, broadly defined to include much popular music since the 1950s. Music majors are to enroll in MUHI 312. Offered as AFST 212 and MUGN 212. Counts for CAS Global & Cultural Diversity Requirement.

**AFST 222. African-American Religions. 3 Units.**

This course is an exploration of the rich diversity of African American religions from the colonial period to the present. Attention will be given to key figures, institutional expressions, and significant movements in African American religious history. Major themes include African traditions in American religions, slavery and religion, sacred music, social protest, Black Nationalism in religion, Islam, African American women and religion, and black and womanist theologies. Course requirements will include field trips to local religious sites. Offered as AFST 222, ETHS 222 and RLGN 222.

**AFST 258. History of Southern Africa. 3 Units.**

A survey of southern Africa from about 1600. Topics include the social structure of pre-colonial African societies, the beginnings of European settlement, the rise of Shaka, the discovery of minerals and the development of industry, Zimbabwe’s guerrilla war and independence, and the rise and apparent demise of apartheid. Offered as AFST 258, ETHS 258 and HSTY 258. Counts for CAS Global & Cultural Diversity Requirement.
AFST 260. U.S. Slavery and Emancipation. 3 Units.
Begins with the African encounter with Europeans during the emergence of the modern slave trade. Students are introduced to the documents and secondary literature on the creation and maintenance of slavery, first in colonial America, and then in the United States. The course concludes with the destruction of slavery. Offered as AFST 260, ETHS 260 and HSTY 260. Counts for CAS Global & Cultural Diversity Requirement.

AFST 261. African-American History 1865-1945. 3 Units.
Explores the fashioning of a modern African-American culture between emancipation and the end of World War II. Emergence of a northern-based leadership, the challenge of segregation, emergence of bourgeois culture, the fashioning of racial consciousness and black nationalism, the shift from a primarily southern and rural population to one increasingly northern and urban, the creation and contours of a modern African-American culture, the construction of racial/gender and racial/class consciousness. Offered as AFST 261, ETHS 261 and HSTY 261. Counts for CAS Global & Cultural Diversity Requirement.

AFST 262. African-American History Since 1945. 3 Units.
Completes the three-term sequence of the African-American history survey (although the first two courses are not prerequisites for this course). Explores some of the key events and developments shaping African-American social, political, and cultural history since 1945. Offered as AFST 262, ETHS 262 and HSTY 262. Counts for CAS Global & Cultural Diversity Requirement.

AFST 265. Malcolm and Martin. 3 Units.
An examination of the lives, religious thought, and ideological frameworks of Malcolm X and Martin Luther King, Jr. The course will investigate Malcolm X and Martin King's religious beliefs and activist strategies; the ideas and strategies of other civil rights and Black Nationalist leaders who influenced and challenged Martin and Malcolm's ideas on race, gender, class, and sexuality; and the historical antecedents for these strategies within nineteenth-century black religious, social, and political movements. Their impact on modern African American religious thought, American political culture, and international human rights movements will also be explored. Offered as AFST 265, ETHS 265 and RLGN 265. Counts for CAS Global & Cultural Diversity Requirement.

AFST 295. The Francophone World. 3 Units.
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (and where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle-East (Lebanon, Syria); the Caribbean (Martinique, Guadeloupe, Haiti); Southeast Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg). FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. Offered as AFST 295, ETHS 295, FRCH 295, and WLIT 295. Counts for CAS Global & Cultural Diversity Requirement.

AFST 302. The Lemonade Class: Religion, Race, Sex and Black Music. 3 Units.
Charles Long suggests that black musical forms are creative responses to the particular circumstances of black peoples’ presence in the U.S and black notions of the sacred. In April of 2016, Beyoncé released her visual album Lemonade two days after the death of Prince. This course is organized around the album’s title cuts and links these two artists together in an examination of religion and musical performance as creative response to the racial and gendered conditions of black life. The course investigates how both artists have used music as a platform to explore issues of race, gender, commerce, sexuality, power and divinity. The course also looks at examples from the works of earlier artists who address similar themes such as Ma Rainey, Bessie Smith, Muddy Waters, Billie Holiday, Nina Simone, Little Richard, James Brown, Marvin Gaye, and Aretha Franklin. Offered as AFST 302, ETHS 302, MUHI 316, RLGN 302, RLGN 402, and WGST 302. Counts for CAS Global & Cultural Diversity Requirement.

AFST 311. Representations of Black Religion in Film. 3 Units.
In this course we will explore cinematic representations of black religion in the Americas and the Caribbean. Each week we will view a film representing diverse religious traditions such as Christianity, Candomble, Santeria, Voudou, and Islam. Films will include Cabin in the Sky, The Color Purple, Black Orpheus, The Serpent and the Rainbow, Malcolm X, Eve’s Bayou, and The Princess and the Frog. Throughout the course we will analyze the ways in which notions of gender, the history of colonialism, modern notions of race, and geographical landscapes have informed representations of black religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideals of black religion in the Americas. Offered as AFST 311, ETHS 311, RLGN 311, and RLGN 411. Counts for CAS Global & Cultural Diversity Requirement.

AFST 314. Blues Histories and Cultures. 3 Units.
An investigation of the blues as a musical and lyrical form as well as a set of social and cultural practices. Beginning in the Mississippi Delta with the country blues, the course moves roughly chronologically, looking at classic and urban blues, the role of blues language and culture during the Harlem Renaissance, and their ‘revival’ in Britain in the 1960s. Our aim will be to open up questions surrounding blues transformations and black authenticities, the relationship between blues cultures and the rise of modernism, the racial and sexual coding of both black and white blues, and the ways in which blues sounds and aesthetics have permeated American popular music since the 1920s. Offered as AFST 314 and MUHI 314. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

AFST 315. History of Jazz and American Popular Music. 3 Units.
Musical styles and structures of jazz and American popular music; emphasis on music since 1900. Recommended preparation: MUTH 202 or MUHI 302. Offered as AFST 315 and MUHI 315. Counts for CAS Global & Cultural Diversity Requirement.

AFST 318. History of Black Women in the U.S.. 3 Units.
Chronologically arranged around specific issues in black women’s history organizations, participation in community and political movements, labor experiences, and expressive culture. The course will use a variety of materials, including autobiography, literature, music, and film. Offered as AFST 318, ETHS 318, HSTY 318, and WGST 318.
AFST 328. Capitalism, Cities, and Inequality. 3 Units.
This course focuses on social inequality, but through an examination of cities in the U.S. and abroad. In many ways, cities provide a window onto the organization of the larger social world, including regional, state, national and global areas. As such, understanding cities goes far beyond their geographical boundaries. The purpose of this course then is to learn the central role that cities play within a larger capitalist economy, how public policies shape life in cities, how cities organize and reproduce social inequality, and how community groups and organizations challenge and negotiate the organization of power and inequality. The course will examine topics such as the formal and informal labor force, immigration, the growth of global cities and slums, urban poverty, racial segregation, housing and homelessness, crime, gentrification, policing, community organization and political resistance. Offered as AFST 328, SOCI 328 and SOCI 428. Counts for CAS Global & Cultural Diversity Requirement.

AFST 363H. African-American Literature. 3 Units.
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature of protest and assimilation. Maximum 6 credits. Offered as AFST 363H, ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

AFST 365N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Offered as AFST 365N, ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

AFST 366. Racial Inequality and Mass Imprisonment in the US. 3 Units.
This course examines the relationship between racial inequality and mass imprisonment in the U.S. It begins by exploring the role of prisons in the Jim Crow south, with a particular focus on convict-leasing practices, and then turns to the north to examine the social forces that created the black urban ghetto and concentrated black urban poverty. The course also examines the impact that these same social forces have had on Puerto Ricans. We will then explore a series of topics including urban poverty and crime, the war on drugs, the politics of mass incarceration, the prospects that mass incarceration has become the new Jim Crow, and the effects that mass incarceration has had on voting rights, urban communities, families and children. We will conclude with a discussion of varying decarceration arguments, strategies, movements, and achievements. Offered as AFST 366 and SOCI 366.

AFST 386. Race and Racism. 3 Units.
Race and Racism will discuss the classical and contemporary understandings of the concepts of race and racism. We will begin by taking an historical approach, delving into processes of racialization and the first instances where distinctions in human race were noted. We will survey theories of race and use a social constructions approach to examine how sociologists approach the study of racial and ethnic group difference. We will examine how definitions of racial groups have evolved over time and differ across contexts, as well as some of the underlying social and structural processes that create racial hierarchies. At the end of the course students should have a strong understanding of the mechanisms that reproduce systems of racial classification. The course will also examine patterns and trends in racial and ethnic inequality over recent decades, centering our discussion on the legacies of racism, current discrimination, and new processes that are currently unfolding to reproduce inequality. While the course’s main focus is to examine understandings of race and racism in the United States, we will devote some attention to how race and ethnicity emerge in different environments by examining race and racism in an international context. Offered as AFST 386, SOCI 386 and SOCI 486. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SOCI 101.

AFST 389. Special Topics in American Politics and Policy. 3 Units.
Specific topic will vary but will consist of an in-depth investigation of a particular policy area or political phenomenon. Topics will involve policy controversies of some current interest. Offered as AFST 389, POSC 389, and POSC 489.

AFST 393. Advanced Readings in the History of Race. 3 Units.
This course examines the concept of race as a social construction that carries political and economic implications. We begin by examining the histories of the early racial taxonomists (e.g., Bernier, Linnaeus, and Blumenbach among others) and the contexts that informed their writings. We then assess how the concept of race changed from the nineteenth to the twentieth century in the United States. We conclude by evaluating how the ideology of race has influenced U.S. domestic life and foreign policy at specific historical moments. Offered as AFST 393, HSTY 393, HSTY 493, and ETHS 393. Counts for CAS Global & Cultural Diversity Requirement.

AFST 399. Advanced Readings in Black History. 3 Units.
This is an advanced readings course that may change from semester to semester. This course will provide students with an opportunity to more deeply explore special themes and theoretical issues in the field of black history that are often quickly and briefly covered in broad survey courses. Readings may be organized around specific topics such as resistance and social protest, black intellectual history, black nationalism and identity, black film and historical literacy black cultural forms and politics, black urban history, or some such other combination. Students may take this course more than once and receive credit as long as the course topic differs. Students should contact the History Department for more details on course content during any given semester. Offered as AFST 399, ETHS 391, HSTY 399 and HSTY 499.
RLGN Courses

RLGN 101. Religion and Culture. 3 Units.
This course introduces students to the study of religion by examining religious practices within a variety of cultural and historical contexts around the world. The course invites students to think comparatively and critically about the role of religion within broader cultural discourses (e.g., gender, politics, and the environment). Instead of surveying what were formerly called the “world’s great religions,” this course builds religious literacy by examining religious practices within particular geographical and thematic areas. Through comparative case studies drawn from a diverse range of non-western cultures, students will learn about religions and spiritualities across the globe. These cultural touchstones will build core literacy in other cultures, positioning students to engage more fully in the religious and cultural diversity that they will encounter in their own lives and careers. Alongside these geographic case studies, the course will also examine key themes in the study of religion, such as diasporic transnationalism, liberation theology, and ritual practice. We will use these themes to tease out and debate some of the core theoretical and methodological challenges in the study of religion, including postcolonial critiques of the origin and history of the field of religious studies itself. To be clear, religion is our subject, not our approach. Although students will find opportunities to reflect on their own spirituality/disbelief, the course does not presume any particular religious or non-religious perspective. Indeed, the study of religion is itself concerned not only with the world’s religious traditions, but also with contemporary questions of skepticism, science, disbelief, and secularity. Evaluation will be based on class preparation and participation, regular short papers, a midterm exam, and a final take-home essay exam. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 108. The History of Yoga: The Yoga of Transformation and the Transformation of Yoga. 3 Units.
In this class we will investigate the history and context of yoga. We will first examine yoga as a transformative disciplined practice through close study of primary sources. Next we will focus on Yoga as presented in Patanjali’s Yoga Sutras. We will then examine the ways and extent to which yoga has been transformed in both India and outside of India. To this end we will scrutinize the development of American(ized) "Yoga." We will address the legal complexities concerning ownership and appropriation as well as those concerning the teaching of "Yoga" in public schools and the establishment clause of the First Amendment. We will also devote several classes to actual yoga experiences where the students can learn some asana (postures) and movements. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 151. Introducing Africana Religions. 3 Units.
This "topics course" offers an introduction to the academic study of Africana Religions. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and basic religious literacy in Buddhist tradition, exploring forms of it in a diversity of cultural contexts in Japan and throughout the world. Section topics could include, but are not limited to: Buddhist Ethics, Buddhist Theory of Mind, The Sutras. Students may repeat the course for credit (up to 6 credits), provided that the two sections are different. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 152. Introducing Buddhism. 3 Units.
This "topics" course offers an introduction to the academic study of Buddhism. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and basic religious literacy in Buddhist tradition, exploring forms of it in a diversity of cultural contexts in Japan and throughout the world. Section topics could include, but are not limited to: Buddhist Ethics, Buddhist Theory of Mind, The Sutras. Students may repeat the course for credit (up to 6 credits), provided that the two sections are different. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 153. Introducing Chinese Religions. 3 Units.
This "topics" course offers an introduction to the academic study of Chinese religions. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and a basic religious literacy in the nuances and complexities in Chinese religions within various historical and socio-cultural contexts. Section topics might include, but are not limited to: Confucianism, Daoism, Chinese Buddhism, Gender and Sexuality in Chinese Religions. Students may repeat the course for credit once (two times total for 6 credits), provided that the two sections are different. Offered as RLGN 153, ETHS 153 and CHIN 253. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 154. Introducing Hinduism. 3 Units.
This "topics" course offers an introduction to the academic study of Hinduism. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and basic religious literacy in Hinduism, exploring forms of it in a diversity of cultural contexts. Section topics could include, but are not limited to: The Epics, Ritual, Contemporary Practices. Students may repeat the course for credit (up to 6 credits), provided that the two sections are different. Offered as RLGN 154 and WLIT 154. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 155. Introducing Jainism. 3 Units.
This "topics" course offers an introduction to the academic study of Jainism. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and basic religious literacy in Jainism exploring forms of it in a diversity of cultural contexts. Section topics could include, but are not limited to: Epics and Narratives, Ritual, Contemporary Issues. Students may repeat the course for credit (up to 6 credits), provided that the two sections are different. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 171. Introducing Christianity. 3 Units.
This "topics" course offers an introduction to the academic study of Christianity. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and a basic religious literacy in Christianity, exploring forms of it in a diversity of cultural contexts throughout the world. Section topics might include, but are not limited to: The Black Church, The Apocalyptic Imagination, Latin American Liberation Theology. Students may repeat the course for credit once (two times total for 6 credits), provided that the two sections are different. Counts for CAS Global & Cultural Diversity Requirement.
RLGN 172. Introducing Islam. 3 Units.
This "topics" course offers an introduction to the academic study of the beliefs, practices, sacred texts, and intellectual traditions of Islam. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and basic religious literacy in Islamic tradition, including investigations into how Muslim institutions developed in relation to diverse socioeconomic and cultural conditions, including Africa, the Americas, the Middle East, and Europe. Section topics could include, but are not limited to: Women and Gender, Faith, Politics, and Modernity, Pilgrimages, Prophecy, and Sacred Places. Students may repeat the course for credit (up to 6 credits), provided that the two sections are different. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 173. Introducing Judaism. 3 Units.
This "topics" course offers an introduction to the academic study of Judaism. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and basic religious literacy in Jewish religious tradition, exploring forms of it in a diversity of cultural contexts around the world. Section topics could include, but are not limited to: Festivals and Holy Days, Women and Gender, Jewish Ethics. Students may repeat the course for credit (up to 6 credits), provided that the two sections are different. Offered as RLGN 173 and JDST 173. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 191. Introduction to Sanskrit. 3 Units.
This class is an introduction to Sanskrit language and culture. Students will learn basic Sanskrit grammar and syntax, both of which are intrinsically linked to the culture of ancient South Asia. There are no prerequisites and the course does not presuppose any familiarity with India or Indian languages. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 201. Interpreting Religion: Approaches and Current Issues. 3 Units.
Introduction to academic study of religion, exploring the history and development of the field, important theories and methodologies, and current issues, debates, and horizons of research. The course is foundational for majors and minors in religious studies but also open to other interested students who may find it valuable for their work in other fields of study. Particular readings and other assignments will be determined by the designated instructor. Students are expected to attend class regularly, complete readings and other assignments, and participate actively in class discussions and other activities.

RLGN 203. Religious Studies for Future Healthcare Professionals. 3 Units.
This class will provide future healthcare professionals with the basic knowledge of religious studies and of topics pertaining to death and dying, sickness, suffering, and so on. Students will also gain a basic knowledge of related bioethical issues as they are found in the world's religions. The primary aim of the course is to offer future healthcare professionals an awareness of the diverse religious backgrounds of patients and issues that they might encounter and to provide a basic understanding of religious studies in the process. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 206. Religion and Ecology. 3 Units.
Historical and cross-cultural introduction to religious perspectives on nature and ecology, including Jewish, Christian, Hindu, Buddhist, and Native American texts and ritual practices. Themes include: ecology of chaos and complexity, urban ecology, wilderness, and ecological crises. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 209. Introduction to Biblical Literature. 3 Units.
This course is an introduction to the academic study of biblical literature, including Hebrew Scriptures ("Old Testament") and the New Testament. The literature will be studied in light of both ancient and contemporary historical contexts, with a particular emphasis on the roles it plays in American culture and politics today. Class sessions will be discussion oriented and will involve close, careful analysis and interpretation of texts. No background in religion is necessary. Evaluation will be based on class preparation and participation, regular short writing assignments, two exams, and a major paper.

RLGN 213. Jews and Judaism. 3 Units.
This course provides an introduction to Jewish religion, culture, history, and life. It does not presuppose any previous study of Judaism or experience with Judaism, and it prepares students for additional coursework in Judaic studies, Jewish history, or religious studies with an emphasis on Judaism. Required for the minor in Judaic Studies. Offered as JDST 101 and RLGN 213. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 215. Religion In America. 3 Units.
This course is an introduction to American religions, with a particular focus on religious diversity in the United States. As we examine the myriad beliefs and practices of America's religious communities, we will pay close attention to how religion and culture have shaped each other from the 1600's to today. To explore the theme of religious diversity, we will take advantage of Cleveland's rich religious history with visits to local religious institutions and historical sites, including churches, mosques, synagogues and Hindu and Buddhist temples. Along the way we will consider the role of religious spaces and institutions in shaping community, identity, and politics in Northeast Ohio and beyond. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 216. Hinduism. 3 Units.
We will survey the basic beliefs and practices of Hinduism(s) as found in India and across the world, with an emphasis on primary sources and contemporary complexities. The class will focus on the religion(s) of cultures outside the United States. It will address in a substantive way ethnic, gender, sexual, religious, or other cultural practices outside the United States, so as to provide students with fresh perspectives on their own cultural assumptions, traditions, and experiences. Our study will range from close readings of classical texts, to observing and reflecting on contemporary practices and movies, to careful study of images and artifacts on display at the Cleveland Museum of Art. We will apply a variety of methods and tools to investigate class materials, from a number of different disciplines, including sociology, history, theology, anthropology, and psychology. Students will build a very strong foundation in the primary sources in this class. Counts for CAS Global & Cultural Diversity Requirement.
RLGN 217. Buddhism. 3 Units.
Buddhism is an important world religion that originated in India around 500 BCE. Subsequently, Buddhism spread to Central and East Asia. More recently, Buddhist traditions have been established in Europe and North America. Like Christianity and Islam, Buddhism is considered a "missionary" religion because its message has been actively propagated in cultural contexts outside its place of origin. Buddhist ideas and concepts have not only inspired religious practice, but have often provided the foundation for political, social, ethical, literary, artistic and other modes of cultural expression. It is, therefore, difficult to understand those Asian cultures in which Buddhism is or has been important without understanding this religious tradition itself. This course examines Buddhist thought and practice, with a focus on the Theravada and Mahayana Buddhist traditions that developed in India, and the spread and transformations of these traditions in south, southeast, and east Asia. We also consider Buddhist ethical perspectives. Course readings include translations of important Buddhist texts and contemporary scholarly interpretations of Buddhist ideas and practices. Visual and other media augment our study. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 218. Faith and Politics in Islam. 3 Units.
An overview of the relationship between Islam as a religion and Islam as a political system and the effect of this relationship on Islamic society from its origin to the present time. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 219. Islam in America. 3 Units.
The United States is home to one of the most diverse Muslim communities in the world. Using a variety of primary and secondary sources, this course examines the rich history of Islam in the United States, from the 18th century to the present, as it relates to key moments within American politics, religion and culture, and to transnational developments in Islamic thought and practice. We will also explore important issues within contemporary Muslim communities, including gender, shari'a, and religious pluralism. In addition to studying the experiences of Muslim immigrants, students will also investigate the vital role of African-American Muslims and converts in the development of American Muslim institutions, beliefs and rituals. This course will also introduce students to the history of Islam in Cleveland, and provide them with the opportunity to contribute to original research on Muslim communities in our city. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 221. Indian Philosophy. 3 Units.
We will survey the origins of Indian philosophical thought, with an emphasis on early Buddhist, Hindu and Jain literature. Our concern will be the methods, presuppositions, arguments, and goals of these schools and trajectories of thought. What were their theories on the nature of the person, the nature of reality, and the nature and process of knowing? What were the debates between the schools and the major points of controversy? And, most importantly, are the positions/arguments internally incoherent? Offered as PHIL 221 and RLGN 221. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 222. African-American Religions. 3 Units.
This course is an exploration of the rich diversity of African American religions from the colonial period to the present. Attention will be given to key figures, institutional expressions, and significant movements in African American religious history. Major themes include African traditions in American religions, slavery and religion, sacred music, social protest, Black Nationalism in religion, Islam, African American women and religion, and black and womanist theologies. Course requirements will include field trips to local religious sites. Offered as AFST 222, ETHS 222 and RLGN 222.

RLGN 224. The Many Faces of Contemporary U.S. Catholicism. 3 Units.
This course explores the implications of immigration and changing demographics on the contemporary U.S. Catholic Church. The course investigates the diverse racial and ethnic communities that increasingly define U.S. Catholicism and includes a particular focus on Africans and African Americans, Latina/os, and Asian Americans. Attention will be given to the intersections of faith, ethnicity, race, and identity constructions in contemporary U.S. Catholicism, as well as issues of racism and racial justice in the U.S. Catholic Church and other social, cultural, and political dynamics that are shaping and transforming contemporary Catholic identities in the United States. Offered as ETHS 224 and RLGN 224. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 227. Women, Gender, and Islam. 3 Units.
Women and gender are central to understanding Muslim societies, past and present. From debates about the veil to the wars in Iraq and Afghanistan, gendered concerns have been especially prominent in contemporary debates about the status of Islam in the modern world. How have Muslim thinkers interpreted Islamic scriptures with respect to topics such as marriage, child custody, inheritance, and sexuality? How is masculinity and femininity constructed? In what ways do their interpretations reflect the political, economic, and social conditions in which they lived? How does gender structure authority and power in Muslim communities? How and why have Muslim women become so important in contemporary debates over religious and national identity around the world? This course begins by examining the position of women and gender in the foundational Islamic texts, the Qur'an and Sunna (the practice of the Prophet Muhammad), and pre-modern interpretations of them. Then we will explore marriage and divorce in Muslim jurisprudence, in order to examine themes such as women's spiritual capacities, female leadership, sexuality, and slavery. Next, we will turn to the headscarf as a lens though which to explore modern configurations of gender and sexuality, as they intersect with conceptions of national belonging, religious identity, and individual freedom. Finally, we will study contemporary debates over polygyny, homosexuality, and female religious authority. There are no prerequisites for this course. No prior knowledge of Islam is expected. Offered as RLGN 227 and WGST 227. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 228. Asian Americans: Histories, Cultures, Religions. 3 Units.
This course introduces students to Asian American Studies as an interdisciplinary academic discipline. It critically examines the global and transnational dimensions of U.S. history, the constructions of "modernity" in the U.S., and the shaping of U.S. culture and religion, race and racialization, identity constructions and contestations, law and law-making, colonialism and empire building, labor and migration, politics and public policy making, and social movements through a critical study of Asian Americans and their diverse histories, cultures, religions, identity negotiations and contestations, social movements, and political activism. Offered as ETHS 228, HSTY 228 and RLGN 228. Counts for CAS Global & Cultural Diversity Requirement.
RGLN 229. Asian Christianity: Historical Perspectives. 3 Units.
The history of Christianity in Asia is as old as the history of Christianity itself. But while much has been told about Christianity as it grew from an obscure Jewish sect to mighty Western Christendom, not enough attention has been given to the Christianity which spread eastwards to Asia in the first millennium of the Christian era. This course seeks to correct the imbalance by introducing students to a historical exploration of the eastward movement of Christianity from Jerusalem to different parts of Asia. Topics include the Assyrian Church of the East in Persia, India and China, European Catholic and Protestant colonial missions in the age of European imperialism, and the Jesuit missions to Japan and China. By the end of the semester, students should have a good grasp of the historical encounter of Christianity with the political, social, cultural and religious realities of Asia. Its dialogue and confrontation with these realities and the forces that led to its growth and decline. Offered as HSTY 229 and RGLN 229. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

RGLN 233. Introduction to Jewish Folklore. 3 Units.
Exploration of a variety of genres, research methods and interpretations of Jewish folklore, from antiquity to the present. Emphasis on how Jewish folk traditions and culture give us access to the spirit and mentality of the many different generations of the Jewish ethnic group, illuminating its past and informing the direction of its future development. Offered as ANTH 233, RGLN 233, and JDST 233. Counts for CAS Global & Cultural Diversity Requirement.

RGLN 234. The Ramayana: The Great Indian Epic. 3 Units.
The Ramayana, a 2000 year old Indian epic, is an intricate story of battling kings and demons, family loyalty and betrayal, romance, religion, and politics. These stories create, store, and transmit cultural and religious values and icons for millions of people in India and other Asian and Southeast Asian nations. Our study will range from close readings of the Ramayana, to observing and reflecting on contemporary practices, to careful study of images and artifacts on display at the Cleveland Museum of Art. We will apply a variety of methods and tools to investigate class materials, from a number of different disciplines, including sociology, history, theology, anthropology, and psychology. Counts for CAS Global & Cultural Diversity Requirement.

RGLN 235. Religion and Visual Culture. 3 Units.
Cross-cultural introduction to complex relations between religion and seeing. Study of visual culture, sacred iconography, calligraphy, film, mass media, and avant-garde fashion. Extensive use of cultural resources in University Circle.

RGLN 237. Religion and Dance in South Asia. 3 Units.
This is an experimental interdisciplinary course in religion, dance, and South Asian studies. We will explore the performance of religion in bharata natyam, one storytelling dance form from South Asia. This dance style draws upon Hindu devotional (bhakti) allegories of sacred and profane love in its choreography. Lover and beloved, as the ideal relationship between God and the human, becomes the model for the performed relationship between heroes and heroines (nayaka-nayaki) danced on stages and, more recently, Bollywood screens. To this end we will examine primary and secondary sources on bharata natyam and aesthetic theory/classical dramatics. We will also observe dance performances in the greater Cleveland area. Offered as RGLN 237 and DANC 237.

RGLN 238. Alternative Altars: Folk Religion in America. 3 Units.
Taking a multidisciplinary approach, students will become familiar with the distinction between conventional and unconventional religions, with the history and personalities associated with new belief systems in America, and with the means, motivations and methods of generating faith communities. Students will come to understand the role of cultural anxieties, new technologies, changing roles, globalization and other social tensions in the formation and duration of alternative altars. Counts for CAS Global & Cultural Diversity Requirement.

RGLN 243. Bollywood and Social Justice: Contemporary Bollywood Movies with a Social Message. 3 Units.
India, where over-the-top, melodramatic films dominate, produces more than 1,000 films a year. With lavish action sequences punctuated by periodic songs in picturesque locales, these films, popularly referred to as Bollywood, traditionally have been known for depicting imaginary worlds, very far from reality. Among these are movies that are deeply immersed in issues of religion, religious conflict, caste, and social injustice. These issues range from ones concerning purity and the class system and Hindu-Muslim conflict, to women's rights and human trafficking. This class will be looking at a number of Bollywood films with focal points of matters pertaining to social justice. Students will learn about the foundations of these inequalities and intolerances so that they can more completely understand the themes addressed in the movies. The class will thus focus on the religion(s) of cultures outside the United States. It will address in a substantive way ethnic, gender, sexual, religious, or other cultural practices outside the United States, so as to provide students with fresh perspectives on their own cultural assumptions, traditions, and experiences. Offered as ETHS 243 and RGLN 243. Counts for CAS Global & Cultural Diversity Requirement.

RGLN 251. Perspectives in Ethnicity, Race, Religion and Gender. 3 Units.
This course is designed to introduce students to the study of ethnicity. Basic concepts such as race, gender, class, and identity construction will be examined. Students are encouraged to use the tools and perspectives of several disciplines to address the experiences of ethnic groups in the United States. Offered as ETHS 251 and RGLN 251. Counts for CAS Global & Cultural Diversity Requirement.
RLGN 252. Soul Murder: Religion and Sexual Abuse. 3 Units.
This seminar traces anthropological questions about religious-trauma, -memory, and -suffering through the lens of clergy sexual abuse. How is religious sexual abuse different than non-religious contexts? What can survivors teach us about the resilience of the human spirit? What are the racial dynamics of the recent Roman Catholic crisis? What flaws has it exposed in our criminal justice system? To answer questions like these, we will (i) begin the semester with anthropological studies of religion and trauma. Then we will (ii) examine grand jury investigations in the United States. Prepared by these theoretical and historical texts, we will (iii) evaluate case studies from the Roman Catholic context, including sexual abuse by nuns. We will use these examples to evaluate (iv) representations of the crisis in film and news media. Finally, we will (v) compare the Catholic crisis to recent sexual abuse scandals in American Jewish, Muslim, and Protestant communities. The comparative literature will include readings by Veena Das (cultural anthropology), Levinas (philosophy), Kathryn Lofton (religious studies), Timothy Lytton (law), Fortune (theology), and Frawley-O’Dea (psychology). Primary sources will include excerpts from special prosecutors and grand juries in Pennsylvania, Louisiana, and Massachusetts. Films will include "Doubt" and "Spotlight." By the end of the course, students will: - Know how to research and critique the legal, spiritual, and theoretical consequences of religious sexual abuse. - Be able to debate multiple theories of religion and trauma. - Be able to analyze data that is emotionally difficult and legally complex. Our seminars will include discussions, short writing assignments, collaborative work, and presentations. Offered as RLGN 252 and WGST 252. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 253. Religion and Philosophy in China. 3 Units.
This course critically examines the three principal religious and philosophical traditions of China: the Confucian, Daoist, and Chinese Buddhist traditions. Through a combination of assigned print and online readings, video clips and documentaries, class discussions, and written assignments, students explore the origins and historical developments, principal thinkers, central religious and doctrinal themes, ethics, spirituality, popular devotions, social movements, and contemporary developments of these three major religious and philosophical traditions of China. Students will consider the wider social, cultural, ethical, economic, and political dimensions of Chinese religions and philosophies generally, and themes of community and society, identity constructions, personal experiences, movements, as well as their socio-cultural reproductions in contemporary China, and where appropriate, the Chinese Diaspora in North America. Offered as CHIN 253C, ETHS 253C, PHIL 253 and RLGN 253. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 254. The Holocaust. 3 Units.
This class seeks to answer fundamental questions about the Holocaust: the German-led organized mass murder of nearly six million Jews and millions of other ethnic and religious minorities. It will investigate the origins and development of racism in modern European society, the manifestations of that racism, and responses to persecution. An additional focus of the course will be comparisons between different groups, different countries, and different phases during the Nazi era. Offered as HSTY 254, RLGN 254, ETHS 254, and JDST 254. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 255. Global Judaism: Diversity Across the Jewish World. 3 Units.
Scattered across the globe over the course of millennia, Jews' diverse histories and environments have given rise to a great range of religious, cultural and social forms. Using ethnographies as our primary texts, we will think critically and comparatively about Judaism and Jewishness in the Americas, Europe, Africa, and Asia. Along our journey, we examine how Jews have navigated their experiences as minorities in their many diaspora homelands, and how they have adapted their cultural and religious practices to the various environments in which they have found themselves. In addition to exploring their Jewishness vis-à-vis others, we also examine questions of exclusion and belonging that Jews have faced as they have encountered each another in recent decades through tourism, mass migration, globalization, and the internet. How do the world's varied Jewish groups - who are of different skin colors, who speak different languages, and who carry different historical memories - navigate ethnic divides, race relations, and religious diversity? Should we speak of a single Jewish religion and Jewish people at all? Offered as ANTH 255, ETHS 255, JDST 255 and RLGN 255. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 260. Introduction to the Qur'an. 3 Units.
This course is an introduction to the Qur'an. For Muslims, the Qur'an is the inimitable word of God, and its influence has been both far-reaching and profound in various historical contexts. It introduces students to the text of the Qur'an, in English translation, providing a window into both Muslim interpretations of their scripture (from the early days of Islam to the present) and academic studies of the text. Students will approach the Qur'an as a living document, as text that is continually re-visited and re-interpreted by Muslims, and used in various ritual contexts and in daily life. This course will explore theological and legal dimensions of the Qur'an, touching on issues of God's nature, Islamic ethics, the foundations of Islamic law, and gender roles. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 265. Malcolm and Martin. 3 Units.
An examination of the lives, religious thought, and ideological frameworks of Malcolm X and Martin Luther King, Jr. The course will investigate Malcolm X and Martin King's religious beliefs and activist strategies; the ideas and strategies of other civil rights and Black Nationalist leaders who influenced and challenged Martin and Malcolm's ideas on race, gender, class, and sexuality; and the historical antecedents for these strategies within nineteenth-century black religious, social, and political movements. Their impact on modern African American religious thought, American political culture, and international human rights movements will also be explored. Offered as AFST 265, ETHS 265 and RLGN 265. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 268. Women in the Bible: Ethnographic Approaches to Rite and Ritual, Story, Song, and Art. 3 Units.
Examination of women in Jewish and Christian Biblical texts, along with their Jewish, Christian (and occasionally Muslim) interpretations. Discussion of how these traditions have shaped images of, and attitudes toward, women in western civilization. Offered as RLGN 268, WGST 268, and JDST 268.
RLGN 270. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCS, FSSQ, FSSY, FSTS, or FSCS.

RLGN 272. Morality and Mind. 3 Units.
Recent research in cognitive science challenges ethical perspectives founded on the assumption that rationality is key to moral knowledge or that morality is the product of divine revelation. Bedrock moral concepts like free will, rights, and moral agency also have been questioned. In light of such critiques, how can we best understand moral philosophy and religious ethics? Is ethics primarily informed by nature or by culture? Or is ethics informed by both? This course examines 1) ways in which cognitive science—a field as evolutionary biology—impact traditional moral perspectives, and 2) how the study of moral philosophy and comparative ethics forces reconsideration of broad cognitive science theories about the nature of ethics. The course examines the concept of free will as a case study in applying these interpretive viewpoints. Interdisciplinary readings include literature from moral philosophy, religious ethics, cognitive science, and evolutionary biology. Offered as COGS 272 and RLGN 272.

RLGN 273. Religion and Healing in the United States. 3 Units.
A cross-cultural exploration of the relationships between religion, health and healing in the United States. Through an interdisciplinary approach that includes religious studies, medical anthropology and ethnic/gender studies, the course investigates how persons interpret illness and suffering. Attention is also paid to how different groups utilized, or are served by, the health care system. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 278. Religion and Popular Culture. 3 Units.
How does religion function when it shows up in popular culture? How does popular culture influence and help shape religion? This "topics" course explores the interactions between religion and popular culture in contemporary society. Each section will focus on visual, kinetic, aural, haptic or literary "texts" that may include musical production, dance, film and television, social media, sports, video, visual and textile arts, traditional fiction or graphic novels. The course examines how religious traditions, symbols or concepts are evoked in popular cultural texts and how these texts create meaning and help shape individual and communal identity. Each section will examine themes and issues that may include: gender, race, and sexuality; protest and activism, commercialism and consumerism; power and identity; ethics and morality; experience and embodiment; and constructions of evil, salvation, and transcendence. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 280. Religion and Politics in the Middle East. 3 Units.
An in-depth look at the relationship between politics and religion in the Middle East. Students will spend the first week on the CWRU campus and the last three weeks in Israel, where time will be divided between classroom teaching, guest lectures, and "field trips" to important sites. Students will have the opportunity to interact directly with members of the region's diverse religious groups within the political, social, and cultural contexts in which they live. A final research paper will be required. Knowledge of Hebrew is not necessary. Offered as JDST 280 and RLGN 280.

RLGN 283. Muhammad: The Man and the Prophet. 3 Units.
The life of the Prophet Muhammad (c.470-632 CE) which was as crucial to the unfolding Islamic ideal as it is today. An examination of how he attempted to bring peace to war-torn Arabia by evoking an entirely new perspective of the human situation, guidance for human lives, and humans' relationship with God. The course will include Western perceptions of Islam, especially in light of September 11, 2001. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 284. Jesus Through Islamic Lens. 3 Units.
Christians are often surprised when they hear Muslims say, "We believe in Jesus too, and we hold him in great esteem." But what do they really mean? Are the Muslim Jesus and the Christian Jesus the same person? The primarily aim of this course is to introduce an image of Jesus little known outside the Arabic Islamic culture. It is an image that might be of interest to those who wish to understand how Jesus was perceived by a religious tradition which greatly revered him but rejected his divinity. Hence, the Jesus presented in this course will be similar in some ways to the Jesus in the Christian Gospels, in others not. Why and how this Muslim tradition of Jesus arose will also be discussed in this course. Jesus Through Islamic Lens will draw from various Islamic texts to provide a comprehensive selection of excerpts pertaining to the life and moral teachings of Jesus. Approaching Christ from an Islamic perspective, this course will offer the students a rare opportunity to understand the significance of Jesus in Islam and to gain a better understanding of the faith, not only as it contrasts with Christianity but also as it compares. In this course we will try to respond to these questions: What role does Jesus have in Islam? What does the Quran say about Him? What does it not say? Why are Muslims perplexed by the idea that Jesus is the Son of God, fully God and fully man? What do Muslims have in mind when they acknowledge Jesus as virgin-born? This course also requires reading literature that pertains to the history of Islam, its theology and its culture, and because of its emphasis on an area of the world historically distinct from the West (or European culture), the course will fulfill the Global and Cultural Diversity requirement. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 301. Ritual in Religion. 3 Units.
Drawing from a broad range of approaches and academic fields, this seminar offers an introduction to the study of ritual. The course has three main goals: (1) to help students become familiar with important theories of and approaches to ritual studies; (2) to explore a number of ritual practices from different cultures, from ancient priestly rites in the Bible to contemporary cockfights in Bali; and (3) to study and discuss several representations of ritual in contemporary literature and film. Offered as RLGN 301 and RLGN 403.
RLGN 302. The Lemonade Class: Religion, Race, Sex and Black Music. 3 Units.
Charles Long suggests that black musical forms are creative responses to the particular circumstances of black peoples' presence in the U.S and black notions of the sacred. In April of 2016, Beyoncé released her visual album Lemonade two days after the death of Prince. This course is organized around the album’s title cuts and links these two artists together in an examination of religion and musical performance as creative response to the racial and gendered conditions of black life. The course investigates how both artists have used music as a platform to explore issues of race, gender, commerce, sexuality, power and divinity. The course also looks at examples from the works of earlier artists who address similar themes such as Ma Rainey, Bessie Smith, Muddy Waters, Billie Holiday, Nina Simone, Little Richard, James Brown, Marvin Gaye, and Aretha Franklin. Offered as AFST 302, ETHS 302, MUHI 316, RLGN 302, RLGN 402, and WGST 302. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 303. Multicultural Spain: Christian, Jewish and Muslim Coexistence. 3 Units.
Why is Medieval Iberia so often depicted as an example of tolerant multiculturalism? What constituted tolerance in the Middle Ages? In what sense can we speak of medieval multiculturalism? Is Americo Castro's optimistic model of convivencia (coexistence) valid, or is Brian Catlos’ idea of convivencia (convenience) more accurate? In this course we will study cultural theory, medieval and modern historiography, and literature from medieval Castile to the present to approach an understanding of Medieval Iberian 'multiculturalism.' This class will allow students to get in contact with the history of Spain through the study of the presence and influence of the Roman Empire, the Jewish and Muslim cultures and religions in the Peninsula. Through literature, cinema and art students will learn how the Spanish civilization and culture developed through the years. The class will be offered during a regular semester, with a study abroad component at the end of it. Students will receive a handout about how to prepare for the class abroad. Students will have the option of completing the class by traveling to Spain, or completing a cultural project at the end of the semester if they are not able to travel. Offered as RLGN 303 and SPAN 301. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 306. Interpreting Buddhist Texts. 3 Units.
Readings in translation of major texts from the Buddhist tradition. Special emphasis on problems of textual interpretation, historical context, Buddhist conceptions of the sacred, and Buddhist ethics.

RLGN 307. Body, Health and Medicine in Chinese Religions: Historical and Contemporary Perspectives. 3 Units.
This course critically evaluates the history and development of traditional Chinese approaches to health and medicine in the context of Chinese religious, philosophical, and socio-cultural history. It examines the constructions of the body in Chinese religious and philosophical thought across different historical periods and evaluates their significance and implications for understanding Chinese approaches to health and medicine. It discusses the conceptions of "health" and "good health" in ancient China, the distinction between "healing" and "curing," the development of the complementary yin-yang and five phases (wuxing) theories, understandings of nature (xing) and body (ti), the concept of qi as life force, and various microcosm-macrocosm analogies that emerged from Chinese religious and philosophical traditions. It explores how these religious and philosophical frameworks, beginning with the Daoist classic, Basic Questions in the Inner Classic of the Yellow Emperor (Huangdi Neijing Suwen) have evolved to undergird the development of diet, acupuncture, moxibustion, meditation, and various alchemical practices within Chinese holistic conceptions of health and practices of Traditional Chinese Medicine. Offered as RLGN 307, RLGN 407, CHIN 307, HSTY 308, and ETHS 307. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 308. Daoism: Visual Culture, History and Practice. 3 Units.
This course explores developments in the visual culture, history and practices of Daoist religious traditions in China from the third to twentieth centuries. Our historically and conceptually structured examination draws upon a balance of visual, textual, and material sources, while considering the various approaches scholars have employed to understand the history and development of Daoist traditions. Topics include: sacred scriptures and liturgies, biographies and visual narratives, iconography and functions of the pantheon of gods and immortals, views of the self and the body, practices of inner alchemy and self-cultivation, thunder deities and exorcism, dietetics and medicine and modes of meditation and ritual. Offered as ARTH 308, ARTH 408, and RLGN 308. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 310. Cognitive Science of Religion. 3 Units.
This course introduces theories and methods in the cognitive science of religion. Particular emphasis is placed on applying cognitive scientific concepts and theories to such religious issues as belief in deities, religious ritual, and morality. We examine such topics as the relationship of religious studies to evolution and cognition, cognitive theories or religious ritual, anthropomorphism and religious representation, religion as an evolutionary adaptation, and cognitive semantics and religious language. Course work includes student-led discussions, a research-intensive journal-length essay on a topic chosen in consultation with the Instructor, and presentation of research findings to the class. Course readings are taken from the humanities, the social sciences, and natural sciences. Offered as COGS 310, COGS 410, RLGN 310 and RLGN 410.
RLGN 311. Representations of Black Religion in Film. 3 Units.
In this course we will explore cinematic representations of black religion in the Americas and the Caribbean. Each week we will view a film representing diverse religious traditions such as Christianity, Candomble, Santeria, Vodou, and Islam. Films will include Cabin in the Sky, The Color Purple, Black Orpheus, The Serpent and the Rainbow, Malcolm X, Eve's Bayou, and The Princess and the Frog. Throughout the course we will analyze the ways in which notions of gender, the history of colonialism, modern notions of race, and geographical landscapes have informed representations of black religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas of black religion in the Americas. Offered as AFST 311, ETHS 311, RLGN 311, and RLGN 411. Counts for CAS Global & Cultural Diversity Requirement. Prereq: RLGN 222 or ETHS 251 or ENGL 367 or by permission of Instructor.

RLGN 312. The Mythical Trickster. 3 Units.
Few literary figures have as wide a distribution, and as long a history, as the mythical Trickster. He is at once sacred and profane, creator and destroyer; an incorrigible duper who is always duped. Free of social and moral restraints he is ruled instead by passions and appetites, yet it is through his unprincipled behavior that morals and values come into being. How are we to interpret this amazing creature? Using folkloristic theories and ethnographic methods, we will come to understand the social functions and symbolic meanings of the cross-cultural Trickster, over time and across space. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 313. Topics in Biblical Literature. 3 Units.
A departmental "topics" seminar focused on advanced textual analysis and interpretation of particular biblical (including apocryphal) texts and the critical issues of method, theory, theology, and history that pertain to those texts. Reading assignments will be divided between close, exegetical analysis of small units of texts and the study of scholarly criticism of the same texts (commentaries, journal articles, critical notes). Evaluation will be based on class preparation and participation, weekly short papers, an exegetical paper focused on a particular pericope of the student's choice, and an interpretive paper based on exegesis of several related passages. Graduate students enrolled in the course as RLGN 413 will have the following additional requirements: (a) preliminary academic reading on the biblical material; (b) leadership/teaching of one seminar session on an academic theoretical or theological approach to the biblical text, including an additional meeting with the professor in preparation for that session; and (c) a longer final paper that critical engages the approach that was the focus of the seminar session s/he leads (15-20 pages, suitable for publication at an academic conference). Offered as RLGN 313 and RLGN 413. Prereq: RLGN 209 or permission of instructor.

RLGN 314. Mythologies of the Afterlife. 3 Units.
This course provides a multidisciplinary approach to the idea of an afterlife, and its manifestation in diverse cultures. We will examine the way varying views of the afterlife influence religion, popular culture and palliative care, and how human creativity has shaped the heavens, hells, hauntings and holidays of diverse populations over time and across space. Students will come to see the afterlife as an integral part of human history and experience, not only because it helps people die with better hope, but because it helps them to live more richly. Offered as RLGN 314 and JDST 314.

RLGN 315. Heresy and Dissidence in the Middle Ages. 3 Units.
Survey of heretical individuals and groups in Western Europe from 500 - 1500 A.D., focusing on popular rather than academic heresies. The development of intolerance in medieval society and the problems of doing history from hostile sources will also be explored. Offered as HSTY 315 and RLGN 315. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 316. Christianity in China. 3 Units.
This course critically evaluates Christianity's long history in China, beginning with the "Luminous Religion" (Jingjiao) that was propagated by Assyrian Christian missionaries in Tang China (7th century CE), the missionary endeavors of Catholic and Protestant foreign missionaries and mission societies, the rise of indigenous Chinese Christianities that sought independence from foreign missionaries, the impact of communist rule and the Cultural Revolution, and current developments involving both the official government-approved churches (i.e., the Three Self Patriotic Movement and the Chinese Patriotic Catholic Association) on the one hand, and the house church movement (jiating jiaohui) on the other hand. Students will critically discuss and analyze the historical dimensions of Christianity's presence in China and engagement with various social, cultural, political, philosophical, and religious aspects of Chinese society, past and present, and consider the implications of emergent forms of contemporary indigenous Chinese Christian movements for the future of Chinese Christianity. Offered as RLGN 316, RLGN 416, HSTY 322, CHIN 316 and ETHS 326. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 317. Topics in Catholic Studies. 3 Units.
A departmental topics seminar for Catholic Studies that is focused on advanced interdisciplinary study of selected thematic issues in Catholic Studies. Students will read and discuss advanced critical readings and write book reports, response papers, and an in-depth research essay. Graduate students enrolled in the course as RLGN 417 will have additional readings, a longer final paper of publishable quality or presentation at an academic conference, and leadership/teaching of at least one seminar session under the supervision of the course instructor. Offered as RLGN 317 and RLGN 417. Prereq: RLGN 205.

RLGN 318. Christian Music: Historical and Global Perspectives. 3 Units.
Music has played an outsized role in the history and development of Christianity, from plainchant to polyphony, shape note singing to gospel, congregational hymns to contemporary genres and global musical expressions at Christian worship across different continents and cultures. Offered as an upper-division seminar for advanced undergraduate and graduate students, this seminar examines the history and development of Christian music around the world within the social, cultural, regional, ritual, and spiritual contexts that inspired their emergence and growth. While the primary approach in this seminar is historiographical, ethnomusicalogical principles may be utilized where appropriate to examine contemporary genres of Christian music from the Two-Thirds or Majority World. Offered as RLGN 318, RLGN 418, and MUHI 309. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 319. The Crusades. 3 Units.
This course is a survey of the history of the idea of "crusade," the expeditions of Western Europeans to the East known as crusades, the Muslim and Eastern Christian cultures against which these movements were directed, as well as the culture of the Latin East and other consequences of these crusades. Offered as HSTY 319 and RLGN 319. Counts for CAS Global & Cultural Diversity Requirement.
RLGN 320. Gods and Demons in the Ancient Near East and Egypt. 3 Units.
The roots of many modern religious, literary, social, and political notions reach deep into the fertile soil of Ancient Near Eastern and Egyptian cultures, which developed as early as the fourth millennium BCE and flourished until the Hellenistic period. In this course we will examine various components of the religious, divinatory and magical systems of these cultures, and reflect upon their relationship with the stories that are found in the Hebrew Bible. We will learn (through a critical analysis of a selection of ancient texts) about ancient Mesopotamian and Egyptian deities, demons, myths, and magical rituals. We will also explore notions of creation, cosmic order, the human condition, death, afterlife, divine favor, and a wide variety of beliefs that, while often contradictory to modern ways of thinking, combined into unified religious systems. Offered as ANEY 320, RLGN 320 and RLGN 420.

RLGN 324. Landscapes and Pilgrimages: Spatial Theory in the Study of Religion. 3 Units.
This course employs spatial approaches and theories to examine the religious praxis and identities of individuals and communities. Working notions of space include physical, socio-political, cultural, imaginative, and ritual dimensions. We will examine the themes of mapping, memory and movement related to religious landscapes and geographies as well as issues related to social justice, gender, race, power, difference, and ecology. We will also investigate the spatial practices of individuals and communities. These practices may include pilgrimage to, and construction, of religious sites, ritual procession, walking, devotional practices, community activism, and artistic endeavors. Course requirements include student participation in field excursions to religious sites and spaces in the Cleveland area and the development of a photo essay or a mixed media project related to religious space. Offered as RLGN 324 and RLGN 424.

RLGN 333. Philosophy of Religion. 3 Units.
Topics include: classical and contemporary arguments for God’s existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433. Prereq: PHIL 101 or RLGN 102.

RLGN 338. Black Women and Religion. 3 Units.
This course is an exploration of the multidimensional religious experiences of black women in the United States. These experiences will be examined within particular historical periods and across diverse social and cultural contexts. Course topics and themes include black women and slave religion, spirituality and folk beliefs, religion and feminist/womanist discourse, perspectives on institutional roles, religion and activism, and spirituality and the arts. Offered as ETHS 339, RLGN 338 and WGST 339. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 343. Mysticism. 3 Units.
This class is an introduction to a central issue in the philosophy of religion concerning the nature of mystical and ineffable experiences. Are all mystical experiences the same? Is it possible to have an experience outside of language? What is the ontological and epistemological status of drug induced mystical experiences? Students will learn to write and present arguments against positions using the methods of philosophers of religion(s).

RLGN 347. Power of Words: Ritual Uses of Premodern Japanese Literature. 3 Units.
In premodern Japan, it was not only death and mourning ritual and practice that could pacify the spirit of the deceased, but also language. Authors consciously crafted the words of their works to simultaneously express the grief associated with longing and pacify the spirits of the dead. These words are called kotodama (power of words). From as far back as the eighth-century Kojiki (Records of Ancient Matters) and Nihon Shoki (The Chronicles of Japan) textual representations of mourning were linked with special uses of language and spirit pacification. At the death of Ame-no-wakahiko (a mythological god), his parents constructed a mourning hut and performed songs to secure his spirit in the afterworld. As several authors have demonstrated, from kotodama in the mid-eighth-century poetic anthology Man’yōshū (Collection of Ten Thousand Leaves) to linked verse (renga) in medieval Japan, carefully constructed literary language also had a place in ritual pacification of the spirits of the dead. Words were not simple expressions of grief; they held power. All material is in English translation. The course is conducted in English. All material will be provided via PDF. Offered as JAPN 347 and JSPORT 347 and RLGN 347. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 348. Buddhism and Cognitive Science. 3 Units.
In 1987, the Dalai Lama initiated a yearly event—Mind and Life Dialogues—to address “critical issues of modern life at the intersection of scientific and contemplative understanding”. Dialogue topics included issues related to Buddhist thought and practice, and cognitive science. Others with an interest in the intersection of Buddhism and cognitive science, such as Robert Wright in Why Buddhism is True: The Science and Philosophy of Meditation and Enlightenment (2017), argue that non-supernatural aspects of Buddhism, such as the benefits of mindfulness meditation and the nature of the (non-)self, are affirmed by cognitive science and evolutionary psychology. The notion that at least some aspects of Buddhism are “true” in relation to contemporary cognitive scientific views of mind and brain has attracted considerable attention from both Buddhist practitioners and cognitive scientists. This seminar explores Buddhist and cognitive science perspectives on issues such as embodied cognition, consciousness, mind, self and personal identity, theory of mind, morality, representation, and language. We start with a general overview of Buddhist philosophy, and then turn to specific readings on Buddhist concepts in relation to similar concepts found in the cognitive science literature. For instance, we will explore the Buddhist concept of no permanent self or soul (an-tman). This idea resonates with Daniel Dennett’s notion of the “narrative self” and the cognitive neuroscience view that there is no neurological center of self or experience. Although the specific concepts covered will vary in each iteration of this course, readings will always be drawn from both Buddhist primary and secondary readings, and from the cognitive science literature. Offered as COGS 348, COGS 448, RLGN 348 and RLGN 448. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Completion of one COGS or RLGN course or Requisites Not Met permission.

RLGN 350. Jewish Ethics. 3 Units.
An exploration of Jewish moral and ethical discourse. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abortion, euthanasia, and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of moral rhetoric in the Jewish community today. Readings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as JDST 350, RLGN 350, and RLGN 450. Counts as SAGES Departmental Seminar.
RLGN 352. Language, Cognition, and Religion. 3 Units.
This course utilizes theoretical approaches found in cognitive semantics—a branch of cognitive linguistics—to study the conceptual structures and meanings of religious language. Cognitive semantics, guided by the notion that conceptual structures are embodied, examines the relationship between conceptual systems and the construction of meaning. We consider such ideas as conceptual metaphor theory, conceptual blending, Image schemas, cross-domain mappings, metonymy, mental spaces, and idealized cognitive models. We apply these ideas to selected Christian, Buddhist, and Chinese religious texts in order to understand ways in which religious language categorizes and conceptualizes the world. We examine both the universality of cognitive linguistic processes and the culturally specific metaphors, conceptual blends, image schemas, and other cognitive operations that particular texts and traditions utilize. Offered as RLGN 352, RLGN 452, COGS 352 and COGS 452. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 353. Hindu and Jain Bioethics: Special Focus on Women's and Gender Studies. 3 Units.
This course will provide both an introduction to basic Hinduism and Jainism and an introduction to Hindu and Jain bioethics. We will focus primarily on bioethical issues that pertain to women and that are gender related. These issues include abortion, menstruation, surrogacy, intersex, and other topics of controversy. Offered as ETHS 353, RLGN 353, RLGN 453, and WGST 355. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 371. Jews Under Islam and Christianity. 3 Units.
This course examines the social and political status of Jews under Muslim and Christian rule since the Middle Ages. Themes include interfaith relations, Islamic and Christian beliefs regarding the Jews, Muslim and Christian regulation of Jewry, and the Jewish response. Offered as HSTY 371, JDST 371 and RLGN 371. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 372. Anthropological Approaches to Religion. 3 Units.
The development of, and current approaches to, comparative religion from an anthropological perspective. Topics include witchcraft, ritual, myth, healing, religious language and symbolism, religion and gender, religious experience, the nature of the sacred, religion and social change, altered states of consciousness, and evil. Using material from a wide range of world cultures, critical assessment is made of conventional distinctions such as those between rational/irrational, natural/supernatural, magic/religion, and primitive/civilized. Recommended preparation: ANTH 102. Offered as ANTH 372, RLGN 372 and ANTH 472.

RLGN 373. History of the Early Church: First Through Fourth Centuries. 3 Units.
Explores the development of the diverse traditions of Christianity in the Roman Empire from the first through the fourth centuries C.E. A variety of New Testament and extra-Biblical sources are examined in translation. Emphasis is placed on the place of Christianity in the larger Roman society, and the variety of early Christian ideals of salvation, the Church, and Church leadership. Offered as HSTY 303 and RLGN 373. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 388. Topics in Religion. 3 Units.
Critical assessment of selected topics of historical or current interest. Project must be accepted by a member of the department faculty prior to registration. Offered as RLGN 388 and RLGN 488.

RLGN 392. Independent Study. 1 - 3 Units.
Up to three semester hours of independent study may be taken in a single semester. Must have prior approval of faculty member directing the project.

RLGN 394. Honors Research I. 3 Units.
Intensive study of a topic or problem leading to the writing of an honors thesis. Requires RLGN 102 plus 9 RLGN credits and department approval. Prereq: RLGN 102 plus 9 RLGN credits.

RLGN 395. Honors Research II. 3 Units.
Intensive study of a topic or problem leading to the writing of an honors thesis. By department approval only. Prereq: RLGN 394 and by departmental approval.

RLGN 399. Major/Minor Seminar. 3 Units.
Capstone course primarily for majors and minors in religious studies. Allows students to interact with peers and faculty, reflect critically, and integrate their learning experiences. Prepares students to continue their learning in the discipline and in the liberal arts. Subject matter varies according to student and faculty needs and perspectives. May be repeated once for up to six credit hours. Counts as SAGES Senior Capstone. Prereq: RLGN 201.

RLGN 400. Foundational Readings in Religious Studies. 3 Units.
Structured as an Independent Study, this course is meant to familiarize the student with the major classical works and thinkers that have shaped the modern field of Religious Studies. Students will meet on a regular basis with the Instructor to discuss the theories and methods described in the literature.

RLGN 402. The Lemonade Class: Religion, Race, Sex and Black Music. 3 Units.
Charles Long suggests that black musical forms are creative responses to the particular circumstances of black peoples’ presence in the U.S and black notions of the sacred. In April of 2016, Beyoncé released her visual album Lemonade two days after the death of Prince. This course is organized around the album’s title cuts and links these two artists together in an examination of religion and musical performance as creative response to the racial and gendered conditions of black life. The course investigates how both artists have used music as a platform to explore issues of race, gender, commerce, sexuality, power and divinity. The course also looks at examples from the works of earlier artists who address similar themes such as Ma Rainey, Bessie Smith, Muddy Waters, Billie Holiday, Nina Simone, Little Richard, James Brown, Marvin Gaye, and Aretha Franklin. Offered as AFST 302, ETHS 302, MUHI 316, RLGN 302, RLGN 402, and WGST 302. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 403. Ritual in Religion. 3 Units.
Drawing from a broad range of approaches and academic fields, this seminar offers an introduction to the study of ritual. The course has three main goals: (1) to help students become familiar with important theories of and approaches to ritual studies; (2) to explore a number of ritual practices from different cultures, from ancient priestly rites in the Bible to contemporary cockfights in Bali; and (3) to study and discuss several representations of ritual in contemporary literature and film. Offered as RLGN 301 and RLGN 403.
RLGN 407. Body, Health and Medicine in Chinese Religions: Historical and Contemporary Perspectives. 3 Units.
This course critically evaluates the history and development of traditional Chinese approaches to health and medicine in the context of Chinese religious, philosophical, and socio-cultural history. It examines the constructions of the body in Chinese religious and philosophical thought across different historical periods and evaluates their significance and implications for understanding Chinese approaches to health and medicine. It discusses the conceptions of “health” and “good health” in ancient China, the distinction between “healing” and “curing,” the development of the complementary yin-yang and five phases (wuxing) theories, understandings of nature (xing) and body (ti), the concept of qi as life force, and various microcosm-macrocosm analogies that emerged from Chinese religious and philosophical traditions. It explores how these religious and philosophical frameworks, beginning with the Daoist classic, Basic Questions in the Inner Classic of the Yellow Emperor (Huangdi Neijing Suwen) have evolved to undergird the development of diet, acupuncture, moxibustion, meditation, and various alchemical practices within Chinese holistic conceptions of health and practices of Traditional Chinese Medicine. Offered as RLGN 307, RLGN 407, CHIN 307, HSTY 308, and ETHS 307. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 410. Cognitive Science of Religion. 3 Units.
This course introduces theories and methods in the cognitive science of religion. Particular emphasis is placed on applying cognitive scientific concepts and theories to such religious issues as belief in deities, religious ritual, and morality. We examine such topics as the relationship of religious studies to evolution and cognition, cognitive theories or religious ritual, anthropomorphism and religious representation, religion as an evolutionary adaptation, and cognitive semantics and religious language. Course work includes student-led discussions, a research-intensive journal-length essay on a topic chosen in consultation with the Instructor, and presentation of research findings to the class. Course readings are taken from the humanities, the social sciences, and natural sciences. Offered as COGS 310, COGS 410, RLGN 310 and RLGN 410.

RLGN 411. Representations of Black Religion in Film. 3 Units.
In this course we will explore cinematic representations of black religion in the Americas and the Caribbean. Each week we will view a film representing diverse religious traditions such as Christianity, Candomble, Santeria, Vodou, and Islam. Films will include Cabin in the Sky, The Color Purple, Black Orpheus, The Serpent and the Rainbow, Malcolm X, Eve's Bayou, and The Princess and the Frog. Throughout the course we will analyze the ways in which notions of gender, the history of colonialism, modern notions of race, and geographical landscapes have informed representations of black religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas of black religion in the Americas. Offered as AFST 311, ETHS 311, RLGN 311, and RLGN 411. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 413. Topics in Biblical Literature. 3 Units.
A departmental “topics” seminar focused on advanced textual analysis and interpretation of particular biblical (including apocryphal) texts and the critical issues of method, theory, theology, and history that pertain to these texts. Reading assignments will be divided between close, exegetical analysis of small units of texts and the study of scholarly criticism of the same texts (commentaries, journal articles, critical notes). Evaluation will be based on class preparation and participation, weekly short papers, an exegetical paper focused on a particular pericope of the student's choice, and an interpretive paper based on exegesis of several related passages. Graduate students enrolled in the course as RLGN 413 will have the following additional requirements: (a) preliminary academic reading on the biblical material; (b) leadership/teaching of one seminar session on an academic theoretical or theological approach to the biblical text, including an additional meeting with the professor in preparation for that session; and (c) a longer final paper that critical engages the approach that was the focus of the seminar session s/he leads (15-20 pages, suitable for publication at an academic conference). Offered as RLGN 313 and RLGN 413.

RLGN 416. Christianity in China. 3 Units.
This course critically evaluates Christianity's long history in China, beginning with the "Luminous Religion" (Jingjiao) that was propagated by Assyrian Christian missionaries in Tang China (7th century CE), the missionary endeavors of Catholic and Protestant foreign missionaries and mission societies, the rise of indigenous Chinese Christianities that sought independence from foreign missionaries, the impact of communist rule and the Cultural Revolution, and current developments involving both the official government-approved churches (i.e., the Three Self Patriotic Movement and the Chinese Patriotic Catholic Association) on the one hand, and the house church movement (jiating jiaohui) on the other hand. Students will critically discuss and analyze the historical dimensions of Christianity's presence in China and engagement with various social, cultural, political, philosophical, and religious aspects of Chinese society, past and present, and consider the implications of emergent forms of contemporary indigenous Chinese Christian movements for the future of Chinese Christianity. Offered as RLGN 316, RLGN 416, HSTY 322, CHIN 316 and ETHS 326. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 417. Topics in Catholic Studies. 3 Units.
A departmental topics seminar for Catholic Studies that is focused on advanced interdisciplinary study of selected thematic issues in Catholic Studies. Students will read and discuss advanced critical readings and write book reports, response papers, and an in-depth research essay. Graduate students enrolled in the course as RLGN 417 will have additional readings, a longer final paper of publishable quality or presentation at an academic conference, and leadership/teaching of at least one seminar session under the supervision of the course instructor. Offered as RLGN 317 and RLGN 417.
RLGN 418. Christian Music: Historical and Global Perspectives. 3 Units.
Music has played an outsized role in the history and development of Christianity, from plainchant to polyphony, shape note singing to gospel, congregational hymns to contemporary genres and global musical expressions at Christian worship across different continents and cultures. Offered as an upper-division seminar for advanced undergraduate and graduate students, this seminar examines the history and development of Christian music around the world within the social, cultural, regional, ritual, and spiritual contexts that inspired their emergence and growth. While the primary approach in this seminar is historiographical, ethnomusicological principles may be utilized where appropriate to examine contemporary genres of Christian music from the Two-Thirds or Majority World. Offered as RLGN 318, RLGN 418, and MUHI 309. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 420. Gods and Demons in the Ancient Near East and Egypt. 3 Units.
The roots of many modern religious, literary, social, and political notions reach deep into the fertile soil of Ancient Near Eastern and Egyptian cultures, which developed as early as the fourth millennium BCE and flourished until the Hellenistic period. In this course we will examine various components of the religious, divinatory and magical systems of these cultures, and reflect upon their relationship with the stories that are found in the Hebrew Bible. We will learn (through a critical analysis of a selection of ancient texts) about ancient Mesopotamian and Egyptian deities, demons, myths, and magical rituals. We will also explore notions of creation, cosmic order, the human condition, death, afterlife, divine favor, and a wide variety of beliefs that, while often contradictory to modern ways of thinking, combined into unified religious systems. Offered as ANEE 320, RLGN 320 and RLGN 420.

RLGN 424. Landscapes and Pilgrimages: Spatial Theory in the Study of Religion. 3 Units.
This course employs spatial approaches and theories to examine the religious praxis and identities of individuals and communities. Working notions of space include physical, socio-political, cultural, imaginative, and ritual dimensions. We will examine the themes of mapping, memory and movement related to religious landscapes and geographies as well as issues related to social justice, gender, race, power, difference, and ecology. We will also investigate the spatial practices of individuals and communities. These practices may include pilgrimage to, and construction, of religious sites, ritual procession, walking, devotional practices, community activism, and artistic endeavors. Course requirements include student participation in field excursions to religious sites and spaces in the Cleveland area and the development of a photo essay or a mixed media project related to religious space. Offered as RLGN 324 and RLGN 424.

RLGN 430. Genealogies of Religious Otherness. 3 Units.
Concepts of otherness pervade recent theories of religion. More or less related to one another, many of these concepts are borrowed from fields other than academic religious studies. This seminar explores the genealogies of otherness in theoretical discourse as they relate to religion. In the course of this seminar, our researches and discussions will address several key issues in academic religious studies, including: psychological and sociological processes of projection and their roles in the construction and deconstruction of religious identity; the significance of gender, sexuality, and ethnicity to these projections; concepts of otherness in mystical religious thought and experience; and the interrelations of order and chaos, figuring and disfiguring within religious ideas, institutions, and practices, interrelations that challenge common theoretical perspectives that treat religion primarily if not exclusively as a means of establishing order against chaos and as a force of social and ideological structure legitimation.

RLGN 433. Philosophy of Religion. 3 Units.
Topics include: classical and contemporary arguments for God's existence; divine foreknowledge and human freedom; the problem of evil and theodicy; nature and significance of religious experience; mysticism; varieties of religious metaphysics; knowledge, belief and faith; nature of religious discourse. Readings from traditional and contemporary sources. Recommended preparation for PHIL 433 and RLGN 433: PHIL 101 or RLGN 102. Offered as PHIL 333, RLGN 333, PHIL 433, and RLGN 433.

RLGN 440. Insiders and Outsiders in the Study of Religion. 3 Units.
This course will provide an introduction to one of the most important theoretical and methodological issues in the social sciences and in religious studies, namely, the epistemic authority of the insider and of the outsider. We will read books and articles, both classical and contemporary, on the topic. My goal is to place students at the center of a contemporary debate in the study of religion. We will also examine both hypothetical and actual communities that uphold insider epistemologies.
RLGN 448. Buddhism and Cognitive Science. 3 Units.
In 1987, the Dalai Lama initiated a yearly event—Mind and Life Dialogues—to address "critical issues of modern life at the intersection of scientific and contemplative understanding". Dialogue topics included issues related to Buddhist thought and practice, and cognitive science. Others with an interest in the intersection of Buddhism and cognitive science, such as Robert Wright in Why Buddhism is True: The Science and Philosophy of Meditation and Enlightenment (2017), argue that non-supernatural aspects of Buddhism, such as the benefits of mindfulness meditation and the nature of the (non-)self, are affirmed by cognitive science and evolutionary psychology. The notion that at least some aspects of Buddhism are "true" in relation to contemporary cognitive scientific views of mind and brain has attracted considerable attention from both Buddhist practitioners and cognitive scientists. This seminar explores Buddhist and cognitive science perspectives on issues such as embodied cognition, consciousness, mind, self and personal identity, theory of mind, morality, representation, and language. We start with a general overview of Buddhist philosophy, and then turn to specific readings on Buddhist concepts in relation to similar concepts found in the cognitive science literature. For instance, we will explore the Buddhist concept of no permanent self or soul (an-tman). This idea resonates with Daniel Dennett’s notion of the "narrative self" and the cognitive neuroscience view that there is no neurological center of self or experience. Although the specific concepts covered will vary in each iteration of this course, readings will always be drawn from both Buddhist primary and secondary readings, and from the cognitive science literature. Offered as COGS 348, COGS 448, RLGN 348 and RLGN 448. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Completion of one COGS or RLGN course or Requisites Not Met permission.

RLGN 450. Jewish Ethics. 3 Units.
An exploration of Jewish moral and ethical discourse. The first half of the course will be devoted to studying the structure and content of classical Jewish ethics on issues including marriage, abortion, euthanasia, and social justice. Students will read and react to primary Jewish religious texts. The second half of the course will focus on various modern forms of Judaism and the diversity of moral rhetoric in the Jewish community today. Readings will include such modern thinkers as Martin Buber and Abraham Joshua Heschel. Offered as JDST 350, RLGN 350, and RLGN 450. Counts as SAGES Departmental Seminar.

RLGN 452. Language, Cognition, and Religion. 3 Units.
This course utilizes theoretical approaches found in cognitive semantics—a branch of cognitive linguistics—to study the conceptual structures and meanings of religious language. Cognitive semantics, guided by the notion that conceptual structures are embodied, examines the relationship between conceptual systems and the construction of meaning. We consider such ideas as conceptual metaphor theory, conceptual blending, image schemas, cross-domain mappings, metonymy, mental spaces, and idealized cognitive models. We apply these ideas to selected Christian, Buddhist, and Chinese religious texts in order to understand ways in which religious language categorizes and conceptualizes the world. We examine both the universality of cognitive linguistic processes and the culturally specific metaphors, conceptual blends, image schemas, and other cognitive operations that particular texts and traditions utilize. Offered as RLGN 352, RLGN 452, COGS 352 and COGS 452. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 453. Hindu and Jain Bioethics: Special Focus on Women’s and Gender Studies. 3 Units.
This course will provide both an introduction to basic Hinduism and Jainism and an introduction to Hindu and Jain bioethics. We will focus primarily on bioethical issues that pertain to women and that are gender related. These issues include abortion, menstruation, surrogacy, intersex, and other topics of controversy. Offered as ETHS 353, RLGN 353, RLGN 453, and WGST 355. Counts for CAS Global & Cultural Diversity Requirement.

RLGN 460. Approaches to the Study of Urban Religion. 3 Units.
This course will introduce students to basic concepts and tools used in sociology of religion drawing upon works from various theorists and sociologists of religion such as Nancy Ammerman, Peter Berger, and Robert Wuthnow. The course will analyze the relationship between the role and structure of religion in North America and the larger historical, cultural and social landscape. Utilizing the city of Cleveland as a resource, students will apply the tools and concepts learned to explicate how religious organizations impact, and are impacted by, urban environments.

RLGN 488. Topics in Religion. 3 Units.
Critical assessment of selected topics of historical or current interest. Project must be accepted by a member of the department faculty prior to registration. Offered as RLGN 388 and RLGN 488.

RLGN 601. Special Research. 1 - 6 Units.
Project must be accepted by a member of the department faculty prior to registration. Prereq: Graduate standing.

RLGN 651. Thesis M.A.. 1 - 9 Units.
Registration. Prereq: Graduate standing.

AFST (AFST)

Courses

AFST 135. Introduction to Modern African History. 3 Units.
A general introduction to major themes in modern African history, with an emphasis on the nineteenth and twentieth centuries. Topics include oral tradition and narrative, economic structure and dynamics, religious movements, colonialism, nationalism, and the dilemmas of independent African states. Offered as AFST 135, ETHS 253A and HSTY 135. Counts for CAS Global & Cultural Diversity Requirement.

AFST 151. Introducing Africana Religions. 3 Units.
This "topics course" offers an introduction to the academic study of Africana Religions. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and the sociology of religion. Offered as AFST 151 and RLGN 151. Counts for CAS Global & Cultural Diversity Requirement.
AFST 201. Introduction to Africana Studies. 3 Units.
This course examines the development of Africana Studies as an academic discipline. It traces multiple genealogies and trajectories of both the discipline and the experiences of Black people on the African continent and in the Americas and the Caribbean with a particular focus on the United States. The course explores these genealogies and trajectories through history, sociology, culture, religion and politics. It will focus on the various kinds of technologies and structures Black people have developed, adapted and adopted as they have created resistance strategies, political and religious institutions, addressed medical and health concerns and participated in the construction of national institutions and cultures. The course will cover diverse themes in Black intellectual thought such as gender, race, enslavement, colonialism, music, dance, politics, religious practice and ritual, nationalism, sexuality and blackness. Counts for CAS Global & Cultural Diversity Requirement.

AFST 202. Race and Ethnic Minorities in The United States. 3 Units.
This is a survey course that looks at the relations between racial and ethnic relations in the United States from an historical and contemporary perspective. This course will look at relations between: European colonists and native Americans; whites and blacks during the period of slavery. Jim Crow, the civil rights era and contemporary period; immigrants at the turn of the 20th and 21st century; Mexicans and Puerto Ricans; and the pan-ethnic groups such as Latinos, Asian Americans, and Arab Americans. We examine the origins of racial/ethnic hierarchies, the social construction of identities, and stratification of racial and ethnic groups. This course will take a macro perspective that examines larger structural forces (e.g., colonization, industrialization, and immigration) to explain inter-group relations, and a constructionist perspective to understand how power manufactures and maintains the social meaning of identities (looking at stereotypes and hegemonic discourse). Students who have received credit for SOCI 302 may not receive credit for SOCI 202. Offered as AFST 202 and SOCI 202. Counts for CAS Global & Cultural Diversity Requirement.

AFST 212. History of Rock and Roll. 3 Units.
This course surveys the musical practices of the rock and roll era, broadly defined to include much popular music since the 1950s. Music majors are to enroll in MUHI 312. Offered as AFST 212 and MUGN 212. Counts for CAS Global & Cultural Diversity Requirement.

AFST 222. African-American Religions. 3 Units.
This course is an exploration of the rich diversity of African American religions from the colonial period to the present. Attention will be given to key figures, institutional expressions, and significant movements in African American religious history. Major themes include African traditions in American religions, slavery and religion, sacred music, social protest, Black Nationalism in religion, Islam, African American women and religion, and black and womanist theologies. Course requirements will include field trips to local religious sites. Offered as AFST 222, ETHS 222 and RLGN 222.

AFST 258. History of Southern Africa. 3 Units.
A survey of southern Africa from about 1600. Topics include the social structure of pre-colonial African societies, the beginnings of European settlement, the rise of Shaka, the discovery of minerals and the development of industry, Zimbabwe's guerrilla war, and the rise and apparent demise of apartheid. Offered as AFST 258, ETHS 258 and HSTY 258. Counts for CAS Global & Cultural Diversity Requirement.

AFST 260. U.S. Slavery and Emancipation. 3 Units.
Begins with the African encounter with Europeans during the emergence of the modern slave trade. Students are introduced to the documents and secondary literature on the creation and maintenance of slavery, first in colonial America, and then in the United States. The course concludes with the destruction of slavery. Offered as AFST 260, ETHS 260 and HSTY 260. Counts for CAS Global & Cultural Diversity Requirement.

AFST 261. African-American History 1865-1945. 3 Units.
Explores the fashioning of a modern African-American culture between emancipation and the end of World War II. Emergence of a northern-based leadership, the challenge of segregation, emergence of bourgeois culture, the fashioning of racial consciousness and black nationalism, the shift from a primarily southern and rural population to one increasingly northern and urban, the creation and contours of a modern African-American culture, the construction of racial/gender and racial/class consciousness. Offered as AFST 261, ETHS 261 and HSTY 261. Counts for CAS Global & Cultural Diversity Requirement.

AFST 262. African-American History Since 1945. 3 Units.
Completes the three-term sequence of the African-American history survey (although the first two courses are not prerequisites for this course). Explores some of the key events and developments shaping African-American social, political, and cultural history since 1945. Offered as AFST 262, ETHS 262 and HSTY 262. Counts for CAS Global & Cultural Diversity Requirement.

AFST 265. Malcolm and Martin. 3 Units.
An examination of the lives, religious thought, and ideological frameworks of Malcolm X and Martin Luther King, Jr. The course will investigate Malcom X and Martin King's religious beliefs and activist strategies; the ideas and strategies of other civil rights and Black Nationalist leaders who influenced and challenged Martin and Malcom's ideas on race, gender, class, and sexuality; and the historical antecedents for these strategies within nineteenth-century black religious, social, and political movements. Their impact on modern African American religious thought, American political culture, and international human rights movements will also be explored. Offered as AFST 265, ETHS 265 and RLGN 265. Counts for CAS Global & Cultural Diversity Requirement.

AFST 295. The Francophone World. 3 Units.
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (and where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle-East (Lebanon, Syria); the Caribbean (Martinique, Guadeloupe, Haiti); Southeast Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg). FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. Offered as AFST 295, ETHS 295, FRCH 295, and WLIT 295. Counts for CAS Global & Cultural Diversity Requirement.
AFST 302. The Lemonade Class: Religion, Race, Sex and Black Music. 3 Units.
Charles Long suggests that black musical forms are creative responses to the particular circumstances of black peoples' presence in the U.S. and black notions of the sacred. In April of 2016, Beyoncé released her visual album Lemonade two days after the death of Prince. This course is organized around the album's title cuts and links these two artists together in an examination of religion and musical performance as creative response to the racial and gendered conditions of black life. The course investigates how both artists have used music as a platform to explore issues of race, gender, commerce, sexuality, power and divinity. The course also looks at examples from the works of earlier artists who address similar themes such as Ma Rainey, Bessie Smith, Muddy Waters, Billie Holiday, Nina Simone, Little Richard, James Brown, Marvin Gaye, and Aretha Franklin. Offered as AFST 302, ETHS 302, MUHI 316, RLGN 302, RLGN 402, and WGST 302. Counts for CAS Global & Cultural Diversity Requirement.

AFST 311. Representations of Black Religion in Film. 3 Units.
In this course we will explore cinematic representations of black religion in the Americas and the Caribbean. Each week we will view a film representing diverse religious traditions such as Christianity, Candomble, Santeria, Vodou, and Islam. Films will include Cabin in the Sky, The Color Purple, Black Orpheus, The Serpent and the Rainbow, Malcolm X, Eve's Bayou, and The Princess and the Frog. Throughout the course we will analyze the ways in which notions of gender, the history of colonialism, modern notions of race, and geographical landscapes have informed representatives of black religion in film. In addition, we will discuss how these representations, in turn, have influenced cultural ideas of black religion in the Americas. Offered as AFST 311, ETHS 311, RLGN 311, and RLGN 411. Counts for CAS Global & Cultural Diversity Requirement.

AFST 314. Blues Histories and Cultures. 3 Units.
An investigation of the blues as a musical and lyrical form as well as a set of social and cultural practices. Beginning in the Mississippi Delta with the country blues, the course moves roughly chronologically, looking at classic and urban blues, the role of blues language and culture during the Harlem Renaissance, and their 're'vival in Britain in the 1960s. Our aim will be to open up questions surrounding blues transformations and black authenticities, the relationship between blues cultures and the rise of modernism, the racial and sexual coding of both black and white blues, and the ways in which blues sounds and aesthetics have permeated American popular music since the 1920s. Offered as AFST 314 and MUHI 314. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

AFST 315. History of Jazz and American Popular Music. 3 Units.
Musical styles and structures of jazz and American popular music; emphasis on music since 1900. Recommended preparation: MUTH 202 or MUHI 302. Offered as AFST 315 and MUHI 315. Counts for CAS Global & Cultural Diversity Requirement.

AFST 318. History of Black Women in the U.S.. 3 Units.
Chronologically arranged around specific issues in black women's history organizations, participation in community and political movements, labor experiences, and expressive culture. The course will use a variety of materials, including autobiography, literature, music, and film. Offered as AFST 318, ETHS 318, HSTY 318, and WGST 318.

AFST 328. Capitalism, Cities, and Inequality. 3 Units.
This course focuses on social inequality, but through an examination of cities in the U.S. and abroad. In many ways, cities provide a window onto the organization of the larger social world, including regional, state, national and global areas. As such, understanding cities goes far beyond their geographical boundaries. The purpose of this course then is to learn the central role that cities play within a larger capitalist economy, how public policies shape life in cities, how cities organize and reproduce social inequality, and how community groups and organizations challenge and negotiate the organization of power and inequality. The course will examine topics such as the formal and informal labor force, immigration, the growth of global cities and slums, urban poverty, racial segregation, housing and homelessness, crime, gentrification, policing, community organization and political resistance. Offered as AFST 328, SOCI 328 and SOCI 428. Counts for CAS Global & Cultural Diversity Requirement.

AFST 363H. African-American Literature. 3 Units.
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature of protest and assimilation. Maximum 6 credits. Offered as AFST 363H, ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSSC, FSNA, FSSO, FSSY, FSTS, or FSCS.

AFST 365N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Offered as AFST 365N, ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

AFST 366. Racial Inequality and Mass Imprisonment in the US. 3 Units.
This course examines the relationship between racial inequality and mass imprisonment in the U.S. It begins by exploring the role of prisons in the Jim Crow south, with a particular focus on convict-leasing practices, and then turns to the north to examine the social forces that created the black urban ghetto and concentrated black urban poverty. The course also examines the impact that these same social forces have had on Puerto Ricans. We will then explore a series of topics including urban poverty and crime, the war on drugs, the politics of mass incarceration, the prospects that mass incarceration has become the new Jim Crow, and the effects that mass incarceration has had on voting rights, urban communities, families and children. We will conclude with a discussion of varying decarceration arguments, strategies, movements, and achievements. Offered as AFST 366 and SOCI 366.
AFST 386. Race and Racism. 3 Units.
Race and Racism will discuss the classical and contemporary understandings of the concepts of race and racism. We will begin by taking an historical approach, delving into processes of racialization and the first instances where distinctions in human race were noted. We will survey theories of race and use a social constructions approach to examine how sociologists approach the study of racial and ethnic group difference. We will examine how definitions of racial groups have evolved over time and differ across contexts, as well as some of the underlying social and structural processes that create racial hierarchies. At the end of the course students should have a strong understanding of the mechanisms that reproduce systems of racial classification. The course will also examine patterns and trends in racial and ethnic inequality over recent decades, centering our discussion on the legacies of racism, current discrimination, and new processes that are currently unfolding to reproduce inequality. While the course’s main focus is to examine understandings of race and racism in the United States, we will devote some attention to how race and ethnicity emerge in different environments by examining race and racism in an international context. Offered as AFST 386, SOCI 386 and SOCI 486. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SOCI 101.

AFST 389. Special Topics in American Politics and Policy. 3 Units.
Specific topic will vary but will consist of an in-depth investigation of a particular policy area or political phenomenon. Topics will involve policy controversies of some current interest. Offered as AFST 389, POSC 389, and POSC 489.

AFST 393. Advanced Readings in the History of Race. 3 Units.
This course examines the concept of race as a social construction that carries political and economic implications. We begin by examining the histories of the early racial taxonomists (e.g., Bernier, Linnaeus, and Blumenbach among others) and the contexts that informed their writings. We then assess how the concept of race changed from the nineteenth to the twentieth century in the United States. We conclude by evaluating how the ideology of race has influenced U.S. domestic life and foreign policy at specific historical moments. Offered as AFST 393, HSTY 393, HSTY 493, and ETHS 393. Counts for CAS Global & Cultural Diversity Requirement.

AFST 399. Advanced Readings in Black History. 3 Units.
This is an advanced readings course that may change from semester to semester. This course will provide students with an opportunity to more deeply explore special themes and theoretical issues in the field of black history that are often quickly and briefly covered in broad survey courses. Readings may be organized around specific topics such as resistance and social protest, black intellectual history, black nationalism and identity, black film and historical literacy black cultural forms and politics, black urban history, or some other combination. Students may take this course more than once and receive credit as long as the course topic differs. Students should contact the History Department for more details on course content during any given semester. Offered as AFST 399, ETHS 391, HSTY 399 and HSTY 499.

Social Justice Institute
A15C Crawford Hall
www.case.edu/socialjustice (http://www.case.edu/socialjustice/)
Phone: 216.368.7568
Ayesha Bell Hardaway, Co-Director; Mark Chupp, Co-Director
socialjustice@case.edu

The Social Justice Institute strives to create a just world. We examine the root causes of social injustice and develop innovative solutions by supporting creative research, scholarship, and pedagogy; social justice leaders on and off campus; and relationships within the university and into the community. We work to eradicate all systems of oppression by redistributing and expanding resources and opportunities while exalting human dignity.

We believe in:
• action
• community involvement
• education
• empathetic relationships
• equity
• human dignity
• inclusiveness
• intergenerational collaboration

The Social Justice Institute believes that university communities should be educators and leaders in advancing an inclusive and just society that raises awareness of social injustice; enhances moral courage; promotes critical thinking about power, privilege and equity; and encourages action and equitable solutions.

Undergraduate students from across the university have the opportunity to pursue a minor in Social Justice that prepares them to address local, national and global inequities. An interdisciplinary and flexible approach allows students majoring in the humanities or in STEM fields to address a wide range of crucial issues. The curriculum emphasizes the history, theory and practice of social justice work. It examines the distribution of power, resources and opportunities, and appropriate individual and collective remedies for social injustice.

Academic Program Faculty
Ayesha Bell Hardaway, JD
Assistant Professor, School of Law, Director, Social Justice Law Center, School of Law; Co-Director, Social Justice Institute

Mark Chupp, PhD, MSW
Assistant Professor, Jack, Joseph and Morton Mandel School of Applied Social Sciences (Mandel School); Chair, Concentration in Community Practice for Social Change, Mandel School; Founding Director, Community Innovation Network, Mandel School; Co-Director, Social Justice Institute

Cristian Gómez Olivaress, PhD
Associate Professor, Department of Modern Languages and Literatures

B. Jessie Hill, JD
Judge Ben C. Green Professor of Law; Associate Dean for Academic Affairs, School of Law

Diana L. Morris, PhD, RN, FAAN, FGSA
Florence Cellar Associate Professor of Gerontological Nursing, Frances Payne Bolton School of Nursing; Executive Director, University Center on Aging and Health

Dana Prince, MPH, PhD
Assistant Professor, Jack, Joseph and Morton Mandel School of Applied Social Sciences

Ben Vinson III, PhD
Provost and Executive Vice President; Hiram C. Haydn Professor of History
The Social Justice minor is open to all undergraduate students. The minor requires a total of 15 credit hours, including the required core course (SJUS 100 Introduction to Social Justice, 3 credits). In addition to the required course, students must take one course from each Focus Area below, plus one additional elective from any Focus Area.

The courses listed below are accepted toward the minor. Approved electives are added every year; students may request that relevant SAGES seminars be applied for elective credit.

Focus Area 1: Ethics, Politics and Economics
Are existing arrangements just? To what extent are current thought systems amenable to change? What are the preferred alternatives and how can they be realized?

- HSTY/ETHS 393 Advanced Readings in the History of Race 3
- PHIL 325/425 Philosophy of Feminism 3
- PHIL 334/ Political and Social Philosophy 3
- POSC 354/454
- PHIL 384 Ethics and Public Policy 3

Focus Area 2: Social Inequality, Power and Privilege
What is a fair distribution of resources? How do cultural practices, social relations, social structures and institutions reproduce, reduce or eliminate inequalities? What are the consequences of social inequality for the health, development and well-being of individuals and communities? How are distributions and uses of power connected to social inequalities?

- HSTY 208 Social History of Crime 3
- HSTY 257 Immigrants in America 3
- HSTY 259 Introduction to Latina/o Studies 3
- HSTY/ETHS 318 History of Black Women in the U.S. 3
- HSTY 363/463 Gender and Sexuality in America 3
- MPH 101 Introduction to Public Health 3
- ORBH 370 Navigating Gender in Organizations 3
- RLGN 338/WGST 339 Black Women and Religion 3
- SOCI 202 Race and Ethnic Minorities in The United States 3
- SOCI/WSGT 326 Gender, Inequality, and Globalization 3
- SOCI 349 Social Inequality 3
- SOCI 366 Racial Inequality and Mass Imprisonment in the US 3
- SPAN 342 Latin American Feminist Voices 3
- WGST/SOCI 201 Introduction to Gender Studies 3

Focus Area 3: Social Movements and Social Change
What are competing models of social change? What role have social movements played in U.S. and global history? How do social movements form? How have states responded to social movements? What is the relationship between democracy and social movements? How have different technological innovations advanced or impeded social movements? What knowledge and skills are necessary to implement social change?

- HSTY/ETHS 280 History of Modern Mexico 3
- HSTY 381 City as Classroom 3
- POSC 322 Political Movements and Political Participation 3
- POSC 346/446 Women, Power, and Politics 3
- SASS 369 Social Networking and Community Organizing in the 21st Century 3
- SOCI 328 Capitalism, Cities, and Inequality 3
- SOCI 380 Social Movements and Social Change 3
- SPAN 315 Latin American Cultural Conflicts 3

Course

SJUS 100, Introduction to Social Justice, 3 Units.

Quests for justice and struggles against injustice have shaped human understanding, behavior and relationships for centuries. Individuals operate within community contexts created through interactions and relationships structured by sociability, belonging, and responsibility. Probing broad questions, this signature core course will encourage students to think critically and expansively about the social world and the conditions of humanity. The course will provide a foundational exploration of social justice concepts, issues, and remedies, thereby developing the necessary analytical tools and information to assess inequality and injustice and address historical and contemporary issues. Following an interdisciplinary, case-study approach, featuring faculty from different schools and departments at CWRU, this course also will provide students with multiple frameworks for understanding the interconnections between what are often perceived as disparate and disconnected fields of study and inquiry. Three primary questions guide the course: What is social justice? Why does social justice matter? What can be done? Counts for CAS Global & Cultural Diversity Requirement.

Department of Sociology

226 Mather Memorial Building
https://sociology.case.edu/
Phone: 216.368.2700; Fax: 216.368.2676
Dale Dannefer, Department Chair
dale.dannefer@case.edu

The Department of Sociology offers programs leading to the Bachelor of Arts, Master of Arts, and Doctor of Philosophy degrees.

Sociologists investigate basic social processes and the causes and consequences of social change in a diverse and increasingly interconnected world. Sociology covers a broad range of topics, from the micro level to the macro level of society. Our undergraduate program offers concentrations in Crime, Law and Justice; Gender, Work and Family; Health, Medicine and Aging; and Social Inequality. Undergraduate majors may also choose a general sociology curriculum. Sociology’s graduate program includes specializations in Sociology of Health and Medicine; Sociology of Age and the Life Course; Social Inequalities; and Research Methods.

Many sociology majors participate in field-based learning experiences in course work and also through their involvement in faculty research projects. We encourage interaction between students and faculty by offering many opportunities for individualized study and research. Our
department has a long history of innovation and international leadership in research, combined with a friendly, student-centered culture, for both graduate and undergraduate students.

Especially with globalization and the increasing diversity of our society, many employers look favorably on the breadth of knowledge and perspective provided by majoring in sociology. For the same reasons, graduate programs in many fields, including medicine and law, also consider a background in sociology to be a strength. Graduates of our program are working in positions in research institutions, medicine, private industry, and the public sector.

Department Faculty

Dale Dannefer, PhD
(Rutgers University)
Selah Chamberlain Professor of Sociology and Chair
Age and the life course; social theory; social inequality and cumulative dis/advantage; research methods

Timothy Black, PhD
(University of Massachusetts-Amherst)
Associate Professor
Social inequality; poverty; urban sociology; qualitative research methods

Cassi Pittman Claytor, PhD
(Harvard University)
Climo Junior Professor and Assistant Professor
Race and ethnic relations; social stratification and inequality; sociology of consumption; economic sociology; qualitative methods

Gary T. Deimling, PhD
(Bowling Green State University)
Professor
Medical sociology; sociology of aging; family sociology

Mary Patrice Erdmans, PhD
(Northwestern University)
Professor
Social inequality; race and ethnicity; immigration; qualitative research methods; gender

Brian Gran, PhD, JD
(Northwestern University; Indiana University-Bloomington)
Professor
Sociology of law; comparative sociology; health care policy; human rights

Susan W. Hinze, PhD
(Vanderbilt University)
Associate Professor
Medical sociology; social inequality, sex and gender; work and family

Eva Kahana, PhD
(University of Chicago)
Distinguished University Professor and Pierce T. and Elizabeth D. Robson Professor of the Humanities
Sociology of aging; medical sociology; social factors in stress and coping

Jessica Kelley, PhD
(Purdue University)
Professor
Health disparities; sociology of disability; sociology of the life course; race/ethnicity; quantitative methods

Lecturer

Karie Feldman, PhD
(Case Western Reserve University)
Lecturer
Family policy, medical sociology, sex and gender

Secondary Faculty

Kurt Stange, MD, PhD
(University of North Carolina)
Professor, Department of Epidemiology and Biostatistics, School of Medicine
Epidemiology; preventive health care; biostatistics; disability prevention in the elderly

Adam T. Perzynski, PhD
(Case Western Reserve University)
Associate Professor, School of Medicine
Sociology of health and illness; qualitative and quantitative methods; health disparities; health informatics

Aloen Townsend, PhD
(University of Michigan)
Professor, Jack, Joseph and Morton Mandel School of Applied Social Sciences
Adult development and aging; research methods and statistics; mental health; families and formal service systems

Adjunct Faculty

Edward H. Thompson, Jr., PhD
(Case Western Reserve University)
Professor Emeritus, College of the Holy Cross
Aging and masculinities; families and later life; men’s health; religion and health

Undergraduate Programs

In addition to the sociology major, the undergraduate program also offers a sociology minor option and an IGS (Integrated Graduate Studies) Program that enables students to complete BA and MA degrees simultaneously (typically requiring a fifth year). Sociology offers a general curriculum, and students may also elect to specialize in one of four concentrations described in detail below.

Major

The major in sociology has been designed to serve a range of educational goals, including pre-professional training, postgraduate employment, and preparation for graduate school. The major requires a minimum of 30 hours of course work. All majors complete the following common core requirements, plus a minimum of 6 electives:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>SOCI 101</td>
<td>Introduction to Sociology</td>
<td>3</td>
</tr>
<tr>

<td>Modern Sociological Thought</td>
<td>3</td>
</tr>
<tr>
<td>SOCI 306</td>
<td>Logic of Social Inquiry</td>
<td>3</td>
</tr>
<tr>
<td>SOCI 307</td>
<td>Social Statistics</td>
<td>3</td>
</tr>
</tbody>
</table>

As an alternate to SOCI 307, students may also take:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANTH 319</td>
<td>Introduction to Statistical Analysis in the Social Sciences</td>
<td></td>
</tr>
<tr>
<td>or</td>
<td></td>
<td></td>
</tr>
<tr>
<td>PSCL 282</td>
<td>Quantitative Methods in Psychology</td>
<td></td>
</tr>
</tbody>
</table>
An additional 18 hours of electives, consisting of any six courses in sociology

SOCI 375 Independent Study is available to selected majors in their junior or senior year.

Majors have the option of choosing either a general sociology curriculum or one of four concentrations:

1. Crime, Law and Justice
2. Gender, Work and Family
3. Health, Medicine and Aging
4. Social Inequality

Students may choose four courses within any of the following specializations for a concentration in that area:

**Crime, Law and Justice Concentration**

<table>

**SAGES Participation**

In conjunction with the SAGES program, the department offers two special seminars, SOCI 325 Departmental Seminar in Sociology: Great Books and SOCI 392 Senior Capstone Experience. These seminars fulfill SAGES requirements but are NOT requirements for the major. They may, however, be counted toward the 30 hours for the sociology major or the 15 hours for the minor.

**Departmental Honors**

Juniors majoring in sociology with a 3.4 overall GPA and a 3.6 GPA in sociology are invited to apply for the department's honors program, which consists of an intensive, year-long investigation of a research problem under the guidance of a faculty member. Students will earn credit through registration in SOCI 397 Honors Studies and SOCI 398 Honors Studies. Admission to honors work is by faculty approval.
The opportunity to join Alpha Kappa Delta (AKD), the national sociology honors fraternity, is available to junior or senior sociology majors. Membership requires a 3.0 GPA in sociology and a 3.3 GPA overall. In addition, the student must have completed at least four sociology courses.

**Integrated Graduate Studies**

The Department of Sociology participates in the Integrated Graduate Studies Program (p. 1298). Students in the program are able to obtain BA and MA degrees simultaneously. Interested students should note the general requirements and the admission procedures in the appropriate section of this bulletin and may consult the department for further information.

**Minor**

The minor consists of 15 credit hours in sociology, including:

<table>
<thead>
<tr>

<tr>
<td>Three additional electives, at least two of which must be 300-level courses</td>
<td>9</td>
<td></td>
</tr>
</tbody>
</table>

**Total Units** 15

**Graduate Programs**

The Department of Sociology offers graduate training leading to the Doctor of Philosophy (Ph.D.) degree. The doctoral program includes four areas of concentration: Sociology of Age and the Life Course, Medical Sociology, Social Inequality, and Research Methods. Doctoral students may petition for a Master of Arts degree once they fulfill the requirements outlined below.

**Master of Arts**

To receive the Master of Arts degree, a student must successfully complete 30 credit hours of course work.

Four electives in sociology (2 must be in selected concentration)

**Total Units** 30

To earn the M.A. degree, students must pass one written comprehensive examination in one of the four concentrations.

**Doctor of Philosophy**

The Doctor of Philosophy degree is awarded upon the completion of required coursework, comprehensive examinations and all requirements of the School of Graduate Studies, including the timely completion and successful defense of the doctoral dissertation.

1. The Ph.D. in Sociology requires the completion of 66 credit hours beyond the B.A./B.S. degree, including 18 credits of SOCI 701 Dissertation Ph.D. hours.

Four electives (2 in each selected concentration area) 12

4 general electives in sociology 12

18 credit hours of dissertation 18

**Total Units** 66

2. Successful completion of written comprehensive examinations in two of the four concentration areas (Sociology of Age and the Life Course, Medical Sociology, Social Inequality, Research Methods) are required before beginning work on the dissertation.

Information concerning the dissertation process is available from the School of Graduate Studies.

**Research Programs**

**Cancer Survivors Research Program (Gary Deimling)**

The Cancer Survivors Research Program (CSRP) investigates the quality of life of older adults who face the dual vulnerability of aging and the long-term effects of having survived cancer. The research also focuses on health disparities and psycho-social factors related to race and gender. Formally started in September 1998, the program of research has benefited from extramural funding through a number of NIH (NCI/NIA) research grants. Gary Deimling serves as program director and is assisted by colleagues in the Department of Sociology and the CWRU School of Medicine. As with many other research programs within the department and the university at large, the CSRP also serves as a teaching facility, training graduate students in the many methodological and theoretical aspects of socio-medical research. The program enables graduate students in sociology to gain hands-on experience in a formal research setting while putting their coursework into practice.

**Citizen Reentry Study (Tim Black)**

This four-year research project identifies men, mostly fathers, who are locked up in an alternative incarceration facility in Cleveland, Ohio, for no more than six months. We observe programs in the facility and run a study circles group, and then track men for up to a year after their release into the community. The study focuses on the ways that men are prepared for reentry, identifies the systemic barriers to reentry, examines how men negotiate the conditions and processes of reentry, and describes varying outcomes.

**Cumulative Dis/Advantage Research Group: Health Disparities and Trajectories of Inequality Across the Life Course (Dale Dannefer/Jessica Kelley)**

Across many societies, inequalities among age peers in health, well-being, and resources exist throughout the life course, yet tend to grow...
more pronounced with age, so that inequalities and disparities tend to be the highest among older people, a pattern that repeats in each succeeding cohort of individuals. How does such intracohort inequality come about? What are its manifestations and consequences? The Cumulative Dis/Advantage (CDA) Research Group analyzes the social processes that create inequalities in well-being, resources and health, with a focus on inequality-generating mechanisms of social stratification ranging from micro-level to macro-level forces such as social class and structural racism. The group also examines social policies that are intended to ameliorate these inequalities. Jessica Kelley examines health disparities, and especially the influence of social and economic circumstances over the life course on later-life health, with a focus on differences organized by race/ethnicity and disability. Dale Dannefer is interested in identifying basic sociological processes that contribute to CDA and understanding how they can be disrupted or ameliorated.

The Elderly Care Research Center (Eva Kahana)
The Elderly Care Research Center (ECRC) conducts research projects focusing on theory-based and public policy-relevant issues in aging and medical sociology. It also sponsors the new Journal of Elder Policy (http://journalofelderpolicy.org/)

Recent projects relate to physical and mental health outcomes of stress, coping, cancer survivorship, and adaptation to frailty in late life. Research projects have been funded by the National Institute on Aging (NIA), the National Cancer Institute (NCI), and the National Institute of Nursing Research. In addition to conducting quantitative surveys and in-depth qualitative interviews with community-dwelling elders, researchers at the ECRC also conducted an NCI-funded intervention to help elderly patients communicate more effectively with their doctors. Our research has also explored family assistance for children with autism

The ECRC has been the recipient of an NIA Merit Award for a long-term study of successful aging among residents of a retirement community. This research focused on health promotion, proactive adaptation, and maintenance of wellness in late life. ECRC serves as a laboratory for student research. Collaborative and cross-national research has involved colleagues from multiple disciplines at CWRU. Currently we collaborate on funded research with researchers from the FPB School of Nursing and the Medical School.

The Forest Hill Neighborhood Study (Cassi Pittman Claytor)
The Forest Hill Neighborhood Study aims to unpack the causes of racial residential preferences by examining what compels members of the middle class to live in a majority-black neighborhood. Research consistently demonstrates that non-blacks consider predominantly black neighborhoods to be the least desirable of all possible neighborhoods. This project focuses on the residents of the Forest Hill neighborhood of East Cleveland, with the goal of identifying the characteristics and features of majority-black neighborhoods that middle-class blacks and non-blacks find desirable. The study investigates how cultural and racial dispositions factor into participants’ selection of a neighborhood. The study also compares the experiences of white residents to those of black residents and examines the history of the neighborhood, which, for most of its existence, excluded black homeowners.

The Return Solidarity Refugee Project (Mary Erdmans)
This study is based on life story interviews with men and women who were active in the democratic opposition movement in Poland during 1980-1981, persecuted during martial law, exiled in the West, and returned to Poland after the fall of communism. As witnesses to and participants in their country’s historic transformation, members of this cohort have noteworthy social histories: they grew up in a communist country; participated in a national movement that challenged the regime; fled from political persecution and established new residences, occupations and lifestyles abroad; and returned to live in a liberal democratic system. This project analyzes the processes of becoming an activist, a migrant, and a returnee. The findings from this study will contribute to the scholarship on transnationalism, return migration, and life course.

Courses

SOCI 101. Introduction to Sociology. 3 Units.
This course examines the basic principles that underlie how sociologists look at the world: "The Sociological Imagination". It addresses the basic questions: How is social order possible and how does change occur? The course is designed as a foundation for further study in field of sociology and related disciplines. It introduces the student to the role that culture and social institutions play in modern society and examines important concepts such as socialization, deviance, social control, patterned inequalities and social change. These concepts are discussed in the context of both contemporary and historical social theories. Additionally, the student will be introduced to the methods of inquiry used by practicing sociologists.

SOCI 113. Critical Problems in Modern Society. 3 Units.
Social inequality is deep-rooted in our culture and society, but often unacknowledged because the mechanisms of that inequality serve dominant groups and those in power. In this course, we will study specific social problems in modern society as a way to understand how and why we allow inequality and problems to exist, for whose interests, and the consequences for individuals and society. Topics can rotate, but will address issues related to wealth and capitalism; technology; structural racism and sexism; health disparities; and political disenfranchisement. We will discuss how all of these intersect with gender/sexualities, race/ethnicity, and social class. After taking this course, students will be able to: 1. Evaluate social conditions that harm some individuals or all people in society. 2. Translate "private troubles" into "public issues." 3. Articulate the purpose and contributions of public sociology. 4. Recognize dimensions of social inequality that cause or perpetuate disadvantage. Counts for CAS Global & Cultural Diversity Requirement.

SOCI 201. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.
SOCI 202. Race and Ethnic Minorities in The United States. 3 Units.
This is a survey course that looks at the relations between racial and ethnic relations in the United States from an historical and contemporary perspective. This course will look at relations between: European colonists and native Americans; whites and blacks during the period of slavery, Jim Crow, the civil rights era and contemporary period; immigrants at the turn of the 20th and 21st century; Mexicans and Puerto Ricans; and the pan-ethnic groups such as Latinos, Asian Americans, and Arab Americans. We examine the origins of racial/ethnic hierarchies, the social construction of identities, and stratification of racial and ethnic groups. This course will take a macro perspective that examines larger structural forces (e.g., colonization, industrialization, and immigration) to explain inter-group relations, and a constructionist perspective to understand how power manufactures and maintains the social meaning of identities (looking at stereotypes and hegemonic discourse). Students who have received credit for SOCI 302 may not receive credit for SOCI 202. Offered as AFST 202 and SOCI 202. Counts for CAS Global & Cultural Diversity Requirement.

SOCI 203. Human Development: Medical and Social. 3 Units.
Social influences on health and illness across the lifespan. Social determinants of health and health behavior, and delivery of health care. Guest lecturers from the medical school and other health care providers address professional practice issues across the lifespan. Issues include: new approaches to birthing; adolescent substance abuse: myths and realities of AIDS; risk factors of diseases in middle age; menopause, cognition and aging-Alzheimer's disease; problems in care of elderly; medical ethic of death and dying.

SOCI 204. Criminology. 3 Units.
What is crime and to what extent does crime affect you? This course will investigate the nature and extent of crime, theories on the causes of crime, types of crime and criminals, and the efforts society makes to cope with and prevent criminal behavior.

SOCI 208. Dating, Marriage, and Family. 3 Units.
What is the family today? How has it changed over the last century? How will it change in the future? This course aims to answer these questions as it explores the influences of work, education, government, health and religion on today's changing families. The course considers the factors that affect mate selection. It also examines parenting, roles of husbands and wives, and family dysfunction, and divorce.

SOCI 228. Sociology of Sexuality. 3 Units.
This course analyzes the issues of sex and sexuality from a sociological point of view. It is centered on the notion that what we consider to be 'normal' or 'natural' about sex and sexuality is, in reality, socially constructed. One's viewpoint on the issues surrounding sexuality are influenced by the social context in which they live, as opposed to the purely biological viewpoint that presupposes some sense of normalcy or naturalness regarding sexual relations. A range of topics will be covered, including readings that discuss the variations of sexuality and the notions of sexual "deviance" in order to explore the cultural and societal variation that exists along the lines of gender, race, ethnicity, sexual orientation, age and disability. Offered as SOCI 228 and WGST 228.

SOCI 239. International Comparative Family Policy. 3 Units.
This course focuses on the connections between public policies and families and the values that enter into policy debates and family choices. It provides conceptual frameworks that can be used to identify and understand some of the influences underlying policy choices affecting families and also frameworks for evaluating the consequences of these choices for families of diverse structures, socio-economic statuses, and racial and ethnic backgrounds. We will apply this framework to topics such as maternity leave, child care, income assistance, and marriage promotion. We will compare U.S. policies to those of other industrialized countries, especially those in Italy. You will end the semester by conducting research on a social policy topic that we have not covered during the semester from understanding the initial social problem all the way through to making a policy recommendation to help you learn to explore a new topic independently. Central to the course are the intersections between families and governments via policy outputs, and the roles that citizens and family professionals can play in improving them. Using UNICEF resources, located in Florence, Italy, we will delve into evidence-based approaches for ameliorating suffering in young families across the globe. Using Florence as a classroom, we will explore differences in family life between the U.S. and Italy as a means to understand the ways in which the state must respond to differing cultures and needs. At the Innocenti Museum, in the same building as UNICEF's research offices, we will see an orphanage that began operations in 1445 and functioned as an orphanage and hospital until 1875, making it the oldest public institution in Italy. The building has been dedicated to the protection of children's rights and education since that time, and provides a backdrop for an early understanding of ways to think about family policy. Offered as SOCI 239 and WGST 239. Counts for CAS Global & Cultural Diversity Requirement.

SOCI 250. Law & Society: Law, Rights and Policy. 3 Units.
How do rights, including human rights, fit in the legal system and society? We will ask how legal actors, like judges and lawyers, think about rights compared to non-lawyers. We will (try to!) observe court hearings in an Ohio Appellate Court and a local small claims court. We will closely examine legal institutions, such as correctional facilities. We will benefit from hearing experts, local, national, and international, discuss how "law" works and whether rights are useful to making change. We will hear from a law school professor on how law school works and what the practice of law is like.

SOCI 264. Body, Culture and Disability. 3 Units.
This course examines the ways that the body is constructed through culture, media, and policy and how that, in turn, defines disability. Students will explore the socio-historical shifts in views and treatment of the body, as a way to understand how this is used to classify, marginalize and contain social differences. We trace these trends through the American Freak Show to present day Disability Determination Processes in the Social Security Administration. We further explore how historical perspectives of the body "carry forward" through social institutions such as health care, religion and education.
SOCI 275. Lives in Medicine: Becoming and Being a Physician. 3 Units.
This course applies a sociological approach to medical profession. Medical sociology emerged as a distinct field of study in the 1950s in part due to prominent studies of medical education such as The Student Physician by Robert K. Merton and Howard Becker's Boys in White. Since then, sociologists and other social scientists have written extensively about how issues of race, gender, aging and ethnicity are tied to issues of medical education, medical training, medical socialization and physician decision-making. Using a life course perspective, this course will examine how lives in medicine change over time; in particular, we'll study changing workforce patterns, physician satisfaction, and burnout. Other topics to be covered include contemporary ethical issues and alternative professional health careers. The course provides an overview of how medicine and medical practice have a profound influence on—and are influenced by—social, cultural, political and economic forces. In short, you'll become familiar with how scholars outside of medicine cast a sociological gaze on the profession.

SOCI 300. Modern Sociological Thought. 3 Units.
The most profound commentary of industrial society began in the middle of the nineteenth century with thinkers such as Durkheim, Marx, and Max Weber. Students will read the work of these scholars as it appeared in the original sources. They thoughtfully address concepts such as social integration and alienation, crime and punishment, and the social impact of modernization. The course is of special relevance to students in the social sciences, but is also recommended for students in other fields who wish to understand the social context in which professional lives will be conducted. Prereq: SOCI 101 and Sophomore standing.

SOCI 306. Logic of Social Inquiry. 3 Units.
This course provides an introduction to the epistemologies and research methodologies used in sociological inquiry. We concentrate on the fundamental principles of research design and on developing a basic understanding of the research process. Topics include formulating a question, alternative modes of research design and principles of measurement, sampling and analysis. We draw examples from published work, ongoing studies, and publicly available data. Offered as SOCI 306 and SOCI 406. Prereq: SOCI 101 and Sophomore standing.

SOCI 307. Social Statistics. 3 Units.
This course provides an introduction to social statistics, including univariate statistics and bivariate tests of association (chi-square, t-test, ANOVA, correlation, regression). Topics include: levels of measurement, probability theory and inference; hypothesis testing; and statistical power. Students receive hands-on instruction using statistical software. A student may receive credit for only one of the following: SOCI 307, ANTH 319, PSCL 282, or STAT 201. Offered as SOCI 307 and SOCI 407. Counts for CAS Quantitative Reasoning Requirement. Prereq: SOCI 101 and Sophomore Standing.

SOCI 310. The Individual in Society. 3 Units.
This course focuses on the relationship between individuals and the societies in which they live. Influences of values and culture on individuals’ selves and identities are discussed as well as how individuals attach meaning to personal life experiences and histories in the context of society at large. Offered as SOCI 310 and SOCI 410. Prereq: SOCI 101.

SOCI 311. Health, Illness, and Social Behavior. 3 Units.
This course considers the role of social factors (e.g., poverty, occupational and family structure) on health and illness. Discussion will concentrate on the role of health promotion (e.g., anti-smoking campaigns), social behavior and lifestyle in health and health care use. Considerable attention is given to understanding health careers and professions and their role in the health of societies and individuals. Offered as SOCI 311 and SOCI 411. Prereq: SOCI 101 and Sophomore standing.

SOCI 313. Sociology of Stress and Coping. 3 Units.
This course will focus attention on human stress throughout the lifespan and its role in personal health and well-being. There have been exciting advances in recent years in understanding the nature of stress in everyday life as well as elements of extreme stress. Trauma is experienced by many people due to normative events such as illness and bereavement or natural and man-made disasters such as crime or war. Coping strategies and social supports which ameliorate negative impact of stress will be considered. Offered as SOCI 313 and SOCI 413. Prereq: SOCI 101 and Sophomore standing.

SOCI 315. Comparative-Historical Sociology. 3 Units.
This seminar offers participants an introduction to comparative methodological approaches to social science research. Participants will employ hands-on approaches to learning about and using innovative methods to apply their knowledge to social science questions. Our starting point will be key questions social scientists must contend with in pursuing answers to questions about social phenomena. After turning to "classic" texts in comparative research, we will study various components of comparative research. We will then focus on configurational comparative methods. Offered as SOCI 315 and SOCI 415. Prereq: SOCI 101 and Sophomore standing.

SOCI 320. Delinquency and Juvenile Justice. 3 Units.
The primary focus of this course is on acquainting the student with the nature and the extent of juvenile delinquency. Accordingly, theoretical approaches to delinquency causation and the prevention, control, and treatment of delinquent behavior in society are addressed. Important aspects of juvenile justice procedures, policy, and practice are examined, and the early history of the juvenile justice system and the many changes occurring over the years are discussed. Prereq: SOCI 101.

SOCI 325. Departmental Seminar in Sociology: Great Books. 3 Units.
This course fulfills the SAGES requirement of a Departmental Seminar. It focuses on close readings of contemporary classics in sociology, analytical writing and intensive seminar-type discussion. The course examines theoretical perspectives and methodological issues in sociology such that students are able to investigate, analyze and present research findings in written form. Research is always an inherently collaborative process and thus the course will utilize seminar-style discussions to formulate and examine ideas. The seminar will focus on topics germane to a critical reading of books that inform our understanding of large and small group processes as well as individual experiences. Students will be introduced to the sociological imagination as an overarching frame work to examine groundbreaking classical and contemporary books on topics such as health and aging, gender, work and family, social inequality and crime and delinquency. Guided by the instructor of record. Readings will provide a sociological perspective for understanding and assessing macro- and micro-level interactions as well as encourage and stimulate critical thinking. Counts as SAGES Departmental Seminar.
SOCI 326. Gender, Inequality, and Globalization. 3 Units.
Using a sociological perspective, this course examines how major societal institutions, including the economy, polity, medicine, religion, education and family, are structured to reproduce gendered inequalities across the globe. Attention is given to the intersections of race/ethnicity, social class, gender and sexuality in social systems of power and privilege. Of critical importance is how gender figures in the relationship between Economic North and Economic South countries. We will elucidate how gender norms vary by culture and exert profound influence on the daily, lived experiences of women and men. The course will be informed by recent scholarship on feminism, women's movements, and globalization. Offered as SOCI 326 and WGST 326. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SOCI 101 or permission of program director.

This course discusses theoretical foundations and methodologies of narrative research, including life stories, oral history, and auto ethnography. The course is designed for students to complete a research project in the semester using narrative methods to collect and analyze primary data and write up the results. Offered as SOCI 327 and SOCI 427. Prereq: SOCI 101 and SOCI 303.

SOCI 328. Capitalism, Cities, and Inequality. 3 Units.
This course focuses on social inequality, but through an examination of cities in the U.S. and abroad. In many ways, cities provide a window onto the organization of the larger social world, including regional, state, national and global areas. As such, understanding cities goes far beyond their geographical boundaries. The purpose of this course then is to learn the central role that cities play within a larger capitalist economy, how public policies shape life in cities, how cities organize and reproduce social inequality, and how community groups and organizations challenge and negotiate the organization of power and inequality. The course will examine topics such as the formal and informal labor force, immigration, the growth of global cities and slums, urban poverty, racial segregation, housing and homelessness, crime, gentrification, policing, community organization and political resistance. Offered as AFST 328, SOCI 328 and SOCI 428. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SOCI 101.

SOCI 338. Seminar and Practicum in Adolescents. 3 Units.
Supervised field placement and attendance in early childhood, child and adolescent settings including preschools, schools, hospitals, and neighborhood centers. This course is an elective. Recommended preparation: PSCL 101. Offered as EDUC 338, PSCL 338 and SOCI 338.

SOCI 344. Health Disparities. 3 Units.
We have come to understand that stark disparities in health result from the social organization of society, especially inequality in resources and opportunities between and within social groups in the population. This seminar course examines the differential distribution of health and illness in society, focusing on the social determinants of health. Topics include: socioeconomic inequality; geographic context; social cohesion and exclusion; health burden in minority populations; policy and federal priorities. We utilize a life course perspective to understand how inequality "gets under the skin" to produce adverse health. Offered as SOCI 344 and SOCI 444. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SOCI 101 and Sophomore standing.

SOCI 345. Sociology of Mental Illness. 3 Units.
Focus is on social construction of mental health and illness and sociology of emotions. Social determinants of psychological distress will be discussed along with social stigma associated with mental illness. Institutional and community options for care of the mentally ill will be considered along with the impact of recent social movements of deinstitutionalization and independent living. Offered as SOCI 345 and SOCI 445. Prereq: SOCI 101 and junior/senior standing.

SOCI 347. Sociology of Education. 3 Units.
This course provides an introduction to the field of sociology of education, which might be more properly called sociology of schooling. We will examine the development of schools historically and competing paradigms for understanding the place of school in society. Major theoretical perspectives concerning the nature and consequences of schools for individuals and for societies will be reviewed. Issues of individual opportunity - including how it is organized by race, class, and gender - will be covered, as well as issues institutional dynamics - including tracking, testing and so-called crisis and reform. Offered as SOCI 347 and SOCI 447. Prereq: SOCI 101 and junior or senior standing.

SOCI 349. Social Inequality. 3 Units.
This course discusses classical theory and contemporary research on the mechanisms of power that produce inequalities in income, wealth, education, privilege, and occupational prestige and are manifest in racial, ethnic, gender, age, health, and sexual hierarchies. Offered as SOCI 349 and SOCI 449. Prereq: SOCI 101 and Sophomore standing.

SOCI 355. Special Topics. 3 Units.
One or more sections each semester focusing on selected areas of study in sociology. Offered as SOCI 355 and SOCI 455.

SOCI 356. Economic Sociology: Money, Markets, Morals, and Social Life. 3 Units.
The course introduces students to a sociological perspective on the economy, and the social processes that effect and are embedded in economic behavior, economic institutions and markets. Students will examine issues such as the social significance of money, the effect of social networks on labor market outcomes, the success and failure of firms, tips and gifts, informal markets and the trade of illicit goods, as well as topics such as immigration and globalization. Our investigations into these diverse topics reveal how economic phenomena, economic systems and processes are shaped by social networks, cultural understandings and relations of power. Throughout the course students will examine how economic relations are facilitated-created, maintained, transformed, and constrained--by social relations, revealing that economic life and behavior is just as social as religion, family or education. Prereq: SOCI 101.

SOCI 357. Sociology of Human Rights. 3 Units.
This course is designed to introduce students to the sociology of human rights. The starting point is fundamental ideas of rights, including citizenship and human rights. We then study various aspects of human rights treaty processes. Over the remainder of the term, we examine different human rights issues, both long-standing and contemporary. Throughout the term, we will critically approach human rights systems and scholarship. Offered as SOCI 357 and SOCI 457. Prereq: SOCI 101.
SOCI 360. The Sociology of Law. 3 Units.
This course will focus on the role of rights in the U.S. legal system and society. In particular, we will consider three questions. The first is how do rights fit in the legal system and society? Second, how have different social groups used and thought about rights? Third, how do legal actors like judges and lawyers think about rights compared to non-lawyers? Offered as SOCI 360 and SOCI 460. Prereq: SOCI 101 and Sophomore standing.

SOCI 361. The Life Course. 3 Units.
Individual experiences and transitions over the life course are considered as the result of societal, cultural, psychological, biological, and historical influences. Developmental issues of childhood, adolescence, young adulthood, middle years and late life are discussed in the context of social expectations, challenges, and opportunities. Emphasis is placed on theoretical readings. Offered as SOCI 361 and SOCI 461. Prereq: SOCI 101 and Sophomore standing.

SOCI 365. Health Care Delivery. 3 Units.
Health care in the U.S. may be approaching a critical cross-road. Limiting care to older persons and the chronically ill has been proposed as a means to combat rising costs and limited access to health care. What are the alternatives to health care rationing? Socialized medicine? National health insurance? This course deals with issues of cost, quality, and access to health care in the United States and other societies. It considers how solutions by other societies can provide directions for the organization of health care in the U.S. Offered as SOCI 365 and SOCI 465. Prereq: SOCI 101 and Sophomore standing.

SOCI 366. Racial Inequality and Mass Imprisonment in the US. 3 Units.
This course examines the relationship between racial inequality and mass imprisonment in the U.S. It begins by exploring the role of prisons in the Jim Crow south, with a particular focus on convict-leasing practices, and then turns to the north to examine the social forces that created the black urban ghetto and concentrated black urban poverty. The course also examines the impact that these same social forces have had on Puerto Ricans. We will then explore a series of topics including urban poverty and crime, the war on drugs, the politics of mass incarceration, the prospects that mass incarceration has become the new Jim Crow, and the effects that mass incarceration has had on voting rights, urban communities, families and children. We will conclude with a discussion of varying decarceration arguments, strategies, movements, and achievements. Offered as AFST 366 and SOCI 366. Prereq: SOCI 101 or SJUS 100.

SOCI 369. Aging in American Society. 3 Units.
Considers the position and participation of aged adults in American society. Sociological perspectives through which to interpret the aging process and old age; social policies; intergenerational relations; lifestyles and how they affect participation of the aged in American society; dying and death serve as major themes. Offered as SOCI 369 and SOCI 469. Prereq: SOCI 101 and Sophomore standing.

SOCI 370. Sociology of the Family. 3 Units.
This course provides the theoretical and methodological foundation for conducting family research. It also reviews the most current research in the sociology of the family arena such as intergenerational issues, ethnicity and gender, and family transitions. Offered as SOCI 370 and SOCI 470. Prereq: SOCI 101 and Sophomore standing.

SOCI 372. Work and Family: U.S. and Abroad. 3 Units.
Covers the impact on human lives of the interface between work and family; the different ways gender structures the experience of work and family depending upon racial and ethnic background, social class, age, and partner preference; the impact of historical context on work-family experiences; work-family policies in the United States and other countries. Offered as SOCI 372, WGST 372, and SOCI 472. Prereq: SOCI 101 and Sophomore standing.

SOCI 375. Independent Study. 1 - 3 Units.
Prereq: SOCI 101 and SOCI 300.

SOCI 377. Population Dynamics and Changing Societies. 3 Units.
Population and social structure are inextricably linked, as changes in one elicit changes in the other. Social demography, as a discipline, examines these linkages through the systematic study of the size, composition and distribution of populations and their relationship to the social, political and economic organization of societies. This course will pay particular attention to mortality, morbidity and health, fertility and household organization, and migration as the major processes of population change. The population dynamics of the United States will be emphasized, with select comparisons to developing and developed countries. Offered as SOCI 377 and SOCI 477. Prereq: SOCI 101 or equivalent; 9 hours in SOCI, ANTH, or ECON.

SOCI 380. Social Movements and Social Change. 3 Units.
This course will introduce students to the theories of social movements and collective action. We look at the conditions that create grievances in democracies, how grievances get translated into collective action, and what types of collective actions are successful for bringing about social change. We discuss a variety of movements in the U.S. in the 20th century to illustrate these theories and concepts. Prereq: SOCI 101 or requisites not met permission.

SOCI 381. City as Classroom. 3 Units.
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface–both literally and figuratively–with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481. Counts for CAS Global & Cultural Diversity Requirement.
SOCI 384. Sociology of Sex(es), Gender(s) and Sexuality(ies). 3 Units.
Gender is an organizing principle of society and affects every element of
social life. Ideas about gender and sexuality shape identity and suffuse
interactions, institutions and the societies within which we live. These
ideas vary from individual to individual, but also across time and place.
This course surveys research on sex, gender and sexuality with the goal
of providing students with a theoretical grounding for analyzing sex,
gender and sexuality from a sociological perspective. We will explore
outdated theories like essentialism and biological determinism, and
newer theories rooted in social constructionism. Central to this course
is intersectionality, a theoretical perspective that reveals ways in which
race/ethnicity, class, gender, sexuality and other social categories are
inextricably connected and form interlocking systems of inequality.
Additional topics to be explored include: the sexual revolution, the hook-
up culture, gendered families, gendered health, occupational segregation,
sexual harassment and gendered violence, reproduction, social change
and feminist activism. Offered as SOCI 384, SOCI 484, and WGST 384.
Prereq: SOCI 101.

SOCI 385. Ethnography. 3 Units.
The course will be taught twice weekly as a seminar for upper level
undergraduate students and graduate students, and will examine some
of the key debates in ethnography, read ethnographies published as both
books and articles, and explore various ways of designing ethnographic
fieldwork. Offered as SOCI 385 and SOCI 485. Prereq: SOCI 101 and
Sophomore standing.

SOCI 386. Race and Racism. 3 Units.
Race and Racism will discuss the classical and contemporary
understandings of the concepts of race and racism. We will begin by
taking an historical approach, delving into processes of racialization
and the first instances where distinctions in human race were noted.
We will survey theories of race and use a social constructions approach
to examine how sociologists approach the study of racial and ethnic
group difference. We will examine how definitions of racial groups have
evolved over time and differ across contexts, as well as some of the
underlying social and structural processes that create racial hierarchies.
At the end of the course students should have a strong understanding
of the mechanisms that reproduce systems of racial classification.
The course will also examine patterns and trends in racial and ethnic
inequality over recent decades, centering our discussion on the legacies
of racism, current discrimination, and new processes that are currently
unfolding to reproduce inequality. While the course’s main focus is to
examine understandings of race and racism in the United States, we
will devote some attention to how race and ethnicity emerge in different
environments by examining race and racism in an international context.
Offered as AFST 386, SOCI 386 and SOCI 486. Counts for CAS Global &

SOCI 387. Social Research Methods. 3 Units.
This course provides an introduction to the epistemologies and research
methodologies used in sociological inquiry. We concentrate on the
fundamental principles of research design and on developing a basic
understanding of the research process. Topics include formulating
a question, alternative modes of research design and principles of
measurement, sampling and analysis. We draw examples from published
work, ongoing studies, and publicly available data. Offered as SOCI 306
and SOCI 406.

SOCI 388. Research Methods. 3 Units.
This course provides an introduction to social statistics, including
univariate statistics and bivariate tests of association (chi-square, t-test,
ANOVA, correlation, regression). Topics include: levels of measurement,
probability theory and inference; hypothesis testing; and statistical
power. Students receive hands-on instruction using statistical software.
A student may receive credit for only one of the following: SOCI 307,
ANTH 319, PSCL 282, or STAT 201. Offered as SOCI 307 and SOCI 407.

SOCI 392. Senior Capstone Experience. 3 Units.
SOCI 392 represents the completion of an independent study paper
involving exploration of a sociology topic to be chosen in consultation
with the student’s capstone advisor. The student will interact regularly
with the faculty advisor who will review their progress on the project. This
project allows for original thought and for the tailoring of the research to
the student’s interests. The student will integrate theory, methods and
social issues as he/she applies critical thinking skills and insights to the
analysis of some aspects of a subject chosen from any of the following
subfields and concentrations: Gerontology, Social Inequality, Medical
Sociology, Crime and Delinquency, The Life Course, Education, Work
and Family, Sociology of Law, and Deviance. The Capstone Project has
both a written and an oral component. Following the submission of the
Capstone paper, the student will give a presentation of the project at the
Senior Capstone fair, or another forum chosen by the department. Counts
as SAGES Senior Capstone. Prereq: SOCI 101, SOCI 300, SOCI 303, and
STAT 201 or PSCL 282.

SOCI 397. Honors Studies. 3 Units.
Intensive investigation of research or conceptual problem; original work
under supervision of faculty member. Limited to senior majors. Prereq:
Senior status.

SOCI 398. Honors Studies. 3 Units.
Intensive investigation of research on conceptual problem; original work
under supervision of faculty member. Limited to senior majors.

SOCI 400. Development of Sociological Theory. 3 Units.
This course examines in detail the works of the major social theorists of
the 19th and 20th centuries. It is intended to integrate their ideas with
the social and historical milieu from which they were born. Questions
of intergroup conflict vs. cooperation, interactions between economic,
familial, religious, and political institutions, and the development of
the self as a function of larger social processes are addressed. Such
celebrated figures as Marx, Weber, and Durkheim, as well as modern
thinkers will be presented and discussed. Prereq: Graduate standing.

SOCI 401. Contemporary Sociological Theory. 3 Units.
Current viewpoints in sociological theory are explored using contrasting
theoretical perspectives.

SOCI 406. Logic of Social Inquiry. 3 Units.
This course provides an introduction to the epistemologies and research
methodologies used in sociological inquiry. We concentrate on the
fundamental principles of research design and on developing a basic
understanding of the research process. Topics include formulating
a question, alternative modes of research design and principles of
measurement, sampling and analysis. We draw examples from published
work, ongoing studies, and publicly available data. Offered as SOCI 306
and SOCI 406.

SOCI 407. Social Statistics. 3 Units.
This course provides an introduction to social statistics, including
univariate statistics and bivariate tests of association (chi-square, ttest,
ANOVA, correlation, regression). Topics include: levels of measurement,
probability theory and inference; hypothesis testing; and statistical
power. Students receive hands-on instruction using statistical software.
A student may receive credit for only one of the following: SOCI 307,
ANTH 319, PSCL 282, or STAT 201. Offered as SOCI 307 and SOCI 407.
SOCI 410. The Individual in Society. 3 Units.
This course focuses on the relationship between individuals and
the societies in which they live. Influences of values and culture on
individuals’ selves and identities are discussed as well as how individuals
attach meaning to personal life experiences and histories in the context
of society at large. Offered as SOCI 310 and SOCI 410.

SOCI 411. Health, Illness, and Social Behavior. 3 Units.
This course considers the role of social factors (e.g., poverty,
occupational and family structure) on health and illness. Discussion
will concentrate on the role of health promotion (e.g., anti-smoking
campaigns), social behavior and lifestyle in health and health care use.
Considerable attention is given to understanding health careers and
professions and their role in the health of societies and individuals.
Offered as SOCI 311 and SOCI 411.

SOCI 413. Sociology of Stress and Coping. 3 Units.
This course will focus attention on human stress throughout the
lifespan and its role in personal health and well-being. There have
been exciting advances in recent years in understanding the nature of
stress in everyday life as well as elements of extreme stress. Trauma is
experienced by many people due to normative events such as illness and
bereavement or natural and man-made disasters such as crime or war.
Coping strategies and social supports which ameliorate negative impact
of stress will be considered. Offered as SOCI 313 and SOCI 413.

SOCI 415. Comparative-Historical Sociology. 3 Units.
This seminar offers participants an introduction to comparative
methodological approaches to social science research. Participants will
employ hands-on approaches to learning about and using innovative
methods to apply their knowledge to social science questions. Our
starting point will be key questions social scientists must contend
with in pursuing answers to questions about social phenomena.
After turning to "classic" texts in comparative research, we will study
various components of comparative research. We will then focus on
configurational comparative methods. Offered as SOCI 315 and SOCI 415.

Storytelling. 3 Units.
This course discusses theoretical foundations and methodologies
of narrative research, including life stories, oral history, and auto
ethnography. The course is designed for students to complete a research
project in the semester using narrative methods to collect and analyze
primary data and write up the results. Offered as SOCI 327 and SOCI 427.

SOCI 428. Capitalism, Cities, and Inequality. 3 Units.
This course focuses on social inequality, but through an examination
of cities in the U.S. and abroad. In many ways, cities provide a window
onto the organization of the larger social world, including regional, state,
national and global areas. As such, understanding cities goes far beyond
their geographical boundaries. The purpose of this course then is to learn
the central role that cities play within a larger capitalist economy, how
public policies shape life in cities, how cities organize and reproduce
social inequality, and how community groups and organizations
challenge and negotiate the organization of power and inequality. The
course will examine topics such as the formal and informal labor force,
immigration, the growth of global cities and slums, urban poverty, racial
segregation, housing and homelessness, crime, gentrification, policing,
community organization and political resistance. Offered as AFST 328,
SOCI 328 and SOCI 428. Counts for CAS Global & Cultural Diversity
Requirement.

SOCI 433. Medical Sociology. 3 Units.
Course covers theories, research methods, and problems in sociology of
medicine. Topics include social epidemiology, health and illness behavior,
and sick role. Structures and functions of delivery systems and their
interrelationships with other social institutions are discussed.

SOCI 444. Health Disparities. 3 Units.
We have come to understand that stark disparities in health result from
the social organization of society, especially inequality in resources
and opportunities between and within social groups in the population.
This seminar course examines the differential distribution of health
and illness in society, focusing on the social determinants of health.
Topics include: socioeconomic inequality; geographic context; social
cohesion and exclusion; health burden in minority populations; policy
and federal priorities. We utilize a life course perspective to understand
how inequality "gets under the skin" to produce adverse health. Offered
as SOCI 344 and SOCI 444. Counts for CAS Global & Cultural Diversity
Requirement.

SOCI 445. Sociology of Mental Illness. 3 Units.
Focus is on social construction of mental health and illness and
sociology of emotions. Social determinants of psychological distress
will be discussed along with social stigma associated with mental
illness. Institutional and community options for care of the mentally ill
will be considered along with the impact of recent social movements of
destigmatization and independent living. Offered as SOCI 345 and
SOCI 445.

SOCI 447. Sociology of Education. 3 Units.
This course provides an introduction to the field of sociology of
education, which might be more properly called sociology of schooling.
We will examine the development of schools historically and competing
paradigms for understanding the place of school in society. Major
theoretical perspectives concerning the nature and consequences of
schools for individuals and for societies will be reviewed. Issues of
individual opportunity - including how it is organized by race, class,
and gender - will be covered, as well as issues institutional dynamics -
including tracking, testing and so-called crisis and reform. Offered as
SOCI 347 and SOCI 447.

SOCI 449. Social Inequality. 3 Units.
This course discusses classical theory and contemporary research on
the mechanisms of power that produce inequalities in income, wealth,
education, privilege, and occupational prestige and are manifest in racial,
ethnic, gender, age, health, and sexual hierarchies. Offered as SOCI 349
and SOCI 449.

SOCI 455. Special Topics. 3 Units.
One or more sections each semester focusing on selected areas of study
in sociology. Offered as SOCI 355 and SOCI 455.

SOCI 457. Sociology of Human Rights. 3 Units.
This course is designed to introduce students to the sociology of human
rights. The starting point is fundamental ideas of rights, including
citizenship and human rights. We then study various aspects of human
rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of
citizenship and human rights. We then study various aspects of human
rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of human
rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of
human rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of human
rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of human
rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of human
rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of
human rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of human
rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of human
rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of human
rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of human
rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including
citizenship and human rights. We then study various aspects of human
rights systems of rights, including citizenship and human rights. We then
study various aspects of human rights systems of rights, including

Full PDF 587
SOCI 460. The Sociology of Law. 3 Units.
This course will focus on the role of rights in the U.S. legal system and society. In particular, we will consider three questions. The first is how do rights fit in the legal system and society? Second, how have different social groups used and thought about rights? Third, how do legal actors like judges and lawyers think about rights compared to non-lawyers? Offered as SOCI 360 and SOCI 460.

SOCI 461. The Life Course. 3 Units.
Individual experiences and transitions over the life course are considered as the result of societal, cultural, psychological, biological, and historical influences. Developmental issues of childhood, adolescence, young adulthood, middle years and late life are discussed in the context of social expectations, challenges, and opportunities. Emphasis is placed on theoretical readings. Offered as SOCI 361 and SOCI 461.

SOCI 465. Health Care Delivery. 3 Units.
Health care in the U.S. may be approaching a critical cross-road. Limiting care to older persons and the chronically ill has been proposed as a means to combat rising costs and limited access to health care. What are the alternatives to health care rationing? Socialized medicine? National health insurance? This course deals with issues of cost, quality, and access to health care in the United States and other societies. It considers how solutions by other societies can provide directions for the organization of health care in the U.S. Offered as SOCI 365 and SOCI 465.

SOCI 466. Promoting Health Across Boundaries. 3 Units.
This course examines the concepts of health and boundary spanning and how the synergy of the two can produce new, effective approaches to promoting health. Students will explore and analyze examples of individuals and organizations boundary spanning for health to identify practice features affecting health, compare and contrast practices and approaches, and evaluate features and context that promote or inhibit boundary spanning and promoting health. Offered as MPH 466, PQHS 466, SOCI 466, NURS 466 and BETH 466. Prereq: Graduate student status or instructor consent.

SOCI 469. Aging in American Society. 3 Units.
Considers the position and participation of aged adults in American society. Sociological perspectives through which to interpret the aging process and old age: social policies; intergenerational relations; lifestyles and how they affect participation of the aged in American society; dying and death serve as major themes. Offered as SOCI 369 and SOCI 469.

SOCI 470. Sociology of the Family. 3 Units.
This course provides the theoretical and methodological foundation for conducting family research. It also reviews the most current research in the sociology of the family arena such as intergenerational issues, ethnicity and gender, and family transitions. Offered as SOCI 370 and SOCI 470.

SOCI 472. Work and Family: U.S. and Abroad. 3 Units.
Covers the impact on human lives of the interface between work and family; the different ways gender structures the experience of work and family depending upon racial and ethnic background, social class, age, and partner preference; the impact of historical context on work-family experiences; work-family policies in the United States and other countries. Offered as SOCI 372, WGST 372, and SOCI 472.

SOCI 477. Population Dynamics and Changing Societies. 3 Units.
Population and social structure are inextricably linked, as changes in one elicit changes in the other. Social demography, as a discipline, examines these linkages through the systematic study of the size, composition and distribution of populations and their relationship to the social, political and economic organization of societies. This course will pay particular attention to mortality, morbidity and health, fertility, family and household organization, and migration as the major processes of population change. The population dynamics of the United States will be emphasized, with select comparisons to developing and developed countries. Offered as SOCI 377 and SOCI 477. Prereq: SOCI 101 or equivalent; 9 hours in SOCI, ANTH, or ECON.

SOCI 481. City as Classroom. 3 Units.
In this course, the city is the classroom. We will engage with the urban terrain. We will meet weekly off-campus, interact with community members, and interface—both literally and figuratively—with the city as a way to examine the linkages between historical, conceptual, and contemporary issues, with particular attention paid to race and class dynamics, inequality, and social justice. This course will have four intersecting components, primarily focusing on American cities since the 1930s: the social and physical construction of urban space, the built environment, life and culture in the city, and social movements and grassroots struggles. Offered as HSTY 381, POSC 381, SOCI 381, HSTY 481, POSC 481, and SOCI 481. Counts for CAS Global & Cultural Diversity Requirement.

SOCI 484. Sociology of Sex(es), Gender(s) and Sexuality(ies). 3 Units.
Gender is an organizing principle of society and affects every element of social life. Ideas about gender and sexuality shape identity and sulfuse interactions, institutions and the societies within which we live. These ideas vary from individual to individual, but also across time and place. This course surveys research on sex, gender and sexuality with the goal of providing students with a theoretical grounding for analyzing sex, gender and sexuality from a sociological perspective. We will explore outdated theories like essentialism and biological determinism, and newer theories rooted in social constructionism. Central to this course is intersectionality, a theoretical perspective that reveals ways in which race/ethnicity, class, gender, sexuality and other social categories are inextricably connected and form interlocking systems of inequality. Additional topics to be explored include: the sexual revolution, the hook-up culture, gendered families, gendered health, occupational segregation, sexual harassment and gendered violence, reproduction, social change and feminist activism. Offered as SOCI 384, SOCI 484, and WGST 384.

SOCI 485. Ethnography. 3 Units.
The course will be taught twice weekly as a seminar for upper level undergraduate students and graduate students, and will examine some of the key debates in ethnography, read ethnographies published as both books and articles, and explore various ways of designing ethnographic fieldwork. Offered as SOCI 385 and SOCI 485.
SOCI 486. Race and Racism. 3 Units.
Race and Racism will discuss the classical and contemporary understandings of the concepts of race and racism. We will begin by taking an historical approach, delving into processes of racialization and the first instances where distinctions in human race were noted. We will survey theories of race and use a social constructions approach to examine how sociologists approach the study of racial and ethnic group difference. We will examine how definitions of racial groups have evolved over time and differ across contexts, as well as some of the underlying social and structural processes that create racial hierarchies. At the end of the course students should have a strong understanding of the mechanisms that reproduce systems of racial classification. The course will also examine patterns and trends in racial and ethnic inequality over recent decades, centering our discussion on the legacies of racism, current discrimination, and new processes that are currently unfolding to reproduce inequality. While the course's main focus is to examine understandings of race and racism in the United States, we will devote some attention to how race and ethnicity emerge in different environments by examining race and racism in an international context. Offered as AFST 386, SOCI 386 and SOCI 486. Counts for CAS Global & Cultural Diversity Requirement.

SOCI 509. Advanced Statistical Analysis. 3 Units.
The purpose of this course is to teach students multivariate data analysis, including linear regression, logistic regression, and econometric models. Students will learn about issues in data management such as variable measurement and techniques for handling missing data. Students also learn to select appropriate statistical models, design the analysis, and assess model fit. The course includes hands-on instruction with computer labs. Prereq: SOCI 407 and SOCI 406 or requisites not met permission.

SOCI 514. Qualitative Methods/Field Research. 3 Units.
Students explore the theoretical foundations of qualitative social research. The course is designed to introduce and provide experience with a range of data generation strategies and analytic skills. The ethnographic techniques of semi-structured interviewing and participant-observation receive particular attention.

SOCI 525. Multilevel Modeling. 3 Units.
This course is designed to provide an introduction to multilevel, or hierarchical, regression models, and to explore its two primary applications in the social sciences: (1) studies of individuals nested within groups; (2) studies of repeated observations nested within individuals. After taking this course, students should be able to discuss the components of the multilevel model, including random intercepts & slopes, variances at levels 1 & 2, within- and between-group regressions. Students should also be able to conduct independent statistical analysis using Stata from initial tests of assumptions and hypothesis testing, and to assessing model fit. This course will additionally provide instruction on time-based and age-based latent growth curves within the multilevel modeling framework. Prereq: SOCI 509 or requisites not met permission.

SOCI 601. Reading and Research. 1 - 9 Units.
Individual study and/or project work.

SOCI 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

Teacher Licensure Program
Cleveland Hearing & Speech 421
www.case.edu/artsci/teachlic (http://www.case.edu/artsci/teachlic/)
Phone: 216.368.0792; Fax: 216.368.5227

Denise Davis, Director of Teacher Licensure
denise.k.davis@case.edu

Case Western Reserve University offers several programs leading to an Ohio teaching license. Teacher Education programs are offered in Art Education and Music Education at the undergraduate (Bachelor of Science) and graduate (Master of Arts) level. A unique feature of these programs is that each is offered in cooperation with a University Circle Institution—the Cleveland Institute of Art (for Art Education) or the Cleveland Institute of Music (for Music Education).

In addition, several departments in the College of Arts and Sciences offer undergraduate majors leading to Ohio teaching licenses. Students wishing to pursue a teaching license in one of these areas must fulfill all the requirements for their primary major and declare teacher education as a second major, following the appropriate course sequences that lead to licensure. The teacher licensure areas are: 1) Adolescent to Young Adult (grades 7-12) in Integrated Language Arts (English major), Integrated Social Studies (history major), Integrated Mathematics (mathematics major), Life Science (biology major), or Physical Science (chemistry or physics major); and 2) Multi-Age (grades preK-12) in French, Spanish, or Latin.

Teacher education programs at Case Western Reserve University lead to teaching licenses and are approved by the Ohio Department of Education and the Ohio Department of Higher Education.

The Teacher Education Unit at CWRU is nationally accredited by the Teacher Education Accreditation Council (TEAC), which is part of the Council for the Accreditation of Educator Preparation (CAEP). In addition, the National Association of Schools of Music (NASM) accredits the Music Education Program.

Program Faculty
Denise K. Davis, EdD
(Teachers College, Columbia University)
Director, Teacher Education; Director, Adolescent to Young Adult Program

Angie Chapple, M.Ed.
(Cleveland State University)
Adjunct Faculty, Teacher Education

David Bellini, MA
(Cleveland State University)
Adjunct Faculty, Teacher Education

Nancy Benincasa, MS
(Cleveland State University)
Adjunct Faculty, Teacher Education

Steven Ciampaglia, EdD
(Northern Illinois University)
Champney Family Professor of Art; Associate Professor, Department of Art History and Art; Director, Art Education/Art Studio Programs

Amy Davis, MA
(John Carroll University)
Adjunct Faculty, Teacher Education

Matthew Garrett, PhD
(Florida State University)
Associate Professor, Department of Music; Director, UCITE; Coordinator, Undergraduate Studies in Music Education
Multi-Age language programs are as follows:
The education course requirements for the Adolescent to Young Adult or Mathematics (requirements, go to the departmental descriptions for Spanish, or Latin. For information concerning specific subject area major). Multi-Age licensure (grades PreK-12) is available in French, Science (biology major), or Physical Science (chemistry or physics major, history major), Integrated Mathematics (mathematics major), Life in Integrated Language Arts (English major), Integrated Social Studies
Adolescent to Young Adult teacher licensure (grades 7-12) is available in French, Science (biology major), or Physical Science (chemistry or physics major, history major), Integrated Mathematics (mathematics major), Life in Integrated Language Arts (English major), Integrated Social Studies

Undergraduate Programs
Ohio Teacher Education Programs

Students interested in a teaching career will pursue a primary major in the field of licensure (for which CWRU has received approval from the Ohio Department of Education and the Ohio Department of Higher Education) and choose teacher education as a second major. This second major requires 36 credit hours in professional education.

Adolescent to Young Adult teacher licensure (grades 7-12) is available in Integrated Language Arts (English major), Integrated Social Studies (history major), Integrated Mathematics (mathematics major), Life Science (biology major), or Physical Science (chemistry or physics major). Multi-Age licensure (grades PreK-12) is available in French, Spanish, or Latin. For information concerning specific subject area requirements, go to the departmental descriptions for Biology (p. 268), Chemistry (p. 298), English (p. 346), History (p. ), Mathematics (p. 407), Physics (p. 503), Classics (p. 310) or Modern Languages and Literatures (p. 428).

The education course requirements for the Adolescent to Young Adult or Multi-Age language programs are as follows:

Students must maintain a 3.0 GPA in all professional education courses, a 2.7 GPA in the specific content area, and a cumulative overall GPA of 2.7 to be recommended for Ohio teacher licensure.

As noted in the Overview, Case Western Reserve University also offers teacher licensure programs in Art Education and Music Education at the undergraduate (Bachelor of Science) and graduate (Master of Arts) levels. For further information on program and course requirements for Art Education, see the Department of Art History and Art (p. 232) description in this bulletin; for Music Education, see the Department of Music (p. 456) description.

Courses

EDUC 200. Introduction to Supplemental Instruction (SI). 1 Unit. This course is designed to develop and reinforce skills necessary for facilitating Supplemental Instruction through the use of pedagogical knowledge, Instructional strategies, understanding of learning theory, understanding the principles and techniques of differentiated Instruction, and understanding group dynamics. Prereq: Cumulative GPA of 3.25.

EDUC 255. Literacy Across the Content Areas. 3 Units. Literacy development is examined through various perspectives. This three hour course emphasizes understanding reading and writing as it applies to the various content areas. The course includes instruction in using protocols for oral language development, strategies for word skill development and reading comprehension, strategies for addressing dyslexia, and use of assessment of reading skills. Students apply strategies through various field experiences.

EDUC 301. Introduction to Education. 3 Units. This course provides an introduction to the historical, sociological, and philosophical role of education in a diverse society. Historic and contemporary practices and issues are introduced and explored within the context of educational ideologies. Emphases include examination of what success in education means and beginning the process of defining one’s own identity as a teacher. Offered as EDUC 301 and EDUC 401.

EDUC 325. Content Area Special Methods I. 3 Units.
This methods course, designed for licensure candidates in secondary or multi-age areas, specifically emphasizes the methods inherent in teaching the subject area of licensure. The first of two courses, EDUC 325 builds on the student's previous understanding of the methods involved in teaching their particular subject. The course will consist of weekly guided observations in a local high school classroom under the mentoring of a master teacher, various forms of exploring content and pedagogy, and monthly discussions in a special format called the "Reflective Triad" - composed of each CWRU student, his/her master teacher in the high school, and a CWRU faculty member in the content area. Additionally, the course involves introductory lesson design and teaching. Prereq: EDUC 301, EDUC 304.

EDUC 326. Content Area Special Methods II. 3 Units.
This methods course, designed for licensure candidates in secondary or multi-age areas, specifically emphasizes the methods inherent in teaching the subject area of licensure. This course is a continuation of the sequence and is the second of two courses. EDUC 326 continues students' work in the first seminar to understand, design and teach their content. The course consists of weekly guided observations in a local high school classroom under the mentoring of a master teacher, various forms of exploring content and pedagogy, and monthly discussions in a special format called the "Reflective Triad" - composed of each CWRU student, his/her master teacher in the high school, and a CWRU faculty member in the content area. Additionally, the course involves more sophisticated lesson design in the content area, content integration, an introduction to designing instruction to meet the needs of diverse learners, and teaching. Prereq: EDUC 301, EDUC 304, EDUC 325.

EDUC 336. The Diverse Learner: Best Practice for Effective Classrooms. 3 Units.
Building on the theories of human development and learning encompassed in EDUC 304, this course guides students to develop a deeper understanding of theories and research in human development, of issues related to adolescents, and how they are applied in today's classrooms. Mental health issues, exceptions in learning and inclusion theory will be focal points for the course. Offered as EDUC 336 and EDUC 436. Prereq: EDUC 301, EDUC 304. EDUC 325.

EDUC 338. Seminar and Practicum in Adolescents. 3 Units.
Supervised field placement and attendance in early childhood, child and adolescent settings including preschools, schools, hospitals, and neighborhood centers. This course is an elective. Recommended preparation: PSCL 101. Offered as EDUC 338, PSCL 338 and SOCI 338.

EDUC 340. Advanced Curriculum and Methods. 3 Units.
This curriculum and methods course is offered for students enrolled in the high school or Multi-Age Languages teacher licensure program. It involves in-depth study of pedagogy within an integrated and interdisciplinary model. Demonstrated understanding of constructivist theory, the application of developmental and learning theories, and state and national standards in curriculum content, curriculum design, instruction and assessment are central to the course. Counts as SAGES Departmental Seminar. Prereq: EDUC 301, EDUC 304, EDUC 325, EDUC 326.

EDUC 386. Introduction to Instructional Technology. 2 - 3 Units.
This course is designed to address the basic technology skills, which are required of all teachers. The course uses both concept and project based learning activities. Each of the projects is centered on a set of activities designed to allow students to demonstrate a particular subset of competencies. The course will not always provide step-by-step directions for completing projects; instead it will promote the use of existing information and help resources to allow students to develop the ability to learn new technology independently. Each of the projects will also contain the opportunity for the student to reflect on how technology impacts their teaching. Course projects are designed to assess both a basic comfort level with learning and using technology tools and the student's ability to apply technology to improve teaching and learning. The nature of the course is a mix of technology and should engage teachers in thinking about ways to improve their teaching. There is an option for non-education majors to enroll for two credits. Offered as EDUC 386 and EDUC 486.

EDUC 390. Student Teaching & Professional Development Seminar. 3 Units.
This course is taken in conjunction with student teaching and provides a forum for processing what students experience throughout the semester. Additionally, the course guides the professional development of each student. The course helps students integrate state and national standards in their teaching. The Teacher Performance Assessment (TPA) is addressed in this course and becomes part of the student teaching portfolio. Individual advisement is a critical component and involves resume writing, interview skills, job placement information and preparation for state mandated licensure exams. Prereq: EDUC 301, EDUC 304, EDUC 325, EDUC 326, EDUC 340. Coreq: EDUC 394 - Student Teaching Practicum - is taken in conjunction with the Student Teaching Seminar.

EDUC 390C. Student Teaching Capstone & Professional Development Seminar. 3 Units.
This course is taken in conjunction with student teaching and emphasizes the integration of theory and practice. The course provides a forum for processing what students experience throughout the semester as students engage in full-time work in the classroom. The course also includes components that fulfill the SAGES Senior Capstone requirement. The course guides the professional development of each student as he or she compiles the portfolio, completes the Capstone, and prepares for state licensure exams. Counts as SAGES Senior Capstone. Prereq: EDUC 255, EDUC 386, EDUC 340. Coreq: EDUC 394.

EDUC 394. Student Teaching Practicum. 3 - 9 Units.
This practicum represents a student teaching experience involving curriculum design and implementation. Each student teacher plans and teaches a comprehensive unit, moving from guided practice to assuming full teacher responsibility within the school culture. Video analysis, pre- and post-teaching lesson analyses, problem-solving, and reflective dialogue are key emphases of the practicum. The Teacher Performance Assessment is a component of the student teaching for education majors.

EDUC 395. Independent Study in Education. 1 - 3 Units.
Independent Study in Education is offered for students with special interests and/or commitments that are not fully addressed in other education courses and who wish to work independently.
EDUC 401. Introduction to Education. 3 Units.
This course provides an introduction to the historical, sociological, and philosophical role of education in a diverse society. Historic and contemporary practices and issues are introduced and explored within the context of educational ideologies. Emphases include examination of what success in education means and beginning the process of defining one's own identity as a teacher. Offered as EDUC 301 and EDUC 401.

EDUC 404. Educational Psychology. 3 Units.

EDUC 436. The Diverse Learner: Best Practice for Effective Classrooms. 3 Units.
Building on the theories of human development and learning encompassed in EDUC 304, this course guides students to develop a deeper understanding of theories and research in human development, of issues related to adolescents, and how they are applied in today's classrooms. Mental health issues, exceptions in learning and inclusion theory will be focal points for the course. Offered as EDUC 336 and EDUC 436. Prereq: EDUC 404.

EDUC 486. Introduction to Instructional Technology. 2 - 3 Units.
This course is designed to address the basic technology skills, which are required of all teachers. The course uses both concept and project based learning activities. Each of the projects is centered on a set of activities designed to allow students to demonstrate a particular subset of competencies. The course will not always provide step-by-step directions for completing projects; instead it will promote the use of existing information and help resources to allow students to develop the ability to learn new technology independently. Each of the projects will also contain the opportunity for the student to reflect on how technology impacts their teaching. Course projects are designed to assess both a basic comfort level with learning and using technology tools and the student's ability to apply technology to improve teaching and learning. The nature of the course is a mix of technology and should engage teachers in thinking about ways to improve their teaching. There is an option for non-education majors to enroll for two credits. Offered as EDUC 386 and EDUC 486. Prereq: EDUC 404.

EDUC 495. Independent Study in Education. 1 - 3 Units.
Independent Study in Education is offered for students with special interests and/or commitments that are not fully addressed in other education courses and who wish to work independently.

Bachelor of Arts students have the opportunity to perform and to serve on the design and technical teams in four fully produced mainstage theatrical productions each year, presented in the historic Eldred Theater. The low student-to-faculty ratio ensures that students are able to work closely with our faculty of highly accomplished artists and scholars. Recognizing that the theater is an inherently interdisciplinary study belonging to the humanities as well as the performing arts, the department treats all productions as artistic and educational experiences, and welcomes the participation of students regardless of their academic majors and career goals.

At the graduate level, the Master of Arts degree prepares students for work in professional theater or education, or for pursuit of further graduate study, while the Master of Fine Arts professional actor training program—a collaboration between the Department of Theater and Cleveland Play House—represents a unique alliance between one of the oldest academic theater programs in the United States and the nation's first regional theater.

Department Faculty
Jerrold Scott, MFA  
(University of South Carolina/Shakespeare Theatre Company)  
Katherine Bakeless Nason Professor in Theater and Drama; Chair and Artistic Director

Christopher Bohan, MFA  
(Wayne State University)  
Instructor  
Acting; speech and dialects

Donald Carrier, BCom  
(McGill University/Webber Douglas Academy)  
Instructor; Director, CWRU/CPH MFA Acting Program  
Acting; script analysis; professional development

Angelina M. Herin, MFA  
(Temple University)  
Associate Professor  
Scene design; lighting design

Kevin Inouye, MFA  
(University of South Carolina)  
Associate Professor  
Costume design; stage makeup

Shanna Beth McGee, MFA  
(University of Georgia)  
Professor  
Voice; acting

Jeffrey Ullom, PhD  
(University of Illinois, Champaign-Urbana)  
Associate Professor; Director of Undergraduate Theater Studies  
Theater history; dramatic literature

The Department of Theater at Case Western Reserve University offers education and participation in all aspects of drama, with course offerings in acting, costume design, scene design, directing, dramatic writing, history, literature, criticism, and stagecraft.
The Bachelor of Arts program in theater offers concentrations in acting, design/technical theater, dramatic writing, history, and directing. Students intending to major in theater must complete 40 hours of coursework. Most students will opt to take many classes beyond the requirements in order to enhance their knowledge and improve their skills. Students interested in declaring a specific concentration of study can satisfy the additional requirements listed below in order to fulfill a Bachelor of Arts with a specific concentration. Students who do not declare a concentration will receive the designation of "General Theater" on their transcript.

The basic course requirements for all theater majors are as follows:

Performance courses: Students must take all four of the following:

- THTR 100 Introduction to Acting
- THTR 103 Acting: Scene Study
- THTR 110 Introduction to Theater
- THTR 330 Play Directing I

Design courses

- THTR 111 Introduction to Design
- THTR 223 Scenic Design
- THTR 224 Lighting Design

Tech credit hours (minimum of 3 hours)

- THTR 185 Theater Practicum (Students are required to enroll in THTR 185, a 1-hour practicum credit, accumulating 7 credits during their 8 semesters at CWRU. Students will enroll in THTR 185 each semester unless instructed to do otherwise by the director of undergraduate theater studies. Any exemptions to this requirement—receiving 2 credit hours in 1 semester or not enrolling in THTR 185 for a semester—must receive approval from the director of undergraduate theater studies.)

Senior capstone: Students must take one of the following:

- THTR 331 Play Directing II
- THTR 390 Advanced Topics in Design/Technology
- THTR 393 Senior Capstone: Dramaturgy

Elective Courses

Students may enroll in additional theater courses beyond the 40 credits required for the major. Some of the courses in the list below can be counted toward the major requirements or taken as electives.

- THTR 100 Introduction to Acting
- THTR 103 Acting: Scene Study
- THTR 105 Introduction to Stagecraft
- THTR 201 Movement
- THTR 206 Mr. Kiss Kiss Bang Bang - James Bond and Popular Culture
- THTR 223 Scenic Design
- THTR 224 Lighting Design
- THTR 225 Costume Design
- THTR 226 Stage Makeup
- THTR 227 Stage Management
- THTR 231 Acting: Advanced Scene Study
- THTR 232 Acting: Classical Technique
- THTR 306 Acting: Camera Technique
- THTR 307 Acting: Advanced Camera Techniques
- THTR 311 Audition Laboratory
- THTR 312 Playwriting
- THTR 314 Advanced Playwriting
- THTR 316 Screenwriting
- THTR 323 Topics in Design
THTR 334  Shakespeare: Histories and Tragedies  3
THTR 335  Shakespeare: Comedies and Romances  3
THTR 375  Voice  3
THTR 376  Advanced Vocal Techniques  3
THTR 385  Rehearsal and Production 1 - 3
THTR 386  Rehearsal and Performance 1
THTR 397  Honors Studies I  3
THTR 398  Honors Studies II  3
THTR 399  Independent Study in Theater Arts 1 - 3

Concentration in Acting
THTR 231  Acting: Advanced Scene Study  3
THTR 232  Acting: Classical Technique  3
THTR 375  Voice  3

Total Units  9

Concentration in Design/Technical Theater
The two remaining design courses (excluding the course taken to fulfill the core requirements) from THTR 223, THTR 224, and THTR 225
Either THTR 226 or THTR 227  3

Total Units  9

Concentration in Directing
THTR 331  Play Directing II  3
THTR 227  Stage Management  3
Either THTR 314 (Advanced Playwriting) or an additional design course (THTR 223, THTR 224, or THTR 225) not taken to fulfill the core requirements of the major.  3

Total Units  9

Concentration in Dramatic Writing
THTR 312  Playwriting  3
THTR 314  Advanced Playwriting  3
THTR 316  Screenwriting  3

Total Units  9

Departmental Honors in Theater
Majors wishing to take a Bachelor of Arts degree with honors in theater must make written application to the director of undergraduate theater studies no later than May 1 of their junior year. Students must have a minimum 3.25 overall grade point average and a minimum 3.75 grade point average in theater. Acceptance into the honors program is contingent upon faculty support and recommendation by the director of undergraduate theater studies and the department chair.

Those accepted register for THTR 397 Honors Studies I and THTR 398 Honors Studies II during their senior year, for a total of 6 hours. The honors project is defined as a production project in acting, design, playwriting, directing, or management/outreach. A supporting paper discussing the concept, execution, and performance of the project must be filed with the director of undergraduate theater studies no later than one week following the project presentation. Preparation of the project will be supervised by a department faculty member.

This project may be accepted for honors only if it receives a grade of A from both the project advisor and the director of undergraduate theater studies. The grade of A must be received both semesters. Students who qualify will receive the notation "Departmental Honors in Theater" on their diplomas. Information about the structure and specific requirements of the honors project is available from the director of undergraduate theater studies.

Minor
A minor in theater requires 18 hours. The requirements for each concentration are as follows:

General Theater
Required Courses:
THTR 100  Introduction to Acting  3
THTR 110  Introduction to Theater  3
THTR 111  Introduction to Design  3

One of the following two courses:
THTR 325  Development of Theater: Beginnings to English Renaissance  3
THTR 326  Development of Theater: Renaissance to Romanticism  3

Plus two additional courses above the 200 level

Acting
THTR 100  Introduction to Acting  3
THTR 103  Acting: Scene Study  3
THTR 201  Movement  3
THTR 231  Acting: Advanced Scene Study  3
THTR 375  Voice  3

One of the following two courses:
THTR 325  Development of Theater: Beginnings to English Renaissance  3
THTR 326  Development of Theater: Renaissance to Romanticism  3

Design/Tech
THTR 105  Introduction to Stagecraft  3
THTR 111  Introduction to Design  3

One of the following two courses:
THTR 325  Development of Theater: Beginnings to English Renaissance  3
THTR 326  Development of Theater: Renaissance to Romanticism  3

One of the following two courses:
THTR 327  American Drama  3
THTR 329  Modern and Contemporary Drama  3

Two of the following three courses:
THTR 223  Scenic Design  3
THTR 224  Lighting Design  3
THTR 225  Costume Design  3

Directing
THTR 100  Introduction to Acting  3
THTR 110  Introduction to Theater  3
THTR 111  Introduction to Design  3
THTR 329  Modern and Contemporary Drama  3
ThTR 330  Play Directing I  3  
ThTR 331  Play Directing II  3  

**Dramatic Writing**

**Graduate Programs**

**Master of Arts in Theater**

Master of Arts students prepare for careers in the professional theater and education, or for further pursuit of graduate study. The MA degree program offers broad-based advanced study in the literature and critical analysis of theater, with the opportunity to focus in a specialization of the student’s choice. A bachelor’s degree and strong academic record are required for admission; although no specific undergraduate degree requirements exist, a background in drama is obviously helpful.

Requirements for the degree include:

1. A minimum of 30 hours of course work beyond the bachelor’s degree
2. A cumulative GPA of 3.0 or better for all coursework
3. Successful completion of the thesis/project

The curriculum consists of 15 hours of comprehensive course work, 6 hours of specialized focus course work, and 9 hours of master’s project or thesis writing.

All MA students must take the following courses (15 hours):

- ThTR 425 Development of Theater: Beginnings to English Renaissance (3)
- ThTR 426 Development of Theater: Renaissance to Romanticism (3)
- ThTR 427 American Drama: American Drama (3) or ThTR 429 Modern and Contemporary Drama (3)
- ThTR 501 Dramatic Text Analysis (3)
- ThTR 509 Performance History (3)

Students may then select from specific interest course tracks (6 hours), such as:

- Directing (taking ThTR 430 Play Directing I (3) and ThTR 431 Play Directing II (3)),
- Dramatic Writing (taking ThTR 412 Playwriting (3) and ThTR 414 Advanced Playwriting (3) or ThTR 412 Playwriting (3) and ThTR 416 Screenwriting (3), or
- Theater Studies (individualized program consisting of two courses in the Department of Theater or in another department, selected by student with consent of the advisor and the approval of the theater graduate program (6 total))

Finally, students must take 9 hours of ThTR 644 M.A. Project. The project or thesis must be agreed upon with the student’s advisor and have the approval of the department.

**Master of Fine Arts in Acting**

In 1996, Case Western Reserve University and Cleveland Play House joined forces to create a Master of Fine Arts program in acting. The MFA is a terminal professional degree, and candidacy for the program requires an undergraduate degree, some theatrical experience, or demonstrable potential for work at the graduate level. In addition, candidates must provide evidence of technical skill and creative ability.

At the end of each semester in residence, each student’s progress is evaluated. Only students who have clearly demonstrated growth and excellence are permitted to remain in the program. The award of the MFA degree is contingent upon the student’s academic progress and upon the assessment on the part of the faculty that the candidate possesses the potential to work in the field of theater on a professional level.

Requirements for the MFA degree include:

1. 82 semester hours of graduate work beyond the bachelor’s degree
2. A cumulative grade point average of 3.0 for all course work on the graduate level
3. Completion of the course requirements for the MFA Thesis Portfolio
4. Successful completion of the third-year internship at Cleveland Play House

Course requirements for the MFA in acting are as follows:

- Courses in acting, including script analysis, acting technique, and the classical canon. 24
- Courses in movement, including mask work, physical awareness, and stage combat. 12
- Courses in voice, including voice production, breath control, and integration with text. 12
- Courses in speech, including stage speech, dialects, and verse and lyric drama 8
- Courses in history and theory, professional internships, solo projects, and professional seminars 20

Two courses in crafting a thesis portfolio 6

Courses

THTR 100. Introduction to Acting. 3 Units.
A course designed to provide the non-major or undeclared liberal arts major experience with a basic understanding of acting and performance. Fundamentals in improvisation, vocabulary, and scene study are stressed. This course fulfills THTR 101 or THTR 102 should the undeclared student select theater as his or her major or minor. Students may receive credit for only one of THTR 100, THTR 101, or THTR 102.

THTR 103. Acting: Scene Study. 3 Units.
This course continues the work begun in THTR 101 or THTR 102 with emphasis on action, emotional life, and text analysis as the essential elements of the actor’s work. Prereq: THTR 100, THTR 101, or THTR 102.

THTR 105. Introduction to Stagecraft. 3 Units.
An introduction to theater terminology and technology with an emphasis on scenic construction, lighting, stage rigging, painting, and production. A practicum in wood shop and stage construction.

THTR 106. Introduction to Stage Combat. 3 Units.
Students will learn the mechanics and technique of unarmed and armed stage combat, following the general curriculum set forth by the Society of American Fight Designers (SAFD). Students will experience the process involved in learning, rehearsing, and performing a fight scene for the stage. This will include academic analysis and discussion, a variety of training exercises, and short choreography performance.

THTR 107. Acting: Improvisation. 3 Units.
This course focuses on developing a kinesthetic awareness of the body and its use as a theatrically expressive instrument. Exercises will encompass development of flexibility, strength building, alignment, motor skills, and concentration. Prereq: THTR 100 or THTR 101 or THTR 102.

THTR 108. Introduction to Stage Combat. 3 Units.
Students will learn the mechanics and technique of unarmed and armed stage combat, following the general curriculum set forth by the Society of American Fight Designers (SAFD). Students will experience the process involved in learning, rehearsing, and performing a fight scene for the stage. This will include academic analysis and discussion, a variety of training exercises, and short choreography performance.
THTR 206. Mr. Kiss Kiss Bang Bang - James Bond and Popular Culture. 3 Units.
The twenty-one films of James Bond have become part of popular culture, and the figure of the superspy has become mythic in proportion. This series, from its first installment in 1963 to the latest reinvention of James Bond in 2006, not only depicts one dashing man's efforts to save the world from disaster again and again, but also traces the development of our popular culture. Issues of violence, sex, the presentation and treatment of women, racial stereotypes, and spectacle among other topics can be discussed after viewing each film, providing an opportunity to explore the changing expectations of American audiences and the developing form of contemporary cinema. Students who have taken USSO 286D may not receive credit for this class.

THTR 207. Our Heroes, Ourselves: Superheroes and Popular Culture. 3 Units.
Since the beginning of cinema, audiences have flocked to see larger-than-life superheroes conquer the unconquerable while also teaching us about ourselves and confirming (or challenging) our world view. Beginning with cinematic serials in the 1920s and continuing to the recent Marvel production machine, these films not only depict a hero's efforts to save the world from disaster again and again, but also trace the development of our popular culture. Issues of violence, nationalism, the presentation and treatment of women, racial stereotypes, and spectacle among other topics can be discussed after viewing each film, providing an opportunity to explore the changing expectations of American audiences and the developing form of contemporary cinema.

THTR 223. Scenic Design. 3 Units.
This course introduces scenic design techniques, approaches, and tools. Emphasis will be on developing ideas through script analysis, visual research, and analysis of the physical theater space, and finally, the communication of ideas through drafting and model building. Prereq: THTR 111 or requisites not met permission.

THTR 224. Lighting Design. 3 Units.
This course introduces lighting design techniques and approaches by combining theory with practical application. The basics of lighting instruments and control consoles are used for practical projects examining light on the stage. The design process is explored through script analysis, visual research, and choice of instrumentation, and communicated with the drafted light plot. Prereq: THTR 111 or requisites not met permission.

THTR 225. Costume Design. 3 Units.
This course is designed to introduce costume design techniques, approaches, and tools. Students will learn the process of costume design through application of skill and theories - from script analysis through post-production. In addition, students will participate in a survey of costume history and drawing/rendering skills will be taught. This course will culminate in a project designed to incorporate skills and techniques acquired during the semester. Prereq: THTR 111 or instructor permission.

THTR 226. Stage Makeup. 3 Units.
An introductory hands-on course in theatrical makeup techniques and tools. Students will study the history of stage makeup, its application, and the relationship between stage makeup and developing a character. The course will explore a variety of makeup applications from basic corrective makeup to special effects including prosthetics, crepe hair, and blood effects.

THTR 227. Stage Management. 3 Units.
Designed to acquaint student with the numerous aspects of stage management.

THTR 231. Acting: Advanced Scene Study. 3 Units.
An advanced exploration of contemporary acting technique emphasizing the effective use of poetic language, heightened partner awareness and behavioral response to achieve greater specificity and spontaneity in performance. Scene work will focus on American master playwrights of the 20th century such as Williams, Miller and Odets. Counts as SAGES Departmental Seminar. Prereq: THTR 103.

THTR 232. Acting: Classical Technique. 3 Units.
An exploration of techniques to approach classical theater, with emphasis on the works of Shakespeare. Presents the challenges of working with heightened language in classical texts, and provides skills necessary to transfer modern acting methods to these more poetic plays. Prereq: THTR 103.

THTR 233. Acting: Improvisation Technique. 3 Units.
This course is designed to teach the student the introductory techniques utilized by all improvisational actors. While improvisation is best known as a comedic enterprise, this course will focus on using improvisational techniques/rules to improve communication skills, as well as a means to discover the “truth” of a moment. In the professional world, improv is taught as a communication tool to doctors, lawyers, law enforcement officers, corporate big wigs, and little wigs. In the medical field, the tools of improv are taught to patients suffering with PTSD, and children suffering from anxiety or social disorders to help them learn valuable communication skills. In addition to improving listening and communication skills, the student of this course will learn to apply improv skills to the performance of short improv games/skits, as well as long-form improv, known as The Harold. Prereq: THTR 103.

THTR 240. Video Production. 3 Units.
Video Production presents a hands-on introduction to video creation. Students are introduced to visual storytelling through concepts of single-camera production. The course will explore all areas of pre-production, followed by production with the use of a camcorder and accompanying software. Students will learn the necessary skills to create short videos from paper to finished product.

THTR 301. Study Abroad at RADA: Dramatic Literature I. 3 Units.
This is a study-abroad course at the Royal Academy of Dramatic Arts in London. Theater 301 explores the foundations of theater in Western civilization, with a special emphasis on Greek theatre in performance. Acceptance into the RADA Study Abroad Program required. Students cannot receive credit for both THTR 228L and THTR 301.

THTR 302. Study Abroad at RADA: Dramatic Literature II. 3 Units.
This is a study-abroad course at the Royal Academy of Dramatic Arts in London. THTR 302 explores the many developments in playwriting, design, acting, and theater architecture in the French Neoclassic period. Acceptance into the RADA Study Abroad Program required. Student cannot receive credit for both THTR 229L and THTR 302.

THTR 303. Study Abroad at RADA: Acting Styles. 3 Units.
This is a study-abroad course at the Royal Academy of Dramatic Arts in London. THTR 303 is an exploration of techniques to approach classical theater, with emphasis on the works on Restoration theatre performance. Acceptance into the RADA Study Abroad Program required. Students cannot receive credit for both THTR 232L and THTR 303.
THTR 304. Study Abroad at RADA: Dramatic Literature III. 3 Units.
Course credit earned while studying abroad at the Royal Academy of Dramatic Arts in London. THTR 304 explores the work of Bertolt Brecht, with special emphasis on his play in performance. The course emphasizes the relationship between different theatrical representations and their historical and social context. Acceptance into the RADA Study Abroad Program required. Students cannot receive credit for both THTR 329L and THTR 304.

THTR 305. Study Abroad at RADA: Vocal Performance. 3 Units.
This is a study-abroad course at the Royal Academy of Dramatic Arts in London. THTR 305 focuses upon the training of the voice for heightened language. Acceptance into the RADA Study Abroad Program required. Students cannot receive credit for THTR 305 and either THTR 375L or THTR 376L.

THTR 306. Acting: Camera Technique. 3 Units.
Acting for the Camera class with emphasis on how it differs from onstage work. Interviews, scenes, and exercises will be used to highlight the differences and similarities. Emphasis on contemporary works. Prereq: THTR 103.

THTR 307. Acting: Advanced Camera Techniques. 3 Units.
Advanced Camera Technique will build upon the fundamental skills learned in Camera Technique and focus on preparation for those seeking potential professional opportunities as performers in the film and television industry. It is a common misconception that there is a comprehensive approach to screen acting that encompasses all aspects of the work—film, television, commercials, etc. This couldn't be further from reality. Just as an actor would prepare differently when performing in a Shakespeare play versus that of a contemporary naturalistic American playwright, there are any number of styles and genres present in on-camera work and each require a distinctive skill set. In this course, students will come to understand the unique attributes explicit to varying formats of television programs and film genres, and develop an informed approach specific to both auditioning for and performing in each. In addition, students will have the opportunity to hone more advanced aspects of the craft itself, such as the challenge of performing multiple takes of emotionally-charged moments, developing credible character relationships without the benefit of the rehearsal time a performer typically experiences in theatre, and providing the editor with slight tonal variations from take to take while still retaining continuity of action and objective. Prereq: THTR 306.

THTR 311. Audition Laboratory. 1 Unit.
A discussion and practicum exploring the problems faced by an actor in various audition situations. Development of an audition repertory for the actor for stage, video and film. Prereq: Senior Theater major.

THTR 312. Playwriting. 3 Units.
Theory and practice of dramatic writing, in the context of examples, classic and contemporary. Recommended preparation: ENGL 203 or ENGL 213 or ENGL 214 or ENGL 303 or ENGL 304. Offered as ENGL 305, THTR 312 and THTR 412.

THTR 314. Advanced Playwriting. 3 Units.
Theory and practice of dramatic writing with special focus on the craft of writing a full-length play. Offered as ENGL 314, THTR 314 and THTR 414. Prereq: ENGL 305 or THTR 312.

THTR 316. Screenwriting. 3 Units.
A critical exploration of the craft of writing for film, in which reading and practicum assignments will culminate in the student submitting an original full-length screenplay. Offered as ENGL 316, THTR 316 and THTR 416. Prereq: THTR 312 or ENGL 305 or THTR 412.

THTR 319. Greek Tragedy: Plays and Performance in Ancient Athens. 3 Units.
This course provides students the opportunity to read a significant number of ancient Greek tragedies in modern English translations. We read, study, and discuss selected works by Aeschylus, Sophocles, and Euripides, as well as selected criticism, ancient and modern, of these plays. All semester we read the plays as literature composed for performance. We study literary elements within the plays and theatrical possibilities inherent in the texts. As we read the plays, we pay close attention to the historical context and look for what each play can tell us about myth, religion, ethics, and society in ancient Athens. Finally, we give attention to the way these tragic dramas and the theater in which they were performed have continued to inspire literature and theater for thousands of years. Lectures provide historical background on the playwrights, the plays, the mythic and historical background, and possible interpretation of the texts as literature and as performance pieces. Students discuss the plays that they read in class. The course has three examinations and a final project that includes writing an essay and staging a monologue or scene from one of the tragedies. Offered as CLSC 319, CLSC 419, THTR 319, THTR 419, WLT 319, and WLT 419. Counts for CAS Global & Cultural Diversity Requirement.

THTR 322. Theater in Ancient Rome. 3 Units.
This course is designed as a continuation of and companion to CLSC/THTR/WLIT 319/419 Greek Tragedy: Plays and Performance in Ancient Athens, although it may be taken without having taken, or before having taken, that course. Students in Theater in Ancient Rome will read a significant number of ancient Roman plays in modern English translation and study non-literary theatrical entertainment of the Roman Republic and Empire, that may include mime and pantomime, gladiatorial shows, political speeches, courtroom drama, and various other spectacles. The dramatic texts that we shall study include the fragments of early Latin drama, selected comedies by Plautus and Terence, and the tragedies of Seneca. We shall also consider Greek and Roman literature that comments on Roman theatrical practices. These works will be read for their literary merits and theatrical possibilities, while at the same time examining them for what they can tell us about Roman civilization. Similarly, when studying the non-literary theatrical works we shall examine historical and theatrical context including archaeological evidence from theaters and amphitheaters and material remains (masks, depictions of actors and gladiators on vases, terra cotta lamps, mosaics, etc.). Finally, while the majority of the course focuses on drama originally written in Latin and theatrical entertainments performed in ancient Rome, the course may include a brief survey of selected post-classical works indebted to the tradition of Roman drama and theater. Authors that may be studied include Hrotsvitha, Marlowe, Shakespeare, Racine, Molière, and the legacy of Roman drama and theater in contemporary stage and cinema such as Sondheim’s A Funny Thing Happened on the Way to the Forum. Thus a secondary concern will be to consider how and in what ways the legacy of Roman drama and theater has continued to shape the dramatic arts since antiquity. Offered as CLSC 322, CLSC 422, THTR 322, THTR 422, WLT 322, and WLT 422. Counts for CAS Global & Cultural Diversity Requirement.

THTR 323. Topics in Design. 3 Units.
This course will examine various topics relating to theatre design and technology not covered in other design courses. Students will be provided with practical and theoretical knowledge on a specific topic in order to increase their design and/or technical skills. In addition, each course offering will have its own stated objectives. This course may be repeated by students with each new topic. Prereq: THTR 111 or instructor permission.
THTR 325. Development of Theater: Beginnings to English Renaissance. 3 Units.
This course explores the foundations of theater in Western civilization, beginning with Greece and then charting and analyzing the developments in playwriting, design, acting and theater architecture. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater I explores developments from Aeschylus to the English Renaissance. Offered for undergraduates as THTR 325 and WLIT 360. Students who have taken THTR 228/WTIT 228 are not allowed to enroll in this course. Offered as THTR 325, WLIT 360, and THTR 425. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: At least Sophomore standing.

THTR 326. Development of Theater: Renaissance to Romanticism. 3 Units.
This course explores the many developments in playwriting, design, acting, and theater architecture across the world. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater II not only explores the development of theatrical conventions in Spain, England, Italy, France and other European countries that lead to the creation of modern drama, but the course also offers an in-depth look at the history and conventions of theater in India, Korea, China, and Japan. Offered as THTR 326, WLIT 361, and THTR 426. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: At least Sophomore standing.

THTR 327. American Drama. 3 Units.
Designed to provide students an overview of the development of theater in the United States and to familiarize them with the work and themes of selected American playwrights. Offered as THTR 327 and THTR 427.

THTR 329. Modern and Contemporary Drama. 3 Units.
This course explores the development of western drama and theatre from 1860 through present-day productions. The course emphasizes the relationship between different theatrical representations and their historical and social context. Shakespeare's well-known dictum that "theatre holds a mirror up to nature" is expanded when one examines who is holding that mirror, and how their actions participate in the constantly shifting construction of culture. Given this premise, the course investigates the development of specific European cultures (England, France, Germany, and Italy) as well as other regions (the United States, South America, and Russia) through the live and literary representations they make of themselves. Offered as THTR 329, WLIT 329 and THTR 429. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: At least Sophomore standing.

THTR 330. Play Directing I. 3 Units.
This course will begin a two-semester study of the art and craft of stage direction of plays. Topics covered will include history of the profession, directorial theory and practice, development of skills such as text analysis, design and concept, and general problem solving. Offered as THTR 330 and THTR 430. Prereq: THTR 101 or THTR 102, and at least Junior standing.

THTR 331. Play Directing II. 3 Units.
This course will continue with the basic concepts learned in THTR 330 and will expand them in regard to actual production. Topics will include directing mechanics, ground planning, blocking, and visualization, staging and working with actors. The course will culminate in a faculty supervised directing project for public performance. There are three evening labs for this course. Offered as THTR 331 and THTR 431. Counts as SAGES Senior Capstone. Prereq: THTR 330, and at least Junior standing.

THTR 334. Shakespeare: Histories and Tragedies. 3 Units.
Close reading of a selection of Shakespeare's tragedies and history plays (e.g., "Richard the Third," "Julius Caesar," "Hamlet," "King Lear"). Topics of discussion may include Renaissance drama as a social institution, the nature of tragedy, national history, gender roles, sexual politics, the state and its opponents, theatrical conventions. Assessment may include opportunities for performance. A student may not receive credit for both ENGL 324 and ENGL 324C. Offered as ENGL 324, ENGL 324C, ENGL 424, and THTR 334. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

THTR 335. Shakespeare: Comedies and Romances. 3 Units.
Close reading of selected plays of Shakespeare in the genres of comedy and romance (e.g., "The Merchant of Venice," "Twelfth Night," "Measure for Measure," "The Tempest"). Topics of discussion may include issues of sexual desire, gender roles, marriage, the family, genre conventions. Assessment may include opportunities for performance. A student may not receive credit for both ENGL 325 and ENGL 325C. Offered as ENGL 325, ENGL 325C, ENGL 425, and THTR 335. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

THTR 336. Concepts of Race within African American Plays. 3 Units.
This course provides an interdisciplinary study of race and African Americans within the context of African American plays. It will use the basic principles of African and African American history, urban studies, theater, sociology, economics and family life, etc. to identify aspects of race and racism. The course will provide an overview of race and racism in America through the lens of African American plays. The semester long course will analyze and discuss a conceptual understanding of how aspects of race serve as central themes within African American plays. The course will engage in various theories, discussions and debates about the African American experience and the relationship to race and racism displayed within the context of plays. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Sophomore standing.

THTR 375. Voice. 3 Units.
Development of the actor's vocal instrument. Work in articulation, range, and flexibility. Prereq: Theater major or consent of department.

THTR 376. Advanced Vocal Techniques. 3 Units.
Continuation of THTR 375. Prereq: THTR 375.

THTR 385. Rehearsal and Production. 1 - 3 Units.
Practicum for students participating in production work in the Department of Theater and Dance. Supervised laboratory experience in technical theater, construction techniques, scenery, costumes, lighting, and props; production; ticket office operations, promotion, publicity and public relations; house management; wardrobe responsibilities; stage management; assistant directing; and other production positions relating to the mainstage performances in Eldred Theater. Students are recommended to take one credit hour per production, with a maximum of 8 credit hours allowed during their undergraduate career.
THTR 386. Rehearsal and Performance. 1 Unit.
Practicum for students participating in performance in the Department of Theater and Dance, relating to the mainstage productions at Eldred Theater. This course may be repeated, for a maximum total of 2 credits.

THTR 390. Advanced Topics in Design/Technology. 3 Units.
This is an advanced-level course designed to provide an opportunity for Design/Technical Theater Undergraduates to do an advanced project in scenic, costume, or lighting design, or in a technical area such as stage management or technical direction, as would be expected in the professional theater. This project may be a realized departmental production or an unrealized project. Working on a departmental production requires attendance at production meetings, technical rehearsals and other scheduled meetings. Counts as SAGES Senior Capstone. Prereq: THTR 111 and (THTR 223, THTR 224, THTR 225, or THTR 227) or requisites not met permission.

THTR 393. Senior Capstone: Dramaturgy. 3 Units.
This course introduces students to theories of textual analysis and contextual research within the framework of theatrical performance. Students will investigate the history and methodologies of dramaturgy, and then apply the best practices of the profession to the study and production of contemporary plays. Because dramaturgy is a collaborative endeavor, students will participate with others in the production of a theoretical adaptation from a non-dramatic source, as well as the creation of an interdisciplinary theatre event and a multimedia performance project. By course end, students will be able to support their theatrical interests with dramaturgical insights and to work collaboratively to create productions that reflect the cultural and aesthetic diversity of the 21st century. Counts as SAGES Senior Capstone. Prereq: Senior standing.

THTR 397. Honors Studies I. 3 Units.
Individual projects in acting, dance, and directing.

THTR 398. Honors Studies II. 3 Units.
Individual projects in acting, design, playwriting, and directing.

THTR 399. Independent Study in Theater Arts. 1 - 3 Units.
Independent research and project work in areas of acting, design, voice, theater history, playwriting, directing, or theater management.

THTR 401. Graduate Movement I: Foundations. 3 Units.
This class is meant to both cleanse and develop the palette; it represents a series of exercises intended to remove habits and blockages, freeing your use of your instrument and expanding your conscious range of expression. The majority of what we will do is not immediately applicable technique in terms of playable actions during performance, but is meant to build your foundation as a performer, laying a groundwork for more powerful future performances. Prereq: Must be a student in M.F.A. Acting program.

THTR 402. Graduate Movement II: Creations. 3 Units.
This second class in our movement sequence is all about creation, from character creation to devised physical theatre. It is about play, in the theatrical sense Lecoq refers to as Jeu. We will play with character masks, from larval/basal masks to full face character masks, explore mime, slapstick/pratfalls, clown, and nonverbal scenes with music. The basic structure will be similar in many ways to that of the previous semester, with a mix of autocours and more fully fleshed out devised scenes at the end of each week or unit. Prereq: THTR 401.

THTR 403. Graduate Movement III: Stage Combat. 3 Units.
Students will learn the mechanics and technique of unarmed and armed stage combat, following the curriculum set forth by the Society of American Fight Designers (SAFD). We will experience the techniques and process involved in learning, rehearsing, and performing fight scenes for the stage, culminating in the opportunity to test for SAFD Certification in Unarmed and at least one sword style. Prereq: THTR 402.

THTR 404. Graduate Movement IV: Genres and Styles. 3 Units.
The push beyond realism and into theatrical styles becomes a proving ground for more advanced application of the fundamental acting concepts garnered in your prior course work, as well as a playground for physical transformation and movement skill. Presentational theatre will be our primary focus, whether in the form of Elizabethan, Restoration, Commedia, Farce, or other genres, including the many "isms." Your ability to synthesize prior training while applying specific templates of period movement or other genre styles is your capstone to our movement sequence. The basic structure will be similar in many ways to that of the previous semesters, with a mix of autocours and more fully fleshed out scenes at the end of each week or unit. Prereq: THTR 403.

THTR 412. Playwriting. 3 Units.
Theory and practice of dramatic writing, in the context of examples, classic and contemporary. Recommended preparation: ENGL 203 or ENGL 213 or ENGL 214 or ENGL 303 or ENGL 304. Offered as ENGL 305, THTR 312 and THTR 412. Prereq: Must be a student in M.A. Theater program.

THTR 414. Advanced Playwriting. 3 Units.
Theory and practice of dramatic writing with special focus on the craft of writing a full-length play. Offered as ENGL 314, THTR 314 and THTR 414. Prereq: Must be a student in M.A. Theater program.

THTR 416. Screenwriting. 3 Units.
A critical exploration of the craft of writing for film, in which reading and practicum assignments will culminate in the student submitting an original full-length screenplay. Offered as ENGL 316, THTR 316 and THTR 416. Prereq: Must be a student in M.A. Theater program.

THTR 419. Greek Tragedy: Plays and Performance in Ancient Athens. 3 Units.
This course provides students the opportunity to read a significant number of ancient Greek tragedies in modern English translations. We read, study, and discuss selected works by Aeschylus, Sophocles, and Euripides, as well as selected criticism, ancient and modern, of these plays. All semester we read the plays as literature composed for performance. We study literary elements within the plays and theatrical possibilities inherent in the texts. As we read the plays, we pay close attention to the historical context and look for what each play can tell us about myth, religion, ethics, and society in ancient Athens. Finally, we give attention to the way these tragic dramas and the theater in which they were performed have continued to inspire literature and theater for thousands of years. Lectures provide historical background on the playwrights, the plays, the mythic and historical background, and possible interpretation of the texts as literature and as performance pieces. Students discuss the plays that they read in class. The course has three examinations and a final project that includes writing an essay and staging a monologue or scene from one of the tragedies. Offered as CLSC 319, CLSC 419, THTR 319, THTR 419, WLIT 319, and WLIT 419. Counts for CAS Global & Cultural Diversity Requirement.
THTR 422. Theater in Ancient Rome. 3 Units.
This course is designed as a continuation of and companion to CLSC/THTR/WLIT 319/419 Greek Tragedy: Plays and Performance in Ancient Athens, although it may be taken without having taken, or before having taken, that course. Students in Theater in Ancient Rome will read a significant number of ancient Roman plays in modern English translation and study non-literary theatrical entertainment of the Roman Republic and Empire, that may include mime and pantomime, gladiatorial shows, political speeches, courtroom drama, and various other spectacles. The dramatic texts that we shall study include the fragments of early Latin drama, selected comedies by Plautus and Terence, and the tragedies of Seneca. We shall also consider Greek and Roman literature that comments on Roman theatrical practices. These works will be read for their literary merits and theatrical possibilities, while at the same time examining them for what they can tell us about Roman civilization. Similarly, when studying the non-literary theatrical works we shall examine historical and theatrical context including archaeological evidence from theaters and amphitheaters and material remains (masks, depictions of actors and gladiators on vases, terra cotta lamps, mosaics, etc.). Finally, while the majority of the course focuses on drama originally written in Latin and theatrical performances performed in ancient Rome, the course may include a brief survey of selected post-classical works indebted to the tradition of Roman drama and theater. Authors that may be studied include Hrotsvitha, Marlowe, Shakespeare, Racine, Molière, and the legacy of Roman drama and theater in contemporary stage and cinema such as Sondheim's A Funny Thing Happened on the Way to the Forum. Thus a secondary concern will be to consider how and in what ways the legacy of Roman drama and theater has continued to shape the dramatic arts since antiquity. Offered as CLSC 322, CLSC 422, THTR 322, THTR 422, WLIT 322, and WLIT 422. Counts for CAS Global & Cultural Diversity Requirement.

THTR 425. Development of Theater: Beginnings to English Renaissance. 3 Units.
This course explores the foundations of theater in Western civilization, beginning with Greece and then charting and analyzing the developments in playwriting, design, acting and theater architecture. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater I explores developments from Aeschylus to the English Renaissance. Offered for undergraduates as THTR 325 and WLIT 360. Students who have taken THTR 228/WLIT 228 are not allowed to enroll in this course. Offered as THTR 325, WLIT 360, and THTR 425. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Must be a student in M.A. Theater program.

THTR 426. Development of Theater: Renaissance to Romanticism. 3 Units.
This course explores the many developments in playwriting, design, acting, and theater architecture across the world. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater II not only explores the development of theatrical conventions in Spain, England, Italy, France and other European countries that lead to the creation of modern drama, but the course also offers an in-depth look at the history and conventions of theater in India, Korea, China, and Japan. Offered as THTR 326, WLIT 361, and THTR 426. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Must be a student in M.A. Theater program.

THTR 427. American Drama. 3 Units.
Designed to provide students an overview of the development of theater in the United States and to familiarize them with the work and themes of selected American playwrights. Offered as THTR 327 and THTR 427. Prereq: Must be a student in M.A. Theater program.

THTR 429. Modern and Contemporary Drama. 3 Units.
This course explores the development of Western drama and theatre from 1860 through present-day productions. The course emphasizes the relationship between different theatrical representations and their historical and social context. Shakespeare's well-known dictum that "theatre holds a mirror up to nature" is expanded when one examines the concept of theater as a reflection of society. The course will begin with the development of modern drama, beginning in England, France, Germany, and Italy. It will then examine the development of other regions (the Americas, South Africa, China, Japan, and Russia) as well as other cultures, through their theatrical representations they make of themselves. Offered as THTR 329, WLIT 329 and THTR 429. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Must be a student in M.A. Theater program.

THTR 430. Play Directing I. 3 Units.
This course will begin a two-semester study of the art and craft of stage direction of plays. Topics covered will include the technical elements of directing, such as text analysis, design and concept, and general problem solving. Offered as THTR 330 and THTR 430. Prereq: Must be a student in M.A. Theater program.

THTR 431. Play Directing II. 3 Units.
This course will continue with the basic concepts learned in THTR 330 and will expand them in regard to actual production. Topics will include directing mechanics, ground planning, blocking, and visualization, staging and working with actors. The course will culminate in a faculty-supervised directing project for public performance. There are three evening labs for this course. Offered as THTR 331 and THTR 431. Counts as SAGES Senior Capstone. Prereq: Must be a student in M.A. Theater program.

THTR 473. Graduate Voice Technique I. 3 Units.
Assessment of students' current vocal and alignment skills. Laboratory for exploring new vocal and alignment habits supportive of healthy vocal functioning. Exploration of the body and voice as it relates to breath, resonance, and the healthy exhalation of sound. Prereq: Must be a candidate in M.F.A. Acting program.

THTR 474. Graduate Voice Technique II. 3 Units.
Continued laboratory for the exploration of alignment and vocal skills supportive of healthy vocal functioning. Continued exploration of the body and voice as it relates to breath, articulation, resonance, and the healthy exhalation of sound. Emphasis on the physical and energetic skills needed to produce full-bodied, healthy sound capable of being heard and understood while acting in theatrical productions. Required of M.F.A. candidates in the Acting program. Prereq: THTR 473.

THTR 475. Graduate Voice Technique III: Classical Texts. 3 Units.
Development of skills needed to address the specific needs of Shakespeare and Classical texts in performance, including vocal skills, the use of breath, imagery, and textual studies. Prereq: THTR 474.
THTR 476. Graduate Voice Technique IV. 3 Units.
The course is focused on increasing and enhancing the graduate student of acting's ability to handle the vocal challenges and technical demands of heightened texts. The class will use language and texts from poetry, classic novels and drama to accomplish this task. Prereq: Must be a student in M.F.A. Acting program.

THTR 479. Graduate Stage Speech I: Phonetics. 2 Units.
Designed to evaluate the graduate student actors' current speech skills, to teach them a stage appropriate dialect using the Skinner narrow IPA set, and to achieve a level of mastery over articulation and diction. Prereq: Must be a student in M.F.A. Acting program.

THTR 493. Graduate Study in Dramaturgy. 3 Units.
This course introduces students to theories of textual analysis and contextual research within the framework of theatrical performance. Students will investigate the history and methodologies of dramaturgy, and then apply the best practices of the profession to the study and production of contemporary plays. Because dramaturgy is a collaborative endeavor, students will participate with others in the production of a theatrical adaptation from a non-dramatic source, as well as the creation of an interdisciplinary theater event and a multi-media performance project. By course end, students will be able to support their theatrical interests with dramaturgical insights and to work collaboratively to create productions that reflect the cultural and aesthetic diversity of the 21st century. Students will also gain practical experience by serving as dramaturgs on a Cleveland Play House production. Prereq: Department of Theater MA Students only.

THTR 501. Dramatic Text Analysis. 1 - 3 Units.
An exploration to the craft of reading a theatrical text. Methods for analyzing the action and dialogue of a play will be applied to dramatic text so that the theater artist can learn to transform a one-dimensional text into a three-dimensional performance work. Prereq: Must be a graduate student in the Department of Theater.

THTR 509. Performance History. 1 Unit.
Research seminar that covers the major movements in performance history and acting style. Readings cover the breadth of theater history with a focus on the art of the actor. Also includes material on major stylistic movements and acting techniques and the impact on the theatrical impulse. Prereq: Must be a student in M.F.A. Acting program.

THTR 512. Graduate Audition Lab. 1 - 2 Units.
This class focuses on choosing and developing classical and contemporary monologues for audition purposes. Other elements of the audition process are explored including the preparation of sides for a specific role as well as casting simulations with guest directors and instructors. Prereq: Must be a student in M.F.A. Acting program.

THTR 530. Ensemble Technique. 1 - 2 Units.
A practicum course structured to explore the use of ensemble dynamic techniques in a rehearsal/performance environment, as well as to develop a set of exercises which encourage and sustain the actor's channels of interpersonal communication during a range of rehearsal and performance situations. Prereq: Must be a student in M.F.A. Acting program.

THTR 531. Graduate Acting I: Performance Process. 3 Units.
This course is aimed toward developing a practical and cohesive acting approach. Through improvisations and structured exercises, the actor learns to employ the basic concepts of the Stanislavski System of intention, action and given circumstances in order to make acting decisions that are viable, playable, original, truthful and specific. Ensemble building and scene work also play heavily in this foundation course. Prereq: Must be a student in M.F.A. Acting program.

THTR 532. Graduate Acting II: Ensemble Improvisations. 3 Units.
Scene work will constitute the core of Acting II. Group improvisations and collective creations will be interspersed throughout the term. Fully embracing the idea of ensemble, this class will focus on exploration, where process and discovery are the primary objectives. Prereq: THTR 531.

THTR 533. Graduate Acting III: The Modernists. 3 Units.
The class focuses on the Modernists: Chekhov, Ibsen. The student will apply the Stanislavski System of character work and the specific tools of "Physical Acting" techniques to these playwrights through intensive scene work. The focus is also on imagery in language and clarity of subtext and imagery as it relates to the dramatic text and character intention. Prereq: THTR 532.

THTR 534. Graduate Acting IV: Shakespeare/Heightened Language. 3 Units.
This course explores the genre of theater loosely called "Heightened Language" and the challenges it presents for the actor. Students will complete intensive scene work on texts ranging from the Greeks, to Shakespeare, to the 19th Century Victorians, and discover the interconnectedness of the styles, and the demands they place on the actor's craft. Prereq: THTR 533.

THTR 535. Graduate Acting V: Camera Technique. 3 Units.
The goal of this course will be to introduce the student to fundamental aspects of creating and performing a role on camera. Various exercises will be employed with the aim of eliciting active listening, spontaneity and a vibrant inner life. Technical aspects such as continuity and hitting marks will be addressed, as well as the professional process involved in production as applied to varying genres of film and television. Prereq: THTR 535.

THTR 540. Professional Orientation. 2 Units.
This class is structured to help the third year MFA actor prepare for his/her entrance and transition to the professional arena. Students will be introduced to the world of contracts, taxes, agents and unions, and understand how to survive and thrive while pursuing a professional acting career. Guest speakers and facilitators will present material to familiarize students with the realities of a life in the arts. Prereq: Must be a student in M.F.A. Acting program.

THTR 579. Graduate Stage Speech II: Articulation. 2 Units.
This course will continue the work begun in THTR 479, exploring more of the International Phonetic Alphabet and developing applicable skills in articulatory sophistication. Prereq: THTR 479.

THTR 580. Graduate Stage Speech III: Dialects. 2 Units.
This survey course will examine the use and application of major stage dialects in the American theatre using a phonetic tool set as a basis for understanding sound substitutions. The student will also study the ways in which rhythmic changes and resonance and tension shifts affect the dialects. Prereq: THTR 579.

THTR 581. Graduate Stage Speech IV: Classical Texts. 2 Units.
The objective of this course is to increase and enhance the students' ability to handle the heightened language and technical demands of classical texts. The class will use poetry, first person narratives from classic novels and verse drama to accomplish this task. The class will contain a strong "verbal gym" component meant to strengthen and refine diction and standard American speech. Drills, tongue twisters, reading aloud will be part of every class. Prereq: THTR 580.

THTR 601. Special Projects. 1 - 3 Units.
(Credit as arranged.)
THTR 610. Professional Internship. 1 - 4 Units.
In the third year, the student will begin their Professional Internship with Cleveland Play House. Involvement will include: understudy assignments and an AEA contracted role in a production(s) as assigned by Cleveland Play House. Prereq: THTR 534.

THTR 611. Professional Showcase. 3 Units.
At the end of the curricular sequence, the graduating class presents an actors showcase, involving scenes and various special skills, to industry professionals (agents, managers, directors, artistic directors). The goal of the showcase is to present material that will illustrate the strengths of each ensemble member in order to procure professional representation. The course begins with a search for material from theatre, film and television sources. Prereq: Must be a student in M.F.A. Acting program.

THTR 630. Performance Studio. 3 Units.
A performance laboratory, ensemble-based practicum in which the student works to integrate effectively a wide range of performance skills culminating in a studio production. May be taken two times in the last two semesters of graduate study. Prereq: THTR 534.

THTR 642. Thesis Portfolio I. 3 Units.
Course designed specifically for candidates in the Master of Fine Arts program in Acting. Graduate students enroll for the course during the fall semester of their third year of study. Work on the thesis spans three years of study based on roles the MFA actor has created. A rough draft of the thesis portfolio will be completed, according to requirements set forth in the department’s MFA Handbook, and presented at the end of the fall semester of the third year to the faculty. Satisfactory completion of the portfolio is part of the requirements for awarding the Master of Fine Arts degree. Prereq: Must be a student in M.F.A. Acting program.

THTR 643. Thesis Portfolio II. 3 Units.
Course designed specifically for candidates in the Master of Fine Arts program in Acting. Graduate students enroll for the course during the spring semester of their third-year of study. A finalized thesis portfolio containing an in-depth exploration of at least three roles is completed, according to requirements set forth in the department’s MFA Handbook. This completed document is presented at the end of the spring semester of the third year. Satisfactory completion of the portfolio is part of the requirements for awarding the Master of Fine Arts degree. Prereq: THTR 642 and must be a student in MFA Acting program.

THTR 644. M.A. Project. 1 - 12 Units.
Research and development of a Master of Arts project in Theater.

Washington Study Program

111 Mather House
http://politicalsecience.case.edu/undergraduate-programs/washington-center-program/
Phone: 216.368.2646; Fax: 216.368.4681
Justin Buchler, Program Director
justin.buchler@case.edu

The Washington Study Program provides students with the opportunity to complete a full-time, research-intensive internship in Washington, D.C. By participating in a semester-length program during the fall or spring (WASH 2A Washington Center Internship), students earn 9 credit hours; for a summer internship (WASH 2D Washington Center Summer Internship), they earn 3 credit hours. In addition, students earn 3 credit hours by developing a portfolio based on their internship experiences (WASH 2C Washington Center - Portfolio). The credits earned can be counted as general electives or applied to a student’s major or minor, with the prior consent of the individual department(s). Finally, as part of the Washington Study Program, students participate in a seminar and attend a weekly lecture/discussion group (WASH 2B Washington Center - Politics and Public Policy Course).

To be eligible for the program, a student is expected to be a junior or senior and have at least a 3.0 GPA. The program director, the student’s major advisor, and the appropriate dean must approve each application. Students must ensure that their participation will not prevent them from meeting on-campus residency or other university requirements.

Students should contact the director for updated information about the program’s operations during the COVID-19 pandemic.

Women's and Gender Studies Program

www.case.edu/artsci/womn (http://www.case.edu/artsci/womn/)
Renée Sentilles (renee.sentilles@case.edu) and Justine Howe (justine.howe@case.edu), Co-Directors

The goal of the Women's and Gender Studies Program is to educate students in interdisciplinary approaches to feminist and queer theories of gender, sexuality, culture, and society. The program is committed to the study of women, the LGBTQ+ community, and sexuality. Students are exposed to a variety of forms of critical thinking in relation to:

1. the social construction of knowledge and philosophy
2. intersections of race/ethnicity, social class, gender, and sexuality in social systems of power and privilege
3. historized and cross-cultural accounts of gender and gender inequality
4. literary criticism
5. approaches to science and medicine informed by "feminist empiricism" and "feminist standpoint" theories
6. contemporary theories of art, performance, language, jurisprudence, social science, and religion in the context of women's experience
7. studies of the body as a focal point for theorizing relations among the arts and sciences
8. social justice and activism as it pertains to women and gender both locally and globally

Women’s and Gender Studies is an interdisciplinary program that prepares students to think critically and creatively within a framework employing gender as a central category of analysis. The program is set up to test and challenge the technologies and limitations of gender roles in a multitude of cultural and historical settings. It is designed to familiarize students with the analytical and hermeneutic tools of research and interpretation, and to create awareness of the ethical, political, and aesthetic dimensions of gender in history and culture.

Program Faculty

Renee M. Sentilles, PhD
Henry Eldridge Bourne Professor of History, Department of History; Co-Director, Women's and Gender Studies Program

Justine Howe, PhD
Armington Professor; Associate Professor, Department of Religious Studies; Co-Director, Women's and Gender Studies Program
Women's and Gender Studies Program

Affiliated faculty

Mary Grimm, MA
Associate Professor, Department of English

Undergraduate Program

Major

The Women's and Gender Studies Program offers a major leading to the Bachelor of Arts degree. The program offers a sound course of study with a disciplinary concentration grounding the program's interdisciplinary objectives. Up to six credit hours in required or elective courses for another major may also be applied to the Women's and Gender Studies major.

In the two required courses, students become fluent in current tools of research and interpretation employed in women's and gender studies.

Required Course 1:

<table>
<thead>
<tr>

</tbody>
</table>

Elective courses: WGST majors must distribute their courses among the Arts, Humanities, and Social Sciences. They must take at least one course in each of these three areas. In two of the areas, they must take two courses. Consult one of the program's academic representatives with questions about the curriculum. Majors and minors in WGST may also conduct an Independent Study (WGST 399) and/or a SAGES Capstone (WGST 396) with program faculty.

Total Units 30

Minor

Fulfillment of the minor requires completion of 18 credit hours according to the following course distribution:

Required Courses:

Five approved electives 15

Total Units 18

To help ensure a comprehensive course of study in a particular area of interest, each student's combination of courses and the structure of an independent study must be approved by one of the program's academic representatives.
Courses

WGST 224. Sex and the City: Gender and Urban History. 3 Units.
Gender is an identity and an experience written onto the spaces of the city. The urban landscape—its streets, buildings, bridges, parks and squares—shapes and reflects gender identities and sexual relations. This course examines the relationship between gender and urban space from the 19th century to the present, giving special attention to the city of Cleveland. Using Cleveland as our case study, this course will explore some of the many ways in which cities and the inhabitants of cities have historically shaped gender and sexual identities. The course is organized thematically and explores different aspects of city life such as prostitution, urban crime, labor, politics, urban renewal and decay, consumption and leisure and the ways in which sex and gender intersects with these issues. Offered as HSTY 124 and WGST 124.

WGST 201. Introduction to Gender Studies. 3 Units.
This course introduces women and men students to the methods and concepts of gender studies, women's studies, and feminist theory. An interdisciplinary course, it covers approaches used in literary criticism, history, philosophy, political science, sociology, anthropology, psychology, film studies, cultural studies, art history, and religion. It is the required introductory course for students taking the women's and gender studies major. Offered as ENGL 270, HSTY 270, PHIL 270, RLGN 270, SOCI 201, and WGST 201. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCS, FSNA, FSSO, FSSY, FSTS, or FSCS.

WGST 227. Women, Gender, and Islam. 3 Units.
Women and gender are central to understanding Muslim societies, past and present. From debates about the veil to the wars in Iraq and Afghanistan, gendered concerns have been especially prominent in contemporary debates about the status of Islam in the modern world. How have Muslim thinkers interpreted Islamic scriptures with respect to topics such as marriage, child custody, inheritance, and sexuality? How is masculinity and femininity constructed? In what ways do their interpretations reflect the political, economic, and social conditions in which they lived? How does gender structure authority and power in Muslim communities? How and why have Muslim women become so important in contemporary debates over religious and national identity around the world? This course begins by examining the position of women and gender in the foundational Islamic texts, the Qur'an and Sunna (the practice of the Prophet Muhammad), and pre-modern interpretations of them. Then we will explore marriage and divorce in Muslim jurisprudence, in order to examine themes such as women's spiritual capacities, female leadership, sexuality, and slavery. Next, we will turn to the headscarf as a lens through which to explore modern configurations of gender and sexuality, as they intersect with conceptions of national belonging, religious identity, and individual freedom. Finally, we will study contemporary debates over polygyny, homosexuality, and female religious authority. There are no prerequisites for this course. No prior knowledge of Islam is expected. Offered as RLGN 227 and WGST 227. Counts for CAS Global & Cultural Diversity Requirement.

WGST 228. Sociology of Sexuality. 3 Units.
This course analyzes the issues of sex and sexuality from a sociological point of view. It is centered on the notion that what we consider to be ‘normal’ or ‘natural’ about sex and sexuality is, in reality, socially constructed. One’s viewpoint on the issues surrounding sexuality are influenced by the social context in which they live, as opposed to the purely biological viewpoint that presupposes some sense of normalcy or naturalness regarding sexual relations. A range of topics will be covered, including readings that discuss the variations of sexuality and the notions of sexual “deviance” in order to explore the cultural and societal variation that exists along the lines of gender, race, ethnicity, sexual orientation, age and disability. Offered as SOCI 228 and WGST 228.

WGST 239. International Comparative Family Policy. 3 Units.
This course focuses on the connections between public policies and families and the values that enter into policy debates and family choices. It provides conceptual frameworks that can be used to identify and understand some of the influences underlying policy choices affecting families and also frameworks for evaluating the consequences of these choices for families of diverse structures, socio-economic statuses, and racial and ethnic backgrounds. We will apply this framework to topics such as maternity leave, child care, income assistance, and marriage promotion. We will compare U.S. policies to those of other industrialized countries, especially those in Italy. You will end the semester by conducting research on a social policy topic that we have not covered during the semester from understanding the initial social problem all the way through to making a policy recommendation to help you learn to explore a new topic independently. Central to the course are the intersections between families and governments via policy outputs, and the roles that citizens and family professionals can play in improving them. Using UNICEF resources, located in Florence, Italy, we will delve into evidence-based approaches for ameliorating suffering in young families across the globe. Using Florence as a classroom, we will explore differences in family life between the U.S. and Italy as a means to understand the ways in which the state must respond to differing cultures and needs. At the Innocenti Museum, in the same building as UNICEF’s research offices, we will see an orphanage that began operations in 1445 and functioned as an orphanage and hospital until 1875, making it the oldest public institution in Italy. The building has been dedicated to the protection of children’s rights and education since that time, and provides a backdrop for an early understanding of ways to think about family policy. Offered as SOCI 239 and WGST 239. Counts for CAS Global & Cultural Diversity Requirement.
WGST 252. Soul Murder: Religion and Sexual Abuse. 3 Units.
This seminar traces anthropological questions about religious-trauma, -memory, and -suffering through the lens of clergy sexual abuse. How is religious sexual abuse different than non-religious contexts? What can survivors teach us about the resilience of the human spirit? What are the racial dynamics of the recent Roman Catholic crisis? What flaws has it exposed in our criminal justice system? To answer questions like these, we will (i) begin the semester with anthropological studies of religion and trauma. Then we will (ii) examine grand jury investigations in the United States. Prepared by these theoretical and historical texts, we will (iii) evaluate case studies from the Roman Catholic context, including sexual abuse by nuns. We will use these examples to evaluate (iv) representations of the crisis in film and news media. Finally, we will (v) compare the Catholic crisis to recent sexual abuse scandals in American Jewish, Muslim, and Protestant communities. The comparative literature will include readings by Veena Das (cultural anthropology), Levinas (philosophy), Kathryn Lofton (religious studies), Timothy Lytton (law), Fortune (theology), and Frawley-O’Dea (psychology). Primary sources will include excerpts from special prosecutors and grand juries in Pennsylvania, Louisiana, and Massachusetts. Films will include "Doubt" and "Spotlight." By the end of the course, students will: - Know how to research and critique the legal, spiritual, and theoretical consequences of religious sexual abuse. - Be able to debate multiple theories of religion and trauma. - Be able to analyze data that is emotionally difficult and legally complex. Our seminars will include discussions, short writing assignments, collaborative work, and presentations. Offered as RLGN 252 and WGST 252. Counts for CAS Global & Cultural Diversity Requirement.

WGST 257. Women's Histories in South Asia. 3 Units.
This course traces the history of women in South Asia from pre-colonial times to the present. Themes explored in the course will include (but not be limited to): the historical transformations of institutions shaping women's lives such as state, family, religious and legal traditions; the impact of colonialism, nationalism, and decolonization on women, as well as the history of women's movements in various parts of South Asia. As we acquaint ourselves with the vibrant historiography on women in South Asia, we will also examine the theoretical and methodological challenges involved in writing histories using the analytical lens of gender. While a significant portion of the readings will focus on South Asia, we will occasionally bring in insights from histories of women in other parts of the world to help develop comparative perspectives and evaluate the South Asian cases and examples within the broader field of women's history. Offered as HSTY 157 and WGST 257. Counts for CAS Global & Cultural Diversity Requirement.

WGST 268. Women in the Bible: Ethnographic Approaches to Rite and Ritual, Story, Song, and Art. 3 Units.
Examination of women in Jewish and Christian Biblical texts, along with their Jewish, Christian (and occasionally Muslim) interpretations. Discussion of how these traditions have shaped images of, and attitudes toward, women in western civilization. Offered as RLGN 268, WGST 268, and JDST 268.

WGST 273. Race and Gender in Popular Culture. 3 Units.
This course explores how notions of race and gender have been constructed, reflected and contested through American popular culture from the nineteenth century to the present. A special focus will be given to the reciprocal relationship between culture, politics and the economy, and the ways in which class, gendered, and racial identities reflected and shaped them. We will examine how different forms of popular culture, broadly defined as both cultural artifacts and as cultural practices provide us with new types of historical sources and how historians are using them to rethink historical questions such as labor struggles, empire, immigration, and democracy. Readings includes both primary and secondary documents and topics are organized chronology. In considering the multifaceted aspects of popular culture, we will examine how it became a useful prism to shape, express and influence notions of gender, sexuality, and race. Offered as HSTY 273 and WGST 273. Counts for CAS Global & Cultural Diversity Requirement.

WGST 302. The Lemonade Class: Religion, Race, Sex and Black Music. 3 Units.
Charles Long suggests that black musical forms are creative responses to the particular circumstances of black peoples' presence in the U.S and black notions of the sacred. In April of 2016, Beyoncé released her visual album Lemonade two days after the death of Prince. This course is organized around the album's title cuts and links these two artists together in an examination of religion and musical performance as creative response to the racial and gendered conditions of black life. The course investigates how both artists have used music as a platform to explore issues of race, gender, commerce, sexuality, power and divinity. The course also looks at examples from the works of earlier artists who address similar themes such as Ma Rainey, Bessie Smith, Muddy Waters, Billie Holiday, Nina Simone, Little Richard, James Brown, Marvin Gaye, and Aretha Franklin. Offered as AFST 302, ETHES 302, MUHI 316, RLGN 302, RLGN 402, and WGST 302. Counts for CAS Global & Cultural Diversity Requirement.

WGST 308. Immigration and the Paris Experience. 3 Units.
Three-week immersion learning experience living and studying in Paris. The focus of the course is the culture, literature, and the arts of the African, Arab, and Asian communities of Paris. At least half of the course looks at issues surrounding immigration that affect women in particular. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308/408 do coursework in French. WLIT 308/408, ETHES 308, and WGST 308 students have the option of completing coursework in English. Graduate students have additional course requirements. Offered as FRCH 308, WLIT 308, ETHES 308, WGST 308, FRCH 408, and WLIT 408. Counts for CAS Global & Cultural Diversity Requirement.

WGST 312. Women in the Ancient World. 3 Units.
The course offers a chronological survey of women's lives in Greece, Hellenistic Egypt, and Rome. It focuses on primary sources as well as scholarly interpretations of the ancient record with a view to defining the construction of gender and sexuality according to the Greco-Roman model. Additionally, the course aims to demonstrate how various methodological approaches have yielded significant insights into our own perception of sex and gender. Specific topics include patriarchy, the antagonism between male and female in myth; the legal, social, economic, and political status of women; the ancient family; women's role in religion and cult; ancient theories of medicine regarding women; pederasty and homosexuality. Offered as CLSC 312 and WGST 312. Counts for CAS Global & Cultural Diversity Requirement.
WGST 314. Innovation and French Science: Past, Present, and Future. 3 Units.
The French scientific enterprise over the past 250 years has been buffeted by politics, war, civil unrest, and economic and societal changes. This study abroad course examines the evolution of science in France in light of these influences, how women have play an outsized role relative to the U.S., and the centrality of the French to humanity’s scientific endeavor over the centuries. Students will visit many important scientific venues, both historical and modern, around Paris and elsewhere in the country. Readings from a variety of sources – scientific, literary, historical – and informal meetings with French scientists, engineers, and students will provide a comprehensive portrait of French science and scientific history from a variety of perspectives. The course will be conducted in English, although there is ample opportunity to interact in French if the student desires. The course meets the CAS Global & Cultural Diversity Requirement and may meet breadth requirements in certain programs. Not available for credit to students who have completed FRCH 328/428, PHYS 333, WGST 333, or WLIT 353/453. Offered as CHEM 314, HSTY 314, PHYS 314, and WGST 314. Counts for CAS Global & Cultural Diversity Requirement.

WGST 315A. International Bioethics Policy and Practice: Women’s Health in the Netherlands. 3 Units.
This 3-credit course allows students to familiarize themselves with social policies and practices related to women’s health in the United States and the Netherlands. Issues covered in the course include birth control and family planning, abortion, prenatal testing, childbirth, health care disparities, cosmetic surgery, prostitution and trafficking in women. This course also addresses the US and Dutch national policies regarding the public provision of health care for women. The course places an emphasis on the ways in which social norms shape policies over time, which political actors are involved in shaping women’s health policy, and the balance between women’s health as a matter of the public good or individual responsibility. This course substantively explores gender-specific cultural values and practices in relation to women’s health in the United States and the Netherlands and will help students develop the analytical skills necessary for evaluating social policy and ethical issues related to women’s health. Offered as BETH 315A, BETH 415A and WGST 315A. Counts for CAS Global & Cultural Diversity Requirement.

WGST 318. History of Black Women in the U.S.. 3 Units.
Chronologically arranged around specific issues in black women’s history organizations, participation in community and political movements, labor experiences, and expressive culture. The course will use a variety of materials, including autobiography, literature, music, and film. Offered as AFST 318, ETHS 318, HSTY 318, and WGST 318.

WGST 325. Philosophy of Feminism. 3 Units.

WGST 326. Gender, Inequality, and Globalization. 3 Units.
Using a sociological perspective, this course examines how major societal institutions, including the economy, polity, medicine, religion, education and family, are structured to reproduce gendered inequalities across the globe. Attention is given to the intersections of race/ethnicity, social class, gender and sexuality in social systems of power and privilege. Of critical importance is how gender figures in the relationship between Economic North and Economic South countries. We will elucidate how gender norms vary by culture and exert profound influence on the daily, lived experiences of women and men. The course will be informed by recent scholarship on feminism, women's movements, and globalization. Offered as SOCI 326 and WGST 326. Counts for CAS Global & Cultural Diversity Requirement. Prereq: SOCI 101 or permission of program director.

WGST 333. Science and Technology in France. 3 Units.
This course is an exploration of the development of science and technology in France, from their rise in the 18th and 19th centuries to their recent renaissance, from both a scientific and a humanities perspective. A significant component will focus on the contributions of women to science in France. Site visits in France will include the Marie Curie laboratory, the Pasteur Institute, and the Museum of Natural History. Readings will come from the fields of history of science, French cultural history, and French literature. Offered as FRCH 328, FRCH 428, WGST 333, WLIT 353 and WLIT 453. Counts for CAS Global & Cultural Diversity Requirement.

WGST 337. Women in the Arab World. 3 Units.
The purpose of this course is twofold: It is a course that allows students an in-depth look at the diverse women who represent a number of cultures in the Arab world in nations from the Mashrek to the Maghreb. The second primary goal of the course is to study such women through the eyes of leading Arab women theorists who have made an impact not only in their own countries, but also on disciplines intersecting with women's studies worldwide. We will study the Arab woman's place in her respective society, in political and economic systems, in education, and in the family. We will also analyze her contributions to art and literature as well as to the sciences. The course will provide an overview of the Arab woman throughout history, from her origins to her place within recent movements within the Arab Spring and other current world events. As Arab women are Muslim, Christian, and Jewish, views of women within these major world religions will also be taken into account as we study the Arab woman as well as religion's impact on culture in the Middle East and in the Maghreb in particular. In the course, we will utilize theoretical texts, but also case studies as well as examples from media and the arts. During the semester, we will take advantage of teleconferencing opportunities between CWRU and two major academic units for Women's Studies in the Arab world: The Institute for Women’s Studies in the Arab World (IWSAW) in Beirut, Lebanon, and the University of Jordan's Center for Women's Studies in Amman. Offered as FRCH 337, FRCH 437, ARAB 337, ETHS 337 and WGST 337. Counts for CAS Global & Cultural Diversity Requirement.

WGST 338. Black Women and Religion. 3 Units.
This course is an exploration of the multidimensional religious experiences of black women in the United States. These experiences will be examined within particular historical periods and across diverse social and cultural contexts. Course topics and themes include black women and slave religion, spirituality and folk beliefs, religion and feminist/ womanist discourse, perspectives on institutional roles, religion and activism, and spirituality and the arts. Offered as ETHS 339, RLGN 338 and WGST 339. Counts for CAS Global & Cultural Diversity Requirement.
WGST 342. Latin American Feminist Voices. 3 Units.
Examination of the awakening of feminine and feminist consciousness in the literary production of Latin American women writers, particularly from the 1920s to the present. Close attention paid to the dominant themes of love and dependency; imagination as evasion; alienation and rebellion; sexuality and power; the search for identity and the self-preservation of subjectivity. Readings include prose, poetry, and dramatic texts of female Latin American writers contributing to the emerging of feminist ideologies and the mapping of feminist identities. Offered as SPAN 342, SPAN 442, ETHS 342, and WGST 342. Counts for CAS Global & Cultural Diversity Requirement.

WGST 343. Language and Gender. 3 Units.
This course introduces students to the study of language and gender by exploring historical and theoretical trends, methods, and research findings on the ways gender, sexuality, language, and discourse interact with and even shape each other. Topics may include "grammatical" versus "biological" gender, feminine écriture, the women and language debate, speech acts and queer performativity; nonsexist language policy; discourses of gender and sexuality, feminist stylistics, and LGBT sociolinguistics. Offered as ENGL 343, ENGL 443, and WGST 343. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

WGST 345. Topics in LGBT Studies. 3 Units.
This course will focus on selected topics in the study of LGBT literature, film, theory, and culture. Individual courses may focus on such topics as queer theory, LGBT literature, queer cinema, gay and lesbian poetry, LGBT graphic novels, the AIDS memoir, AIDS/Gay Drama, and queer rhetoric and protest. Maximum 6 credits. Offered as ENGL 345, ENGL 445 and WGST 345. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

WGST 346. Women, Power, and Politics. 3 Units.
Women, Power, and Politics involves a critical examination of the impact of gender on the forms and distributions of power and politics, with primary reference to the experience of women in the United States. Major concerns of the course include the political meanings and import of "sex," "gender," and "politics;" the relationship between women and the state; how women organize collectively to influence state policies; and how the state facilitates and constrains women's access to and exercise of political power. The course is organized around four foci central to the study of women and politics. The first section of the course focuses on the meanings of "women," "gender," and "politics." In this section, we will consider how these concepts intersect and the ways in which each may be used to deepen our understanding of the workings of governments and political systems, and of women's relative political powerlessness. The second section of the course employs these concepts to understand the (re) emergence of the US feminist movement, its meanings, practices, and goals, and its transformation across US political history. In the third section, we turn to conventional electoral politics, focusing on women's candidacies, their campaigns, and women's voting behavior. In the final section of the course, we consider those general factors that might provide for increased gender equality and improved life status for women, in global, comparative perspective. Offered as POSC 346, POSC 446 and WGST 346. Counts as SAGES Departmental Seminar.

WGST 349. The Arab World Experience. 3 Units.
Taught and led by Case faculty, The Arab World Experience is a spring semester course with a spring break study abroad component in a Middle Eastern or North African country supplemented by course meetings before and after travel. It will rotate among countries such as Jordan, Lebanon, Morocco, etc. and be taught by faculty with appropriate area expertise in Arabic, Women's and Gender Studies, and/or Ethnic Studies. The course focuses on topics such as history, politics, culture, and gender relations within the society of study. Workload and learning outcomes are commensurate with a semester-long three credit hour course. Guest lectures in the host country are an important component of the course as they bring a fresh, authentic perspective to the aforementioned topics discussed. There will be three three-hour meetings prior to travel, required reading, and one three-hour meeting after travel. In the host country, students will spend seven days (five-eight hours per day) in seminars, discussions, and site visits. Student grades are determined on the basis of participation, attendance, a daily experiential learning journal, interviews with guest speakers, and a final exam. Offered as ARAB 349, ETHS 349 and WGST 349. Counts for CAS Global & Cultural Diversity Requirement.

WGST 352. African Feminisms. 3 Units.
This course traces the history of African feminism from its origins within traditions through to a more contemporary theoretical analysis of gender, marriage, and motherhood seen from an Afrocentric perspective. Approaches studied are those that pertain to anthropology, history, literature, sociology, and culture. African feminist theory of scholars such as Filomina Steady, Cheikh Anta Diop, Buchi Emecheta, Ifi Amadiume, Obioma Nnameka, Oyeronko Eyewumi, and Calixthe Beyala will be studied and there will be some comparative analysis of Western theories to show how African feminisms are clearly distinct. Theories on these feminisms will be presented, and in the process, students will look at cases of women in Cameroon, Nigeria, Ghana, Kenya, and Senegal. It is commonly believed that African women were defined for a long time according to constructs of gender, family, kinship, marriage, and motherhood. Offered as ETHS 352 and WGST 352. Counts for CAS Global & Cultural Diversity Requirement.

WGST 353. Women in American History I. 3 Units.
The images and realities of women's social, political, and economic lives in early America. Uses primary documents and biographers to observe women's and groups of women in relation to legal, religious, and social restrictions. Offered as HSTY 353, WGST 353, and HSTY 453. Counts for CAS Global & Cultural Diversity Requirement.

WGST 354. Women in American History II. 3 Units.
With HSTY 353, forms a two-semester introduction to women's studies. The politics of suffrage and the modern woman's efforts to balance marriage, motherhood, and career. (HSTY 353 not a prerequisite.) Offered as HSTY 354, WGST 354, and HSTY 454. Counts for CAS Global & Cultural Diversity Requirement.

WGST 355. Hindu and Jain Bioethics: Special Focus on Women's and Gender Studies. 3 Units.
This course will provide both an introduction to basic Hinduism and Jainism and an introduction to Hindu and Jain bioethics. We will focus primarily on bioethical issues that pertain to women and that are gender related. These issues include abortion, menstruation, surrogacy, intersex, and other topics of controversy. Offered as ETHS 353, RLGN 353, RLGN 453, and WGST 355. Counts for CAS Global & Cultural Diversity Requirement.
WGST 373. Women and Psychological Disorders. 3 Units.
This course examines psychological disorders, including depression, anxiety, and eating disorders, in the perspective of gender, sex, and culture. We will explore how social, political, and economic factors influence mental health and well-being, and how gender and sex play a role in the experience and treatment of mental illness. Offered as WGST 373, HSTY 473, and WGST 373. Counts for CAS Global & Cultural Diversity Requirement.

WGST 363. Gender and Sexuality in America. 3 Units.
This multicultural seminar uses a mixture of historical text, gender theory, personal biography, and artistic expression to explore changing notions of gender and sexuality over the past two centuries in the United States. Offered as HSTY 363, HSTY 463 and WGST 363. Counts for CAS Global & Cultural Diversity Requirement.

WGST 365. Gender and Sex Differences: Cross-cultural Perspective. 3 Units.
Gender roles and sex differences throughout the life cycle considered from a cross-cultural perspective. Major approaches to explaining sex roles discussed in light of information from both Western and non-Western cultures. Offered as ANTH 365, ANTH 465 and WGST 365.

WGST 370. Navigating Gender in Organizations. 3 Units.
The purpose of this course is to prepare students to succeed in the workforce by understanding and exploring the opportunities and challenges of work across the lifespan and developing necessary skills to be effective. The course broadens understanding of gender dynamics and gendered structures in the workplace, intersections of gender with other identities, and the leadership and managerial issues affecting women and men in work organizations. The course helps students create a personal framework for how to develop a successful, happy and integrated work-life in the global economy. Offered as ORBH 370 and WGST 370. Counts for CAS Global & Cultural Diversity Requirement.

WGST 372. Work and Family: U.S. and Abroad. 3 Units.
Covers the impact on human lives of the interface between work and family; the different ways gender structures the experience of work and family depending upon racial and ethnic background, social class, age, and partner preference; the impact of historical context on work-family experiences; work-family policies in the United States and other countries. Offered as SOCI 372, WGST 372, and SOCI 472.

WGST 373. Women and Medicine in the United States. 3 Units.
Students in this seminar will investigate the experiences of American women as practitioners and as patients. We will meet weekly in the Ditrick Medical Museum for discussion of texts and use artifacts from the museum's collection. After a unit exploring how the female body was viewed by medical theorists from the Galenic period to the nineteenth-century, we will look at midwives, college-trained female doctors and nurses, and health advocacy among poor populations. We will then look at women's experiences in terms of menstruation, childbearing, and menopause, before exploring the cultural relationship between women and psychological disorders. Offered as HSTY 373, HSTY 473, and WGST 373. Counts for CAS Global & Cultural Diversity Requirement.

WGST 374. American Women's Poetry. 3 Units.
This course surveys American women's poetry from the seventeenth century to the present. We will read a range of poetry illustrating the roles of women poets in the development of the nation's literary, cultural, and social history. We will pay close attention to how women poets use traditional and innovative poetic forms to represent lived experiences and to engage the political realities of their varying historical moments. Offered as ENGL 373, ENGL 473, and WGST 374. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

WGST 384. Sociology of Sex(es), Gender(s) and Sexuality(ies). 3 Units.
Gender is an organizing principle of society and affects every element of social life. Ideas about gender and sexuality shape identity and influence interactions, institutions, and the societies within which we live. These ideas vary from individual to individual, but also across time and place. This course surveys research on sex, gender and sexuality with the goal of providing students with a theoretical grounding for analyzing sex, gender and sexuality from a sociological perspective. We will explore outdated theories like essentialism and biological determinism, and newer theories rooted in social constructionism. Central to this course is intersectionality, a theoretical perspective that reveals ways in which race/ethnicity, class, gender, sexuality and other social categories are inextricably connected and form interlocking systems of inequality. Additional topics to be explored include: the sexual revolution, the hook-up culture, gendered families, gendered health, occupational segregation, sexual harassment and gendered violence, reproduction, social change and feminist activism. Offered as SOCI 384, SOCI 484, and WGST 384. Prereq: SOCI 101.

WGST 396. SAGES Capstone. 3 Units.
Capstone experience in the fields of Women's and Gender Studies for an in-depth, independent project of particular interest to the student. Students are strongly encouraged to work with a WGST program faculty member, but some projects may be supervised by faculty in other areas or by other qualified professionals. All capstones require a WGST faculty advisor's approval of the proposal prior to registration. Open to juniors and seniors majoring in Women's and Gender Studies. Counts as SAGES Senior Capstone. Prereq: WGST 201; Junior or Senior standing with major/minor in WGST.

WGST 399. Independent Study. 1 - 3 Units.
Independent research project in the fields of Women's and Gender Studies. Project proposals must be approved by a WGST faculty advisor. Students are strongly encouraged to work with a WGST program faculty member, but some projects may be supervised by faculty in other areas for by other qualified professionals with a WGST faculty advisor’s approval. Credit varies with the scope and depth of the project. Prereq: WGST 201.

"I don't know what literature is exactly, but I know it makes me feel like I'm soaring." — Unknown

The study of world literature, traditionally called comparative literature, involves a global approach to the art of literature in all its forms. "Literature" is a unique way of using language that seeks to express
human wants and needs through poetic techniques, whether in prose, poetry, drama, or song. Cultures have always turned to literature—whether in oral or written form—to express basic values, concerns, despairs, dreams, and hopes. Literature comments on what “is,” and reaches for what “might be.” Cultural identity is created in part through literature, and literature is used to question—at times even undermine—that identity. Literature may be a conservative force, emphasizing traditions, or a revolutionary force, provoking change from within.

The interaction of literatures from various regions of the world also transforms the art, as authors influence each other in what we might call a “global writing experiment.” World Literature redefines the concept of “minor” or “third world” literatures, as it considers “marginal” artistic expressions to be as worthy of study as any classical tradition of the West or East.

The World Literature Program maintains the comparative spirit of the discipline, offering courses on individual authors, literary periods, regional literatures, themes, and schools of criticism.

The World Literature Program is fundamentally interdisciplinary. Courses come mostly from the Departments of Modern Languages and Literatures, Classics, and English, but students may also take approved courses from the Departments of Theater and Religious Studies. The major in World Literature requires reading in at least one language other than English, thus emphasizing that language and literature are interrelated. Film, as a narrative art, is also included in World Literature, as are some courses in linguistics.

**Program Director**

Marie Lathers, PhD  
Elizabeth M. and William C. Treuhaft Professor of Humanities, Department of Modern Languages and Literatures

**Advisory Committee**

Margaretmary Daley, PhD  
Associate Professor, Department of Modern Languages and Literatures

William Marling, PhD  
Professor, Department of English

Timothy Wutrich, PhD  
Senior Instructor, Department of Classics

**Undergraduate Programs**

**Major**

The World Literature Program offers a major leading to the Bachelor of Arts degree. Requirements for the major are as follows:

- **Required Courses:**
  - WLIT 211 World Literature I 3
  - WLIT 212 World Literature II 3
  - WLIT 387 Literary and Critical Theory 3
  - One of the following: 3
    - WLIT/CLSC 203 Gods and Heroes in Greek Literature
    - WLIT/CLSC 204 Heroes and Hustlers in Roman Literature
    - WLIT 365Q Post-Colonial Literature

Two courses in literature at the 300-level in a language other than English 6

Twelve hours of any WLIT course or cross-listed equivalent or any non-English literature course at the 200-level or above 12

**Total Units** 30

All literature courses at the 200 and 300 levels offered by the Departments of Modern Languages and Literatures, Classics, and English are approved as World Literature courses.

**Minor**

The minor in World Literature requires:

- **Required Courses:**
  - WLIT 211 World Literature I 3
  - WLIT 212 World Literature II 3
  - Nine credits of electives chosen in consultation with a program advisor 9

**Total Units** 15

**Graduate Program**

The World Literature Program offers a master of arts degree. Students pursuing the MA take courses (consisting of 30 credit hours) from a variety of genres and regions of the world. They take an MA exam in lieu of writing a thesis. Students with an MA in World Literature may go on to a PhD program in a variety of fields, teach, conduct research for humanities agencies or institutions, or work for global programs and institutions.

**Courses**

**WLIT 154. Introducing Hinduism. 3 Units.**

This “topics” course offers an introduction to the academic study of Hinduism. Whether approached through a particular theme or as a general historical introduction, each section of this course provides students with a general introduction to the academic study of religion and basic religious literacy in Hinduism, exploring forms of it in a diversity of cultural contexts. Section topics could include, but are not limited to: The Epics, Ritual, Contemporary Practices. Students may repeat the course for credit (up to 6 credits), provided that the two sections are different. Offered as RLGN 154 and WLIT 154. Counts for CAS Global & Cultural Diversity Requirement.

**WLIT 201. Greek Prose Authors. 3 Units.**

Readings from authors such as Plato, Lysias, Xenophon, and Herodotus. Offered as GREK 201, GREK 401, WLIT 201 and WLIT 401.

**WLIT 202. Introduction to Greek Poetry. 3 Units.**

Primarily readings from Homer, Hesiod, and Theocritus. Selections from Greek lyric may be introduced at the instructor’s discretion. Offered as GREK 202, GREK 402, WLIT 202, and WLIT 402.

**WLIT 203. Gods and Heroes in Greek Literature. 3 Units.**

This course examines major works of Greek literature and sets them in their historical and cultural context. Constant themes are war, wandering, tyranny, freedom, community, family, and the role of men and women within the household and the ancient city-state. Parallels with modern life and politics will be explored. Lectures and discussions. Offered as CLSC 203 and WLIT 203. Counts for CAS Global & Cultural Diversity Requirement.
WLIT 204. Heroes and Hustlers in Roman Literature. 3 Units.
This course constitutes the second half of a sequence on Classical literature. Its main themes are heroism vs. self-promotion, love vs. lust, and the struggle between democracy and tyranny. These topics are traced in a variety of literary genres from the period of the Roman republic well into the empire. Parallels with modern life and politics will be drawn. Offered as CLSC 204 and WLIT 204. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 205. Readings from the Epic of Gilgamesh. 3 Units.
In this course, we will read the entire Standard Babylonian recension of the Epic of Gilgamesh, considered the first great work of literature, from the original Akkadian text. While the primary goal of the course will be to become proficient readers of Akkadian, we will take some excursus on topics such as Babylonian religion, whether Gilgamesh was a historical figure or not, how the text was put together, and its possible influence on later heroic traditions such as the Greco-Roman. Offered as AKKD 205, AKKD 405, WLIT 205 and WLIT 405. Counts for CAS Global & Cultural Diversity Requirement. Prereq: AKKD 101 and AKKD 102.

WLIT 210. Ancient Near Eastern and Egyptian Literature. 3 Units.
This course offers a broad survey of Ancient Near Eastern and Egyptian literature. We will explore the rich heritage of narrative and mythological compositions through which the Mesopotamians and Egyptians tried to explain the natural phenomena, the religious beliefs and the history of the world around them. Examples of this include myths of creation, stories about gods, the great Flood, the Epic of Gilgamesh, the story of Sinuhe and many others. Other genre of literature will be explored such as the most ancient Legal Codes in history, Pyramid Texts, Wisdom Literature and Proverbs, Love Poetry and Humoristic compositions. Finally, some time will be devoted to the relation of these literatures with the texts that were composed in the Levant, where the alphabet was envisioned, and with the Bible, which grew within this Near Eastern context. All the texts will be read in English translation. Offered as ANEE 210 and CLSC 210.

WLIT 211. World Literature I. 3 Units.
Survey of literature from antiquity to 1600. May include Western and non-Western texts by Homer, Vergil, Ovid, St. Augustine, Dante, Boccaccio, Rabelais, Cervantes, Sei Shonagon, Basho, and the Baghavad Gita.

WLIT 212. World Literature II. 3 Units.
Survey of literature from 1600 to present. May include Western and non-Western texts by Swift, Voltaire, Rousseau, Tolstoi, Baudelaire, Austen, Mann, Kafka, Lispector, Marmon Silko, Soyinka.

WLIT 215. The World of Manga. 3 Units.
Manga (comic books and graphic novels) is one of the most important aspects of contemporary visual culture in Japan. It is consumed by millions of Japanese every day, and has attracted intense attention around the world. As it constitutes one third of the annual publications in Japan today, its breadth and scope are limitless. What does manga reveal about contemporary cultural production and consumption in Japan? What kind of special features are used in manga to attract people so much? What kind of genres do they have and what kind of readers do they have? These are some of the questions we will explore by surveying a large number of works produced in the last fifty years. Introducing graphic novels by major artists and writers, the course will expand your understanding of key components, social movements and discourses associated with manga. You will examine the history of manga, its aesthetics, and social impact through assigned readings, including scholarly papers and manga books, as well as works selected by each student (in original Japanese or in English translation). Offered as JAPN 215 and WLIT 215. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 224. Sword and Sandal: The Classics in Film. 3 Units.
Gladiator. Alexander. The 300. Contemporary society’s continuing fascination with putting the ancient world on the big screen is undeniable; and yet the causes underlying this phenomenon are not quite so readily apparent. In this course we will watch and discuss a number of movies about the ancient world, running the gamut from Hollywood classics such as Ben-Hur and Spartacus to more recent treatments (the aforementioned 300 and Gladiator, for starters), and from the mainstream and conventional (Clash of the Titans, Disney’s Hercules) to the far-out and avant-garde (Fellini’s Satyricon, anyone?). As we do so we’ll learn quite a bit about the art and economics of film, on one hand, and the ancient world, on the other. And yet what we’ll keep coming back to are the big questions: what does our fascination with the ancient Mediterranean tell us about ourselves as a society? Why do such movies get made, and what kinds of agendas do they serve? To what extent can we recapture the past accurately? And if we can’t, are we doomed to just endlessly projecting our own concerns and desires onto a screen, and dressing them in togas? No knowledge of ancient languages is required for this course. Offered as CLSC 224 and WLIT 224.

WLIT 225. Japanese Popular Culture. 3 Units.
This course highlights salient aspects of modern Japanese popular culture as expressed in animation, comics and literature. The works examined include films by Hayao Miyazaki, writings by Kenji Miyazawa, Haruki Murakami and Banana Yoshimoto, among others. The course introduces students to essential aspects of modern Japanese popular culture and sensibility. Offered as JAPN 225 and WLIT 225. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 232. Vergil. 3 Units.
Primarily readings from The Aeneid; selections from Vergil’s other work may be introduced at instructor’s discretion. Recommended preparation: LATN 201 or equivalent. Offered as LATN 202, LATN 402, WLIT 232 and WLIT 432.

WLIT 240. Modern Chinese Literature in Translation. 3 Units.
This course examines Modern Chinese Literature from the beginning of the 20th century to contemporary period in the contexts of Chinese historical and cultural transformations. It examines representative works of the major literary genres, including fiction, poetry, drama, and prose writing. We will be making the following inquiries: What is modern Chinese literature? What does it tell us about the cultural, social, psychological, and historical changes that occurred in modern China? Who are the main literary and cultural figures, and what did they contribute to the construction of the Chinese nation? How did Western thoughts impact on the ways in which Chinese reflected on their own cultural identities and social and gender relationships? This course is taught in English. Offered as CHIN 240, ASIA 240 and WLIT 240. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 241. Latin Prose Authors. 3 Units.
Reading and discussion of such prose authors as Cicero, Caesar, Livy or Pliny. Offered as LATN 201, LATN 401, WLIT 241 and WLIT 441. Prereq: LATN 102 or equivalent.

WLIT 245. Classical Japanese Literature in Translation. 3 Units.
Readings, in English translation, of classical Japanese poetry, essays, narratives, and drama to illustrate essential aspects of Japanese culture and sensibility before the Meiji Restoration (1868). Lectures explore the sociohistorical contexts and the character of major literary genres; discussions focus on interpreting the central images of human value within each period. Japanese sensibilities compared to and contrasted with those of Western and other cultures. Offered as JAPN 245 and WLIT 245. Counts for CAS Global & Cultural Diversity Requirement.
WLIT 250. Classical Chinese Literature in Translation. 3 Units.
This course is a survey of the classical Chinese literature from the pre-Qin Period to the fall of Qing Dynasty in 1911. Students will be introduced to a variety of forms and genres, including classical poetry, lyric, aria, elegy, rhapsody, folk song, narrative verse, parallel prose, classical-language short story, vernacular short story, novel, drama, etc. This course is taught in English. Offered as CHIN 250, ASIA 250 and WLIT 250. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 255. Modern Japanese Literature in Translation. 3 Units.
Focus on the major genres of modern Japanese literature, including poetry, short story, and novel (shosetsu). No knowledge of Japanese language or history is assumed. Lectures, readings, and discussions are in English. Films and slides complement course readings. Offered as JAPN 255 and WLIT 255. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 265. Constructing the Samurai: Images of Japanese Warriors from 1100's to the Present. 3 Units.
From concepts of premodern warriors calling out their names before doing hand-to-hand combat to modern salary men crushing the world with their economic prowess, samurai have come to be an iconic image of the Japanese people. Throughout the semester we will pay particular attention to the central themes in the historiography of warrior society, roughly, the years between ca. 1110 and 1850 C.E. We will investigate how these documents were translated by modern societies, both east and west, in samurai film. Students will explore the category of "samurai" through reading selections from The Tale of the Heike, as well as selected Noh plays, legal documents, travel diaries, autobiographies, short stories, and historical texts. In addition, we will investigate other genres contributing to the construction of the idea of "samurai," such as film. This seminar will closely examine the concept of "samurai," particularly its connection to the Japanese identity using an interdisciplinary context of the arts, history, religion, and literature. We will also explore the ways in which daimyo (feudal lords), authors, Buddhist officials, and filmmakers throughout the world created, shaped, and altered the ideal image of the samurai. Key to understanding the concept of samurai will be wrestling with questions of authorship, spirit pacification, nationality, and patronage, with specific focus on the Japanese relationship with Western nations and cultures. We will focus on language and its role in legitimizing the global concepts of "samurai" and "bushido." This class will provide additional insight geared toward the cultural study of linguistic identities beyond those informed by the English language and will include terms expressed in Japanese. Many of the resources used in this course will be translated from the Japanese, allowing us to consider Naoki Sakai's theories of enunciation/translation/subjectivity, Haruo Shirane's theory of reception, and Michael Emmerich's theory of replacement. Especially important will be to focus on terms in Japanese with no, or poor, English equivalent (such as samurai, shogun, daimyo, bushido, etc.) but with clear images in the English-speaking imagination(s). The instructor will provide background information on political, cultural, and religious history. Class sessions will be conducted in English and combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. All readings and films will be in English or with English subtitle. Offered as JAPN 265 and WLIT 265. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 290. Masterpieces of Continental Fiction. 3 Units.
Major works of fiction from the 19th century and earlier. Offered as ENGL 290 and WLIT 290.

WLIT 295. The Francophone World. 3 Units.
The course offers an introduction to the Francophone World from a historical, cultural, and literary perspective. The Francophone World includes countries and regions around the globe with a substantial French-speaking population (and where French is sometimes, but not always, an official language): North America (Louisiana, Quebec, and Acadia); North Africa (Tunisia, Morocco, Algeria, and Egypt); the Middle-East (Lebanon, Syria); the Caribbean (Martinique, Guadeloupe, Haiti); Southeast Asia (Vietnam); and Europe (France, Belgium, Switzerland, and Luxembourg). FRCH 295 provides a comprehensive overview of the Francophone World, while focusing on a particular area or areas in any given semester. Offered as AFST 295, ETHS 295, FRCH 295, and WLIT 295. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 300. The City in Literature. 3 Units.
Focus on major cities of the world as catalysts and reflections of cultural and historical change. Interdisciplinary approach utilizing the arts, literature, social sciences. Examples include Berlin at the turn of the century; Paris in literature and film; Tokyo in history and literature. Offered as WLIT 300 and WLIT 400.

WLIT 306. Tragedy. 3 Units.
Reading and interpretation of selected plays of Aeschylus, Euripides, and Sophocles. Offered as GREK 306, GREK 406, WLIT 306, and WLIT 406.

WLIT 307. History. 3 Units.
Extensive reading in Thucydides' History of the Peloponnesian War, especially Books VI and VII, the expedition against Syracuse. Offered as GREK 307, GREK 407, WLIT 307 and WLIT 407. Prereq: GREK 202 or equivalent.

WLIT 308. Immigration and the Paris Experience. 3 Units.
Three-week immersion learning experience living and studying in Paris. The focus of the course is the culture, literature, and the arts of the African, Arab, and Asian communities of Paris. At least half of the course looks at issues surrounding immigration that affect women in particular. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308/408 do coursework in French. WLIT 308/408, ETHS 308, and WGST 308 students have the option of completing coursework in English. Graduate students have additional course requirements. Offered as FRCH 308, WLIT 308, ETHS 308, WGST 308, FRCH 408, and WLIT 408. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 311. Homer. 3 Units.
Reading and translation of extensive selections from the Odyssey. Introduction to epic meter, to Homeric Greek, and to the poet's style. Consideration of evidences of oral composition and discussion of the heroic tradition. Offered as GREK 311, GREK 411, WLIT 311 and WLIT 411.
WLIT 315. Origins of Anime: Classical Texts, Modern Manga, Anime, and Tales. 3 Units.
Modern anime and manga authors and artists captivate audiences with rich stories and stylized art. This course investigates the origins of these stories by engaging premodern Japanese texts (in English language translation) and modern literary theory. Throughout the semester we will pay particular attention to commonalities among these literatures and narrative genres, as well as the extent they differ due to temporal/socio/religio/political concerns. Western and Asian literary theories, especially those concerning topics of translation, replacement, negotiation with classics, and gender and sexuality will also be extensively explored. We will interpret the historic human endeavor of story telling within the contexts of time and space and through a critical self-awareness of our own positions in the modern world. Students will prepare individual research projects and be responsible for finding and presenting primary sources and secondary research. The instructor will provide background information on political, cultural, and religious history as well as present on details of literary theory. The aim is to encourage students to critically analyze the modern perception of past events. Every topic will be addressed in three phases. First, the students will discover historical events, literature, and people through reading primary sources in English translation. In a second phase, we will see how these stories are depicted in movies, animation, or manga. Finally, students will perform research to explore the differences between the premodern sources and their modern adaptation and determine how we can use such a comparison to critically analyze the way modern storytellers recreate the past. Class sessions will combine lectures, discussion, and audio-visual materials. Offered as JAPN 315 and WLIT 315. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 318. Comedy. 3 Units.
Origin, ambiance, and development of Greek Old Comedy and persisting characteristics of the genre. Translation of selected plays from Greek into English. Offered as GREK 308, GREK 408, WLIT 318, and WLIT 418.

WLIT 319. Greek Tragedy. Plays and Performance in Ancient Athens. 3 Units.
This course provides students the opportunity to read a significant number of ancient Greek tragedies in modern English translations. We read, study, and discuss selected works by Aeschylus, Sophocles, and Euripides, as well as selected criticism, ancient and modern, of these plays. All semester we read the plays as literature composed for performance. We study literary elements within the plays and theatrical possibilities inherent in the texts. As we read the plays, we pay close attention to the historical context and look for what each play can tell us about myth, religion, ethics, and society in ancient Athens. Finally, we give attention to the way these tragic dramas and the theater in which they were performed have continued to inspire literature and theater for thousands of years. Lectures provide historical background on the playwrights, the plays, the mythic and historical background, and possible interpretation of the texts as literature and as performance pieces. Students discuss the plays that they read in class. The course has three examinations and a final project that includes writing an essay and staging a monologue or scene from one of the tragedies. Offered as CLSC 319, CLSC 419, THTR 319, THTR 419, WLIT 319, and WLIT 419. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 320. Chinese Popular Culture. 3 Units.
In this course we are going to study Chinese (including Mainland China, Hong Kong, Taiwan, and Chinese Diaspora) popular culture since the 1980s. By examining different forms of popular culture, including popular literature, film, music, TV programs, posters, the Internet, etc., we will be looking into their political, ideological, sociological, cultural, and psychological mechanisms. The film viewing will take place outside the class. Offered as: CHIN 320, ASIA 320 and WLIT 320. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 322. Theater in Ancient Rome. 3 Units.
This course is designed as a continuation of and companion to CLSC/THTR/WLIT 319/419 Greek Tragedy. Plays and Performance in Ancient Athens, although it may be taken without having taken, or before having taken, that course. Students in Theater in Ancient Rome will read a significant number of ancient Roman plays in modern English translation and study non-literary theatrical entertainment of the Roman Republic and Empire, that may include mime and pantomime, gladiatorial shows, political speeches, courtroom drama, and various other spectacles. The dramatic texts that we shall study include the fragments of early Latin drama, selected comedies by Plautus and Terence, and the tragedies of Seneca. We shall also consider Greek and Roman literature that comments on Roman theatrical practices. These works will be read for their literary merits and theatrical possibilities, while at the same time examining them for what they can tell us about Roman civilization. Similarly, when studying the non-literary theatrical works we shall examine historical and theatrical context including archaeological evidence from theaters and amphitheaters and material remains (masks, depictions of actors and gladiators on vases, terra cotta lamps, mosaics, etc.). Finally, while the majority of the course focuses on drama originally written in Latin and theatrical entertainments performed in ancient Rome, the course may include a brief survey of selected post-classical works indebted to the tradition of Roman drama and theater. Authors that may be studied include Hrotsvitha, Marlowe, Shakespeare, Racine, Molière, and the legacy of Roman drama and theater in contemporary stage and cinema such as Sondheim’s A Funny Thing Happened on the Way to the Forum. Thus a secondary concern will be to consider how and in what ways the legacy of Roman drama and theater has continued to shape the dramatic arts since antiquity. Offered as CLSC 322, CLSC 422, THTR 322, THTR 422, WLIT 322, and WLIT 422. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 325. Hispanic Intellectuals and Society: A Critical Approach. 3 Units.
This course offers an overview of the most important critical approaches to Spanish American culture and literature, with a socio-historical emphasis. Some of the authors we will discuss are Angel Rama, Jose Antonio Cornejo Polar and Nestor Garcia Canclini. We will analyze how the Latin American intellectuals had thought about specific issues such as identity, race, ideology, colonial and post-colonial relations with the metropolis and the process of formation of the nations in the continent. The class, the discussions, exams, oral presentations and papers will be in Spanish. Some of the readings must be in English, but most of them will be in Spanish. Offered as SPAN 325, SPAN 425, ETHS 325, WLIT 325 and WLIT 425. Counts for CAS Global & Cultural Diversity Requirement.
WLIT 329. Modern and Contemporary Drama. 3 Units.
This course explores the development of western drama and theatre from 1860 through present-day productions. The course emphasizes the relationship between different theatrical representations and their historical and social context. Shakespeare's well-known dictum that "theatre holds a mirror up to nature" is expanded when one examines who is holding that mirror, and how their actions participate in the constantly shifting construction of culture. Given this premise, the course investigates the development of specific European cultures (England, France, Germany, and Italy) as well as other regions (the United States, South America, and Russia) through the - live and literary - representations they make of themselves. Offered as THTR 329, WLIT 329 and THTR 429. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: At least Sophomore standing.

WLIT 334. Literature of the Republic. 3 Units.
A reading course in prose and poetry of the Roman Republic. Extensive selections from Cicero and Catullus, and one comedy of Terence. Offered as LATN 305, LATN 405, WLIT 334, and WLIT 434.

WLIT 336. Elegiac Poetry. 3 Units.
In this course we shall translate and interpret selected elegies by Catullus, Tibullus, Propertius, and Ovid. We will also devote considerable class time to the reading and in-depth analysis of the major secondary literature, starting with the introductory pieces in the newest companions published by Brill and Cambridge, and moving on to fundamental articles and perhaps even a full scholarly monograph. Offered as LATN 356, LATN 456, WLIT 336, and WLIT 436.

WLIT 337. Love and Loss: Reading The Tale of Genji. 3 Units.
Murasaki Shikibu's The Tale of Genji (c. 1000 CE), the great Japanese classic often referred to as "the world's first novel," has been praised by countless readers and scholars since it was first circulated within the imperial court. In this course we will read the entire text in English translation. We will focus on themes of love and loss, paying special attention to the substitution that results from the hero, the shining prince Genji, losing his mother at a tender age and attempting to fill the void she left. Since Genji is popularly thought of as a "playboy," we will investigate the thematic, historic, political, social, and religious descriptions within Genji's (many) love affairs, with a special emphasis on issues of gender. We will also consider the poetry, imagery, costume, music, religion, theater, and material culture of the mid-Heian era, which is encapsulated in the tale. Students will prepare individual research projects and be responsible for finding and presenting primary sources and secondary research. The instructor will provide background information on political, cultural, and religious history as well as present on details of literary theory. The aim is to encourage students to critically analyze the modern perception of the past. Class sessions will combine lectures, discussion, and audio-visual materials. All material is in English translation. There are no prerequisites. The course is conducted in English. Offered as JAPN 337 and WLIT 337. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 345. Japanese Women Writers. 3 Units.
Contributions of women writers to the literature of pre-modern and modern Japan; investigations of how their works exemplify and diverge from "mainstream" literary practices. Emphasis on the social and cultural contexts of the texts. Offered as JAPN 345 and WLIT 345. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 347. Livy, Power of Words: Ritual Uses of Premodern Japanese Literature. 3 Units.
Readings in Books I and XXI, with other selections from this major Augustan historian. Offered as LATN 307, LATN 407, WLIT 347, and WLIT 447. In premodern Japan, it was not only death and mourning ritual and practice that could pacify the spirit of the deceased, but also language. Authors consciously crafted the words of their works to simultaneously express the grief associated with longing and pacify the spirits of the dead. These words are called kotodama (power of words). From as far back as the eighth-century Kojiki (Records of Ancient Matters) and Nihon Shoki (The Chronicles of Japan) textual representations of mourning were linked with special uses of language and spirit pacification. At the death of Ame-no-wakahiko (a mythological god), his parents constructed a mourning hut and performed songs to secure his spirit in the afterworld. As several authors have demonstrated, from kotodama in the mid-eighth-century poetic anthology Man'yosh, (Collection of Ten Thousand Leaves) to linked verse (renga) in medieval Japan, carefully constructed literary language also had a place in ritual pacification of the spirits of the dead. Words were not simple expressions of grief, they held power. All material is in English translation. The course is conducted in English. All material will be provided via PDF. Offered as JAPN 347 and WLIT 347 and RLGN 347. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 348. Horace: Odes and Epodes. 3 Units.
Readings and discussion of extensive selections from the poetry of Horace; consideration of Horace as exemplifying the spirit of the Augustan Age. Offered as LATN 308, LATN 408, WLIT 348, and WLIT 448.

WLIT 349. Medieval Latin. 3 Units.
Reading and interpretation of Latin texts from the Middle Ages. Material selected according to the needs and interests of students. Offered as LATN 309, LATN 409, WLIT 349, and WLIT 449.

WLIT 351. Latin Didactic Literature. 3 Units.
Readings from didactic poetry such as Lucretius and Vergil's Georgics. Parodies like Ovid's Ars Amatoria or prose treatises may also be introduced. Offered as LATN 351, LATN 451, WLIT 351, and WLIT 451. Prereq: 200-level LATN or equivalent.
WLIT 352. History. 3 Units.
Works of the Roman historian Cornelius Tacitus; his Annals I-VI dealing with his portrait of Emperor Tiberius and the Empire after the death of Augustus. Offered as LATN 352, LATN 452, WLIT 352, and WLIT 452.

WLIT 353. Science and Technology in France. 3 Units.
This course is an exploration of the development of science and technology in France, from their rise in the 18th and 19th centuries to their recent renaissance, from both a scientific and a humanities perspective. A significant component will focus on the contributions of women to science in France. Site visits in France will include the Marie Curie laboratory, the Pasteur Institute, and the Museum of Natural History. Readings will come from the fields of history of science, French cultural history, and French literature. Offered as FRCH 328, FRCH 428, WGST 333, WLIT 353 and WLIT 453. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 354. Drama. 3 Units.
Reading of at least one play each by Plautus and Terence. Attention to the history of Latin and Greek New Comedy, and the contrasting styles of the two authors. Offered as LATN 354, LATN 454, WLIT 354, and WLIT 454.

WLIT 355. Modern Japanese Novels and the West. 3 Units.
This course will compare modern Japanese and Western novels, drama, and novels. Comparisons will focus on the themes of family, gender and alienation, which subsume a number of interrelated sub-themes such as marriage, home, human sexuality, amae (dependence), innocence, experience, death, God/gods, and nature (the ecosystem). Offered as JAPN 355 and WLIT 355. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 360. Development of Theater: Beginnings to English Renaissance. 3 Units.
This course explores the foundations of theater in Western civilization, beginning with Greece and then charting and analyzing the developments in playwriting, design, acting and theater architecture. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater I explores developments from Aeschylus to the English Renaissance. Offered for undergraduates as THTR 325 and WLIT 360. Students who have taken THTR 228/WLIT 228 are not allowed to enroll in this course. Offered as THTR 325, WLIT 360, and THTR 425. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: At least Sophomore standing.

WLIT 361. Development of Theater: Renaissance to Romanticism. 3 Units.
This course explores the many developments in playwriting, design, acting, and theater architecture across the world. Students read a wide variety of plays in order to obtain a comprehensive understanding of the history of the art form, but also learn how theater has played an integral societal function as a medium of political, economic, and cultural commentary. Development of Theater II not only explores the development of theatrical conventions in Spain, England, Italy, France and other European countries that lead to the creation of modern drama, but the course also offers an in-depth look at the history and conventions of theater in India, Korea, China, and Japan. Offered as THTR 326, WLIT 361, and THTR 426. Counts as SAGES Departmental Seminar. Counts for CAS Global & Cultural Diversity Requirement. Prereq: At least Sophomore standing.

WLIT 363H. African-American Literature. 3 Units.
A historical approach to African-American literature. Such writers as Wheatley, Equiano, Douglass, Jacobs, DuBois, Hurston, Hughes, Wright, Baldwin, Ellison, Morrison. Topics covered may include slave narratives, African-American autobiography, the Harlem Renaissance, the Black Aesthetic, literature of protest and assimilation. Maximum 6 credits. Offered as AFST 363H, ENGL 363H, ETHS 363H, WLIT 363H, ENGL 463H, and WLIT 463H. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

WLIT 365. German Literature in Translation. 3 Units.
Goethe defined "World Literature" (Weltliteratur) as "Intellectual Trade Relations" (geistiger Handelsverkehr). This course gives students the opportunity to study German literary works in translation and thus to trade intellectual relations with a literary culture previously unknown to them. Counts toward the German major only as a related course. No knowledge of German required. Offered as GRMN 365 and WLIT 365.

WLIT 365E. The Immigrant Experience. 3 Units.
Study of fictional and/or autobiographical narrative by authors whose families have experienced immigration to the U.S. Among the ethnic groups represented are Asian-American, Jewish-American, Hispanic-American. May include several ethnic groups or focus on a single one. Attention is paid to historical and social aspects of immigration and ethnicity. Maximum 6 credits. Offered as ENGL 365E, ENGL 365EC, ENGL 465E, WLIT 365E and WLIT 465E. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

WLIT 365N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Offered as AFST 365N, ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

WLIT 365Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Offered as ENGL 365Q, ENGL 365QC, ETHS 365Q, WLIT 365Q, ENGL 465Q, and WLIT 465Q. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

WLIT 366G. Minority Literatures. 3 Units.
A course dealing with literature produced by ethnic and racial minority groups within the U.S. Individual offerings may include works from several groups studied comparatively, or focus on a single group, such as Native Americans, Chicanos/Chicanas, Asian-Americans, Caribbean-Americans. African-American works may also be included. May cover the entire history of the U.S. or shorter periods. Maximum 6 credits. Offered as ENGL 366G, WLIT 366G, ENGL 466G, and WLIT 466G. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.
WLIT 368. Topics in Film. 3 Units.
Individual topics include Horror Films, Storytelling & Cinema, Science Fiction Films, Films of Alfred Hitchcock, American Cinema & Culture, History of Cinema, and many others. This course has no prerequisites and welcomes first year students. Other than the number of credits from one department a student can apply toward graduating, there is no limit to the number of times Topics in Film can be taken. A student who has previously taken ENGL 368C may receive credit for ENGL 368 only if the themes/topics are different. Offered as ENGL 368, ENGL 468, WLIT 368, and WLIT 468.

WLIT 370. Greek Prose Composition. 3 Units.
This course introduces students to the principles and practice of composing continuous passages of Greek prose. It is designed to review and to strengthen students’ command of Attic forms while becoming more aware of the ways Greek syntax was employed to express thought. Via practice at writing Greek prose, the ultimate goal is for the students to become more proficient and sensitive readers of ancient Greek. Offered as GREK 370, GREK 470, WLIT 370 and WLIT 470.

WLIT 375. Russian Literature in Translation. 3 Units.
Topics vary according to student and faculty interest. May include Russian classical and modern literature, cinema, women writers, individual authors. May count towards Russian minor. No knowledge of Russian required. Offered as RUSN 375 and WLIT 375. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 385. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 386. Russian Culture and Civilization: From Varangians to Revolutionaries (862-1917). 3 Units.
This course will explore the history, art, and literature of the Eastern Slavic/Russian people from the ninth century to end of the Russian empire in 1917. Students will trace the formation and transformation of the Slavic/Russian state, from Kievan Rus’ to the Tsardom of Muscovy and to the Russian empire. The historical background will be illuminated by the literary and artistic works created by outstanding Russian writers, poets, painters, and composers. At the end of the course, students will gain a solid knowledge of the Russian cultural ground and understand the roots of Russian national and cultural identity. Offered as RUSN 386 and WLIT 386. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 387. Literary and Critical Theory. 3 Units.
A survey of major schools and texts of literary and critical theory. May be historically or thematically organized. Maximum 6 credits. Offered as ENGL 387, WLIT 387, ENGL 487, and WLIT 487. Prereq: ENGL 150 or passing letter grade in a 100 level first year seminar in FSCC, FSNA, FSSO, FSSY, FSTS, or FSCS.

WLIT 390. Topics in World Literature. 3 Units.
In-depth examination of specific critical and literary theories and of their relevance for literature and culture studies. Authors, works and instructor may vary. Offered as WLIT 390 and WLIT 490.

WLIT 391. Introduction to Text Semiotics. 3 Units.
Introduction to Text Semiotics addresses both students of Literature and students in Cognitive Science. Most of the authors included in the reading list extend their linguistic approach towards fields that intersect literature, psychology, philosophy, aesthetics, and anthropology. The scholarly traditions of text analysis and structural theory of meaning, including authors from classical formalism, structuralism, structural semiotics, and new criticism will be connected to cognitive theories of meaning construction in test, discourse, and cultural expressions in general. The focus of this course, taught as a seminar, is on empirical studies, specific text analyses, discourse analyses, speech act analyses, and other studies of speech, writing, and uses of language in cultural contexts. This course thus introduces to a study of literature and cultural expressions based on cognitive science and modern semiotics—the new view that has been coined Cognitive Semiotics. Offered as COGS 391 and WLIT 391.

WLIT 395. Advanced Topics in Akkadian Literature. 3 Units.
Directed readings in selected Akkadian texts in the cuneiform script either of the Old Babylonian or the Neo-Assyrian periods to serve the individual interests and needs of students (texts may be drawn from a variety of text genres: mythological, historical, scientific, medical, correspondence, religious, etc.). Offered as AKKD 395, AKKD 495, WLIT 395 and WLIT 495. Counts for CAS Global & Cultural Diversity Requirement. Prereq: AKKD 101 and AKKD 102.

WLIT 397. Honors Thesis I. 3 Units.
Intensive study of a literary, linguistic, or cultural topic with a faculty member, leading to the writing of a research paper. Prereq: Senior status.

WLIT 398. Honors Thesis II. 3 Units.
Continuation of WLIT 397. Prereq: WLIT 397 and senior status.

WLIT 399. Independent Study. 1 - 3 Units.
For majors and advanced students under special circumstances.

WLIT 400. The City in Literature. 3 Units.
Focus on major cities of the world as catalysts and reflections of cultural and historical change. Interdisciplinary approach utilizing the arts, literature, social sciences. Examples include Berlin at the turn of the century; Paris in literature and film; Tokyo in history and literature. Offered as WLIT 300 and WLIT 400. Prereq: Graduate standing.

WLIT 401. Greek Prose Authors. 3 Units.
Readings from authors such as Plato, Lysias, Xenophon, and Herodotus. Offered as GREK 201, GREK 401, WLIT 201 and WLIT 401.

WLIT 402. Introduction to Greek Poetry. 3 Units.
Primarily readings from Homer, Hesiod, and Theocritus. Selections from Greek lyric may be introduced at the instructor’s discretion. Offered as GREK 202, GREK 402, WLIT 202, and WLIT 402.

WLIT 405. Readings from the Epic of Gilgamesh. 3 Units.
In this course, we will read the entire Standard Babylonian recension of the Epic of Gilgamesh, considered the first great work of literature, from the original Akkadian text. While the primary goal of the course will be to become proficient readers of Akkadian, we will take some excursus on topics such as Babylonian religion, whether Gilgamesh was a historical figure or not, how the text was put together, and its possible influence on later heroic traditions such as the Greco-Roman. Offered as AKKD 205, AKKD 405, WLIT 205 and WLIT 405. Counts for CAS Global & Cultural Diversity Requirement. Prereq: AKKD 101 and AKKD 102.

WLIT 406. Tragedy. 3 Units.
Reading and interpretation of selected plays of Aeschylus, Euripides, and Sophocles. Offered as GREK 306, GREK 406, WLIT 306, and WLIT 406.
WLIT 407. History. 3 Units.
Extensive reading in Thucydides' History of the Peloponnesian War, especially Books VI and VII, the expedition against Syracuse. Offered as GREK 307, GREK 407, WLIT 307 and WLIT 407.

WLIT 408. Immigration and the Paris Experience. 3 Units.
Three-week immersion learning experience living and studying in Paris. The focus of the course is the culture, literature, and the arts of the African, Arab, and Asian communities of Paris. At least half of the course looks at issues surrounding immigration that affect women in particular. Students spend a minimum of fifteen hours per week visiting cultural centers and museums and interviewing authors and students about the immigrant experience. Assigned readings complement course activities. Students enrolled in FRCH 308/408 do coursework in French. WLIT 308/408, ETHE 308, and WGST 308 students have the option of completing coursework in English. Graduate students have additional course requirements. Offered as FRCH 308, WLIT 308, ETHE 308, WGST 308, FRCH 408, and WLIT 408. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

WLIT 411. Homer. 3 Units.
Reading and translation of extensive selections from the Odyssey. Introduction to epic meter, to Homeric Greek, and to the poet's style. Consideration of evidences of oral composition and discussion of the heroic tradition. Offered as GREK 311, GREK 411, WLIT 311 and WLIT 411.

WLIT 418. Comedy. 3 Units.
Origin, ambiance, and development of Greek Old Comedy and persisting characteristics of the genre. Translation of selected plays from Greek into English. Offered as GREK 308, GREK 408, WLIT 318, and WLIT 418.

WLIT 419. Greek Tragedy: Plays and Performance in Ancient Athens. 3 Units.
This course provides students the opportunity to read a significant number of ancient Greek tragedies in modern English translations. We read, study, and discuss selected works by Aeschylus, Sophocles, and Euripides, as well as selected criticism, ancient and modern, of these plays. All semester we read the plays as literature composed for performance. We study literary elements within the plays and theatrical possibilities inherent in the texts. As we read the plays, we pay close attention to the historical context and look for what each play can tell us about myth, religion, ethics, and society in ancient Athens. Finally, we give attention to the way these tragic dramas and the theater in which they were performed have continued to inspire literature and theater for thousands of years. Lectures provide historical background on the playwrights, the plays, the mythic and historical background, and possible interpretation of the texts as literature and as performance pieces. Students discuss the plays that they read in class. The course has three examinations and a final project that includes writing an essay and staging a monologue or scene from one of the tragedies. Offered as CLSC 319, CLSC 419, THTR 319, THTR 419, WLIT 319, and WLIT 419. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 422. Theater in Ancient Rome. 3 Units.
This course is designed as a continuation of and companion to CLSC/THTR/WLIT 319/419 Greek Tragedy: Plays and Performance in Ancient Athens, although it may be taken without having taken, or before having taken, that course. Students in Theater in Ancient Rome will read a significant number of ancient Roman plays in modern English translation and study non-literary theatrical entertainment of the Roman Republic and Empire, that may include mime and pantomime, gladiatorial shows, political speeches, courtroom drama, and various other spectacles. The dramatic texts that we shall study include the fragments of early Latin drama, selected comedies by Plautus and Terence, and the tragedies of Seneca. We shall also consider Greek and Roman literature that comments on Roman theatrical practices. These works will be read for their literary merits and theatrical possibilities, while at the same time examining them for what they can tell us about Roman civilization. Similarly, when studying the non-literary theatrical works we shall examine historical and theatrical context including archaeological evidence from theaters and amphitheaters and material remains (masks, depictions of actors and gladiators on vases, terra cotta lamps, mosaics, etc.). Finally, while the majority of the course focuses on drama originally written in Latin and theatrical entertainments performed in ancient Rome, the course may include a brief survey of selected post-classical works indebted to the tradition of Roman drama and theater. Authors that may be studied include Hrotsvitha, Marlowe, Shakespeare, Racine, Molière, and the legacy of Roman drama and theater in contemporary stage and cinema such as Sondheim's A Funny Thing Happened on the Way to the Forum. Thus a secondary concern will be to consider how and in what ways the legacy of Roman drama and theater has continued to shape the dramatic arts since antiquity. Offered as CLSC 322, CLSC 422, THTR 322, THTR 422, WLIT 322, and WLIT 422. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 425. Hispanic Intellectuals and Society: A Critical Approach. 3 Units.
This course offers an overview of the most important critical approaches to Spanish American culture and literature, with a socio-historical emphasis. Some of the authors we will discuss are Angel Rama, Jose Antonio Cornejo Polar and Nestor Garcia Canclini. We will analyze how the Latin American intellectuals had thought about specific issues such as identity, race, ideology, colonial and post-colonial relations with the metropolis and the process of formation of the nations in the continent. The class, the discussions, exams, oral presentations and papers will be in Spanish. Some of the readings must be in English, but most of them will be in Spanish. Offered as SPAN 325, SPAN 425, ETHE 325, WLIT 325 and WLIT 425. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 432. Vergil. 3 Units.
Primarily readings from The Aeneid; selections from Vergil's other work may be introduced at instructor's discretion. Recommended preparation: LATN 201 or equivalent. Offered as LATN 202, LATN 402, WLIT 232 and WLIT 432.

WLIT 434. Literature of the Republic. 3 Units.
A reading course in prose and poetry of the Roman Republic. Extensive selections from Cicero and Catullus, and one comedy of Terence. Offered as LATN 305, LATN 405, WLIT 334, and WLIT 434.
WLIT 436. Elegiac Poetry. 3 Units.
In this course we shall translate and interpret selected elegies by Catullus, Tibullus, Propertius, and Ovid. We will also devote considerable class time to the reading and in-depth analysis of the major secondary literature, starting with the introductory pieces in the newest companions published by Brill and Cambridge, and moving on to fundamental articles and perhaps even a full scholarly monograph. Offered as LATN 356, LATN 456, WLIT 336, and WLIT 436.

WLIT 441. Latin Prose Authors. 3 Units.
Reading and discussion of such prose authors as Cicero, Caesar, Livy or Pliny. Offered as LATN 201, LATN 401, WLIT 241 and WLIT 441.

WLIT 447. Livy. 3 Units.
Readings in Books I and XXI, with other selections from this major Augustan historian. Offered as LATN 307, LATN 407, WLIT 347, and WLIT 447.

WLIT 448. Horace: Odes and Epodes. 3 Units.
Readings and discussion of extensive selections from the poetry of Horace; consideration of Horace as exemplifying the spirit of the Augustan Age. Offered as LATN 308, LATN 408, WLIT 348, and WLIT 448.

WLIT 449. Medieval Latin. 3 Units.
Reading and interpretation of Latin texts from the Middle Ages. Material selected according to the needs and interests of students. Offered as LATN 309, LATN 409, WLIT 349, and WLIT 449.

WLIT 451. Latin Didactic Literature. 3 Units.
Readings from didactic poetry such as Lucretius and Vergil's Georgics. Parodies like Ovid's Ars Amatoria or prose treatises may also be introduced. Offered as LATN 351, LATN 451, WLIT 351, and WLIT 451.

WLIT 452. History. 3 Units.
Works of the Roman historian Cornelius Tacitus; his Annals I-VI dealing with his portrait of Emperor Tiberius and the Empire after the death of Augustus. Offered as LATN 352, LATN 452, WLIT 352, and WLIT 452.

WLIT 453. Science and Technology in France. 3 Units.
This course is an exploration of the development of science and technology in France, from their rise in the 18th and 19th centuries to their recent renaissance, from both a scientific and a humanities perspective. A significant component will focus on the contributions of women to science in France. Site visits in France will include the Marie Curie laboratory, the Pasteur Institute, and the Museum of Natural History. Readings will come from the fields of history of science, French cultural history, and French literature. Offered as FRCH 328, FRCH 428, WGST 333, WLIT 353 and WLIT 453. Counts for CAS Global & Cultural Diversity Requirement.

WLIT 454. Drama. 3 Units.
Reading of at least one play each by Plautus and Terence. Attention to the history of Latin and Greek New Comedy, and the contrasting styles of the two authors. Offered as LATN 354, LATN 454, WLIT 354, and WLIT 454.

WLIT 463H. African-American Literature. 3 Units.

WLIT 465E. The Immigrant Experience. 3 Units.
Study of fictional and/or autobiographical narrative by authors whose families have experienced immigration to the U.S. Among the ethnic groups represented are Asian-American, Jewish-American, Hispanic-American. May include several ethnic groups or focus on a single one. Attention is paid to historical and social aspects of immigration and ethnicity. Maximum 6 credits. Offered as ENGL 365E, ENGL 365EC, ENGL 465E, WLIT 365E and WLIT 465E. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

WLIT 465N. Topics in African-American Literature. 3 Units.
Selected topics and writers from nineteenth, twentieth, and twenty-first century African-American literature. May focus on a genre, a single author or a group of authors, a theme or themes. Maximum 6 credits. Offered as AFST 365N, ENGL 365N, ETHS 365N, WLIT 365N, ENGL 465N, and WLIT 465N. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

WLIT 465Q. Post-Colonial Literature. 3 Units.
Readings in national and regional literatures from former European colonies such as Australia and African countries. Maximum 6 credits. Offered as ENGL 365Q, ENGL 365QC, ETHS 365Q, WLIT 365Q, WLIT 465Q, and WLIT 465Q. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

WLIT 466G. Minority Literatures. 3 Units.
A course dealing with literature produced by ethnic and racial minority groups within the U.S. Individual offerings may include works from several groups studied comparatively, or focus on a single group, such as Native Americans, Chicanos/Chicanas, Asian-Americans, Caribbean-Americans. African-American works may also be included. May cover the entire history of the U.S. or shorter periods. Maximum 6 credits. Offered as ENGL 366G, WLIT 366G, ENGL 466G, and WLIT 466G. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

WLIT 466N. Topics in Film. 3 Units.
Individual topics include Horror Films, Storytelling & Cinema, Science Fiction Films, Films of Alfred Hitchcock, American Cinema & Culture, History of Cinema, and many others. This course has no prerequisites and welcomes first year students. Other than the number of credits from one department a student can apply toward graduating, there is no limit to the number of times Topics in Film can be taken. A student who has previously taken ENGL 368C may receive credit for ENGL 368 only if the themes/topics are different. Offered as ENGL 368, ENGL 468, WLIT 368, and WLIT 468. Prereq: Graduate standing.

WLIT 470. Greek Prose Composition. 3 Units.
This course introduces students to the principles and practice of composing continuous passages of Greek prose. It is designed to review and to strengthen students' command of Attic forms while becoming more aware of the ways Greek syntax was employed to express thought. Via practice at writing Greek prose, the ultimate goal is for the students to become more proficient and sensitive readers of ancient Greek. Offered as GREK 370, GREK 470, WLIT 370 and WLIT 470.
WLIT 485. Hispanic Literature in Translation. 3 Units.
Critical analysis and appreciation of representative literary masterpieces from Spain and Latin America, and by Hispanics living in the U.S. Texts cover a variety of genres and a range of literary periods, from works by Cervantes to those of Gabriel Garcia Marquez. The course will examine the relationship between literature and other forms of artistic production, as well as the development of the Hispanic literary text within the context of historical events and cultural production of the period. Counts toward Spanish major only as related course. No knowledge of Spanish required. Offered as ETHS 385, ETHS 485, SPAN 385, SPAN 485, WLIT 385, and WLIT 485. Counts for CAS Global & Cultural Diversity Requirement. Prereq: Graduate standing.

WLIT 487. Literary and Critical Theory. 3 Units.
A survey of major schools and texts of literary and critical theory. May be historically or thematically organized. Maximum 6 credits. Offered as ENGL 387, WLIT 387, ENGL 487, and WLIT 487. Prereq: Graduate standing.

WLIT 490. Topics in World Literature. 3 Units.
In-depth examination of specific critical and literary theories and of their relevance for literature and culture studies. Authors, works and instructor may vary. Offered as WLIT 390 and WLIT 490. Prereq: Graduate standing.

WLIT 495. Advanced Topics in Akkadian Literature. 3 Units.
Directed readings in selected Akkadian texts in the cuneiform script either of the Old Babylonian or the Neo-Assyrian periods to serve the individual interests and needs of students (texts may be drawn from a variety of text genres: mythological, historical, scientific, medical, correspondence, religious, etc.). Offered as AKKD 395, AKKD 495, WLIT 395 and WLIT 495. Counts for CAS Global & Cultural Diversity Requirement. Prereq: AKKD 101 and AKKD 102.

WLIT 590. Seminar in World Literature. 3 Units.
Topics vary depending on student and instructor interests; may include Postcolonial literature; Latin American literature and film; African Anglophone and Francophone literature. Prereq: Graduate standing.

WLIT 601. Independent Study. 1 - 18 Units.
For graduate students under special circumstances. Prereq: Graduate standing.

WLIT 651. Thesis M.A.. 1 - 18 Units.
(Credit as arranged.)
**FRANCES PAYNE BOLTON SCHOOL OF NURSING**

**History**

The Frances Payne Bolton School of Nursing (http://fpb.case.edu) at Case Western Reserve University is a globally recognized leader in nursing education, research and practice. Our commitment to excellence is visible in our distinguished faculty, small class sizes, world renowned clinical partners and academic innovations. While its roots date back to 1898 with the founding of the Lakeside Hospital Training School for Nurses, the school was formally established in 1923 as one of the first two colleges of nursing within a university through a gift from its namesake, Frances Payne Bolton, the first congresswoman from Ohio.

Today, the School of Nursing offers curricula for students at all levels of study including undergraduate, graduate entry and advanced nursing practice and leadership. Master's level instruction prepares graduates to sit for certification and to practice in a range of specialties including: nurse midwifery, acute and primary care in adult-gerontology and pediatrics, care of families, care of neonates, family psychiatric mental health, women's health, as well as education with a focus on populations. The school of nursing also offers both the Doctor of Nursing Practice (DNP) that includes a post baccalaureate nurse anesthesia track, and the PhD in Nursing, as well as dual doctorate programs. Areas of research include symptom science, family and community care, aging across the lifespan, self-management of health and illness, and neuroscience.

**Strategic Vision**

**Mission**

Create and empower nurse leaders who develop and implement innovative and interprofessional research, education and practice activities that make a positive difference in the health of individuals and communities.

**Vision**

To be recognized globally as an academic community of excellence that builds on our strengths and traditions to provide leadership in nursing research, education and practice in evolving, interprofessional health and scientific communities.

**Purpose**

The purpose of the Frances Payne Bolton School of Nursing is to provide an environment that encourages individuals to develop their personal and professional capabilities, including the sense of responsibility for continued learning; to learn as efficiently and effectively as possible; to find enjoyment, excitement, and challenge in the pursuit of knowledge and its application; and to develop behaviors that enable them to function in a changing, complex society. As an integral component of Case Western Reserve University, the school assumes responsibility for the preparation of individuals committed to excellence and leadership in the profession of nursing. The faculty of the school accepts the responsibility for teaching and scholarly inquiry as integral parts of the educational process.

**Philosophy**

FPB has set forth the following philosophy to accomplish the stated mission.

Nursing is an academic discipline and profession. Nursing as an academic discipline is a distinct branch of human knowledge fundamental to nursing practice, nursing education, and nursing administration, and to the continuous development of the profession. The distinct perspective of nursing includes a focus on the meta-paradigm concepts of persons, health, environment, and nursing. The conceptual focus within FPB is on health-seeking mechanisms and behaviors of human beings. Some of those mechanisms and behaviors are innate; others are learned or developed and may be subject to the influence of nurses’ knowledgeable ministrations. The body of nursing knowledge is continuously advanced, structured, and restructured as a consequence of a range of methods including scientific inquiry, philosophic inquiry, historical inquiry, and clinical evaluation.

Scientific inquiry within nursing is designed to discover, advance, and clarify knowledge about determinants and correlates of optimal biological, psychological, and social functioning; physical, emotional and spiritual comfort; and individual and group attainment of health goals in multiple environments and under a variety of circumstances (including illness and injury) attendant to birth, living, development, decline, and death. Philosophic inquiry is undertaken to clarify the values that underlie consumers’ and nurses’ responsibilities for human health promotion, the ethics of nursing practice, and the nature of the body of knowledge known as nursing. Historical inquiry is undertaken to document significant influences (by events and individuals) on the development of nursing over time as a body of knowledge and as a profession. Clinical evaluation is designed to test and verify the relative efficacy of strategies used in nursing administration, consultation, education, and practice, and the means employed to advance nursing knowledge.

Professional nurses have mastery over a body of scientific and humanistic knowledge that is fundamental to their particular kinds of practice. They selectively use this knowledge in the execution of their professional responsibilities and in the attainment of professional goals. Those involved in differentiated nursing practices employ nursing technologies (skills and approaches that represent the application of scientific knowledge), using artistry in the execution of their professional responsibilities. Professional nurses’ several, particular practices are guided by a code of professional ethics and also by knowledge about the individuals and groups whom they serve. The nurse’s professional goal is to appraise accurately and to enhance effectively the health status, health assets, and health potentials of individuals, groups, families, and communities and to promote the initiative and independence of those they serve in the attainment of reasonable health goals, mutually agreed upon by consumers and by nurses as their health care providers. Nursing practice includes assisting persons in the maintenance of health, detecting deviations from health, assisting persons in the restoration of health, and supporting persons during life. These responsibilities are accomplished through a systematic and deliberative process. Nursing practice includes independent and interdependent functions and nurses are an integral part of the health care system.

Other beliefs essential to nursing that are shared by the faculty are stated below.
Nursing Strategies
Nursing strategies can be categorized according to the function they serve in facilitating clients' health-seeking behaviors. A tentative classification scheme according to the function strategies is set forth below. Within each category, there are multiple behaviors from which the nurse can select depending on the nature of the clients' assets and deficits. Also, each category is open to the discovery of more activities than are presently known. Each category focuses on facilitating health-seeking behaviors.

Compensating: Performing selected activities or measures (including monitoring) for clients when they are unable to do these activities.

Teaching: Performing actions intended to induce learning.

Counseling: Assisting clients to examine an alternative course of action.

Supporting: Promoting clients' ability to cope, adapt and change.

Stimulating: Promoting clients' desire to perform health-seeking behaviors.

Advocating: Intervening on behalf of the client to overcome obstacles that are interfering with health-seeking behaviors.

Comforting: Providing an environment that promotes ease and well-being.

The choice of nursing strategies for enhancing client's health-seeking behaviors is based on assessment of these behaviors and the intervening variables to determine the assets and deficits and potential for engaging in behaviors that are directed toward attaining, maintaining or regaining an optimal level of health.

FPB Accreditation and Approvals
Accreditation
Case Western Reserve University is accredited at the institutional level by the Higher Learning Commission:

Higher Learning Commission
230 South LaSalle Street
Suite 7-500
Chicago, Illinois 60604-1411
Phone: 800.621.7440 / 312.263.0456
Fax: 312.263.7462
info@hlcommission.org

The University is chartered as an educational institution under the laws of the State of Ohio and holds a Certificate of Authorization from the Ohio Department of Higher Education (https://www.ohiohighered.org/) (formerly known as the Ohio Board of Regents).

In addition, many of the individual nursing programs are accredited by nationally recognized professional associations, including:

The Bachelor of Science in Nursing (BSN) (https://nursing.case.edu/bsn/), Master of Nursing (https://nursing.case.edu/mn/) (MN), Master of Science in Nursing (MSN) (https://nursing.case.edu/msn/), Post-Graduate APRN Certificate (https://nursing.case.edu/programs/certificate/), and Doctor of Nursing Practice (DNP) (https://nursing.case.edu/dnp/) programs at Case Western Reserve University are accredited by the Commission on Collegiate Nursing Education (CCNE) through June 30, 2031. The next accreditation visit is due in 2030.

Director, Information Technology

Facilities

Instructional Facilities

With internationally renowned faculty engaged in teaching, research, and community service, FPB offers high quality academic programs. Instruction includes lectures, seminars, individual conferences and small
group discussions, and clinical experiences. The FPB School of Nursing, located at the Health Education Campus, provides a state of the art inter-professional education environment where nursing, medical, dental medicine and physician assistant students learn with and from each other. The eleven acre campus is the site of the Sheila and Eric Samson Pavilion. This 477,000 square-foot facility features a central atrium where students can gather, study and eat together, an innovation laboratory, 26 academic classrooms (including “team-based learning” classrooms) and simulation labs where collaborative learning take place.

**Clinical Facilities**

Instructional facilities are abundant and varied. University Hospitals Cleveland Medical Center (http://www.uhhospitals.org/) established in 1866 is a 1,032-bed tertiary, academic medical center specializing in adult/pediatric medical and surgical specialties and is an aggregate of specialized hospitals that includes Alfred and Norma Lerner Tower, Samuel Mather Pavilion and Lakeside Hospital for adult medical/surgical care; Rainbow Babies and Children's Hospital ranked #4 nationally for Neonatal Care by the U.S. News and World Report; University MacDonald Women's Hospital, Ohio’s only hospital for Women; Seidman Cancer Center (formerly known as the Ireland Cancer Center); University Psychiatric Center-Hanna Pavilion, University Hospitals Institute for Health Care Quality & Innovation, skilled nursing and rehabilitation services and home health care. University Hospitals is part of the University Hospitals Health System with services provided at 150 locations in 40 northern communities. University Hospitals Cleveland Medical Center is an affiliate of Case Western Reserve University. Together, they form the largest center for biomedical research in the state of Ohio. University Hospitals Cleveland Medical Center is home to world class clinical and research centers, including cancer, pediatrics, women's health, orthopedics, spine, radiology, radiation oncology, neurosurgery neuroscience, cardiology, cardiovascular surgery, organ transplantation and human genetics.

The Cleveland Clinic Health System (https://my.clevelandclinic.org/) is a multi-specialty academic medical center founded in 1921. Main Campus has 1,400 beds and 4,435 beds system-wide. The Cleveland Clinic is one of the largest and most respected hospitals. Cleveland Clinic main campus, Fairview Hospital, Hillcrest Hospital, South Pointe Hospital and Akron General Hospital are all designated as Magnet status hospitals, the most sought after indicator of nursing excellence. Cleveland Clinic Health System is comprised of the Cleveland Clinic main campus, Cleveland Clinic Children's Hospital located within the main campus, Euclid Hospital, Fairview Hospital, Lutheran Hospital, Marymount Hospital, Medina Hospital, South Pointe Hospital, Hillcrest Hospital, Ashtabula County Medical Center, Avon Hospital, Cleveland Clinic Florida (Weston, West Palm Beach), Lou Ruvo Center for Brain Health, Las Vegas, Nevada and The Glickman Urological & Kidney Institute in Las Vegas, and Cleveland Clinic Abu Dhabi, Cleveland Clinic London, Cleveland Clinic Canada. The system also includes Akron General Health System, Visiting Nurse Service and Affiliates, Hospice of VNS, Lodi Community Hospital, Edwin Shaw Rehabilitation Institute, an outpatient clinic in Toronto, Ontario and three health and wellness centers. It is nationally recognized as one of the top medical centers in the US and the world, particularly in technological and management systems and in the treatment of cardiovascular disease.

MetroHealth Medical Center (https://www.metrohealth.org/) established in 1837, is a 642-bed hospital that includes a Level I Adult Trauma, Level II Pediatric Trauma Center, and a verified regional Burn Center, a skilled nursing facility and more than 25 locations throughout Cuyahoga County with more on the way. MetroHealth is one of three teaching hospitals that make up the Case Western Reserve University Integrated Surgical Program. Annually, MetroHealth medical center handles more than one million patient visits including more than 100,000 in the Emergency Department, one the busiest in the country. That’s an average of 274 Emergency Department visits per day. The John A. Gannon Comprehensive Burn Care Center (https://www.metrohealth.org/burn/) is one of only two burn centers in Ohio treats more than 1,700 outpatient and inpatient burn injuries every year. The 27-bed Surgical Intensive Care Unit admits more than 2,000 critically ill surgical patients per year. The Elisabeth Severance Prentiss Center at MetroHealth is a long term skilled nursing facility. In 2014 the Centers for Disease Control designated MetroHealth as an official Ebola Treatment Center, the only one in Ohio.

The Louis Stokes Cleveland Veterans Administration Medical Center (https://www.cleveland.va.gov/) (VAMC) is one of five facilities constituting the VA Healthcare System of Ohio. A full range of primary, secondary and tertiary care services are offered to an eligible Veteran population covering 24 counties in Northeast Ohio. Comprehensive, seamless health care and social services are provided to more than 111,500 veterans each year through an inpatient tertiary care facility (Wade Park). With 18 locations of care, including 13 outpatient clinics, two community resource and referral centers, a psychosocial resource rehabilitation center, a chronic dialysis center and an ambulatory surgery center, the Northeast Ohio VA Healthcare System's quality services are easily accessible to Veterans in 24 counties.

Additional opportunities are available in a variety of health, social, and educational agencies. These include, for example, Benjamin Rose Institute, Hospice of the Western Reserve, Judson Park Retirement Community, The Cleveland Visiting Nurses Association, Cleveland Public Health Department, the Cleveland Metropolitan School District, and many others.

**Libraries**

The Kelvin Smith Library (http://library.case.edu/ksl/aboutus/), a 144,000 square foot building completed in 1996, houses most of the collections of Case Western Reserve University. This includes over 1,290,000 monographs, 7,363 serial titles, U.S. Government publications, company annual reports, newspapers, CDs, technical reports, over 12,000 DVDs and videos, and more. The library enables users to integrate both traditional resources and state-of-the-art technology into teaching, research, and learning. A variety of seating styles accommodates 900 people and provides electrical ports for connecting personal laptop computers. Case Western Reserve’s wireless network enables personal laptops to have internet access throughout the library. Two multimedia rooms include scanners and sound and video digitizers. Available are individual study spaces, meeting rooms, conference areas, and social gathering spaces. Thirty miles of compact movable shelving allows the library to keep much of its collection onsite for immediate access to print materials. The user-friendly interface to the online catalog, databases, and other resources allows library staff to focus their attention on working in-depth with faculty and students.

The Cleveland Health Science Library (https://case.edu/chslibrary/)(CHSL) serves as the library system for the Schools of Medicine, Dental Medicine, Nursing, and the Departments of Biology and Nutrition. The CHSL was formed in 1965 by an agreement between the Cleveland Medical Library Association (CMLA) and Western Reserve University. CHSL operates in two locations: The Allen Memorial Medical Library (https://case.edu/chslibrary/about-us/allen-memorial-medical-library/), which has a collection of clinical books and journals, basic
sciences, nursing, dentistry, and biology books, journals, audiovisuals, microforms, as well as a collection of rare and historical books; and the Health Education Campus Library (https://case.edu/chslibrary/our-locations/health-education-campus-library/), which is a quiet study area, and the place where students can check out books on reserve for courses. The combined collections total over 430,000 volumes including electronics and collectibles, with print and electronic journal subscriptions numbering in excess of 60,000, electronic books numbering over 60,000 and print books numbering over 118,500. Personal and institutional members of the CMLA and faculty, students and staff of CWRU have borrowing privileges. The Cleveland Health Sciences Library serves as a resource library in the Greater Midwest Region of the National Network of Libraries of Medicine (https://nnlm.gov/). CHSL also participates in OhioLINK (https://www.ohiolink.edu/), OHIONET (https://www.ohionet.org/), and OCLC (https://www.oclc.org/en/home.html).

In addition, the Allen Memorial Medical Library is home to the Dittrick Medical History Center (https://artscli.case.edu/dittrick/) (College of Arts and Sciences) and its archives, medical artifacts, and books on the history of medicine. The Allen has two technology supported classrooms, one large conference room (often used for courses), three large quiet study rooms, and main reading room. The first technology supported classroom is the Ford Auditorium, with a seating capacity of 472, and is supported by University Technology (UTech) and Level 2 technology classroom. The second technology classroom is the Herrick Room, with a capacity of 24, and a UTech Level 1 classroom. Case Western Reserve University’s wireless network is available throughout all library spaces. The two combined library spaces are open 167 hours per week. The CHSL staff includes 4 FTE librarians, and 3 FTE paraprofessional and technical staff.

**FPB School of Nursing Information Technology Services**

The Frances Payne Bolton School of Nursing (SON) has an assigned Information Technology Services team. This team is part of the University Technology (UTech) Division, managing and overseeing all computer related operations within the school. The team assists faculty, staff and students with any computer problems, issues, needs, or equipment purchases. This team manages the Help Desk, provides troubleshooting of problems, and repairs all school-owned equipment. The SON UTech team provides assistance with the School’s website and develops web applications to meet the needs of the school. The team also administers online application, review, and customer relations management systems, as well as a variety of other IT systems and tasks.

The Health Education Campus (HEC) has an UTech Care Center (Tech Bar) located at the south end of the atrium on the first floor of Samson Pavilion. The HEC Support team assists all faculty, students and staff in the HEC with computer problems, connectivity issues, or repairs; providing technical support to resolve identified needs. A limited supply of loaner laptops are available through the Tech Bar which students can request for use for a limited amount of time.

The hours of operation for the Tech Bar are 8:00am - 5:00pm, Monday - Friday. The team is also available by emailing hecsupport@case.edu.

While the University is working remotely, assistance is available via the online Zoom Room: https://cwr.zoom.us/my/hecsupport/ (8:00 am - 5:00 pm (EST), Monday - Friday). For after-hours assistance, contact the University Helpdesk by emailing help@case.edu or calling 216-368-HELP (4357).

The HEC has extensive wireless access for all users, including access to the Internet and University software tools throughout the building. Students also have access to four wireless printing kiosks located on the first and fourth floors of the building. The HEC provides the most advanced technology possible to enhance and accelerate education.

**Center for Nursing Education, Simulation & Innovation (CNESI)**

The Center for Nursing Education, Simulation & Innovation is located on the second floor of the Samson Pavilion at the Health Education Campus (HEC) and is composed of two labs: Physical Assessment Lab and Clinical Teaching Bed Lab, and a separate Medication Room.

**Physical Assessment Lab**: This ten-bed lab is for pre-licensure students (BSN and MN) and graduate nurse practitioner students (MSN) learning basic and advanced physical assessment skills. The room is fully equipped with ten electronic exam tables that have inclining headrests, extending leg supports, storage drawers, and optional stirrups. To ensure privacy, the lab has custom ceiling-mounted privacy drapes at each bed station. Each station has electronic Welch Allyn otoscopes along with 3 sizes of clean gloves, sharps disposal units and wall-mounted blood pressure cuffs. The physical assessment lab has extensive locked storage for 10 Welch Allyn and 16 ADC Diagnostic kits, 20 various-sized blood pressure cuffs, 4 electronic blood pressure cuffs, and 10 single and 6 double headed stethoscopes for student and faculty use. Students also have access to several high fidelity human patient simulators, task trainers, anatomical ear and eye models, two full body skeletons, breast and prostate models, a DVD library, and two large screen video display boards to support our undergraduate and graduate lab sessions.

**Clinical Teaching Bed Lab**: This lab is comprised of 10 patient bed stations each with a static Laerdal Medical manikin. The lab simulates an in-patient medical-surgical or step-down unit and has a full-sized ADA hospital bathroom designed to provide students with the opportunity to learn how to transfer a patient in and out of the bathroom, to the shower, and to the commode. The center contains all of the common devices seen in the hospital setting including a Hoyer lift, Geri chair, wheelchair, canes, crutches, linen carts, ventilators, ceiling-mounted privacy drapes, sharps disposal units, and head wall units at each patient bed to simulate oxygen delivery and wall suction. Pre-licensure students use this lab to learn and practice every essential nursing skill from hand washing and bed making to wound irrigation and managing a ventilated patient. The center also has three medication carts, 6 smart IV pumps, and extensive locked storage for IV tubing, IV solutions, dressing supplies, catheters, chest tubes, Foley catheters, sterile gloves, sterile gowns, bedpans, urinals, and tracheostomy supplies. The lab has an extensive DVD library and two large screen video display boards to support our undergraduate and graduate lab sessions.

**Medication Room**: The medication room is adjacent to the Clinical Teaching Bed Lab and is equipped with an academic version of the Pyxis Medication dispensing system, bar coding techniques, and synthetic medications. The medication room has extensive locked cabinets, a sink, and counter space to provide a realistic setting for best practices of preparing patient medications.

In the HEC, nursing students have access to the following shared lab spaces that foster interprofessional education:

**Acute Care Flexible Simulation Labs**: These three labs are set up with portable head walls, one way glass, a large screen video display board, and video/audio capabilities for recording and debriefing and high-stakes testing. The labs can be set up for any high fidelity simulation with access to a family of Laerdal and Gaumard high fidelity human patient simulators: Sim-Man Essential, Sim-Baby, Sim Child, Sim Newbie, Sim Junior, and Lucinda birthing simulator. All pre-licensure
students and nurse practitioner students utilize these labs on a weekly basis throughout each semester for simulation training on human patient simulators; practicing various advanced nursing skills on task trainers; viewing skills and simulation videos; and conducting pediatric and obstetric labs and simulation sessions. Each acute care flexible simulation lab has a large screen video display board to support our undergraduate and graduate lab sessions.

Private Exam Rooms: 20 private exam rooms each equipped with a physician-grade exam table, side chair, exam stool, and built in otoscope and ophthalmoscope provide the opportunity for students to practice and review communication and assessment skills with faculty, peers, and standardized patients. Each room has one way glass, video and audio capability, and a small screen video display board allowing faculty to record exemplars and provide feedback on student practice, testing, and final examinations. Standardized patients (SPs) are hired for formative, summative, and high stakes testing situations and adjacent small and large debriefing rooms allow for private or class meetings prior to or following SP sessions.

Steris Perioperative Lab: This interprofessional lab contains a fully functioning Steris 3080 operating room table and fluid/blanket warmer, a full set of surgical instruments, back and gown tables, locked supply cabinets, pulse oximeters, and an educational anesthesia machine, endoscopy, and Bovie machine. Students learn basic perioperative safety skills including: aseptic technique, patient positioning, handling of surgical instruments, and communication hand-over techniques related to perioperative nursing and nurse anesthesia patient care. Audio and video capabilities allow for recording of formative and summative simulations and adjacent classrooms allow for pre-briefing and debriefing opportunities. The Steris Perioperative lab has two large screen video display boards to support our undergraduate and graduate lab sessions.

Bachelor of Science in Nursing (BSN)

https://case.edu/nursing/programs/bsn (https://case.edu/nursing/programs/bsn/)
Phone: 216.368.8839
Beverly Capper, DNP, RNC-NIC, Interim Program Director
bjc40@case.edu

Bachelor of Science in Nursing

The BSN program emphasizes intensive and early clinical experience, a strong foundation in acute care nursing, and a commitment to service to our community. Our students begin their clinical experience in the first term of the freshman year and complete their program with a 280-hour clinical preceptorship in the senior year. Students graduate with over 1300 hours of clinical experience, exceeding that of other schools of nursing. In addition, students provide healthcare services to children and families—collectively amassing approximately 16,000 hours of service to local schools alone each year.

The student-learning environment includes traditional classrooms, world-class clinical facilities, community settings and the Center for Nursing Education, Simulation & Innovation (http://case.edu/nursing/students/center-for-nursing-education-simulation-and-innovation/) (CNESIL). Clinical experiences occur in Cleveland's nationally and internationally renowned health care facilities including University Hospitals of Cleveland, the Cleveland Clinic, the MetroHealth Medical Center System, and the Veterans Administration. Students also have extensive experience in community health departments, community centers and the Cleveland Metropolitan School District.

The opportunities available to students are limitless. Students are encouraged to participate in interdisciplinary research projects with faculty. They have the opportunity to explore health issues in the global arena and to study at national sites as part of their standard curriculum.

Graduates have a foundation in the discipline of nursing, demonstrate leadership in clinical practice, use clinical inquiry to advance practice, become involved in research, quality improvement, and assume responsibility for their own professional development.

Student Learning Outcomes

1. Demonstrates the ability to integrate principles of evidence-based practice and quality improvement to deliver safe patient-centered care.
2. Exhibits leadership skills to optimize health care outcomes, influence health policy and advance the nursing profession.
3. Demonstrates clinical reasoning that promotes a culture of quality and safety to individuals, families and populations.
4. Collaborates with interprofessional teams, fostering open communication and shared decision making to ensure safe, high quality and cost-effective care.
5. Integrates behaviors, values and the professional code that reflects the nursing profession.
6. Explains the benefits of utilizing health care information systems and technologies to promote safe, patient-centered care and support decision making.
7. Recognizes the individual as a full partner in coordinating care that promotes health and well-being based on respect of their preferences, values and needs.

Progression in the BSN Program

Progression in the Bachelor of Science in Nursing program is contingent upon satisfactory academic achievement in all required courses. To maintain satisfactory academic standing, students must attain a GPA of 2.00 or above by the end of their junior year and must obtain a C or above in all nursing and science courses counting toward the major. Students who receive two unsatisfactory grades (D or F) in nursing and/or natural and behavioral science courses may be subject to separation from the school of nursing. See the Undergraduate Student Handbook (https://nursing.case.edu/students/student-resources/student-handbook/) for a description of the criteria for academic standing.

Students who receive a grade of Incomplete (I), given at the discretion of the instructor for the course, must complete course requirements by the eleventh week of the following semester. It is the student's responsibility to notify the instructor of the circumstances preventing completion of all assigned work. In the absence of notification or adequate justification, the instructor may give the student a final grade that assumes a failing grade for the missing work. If a student fails to submit the work required for removing the Incomplete by the date established or by the eleventh week of the following semester, the instructor will give a failing grade (F). The grade will convert from I to F when the deadline for making up incomplete grades from a previous semester has passed.

Students who receive a grade below C for a nursing course or a science course that counts toward the major must register for that course the next semester that it is offered. If the student fails to meet the University's requirement for good academic standing, the student is
placed on academic probation. If the GPA does not improve the next semester, the Academic Standing Board of the Faculty Senate Committee on Undergraduate Education will review the student's record to determine whether extenuating circumstances warrant an additional semester of probation or separation from the university.

Advising
In addition to your Sages advisor, each freshman nursing student will have a first year nursing advisor assigned to them. This is to assure a smooth transition during freshmen year. Varsity athletes who are also majoring in nursing will have a specific nursing advisor during the time they participate in varsity sports.

Curriculum
This four-year baccalaurate program for high school graduates leads to a BSN degree. Upon successful completion of the program, graduates will be eligible to sit for the NCLEX examination (http://www.ncsbn.org/) for licensure as a Registered Nurse (RN). A sample study plan also demonstrates how a BSN student might schedule the required courses.

The FPB School of Nursing has the right to determine a student’s readiness to sit for the NCLEX-RN examination and the right to restrict testing until the student demonstrates a readiness to pass this examination. This examination is given by State Boards of Nursing, and satisfactory completion of this examination graduate the student to practice as an RN in the state for which the examination was taken.

Degree Requirements
Candidates for the Bachelor of Science in Nursing degree must complete the following:

1. Minimum of 121.5 hours as specified by the requirements with a 2.000 GPA
2. A minimum of C for all courses taken in nursing and science courses counting toward the major
3. A minimum of 50 credit hours in 300 and 400 level courses
4. The SAGES General Education Requirements for the School of Nursing

For those with experience in the armed forces of the United States, or in the National Guard or in a reserve component, the BSN program will (a) Review the individual's military education and skills training; (b) Determine whether any of the military education or skills training is substantially equivalent to the curriculum established in Chapter 4723-5 of the Ohio Administrative Code; and (c) Award credit to the individual for any substantially equivalent military education or skills training. (In accordance with Ohio Revised Code 4723-5)

The BSN program includes nursing, science and liberal arts courses. A minimum of 121.5 credit hours, with at least 50 credits from upper division courses, are required for award of the BSN degree. Students must meet the University requirements for graduation. The ratio of clinical hours to credit hours is 4 to 1, and for laboratory hours, it is 2 to 1. The program plan for entry-level students to the BSN program is as follows:

Bachelor of Science in Nursing (BSN)

---
**Master of Nursing (Graduate Entry) Program**

https://case.edu/nursing/programs/mn-graduate-entry (https://case.edu/nursing/programs/mn-graduate-entry/)

Phone: 216.368.8858
Molly J. Jackson, DNP, CNP, ACHPN, CNE, Program Director
mj22@case.edu

The Master of Nursing (Graduate Entry) Program is a full time, graduate-level program designed for students with a baccalaureate degree (BA or BS) in a non-nursing field. The MN program offers a rigorous, accelerated inter-professional education with on-campus classes in our new Health Education Campus. This 20 month, four semester program prepares graduates to take the national licensure exam (NCLEX) to become a Registered Nurse. In addition, graduates earn approximately 15 credits toward an MSN degree following completion of the pre-licensure portion of the program, and awarding of the Master of Nursing (MN) degree. The Frances Payne Bolton School of Nursing has a rich history of preparing national and international nurse leaders.

After earning the MN degree, students may complete their MSN degree without reapplying, or explore options for doctoral study in the DNP or PhD program. Refer to the MSN, DNP and PhD websites for information about these programs. Certain MSN majors have separate RN experience requirements and/or admission processes; a DNP is required for some advanced practice registered nursing specialties.

The MN program has an innovative **quality and safety component** woven throughout the curriculum, emphasizing the importance of the patient experience.

**MN Program Student Learning Outcomes**

The MN (Master of Nursing) is an advanced generalist nursing degree awarded to those who satisfactorily complete the required curriculum. The program outcomes for MN Students are as follows:

**Quality Improvement:** Leads inter-professional, culturally-sensitive, and evidence-based initiatives within organizations and systems to continuously improve the safety and quality of healthcare.

**Research and Scholarship:** Initiates use of theory and research to identify clinical problems or solutions, participates in scientific inquiry, and translates scholarship into practice.

**Nature of Practice:** Assumes the direct and indirect roles and functions of advanced nursing practice to promote health, prevent illness, and improve the health of patients and populations.

**Leadership:** Promotes implementation of the full scope of nursing practice and assumes leadership positions in employer, professional, or community organizations at the local/state/national level.

**Ethics:** Incorporates ethical principles in complex situations of advanced nursing practice and clinical inquiry.

**Collaboration:** Collaborates with other health care professionals to initiate intra- and/or inter-professional teams to enhance practice and patient population health outcomes.

**Communication:** Integrates information, technology, and practice guidelines to promote effective communication among patients and colleagues within health care systems.

**Advocacy and Policy Development:** Advocates for the development of health and social policy to improve health and practice by community engagement and participating in employer and professional organizations.

**Degree Requirements**

**Time Frame for Completion of Degree**

- MN students must complete the program within 4 years of initial enrollment. Students who do not complete the MN curriculum within 4 years are required to reapply for the program; readmission to the program will be determined by the admissions committee.
- Students offered readmission may be required to complete additional coursework upon curricular review in order to meet current MN program requirements.
- Completion of the MSN, DNP, or PhD: refer to policies for those programs.
- Students follow the curriculum of their MSN major in effect at the time they begin the MSN program.

For students with experience in the armed forces of the United States, or in the National Guard or in a reserve component, the Master of Nursing Program Director will (a) Review the individual’s military education and skills training; (b) Determine whether any of the military education or skills training is substantially equivalent to the curriculum established in Chapter 4723-5 of the Ohio Administrative Code; and (c) Award credit to the individual for any substantially equivalent military education or skills training. (In accordance with Ohio Revised Code 4723-5)

**Progression in the Graduate Entry Nursing Program**

**Satisfactory Academic Standing**

Progression in the pre-licensure phase of the Master of Nursing Program is contingent upon satisfactory achievement in all required courses. To maintain satisfactory academic standing, students enrolled must attain and maintain a GPA of 3.0 or above. A grade of C (2.0), the lowest passing grade, is viewed as borderline performance. An overall GPA of 3.0 is required to progress to the post-licensure component of the MN program. If a student’s semester GPA is less than 3.0 or the overall GPA is less than 3.0, the student will be placed on probation and an individualized plan will be developed and documented. The student will be removed from probation when the overall GPA is 3.0 or higher.

The academic record of a student on probation for two semesters will be reviewed by the Executive Committee. The committee will determine whether extenuating circumstances warrant an additional semester of probation, or whether the student should be separated from the program. If separation is advised, the MN Program Director will notify the student in writing.

When a student receives a grade of F for a required course, the student must register for that course the next semester in which the course is available. Refer to the Student Handbook (https://case.edu/nursing/students/student-resources/student-handbook/) for more information on repeating a course with an F grade. MN students who receive two failing grades indicating unsatisfactory performance (F, NP, or U) in required courses will be separated from the Frances Payne Bolton School of Nursing. Progression from one semester to the next in the MN
Program is contingent upon passing grades in all courses taken in the preceding semester.

The grade of Incomplete (I) can only be assigned by the discretion of the instructor when: 1) There are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justifies an extension of time beyond the requirements established for and met by other students in the class, and 2) The student has been passing the course and only an evaluative component of the course, such as a term paper, final exam, or project remains to be completed. The “Arrangement to Resolve a Grade of Incomplete” form must be completed prior to the end of the semester, or the instructor may assign a grade of U or F. The instructor shall enter a final evaluative grade if and when the completed work has been submitted. A grade of Incomplete must be removed by the 11th week of the semester following the one in which the courses were taken. If the student does not complete the required work by the date established, the Registrar will convert the I to an F when the deadline for completion has passed. Students may not sit in the same course in a later semester to complete the work required for the original course. Please see the University Incomplete Policy.

Master of Nursing students pursuing a post-licensure degree must meet all progression requirements of the degree program in which they are enrolled (MSN (p. 631), DNP (p. 637), or Ph.D (p. 640)). Refer to those sections of the Bulletin for further information.

**Curriculum**

Students may petition for the Master of Nursing (MN) degree upon successful completion of all courses in the MN curriculum (see below). Successful completion requires a grade of at least C in each course and an overall GPA of at least 3.0. See the MN Program Policy on Progression. Students must meet all University requirements for graduation.

Ratio of credit hours to clock hours: Didactic and Seminar, 1:1; Lab, 1:2; and Clinical, 1:4.

**Curriculum 2021-2023 72 total credit hours**

### Total Units in Sequence: 72

### Approval of RN Licensure Applications

The School of Nursing has the right to determine a student's readiness to sit for the NCLEX-RN exam and also reserves the right to restrict testing until the student demonstrates a readiness to pass the examination.

In order to have the "Program Completion" section of the application for RN licensure approved by the Program Director, students must meet the following criteria:

1. Have been awarded the Master of Nursing (MN) degree.
2. Demonstrate readiness to take the NCLEX-RN examination by achieving at least a minimum score on a faculty-selected, standardized NCLEX-RN predictor exam.

### Degree Requirements

The MSN program itself requires a minimum of 36 credit hours to graduate, but most majors require an average of 40 credit hours of graduate credit for the student who enters with a BSN degree. A maximum of nine (9) semester hours of credit in approved graduate courses, where the student obtained a grade of B or above, may be transferred to meet program requirements, and three (3) credits may be waived for a total of 12 credits. To be awarded an MSN degree, the student must have a cumulative GPA of 3.0 and received satisfactory grades in all nursing courses taken for credit as a MSN student. Degree requirements must be completed within 5 years of initial enrollment.
**Path to the MSN**

Students in the MSN program choose from several different majors, but virtually all students must take at least ten core courses (https://nursing.case.edu/msn/curriculum/). Students must complete a required number of credit hours as well as clinical hours. Most majors require an average of 40 credit hours, usually completed in three or four semesters (including summer for some majors). MSN majors also require at least 600 or more clinical hours depending on major.

Students can choose either a part-time or full-time program, with full-time consisting of 9 or more credits per semester and part-time being anything less.

**Course Grades**

Progression in the MSN program is contingent on a cumulative GPA of 3.0 and passing grades in all courses (A, B, C, P, or S). If the cumulative GPA falls below 3.0 during any semester, the student will be placed on academic probation. To be removed from probation, the student must have a cumulative GPA of 3.0 or higher in the next academic semester they are registered. If the student fails to be removed from academic probation at this time, he/she may be separated from the FPB School of Nursing.

The grade of Incomplete (I) can only be assigned by the discretion of the instructor when: 1) There are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justifies an extension of time beyond the requirements established for and met by other students in the class, and 2) The student has been passing the course and only an evaluative component of the course, such as a term paper, final exam, or project remains to be completed. The "Arrangement to Resolve a Grade of Incomplete" form must be completed prior to the end of the semester, or the instructor may assign a grade of U or F. The instructor shall enter a final evaluative grade if and when the completed work has been submitted. A grade of Incomplete must be removed by the 11th week of the semester following the one in which the courses were taken. If the student does not complete the required work by the date established, the Registrar will convert the I to an F when the deadline for completion has passed. Students may not sit in the same course in a later semester to complete the work required for the original course. Please see the University Incomplete Policy (p. 1333).

A student who receives a grade of F or U for a required course must register for the course the next semester it is offered to continue in the MSN program. If the grade of U or F is in a course that is not required for the MSN program, the student may register for the same course or a substitute course and achieve a passing grade to continue in the MSN program. MSN students who receive 2 failing grades (F, U, NP) will be separated from FPB.

**Majors and Sample Full-Time Curriculum**

Virtually all MSN students must take at least ten core courses in Professional Development, Scientific Inquiry, and Nursing Practice. Although the MSN program itself requires a minimum of 36 credit hours to graduate, most majors require an average of 40 credit hours, usually completed between 18 and 30 months depending on the MSN major. Students are required to complete 600 or more clinical hours depending on MSN major. Post-master's certificates can be provided for most programs and are crafted according to individual needs and background education. Sample full-time curriculum are listed for each major.
Adult-Gerontology Primary Care Nurse Practitioner (AGACNP)

Adult-gerontology Primary Care Nurse Practitioners provide comprehensive care, including wellness and acute and chronic illness care, to patients from late-adolescence through adulthood to the elderly. They specifically emphasize health promotion, disease prevention, and comprehensive gerontological assessment. They practice in a wide variety of locations that include hospitals, urgent and primary care settings, community clinics, long-term care facilities, and private practice.

As part of FPB’s MSN program, the adult-gero NP major requires 41 hours of coursework, plus 600 hours of clinicals. The coursework is usually completed within 18 months (four semesters) for full-time students, and courses are offered in a distance-friendly format that requires about eight trips to Cleveland.

Pediatric Nurse Practitioner (PNP)

Pediatric nurse practitioners provide primary health care for children from infancy to 21 years of age, including physical, psychosocial, and family dimensions of health. They diagnose and treat childhood illnesses, provide immunizations, perform developmental screenings and physical assessments, and much more in their objective to protect and enhance the health of children. Along with pediatricians and other providers, PNPs practice in settings such as private practice, primary care clinics, community health centers, and hospitals.

As part of FPB’s MSN program, the PNP major requires 40 credit hours of coursework, plus 600 hours of clinicals. The coursework is usually completed within 18 months (four semesters) for full-time students, and courses are offered in a distance-friendly format.

Pediatric Nurse Practitioner in Acute Care

Acute Care Pediatric Nurse Practitioners (https://case.edu/nursing/programs/msn/msn-majors/pediatric-nurse-practitioner-in-acute-care/) are responsible for promoting the overall health of chronic, acute or critically ill children. In this program, you will discover best practices to diagnose and treat acute, critical, and chronic illness in children. You will also learn to coordinate interdisciplinary models of referral, relationships, ethical behavior, conflict resolutions and the implementation of health plans for critically or acutely ill children.

The pediatric nurse practitioner major in acute care, as part of FPB’s MSN program, requires 45 hours of coursework, plus over 600 clinical hours. Graduates are eligible for the certification exam conducted by the Pediatric Nursing Certification Board.

- A dual major in Pediatric Nurse Practitioner-Primary Care and Acute Care Pediatric Nurse Practitioner is available by taking only one additional course and 200 additional clinical hours.
- Post-master’s certificates can be obtained, crafted according to individual needs and background education.
- One year of recent acute care pediatric nurse experience required for admission.

Neonatal Nurse Practitioner (NNP)

Neonatal nurse practitioners (https://nursing.case.edu/msn/neonatal/) (NNPs) are advanced practice nurses who focus on the management and care of fragile, critically ill, and premature infants and their parents. Their role encompasses activities that promote optimal health, detect illness, and facilitate restoration and maintenance of the health of neonates. NNPs practice in neonatal intensive care units (NICUs), which are found in children's and large general hospitals.

Two years of NICU nursing are needed prior to beginning the NNP major. As part of FPB’s MSN program, the major requires 40 credit hours of coursework, plus 700 hours of clinicals in Level III NICUs. Full-time coursework is completed within 18 months (4 semesters).

Family Nurse Practitioner (FNP)

Family nurse practitioners (https://nursing.case.edu/msn/fnp/) (FNPs) are advanced nurses who offer care, promote health, and treat disease in patients ranging from children to elders. They provide comprehensive wellness care as well as management of acute and chronic illnesses. FNPs practice in hospitals, urgent care and primary care settings, federally-qualified health centers, and private practice offices.

As part of the MSN program, the FNP major requires 40 credit hours of coursework, plus 600 hours of clinical. The coursework is usually completed within 18 months (four semesters) for full-time students, and courses are offered in a distance-friendly format.

### Women’s Health Nurse Practitioner (WHNP)

Women’s health nurse practitioners ([https://case.edu/nursing/programs/msn/msn-majors/womens-health-nurse-practitioner/](https://case.edu/nursing/programs/msn/msn-majors/womens-health-nurse-practitioner/)) (WHNPs) are experts in woman-focused health promotion and disease prevention. As specialists, WHNPs deliver comprehensive health care to women, with emphasis on reproductive and gynecologic health needs. They provide well-woman care, care during and after pregnancy, and care before and after menopause. They also care for women experiencing episodic acute or chronic illnesses. WHNPs see a broad range of patients in practice settings that include primary care centers, adolescent health centers, and private practice.

The WHNP major, as part of FPB’s MSN program, requires 38 credit hours of coursework, plus 600 hours of clinicals. With full-time enrollment, coursework is usually completed within 12 months (four semesters). Core MSN courses are offered in an intensive format that requires limited trips to Cleveland.

### Nurse Midwifery

Certified nurse-midwives ([https://nursing.case.edu/msn/midwifery/](https://nursing.case.edu/msn/midwifery/)) (CNMs) are educated in the two disciplines of nursing and midwifery and are certified according to the requirements of the American Midwifery Certification Board. CNMs manage women’s health care, focusing on common primary care issues, family planning and gynecologic needs including menopause related issues, pregnancy, childbirth, the postpartum period, and care of the newborn. They practice within a healthcare system that provides for consultation, collaboration, or referral as indicated by the health status of the client, in accordance with the Standards for the Practice of Midwifery, as defined by the American College of Nurse-Midwives (ACNM).

Nurse midwife students must complete 49 credit hours of coursework as well as work individually with (a) clinical preceptors in a variety of out-patient, in-patient, and out-of-hospital settings to provide optimal care to women in the antepartum, intrapartum, (and) postpartum and nonchildbearing periods. Students will be eligible to take the certification examination administered by the American Midwifery Certification Board. By taking NURS 559 Primary Care in Women’s Health students are eligible for dual certification in Women’s Health.

Joint Degrees

**MSN/PhD Dual Degree Program**

The Master of Science in Nursing / PhD (https://case.edu/nursing/programs/msn/msn-to-doctorate/) combined degree program provides the opportunity for students with a BSN or MN degree to pursue the PhD while earning an MSN degree in a selected major or clinical specialty along the way. Application involves a dual submission process and applicants must be accepted into both programs. For the combined MSN/PhD program, up to 8 credits of course overlap are allowed depending on the selected clinical major.

**Master of Science in Nursing/Master of Arts in Anthropology (MSN/MA Anthropology)**

The Master of Science in Nursing/Master of Arts in Anthropology (https://case.edu/nursing/programs/msn/msn-majors/msnma-anthropology/) joint degree provides students with the unique combination of cross-cultural expertise in medical anthropology and clinical expertise in nursing. Students must complete a minimum of 19 credits in nursing core courses, 12 to 22 credits in clinical major courses, and a minimum of 18 credits in anthropology courses, distributed as indicated below. The actual number of credits depends upon the major selected. This curriculum plan reflects clinical nursing majors other than nurse anesthesia and community health. Choice of electives should guarantee that minimum credit requirements are met. All students must pass the Masters Qualifying Examination in Anthropology.

**Master of Science in Nursing/Master of Arts in Bioethics (MSN/MA Bioethics)**

The Master of Science in Nursing/Master of Art in Bioethics (https://case.edu/nursing/programs/msn/msn-majors/msnma-bioethics/) joint degree program is designed to provide nurses with the concepts essential to ethics and ethical decision-making. This program is relevant for nurses who are family advocates within health care systems. The total MSN/MA degree requirements are 53-63 credits.

**Master of Science in Nursing/Master of Public Health (MSN/MPH)**

Application involves a dual submission process and applicants must be accepted into both the MSN and MPH programs. Individual program plans available upon admission to both programs.

**Leadership Excel and Achievement Postbaccalaureate (LEAP) Certificate Program**

The Leadership Excel and Achievement Program (LEAP), a post-baccalaureate certificate program, is one year in length and 16 credit hours. LEAP prepares students for the rigors and in-depth curriculum of Nurse Anesthesiology Doctoral programs. The focus is on science, scholarly writing, and anesthesia specialty courses. The coalition of Nurse Anesthesiology programs builds quality students to continue their education seamlessly.

**Key Features:**

- Academic enhancer – applicants who need to improve their undergraduate GPAs and their knowledge in the biological sciences.
- Primary program rejections – applicants denied an interview or admission to a currently accredited Nurse Anesthesiology doctoral program.

**Doctor of Nursing Practice**

https://case.edu/nursing/programs/dnp (https://case.edu/nursing/programs/dnp/)
Phone: 216.368.1907
Latina Brooks, PhD, CNP, FAANP, Program Director
lmb3@case.edu

The Doctor of Nursing Practice Program (DNP) is an innovative academic program designed to prepare nurses for leadership positions in advanced nursing practice roles. The Post-Master’s DNP program is flexible in
meeting the needs of distance education students, with an executive format and cohort model that has partnerships with institutions around the country.

The DNP program admits students at three different stages in order to accommodate students with diverse educational backgrounds.

- Post-Licensure DNP (Advanced Practice Registered Nurse (APRN) stage: MSN degree awarded). This entry point into the DNP program is designed for registered nurses entering the MSN program. Students who apply to the MSN and DNP programs at the same time follow a blended curriculum in which students begin taking DNP courses while in the Masters’ program. Students are awarded an MSN degree when they complete MSN requirements and then continue with additional DNP courses. After receiving the MSN degree, students may sit for the certification exam in their advanced practice specialty and then apply to a Board of Nursing for credentials to practice as an APRN. Students already enrolled in the MSN program may also apply to the DNP program during the MSN program but are required to complete courses from both programs.

- Nurse Anesthesia DNP (Advanced Practice Registered Nurse; DNP degree awarded). This entry point into the DNP program is designed for registered nurses preparing to be Certified Registered Nurse Anesthetists (CRNA). Detailed information about this program may be found at https://case.edu/nursing/programs/dnp/nurse-anesthesia-dnp (https://case.edu/nursing/programs/dnp/nurse-anesthesia-dnp/).

- Post-Master’s DNP (Practice Doctorate stage; DNP degree awarded): This stage of the DNP program prepares nurses with MSN degrees to be clinical leaders at the pinnacle of their field. Students acquire in-depth knowledge in nursing theory, inquiry, policy, and leadership. Most post-masters’ DNP students are already practicing as advanced practice nurses, administrators, or educators. Once admitted to this phase of the program, they choose one of two elective sequences: education leadership or practice leadership.

- Student Learning Outcomes

Scientific Underpinnings for Practice

- Integrate nursing science and theory with knowledge and theory from ethics, the biophysical, psychosocial, cultural, and organizational sciences to develop and evaluate new practice approaches.

Organizational and Systems Leadership for Quality Improvement and Systems Thinking

- Demonstrate leadership in the development and evaluation of care delivery approaches that meet current and future needs of patient populations from findings of nursing and other clinical sciences, as well as organizational, political and economic sciences.

- Develop and evaluate effective strategies and ensure accountability for leading organizations, addressing quality improvement and patient safety initiatives, and managing ethical dilemmas inherent in patient care and research.

Clinical Scholarship and Analytical Methods for Evidence-Based Practice

- Use analytic methods to critically appraise existing evidence to determine best practices.

- Apply relevant findings and use quality improvement methods to develop recommendations to improve practice and the practice environment.

- Disseminate findings from evidence-based practice and research to improve health care outcomes.

Information Systems/Technology and Patient Care Technology for the Improvement and Transformation of Health Care

- Evaluate programs that monitor outcomes of care, care systems, and quality improvement including consumer use of health care information systems.

- Provide leadership in the evaluation and resolution of ethical and legal issues within health care systems relating to the use of information, information technology, communication networks and patient care technology.

Health Care Policy and Advocacy in Health Care

- Demonstrate leadership in the critical appraisal, development, and/or implementation of institutional, local, state, federal, and international health policy.

Inter-professional Collaboration for Improving Patient and Population Health Outcomes

- Collaborate using communication, consultative, and leadership skills, with intra-professional and inter-professional teams to improve quality and safety in health care.

Clinical Prevention and Population Health for Improving the Nation’s Health

- Analyze scientific data and synthesize concepts related to clinical prevention and population health in developing, implementing, and evaluating interventions to address health promotion and disease prevention efforts.

DNP Program Requirements

Progression

Progression in the Doctor of Nursing Practice degree program is contingent upon satisfactory academic achievement in all required courses.

Doctor of Nursing Practice students must achieve a cumulative grade point average of 3.0 or above in all courses taken for credit as a DNP student at the Frances Payne Bolton School of Nursing to be awarded the DNP degree. All DNP students must successfully complete an oral presentation of their DNP project.

A grade of “I” (Incomplete) in a course is awarded when a student is meeting expectations in that course, is earning a passing grade, and due to extenuating circumstances is unable to complete a portion of the work on time for grade submission. This must be pre-arranged with course faculty, before the date on which grades are due. If a student receives a grade of “I” they have until the 11th week of the following semester to complete the outstanding work. In this case the “I” will convert to the grade earned. If a student does not complete the outstanding work by the 11th week of the following semester, in accordance with University policy, the grade will be converted to a failing grade (“F” or “NP”). Please refer to the full incomplete policy in the School of Graduate Studies section of the CWRU Bulletin.

If a student receives a grade of “F” or “NP” as the final grade in a required course, that grade will be entered on the transcript. The student will be required to repeat the course during the next semester in which the
course is offered and will not be allowed to enroll in other courses for which the failed course is a prerequisite.

**DNP Project**

The DNP program culminates in successful completion of the DNP project. The DNP project is designed by the student in collaboration with a three-member committee approved by the Program Director. The project must focus on a practice issue related to improving patient outcomes. The written product can take the form of a written report or a manuscript suitable for publication. The procedures and written report must conform to the regulations of the FPB School of Nursing.

Students must successfully present their completed DNP project in an oral presentation with their committee members who are responsible for certifying that it meets acceptable scholarly standards. The presentation is open to faculty and students; the chair determines whether the defense is open to those outside of the University. The committee determines the adequacy of the oral presentation and written product. A student will pass if two or more of the committee members agree that the student successfully responded to questions during the oral presentation and the written product met scholarly standards.

**Completion of Program**

Post-Master's Doctor of Nursing Practice program (PMDNP) students have five years to complete the program. In unusual circumstances, students may petition the Program Director for individual consideration of this policy.

If a student does not register for courses without an approved LOA for two years (Fall & Spring), it will be necessary for the student to apply to be reinstated in the program. The student should submit the Post-Master's DNP application form, essays and one recent recommendation. The essays should address how the student plans to be successful in completing the program. The student should contact the advisor to determine if the advisor agrees with the plan and the advisor and Program Director will make the decision about the need to repeat coursework. Please refer to the School of Graduate Studies' full policy regarding Leave of Absence and absence for maternity/paternity leaves and military service.

The France Payne Bolton School of Nursing has a unique approach to "distance" learning. Most classes are held in an Intensive Format, meeting for a specified number of days with additional meetings held online. For example, a 3-credit course will meet for 5-6 days. Three courses are taught online across the semester. Intensive sessions are given three times a year (January, May, and August) for at least two weeks. Papers and projects are due in the semester following the intensive session. NUND 619 (proposal development) and 620 (scholarly project) are arranged with the advisor and NUND 611 is arranged with the advisor and preceptor/s.

**DNP Curriculum**

The DNP curriculum listed below is intended for Post-Master's DNP students. Each student is expected to satisfactorily complete the Required Courses AND the two courses listed for one Elective Sequence.

Students completing the MSN/DNP Program should refer to that curriculum. The Nurse Anesthesia DNP Curriculum can be found below the Post-Master's DNP Curriculum.

PhD in Nursing

https://case.edu/nursing/programs/phd
Phone: 216-368-5979
Joachim G. Voss, PhD, RN, ACRN, FAAN Director of PhD program jgv20@case.edu

The PhD program is a post baccalaureate degree program designed to prepare scientists who initiate and conduct research relevant to nursing. Expertise in clinical nursing and competence in research are required to prepare scholars to disseminate knowledge and build programs of research. To achieve excellence in the academic program, students engage in activities consistent with the areas of research excellence of the faculty. Moreover, the faculty is committed to the intellectual growth of the student, which is achieved through mentorship and collaboration in scholarship.

The PhD student concentrates on the organization and development of knowledge requisite to nursing practice for service to a particular population. The population may include: age group (children, adults), focus of service (individual, family, or community) and position on the continuum of health (health and wellness, acute and chronic disruptions in health). PhD students are culturally diverse, and many develop and apply knowledge relevant to global health needs.

Student Learning Outcomes

<table>
<thead>
<tr>
<th>Themes/Roles</th>
<th>Characteristics/Expected outcomes</th>
</tr>
</thead>
</table>
| Research/Knowledge Development | • Conduct original research  
• Critique and integrate different scientific perspectives in the conduct of original research  
• Lead interdisciplinary research teams and participate in team science |
| Leadership | • Understand the evolving roles and responsibilities of a nurse scholar  
• Assume leadership in the conduct of culturally and linguistically appropriate scholarship  
• Lead in advancing the discipline through scholarly contributions and science in the global community  
• Provide career and research mentorship to others |
| Dissemination | • Communicate research through publications and presentations for professional, interdisciplinary, and lay audiences |
| Policy | • Generate and disseminate knowledge relevant to health care policy  
• Understand the influence of politics and policy on knowledge generation |
| Values | • Appreciate the history and philosophy of science  
• Understand the evolving nature of the nursing discipline  
• Utilize professional and research ethics and judgment in the conduct of research |
| Substantive Area of Specialization | • Demonstrate mastery of in-depth knowledge in a substantive area |

Degree Requirements

Our PhD in Nursing program prepares students for careers as researchers, scientists, or university-level faculty members. Students have the opportunity to participate in research that has a profound effect on the science of nursing and nursing practices. PhD students concentrate on the organization and development of knowledge requisite to nursing practice for service to a particular population. PhD students are culturally diverse, and many develop and apply knowledge relevant to global health needs.

The post-MSN PhD requires a minimum of 57 semester hours, including course work, proposal development and research and dissertation completion. For students matriculating in Summer 2019 and later, in order to accurately reflect the time and effort accrued in completing the dissertation, 36 hours of advanced dissertation research will be posted to the PhD/DMA student’s record upon successful completion of the dissertation defense and submission of final certification paperwork. The program is individualized, taking into account student interests, aspirations, and work experience. Students entering the program with a BSN who do not wish to obtain an MSN degree will have an option to take NURS 507 Clinical Knowledge and NURS 508 Context of Care; or to
take 6 credits of MSN courses to ease their transition from BSN to PhD. The BSN to PhD requires a minimum of 63 semester hours. An advanced standing option is available for those entering with a DNP degree; for those students, a minimum of 48 semester hours is required. Dual degree programs are also available, including MSN/PhD and DNP/PhD programs.

General program requirements are listed below. Additional coursework may be required or recommended, as determined by the faculty advisor, and area of research. Courses may be taken on a full time or part time basis.

**Knowledge Development/Theory Core (6 credit hours)**
- NURS 504 Nursing Knowledge Development (3 credits)
- NURS 533 Introduction to Data Science in Healthcare (3 credits)

**Research Methods Core (12 credit hours)**
- NURS 518 Qualitative Nursing Research (3 credits)
- NURS 530 Advanced Nursing Research Methods I (3 credits)
- NURS 531 Advanced Nursing Research Methods II (3 credits)
- NURS 524 Molecular Genetics for the Nurse Scientist (3 credits)

**Statistics Core (9 credit hours)**
- NURS 532 Applied Statistics (Possibility for waiver if equivalent graduate level statistics course completed within the past 5 years with a grade of B or better) (3 credits)
- NURS 630 Advanced Statistics: Linear Models (3 credits)
- NURS 631 Advanced Statistics: Multivariate Analysis (3 credits)

**Support Courses (minimum 9 credit hours)**
- NURS 609 Health Care Policy and Planning (Taught in an executive/intensive format) (3 credits)
- NURS 615 Topical Seminar in Health Science Research (3 credits)

**Electives**
3 credits

**Preparation for Research (minimum 3 credit hours)**
- Research Practicum (240 hours required) 0 credits
- NURS 671 Proposal Development (minimum of 3 credits required) 3 credits
- Candidacy Exam 0 credits
- Proposal Defense 0 credits

**Dissertation Research (minimum 36 credit hours)**
- NURS 701 Dissertation Ph.D. 1-9 credits

Dissertation Fellowship (upon recommendation to the School of Graduate Studies) for a maximum of 4 consecutive semesters after completion of NURS 701

**Optional PhD Education Courses**
To insure that graduates from our PhD in Nursing program are prepared to assume the full faculty role upon graduation, including preparation for teaching and mentoring others, students are encouraged to take optional courses that specifically address the development of their teaching skills. These courses are taught in an intensive format, between semesters.

**Preparation for Nursing Education Coursework**
- NUND 509 Curriculum and Instruction (3 credits)
- NUND 609 Theoretical Foundations of Testing and Evaluation (2 credits)

It is recommended that courses within this education track be integrated within the student’s planned program of study within the first two years of the program.

**Sample Curriculum Plans**
See the website for details. ([https://case.edu/nursing/programs/phd/sample-course-plans/](https://case.edu/nursing/programs/phd/sample-course-plans/))

**Traditional Format Sample Plan**
Students who already have earned the MSN degree can enter the PhD program directly and complete the PhD core coursework during fall and spring semesters.

- A minimum of 3 credits of proposal development is required; however, students may need more time to complete their candidacy exam and proposal development and may therefore need to take more credits of proposal development.
- Concurrent enrollment in proposal development credits and dissertation credits is not permitted.
- Full time status is defined as 9 credits per semester ONLY while students are enrolled in their coursework and prior to proposal development. However, enrollment in even a single credit of proposal development or dissertation constitutes full time study.
- Total required credit hours for the nursing PhD (post MSN) = 57 credits

**Fast-Track Sample Plan**
Students with a BSN or equivalent can pursue the PhD degree without earning an MSN. Learn more about our Entry Options ([https://case.edu/nursing/programs/phd/entry-options/](https://case.edu/nursing/programs/phd/entry-options/)).

- A minimum of 3 credits of proposal development is required; however, students may need more time to complete their candidacy exam and proposal development and may therefore need to take more credits of proposal development.
- Concurrent enrollment in proposal development credits and dissertation credits is not permitted.
- Full time status is defined as 9 credits per semester ONLY while students are enrolled in their coursework and prior to proposal development. However, enrollment in even a single credit of proposal development or dissertation constitutes full time study.
- Total required credit hours for the nursing PhD (post BSN or equivalent) = 63 credits
- BSN to PhD Transition Course Waiver form ([https://bulletin.case.edu/schoolofnursing/phd/BSN-PhD-Transition-Course-Waiver-Form.pdf](https://bulletin.case.edu/schoolofnursing/phd/BSN-PhD-Transition-Course-Waiver-Form.pdf))

**Advanced Standing for DNP Graduates**
Students who have earned a DNP degree within the past five years may be granted advanced standing in the PhD nursing program and qualify for a waiver of up to 9 credits. Total required credit hours post-DNP = 48 credits
**Dual Degree Programs**

**MSN/PhD Dual Degree Program**

Students must be accepted into both programs. They select an MSN major or clinical specialty and may take MSN and PhD courses concurrently. Up to 8 credits of course overlap are allowed, depending on the clinical MSN major.

**DNP/PhD Dual Degree Program**

Students must be accepted into both programs and must meet course requirements for both doctorates with an overlap of up to 11 credits. Students develop proposals for the DNP thesis project and PhD dissertation concurrently in order to facilitate timely completion of both degrees.

**Other Student Categories**

**Non-Degree Students**

An applicant with basic preparation in nursing may apply to register as a non-degree student for up to 9 credits. After your application is received and approved, you will receive further instructions via e-mail on how to register via the Student Information System (SIS).

For those wishing to take PhD courses, the applicant must obtain written permission from the faculty teaching the course and the PhD Program Director in the FPB School of Nursing for those taking PhD courses. Contact the Graduate Studies Office (http://www.case.edu/gradstudies/) at 216-368-4390.

For those wishing to take MSN or post-MSN DNP courses, the applicant must complete our online application and receive permission from the appropriate program director before being permitted to enroll in the course. Once the application has been submitted, the student will be notified if permitted to enroll into the course.

Continuation of this status is at the discretion of FPB's administrative officer. Status as a non-degree student does not imply acceptance into FPB. If the non-degree student applies for admission to FPB, coursework completed as a non-degree student will be evaluated on an individual basis for its applicability to degree requirements within the time frame for the degree.

Clinical courses may not be taken as a non-degree student.

**Special Students**

Special students are those who take a series of courses designed to meet their particular career goals. These students must meet the admission requirements for the program in which the majority of classwork will be completed. Status and performance will be reviewed after one year. Students completing MSN courses to obtain a certificate in any advanced practice nursing major will be admitted as special students.

If a special student decides to pursue a graduate degree, the approval of the Associate Dean of Academic Programs must be obtained. Entrance into the degree program will be considered the date when the student enrolled in the first coursework as a special student. These courses must have been taken within the last five years. If more than five years have elapsed since the coursework as special student was done, the student must meet the current academic requirements for the major selected.

**International Students**

International students are welcome to enroll in any educational program. All prospective students must meet the admission requirements for the program that they select. English translations of transcripts are required. It is recommended that applications be submitted 9 to 12 months prior to the desired date of enrollment.

Each applicant for graduate programs must document the ability to speak, read, and write English as evidenced by satisfactory performance on the Test of English as a Foreign Language (TOEFL). The International English Language Testing System (IELTS) is also accepted.

Test information can be obtained at: www.toefl.org (http://www.toefl.org) and www.ielts.org (http://www.ielts.org)

Students whose native language is English are exempt. For those whose native language is not English, the minimum acceptable scores are:

- Internet-based TOEFL: 90
- Paper-based TOEFL: 577
- IELTS: 7.0
- International students must present evidence of adequate financial resources to meet the expenses of full-time study as well as travel to and from Cleveland. Financial assistance from FPB is limited. Each student will need a sponsor who will provide full financial support. Each sponsor is required to document their ability to support the student, including costs of tuition and fees, room and meals, books, incidentals, and travel expenses. http://www.case.edu/gradstudies/new-students/important-first-steps (http://students.case.edu/international/information/new/)
  - For the MSN and post-graduate certificate programs, excluding the Nurse Educator option, prospective students must be eligible for licensure as a registered nurse (RN) before enrollment. To obtain RN licensure, the student can either 1) obtain licensure in a state other than Ohio and apply for reciprocity in Ohio, or 2) sit for the licensure examination (NCLEX-RN) in Ohio. For information on how to become licensed in any state, you must obtain information from the specific state where you wish to become licensed. For the individual addresses of each State Board of Nursing, go to the National Council of State Boards of Nursing website (http://www.ncsbn.org/) and then go to “Boards of Nursing.”
  - For additional information about obtaining a US visa visit the following site: http://www.case.edu/gradstudies/new-students/important-first-steps (http://www.case.edu/gradstudies/new-students/important-first-steps/)

Students may also write to:

Chicago, IL 60601-4277
Telephone: 312.525.3600
Once admitted to FPB, an application form for a student visa will be sent to the student. Upon enrollment at the university, the student must subscribe to the Student Medical Insurance Plan or have proof of other medical insurance coverage.

Nursing Centers of Excellence

Unparalleled Opportunities
The Centers of Excellence at the Frances Payne Bolton School of Nursing expose students first-hand to nursing research, global health care systems, evidence-based practice, initiatives in aging care, self-management, end-of-life science, inclusion of persons with disabilities into research, and flight nursing.

Sarah Cole Hirsh Institute for Best Nursing Practices Based on Evidence
The Sarah Cole Hirsh Institute for Evidence Based Practice (https://nursing.case.edu/hirsh/) is an endowed research and training institute to promote implementation of evidence into clinical practice. Established in 1998 with the generous endowment by Sarah Cole Hirsh (https://case.edu/nursing/research/centers-of-excellence/sarah-cole-hirsh-institute/about-the-hirsh-institute/), the center focuses on education, research, and innovation in EBP implementation for students, and current clinicians. In close collaboration with the Quality Safety Education for Nurses Institute, the center’s key objective is to increase implementation of EBP guidelines and promote quality, safety and reduce cost of care. The Institute also promotes disseminating advanced management of HIV care to the Northeast Ohio provider community through its annual conference.

The University Center on Aging and Health (UCAH)
By the year 2040, a staggering number (approximately 21.7%) of the US population will be persons 65 years of age and older. Elder care is projected to be the fastest growing employment sector within the health care industry. UCAH at Case Western Reserve University (https://case.edu/nursing/ucah/) serves international, national, and local communities by providing an interdisciplinary platform for gerontological education, research, and services. A key objective of UCAH is to increase the number of students studying gerontology, and utilize its partnerships to promote interdisciplinary collaboration in research and education.

Center of Excellence for Self-Management Advancement through Research and Translation (SMART)
The SMART Center (https://case.edu/nursing/research/centers-of-excellence/smart-center/) is a National Institute of Nursing Research/National Institute of Health-funded Center of Excellence to build the Science of Self-Management. The SMART center engages in interdisciplinary collaboration and partnerships to develop and support programs of research regarding self-management of health and illnesses. A recent focus of the SMART Center is to expand knowledge related to the brain-behavior connections associated with self-management. Its goals are to expand knowledge related to self-management through interdisciplinary investigations of self-management, expand the number of research projects aimed at improving our scientific understanding of the brain-behavior connections specific to self-management of health and illness, increase the number of investigators conducting research targeted at the brain-behavior connections specific to self-management of health and illness, and to serve as a national leader in research and dissemination of research findings to the scientific communities.

The Dorothy Ebersbach Academic Center for Flight Nursing
The Dorothy Ebersbach Academic Center for Flight Nursing (https://nursing.case.edu/flight/), formerly the National Flight Nurse Academy, serves as part of the MSN program’s Adult-Gerontology Acute Care Nurse Practitioner Flight Nursing subspecialty. It is the first formal training program of its kind to prepare nurses at the advanced practice level to provide care to individuals outside of hospitals, but at a hospital level of care.

Nursing students of all levels, including acute care nurse practitioner (ACNP) students, specializing in flight nursing at Case Western Reserve University train in the nation’s first state-of-the-art simulator built in a full-scale Sikorsky S76 helicopter. The helicopter simulator allows faculty to input any two flight coordinates in the world, the time of day, weather pattern, and level of turbulence for students to experience the flight as though it was actually occurring. The helicopter features the most advanced medical equipment with authentic aerial views projected within the windows and the motion platform provides 11 degrees pitch and roll that mimics changing altitudes and weather conditions throughout the flight. The learning environment allows students to experience the physical confines of an actual helicopter while practicing the delivery of patient care to high fidelity human patient manikins to create the most realistic training of caring for critically injured patients from takeoff to landing. The center also has a static full scale ambulance for students to practice effective patient hand-offs from first-responders including fire, rescue, EMT, and Paramedics. The center is located on the ground floor of the HEC directly below the Steris Perioperative Lab allowing faculty to simulate taking the patient from the helicopter or ambulance up the elevators, directly to surgery. Both the helicopter and ambulance are equipped with video and audio capabilities to capture student interactions during formative and summative evaluations and provide the means for debriefing in the center or in any of the adjacent classrooms or debriefing rooms. The DEACRN has a large screen video display board to support any interprofessional training within the center.

Quality and Safety Education for Nurses (QSEN) Institute
The QSEN Institute (http://qsen.org/) is a comprehensive, competency based resource center for faculty and clinical nurse educators to empower nurses with knowledge, skills, & attitudes to improve quality & safety across healthcare systems (QSEN.org (http://qsen.org/)). QSEN addresses the challenge of educating nurses with the knowledge, skills, and attitudes (KSA) necessary to continuously improve the quality and safety of the healthcare systems in which they work.

The QSEN Institute hosts a National Conference each year which is designed to attract innovators and nurture faculty and nursing leaders for the improvement of quality and safety education. The conferences highlights innovations in curricular design and teaching strategies that accomplish QSEN competency development. Research related to quality and safety education in pre-licensure, advanced practice programs and clinical practice is also shared. Learn all that QSEN has to offer here. (http://www.qsen.org/)

School of Nursing Faculty Professors
Sara Douglas , PhD, RN
(Illinois State University)
Assistant Dean for Research; and The Gertrude Perkins Olivia Professorship in Oncology Nursing
Evelyn G. Duffy, DNP, RN, AGPCNP-BC, FAAN (Case Western Reserve University)
Professor; and The Florence Cellar Professor of Gerontological Nursing

Joyce J. Fitzpatrick, PhD, MBA, RN, FAAN, FNAP (New York University)
The Elizabeth Brooks Ford Professor of Nursing

Faye A. Gary, EdD, RN, FAAN (University of Florida, Gainesville)
The Medical Mutual of Ohio Kent W. Clapp Chair and Professorship in Nursing

Deborah F. Lindell, DNP, RN, CNE, ANEF, FAAN (Case Western Reserve University)
Assistant Director, DNP Program; The Marvin E. and Ruth Durr Denekas Professor

Susan M. Ludington, PhD, RN, NM, CKC, FAAN (Texas Woman’s University)
The Carl W. and Margaret Davis Walter Professor of Pediatric Nursing

Carol M. Musil, PhD, RN, FAAN, FGSA (Case Western Reserve University)
Dean; and The Edward J. and Louise Mellen Professor of Nursing

Mary T. Quinn-Griffin, PhD, RN, FAAN, ANEF (Case Western Reserve University)
Associate Dean for Global Affairs; and Assistant Provost of Outcome Assessment and Accreditation; and The May L. Wykle Endowed Professorship

Joachim G. Voss, PhD, RN, ACRN, FAAN (University of California San Francisco)
The Independence Foundation Professorship in Nursing Education

Jaclene A. Zauszniewski, PhD, RN-BC, FAAN (Case Western Reserve University)
The Kate Hanna Harvey Professor in Community Health Nursing

**Associate Professors**

Celeste M. Alfes, DNP, MSN, MBA, RN, CNE, CHSE-A, FAAN (Case Western Reserve University)
Associate Professor of Nursing; Director, Center for Nursing Education, Simulation, and Innovation

Ester Bernhofer, PhD, RN-BC, CPE (Case Western Reserve University)
Associate Professor of Nursing

Christopher Burant, PhD, MACTM, FGSA (Case Western Reserve University)
Associate Professor

Elizabeth R. Click, DNP, ND, RN, CWP (Case Western Reserve University)
Associate Professor of Nursing

Elizabeth G. Damato, PhD, RN, APRN-CNP (Boston College)
Associate Professor of Nursing

Marguerite DiMarco, PhD, RN, CPNP, FAAN (Case Western Reserve University)
Associate Professor of Nursing

Mary A. Dolansky, PhD, RN, FAAN (Case Western Reserve University)
Associate Professor of Nursing; and The Sarah C. Hirsh Professorship

Ronald Hickman, PhD, RN, ACNP-BC, FAAN, FNAP (Case Western Reserve University)
Associate Dean for Research; and The Ruth M. Anderson Professor of Nursing

Carol Kelley, PhD, RN, CNNP (Case Western Reserve University)
Associate Professor of Nursing

Irena L. Kenneley, PhD, RN, CNE, CIC, FAPIC (Case Western Reserve University)
Associate Professor of Nursing

Diana L. Morris, PhD, RN, FAAN, FGSA (Case Western Reserve University)
Interim Associate Dean for Academic Affairs; and The Arline H. and Curtis F. Garvin Professor of Nursing

Matthew Plow, PhD (University of Minnesota)
Associate Professor

Carol Savrin, DNP, RN, CPNP, FNP-BC, FAAN, FNAP (Case Western Reserve University)
Associate Professor of Nursing

Valerie A. Toly, PhD, RN, CPNP, FAAN (Case Western Reserve University)
Associate Professor of Nursing; and The Arline H. and Curtis F. Garvin Professor in Nursing Excellence

Chris Winkelman, PhD, RN, ACNP, FAANP, FCCM, CCRN, CNE (Case Western Reserve University)
Associate Professor of Nursing

Amy Y. Zhang, PhD (The Pennsylvania State University)
Associate Professor

**Assistant Professors**

Latina Brooks, PhD, RN, CNP, FAANP (Case Western Reserve University)
Assistant Professor of Nursing; Director, MSN and DNP Program

Cynthia L. Danko, DNP, MSN, RN (Case Western Reserve University)
Assistant Professor of Nursing; Director, Institutional Research

Mary Franklin, DNP, RN, CNM, NCMP (Case Western Reserve University)
Assistant Professor of Nursing

Heather Hardin, PhD, RN (University of Louisville)
Assistant Professor of Nursing
Carolyn Harmon Still, PhD, RN, CNP, MSN, AGPCNP-BC, CCRP  
(Case Western Reserve University)  
Assistant Professor of Nursing

Jesse Honsky, DNP, MPH, RN, PHNA-BC  
(Case Western Reserve University)  
Assistant Professor of Nursing

Chao-Pin Hsiao, PhD, RN, FAAN  
(University of Arizona)  
Assistant Professor of Nursing

Eliane Irani, PhD, RN  
(University of Pennsylvania )  
Assistant Professor of Nursing

Molly J. Jackson, DNP, RN, AGNP-C, ACHPN, CNE  
(Case Western Reserve University)  
Assistant Professor of Nursing; Director, MN Program

Evanne Juratovac, PhD, RN, GCNS-BC  
(Case Western Reserve University)  
Assistant Professor of Nursing

Jane F. Marek, DNP, RN, NP  
(Case Western Reserve University)  
Assistant Professor of Nursing

Susan R. Mazanec, PhD, RN, AOCN, FAAN  
(Case Western Reserve University)  
Assistant Professor of Nursing

Kelly K. McConnell, DNP, RN, AGACNP  
(University of Phoenix)  
Assistant Professor of Nursing

Patricia E. McDonald, PhD, RN, APRN  
(Case Western Reserve University)  
Assistant Professor of Nursing

Sonya D. Moore, DNP, RN, CRNA  
(Case Western Reserve University)  
Assistant Professor of Nursing; Director, Nurse Anesthesia Program

Scott E. Moore, PhD, RN, APRN, AGPCNP-BC  
(Clemson University)  
Assistant Professor of Nursing

Grant O’Connell, PhD  
(West Virginia University of Pharmacy)  
Assistant Professor

Susan Painter, DNP, RN, PMHNP-BC, PMHCNS-BC  
(University of Illinois at Chicago)  
Assistant Professor of Nursing

Rebecca M. Patton, DNP, RN, CNOR, FAAN  
(Case Western Reserve University)  
Assistant Professor of Nursing; Lucy Jo Atkinson Professorship in Perioperative Nursing

Andrew Reimer, PhD, RN  
(Case Western Reserve University)  
Assistant Professor of Nursing

Nicholas Schiltz, PhD  
(Case Western Reserve University)  
Assistant Professor

Nathanial Schreiner, PhD, MBA, RN  
(Case Western Reserve University)  
Assistant Professor of Nursing

Rita Sfiligoj, DNP, MPA, RN  
(Case Western Reserve University)  
Assistant Professor of Nursing

D. Todd Smith, PhD, APRN, AGACNP-BC, FNP-C, FF/EMT-P  
(University of Virginia)  
Assistant Professor of Nursing; Director, Dorothy Ebersbach Academic Center for Flight Nursing

Elizabeth Zimmerman, DNP, RN, CHSE  
(Case Western Reserve University)  
Assistant Professor of Nursing

Instructors

Hannoud Al Moghrabi, DNP, RN, APRN, WHNP-BC  
(Case Western Reserve University)  
Instructor of Nursing

Ashley Austin, DNP, RN, CRNA  
(University of Akron)  
Instructor of Nursing

Beverly Capper, DNP, MSN, RNC-NIC  
(Case Western Reserve University)  
Instructor of Nursing; Interim Director, BSN Program

Carli Carnish, MSN, RN, CPNP, CHFN  
(Case Western Reserve University)  
Instructor of Nursing

Katharine Chapman, MSN, RN, CPNP-PC, FNP-BC  
(Case Western Reserve University)  
Instructor of Nursing

Mary Cushing, DNP, RN, CRNA  
(Northeastern University)  
Instructor of Nursing

Margaret A. Contrera, DNP, RN, CRNA  
(University of Akron)  
Instructor of Nursing

Mary de Haan, MSN, RN, ACNS-BC  
(Ursinus College)  
Instructor of Nursing

Laurine A. Gajkowski, ND, RN, CPN  
(Case Western Reserve University)  
Instructor of Nursing

Janine Galeski, MSN, MA, RN, FNP  
(Case Western Reserve University)  
Instructor of Nursing
School of Nursing Courses

LEAP Courses

LEAP 401. Introduction to Nurse Anesthesiology Specialty I. 2 Units.
This course will focus on the continuum of anesthetic states influenced by clinical anesthesia pharmacology. Coreq: LEAP 402.

LEAP 402. Writing Workshop I. 1 Unit.
This course will engage students in increasing their understanding of concepts in academic dialogue and magnifying their ability to write effectively. It will include an examination of scholarly writing techniques. Coreq: LEAP 401.

LEAP 403. Introduction to Nurse Anesthesiology Specialty II. 2 Units.
This course will focus on the basic principles of anesthesia practice. Prereq: LEAP 401 and LEAP 402. Coreq: LEAP 404, LEAP 405, and LEAP 406.

LEAP 404. Human Physiology. 3 Units.
This course will provide an in-depth understanding of the function, regulation, and integration of human organ systems. Emphasis will be placed on homeostasis in health and disease. Course content will include introductory cell physiology and major organ systems. Prereq: LEAP 401 and LEAP 402. Coreq: LEAP 403, LEAP 404, and LEAP 406.

LEAP 405. Professional Aspects and Leadership in Nurse Anesthesiology. 1 Unit.
This course will focus on the study of the role of the advance practice nurse in Nurse Anesthesiology, including principles of leadership. Prereq: LEAP 401 and LEAP 402. Coreq: LEAP 403, LEAP 404, and LEAP 406.

LEAP 406. Writing Workshop II. 1 Unit.
This course will build on scholarly writing techniques and introduce concepts related to academic dialogue. The course will provide a review of the writing process for dissemination. Prereq: LEAP 401 and LEAP 402. Coreq: LEAP 403, LEAP 404, and LEAP 405.
LEAP 407. Introduction to Nurse Anesthesiology Specialty III. 2 Units.
This course will focus on the clinical management of nurse anesthesiology practice. Prereq: LEAP 403. Coreq: LEAP 408 and LEAP 409.

LEAP 408. Pathophysiology. 3 Units.
This course will provide an in-depth understanding of health and pathologic alterations across the lifespan. A focused review of etiology, symptomology, and the psychophysical response to disease and injury will be incorporated. Prereq: LEAP 404. Coreq: LEAP 407 and LEAP 409.

LEAP 409. Writing Workshop III. 1 Unit.
This course will expand students’ understanding of concepts in academic dialogue. It will enhance students’ ability to develop and discuss the underpinnings of scholarly writing. Prereq: LEAP 403, LEAP 404, LEAP 405, and LEAP 406. Coreq: LEAP 407 and LEAP 408.

NUAN Courses

NUAN 443. Professional Role. 1 Unit.
This course will explore the role of the Certified Registered Nurse Anesthetist. Emphasis will be placed on the historical development of the role, regulation of practice, professional organizations, and professional practice standards and guidelines.

NUAN 450. Pharmacological Strategies in Anesthesia Practice. 2 Units.
This course will provide a comprehensive analysis of anesthetic agents, adjunct drugs, and pharmacologic principles related to the practice of anesthesia. The interaction between anesthetic agents and other pharmacologic therapy will be identified. (Admission to program or permission of instructor required.)

NUAN 458. Principles of Anesthesia I. 4 Units.
This course will introduce the student to the practice of nurse anesthesia. Emphasis will be placed on development of foundational knowledge, skills, and techniques necessary for delivery of safe, effective anesthesia care across the lifespan. This will be the first of two courses to provide an overview of the fundamentals of anesthesia practice. This course will focus on knowledge and skills necessary to deliver safe anesthesia care. (Enrollment in nurse anesthesia program)

NUAN 459. Principles of Anesthesia II. 4 Units.
This course will introduce the student to the practice of nurse anesthesia. Emphasis will be placed on development of foundational knowledge, skills, and techniques necessary for delivery of safe, effective anesthesia care across the lifespan. This will be the second of two courses to provide an overview of the fundamentals of anesthesia practice. This course will focus on principles applicable to specific patient populations. Prereq: NUAN 458.

NUAN 460. Advanced Principles of Anesthesia 1. 4 Units.
This course will provide an in-depth exploration of the anatomy, physiology, and pathophysiology of the cardiovascular, respiratory, and hematologic systems in the context of anesthesia care. Implications of disease states in these systems for all types of surgery will be explored, with emphasis on anesthetic management of surgical procedures related to these systems. Prereq: NUAN 460.

NUAN 461. Advanced Principles of Anesthesia 2. 3 Units.
This course will provide an in-depth exploration of the anatomy, physiology, and pathophysiology of the renal, endocrine, immunologic, musculoskeletal, hepatobiliary, and neurologic systems in the context of anesthesia care. Implications of disease states in these systems for all types of surgery will be explored, with emphasis on anesthetic management of surgical procedures related to these systems. Prereq: NUAN 460.

NUAN 462. Advanced Principles of Anesthesia III. 3 Units.
This course will provide an in-depth exploration of the anatomy, physiology, and pathophysiology of pediatric, obstetric, geriatric, and obese patients within the context of anesthesia care. Implications of physiologic changes across the lifespan will be explored, with emphasis on the anesthetic management of anesthetic and surgical procedures related to these patient populations. Prereq: NUAN 461.

NUAN 507. Nurse Anesthesia Practice Management. 1 Unit.
This course will focus on management, entrepreneurial concepts, and topics related to nurse anesthesia practice. Seminars will focus on integrating legal, fiscal, quality improvement, and other factors that affect environments of care. Prereq: Enrolled in DNP Anesthesia program or Requisities Not Met permission.

NUAN 550A. Anesthesia Seminar I. 1 Unit.
This course is the first of a three-course sequence designed to examine the current body of knowledge related to nurse anesthesia practice. Emphasis will be placed on analysis of theory and evidence, and application of research outcomes. Prereq: NUAN 462.

NUAN 550B. Anesthesia Seminar II. 1 Unit.
This course is the second of a three-course sequence designed to examine the current body of knowledge related to nurse anesthesia practice. Emphasis will be placed on analysis of theory and evidence, and application of research outcomes. Prereq: NUAN 550A.

NUAN 550C. Anesthesia Seminar III. 1 Unit.
This course is the third of a three-course sequence designed to examine the current body of knowledge related to nurse anesthesia practice. Emphasis will be placed on analysis of theory and evidence, and application of relevant research outcomes. Prereq: NUAN 550B.

NUAN 551A. Nurse Anesthesia Advanced Clinical Practicum I. 1 Unit.
This course will emphasize nurse anesthesia care for individuals with complex medical conditions, or those who require increasingly complex procedures. Students will demonstrate advanced monitoring techniques, safe use of pharmacologic agents, and the management of high-stress situations. Prereq: NUAN 462.

NUAN 551B. Nurse Anesthesia: Advanced Clinical Practicum II. 1 Unit.
This course will emphasize nurse anesthesia care for individuals with complex medical conditions, or those who require increasingly complex procedures. Students will demonstrate advanced monitoring techniques, safe use of pharmacologic agents, and the management of high-stress situations. Prereq: NUAN 551A.

NUAN 551C. Nurse Anesthesia Advanced Clinical Practicum III. 1 Unit.
This course will emphasize nurse anesthesia care for individuals with complex medical conditions, or those who require increasingly complex procedures. Students will demonstrate advanced monitoring techniques, safe use of pharmacologic agents, and the management of high-stress situations. Prereq: NUAN 551B.

NUAN 551D. Nurse Anesthesia-Advanced Clinical Practicum IV. 1 Unit.
This course will emphasize nurse anesthesia care for individuals with complex medical conditions, or those who require increasingly complex procedures. Students will demonstrate advanced monitoring techniques, safe use of pharmacologic agents, and the management of high-stress situations. Prereq: NUAN 551C.

NUAN 552. Nurse Anesthesia: Advanced Practice II. 1 - 5 Units.
The continuation of advanced, independent clinical nurse anesthesia administration. Emphasis is on management of higher risk patients for more difficult procedures, performing total anesthetic care with minimum of anesthesiologist supervision, and readiness for transition from student to graduate status. Prereq: NUAN 551A and NUAN 551B and NUAN 551C.
NUED Courses

NUED 432. Common & Acute Health Problems of the Adult and Older Adult. 3 Units.
This course introduces the common and acute health problems occurring across the adult life span. A problem-oriented approach is used with emphasis on the biological, psychological, social, and cultural aspects of care. Pathophysiology, pharmacology, assessment, and diagnostic strategies specific to the acute and common problems of adults and older adults will be included. Nursing strategies used to enhance, maintain, and restore health will be emphasized. Prereq: NUED 459 and NUNP 410. Coreq: NUED 430.

NUED 434. Advanced Management in Adult and Older Adult Primary Care. 3 Units.
This course focuses on the health care concepts specific to the management of complex multidimensional health problems experienced by adults, older adults within the context of their family and community environments. Pathophysiology, assessment, and diagnostic strategies specific to complex health problems are emphasized. The selection of management strategies used to enhance outcomes will be stressed. Prereq: NUED 449.

NUED 449. Primary Care of the Older Adult. 3 Units.
This course will focus on the assessment of the older adult’s nutritional needs, functional status, mental status (cognitive and affective), social support systems, and caregiver stress. These factors are analyzed in various environments, such as acute care, ambulatory care, home care, day care, long-term care, and rehabilitation. Epidemiological and health behavior models are used to assess health risks, assist with problem identification, primary, secondary, and tertiary prevention strategies. Cultural, ethnic, and developmental issues are addressed. Concepts, assessment strategies, interventions and evaluation approaches specific for older adults are identified. Prereq: NUED 449.

NUED 509. Curriculum and Instruction. 3 Units.
The purpose of this course is to explore the theoretical underpinnings of education and to examine innovative approaches to critical thinking. Students are provided the opportunity to analyze philosophies and principles of education along with teaching and learning styles. The focus of this course is on curriculum planning and development congruent with the philosophy and objectives of a nursing program. Curriculum development includes determination of program and course objectives, along with selection and organization of appropriate learning experiences to meet these objectives. Techniques for instruction in the classroom, laboratory, and clinical settings are explored.

NUED 609. Theoretical Foundations of Educational Testing and Evaluation. 2 Units.
In this course, an overview of educational measurement and evaluation is provided. Methods of evaluating teaching effectiveness, student learning, and student performance are explored. Prereq: NUED 509.

NUMN Courses

NUMN 400. Guided Study. 1 - 12 Units.
Independent guided study for students with special interests and/or curricular needs. May include didactic, lab, and/or clinical experiences. Separate guided study plan form required. Faculty consent required to register.

NUMN 401. Introduction to the Discipline and Practice of Nursing. 6.5 Units.
This course is an introduction to the discipline and practice of nursing. Factors influencing health and illness will be explored. Selected nursing strategies and interventions designed to support the maximum health potential of the adult client will be incorporated into lab sessions and practiced in acute care and other settings as arranged. Historical, societal, and legal influences on nursing and the role and functions of the professional nurse will be examined. Coreq: NUMN 402 and NUMN 410.

NUMN 402. Pharmacology for the Advanced Generalist Nurse. 3 Units.
This course is an introduction to the principles of pharmacology and pharmacotherapeutics, including characteristics of the major drug classifications with emphasis on drug action and adverse effects. Students will apply knowledge of pharmacology to implications for safe, patient-centered nursing care. Coreq: NUMN 401 and NUMN 410.

NUMN 403. Introduction to Nursing Informatics. 1 Unit.
This course will introduce students to the concepts of health informatics and the role nurses play in the management of information within the health care setting. Foundational knowledge that supports clinical practice, education, research, and administration will be studied as well as core models and theories of nursing informatics. Students will develop an awareness of the importance of nursing involvement in the design, implementation, and use of information systems and other technologies. Coreq: NUMN 401.

NUMN 406. Nursing Care of Older Adults in Health and Illness. 2 Units.
This course will explore the concept of aging in health and illness with an emphasis on the older adult as an individual with the capacity to grow and develop. Theories of aging, geriatric syndromes, and the multiple interacting determinants influencing the health of older adults will be examined. Students will design and implement theory and evidence-based, safe, patient-centered nursing interventions tailored to the unique needs of older adults and their caregivers. Prereq or Coreq: NUMN 401 and NUMN 410.

NUMN 407. Acute Care Nursing of the Adult. 8.5 Units.
The focus of this course is the integration of the nursing process in clinical practice. Human responses to significant health events and alterations are analyzed. Application of relevant physiology, psychosocial dimensions, and pharmacology are included. Particular emphasis is placed on nursing strategies, interventions, and the evaluation of their effectiveness in the care of the acutely ill adult. Prereq: NUMN 401 and NUMN 410.

NUMN 409. Advanced Generalist: Health Policy, Advocacy, and Economics. 1.5 Unit.
This course is designed to address professional role development of the advanced generalist nurse. In this course, students will examine economics, health policy, and advocacy and the role of the advanced generalist nurse as political activist and policy advocate within the U.S. health care delivery systems of care. Policies that influence health care economics, safety, and quality will be investigated. Prereq: NUMN 414.

NUMN 410. Health Assessment for the Advanced Generalist Nurse. 2.5 Units.
This course uses a comprehensive, system-by-system, patient-centered approach to provide students with assessment and interviewing skills required for practice as an advanced generalist nurse. Students will apply critical thinking to make decisions regarding utilization of assessment findings including communication of the findings to the patient. Coreq: NUMN 401.
NUMN 411. Nursing Care of Populations in Communities. 3 Units.
This course will focus on instructional and clinical learning experiences with populations in the community, including vulnerable populations. Students will examine the influences of communities on the health of populations using an ecological perspective. Culturally-sensitive, asset-based strategies and analytical skills will be used to assess, describe, and implement nursing interventions to populations in the community. Coreq: NUMN 401.

NUMN 412A. Collaborative Practice I. 2 Units.
This course will introduce students to interprofessional education and collaboration. Students will develop knowledge, skills, and attitudes related to the four core competencies of interprofessional collaboration: 1) values for interprofessional practice, 2) understanding the roles and responsibilities of other professionals, 3) interprofessional communication, and 4) interprofessional teamwork. Cultural humility, civic responsibility, and service to others will be emphasized. Students will begin to apply these skills by participating within an interprofessional team on a community-based service learning project.

NUMN 412B. Collaborative Practice II. 1.5 Unit.
This course will build on previous learning related to interprofessional education and collaboration. Students will apply teamwork skills, culminating in the completion of a community-based service learning project designed to improve health and well-being for individuals, families, communities, and populations. Prereq: NUMN 412A.

NUMN 413. Issues and Ethics in Health Care. 2 Units.
This course introduces students to the principles underlying ethical issues and methods of rational decision making. Fundamental theories will be reviewed and applied through case analyses to address ethical dilemmas common to modern health care.

NUMN 414. Concepts in Nursing Management. 2.5 Units.
This course focuses on the study of basic concepts related to management in nursing and working with multidisciplinary teams in the provision and coordination of care. Concepts of nursing management including; planning, organizing, staffing, delegating, and budgeting within healthcare settings will be discussed. Coreq: NUMN 407.

NUMN 415. Parents and Neonates in Health and Illness. 4.25 Units.
This course will focus on the health needs of women and families in the preconception, antepartum, intrapartum, and postpartum period. Health topics related to the reproductive system will be explored. The influence of intervening variables on bio-psycho-social development of the childbearing family will be analyzed. In the clinical experience, students will implement and evaluate nursing strategies designed to enhance health in parents and neonates in health and illness. Prereq: NUMN 407.

NUMN 416. Children and Families in Health and Illness. 4.25 Units.
This course is the study of children from infancy through adolescence and their health status from a developmental perspective. Emphasis is on healthy children as well as those with common acute and chronic illness within the context of their family environment. Nursing strategies focus on interventions to promote, restore, and maintain health and foster growth and development. These strategies are based on understanding advanced concepts of children's and families' responses in health and illness. Prereq: NUMN 407. Coreq: NUMN 414.

NUMN 417. Psychiatric Mental Health Nursing. 4 Units.
This course is designed to address psychiatric nursing concepts related to mental illness and addiction. The focus is on achieving optimal health for clients with acute and chronic psychiatric disorders using interpersonal techniques and applying the nursing process. Nursing strategies that are appropriate for assessment and intervention with individuals, families, and groups to facilitate optimal mental health and recovery will be discussed and evaluated. Prereq: NUMN 407.

NUMN 418. Intro to Critical Care Nursing. 6 Units.
The focus of this course is on integrating the knowledge and skills required to safely and effectively provide quality patient care in the critical care setting. Emphasis is placed on implementation of the nursing process and standards of practice required to care for critically ill patients and their families. The didactic component includes topics on current practice and trends in critical care nursing. The clinical component provides students with opportunities to implement the roles and functions of the advanced generalist nurse. Prereq or Coreq: NURS 502.

NUMN 419. Advanced Generalist Nurse Leadership. 2.5 Units.
This course is part of the concentration in leadership for safe quality healthcare. It provides students with clinical practice opportunities to synthesize knowledge, skills, and attitudes, and implement the roles of the advanced generalist nurse as leader for evidence-based quality healthcare for populations across the continuum of care. Coreq: NURS 451, NURS 502, and NUMN 409.

NUMN 420. Clinical Immersion. 1 Unit.
This clinical immersion will build on previous MN clinical and didactic coursework and provide opportunities to integrate and apply knowledge and skills in a selected patient population. The course will enhance preparation for entry into professional nursing practice. Coreq: NUMN 418.

NUND Courses

NUND 450. Applied Statistics. 3 Units.
This course provides an advanced overview of the assumptions and applications necessary to analyze and interpret questions and research related to clinical practice. Emphasis will be on statistical interpretation of research. During the course, data management, statistical analysis, and data interpretation, as well as univariate, bivariate, and multivariate statistics such as ANOVA and ANCOVA will be examined. The data analysis process will be examined and deconstructed throughout the course. Offered as NUND 450 and NURS 532. Prereq: STAT 201 or equivalent within past 5 years.

NUND 504. Theories for Nursing Practice and Scholarship. 3 Units.
This course will examine perspectives of the discipline, the nature of theory, theory development in nursing, and significant conceptualizations of nursing and related disciplines. Application of theory to practice, practice change and scholarship will be explored.

NUND 506. Leadership in Organizations and Systems. 3 Units.
This course introduces the student to organizational design and leadership. The focus is developing skills to effectively lead individuals and teams toward maximizing organizational effectiveness. Elements of this course will include: diversity, organization culture, systems, communication, innovation and change.

NUND 507. Business Concepts in Advanced Nursing Practice. 3 Units.
This course will focus on business concepts and issues related to advanced nursing practice leadership. Seminars will focus on integrating business-related ethical, legal, fiscal, and other intervening variables that affect environments of care. Prereq: NUND 506.
NUND 508. Health Care Policy and Planning. 3 Units.
The primary focus of this course is to explore the leadership role of nurses in health policy development and implementation as well as the role of research in health care policy formation and planning. Special emphasis is placed on selected national and international health policy issues that form the socio-political and economic context of nursing care and practice. Ethical dimensions of public policy formulations and implementation are highlighted. Offered as NUND 508 and NURS 609.

NUND 509. Curriculum and Instruction. 3 Units.
The purpose of this course is to explore the theoretical underpinnings of education and to examine innovative approaches to critical thinking. Students are provided the opportunity to analyze philosophies and principles of education along with teaching and learning styles. The focus of this course is on curriculum planning and development congruent with the philosophy and objectives of health care organizations. Curriculum development includes determination of program and course objectives, along with selection and organization of appropriate learning experiences to meet these objectives. Effective techniques for instruction in the classroom, laboratory, and clinical settings are explored.

NUND 510. Application of Health Information Technology and Systems. 1 Unit.
In this course, an overview of health information technology (HIT) is provided with focus on use of HIT in health care settings and among consumers. Course content includes use and evaluation of HIT by health care providers and patients.

NUND 512. Advanced Leadership and Management in Health Care Organizations. 2 Units.
This course will focus on the system-level executive leadership role of nurses in health care organizations. The course will examine strategic leadership and management planning, process improvement, and local, national and global influences on health system functioning. Emphasis will be placed on developing executive strategies within the dynamics of competitive health care environments. Prereq: NUND 504 and NUND 506.

NUND 540. Practice Focused Inquiry I. 3 Units.
This course will introduce the student to a variety of approaches that can be used for practice-focused inquiry, including concepts related to population health. Applications of beginning elements of the scholarly process to practice-focused inquiry will be reviewed. Elements include development of a problem statement and literature review. (Alternate pre-req to NUND 450: Applied statistics course within the past 5 years). Prereq: NUND 504 and NUND 450.

NUND 541. Practice-Focused Inquiry II. 3 Units.
This course builds on Practice-Focused Inquiry I. The content expands student understanding of practice-focused methodology, including aims, a conceptual or theoretical framework, setting, sample, sources of data, measures and instruments. The student applies appropriate methodology to the development of a plan for their scholarly practice-focused project. Ethical issues and mechanisms for dissemination of the project results are included. Prereq: NUND 540.

NUND 607. Advanced Leadership and Management in Healthcare. 2 Units.
This course will build upon and apply knowledge of leadership strategies from previous coursework. Students will address the successful management of clinical challenges within the dynamic healthcare environment. The course will emphasize the development of strategic capacity, enabling students to navigate complex clinical issues within the healthcare setting. Prereq: NUND 507.

NUND 609. Theoretical Foundations of Educational Testing and Evaluation. 2 Units.
In this course, an overview of educational measurement and evaluation is provided. Methods of evaluating teaching effectiveness, student learning, and student performance are explored. Prereq: NUND 509.

NUND 610. Translating Evidence into Nursing Practice. 3 Units.
This course focuses on methods for developing best practice protocols, and translating them into practice.

NUND 611. DNP Practicum. 1 - 2 Units.
Under the guidance of the faculty advisor and designated mentor(s), the student will develop, implement and evaluate specific clinical practice experience(s) that prepare the student to lead in collaborative practice. Selected competencies of the DNP-prepared nurse will be advanced. Note: Admission to the DNP Program required. Prereq: NUND 504 or NUND 506.

NUND 612. Transformational Leadership in Executive Nursing Practice. 3 Units.
This course will focus on transformational leadership and entrepreneurial concepts as applied to executive nursing practice. This course will include theoretical understandings of innovation, visioning and inspirational skills to lead change and improve clinical nurse and patient/client outcomes at the organizational system level, within the context of complex health care systems. Prereq: NUND 512.

NUND 615. Teaching Practicum. 1 - 6 Units.
In this precepted teaching practicum, the student may engage in classroom, laboratory, and clinical teaching assignments in nursing. The student will be expected to use current educational theory and nursing knowledge in completing the practicum experience (minimum 60 hours). Prereq: NUND 609 or NURS 619.

NUND 619. DNP Project Proposal Development. 1 - 2 Units.
Under the guidance of the student's chair and committee, the student will develop a proposal for a project to address a practice-based problem. Prereq: NUND 541.

NUND 620. Scholarly Project. 1 - 3 Units.
Under the guidance of their advisor and committee, the student will complete a systematic investigation of a previously identified problem. The experience will culminate with a written report of the findings. (Completion of all DNP coursework; may be concurrent with NUND 611). Prereq: NUND 619.

NUNP Courses

NUNP 401. Development and Health Promotion in Children and Adolescents. 3 Units.
This course will examine the concepts of development and health promotion in children and adolescents. Concepts and theories from nursing and other related disciplines will be explored. Clinical application of theories and advanced nursing strategies to optimize the health of children, adolescents, and their families will be emphasized in the professional role development of students. Prereq: Enrolled in MSN program.

NUNP 402. Common and Acute Health Problems of Children. 6 Units.
This course will introduce the common and acute health problems occurring in infancy through adolescence using a biological, psychological, social, cultural, and family-centered approach. Knowledge of pathophysiology, advanced assessment, and diagnostic reasoning for acute and common problems in children and adolescents will be emphasized. Strategies used to improve health outcomes will be discussed. Prereq: NURS 453, NURS 459 and NUNP 410. Prereq or Coreq: NURS 430.
NUNP 403. Advanced Management in Pediatric Primary Care. 5 Units.
This course will focus on the primary and rehabilitative health care management of complex, multi-dimensional health problems experienced by children and adolescents within the context of their family and community environments. Pathophysiology, advanced assessment, and diagnostic reasoning specific to complex health problems in children and adolescents will be emphasized. Emphasis will be placed on the consultation and referral processes within interprofessional teams. Prereq: NUNP 402.

NUNP 405. Foundations for the Neonatal Nurse Practitioner. 3 Units.
This course introduces the role of the Neonatal Nurse Practitioner and concepts relevant to the management of the neonate. Students analyze nursing strategies to optimize health behaviors in families with neonates. Coreq: NUNP 416.

NUNP 410. Health Promotion Across the Life Span. 2 Units.
This course introduces diagnostic reasoning skills related to health promotion, disease prevention, and maintenance of function across the lifespan. Students develop skills that foster wellness in individuals, families, and communities. Epidemiological principles, risk appraisals, and other strategies are incorporated.

NUNP 412. Health Problems of the Neonate. 4 Units.
This course will focus on the high-risk neonate. Advanced practice nursing strategies that enhance, maintain, and restore health in ill neonates and their families will be addressed. Diagnostic and therapeutic approaches specific to the neonate will be emphasized. Prereq: NUNP 405 and NUNP 416.

NUNP 413. Adv Mgmt Acutely Ill Neonate. 3 Units.
This course will focus on assessment, and diagnostic approaches in implementation of management plans for neonates with acute health problems. Pathophysiological changes specific to neonates with acute health problems will be incorporated. Concepts related to discharge planning and long-term follow-up will be introduced. Prereq: NUNP 405 and NUNP 412.

NUNP 414. Advanced Management of Neonates with Complex Health Problems. 5 Units.
This course will focus on assessment and diagnostic approaches in implementation of management plans for neonates with acute and complex health problems. Pathophysiological changes specific to neonates with complex health problems will be incorporated. Emphasis will be placed on consultation and referral processes within interprofessional teams. Prereq: NUNP 413.

NUNP 416. Integrated Assessment of the Neonate. 3 Units.
This course will introduce principles fundamental to the integrated assessment of the neonate. It will stress perinatal history taking including assessment of genetic risks, gestational age assessment, and physical assessment skills. The course will provide the basis for problem identification, decision making, advanced therapeutics, and case management. Coreq: NUNP 405.

NUNP 419. Family Health Nursing: Health of Adults and Older Adults. 5 Units.
This course is an introduction to the practice of primary health care of adults and older adults. Principles of health promotion, disease prevention, management of common acute and chronic health problems and the impact of the family are incorporated. Emphasis is placed on the physical, psychological, social, and cultural aspects of care. Pathophysiology, assessment, and diagnostic techniques specific to the common acute and chronic health problems are integrated. Strategies related to health and illness care are used to enhance, maintain, and restore health. Collaboration with other health care professionals to enhance patient outcomes is explored. Prereq: NURS 453, NURS 459 and NUNP 410. Coreq: NURS 430.

NUNP 429. Health Promotion & Common Reproductive Health Problems of Adolescents and Adults. 4 Units.
This course introduces the student to the care of the woman from puberty through menopause and her family. Physical and psychosocial health and deviations before, during, and after the childbearing years are assessed. The course content includes principles of education for childbirth, parenting, and fertility control. Strategies to optimize health-seeking behaviors are identified. Content on pregnancy and postpartum care is integrated into the course. Prereq: NURS 459.

NUNP 432. Common & Acute Health Problems of the Adult and Older Adult. 5 Units.
This course will introduce the common and acute health problems occurring across the adult life span. A problem-oriented approach will be used with emphasis on the biological, psychological, social, and cultural aspects of care. Advanced assessment, and diagnostic reasoning strategies specific to the acute and common problems of adults and older adults will be included. Principles of pathophysiology and pharmacology will be incorporated. Advanced practice nursing strategies to enhance, maintain, and restore health will be emphasized. Prereq: NURS 453, NURS 459 and NUNP 410. Prereq or Coreq: NURS 430.

NUNP 434. Advanced Management in Adult and Older Adult Primary Care. 5 Units.
This course will focus on health care concepts specific to the management of complex multidimensional health problems experienced by adults and older adults within the context of their family and community environments. Pathophysiology, assessment, and diagnostic strategies specific to complex health problems will be emphasized. Principles of pathophysiology and pharmacology will be incorporated in the development, implementation, and evaluation of plans of care to enhance patient outcomes. Prereq: NUNP 449.

NUNP 438. Foundations for Adult-Gerontology Acute Care Nursing. 4 Units.
The course focuses on establishing elements of advanced nursing practice assessment and diagnostic reasoning across the continuum of healthcare services to meet the specialized physiologic and psychological needs of adults and older adults with complex acute and/or chronic health conditions. Prereq or Coreq: NURS 453 and NURS 459 or students with an MSN and NP certification, permission of faculty.
NUNP 439. Family Health Nursing: Health of Children and Adolescents. 4 Units.
In this course students are introduced to the influence of family dynamics in the practice of primary health care of children and adolescents. The course includes the application of the principles of growth and development, disease prevention, health promotion, and management of common acute and chronic health problems in children and adolescents. Clinical application of strategies to optimize health seeking behaviors is emphasized. Collaboration with other health care professionals to enhance patient care is reinforced. Prereq: NUNP 429.

NUNP 443. Acute Health Problems of Adults and Older Adults. 6 Units.
In this second of sequenced Adult-Gerontology Acute Care Nursing clinical courses, the emphasis is on the pathophysiology, assessment, and diagnostic approaches to adults and older adults with complex acute and chronic health disorders that manifest with physiologic instability. The clinical practicum focuses on further development of diagnostic reasoning, clinical judgment, caring practices, and collaboration in health care systems that deliver acute and critical advanced practice nursing. Certification in PALS is required. Prereq or Coreq: NURS 438 and NURS 459 and NURS 453 and NURS 430 or Requisites Not Met permission.

NUNP 444. Advanced Management of Acutely Ill Adults and Older Adults. 4 Units.
This third clinical course in the Adult-Gerontology Acute Care Nurse Practitioner sequence focuses on concepts specific to complex, multidimensional health problems of acute and critically ill adults and older adults. Clinical practice focuses on the management of patients with complex health problems and life-threatening conditions across the entire adult population. Prereq: NUNP 443.

NUNP 449. Advanced Practice Nursing Care of the Older Adult. 4 Units.
This course will integrate the principles of health promotion, disease prevention and rehabilitation in the care of older adults. The assessment of nutritional needs, functional status, mental status, social support systems, and caregiver stress will be addressed. These factors are analyzed in various environments of care. Cultural, ethnic, and developmental issues are addressed. The diagnosis, treatment and management of acute and chronic conditions associated with aging, but that can also occur in younger adults, are presented. Interventions appropriate to restore or maintain an optimal level of function will be included. Palliative and end-of-life care will be addressed. Prereq: NUNP 432.

NUNP 455. Management of Complex Acute Problems in Children and Adolescents I. 4 Units.
This course will apply knowledge, evidence, advanced skills, interventions, and pharmacotherapy in the management of children and adolescents with acute, chronic and critical conditions within the context of family-centered care. Assessment strategies and management principles will be addressed. (Minimum of one year nursing experience in a pediatric acute care setting. Certification in PALS is required.) Prereq or Coreq: NUNP 402.

NUNP 456. Management of Complex Acute Problems in Children and Adolescents II. 5 Units.
This course will integrate knowledge, research, advanced skills and interventions with children and adolescents with complex acute, critical and chronic health conditions. Advanced practice strategies and management principles will be addressed including knowledge and skills with technological assessment modalities and procedures associated with the care of acutely and critically ill children and adolescents within the context of family-centered care. Prereq: NUNP 455.

NUNP 464. Global Clinical Learning. 1 Unit.
This course will allow the MSN student to engage in clinical work in low and middle income medically under resourced communities providing direct patient care under clinical supervision of MSN faculty. Students will prepare for the experience by gaining knowledge of the history and culture of the region, common diseases prevalent in the area and orientation to the site operations. The student will focus on the 1) steps to diagnose, treat and implement a plan of care for area specific diseases; 2) culturally and resource appropriate treatments; 3) dental hygiene and nutrition as they impact the health of the local population. Students will prepare culturally appropriate presentations for local nurses and contribute to the preparation of non-medical members of the team for patient safety using current evidence based practices. Offered as NUNP 464 and NURS 464. Prereq: Enrollment in MSN, DNP or PhD in Nursing Program.

NURS Courses

NURS 115. Foundations of Nursing Practice I. 4 Units.
This course is designed to introduce the student to the practice, profession, and discipline of nursing. Critical historical influences on the development of the profession will be discussed. The relationship between evidence, theory, and nursing care will be explored. Contemporary nursing will be examined with a focus on patient safety, interdisciplinary care, and innovative strategies to attain optimum health. The basic components of the nursing process will be presented as a framework for beginning clinical practice.

NURS 122. Foundations of Nursing Practice II. 3 Units.
This course builds on the concepts essential to the foundations of nursing practice presented in previous nursing courses. It is designed to focus on strategies, skills, and techniques to obtain a comprehensive individual health history, family health history, and physical examination. Therapeutic interventions based on assessment and scientific knowledge will be performed. Prereq: (BIOL 114 with a grade of C or better or a score of 4 or higher on the Biology AP exam), BIOL 116 with a grade of C or better, NURS 115 with a grade of C or better.

NURS 160. Health Care in the Community. 1 Unit.
This course will integrate social disparities in healthcare outcomes with the delivery of culturally appropriate, community-based healthcare interventions. Students will engage in a community clinical experience in a community-based facility. Population health, public health nursing, and community assessment will be emphasized.

NURS 201. Applied Nutrition in Health and Disease. 2 Units.
This course builds upon the student’s knowledge of human physiology and metabolism. Nutrient requirements are highlighted as well as changes related to different stages in the lifespan. Contemporary nutritional issues will be addressed. Prereq: (BIOL 114 with a grade of C or better or a score of 4 or higher on the Biology AP exam) and BIOL 116 with a grade of C or better.

NURS 210. Teaching/Learning in the Community. 1 Unit.
This course will expand on foundational public health nursing concepts to develop student knowledge, skills, and attitudes in providing culturally appropriate health care education to diverse populations. This course will explore the syndemic relationships between learning needs, health literacy, teaching/learning interventions, and evaluation of learning. Students will engage in classroom and experiential teaching/learning encounters. Prereq: NURS 160.
NURS 211. Introduction to Pharmacology I. 1.5 Unit.
This is the first of two courses which will introduce the basic principles of pharmacology and pharmacotherapeutics, including a review of the characteristics and use of major drug classifications with an emphasis on nursing implications. The pharmacological content presented in this course will be coordinated with Nursing Care of the Adult 1 with emphasis focused on patients experiencing co-morbid conditions. Prereq: BIOL 117, CHEM 119, and NURS 122. Coreq: NURS 230.

NURS 212. Introduction to Pharmacology II. 1.5 Unit.
This is the second of two courses which will introduce the basic principles of pharmacology and pharmacotherapeutics, including a review of the characteristics and use of major drug classifications with an emphasis on nursing implications. The pharmacological content in this course will be coordinated with Nursing Care of the Adult 2 with emphasis focused on patients experiencing co-morbid conditions. Prereq: NURS 211 and NURS 230. Coreq: NURS 240 and NURS 317.

NURS 230. Nursing Care of the Adult I. 5 Units.
This is the first of two courses that will focus on the application of the nursing process to adults experiencing common acute and chronic health alterations. Special emphasis will be placed on patient assessment, diagnostic testing, and medication teaching and administration. The concept of transition from inpatient to primary care will be discussed. Prereq: BIOL 117, CHEM 119, and NURS 122. Coreq: NURS 211.

NURS 240. Nursing Care of the Adult II. 4.75 Units.
This course will build upon the knowledge and skills mastered in NURS 230. Students will collaborate with members of the health care team to plan, implement, and evaluate nursing interventions and provide comprehensive care. Primary and transitional care planning will be emphasized for the adult with chronic health issues and comorbid conditions. Prereq: CHEM 121, NURS 211, and NURS 230. Coreq: NURS 212.

NURS 250. Aging in Health and Illness. 2 Units.
This course will explore the concept of aging as a healthy developmental process with a particular focus on older adults as active, independent and contributing members of the community. Content will include the process of healthy aging, major health problems for which older adults are at risk, and policy issues. Prereq: BIOL 117, CHEM 119, NURS 122. Coreq: NURS 211.

NURS 260. Evidence Based Public Policy in the Community. 1 Unit.
This course expands on foundational public health nursing concepts to develop student knowledge, skills, and attitudes in providing culturally competent health care to diverse populations using the service learning model. Utilizing a balance between knowledge centered and skill centered approaches students will apply concepts of team work and collaboration to experiential learning outcomes. Prereq: NURS 210.

NURS 277. BCLS and First Aid for Health Care Providers. 0 Unit.
Designed for healthcare professional students, this course follows the American Heart Association Basic Life Support (BLS) for Healthcare Providers Course objectives. It provides a variety of healthcare professional students the ability to recognize several life-threatening emergencies, provide CPR, use an AED, and relieve choking in a safe, timely and effective manner. Basic first aid skills are also included in this course.

NURS 310. Leadership in the Community. 1 Unit.
This public health course is designed to develop student knowledge, skills and attitudes in providing culturally competent health care to diverse populations, using the service learning model. Students will explore nursing’s role as a community health advocate in the promotion of health and the elimination of health disparities. Utilizing a balance between knowledge-centered and skill centered approaches to delivering culturally competent care, students will apply leadership concepts in both traditional classroom and transcultural experiential learning encounters. Prereq: NURS 210 and NURS 260.

NURS 315. Parents and Neonates in Health and Illness. 4.5 Units.
This course focuses on the study of child bearing families and their health-seeking behaviors from a developmental perspective. Content includes nursing knowledge and skills related to assessment of health status of parents and neonates. Nursing strategies focusing on interventions to promote, restore, and maintain health are discussed. Prereq: NURS 212, NURS 240, NURS 317, NURS 342, and SOCI 203.

NURS 316. Child Health Nursing. 4.5 Units.
This course will build on knowledge and skills acquired in previous adult courses to tailor nursing care to infants, children, adolescents, and their families. Students will apply the nursing process within the context of the child/family’s culture and community and will examine acute and chronic conditions along with health promotion and maintenance. Growth and development, communication, evidence-based practice, interprofessional collaboration, quality, and safety will be emphasized. Prereq: NURS 212, NURS 240, NURS 317, NURS 342, and SOCI 203. Coreq: NURS 315.

NURS 317. Psychiatric-Mental Health Nursing. 3.75 Units.
The course is designed to address health-seeking behavior patterns within the context of psychiatric and mental health nursing concepts. The focus is on clients with psychiatric disorders and their mental health. Nursing strategies that are appropriate for assessment and intervention with individuals, families, and groups to facilitate optimal mental health will be discussed and practiced. Prereq: NURS 211 and NURS 230. Coreq: NURS 212.

NURS 320. Theoretical and Evidence Bases for Best Practice in Nursing. 3 Units.
This course explores the theoretical and evidence bases for best practices in nursing. The course begins with an overview of the theoretical and philosophical underpinnings of nursing practice and nursing science. The course includes an intensive focus on the concept of evidence based practice and the process of evaluation supporting practice. Additionally, the course introduces evaluation models used to determine the effectiveness and quality of existing practice and to recommend improvements. Counts as SAGES Departmental Seminar. Prereq: STAT 201 or STAT 201R.

NURS 338. Care of the Adult and Older Adult with Complex Health Alterations. 4.5 Units.
The purpose of this course is to provide the student with the knowledge and skills to care for one or more complex, acutely ill adult patients, who present with co-morbid conditions and may be dependent on technologies. This complexity encompasses the physical, psychological, social, spiritual, and ethical domains of care and includes both patient and the family. Prereq: NURS 212, NURS 240, NURS 342 and NURS 317. Coreq: NURS 339.
NURS 339. Care of the Perioperative Patient. 3.5 Units.
This course will provide the student with a dynamic learning experience in a perioperative interprofessional environment to enhance the knowledge, cognitive and psychomotor skills to care for patients undergoing operative or invasive procedures. Course didactic, lab, and clinical components will be guided by The Quality and Safety Education for Nurses (QSEN) competencies. The Perioperative Patient-Focused Model (Association of periOperative Registered Nurses) will be introduced. Communication skills, advocacy and leadership will be emphasized in the context of nursing care within and outside of the perioperative environment. Prereq: NURS 212, NURS 240, NURS 317 and NURS 342. Coreq: NURS 338.

NURS 341. Concepts of Leadership and Management in Nursing Practice. 3 Units.
This course will focus on basic concepts related to leadership and management in the provision of nursing care. Students will examine management processes, leadership theory, and related competencies for individual clinical practice. An emphasis will be placed on professionalism, professional identity, equity, inclusion in care, and emotional intelligence. Internal environmental factors and external influences that impact nursing management will be analyzed. Prereq: NURS 315, NURS 316, NURS 338, NURS 339.

NURS 342. Medical Microbiology, Immunity, and Infectious Disease. 4 Units.
This course will provide the foundation of general microbiology necessary for students who are enrolled in nursing. This course will introduce the core concepts and basic principles in microbiology, examining microorganisms and how they interact with humans and the environment. Information regarding classification of microorganisms, characteristics of different cell types and processes critical for cell survival will be presented. Topics such as bacterial metabolism, microbial nutrition, genetics, anti-microbial approaches and interaction of pathogenic bacteria with humans will be discussed. The course will include a laboratory component designed to complement lecture topics. Prereq: BIOL 117 and CHEM 121.

NURS 343. Issues and Ethics in Health Care. 2 Units.
This course is designed to introduce the student to the principles underlying ethical issues and methods of rational decision making. Fundamental theories will be reviewed and opportunity provided, using case analysis, to apply the theories in addressing ethical dilemmas common to modern health care. Prereq: NURS 315, NURS 316, NURS 338, and NURS 339.

NURS 345. Nursing Informatics 2. 2 Units.
This course builds on information learned in NURS 120, and focuses on the use of informatics in nursing practice, education, and research. The emphasis is on using informatics to solve clinical problems. The course addresses how nursing informatics has evolved as a discipline and explores career options in nursing informatics. Current policy and legislative influences on health care technology are also addressed. Prereq: NURS 120.

NURS 350. Process Change in the Community. 1 Unit.
This public health nursing course is designed to develop student knowledge, skills, and attitudes in providing culturally competent health care to diverse populations, using the service learning model, by analyzing key community components that influence health and wellness. Students will explore nursing's role as a community health advocate in the promotion of health and the elimination of health disparities. Utilizing a balance between knowledge-centered and skill-centered approaches to delivering culturally competent care, students will engage in both traditional classroom and transcultural experiential learning encounters. Prereq: NURS 210 and NURS 260.

NURS 370. Information Technologies in Health. 1 Unit.
The focus of this course is the application of advanced information technologies in the health care of communities and populations. Building on a base of pre-requisite informatics course knowledge and student clinical experiences, the course will explore contemporary issues in informatics and the ways in which a nurse can manage the information to support the delivery of care to clients, communities, and populations.

NURS 371. Population Health Nursing. 3 Units.
In this course, students will develop knowledge and competencies in applying key concepts of population-based health, including public health nursing, social determinants of health, and epidemiology to care for individuals, families, communities, and populations. Through classroom experiences, students will discover strategies to assess, plan, implement, and evaluate population-focused programs. Prereq: NURS 310 and NURS 360.

NURS 372. Health in the Global Community. 3 Units.
This course focuses on an analysis of the forces shaping community and global health patterns. Drawing on multidisciplinary sources, this course explores the impact of these global processes as they manifest in the health of our own and other societies. Emphasis is placed on analysis of the broad cultural, environmental, social-economic, and political systems that contribute to health status and outcomes, health policies, and health care delivery around the world. Prereq: NURS 310 and NURS 360.

NURS 373. Population Health Practicum. 5 Units.
This practicum will provide students with the opportunity to analyze the concepts of population health, healthcare quality, health policy, systems-based practice, culture, and ethics through a community-based immersion experience. Students will apply epidemiological methods, community assessment, leadership, teamwork, collaboration, partnership building, and evidence-based nursing practice to identify and analyze a population health concern leading to the development of an intervention. Counts as SAGES Senior Capstone. Prereq: NURS 315, NURS 316, NURS 338, NURS 339. Coreq: NURS 371 and NURS 372.

NURS 380. Transition to Practice. 8 Units.
This course will prepare students to transition to professional nursing practice by integrating principles of communication, collaboration, and clinical decision making necessary to provide safe, quality nursing care for patients and their families with complex issues of health and illness. Emphasis will be placed on clinical practice and nursing strategies designed to provide comprehensive, patient-centered care for select populations. Prereq: NURS 315, NURS 316, NURS 338 and NURS 339.

NURS 394. Global Health Seminar. 3 Units.
The focus of this course is the issues and trends in global health from both a nursing and a trans-disciplinary perspective. The course covers how international social, political, economic, environmental, and cultural issues affect health and health care. Particular emphasis is placed on nursing’s contribution to global health issues and outcomes. Offered as: NURS 394 and NURS 494.
NURS 395. Global Health and Culture in Diverse Populations. 3 Units.
This elective course will use didactic and experiential learning, including travel abroad, to expose students to health care and population health in other countries. The focus of the course will be on issues and trends in global health from a trans-disciplinary perspective. International historical, social, economic, environmental, and cultural issues affecting health and health care will be examined. (Junior or graduate status required). Offered as NURS 395 and NURS 495.

NURS 399. Independent Study. 1 - 12 Units.
Independent guided study for undergraduate students with special interests and/or curricular needs. The course may include didactic, lab and/or clinical experiences. Faculty consent required to register.

NURS 400. Guided Study in Nursing. 1 - 12 Units.
Independent guided study for students with special interests and/or curricular needs. May include didactic, lab, and/or clinical. Separate guided study plan form required. Faculty consent required to register.

NURS 401. Human Growth and Development through the Lifespan. 3 Units.
This course will provide an overview of major concepts, theories and research related to human growth and development from birth to death. An emphasis will be placed on providing culturally appropriate care to all, respecting the diversity and breadth of the human experience.

NURS 404. Emergent Care of the Child. 2 Units.
This course provides an introduction to the care of the child requiring critical care transport (CCT). This course examines pathophysiology, assessment, diagnostic approaches, and interventions specific to emergent care of infants, children and adolescents by advanced nursing practice in CCT. Prereq: NURS 406.

NURS 405. Inquiry I - Theoretical Foundations. 2 Units.
This course provides an introduction to conceptual and theoretical thinking. Students will examine knowledge development in nursing, conceptual structures, and their uses as a basis for nursing practice and research.

NURS 406. Flight Nursing Seminar I. 1 Unit.
This course introduces the knowledge and skill set for advanced nursing practice in critical care transport. The unique features of delivering care in the critical care transport environment are emphasized.

NURS 407. Critical Care Transport and Advanced Nursing Practice 2. 1 Unit.
This course further develops the knowledge and skill set of advanced nursing practice to deliver care to individuals and groups of patients with critical illness. Emphasis is placed on diagnostic reasoning and patient management in unstructured environments. Prereq: NURS 406.

NURS 412. Practice Change Implementation. 1 Unit.
The course focuses on evidence-based practice implementation and quality improvement methods to facilitate effective management of practice change. Students will define quality and safety problems in the healthcare system in which they work and then implement a change. The course covers issues related to evidence-based practice, teamwork, systems science, change management, and data analytics. Students will apply the concepts to practice through an implementation/quality improvement project.

NURS 415. Introduction to Childbirth. 1 Unit.
This course will provide an overview of the process of physiologic labor and birth and methods to facilitate normal processes and minimize interventions. Anatomical and physiologic factors of labor and birth will be explored in detail. The psychological, social, and cultural influences on labor will be examined. Preparation for childbirth by the woman and her family will be explored. The influences of family and health care providers during the labor and birth process will be analyzed.

NURS 416. Integrated Assessment of the Neonate for Midwives. 1 Unit.
This course will introduce concepts fundamental to the integrated assessment of the neonate. Skills in physical, behavioral, and gestational age assessment will be developed. The course will provide the basis for identification of deviations from normal and consultation and/or referral to appropriate health services as indicated. Coreq: NURS 457.

NURS 420. History of Advanced Practice Nursing. 1 Unit.
This course will provide an overview of the history of advanced practice nursing in the United States. The social, political, and economic factors driving the establishment of advanced practice nursing will be explored. Students will have an opportunity to thoroughly explore the history and evolution of a particular advanced practice nursing role.

NURS 425. Inquiry II - Research Process. 3 Units.
This course emphasizes scholarly inquiry, scientific integrity and scientific investigation. It includes study of the research process, particularly design, sampling, data collection and analysis, and interpretation and reporting of findings. Prereq: NURS 405.

NURS 430. Advanced Pharmacology. 3 Units.
This course focuses on the application of advanced pharmacology and pharmacotherapeutics for common conditions across the lifespan. Principles of pharmacokinetics, pharmacodynamics, and pharmacogenomics are applied. Pharmacotherapeutic decision points congruent with effective prescribing are emphasized, including integrating the ethical, legal and cost-benefits of pharmacological interventions. This course is designed to build on diagnostic reasoning and prior pharmacology study of actions and effects of drugs on the human system. RN licensure and practice recommended Prereq: Enrolled in MSN, DNP or PhD Nursing program.

NURS 431. Psychosocial and Spiritual Dimensions of Advanced Nursing Practice. 2 Units.
This course will focus on psychosocial and spiritual dimensions of care. Focused interviewing, counseling, and coaching skills will be examined. Skills in assessing spirituality depression, psychological distress, suicide risk, and substance use issues will be addressed.

NURS 444A. Ethical Issues in Advanced Nursing Practice. 1 Unit.
The focus of this course is ethical decision-making for advanced nursing practice. The interaction between the health care delivery system and ethical decision making is explored. The role of the nurse in identifying and addressing ethical dilemmas and applying communication strategies in assisting patients and families and the interdisciplinary team is emphasized.

NURS 444B. Health Care Delivery and Finance in Advanced Practice. 1 Unit.
The focus of this course is the study of the financial and business factors related to health care delivery and advanced practice nursing. Students will discuss strategies related to business practices, coding, billing, and reimbursement.
NURS 444C. Health Policy Legislation and Legal Issues in Advanced Practice. 1 Unit.
The focus of this course is the critical analysis of health policy and legal issues. Strategies for influencing health policy will be explored.

NURS 451. Leadership for Quality Healthcare within Organizations and Systems. 3 Units.
This course will prepare the student to take a leadership role within organizations and systems to improve the quality of health care. Theory-based strategies to promote change within organizations and systems will be examined. The influence of structural and contextual factors on health, current and emerging information technologies, and communication patterns influencing outcomes of care will be explored.

NURS 453. Advanced Pathophysiology. 4 Units.
This course focuses on the biologic alterations produced by injury or disease among individuals across the lifespan. Physiologic and pathophysiologic concepts that contribute to an individual's capacity for health and susceptibility to illness are examined. This will be the first of a two-course series focusing on advanced physiology and pathophysiology. This course will include an examination of cellular and tissue physiology, genetics, immunology, cancer biology, and neurologic systems. (Enrollment in MSN, DNP or PhD in Nursing Program)

NURS 453A. Advanced Physiology & Pathophysiology I. 2 Units.
This course will focus on physiologic function and pathophysiologic alterations produced by injury or disease among individuals across the lifespan. Physiologic and pathophysiologic concepts that contribute to an individual's capacity for health and susceptibility to illness will be examined. This will be the second of a two-course series focusing on advanced physiology and pathophysiology. This course will include an examination of cellular and tissue physiology, genetics, immunology, cancer biology, and neurologic systems. (Enrollment in MSN, DNP or PhD in Nursing Program)

NURS 453B. Advanced Physiology & Pathophysiology II. 3 Units.
This course will focus on the physiologic function and pathophysiologic alterations produced by injury or disease among individuals across the lifespan. Physiologic and pathophysiologic concepts that contribute to an individual's capacity for health and susceptibility to illness will be examined. This will be the second of a two-course series focusing on physiology and pathophysiology. This course will include an examination of cardiovascular, pulmonary, hemotologic, endocrine, renal, gastrointestinal, musculoskeletal, and reproductive systems. (Enrollment in MSN, DNP or PhD in Nursing Program)

NURS 454. Gynecologic, Reproductive, and Sexual Health Care. 3 Units.
In this course, students will learn to assess and manage common gynecologic, reproductive, and sexual health issues encountered by adolescents and adults in ambulatory settings. Comprehensive care for all available contraceptive methods will be addressed. Cultural safety will be integrated throughout the clinical experience. Supervised clinical experience will focus on achieving the foundation for beginning practice, anticipating and identifying complications and participating in consultations, referrals and collaborative management. This course does not address antepartum, intrapartum, or postpartum care. Prereq: NURS 459. Coreq: NURS 453.

NURS 455. The Childbearing Family. 4 Units.
The focus of this course will be the application of theory, practice and research by advanced practice nurses in the promotion of health and wellness of childbearing women using a family-centered approach. Emphasis will be on normal aspects of pregnancy, focusing on prevention of problems and promotion of health behaviors, as well as identification and management of deviations from normal. Supervised clinical experiences will include understanding normal pregnancy, anticipating and identifying complications, participating in consultations, referrals and collaborative management. Prereq: NURS 454. Coreq: NURS 430.

NURS 457. Labor and Birth. 5 Units.
In this course, students will learn to assess and manage common intrapartum and immediate postpartum issues encountered by a diverse population in inpatient settings. Facilitating the process of physiologic labor and birth and providing physical, psychological, emotional, spiritual, and social support will be emphasized. Cultural safety will be integrated throughout the clinical experience. Supervised clinical experience will include anticipating and identifying complications, including emergency situations, and participating in consultations, referrals, and collaborative management. Prereq: NURS 559.

NURS 459. Advanced Health Assessment. 3 Units.
This course focuses on advanced assessment of individuals across the lifespan. This course incorporates communication skills, interpretation of data, and diagnostic reasoning. Prereq: Enrolled in Master of Science in Nursing Program.

NURS 464. Global Clinical Learning. 1 Unit.
This course will allow the MSN student to engage in clinical work in low and middle income medically under resourced communities providing direct patient care under clinical supervision of MSN faculty. Students will prepare for the experience by gaining knowledge of the history and culture of the region, common diseases prevalent in the area and orientation to the site operations. The student will focus on the 1) steps to diagnose, treat and implement a plan of care for area specific diseases; 2) culturally and resource appropriate treatments; 3) dental hygiene and nutrition as they impact the health of the local population. Students will prepare culturally appropriate presentations for local nurses and contribute to the preparation of non-medical members of the team for patient safety using current evidence based practices. Offered as NURS 464 and NURS 466. Prereq: Enrollment in MSN, DNP or PhD in Nursing Program.

NURS 465. Psychopharmacology. 2 Units.
Course content will focus on drug categories commonly used to treat psychiatric disorders and clinical implications for the patient and family. Substance use disorder/Alcohol use disorder and application of detoxification protocols will be described. Pain management and current APRN practice in prescribing will be discussed.

NURS 466. Promoting Health Across Boundaries. 3 Units.
This course examines the concepts of health and boundary spanning and how the synergy of the two can produce new, effective approaches to promoting health. Students will explore and analyze examples of individuals and organizations boundary spanning for health to identify practice features affecting health, compare and contrast practices and approaches, and evaluate features and context that promote or inhibit boundary spanning and promoting health. Offered as MPH 466, PQHS 466, SOCI 466, NURS 466 and BETH 466. Prereq: Graduate student status or instructor consent.

NURS 468. The Continual Improvement of Healthcare: An Interdisciplinary Course. 3 Units.
This course prepares students to be members of interprofessional teams to engage in the continual improvement in health care. The focus is on working together for the benefit of patients and communities to enhance quality and safety. Offered as PQHS 468, MPH 468, and NURS 468.
NURS 473. Advanced Psychopathology Across the Lifespan: Part I (Infant through Young Adult). 2 Units.
The course will focus on the assessment and diagnosis of psychopathology in children of all ages, infants through young adults. Behavioral deviations from normal growth and development will be assessed while considering age, social, cultural, and economic differences. The responsibilities of family members to psychopathology, violence and substance use in this age group will be discussed.

NURS 474. Advanced Psychopathology Across the Lifespan Part II (Adult and Older Adult). 2 Units.
This course will focus on the assessment and diagnosis of psychopathology in adults and older adults. Behavioral /cognitive deviations from normal growth and development will be evaluated while considering socio-cultural differences and age-appropriate behavior. Responses of family members in relation to adults or older adults' psychopathology, violence and substance use will be discussed. Prereq: NURS 473.

NURS 475. General Systems Theory: Foundations for Practice. 2 Units.
This foundational seminar will introduce General Systems Theory as a framework for understanding complex entities comprised of component parts that are in constant and mutual interaction. The concepts covered will emphasize the openness and flexibility of a system by attending to its entirety as opposed to focusing on separate parts. The focus will be on the organizational structure and processes controlled through cybernetics that allow system adaptation and transformation. Students will apply General Systems Theory to address the mental health care needs of stigmatized, at risk and vulnerable populations informed by their disciplinary perspectives. Graduate standing in nursing or permission of Instructor.

NURS 476. Advanced Practice Seminar: Role of Psychiatric-Mental Health APRN. 1 Unit.
Students will explore the role of the Psychiatric Mental Health (PMH) Nurse Practitioner and Psychiatric Mental Health Clinical Nurse Specialist within the context of family and community. The course will focus on boundaries, professional development and the scope of practice within these roles. Students will examine ethical, legal, cultural and professional standards as they relate to micro and macro systems. (Admission to Family Systems Psychiatric Mental Health Nursing Program required.)

NURS 481. Family Systems Theoretical Foundations. 2 Units.
This course will focus on the major contemporary theoretical approaches and therapies for conceptualizing and working with families across the lifespan. Attention will be given to families challenged by situations such as stress, trauma, violence, psychiatric disorders, and substance use. Prereq: NURS 453 and NURS 473 and NURS 475 and NURS 476.

NURS 482. Family Systems Integration and Application. 1 Unit.
This practicum experience in the application of family theory will address the professional encounter between the advanced practice registered nurse (APRN) and the family system with attention to health promotion and psychiatric disorder management. Special consideration will be given to policy, legal, cultural, and ethical issues regarding family care and practice. Group supervision of the practicum experience is an expectation. (NOTE: Admission to the Family Systems Psychiatric Mental Health NP major is required.) Prereq: NURS 453 and NURS 473 and NURS 475 and NURS 476. Coreq: NURS 430 and NURS 474 and NURS 481.

NURS 477. Family Systems Integration and Application. 1 Unit.
This practicum experience in the application of family theory will address the professional encounter between the advanced practice registered nurse (APRN) and the family system with attention to health promotion and psychiatric disorder management. Special consideration will be given to policy, legal, cultural, and ethical issues regarding family care and practice. Group supervision of the practicum experience is an expectation. (NOTE: Admission to the Family Systems Psychiatric Mental Health NP major is required.) Prereq: NURS 453 and NURS 473 and NURS 475 and NURS 476. Coreq: NURS 430 and NURS 474 and NURS 481.

NURS 483. Individual and Group Modalities for Family Systems Practice Across the Lifespan. 3 Units.
This seminar will address therapeutic modalities as applied to families across the lifespan. Brief, individual, and group modalities will be studied in the context of Family Systems Theory with a focus on differences in family constellations and developmental stages. The selection of modalities for families will consider the implications of cultural and gender differences, vulnerable populations, and the stigma of psychiatric illness. Prereq: NURS 430 and NURS 481 and NURS 482.

NURS 485. Practicum and Supervision: Family Systems Practice Across the Lifespan. 2 Units.
This practicum experience will involve the professional encounter between the individual, group members, and psychiatric nurse practitioner students within the context of family systems theory. Nursing strategies and concepts from psychiatry, behavioral and social sciences related to the promotion of mental health and biopsychosocial treatment in individual and group members across the life span will be explored. Attention will be given to situations such as stress, loneliness, trauma, violence, and substance abuse. Group supervision of the practicum experience is an expectation. Prereq: NURS 430 and NURS 481 and NURS 482. Coreq: NURS 484.

NURS 486. Modalities for Family Systems Practice: Vulnerable Family Populations. 3 Units.
Students will explore the special needs of families who are currently at risk for or manifesting mental health and substance use disorders within the context of family and community in urban and rural settings. Vulnerable families including those who have been exposed to acute and chronic stress disasters, military-related and other forms of trauma will be studied. The needs of youth and adults who are incarcerated will be addressed. Students will encounter the diverse nature of family relationships, including blended, migrant, and immigrant families; relationships that are defined by choice; and families residing on reservations and in religious enclaves. A variety of treatment modalities will be discussed. Prereq: NURS 482 and NURS 485.

NURS 488. Theoretical Basis of Practicum and Supervision in Consult, Collaborate, and Mental Health Education. 3 Units.
This course will focus on the professional encounter among the psych mental health advanced practice registered nurse (APRN) and patient, families and communities within the context of an environment of care. The nurse consultant e applies general systems and family systems theory to enhance the capacity of patients and families to learn, adapt and develop through mutual interaction and cybernetic processes. The roles of the psychiatric mental health APRN, educator, researcher, administrator and therapist are explored. The theories and processes of consultation, collaboration and adult education are discussed relative to mental health and community education. Prereq: NURS 484 and NURS 485. Coreq: NURS 489.

NURS 489. Practicum and Supervision in the Role of Family Systems Psychiatric Mental Health Advanced Practice. 3 Units.
This practicum course will emphasize the professional encounter between the psychiatric mental health (PMH) advanced practice registered nurse (APRN), families, organizations, communities and agency personnel providing mental health services. Systems variables that influence the learning, adaptation and development of families, organizations and systems will be emphasized. Billing and coding for the PMH APRN will be integrated into the course. The PMH APRN student functions as a change agent in direct and indirect care through the role of practitioner, educator, consultant, planner, evaluator and researcher. Prereq: NURS 484 and NURS 485. Coreq: NURS 488.
NURS 494. Global Health Seminar. 3 Units.
The focus of this course is the issues and trends in global health from both a nursing and a trans-disciplinary perspective. The course covers how international social, political, economic, environmental, and cultural issues affect health and health care. Particular emphasis is placed on nursing's contribution to global health issues and outcomes. (Junior or graduate status required). Offered as NURS 394 and NURS 494.

NURS 495. Global Health and Culture in Diverse Populations. 3 Units.
This elective course will use didactic and experiential learning, including travel abroad, to expose students to health care and population health in other countries. The focus of the course will be on issues and trends in global health from a trans-disciplinary perspective. International historical, social, economic, environmental, and cultural issues affecting health and health care will be examined. (Junior or graduate status required). Offered as NURS 395 and NURS 495.

NURS 502. Inquiry III Evidence-Based Practice. 2 Units.
This course will focus on linking research evidence to practice. Processes for appraisal and implementation of evidence-based practice will be included. Prereq: NURS 425 or Requisites Not Met permission.

NURS 503. Inquiry Practicum. 1 - 2 Units.
This course focuses on the development of competencies in scientific inquiry. Such competencies are achieved through participation in a research study or evidence-based project related to nursing science with dissemination of the experience. Prereq or Coreq: NURS 502.

NURS 504. Nursing Knowledge Development. 3 Units.
This course involves two critical issues for knowledge development for the discipline of nursing. First, epistemology is the study of knowledge shared among members of the discipline, the patterns of knowing and knowledge development, and criteria for evaluating knowledge claims and philosophy of science. The epistemological focus is aimed at enabling students to become knowledgeable about approaches to the study of disciplines and scientific knowledge development. Forces affecting the development of knowledge, the origins of key terms and concepts, and identification of major themes in nursing will be explored.

NURS 506. Nursing Epistemology. 3 Units.
This course involves the study of knowledge shared among members of the discipline, the patterns of knowing and knowledge development, and criteria for evaluating knowledge claims and philosophy of science. The course is a search and discussion experience aimed at enabling graduate students to become knowledgeable about approaches to the study of disciplines and scientific knowledge development. Forces affecting the development of knowledge, the origins of key terms and concepts, and identification of major themes in nursing will be explored.

NURS 507. Clinical Knowledge. 3 Units.
This course is structured to allow students to develop clinical knowledge about their area of interest and to begin the process of identifying clinical research questions. Supervision for this experience will be twofold. Students will be placed with an expert clinician with a minimum of a master's degree (in nursing) to identify and arrange relevant clinical experiences. The student and the clinician will work with the course faculty to create opportunities for the student to experience the clinical phenomena of interest, which may include actual "hands-on" experience. Students will also meet regularly with the other students in the course and the course faculty for group supervision that focuses on linking clinical practice issues to research questions. Course requirements would include eight hours of practicum experiences per week.

NURS 508. Context of Care. 3 Units.
This course is designed to allow students to explore the social, political, economic, and health care issues that form the context for their clinical phenomena of interest. The intent of this course is for the student to become knowledgeable about the broader forces that affect their clinical problem. Topics might include current research in their field, as well as health policy related to their phenomena, political entities that affect funding, and the regulation of practice in their area of interest. The student will need a content expert to help them plan and coordinate their practicum experiences, which should be multiple and varied, and include exposure to both local and state level entities. Prereq: NURS 507 or equivalent.

NURS 510. Health Disparities. 3 Units.
This course aims to provide theoretical and application tools for students from many disciplinary backgrounds to conduct research and develop interventions to reduce health disparities. The course will be situated contextually within the historical record of the United States, reviewing social, political, economic, cultural, legal, and ethical theories related to disparities in general, with a central focus on health disparities. Several frameworks regarding health disparities will be used for investigating and discussing the empirical evidence on disparities among other subgroups (e.g., the poor, women, uninsured, disabled, and non-English speaking populations) will also be included and discussed. Students will be expected to develop a research proposal (observational, clinical, and/or intervention) rooted in their disciplinary background that will incorporate materials from the various perspectives presented throughout the course, with the objective of developing and reinforcing a more comprehensive approach to current practices within their fields. Offered as CRSP 510, PQHS 510, MPHP 510, NURS 510, and SASS 510.

NURS 511. Strategies for Theory Development. 3 Units.
This course examines the nature of theory and strategies for theory development in nursing. Students will explore a variety of strategies and select an approach for beginning theory development that addresses nursing phenomena in their area of interest. Prereq: Admission to PhD nursing program or requisites not met permission.

NURS 518. Qualitative Nursing Research. 3 Units.
This course examines research approaches directed towards the development of nursing knowledge. This course will include methods and issues in data collection, analysis, and critique of research findings. It will focus on the philosophical and epistemological foundations of qualitative research, present an overview of various methodological approaches, examine the criteria for rigor, and analyze ethical issues in qualitative methodologies. Prereq: Admission to PhD nursing program or requisites not met permission.
NURS 523. Advanced Practice Nursing in Critical Care Transport Practicum. 1 - 5 Units.
This practicum is designed to promote safe, effective care in critical care transport (CCT) by advanced practice (APN) nurses and APN nursing students. Experiential learning is individualized with a focus on the assessment and management of patients with life-threatening or time sensitive conditions. Precepted experiences address the knowledge, skills and attitudes for optimal CCT across the lifespan. Students will be required to have eligibility or certification in AGACNP or equivalent.

NURS 524. Molecular Genetics for the Nurse Scientist. 3 Units.
This Ph.D. course provides an in-depth forum for discussion of fundamental principles regarding molecular genetics and its relevance to medical genetics, genomics and nursing. The course will cover principles of molecular genetics including an overall discussion of the complexity of the human genome, the structure, function and regulations of genes (DNA, RNA, proteins), genetic variation, inheritance patterns and a brief overview of molecular laboratory techniques used in clinically based research. In addition the course will discuss genetic-based research approaches, and ethical challenges that accompany human genetics research. Admission to PhD nursing program required.

NURS 530. Advanced Nursing Research Methods I. 3 Units.
This course focuses on conceptualization of a research problem within a nursing perspective, systematic literature review of a substantive area of research, and the design component of a research study to address scientific gaps. Descriptive, quasi-experimental, experimental, and mixed methods designs will be examined. Threats to internal and external validity will be discussed. The emphasis is on the application of design strategies while encouraging flexibility in conceptualizing a study using different research methods. Coreq: NURS 532 or requisites not met permission.

NURS 531. Advanced Nursing Research Methods II. 3 Units.
This course focuses on sampling, measurement, instrumentation, data management, intervention development, and human subjects’ issues. These will be discussed and applied within the context of a scientific study in a substantive area that is consistent with theoretical and empirical knowledge and the nursing perspective. Prereq: NURS 530 and NURS 532 or consent of instructor.

NURS 532. Applied Statistics. 3 Units.
This course provides an advanced overview of the assumptions and applications necessary to analyze and interpret questions and research related to clinical practice. Emphasis will be on statistical interpretation of research. During the course, data management, statistical analysis, and data interpretation, as well as univariate, bivariate, and multivariate statistics such as ANOVA and ANCOVA will be examined. The data analysis process will be examined and deconstructed throughout the course. Offered as NUND 450 and NURS 532. Prereq: Admission to PhD nursing program or requisites not met permission.

NURS 533. Introduction to Data Science in Healthcare. 3 Units.
This course introduces students to key concepts in data science with a focus on applications in healthcare delivery and clinical research. The course will discuss common sources of structured and unstructured clinical healthcare data, and the theory and application of different methodologies including machine learning and artificial intelligence. Students will be introduced to the tools and processes used to clean data, perform analysis, and visualize data through experiential learning. The integration of data science research into clinical practice at the population level (e.g. disease surveillance), system level (e.g. learning health systems) and patient-level (e.g. precision health) will also be discussed. Prereq: NURS 530 and NURS 532.

NURS 533. Cultural Diversity Topics. 1 Unit.
This course will explore topics around cultural diversity in advanced nursing practice. Concepts related to cultural sensitivity in delivery of healthcare will be integrated.

NURS 557. Advanced Midwifery. 6 Units.
In consultation with faculty, students select a nurse-midwifery service where they will assume the responsibilities of beginning practitioner for a minimum of 10 weeks of intensive supervised clinical practice. Students will synthesize the nurse-midwifery management process while providing continuity of care and integrating all core competency areas. Students will explore the professional aspects of nurse-midwifery practice. Historical development of the profession will be emphasized as a framework for understanding current issues related to nurse-midwifery education and practice in the United States. Prereq: NURS 457.

NURS 559. Primary Care in Women's Health. 4 Units.
In this course, students will gain knowledge needed to assess and manage primary health care problems commonly encountered by diverse populations of women in ambulatory settings. This course will prepare the student to use the problem-solving approach to assist individuals with common acute and chronic health problems. Culturally appropriate health promotion and disease prevention will be integrated throughout. The synthesis and application of these principles, theories and concepts will be emphasized in clinical practicum. Prereq: NURS 454 and NURS 455.

NURS 601. Special Problems. 1 - 12 Units.
This course is offered, with permission, to Ph.D. students in Nursing undertaking reading in a field of special interest.

NURS 609. Health Care Policy and Planning. 3 Units.
The primary focus of this course is to explore the leadership role of nurses in health policy development and implementation as well as the role of research in health care policy formation and planning. Special emphasis is placed on selected national and international health policy issues that form the socio-political and economic context of nursing care and practice. Ethical dimensions of public policy formulations and implementation are highlighted. Offered as NUND 508 and NURS 609.

NURS 615. Topical Seminar in Health Science Research. 3 Units.
This PhD course is designed to provide an in-depth knowledge of research issues in a given area. Opportunities are provided to apply knowledge for further development of the student’s research interests and ideas. An in-depth examination of selected theoretical and methodological approaches to the development of research related to human science will be emphasized. Interrelationships among theory, research, and knowledge from nursing and related disciplines will be explored. Prereq: Admission to PhD nursing program or Requisites Not Met permission.

NURS 630. Advanced Statistics: Linear Models. 3 Units.
This course is focused on advanced procedures for data analysis and statistical inference in health research. The course is devoted to discussion and application of linear models, including simple and multiple regression and logistic regression to study design. The role of assumptions and theory in guiding the analysis plan is emphasized through lecture, readings, and critical evaluation of published research in the student’s area of interest. Prereq: NURS 532 or Requisites Not Met permission.
NURS 631. Advanced Statistics: Multivariate Analysis. 3 Units.
This course focuses on selected advanced multivariate topics and procedures in health research. Topics will be covered through lecture, readings, computer analysis as well as critical analysis of published research in the health sciences fields. Topics to be covered in this course include: survival analysis, factor analysis, path analysis, repeated measures ANOVA and advanced regression techniques (logistic, loglinear, mixed models). Prereq: NURS 630 or Requisites Not Met permission.

NURS 632. Advanced Statistics: Structural Equation Modeling. 3 Units.
This course focuses on advanced data analytic procedures using structural equation modelings (SEM) in health research. Content will be explored through lecture, computer analysis, and critical analysis of relevant research. Topics covered in this course include: SEM with latent variables, path analysis adjusting for measurement error, nested models, and advanced SEM techniques, e.g., exploratory SEM, autoregressive models, latent growth curves, and latent class analysis using mixture modeling. Prereq: NURS 630 or Instructor Consent

NURS 671. Proposal Development. 1 - 6 Units.
Provides an opportunity for guided development of a candidacy proposal through planned contact with a designated committee of faculty members. The aim is to assist the student in the development of a refined proposal with strong scientific merit. The course should be utilized only by those with a candidacy proposal statement. Minimum 3 hours required for progression in program.

NURS 701. Dissertation Ph.D.. 1 - 12 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
JACK, JOSEPH AND MORTON
MANDEL SCHOOL OF APPLIED
SOCIAL SCIENCES

The Jack, Joseph and Morton Mandel School of Applied Social Sciences (http://msass.case.edu/) offers curricula leading to the Master of Social Work (MSW) degree, Master of Nonprofit Organization (MNO) and to the Doctor of Philosophy (PhD) degree in social welfare.

Case Western Reserve University and the Ohio Department of Higher Education have authorized the Mandel School to offer the Master of Social Work (MSW) degree (https://community.case.edu/click/?linkid=5c443c05-9da6-4735-950b-caedff2e9c19) to all students who matriculate in August 2021 and thereafter. The school has great respect for the MSSA degree name and all it represents, so this decision was not made lightly. In making the transition to a new degree name, the Mandel School is recommitting to its mission of providing exceptional educational experiences for every student.

Mission and Vision

Our Mission
Advancing leadership in social work and nonprofit education, scholarship, and service to build a more just world.

Our Vision
Students are central to what we do, and they actively participate and contribute to a dynamic learning community that develops leaders of social change in direct practice, community practice and nonprofit management.

The Mandel School was founded by and for the Greater Cleveland community in the belief that a university-based school of social work would transform the work of people and organizations to achieve to their full potential. As the Mandel School celebrates its centennial, we reaffirm our historical commitment to the application of social science for improving social welfare, and seek to continue to broaden the national and international reach of our research, teaching, and service. Our graduates are prepared to be future leaders who turn knowledge into action that furthers health, well-being, and social justice.

A History of Innovation

Ranked among the nation's top ten graduate schools of social work by U.S. News and World Report, and ranked number one in Ohio, the Jack, Joseph and Morton Mandel School of Applied Social Sciences has always committed itself to learning from and fostering the best in social work practice and to building social work's knowledge base. Since its founding in 1915 as the nation's first university-affiliated professional graduate school of social work, the Mandel School has been an innovator in professional education, where educators, researchers and practitioners work side-by-side to investigate, study and disseminate knowledge to bridge the gap between the classroom and communities in which social workers practice.

The Mandel School provides students with a solid foundation designed to build core competencies with its innovative Ability-Based Learning Environment, which allows graduates a great degree of flexibility and portability. Social Work students choose concentrations in either Community Practice for Social Change or Direct Practice, which offers specializations in Aging; Substance Use Disorders and Recovery; Children, Youth and Families; Health; and Mental Health. Certificate programs include gerontology, global health, nonprofit management, trauma-informed practice, data science for social impact and school social work. Dual-degree programs enable Mandel School students to obtain their social work degree concurrently with a master's degree in bioethics, business, law, nonprofit management, public health as well as a dual degree in nonprofit management and law.

Founded 30 years ago as one of the first nonprofit management programs in the nation, the MNO program has been at the forefront of training future nonprofit leaders. It provides the essential tools needed to lead a nonprofit, carry out its mission ethically and effectively and contribute to society's betterment. The Master of Nonprofit Management (MNO) is a 39-hour degree program comprised of 27 hours of required coursework and 12 hours of electives.

The Mandel School believes that advanced practitioners are strategists of change, working in partnership with others to enhance the caring capacity of communities. The concentrations structure cross-trains Mandel School students, who build foundations in both areas that bring a breadth of knowledge to their work lives, allowing them the flexibility to pursue their interests even as they change over time. The school prepares advanced practitioners who become lifelong learners with the abilities needed to practice ethically and effectively with diverse populations and with systems of various sizes and types. Students learn to understand the dynamics of problematic social situations and to identify the strengths and resources in individuals, families and communities that offer the best solutions. The school is committed to a vision of social work practice as a force of social justice, empowerment, and the building of healthy communities. That commitment extends beyond our national borders with the Mandel School's award-winning program of international study options.

The Mandel School counts among its alumni many prominent educators, government officials, accomplished practitioners, researchers, advocates, public policy-makers, and chief executives of national and regional agencies. Faculty achievements in professional organizations, research, and agency consultation further extend the school's reputation as an active participant in the advancement of social work practice.

A Mandel School education is more than preparation. It is an opportunity to join a national network of scholars and practitioners who are shaping the course of social work in communities throughout the world. The Mandel School is ranked seventh in faculty productivity among social work schools by Academic Analytics.

For nearly one hundred years, the Jack, Joseph and Morton Mandel School of Applied Social Sciences has stood at the forefront of social work education, introducing innovations in teaching, research, and practice at every step of the way, with an approach that integrates theory and practice like no other.

Mandel students take their places alongside long-time professionals in a variety of social work and nonprofit management arenas understanding firsthand the challenges of social work and nonprofit management and sharing in its rewards. In a broad spectrum of local and regional organizations, students develop skills in direct practice, policy analysis and development, research, management and community development, and in leading nonprofit organizations.
Accreditation and Licensure
The Jack, Joseph and Morton Mandel School of Applied Social Sciences is accredited by the Council on Social Work Education (CSWE) and the Ohio Chemical Dependency Professionals Board of Ohio.

The Master of Social Work (MSW), the social work master’s degree program at the Jack, Joseph and Morton Mandel School of Applied Social Sciences is accredited by the Council on Social Work Education, a nationally recognized professional accrediting association for social work graduate and undergraduate programs.

The Jack, Joseph and Morton Mandel School of Applied Social Sciences’ Alcohol and Other Drug Abuse (AODA) curriculum is accredited by the Ohio Chemical Dependency Professionals Board of Ohio. The accreditation indicates that the AODA curriculum meets the formal master’s degree education requirements for the top level of licensed independent chemical dependency counselors in Ohio.

The Master of Social Work (MSW) degree fulfills part of the requirements of social work licensure in fifty (50) states in the United States. For further information about various licensing requirements by state, visit the website of the Association of Social Work Boards (ASWB) (https://www.aswb.org).

The Master of Nonprofit Organizations (MNO) Degree is accredited by Nonprofit Academic Centers Council (NACC).

Administration
Sharon E. Milligan, PhD

Assistant Director, Research Administration

Richard Sigg
Director, Recruitment and Enrollment

Mark Singer, PhD
Deputy Director, Begun Center for Violence Prevention Research and Education, Co-Director, Center on Substance Abuse and Mental Illness
Master of Social Work (MSW) & Master of Nonprofit Organizations (MNO)

Master of Social Work (MSW)

The Master of Social Work has replaced the Master of Science in Social Administration.

The Master of Social Work (MSW) program prepares students for advanced social work practice in a variety of settings. The master’s curriculum is designed to address the wide range of skills and functions required of a professional social worker. Mandel School students are instructed on the various theories of individual and group behavior as well as community systems theory. The application of this knowledge, along with the appropriate use of practice principles and techniques, is a major educational objective.

The curriculum is divided into two levels: generalist and advanced. The generalist curriculum (27 credit hours) includes the knowledge, values, processes, and skills essential for the general practice of social work. It consists of generalist courses in social work methods, human development theory, social policy, research methods, and an introductory semester of field education. The advanced curriculum (33 credit hours) builds on the professional foundation and provides for advanced knowledge and practice skills in the concentration selected by the student. Concentrations (Direct Practice and Community Practice) include specializations in aging; substance use disorders and recovery; children, youth and families; health; mental health; and community practice for social change. School social work is available as a special emphasis.

Ability Based Learning Environment (ABLE)

The MSW program incorporates an ability-based learning environment that enables students to develop and demonstrate mastery of eight core social work abilities. Classroom courses and field education are designed to help students develop each ability and continuously assess their learning throughout the educational experience. Mastery of the abilities is demonstrated in the field practicum and documented in a cumulative learning portfolio.

- **Identify as a Reflective Professional Social Worker**: Students will demonstrate an awareness of the potential influence of their actions and words as a professional social worker upon individuals, families, groups, organizations and communities. Students will demonstrate the ability to reflect on practice decisions and activities, using self-correction to assure continual professional development.
- **Advocate for Social, Economic and Environmental Justice**: Graduates will advocate for human rights and social and economic justice as one of their primary responsibilities.
- **Apply Social Work Methods**: Graduates of the Mandel School’s master’s program are prepared to function as advanced practitioners in a changing arena of social work and social welfare. They are able to engage clients and client systems, assess client needs and strengths, provide or help arrange needed services and support, weigh intervention alternatives, implement change strategies, and evaluate results.

  - **Uphold Social Work Values and Ethics**: Students will integrate social work values and ethics into their learning and professional practice.
  - **Integrate Cultural, Economic and Global Diversity**: Students will integrate into their practice the knowledge, skills, and values needed for understanding and appreciation of a diverse world, and for ongoing development of competence in working with diverse populations and settings.
  - **Think Critically About Theory and Research Knowledge**: Graduating students will be able to think critically about their practice and its knowledge base, and about the social problems and situations they encounter. Critical thinking in social work includes selecting appropriate theoretical approaches and strategies to apply in practice, using research findings to improve practice, evaluating one’s own practice, and making contributions to knowledge in the field.
  - **Communicate Effectively**: Graduating students will have the oral, written, nonverbal, and information technology skills that will enable them to communicate effectively and appropriately in professional roles and settings.
  - **Develop as a Social Work Leader**: Social workers recognize that the context of practice is dynamic, and use knowledge and skill to respond proactively. Social work leaders are informed, resourceful, and proactive in responding to evolving organizational, community, societal and global contexts at all levels of practice in ways that improve quality of life.

Mandel School faculty place a high priority on the integration of theory with practice. To facilitate this integration, fieldwork is done concurrently with coursework. Through field education, students have the opportunity to acquire new skills and apply their classroom learning in their practice setting. The school is affiliated with over 350 agencies in the Greater Cleveland area, creating a vast network of field education as well as employment opportunities. Students are required to complete over 1000 clock hours of field education. The school and the affiliated agency or field setting agree on the content and conditions of field education, including the qualifications of social workers who serve as field instructors. Field placement decisions are based on educational criteria, with student interests and career objectives taken into consideration.

**Concentrations**

- Community Practice for Social Change
- Direct Practice

**Direct Practice Specializations**

- Aging*
- Substance Use Disorders and Recovery
- Children, Youth and Families
- Mental Health
- Health*

*Offered only in the full-time format.

**Program Options**

On-Campus Weekly Program

Approximately one-half of Mandel School students are enrolled in the Campus-Based Weekly Program. This program takes four semesters...
to complete. Students enroll for fall and spring semesters and are scheduled concurrently for classes and fieldwork on a full-time basis. This program is demanding in depth and scope of experience. It is not advisable for students to assume extensive employment during their semesters of enrollment.

Advanced Standing Program
Advanced standing may be granted to students who have earned a Bachelor's degree in Social Work (BSW) within the last seven years from an institution accredited by the Council on Social Work Education. Students must have earned a B or better in any social work course for which advanced standing is sought.

Intensive Weekend Program
The Intensive Weekend Program is designed to provide graduate-level education toward the MSW to employed professionals who are maintaining full-time employment. Classes meet one weekend per month throughout the calendar year. Students are required to attend all classes. Students complete five courses each year and all program requirements in three years. Those who have graduated from an accredited BSW program in the last seven (7) years can complete the Intensive Weekend Program in two years.

Online MSW Program
The Online MSW Program option is designed to provide online graduate social work education for employed professionals who plan to maintain full-time employment. Classes meet online to complete all program requirements in two years for advanced standing, and three years for non-advanced standing.

Senior Year in Professional Studies Program
Undergraduate students of superior ability and achievement may be admitted to the Mandel School at the end of their junior year. This program enables qualified college seniors who are majoring in social work related fields to begin their first year of graduate study during what would normally be their last year of undergraduate work. Exceptional undergraduate students who are firmly committed to social work as a profession can earn both their undergraduate and graduate degrees in five years.

A student in the Senior Year in Professional Studies Program is permitted to substitute the first year (31 semester hours) at the Mandel School for the last year of undergraduate work. The bachelor’s degree will be granted by the undergraduate college when the student has completed his or her first year at the Mandel School.

Students applying for this program must be interviewed by an admissions officer as part of the application process to explore the candidate's level of maturity, knowledge of social work, and readiness for professional education. Application for this program should be made prior to the second semester of the junior year.

To qualify for this program, students must demonstrate superior academic ability and achievement during their first three years of undergraduate study. All applicants must (a) have sufficient coursework in the social and behavioral sciences by the end of their junior year; (b) hold a cumulative grade point average of at least 3.25; and (c) have successfully completed three-quarters of the major and minor courses in their area of concentration. Acceptance into the Senior Year in Professional Studies Program is contingent upon receipt of a written statement from the dean of the applicant’s undergraduate college, outlining any remaining requirements.

Note: This program is available to students at Case Western Reserve University, Hiram College, College of Wooster, Baldwin Wallace University, John Carroll University, Fisk University, and Ohio Northern University by joint agreement with these institutions. Interested students from other institutions are encouraged to speak with the director of admissions.

Part-Time Degree Program
Students may opt to complete their degree work on a part-time basis during their first year. During the second, third, and fourth years students complete field education requirements and carry a full-time, or nearly full-time, load.

Part-time students select classes from the full-time weekday schedule. These classes meet once a week for two hours. Employed professionals may participate in this program if they can arrange a flexible work schedule.

The part-time program may be completed in three years. Students granted advanced standing may complete the program in fewer semesters. Part-time students are required to register for a minimum of six credit hours per semester. A student must complete all degree requirements in a maximum of five years.

Non-Degree Study
Some designated courses may be taken on a non-degree basis with the permission of the assistant dean of academic affairs and the course instructor. A maximum of 12 hours earned on a non-degree basis may be counted toward requirements for the master’s degree if the student is subsequently admitted as a degree seeking candidate. A bachelor’s degree is required for enrollment.

Undergraduate Social Work Minor
The Social Work minor offers interdisciplinary collaborative learning that includes service, community engagement, and an exploration of values. Students experience active learning that is practical and applied to real-world settings. The minor integrates social work theory and practice, social policy, socio-behavioral theory and research to understand and address complex social problems of our time, domestically and internationally. Some issues covered in the courses include oppression and privilege, poverty, violence, social justice, alcohol and other drug abuse, social welfare, community development, children, youth, and families. Courses can be taken on campus or through the Mandel School international study and travel courses.

Master of Nonprofit Organizations Degree Program (MNO)
The Master of Nonprofit Organizations (MNO) degree program prepares students interested in the nonprofit sector for management and leadership positions, by building their skills, competencies, knowledge and capacity. The MNO degree has five program educational objectives for its graduates: (1) to bring contextual understanding to managerial decision-making; (2) to develop, analyze and apply relevant data; (3) to inspire and engage volunteers and professionals in the creation and implementation of ethically-grounded strategies to advance organizational mission; (4) to develop and implement revenue generation strategies; and (5) to manage human and financial resources effectively, efficiently and ethically.

The full-time program consisting of thirty-nine (39) credit hours can be completed in twelve (12) months over three (3) consecutive semesters, with students beginning each year in the summer semester (June 1) and concluding at University graduation in the following May.
The curriculum will provide education that instills analytical skills, knowledge relevant to ethical and entrepreneurial decision-making, and expertise in acquiring and managing resources. Graduates will be trained to enhance organizational effectiveness, harness passion, dedication, and vision, make the best use of available resources and seek new resources. Graduates will gain hard and soft management skills and knowledge needed to address a wide range of issues confronting nonprofits and become professionals who work to influence political and social decisions, create stronger organizations, building the capacity, and advancing the mission.

Students accepted for the MNO degree program must possess a bachelor’s degree from an accredited college or university. They must have a record of excellent academic performance and potential evidenced by grade point average. Applicants with a GPA below 2.7 may be admitted conditionally. Students must also show evidence of a strong interest in the nonprofit sector through volunteer activities, internship experiences, or employment in a nonprofit organization.

**Advanced Standing Program**

The Advanced Standing Program leading to a Master of Social Work (MSW) is available to students who obtained a strong academic record in their Bachelor of Science (BSW) program.

A total of 21 credits hours of advanced standing may be granted toward the MSW degree and students can complete the MSW program in just 39 credit hours. Your BSW must have been earned within the last seven years from a Council on Social Work Education (CSWE) accredited institution with grades of B or better in all social-work-related courses.

Advanced standing students in any concentration may receive transfer credit for the 21 credit hours of foundation courses listed below:

#### Intensive Weekend Program

The Intensive Weekend program offers human service professionals who are employed full-time to pursue a Master of Social Work (MSW). Classes meet one weekend per month through the calendar year and students are required to attend all classes. Students complete four courses each year (six during the first year), and complete all program requirements in three years.

Courses consist of three distinct components:

- A two-day weekend of classes once per month (Saturday and Sunday, 9:00 a.m. - 6:00 p.m.; may vary by course)
- A four-week study period, during which additional readings and written assignments are completed
- A final study period of approximately three weeks, during which the final course assignment is completed and materials for the next course are received.

Online Program

The online social work master's experience at the Mandel School includes weekly live classes, in-person field education and continuous student support. We designed our online social work master's program to fit seamlessly into a variety of lifestyles. The rigor of the program is the same as our on-campus and intensive weekend options—the only difference is that the program is delivered entirely online, with no campus visits required.
Dual Degree Programs

Dual and Interdisciplinary Degree Programs

Master of Social Work and Law (MSW/JD)
The dual-degree program established by the Jack, Joseph and Morton Mandel School of Applied Social Sciences and the university's School of Law makes it possible for selected full-time students to pursue an integrated program of studies to receive the Master of Social Work (MSW) and Juris Doctor (JD) degrees within four years rather than the normal five years. Applicants for the dual-degree program must apply to and meet the admission requirements of both professional schools and are encouraged to apply for admission to both programs simultaneously. Dual-degree students must receive the MSW and JD degrees simultaneously to be granted credit for specific courses taken in the other program.

Master of Social Work and Business (MSW/MBA)
The Jack, Joseph and Morton Mandel School of Applied Social Sciences and the Weatherhead School of Management offer a dual-degree program leading to the Master of Social Work (MSW) with the Master of Science in Business Administration (MBA). The program is designed for candidates who wish to prepare for advanced social work practice in a variety of direct practice and community and social development settings, while developing the skills to assume management responsibility within those settings. Candidates must apply separately to each program.

MSW/MBA students may begin the dual-degree in either Jack, Joseph and Morton Mandel School of Applied Social Sciences or Weatherhead School of Management. Students will continue to register in the school at which they began the program, regardless of the school they are attending. There are 102 credit hours in the dual MSW/MBA Program (51 credit hours at Mandel School, 51 credit hours at Weatherhead), compared with 124 credit hours if both degrees were completed separately. By integrating the course work, completing some course work over the summer, and reducing the elective requirements in each program, dual-degree students may complete the MSW/MBA in three years, instead of the four years required if both degrees were to be completed separately. Dual-degree students must receive the MSW and MBA degrees simultaneously to be granted credit for specific courses taken in the other program.
Master of Social Work and Bioethics (MSW/MA)
A dual degree established by the Jack, Joseph and Morton Mandel School of Applied Social Sciences and the Department of Bioethics (http://www.case.edu/med/bioethics/) in the university’s School of Medicine makes it possible for selected students to pursue an integrated program of studies to earn the Master of Social Work (MSW) and the Master of Arts (MA) in Bioethics. In a full-time format both degrees may be earned in two years plus one summer semester.

As the number and complexity of ethical dilemmas continue to increase, there is a growing need for social workers knowledgeable of the principles and practices fundamental to bioethics. Graduates of this program may help counsel clients and care providers as well as pursuing careers related to policy and practice.

Applicants must apply separately and meet the admission requirement of both professional programs and are encouraged to apply simultaneously to both schools. Dual-degree students must receive the MSW and MA degrees simultaneously to be granted credit for specific courses taken in the other program.

Master of Social Work and Public Health (MSW/MPH)
The "Side by Side" Dual Degree Program leads to both the Masters of Social Work (MSW) and the Masters in Public Health (MPH). The MSW/MPH program will prepare graduates with flexibility for professional leadership in a broad range of health and social services within communities and organizations. Areas of study will include prevention, program planning, development and evaluation.

The impetus for this dual program arises from a growing societal recognition that issues once thought to represent individual-level interventions, such as family violence, substance use, and mental illness, are multi-level problems demanding multi-level interventions for their amelioration. The MSW/MPH Degree Program will equip students with a broader set of skills and perspectives to address such issues.

This degree option is open to full-time students only due to the sequencing of courses. Applicants must apply separately and meet the admission requirement of both professional programs and are encouraged to apply simultaneously to both schools. This dual degree can be completed in 36 months. Dual-degree students must receive the MSW and MPH degrees simultaneously to be granted credit for specific courses taken in the other program.

Master of Social Work and Master of Nonprofit Organization (MSW/MNO)
The dual degree in social work and non-profit organization offered by the Jack, Joseph and Morton Mandel School of Applied Social Sciences prepares students for leadership and management positions in human service organizations. Students may pursue either the Community Practice in Social Change concentration or the Direct Practice concentration. Further, this dual degree will place graduates into nonprofit management, administration, leadership, and research positions, which promises a great potential to influence the well-being of vulnerable groups and improve lives on a greater scale. MSW/MNO dual degree students may apply for graduation in the term in which all requirements for the degree have been completed. It is not required that the MSW and MNO be awarded simultaneously.

Master of Nonprofit Organization and Law (MNO/JD)
Being part of a world-class research university means you can combine your nonprofit management education with a Juris Doctor (JD) from Case Western Reserve University’s School of Law (http://law.case.edu/). The MNO/JD program is 109 credit hours (JD 88 hours and MNO 39 hours, with 18 hours that double-count) and can be completed in four years. You must apply separately to and be admitted to each of the programs. Alumni with MNO/JD degrees are employed worldwide by leading organizations, including the Bill and Melinda Gates Foundation and the National Center for Transgender Equality.

Undergraduate Minor in Social Work
Undergraduate Social Work Minor
The Social Work Minor offers interdisciplinary collaborative learning that includes service, community engagement, and an exploration of values. Students experience active learning that is practical and applied to real-world settings. The minor integrates social work theory and practice, social policy, socio-behavioral theory and research to understand and address complex social problems of our time, domestically and internationally. Some issues covered in the courses include oppression and privilege, poverty, violence, social justice, alcohol and other drug abuse, social welfare, community development. Courses can be taken on campus or through the our short term international study and travel courses.

The Social Work minor requires 15 credit hours. Some of the courses include:

Doctoral Program
Doctoral Program
Founded in 1952 as one of the first doctoral programs in social welfare in America, the PhD program at the Mandel School is designed to develop leaders in social work research, policy and teaching.
The PhD program is a cornerstone of the school, offering doctoral students the unrivaled opportunity to engage with world-renowned faculty, cutting edge research and a creative curriculum—all within a supportive environment committed to student success.

**Doctor of Philosophy in Social Welfare**

**Four Competencies**

A defining characteristic of our Doctoral Program is the identification of the competencies that we want our students to have when they graduate from our program.

- Research
- Social welfare theory
- Teaching
- Leadership

Our curriculum and professional development opportunities are focused on assisting students to meet these four competencies. Student performance on the competencies is assessed annually as part of our faculty’s review of students’ activities and accomplishments.

**Research**

Research involves the mastery of skills needed to design and conduct a systematic, empirical, objective, public and critical investigation of a social welfare problem or issue. Doctoral students graduate with the capacity to frame a question about a social welfare issue or problem that can be evaluated or examined by using social science research methods. Their dissertation research may be descriptive, designed to develop a theory, or intended to test a hypothesis. The typical doctoral student has a prospectus approved within two years of completing coursework and a dissertation defended within five years of completing coursework, although many complete all requirements sooner. Through the dissertation, students demonstrate the ability to conduct independent research and to make appropriate use of quantitative, qualitative, or mixed methods of analytical techniques. The majority of our doctoral students present research at professional conferences and author or co-author a publishable-quality article for a peer-reviewed journal during their time in the Doctoral Program. In the first three years of the full-time program, 20 hours each week are devoted to a paid individualized research fellowship matching a student’s interests with a faculty member's research projects. Specialized research mentorships are also available for both full-time and part-time students who wish to work with an individual faculty member on a specific research topic.

**Social Welfare Theory**

Students in the Mandel School Doctoral Program acquire the skills needed to use theory and conceptual frameworks in social science research. Upon completion of the program, students will be able to use theory to develop research questions and hypotheses for empirical testing and will possess an understanding of the conceptual nature of theory and the ways theory can be applied to the development of knowledge in social welfare. Through coursework, research fellowships and dissertation work, students apply a theoretical framework in research to a social welfare problem and are able to discuss implications of empirical research findings on theoretical relationships.

**Teaching**

We expect scholars and leaders be able to effectively communicate with others and to be able to teach. Students can take coursework related to teaching and engage in a teaching mentorship with a faculty member. During the mentorship, students practice didactic, interactive and experiential teaching strategies in classroom settings. They also learn approaches to other forms of knowledge dissemination such as presentations and writing papers for publications.

Teaching involves a conceptual understanding of how people learn and the ability to translate this understanding into constructing and delivering learning opportunities to diverse audiences. Formal coursework on social work education and funded teaching mentorships allow doctoral students the opportunity to develop knowledge of the history and current context of social work education and skills in educational program design, curriculum development, and outcome assessment of educational objectives. Students have an opportunity to participate in seminars on teaching offered by the University Center for Innovations in Teaching Excellence.

**Leadership**

Leadership is a process whereby an individual influences others to achieve a common goal. Leadership in academia is unique in that the organizational structure is more horizontal and shared, while in most organizations it is hierarchical. Students will achieve competency in academic leadership by understanding their and others’ style of leadership and participating in student and professional activities that enhance leadership skills. Students are encouraged to participate in professional social work organizations in their areas of expertise as well as to assume leadership roles in on Mandel School, CWRU and community committees.

**Program Credits**

A total of 37 credit hours of coursework is required, plus 18 credit hours of dissertation credit. A qualifying examination, given after completion of coursework, determines each student's eligibility for degree candidacy. The degree is awarded following successful completion of the dissertation.

The school reserves the right to require additional courses, which may not be credited toward the doctoral requirements if the faculty believes the student has insufficient knowledge in core areas of the curriculum, or to assist students in their intellectual and professional development.

In response to the different needs and interests of potential PhD students, the Mandel School offers two formats for meeting course and degree requirements. Program requirements under both formats include taking 55 credit hours (28 required, 9 electives, and 18 dissertation credit hours), passing a qualifying exam, and completing a dissertation. The Alternative Program Structures are:

- **Full-Time Program**

Under this format, full-time students can complete course requirements and individualized research fellowships over two academic years.

- **Part-Time Program**

Part time students are expected to complete the coursework requirements within three years.
Faculty Advisers
Each doctoral student is assigned a faculty adviser to assist in the planning of their educational experience. At the appropriate time, a dissertation advisor is selected by the student and in consultation with the Doctoral Program Chair.

Qualifying Examination
The qualifying examination for doctoral candidates is taken after completion of required coursework. The exam is intended to test the student’s ability to critically analyze and integrate knowledge.

Admission to Candidacy
Students are admitted to candidacy for the PhD degree after completing all coursework and upon the successful completion of the qualifying examination. To be admitted to candidacy, the candidate also must have maintained a grade point average of 3.0. The Doctoral Program follows the grading policy and GPA Guidelines of Graduate Studies.

Dissertation Requirements
Dissertation Formats
Students may choose one of two different formats for writing their dissertation. Each format should be carefully considered by the student in consultation with their dissertation committee chair.

Traditional Dissertation. The first format is the monograph or “book” format for a dissertation. In this format, the dissertation is organized as an integrated set of chapters written as a logical progression of ideas pertaining to a central topic. Monograph dissertations typically include chapters formatted much like a book, with an abstract, table of contents, introductory chapter(s) addressing literature and theory, a methods chapter, one or more results chapter, a discussion chapter, and reference list.

Three Paper Dissertation. The second dissertation format is a series of three research papers that may differ in a topic but are clearly reflective of a coherent program of research. Each paper is a stand-alone manuscript that is intended to be submitted to a high-quality peer review journal. Examples of acceptable paper formats may include: systematic literature review, theoretical or conceptual, or empirical which must contain its own literature review, background, motivation, theory, data, methodology, results, and conclusions. Other types of papers may be acceptable but must be approved by the dissertation committee. The three paper dissertations include the following components: abstract; an introductory chapter addressing the literature and theory of the program of research; three chapters that are the stand-alone manuscripts; a discussion chapter that discusses common implications across the program of research for social work, policy, practice and/or research; three paper dissertations include the following components: abstract; an introductory chapter addressing the literature and theory of the program of research; three chapters that are the stand-alone manuscripts; a discussion chapter that discusses common implications across the program of research for social work, policy, practice and/or research; a methods chapter, one or more results chapter, a discussion chapter, and reference list.

Admission and Financial Aid
Information about admission to the Doctoral Program can be found on the Jack, Joseph, and Morton Mandel School of Applied Social Sciences Doctoral Program Website (https://case.edu/socialwork/academics/phd-social-welfare/).

Academic Regulations
Non-Degree Study
Generalist courses may be taken on a non-degree basis with the permission of the assistant dean for academic affairs. A maximum of 12 hours earned on a non-degree basis may be counted toward requirements for the master’s degree if the student is subsequently admitted as a degree candidate.

Admissions and Application Information
Admission to the Master of Social Work (MSW) and the Master of Nonprofit Organizations (MNO) at the Jack, Joseph, and Morton Mandel School of Applied Social Sciences are granted on a selective basis determined by the quality of the overall application. The application requirements are the same for all program formats. This includes the On-Campus Weekly MSW, Intensive Weekend MSW, Online MSW and MNO program. An applicant for admission is expected to meet the following minimum requirements:

• A bachelor’s degree from an accredited college or university.
• Evidence of capacity to succeed in graduate level education based on undergraduate work and any previous graduate work. Previous course work must include courses strong enough to ensure the applicant’s ability to do creditable work at the graduate level.
• A minimum undergraduate grade-point average is 2.7 for general admission. Candidates with a cumulative g.p.a. below 2.7 may be considered for probationary admission.
• Evidence of a combination of personal qualities and values that are considered essential for the professional practice of social work or nonprofit management: strong moral character; strong analytical and verbal skills; a caring and compassionate nature; and a personal commitment to social justice, empowering individuals, and serving vulnerable and under-represented groups, communities and organizations.
• The school may request a personal interview or additional information about an applicant. For example, a member of the admissions office or Director of International Affairs may interview an applicant from a non-English speaking country to evaluate English
proficiency. The admissions review committee may also request an interview if an applicant discloses a felony or past criminal conviction to discuss the potential implication related to fieldwork and licensure.

- **MSW applicants**: Baccalaureate Social Work (BSW) degree graduates from a CSWE accredited program within the last seven years enter our MSW with advanced standing. Advanced Standing students have demonstrated mastery in the core competencies and will not repeat generalist courses.

The application for admission to the Master of Social Work (MSW) includes the following materials:

- Transcripts from a regionally accredited college or university, recognized by the Council for Higher Education Accreditation (CHEA), that demonstrates completion of a bachelor’s degree in any field of study. The Mandel School also requires transcripts from any school a student completed 6 or more credits.

A two-part essay that is a maximum of five (5) typed pages (double-spaced, 12 point font) and is exemplary of graduate-level writing.

- Part one: Discuss significant factors influencing your decision to pursue a Master of Social Work (MSW). Your essay should include information regarding your interest in the Social Work profession, your intended concentration/specialization and career goals. Please reflect on how any past school, community, volunteer, professional work or leadership experiences will contribute to your success as a graduate student. Describe how you see yourself contributing to the vibrancy of our student body and school community. Describe any strengths or limitations that might influence your being successful in your field placement. Finally, please include why the Mandel School is a good fit for their educational goals.

- Part two: Analyze a social justice problem of great concern to you. What do you think are the causes of this problem? Assuming you have power and resources at your disposal, in what ways do you think this problem could be addressed? Please include possible steps for implementation and challenges likely to surface in seeking a solution.

- A current resume highlighting past paid, volunteer, professional work, community service and leadership experiences.

- Three recommendation letters preferably from faculty members, direct supervisors, and/or volunteer coordinators.

- Additional documents that may be required as part of the application:
  - Advanced Standing Applicants: If you are Advanced Standing (baccalaureate degree in social work from a CSWE accredited program within seven years ), please include a description of your field education experience, your role and responsibilities, and key learning objectives. This requirement is in addition to the two-part page essay addressed above. (If you will not have field before applying, please let us know)
  - Academic Explanation: An academic explanation is required when an applicant has received an academic disciplinary action or academic dismissal in any previous college level course work. An academic explanation may also be utilized for students with a cumulative grade point average below 3.0 overall or a past failing grade.

The application for admission to the MSW On-Campus Weekly, Intensive Weekend, and Online programs are completed through a secure online portal. The web address for the application is https://applygrad.case.edu/ (https://app.applyyourself.com/AYApplicantLogin/fl_ApplicantConnectLogin.asp?id=case-msass).

The application for admission to the Master of Nonprofit Organizations (MNO) includes the following materials:

- Transcripts from a regionally accredited college or university, recognized by the Council for Higher Education Accreditation (CHEA), that demonstrates completion of a bachelor’s degree in any field of study. The Mandel School also requires transcripts from any school a student completed 6 or more credits.

A two-part essay that is a maximum of five (5) typed pages (double-spaced, 12 point font) and is exemplary of graduate-level writing.

- Part one: Discuss significant factors influencing your decision to pursue a Master of Nonprofit Organizations (MNO). Your essay should include information regarding your interest in nonprofit management and your career goals in the field of nonprofit management. Please also reflect on how any past school, community, volunteer, professional work or leadership experiences will contribute to your success as a graduate student. Describe how you see yourself contributing to the vibrancy of our student body and school community. Finally, please include why the Mandel School is a good fit for their educational goals.

- Part two: Discuss some of the forces impacting nonprofit organizations today. Imagine you are a nonprofit executive. Identify three things you would do to ensure the success and effectiveness of the programs your organization delivers. Who would you seek to collaborate with to achieve these objectives?

- A current resume highlighting past paid, volunteer, professional work, community service and leadership experiences.

- Three recommendation letters preferably from faculty members, direct supervisors, and/or volunteer coordinators.

- Additional documents that may be required as part of the application:
  - Academic Explanation: An academic explanation is required when an applicant has received an academic disciplinary action or academic dismissal in any previous college level course work. An academic explanation may also be utilized for applicants with a cumulative grade point average below 3.0 overall or a past failing grade.

The application for admission to the Master on Nonprofit Organizations (MNO) program is completed through a secure online portal. The web address for the application is https://applygrad.case.edu/ (https://app.applyyourself.com/AYApplicantLogin/fl_ApplicantConnectLogin.asp?id=case-msass)

**Admission Procedures**

Applicants to the Master of Social Work (MSW) program and the Master of Nonprofit Organization (MNO) apply online through a secure online portal on our website. On-Campus MSW, Intensive Weekend MSW and MNO programs apply through the link: https://applygrad.case.edu/ (https://applygrad.case.edu/) The Online MSW program applicants apply through the link: https://apply.madelonline.case.edu/signup (https://apply.madelonline.case.edu/signup/).

Instructions on how to apply can also be found at:

Below are the enrollment options and application deadlines for each program and format.
Social work: On-campus, including all dual degrees (https://case.edu/socialwork/academics/master-of-social-work/on-campus-social-work-masters-degree/)

All on-campus and dual degree students begin the program in the fall semester.

- Early decision application and scholarship deadline: Dec. 15
- Priority application and scholarship deadline: Feb. 1
- General application and scholarship deadline: April 15

All intensive weekend students begin the program in the fall semester.

- Priority application and scholarship deadline: February 1
- General application and scholarship deadline: April 15

Social work: Online (https://case.edu/socialwork/academics/master-of-social-work/online-social-work-masters-degree/)

Online students may begin the program in the fall, spring or summer semester.

- Application deadlines for the online program vary based on enrollment semester.

Master of Nonprofit Organizations (https://case.edu/socialwork/academics/master-of-nonprofit-organizations/)

MNO students may begin the program in the fall, spring or summer semester.

- Fall deadline: July 6
- Spring deadline: Dec. 15
- Summer deadline: April 1

Advanced Standing (Social Work Students Only)

Applicants with a Bachelor’s of Social Work (BSW) from a Council on Social Work Education (CSWE) accredited institution are automatically eligible for Advanced Standing. The Mandel School will also award advanced standing credit to international students that have received official notification from the International Social Work Degree Recognition and Evaluation Service (ISWDRES) that the BSW they earned is equivalent to a CSWE accredited program and recognized by ISWDRES. The advanced standing policy is administered the same for all three MSW program formats: On-Campus Weekly, On-Campus Intensive Weekend and Online.

The BSW must have been earned within the last seven years, from the date of admission, to receive advanced standing. Eligible students will receive 21 advanced standing credits (listed below). Advanced standing students will be required to complete 39 credits to earn the MSW.

Advanced Standing Course Credit

Students who have completed graduate-level social work, nonprofit management or graduate level courses in a related field other than social work or nonprofit management may request an evaluation of coursework for approval of eligible/comparable courses with a grade of B or better (3.0 on a 4.0 scale) earned within the last 7 years. Students who are transferring to the Mandel School from another accredited graduate school of nonprofit management may apply for transfer credit for up to twelve (12) credit hours of academic work and field education. Transfer students from social work programs must submit fieldwork evaluations, final official transcripts, course syllabi and the Request for Evaluation of Transfer Credit form.

Transfer credit (6 hour limit) may be given for related, but non-social work, coursework completed within the past seven years. Credit hours must not have been applied toward a previous graduate degree. Students must have received a grade of B or better in any course for which transfer credit is sought. Course syllabi, Request for Transfer Credit Evaluation form and official transcript must be submitted to the Mandel School Office of Admissions.

Students who are transferring to the Mandel School from another accredited graduate school of nonprofit management may apply for transfer credit up to twelve (12) academic credit hours. Final official transcripts, course syllabi for each course transfer credit is requested and Request for Transfer Credit Evaluation form must be submitted to the Mandel School Office of Admissions.

Courses approved for transfer credit are not used in computing the student’s GPA. Quarter hours will be converted to semester hours. Credit hours may not have been applied toward a previous graduate degree.

International Students

In addition to our standard application requirements, international students must also provide the following information:

World Education Service (WES) Report

All international and domestic applicants with a bachelor’s degree earned from a country outside of the United States Educational System are
required to submit a World Education Services (WES) Report for course-by-course credential evaluation upon applying to our program.

If you are an international student with an earned 4-year bachelor's degree awarded from a U.S. based institution, you do not need to provide a WES Report. If your degree was earned at an institution outside of the United States educational system, you must submit a WES Report.

Students may submit the Mandel School's online applications for admission before the WES Report is received by our office, but student materials will not be reviewed until a WES Report is received.

Demonstration of English Proficiency

If English is not recognized as your country's official language, you will be required to submit a Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) test score. The Mandel School code for TOEFL is 1105.

- The minimum TOEFL required scores are 577 (paper-based) or 90 (internet-based)
- The minimum score for the International English Language Testing System (IELTS) is 7.0

Official results of this test must be forwarded to the Mandel School Office of Admissions.

You are exempt from proficiency testing if you meet any of the following criteria:

- English is recognized as your country of birth’s official language according to the CIA World Factbook.
- You have completed work at an international university where English is the language of instruction
- You have studied at or graduated from an American institution

Proof of Financial Support

If admitted to the program, international students must provide proof of financial support. Once admitted, you will be asked to provide original bank documents as evidence of support to cover educational and living expenses for one academic year. This supporting documentation will be required to confirm enrollment and initiate the appropriate immigration and visa process. The proof of financial support can include all scholarship awards from the Mandel School.

Advanced Standing Options for Students that Complete a BSW Outside of the US

Students holding a BSW from their country of origin may be eligible for advanced standing. Applicants should contact International Social Work Degree Recognition and Evaluation Service directly and ask to have their degree reviewed.

An international applicant who holds a Master of Social Work (MSW) degree for his or her country may request a credit review for transfer credit. The Mandel School may award up to twelve (12) academic transfer credit hours (including field education).

Please note that materials submitted for application cannot be returned to the applicant.

Financial Information

Tuition

Tuition for the 2021-2022 academic year is calculated at $1,590 per credit hour for enrollment between 1 and 11 credit hours. Tuition is charged a flat rate of $23,850 per semester for enrollment between 12 to 18 credits. Students enrolled in 19 or more hours during a semester will pay the semester rate of $23,850 and an additional $1,590 per credit hour beyond 18 credits.

Required Fees

- On-Campus Graduate Student Fees:
  - Student Activity Fee: $40.00 per semester
  - Graduate Student Council Fee: $15 per semester
  - RTA Pass fee: $60 per semester
- Online Student Fees (online students only)
  - $20 per credit

Optional fees

- Health Insurance: $1,582* per semester
- One to One Fitness Membership: $136.08 fall semester; $169.56 spring and summer semesters

Social Work Traditional Track: 60 credit hours
Social Work Full Advanced Standing Track: 39 credit hours
Master of Nonprofit Organizations: 39 credit hours

The Mandel School has a dedicated financial aid adviser on staff to answer your scholarship questions, provide one-on-one guidance, and match you with the best financial aid opportunities available. Please contact mandelschool@case.edu.

*All insurance coverage is subject to applicable state form and rate filing approval and once approved, to the terms of the Master Policy. We have not yet received approval from the state insurance department for the benefits, features and rates described in this document. As part of the approval process, the State may require us to make changes to the benefits, features and/or rates. We will notify you if that happens."

Confirmation Tuition Deposit

A non-refundable tuition deposit of $100 is required of all master’s degree candidates at the time of acceptance. This deposit will be applied toward tuition for the degree program. Complete information about academic policies, procedures, and financial aid is available by contacting the Office of Admissions, Jack, Joseph, and Morton Mandel School of Applied Social Sciences at 216-368-1655.

Academic Standing and Academic Difficulty

PROBATION AND DISMISSAL POLICIES

Probation Based on Academic Performance

A student who receives a grade point average below 3.0 in any semester or cumulative will be placed on probation. A student on probation must obtain at least a 3.0 average in the subsequent semester in order to be removed from probation. Since probationary status may have financial aid implications, students on probation are directed to contact the financial aid office upon determination of probationary status.

Dismissal Based on Academic Performance

A student will not be permitted to continue in the program if he, she or they receives:
INCOMPLETE IN ACADEMIC COURSES

1. A second grade of F in the program, or two semesters of No Pass (NP) in field education or No Pass (NP) in any course;
2. A grade point average (GPA) of 2.0 or below in any one semester or cumulative;
3. A grade point average (GPA) less than 2.8 entering the final semester;
4. If a student admitted on academic probation does not earn a 3.0 GPA in the first semester; If a student admitted on academic probation earns NP in field at any time, the student will be academically dismissed.
5. For part-time, Intensive Weekend, and online students, these policies apply in two semester blocks of time.

A NO PASS (NP) counts as F for purposes of determining academic standing.

Dismissal Based on Non-Academic Performance

Failure to meet generally accepted standards of professional conduct, personal integrity, or emotional stability requisite for professional practice, inappropriate or disruptive behavior toward colleagues, faculty or staff (at school or in field sites) will be the basis for nonacademic termination.

STUDENTS COMPLETING WORK BEYOND THE END OF A SEMESTER may be subject to academic actions at any point within the next semester. Students will be academically withdrawn from their courses and their records updated based on academic decision.

Students will be fully responsible for all financial obligations up to the date of academic action.

University Registrar requires letters of academic standing indicating probation or dismissal be sent to the student at the address on file in the Student Information System (SIS). Letters of dismissal are sent by priority mail and/or electronically by confidential E-LETTER. Letters of probation are sent regular first-class mail delivery and/or electronically by confidential E-LETTER.

INCOMPLETE IN ACADEMIC COURSES

1. A grade of Incomplete is given at the end of the semester only when a student has discussed the matter with his/her/instructor and there are extenuating circumstances that clearly justify an extension beyond the requirements established for the other students in the class.
2. The student and the instructor must agree on a due date for fulfilling the requirements for the Incomplete. A signed Request for an Incomplete Grade (by both the instructor and student) must then be submitted to the Mandel School Registrar by the instructor. This form can also be printed from the Mandel School Academic Resources (https://case.edu/socialwork/resources-students/academic-resources/#Incomplete%20grades) website. The extension may not go beyond the end of the subsequent term (fall, spring, summer). The form must be specific in what assignment(s) are due and the date(s) by which assignment(s) must be submitted. For administrative purposes, instructors must submit final grades for Incomplete as soon as coursework is submitted and graded.
3. If a student fails to remove the Incomplete within the specified time, he/she/he/she forfeit the privilege of completing the course for credit and the instructor must assign a grade of F. For exceptional situations in which there are extenuating circumstances, the student and advisor may request, in writing, an extension beyond one semester from the Associate Dean for Academic Affairs, with the instructor's approval.
4. If a student accumulates three or more grades of "Incomplete," he/she may not enroll in the subsequent course or term and will be considered to be "on probationary suspension/probationary leave" from the program. This policy includes grades of "Incomplete" in Field Education. These students will be required to clear all but one grade of "Incomplete" on their records before they will be allowed to re-enroll in school.

INCOMPLETE IN FIELD EDUCATION

An Incomplete for fieldwork should be treated in the same manner as an Incomplete in academic courses. An Incomplete is only appropriate when insufficient hours were spent in placement, or assignments were not finished for reasons of illness or other excused absences. An Incomplete also used for field education when the student is assessed to be performing at the marginal level and a remediation plan is required to be completed prior to a determination being made as to whether the student receives a P or an NP for the field period. A grade of Incomplete must be removed before entering the subsequent semester of fieldwork.

LATE ASSIGNMENTS

Assignments are due on the date assigned. Exceptions must be cleared in advance with the instructor. In the absence of a mutual agreement by the student and instructor, the instructor is not obligated to accept papers and a grade of "F" can be entered for the assignment. If the instructor determines justifiable circumstances, additional time may be granted.

COURSE REPEAT OPTION

Mandel School students may petition the Associate Dean of Academic Affairs to repeat a maximum of two courses during their degree program in order to improve their performance. When a course is repeated, the first grade will remain visible on the transcript but will be removed from the calculation of the cumulative grade point average and the grade point average for the semester in which the course was first taken. The new grade will then be used for calculation of the cumulative grade point average and the grade point average for the semester in which it was earned, regardless of whether the new grade is higher or lower than the first grade. The student's transcript will show the comment "Repeated: No credit awarded" directly below the original grade. However, if the first attempt of the course resulted in a passing grade, but the second attempt results in a failing grade, then the original grade will remain. Similarly, if a student withdraws from a course that is being repeated, the Course Repeat Option will not be applied and the original grade will stand.

This option may be exercised according to the following criteria:

• The course repeat option can only be used on course in which a grade of C or lower was earned; Courses with a grading basis of P/NP are not eligible under this policy;
• A student may not use the Pass/No Pass Option on a course that is being repeated;
• A student may only use the repeat option on the same course;
• The course repeat option may not be exercised after a degree has been awarded;
• Approval from Associate Dean of Academic Affairs is required;
• The tuition and associated fees for a repeated course will be the responsibility of the student.
READMISSION TO CANDIDACY

A student who leaves the Mandel School in good standing without completing requirements for the degree may re-enter within a three-year period and receive credit for previous work. Any former student who wishes to complete degree requirements and who has been out of school for two years or more must reapply for admission. All information regularly required for an admission application must be updated. The application will be reviewed in light of current admission policies.

Upon acceptance for readmission, the specific courses and fieldwork required for completion of the student’s program will be determined in accordance with current degree requirements. Credit hours will not be granted for work completed more than five years before readmission.

If a student is terminated due to inadequate academic performance or a violation of the professional code of conduct, he/she/they may request reinstatement although this will not be considered until two semesters after termination. A written petition and supporting documentation (if applicable) must be forwarded by the student to the attention of the Chair of the Committee on Students (mandelschoolcos@case.edu) who will present the petition for possible review by the full Committee at the next scheduled meeting. The Committee meets monthly except in May, June, July, and August. In all cases, the student must remain separated from the School for a minimum of two semesters (fall, spring, and summer are considered semesters).

The petition must include the following: a) the student’s reason for requesting the reinstatement, b) an identification of the circumstances that led to the termination, and evidence of personal, educational, or professional activities or accomplishments that would demonstrate the student’s readiness to return to school and successfully complete the degree program. The Committee will meet with the student (in-person, zoom conference call) if desired, and thereafter recommend to the Associate Dean of Academic Affairs one of three possible responses: 1) readmit, 2) readmit with condition, or 3) do not readmit.

Special Focus and Certificate Programs

Certificate Programs

Global Health

The Certificate in Global Health focuses on the broadest concept of public health, including international aspects of disease transmission, diagnosis, treatment, policy, and prevention. The overall objective of this interdisciplinary certificate is to support Mandel School students with interests in health problems, issues, and concerns that (a) transcend national boundaries, (b) may be influenced by circumstances or experiences in other countries, and (c) are best addressed by cooperative actions and solutions. Current participating departments and schools at Case Western Reserve University include Mathematics, Medicine, Public Health, Anthropology, Nursing, Bioethics, Epidemiology, Bio-statistics, Biology, and Engineering.

The requirements to receive the certificate differ by discipline and emphasize discipline-specific and interdisciplinary coursework. For Mandel School students, this includes completion of two required interdisciplinary courses and an additional Mandel School elective. The certificate is most appropriate for students who choose to complete the Community Practice for Social Change concentration or Health or Aging specializations in the Direct Practice program.

Gerontology

Students with an interest in serving the needs of the aging population may pursue the multidisciplinary graduate certificate program offered through the Case Western Reserve University Center on Aging and Health. This program is designed for gerontological researchers, educators, and practitioners. Participating faculty are from the Mandel School and the Case Western Reserve University Schools of Medicine, Dental Medicine, Nursing, and Arts and Sciences. Students must be enrolled in the Aging specialization at the Mandel School.

School Social Work

The School Social Work program is designed to train school social workers and provide them with the competencies to practice in a variety of traditional and non-traditional primary and secondary education settings. Such competencies include assessing children’s needs; designing and implementing interventions; and making referrals to other professionals and agencies, as needed. School social workers function collaboratively with educators and other professionals to assist the schools and the communities in mobilizing resources on behalf of children and adolescents in order to help ensure academic success.

The program is consistent with the Ohio Department of Education, State of Ohio, regulations and professional standards developed by the National Association of Social Workers, and is jointly offered by the Mandel School of Applied Social Sciences at Case Western Reserve University and the Division of Education at Baldwin Wallace University. Students in the program complete the Master of Social Work (MSW) degree at the Mandel School with a specialization in Children, Youth and Families. As part of the MSW degree, students complete three required education courses at Baldwin Wallace University, SASS 519 Children and Families in the School Setting, and a field practicum in an approved school social work setting. After the completion of all required coursework and field education, a student can apply to the State of Ohio Department of Education to receive a certificate in school social work.

This program can be completed only by two-year and eighteen-month students (not twelve-month students). Intensive weekend students can also complete this program if they are able to enroll in some full-time program courses.

Nonprofit Management

This certificate is offered as a credential requiring 15 academic credit hours. The certificate may be done concurrently with the MNO degree, MSW degree or may be taken as a stand-alone credential. The requirements are four 3-hour courses from the approved listing for the Master of Nonprofit Organization and a 3-hour nonprofit dialogues course.

Trauma-Informed Practice

The Graduate Certificate in Trauma-Informed Practice allows for focused and integrated training in evidence-based models designed to address differential responses to trauma alongside the course and fieldwork necessary for a student’s chosen concentration and specialization areas. A total of 15 credit hours is required for this certificate (includes 9 credit hours of required course work and 6 credit hours of elective courses selected from a list of approved electives).

Certificate in Data Sciences for Social Impact (Digitally Credentialed).

Offered by the Jack, Joseph and Morton Mandel School of Applied Social Sciences, CWRU in collaboration with the Case School of Engineering.
Through this 12-credit certificate program students will develop an understanding and fluency in data analytics for social policy and social impact, covering a wide range of current applications of predictive and causal modeling in the areas of health and human services, criminal justice and others.

Certificate earners will be able to navigate and influence this new era of technology and data-driven solutions in social welfare and policy, ensuring that proper ethical guidelines are developed and followed.

The program is offered to degree-seeking students in graduate programs at CWRU and non-degree students from other degree programs in other institutions.

**Special Focus Programs**

**Louis B. Stokes Fellowship in Community and Social Development**
The Louis Stokes Fellows Program in Community and Social Development provides a full-tuition scholarship to African American and Hispanic/Latino students with an interest in Community Practice for Social Change. The goal of the Louis Stokes Fellows program is to:

- Support the graduate professional education of outstanding students from universities with Hispanic students and students from traditionally Black colleges and universities.
- Attract a greater number of African American and Hispanic students to advanced social work education to help meet the need for diversity in the social work profession.
- Foster future leadership in community building, community development, and housing.

**Leadership Fellows Program**
The Leadership Fellows Program focuses on exceptional students who want to assume leadership in clinical practice within an agency context. It is a two-year program of study for direct practice students in aging, substance use disorders and recovery, children, youth and families, health or mental health.

**Paul D. Coverdell Fellowship Program for Returning Peace Corps Volunteers**
The Paul D. Coverdell Fellowship Program for Returning Peace Corps Volunteers provides the option for students selecting concentrations in Community Practice for Social Change or Direct Practice. The Direct Practice concentration will allow students to select specializations in aging; substance use disorders and recovery; children, youth and families; health; and mental health with children, adolescents and adults. Fellows will be able to integrate professional social work education, research and service to promote social justice and community empowerment domestically and around the world. Students also have the option of pursuing certificates and dual degrees in several interest areas.

**Global Practice Opportunities**
At the Mandel School, students have numerous opportunities to explore beyond our own borders. The Mandel School faculty includes experts in international social work and social policy research. The Mandel School also hosts numerous international full-time students, exchange students, visiting scholars and researchers.

Qualified students may choose to participate in a number of multi-disciplinary study abroad opportunities. Many trips occur during winter and spring break and the beginning of summer semester. Students are able to familiarize themselves with a variety of social policies of other countries, which have included the Netherlands, Guatemala, Ecuador, India, Poland, Ghana, and Israel, among others.

**Jack, Joseph, and Morton Mandel School of Applied Social Sciences Faculty**

**Department Faculty**
Mark P. Aulisio, PhD
(Bowling Green State University)
*Associate Professor, Bioethics and Social Work; Director, MA Program in Bioethics; Director, Center for Biomedical Ethics, MetroHealth*

Intersection of political philosophy and bioethics, consultation

Mark G. Chupp, PhD
(Case Western Reserve University)
*Assistant Professor, Social Work*

Inter-group dialogue and conflict transformation, citizen participation, community building, community organizing, appreciative inquiry, service learning

Claudia J. Coulton, PhD
(Case Western Reserve University)
*Lillian F. Harris Professor of Urban Research and Social Change*

Research in urban poverty, neighborhoods, community development

David Crampton, PhD
(University of Michigan)
*Associate Professor, Social Work*

Child welfare, community and social development, program evaluation

Ronald Davis, MSW
(University of Akron)
*Clinical Instructor, Social Work*

Medical social work, hospice & palliative care, trauma, diversity and inclusion

Marjorie Edguer, PhD
(Bowling Green State University)
*Assistant Professor, Social Work*

Clinic social worker, trauma, diversity

Kathleen J. Farkas, PhD
(Case Western Reserve University)
*Associate Professor, Social Work*

Co-occurring substance abuse and mental disorders, jail/prison-based treatment, women/elderly substance abuse assessment and treatment

Robert L. Fischer, PhD
(Vanderbilt University)
*Associate Professor of Research, Social Work*

Program evaluation, social/behavioral intervention research, child/family interventions, nonprofit programming, policy studies

Daniel J. Flannery, PhD
(The Ohio State University)
*Semi J. and Ruth Begun Professor in Violence Research Prevention and Education*

Violence prevention, mental health, program evaluation
Mark S. Fleisher, PhD  
(Washington State University)  
Research Professor, Social Work  
Gangs, prisoner violence, cultural resilience

Adrienne Fletcher, PhD  
(Loyola University)  
Assistant Professor, Social Work  
Disproportionality in child welfare system and across social institutions, implicit association/bias, issues of diversity, social welfare policy, social justice and advocacy, child welfare and Indian child welfare

Darcy A. Freedman, PhD  
(Vanderbilt University)  
Associate Professor, Epidemiology and Biostatistics  
Food access interventions, health equity, public health literacy, qualitative methods, primary prevention of chronic disease

Kathi I. Overmier Gant, MSSA  
(Case Western Reserve University)  
Clinical Instructor, Social Work; Field Advisor  
Direct practice, adult and adolescent mental health, assessment and diagnosis, criminal justice

Brian K. Gran, PhD  
(Northwestern University)  
Associate Professor, Sociology  
Children’s rights and social policy

Victor K. Groza, PhD  
(University of Oklahoma)  
Grace G. Brody Professor of Parent-Child Studies  
Child welfare workforce and systems, older child and sibling group adoptions, intercountry adoption, international child welfare

Megan Holmes, PhD  
(University of California, Los Angeles)  
Associate Professor, Social Work  
Domestic violence, alcohol use and child maltreatment, research

Peter Hovmand, PhD, MSW  
(Michigan State University)  
Professor, School of Medicine  
Center for Community Health Integration

David Hussey, PhD  
(Case Western Reserve University)  
Associate Professor, Social Work  
Substance abuse, violence, social and behavioral science, psychopathology

Jeffrey Janata, PhD  
(Case Western Reserve University)  
Associate Professor, Psychiatry UH  
Behavioral medicine, health psychology, obsessive-compulsive spectrum disorders, pain disorders, outcomes measurement

Mark L. Joseph, PhD  
(University of Chicago)  
Associate Professor, Social Work  
Urban poverty, community development, mixed-income development, comprehensive community initiatives

Eva Kahana, PhD  
(University of Chicago)  
Pierce T. & Elizabeth D. Robson Professor of Humanities; Professor, Social Work; Director, Elderly Care Research Center  
Sociology of aging, medical sociology, social factors in stress and coping

Jennifer King, DSW  
(University of Pennsylvania)  
Assistant Professor, Social Work  
Clinical social work, trauma-informed care, childhood trauma

Jill E. Korbin, PhD  
(University of California, Los Angeles)  
Professor, Anthropology and Social Work; Director, Schubert Center for Child Studies; Co-Director, Childhood Studies Interdisciplinary Program; Associate Dean, College of Arts and Sciences  
Culture and human development, child well-being and child maltreatment, cultural, medical and psychological anthropology

Siran M. Koroukian, PhD  
(Case Western Reserve University)  
Associate Professor, Social Work; Associate Professor, Epidemiology and Biostatistics  
Methodological issues in the use of large databases in health services research, Medicare and Medicaid programs, cancer-related and other health disparities

Amy Korsch-Williams, MSSA  
(Case Western Reserve University)  
Senior Instructor, Social Work  
Trauma informed care, Field education

Jeff M. Kretschmar, PhD  
(Miami University of Florida)  
Assistant Professor of Research, Social Work  
Violence and aggression, suicide, victimization, mental health and substance abuse

Sana Loue, PhD  
(University of Southern California at Los Angeles and Case Western Reserve University)  
Professor, Department of Epidemiology and Biostatistics; Director for Minority Public Health, School of Medicine  
Immigration law and health, impact of HIV on the family, HIV in underserved populations, ethics in research, public health and law

Kimberly McFarlin, MSSA, MNO  
(Case Western Reserve University)  
Clinical Instructor, Social Work  
Field education, international social work

David B. Miller, PhD  
(University of Pittsburgh)  
Associate Professor, Social Work  
African American fatherhood, violence as a public health problem, child maltreatment, adolescent resiliency factors, treatment of individuals exposed to violence

Sharon E. Milligan, PhD  
(University of Pittsburgh)  
Associate Professor, Social Work;  
Evaluation of community-based initiatives, community and social development practice and urban poverty research
Sonia Minnes, PhD  
(Case Western Reserve University)  
**Associate Professor, Social Work**  
Behavioral and mental health outcomes of prenatally drug-exposed children

Diana Morris, PhD  
(Case Western Reserve University)  
**Florence Cellar Associate Professor of Gerontological Nursing; Executive Director, Case Western Reserve University Center on Aging and Health**  
Geriatric mental health, aging and quality of life, family care giving, science of unitary human beings

Cristina Nedelcu, PhD  
(Case Western Reserve University)  
**Lecturer, Social Work**  
Child welfare, immigration & adoption, child and adolescent development, trauma survivors, child and adolescent mental health

Ann Nguyen, PhD  
(University of Michigan)  
**Assistant Professor, Social Work**  
Gerontology, mental health disparities, informal social support, social networks, subjective wellbeing, African American, Afro-Carribean, religion

Lori Longs Painter, MSSA  
(Case Western Reserve University)  
**Clinical Instructor, Social Work; Field Advisor**  
Social work practice

Nicole Parker, MSW  
(Cleveland State University)  
**Clinical Instructor, Social Work; Field Advisor**  
Field education, global culture, clinical & community practice

Dana Prince, PhD  
(University of Washington)  
**Assistant Professor, Social Work**  
Impact of cumulative disadvantage on youth development trajectories, risk behavior and health outcomes, intersectionality of race, class, gender and youth health disparities, youth transitions, school and community-based prevention, program development and evaluation

Francisca Richter, PhD  
(Oklahoma State University)  
**Research Assistant Professor, Social Work**  
Economic behavior

Maureen Riley-Behringer, PhD  
(Case Western Reserve University)  
**Lecturer, Social Work**  
Global child welfare & well being, human behavior, social policy

Nancy M. Rolock, PhD  
(University of Illinois-Chicago)  
**Henry L. Zucker Professor of Social Work Practice**  
Child welfare, post permanency and intervention research

J. Richard Romaniuk, PhD  
(Polish Academy of Sciences, Warsaw Poland)  
**Lecturer, Social Work**  
Neuroscience, immigration, clinical social work

Robert J. Ronis, MD  
(Case Western Reserve University)  
**Douglas Danford Bond Professor and Chair, Psychiatry; Professor, Social Work**  
Addiction psychiatry, public health, community mental health, co-occurring disorders

Mark I. Singer, PhD  
(Case Western Reserve University)  
**Leonard W. Mayo Professor in Family and Child Welfare;**  
Adolescent mental health, adolescent substance abuse, youth-related violence

Susan Snyder, MSW  
(New York University)  
**Clinical Instructor, Social Work; Field Advisor**  
Field education, clinical social work practice

Jody Timko, MSW  
(Cleveland State University)  
**Clinical Instructor, Social Work; Field Advisor**  
Medical, residential and community services to children, families, and adults

Laura A. Voith, PhD  
(University of Wisconsin-Milwaukee)  
**Assistant Professor, Social Work**  
Intimate partner violence, violence prevention

Chenobia Webster-Hill, DSW  
(University of Tennessee -Knoxville)  
**Clinical Instructor, Social Work ; Field Advisor**  
Anxiety, depression, chronic mental health, Acceptance and Commitment Therapy (ACT), Motivational Interviewing (MI)

James J. Werner, PhD  
(Case Western Reserve University)  
**Assistant Professor of Family Medicine, School of Medicine**  
Health behavior change, methods for mental health service delivery and direct practice in primary care, practice-based research networks, clinician education

Angela Whidden, EdD  
(Argosy University)  
**Clinical Instructor, Social Work; Field Advisor**  
Field education, early childhood & family therapy

Scott A. Wilkes, PhD  
(Case Western Reserve University)  
**Assistant Professor, Social Work**  
Child welfare, mental health, nonprofit management, social work ethics
through field trips and classroom discussions.

Students are expected to participate fully in class discussions. Content is covered via lectures and classroom discussions, as well as appropriate guest speakers. 

Jack, Joseph and Morton Mandel School of Applied Social Sciences Courses

Courses

SASS 284. Oppression and Privilege in a Multicultural Society. 3 Units.
Privilege flings open the doors of opportunity in a multicultural society. Oppression jams those doors tightly shut. This course provides students with understandings of how oppression and privilege operate in a multicultural society to restrict the life chances of minority and disenfranchised group members. Increasing knowledge about the nature and dynamics of oppression and privilege are fundamental dimensions of the ability to value a diverse world. This undertaking requires self-assessment and reflection on discrimination, oppression, and privilege as components of individual awareness. Such insight will help students to live, work, study, and play well with "others" who are culturally different from themselves with respect to race/ethnicity, religion, class, gender, sexual orientation/gender identity, ability, and age. Beyond increasing respectful social interaction, it is hoped that students will be motivated to work towards dismantling systems that perpetuate de-valuing, exploitation, marginalization, and violence against members of subordinate groups. Major consideration will be given to structures of oppression and privilege related to racism, classism, religious bigotry, sexism, heterosexism/transgenderism, ableism, and ageism. Note: A student cannot receive degree credit for both SASS 284 and SOCI 349.

SASS 315. Adoption Practice and Policy. 3 Units.
This course covers the concepts, knowledge, skills, and policies associated with contemporary adoption practice. The practice method reflects a constellation perspective, meaning that adoption is examined from the viewpoints of birth families, adoptees, and adoptive families. Exemplars and case studies are presented for illustration purposes. Consideration of constellation members' needs at different life cycle stages are presented. Ethical issues and dilemmas related to adoption are emphasized throughout the course in each content area. Course content is covered via lectures and classroom discussions, as well as appropriate guest speakers. Students are expected to participate fully through field trips and classroom discussions.

SASS 318. Death, Grief, and Loss. 3 Units.
This course provides students the opportunity to become informed, aware citizens understanding human issues related to end-of-life decision making, dying, and experiencing grief and loss. Topics focus on death and grief across the lifespan; the role of death in American culture; understanding individual and family challenges with decision making at the end of life; and the experience of grieving across life stages, cultures, gender, and spiritual difference. The course provides exposure to the experience of death as it relates to the self of the student; the terminally ill person, and the bereaved. Students will gain insight into their own values and beliefs in this area, as well as understanding the needs of terminally ill people, those who need support in their grief and mourning, and persons dealing with challenging life and death decisions regarding self or loved ones. Creation of a personal learning objective is an additional focus. Course content is implemented via lectures, class discussion, individual and small group work, audio-visuals, and guest speakers.

SASS 325. The Netherlands Social Justice: Health and Violence. 3 Units.
Social justice issues including violence prevention and health care services/policies will be explored via agency visits, lectures, and discussion with Dutch experts. The pervasive use of a harm reduction policy in the Netherlands will be examined. The course will help students develop the analytical skills necessary for evaluating social policy and practice issues related to a range of health care services as well as social justice issues that pertain to health care, prostitution and substance use. Students will familiarize themselves with the United States and Dutch social policies and practices related to issues such as: right to die, euthanasia for terminally ill, those in chronic pain or severely ill newborns; access to healthcare and health disparities; addictions; and prostitution. The manner in which a society treats its citizens least capable of taking care of themselves reveals many of the core values of its cultural system of social justice and approaches to health care. Counts for CAS Global & Cultural Diversity Requirement.

SASS 350. Seminars in Applied Social Sciences. 1 - 3 Units.
Survey of special subject areas. Topics vary in response to faculty and student interests. Small group discussion. Prerequisite depends on content.

SASS 355. Drugs and Youth. 3 Units.
Drug abuse is a more acute problem and more widespread than in any previous era of our country. Just as technology continues to evolve, drug use follows similar paths of evolution. Today, there are thousands of new drugs available that are used for medicinal purposes, recreational purposes, and other uses that affect the health of our citizens. The impact of drug use and/or abuse on the lives of ordinary people will be explored both through academic readings as well as biographies of young people who have dealt with the problem of drug abuse. Material will be presented from a wide range of disciplines and theoretical perspectives highlighting the bio-psycho-social nature of the problem--both the etiology as well as the effects of addiction. The impact of both macro (society) and micro (family and friends) on drug use of both licit (alcohol, over the counter drugs, and prescription) and illicit (marijuana, hallucinogens, and cocaine) on various subcultures such as sports/athletics, college students, women, adolescents, etc. will be explored. Course content will be covered via lectures, classroom discussions as well as appropriate guest speakers.
SASS 365. Victimology. 3 Units.
This course introduces the study of victimology, which is the study of the causes and consequences of victimization, and how victims and the criminal justice system interact. The focus will be on understanding the extent of crime victimization, theories of victimization, and the criminal justice system as it relates to the study of victimology. We will cover topics such as homicide, intimate partner violence, violence exposure, victims' rights, and sexual violence. This course will help students to understand crime victimization from a variety of perspectives with a particular emphasis on the intersection of social work and criminal justice and the role of social workers in the criminal justice system.

SASS 367. Poverty, Wealth Building, and Social Entrepreneurship. 3 Units.
With poor communities and individuals across the world aspiring for higher standards of living and quality of life, monolithic development strategies are proving to be insufficient. Microenterprise and social entrepreneurship are among the latest strategies for poverty alleviation. New strategies that are grass-roots, multi-dimensional, entrepreneurial, and engage stakeholders as partners are gaining ground. They seek to fundamentally transform the roles and relationships of the stakeholders in the economy. While social entrepreneurship is revolutionizing the practice of development work, the micro-enterprise sector plays an important role for some of the poorest sectors of society who gain employment, connection to the market, and opportunities for innovation through it. In this course, we will examine social entrepreneurship, the change it brought about in how development is viewed, conceived, and implemented. Some of the examples that will provide core content include economic development strategies that promote asset building among the poor; Mandragon in Spain (and other similar institutions from across the world), Greyston Bakery (and other similar examples from around the United States) and Evergreen Cooperative (and other relevant local examples).

SASS 368. Whatever it Takes: Creating Paths Out of Poverty for Children. 3 Units.
This course will examine current community based strategies for providing young people living in high poverty, multiple needs, urban areas with the educational, social and economic support they need for a stronger future. The course will begin with a review of the debated root causes of poverty in the United States and an exploration of the short and long term effects of poverty on children. Students will understand how poverty differentially affects different populations and geographic areas across the United States and globally. Special attention will be given to the complexity of urban poverty issues and the corresponding need for holistic interventions. The course will further explore the concepts and strategies underlying innovative community-based initiatives being implemented across the country including the theories, programming content, inclusion criteria and outcomes of these efforts. Students will have to critically think through the cost/benefits of this programming considering economic, political and social justice issues. Special attention will be given to the Harlem Children Zone's (HCZ) model. The HCZ has achieved successes in boosting college attendance and closing the racial and socioeconomic achievement gap among youth in a high-poverty target area in New York City. The HCZ is the model for the Obama Administration's Promise Neighborhoods Initiative to support comprehensive neighborhood development programs for children and youth. It includes efforts for social, educational and medical support designed sequentially to keep up with youth's developmental needs. Students will critically analyze this model and its applicability across other geographic areas and populations. Students will also learn from local best practice initiatives in education attempting to provide a path out of poverty for Cleveland's children through site visits at local schools. This will include experiential opportunities for firsthand contact with program staff and youth.

SASS 369. Social Networking and Community Organizing in the 21st Century. 3 Units.
This course will examine the changing nature of place, given increased mobility and diversity in communities within the United States and the emergence of a truly global economy and communication network due to the revolution in information technology. Community itself is being redefined as many members of society consider their most important relationships are primarily virtual in nature. The forms of engaging citizens are also changing as old models of community organizing give way to new approaches that focus on connectivity through social networks. This course will examine various new approaches to engagement, from political or campaign organizing to social networking around mutual interest to mobilizing people for a cause. We will examine the Obama presidential campaign as an example of a new mobilization strategy that emphasizes choice, flexibility, value, and the ability to influence through organic informal networks. The course will also explore case studies, such as network centric organizing as developed by Bill Traynor and Lawrence (MA) Community Works. Special attention will be given to controversial efforts criticized by the right or the left, such as the ACORN voter registration initiative. Students will also explore the changing nature of community in Northeast Ohio and how this new approach might lead to social change and economic development for greater Cleveland.
SASS 375A. International Travel & Study Abroad: Health, Human and Social Development in Urban & Rural Ecuador. 3 Units.
The study abroad program to Quito, Ecuador and surrounding rural areas will acquaint students with the history and culture of Ecuador, its social, political and economic development, and the impact it has on the delivery of social services. Ecuador’s historical and current relationship with the United States will also be explored. This course is designed for students and professionals who are interested in developing an international perspective for the study of social work and related health services. It will expose students to helping modalities within a cultural context and provide opportunities for cross-cultural comparison. The course will be taught using both lecture and experiential modalities. Along with interaction with a variety of social service agencies, students will visit historical sites and attend cultural events. They will be introduced to the art and culture of the area and explore the region’s economic development. Lectures by guest speakers on topics regarding family systems, culture, and history, social and political issues will provide students with learning opportunities. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375B. International Travel & Study Abroad: Mental Health Issues & Practice Netherlands. 3 Units.
This 3-credit course will be at least 42 hours of contact time, and include a trip to the Netherlands over Spring Break. The course will acquaint the participant (undergraduate and graduate) with the socio-political factors that influence policy development and the delivery of mental health care and services to the citizens of the Netherlands. The role of the social work profession in mental health care and service delivery will be explored via agency visits, lectures, and discussion with Dutch consumers and experts in the area of mental healthcare. This course will help students develop the analytical skills necessary for evaluating social policy and practice issues related to mental health. Students will familiarize themselves with the United States and Dutch social policies and practices related to specific mental health issues such as: treatment of severe mental illness, community mental health systems and community reintegration of the those with mental illness, psychosocial rehabilitation, the treatment of people with dual diagnoses of substance dependence and abuse and mental illness, homelessness and the mentally ill, psychiatric hospitalization, employment, education and issues of quality of life for people living with mental illness. Prior to the trip, students will attend a pre-trip session, will be expected to become familiar with the literature on concepts in social policy and practices relevant to mental health issues in both countries, and following the trip, meet for a post-trip session. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375C. International Travel & Study Abroad: Invisible Groups in a New Poland. 3 Units.
This 3 hour Spring Break for the undergraduate and graduate students introduces students and faculty to Polish culture and Polish social policies and practices concerning those social groups that are disenfranchised, stigmatized, and disempowered, including the poor, the unemployed, the homeless, the elderly, victims of domestic violence, and people affected by substance abuse and mental health problems. In cooperation with the Institute of Sociology at the University of Poznan, students and faculty will examine the issues of multiculturalism, social integration, feminism studies, and determinants of social exclusion in the context of the economic and social forces that are shaping a new Poland. The trip includes guided tours of neighborhoods and social institutions and daily lectures and workshops with government officials, practicing social workers, and many of Poland’s most prominent scholars in residence at the University of Poznan. The experience will challenge students to recognize how the recent political and economic transformation of the country has affected the entire society and how certain groups have paid a higher price. Students and faculty will also participate in cultural events to gain a greater understanding of Polish society. Prior to the trip, students will attend two pre-trip sessions, will be expected to become familiar with the literature on concepts in social policy and practices relevant to social welfare issues in both countries, and following the trip, meet for a post trip session. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375D. International Travel & Study Abroad: Child Welfare in Guatemala. 3 Units.
This program is designed to familiarize participants with child welfare issues, social services, and indigenous community development, particularly women cooperatives. The plan is for participants to learn Spanish each morning, followed by guided tours of various programs. The experience challenges participants to compare Guatemala with the United States, and to understand the strengths and weaknesses of social policies and human services in both countries. This course acquaints participants with the socio-political factors that influence the development of child welfare programs in the nongovernmental sector (private, nonprofit) and governmental sector in Guatemala. The role of the helping professions in child welfare are explored via agency visits, lectures, and collaboration with Guatemalan professionals. The program is an intense small group experience in living, learning, traveling, and studying. Counts for CAS Global & Cultural Diversity Requirement.
SASS 375E. International Travel & Study Abroad: Microcredit, Microfinance, and Social Development in Bangladesh. 3 Units.

This international travel/study course to Bangladesh is taught by SUIC School of Social Work, Case Western Reserve’s Mandel School of Applied Social Sciences (MSASS), and Independent University, Bangladesh. Many international scholars and leaders will be involved, including 2006 Nobel Peace Prize winner Muhammad Yunus, as well as other officials in Bangladesh. The program will provide an intensive learning experience that will take students to Bangladesh for 12 days. The course to Bangladesh will be focusing on the role of Micro-credit and Microfinance and Social Developments to alleviate poverty and nurture social entrepreneurship. Students will spend 8 days in Dhaka, the Bangladesh capital, and 4 days in the villages visiting field projects. The program will provide lectures and field trips involving social, political, economic and developmental aspects of Micro-Credit and Micro-Finance. The trip will explore the basic ideas behind the Microcredit revolution in Bangladesh, its historical precedence, and will study it’s relation to health, finance, management, politics, social entrepreneurship and development. Student will learn about the mechanisms of micro-credit in social development and execute the knowledge in their own practice. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375G. Global Health and Social Development in India. 3 Units.

The study abroad program explores the innovative approaches to health and social development in India and draws parallel to that of the United States. The purpose of the trip is to familiarize students with Indian social development and social policy issues in regards to multicultural aspects of healthcare, poverty alleviation, non-formal education, and application of information communication technologies in addressing social problems. The trip will include guided tours to neighborhoods, field-action project sites, health, social and educational institutions and government establishments. Daily lectures by practicing social workers, healthcare professionals, policy advocates, field workers, government officials and eminent Indian scholars and researchers will further enhance students’ understanding. This study abroad course will also acquaint students with history and culture of India, its social, political and economic development and the impact it has on the delivery of social services The course will be taught using both lecture and experiential modalities. Along with visiting a variety of governmental and non-governmental institutions, health care facilities, organizations and projects, students will visit historical sites and attend cultural events. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375H. 21st Century Ghana: Culture, Institutions & Development in West Africa. 3 Units.

This two-week study abroad program to Ghana, West Africa will introduce students to the history and culture of Ghana, its social, political and economic development, and current social issues and institutional responses. Among the specific social issues to be examined in the course are health, education and community development. We will pay particular attention to understanding how the role of culture, faith and religion is shaping institutional, community and individual responses to the challenges and opportunities of globalization and development. The course will be taught using a combination of lectures, individual and group exercises and experiential learning, including a community service project, a brief home-stay for each student with a Ghanaian family and a day of work shadowing with a Ghanaian professional. Along with lectures from local academics and interaction with a variety of institutions and agencies, students will visit historical sites and attend cultural events. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375I. Global Issues, Health, & Sustainability in India. 3 Units.

Global Issues, Health, & Sustainability in India is an interdisciplinary social work and engineering collaboration that includes a short-term cross-cultural immersion. This course brings together social work (knowledge, values, and skills) and health care (promotion, education, and community) perspectives to the understanding of technical project assessment, selection, planning and implementation in India. The course is also designed to help students understand culturally relevant community engagement strategies to ensure project acceptance in underserved and developing communities. Many field sites will be visited in order to observe first-hand the community assessment and development of projects that engineers implement. An example of these projects could include infrastructure to support green energy and water (resource planning, development, conservation, and sanitation). This study abroad course will acquaint students with history and culture of India, its social, political and economic development and the impact it has on health and the delivery of social services. Participants will learn about factors affecting the abilities to reach, treat, educate, and equip communities to improve health outcomes. Engineering students will learn the quantitative aspects using a paradigm of hierarchical systems, mathematical modeling, and scenario analysis using a ‘reasoning support’ system. Together the engineering, social work, and health sciences students in disciplinary-balanced teams will jointly work on real and meaningful projects marrying the descriptive scenarios (that is the ‘subjective’ aspect) with the numerical scenario analysis based on mathematical modeling (or ‘objective’ aspect) to form a coherent view of the future. The course will be taught using both lecture and experiential modalities. Engineering students will conduct computer modeling work. Along with visiting a variety of governmental and non-governmental institutions, organizations and projects, students will visit historical sites and attend cultural events. Offered as ECSE 342I and SASS 375I. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375J. International Travel & Study Abroad: Child Development/Child Welfare Nicaragua. 3 Units.

This four-week study abroad program to Nicaragua, Central America will introduce students to the history and culture of Nicaragua, its social, political and economic development, and current child development/health/child welfare issues. The program will focus on Spanish language acquisition or mastery along with substantive study in either child development & health or child welfare, depending on student interest. Counts for CAS Global & Cultural Diversity Requirement.

SASS 375K. International Learning through Community Immersion & Internship. 3 Units.

This three-credit course will be conducted in partnership with Educo Africa in Cape Town, South Africa. The course will provide experiential and service learning social work experiences in a nation still experiencing the lingering effects of decades of apartheid rule as well as the co-existence of developed and developing worlds within the boundaries of the country. Course activities will encourage cross cultural learning experiences to increase knowledge pertinent to South Africa’s social, cultural, environmental, political and historical reality. It will expose students to community development challenges as well as environmental and social justice issues in a South African context. The goal of the course is to increase personal, community and global leadership potential of social work and social development professionals. This course in partnership to Educo Africa will use a community-based context to increase the effectiveness and expertise of students and will support student’s engagement in program development and building international networks and partnerships. Counts for CAS Global & Cultural Diversity Requirement.
SASS 385. Social Welfare Capstone Seminar. 3 Units.
This seminar course will revolve around the identification and critical investigation of current social problems. Insights gained from social welfare research will be applied to better understand these problems. Successful completion of the course will require critical analysis of published research, integration of information from social work and different disciplines, an oral presentation and a final written research report including a literature review. Counts as SAGES Senior Capstone.

SASS 390. Independent Study for Undergraduates. 1 - 3 Units.
Individual study in Applied Social Sciences involving specific programs of reading, research, and special projects. Requires prior approval of faculty member directing the project. Recommended preparation: 12 hours of social science courses; approval of MSASS Associate Dean.

SASS 405. Nonprofit Ethics and Professionalism. 3 Units.
This course is an application of ethical frameworks and analysis to nonprofit organizations. Using cases and essays, the course will help nonprofit managers become better equipped to address ethical problems and dilemmas in their work in the following areas: ethics of boards, ethics and leadership, ethics and organizational culture, professional ethics, and ethics and fundraising.

SASS 407. Nonprofit Revenue Planning and Development. 3 Units.
Revenue strategy and development are critical in advancing the mission and core work of a nonprofit organization, and are among the most strategic responsibilities held by an executive director and his/her board. Nonprofits face a myriad of revenue options which could be pursued but each of these has implications for how the organization advances its mission and its sustainability. The course will examine how to assess these revenue sources and evaluate how they can contribute to an organization’s overall financial vitality.

SASS 408. Nonprofit Philanthropic Fundraising. 3 Units.
This course will provide current and future nonprofit leaders with a detailed survey of the practices, principles, and process of fundraising, enabling them to effectively create, participate in, and manage fund development programs and staff. Successful fundraising is shown to be communication-based and built upon solid relationships with defined constituencies of donors and potential donors.

SASS 409. Nonprofit Strategic Planning. 3 Units.
