Belardo, Michelle; MD, Clinical Instructor, Reproductive Bio, UH
Belkin, Jane; MA, Clinical Instructor, Psychiatry, UH
Bellamy, Robert; MD, Clinical Senior Instructor, Medicine, UH
Beller, Nancy; MD, Clinical Senior Instructor, Medicine, UH
Bellin, Sandra; MD, Clinical Instructor, Reproductive Bio, UH
Below, Richard; O.D., Clinical Instructor, Fam Med & Comm Hlth, UH
Benatti, Rodolfo; MD, Clinical Assistant Professor, Medicine, UH
Benhacene, Assia; MD, Clinical Assistant Professor, Anesth & Periop Med, UH
Benish, William; MD, Adjunct Assistant Professor, Medicine, UH
Benjamin, Jaye; MD, Clinical Assistant Professor, Dermatology, UH
Bennet, John; MD, Clinical Assistant Professor, Pediatrics, UH
Benson, Anna; MD, Clinical Instructor, Pediatrics, UH
Berard, Alicia; PhD, Adjunct Instructor, Pathology, UH
Berger, Melvin; MD PhD, Adjunct Professor, Pediatrics, UH
Berman, Barbara; MA, Clinical Instructor, Medicine, UH
Bernat, Viera; MD, Clinical Assistant Professor, Pediatrics, UH
Bernstein, George; MD, Clinical Assistant Professor, Medicine, UH
Berte, Michael; MD, Clinical Assistant Professor, Urology, UH
Bertschinger, Kurt; MD, Clinical Assistant Professor, Psychiatry, UH
Bevan, Graham; PhD, Clinical Instructor, Medicine, UH
Bezerra, Hiram; MD, Adjunct Associate Professor, Medicine, UH
Bhadra, Eva; MBBS, Adjunct Instructor, Pediatrics, UH
Bhardwaj, Anita; MD, Clinical Instructor, Pediatrics, UH
Bhatt, Jyoti; MBBS, Clinical Senior Instructor, Medicine, UH
Bhatt, Mukesh; MBBS, Clinical Assistant Professor, Medicine, UH
Bickers, David; MD, Adjunct Professor, Dermatology, UH
Biel, David; MS, Clinical Instructor, Anesth & Periop Med, UH
Bigg, Margaret; MD, Clinical Assistant Professor, Fam Med & Comm Hlth, UH
Billowitz, Aaron; MD, Clinical Assistant Professor, Psychiatry, UH
Biswa, Tithi; MBBS MD, Clinical Associate Professor, Radiation Oncology, UH
Blisscourt, Leonardo; MD, Clinical Associate Professor, Radiology, UH
Black, Jane; MD, Clinical Assistant Professor, Pediatrics, UH
Blankfield, Robert; MD, Clinical Professor, Fam Med & Comm Hlth, UH
Blixen, Carol; PhD, Adjunct Associate Professor, Psychiatry, UH
Block, Seneca; MA, Adjunct Instructor, Psychiatry, UH
Bloom, Henry; MD, Clinical Associate Professor, Fam Med & Comm Hlth, UH
Blumenthal, Harold; MD, Clinical Assistant Professor, Dermatology, UH
Bobak, David; MD, Adjunct Associate Professor, Medicine, UH
Bobanga, Iuliana; MD, Clinical Assistant Professor, Surgery, UH
Bober, Kayla; MS, Clinical Instructor, Anesth & Periop Med, UH
Bodnar, Tetyana; MD, Clinical Assistant Professor, Psychiatry, UH
Boe, Brian; MD, Clinical Instructor, Pediatrics, UH
Boehm, Gregory; MD, Clinical Assistant Professor, Psychiatry, UH
Boieru, Cristiana; MD, Clinical Instructor, Medicine, UH
Bokovitz, Lauren; MS, Clinical Instructor, Genetics & Genome Sc, UH
Bolton, Carrie; MD, Clinical Assistant Professor, Radiology, UH
Bonder, Elise; MD, Clinical Senior Instructor, Psychiatry, UH
Bonem, Deborah; MS, Adjunct Instructor, Pediatrics, UH
Boos, Maridee; DO, Clinical Instructor, Pathology, UH
Carroccio, James; DO, Clinical Instructor, Fam Med & Comm Hlth, UH
Carrouzzo, Michele; MD, Clinical Assistant Professor, Pediatrics, UH
Carrozzo, Christian; MS, Clinical Instructor, Anesth & Periop Med, UH
Carruthers, Amy; MD, Clinical Instructor, Pediatrics, UH
Carsons, Dennis; MD, Clinical Instructor, Fam Med & Comm Hlth, UH
Carter-O’Gorman, Denise; M SW, Clinical Instructor, Medicine, UH
Carvill, Elizabeth; MS, Clinical Instructor, Anesth & Periop Med, UH
Cash, Shelby; MD, Clinical Senior Instructor, Medicine, UH
Castro, Constanza; MD, Clinical Instructor, Pediatrics, UH
Castro-Dominguez, Yulanka; MD, Clinical Assistant Professor, Medicine, UH
Castrovinci, Anthony; MD, Clinical Associate Professor, Dermatology, UH
Catanzaro, Phillip; MD, Clinical Assistant Professor, Radiology, UH
Cattano, Davide; MD PhD, Clinical Instructor, Anesth & Periop Med, UH
Cavey, Carol; MD, Clinical Senior Instructor, Psychiatry, UH
Chadha, Amrita; MBBS, Clinical Assistant Professor, Anesth & Periop Med, UH
Chaiban, Joumana; MD, Clinical Assistant Professor, Medicine, UH
Chaka, Michael; MD, Clinical Assistant Professor, Pediatrics, UH
Chakravarty, Saneka; MD, Clinical Assistant Professor, Medicine, UH
Challener, Kenneth; MD, Clinical Instructor, Medicine, UH
Chan, Megan; MD, Clinical Senior Instructor, Medicine, UH
Chandurkar, Sudhakar; MBBS, Clinical Assistant Professor, Medicine, UH
Chang, Li-Wei; MD, Clinical Assistant Professor, Dermatology, UH
Chang, Phillip; MD, Clinical Professor, Surgery, UH
Chang, Richard; MD, Clinical Assistant Professor, Medicine, UH
Chapman, Graham; MD, Clinical Instructor, Reproductive Bio, UH
Chapman, Mark; MD, Clinical Assistant Professor, Reproductive Bio, UH
Chattopadhyay, Rhea; MD, Clinical Instructor, Reproductive Bio, UH
Chaudhry, Abubaker; MD, Clinical Senior Instructor, Medicine, UH
Chaudhry, Mundeep; MD, Clinical Senior Instructor, Fam Med & Comm Hlth, UH
Chavinson, Melvin; MD, Clinical Associate Professor, Psychiatry, UH
Chelimsky, Gisela; MD, Adjunct Professor, Pediatrics, UH
Chelimsky, Thomas; MD, Adjunct Professor, Neurology, UH
Chen, Michael; MD, Clinical Instructor, Fam Med & Comm Hlth, UH
Chen, Shih-Ann; MD, Adjunct Professor, Medicine, UH
Cheng, CeCe; MD, Clinical Instructor, Reproductive Bio, UH
Cheng, Chee-Wai; PhD, Adjunct Professor, Radiation Oncology, UH
Cheplak, Alyson; MS, Clinical Instructor, Anesth & Periop Med, UH
Cheren, Mark; PhD, Adjunct Assistant Professor, Psychiatry, UH
Chi, Thomas; MD, Clinical Assistant Professor, Ophthal & Visual Sci, UH
Chi, Yang; MD, Clinical Assistant Professor, Radiology, UH
Chiang, Ambrose; MD, Clinical Associate Professor, Medicine, UH
Chmielewski, Richard; MD, Clinical Assistant Professor, Medicine, UH
Cho, Donald; MD, Clinical Assistant Professor, Medicine, UH
Cho, Michael; PhD, Adjunct Associate Professor, Medicine, UH
Chiren, MaryMargaret; MD, Adjunct Associate Professor, Dermatology, UH
Christman-Khawam, Leanne; MD, Clinical Assistant Professor, Fam Med & Comm Hlth, UH
Christie, Richard; MD, Clinical Assistant Professor, Medicine, UH
Chua, Joselita; MD, Clinical Instructor, Psychiatry, UH
Chung, Rebecca; MD, Clinical Instructor, Reproductive Bio, UH
Chwast, Robert; PhD, Clinical Assistant Professor, Psychiatry, UH
Cifra-Bean, Laura; MD, Clinical Instructor, Pediatrics, UH
Ciotti, Matthew; MS, Clinical Instructor, Anesth & Periop Med, UH
Cireddu, James; MD, Clinical Assistant Professor, Medicine, UH
Cirino, Robert; MD, Clinical Assistant Professor, Medicine, UH
Citta-Pietrolungo, Thelma; O.D., Clinical Assistant Professor, Pediatrics, UH
Clark, Lisa; MS AA-C, Clinical Instructor, Anesth & Periop Med, UH
Clarren, Hadley; MD, Clinical Associate Professor, Medicine, UH
Clough, Mary; MD, Clinical Instructor, Pediatrics, UH
Coakley, Colleen; MS, Adjunct Instructor, Psychiatry, UH
Coates, Laura; MD, Clinical Senior Instructor, Medicine, UH
Coats, Valerie; MD, Clinical Instructor, Pediatrics, UH
Cobler, Ellen; MS, Clinical Instructor, Otolaryngology, UH
Cochran, Jennifer; MD, Clinical Instructor, Pediatrics, UH
Coconcea, Cristinel; MD, Clinical Assistant Professor, Psychiatry, UH
Coconcea, Nicolete; MD, Clinical Assistant Professor, Psychiatry, UH
Coffman, Byron; MD, Clinical Senior Instructor, Medicine, UH
Cogan, David; MD, Clinical Assistant Professor, Medicine, UH
Cohen, Leslie; MS, Clinical Instructor, Genetics & Genome Sc, UH

WEATHERHEAD SCHOOL OF MANAGEMENT

Peter B. Lewis Building
http://weatherhead.case.edu/
Phone: 216.368.2030

Weatherhead School of Management spans the entire spectrum of research and learning from Appreciative Inquiry (AI) to Artificial Intelligence (AI). Weatherhead’s more than 1,400 students study undergraduate, graduate and doctoral programs in the Peter B. Lewis Building. Weatherhead’s Executive Education programs engage more than 3,000 people annually and offer the latest in leadership development programs to help individuals at all stages of their careers grow in their profession. Our Fowler Center for Business as an Agent of World Benefit brings students together with an international network of educators, researchers and practitioners who incorporate social and global issues into business innovation and social entrepreneurship.

Through innovative curriculum in data-driven management, Weatherhead continues to position graduates for high-demand jobs that connect business with analytics and technology in a rapidly changing world. STEM Masters degrees for MBA, Accounting, Business Analytics and Intelligence, Finance, and Supply Chain Management immerse students with in-demand technical knowledge, such as big data, artificial intelligence and blockchain technology, that is essential for a competitive business career. Located in the hub of healthcare in Cleveland, Ohio, Weatherhead gives aspiring healthcare business professionals the tools and resources they need to succeed in our Master of Healthcare Management program and Online MBA-Healthcare Management Track.

As a management school within a top research university, Weatherhead’s faculty members are committed to expanding knowledge and contributing to global scholarship through their research. Weatherhead faculty pioneered concepts in Appreciative Inquiry, Emotional Intelligence competencies, Intentional Change Theory and Manage by Designing. Our faculty have extensive, real-world business experience and connections to business leaders which they leverage to help students learn and develop networks. Students have unique opportunities to work closely with our world-class faculty members.

Mission Statement

The Weatherhead School of Management has an enduring impact on business and society through cutting edge research and innovative teaching that prepares professionals for the marketplace of the future.

Vision

The Weatherhead School of Management is a leader in data driven, experiential, and market-based management education and research. We leverage our strengths from Appreciative Inquiry to Artificial Intelligence (AI to AI), empowering our graduates to solve complex problems and lead thriving organizations that do well by doing good.

Values

The Weatherhead School of Management proudly embraces our student-centered culture of excellence that promotes collaboration, inclusion, and diversity in all that we do.

• Student-Centered – We believe in our students and alumni being our true north, and promote their development, growth, and well-being.

• Excellence with Integrity – We act ethically and transparently with all our internal and external stakeholders to promote and reward a culture of inquiry and discovery that is driven by evidence-based innovation in our research, in our classroom experience, and in our community endeavors.

• Collaboration in Action – We act collegially within our WSOM community, the University, and with external partners to develop enduring and transformational knowledge across disciplines.

• Diversity with Inclusion – We value diversity of ideas, culture, and people to foster an inclusive, respectful, and supportive community of lifelong learners.

Brief History

In 1952, Western Reserve University established the School of Business by combining the Cleveland College Division of Business Administration and the Graduate School Division of Business Administration, and from its founding until 1988, the activities of the School of Business were divided among a number of buildings both in downtown Cleveland and in University Circle. In 1967, the merger of Case Institute of Technology and Western Reserve University created Case Western Reserve University, and the Western Reserve University School of Business absorbed Case’s Division of Organizational Sciences to become the School of Management in 1970. Just six years later, the School of Management launched its full-time MBA.

In 1980, the School of Management was renamed in honor of Albert J. Weatherhead III, a Cleveland businessman and industrialist who represented the fourth generation of his family to carry on the Weatherhead name and values, including cultural and educational leadership. By 1999, the Weatherhead School of Management had developed a strong identity, growing out of its space in Enterprise Hall and requiring new construction. Funded by the philanthropist and entrepreneur whose name it bears, the Peter B. Lewis building, designed by renowned contemporary architect Frank Gehry and completed in 2002, was the answer. Located across the street from the George S. Dively Building, which houses Weatherhead Executive Education programs, the Lewis Building, featuring Gehry’s unmistakable sculptural profile and gleaming stainless steel roof, both sets the school apart from its surroundings and, quite literally, reflects the prestigious neighborhood of the school. Gehry redefined the way a business school should look, just as Weatherhead redefines the way management education should take place.

Accreditation

The programs of the Weatherhead School of Management have been fully accredited by the Association to Advance Collegiate Schools of Business (AACSB) International since 1958.

Administration

Manoj K. Malhotra, PhD
(Ohio State University)
Dean, Weatherhead School of Management; Albert J. Weatherhead III Professor of Management; Professor, Operations

Gregory A. Jonas, PhD, CMA
(Virginia Commonwealth University)
Senior Associate Dean, Academics and Graduate Programs; Associate Professor, Accountancy
Leonardo Madureira, PhD  
(University of Pennsylvania)  
Associate Dean, Research and Faculty; Deborah and David Daberko Fellow; Professor, Banking and Finance

J.B. Silvers, PhD  
Associate Dean, Finance; Professor, Banking and Finance

Jennifer Johnson, MBA  
Associate Dean, Undergraduate and Integrated Programs; Associate Professor, Design & Innovation

Shirley Leonard, MBA  
Associate Dean, External Relations

Jim Hurley, MEd, MSEd  
Assistant Dean, Undergraduate and Integrated Programs

Tiffany Schwendeman, MAcc, MBA  
Assistant Dean, Curriculum and Administration, Master of Accountancy

Deborah Bibb, MBA  
Executive Director Enrollment, Career Development and Student Experience

Anna Frolova-Levi, MBA  
Executive Director, Recruitment and Placement

Christine Kush, MBA, MPA  
Executive Director, Executive Education

Department Chairs

Diana Bilimoria, PhD  
(University of Michigan)  
KeyBank Professor; Chair and Professor, Organizational Behavior

CNV Krishnan, PhD  
(University of Wisconsin-Madison)  
Chair and Professor, Banking and Finance; Faculty Director, Master of Finance

Kalle Lyytinen, PhD  
(University of Jyvaskyla)  
Distinguished University Professor; Iris S. Wolstein Professor of Management Design; Faculty Director, Doctor of Business Administration; Chair and Professor, Design & Innovation

Kamlesh Mathur, PhD  
(Case Western Reserve University)  
Chair and Professor, Operations; Faculty Co-director, Master of Business Analytics and Intelligence; Faculty Co-director, Master of Engineering and Management

Thomas King, DM, CPA, CMA  
(Case Western Reserve University)  
Chair and Professor, Accountancy; Faculty Director, Master of Accountancy

Mark Votruba, PhD  
(Princeton University)  
Chair and Associate Professor, Economics

Undergraduate Programs

DEGREES AND MAJORS

BS Accounting

BA Economics

BS Management with Major(s) in:

1. Business Management with one or more concentration(s) in:
   a. Business Information Technology
   b. Healthcare Management
   c. Innovation & Entrepreneurship
   d. International Business
   e. Organizational Leadership
   f. Supply Chain Management

2. Finance
3. Marketing
4. Dean's Approved

Bachelor of Science (BS) in Accounting

The accounting profession demands a high degree of technical training, similar to the professions of architecture, law, engineering and medicine, and a broad knowledge of the fundamentals of economics and business with a commitment to public well-being. Career opportunities in accounting include the public, corporate, government, nonprofit and healthcare sectors. The undergraduate program in accountancy is designed to prepare students for entrance into these careers and to provide a foundation for the examination to become a CPA or to achieve other professional certifications. Each state Board of Accountancy (https://www.nasba.org/stateboards/) has its own eligibility requirements for taking the CPA exam. Students pursuing a BS in Accounting should consult the Board of Accountancy (https://www.nasba.org/stateboards/) website for the state in which they plan to sit for the CPA examination in order to determine specific course requirements.

As part of the sequence of courses leading to the BS in Accounting offered through Weatherhead, the student takes required and elective courses in related fields of banking and finance, economics, marketing, organizational behavior and operations.

General Education Requirements

SAGES Requirements
First Seminar  
Two University Seminars  
Departmental Seminars - taken as MGMT 395, see Core Requirements  
Senior Capstone  
Breadth Requirements
Mathematical Sciences Part 1  
Mathematical Sciences Part 2  
Mathematical Sciences Part 2

Mathematical Sciences Part 2

DESN 210  
Introduction to Programming for Business Applications  
or CSDS 132  
Introduction to Programming in Java

Total Units 23

### Total Credit Hours for Degree: 122

† Students must complete one university-approved SAGES Senior Capstone. It is not required that students complete a Weatherhead-specific capstone. Most students choose to take MGMT 398 Action Learning, although a second option within Weatherhead is MGMT 397 Undergraduate Research Project.

‡ Students must complete three one-credit-hour MGMT 395 offerings each of a different topic.

Students pursuing the BS in Accounting are advised to take the two introductory classes, ACCT 100 Foundations of Accounting I and ACCT 200 Foundations of Accounting II, and ACCT 106 Spreadsheet Basics for Business and Non-Business Majors, as early as possible. In addition, students are advised to take MGMT 201 Contemporary Business and Communication as early as possible and ORBH 250 Leading People (LEAD I) in the second year.

Twelve credit hours of accounting coursework taken at another accredited institution may be considered for transfer toward the BS in Accounting, although transfer credit for courses must be approved by the Accountancy Department. Each student is required to consult with an advisor in the Office of Undergraduate and Integrated Study Programs at Weatherhead.

For more information, contact Tiffany Schwendeman (tiffany.schwendeman@case.edu), assistant dean of undergraduate and integrated study programs, at 216.368.2058.

### Integrated Study Program in Accountancy

Undergraduate students at Case Western Reserve University have the unique opportunity to pursue both the Bachelor of Arts (BA) or Bachelor of Science (BS) and the Master of Accountancy through the BA/BS and Master of Accountancy Integrated Study Program. The Integrated Study program allows students to complete both degrees in four or five years. For students majoring in accounting, both degrees are most commonly completed in four-and-a-half years or nine academic semesters. All Case Western students must apply for and be admitted to the MAcc program, although certain requirements are waived, such as the Graduate Management Admission Test (GMAT) or the Graduate Record Examinations (GRE). Because of the necessity for proper planning of coursework, undergraduate students are strongly encouraged to apply for the MAcc in their junior year.

The Integrated Study program is strongly recommended for those individuals planning to obtain professional certification as a certified public accountant (CPA). CPA candidates must have completed 150 semester hours of study at the university level in order to qualify to sit for the CPA examination. The integrated program saves qualified students both time and money while equipping students with the skills and knowledge attractive to top accounting firms.

For more information, contact Tiffany Schwendeman (tiffany.schwendeman@case.edu), assistant dean of undergraduate and integrated study programs, at 216.368.2058.

### Early Admission to the Integrated Study Program in Accountancy

Each year, approximately 10 to 15 exceptionally well-qualified high school seniors who plan to pursue careers in accountancy will be offered Early Admission to the Integrated Study Program in Accountancy.
Early admits receive a conditional commitment of admission to the Weatherhead School of Management Master of Accountancy (https://weatherhead.case.edu/degrees/masters/m-accountancy/) program and a scholarship package covering a minimum of 50% of an academic year’s tuition cost to be honored when students formally enroll as a graduate student. Students are required to maintain a minimum undergraduate GPA of 3.2 overall and in accountancy courses. Those who achieve higher grade point averages will be eligible for greater scholarship amounts.

**Practicum Program**

The practicum program (https://case.edu/postgrad/experiential-education/practicum/) is a planned, structured, supervised workplace experience at an approved "site" organization. The practicum is an experiential learning arrangement between the student, the employer and the practicum adviser in conjunction with the Office of Post-Graduate Planning and Experiential Education. Employers provide appropriate supervision and work-related learning while the practicum adviser guides and evaluates the student’s experience. The primary goal of this active learning experience is the intellectual, personal and professional growth of the student in an area related to the student’s academic goals. The practicum should provide the student with new skills, insights and experiences that are transferable to the academic setting.

Students apply to the Office of Post-Graduate Planning and Experiential Education in the semester preceding the work assignment and may participate in up to two practicums. All practicums developed through the University Career Center must be taken for transcript notation, and students must have a faculty member serve as a practicum advisor. If a student elects to work in an internship/practicum without enrolling in the course for academic notation, he or she will not have the benefits of full-time student status. Additionally, he or she will not represent the practicum program in any official capacity.

**Total Units in Sequence: 121**
Bachelor of Arts (BA) in Economics 
(College of Arts and Sciences)

The BA in Economics is a 120-credit-hour, structured program in which students learn to analyze problems of resource allocation and decision making and to understand the influence of these factors on economies and societies.

Our highly regarded major attracts some of the best students on campus. Students have the opportunity to assist Weatherhead faculty in their research activities and to participate in independent research projects.

Bachelor of Arts (BA) in Economics concentration in Quantitative Methods 
(College of Arts and Sciences)

This major option (120-hours) emphasizes mathematical and empirical methods in economics, including development of strong quantitative and programming skills. The Quantitative Methods concentration is especially recommended for students who are highly interested in research and advanced study in Economics.

General Degree Requirements 
Students are required to complete the Arts and Sciences General Education Requirements (p. ).

Students who desire a Secondary Major in Economics should consult with a Weatherhead academic advisor.

**NOTE: ECON 395 and ECON 398 do not count towards electives (See information below on SAGES Senior Capstone).**
SAGES Senior Capstone: Economics
The basic Economics major does not require a capstone as part of the major. However, students need to complete a capstone as part of the SAGES requirement. The Economics Department offers the following courses for a capstone.

ECON 398 Honors Research II 3
ECON 395 Senior Capstone in Economics 3
ECON 399 Individual Readings and Research (upon approval of Senior Capstone Coordinator) 3-6

SAGES Senior Capstone: Economics concentration in Quantitative Methods
Required - 3 units:
ECON 395 Senior Capstone in Economics 3
or ECON 398 Honors Research II

For more information, contact Teresa Kabat (teresa.kabat@case.edu), department administrator, at 216.368.4110.

Bachelor of Science (BS) in Management
Graduates of the BS in Management degree program obtain a broad education that enables them to bring an unusual degree of analytical capability to the problems of management and business. Each student is required to complete an approved major program of study from the options outlined below. In addition, each student must consult with an advisor in the Office of Undergraduate and Integrated Study Programs at Weatherhead.

General Education Requirements
SAGES Requirements
First Seminar 4
Two University Seminars 6
Departmental Seminars - taken as MGMT 395, see Core Requirements
Senior Capstone ‡ 3-6

Breadth Requirements
Mathematical Sciences Part 1 4
MATH 125 Math and Calculus Applications for Life, Managerial, and Social Sci I
or MATH 121 Calculus for Science and Engineering I
Mathematical Sciences Part 2 3-4
DESN 210 Introduction to Programming for Business Applications
or CSDS 132 Introduction to Programming in Java
or ENGR 131 Elementary Computer Programming
or MATH 122 Calculus for Science and Engineering II
or MATH 126 Math and Calculus Applications for Life, Managerial, and Social Sci II

Two Natural Sciences Courses 6-8
Two Arts & Humanities Courses 6-8
Two Social Sciences Courses 6
Total Units 38-46

Degree Requirements
Principles Requirements
ACCT 100 Foundations of Accounting I 3
ACCT 200 Foundations of Accounting II 3
ECON 102 Principles of Microeconomics 3
ECON 103 Principles of Macroeconomics 3
OPRE 207 Statistics for Business and Management Science I 3

Core Requirements
BAFI 355 Corporate Finance 3
MGMT 201 Contemporary Business and Communication 3
MIDS 301 Introduction to Information: A Systems and Design Approach 3
MKMR 201 Marketing Management 3
OPRE 301 Operations Research and Supply Chain Management 3
ORBH 250 Leading People (LEAD I) 3
ORBH 251 Leading Organizations (LEAD II) 3
PLCY 399 Business Policy 3
MGMT 395 Advanced Seminar * 3

Open Electives
Electives 15-24
Total Units 57-66

Major Requirements
Students must complete an 18-credit-hour major in Business Management, Finance, Marketing or a Dean's Approved Major. Students who desire a Secondary Major in one of these areas should consult with a Weatherhead academic advisor.

Business Management Major Requirements
1) Complete three courses from within one of the concentrations below. 9
2) Complete one of the following analytics courses: 3-4
BAFI 361 Empirical Analysis in Finance
ECON 326 Econometrics
MKMR 310 Marketing Analytics
3) Complete two additional Weatherhead electives. 6
NOTE: A student who is completing a major in Accounting, Economics, Finance or Marketing may apply one course from one of these majors towards the Concentration, Analytics Course, or Weatherhead Electives requirement for their major in Business Management.

Total Units 18-19

Business Management Concentrations
Business Information Technology
Required Course:
DESN 210 Introduction to Programming for Business Applications

Elective Courses (complete two of the following):
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACCT 306</td>
<td>Accounting Information Systems - Basic</td>
</tr>
<tr>
<td>BAFI 335</td>
<td>Introduction to Fintech</td>
</tr>
<tr>
<td>MKMR 348</td>
<td>Strategic Internet Marketing</td>
</tr>
</tbody>
</table>

**Healthcare Management**

Required Course:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>ECON 378</td>
<td>Health Care Economics</td>
</tr>
</tbody>
</table>

Elective Courses (complete two of the following):

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>ECON 342</td>
<td>Public Finance</td>
</tr>
<tr>
<td>HSMC 412</td>
<td>Lean Services Operations</td>
</tr>
<tr>
<td>HSMC 420</td>
<td>Health Finance</td>
</tr>
</tbody>
</table>

Or alternative, approved HSMC or other WSOM course chosen in consultation with advisor.

**Innovation and Entrepreneurship**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>BLAW 331</td>
<td>Legal Environment of Management</td>
</tr>
<tr>
<td>ECON 313</td>
<td>Experiential Entrepreneurship</td>
</tr>
<tr>
<td>ECON 364</td>
<td>Economic Analysis of Business Strategies</td>
</tr>
<tr>
<td>ECON 369</td>
<td>Economics of Technological Innovation and Entrepreneurship</td>
</tr>
<tr>
<td>ENTP 301</td>
<td>Entrepreneurial Strategy</td>
</tr>
<tr>

</tr>
<tr>
<td>ENTP 311</td>
<td>Entrepreneurship and Wealth Creation</td>
</tr>
<tr>
<td>MKMR 312</td>
<td>Selling and Sales Management</td>
</tr>
<tr>
<td>ORBH 380</td>
<td>Managing Negotiations</td>
</tr>
</tbody>
</table>

NOTE: ENTP 301 is required for this concentration. Students completing an Innovation and Entrepreneurship concentration may not complete an Entrepreneurship minor.

**International Business**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>ECON 355</td>
<td>The Origins of the Modern Economy</td>
</tr>
<tr>
<td>ECON 372</td>
<td>International Finance</td>
</tr>
<tr>
<td>ECON 373</td>
<td>International Trade</td>
</tr>
<tr>
<td>ECON 375</td>
<td>Economics of Developing Countries</td>
</tr>
<tr>
<td>ECON 376</td>
<td>Inside Financial Crises</td>
</tr>
<tr>
<td>MGMT 315</td>
<td>International Management Institute</td>
</tr>
<tr>
<td>ORBH 391</td>
<td>Leadership in Diversity and Inclusion: Towards a Globally Inclusive Workplace</td>
</tr>
</tbody>
</table>

NOTE: MGMT 315 is required for this concentration. If a student wishes to substitute a course from another study abroad experience, he/she must receive prior approval from an academic advisor.

**Organizational Leadership**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>ORBH 303</td>
<td>Leading Teams through Interpersonal Relationships</td>
</tr>
<tr>
<td>ORBH 330</td>
<td>Quantum Leadership: Creating Value for You, Business, and the World</td>
</tr>
<tr>
<td>ORBH 360</td>
<td>Independent Study</td>
</tr>
<tr>
<td>ORBH 370</td>
<td>Navigating Gender in Organizations</td>
</tr>
<tr>
<td>ORBH 380</td>
<td>Managing Negotiations</td>
</tr>
<tr>
<td>ORBH 391</td>
<td>Leadership in Diversity and Inclusion: Towards a Globally Inclusive Workplace</td>
</tr>
</tbody>
</table>

**Finance Major Requirements**

Required Courses: 9

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>BAFI 356</td>
<td>Investments</td>
</tr>
<tr>
<td>BAFI 357</td>
<td>Financial Modeling, Analysis and Decision Making</td>
</tr>
<tr>
<td>BAFI 361</td>
<td>Empirical Analysis in Finance</td>
</tr>
</tbody>
</table>

Elective Courses (complete three of the following six): 9

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>BAFI 335</td>
<td>Introduction to Fintech</td>
</tr>
<tr>
<td>BAFI 341</td>
<td>Money and Banking</td>
</tr>
<tr>
<td>BAFI 358</td>
<td>Intermediate Corporate Finance</td>
</tr>
<tr>
<td>BAFI 359</td>
<td>Cases in Finance</td>
</tr>
<tr>
<td>BAFI 362</td>
<td>Advanced Financial Analytics</td>
</tr>
<tr>
<td>BAFI 365</td>
<td>Options and Other Derivatives</td>
</tr>
</tbody>
</table>

Total Units 18

**Marketing Major Requirements**

Required Courses: 3

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>MKMR 304</td>
<td>Brand Management</td>
</tr>
<tr>
<td>MKMR 308</td>
<td>Measuring Marketing Performance</td>
</tr>
<tr>
<td>MKMR 310</td>
<td>Marketing Analytics</td>
</tr>
<tr>
<td>MKMR 311</td>
<td>Customer Relationship Management</td>
</tr>
<tr>
<td>MKMR 312</td>
<td>Selling and Sales Management</td>
</tr>
<tr>
<td>MKMR 348</td>
<td>Strategic Internet Marketing</td>
</tr>
</tbody>
</table>

Total Units 18

**Dean’s Approved Major Requirements**

A student may consult with an advisor to develop a proposal for individualized study in an area of interest, subject to approval by the Weatherhead Undergraduate Executive Committee.
1) Complete five courses around a common interest, selected in conjunction with a major advisor.  

2) Complete one of the following analytics courses:  

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>BAFI 361</td>
<td>Empirical Analysis in Finance</td>
</tr>
<tr>
<td>ECON 326</td>
<td>Econometrics</td>
</tr>
<tr>
<td>MKMR 310</td>
<td>Marketing Analytics</td>
</tr>
</tbody>
</table>

Total Units: 18-19

Total Credit Hours for Degree: 122

‡ Students must complete one university-approved SAGES Senior Capstone. It is not required that students complete a Weatherhead-specific capstone. However, the vast majority of students take MGMT 398 Action Learning. Highly motivated students with a keen interest in a particular business topic may complete an individual research project via MGMT 397, subject to approval by the Weatherhead Undergraduate Executive Committee.

* Students must complete three one-credit-hour MGMT 395 offerings each of a different topic.

Students pursuing a BS in Management are advised to take MGMT 201 Contemporary Business and Communication as early as possible and the ORBH 250 Leading People (LEAD I) and ORBH 251 Leading Organizations (LEAD II) sequence in the second year.

For more information, contact Jim Hurley (james.hurley@case.edu), assistant dean of undergraduate and integrated study programs at 216.368.3856.

</tbody>
</table>
Three electives from the following:  
- BAFI 335 Introduction to Fintech  
- BAFI 341 Money and Banking  
- BAFI 356 Investments  
- BAFI 357 Financial Modeling, Analysis and Decision Making  
- BAFI 358 Intermediate Corporate Finance  
- BAFI 359 Cases in Finance  
- BAFI 361 Empirical Analysis in Finance  
- BAFI 362 Advanced Financial Analytics  
- BAFI 365 Options and Other Derivatives  

Total Units 15

**Minor in Business Management**

Note: Business Management minor is not open to WSOM majors (except Economics majors).

**Required:**
- ACCT 100 Foundations of Accounting I 3  
- ECON 102 Principles of Microeconomics 3  
  or ECON 103 Principles of Macroeconomics 3

Three electives from the following:  
- BAFI 355 Corporate Finance  
  or BAFI 341 Money and Banking  
- BLAW 331 Legal Environment of Management  
- ENTP 301 Entrepreneurial Strategy  
  or ENTP 302 Creativity in Design & Business: Sources of Perception, Imagination, & Creative Thinking  
  or ENTP 308 Business Model Design and Innovation  
  or ENTP 310 Entrepreneurial Finance  
  or ENTP 311 Entrepreneurship and Wealth Creation  
  or ECON 369 Economics of Technological Innovation and Entrepreneurship  
- MGMT 201 Contemporary Business and Communication  
- ORBH 250 Leading People (LEAD I) 3  
  or ORBH 396 Professional Development for Engineers 3  

Total Units 15

**Minor in Economics**

- ECON 102 Principles of Microeconomics 3  
- ECON 103 Principles of Macroeconomics 3  
- Three additional ECON courses 9

Total Units 15

**Minor in Entrepreneurial Studies**

- ACCT 100 Foundations of Accounting I 3  
- MKMR 201 Marketing Management 3  
- ENTP 301 Entrepreneurial Strategy 3  
- ENTP 310 Entrepreneurial Finance 3  
- ENTP 311 Entrepreneurship and Wealth Creation 3

Total Units 15

**Minor in Leadership**

**Required:**
- ORBH 250 Leading People (LEAD I) 3  
  or ORBH 396 Professional Development for Engineers 3  
- ORBH 251 Leading Organizations (LEAD II) 3

Three electives from the following:  
- ORBH 303 Leading Teams through Interpersonal Relationships 3  
- ORBH 370 Navigating Gender in Organizations 3  
- ORBH 380 Managing Negotiations 3  
- ORBH 391 Leadership in Diversity and Inclusion: Towards a Globally Inclusive Workplace 3

Total Units 15

**Minor in Marketing**

**Required:**
- MKMR 201 Marketing Management 3  
- ORBH 250 Leading People (LEAD I) 3  
- ORBH 396 Professional Development for Engineers 3  

Four of the following (including at least three MKMR courses):  
- MKMR 304 Brand Management 3  
- MKMR 308 Measuring Marketing Performance 3  
- MKMR 310 Marketing Analytics 3  
- MKMR 311 Customer Relationship Management 3  
- MKMR 312 Selling and Sales Management 3  
- MKMR 348 Strategic Internet Marketing 3  
- ANTH 102 Being Human: An Introduction to Social and Cultural Anthropology 3  
- ECON 328 Designing Experiments for Social Science, Policy, and Management 3  
- ENTP 301 Entrepreneurial Strategy 3  
- PSCL 315 Social Psychology 3

Total Units 15

For more information, contact:
Weatherhead's Integrated Study Programs allow undergraduate students the unique opportunity to pursue a bachelor's degree and a master's degree at the same time, completing both degrees in as little as four years. These programs are open to all Case Western undergraduates, regardless of major, but certain prerequisite courses may be required in order to complete the master's degree. Each program has its own set of admission criteria, course timelines and considerations, so it is best to speak with a program representative as early as possible.

BA/BS and Master of Accountancy Integrated Study Program

Program Contacts:

Tiffany Schwendeman (tiffany.schwendeman@case.edu), assistant dean of undergraduate and integrated study programs, 216.368.2058

Ashley Lu (ashley.lu@case.edu), program manager, MAcc program, 216.368.5376

BA/BS and Master of Business Analytics and Intelligence Integrated Study Program

Program Contacts:

Jim Hurley (james.hurley@case.edu), assistant dean of undergraduate and integrated study programs, 216.368.3856

Marybeth Keeler (mxk761@case.edu), program manager, Master of Finance program, 216.368.3688

Meredith Richardson (meredith.richardson@case.edu), admissions manager, 216.368.7586

BA/BS and Master of Finance Integrated Study Program

Program Contacts:

Jim Hurley (james.hurley@case.edu), assistant dean of undergraduate and integrated study programs, 216.368.3856

Marybeth Keeler (mxk761@case.edu), program manager, Master of Finance program, 216.368.3688

Meredith Richardson (meredith.richardson@case.edu), admissions manager, 216.368.7586

BA/BS and Master of Healthcare Management Integrated Study Program

Program Contacts:

Jim Hurley (james.hurley@case.edu), assistant dean of undergraduate and integrated study programs, 216.368.3856

Karla Schiebel (karla.schiebel@case.edu), director of admission, senior recruiter Master of Healthcare Management & international initiatives, 216.368.3914

BA/BS and Master of Supply Chain Management Integrated Study Program

Program Contacts:

Jim Hurley (james.hurley@case.edu), assistant dean of undergraduate and integrated study programs, 216.368.3856

Meredith Richardson (meredith.richardson@case.edu), admissions manager, 216.368.7586

Master of Business Administration (MBA)

Full-Time MBA

The full-time MBA program is a four-semester, 60-credit-hour program that provides students with the strong foundation necessary to be a leader in management while allowing opportunities for students to pursue their passions and customize their experience. In partnership with faculty and staff, students create a personalized learning plan with distinct concentrations by choosing electives that comprise half of the program thereby enabling specialization within their MBA.

Distinctive courses in Weatherhead’s MBA program help students assess their strengths and develop a learning plan to meet their career goals. Upon enrolling in the MBA, students take Leading People and Organizations, which facilitates the discovery of individual strengths and weaknesses through a series of self-assessments, experiential activities and case studies focused on teamwork. Students then develop core management skills (accounting, finance, marketing, operations/supply chain management, strategy, economics, statistics and analytics) in the first year of the program. In the second year of the MBA program, students choose electives based on their choice of concentration(s) and complete the required core strategy class.

The Weatherhead School of Management offers two tracks in the MBA program.

STEM MBA track - offers three concentrations:

- Business Analytics
- Financial Analytics
- Operations Analytics
Standard MBA track - offers eight concentrations:

- Business Analytics
- Entrepreneurship & Design & Innovation
- Finance
- Healthcare Management
- Leading Design and Transformational Innovation (beginning fall 2022)
- Marketing
- Operations
- Organizational Leadership

Independent Study

MBA students are limited to three credit hours of elective credit as independent study with the approval of the full-time MBA faculty program director.

Other courses at the university may be eligible for MBA elective credit, subject to approval from senior associate dean of academics and graduate programs Gregory Jonas (gregory.jonas@case.edu).

**Curriculum**

All of the core courses in the following tables are required.

**Electives**

The program provides space for 30 elective credit hours. Students must choose a concentration and complete 12 credit hours in that concentration area (a concentration is required). Students must complete eight STEM-approved electives to complete the requirements of the STEM MBA track.

For additional information about this program, contact Radhika Ramamurthi (rxe73@case.edu), associate director of MBA programs, 216.368.2144, or Stephen Scheidt (sxs1507@case.edu), director of admissions, 216.368.6208.

**Part-Time MBA**

The part-time MBA is a 48-credit-hour, cohort-based program that combines a core of fundamental business classes with elective options to create an integrated experience focused on honing general management skills. Students develop a personalized learning plan through the MBAP 401 (LEAD) course.

The first summer semester begins with the intensive offering of LEAD and an online introduction to statistics MBAP 400. The rest of the core offerings are covered within the first two years of the program. All core classes typically meet one evening a week and are offered in a hybrid format. Summer semesters include more intensive formats. The majority of the third year is devoted to electives. The part-time MBA program is designed to be a three-year program, but the 48 credit hours can be completed in as little as 2.5 years based on a customized curriculum plan. All degree requirements must be completed within six years.

Open Electives

Students in the part-time MBA program have the opportunity to choose five electives. Students determine their own focus areas and, with the help of our Career Management Office, learn how to best position themselves for post-MBA career advancement.

For additional information about this program, contact Radhika Ramamurthi (rxe73@case.edu), associate director of MBA programs, 216.368.2144, or Stephen Schiedt (sxs1507@case.edu), director of admissions, 216.368.6208.

Online Healthcare Management Track

A blend of MBA core and healthcare management core courses, the online part-time MBA curriculum is designed to create future leaders in the growing field of healthcare management. Cutting-edge, multidisciplinary coursework from Case Western Reserve University’s renowned business, medical, law and engineering schools is coupled with learning opportunities in collaboration with Cleveland Clinic, MetroHealth, Louis Stokes Cleveland VA Medical Center, and University Hospitals.

The program follows a trimester schedule with three full terms in Fall, Spring, and Summer. While the program is offered online, it still provides a high-touch experience for students. In addition to high quality synchronous and asynchronous content delivered by faculty, students have the opportunity to become fully immersed in the Weatherhead community through interactive and in-person experiences while also benefiting from the flexibility of online learning. Connect and collaborate with peers and faculty during real-time, face-to-face virtual classes. Receive guidance and support from your professors during online office hours. And complete 2 - 3 1/2 day in-person residencies at different types of hospital systems for hands-on, experiential learning of practical skills.

Executive MBA (EMBA)

The Executive MBA (EMBA) and the Cleveland Clinic-Weatherhead Executive MBA are tailored to those poised to move into a more prominent leadership role. Weatherhead’s renowned Organizational Behavior Department structured the EMBA around an exploration of the four levels of leadership, amplifying students’ ability to effect change...
at the personal, team, organization and societal levels. Classes are held during periodic residencies in the company of intimate cohort groups.

**Curriculum**

The 48-credit-hour program takes place over 16 brief residencies. The curriculum is delivered over five semesters or 21 months. Both fall and spring semesters are comprised of four three-day residencies (Thursday, Friday, Saturday), with additional track-specific site visits during one residency in the spring semester. The summer semester includes the 10-day international study tour as part of the international business course EMBA 475. Although individual study habits vary, students should anticipate spending 15-20 hours per week to study outside of classes.

The Weatherhead EMBA is a lock-step cohort program. Participants self-select learning teams that represent essential study partnerships over the course of the program as well as invaluable resources for networking and organizational support. Learning teams meet weekly outside of the classroom, either face-to-face or remotely, to achieve course objectives and enhance the learning experience. In addition, faculty often host optional study and review sessions, which are also recorded for virtual access.

**EMBA Nonprofit Certificate**

In addition to earning the Master of Business Administration degree, nonprofit professionals who complete the EMBA can earn the EMBA Nonprofit Certificate at the same time. The EMBA certificate program fosters mutually beneficial dialogue between professionals from nonprofit and for-profit backgrounds. As a participant in the EMBA Nonprofit Certificate program, you will build new and lasting partnerships with other nonprofit and for-profit organizations in Greater Cleveland.

**Cleveland Clinic-Weatherhead Executive MBA**

The Cleveland Clinic-Weatherhead Executive MBA at Case Western Reserve University combines Weatherhead’s breakthrough business concepts of leadership in management with Cleveland Clinic’s innovation in healthcare to make this EMBA the premier option for experienced professionals in the healthcare profession. Participants in the Cleveland Clinic-Weatherhead EMBA join students in the traditional EMBA track to provide cross-pollination of ideas from a multitude of industries and experiences. Several healthcare-specific curriculum differences are noted in the plan of study below.

degrees in the shortest amount of time, typically nine or 10 semesters. A select number of exceptionally well-qualified high school seniors who plan to study accounting are offered places in the Early Admission to the Integrated Study Program in Accountancy (https://bulletin.case.edu/weatherheadschoolofmanagement/undergradpgrams/#accountingtext) (p. 1113) and may obtain both degrees in eight semesters.

**Eligibility to Apply**

Applicants to the MAcc program must have earned, or are in the process of earning, a bachelor’s degree from an accredited institution. A bachelor’s degree in accounting is not required to apply to the MAcc. Students interested in the Analytics Track must have completed two semesters of college calculus (including exposure to multivariate functions) and have a basic understanding of linear algebra (high-level knowledge of vectors and matrices plus what’s involved in adding and multiplying them).

**Prerequisite Courses**

In addition to earning a bachelor’s degree, applicants must have earned a grade of C or better in the following courses or their equivalents. Students who have not completed these courses must fulfill these requirements at CWRU or at an approved substitute institution.

† This prerequisite may also be fulfilled by ACCT 101 Introduction to Financial Accounting.
‡ This prerequisite may also be fulfilled by ACCT 102 Management Accounting.
§ Students may take the graduate level U.S. Business Law course (BLAW 417 Legal Environment of Management) and double count it as an elective for the MAcc.

**Curriculum**

The MAcc program requires completion of 30 credit hours of graduate study, typically comprised of ten 3-credit hour courses. The program offers two tracks: (i) a Professional Track for students interested in careers in audit, tax or management accounting; and (ii) a STEM-designated Analytics Track for students interested in combining accounting with data analysis tools. Completion of either track will meet the accounting educational requirements to sit for the CPA exam in the state of Ohio.

ACCT 540  Corporate Governance and Contemporary Accounting Policy  3

Total Units  15

Track Courses: 
Students must complete one of the following two tracks;

1) Professional Track

ACCT 406  Advanced Accounting Information Systems  3
ACCT 407  Analytics and Control  3
ACCT 414  Corporate Reporting and Analysis  3
ACCT 431  Tax Practice: Analysis, Planning and Communications  3

Supporting Elective  3

Total Units  15

2) Analytics Track

BTEC 420  Introduction to Programming for Business Applications  3
BUAI 433  Foundations of Probability and Statistics  3
BUAI 434  Data Mining & Visualization  3
BUAI 444  Predictive Modeling  3

Supporting Elective  3

Total Units  15

* All students must select a 3-credit hour graduate-level elective course that compliments an accountancy career. Students completing the Analytics Track must choose an elective with a STEM-related focus. A list of approved graduate supporting electives will be provided each semester.

For more information about the MAcc, contact Tiffany Schwendeman (tiffany.schwendeman@case.edu), assistant dean, undergraduate and integrated study programs, at 216.368.2058; or Ashley Lu (ashley.lu@case.edu), program manager, MAcc, at 216.368.5376.

Master of Business Analytics and Intelligence

The Master of Business Analytics and Intelligence has replaced the Master of Science in Management - Business Analytics.

The Master of Business Analytics and Intelligence degree is a 16-month, 36-credit-hour, full-time program for students interested in learning advanced data analytics skills for application in general business areas, focusing specifically on both marketing and operations. The program prepares students to analyze big data for smart insights for executive decision making. The program includes three interlocking modules:

- Business core (10.5 credit hours),
- Analytics core (13.5 credit hours)
- Applied Business analytics (12 credit hours)

The Business Core provides students with a holistic understanding of the underlying business context necessary for succeeding in any industry. The Analytics Core equips students with general data handling, data presentation and analysis skills. The courses in Applied Business Analytics build from these general skills to improve the students’ ability to make decisions in the two focus application areas: marketing and operations.

The overlapping areas emphasize our program’s goals:

- Learning the language of business
- Building analytical skills
- Applying appropriate analytical tools to today’s business data

The program is delivered through a range of open source and commercial statistical software (e.g., R, Python, SPSS, SAS), preparing students with the necessary user expertise to excel in analyst positions across industries.

Prerequisites

Students are required to have taken two calculus courses at the college level and one course in linear algebra. Students who do not satisfy linear algebra prerequisites will be required to take a one credit preparatory course. A course in statistics is strongly preferred.

For more information about this program, visit the website (https://weatherhead.case.edu/degrees/masters/ms-management/business-analytics/) or contact Meredith Richardson (meredith.richardson@case.edu), admissions manager, at 216.368.7586.

Master of Engineering and Management (MEM)

The Master of Engineering and Management (MEM) degree is offered through an innovative collaboration between the Case School of
Engineering and the Weatherhead School of Management. The one-year, 12-course program of study builds on the technical and analytical skills gained through an undergraduate engineering degree and provides a real-world framework for applying them along with master’s level business management tools. Individualized coaching emphasizes self-assessment and emotional intelligence. Interdisciplinary team projects enhance the people skills needed as a business leader today. The MEM program positions students to become more productive faster and, in the process, accelerate their careers.

Additional information regarding the MEM program (p. 13) is available in the Case School of Engineering section of the Bulletin.

**Master of Finance**

*The Master of Finance has replaced the Master of Science in Management - Finance.*

The Master of Finance degree is a rigorous program designed to equip students to meet the needs of financial sector companies in today’s intense and competitive business climate. Upon completion of the program, students will be prepared to make immediate contributions to careers in corporate finance, investment banking, equity research, investment management, risk management and corporate consulting, or to pursue higher studies.

The program’s 30 credit hours can be completed in as little as two semesters, or students can stay longer to work toward an additional nine-credit-hour departmental certification in a specialization track—corporate financial analytics, corporate finance, risk management analytics or financial big data analytics.

**Curriculum**

The 30-credit-hour Master of Finance program is a two-semester, full-time curriculum.

The curriculum is comprised of the following components:

**Core Courses**

The core courses provide students with the tools and techniques that build a strong foundation in finance.

Before the first semester begins, all entering Master of Finance students must take FNCE 401, Financial Orientation, which is the mandatory preparatory/refresher course.

<table>

Other appropriate electives as approved by the program faculty director.

Departmental certification is available upon successful completion of 39 credit hours in a specific track.

For more information visit the website (https://weatherhead.case.edu/degrees/masters/ms-management/finance/) or contact Marybeth Keeler.
Management - Healthcare.

The Master of Healthcare Management has replaced the Master of Science in Healthcare Management. Richardson

The Master of Science in FinTech will begin admitting new students for fall 2022. For more information about this program, contact Meredith Richardson (mer118@case.edu), admissions manager, at 216.368.7586.

### Master of Finance in China

The Weatherhead School of Management at Case Western Reserve University and the School of Economics and Management at Tongji University (SEM-Tongji) have partnered to offer the Master of Finance in China program. This is the first master's degree in finance offered by a world-class U.S. university in mainland China. This innovative program, taught in Shanghai and Cleveland, provides students with both broad general management skills and depth of knowledge in finance. Graduates come away with a global way of thinking and the latest insights on the financial markets and instruments. In 2019, MBACHina ranked this program 2nd among more than 200 finance-focused MBA programs in China.

Students enrolled in this program take 30 credit hours of Weatherhead Master of Finance courses through two semesters of part-time study on the Tongji University campus in Shanghai, plus a one-month-long residency in the U.S., which includes classes on the Case Western Reserve University campus in Cleveland, Ohio, as well as a residency in New York City to interact with financial institutions on Wall Street.

Upon graduation from the program, students will obtain the Master of Finance degree from Weatherhead.

### Program Features

- Obtain the first Master of Finance degree offered from a highly ranked U.S. university in mainland China
- Gain cutting-edge knowledge and skills in global finance
- Take advantage of the opportunity to prepare for CFA, FRM and other certifications
- Specialize in corporate finance, risk management and capital markets
- Network with financial sector players in the U.S.; intern in Shanghai's Lujiazui/Pudong international finance and trade area

To learn more, please review our admissions (https://weatherhead.case.edu/degrees/masters/m-finance/china/admission/) information.

### Master of Science in FinTech

The Master of Science in FinTech (MS-FinTech) is a 30-credit-hour, two-semester program that provides students with quantitative and analytical skills including programming and empirical capabilities that are in high demand. Graduates of the MS-FinTech program will have a solid understanding of finance as well as recent trends and products that are reshaping the finance industry, including blockchain, AI, big data analytics, and others.

Students can choose to stay an additional semester or two semesters, to earn a specialization in Analytics for FinTech by completing an additional 9 credit hours of approved courses.

The Master of Science in FinTech will begin admitting new students for fall 2022. For more information about this program, contact Meredith Richardson (mer118@case.edu), admissions manager, at 216.368.7586.

### Master of Healthcare Management

The Master of Healthcare Management program provides rising healthcare professionals with the skills necessary to become effective managers and future healthcare leaders. The Master of Healthcare Management program is a part-time program designed for working professionals that provides foundational training in the essential elements of business management through coursework tailored around the issues and challenges facing modern healthcare organizations.

### Outcomes

In completion of the Master of Healthcare Management program, students will:

- Gain a sophisticated understanding of the modern healthcare economy—its players, the incentives those players operate under and the role played by institutions and public policy in shaping those incentives
- Receive foundational training in essential elements of business management, including accounting, finance, strategy and operations
- Learn to speak and understand the language of business
- Gain exposure to a wide range of established healthcare professionals operating in diverse parts of the healthcare economy
- Acquire a network of regional and national contacts in the healthcare sector

### Curriculum

The Master of Healthcare Management is a 30-credit-hour program that is completed in six semesters with one summer semester completely dedicated to an independent project.

Master of Science in Positive Organization Development and Change (MPOD)

The Master of Science in Positive Organization Development and Change (MPOD) is the premier program created and offered by the world-renowned Organizational Behavior Department at the Weatherhead School of Management. The curriculum remains on the cutting edge of positive organization development, results-driven change management, leadership development, coaching, gender, diversity and multi-culturalism (inclusive leadership) and interpersonal and team-effectiveness.

The MPOD program emphasizes strength-based and positive approaches to managing change, designing sustainable organizations, formulating effective strategy, creating high engagement work cultures, leading through emotional intelligence and coaching for deep and lasting personal and professional development. The MPOD program is of value to organizations with aspiring managers who wish to:

- Maximize organizational gains by managing the diversity and complexity that characterize today’s organizations
- Use experiential learning to promote effective teams and decision making

The MPOD program is grounded in the basic belief that a person can be a powerful instrument for change, and that personal and professional development go hand in hand. The MPOD learning experience enables participants to become more effective leaders and coaches, and design and conduct positive organization change management interventions.

Curriculum

The MPOD program is conducted in modules spread out over four University semesters. The program design uses both onsite and online teaching to accommodate the busy schedules of leaders, managers and staff professionals, and enables students to attend school while continuing to work full time.

Master of Supply Chain Management

The Master of Supply Chain Management has replaced the Master of Science in Management - Operations Research and Supply Chain Management.

The Master of Supply Chain Management program is designed for individuals with quantitative training who seek to obtain a
position in supply chain management or a management position in manufacturing, healthcare, service or consulting firms that are part of sophisticated national or global supply chains. The Master of Supply Chain Management curriculum provides students with the fundamentals of business as well as depth and focus in the principles and concepts of supply chain management. This unique program produces highly knowledgeable professionals who are well prepared to make organizations more efficient and competitive.

The Master of Supply Chain Management program attracts individuals with a quantitative undergraduate degree who have an interest in gaining expertise in the field of supply chain management. Typical undergraduate majors include:

- Engineering
- Statistics
- Computer science
- Economics
- Mathematics
- Business

Work experience is beneficial but not required for admission; many students pursue the Master of Supply Chain Management program immediately following the completion of their undergraduate degree.

**Outcomes**

Upon completion of the Master of Supply Chain Management program, students will:

- Be equipped with analytical and supply chain skills to become an agent of positive change at their organization within the first few years of work
- Speak and understand the language of business
- Have a working knowledge of all functional areas of an organization and the ability to communicate effectively with colleagues in these areas
- Have a network of regional, national and international business contacts

**Curriculum**

The 30-credit-hour Master of Supply Chain Management program is a full-time program that starts in the fall semester each year and can be completed in two, three or four semesters. The curriculum comprises the following three components:

**Analytics Core (6 credit hours)**

The Analytics Core provides the mathematical, statistical and computational skills needed by supply chain analysts in research and development groups in manufacturing and services companies and consulting firms.

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>SCMG 411A</td>

</tbody>
</table>

For more information, contact Alireza Kabirian (axk821@case.edu), PhD, associate professor of operations at 216.368.2506; or Meredith Richardson (mer118@case.edu), admissions manager, at 216.368.7586.

**Doctoral Programs**

**Doctor of Business Administration (DBA)**

Business leadership is increasingly required to integrate multiple sources of knowledge, understand the perceptions of diverse parties and put human values into action. Executives are challenged to create social, intellectual and economic value for their organizations and for society at large based on rigorous and sound evidence. Recognizing these challenges, Weatherhead offers two doctoral degrees in management for working professionals: the DBA and the PhD in Management: Designing Sustainable Systems.

The DBA is based on the expectation that the practitioner-scholar will develop the ability to think intensely and critically about problems confronting an organization, a community, a nation and the world. Students are afforded the opportunities to conceptually model these "wicked" problems, challenge existing assumptions and test new ideas. This is accomplished in a cross-disciplinary fashion with relevant contributions to both management theory and practice.

The PhD in Management: Designing Sustainable Systems is focused on preparing interdisciplinary practitioner-scholars for successful research and academic careers. Students develop the ability to approach problems
of practice rigorously from multiple disciplinary angles and to produce sound evidence and theoretical frames to address those problems and communicate them to academic and practitioner audiences. The DBA program also includes preparations for successful teaching in academic settings.

Curricula and coursework in these programs provide a foundation for conducting rigorous research and practicing evidence-based management. Courses are interrelated theoretically and methodologically and prepare students to bring academic, theoretical and data-driven perspectives to bear on problems that they may encounter in their organizations or in public policy advocacy.

**DBA**

The DBA is a 60-credit-hour, three-year, lock-step program with an option to pursue the Designing Sustainable Systems track in the PhD in Management Program. DBA students’ research projects are evaluated by a faculty review committee over the course of the program at critical research milestones.

### Research Requirements and Deliverables

The DBA dissertation consists of the Qualitative Research Paper, Quantitative Research Paper and an Integrative Paper that organizes the research into a coherent thesis.

#### Research Proposal Paper

The first research requirement is a Qualitative Research Proposal that frames the student’s research problem and question. Additionally, the proposal specifies a design for the fieldwork portion of the qualitative research project. An inductive qualitative research proposal is developed that synthesizes a substantial body of scholarly literature (theoretical and empirical) in a fashion that creates a conceptual framework and model that provides insight into a significant problem of practice reflecting the lived experiences of a specific group of practitioners. The proposal outlines a broad research question to guide the qualitative research and specifies a design for the fieldwork to be carried out in the study. Students develop individual skills of conceptualizing (including modeling), creating ethnographic/phenomenological interview protocols, conducting semi-structured interviews and interpretively analyzing qualitative interview data.

#### Qualitative Research Paper

The Qualitative Research Paper presents findings and explanatory concepts from the student’s qualitative fieldwork project. It identifies and frames a potent “phenomenological practice gap” where current practitioner and academic knowledge guide effective practice. The research synthesizes significant scholarly literature into a coherent conceptual framework and an understandable model of relationships among theoretical constructs. Students learn to frame effective questions for practitioner-scholarship research that embodies inquiry and openness, to align the conceptual framework and research question to the chosen problem of practice and to write scholarly papers that are clear and that present a logical flow of well-supported arguments. By understanding the development of grounded theory and understanding ethnographic observation and field notes, students formally and rigorously analyze qualitative data in an interpretive fashion.

#### Capstone

The Capstone integrates the analytical approaches the student has learned in DBAP 643 Measuring Business Behaviors and Structures, DBAP 648 Causal Analysis of Business Problems I and DBAP 649 Causal Analysis of Business Problems II. The Capstone exercise is intended to allow students to demonstrate their independent competence in quantitative inquiry skills and, based on a satisfactory assessment, to progress toward the completion of the quantitative inquiry project, which is a requirement for both the DBA and the PhD in Management: Designing Sustainable Systems.

#### Quantitative Research Paper

At the end of the Fall semester of the third year, students complete a Quantitative Research Paper. The objective of the quantitative research
project is to generate a rigorous and valid quantitative empirical study that is guided by a hypothesized model of the student's phenomena of interest. The study must be framed by current theoretical and empirical work within the area of interest. A robust research design is utilized that follows the material covered in the quantitative research courses including collecting and validating data in a way that mitigates biases. The student completes a systematic and rigorous quantitative analysis and interprets the analysis in a way that provides novel insight into the phenomena of interest. The quantitative research paper details the project and is written in a manner that meets high scholarly standards to merit publication in top-rated journals and outlets.

**Integrative Paper**

As a final requirement for the DBA dissertation, each student writes an overview statement introducing his or her Qualitative and Quantitative Research Papers, making substantive observations and conclusions about each project, and presenting a personal reflective statement about each project's significance to the author. The Research Proposal frames the dissertation overview in a preliminary way, but in light of the student's experience in conducting qualitative and quantitative studies, the synthesis is rewritten, revised and critically evaluated to become the Integrative Paper. The approved Integrative Paper, Qualitative Research Paper and Quantitative Research Paper serve as the dissertation requirement of the DBA program.

**PhD in Management: Designing Sustainable Systems**

Please refer to the PhD in Management (p. 1132) section of the Bulletin for more information on the PhD in Management: Designing Sustainable Systems.

**PhD in Management**

A PhD in management offers students the opportunity to develop theory-driven scholarship that is grounded in practice and explores various dimensions of value creation and to prepare for a career as a faculty member.

Candidates may specialize in one of three areas:

- Accountancy
- Designing Sustainable Systems
- Design & Innovation

**Accountancy**

The PhD in accountancy is structured and a student study plan is developed to support high-quality research and effective teaching based upon knowledge and skill levels appropriate to a student's goals. Doctoral students work with faculty whose research investigates matters of importance to academics, practitioners and policy makers, in order to influence practice and standard setting in both the private and public sectors.

**Curriculum**

The first two academic years are directed toward the study of the literature, methods and recent research appropriate to a student's identified interests. Most summer periods are available for individual reading, development and writing along project lines to be determined by the student's chair and program committee. This two-year period is expected to provide the foundation for preparing well-developed research papers that exhibit knowledge and skill levels appropriate to an individual’s goals as he or she approaches candidacy.

The third year is devoted to writing-focused individual papers leading to a dissertation proposal under the supervision of a study program committee. Based upon one of these high-quality research papers, a suitable dissertation proposal will be prepared by the end of the third year of study. This research and writing activity will not only help to determine the student's dissertation topic but will also be considered equivalent to field examinations. The series of papers leading up to the dissertation proposal, the proposal itself and an oral presentation to the student's study program committee will be taken into account as the committee determines whether to grant doctoral candidate status to the student.

The fourth year is focused upon completion of the dissertation. The student will also prepare documents necessary and helpful for the acquisition of a full-time academic appointment. Most students will also be engaged in the revision of submissions of academic work to journals in the accounting discipline. Throughout the program, the student will develop competencies related to classroom and teaching activities as well.

For more information, visit our website (http://weatherhead.case.edu/degrees/phd-management/accountancy/) or contact Lila Robinson (lila.robinson@case.edu), department administrator, at 216.368.2055.

**Designing Sustainable Systems**

Weatherhead’s Designing Sustainable Systems track in the PhD in Management (https://weatherhead.case.edu/degrees/phd-management/designing-sustainable-systems/) program offers an extension to the DBA. This program is for DBA students who wish to reorient their careers to formally pursue positions as academic researchers and scholars. DBA students can apply for this degree program during their second year in the DBA program.

**Research Requirements and Deliverables**

Although transdisciplinary research is the main focus of the 78-credit-hour PhD in Management: Designing Sustainable Systems track, candidates must be grounded in a disciplinary field. Therefore, throughout their course of study, candidates will read seminal works and acquire knowledge that leads to grounding in their chosen discipline(s) (for example, marketing, strategy, accounting, information systems, organizational behavior, finance or economics). Students are required to take a comprehensive exam demonstrating knowledge of the field’s theories, research methods and results. Upon passing the comprehensive exam, students are advanced to candidacy for the PhD. Candidates defend their PhD thesis proposal and the final thesis during their course of study.

Doctoral candidates in the PhD in Management: Designing Sustainable Systems track undertake dissertation research during their fourth year of study to extend their contributions to managerial knowledge. Informed by courses in design practices, sustainable value and complex systems thinking, candidates incorporate human values and appropriate mixed methods of analysis into their research. An original and significant endeavor, the dissertation includes a detailed review of the chosen topic, relevant research questions, methods of inquiry used and findings obtained, as well as the implications of these findings.

For more information, contact Sue Nartker (sue.nartker@case.edu), managing director of the DBA program, at 216.368.1943; or Marilyn Chorman (marilyn.chorman@case.edu), associate director of the program, at 216.368.3638.
Design & Innovation

The PhD in Management Design & Innovation brings together the disciplines of information systems and marketing to prepare scholars for path-creating research on consequential issues faced by organizations and managers.

This world-class management doctoral degree program in the Department of Design & Innovation seeks to develop scholars who:

- Challenge conventional wisdom
- Think critically and creatively
- Are skilled in rigorous research methods that transcend the qualitative/quantitative divide
- Desire a career addressing significant organizational problems

We value thought and action that better the lives of people, contributes to a just society and maintains a sustainable environment. Our objective is to be recognized globally as a distinctive force in management research that is founded on interdisciplinary, outward-looking faculty collaboration and that addresses deep problems confronting today’s organizations.

Program Features

Weatherhead’s PhD in Management with a concentration in Design & Innovation is focused on interdisciplinary research and trains academic scholars for faculty positions in information systems, strategy, management and marketing at leading business schools.

PhD students will generally engage with problems grounded in practice, building on traditions in the disciplines of information systems, strategy and marketing. The PhD program encourages a hands-on education, broad exposure to technique, close association with industry and intensive workshops with senior faculty.

Certificate of Achievement in research skills for Quantitative Methodologies (AQM)

Graduate students at Case Western Reserve University can specialize in advanced analytics for applied research and study by earning this certificate of Achievement in research skills for Quantitative Methodologies (AQM). Learn more about the AQM certification requirements and eligibility.

Curriculum

The organizing principles for the program are to:

- Provide rigorous interdisciplinary training in theory and methods through core courses
- Challenge students to develop research articles in each year of study that draw from their interdisciplinary training

The PhD in Management program consists of coursework in three areas and a dissertation. Coursework in the following areas is required: general management research and methods, specialization research and a minor area of study.

At the end of first and second year of study, each student will be expected to complete and present a publishable paper that draws from one of more of their courses of study and demonstrates their progress in the program.

Following the completion of all required coursework, students take a comprehensive qualifying examination, generally during the second summer semester or early in the fall semester of the third year. Upon successful completion of the comprehensive qualifying examination, the student is admitted to candidacy and formally begins the dissertation phase of the program.

Students will be expected to complete a teaching requirement as part of their PhD studies. This requirement includes engaging in teaching responsibilities for at least two full semesters (not including summer) as an instructor of an assigned course and/or assistant assigned to faculty teaching a course. Teaching responsibilities are governed by department priorities as determined by the chair.

Information Systems Specialization

A management discipline engaged in design- and information-based inquiry, information systems (IS) is influenced by a broad set of concepts from the humanities, social sciences and engineering. The IS faculty is a center of excellence for learning about the ways in which information is generated and used in organizations. We believe that a broad, theoretical study of information that includes human, social and technical aspects will best enable people in organizations to achieve their operational and strategic missions.

The program seeks intellectually curious students who possess a solid background in information systems or computer science; industrial, service, or interaction design; or related academic areas. The program prepares students for a career in research and teaching, primarily in academic institutions. We seek to attract rigorous lateral thinkers who want to shape their environments and build a strong scholarly track record in design principles for innovation.

Marketing Specialization

As a discipline, marketing lies at the core of the purpose of management—to create and deliver value to customers, shareholders and society at large. As a profession, marketing serves an organization’s vital interests—to manage capabilities for value creation and delivery at organization–customer and organization–society interfaces. Technology, information and globalization are rapidly changing how organizations interact with customers to create and deliver value.

The marketing faculty is a center of excellence for the study and management of valued customer relationships. We view brands, offerings, interactions and interfaces as design elements and our crucibles for innovation. We recognize that fascinating opportunities for
design and innovation lie in dynamic markets that are increasingly rich in information, social in networks, and flat in connectivity.

Qualified students will have a demonstrable record of intellectual curiosity, academic excellence and industry experience with a marketing orientation. We value diversity and encourage students with academic work in basic and social sciences including engineering, health and law to apply, in addition to those with business backgrounds. A master's degree with at least two years of industry experience is a must.

For more information about the PhD in Management Design & Innovation, visit our website (https://weatherhead.case.edu/degrees/doctorate/phd-management/design-and-innovation/) or contact Gail Stringer (gcs23@case.edu), department administrator, at 216.368.5326.

**PhD in Organizational Behavior**

Weatherhead’s PhD in organizational behavior was the first of its kind. Graduating our first PhD students in 1964, our department set the standard for universities worldwide. United by a passion for generating new knowledge of enduring consequence through scholarly research, inquiry and writing as well as deeply reflective practice, doctoral students study in a department consistently ranked among the best in the world.

Recipients of our PhD in organizational behavior have taken positions in leading universities and research institutions such as the London School of Business, Columbia University, Stanford University and the Naval Post-Graduate School.

Organizational behavior is a vital and growing field of knowledge that is concerned with human and developmental processes across levels of analysis from individuals and groups through organizations, inter-organizational systems and societies. The academic roots of the field span the disciplines of individual and social psychology, sociology, anthropology, political science and social philosophy. Organizational behavior situates the knowledge and tools of those disciplines in the context of the human dimensions of organizational life.

We approach the study of organizational behavior from the perspective of human possibility, with a special concern for the dynamics and processes of development and for creating new knowledge of individual, group and organizational processes of learning, development and transformation.

**Goals of the Program**

Our educational goals are to prepare PhD students to:

- Obtain a doctoral-level foundation in academic areas pertinent to organizational behavior, from the micro to the macro. This interdisciplinary course of study covers key social science domains such as psychology, sociology, learning theory, organization theory, living systems theory, management science and the organizational dimensions of global sustainability and change.
- Master and triangulate rigorous qualitative, quantitative and action-research methodologies in the quest for deep and comprehensive understanding.
- Develop a high level of professional creativity and interpersonal competence, as well as a foundation of professional values and ethics enabling the pursuit of research and teaching in the field, including the facilitation and design of contexts for human development and self-reflective learning, organization development and larger-system transformative change.

Our mission is to provide students with the knowledge, skills and values needed to: conduct the highest quality research and teaching in the field and sub-fields of organizational behavior and become leading scholars in careers as researchers and educators at the top levels of their specializations and in high-impact areas of society.

Our vision is clear: to be a world-class center of doctoral education, known for our bold ideas, our powerful learning community and our commitment to value-driven knowledge for the betterment of organizations and the greater good. All of this is in clear and strong alignment with the aim of the Weatherhead School of Management at Case Western Reserve University "to develop transformational ideas and outstanding leaders for the betterment of business and society," and through this environment to have a transformational impact on all who teach, learn, discover and work here, so they are prepared and engaged to advance knowledge and serve humanity.

The philosophy of the Organizational Behavior Department (http://weatherhead.case.edu/departments/organizational-behavior/) is rooted in human values. These values guide our behavior as we strive to enhance research, learning and academic excellence amidst the demands and complexities of everyday life. They also reflect the spirit of connectedness among us that gives life to the doctoral learning community as a whole. The following guiding ideas represent our aspirations and our community at our best:

- Knowledge of consequence
- Methodological rigor and variety
- A community of inquiry
- A deep value for diversity and inclusion
- Whole person development
- The life of the mind
- Academic innovation and excellence

**Curriculum**

Our doctoral program is structured to resonate with our department’s mission of developing world-class researchers and educators interested in doing high-quality academic work of enduring consequence. Hence our program and course requirements encourage continual development of reading, writing, research methods, statistical skills and relational skills to help students effectively study and communicate their ideas. Coursework is completed in the first two years of the program, as follows:

By the end of the spring semester of the first year, each doctoral student
Integrative Scholarship Paper
Other program requirements include the following:
Research Requirements and Deliverables

Research Seminar

Research Seminar is a department-wide platform for developing
Research Seminar is required for both the first- and second-year cohort
and presentation of Integrative Scholarship Papers, Qualifying Papers,
research. After completion of both degree programs, two separate
diplomas are awarded. Coursework for both programs is usually completed within five years, and it must
be completed within six years of the date of initial enrollment in either
program.

Qualifying Paper
During the summer of their second year in the doctoral program, students
complete a Qualifying Paper. Generally, this is an initial empirical
investigation or meta-analysis of the topic of choice. The student is
expected to form a committee, headed by a faculty advisor of the
student's own choosing and two other departmental faculty members
who guide the research. Often understood as a mini-thesis or pilot study,
the student is expected to produce an in-depth analysis of the research
question explored through a relevant method of inquiry. Students are
expected to submit their qualifying paper for consideration for conference
presentation and journal publication during their third and subsequent
years of the doctoral program.

Dissertation
Doctoral students undertake dissertation research after completion of
their qualifying paper. Each student forms a committee, consisting of
three departmental faculty members (one of whom will be the
committee chair) and one faculty member from outside the department
but within the university, to guide the research conducted. An original and
significant endeavor, the dissertation includes a detailed review of the
chosen topic, relevant research questions, research methods, findings
obtained and an analysis of their implications.

Though all three deliverables (the ISP, Qualifying Paper and Dissertation)
may optimally flow within a single stream of inquiry, the student is free to
choose a different topic of interest for each.

For more information, contact Lila Robinson (lila.robinson@case.edu),
department administrator, at 216.368.2055.

Dual-Degree Programs

MBA/Doctor of Medicine (MD) Dual-Degree Program
The School of Medicine and Weatherhead collaborate to offer the
MBA/MD dual-degree program. The MBA/MD provides physicians with
the management knowledge and skills necessary to deal with rapid
changes in the healthcare industry and economy. After completion of
both degree programs, two separate diplomas are awarded. Coursework
for both programs is usually completed within five years, and it must
be completed within six years of the date of initial enrollment in either
program.

To learn more, contact Weatherhead at 216.368.2030 or
wsomadmissions@case.edu, or the School of Medicine at 216.368.3450
or casemed-admissions@case.edu.

MBA/Juris Doctor (JD) Dual-Degree Program
Weatherhead has a formal full-time dual-degree program with the School
of Law. Students enrolled in the program who fulfill the requirements
set for graduation by both schools will receive both an MBA and a JD
degree. The MBA/JD dual-degree program is designed for individuals who
want to specialize in the legal, contractual and governmental aspects of
management. After completion of both degree programs, two separate
examination of how the topic is approached by different disciplines or
schools of thought, theoretical propositions and suggestions for future
research. The ISP is reviewed by the faculty advisor and a faculty reader,
and upon approval is included in the department's working paper series.
Beyond the first year, students are expected to work with their faculty
adviser and others to submit their ISPs for consideration for conference
presentation and journal publication during their second and subsequent
years of the doctoral program.

Qualifying Paper
During the summer of their second year in the doctoral program, students
complete a Qualifying Paper. Generally, this is an initial empirical
investigation or meta-analysis of the topic of choice. The student is
expected to form a committee, headed by a faculty advisor of the
student's own choosing and two other departmental faculty members
who guide the research. Often understood as a mini-thesis or pilot study,
the student is expected to produce an in-depth analysis of the research
question explored through a relevant method of inquiry. Students are
expected to submit their qualifying paper for consideration for conference
presentation and journal publication during their third and subsequent
years of the doctoral program.

Dissertation
Doctoral students undertake dissertation research after completion of
their qualifying paper. Each student forms a committee, consisting of
three departmental faculty members (one of whom will be the
committee chair) and one faculty member from outside the department
but within the university, to guide the research conducted. An original and
significant endeavor, the dissertation includes a detailed review of the
chosen topic, relevant research questions, research methods, findings
obtained and an analysis of their implications.

Though all three deliverables (the ISP, Qualifying Paper and Dissertation)
may optimally flow within a single stream of inquiry, the student is free to
choose a different topic of interest for each.

For more information, contact Lila Robinson (lila.robinson@case.edu),
department administrator, at 216.368.2055.

Dual-Degree Programs

MBA/Doctor of Medicine (MD) Dual-Degree Program
The School of Medicine and Weatherhead collaborate to offer the
MBA/MD dual-degree program. The MBA/MD provides physicians with
the management knowledge and skills necessary to deal with rapid
changes in the healthcare industry and economy. After completion of
both degree programs, two separate diplomas are awarded. Coursework
for both programs is usually completed within five years, and it must
be completed within six years of the date of initial enrollment in either
program.

wsomadmissions@case.edu, or the School of Medicine at 216.368.3450
or casemed-admissions@case.edu.

MBA/Juris Doctor (JD) Dual-Degree Program
Weatherhead has a formal full-time dual-degree program with the School
of Law. Students enrolled in the program who fulfill the requirements
set for graduation by both schools will receive both an MBA and a JD
degree. The MBA/JD dual-degree program is designed for individuals who
want to specialize in the legal, contractual and governmental aspects of
management. After completion of both degree programs, two separate
diplomas are awarded. Coursework for both programs must be completed within six years of the date of initial enrollment in either program.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or the School of Law at 216.368.3600 or lawadmissions@case.edu.

MBA/Master of Social Work (MSW) Dual-Degree Program
The MBA/MSW dual-degree program is offered in partnership with the Jack, Joseph, and Morton Mandel School of Applied Social Sciences (Mandel School) and Weatherhead. The MBA/MSW dual-degree program is designed for candidates who wish to prepare for advanced social work practice in a variety of direct practice and community practice settings/organizations while developing the skills to assume management responsibility within those settings. Candidates must apply separately to each program.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or Mandel School at 216.368.1655 or msass.case.edu/admissions (http://msass.case.edu/admissions/).

MBA/Master of Public Health (MPH) Dual-Degree Program
The MBA/MPH dual-degree program was developed by the School of Medicine, the School of Graduate Studies and Weatherhead to provide the skills and knowledge necessary for those who wish to attain the following goals:

• A career working with communities to improve the health of their members by identifying and assessing the health needs of the population and planning and implementing programs to meet those needs
• Management and leadership ability to ensure continued economic viability, human development and effective communication for the public health organization and community in which they practice

MBA/MPH candidates must complete separate applications, participate in the required admission tests and be admitted separately to each program.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or the School of Medicine at 216.368.0875 or daniel.tisch@case.edu.

MBA/Master of Finance Dual-Degree Program
Weatherhead offers a dual-degree program that is ideal for students interested in gaining the management skills to create sustainable value for business and society, along with specialized skills that prepare them to make immediate contributions in careers in corporation finance, investment banking, equity research, investment management, risk management and corporate consulting.

A student can submit one application to be admitted into the dual-degree program but will be considered for each program separately. A student currently in the first year of the Weatherhead full-time MBA program can also apply to be admitted into the dual-degree program. A motivated student may be able to complete both degrees in just five semesters (https://weatherhead.case.edu/degrees/masters/dual-degree/mba-m-finance/).

• Learn breakthrough business concepts from the people who invented them
• Realize cross-disciplinary collaboration making creativity as vital as quantitative analysis
• Receive direct exposure to top employers to learn about career opportunities

To learn more, contact Marybeth Keeler (mxk761@case.edu), program manager, at 216.368.3688.

MBA/Masters of Science in Medical Physiology (MS) Dual-Degree Program
The MBA/MS Medical Physiology dual-degree is offered by the School of Medicine and Weatherhead School of Management to provide the skills and knowledge necessary for those who wish to attain the following goals:

• Find career opportunities in healthcare consultation, hospital administration, hospital operations, pharmaceutical project management and more
• Enhance their chances of admission to medical school, osteopathic school, dental school, a PhD program or other related programs

MBA/MS Medical Physiology candidates must complete separate applications, participate in the required admission tests and be admitted separately to each program.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or the School of Medicine at mspadmissions@case.edu.

MBA/Master of Science in Biochemistry (MS) Dual-Degree Program
The MBA/MS in Biochemistry dual degree is offered by the School of Medicine and Weatherhead School of Management to provide the skills and knowledge necessary for those who wish to attain the following goals:

• Participate in the fields of medical research and management as well as give students an opportunity to develop expertise in areas of substantive interest
• Realize cross-disciplinary collaboration that prepares practitioners to adapt to the changing healthcare environment and create positive, sustainable change for their organizations
• Increase job opportunities that are at the intersection of translational science and business

MBA/MS in Biochemistry candidates must complete separate applications and be admitted separately to each program. Once students have been admitted, they will consult with the Department of Biochemistry Department Liaison and Associate Dean for Academic Affairs at the Weatherhead School of Management to determine their appropriate course of study.

To learn more, contact Weatherhead at 216.368.2030 or wsomadmissions@case.edu, or the School of Medicine at 216.368.3334 or the Department of Biochemistry (biochem_grad_programs@case.edu).

Master of Healthcare Management (MHC)/Master of Public Health (MPH) Dual-Degree Program
Weatherhead and the School of Medicine collaborate to offer the MHC/MPH dual-degree program. This program integrates into a single unified curriculum with graduate coursework from the healthcare management
To learn more, contact Weatherhead at 216.368.2030 or wsomadmisions@case.edu, or the School of Medicine at 216.368.0875 or daniel.tisch@case.edu.

**Weatherhead Center**

**Fowler Center for Business as an Agent of World Benefit**

The Fowler Center for Business as an Agent of World Benefit exists to create a world where business can prosper, human beings can flourish and nature can thrive.

The Fowler Center helps propel business success and flourishing enterprise through the belief that business is one of the most powerful and positive forces for advancing a better world. It’s a center that challenges, at every turn, what might be called “the great trade-off illusion”—the myth that doing good is at odds with doing well. We believe that increasingly, it’s exactly the opposite. Peter Drucker, one of our first advisors, said that he loved the phrase “business as an agent of world benefit” because of its opportunity focus. He was clear that every business exists to create value and advance a better society, just as every organ in the body is there to enable life and health. He declared something that completely transcended the great trade-off illusion:

“Every social and global issue of our day is a business opportunity in disguise... just waiting for the pragmatism of good business, its capacity for radical innovation and entrepreneurship and its management for results.”

We know from the best research available that today’s industry-leading stars are moving toward the strategy concept of sustainable or shared value—it’s an inseparable win-win mindset that says “doing good and doing well” is the most promising pathway to organizational success and significance, especially when coupled with the increasingly high expectations of stakeholders including millennials and Generation Z, the inherent interdependence of economy and nature, and the rapid rise of what’s being called the Purpose Economy.

The research, teaching and service mission of the Fowler Center is to be one of the world’s most powerful, science-based and inspiring organization development centers for the advancement of business success and what we call “full spectrum flourishing.” Our purpose is clear:

**A world where business can excel, human beings can flourish and nature can thrive.**

The Fowler Center’s primary focus is on for-profit organizations that use their core activities to create value for society and the environment in ways that create even more value for their customers and shareholders; its primary vehicle for effecting change is Positive Organizational Science and Appreciative Inquiry. We are drawing on expertise and tools such as design, sustainable value and Appreciative Inquiry to build and maintain prosperity and flourishing.

Companies embracing the notion of “full-spectrum flourishing” as part of their business strategy have seen huge benefits to their bottom line. These findings are reported in recent publications such as *Flourishing Enterprise* (Laszlo, Brown, et al., 2014), *Dreammakers: Innovating for the Greater Good* (Hunt, 2017), and *The Quest for a Flourishing Earth is the Most Significant OD Opportunity of the 21st Century* (Cooperrider, 2017), and *Quantum Leadership: New Consciousness in Business* (Laszlo, Tsao, 2019).

The Fowler Center advances extraordinary business innovation and social entrepreneurship by turning the social and global issues of our day into business opportunities, much as Peter F. Drucker envisioned. The Fowler Center practices, researches and supports initiatives based on whole-system design for advancing the ‘how-to’ of flourishing enterprise, and works with businesses, organizations, industries and economic regions to discover the power and promise of flourishing as an innovation engine for doing good and doing well.

**Portfolio of activities**

The Fowler Center conducts research, teaching, service and applied work to accelerate a better world, one where business can excel, all people can flourish and nature can thrive. Our strategic portfolio includes:

1. AIM2Flourish: The search for the greatest business and society innovations in the world. This search fuels everything the Fowler Center does.
2. Powerful Learning Environments for Students: Pathways for student leadership advancement
3. Custom Design Corporate Development: Applied Business as an Agent of World Benefit
4. Strategic Convening and Knowledge Alliances, like the Global Forum Series
5. Pioneering Scholarship

The research activities of the Fowler Center include teaching cases and PhD research as well as books, book chapters and journal articles on Appreciative Inquiry, sustainable value, design and flourishing enterprise. To carry out its agenda, the Fowler Center relies in part on its Fowler Center Doctor of Management Fellows, MBA Business as an Agent of World Benefit Fellows and other students of Case Western Reserve University.

The leadership of the Fowler Center is built on the vision and work of David Cooperrider, Ron Fry, Chris Laszlo and other faculty at the Weatherhead School of Management, working in close collaboration with the Fowler Center’s Advisory Board members and other leaders in the Case Western Reserve University community.

To learn more or to find out how you or your organization can get involved with the Fowler Center, visit our website (http://weatherhead.case.edu/centers/fowler/) or contact the Fowler Center at 216.368.2160.

**Policies**

**Registration and Academic Standards for Graduate Students**

**Change of Grading Basis**

With Dean’s Office approval, the grading basis can change from "Graded" to "Pass/No Pass" for elective courses. Students need to request the grading basis change prior to the last week of classes. No more than six hours of elective courses can have the grading basis change from "Graded" to "Pass/No Pass."
Class Attendance
Students are expected to attend all scheduled class meetings for the courses in which they are registered. Students should notify faculty when they are forced to miss a class because of extenuating circumstances. Faculty should report excessive absences to the program’s faculty director. Students who are not on the class roster for a course are not permitted to attend the course.

Course Loads
Weatherhead requires students to register for and complete courses as specified in their cohort program curriculum plan to continue in their program and maintain any scholarship granted. Failure to adhere to the program curriculum plan may result in separation from the program. Full time, three-quarter time, half time and less than half time enrollment information is provided by the University Registrar (https://case.edu/registrar/registration-classes/enrollment-status/).

Course Registration
A student may enroll during each registration period through the last day of late registration, as set by the official university calendar (https://www.case.edu/registrar/calendar/). Exceptions will be granted only upon the recommendation of the dean of Weatherhead. A fee of $25 is charged during the late registration period.

To register, students must have a clear balance unless they are participating in the Bridge Loan Program. Students eligible for the Bridge Loan Program need to submit a company tuition reimbursement letter, Bridge Loan application and fee each semester. Students register online using the Student Information System (SIS). Students who wish to apply for federal loans should visit the FAFSA website (http://www.fafsa.ed.gov/).

During any semester, a student may not register in more than one career in SIS, unless the student is in a dual-degree program.

If at any time a student fails to register in two consecutive semesters, excluding the summer session, the student must reapply for admission to Weatherhead, unless prior approval was granted by the Weatherhead registrar.

Degrees Conferred
Case Western Reserve University grants degrees to qualified candidates three times per year: in August, for students who complete their programs during the summer semester; in January, for students who complete their programs during the fall semester; and in May, for students who complete their programs during the spring semester.

There is only one diploma ceremony (https://case.edu/events/commencement/) each year, in May, and all candidates are invited to march at this ceremony, regardless of the month in which their degree was awarded. May degree candidates receive their diplomas the day of the ceremony. May degree candidates who do not participate in the ceremony can choose to have their diploma mailed to them or can collect it at the Weatherhead registrar’s office. January and August degree recipients can have diplomas mailed or held for pick up. Students may not receive diplomas prior to the date on which the degree is to be granted.

Extra Assignments
No student is permitted to do extra assignments beyond the work assigned to all students in a course in order to obtain a higher grade. This policy applies to changing an I (Incomplete) grade to a regular grade or to changing one regular grade to another. However, faculty may replace or substitute assignments for individual students in a course, based on extenuating circumstances.

Grade of Incomplete (I)
The grade I is assigned at the discretion of an instructor, provided that two criteria are met:

- There are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justify an extension of time beyond the requirements established for other students in the class. It is the student’s responsibility to notify the instructor of the circumstances that prevent completion of the course.
- The student has been passing the course and only a small segment of the course, such as a term paper, remains to be completed, for which the extenuating circumstances justify a special exception.

In order to receive credit for an I, the student must complete the work by the date specified by the instructor, and no later than the end of the next regular semester (fall or spring semester).

In the absence of notification or adequate justification, the I will automatically change to F or NP (depending on the grading basis for the course) on the stated deadline.

If the student wishes to petition to extend a grade of I beyond the stated deadline, the student must obtain approval from the faculty member who assigned the I, and from the program’s faculty director, before the deadline. A request must be made in writing, preferably via email, and convey (a) the extenuating circumstances justifying the extension and
(b) the expected date of completion of the work. If approved, the request should be initialed by the faculty member and delivered by the student to the faculty director for approval and then to the Weatherhead registrar. Failure to complete course requirements by the extended date will result in a grade of F or NP depending on the grading basis for the course.

Graduation Requirements
A cumulative GPA of 2.5 in all graduate courses taken for credit in the Master of Accountancy, Master of Business Administration, Master of Science in Positive Organization Development and Change, Master of Business Analytics and Intelligence, Master of Finance, Master of Healthcare Management, Master of Science in FinTech, and Master of Supply Chain Management degree programs is required for graduation. Candidates must submit an application for graduation in SIS no later than two months before the graduation date at which their degree is expected to be awarded. The candidate is responsible for filing the application. Students are advised to contact the Weatherhead Registrar’s Office (https://intranet.weatherhead.case.edu/registrar/contact/) if they have any questions regarding requirements for graduation.

Leave of Absence
If a student will not be taking classes for more than one semester, the student should request a one-year leave of absence. Approval for any leave of absence from a degree program must be requested in writing by the student. This request for approval should be submitted to the faculty director of the program and the Weatherhead registrar. Unapproved interruption in the program sequence constitutes separation from the program.

Retroactive leaves of absence are not permitted. Students who fail to return upon completion of a leave of absence need to re-apply to the degree program. Students must graduate within six years from the start of their first semester at Weatherhead. A leave of absence does not extend the maximum time permitted for the completion of degree requirements. A leave of absence cannot be taken if students are on an approved extension of the time limit to complete their degree.

Registration
Students generally register for classes and make changes to their schedule using SIS. Step by step information on registering for classes is available online (https://case.edu/registrar/sites/case.edu.registrar/files/2020-03/Student%20-%20Registering%20for%20Classes.pdf). For assistance with this process, students must contact the Weatherhead registrar (https://intranet.weatherhead.case.edu/registrar/contact/) before the last day of the drop/add period.

Repeat Policy
In general, Masters students can take a course for credit only one time. Master of Accountancy, Master of Business Administration, Master of Science in Positive Organization Development and Change, Master of Business Analytics and Intelligence, Master of Finance, Master of Healthcare Management, Master of Science in FinTech, and Master of Supply Chain Management students who earn a grade of F in a core course must repeat the course, or an equivalent course as approved by the faculty program director. Graduate students can repeat Curricular Practical Training or the equivalent, Independent Study/Special Problems and Topics and International Institute/study abroad electives. Full semester study abroad experiences at an international school are not repeatable. Doctor of Business Administration students who earned a grade of NP in a doctoral course are required to repeat the course and earn a P.

Residency
For the Doctor of Business Administration program:
In-person presence at each residency is critical for success in the Doctor of Business Administration program. Student participation at the residency sessions is obligatory. Students are expected to attend each residency and each class and to participate throughout the program with classmates in small groups, team projects and practicums. If unavoidable absences arise, these should be approved in advance and accommodation should be reached with the faculty member(s) in question to make up the content.

For the Executive MBA program:
In-person presence at each residency is critical for success in the Executive MBA program. Students are expected to attend each residency and each class. If unavoidable absences arise, these should be approved in advance and accommodation should be reached with the faculty member(s) in question to make up the content. In addition to regularly scheduled classes, students can expect to attend frequent meetings with small groups formed at the start of the program.

For the Master of Science in Positive Organization Development and Change (MPOD) program:
In-person presence at each residency is critical for success in the MPOD program. Students are expected to attend each residency and each class and to participate throughout the program with classmates in small groups, team projects and practicums. If unavoidable absences arise, these should be approved in advance and accommodation should be reached with the faculty member(s) in question to make up the content.

Retention Requirements
All students are required to follow their curriculum plan and graduate with their cohort. If at any time a student fails to register in two consecutive semesters, excluding the summer session, the student must reapply for admission to Weatherhead, unless prior approval was granted by the Weatherhead registrar.

For the Master of Accountancy, Master of Business Administration, Master of Science in Positive Organization Development and Change, Master of Business Analytics and Intelligence, Master of Finance, Master of Healthcare Management, Master of Science in FinTech, and Master of Supply Chain Management degree programs:
- All grades received are included in the calculation of the GPA
- A cumulative GPA of 2.5 is needed to maintain good standing
- A cumulative GPA below 2.5 will result in probation
- A cumulative GPA below 2.5 in two semesters will result in separation from the program
- Students must retake a core course in which they earn an F or an equivalent course approved by the faculty program director
- A course in which an F is earned contributes no hours toward graduation requirements

For the Master of Engineering and Management degree program:
Students should contact the Master of Engineering and Management program director for specifics regarding Retention Requirements.

Time Limit to Return to a Degree Program
Students who leave their WSOM Graduate program (after not returning from an approved one-year Leave of Absence or not returning due to a
Transcripts

Case Western Reserve University considers grades and other information about a student’s performance at the university to be a private matter and will release such information to the student only upon written request. Transcripts will not be issued to or on behalf of a student who has not discharged all financial obligations to the university. Transcripts are issued by the University Registrar’s Office. Transcript requests can be made online (https://case.edu/registrar/grading-transcript/request-a-transcript/), in person or by mail.

Transcripts of work completed at other institutions will not be released to the student or other third parties.

Transfers and Waivers

No transfers, waivers or substitutions are accepted for full-time Master of Accountancy, Master of Business Administration, Executive MBA and Master of Science in Positive Organization Development and Change.

For Master of Business Analytics and Intelligence, Master of Finance, Master of Science in FinTech, and Master of Supply Chain Management:

Upon approval of the faculty program director, Master of Business Analytics and Intelligence, Master of Finance, Master of Science in FinTech and Master of Supply Chain Management students may substitute up to nine credit hours of coursework if comparable CWRU courses have been completed.

For Master of Healthcare Management:

Students may transfer up to six credit hours of prior course work from an AACSB-accredited university to replace elective classes only with approval from the faculty director and the Weatherhead registrar. No course in which the student received a grade lower than a B will be accepted. Graduate courses counted toward another degree are not eligible for transfer credit. Courses completed more than five years prior to the start of the Master of Healthcare Management program are not eligible for transfer credit. If a transfer credit request is approved, upon completion of the course, it is the student’s responsibility to provide the Weatherhead Registrar’s Office with an official transfer transcript. Courses cannot be transferred without an official transfer transcript. Quarter hours convert to semester hours with a conversion of 0.67 semester hours for every 1.0 quarter hours.

Withdrawals

To withdraw from courses during a semester, the student may either initiate a request to withdraw in SIS or contact the Weatherhead registrar (https://intranet.weatherhead.case.edu/registrar/contact/) before the last day of classes. All withdrawals after the official drop/add periods will result in a grade of W (WD if withdrawing from all classes) on the student’s transcript. A student withdrawing after the last day of classes will receive the grade of F unless, in the judgment of the program’s faculty director, there are valid reasons for recording the grade of W.

Failure to attend class, giving notice to the instructor or nonpayment of fees will not be regarded as official notice of withdrawal. A grade of F will be assigned in each course from which the student has not officially withdrawn.

Note: A student is not entitled to any tuition adjustment for a single course dropped after the drop/add deadline. However, if a student is forced to withdraw from all coursework for the semester due to unavoidable and unforeseen circumstances, they may petition (in writing to the Weatherhead registrar) for a partial tuition refund. Tuition charges for withdrawals after the drop/add deadline are prorated based upon the week of withdrawal and according to the withdrawal and refund schedule (http://case.edu/studentaccounts/tuition-fees/withdrawal-refund/) published by Student Financial Services (http://case.edu/studentaccounts/).

Academic Integrity Policy

This policy comprises the standards of academic integrity in the graduate programs of the Weatherhead School of Management at Case Western Reserve University and sets forth the procedures to be followed by the dean, faculty and staff in cases in which students are alleged to have violated the Academic Integrity Policy. This policy does not address alleged violations and disciplinary actions in the undergraduate programs. Such matters are addressed at the university level.

Academic integrity is vital to the Weatherhead graduate programs’ learner-centered approach to management education. A deep commitment to learning and honesty on the part of every student is crucial. Every student is expected to respect the learning process, to enhance it and to strenuously avoid any activity that might corrupt it. Students are required to report observed violations of the Weatherhead code of academic conduct. Faculty, the dean and administration also have a crucial role in upholding academic integrity at Weatherhead and ensuring adherence to general principles of academic integrity and this policy.

To foster a well-informed commitment to academic integrity, the following policies govern the Weatherhead learning environment:

1. All forms of dishonesty including cheating, plagiarism or knowingly furnishing false information to Weatherhead faculty or administrators are prohibited. This standard is to be interpreted strictly. Examples of violations of the code of academic conduct include, but are not limited to:

   • Communication or use of aids not specifically authorized by the instructor during examinations. Such instances include giving or receiving unauthorized assistance in any form (including the use of unauthorized aids, copying from another student’s work, or giving, soliciting or receiving unauthorized aid).
• Submission of work prepared for another class, for another section of the same class in the same or prior years, or by other students without the prior authorization of the course instructor.
• Submission of texts or partial texts prepared by anyone other than the student (plagiarism), including material from the internet, without proper attribution, including whether the true author is aware of or condones the act. Plagiarism can occur inadvertently due to the omission of proper credit and includes failure to properly footnote sources, to indicate quoted or paraphrased material or to credit others for their ideas, words or work.
• Misrepresentation on a resume, Weatherhead application materials or any other official document.

2. Computer software is private intellectual property; therefore, copying university-owned or -licensed software or data, or loading such software onto another computer system for personal or external non-CWRU use without prior written approval is prohibited. The modification of university-owned or -licensed software or data without prior written approval is prohibited.

3. Information technology, including computers, data transmission and storage technology are essential to knowledge production and learning. Damage or disruption to the operation of computer equipment, data communications equipment or data communications lines is prohibited. The use of university-owned or -licensed computers for non-educational purposes or for purposes for which they were not intended is prohibited.

**Academic Integrity Officer and Associate Academic Integrity Officer**

To maintain and consolidate information on prior academic integrity violations and associated consequences, prior to each academic year, Council will designate one Academic Integrity Officer (AIO) and one Associate Academic Integrity Officer (AAIO) from the full-time faculty to serve a term of one year of service during the coming academic year, renewable up to five years based upon the respective individuals’ willingness and ability to fulfill the respective roles. Council will carefully consider the fit between the workload demands of the AIO and AAIO and the characteristics of the individuals, including such things as the individuals’ tenure, rank and previous involvement in other Weatherhead committees related to Weatherhead curriculum. To fulfill the responsibilities of the AIO, the individual will be provided with the appropriate administrative support.

The AIO is the first contact for allegations of violations of the code of academic conduct, as explained below. The AAIO is appointed for two purposes. First, the AAIO serves as a backup for the AIO in the event that conflicts of interest or other obligations prevent the AIO from fulfilling AIO duties in a given case. Second, Council selects the AAIO with the idea that the AAIO may become the succeeding AIO when the AIO’s term is concluded, whereupon Council will designate a replacement AAIO. The expectation is that the AIO and the AAIO will work together on academic integrity issues that arise.

If a student witnesses an activity that appears to violate the code of academic conduct, that student must take proper action to address or curtail the activity. Proper action may include confronting the individuals involved, requesting that the instructor clarify the guidelines for appropriate conduct, and reporting the activity to the instructor or the AIO. Provision will be made for an anonymous reporting channel as necessary.

In the event that a faculty member has reasonable grounds to suspect that a student has violated the Weatherhead Code of Academic Conduct, the faculty member must consult the AIO. The purpose of the consultation is fourfold: (1) to provide the faculty member with an awareness of precedents for the violation in question, (2) to maintain consistency across departments in the Weatherhead, (3) to determine whether the student has prior violations and (4) to allow the faculty member and the AIO to determine whether additional information should be gathered about the alleged incident and by whom. If the student has had prior offenses, a hearing must be conducted.

A faculty member may resolve the violation without a hearing if the following four conditions are met: (1) the incident and sanction have been reported to the AIO, (2) the student admits to the violation, (3) based on the best information available, it is the student’s first violation and (4) the student accepts the sanction proposed by the faculty member. If the student does not accept the faculty member’s proposed sanction, the student has one week from that refusal to request a hearing. The minimum sanction in such cases is failure in the work in question; the maximum sanction is failure in the course. In addition, any student guilty of an academic integrity violation shall not be permitted to participate in the evaluation process for either the faculty member(s) who brought the allegation or the course in which the violation occurred.

If any one of the four conditions noted above is not met, or if the faculty member concludes that the seriousness of the offense warrants a hearing, a hearing must be convened in accordance with the procedures outlined below. In addition, students found guilty of an academic integrity violation shall not have the same rights as other students to participate in the course/instructor evaluation process. A separate policy document regarding this can be obtained from the AIO.

If a hearing is warranted then a maximum penalty can include failure in the course and expulsion.

**Procedures for Conducting Academic Integrity Disciplinary Hearings**

**Initial Steps**

1. The faculty member or other individual alleging the academic integrity violation shall prepare a written, signed statement containing a description of the acts constituting the alleged violation of the Code of Academic Conduct, including dates, times, locations and names of individuals involved. The written statement shall include all supporting evidence that is pertinent to the alleged violation.

2. The individual shall submit the statement to the AIO. The AIO will review the statement to determine whether the written statement contains sufficient information to warrant further investigation. The AIO shall also notify the university’s Office of Student Affairs of the matter. The AIO can continue to consult the university’s Office of Student Affairs to the extent appropriate.

3. If the AIO determines that further investigation is warranted, the AIO may request that other parties prepare written statements describing their knowledge of the alleged violation of the Code of Academic Conduct.

4. The AIO shall notify the student of the allegations and that a hearing will be scheduled, which will provide the student with the opportunity to prepare a defense against the allegations and to have an adviser present at the hearing.
Hearing Process
1. After receiving all written statements and any other pertinent information, the AIO shall convene an ad hoc hearing committee comprised of the following individuals: (a) one student, and (b) two full-time regular faculty members. One non-voting administrative staff member shall also attend to take minutes of the proceeding. The members of the committee will elect one member to serve as chair with the staff member recording the minutes. The AIO shall approach student government and allow that organization to nominate the student representative. If student government does not respond, the AIO shall appoint a student representative.

2. Prior to the hearing, the ad hoc hearing committee members will be provided with the written documents concerning the alleged incident and any other pertinent information.

3. The ad hoc hearing committee will establish a hearing date and communicate the date to all parties involved. Prior to the hearing date, the student in question shall have access to all written documents and any other information the ad hoc hearing committee has reviewed. For these purposes, the committee should be aware that privacy concerns or related legal issues may prevent the sharing of certain information with the student. For example, cases may arise in which the sharing of certain information may violate the Family Education Rights and Privacy Act (FERPA). In such cases, the committee will consult with the university’s legal counsel.

4. All members of the ad hoc hearing committee must be present at the hearing.

5. The student may be accompanied and assisted by an adviser. The adviser shall not be permitted to participate in the hearing except to advise the student.

6. The faculty member bringing the academic integrity matter to the hearing ordinarily must be present at the hearing. However, if the AIO determines that no material issue of fact exists, the faculty member’s presence is not required.

7. Minutes of the hearing will be recorded by the staff member referenced in item 1 of this section.

8. The student shall have the opportunity to argue their defense and to present supporting evidence and witnesses. The student shall have the opportunity to hear and question witnesses against them by directing all such inquiry through the person chairing the meeting.

9. The hearing committee shall have the authority to reasonably limit the time for testimony for each witness, including the testimony of the student in question.

10. After the hearing, the committee shall convene to discuss the information presented. The committee shall make a written recommendation at this time. The recommendation shall be made to the dean no later than one week after the hearing. The dean will make the final decision regarding the outcome of the hearing.

11. The recommendation may include discipline up to and including expulsion. The student will receive a copy of the committee’s recommendation.

Sanctions and Appeal Process
1. The dean shall have the authority to accept, reject or modify the hearing committee’s recommendation, after consultation with the AIO and, if possible, the AAIO. The student shall have the right to present in writing their basis for requesting acceptance, rejection or modification. The dean shall communicate their decision in writing to the student and the committee.

2. In no event will a student be suspended from classes or expelled prior to a final resolution of the charges, except in cases where the dean believes the student’s presence on campus presents a risk to the university community.

3. The procedures set forth herein do not preempt the jurisdiction and disciplinary processes of other university bodies that retain their own concurrent jurisdiction to investigate and enforce their own rules and impose their own disciplinary measures. In circumstances in which different disciplinary findings or measures may be imposed by different bodies, the more severe shall have precedent.

4. A student found in violation of the academic integrity policy has the right to appeal the original decision to the Provost’s Office according to the following procedures: An appeal of a decision must be submitted in writing and postmarked or hand-delivered to the provost or the provost’s designee within 10 calendar days after the date on which written notice of the decision was sent to the student. Each student shall be limited to one appeal. The decision of the appeal officer is final.

5. An appeal may be based only upon one or more of the following grounds: (a) procedural error, (b) misapplication or misinterpretation of the rule alleged to have been violated, (c) findings of facts not supported by a preponderance of evidence, (d) discovery of substantial new facts that were unavailable at the time of the hearing, or (e) that the disciplinary sanction imposed is grossly disproportionate to the violation committed.

6. The appeal officer shall dismiss the appeal if the appeal is not based upon one or more of the grounds set forth in section 5 immediately above. The appeal officer may decide the appeal based upon a review of the record. The appeal officer may request additional written information or an oral presentation from any relevant person(s) and then decide the appeal based upon the enhanced record.

7. The appeal officer may, after a review of the record, uphold the original sanction, dismiss the original sanction or impose a lesser sanction. An appeal officer may also remand the case to the original hearing body or refer the case to a new hearing officer or panel to be reheard. If possible, the new hearing officer or panel should be different from the one that originally decided the case. If a case is reheard by a hearing officer or panel, the sanction imposed could be greater or lesser than that imposed at the original hearing.

8. A student and hearing officer may agree in advance to minor deviations from procedure. Such deviations are not then subject to appeal. Other minor deviations are acceptable as long as such deviations are not found upon appeal to be unreasonably harmful to the student.

Standards of Conduct Beyond Academic Integrity
In addition to the standards set forth in the Academic Integrity Policy, Weatherhead students are subject to the university’s University Code of Conduct (https://case.edu/studentlife/conduct/university-code-conduct/). All students are expected to make themselves aware of those standards and refrain from engaging in any prohibited activities.

A student accused of any of the listed prohibited activities may be referred to the disciplinary conduct procedures described below.

Disciplinary Conduct Procedures
Initial Steps
1. The student, faculty member or member of staff making the allegation shall prepare a written and signed statement containing a complete description of the acts constituting the violation of the
Sanctions and Appeal Process

1. The student will be notified that a hearing will be scheduled and on the hearing date, all members of the hearing committee must be present supporting witnesses. The student shall have the opportunity to present, in writing, a request for acceptance, rejection or modification no later than one week after receiving the decision.

2. In no event will a student be suspended from classes or expelled prior to a final resolution of the charges, except in cases where the dean or designee believes that the student's presence on campus presents a risk to the university community.

The procedures set forth herein do not preempt the jurisdiction and disciplinary processes of other university bodies, which retain their own concurrent jurisdiction to investigate and enforce their own rules and impose their own disciplinary measures. In circumstances where different disciplinary findings and/or measures may be imposed by different bodies, the more severe sanction shall take precedence.

Grievance Procedures

Staff and faculty members have an important role to play in supporting the best possible learning environment. In the event that a student feels unjustly affected by a non-disciplinary academic or administrative action, they may grieve the action or decision in the following manner:

1. The student should bring their complaint directly to the person responsible for the action in question. The student should make an effort to resolve the problem informally. If the matter involves a complaint with a faculty member, the student should first approach the faculty member directly. If those efforts are not successful, the student should bring the matter to the appropriate department chair to make additional attempts at informal resolution.

2. If efforts at informal resolution of the problem are not successful, the student shall prepare a written statement within a reasonable period of time after the action or decision that gives rise to the grievance. The statement shall contain the following:
   - Date of the grievance
   - Brief description of the alleged unjust academic or administrative action or decision
   - Names of individual(s) involved
   - Explanation of previous attempts to resolve the problem(s)
   - Action(s) that the student believes should be taken to resolve the problem

3. The written statement shall be directed to the director of student experience.

4. The dean or dean's designee may request that the individual(s) named in the grievant's written statement prepare a written statement responding to the grievant.

5. Upon receiving the written statements, the dean or designee shall convene an ad hoc committee consisting of one student and two full-time faculty members.

6. The committee shall consider the written statements of the individuals involved and any other information they deem relevant. The committee may interview the individuals involved, including the grievant.

7. The committee shall make a written recommendation to the dean or designee and furnish a copy to the grievant.

8. The dean or designee may accept, reject or modify any or all of the committee's recommendations. The dean or designee shall make the final
decision as to the grievance and shall communicate the decision to the
grievant in writing.

All grievances will be held in strictest confidence by all involved. The
grievance process cannot be used to circumvent the disciplinary process
and procedures set forth elsewhere in this document.

Honors and Awards

Graduate Student Honors and Awards

All Weatherhead graduate students, faculty and staff may nominate
graduating students for the student awards. An ad hoc committee
comprised of at least one non-graduating student, one faculty member,
and one staff member is formed each year to review the nominations and
determine the recipients of the following awards.

The Rita Kicher Award is presented to a graduating part-time student
at Weatherhead. The award recipient is recognized as an outstanding
colleague in Cleveland’s professional community by their peers and
supervisors, is an active member of community nonprofit organizations,
contributes to one or more professional societies or organizations,
demonstrates leadership qualities and promotes Weatherhead in a
positive way.

The Scott S. Cowen Student Leadership Award is presented to a
Weatherhead graduate student who serves as a leader and role model for
all students. The recipient promotes the Weatherhead image in a positive
way, contributes to the total community and stimulates the classroom
experience. The recipient must be a member of the Graduate Business
Student Association and/or a Weatherhead School of Management Club
Leader.

The Student Life Award is presented to a Weatherhead graduate
student who actively participates in and supports Weatherhead student
activities and events; encourages and supports student participation in
student life activities; and creates, revitalizes or provides added value to
Weatherhead student organizations, activities or programs.

The Theodore M. Alfred Distinguished Service Award is presented
to a Weatherhead graduate student who participates in community
service inside and outside of Weatherhead, brings community
service opportunities to Weatherhead and promotes external service
opportunities.

Awards presented independent of nominations are:

• The Dean’s Academic Achievement Award to the student or students
  attaining the highest GPA in each degree program.

• Beta Gamma Sigma: Master’s students graduating in the spring who
  are in the top 20 percent of their graduating class (summer, fall and
  spring graduates) are invited to join in the semester they complete
  their program. Master’s students graduating in the summer and fall
  who are in the top 20 percent of their graduating class (summer,
  fall and spring graduates) are invited to join in the spring semester
  following completion of their program. Doctoral students graduating
  in the spring are invited to join in the semester they complete their
  program. Doctoral students graduating in the summer and fall are
  invited to join in the spring semester following completion of their
  program.

Weatherhead School of Management Courses

Courses

ACCT

ACCT 100. Foundations of Accounting I. 3 Units.
Accounting is the language of business and this course exposes students to that language. This course introduces students to the basic principles, objectives, terminology and role of financial, managerial, and tax accounting in business. This course is intended for both business and non-business majors. This is the first required accounting course for all business majors.

ACCT 106. Spreadsheet Basics for Business and Non-Business Majors. 1 Unit.
This one hour class combines classroom and project work to complete assignments leveraging Microsoft Excel 365. Through this course, students will gain an understanding of data, data extraction, creation of data models and use of spreadsheet technology for solving business information related problems.

ACCT 200. Foundations of Accounting II. 3 Units.
This course teaches future business professionals how to produce and use financial information for business decisions. This course expands upon the basic principles and objectives of financial and managerial accounting providing business students with essential skills for any business career. This course is the second required accounting course for all WSOM business majors. Prereq: ACCT 100.

ACCT 300. Corporate Reporting I. 3 Units.
This is the first course in the Corporate Reporting sequence. This course examines the basic financial statements (balance sheet, income statement, statement of cash flows), the asset side of the balance sheet (from cash to inventory), accrual versus cash accounting, revenue recognition, time value of money, and profitability analysis. Also, this course will highlight some of the differences between GAAP and IFRS relative to the topics covered. Prereq: ACCT 100 or ACCT 101 and ACCT 106.

ACCT 300L. Technology Lab for Corporate Reporting I. 1 Unit.
In this lab, students will learn about the technology tools currently used in the professional environment to advance their ability to report and analyze financial accounting data. Examples of foundational tools include advanced spreadsheet functions and data collection/download tools. The knowledge gained in this lab will be applied in ACCT 300, Corporate Reporting I, taken concurrently with the lab. Prereq: ACCT 106. Coreq: ACCT 300.

ACCT 301. Corporate Reporting II. 3 Units.
This course is the second of a 3 course sequence and covers financial accounting theory, generally accepted accounting principles and reporting practices. Areas of focus include: property plant and equipment, liability determination, long-term debt, derivatives, leases, pensions and other postretirement benefits, and investments. International (IFRS) aspects also are considered. Prereq: ACCT 300.

ACCT 305. Income Tax: Concepts, Skills, Planning. 3 Units.
This course addresses U.S. Federal Income Taxation concepts and applications. The subject matter includes topics applicable to individuals, partnerships and corporations and various other entities required to file income tax returns. In addition the subject matter addressed includes a variety of business, legal and taxation concepts and practices related to effective tax planning. The purpose of the course is to provide the student with the appropriate knowledge and skill levels to "speak the language of U.S. tax." Prereq: Sophomore Standing.

ACCT 306. Accounting Information Systems - Basic. 3 Units.
This course introduces the students to the major business cycles as they relate to Accounting Information Systems, including the revenue, procurement and conversion cycles. Additionally, students will be introduced to risks and controls in accounting systems, as well as emerging accounting technology. Prereq: ACCT 102 or ACCT 200.

ACCT 307. Applied Management Accounting. 3 Units.
This course advances students’ ability to use management accounting to evaluate decisions, businesses, and managers. Students will begin with the idea that management accounting is a dialect within the language of accounting, explore varied types of costs and their relationships to pricing, and then use these concepts to assess decisions, organizations, and performance. Case studies will be used to stress application of management accounting concepts to problems faced in the real-world business environment. Students will use advanced spreadsheet functions and data analytics/visualization tools to further develop their proficiency at using management accounting to evaluate decisions, businesses, and managers. Prereq: (ACCT 101 and ACCT 102) or ACCT 200 and ACCT 106 or ACCT 207.

ACCT 307L. Technology Lab for Management Accounting. 1 Unit.
In this lab, students will learn about the technology tools currently used in the professional environment to further develop their proficiency at using management accounting in evaluating decisions, businesses, and managers. Examples of foundational technology tools include advanced spreadsheet functions and data analytics/visualization tools. The knowledge gained in this lab will be applied in ACCT 307, Applied Management Accounting, taken concurrently with the lab. Prereq: ACCT 106. Coreq: ACCT 307.

ACCT 314. Attestation and Assurance Services. 3 Units.
This course covers the role of the auditor, the audit process, the public accounting profession, audit risk and materiality, fraud, audit methods and techniques, audit planning, internal control, the effects of information technology on the audit, auditing revenue, receivables and inventories, professional ethics, legal responsibilities, emerging assurance services, and recent developments in the auditing profession. Prereq: ACCT 301.
ACCT 360. Independent Study. 1 - 18 Units.

ACCT 401H. Accounting for Healthcare. 3 Units.
This course exposes MSM-Healthcare students to ways that accounting information helps managers monitor and improve the performance of organizations. After studying the nature and limitations of accounting information, we explore how financial, cost, tax, and regulatory accounting are used by various stakeholders. From this effort, students become comfortable evaluating accounting recognition, valuation, classification, and disclosure issues that arise in an executive's career. Finally, we study how accounting is a feedback loop that enables managers to assess consequences of past decisions and think about what should be done going forward. Feedback loops, in turn, can give rise to observer effects and/or unpredictable outcomes. Course content contributes to achieving the program goal of strengthening a student's ability to promote positive change in healthcare. Prereq: Master of Healthcare Management students only.

ACCT 404. Advanced Financial Reporting. 3 Units.
ACCT 404 covers advanced financial reporting topics including financial statement consolidations, foreign currency translations and transactions, VIE's, (variable interest entities), partnership accounting, derivatives, segment reporting, and interim financial statement reporting. As a graduate course, a master's level project or paper will be required. Prereq: ACCT 301.

ACCT 405. Advanced Federal Taxes. 3 Units.
Corporate income taxes, estate and gift tax, fiduciary income taxes, partnerships, and hybrid forms of organization are covered. Prereq: ACCT 305.

ACCT 406. Advanced Accounting Information Systems. 3 Units.
This is a three hour class in which the students will combine classroom and project work to learn how technology is used in the reporting and evaluation of internal and external Accounting Information. Students will learn to recognize and manage technology-based risks to Accounting Information and will study current events and relevant trends in accounting technology. Prereq: ACCT 314.

ACCT 407. Analytics and Control. 3 Units.
This is the final course in the Department of Accountancy's analytics sequence. The course is designed to further students' skills in making informed decisions when faced with unfamiliar data sets. We hone the ability to use the tools of average, variance, correlation, sampling, and hypothesis to reduce uncertainty. Upon course completion, students will be able to analyze data that help organizations accomplish desired goals. We prioritize development of critical thinking skills over the ability to use software to perform statistical calculations. We seek to be approximately right rather than precisely wrong. Prereq: (ACCT 102 and OPRE 207) or (MBAC 503 and MBAC 511) or MBAP 403.

ACCT 414. Corporate Reporting and Analysis. 3 Units.
This course provides a basis for evaluation of traditional and proposed uses of reports and information for decision making regarding investment, credit and internal planning and control. Students are introduced to concepts, and analytical techniques that can be used to critique and interpret the financial health and value of an organization. At a practical and theoretical level, the course integrates research in the areas of accounting, quantitative methods and finance which has proved useful in the financial analysis of organizations Prereq. ACCT 300 or ACCT 401H or MBAC 502 or MBAP 402 or Requisites Not Met permission.

ACCT 431. Tax Practice: Analysis, Planning and Communications. 3 Units.
This course concentrates on teaching the identification of key U.S. tax issues, the analysis of fundamental tax concepts and the underlying interpretation and application of tax law through the use of appropriate authoritative sources. Both oral and written communication will be utilized to present tax planning research results. Actual court cases will be used as the basis for simulating practical client scenarios. Prereq: ACCT 305.

ACCT 444. Advanced Auditing Theory and Practice. 3 Units.
This course examines auditing concepts and issues in depth. A special focus exists on audit evidence and how auditors make decisions. Some topic areas include ethics, analytical review, fraud, and the role of technology. Prereq: ACCT 314 or Requisites Not Met permission.

ACCT 501. Special Problems and Topics. 0 - 18 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.

ACCT 520. Advanced Accounting Theory. 3 Units.
This seminar studies contemporary issues in financial accounting theory and business reporting. Topics are considered from their historical development to contemporary circumstances. Academic and professional literatures are employed to gain a variety of perspectives on current matters. The development of communication skills, written and verbal, and use of support technology for presentations is emphasized throughout. Students are required to make several individual and team presentations, to conduct database and periodical research and to provide frequent written and oral research reports. Prereq: MAcc students only and ACCT 301. Prereq or Coreq: ACCT 404.

ACCT 540. Corporate Governance and Contemporary Accounting Policy. 3 Units.
The Sarbanes-Oxley Act (SOX), passed in the wake of a series of corporate accounting scandals including Enron and WorldCom, was designed to strengthen Corporate Governance processes for all US publicly traded companies with an aim of "protecting investors by improving the accuracy and reliability of corporate disclosures." The contemporary implications of SOX for the accounting profession are immense. Students must understand these implications to successfully navigate the world of public company financial reporting. One implication is the role SOX gave to corporate board audit committees to oversee the independent auditors charged with auditing public company financial statements. This requires a fundamental understanding of corporate boards including why they exist and what are their more general responsibilities. Another implication is the establishment of the Public Company Accounting Oversight Board (PCAOB) to regulate the accounting profession. Thus, this seminar examines broad issues surrounding Corporate Governance including governance of public companies including investment companies, with strong contemporary connections to the accounting profession. Students are required to make several individual and team presentations, to conduct database and periodical research and to provide frequent written and oral research reports. Prereq: MAcc students only and ACCT 301, and ACCT 314. Prereq or Coreq: ACCT 404.

ACCT 601. Special Problems and Topics. 1 - 18 Units.
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

ACCT 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
ECON 341. Prereq: ECON 102 and ECON 103.

systems with monetary and fiscal policy. Offered as BAFI 341 and changes, and the closely intertwined condition of financial and economic

and banking--and the economy. Emphasis is placed on both theoretical

This course emphasizes the importance of financial markets, the nature

and role of the financial system, and the linkages between these--money

and banking--and the economy. Emphasis is placed on both theoretical

and practical constructs, on major innovations and contemporary

and seed opportunities for inclusive growth. Fintech is also the label

enforcement challenges, provides new gateways for entrepreneurship,

These innovations are revolutionizing how existing firms create and

and deliver products and services, addresses privacy, regulatory and law-

enforcement challenges, provides new gateways for entrepreneurship,

and seed opportunities for inclusive growth. Fintech is also the label

in a business setting by developing proficiency in PowerPoint and oral

presentation skills.

BAFI 206. Personal Financial Management with Digital Technology. 1 Unit.

In the digital era, financial technologies have worked its way into our
digital wallets and portfolio. Mobile banking services, budgeting and
investing apps are intrinsically linked with how we conduct our personal

Firms try to create value. In their day-to-day operations, they are faced
with numerous challenges: Should we accept trade credit or borrow?
Will an acquisition create or destroy value? Should we introduce a new
product line even if it cannibalizes an existing one? In each of these

situations they try to quantify the impact on the value of their firm. The
goal of this course is to develop your skills in financial modeling and
valuation, so you can tackle issues like the ones described above. The
course is designed to be "hands-on": You will learn to apply the theory
and develop spreadsheet modeling skills through homework, case
studies and a group project. By the end of the course you will have a good
understanding of both the theory and practice of valuation, and possess
a set of cutting-edge financial modeling skills. This course is designed for
students who aspire to work in a regular company, a bank or a consulting
firm in (i) corporate finance (including mergers and acquisitions); (ii)
strategy; or (iii) equity and analysis. Prereq: BAFI 355.

BAFI 358. Intermediate Corporate Finance. 3 Units.

This is a rigorous second course in corporate finance (following
BAFI 355) designed to lay the analytic foundation for careers in business.
The objective is to strengthen students' theoretical and conceptual
understanding of several important topics in finance, and to develop their
problem-solving skills. Topics covered include economic cash flows and
valuation, Long term financial planning and ratios analysis, Growth and
external financing, Short term financial planning and Working capital
management, Managerial options and valuation, Derivatives, Agency cost
and asymmetric information, Capital structure and payout policy. Prereq:
BAFI 355

BAFI 359. Cases in Finance. 3 Units.

This course applies the case study method applied to a variety of
business situations that teaches students to think on their feet, develop
presentation skills and hone business judgment. The objective of the
course is to strengthen students' conceptual understanding and problem-
solving skills. It is intended to complement the two course sequence in

corporate finance (BAFI 355 and BAFI 358) by applying these concepts to
real world problems. Topics covered include cash flow estimation
and corporate valuation, financial planning and ratio analysis, financing
using internal and external sources, capital budgeting and managerial
options, capital structure, payout policy, financial strategy, public equity
analysis (including initial public offerings), mergers and acquisitions
and leveraged buyouts. The course envisages an extensive use of case
studies and simulation exercises. Prereq: BAFI 355.
BAFI 361. Empirical Analysis in Finance. 3 Units.
This course is developed based on the feedback received from employers who have hired BS Management (finance) graduates in the past and will likely do so in future. The goal is to enable students to use financial econometrics to effectively analyze financial data. The course will draw on theoretical aspects of BAFI 355 but focus on developing financial analytic skills. The applied nature of the course comes from the use of real, rather than theoretical, data. In other words, in a real-world fashion, through the use of statistical methods to analyze real data, the student can address practical questions of high relevance to the Finance industry. The scope of the data as well as the quantitative methods used in such analysis often requires familiarity with computational environments and statistical packages. As such, another goal of the course is to familiarize the student with at least one such environment. Prereq: BAFI 355 and OPRE 207.

BAFI 362. Advanced Financial Analytics. 3 Units.
The objectives of this course include understanding important quantitative risk models, risk measurement tools and explaining implications for risk management and investment decisions. Data will be used from Bloomberg and other intra-day data sources to estimate models and evaluate results in many areas of finance. At the end of the course students will: (i) understand and apply analytical models to real financial market problems, (ii) be exposed to debt, credit, and derivatives markets and associated career opportunities in applied analytics and (iii) be exposed to bank risk management skills and applications. This course is designed to be focused and intense, while also being very aligned with the best practices in the financial industry today. Microsoft Excel, because of its flexibility, will be the primary source of practical experience, though the course may also incorporate other computer tools/languages. Prereq: OPRE 207 and BAFI 355.

BAFI 365. Options and Other Derivatives. 3 Units.
This course is designed to introduce students to the theoretical and practical aspects of financial futures, options, and other derivatives. The markets for these instruments have grown enormously and have generated a profusion of innovative products and ideas, not to mention periodic crises. Derivatives have become one of the most important tools of modern finance. The goal is for students to understand the principles of how these important instruments and markets work. Prereq: BAFI 355.

BAFI 372. International Finance. 3 Units.
This course deals with open-economy macroeconomics and international financial markets, covering open-economy national income analysis, international macroeconomic policy coordination, exchange rate determination, foreign portfolio investment, and global financial crises. Offered as BAFI 372 and ECON 372. Prereq: ECON 103.

BAFI 403. Corporate Financial Technology. 3 Units.
This course is focused on the many aspects of the development in Financial Technology from recent notable successes to the current edge and thoughts about the future. Topics covered will include “FinTech” Applications, Incubators and Angels, Block Chains, Crypto-currencies, Crowdfunding, and Payment Schemes. Topics can change from semester to semester, in tune with changing technology. Offered as BAFI 403 and FNCE 403.

BAFI 404. Financial Modeling. 3 Units.
This is a course about financial modeling. It covers a range of topics in the field of financial economics. Each topic is chosen because it lends itself to financial modeling. The primary focus of the course is to relate the theory of finance to practical and usable spreadsheet models that will assist a financial manager with a firm’s investment and financing decisions. Spreadsheet models have been the dominant vehicle for finance professionals to practice their trade. This course will utilize Excel and challenge the student to improve their finance and modeling skills. Students will improve their familiarity with financial data analysis through various exercises that incorporate completed models. In summary, the course is designed to increase your practical understanding of core concepts in finance, help you develop hands-on spreadsheet modeling skills, and strengthen your ability to perform financial data analysis within an Excel model. Prereq: MBAC 504 or MBAP 405.

BAFI 420. Health Finance. 3 Units.
Exploration of economic, medical, financial and payment factors in the U.S. healthcare system sets the framework for the study of decisions by providers, insurers, and purchasers in this course. The mix of students from various programs and professions allows wide discussion from multiple viewpoints. Offered as BAFI 420 and HSMC 420. Prereq: MBAC 502 or MBAP 402 or ACCT 401H and enrollment in a program other than MSM in Healthcare.

BAFI 428. Financial Strategy and Value Creation. 3 Units.
The intersection between the theory of perfect markets and the reality of market imperfections provides the basis for the exploration of value creation in this course. Opportunities in both product and financial markets are explored using case studies to develop a framework for strategic financial decisions.

BAFI 429. Investment Management. 3 Units.
This course explores the characteristics of financial investments and markets and develops modern techniques of investment analysis and management. The goal is to help students develop a level of analytical skill and institutional knowledge sufficient to make sensible investment decisions. Topics include: an overview of stock, debt and derivative asset markets, practical applications of modern portfolio theory, equilibrium and arbitrage-based approaches to capital market pricing, the debate over market efficiency, the term structure of interest rates, bond portfolio management, and uses of derivative assets in investment portfolios. Prereq or Coreq: MBAC 504 or MBAP 405.

BAFI 430. Derivatives and Risk Management. 3 Units.
This course is intended to give students an understanding of options and futures markets both in theory and practice. The emphasis is on arbitrage and hedging. The course concentrates on listed common stock and index contracts as well as commodity markets. Various theories for trading strategies are studied. Prereq or Coreq: MBAC 504 or MBAP 405.

BAFI 431. Fixed Income Markets and Their Derivatives. 3 Units.
This class is concerned with fixed income securities, interest rate risk management, and credit risk. Fixed income securities account for about two thirds of the market value of all outstanding securities, and hence this topic is important. The course covers the basic products of fixed income markets including treasury and LIBOR products, such as interest rate swaps. Risk management and hedging strategies are covered as well as selected topics in credit risk models and mortgage-backed securities. Prereq: BAFI 430.
BAFI 432. Corporate Risk Management. 3 Units.
This is a risk management course aimed at participants who wish to enhance their understanding of the risks faced by corporate firms, both financial and non-financial, learn techniques to identify and measure these risks, and understand how derivatives and risk management solutions can be used to manage these risks, create value, and advance the strategic goals of the firm. Offered as BAFI 432 and FNCE 432. Prereq: MBAP 405 or MBAC 504 or MBAC 505.

BAFI 433. Quantitative Risk Modeling. 3 Units.
This course is designed to help students learn quantitative models for estimating risk in various financial settings for different types of financial institutions (banks, hedge funds, and others). It is a very hands-on course where students will become familiar with several state-of-the-art quantitative risk models as well as their detailed implementation procedure in the real world. The course uses several in-class Excel exercises to illustrate the models as well as their practical implementation using real financial data. Offered as BAFI 433 and FNCE 433. Prereq or Coreq: MBAC 504 or MBAP 405.

BAFI 434. Financial Analytics and Banking. 3 Units.
This course will cover empirical and analytical aspects of banking, including loan origination, syndication, sales, stress-testing and securitization; capital adequacy, regulation and supervision; methods of measuring and managing value at risk, credit risk, interest rate risk, liquidity risk, and other risk; credit market information, feedback, and signaling. Offered as BAFI 434 and FNCE 434. Prereq or Coreq: MBAC 504 or MBAP 405.

BAFI 435. Empirical Finance. 3 Units.
This course provides an introduction to empirical analysis and research in finance. This involves the management of empirical datasets and the aspects of quantitative applications of finance theory. The goal is to enable the student to deal with the need to analyze complex and large financial and economic datasets that is present in many fields of the financial profession. The scope of the data as well as the quantitative methods used in such analysis often requires familiarity with robust computational environments and statistical packages. As such, another goal of the course is to familiarize the student with at least one such environment. Applications are conducted using real financial and economic data. The course draws on the theoretical aspects of the subjects covered, but mainly focuses on the practical matters required to undertake an empirical analysis of financial topics—e.g., the definition of the research question, the datasets required, the computational needs, and, then, the implementation. The course enables the student to evaluate outstanding financial research as well as to conduct his or her own research. Offered as BAFI 435 and FNCE 435. Prereq or Coreq: MBAC 504 or MBAP 405.

BAFI 444. Entrepreneurial Finance. 3 Units.
The objective of this course is to introduce students to the issues of financial management and capital formation in new ventures. The course will address issues of estimation of cash requirements, development of pro forma financial plans, firm valuation and the process and tools used in raising debt and equity financing. Bootstrapping, angel investing, venture capital, strategic alliances and initial public offerings will be covered. The emphasis is on the entrepreneur and how he/she can assess financial needs and develop a sensible plan for acquiring financial resources in a manner that is consistent with their financial needs and other strategic goals. Offered as BAFI 444 and FNCE 444. Prereq or Coreq: BAFI 420, MBAC 504, MBAP 405, FNCE/MSFI 401 or MEM students.

BAFI 450. Mergers and Acquisitions. 3 Units.
This course examines the economic rationale and motivation for the different merger and acquisition and recapitalization activities undertaken by firms and individuals in the U.S. market. Emphasis is on the comparable publicly traded proxy company, comparable "change of control" transaction, and discounted cash flow methods of valuing a firm. The class will also review the different types of debt and equity capital employed to fund mergers and acquisitions and recapitalizations, how senior lenders and equity investors structure their loans and/or investments, and how investors realize the gains through different exit strategies. The legal and tax ramifications of various forms of M&A activity are also discussed. The course gives the student an excellent understanding of the role that senior commercial banks, insurance companies, pension funds, LBO funds, investment banking firms, and venture/growth capital investors play in mergers and acquisitions and will strengthen the students’ ability to value a business enterprise. Prereq: MBAC 504 or MBAP 405.

BAFI 460. Investment Strategies. 3 Units.
This course provides a broad survey of some of the main strategies used by hedge funds today. Through exercises and projects, the hedge fund strategies will be presented using real data. Students will learn to use a methodology referred to as “back testing” in order to evaluate hedge fund strategies. The course will also cover institutional details related to short selling, liquidity, margin requirements, risk management, and performance measurement. Since hedge funds today use advanced modeling techniques, the course will require students to analyze and manipulate real data using mathematical modeling. The objective of the course is for students to gain practical knowledge about creating, back-testing, and implementing hedge fund trading strategies. Offered as BAFI 460 and FNCE 460. Prereq: MBAC 504 and MBAC 505.

BAFI 480. Global Banking & Capital Markets. 3 Units.
This course will expose students to Banking and Capital Market Structure, Practices, and Regulations in North America, Europe, as well as Asia. Students will learn about structure of the financial services industry in different parts of the world, the history and evolution of the regulatory frameworks in this industry, and its consequent impact on financial and economic development as well as risk. Several case studies are used to expose students to different issues and questions that arise in the day-to-day jobs of financial managers in this industry. Offered as BAFI 480 and FNCE 480. Prereq: MBAC 504 or MBAP 405.

BAFI 490. Cases in Applied Corporate and Real Estate Valuation. 3 Units.
This course is focused on engaging groups of students in identifying, analyzing and making decisions on real-world corporate financial problems. Teams of students will be assigned to a specific client situation drawn from one of four general areas: (i) mergers and acquisitions (involving corporations and/or leveraged buyout firms), (ii) public equities (IPOs and/or equity research), (iii) corporate financial policies and transactions or (iv) real estate. Learning will include lectures, structured problem solving using live case studies and an in-depth project in which will evaluate an actual current business opportunity and present it to a panel of industry veterans. In addition to learning deeper financial skills, the course will enhance unstructured problem solving, project management, team building and high level communications skills. Offered as BAFI 490 and FNCE 490. Prereq: MBAC 504 or MBAP 405.
BAFI 491. Python Programming w Appl in Finance. 3 Units.
There are two parts to this course. (i) In the first part we learn the basics of Python programming language by solving a sequence of rather simple problems each focusing on broadening your knowledge. At each stage we introduce important commands of Python and slowly learn the structure of object oriented programming with Python. The objective is to make you Python literate. (ii) The second part of the course is for you to tackle significant financial problems either in risk management or in corporate finance using the Python language as the primary tool to do the analysis. You will develop a series of financial models in your track and then tackle two major projects which will utilize all the skills developed. Offered as BAFI 491 and FNCE 491. Coreq: BAFI 430.

BAFI 501. Special Problems and Topics. .75 - 18 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.

BLAW

BLAW 331. Legal Environment of Management. 3 Units.
This course will provide an overview of the legal environment in which business transactions take place. Through coverage of a number of topical areas, the student will be given a broad understanding of how the law impacts upon the daily decisions of managers. More specifically, the student will be better able to identify and understand how the legal issues facilitate or hinder the conduct of business. Topics covered will include contracts, property, products' liability, employment law, and corporate law. Special emphasis is placed on those regulatory areas of greatest interest to modern business. Offered as BLAW 331 and BLAW 417.

BLAW 411. Business and Law Colloquium. 3 Units.
This course will bring together law students, business students, mid-level attorneys and senior leaders in the legal field for a one-semester weekly colloquium. Even though women have represented approximately half of law-school graduates for a number of years, women represent only 16% of law firm equity partners and even fewer corporate General Counsels. This course aims to offer an introduction to the business skills that both women and men will need to rise to the highest levels of law practice and organizational leadership. Each week will focus on a different aspect of law and business. The curriculum will include sessions focused in financial management, business development, communication skills, and intercultural business and law practices. Offered as LAWS 5432 and BLAW 411.

BLAW 417. Legal Environment of Management. 3 Units.
This course will provide an overview of the legal environment in which business transactions take place. Through coverage of a number of topical areas, the student will be given a broad understanding of how the law impacts upon the daily decisions of managers. More specifically, the student will be better able to identify and understand how the legal issues facilitate or hinder the conduct of business. Topics covered will include contracts, property, products’ liability, employment law, and corporate law. Special emphasis is placed on those regulatory areas of greatest interest to modern business. Offered as BLAW 331 and BLAW 417.

BTEC

BTEC 420. Introduction to Programming for Business Applications. 3 Units.
Goals: This course will introduce students to the basics of programming logic utilizing the Python programming language and environment. The course will help students understand how to apply programming solutions and related algorithmic thinking to solve common business and decision problems. This class is a great introduction into programming logic, it just happens to use Python. This course will teach the fundamentals of programming logic, which could be applied to any programming language available today or into the future. Learning Objectives: Upon completion of this course students should have a foundational knowledge of how to use variables, operators, manipulate strings, loops, functions, and basic array manipulation all through Python programming language. The course will culminate with a final project where students will be divided into groups with each group solving a different small business problem. The final submission will require a joint white paper submission that demonstrates the following learned objectives: problem research, scope, architect, and design a potential solution using python environment. A sample of the implemented Python code that was used to solve this problem will be required for final submission. Course Requirements: Each student must have access to a computer that can be brought to class. No programming experience is required. Downloading and installing Python is covered at the start of the course. Basic computer skills: surfing websites, running programs, saving and opening documents, etc. Offered as BTEC 420 and DESN 210.

BTEC 493. Blockchains and AI: Applications in Finance and Business. 3 Units.
It behooves today’s business leaders to be well acquainted with blockchain technologies and AI (Artificial Intelligence), two seemingly disparate technologies that have the potential to fundamentally disrupt a wide range of businesses. The popularity of blockchain technologies has increased exponentially since the release of bitcoin in 2009. While bitcoins garnered a lot of attention during the initial days, the focus has shifted over time to the underlying technology blockchain. This wildly innovative technology has made possible tasks that were hitherto deemed implausible: validate ownership in a digital asset, verify the true state of a transaction without relying on a costly intermediary etc. The list of businesses that are impacted by this technology makes for an impressive reading: supply chain, health care, insurance, foreign exchange transfers, real estate, etc. If the emphasis of blockchain technology is on trust, that of Artificial Intelligence is on predictions. Accurate predictions and sound judgements are two critical ingredients of any decision making process. While the jury is still out on whether algorithms can make sound judgements, recent developments in a field called machine learning (and its sub-field, deep learning) have led to dramatic improvements in the accuracy of predictions made by these algorithms. Significantly, this gain in accuracy has been accompanied by a reduction in overall costs. These in turn have spurred the recent interest in AI. Organizations that have enabled AI at the enterprise level appear to be making more informed decisions and innovating new products. In this course, we will unpack these technologies and examine a wide range of relevant business use cases. Our objective is to provide a practical introduction to these key technologies and their business implications. We focus on business perspectives, rather than on the technical dimensions. Fittingly, this course is open to all graduate students of Weatherhead School (MBA and all specialty Masters). Students are not expected to have any specific programming background; however, a basic understanding of statistics is required to better appreciate the discourse on Artificial Intelligence. Offered as BTEC 493 and FNCE 493. Prereq or Coreq: MBAC 504 or MBAP 405.
BTEC 494. Artificial Intelligence for Financial Modeling. 3 Units.
This is a hands-on course on Artificial Intelligence (A.I.) where the emphasis is not only on understanding the theoretical underpinnings of various AI models but also on building, evaluating, and critiquing A.I. models as they apply to the finance industry. This course begins with an introduction of Machine Learning models; various key ideas such as bias-variance tradeoff, cross-validation, regularization techniques are introduced with relevant examples from Finance. The course then proceeds to discuss Artificial Neural Networks and its relevance to Deep Learning. Foundational ideas such as back-propagation are discussed in sufficient detail; we also lay a lot of emphasis on evaluating the performance of all these models. A key objective of this course is to help students build cutting-edge A.I. models that are ready for prime time, i.e., real-life applications. Fittingly, we work with several real-life datasets and case studies from banking and finance. We will work with three case studies, each of which span multiple sessions. In the first case study, students use Machine Learning algorithms to understand how imbalanced datasets are handled in real-life. In the second study, students use time series data and learn not only about the power of regularization techniques but also to highlight the prominence of A.I. in financial markets. In the third case study, students learn how to use cutting-edge Deep Learning models to extract sentiments from disparate news sources; these are in turn used to generate trading strategies. By contrasting the effort that goes into and the payoff obtained from Machine Learning and Deep Learning models, students gain an intuitive appreciation of both these classes of models. Offered as BTEC 494 or FNCE 494.

BUAI

BUAI 400. Linear Algebra. 1 Unit.
The objective of this one-credit hour course is to provide a basic working knowledge of material in linear algebra that is relevant to the Master of Supply Chain Management and Master of Business Analytics & Intelligence programs. This background material includes geometric and algebraic properties of vectors and matrices together with operations that can be performed on them. The use of vectors and matrices in solving systems of linear equations is taught. Offered as BUAI 400 and SCMG 400. Prereq: For Master of Business Analytics & Intelligence students only.

BUAI 406A. Operations Management I. 1.5 Unit.
Operations managers, ranging from supervisors to vice presidents, are concerned with the production of goods and services. More specifically, they are responsible for designing, running, controlling and improving the systems that accomplish production. This course is a broad-spectrum course with emphasis on techniques helpful to the practice of management at the analyst level. Its goal is to introduce you to the environments, to help you appreciate the problems that operations managers are confronted with, and provide you with the tools to address these problems. Operations Management spans all value-adding activities of an organization including product and process design, production, service delivery, distribution network and customer order management. As global competition in both goods and services increases, a firm's survival depends upon how well it structures its operations to respond quickly to changing consumer needs. Thus, it is essential for all business managers to acquire an understanding of operations management to maintain their competitive advantage. This course provides students with the basic tools needed to become an analyst in Supply Chain and Operations Management. This course provides an overview of Process analysis, Capacity management, Queuing system and analysis. Coreq: BUAI/MSBA 433.

BUAI 406B. Operations Management II. 1.5 Unit.
Operations managers, ranging from supervisors to vice presidents, are concerned with the production of goods and services. More specifically, they are responsible for designing, running, controlling and improving the systems that accomplish production. This course is a broad-spectrum course with emphasis on techniques helpful to the practice of management at the analyst level. Its goal is to introduce you to the environments, to help you appreciate the problems that operations managers are confronted with, and provide you with the tools to address these problems. Operations Management spans all value-adding activities of an organization including product and process design, production, service delivery, distribution network and customer order management. As global competition in both goods and services increases, a firm's survival depends upon how well it structures its operations to respond quickly to changing consumer needs. Thus, it is essential for all business managers to acquire an understanding of operations management to maintain their competitive advantage. This course provides students with the basic tools needed to become an analyst in Supply Chain and Operations Management. This course provides an overview of Process analysis, Capacity management, Queuing system and analysis. Coreq: BUAI/MSBA 433.
BUAI 410. Accounting and Financial Management. 3 Units.
This course focuses on learning the language of business, how basic accounting information is reported and analyzed, and how basic financial principles can be applied to understanding how value is created within an enterprise. This course is intended for individuals who have a limited background in accounting, finance and business. Most of the exercises will involve evaluating and building models in Excel. Teaching objectives are fairly straightforward: 1. Provide you with a basic understanding of the key principles of accounting and finance. We will quickly cover material that is typically covered in a threecourse sequence (Introductory Accounting and Finance I and II). We will fly at a fairly high level, but we want to make sure you understand the basic concepts. 2. Apply these concepts to real (but straightforward) business situations, to gain a better understanding of how companies utilize accounting and financial information. 3. Time permitting, explore how these concepts can be applied to securities, mergers and acquisitions and leveraged buyout transactions, with a specific emphasis on how these concepts are likely to surface in your role in such transactions. Offered as BUAI 410 and SCMG 410. Prereq: For Master of Business Analytics & Intelligence students only.

BUAI 411. Operations Analytics: Deterministic. 3 Units.
The first half of the course provides a practical coverage of linear programming, a special type of mathematical model. The art of formulating linear programs is taught through the use of systematic model-building techniques. The simplex algorithm for solving these models is developed from several points of view: geometric, conceptual, algebraic, and economic. The role and uses of duality theory are also presented. Students learn to obtain and interpret a solution from a computer package and how to use the associated output to answer “What-happens-if...” questions that arise in post-optimality analysis. Specific topics include: problem formulation, geometric and conceptual solution procedures, the simplex algorithm (phase 1 and phase 2), obtaining and interpreting computer output, duality theory, and sensitivity analysis. The second half of this course provide a practical approach to formulating and solving combinatorial optimization problems in the areas of networks, dynamic programming, project management (CPM), integer programming, and nonlinear programming. The art of formulating problems, understanding what is involved in solving them, and obtained and interpreting the solution from a computer package are shown. A comparison with formulating and solving linear programming problems is provided as a way to understand the advantages and disadvantages of some of these problems and solutions procedures. Recommended preparation: Knowledge of Excel, one semester each of undergraduate linear algebra and undergraduate calculus (derivatives); or consent of instructor. Prereq: For Master of Business Analytics & Intelligence students only.

BUAI 432. Operations Analytics: Stochastic. 3 Units.
This course covers modeling and analysis of discrete-event dynamical systems using computer simulations. Topics include an introduction to simulation as a modeling tool, with emphasis on understanding the structure of a simulation model and how to build such models, model validation, random number generation, simulation languages, statistical simulation output analysis, design of simulation experiments and selected current research topics. Prereq: BUAI/MSBA 433. Coreq: SCMG 406.

BUAI 433. Foundations of Probability and Statistics. 3 Units.
Data of many kinds are typically available in practice, but the challenge is to use those data to make effective professional decisions. This software-intensive course begins with useful descriptions of data and the probability theory foundation on which statistics rests. It continues to statistics, including the central limit theorem, which explains why data often appear to be normally distributed, and the Palm-Khintchine theorem which explains why data often appear to have a Poisson distribution. The remainder of the course focuses on regression and forecasting, including detecting and overcoming some of the deadly sins of regression, and the surprising flexibility of regression models. Recommended preparation: One semester of undergraduate calculus or consent of instructor. Prereq: For Master of Business Analytics & Intelligence students only.

BUAI 434. Data Mining & Visualization. 3 Units.
Data Mining is the process of identifying new patterns and insights in data. As the volume of data collected and stored in databases grows, there is a growing need to provide data summarization (e.g., through visualization), identify important patterns and trends, and act upon the findings. Insight derived from data mining can provide tremendous economic value, often crucial to businesses looking for competitive advantages. This course is a survey of data visualization methods, supervised and unsupervised learning techniques, and modern tools for discovering knowledge for business decisions. Prereq or Coreq: BUAI/MSBA 433 or SCMG/MSOR 433 or OPRE 433.

BUAI 435. Marketing Models and Digital Analytics. 3 Units.
Models & analytics suitable for digital marketing data are the focus of this course. The objective to develop analytical skills for making intelligent decisions about marketing investments that create value and build competitive advantage. In short, to build capabilities for marketing ai-analytics for insights. The course content and assignments are designed to (a) enable student learning by using real-world problems and data, (b) emphasize the Problem-Data-Analytics interdependence for effective problem solving, and (c) engage with thoughtful practitioners of digital data analytics to inform current practices and opportunities. Prereq or Coreq: MBAC 506 or BUAI/MSBA 407A. Prereq: BUAI/MSBA 433 or SCMG/MSOR 433 or OPRE433.

BUAI 444. Predictive Modeling. 3 Units.
Predictive modeling is a set of procedures and tools for hypothesizing, testing and validating a model to explain and predict the probability or likelihood of a future event, or outcome. A wide range of procedures and tools are available for predictable modeling, and this course will cover a select set of topics with wide applicability. Through applications and case studies involving real-life data, the course will emphasize managerial problem solving. To build models is to capture managerial problem formulation, and to test/validate them is to confront managerial hypotheses with empirical observations. Problem solving is a creative act rooted in validated evidence of managerial hypotheses testing. Prereq or Coreq: BUAI/MSBA 433 or SCMG/MSOR 433 or OPRE 433.
BUAI 445. Advanced Marketing Analytics. 3 Units.
In order to improve decision making in various decision areas of marketing like segmentation, positioning, advertising, promotions, new product development and pricing, use of quantitative data and analysis has become very popular. It is increasingly common for marketing managers to be challenged by top managers, to show the value of marketing expenditures to an organization’s financial well-being. This course will introduce a variety of data based decision-aids in the marketing area that will often focus on those metrics. In addition, the course will also introduce SAS to you. SAS is a very popular tool that analysts in business and economics field have been using for decades now, and has the potential to open some doors for you when it comes to internships and jobs. In order to improve decision making in various decision areas of marketing like segmentation, positioning, advertising, promotions, new product development and pricing, use of quantitative data and analysis has become very popular. It is increasingly common for marketing managers to be challenged by top managers, to show the value of marketing expenditures to an organization’s financial well-being. This course will introduce a variety of data based decision-aids in the marketing area that will often focus on those metrics. In addition, the course will also introduce SAS to you. SAS is a very popular tool that analysts in business and economics field have been using for decades now, and has the potential to open some doors for you when it comes to internships and jobs. The course will also use Python in parallel to re-emphasize what you have already learnt in previous classes. Prereq or Coreq: BUAI/MSBA 407A or MBAC 506. Prereq: (BUAI/MSBA 433 or OPRE 433 or SCMG/MSOR 433) and (BUAI 492 or MSOR 492 or BTEC 420).

BUAI 446. Machine Learning and Artificial Intelligence in Business Analytics. 3 Units.
Advances in computational analytics including Machine, Deep and Statistical Learning (ML) provide powerful methods for developing mathematical "learning" models that can autonomously parse, learn from, and make predictions from data to improve performance with "experience". In deep learning, large neural networks are leveraged to achieve artificial intelligence (AI), enabling machines to mimic human behavior. This course covers principles, algorithms, and applications of machine learning from a business analytics perspective. Specifically, the course will provide a practical understanding of modern machine learning techniques including regression and classification methods, resampling methods and model selection, regularization, perceptron and artificial neural networks, tree-based methods, support vector machines and kernel methods, and grouping methods. Prereq: BUAI/MSBA 434 or BUAI/MSBA 444 and (BUAI/MSBA 492 or SCMG/MSOR 492 or BTEC 420).

BUAI 485B. Team Development. 1.5 Unit.
This course is unique in the sense that its primary focus is on the student working in teams. In this course the student will assess their team interaction based on team assignments simulated and action learning type projects, presenting to the class as a team, engaging in various experiential activities, participating one team coaching session, working with a team, and expanding their knowledge of team leadership and membership skills and abilities. They are also expected to engage with projects external to the university (similar to an action learning project).

BUAI 492. Foundations of Python Programming. 1.5 Unit.
Python is an object-oriented programming language that can interact with the world wide web as well as Excel and other programming languages like VBA. As such, Python has gained popularity and is becoming an industry standard in many areas, including supply chain management. In addition to assignment, if/then, and for/while statements, in this course you will learn about object-oriented programming and how to implement those ideas with appropriate data structures. You will also learn how to use libraries that others have created, such as Numpy for numerical calculations (like working with vectors, matrices, and solving systems of linear equations). In addition to individual homeworks, you will solve an assigned project in groups and make a final presentation to the class with PowerPoint. Being able to communicate your model and results is part of learning to work effectively with others in an organization, which is a goal of the supply chain program. All of this is designed to enable you to build and solve models that help organizations make good decisions. Offered as BUAI 492 and SCMG 492. Prereq: For Master of Business Analytics & Intelligence students only.

BUAI 499. Capstone Project in Business Analytics. 0 Unit.
This course is focused on engaging Master of Business Analytics students in a capstone experience. Students will be provided with analytics problems with data from local companies and will be asked to leverage the broad range of skills, tools and approaches introduced throughout the program to analyze the data. They will also present a final report to the sponsoring organization. Prereq: For Master of Business Analytics & Intelligence students only.

DESN
DESN 210. Introduction to Programming for Business Applications. 3 Units.
Goals: This course will introduce students to the basics of programming logic utilizing the Python programming language and environment. The course will help students understand how to apply programming solutions and related algorithmic thinking to solve common business and decision problems. This class is a great introduction into programming logic, it just happens to use Python. This course will teach the fundamentals of programming logic, which could be applied to any programming language available today or into the future. Learning Objectives: Upon completion of this course students should have a foundational knowledge of how to use variables, operators, manipulate strings, loops, functions, and basic array manipulation all through Python programming language. The course will culminate with a final project where students will be divided into groups with each group solving a different small business problem. The final submission will require a joint white paper submission that demonstrates the following learned objectives: problem research, scope, architect, and design a potential solution using python environment. A sample of the implemented Python code that was used to solve this problem will be required for final submission. Course Requirements: Each student must have access to a computer that can be brought to class. No programming experience is required. Downloading and installing Python is covered at the start of the course. Basic computer skills: surfing websites, running programs, saving and opening documents, etc. Offered as BTEC 420 and DESN 210.
DESN 302. Creativity in Design & Business: Sources of Perception, Imagination, & Creative Thinking. 3 Units.
The goal of this course is to develop skills and techniques for creative problem solving. The course is for anyone interested in design, the development of new products and services, and strategies for change in organizations and society. It is useful wherever we face challenging situations that require imagination, new ideas, and innovative approaches in a rapidly changing world. At its core, creativity is an issue of perception. Learning to change one's perception from what is known, comfortable, and familiar to what is unknown and potentially valuable and rewarding is the challenge of this course. We will explore a wide variety of methods, techniques, and tools for encouraging new perceptions. There will be useful readings, but also exercises and projects for individuals and teams to develop new strategies of creative thinking. Offered as DESN 302 and ENTP 302.

DESN 308. Business Model Design and Innovation. 3 Units.
This course takes the perspective of entrepreneurs or business unit managers. The three basic questions that all entrepreneurs and entrepreneurs must answer is where to play, how to win and what to do. You have identified a group of customers for your product or service (where to play). Your first challenge is to know what features (Customer Attributes) your target customer will pay for. Innovative business models focus on a set of customer attributes that are usually very different from other industry incumbents that we call Focal Attributes. Your second challenge is to clearly state your profit logic – how you will make money – to win. The concept called Profit Objectives (similar but not the same as KPI and/or SMART objectives) allow you to operationalize the profit logic through specific and measurable deliverables. Your third challenge is building the value chain that can deliver these focal attributes (what to do). At this point, you have a good understanding of all the elements of your business model and in particular, how the focal attributes and the value chain align with the profit objectives. You will learn how to illustrate this alignment through a mapping process. Offered as DESN 308 and ENTP 308. Prereq: Junior standing or higher.

DESN 410. Leading Digital Innovation by Design. 3 Units.
A new wave of digital revolution is transforming every industrial sector. Powered by increasingly smaller yet potent microprocessors and sensors, a new generation of analytical tools, and ubiquitous wearable and mobile devices, companies can radically transform the way they interact with users and the way they create and capture value. Technology like Block Chain and AI are likely to fundamentally reshape how we think about firms and industries. Such changes make existing strategic frameworks and tools obsolete. In order to understand how and why digital technology changes the industrial landscape, companies must understand some of the fundamental characteristics of digital technology and how it demands new types of value creation logic. Be it a large corporation or a small start-up; or a government agency or a multinational enterprise; everyone is struggling to deal with the new digital reality. Yet, exactly how to use digital technology to create value is not clear. While all companies must understand how digital technology is fundamentally different from other forms of technology, ironically digital innovation is not about technology. Digital innovation is making digital technology meaningful and value to users. Therefore, digital innovation requires us to truly understand us (people), what we do, why we do what we do, what makes us happy, and what we consider meaningful. Therefore, digital innovation is a deeply humanistic exploration to make digital technology meaningful and valuable to us. In order to fully harness the transformative capacity of digital technology, we must gain deeper insights on people and their actions, meanings and values. In this experiential course, we use design as the primary tool to gain such humanistic insights, and work with real-world projects to apply those ideas and tools to build real digital innovations.

DESN 419. Entrepreneurship and Personal Wealth Creation. 3 Units.
Course explores the accumulation of personal wealth utilizing entrepreneurial strategies. The underlying competencies of successful entrepreneurs are identified and applied to individual lives of students. Active entrepreneurs will be studied, and original case studies of start-ups and acquisitions provide the basis for class exercises. Offered as DESN 419 and IIME 419.

DESN 425. Chief Executive Officer. 3 Units.
This course will take the perspective of the CEO in deciding the actions that lead to sustainable competitive advantage. We will study decisions that span from starting a small business to expanding beyond the core using mergers and acquisitions. We will also study how CEOs decide to exit a market. The successful CEO not only has to design the strategy for success but has to also design an execution plan. As the organization grows the importance of delegation to the right subordinates becomes increasingly critical. The course material includes case studies, decision briefs and presentations (virtual and in person) by senior executives. Decision briefs are short notes that have the same information that the CEOs had when starting the business. You will develop the strategy based on these decision briefs and will compare your suggestions to what was actually done by both successful and unsuccessful CEOs. Offered as DESN 425 and IIME 424.

DESN 440. Design of Disruptive Business Models. 3 Units.
This course will explore the design of business models that disrupt traditional or established business patterns. With the shift toward services and human interactions as the foundation of many new companies, this course will focus on methods of inventing and developing business models that use digital technology, information, and service concepts to meet new needs in areas of retail, medical care, and other areas of business opportunity.
DESN 490. Business Model Innovation and Diversification. 3 Units.
This course is an advanced strategy course that explores the determinants of successful corporate strategy. In Strategy Issues and Applications you were exposed to the basic frameworks for developing successful competitive or business unit level strategy. Corporate strategy takes you to the next level and provides the frameworks you need to be able to be successful in multiple businesses. At its core corporate strategy constitutes any and all decisions that change the core business model of a firm. Examples are vertical integration, new but related product lines, entering new markets with existing products and entering new or existing markets with unrelated products. The fundamental premise of the course is that successful corporate strategy is rooted in competitive advantage arising from capabilities residing at the business unit level. Starting from analyzing business level strategies of very simple firms, the course successively builds frameworks towards more complicated business level strategies. Next, the course develops frameworks to discuss corporate strategy based around the concept of core competencies and market entry strategies. Finally, the course develops the concepts that are useful in greenfield entries, alliances and acquisitions as part of an overall corporate strategy.

DESN 494. Managerial Consultancy. 3 Units.
Students will learn to match consulting methodologies with client needs and employ a step by step strategy development process applied to actual companies which are semester-long clients of the class. Accelerated career strategies in the consultancy business are featured as well as tactics for getting hired in the first place. The course views consultancy as a role rather than career and conceptualizes consultancy as a process of optimizing an organization's value creation potential and competitive advantage. Students should be able to apply the concepts regardless of career choice. Exposure to senior practicing consultants is featured.

DESN 496. Strategic Planning and Control Systems for Strategy Implementation. 3 Units.
This course introduces the principal tools of strategy implementation, namely the design of organization structures, the use of formal planning and control systems, and the design of measurement and reward systems. The importance of organizational context (small vs. large, for profit vs. not-for-profit, manufacturing vs. service, etc.) and the need to tailor systems to the context of the organization are emphasized. New and emergent organizational forms and their role in strategy development and implementation are reviewed. Cases and readings are the principal pedagogical methods utilized. Students work in small project teams, study the operation and effectiveness of systems for strategic control in organizations, and present the results of their analysis in class presentations.

DESN 501. Special Problems and Topics. 1 - 18 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.

DESN 527. Seminar in DESN. 3 Units.
This seminar addresses topics of current interest with a strong emphasis on research. It is intended primarily for the faculty and doctoral students of the DESN Department.

DESN 601. Special Topics in MIS. 1 - 18 Units.
This course is offered, with permission, to Ph.D. candidates undertaking reading in a field of special interest.

DESN 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

DBAP 611. Theory and Practice of Collective Action. 3 Units.
The ability of autonomous and interdependent parties to coordinate actions, or to act cooperatively, affects a wide range of organizational and social problems. This course addresses the theory and practice of collective action in local, national and global contexts. Case studies of collective action problems, such as environmental protection, community revitalization, and the mobilization of interest groups will be discussed. Offered as DBAP 611 and EDMP 611. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 613. Leading Change. 3 Units.
Change is an enigma and yet sustained, desirable change (SDC) drives adaptation, growth and life itself. In this course, we will continuously attempt to answer two questions: What is the process of sustained, desirable change? and What is the role of a leader? Concepts from complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad, team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. Leadership and its development will be examined by studying a number of topics and applying them to three major case studies: (1) yourself; (2) practice coaching with compassion; and (3) a major change project. This course will explore questions, such as: Who are effective leaders? How do they think and act? What makes us want to follow them? How are leaders developed? What is the role of emotional and social intelligence? How does a leader’s mind, body, heart, and spirit affect their performance? Offered as DBAP 613 and EDMP 613. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 614. Business as an Evolving Complex System. 3 Units.
The goal of this course is to provide a foundation for understanding how business systems evolve, why the business systems in the major advanced countries have evolved differently over the last 100 years or so, and what the underlying driving forces are. The focus is on transformation rather than economic growth. The course examines the evolution of business systems as a result of technological and organizational change. It deals with the role of history, culture and finance in generating business organizations in various countries. The course also studies the emergence of regional innovation systems and industry clusters, as well as how digitization and globalization are changing the "industrial logic." Offered as DBAP 614 and EDMP 614. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 616. Global Economic Systems and Issues. 3 Units.
This course provides a framework and analytical tools for understanding globalization and international economic relations in the context of the global political system. It analyzes the economic and political forces that are shaping global cooperation on economic matters, the role and impact of international economic institutions such as the World Bank, the International Monetary Fund, and the World Trade Organization, and evolving forms of regional governance, such as the European Union. It covers national and international policies and development and the causes and cures of international financial crises. The course revolves around concepts of efficiency, equality, power, and institutions in the making of public policy towards globalization of communications and transportation. Offered as DBAP 616 and EDMP 616. Prereq: DBAP 665.
DBAP 617. Technology and Social System Design. 3 Units.
Managers are designers who shape the social and technical world we inhabit. This course explores the process of design and asks how managers can become better designers and interventionists who anticipate and evaluate the social, economic, and political consequences of existing and emerging products, processes, and organizational forms. Offered as DBAP 617 and EDMP 617. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 638. Qualitative Inquiry I. 3 Units.
This course explores ways to conceptualize an object of study and facilitates formulation of students' conceptual work and production of research reports at the end of the first year of the program. The course conveys how to generate research ideas by critically reviewing literature and developing ideas that contribute to a problem or issue of interest by working with theory and extending previous research. The practicality of conducting certain kinds of research is evaluated and length, intensity and ethical constraints of different research efforts are examined. Each student produces a report communicating and supporting a conceptualization of the phenomenon of interest involving independent, mediating and dependent variables. The paper defines a problem of practice, presents, both visually and in narrative form, concepts shaped by field experience and prior writing that promote understanding of the problem, and includes a research proposal describing sample, data collection and data analysis. Offered as DBAP 638 and EDMP 638. Prereq: DBAP 665.

DBAP 640. Social Ethics: Contemporary Issues. 3 Units.
The course draws upon intellectual ancestors and current thinkers in moral philosophy and ethics to assist each student in identifying, analyzing, and discussing social and ethical questions pertaining to the definition and purpose of contemporary life, the need for moral coherence, and the meaning of life in a global society. The unifying theme of the course is Tolstoy's question, “How then shall we live?” The course does not seek to provide answers to the great questions of life. Rather, it tries to expand each student's capacity to grapple with such questions. Offered as DBAP 640 and EDMP 640. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 641. Qualitative Inquiry II. 3 Units.
This course guides the student in conducting the qualitative research project that was proposed in EDM 638. Fieldwork and initial analysis is conducted during the summer when data based on semi-structure interviews is collected and analysis begins using inductive coding techniques. A summer residency is held in mid-June to assess progress as final data collection and analysis continues. The aim of the fall semester is to prepare a formal research report on that project, which will be submitted to an academic research conference. The final report includes a revision of one's conceptual model, integrating new understandings and literature arising from the data collection and analysis. Offered as DBAP 641 and EDMP 641. Prereq: DBAP 638.

DBAP 642. Directed Studies Seminar. 0 - 9 Units.
At different times during the Program, EDM students register for Directed Studies courses. The purpose of these courses is to recognize the work the students are doing to conduct and present their individualized research at a high quality level. Activities conducted under the Directed Studies courses are dedicated to the collection of qualitative or quantitative data and the preparation of research reports. Offered as DBAP 642 and EDMP 642. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 643. Measuring Business Behaviors and Structures. 3 Units.
This course aims to develop the basic foundations and skills for designing and executing generalizable studies. It focuses on building competence in model building, construct measurement, research design, data collection methodologies, and application of analytical software commonly involved in quantitative inquiry. Covered topics include framing research questions, reliability and validity of measurement, quasi-experimental research design, and fieldwork for data collection. Classes are designed to balance between the theory and practice of quantitative research design, and will be linked to the participant's own research projects. Offered as DBAP 643 and EDMP 643. Prereq: DBAP 641.

DBAP 645. Integration of Qualitative and Quantitative Inquiry. 3 Units.
Using the mixed method research toolkit developed in previous courses, this course focuses on critically analyzing selected pieces of published applied and policy research to develop a critical appreciation of issues and debates that have wide applicability and relevance. In particular, it offers students ways to integrate and triangulate using a mixed method approach, different forms of evidence, and related evidence. In addition, this course addresses common method choice and justification issues and related challenges of validity and theory formulation that typically arise during the students' execution of a series of individual research projects. Application of critical analysis and appreciation approach in justifying mixed methods designs to the student's own research work is encouraged and supported by sharing and discussing common research and methodology themes and problems. Offered as DBAP 645 and EDMP 645. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 646. Advanced Analytical Methods for Generalizing Research. 3 Units.
This course addresses advanced topics in regression and structural equation modeling such as latent growth curve models, partial least squares, logit models, tests for various types of invariance, multiple-group analysis, multilevel analysis, and analyzing qualitative/categorical data. These analytical methods are intended to enhance the student's toolkit as to facilitate a strong bridge to the academic literature and the application to specific data based problems that arise in applied managerial research. Offered as DBAP 646 and EDMP 646. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 648. Causal Analysis of Business Problems I. 3 Units.
Model Building & Validation I introduces fundamental concepts in theory-based model building and validation. In this course students will develop, explore, refine and validate a range of models appropriate for addressing their problem of practice including classification models, process models, variance models, and articulating nomological networks. In particular, the course will focus on effective conceptualizations of causation, control, mediation, and moderation. Further, foundational statistical techniques such as tests of assumptions of the data, exploratory factor analysis, and regression and path analysis will be introduced. Offered as DBAP 648 and EDMP 648. Prereq: Must be enrolled in the Doctor of Business Administration Program.
DBAP 649. Causal Analysis of Business Problems II. 3 Units.
Building upon the first course in Model Building & Validation, this course will guide students through the theoretically-grounded variance models that are required for testing through structural equation modeling (SEM) in the quantitative portion of their research. Fundamental concepts in model testing will be reinforced using path analysis, and will include a deeper exploration of moderation by addressing topics such as moderated mediation and interaction effects. Beyond the analysis the course will emphasize precise and accurate formulation of theoretical models and associated reasoning, as well as careful interpretation of findings. The class will also delve into testing of data assumptions and prepare students for the model testing portion of their capstone assignments. Offered as DBAP 649 and EDMP 649. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 664. Knowledge Dissemination to Influence Managerial Practice. 3 Units.
The aim of this course is twofold. First, it supports students organizing and writing their DM thesis overview or their PhD thesis proposal. Also discussed are ways to organize and communicate in scientific genres, their aims and their generic properties. Secondly, students become acquainted with scientific communication and publishing. Effective reviewing, criteria for judging articles and theses, management of review processes, and how to communicate and respond to reviews are topics discussed. The course also addresses publication strategies and ways of managing and communicating scientific and managerial knowledge to different stakeholders. Offered as DBAP 664 and EDMP 664. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 665. Introduction to Research Inquiry. 3 Units.
This course begins participants’ three-year research experience. Energized by one’s personal passion and commitment to the topic, we seek for the work to be accomplished at a level that makes it worthy of widespread dissemination and influence as engaged scholars. The goal in this course is to prepare students to develop their minds as scholars by understanding the world of research; develop a research identity by identifying one’s research domain; learn to read academic literature and write in a scholarly style; work with academic literature to identify and digest concepts and theories that inform research on that problem; begin to develop a conceptual model that abstracts how the world may be functioning in that problem domain and points to a research question that can guide the next stage of the research. The final deliverable for this course is to present the research topic with substantiation for its significance, relevance and timeliness in the management field. This would include the research question(s), the literature review; and proposed qualitative methodology and analytical approach(es). Offered as DBAP 665 and EDMP 665. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 672. Flourishing Enterprise: Creating Sustainable Value for Business and World Benefit. 3 Units.
This course is designed to galvanize new visions of business and society, as well as organizational leadership. The course is born of a conviction that the future of human society and the natural world is intimately linked to the future of the world economy, business enterprises, and management education. The course presentations, books, dialogues, and interview projects are organized around three themes: (1) the state of the world and the economics possibilities of our time, (2) the business case for understanding business as an agent of world benefit—how business performance can profit from current and future advances in sustainable design and social entrepreneurship; and (3) tools for becoming a change leader—including the methods of Appreciative Inquiry and new insights about "strength-based" change emerging from the science of human strengths. The overarching aim is to provide a powerful introduction to the many facets of sustainable value creation as a complete managerial approach. Offered as DBAP 672 and EDMP 672. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 673. Understanding, Designing, Managing Complex Systems. 3 Units.
The purpose of this course is to provide a perspective on systems thinking and complex systems and aid PhD students in expanding the ideas in their research on systems, systems models, and complex systems. The work of the course will develop with increasingly difficult books on the subject of complex systems, a major case study in health care, and individual applications of the concepts to their potential research model and methods. Offered as DBAP 673 and EDMP 673. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 677. Designing Sustainable Systems. 3 Units.
Students in teams will recognize and work in practice on a managerial problem that involves dimensions of sustainability and design. They will develop a set of solutions to the problem by generating alternative models and intervention strategies to address the problem. The project results in a short presentation and written communication of the solution in a form of a poster or prototype. The course will also include presentations of intervention and action research approaches and issues of inquiry validation and theory development. Offered as DBAP 677 and EDMP 677. Prereq: Must be enrolled in the Doctor of Business Administration Program.

DBAP 680. Conflict & Cooperation in the Global Arena. 3 Units.
The global arena is described by some as a realm of perpetual conflict. Others argue that given the right institutions and incentives, international actors can find ways to achieve cooperation, peace and increased global prosperity. Still others suggest that the international political and economic arena is “what you make of it”—emphasizing the role of norms, identities and ideas in shaping international outcomes. This course will examine both theoretical and policy perspectives regarding the question of international conflict and cooperation, with a specific emphasis on drawing on insights from collective action theory and international relations scholarship. Offered as DBAP 680 and EDMP 680. Prereq: Must be enrolled in the Doctor of Business Administration Program.

This course is set up individually upon conference between the student and a DM Faculty member and is designed in consult with the DM Program Director in order to complete the student's required coursework and research requirements within the DM Program. Offered as DBAP 699 and EDMP 699. Prereq: DBAP 665.
ECON 102. Principles of Microeconomics. 3 Units.
This course is an introduction to microeconomic theory, providing a foundation for future study in economics. In particular, it addresses how individuals and businesses make choices concerning the use of scarce resources, how prices and incomes are determined in competitive markets, and how market power affects the prices and quantities of goods available to society. We will also examine the impact of government intervention in the economy.

ECON 103. Principles of Macroeconomics. 3 Units.
While Microeconomics looks at individual consumers and firms, Macroeconomics looks at the economy as a whole. The focus of this class will be on the business cycle. Unemployment, inflation and national production all change with the business cycle. We will look at how these are measured, their past behavior and at theoretical models that attempt to explain this behavior. We will also look at the role of the Federal Government and the Federal Reserve Bank of the United States in managing the business cycle.

ECON 216. Data Visualization in R. 3 Units.
Visualizations, such as graphs and maps, provide a compelling and intuitively appealing approach to understanding data and communicating that understanding to others. This course provides a practical, hands-on introduction to the creation of beautiful visual displays of social science data. We will learn the powerful but easy to use visualization tools in the R language. No prior experience in working with data or in coding is required. Counts for CAS Quantitative Reasoning Requirement. Prereq: Sophomore standing.

ECON 307. Intermediate Macro Theory. 3 Units.
Macroeconomics studies aggregate indicators of the performance of an economy, most commonly measured in terms of GDP, and the rates of unemployment and inflation. An important goal of macroeconomic researchers is to develop a model of an economy that is simple, yet powerful enough to explain the historical trends of these aggregate economic indicators. Needless to say, coming up with a good model has remained a very difficult task. So far, there is no single model that is good enough to coherently explain even the most prominent historical trends of aggregate economic indicators. But several models have been built, each offering insight into a certain aspect of the economy. Throughout the course model building is motivated by real world cases from the American economy. Prereq: ECON 102 and ECON 103.

ECON 308. Intermediate Micro Theory. 3 Units.
This course builds on ECON 102 and provides a more in-depth analysis of the theory of the consumer, the theory of the firm, market equilibrium, market failure and government intervention in the market. The focus in this class is on intuition, rather than mathematical derivations, although there will be some. You should come away from this course with a greater understanding of how consumers and firms make their decisions and how they interact in the market place. Note: a student cannot receive degree credit for both ECON 308 and ECON 309. Prereq: ECON 102 and (MATH 121 or MATH 125).

ECON 309. Intermediate Micro Theory: Calculus-Based. 3 Units.
This course builds on Economics 102 and provides a more in-depth analysis of the theory of the consumer, the theory of the firm, market equilibrium, market failure and government intervention in the market. We will use calculus to derive supply, demand and market equilibrium from first principles. You should come away from this course with a greater understanding of how consumers and firms make their decisions and how they interact in the market place. Note: a student cannot receive degree credit for both ECON 308 and ECON 309. Prereq: ECON 102 and (MATH 122 or MATH 126).

ECON 312. Entrepreneurial Finance. 3 Units.
This course explores the financing and financial management of entrepreneurial new ventures. The course will focus on issues of financial management of new ventures (forecasting cash flows, cash flow management, valuation, capital structure) and the various financial methods and mechanisms available to entrepreneurs (bootstrapping, angel investors, venture capitalists, IPOs). ECON 312.

ECON 313. Experiential Entrepreneurship. 3 Units.
Experiential entrepreneurship places students in a startup (founded by the student or someone else) for a semester, while simultaneously teaching students key concepts for startup success in a classroom setting. Each session covers tools and concepts that every entrepreneur should understand, and students should be able to apply these tools and concepts to their host companies. Prereq: ECON 102.

ECON 326. Econometrics. 4 Units.
Econometrics is the application of statistics to empirical economic analysis. One way of testing the validity of economic theories is to gather data and apply statistical tests to see if the data support the theory. These data are usually gathered by observing actual economies, firms and consumers, rather than by performing experiments in a laboratory. Because field data does not have the precision and control of laboratory data, analysts must compensate by adjusting their statistical procedures. In this class, we will concentrate on regression analysis, which is the basic tool of the economic researcher. We will study the assumptions commonly made in the application of this technique, the consequences of violating these assumptions, and the corrections that can be made. Students will have a chance to formulate and test their own hypotheses using econometric software available for personal computers. Prereq: ECON 102 and ECON 103 and (Opre 207 or STAT 243 or STAT 312).

ECON 327. Advanced Econometrics. 3 Units.
This class builds on the foundations of applied regression analysis developed in ECON 326. The goal of the class is to equip students with the tools to conduct a causal analysis of a hypothesis in a variety of settings. Topics will include causality, panel and time series data, instrumental variables and quasi-experiments, semi- and non-parametric methods, and treatment evaluation. Offered as ECON 327 and ECON 427. Prereq: ECON 326.
ECON 328. Designing Experiments for Social Science, Policy, and Management. 3 Units.
Both economists and firms are increasingly relying on experiments to study the economic behavior of individuals and the effectiveness of policies in a wide range of settings. This course gives students the tools they need to design and critique experiments that answer a research or business question. A small part of the class will be devoted to important theoretical concepts in experimental design, such as treatments, factorial designs, randomization, and internal validity, biases, and inference problems. The bulk will be devoted to learning about how these concepts come together by discussing exciting new experimental work on topics such as discrimination and identity, cooperation versus self-interest, and dishonesty and corruption. Prereq: ECON 102 and (OPRE 207, STAT 201, STAT 243, STAT 312, ANTH 319, or PSCL 282).

ECON 329. Game Theory: The Economics of Thinking Strategically. 3 Units.
The term "game theory" refers to the set of tools economists use to think about strategic interactions among small groups of individuals and firms. The primary purpose of this course is to introduce students to the basic concepts of game theory and its applications. The class will stress the use of game theory as a tool for building models of important economic phenomena. The class will also include a number of experiments designed to illustrate the game theoretic results, and to highlight how reality may depart from the theory. The course will stress the value of thinking strategically and provide students with a framework for thinking strategically in their everyday lives. Rather than approaching each strategic situation they encounter as a unique problem, students will be taught to recognize patterns in the situations they face and to generalize from specific experiences. A paper on an application of game theory will be required for graduate students. Offered as ECON 329 and ECON 429. Prereq: ECON 102.

ECON 330. Economic Behavior and Psychology. 3 Units.
This course is an introduction to Behavioral Economics, a growing field which incorporates insights from other disciplines--primarily psychology--into microeconomic models. We will cover fundamental aspects of decision-making, such as how people respond to risk, how people make trade-offs between short-term and long-term rewards, and the ways in which people aren't as selfish as standard economic models suggest. We will cover novel economic models that can accommodate phenomena such as altruism, loss aversion, and self-control problems. We will discuss empirical applications of these concepts in areas ranging from personal finance and health to marketing and public policy. Prereq: ECON 102.

ECON 332. Economic Analysis of Labor Markets. 3 Units.
This course explores the economics of work and pay. We take a comprehensive look at labor markets in the U.S. and other advanced countries and examine related social policy issues. These include the effect of unions on wages; the underpinnings of the income distribution of the U.S.; issues of poverty and welfare; discrimination and wage differential by gender and race; the relationship between work and family; education as a determinant of wages; immigration and migration, and the way firms use wage and employment practices to motivate their employees to work productively. What makes labor economics special is that the commodity we examine is human labor, something that is central to the organization of our lives and the functioning of the economy. Labor economics thus applies the standard neoclassical model of demand, supply, and equilibrium to many areas that also have a profound human dimension. Prereq: ECON 102.

ECON 333. The Economics of Organizations and Employment Relationships. 3 Units.
Economic activity is guided not only by the "invisible hand" of the market, but also by the "visible hand" of management. This class uses microeconomic concepts to understand different ways of organizing economic activity, including firms, cooperatives, and state-owned enterprises. The course focuses on the roles of information, property rights, and incentives in determining the origin and performance of different types of organizations. We look at problems faced by real organizations, examining questions such as, are Facebook and Uber fundamentally new types of firms? Why do some firms offer high-paying jobs while competitors in the same industry do not (eg, Costco vs. Walmart)? What are the impacts of different kinds of contracts with workers and supply chain firms on incentives to work hard, invest, and innovate? Should firms maximize shareholder value, or something else? Why are firms often not able to survive "disruptive innovation"? Are venture capitalists promoters or thwarters of innovation? An objective of the course is to give students a rigorous understanding of fundamental principles that will allow them to examine their own careers, even as many features of the economy change dramatically. Prereq: ECON 102.

ECON 338. Law and Economics. 3 Units.
This course examines legal institutions and rules from an economic perspective. Students will learn when and how legal rules can be efficient. Topics will include property law (including intellectual property), tort law, contracts, and crime. Offered as ECON 338 and ECON 438. Prereq: ECON 102.

ECON 341. Money and Banking. 3 Units.
This course emphasizes the importance of financial markets, the nature and role of the financial system, and the linkages between these--money and banking--and the economy. Emphasis is placed on both theoretical and practical constructs, on major innovations and contemporary changes, and the closely intertwined condition of financial and economic systems with monetary and fiscal policy. Offered as BAFI 341 and ECON 341.

ECON 342. Public Finance. 3 Units.
Government intervention is a pervasive feature of every modern economy. The goal of this course is to develop the economic tools for understanding and evaluating a wide range of government behaviors such as taxation and redistribution policy, the public provision of goods and services, and the regulation of private markets. ECON 342 begins by considering "market failures" that justify government intervention in a market economy. To respond to such failures, governments must raise revenues through taxation. Using the tools of microeconomic theory, we will develop a framework for thinking about the positive and normative effects of alternative forms of taxation. Particular attention will be paid to the individual income tax in the U.S., allowing students to understand the efficiency, distributional and behavioral implications of recent changes in the tax code. We will then turn to the expenditure side of the public sector. The economic principles used to evaluate public expenditures will be discussed and exemplified through the analysis of significant public programs. Of particular interest will be the effect of public programs on the incentives faced by workers and families. Prereq: ECON 102.

ECON 346. Economic Perspectives. 3 Units.
This course examines important contemporary and historical issues from an economic perspective. It enables students to think about the world "like an economist." Possible topics of current interest include the transformation of Eastern Europe; ethic and racial strife; environmental policy and sustainable development; and professional sports.
ECON 350. Regional and Urban Economics: The Case of Israel. 3 Units.
The goal of this course is to develop a deep understanding of core issue in regional and urban economics. Israel, by dint of its unique history and geo-political environment, provides a fascinating case study on the impact of refugees and immigration, urban planning and governance, security concerns, inequities and discrimination, labor force participation, poverty, environmentalism, and regional cooperation. This course provides a learning experience about these topics both via classroom time at Israeli universities and through visits to carefully chosen sites throughout the country. The trip includes a small amount of discretionary time for visiting spiritually significant sites as well. Counts for CAS Global & Cultural Diversity Requirement. Prereq: ECON 102 or ECON 103.

ECON 351. Startup Nation Trip Course. 3 Units.
The course offers an opportunity to experience, first hand, Israel’s raging start-up economy. Students will visit some of the country’s hottest high-tech companies and meet face-to-face with top entrepreneurs and investors. The course will meet with prominent figures in the Israeli innovation scene, including directors of leading accelerators; top angel investors; leaders of corporate innovation; and representatives of governmental entrepreneurship agencies. Topics will include: the role of military in spurring innovation, public support for innovation, biotech, water, energy, cyber security, and new funding models. Prereq: ECON 102.

ECON 355. The Origins of the Modern Economy. 3 Units.
This course in economic history investigates the process by which the modern industrial economy, with its high and growing standard of living, came into being. It traces the development of important pre-modern economic institutions, such as agriculture, states, markets, and long-distance trade. The industrial revolution, the fulcrum that launched the modern economy, is then explored in detail, including its origins and uneven spread around the world. Prereq: ECON 102.

ECON 360. Economics of Crime. 3 Units.
Crime and incarceration impose tremendous costs on society with lasting impact on individuals, families, and communities. Over the past four decades, the incarceration rate in the United States has grown to an historically unprecedented level with approximately 2.2 million people behind bars. In light of the substantial resources allocated towards crime, it is only natural to ask whether the criminal justice system achieves its goals. The purpose of this course is to develop the analytical skills necessary for understanding the economic rationale for criminal law and the criminal justice system. Through the lens of microeconomic theory, we will deal with questions such as when and what to criminalize, the severity of punishment, the determinants of the supply of criminal activity, the effects of policing, and the optimal level of enforcement. This course will introduce students to key concepts in crime policy and help develop their policy analysis skills, including the ability to frame problems and policy alternatives, think critically about empirical evidence, use cost-effectiveness and cost-benefit analysis to compare policy alternatives, and communicate the findings in writing. Prereq: ECON 102.

ECON 364. Economic Analysis of Business Strategies. 3 Units.
This course examines how companies compete against each other and interact with customers in an effort to increase profits. Topics include: pricing strategies, product differentiation, advertising, R&D strategies, bundling and tie-ins, entry barriers, mergers and acquisitions, collusion and cartels, the dynamics of network industries (e.g. information technology), and technology adoption and diffusion. The course will take two complementary perspectives. First, we will consider the point of view of companies, and ask how different business strategies can affect competitive success. Second, we will consider the perspective of consumers and policymakers: we will ask whether different firm strategies enhance or reduce social welfare, and will explore different policy options to increase welfare (e.g. antitrust policies, patent systems). The first part of the course will utilize a range of basic economic tools. In the second part of the course, we will apply what was learned in the first part to real examples of firms and industries, including both business and legal cases. Prereq: ECON 102.

ECON 366. Economics of Sports. 3 Units.
The world of sports provides many captivating examples of how economic tools and methods can be understood through real-world applications. While the popularity of sports is unquestioned, there are many ways in which economics can delve more deeply into the hidden inner-workings of the sports world. When sports teams acquire a new player, are they attempting to maximize wins, or profits? Do the NCAA, NFL, or other sports leagues have a monopoly, and what costs would this entail? What incentives guide sports teams, strategies, and would they ever lose on purpose? Is it worth it to subsidize a sports team to build a new stadium, or renovate an existing arena, in your city? The purpose of this course is to perform economic analysis of sports teams, leagues, and institutions by applying economic tools to a variety of sport-related topics. Microeconomic theory is applied to these questions, and others, drawing from economic fields including industrial organization and public finance. Students with an interest in applying basic economic tools to answer real-world questions in the rapidly growing world of sports should strongly consider taking this course. Prereq: ECON 102.

ECON 368. Environmental Economics. 3 Units.
Economics provides a critically important lens for understanding why environmental problems arise and persist, and the consequences of efforts to mitigate those problems. We will apply economics tools to real-world problems, such as: how can we address climate change without massive job loss? why do markets fail to prevent pollution, and how can government policy do better? Under what circumstances can companies profit by polluting less? What kinds of policies can spur the invention of green technologies? Class sessions will include guest presentations from professionals who are actively working on environmental challenges. Offered as ECON 368 and ECON 468. Prereq: ECON 102.

ECON 369. Economics of Technological Innovation and Entrepreneurship. 3 Units.
This course is designed to help students identify, evaluate, and obtain control over technological opportunities so they may successfully understand the challenges of starting new companies. The course focuses on four themes: 1) the source, discovery and evaluation of technological opportunities; 2) the process of organizing a new firm to produce new technology that satisfies the needs of customers; 3) the acquisition of financial and human resources necessary to exploit technological opportunities; and 4) the development of mechanism to appreciate the returns from exploitation of technological opportunities. Prereq: ECON 102.
ECON 372. International Finance. 3 Units.
This course deals with open-economy macroeconomics and international financial markets, covering open-economy national income analysis, international macroeconomic policy coordination, exchange rate determination, foreign portfolio investment, and global financial crises. Prereq: ECON 102 and ECON 372. Prereq: ECON 103.

ECON 373. International Trade. 3 Units.
This course deals with international trade theories and policies, covering: gains from and patterns of trade; immigration; foreign direct investment; protectionism; multilateral trade liberalization; regionalism; and the costs and benefits of globalization within, as well as among, nations. Prereq: ECON 102.

ECON 374. Financial Regulation. 3 Units.
This course will provide students with an understanding of the economic underpinnings of financial regulation as it exists in the United States today. The course will highlight salient aspects of financial markets, such as asymmetric information and the chains of exposures linking financial market participants, that make financial regulation both necessary and yet problematic. Emphasis will be put on the difference between regulations on individual financial firms as compared with regulating for systemic financial stability. The course will be designed to: (1) provide enhanced understanding of financial markets to undergraduate students who have already taken ECON/BAFI 341 (Money and Banking); (2) provide institutional insight to master’s level finance students; (3) illustrate the application of welfare analysis to financial regulation, and (4) teach all students to think critically about regulatory arbitrage and the dynamic evolution of regulated markets. Prereq: ECON 102, ECON 103 and (ECON 341 or BAFI 341).

ECON 375. Economics of Developing Countries. 3 Units.
This course focuses on international aspects of economic development. The term "developing country" is often defined as a country that exhibits low per capita income, high poverty level, low level of industrialization, or low life expectancy. In terms of size, the developing countries make up at least three-fourth of the world population. Why do we study those countries' economies separately from the industrialized economies? In fact, low economic growth, high unemployment, or high poverty rates also exist in many developed countries. The differences lie not in the types of problems but in the causes of these problems. In addition, differences in the kind of institutions that prevail in developing countries also lead to different policy prescriptions. Among developing countries, differences in historical experience, cultural practices, political institutions and economic conditions are also enormous. Illustrations and explanations of those differences are provided from a wide range of developing countries. Prereq: ECON 102.

ECON 376. Inside Financial Crises. 3 Units.
Financial crises throughout history share common elements, though each one contains aspects unique to its own era. Why do financial systems tend to develop imbalances that lead to bankruptcies and systemic collapse? What are the linkages that cause spillovers from financial systems to the broader economy? What tools are available to detect and counter financial pressures before they erupt into economic catastrophe? This course will examine these issues, by examining several recent financial collapses, including the 2007-2009 global financial crisis. We consider post-crisis legislative and regulatory responses, and ask whether they are likely to dramatically reduce the odds of another crisis. Prereq: ECON 102 and ECON 103.

ECON 377. Topics in Monetary Policy. 3 Units.
Central banks have become enormously powerful economic institutions in many countries, yet their purposes and functions are widely misunderstood. This course is designed to enrich one's understanding of how central banks, such as the Federal Reserve System, actually operate; how they have been adapting to changes in the economic and financial landscape; and how they have been adapting to changes in technology. The course will highlight current monetary policy and central banking issues being dealt with in the United States and elsewhere. The course will emphasize the connection between economic theory and the practice of central banking. Where relevant, topics will be examined from a multi-country perspective, so that the practices of several different countries may be compared and contrasted. Prereq: ECON 102 and ECON 103.

ECON 378. Health Care Economics. 3 Units.
Healthcare accounts for over one-sixth of the U.S. national economy and over one-eighth of its workforce, shares that have dramatically increased over the last 50 years. The rapid growth in healthcare spending has accompanied growing concerns about the quality and efficiency of U.S. healthcare delivery and persistent disparities in access to care. Are these concerns justified? If so, what can policymakers do - and what are they doing - to address them? The purpose of this course is to develop the analytical skills necessary for understanding how the U.S. health care sector operates, how it has evolved, the forces at work behind perceived deficiencies (in access, quality and cost control), and the expected impact of alternative policy proposals. These issues are addressed through the lens of microeconomic theory. Under this framework, outcomes result from the interaction of decisions made by participants in the healthcare economy (e.g. patients, providers, insurers, government), with those decisions governed by the preferences, incentives and resource constraints facing each decision-maker. This course should be of particular interest to students who envision future careers in healthcare delivery, healthcare management, pharmaceutical and device innovation, health insurance or public health, as well as other policy-oriented students seeking to understand the contentious issues in healthcare policymaking. Prereq: ECON 102.

ECON 380. Computational Economics. 3 Units.
Over the past two decades, computational methods have become an indispensable tool in social science studies. The goal of this course is to introduce undergraduate students to numerical methods and computer implementations for conducting modern quantitative research in economics and social sciences. In this course, we will learn about how to utilize computational methods to conduct research in several different domains, including microeconomics, macroeconomics, financial market, and empirical methods. At the conclusion of this course, students will be able to effectively apply quantitative solution methods to a wide range of economic, financial, and business issues. In addition, students will learn Python as a basic programming language. The learned programming skills will be readily applicable out of classroom. Computational economics will provide students a comprehensive experience and training in economics, computer science, and statistics. Students will be able to distinguish themselves on the job-market, as candidates ready to work in an environment that requires both economics insights and strong quantitative data/computational skills. The course will also be highly useful for students who plan to go to graduate school in either economics, business, finance or statistics. Recommended preparation but not required: basic programming experience (e.g. using Python, R, Matlab, Stata). Prereq: (ECON 102 or ECON 103) and (OPRE 207, ANTH 319, SOCI 307, STAT 201, STAT 243, STAT 312, or STAT 312R).
ECON 386. Urban Economics. 3 Units.
Microeconomic theory as taught in principles (and even intermediate) does not usually take into account the fact that goods, people, and information must travel in order to interact. Rather, markets are implicitly modeled as if everyone and everything is at a single point in space. In the first part of the course, we will examine the implications of spatial location for economic analysis. In the second part of the class, we will use microeconomic tools to understand urban problems. Topics that we will cover include urban growth, suburbanization, land use, poverty, housing, local government, transportation, education, and crime. Prereq: ECON 102.

ECON 391. Advanced Topics and Writing in Economics. 3 Units.
This course is characterized by intense yet open-ended intellectual inquiry, guided by reading from primary and secondary sources, and will include extensive practice in written and oral communication. The focus will be on contemporary economic issues and scholarship, and assumes a high level of ability in undergraduate economics training. Specifically, this course provides an avenue for an intellectual discourse on some of the most challenging present day economic issues, and we will rigorously think and write about how economic concepts can be applied to virtually any topic, issue and event in the social world. Students will be challenged throughout the course to think and write like an economist and see the world through the economist's lens. Counts as SAGES Departmental Seminar. Prereq: (ECON 308 or ECON 309) and (ECON 326 or BAFI 361).

ECON 395. Senior Capstone in Economics. 3 Units.
This course satisfies the SAGES capstone experience for economics majors, giving students the opportunity to apply their knowledge from previous coursework to conduct economic research in the role of an on-the-job economist. Opportunities to research economic issues on the American economy will be provided in two ways: one through short data analysis projects on various assigned topics and another larger project of original research on a topic of the student's choosing. For the shorter empirical assignments students will take on the role of an economist, whether it be for a company or in public policy. Students will offer both theoretical and empirical analyses of economic issues, both historical and new, such as wage discrimination, determining damages in a court case, analyzing product data for a firm, and analyzing a firm's anticompetitive behavior. For their project of original research, students will identify an applied research problem, determine an appropriate research methodology, give a review of the literature, gather data, run an economic analysis, and interpret the results. Projects will be presented in writing, orally, and with posters. Counts as SAGES Senior Capstone. Prereq: ECON 326 and Junior or Senior standing.

ECON 397. Honors Research I. 3 Units.
All students admitted to the Honors Program will undertake an independent research project (Senior Thesis) under the guidance of a faculty member (Thesis Advisor). ECON 397 is used to define the topic, review relevant literature, formulate hypotheses, and collect appropriate data toward completing their research project. Students will have the responsibility of providing regular progress reports to their thesis advisor highlighting the work accomplished to date, the immediate challenges confronting them, and a plan to complete the project in the time remaining. Prereq: ECON 102, ECON 103, ECON 326 and ECON 308 or ECON 309; Junior standing and minimum GPA of 3.3 in ECON major and 3.0 overall.

ECON 398. Honors Research II. 3 Units.
This is the second course in a two course sequence to complete the Honors Research Program in Economics. Counts as SAGES Senior Capstone. Prereq: A grade of B or higher in ECON 397.

ECON 399. Individual Readings and Research. 1 - 6 Units.
Intensive examination of a topic selected by the student. A student must receive permission from the program administrator before the start of the term, and permission will only be granted in cases where the student has a clear learning plan and objectives in using the independent readings/research option that cannot be met through available course offerings.

ECON 427. Advanced Econometrics. 3 Units.
This class builds on the foundations of applied regression analysis developed in ECON 326. The goal of the class is to equip students with the tools to conduct a causal analysis of a hypothesis in a variety of settings. Topics will include causality, panel and time series data, instrumental variables and quasi-experiments, semi- and non-parametric methods, and treatment evaluation. Offered as ECON 327 and ECON 427.

ECON 429. Game Theory: The Economics of Thinking Strategically. 3 Units.
The term "game theory" refers to the set of tools economists use to think about strategic interactions among small groups of individuals and firms. The primary purpose of this course is to introduce students to the basic concepts of game theory and its applications. The class will stress the use of game theory as a tool for building models of important economic phenomena. The class will also include a number of experiments designed to illustrate the game theoretic results, and to highlight how reality may depart from the theory. The course will stress the value of thinking strategically and provide students with a framework for thinking strategically in their everyday lives. Rather than approaching each strategic situation they encounter as a unique problem, students will be taught to recognize patterns in the situations they face and to generalize from specific experiences. A paper on an application of game theory will be required for graduate students. Offered as ECON 329 and ECON 429. Prereq: MBAC 512 or MBAP 406.

ECON 431. Economics of Negotiation and Conflict Resolution. 3 Units.
Students frequently enroll in a negotiation class with one thought in mind—negotiating a better job offer from an employer. They soon learn, however, that negotiation skills can do far more than improve a paycheck. Negotiations occur everywhere: in marriages, in divorces, in small work teams, in large organizations, in getting a job, in losing a job, in deal making, in decision making, in board rooms, and in court rooms. The remarkable thing about negotiations is that, wherever they occur, they are governed by similar principles. The current wave of corporate restructuring makes the study of negotiations especially important for M.B.A.s. Mergers, acquisitions, downsizing and joint ventures call into question well established business and employment relationships. Navigating these choppy waters by building new relationships requires the negotiation skills that you will learn in this class. Offered as ECON 431 and ORBH 413.

ECON 438. Law and Economics. 3 Units.
This course examines legal institutions and rules from an economic perspective. Students will learn when and how legal rules can be efficient. Topics will include property law (including intellectual property), tort law, contracts, and crime. Offered as ECON 338 and ECON 438. Prereq: MBAC 512 or MBAP 406.

ECON 439. Individual Readings and Research. 1 - 6 Units.
Intensive examination of a topic selected by the student. A student must receive permission from the program administrator before the start of the term, and permission will only be granted in cases where the student has a clear learning plan and objectives in using the independent readings/research option that cannot be met through available course offerings.
ECON 468. Environmental Economics. 3 Units.
Economics provides a critically important lens for understanding why environmental problems arise and persist, and the consequences of efforts to mitigate those problems. We will apply economics tools to real-world problems, such as: how can we address climate change without massive job loss? why do markets fail to prevent pollution, and how can government policy do better? Under what circumstances can companies profit by polluting less? What kinds of policies can spur the invention of green technologies? Class sessions will include guest presentations from professionals who are actively working on environmental challenges. Offered as ECON 368 and ECON 468. Prereq: MBAC 512 or MBAP 406.

ECON 501. Special Problems and Topics. 1 - 18 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.

EDMP

EDMP 611. Theory and Practice of Collective Action. 3 Units.
The ability of autonomous and interdependent parties to coordinate actions, or to act cooperatively, affects a wide range of organizational and social problems. This course addresses the theory and practice of collective action in local, national and global contexts. Case studies of collective action problems, such as environmental protection, community revitalization, and the mobilization of interest groups will be discussed. Offered as DBAP 611 and EDMP 611. Prereq: Must be enrolled in the DM Program.

EDMP 613. Leading Change. 3 Units.
Change is an enigma and yet sustained, desirable change (SDC) drives adaptation, growth and life itself. In this course, we will continuously attempt to answer two questions: What is the process of sustained, desirable change? and What is the role of a leader? Concepts from complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad, team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. Leadership and its development will be examined by studying a number of topics and applying them to three major case studies: (1) yourself; (2) practice coaching with compassion; and (3) a major change project. This course will explore questions, such as: Who are effective leaders? How do they think and act? What makes us want to follow them? How are leaders developed? What is the role of emotional and social intelligence? How does a leader’s mind, body, heart, and spirit affect their performance? Offered as DBAP 613 and EDMP 613. Prereq: Must be enrolled in the DM Program.

EDMP 614. Business as an Evolving Complex System. 3 Units.
The goal of this course is to provide a foundation for understanding how business systems evolve, why the business systems in the major advanced countries have evolved differently over the last 100 years or so, and what the underlying driving forces are. The focus is on transformation rather than economic growth. The course examines the evolution of business systems as a result of technological and organizational change. It deals with the role of history, culture and finance in generating business organizations in various countries. The course also studies the emergence of regional innovation systems and industry clusters, as well as how digitization and globalization are changing the "industrial logic." Offered as DBAP 614 and EDMP 614. Prereq: Must be enrolled in the DM Program.

EDMP 616. Global Economic Systems and Issues. 3 Units.
This course provides a framework and analytical tools for understanding globalization and international economic relations in the context of the global political system. It analyzes the economic and political forces that are shaping global cooperation on economic matters, the role and impact of international economic institutions such as the World Bank, the International Monetary Fund, and the World Trade Organization, and evolving forms of regional governance, such as the European Union. It covers national and international policies and development and the causes and cures of international financial crises. The course revolves around concepts of efficiency, equality, power, and institutions in the making of public policy towards globalization of communications and transportation. Offered as DBAP 616 and EDMP 616. Prereq: EDMP 665.

EDMP 617. Technology and Social System Design. 3 Units.
Managers are designers who shape the social and technical world we inhabit. This course explores the process of design and asks how managers can become better designers and interventionists who anticipate and evaluate the social, economic, and political consequences of existing and emerging products, processes, and organizational forms. Offered as DBAP 617 and EDMP 617. Prereq: Must be enrolled in the DM Program.

EDMP 638. Qualitative Inquiry I. 3 Units.
This course explores ways to conceptualize an object of study and facilitates formulation of students’ conceptual work and production of research reports at the end of the first year of the program. The course conveys how to generate research ideas by critically reviewing literature and developing ideas that contribute to a problem or issue of interest by working with theory and extending previous research. The practicality of conducting certain kinds of research is evaluated and length, intensity and ethical constraints of different research efforts are examined. Each student produces a report communicating and supporting a conceptualization of the phenomenon of interest involving independent, mediating and dependent variables. The paper defines a problem of practice, presents, both visually and in narrative form, concepts shaped by field experience and prior writing that promote understanding of the problem, and includes a research proposal describing sample, data collection and data analysis. Offered as DBAP 638 and EDMP 638. Prereq: EDMP 665.

EDMP 640. Social Ethics: Contemporary Issues. 3 Units.
The course draws upon intellectual ancestors and current thinkers in moral philosophy and ethics to assist each student in identifying, analyzing, and discussing social and ethical questions pertaining to the definition and purpose of contemporary life, the need for moral coherence, and the meaning of life in a global society. The unifying theme of the course is Tolstoy’s question, “How then shall we live?” The course attempts to answer two questions: What is the process of sustained, desirable change (SDC) drives adaptation, growth and life itself? and What is the role of a leader? Concepts from complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad, team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. Leadership and its development will be examined by studying a number of topics and applying them to three major case studies: (1) yourself; (2) practice coaching with compassion; and (3) a major change project. This course will explore questions, such as: Who are effective leaders? How do they think and act? What makes us want to follow them? How are leaders developed? What is the role of emotional and social intelligence? How does a leader’s mind, body, heart, and spirit affect their performance? Offered as DBAP 613 and EDMP 613. Prereq: Must be enrolled in the DM Program.

EDMP 665. Research Methods I. 3 Units.
This course is designed to facilitate formulation of students' conceptual work and production of research reports at the end of the first year of the program. The course conveys how to generate research ideas by critically reviewing literature and developing ideas that contribute to a problem or issue of interest by working with theory and extending previous research. The practicality of conducting certain kinds of research is evaluated and length, intensity and ethical constraints of different research efforts are examined. Each student produces a report communicating and supporting a conceptualization of the phenomenon of interest involving independent, mediating and dependent variables. The paper defines a problem of practice, presents, both visually and in narrative form, concepts shaped by field experience and prior writing that promote understanding of the problem, and includes a research proposal describing sample, data collection and data analysis. Offered as DBAP 638 and EDMP 638. Prereq: EDMP 665.
EDMP 641. Qualitative Inquiry II. 3 Units.
This course guides the student in conducting the qualitative research project that was proposed in EDMP 638. Fieldwork and initial analysis is conducted during the summer when data based on semi-structure interviews is collected and analysis begins using inductive coding techniques. A summer residency is held in mid-June to assess progress as final data collection and analysis continues. The aim of the fall semester is to prepare a formal research report on that project, which will be submitted to an academic research conference. The final report includes a revision of one's conceptual model, integrating new understandings and literature arising from the data collection and analysis. Offered as DBAP 641 and EDMP 641. Prereq: EDMP 638.

EDMP 642. Directed Studies Seminar. 0 - 9 Units.
At different times during the Program, EDM students register for Directed Studies courses. The purpose of these courses is to recognize the work the students are doing to conduct and present their individualized research at a high quality level. Activities conducted under the Directed Studies courses are dedicated to the collection of qualitative or quantitative data and the preparation of research reports. Offered as DBAP 642 and EDMP 642. Prereq: Must be enrolled in DM program or PhD in Management: Designing Sustainable Systems track.

EDMP 643. Measuring Business Behaviors and Structures. 3 Units.
This course aims to develop the basic foundations and skills for designing and executing generalizable studies. It focuses on building competence in model building, construct measurement, research design, data collection methodologies, and application of analytical software commonly involved in qualitative inquiry. Covered topics include framing research questions, reliability and validity of measurement, quasi-experimental research design, and fieldwork for data collection. Classes are designed to balance between the theory and practice of quantitative research design, and will be linked to the participant’s own research projects. Offered as DBAP 643 and EDMP 643. Prereq: EDMP 641.

EDMP 645. Integration of Qualitative and Quantitative Inquiry. 3 Units.
Using the mixed method research toolkit developed in previous courses, this course focuses on critically analyzing selected pieces of published applied and policy research to develop a critical appreciation of issues and debates that have wide applicability and relevance. In particular, it offers students ways to integrate and triangulate using a mixed method approach, different forms of evidence, and related evidence. In addition, this course addresses common method choice and justification issues and related challenges of validity and theory formulation that typically arise during the students’ execution of a series of individual research projects. Application of critical analysis and appreciation approach in justifying mixed methods designs to the student’s own research work is encouraged and supported by sharing and discussing common research and methodology themes and problems. Offered as DBAP 645 and EDMP 645. Prereq: Must be enrolled in the DM Program.

EDMP 646. Advanced Analytical Methods for Generalizing Research. 3 Units.
This course addresses advanced topics in regression and structural equation modeling such as latent growth curve models, partial least squares, logit models, tests for various types of invariance, multiple-group analysis, multilevel analysis, and analyzing qualitative/categorical data. These analytical methods are intended to enhance the student’s toolkit as to facilitate a strong bridge to the academic literature and the application to specific data based problems that arise in applied managerial research. Offered as DBAP 646 and EDMP 646. Prereq: Must be enrolled in the DM Program.

EDMP 648. Causal Analysis of Business Problems I. 3 Units.
Model Building & Validation I introduces fundamental concepts in theory-based model building and validation. In this course students will develop, explore, refine and validate a range of models appropriate for addressing their problem of practice including classification models, process models, variance models, and articulating nomological networks. In particular, the course will focus on effective conceptualizations of causation, control, mediation, and moderation. Further, foundational statistical techniques such as tests of assumptions of the data, exploratory factor analysis, and regression and path analysis will be introduced. Offered as DBAP 648 and EDMP 648. Prereq: Must be enrolled in the DM Program.

EDMP 649. Causal Analysis of Business Problems II. 3 Units.
Building upon the first course in Model Building & Validation, this course will guide students through the theoretically-grounded variance models that are required for testing through structural equation modeling (SEM) in the quantitative portion of their research. Fundamental concepts in model testing will be reinforced using path analysis, and will include a deeper exploration of moderation by addressing topics such as moderated mediation and interaction effects. Beyond the analysis the course will emphasize precise and accurate formulation of theoretical models and associated reasoning, as well as careful interpretation of findings. The class will also delve into testing of data assumptions and prepare students for the model testing portion of their capstone assignments. Offered as DBAP 649 and EDMP 649. Prereq: Must be enrolled in the DM Program.

EDMP 664. Knowledge Dissemination to Influence Managerial Practice. 3 Units.
The aim of this course is twofold. First, it supports students organizing and writing their DM thesis overview or their PhD thesis proposal. Also discussed are ways to organize and communicate in scientific genres, their aims and their generic properties. Secondly, students become acquainted with scientific communication and publishing. Effective reviewing, criteria for judging articles and theses, management of review processes, and how to communicate and respond to reviews are topics discussed. The course also addresses publication strategies and ways of managing and communicating scientific and managerial knowledge to different stakeholders. Offered as DBAP 664 and EDMP 664. Prereq: Must be enrolled in the DM Program.

EDMP 666. Introduction to Research Inquiry. 3 Units.
This course begins participants’ three-year research experience. Energized by one’s personal passion and commitment to the topic, we seek for the work to be accomplished at a level that makes it worthy of widespread dissemination and influence as engaged scholars. The goal in this course is to prepare students to develop their minds as scholars by understanding the world of research; develop a research identity by identifying one’s research domain; learn to read academic literature and write in a scholarly style; work with academic literature to identify and digest concepts and theories that inform research on that problem; begin to develop a conceptual model that abstracts how the world may be functioning in that problem domain and points to a research question that can guide the next stage of the research. The final deliverable for this course is to present the research topic with substantiation for its significance, relevance and timeliness in the management field. This would include the research question(s); the literature review; and proposed qualitative methodology and analytical approach(es). Offered as DBAP 665 and EDMP 665. Prereq: Must be enrolled in the DM Program.
EDMP 672. Flourishing Enterprise: Creating Sustainable Value for Business and World Benefit. 3 Units.
This course is designed to galvanize new visions of business and society, as well as organizational leadership. The course is born of a conviction that the future of human society and the natural world is intimately linked to the future of the world economy, business enterprises, and management education. The course presentations, books, dialogues, and interview projects are organized around three themes: (1) the state of the world and the economics possibilities of our time, (2) the business case for understanding business as an agent of world benefit—how business performance can profit from current and future advances in sustainable design and social entrepreneurship; and (3) tools for becoming a change leader—including the methods of Appreciative Inquiry and new insights about "strength-based" change emerging from the science of human strengths. The overarching aim is to provide a powerful introduction to the many facets of sustainable value creation as a complete managerial approach. Offered as DBAP 672 and EDMP 672. Prereq: Must be enrolled in the DM Program.

EDMP 673. Understanding, Designing, Managing Complex Systems. 3 Units.
The purpose of this course is to provide a perspective on systems thinking and complex systems and aid PhD students in expanding the ideas in their research on systems, systems models, and complex systems. The work of the course will develop with increasingly difficult books on the subject of complex systems, a major case study in health care, and individual applications of the concepts to their potential research model and methods. Offered as DBAP 673 and EDMP 673. Prereq: Must be enrolled in the DM Program.

EDMP 677. Designing Sustainable Systems. 3 Units.
Students in teams will recognize and work in practice on a managerial problem that involves dimensions of sustainability and design. They will develop a set of solutions to the problem by generating alternative models and intervention strategies to address the problem. The project results in a short presentation and written communication of the solution in a form of a poster or prototype. The course will also include presentations of intervention and action research approaches and issues of inquiry validation and theory development. Offered as DBAP 677 and EDMP 677. Prereq: Must be enrolled in the DM Program.

EDMP 680. Conflict & Cooperation in the Global Arena. 3 Units.
The global arena is described by some as a realm of perpetual conflict. Others argue that given the right institutions and incentives, international actors can find ways to achieve cooperation, peace and increased global prosperity. Still others suggest that the international political and economic arena is "what you make of it"—emphasizing the role of norms, identities and ideas in shaping international outcomes. This course will examine both theoretical and policy perspectives regarding the question of international conflict and cooperation, with a specific emphasis on drawing on insights from collective action theory and international relations scholarship. Offered as DBAP 680 and EDMP 680. Prereq: Must be enrolled in the DM Program.

This course is set up individually upon conference between the student and a DM Faculty member and is designed in consult with the DM Program Director in order to complete the student's required coursework and research requirements within the DM Program. Offered as DBAP 699 and EDMP 699. Prereq: EDMP 665.

EMBA

EMBA 417. TEAMS. 0 Unit.
This course enables the formation of E.M.B.A. study groups and classroom learning environment by introducing participants to their adult learning styles, models of group decision-making, theories of team development and rules of engagement for effective learning teams. Prereq: E.M.B.A. students only.

EMBA 430. Health Informatics, Analytics & Decision Making. 2.5 Units.
Increasingly in today's healthcare environment, those aspiring to succeed in leadership positions are expected to know and do more than their primary discipline traditionally required. They are also expected to transform their organizations - whether they are departments or IDS's - to a higher state of quality, effectiveness, efficiency and competitiveness. To meet this expectation they must be able to harness the interrelated power of information, analytics and decision support to plan, evaluate, improve, and control their organization. This course is for executives in health care delivery, health planning, regulatory, or accrediting organizations who will be involved with, be responsible for, or oversee: The use and/or management of health or organizational information, and analytic and decision processes; The improvement / innovation of their organization's operations and decision processes; and/or The design, acquisition, implementation, and/or evaluation of health information technologies (HIT). The course is intended to develop competence and confidence in the participant's ability to understand and manage the complex information, analytics and decision environment. Prereq: E.M.B.A. candidates only.

EMBA 436. Accounting for Business Executives. 2.5 Units.
This course is an introduction to financial and managerial accounting, rather than a course in introductory accounting. This course is designed for the business professional and is intended to prepare the student to use the information prepared by accountants. It will not dwell in detail on the technical aspects of accounting or bookkeeping. In addition, this course is designed to help the student become an effective user of cost information, from the perspective of parties internal to the firm. This aspect of accounting is a compilation of techniques rather than a set of rules. Since the information is for private use, the goal is to create the most meaningful and useful data for use by managers. Assignments will be designed to develop the student's ability to analyze and interpret accounting data and to more effectively utilize accounting data in day to day business decisions. Finally, this course is intended to strengthen abilities to identify problems and opportunities, to search out and analyze desired information leading to a well-reasoned conclusion, and to perform sensitivity analysis around that conclusion, using financial information. Prereq: E.M.B.A. candidates only.

EMBA 437. Economic Analysis for Managers. 2.5 Units.
This course, which is limited to students in the Executive M.B.A. program, explores the basic elements of the economic system which the executive needs to know in order to understand how the firm interacts with the system and how economic factors affect decision making. Prereq: E.M.B.A. candidates only.

EMBA 438A. Business Statistics and Quantitative Analysis. 1.25 Unit.
In this course, students study the use of modern quantitative and business statistics to support the executive decision-making process. With the help of computer software, the models examined assist in describing and analyzing problems and suggesting possible managerial actions. The techniques discussed include tools for decision making under uncertainty including regression analysis. This course is part of a two (2) course sequence. Prereq: E.M.B.A. candidates only.
EMBA 438B. Business Statistics and Quantitative Analysis. 1.25 Units.
In this course, students study the use of modern quantitative and business statistics to support the executive decision-making process. With the help of computer software, the models examined assist in describing and analyzing problems and suggesting possible managerial actions. The techniques discussed include tools for decision making under uncertainty including regression analysis. This course is part of a two (2) course sequence. Prereq: EMBA 438A

EMBA 439. Corporate Finance. 2.5 Units.
The central organizing principle of this course is to familiarize the class with the basics of valuation. This first course in finance introduces the tools and methods employed in valuation of projects and corporate securities. Valuation involves the determination of (i) cash flows of the firm, project or financial assets and (ii) the discount rates that are used to compute the present values of the cash flows. Asset pricing models provide the underpinnings for the development of the discount rates. The material is synthesized in capital budgeting exercises which are cost-benefit analyses of capital project cash flows to evaluate whether they are value enhancing. Prereq: E.M.B.A. candidates only.

EMBA 441. Leading Change: Self. 2.5 Units.
The primary objective of Leading Change: Self is to learn a method for assessing your knowledge, abilities, values, and interests relevant to leadership and executive management so that you will be able to develop and implement a plan for enhancing your leadership and executive capability throughout your career and life. The enabling objectives are: (a) To systematically identify your current and desired capability (i.e., knowledge, abilities, values, and interests); (b) To develop an individualized learning agenda and plan for the next 3-5 years; and (c) To explore techniques to assist others in doing the same. This course will explore questions, such as: Who are effective leaders? How are they different than managers? How do they think and act? What makes us want to follow them? How are leaders developed? How can people help others become effective leaders? What type of leader do I want to be? And, what can I do to become that type of leader? Prereq: E.M.B.A. candidates only.

EMBA 442. Innovation. 2.5 Units.
Organizations are under continuous pressure to be efficient and productive in order to generate (often short-term) profit. At the same time they must innovate to remain competitive in the long-term. Innovation involves the generation, development, and delivery of new products, processes, or businesses. Intrapreneurs are those who can successfully bring new ideas to fruition in established organizations. Innovation in the context of an established organization requires that intrapreneurs fundamentally understand the dynamics of innovation and innovation management. This course introduces fundamental concepts associated with innovation in the context of an established organization. Prereq: E.M.B.A. candidates only.

EMBA 443. Supply Chain Management. 2.5 Units.
Operations managers, ranging from supervisors to vice presidents, are concerned with the production of goods and services. More specifically, they are responsible for designing, running, controlling and improving the systems that accomplish production. This course is a broad-spectrum course with emphasis on techniques and information that are helpful to the practice of management in general and at any level. We will discuss commonly occurring application problems such as process analysis, inventory control, quality management, just-in-time concepts, etc. The field of operations management was originally concerned with manufacturing systems. But many of the same ideas apply, and the same trade-offs are present, in service organizations like health care, insurance, hotel-management, airlines and government related operations. Several manufacturing and non-manufacturing environments will be discussed explicitly, and the emphasis will be on the fundamentals of the operations function in an organization. Also we will explore the interface of operations management with other functional areas such as marketing, finance, accounting, etc. Prereq: E.M.B.A. candidates only.

EMBA 445. Expanding Boundaries. 2.5 Units.
This course will help you understand the keys to successful corporate development-competitive advantage in every business in which a firm is involved. In particular, the course will help the participants to understand the following: -Corporate development strategy through capabilities and leveragable capabilities -Before venturing into a new business, the firm has to have a clear understanding of the critical capabilities required for success in the new business. -Firms can increase the odds of success if they can leverage (parts of ) existing capabilities to new businesses. -Corporate development strategies-adapting to a market -Analyze the industry environment in order to select the competitive battlefield to increase the odds of success by leveraging some of your existing capabilities -sometimes also known as core competencies. This is a relatively low risk strategy. We will develop methodologies that will allow you to identify markets (segments) where your current capabilities are leveragable. -Shaping a market usually requires developing a completely new set of capabilities - very risky. We will develop concepts to understand techniques to mitigate these risks. -Acquisitions as one of the means for corporate development -Approximately half of the class sessions will be devoted to the specific case of acquisitions as a means to expand the boundaries of a firm. We will explore both how acquisitions contribute to competitive advantage and the selection process and integration of the acquired entity. Less emphasis will be placed on strict financial valuations and negotiations. Prereq: E.M.B.A. candidates only.
EMBA 446. Managing Risk and Real Options. 2.5 Units.
The course seeks to help corporate managers understand how financial design can be used to meet the objectives of the firm. In the Finance course, you concentrated almost exclusively on the firm’s capital expenditure decision. You studied in great detail the discounted cash flow model, NPV, how you get your cash flows, and how you discount them. Therefore, we move to the other side of the balance sheet to look at how the firm can finance these expenditures. The first part of this class provides the basic building blocks of financial engineering which incorporates both the uncertainty inherent in business and the active decision making required for strategy to succeed. Prereq: E.M.B.A. candidates only.

EMBA 449. Contemporary Issues in Management. 2.5 Units.
This course is intended to address the contemporary issues in management to be decided by faculty and student interest. With the current global economic crisis, this year the course will focus on International Finance and Economics. In subsequent years, the topics will evolve as the global business climate changes. Prereq: E.M.B.A. candidates only.

EMBA 450. Managerial Marketing. 2.5 Units.
This course is designed with three overarching objectives. The first is an emphasis on decision making in a broad range of market contexts. The second objective builds on the notion that decision making is dynamic; that is, market situations demand not just one good decision but a series of them as a situation unfolds (providing new and varied information for each subsequent decision). Integrating concepts from a number of the courses that you are taking concurrently into decision-making about markets is a final objective. Prereq: E.M.B.A. candidates only.

EMBA 451. Business Model Design. 2.5 Units.
In most companies the process of designing business models is an ad hoc process and in my opinion an inefficient process. In this course you will learn a systematic but iterative process to do this. We will expose you to some broad categories of business models and internalize the basic logic of how to make money in each of these categories. The first step is to recognize which of these categories is most applicable to your business. The second step is to customize these broad patterns to the specifics of the business at hand. This seems easy because everything is in English and there are no hard formulas to figure out. However, unless you discipline yourself to systematically go through a structured process (there are other equally valid processes than the ones you’ll be exposed to) it is very easy to fall into the ad hoc trap. You will internalize this process by applying it over a wide range of business situations that will give you confidence in its applicability to any business opportunity. After the completion of this course you should be quickly able to draw the outline of a business model for any business opportunity that you’re considering. Prereq: E.M.B.A. candidates only.

EMBA 458. Healthcare Financial Management. 2.5 Units.
This course will consider basic financial concepts, techniques, and strategies for institutions and companies in the U.S. health care delivery system. Note that this may differ from the influences one would find in a different country since the payment system and ownership structures vary widely around the world. These basics include relevant factors in the economic, medical, and financial environment that shape an intelligent financial decision. Therefore, although the course is directed towards financial management decisions in health delivery organizations, it may also be useful for those who supply the industry (equipment, drugs and services), purchase services from it (employers, third party administrators, health plans) or finance these (insurance, banking, investors). Public policy and the structure of the industry also play an important role in the course. However, the general approach is from the point of view of a decision-maker in a health care organizational setting dealing with issues with important economic or financial dimensions. Prereq: E.M.B.A. candidates only.

EMBA 464. Legal Environment. 2.5 Units.
This course provides a brief overview of the legal system that managers face, with an emphasis on contracts, corporate law, property rights and the modern regulatory apparatus of government. Contracts include full coverage of the Uniform Commercial Code. Corporate law is the capstone of the consideration of other forms of business organizations such as partnerships. Regulatory areas include employment law and environmental law. Property coverage includes modern struggles over intellectual ownership claims (patents, copyrights, etc.). Prereq: E.M.B.A. candidates only.
EMBA 472. Leading Change: The Organization. 2.5 Units.
Participants in this course will be challenged to enhance their leadership capacity by assessing and analyzing the knowledge, abilities, values and interests relevant to executives. The course will also explore the art of reading and understanding organizations in ways that help us imagine, design, and develop organization excellence. Prereq: E.M.B.A. candidates only.

EMBA 473. Leading Change: Teams. 2.5 Units.
Sustainability of effective leadership is necessary for adaptive, resilient organizations and for the health and functioning of the leader. Chronic stress results in diminished cognitive functioning, as well as poor health and a contagion of negative mood in organizations. The latest advances in social neuroscience and endocrinology will be used to develop an understanding how someone in a leadership position can renew themselves and mitigate the ravages of chronic stress. The short course will focus on how to coach others toward renewal and sustainability. Prereq: E.M.B.A. candidates only.

EMBA 475. Managing in a Global Economy. 3 Units.
This course is designed to present first-hand issues in international management. It accomplishes this by means of readings, a written assignment and, most importantly, an international trip designed to witness different management cultures, styles and environments for business in the international community. Faculty responsibility rests with the Faculty Director of the E.M.B.A. Program as well as a "Resident-Faculty" specific to each field trip. Such faculty are drawn from the Weatherhead community and vary by the design and destination of the trip. In addition, the course is staffed by an administrative assistant from the complement of Dively CMDR staff. Occasionally and where appropriate, there is also "in-tourist" assistance in some of our foreign locations Prereq: E.M.B.A. candidates only.

EMBA 476. Corporate Governance and Dialogues in Healthcare. 2.5 Units.
The course incorporates insights from leaders in a number of dialogue sessions and is grounded in the following themes: -The role of the board of directors; -Leadership in healthcare organizations; -The CEO relationship to the firm’s principal stakeholders (shareholders, board of directors, employees, customers) and the CEO’s responsibility to give back (time and money) to the community; -CEO role in developing and maintaining the organization’s vision, values and corporate culture. Prereq: E.M.B.A. candidates only.

EMBA 477A. Leading Design in Organization. 1.25 Unit.
This course explores the ideas and methods of design as a new approach to management practices that is well suited to the changing environment that organizations face in contemporary culture and the emerging economic environment in the United States and abroad. It is a studio course as well as a seminar, because it is designed around a project that each student brings to the EMBA program, a project that is grounded in the issues and operations of the student’s organization or in the kind of organization that the student wishes to explore. In addition to the yearlong project, the course will also include important readings in management and organizational literature that are relevant to the new direction of strategic thinking. Finally, the course will draw on the expertise of other faculty at the Weatherhead School of Management who will be called upon to share their practical expertise and theoretical knowledge in the development and execution of the student’s management design project, whether in the area of vision and strategy, new product development of goods and services, operations, organizational design and configuration, or related topics. This is the first part of a two semester course. Prereq: E.M.B.A. candidates only.

EMBA 477B. Leading Design in Organizations. 1.25 Unit.
This course explores the ideas and methods of design as a new approach to management practices that is well suited to the changing environment that organizations face in contemporary culture and the emerging economic environment in the United States and abroad. It is a studio course as well as a seminar, because it is designed around a project that each student brings to the EMBA program, a project that is grounded in the issues and operations of the student’s organization or in the kind of organization that the student wishes to explore. In addition to the yearlong project, the course will also include important readings in management and organizational literature that are relevant to the new direction of strategic thinking. Finally, the course will draw on the expertise of other faculty at the Weatherhead School of Management who will be called upon to share their practical expertise and theoretical knowledge in the development and execution of the student’s management design project, whether in the area of vision and strategy, new product development of goods and services, operations, organizational design and configuration, or related topics. This is the first part of a two semester course. Prereq: E.M.B.A. candidates only.

EMBA 478. Leading Design in Organizations. 2.5 Units.
This course explores the ideas and methods of design as a new approach to management practices that is well suited to the changing environment that organizations face in contemporary culture and the emerging economic environment in the United States and abroad. It is a studio course as well as a seminar, because it is designed around a project that each student brings to the EMBA program, a project that is grounded in the issues and operations of the student’s organization or in the kind of organization that the student wishes to explore. In addition to the yearlong project, the course will also include important readings in management and organizational literature that are relevant to the new direction of strategic thinking. Finally, the course will draw on the expertise of other faculty at the Weatherhead School of Management who will be called upon to share their practical expertise and theoretical knowledge in the development and execution of the student’s management design project, whether in the area of vision and strategy, new product development of goods and services, operations, organizational design and configuration, or related topics. This is the second part of a two semester course. Prereq: E.M.B.A. candidates only.

EMBA 479. Leading Change: Society. 2.5 Units.
This course explores a proposition: that business, the motor of our society has the opportunity to be a new creative force on the planet, a force that could contribute to the well being of many. Our exploration and search is for “business as an agent of world benefit” and the questions are many: what does it look like, where is it happening, what are the market, societal and leadership enablers, and what are the results? Prereq: E.M.B.A. candidates only.

ENTP

ENTP 301. Entrepreneurial Strategy. 3 Units.
This course is designed to show students how to identify potential business opportunities, determine what constitutes a good business model, and to strategically implement a business proposal. Topics of focus include an overview of the entrepreneurial process, determinants of venture success in high tech and other business environments, and strategies for industry entry and venture growth. Prereq: At least Sophomore standing.

ENTP 302. Creativity in Design & Business: Sources of Perception, Imagination, & Creative Thinking. 3 Units.
The goal of this course is to develop skills and techniques for creative problem solving. The course is for anyone interested in design, the development of new products and services, and strategies for change in organizations and society. It is useful wherever we face challenging situations that require imagination, new ideas, and innovative approaches in a rapidly changing world. At its core, creativity is an issue of perception. Learning to change one’s perception from what is known, comfortable, and familiar to what is unknown and potentially valuable and rewarding is the challenge of this course. We will explore a wide variety of methods, techniques, and tools for encouraging new perceptions. There will be useful readings, but also exercises and projects for individuals and teams to develop new strategies of creative thinking. Offered as DESN 302 and ENTP 302.
ENTP 308. Business Model Design and Innovation. 3 Units.
This course takes the perspective of entrepreneurs or business unit managers. The three basic questions that all entrepreneurs and innovators must answer is where to play, how to win, and what to do. You have identified a group of customers for your product or service (where to play). Your first challenge is to know what features (Customer Attributes) your target customer will pay for. Innovative business models focus on a set of customer attributes that are usually very different from other industry incumbents that we call Focal Attributes. Your second challenge is to clearly state your profit logic – how you will make money – how to win. The concept called Profit Objectives (similar but not the same as KPI and/or SMART objectives) allow you to operationalize the profit logic through specific and measurable deliverables. Your third challenge is building the value chain that can deliver these focal attributes (what to do). At this point, you have a good understanding of all the elements of your business model and in particular, how the focal attributes and the value chain align with the profit objectives. You will learn how to illustrate this alignment through a mapping process. Offered as DESN 308 and ENTP 308. Prereq: Junior standing or higher.

ENTP 310. Entrepreneurial Finance. 3 Units.
This course explores the financing and financial management of entrepreneurial new ventures. The course will focus on issues of financial management of new ventures (forecasting cash flows, cash flow management, valuation, capital structure) and the various financial methods and mechanisms available to entrepreneurs (bootstrapping, angel investors, venture capitalists, IPOs). Offered as ENTP 310 and ECON 312.

ENTP 311. Entrepreneurship and Wealth Creation. 3 Units.
This course explores all aspects of the creation of a new venture from idea through startup, growth, and beyond. Students will learn how to evaluate opportunities, develop strategies, create a business plan and acquire financing for a new venture. In this course students will develop a business plan for a new venture.

ENTP 428. Entrepreneurship and Innovation. 3 Units.
In all companies, new and old, large and small, innovation and entrepreneurship are important ways economic value is created. Whether a person wants to found their own company or work in an existing one, and whether one wants to run a business or simply work in one, it is difficult to go through one’s career without needing to engage in innovation or entrepreneurship. The purpose of this course is to equip students to think about how to manage innovation and entrepreneurship. The course will provide frameworks and tools for understanding four important dimensions of innovation and entrepreneurship: (1) Identifying and evaluating opportunities for the new products, processes, ways of organizing, materials, and markets; (2) assessing the needs of customers for new products and services and developing products and services that fulfill those needs; (3) creating strategies to financially benefit from investing in innovation and entrepreneurship; and (4) designing groups and organizations to be innovative and entrepreneurial.

ENTP 501. Special Problems and Topics. 1 - 18 Units.

FNCE

FNCE 401. Financial Orientation. 1.5 Unit.
This is a mandatory preparatory/refresher course for all entering Master of Finance students. It will cover basic topics in statistics, financial accounting and in financial management, so that all students can hit the road running with the other core courses in the first semester. Prereq: For Master of Finance students only.

FNCE 403. Corporate Financial Technology. 3 Units.
This course is focused on the many aspects of the development in Financial Technology from recent notable successes to the current edge and thoughts about the future. Topics covered will include "FinTech" Applications, Incubators and Angels, Block Chains, Crypto-currencies, Crowdfunding, and Payment Schemes. Topics can change from semester to semester, in tune with changing technology. Offered as BAFI 403 and FNCE 403. Prereq: For Master of Finance students only.

FNCE 403C. Financial Management. 1.5 Unit.
Serves as a perquisite for several advanced electives in banking and finance. Its purpose is to familiarize the student with the theory and application of models used in financial decision-making by corporations. Issues relating to efficient markets, financing decisions, capital budgeting, risk and return, and securities valuation are among the topics considered. Prereq: For Master of Finance students in Shanghai, China

FNCE 404. Financial Modeling. 3 Units.
This is a course about financial modeling. It covers a range of topics in the field of financial economics. Each topic is chosen because it lends itself to financial modeling. The primary focus of the course is to relate the theory of finance to practical and usable spreadsheet models that will assist a financial manager with a firm’s investment and financing decisions. Spreadsheet models have been the dominant vehicle for finance professionals to practice their trade. This course will utilize Excel and challenge the student to improve their finance and modeling skills. Students will improve their familiarity with financial data analysis through various exercises that incorporate completed models. In summary, the course is designed to increase your practical understanding of core concepts in finance, help you develop hands-on spreadsheet modeling skills, and strengthen your ability to perform financial data analysis within an Excel model. Prereq: For Master of Finance students only.

FNCE 404C. Financial Modeling & Value. 1.5 Unit.
Firms try to create value. In their day-to-day operations, they are faced with numerous challenges: Should we accept trade credit or borrow? Will an acquisition create or destroy value? Should we introduce a new product line even if it cannibalizes an existing one? In each of these situations they try to quantify the impact on the value of their firm. The goal of this course is to develop your skills in financial modeling and valuation, so you can tackle issues like the ones described above. The course is designed to be "hands-on": You will learn to apply the theory and develop spreadsheet modeling skills through homework, case studies and a group project. By the end of the course you will have a good understanding of both the theory and practice of valuation, and possess a set of cutting-edge financial modeling skills. This course is designed for students who aspire to work in a regular company, a bank or a consulting firm in (i) corporate finance (including mergers and acquisitions); (ii) strategy; or (iii) equity analysis. Prereq: For Master of Finance students in Shanghai, China

FNCE 421. Corporate Financial Analysis. 3 Units.
This course is designed to lay the analytic foundation for careers in corporate finance, banking, consulting, and investment banking. The objective of the course is to strengthen students’ conceptual understanding and problem-solving skills, and teach them how to think on their feet. Topics covered include Economic cash flows and valuation, Valuation methods, Long term financial planning and ratios analysis, Growth and external financing, Managerial options and valuation, Capital structure, and Payout policy. Topics covered may change from semester to semester. The course envisages use of spreadsheets and case studies, and will emphasize on links to real-world events. Prereq: For Master of Finance students only.
FNCE 428. Financial Strategy and Value Creation. 3 Units.
The intersection between the theory of perfect markets and the reality
of market imperfections provides the basis for the exploration of value
creation in this course. Opportunities in both product and financial
markets are explored using case studies to develop a framework for
strategic financial decisions. Prereq: For Master of Finance students only.

FNCE 428C. Financial Strategies and Value Creation. 3 Units.
The intersection between the theory of perfect markets and the reality
of market imperfections provides the basis for the exploration of value
creation in this course. Opportunities in both product and financial
markets are explored using case studies to develop a framework for
strategic financial decisions. Prereq: For Master of Finance students in
Shanghai, China

FNCE 429. Investment Management. 3 Units.
This course explores the characteristics of financial investments and
markets and develops modern techniques of investment analysis and
management. The goal is to help students develop a level of analytical
skill and institutional knowledge sufficient to make sensible investment
decisions. Topics include: an overview of stock, debt and derivative asset
markets, practical applications of modern portfolio theory, equilibrium
and arbitrage-based approaches to capital market pricing, the debate
over market efficiency, the term structure of interest rates, bond portfolio
management, and uses of derivative assets in investment portfolios.
Prereq: For Master of Finance students only.

FNCE 429C. Portfolio Management and Asset Allocation. 3 Units.
This course explores the characteristics of financial investments and
markets and develops modern techniques of investment analysis and
management. The goal is to help students develop a level of analytical
skill and institutional knowledge sufficient to make sensible investment
decisions. Topics include: an overview of stock, debt and derivative asset
markets, practical applications of modern portfolio theory, equilibrium
and arbitrage-based approaches to capital market pricing, the debate
over market efficiency, the term structure of interest rates, bond portfolio
management, and uses of derivative assets in investment portfolios.
Prereq: For Master of Finance students in Shanghai, China

FNCE 430. Derivatives and Risk Management. 3 Units.
This course is intended to give students an understanding of options and
futures markets both in theory and practice. The emphasis is on arbitrage
and hedging. The course concentrates on listed common stock and index
contracts as well as commodity markets. Various theories for trading
strategies are studied. Prereq: For Master of Finance students only.

FNCE 430C. Derivatives Markets and Models. 3 Units.
This course is intended to give students an understanding of options and
futures markets both in theory and practice. The emphasis is on arbitrage
and hedging. The course concentrates on listed common stock and index
contracts as well as commodity markets. Various theories for trading
strategies are studied. Prereq: For Master of Finance students in
Shanghai, China

FNCE 431. Fixed Income Markets and Their Derivatives. 3 Units.
This class is concerned with fixed income securities, interest rate risk
management, and credit risk. Fixed income securities account for about
two thirds of the market value of all outstanding securities, and hence
this topic is important. The course covers the basic products of fixed
income markets including treasury and LIBOR products, such as interest
rate swaps. Risk management and hedging strategies are covered as well
as selected topics in credit risk models and mortgage-backed securities.
Prereq: For Master of Finance students only.

FNCE 431C. Fixed Income Markets and Models. 1.5 Unit.
This class is concerned with fixed income securities, interest rate risk
management, and credit risk. Fixed income securities account for about
two thirds of the market value of all outstanding securities, and hence
this topic is important. The course covers the basic products of fixed
income markets including treasury and LIBOR products, such as interest
rate swaps. Risk management and hedging strategies are covered as well
as selected topics in credit risk models and mortgage-backed securities.
Prereq: For Master of Finance students in Shanghai, China

FNCE 432. Corporate Risk Management. 3 Units.
This is a risk management course aimed at participants who wish to
enhance their understanding of the risks faced by corporate firms, both
financial and non-financial, learn techniques to identify and measure
these risks, and understand how derivatives and risk management
solutions can be used to manage these risks, create value, and advance
the strategic goals of the firm. Offered as BAFI 432 and FNCE 432. Prereq:
For Master of Finance students only.

FNCE 432C. Corporate Risk Management. 1.5 Unit.
This is a unique strategic risk management course aimed at participants
who wish to enhance their understanding of the risks faced by corporate
firms, both financial and non-financial, learn techniques to identify
and measure these risks, and understand how derivatives and risk
management solutions can be used to manage these risks, create value,
and advance the strategic goals of the firm. The course is designed in
a manner such that it would be of use to executives of all corporations,
financial and nonfinancial, across all functional areas. Prereq: For Master
of Finance students in Shanghai, China

FNCE 433. Quantitative Risk Modeling. 3 Units.
This course is designed to help students learn quantitative models
for estimating risk in various financial settings for different types of
financial institutions (banks, hedge funds, and others). It is a very
hands-on course where students will become familiar with several
state-of-the-art quantitative risk models as well as their detailed
implementation procedure in the real world. The course uses several in-
class Excel exercises to illustrate the models as well as their practical
implementation using real financial data. Offered as BAFI 433 and
FNCE 433. Prereq: For Master of Finance students only.

FNCE 433C. Quantitative Risk Modeling. 3 Units.
This course exposes students to state-of-the-art quantitative techniques
in risk modeling. The course covers the analytical as well as simulation
based implementation of different types of risk models using Excel,
including several Value-at-Risk (VaR) models. It also covers volatility
modeling, correlation estimation, extreme value theory, back-testing, and
stress testing of risk models. This course is for Master of Finance (China)
students. Prereq: For Master of Finance students in Shanghai, China

FNCE 434. Financial Analytics and Banking. 3 Units.
This course will cover empirical and analytical aspects of banking,
including loan origination, syndication, sales, stress-testing and
securitization; capital adequacy, regulation and supervision; methods
of measuring and managing value at risk, credit risk, interest rate risk,
liquidity risk, and other risk; credit market information, feedback, and
signaling. Offered as BAFI 434 and FNCE 434.
FNCE 434C. Financial Econometrics. 3 Units.
This course represents a rigorous study of the latest developments in the area of financial econometrics. It assumes that you have had a basic statistics class and that you have had regression analysis. It is taught using economic motivations and examples from the financial world. The course concerns modern econometric topics like time-series forecasting, volatility modeling, and panel data analysis. Various concepts and approaches in the course will be subjected to real-world data. Students are expected to have basic knowledge of the fundamentals of corporate finance and statistics. The course aims at providing a lasting conceptual framework for model building using modern applied econometric techniques commonly employed in finance. Prereq: For Master of Finance students in Shanghai, China

FNCE 435. Empirical Finance. 3 Units.
This course provides an introduction to empirical analysis and research in finance. This involves the management of empirical datasets and the aspects of quantitative applications of finance theory. The goal is to enable the student to deal with the need to analyze complex and large financial and economic datasets that is present in many fields of the financial profession. The scope of the data as well as the quantitative methods used in such analysis often requires familiarity with robust computational environments and statistical packages. As such, another goal of the course is to familiarize the student with at least one such environment. Applications are conducted using real financial and economic data. The course draws on the theoretical aspects of the subjects covered, but mainly focuses on the practical matters required to undertake an empirical analysis of financial topics—e.g., the definition of the research question, the datasets required, the computational needs, and, then, the implementation. The course enables the student to evaluate outstanding financial research as well as to conduct his or her own research. Offered as BAFI 435 and FNCE 435. Prereq: For Master of Finance students only.

FNCE 436A. Individual, Team and Career Development. .75 Unit.
This course is designed to focus on three areas of development critical to students' personal and professional success: 1) Individual; 2) Team; and 3) Career. The individual and team aspects include developing self and other awareness through exploration of learning styles, process skills, and building communication and presentation competencies. Career development includes a focus on strategies for success such as networking, resume building, and learning from executives through intensive and interactive seminars. The course involves use of assessments, group discussions, presentations and experiential activities. Prereq: For Master of Finance students only.

FNCE 436B. Individual, Team and Career Development. .75 Unit.
This course is designed to focus on three areas of development critical to students’ personal and professional success: 1) Individual; 2) Team; and 3) Career. The individual and team aspects include developing self and other awareness through exploration of learning styles, process skills, and building communication and presentation competencies. Career development includes a focus on strategies for success such as networking, resume building, and learning from executives through intensive and interactive seminars. The course involves use of assessments, group discussions, presentations and experiential activities. Prereq: For Master of Finance students only.

FNCE 436D. Individual, Team, and Career Development. 0 Unit.
This course is designed to focus on three areas of development critical to a student’s personal and professional success: individual, team, and career development. This will be accomplished through a project with a company so that students get a real-life experience related to their field of study. This experience provides students with the opportunity to explore their career interests while applying knowledge learned in the classroom in a real-life setting. The experience also helps students build their professional networks and be part of a team assigned to work on the corporate project.

FNCE 440. Financial Decisions Modeling and Analytics. 3 Units.
The firm is a nexus of contracts among its various stakeholders (e.g., managers, shareholders, debt holders). In this course, we will examine Valuation, Quantitative Analysis of Real Options, Asymmetric Information, Agency Cost, Incentive Contracts and Performance Metrics, Regulation and Reputation. The takeaway learnings from this course are: (a) Understanding how value can be created or destroyed, (b) Measuring/quantifying value using financial big data, (c) Understanding the links between capital structure and asymmetric information, market reactions and signaling, agency and management incentives, taxes and shareholder, bondholder conflicts, (d) Understanding the links between payout policy and informational content, market reaction, stock returns and signaling, and clientele effects, and (e) design of Performance Metrics. We will download corporate financial data (financial big data) from research databases, and conduct empirical analysis to understand the value implications of financial decisions. Excel/SAS will be used. We will analyze case studies and real-world events. Prereq: For Master of Finance students only.

FNCE 440C. Financial Decisions, Contracting and Value. 1.5 Unit.
This course exposes the students to in-depth treatment of topics that include investment decisions, financing decisions, payout decisions, contracting decisions and performance metrics, internal control systems, risk management, real options, diversification and valuation. Topics covered may vary from semester to semester. Prereq: For Master of Finance students in Shanghai, China

FNCE 441AC. Global Banking and Capital Markets I. 1.5 Unit.
This course will expose students to Banking and Capital Market Structure, Practices, and Regulations. Topics covered include the financial services industry, especially commercial banking and investment banking, regulatory framework, market reactions to various corporate events, understanding risk, the return demanded by investors, activists involvement in target firms, and market reactions to such events. Several case studies are used to expose students to different issues and questions that arise in the day-to-day jobs of financial managers in this industry. Prereq: For Master of Finance students in Shanghai, China

FNCE 441BC. Global Banking and Capital Markets II. 1.5 Unit.
This course will expose students to Banking and Capital Market Structure, Practices, and Regulations. Topics covered include the financial services industry, especially commercial banking and investment banking, regulatory framework, market reactions to various corporate events, understanding risk, the return demanded by investors, activists involvement in target firms, and market reactions to such events. Several case studies are used to expose students to different issues and questions that arise in the day-to-day jobs of financial managers in this industry. Prereq: For Master of Finance students in Shanghai, China
FNCE 444. Entrepreneurial Finance. 3 Units.
The objective of this course is to introduce students to the issues of financial management and capital formation in new ventures. The course will address issues of estimation of cash requirements, development of pro forma financial plans, firm valuation and the process and tools used in raising debt and equity financing. Bootstrapping, angel investing, venture capital, strategic alliances and initial public offerings will be covered. The emphasis is on the entrepreneur and how he/she can assess financial needs and develop a sensible plan for acquiring financial resources in a manner that is consistent with their financial needs and other strategic goals. Offered as BAFI 444 and FNCE 444. Prereq: For Master of Finance students only.

FNCE 450. Mergers and Acquisitions. 3 Units.
This course examines the economic rationale and motivation for the different merger and acquisition and recapitalization activity undertaken by firms and individuals in the U.S. market. Emphasis is on the different three (3) methods of valuing a firm, the various forms of debt and equity capital employed to fund mergers and acquisitions and recapitalizations, how lenders and investors structure their loans and/or investments, and how investors realize the gains through different exit strategies. The course gives the student an excellent understanding of the role that senior commercial banks, insurance companies, pensions funds, LBO funds, investment banking firms, and venture/growth capital investors play in mergers and acquisitions. Prereq: For Master of Finance students only.

FNCE 450C. Corporate Valuation and M&A Restructuring. 1.5 Unit.
This course examines the economic rationale and motivation for the different merger and acquisition and recapitalization activity undertaken by firms and individuals in the U.S. market. Emphasis is on the comparable publicly traded proxy company, comparable "change of control" transaction, and discounted cash flow methods of valuing a firm. The class will also review the different types of debt and equity capital employed to fund mergers and acquisitions and recapitalizations, how senior lenders and equity investors structure their loans and/or investments, and how investors realize the gains through different exit strategies. The legal and tax ramifications of various forms of M&A activity are also discussed. The course gives the student an excellent understanding of the role that senior commercial banks, insurance companies, pensions funds, LBO funds, investment banking firms, and venture/growth capital investors play in mergers and acquisitions and will strengthen the students' ability to value a business enterprise. Prereq: For Master of Finance students in Shanghai, China

FNCE 455C. A Foundation in Basic Concepts of Innovations and Applications for Financial Technology. 1.5 Unit.
Over last few years, field of finance has experienced a burst of technological advances that have disrupted and transformed traditional methods of accessing, allocating, and transferring capital. Understanding the evolution of traditional finance methods is increasingly important for finance students so they can meaningfully distinguish advantages and disadvantages of traditional versus emerging methods and models. Main objective of course is to provide foundation in basic concepts of these innovations and their applications. It is this collective financial technology focus that has garnered the name of FinTech. This course will cover many aspects of FinTech proliferation, from notable successes to current innovations and thoughts about future opportunities. Topics will include FinTech applications, blockchains, cryptocurrencies, crowdfunding, payment systems and trading technology. This list may change from semester to semester, in tune with changing technology and as business models become disrupted. Prereq: For Master of Finance students in Shanghai, China

FNCE 460. Investment Strategies. 3 Units.
This course provides a broad survey of some of the main strategies used by hedge funds today. Through exercises and projects, the hedge fund strategies will be presented using real data. Students will learn to use a methodology referred to as "back testing" in order to evaluate hedge fund strategies. The course will also cover institutional details related to short selling, liquidity, margin requirements, risk management, and performance measurement. Since hedge funds today use advanced modeling techniques, the course will require students to analyze and manipulate real data using mathematical modeling. The objective of the course is for students to gain practical knowledge about creating, back-testing, and implementing hedge fund trading strategies. Offered as BAFI 460 and FNCE 460. Prereq: For Master of Finance students only.

FNCE 460C. Investment Strategies. 1.5 Unit.
The class describes some of the main strategies used by hedge funds and provides a methodology to analyze them. In class and through exercises, the strategies will be illustrated using real data and students will learn to use "back testing" to evaluate a strategy. Throughout the semester, we will discuss the economics underlying these strategies and we will analyze why certain strategies might work and why others might not. The class also covers institutional issues related to short selling, liquidity, and performance measurement. The class is fairly quantitative. As a result of the advanced techniques used in state-of-the-art hedge funds, the class requires the students to work hard, analyze and manipulate real data, and use mathematical modeling.

FNCE 470. Financial Models Using Big Data. 3 Units.
This course is focused on developing models in investments using financial big data. A strong theoretical base will be developed and then relevant empirical analyses using real data will be used for testing models, via individual assignments and group projects. In the projects, groups of students will be immersed in collecting, analyzing, and interpreting financial big data sets. Prereq: For Master of Finance students only.

FNCE 471. Applications in Financial Big Data. 3 Units.
This course is project-based and focused on solving real-life problems using financial big data. Groups of students will collect/use data, estimate parameters, and conduct appropriate validation tests. Not only do the members have to work together, but they also have to be professional, make interim reports, and communicate effectively with each other. Prereq: For Master of Finance students only.

FNCE 480. Global Banking & Capital Markets. 3 Units.
This course will expose students to Banking and Capital Market Structure, Practices, and Regulations in North America, Europe, as well as Asia. Students will learn about structure of the financial services industry in different parts of the world, the history and evolution of the regulatory frameworks in this industry, and its consequent impact on financial and economic development as well as risk. Several case studies are used to expose students to different issues and questions that arise in the day-to-day jobs of financial managers in this industry. Offered as BAFI 480 and FNCE 480. Prereq: For Master of Finance students only.

FNCE 480C. International Finance. 1.5 Unit.
This course introduces students to international finance and foreign exchange risk management by corporations. Topics include foreign exchange markets and international financial institutions; fx contracts; exchange rate risk and corporate risk management; and international aspects of long-term financing. Prereq: For Master of Finance students in Shanghai, China
FNCE 490. Cases in Applied Corporate and Real Estate Valuation. 3 Units.
This course is focused on engaging groups of students in identifying, analyzing and making decisions on real-world corporate financial problems. Teams of students will be assigned to a specific client situation drawn from one of four general areas: (i) mergers and acquisitions (involving corporations and/or leveraged buyout firms), (ii) public equities (IPOs and/or equity research), (iii) corporate financial policies and transactions or (iv) real estate. Learning will include lectures, structured problem solving using live case studies and an in-depth project in which will evaluate an actual current business opportunity and present it to a panel of industry veterans. In addition to learning deeper financial skills, the course will enhance unstructured problem solving, project management, team building and high level communications skills. Offered as BAFI 490 and FNCE 490. Prereq: For Master of Finance students only.

FNCE 491. Python Programming w Appl in Finance. 3 Units.
There are two parts to this course. (i) In the first part we learn the basics of Python programming language by solving a sequence of rather simple problems each focusing on broadening your knowledge. At each stage we introduce important commands of Python and slowly learn the structure of object oriented programming with Python. The objective is to make you Python literate. (ii) The second part of the class is for you to tackle significant financial problems either in risk management or in corporate finance using the Python language as the primary tool to do the analysis. You will develop a series of financial models in your track and then tackle two major projects which will utilize all the skills developed. Offered as BAFI 491 and FNCE 491. Prereq: For Master of Finance students only.

FNCE 493. Blockchains and AI: Applications in Finance and Business. 3 Units.
It behooves today's business leaders to be well acquainted with blockchain technologies and AI (Artificial Intelligence), two seemingly disparate technologies that have the potential to fundamentally disrupt a wide range of businesses. The popularity of blockchain technologies has increased exponentially since the release of bitcoin in 2009. While bitcoins garnered a lot of attention during the initial days, the focus has shifted over time to the underlying technology: blockchain. This wildly innovative technology has made possible tasks that were hitherto deemed implausible: validate ownership in a digital asset, verify the true state of a transaction without relying on a costly intermediary etc. The list of businesses that are impacted by this technology makes for an impressive reading: supply chain, health care, insurance, foreign exchange transfers, real estate, etc. If the emphasis of blockchain technology is on trust, that of Artificial Intelligence is on predictions. Accurate predictions and sound judgements are two critical ingredients of any decision making process. While the jury is still out on whether algorithms can make sound judgements, recent developments in a field called machine learning (and its sub-field, deep learning) have led to dramatic improvements in the accuracy of predictions made by these algorithms. Significantly, this gain in accuracy has been accompanied by a reduction in overall costs. These in turn have spurred the recent interest in AI. Organizations that have enabled AI at the enterprise level appear to be making more informed decisions and innovating new products. In this course, we will unpack these technologies and examine a wide range of relevant business use cases. Our objective is to provide a practical introduction to these key technologies and their business implications. We focus on business perspectives, rather than on the technical dimensions. Fittingly, this course is open to all graduate students of Weatherhead School (MBA and all specialty Masters). Students are not expected to have any specific programming background; however, a basic understanding of statistics is required to better appreciate the discourse on Artificial Intelligence. Offered as BTEC 493 and FNCE 493.

FNCE 494. Artificial Intelligence for Financial Modeling. 3 Units.
This is a hands-on course on Artificial Intelligence (A.I.) where the emphasis is not only on understanding the theoretical underpinnings of various AI models but also on building, evaluating, and critiquing A.I. models as they apply to the finance industry. This course begins with an introduction of Machine Learning models; various key ideas such as bias-variance tradeoff, cross-validation, regularization techniques are introduced with relevant examples from Finance. The course then proceeds to discuss Artificial Neural Networks and its relevance to Deep Learning. Foundational ideas such as back-propagation are discussed in sufficient detail; we also lay a lot of emphasis on evaluating the performance of all these models. A key objective of this course is help students build cutting-edge A.I. models that are ready for prime time, i.e., real-life applications. Fittingly, we work with several real-life datasets and case studies from banking and finance. We will work with three case studies, each of which span multiple sessions. In the first case study, students use Machine Learning algorithms to understand how imbalanced datasets are handled in real-life. In the second study, students use text series data and learn not only about the power of regularization techniques but also to highlight the prominence of A.I. in financial markets. In the third case study, students learn how to use cutting-edge Deep Learning models to extract sentiments from disparate news sources; these are in turn used to generate trading strategies. By contrasting the effort that goes into and the payoff obtained from Machine Learning and Deep Learning models, students gain an intuitive appreciation of both these classes of models. Offered as BTEC 494 or FNCE 494.

HSMC

HSMC 404. Managing People and Organizations. 3 Units.
Examines the behavioral sciences relevant to the effective management of people and the effective design of human resources system, structure and policies. Topics include leadership, change management, motivation and pay systems, team dynamics, staffing, decision making, organizational communications, employee participation, performance appraisal, conflict management, negotiation, work design, organizational design, and organizations culture. A variety of methods, including experiential and interactive learning methods, are used to study these topics. Prereq: Master of Healthcare Management students only.

HSMC 407. Managerial Marketing. 3 Units.
Through lecture, discussion, cases, projects and/or simulations you will learn theory and practice of how firms develop processes to understand, create and deliver "triple bottom line" value (i.e., economic, social and environmental) to business and/or consumer markets. Specifically in this course, we take the perspective that marketing is a process of creating value for firms, customers, and other stakeholders through mutually desirable exchanges. This is the foundation of a customer orientation and a central theme of market-driven management. Methods for strategic marketing planning, understanding buyer behavior, market analysis, segmentation and devising integrated marketing programs are introduced. Prereq: Master of Healthcare Management students only.
HSMC 411. Identifying Design Opportunities. 3 Units.
Designing is giving form to an idea for a more desirable product, service, process or organization, and refining the idea into something that can be delivered reliably and efficiently. Good design integrates these evolving ideas with the day-to-day realities of a firm’s operations, systems, marketing, economics, finance and human resources. Designing is thus a unique managerial activity that brings together changing technologies, capabilities, relationships, activities and materials to shape an organization’s plans and strategies. It combines analysis and synthesis to create opportunities for improvement and means of attaining them. Viewed this way, designing is a core competence of a successful entrepreneur or innovative leader. Design analysis is the systematic review of the four orders of design found in every firm—namely, the firm’s communications, products, interactions and environments—and the creation of opportunities to increase firm value by improving each. Students will identify ill-defined, ill-structured problems within organizations. Such problems are ones for which there are no definitive formulations and for which the formulation chosen affects the solutions available. For such problems, there is no explicit way of knowing when you have reached a solution, and solutions cannot necessarily be considered correct or incorrect. But finding innovative solutions to such problems can provide unique opportunities to create exceptional value. A major outcome of the semester’s inquiry is a presentation of the design problem and proposed design solution. Prereq: Master of Healthcare Management students only.

HSMC 412. Lean Services Operations. 3 Units.
The course will be delivered over four modules: 1) Service Process Blueprints, 2) Managing Capacity in Service Systems, 3) Mapping the Value Stream (current and future state), and 4) Inventory Management in Service Systems. The topics considered are viewed in the context of healthcare management, financial services, insurance firms, call centers, back-office operations, and other applications. Through these topics, the participants will be trained in tools that help them understand customers’ expectations and needs and to identify service system characteristics that can meet these needs. We will learn how to identify errors in service and troubleshoot these problems by identifying the root causes of errors. Subsequently, we will discuss how one can modify the product or service design so as to prevent defects from occurring. Finally, we will establish performance metrics that help evaluate the effectiveness of the Lean system in place. These efforts will result to improved quality. This course is not oriented toward specialists in service management. Its goal is to introduce you to the environments and help you appreciate the problems that operations managers are confronted with. Then, we will typically discuss some system specifics and emphasize the principles and issues that play key role in their management. Offered as HSMC 412 and OPMT 412. Prereq: Master of Healthcare Management students only.

HSMC 420. Health Finance. 3 Units.
Exploration of economic, medical, financial and payment factors in the U.S. healthcare system sets the framework for the study of decisions by providers, insurers, and purchasers in this course. The mix of students from various programs and professions allows wide discussion from multiple viewpoints. Offered as BAFI 420 and HSMC 420. Prereq: (MBAP 402 or MBAC 502 or ACCT 401H) and Master of Healthcare Management students only.

HSMC 421. Health Economics and Strategy. 3 Units.
The purpose of this course is to develop the analytical skills necessary for understanding how the U.S. health care sector operates, how it has evolved, the forces at work behind perceived deficiencies (in quality and cost control), and the impact of alternative policy proposals. Special attention is giving to recent developments in the healthcare marketplace, and the strategic considerations they create for providers and insurers. These issues are addressed through the lens of microeconomic theory. Under this framework, outcomes result from the interaction of decisions made by participants in the healthcare economy (e.g. patients, providers, insurers, government), with those decisions governed by the preferences, incentives and resource constraints facing each decision-maker. Principles of microeconomics will be reviewed as necessary to ensure consistent understanding of basic concepts. The course is designed to appeal to a broad audience, particularly students interested in healthcare management, public health, medical innovation, health law, and public policymaking. Offered as HSMC 421 and MPHP 421.

HSMC 425. Dialogues in Health Care Management. 3 Units.
Dialogues in Healthcare Management is designed to serve students in the MSM-Healthcare management program. The course seeks to educate students of the intricacies related to specific management challenges that arise in the context of healthcare delivery. This is accomplished through a process of facilitated dialogs with experienced healthcare management professionals. Drawing on the experiences and deep contextual knowledge of these professionals, the course provides students an opportunity to synthesize and apply their prior coursework to better understand the challenges and opportunities that managers face to improve organizational performance. Prereq: Master of Healthcare Management students only.

HSMC 432. Health Care Information Systems. 3 Units.
This course covers concepts, techniques and technologies for providing information systems to enhance the effectiveness and efficiency of health care organizations. Offered as HSMC 432 and MPHP 532.

HSMC 446. Models of Health Care Systems. 1.5 Unit.
This course is for professionals who will pursue their careers in, or associated with, the health care industry; and therefore, need to understand the structure, operations and decision influences in the health care delivery system. The course is intended to develop competence and confidence in the participant’s ability to understand and operate in the industry, the largest and, perhaps, the most complex in the United States. It is applicable to the private and public, profit and not-for-profit sectors. In this course students are introduced to: the different systems of care delivery; their organization and operations; their markets and the nature of the demand for their services; and the dynamics of their interoperation among themselves and with other entities in the industry (e.g., payors/insurers, regulators and accreditors, technology and pharmaceuticals suppliers). Offered as HSMC 446 and IIME 446.

HSMC 447. Regulatory Affairs for the Biosciences. 1.5 Unit.
This mini-course introduces students to the Food and Drug Administration (FDA) and the laws and regulations it enforces. A scientific regulatory agency with far reaching enforcement authority, FDA is the most powerful consumer protection agency in the world. This course will familiarize students with FDA’s mission, philosophy and organizational structure, as well as policy and procedure it uses to ensure the safety and effectiveness of the food, drugs, biologics, cosmetics, medical devices and radiation-emitting products it regulates. Recommended preparation: Enrollment in the MEM Biomedical Entrepreneurship Track. Offered as BIOS 447, HSMC 447, and IIME 447.
HSMC 456. Health Policy and Management Decisions. 3 Units.
This seminar course combines broad health care policy issue analysis with study of the implications for specific management decisions in organizations. This course is intended as an applied, practical course where the policy context is made relevant to the individual manager. Offered as HSMC 456 and MPH 456.

HSMC 457. Health Decision Making & Analytics. 3 Units.
The goals of this course are to: (1) introduce the sources of data healthcare that managers can exploit to improve decision-making in their organizations; (2) examine health decision making styles, approaches and impediments; (3) provide a framework for medical informatics and how information technology can be exploited to pursue organizational goals; and (4) examine the analytic tools necessary for turning "raw data" into actionable information. The course is pragmatic, covering such issues as the current state and emerging trends in medical informatics (MI), information principles, decision models and analytics approaches, as well as the impact of emerging health legislation, information systems and processes on decisions and analytics.

HSMC 501. Special Problems and Topics. 1 - 18 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.

MBAC

MBAC 500. Probability, Statistics, and Quantitative Methods. 0 Unit.
This 0 credit hour pass/fail course is designed to provide MBA students with all of the basic statistics and mathematics background material, as well as some experience with EXCEL and the statistics software package SPSS, that is needed in a number of their required core courses. Prereq: Full-time MBA program only.

MBAC 502. Financial Accounting. 3 Units.
This course covers financial accounting: concepts, principles, and analyses. The major emphasis is development of an understanding of accounting information and reporting to enable you to be an effective manager. Although considerable importance is placed on the evaluation, interpretation, and analysis of accounting information for decision making: the fundamentals of accounting measurement and disclosure are also covered. Prereq: Full-time MBA program only.

MBAC 503. Managerial Accounting. 1.5 Unit.
This course focuses on managerial accounting. Upon completion of the course, students should be comfortable with the following: understanding the basics of commonly used costing methods, creating and analyzing a budget, analyzing departmental, divisional and corporate performance, using data to make business decisions using managerial accounting techniques, and understanding the basic concepts of management decision analysis and the related vocabulary. Specifically, the course helps provide some answers to the following questions: How is management accounting information prepared and reported, and how can it be understood and analyzed? How can the analysis of management accounting and other data help management better understand the drivers of the company's financial performance, the strengths and weaknesses of the company's operations and management, and the risks and opportunities facing it? How can the analysis of financial and other management information enable management to make the best decisions to address the risks and opportunities of its operations? The goal of this class is to move you from simply "doing the work and forgetting it" to helping you gain knowledge and a basic skill set that you will be able to apply to real-life opportunities. Prereq: Full-time MBA program and (MBAP 402 or MBAC 502).

MBAC 504. Corporate Finance I. 3 Units.
This is a MBA core finance course. In this course, students are introduced to the basics of corporate finance, including the objectives of and the decisions made by corporate financial managers. Topics covered include time value of money, stock and bond valuation, cost of capital, risk and return, investment decision rules, cash flows and free cash flows, cash flow projections and planning, and capital budgeting. Other topics may be covered from time to time. Prereq: Full-time MBA program only.

MBAC 505. Corporate Finance II. 1.5 Unit.
This is an MBA core finance course. The objective of the course is to strengthen students’ conceptual understanding and problem-solving skills in corporate finance. Topics covered include cash flows and valuation, financial planning and ratio analysis, financing using internal and external sources including public offerings, capital budgeting and managerial options, capital structure, payout policy, working capital management, and financial planning and strategy. Topics could change from semester to semester. The course envisages use of case studies, excel spreadsheets, and simulation exercises. Prereq: MBAC 504.

MBAC 506. Marketing Management. 3 Units.
Through lecture, discussion, cases, projects and/or simulations you will learn theory and practice of how firms develop processes to understand, create and deliver "triple bottom line" value (i.e., economic, social and environmental) to business and/or consumer markets. Specifically in this course, we take the perspective that marketing is a process of creating value for firms, customers, and other stakeholders through mutually desirable exchanges. This is the foundation of a customer orientation and a central theme of market-driven management. Methods for strategic marketing planning, understanding buyer behavior, market analysis, segmentation and devising integrated marketing programs are introduced. Prereq: Full-time MBA program only.

MBAC 507. Operations and Supply Chain Management. 3 Units.
Operations and supply chain managers, ranging from supervisors to vice presidents, are concerned with the production of goods and services. More specifically, they are responsible for designing, running, controlling and improving the systems to deliver their goods or services timely and efficiently. This course is a broad-spectrum course with emphasis on techniques and information that are helpful to the practice of management in general and at any level. Through lectures, case discussions, and experiential learning in simulations and educational games, we will discuss commonly occurring application problems such as bottleneck identification, capacity planning, inventory control, bullwhip effect, supply chain design, etc. We will examine operations and supply chain management in a variety of contexts including manufacturing systems, financial companies, hospitals, start-ups, and apparel industries. Also we will explore the interface of operations and supply chain management with other functional areas such as marketing, finance, accounting, etc. This course is not oriented toward specialists in operations and supply chain management. Its goal is to introduce you to the basic concepts, to develop your business intuition about operations and supply chain management, to help you understand the day-to-day challenges in this area, and to provide you with the tools to address these challenges. Prereq: Full-time MBA program only.
**MBAC 508. Strategic Issues and Applications. 3 Units.**

Strategic management deals fundamentally with the ways firms build and sustain superior competitive positions and profitability. Successful strategy design and implementation requires an understanding of a firm’s external environment, its internal resources and capabilities. It also requires an integrative view of the firm that spans functional areas such as operations, marketing and finance. Strategic analysis draws on a number of academic disciplines including economics, psychology, political and management science. Prereq: Full-time MBA program only.

**MBAC 511. Statistics and Decision Modeling. 3 Units.**

This course provides the foundations of statistical and operations research methodologies for managerial decision-making. Topics covered include using sample data to (a) estimate quantities of interest and create confidence intervals, (b) perform hypothesis tests, and (c) make forecasts with simple and multiple regression. Decision modeling involves using mathematical models to provide a quantitative approach to analyzing and solving complex decision problems and includes an introduction to linear and integer programming models and applications, queuing models, and simulation models, all solved by appropriate computer software packages. Prereq or Coreq: MBAC 500. Prereq: Full-time MBA program.

**MBAC 512. Economics. 3 Units.**

This course is designed to give you an overview and a basic understanding of microeconomics. The course will cover the microeconomic topics of consumer choice, business decision making, and market equilibrium; as well as the macroeconomic topics of economic growth, inflation, interest rates, and exchange rates. In the process of achieving these specific content objectives, this course is taught in a way that will support the MBA program goals of having students become competent analysts and critical, creative thinkers. Prereq: Full-time MBA program only.

**MBAC 515. Leading People and Organizations. 3 Units.**

The primary objective of this course is to develop students’ capability to be effective leaders and life-long learners. Drawing upon the field of organizational behavior, the course examines leadership effectiveness on three levels: developing the leader from the inside out, working effectively with diverse teams and leading effectively in organizations. Topics include resonant leadership, emotional intelligence, coaching relationships, team learning and development, employee engagement, diversity and inclusion and organizational culture. Students will work in diverse learning teams and complete a personal vision, receive 360-degree feedback on their emotional and social competence and create a personalized learning plan to guide their development throughout the MBA program and beyond. Leadership development coaches meet privately with each student twice throughout the semester and students become peer coaches for classmates. Fundamentally, this course is about developing the leader within so that each individual is best positioned to lead and manage others effectively. Prereq: Full-time MBA program only.

**MBAC 518. Business Analytics. 3 Units.**

Companies, government agencies, and nonprofit organizations can collect prodigious amounts of data with relative ease, but the data become insights only after they are organized, analyzed, and communicated. Substantial evidence exists to indicate that the demand for analytics trained managers outstrips current supply, and will continue to remain strong in the foreseeable future. Using analytics tools to use data to create insights is a prerequisite to effective management. Building on your first course in statistics, in this course you will be introduced to other useful analytical tools (e.g., Predictive Modeling, Data Mining, and Data Visualization). The course will also introduce commonly used software tools. Prereq: MBAC 511.

**MBAP**

**MBAP 400. Probability, Statistics, and Quantitative Methods. 0 Unit.**

This course is the no-cost, online program that helps students acquire and/or refresh the following probability, statistics, mathematics, and computer skills that are essential for success in the MBA program. Topics include: - Statistics: Descriptive Statistics (summarizing and explaining data). Probability (modelling randomness and variability using probability ideas). Sampling (mean, standard deviation, and the role of the Central Limit Theorem). -Algebra and Math: a self-guided review is provided of functions and their graphical representations, linear equations, and exponentials and logarithms. -Computer Skills: the basic use of SPSS and EXCEL for statistical analysis. This course is designed for incoming MBA students who have not taken a formal course in probability and statistics, have taken such a course long ago and need to refresh this knowledge, or are not confident with basic probability, statistics and mathematics. This course is a required prerequisite for the first-year Statistics course. It is also assumed that you have the knowledge of the material in MBAP 400 for the core courses (especially Finance, Marketing, and Accounting) and is not reviewed in any of those courses. Recommended Preparation: Knowledge of high school mathematics and the basics of using EXCEL (such as writing formulas, copying cells and formulas, and so on). Prereq: Enrolled in the MBA Program.

**MBAP 400H. Probability, Statistics, and Quantitative Methods. 1.5 Unit.**

This course helps students squire and/or refresh the following probability, statistics, mathematics, and computer skills that are essential for effective managers in a healthcare system. Topics include: Descriptive Statistics (summarizing and explaining data), Probability (modeling randomness and variability using probability ideas) Sampling (mean, standard deviation, and the role of the Central Limit Theorem), Linear equations and exponentials. Prereq: Students enrolled in the online MBA program.

**MBAP 401. Leadership Assessment and Development. 3 Units.**

This main objective of this course is to help students deepen their self-awareness and to prepare them to be effective leaders and life-long learners. The course is based on a model of self-directed learning and development, which encourages students to discover and expand their emotional intelligence and leadership potential. Students are encouraged to reflect and learn through a series of activities, assessment exercises, and small and large group discussions. Students will complete a personal vision, receive 360-degree feedback on their emotional and social competence and create a personalized learning plan to guide their development throughout the MBA program. Leadership development coaches will meet with each student twice throughout the semester. Fundamentally, this course is about developing the leader within each person so that he or she can lead and manage others effectively. Prereq: This course is for students in the Part-time Cohort MBA Program.
MBAP 401H. Leadership Assessment and Development. 3 Units.
This main objective of this course is to help students deepen their self-awareness and to prepare them to be effective leaders and lifelong learners. The course is based on a model of self-directed learning and development, which encourages students to discover and expand their emotional intelligence and leadership potential. Students are encouraged to reflect and learn through a series of activities, assessment exercises, and small and large group discussions. Students will complete a personal vision, receive 360-degree feedback on their emotional and social competence and create a personalized learning plan to guide their development throughout the MBA program. Leadership development coaches will meet with each student during the semester. Fundamentally, this course is about developing the leader within each person so that he or she can lead and manage others effectively within a healthcare setting.
Prereq: Students enrolled in the online MBA program.

MBAP 402. Financial and Managerial Accountancy. 3 Units.
This course will cover the use and application of basic financial statements, the basic cost structures in a firm, and decision making using accounting information. We will discuss usage and analysis of information from the annual report, focusing on the balance sheet, income statement, cash flow statement and related notes. The course will also cover internally generated accounting information about the cost structure of the firm. We will discuss use of this information in decision making. You are expected to be comfortable with definitions of basic accounting terms, and you should be familiar with the accounting structure and the financial statements.
Prereq: This course is for students in the Part-time Cohort MBA Program only.

MBAP 402H. Accounting for Managers. 3 Units.
The course introduces graduate management students to accounting’s role in business administration. Students learn that accounting is not math, truth, or putting numbers in to boxes. Instead, accounting is an imprecise language used to send and receive information about economic performance. Every language has its quirks, and accounting is no exception. Any communication problem that arises from use of English may reveal itself when one uses accounting. This course sensitizes students to common communication problems and suggests ways that they may be mitigated. A metaphor for the class is taking a one-semester introductory course in a foreign language. A semester’s worth of study does not make one fluent. However, successful completion of the course allows motivated students, over the balance of their careers, to cultivate the ability to read, write, speak, and listen to that language. Time invested lays a foundation for accelerated learning. Highly motivated students eventually become fluent, while others are better able to use the language in everyday life.
Prereq: Students enrolled in the online MBA program.

MBAP 403. Statistics and Decision Modeling. 3 Units.
This course provides the foundations of statistical and operations research methodologies for managerial decision-making. Business statistics focuses on statistical thinking as one of the fundamentals of effective management. Topics covered include sampling and the normal distribution, making inferences from data via confidence intervals and hypothesis tests, and analyzing relationships between samples. Decision modeling of organizational systems uses mathematical and computer models to provide a quantitative perspective on identifying, analyzing and solving complex decision problems. This course includes an introduction to linear programming models and applications, simulation techniques in decision-making, and project management.
Prereq: Students in the Part-time Cohort MBA Program and successful completion of MBAP 400.

MBAP 403H. Statistics and Decision Modeling. 3 Units.
The primary objective of this course, and a goal of the part-time MBA Program, is to make you a competent analyst by providing you with the ability to use, and to communicate with those who use, certain quantitative approaches to help make informed decisions for your organizations. A secondary objective is to provide you with the quantitative knowledge and skills that are needed in other MBA courses. The two groups of quantitative techniques are statistics and decision modeling. The objective of statistics is to summarize and present information contained in data sets, to draw conclusions about large populations based only on information obtained from samples, and, using these conclusions, to obtain reliable forecasts of quantities of interest. Among other things, statistical analysis provides many of the data needed in decision modeling. At the end of this part of the course you will be able to: 1) Summarize data sets using either graphical techniques (histograms, pie charts, and so on) or descriptive statistics (mean, median, standard deviation, and so on). 2) Use computer software to develop estimates and confidence intervals for means and proportions, and analyze the tradeoff between sample size and estimation risk. 3) Use sample data either to support or reject claims about a large population; understand the concepts and consequences of type-1 and type-2 errors. 4) Analyze relationships between two or more quantities of interest and use these relationships to make intelligent forecasts.
Prereq: Students enrolled in the online MBA program.

MBAP 404. Managing People and Organizations. 3 Units.
Examines the behavioral sciences relevant to the effective management of people and the effective design of human resources system, structure and policies. Topics include leadership, change management, motivation and pay systems, team dynamics, staffing, decision making, organizational communications, employee participation, performance appraisal, conflict management, negotiation, work design, organizational design, and organizations culture. A variety of methods, including experiential and interactive learning methods, are used to study these topics.
Prereq: This course is for students in the Part-time Cohort MBA Program.

MBAP 404H. Managing People and Organizations. 3 Units.
In today’s increasingly complex and fast-paced environment, it is critical to understand how to maximize organizational performance. All organizations (corporations, non-profits, government) aim to achieve some goal or objective (e.g., increase shareholder value, make a profit, provide a service). People and systems are the vehicles by which an organization accomplishes its goals and objectives. This course is designed to enhance your ability to make well-reasoned decisions about human capital in organizations and to help you understand organizations as complex systems. Being able to apply systems thinking is critical in order to maximize individual, team and organizational performance.
Prereq: Students enrolled in the online MBA program.

MBAP 405. Financial Management I. 3 Units.
This is a Corporate Finance course that deals with investment theory and financial value. The course materials cover discounted cash flows, bond and stock valuation, capital budgeting, applications of real options in investment analysis, asset’s risk and return, cost of capital, market efficiency and capital structure. The tools, problem solving techniques, and ways of thinking that you develop in this course have broad applicability to all areas of business. They also form the basis for sensible personal decisions in the areas of investments, borrowing, and financial planning.
Prereq: This course is for students in the Part-time Cohort MBA Program.
MBAP 405H. Financial Management. 3 Units.
The purpose of this class is to introduce you to multiple concepts in Corporate Finance with the aim of providing principles and tools that enable you to make managerial decisions that increase the firm's value. The course will begin by building a foundation in understanding the time value of money and its many applications, and then move on to various tools used to evaluate sound investment decision making. Students will also gain an understanding of how securities (different claims on the business) are evaluated and valued, including an in-depth treatment of risk vs. expected return, i.e., the notion that a more risky investment requires a higher expected return. We will then revisit corporate financial analysis first taught in financial accounting. The course will conclude with fundamental corporate valuation techniques. This portion of the class integrate topics learned earlier in the course, will build linkages to other courses (especially financial accounting) and reinforce what drives value as a manager within the enterprise. Prereq: Students enrolled in the online MBA program.

MBAP 406. Economics for Managers. 3 Units.
This course is designed to give you an overview and a basic understanding of modern economics. The course will cover the microeconomic topics of consumer choice, business decision making, and market equilibrium; as well as the macroeconomic topics of economic growth, inflation, interest rates, and exchange rates. In the process of achieving these specific content objectives, this course is taught in a way that will support the MBA program goals of having students become competent analysts and a critical, creative thinkers. Prereq: This course is for students in the Part-time Cohort MBA Program.

MBAP 406H. Economics for Managers. 3 Units.
This course offers an introduction to the theories, principles, and applications of microeconomics and macroeconomics. Topics include supply and demand, elasticity, market structure analysis, business cycles, taxation, and monetary policy. Prereq: Students enrolled in the online MBA program.

MBAP 407. Managerial Marketing. 3 Units.
Through lecture, discussion, cases, projects and/or simulations you will learn theory and practice of how firms develop processes to understand, create and deliver "triple bottom line" value (i.e., economic, social and environmental) to business and/or consumer markets. Specifically in this course, we take the perspective that marketing is a process of creating value for firms, customers, and other stakeholders through mutually desirable exchanges. This is the foundation of a customer orientation and a central theme of market-driven management. Methods for strategic marketing planning, understanding buyer behavior, market analysis, segmentation and devising integrated marketing programs are introduced. Prereq: This course is for students in the Part-time Cohort MBA Program.

MBAP 407H. Managerial Marketing. 3 Units.
This course will focus on Marketing Strategy in business organizations. We will use case studies and discussions as the primary mode of learning. To get the most out of this course, it is important that you come to class well prepared with your case analysis. The course objectives emphasize MBA program-level goals aimed at: 1. Creative and critical thinking and action in the face of ambiguity 2. Development and implementation of strategies to secure sustainable competitive advantage, and 3. Rigorous analytics Prereq: Students enrolled in the online MBA program.

MBAP 408. Operations Management. 3 Units.
Operations management deals with the design of products and processes, the acquisition of resources, the conversion of inputs to outputs, and the distribution of goods and services. It is central to a firm’s ability to compete effectively. As global competition in both goods and services increases, the management of operations is becoming more and more important. This course provides a broad overview of the managerial issues associated with production and delivery of goods and services. It includes the use of quantitative modeling using computers as a central methodology. Prereq: This course is for students in the Part-time Cohort MBA Program.

MBAP 408H. Operations and Supply Chain Management. 3 Units.
Operations managers, ranging from supervisors to vice presidents, are concerned with the production of goods and services. More specifically, they are responsible for designing, running, controlling and improving the systems that accomplish production. This course is a broad-spectrum course with emphasis on techniques and information that are helpful to the practice of management in general and at any level. We will discuss commonly occurring application problems such as capacity planning, production scheduling, line balancing, inventory control, quality management, just-in-time concepts, etc. The field of operations management was originally concerned with manufacturing systems. But many of the same ideas apply, and the same trade-offs are present, in service organizations like health care, insurance, hotel-management, airlines and government related operations. Several manufacturing and non-manufacturing environments will be discussed explicitly, and the emphasis will be on the fundamentals of the operations function in an organization. Also we will explore the interface of operations management with other functional areas such as marketing, finance, accounting, etc. This course is not oriented toward specialists in operations management. Its goal is to introduce you to the environments and help you appreciate the problems that operations managers are confronted with. Then, we will typically discuss some system specifics and emphasize the principles and issues that play key role in their management. Prereq: Students enrolled in the online MBA program.

MBAP 409. Sustainability and Social Entrepreneurship. 3 Units.
This course creates a foundational platform featuring key models and managerial tools for building sustainable value and "turning the social and global issues of our day into business opportunities." Case studies of leading mainstream companies are used to analyze how business value is created for a range of social and environmental initiatives. Students will look at sustainability business strategies that reduce risks, drive down costs, create new revenue streams, serve new markets, and position companies to take advantage of changing societal expectations. Environmental issues such as climate change are covered along with social issues such as global poverty. Students acquire the competencies required to make effective business decisions based on integrating sustainability into the core of a company's value added activities. Prereq: This course is for students in the Part-time Cohort MBA Program.

MBAP 410. Strategic Issues and Applications. 3 Units.
This course helps students understand the nature of strategic competitiveness and helps them develop the ability to analyze the competitive environment facing any organization, assess the attractiveness of the industry or sector and isolate potential sources of competitive advantage which will aid in developing a positioning strategy for the organization.
MBAP 410H. Strategic Issues and Applications. 3 Units.
Strategic Management deals fundamentally with the ways firms build and sustain superior competitive positions and profitability. Successful strategy design and implementation requires an understanding of a firm's external environment, its internal resources and capabilities. It also requires an integrative view of the firm that spans functional areas such as operations, marketing and finance. Strategic analysis draws on a number of academic disciplines including economics, psychology, political and management science. Prereq: Students enrolled in the online MBA program.

MBAP 411. Identifying Design Opportunities. 3 Units.
Designing is giving form to an idea for a more desirable product, service, process or organization, and refining the idea into something that can be delivered reliably and efficiently. Good design integrates these evolving ideas with the day-to-day realities of a firm's operations, systems, marketing, economics, finance and human resources. Designing is thus a unique managerial activity that brings together changing technologies, capabilities, relationships, activities and materials to shape an organization's plans and strategies. It combines analysis and synthesis to create opportunities for improvement and means of attaining them. Viewed this way, designing is a core competence of a successful entrepreneur or innovative leader. Design analysis is the systematic review of the four orders of design found in every firm--namely, the firm's communications, products, interactions and environments--and the creation of opportunities to increase firm value by improving each. Students will identify ill-defined, ill-structured problems within organizations. Such problems are ones for which there are no definitive formulations and for which the formulation chosen affects the solutions available. For such problems, there is no explicit way of knowing when you have reached a solution, and solutions cannot necessarily be considered correct or incorrect. But finding innovative solutions to such problems can provide unique opportunities to create exceptional value. A major outcome of the semester's inquiry is a presentation of the design problem and proposed design solution. Prereq: This course is for students in the Part-time Cohort MBA Program.

MBAP 420H. Regulatory Issues in Healthcare Management. 1.5 Unit.
This course provides and overview of key areas health law at level important to managers in healthcare related organizations. The topical areas covered include (1) the history, structure, financing, and operation of the U.S. medical system; (2) legal and ethical rules and regulations governing physicians and other health care professionals; the patient-physician relationship; institutional providers of care such as hospitals, nursing homes, and laboratories; and drug and device manufacturers; (3) regulation of health insurers and managed care organization; (4) medical malpractice law; (5) confidentiality and electronic medical records; (6) fraud and abuse; (7) antitrust law; (8) employer health plans; (9) medical research; and (10) public health. Prereq: Students enrolled in the online MBA program.

MBAP 421H. Organizational Culture in Healthcare Management. 1.5 Unit.
In this residency course, students will analyze corporate culture using the Burke-Litwin model. Culture in relation to other factors of organizational functioning and change. Prior to the on campus residency students will be introduced to factors that influence organizational culture such the external environment, vision & mission, leadership style, organizational structure, systems (HR such as recruiting and reward and IT such as administrative records keeping), management practices & climate, and power, politics and influence. During the on campus residency, students will visit two major hospital systems to examine how culture influences operational decision making. Prereq: Students enrolled in the online MBA program.

MBAP 422H. Digital Innovation in Healthcare. 1.5 Unit.
In this course, students will learn the role of digital technology in creating new digitally enabled services in the healthcare market. Industry experts will be engaged throughout the course to provide the latest information on developments and application being used. Prereq: Students enrolled in the online MBA program.

MBAP 423H. Engineering in Healthcare Management. 1.5 Unit.
The course focuses on the creation, funding, and management of digital health, biotech, medtech, and other health services enterprises. The course will focus on special issues surrounding the conceptualization, planning, diligence, and capitalization of these ventures and also includes management and compensation practices. In addition, course offers methods for self-assessment & development of business models and plans, techniques for technology assessment and strategy, develops foundation for capitalization and partnering strategies, and creates a basis for best practices in company launch and plan execution. Prereq: Students enrolled in the online MBA program.

MBAP 424H. Economic Issues and Applications in Healthcare. 1.5 Unit.
The purpose of this course is to develop the analytical skills necessary for understanding how the U.S. health care sector operates, how it has evolved, the forces at work behind perceived deficiencies (in quality and cost control), and the impact of alternative policy proposals. Special attention is given to recent developments in the healthcare marketplace, and the strategic considerations they create for providers and insurers. These issues are addressed through the lens of microeconomic theory. Under this framework, outcomes result from the interaction of decisions made by participants in the healthcare economy (e.g. patients, providers, insurers, government), with those decisions governed by the preferences, incentives and resource constraints facing each decision-maker. Principles of microeconomics will be reviewed as necessary to ensure consistent understanding of basic concepts. The course is designed to appeal to a broad audience, particularly students interested in healthcare management, public health, medical innovation, health law, and public policymaking. Prereq: Students enrolled in the online MBA program.

MBAP 425H. Experiential Learning in Healthcare. 3 Units.
In this residency based course students will have an opportunity to apply their learning to real world projects in collaboration with a major hospital system in the Cleveland area. Students will learn how to conduct an action research project including problem identification, stakeholder engagement, needs assessment, intervention design, data collection, data analysis, and the presentation of recommendations/findings. Prereq: Students enrolled in the online MBA program.

MBAP 426H. Finance Issues and Applications in Healthcare. 1.5 Unit.
Exploration of economic, medical, financial and payment factors in the U.S. healthcare system sets the framework for the study of decisions by providers, insurers, and purchasers in this course. The mix of students from various programs and professions allows wide discussion from multiple viewpoints. Prereq: Students enrolled in the online MBA program.

MBAP 427H. Introduction to Population Health. 1.5 Unit.
This course introduces graduate students to the multiple determinants of health including the social, economic and physical environment, health services, individual behavior, genetics and their interactions. It aims to provide students with the broad understanding of the research development and design for studying population health, the prevention and intervention strategies for improving population health and the disparities that exist in morbidity, mortality, functional and quality of life. Format is primarily group discussion around current readings in the field. Prereq: Students enrolled in the online MBA program.
MBAP 428H. Healthcare Decision Making and Analytics. 3 Units.
This course is designed to introduce the students to a wide range of methods and applications of decision science and analytics in healthcare management and medical decision making. The primary objective of the course is to provide the students with the necessary technical knowledge and skills to understand mathematical and statistical models used in health decision making. Further, the course aims to provide the students with hands-on experience required to leverage such methods for evaluating clinical interventions, choosing the best treatment, and informing public health policy. Course topics include decision trees, Markov decision models, Monte Carlo simulation, cost-effectiveness analysis, sensitivity analysis, utility theory, bootstrapping and subgroup analysis, prediction and classification methods, and using computer software to build and analyze health decision analysis models. Prereq: Students enrolled in the online MBA program.

MBAP 429H. Artificial Intelligence Applications in Healthcare Management. 1.5 Unit.
Artificial intelligence (AI) is a set of methods and algorithms that enable computers to mimic human behavior. Deep learning is a subfield of machine learning that builds large neural networks to extract subtle patterns from data and is currently the state-of-the-art method of achieving artificial intelligence. Healthcare is undoubtedly one of the most promising and influential application areas of AI. The unprecedented increase in data availability and computer power over the past decade has enabled neural network models to parse massive clinical datasets, learn incredibly subtle patterns, and in some cases, augment clinicians’ performance. This course covers the basic concepts and theoretical foundations of deep learning as they relate to healthcare management. We will discuss several successful applications of AI in healthcare as well as opportunities for AI across a variety of healthcare contexts. Limitations, challenges, key debates, and considerations surrounding AI models and their adoption in healthcare will also be highlighted. Prereq: Students enrolled in the online MBA program.

MBAP 430H. Lean Operations in Healthcare. 1.5 Unit.
The course will include the following topics: 1) Service Process Blueprints, 2) Managing Capacity in Service Systems, 3) Mapping the Value Stream (current and future state), and 4) Inventory Management in Service Systems. The topics considered are viewed in the context of healthcare management, financial services, insurance firms, call centers, back-office operations, and other applications. Through these topics, the participants will be trained in tools that help them understand customers' expectations and needs and to identify service system characteristics that can meet these needs. We will learn how to identify errors in service and troubleshoot these problems by identifying the root causes of errors. Subsequently, we will discuss how one can modify the product or service design so as to prevent defects from occurring. Finally, we will establish performance metrics that help evaluate the effectiveness of the Lean system in place. These efforts will result in improved quality. This course is not oriented toward specialists in service management. Its goal is to introduce you to the environments and help you appreciate the problems that operations managers are confronted with. Then, we will typically discuss some system specifics and emphasize the principles and issues that play key roles in their management. Prereq: Students enrolled in the online MBA program.

MBAP 499. Introduction to Learning Skills. 0 Unit.
Whether you are an online student, a student attending classes on campus, or a mix of both this course will equip you with the skills necessary to become a successful graduate student. Throughout this course you will learn more about yourself as a learner, how to apply universal standards for critical thinking to the evaluation of professional literature, and how to effectively balance your competing responsibilities as you begin your journey toward your degree.

MGMT
MGMT 1. Supervised Professional Practicum - Semester 1. 0 Unit.
A professional practicum is a workplace experience, the primary goal of which is the intellectual, personal and professional growth of the student. It occurs under the sponsorship or supervision of a mentor in the workplace who is committed to seeing that it is an educational as well as a work venture. It requires skills appropriate to the student’s year in college and provides students with new skills, insights and experiences that are transferable back to the academic setting and/or to a future position in the workplace. (Only available to declared Weatherhead Accounting or Management majors.) Prereq: Junior standing or higher.

MGMT 2. Supervised Professional Practicum - Semester 2. 0 Unit.
A professional practicum is a workplace experience, the primary goal of which is the intellectual, personal and professional growth of the student. It occurs under the sponsorship or supervision of a mentor in the workplace who is committed to seeing that it is an educational as well as a work venture. It requires skills appropriate to the student’s year in college and provides students with new skills, insights and experiences that are transferable back to the academic setting and/or to a future position in the workplace. (Only available to declared Weatherhead Accounting or Management majors.) Prereq: Junior standing.

MGMT 201. Contemporary Business and Communication. 3 Units.
This course is designed to survey business topics, issues, and practices. Students will be introduced to each of the functional areas of business, including accounting, finance, marketing, operations, business intelligence, and human resources management. The course is designed to help students appreciate the interrelationship of these business functions and, more generally, the role and context of business in society. Other topics considered include: the economic and legal environment of business, the globalization of markets, workforce diversity, leadership and entrepreneurship. To convey course content, lectures, in-class discussions, exercises, simulations, and guest speakers are used. Weekly discussions and a high level of student interaction amplify on class materials and concepts by focusing on contemporary issues of actual businesses.

MGMT 205. Essentials of Personal Finance. 1 Unit.
This course will provide students of all disciplines with an essential foundation in personal finance. The course will focus on four core areas of personal finance: 1) Budgeting & saving, 2) Investing, 3) Obtaining credit & controlling debt, and 4) Minimizing financial risk through the use of insurance. The course will also cover the essentials of personal taxation, retirement planning, and estate planning. This course will enable students to gain the fundamental knowledge and skills needed to make wise financial decisions as they move forward in life, which in turn will impact their ability to function as productive leaders in the workplace and financially literate citizens. A student may not receive credit for both MGMT 205 and MGMT 395 with the topic "Achieving Personal Financial Security." Prereq: Sophomore standing or higher.
MGMT 206. Personal Financial Management with Digital Technology. 1 Unit.
In the digital era, financial technologies have worked its way into our digital wallets and portfolio. Mobile banking services, budgeting and investing apps are inextricably linked with how we conduct our personal finances. While financial literacy deals with underlying finance concepts such as time value of money, compounding, budgeting and investing, financial technologies dictate how we access tools to carry out day-to-day budgeting, investing and consuming. In the digital era, financial technologies, Fintech, serves as an enabler of financial literacy, FinLit. While technology is not a substitute for literacy, Fintech complements literacy. Technology has created a level playing field and has advanced the access to credit and investments. This course will cover four areas: 1. Comparing banking services and costs 2. Digital banking: Using mobile apps and financial technologies for financial management and decision making 3. Personal finance and digital money 4. Risks in the digital era: Identity protection Offered as BAFI 206 and MGMT 206. Prereq: Sophomore standing or higher.

MGMT 315. International Management Institute. 3 Units.
The course provides undergraduate students with a unique overseas visitation, language orientation, and management subject experiences during periods such as Spring Break, or during interims immediately following the end of the semester. Opportunities for diverse cultural and language experiences which result from the institute are added benefits of these programs.

MGMT 360. Special Topics and Issues in Management. 1 - 9 Units.
This course option is available to qualified students who are undertaking special projects in a management related field.

MGMT 361. Managing in a Global Economy. 3 Units.
Managers need new skills to enable them to manage effectively in what is increasingly a global economy. They need a deeper understanding of cultural differences and how these differences may influence communications with foreign employers, employees, customers, suppliers or partners. They need a better understanding of the economic and political mechanics of the world business system. They need to learn how to find out more about potential opportunities and threats that lie outside the United States. This course is designed to address these needs. Offered as MGMT 361 and MGMT 460.

MGMT 395. Advanced Seminar. 1 Unit.
This seminar, for Accounting and Management majors with junior class standing or above, provides an opportunity to consider topics of importance in the community of ideas and activities related to the professional and managerial world. The development of writing and communication skills and in-depth discussion are expected attributes of seminar activity. The topic and scope of the coverage will be defined by the course instructor as consistent with the seminar approach to learning of the University. Accounting and Management majors must complete three seminars, each with a different topic. No academic credit will be earned for repeating seminars with the same topic. Counts as SAGES Departmental Seminar. Prereq: Declared Accounting or Management major and at least Junior standing.

MGMT 397. Undergraduate Research Project. 3 - 6 Units.
This course provides a supervisory structure for students completing and a capstone research project in the Weatherhead School of Management. Arrangements should be made by consultation with a faculty member selected and the Senior Capstone Committee of the School of Management. Open to all management and accounting majors and other qualified students with instructor approval. A written report, presentation to the faculty department most closely related to the student’s topic, and an approved public presentation are required. Counts as SAGES Senior Capstone.

MGMT 398. Action Learning. 6 Units.
This is an experiential course built around consulting projects in local organizations. Each project is focused on solving a business problem or pursuing a business opportunity. Each student will work in a team to analyze the current situation and identify related problems/opportunities, conduct research, analyze findings, creatively envision alternatives, and recommend an appropriate course of action and next steps. Throughout the semester students will receive instruction and coaching on the problem solving approach used in the course. Counts as SAGES Senior Capstone. Prereq: (ACCT 102 or ACCT 200) and BAFI 355 and MKMR 201 and Senior standing with a declared Accounting or Management major.

MGMT 418. Curricular Practical Training. 0 Unit.
This course is intended for graduate business students who wish to gain curricular practical training in support of career goals. The experience developed in an internship will complement academic experience gained in Weatherhead classes.

MGMT 456. Beyond Silicon Valley: Growing Entrepreneurship in Transitioning Economies. 3 Units.
The path for entrepreneurs to grow their companies outside of well-developed entrepreneurial ecosystems like Silicon Valley is challenging. Most markets around the world do not look like Silicon Valley, and they never will. But there are other models to support new businesses. In transitioning markets (where entrepreneurs do not have much access to private sector financing), government officials, donors, and business leaders are experimenting with creative approaches to support the growth of entrepreneurs. Cleveland is one such community. This seminar will explore some of these innovative approaches.

MGMT 458. International Institute. 3 Units.
The International Institute involves semester-long study of a particular region, followed by a class trip to an area within that region. The preparatory coursework varies depending on the region selected for that particular semester; however, it typically consists of research about cultural, financial, political, and economic topics. The trip consists of daily research meeting with organizations within the region being studied. Upon return, a summary exercise is required to complete the coursework. The class trip is a mandatory component of the course.

MGMT 460. Managing in a Global Economy. 3 Units.
Managers need new skills to enable them to manage effectively in what is increasingly a global economy. They need a deeper understanding of cultural differences and how these differences may influence communications with foreign employers, employees, customers, suppliers or partners. They need a better understanding of the economic and political mechanics of the world business system. They need to learn how to find out more about potential opportunities and threats that lie outside the United States. This course is designed to address these needs. Offered as MGMT 361 and MGMT 460.
MGMT 464. Business Ethics. 3 Units.
This course is built around two core learning tracks. The first is extended analyses of case studies, which identifies ethical problems, diagnoses import, and develops strategic programs to address them. The second learning track uses short pieces of fiction to explore issues of ethical character, leadership, and organizational responsibility. Each student keeps an ethics journal over the course of the semester to reflect on ethical issues, both inside and outside the classroom. In addition, small student groups are formed to write case studies focusing on a business ethics problem.

MGMT 465. Perspectives in European Management. 3 Units.
The European Institute provides an introduction to international business through a unique combination of class meetings and an excursion to Europe. While in Europe, students meet with local business people, consulate officials, and university professors to learn the prerequisites for doing business in the region. The trip features site visits to local companies.

MGMT 467. Commercialization and Intellectual Property Management. 3 Units.
This interdisciplinary course covers a variety of topics, including principles of intellectual property and intellectual property management, business strategies and modeling relevant to the creation of start-up companies and exploitation of IP rights as they relate to biomedical-related inventions. The goal of this course is to address issues relating to the commercialization of biomedical-related inventions by exposing law students, MBA students, and Ph.D. candidates (in genetics and proteomics) to the challenges and opportunities encountered when attempting to develop biomedical intellectual property from the point of early discovery to the clinic and market. Specifically, this course seeks to provide students with the ability to value a given technological advance or invention holistically, focusing on issues that extend beyond scientific efficacy and include patient and practitioner value propositions, legal and intellectual property protection, business modeling, potential market impacts, market competition, and ethical, social, and healthcare practitioner acceptance. During this course, law students, MBA students, and Ph.D. candidates in genomics and proteomics will work in teams of five (two laws students, two MBA students and one Ph.D. candidate), focusing on issues of commercialization and IP management of biomedical-related inventions. The instructors will be drawn from the law school, business school, and technology-transfer office. Please visit the following website for more information: fusioninnovate.com. Offered as LAWS 5341, MGMT 467, GENE 367, GENE 467, EBM 467, and ECSE 467.

MGMT 495. AMES Business Model. 3 Units.
AMES BUSINESS MODELS is an experiential course designed to explore the challenges that face entrepreneurs and established organizations as they develop new business models. Throughout the course we will address four general questions regarding business models: What are the key elements of any business model? How do those elements work in concert to create value? What challenges do innovators face as they explore new business models? What tools and techniques help innovators reduce their risk and enable growth? At the end of this course students should be able to: Describe the essential elements of a business model and how that model is meant to create value. Assess the potential of any business model and the key assumptions upon which it is built. Design and execute experiments to efficiently validate (or invalidate) those assumptions. Whether students plan to join an existing organization or start their own, these tools will provide a foundation for creating innovative, sustainable businesses. This course will focus on entrepreneurship (creating and testing new business models within an established organization).

MGMT 497. Action Learning Project. 3 Units.
This course allows teams of students to integrate functional, core knowledge and apply analysis and strategic management skills in a real-world setting. Students will be evaluated by the instructor and the project managers at the client organizations. Prereq: Instructor and project managers at client organizations. Prereq: Part-time Cohort MBA Students and Master of Healthcare Management students only.

MGMT 500. Qualitative Methods for Business. 1 Unit.
This course is offered online and helps students acquire and/or refresh the following probability, statistics, mathematics, and computer skills that are essential for success in the MBA program. Topics include: - Statistics: Descriptive Statistics (summarizing and explaining data). Probability (modelling randomness and variability using probability ideas). Sampling (mean, standard deviation, and the role of the Central Limit Theorem). -Algebra and Math: a self-guided review is provided of functions and their graphical representations, linear equations, and exponentials and logarithms. -Computer Skills: the basic use of SPSS and EXCEL for statistical analysis. This course is designed for non-MBA/non-WSOM students who have not taken a formal course in probability and statistics, have taken such a course long ago and need to refresh this knowledge, or are not confident with basic probability, statistics and mathematics. Recommended Preparation: Knowledge of high school mathematics and the basics of using EXCEL (such as writing formulas, copying cells and formulas, and so on).

MGMT 501. Special Problems and Topics. 1 - 18 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.

MGMT 502. Independent Study. 1 - 18 Units.
This course is offered, with Dean's Office permission, to students undertaking reading in a field of special interest.

MGMT 560. Theoretical Perspectives in Management. 3 Units.
This seminar exposes students to management theories from a variety of disciplines. The goal of the course is to help students learn to synthesize and contrast theories to develop hypotheses of their own. Prereq: Ph.D. standing or consent of instructor.

MGMT 571. Measurement Theory and Method. 3 Units.
This doctoral seminar focuses on the theoretical and methodological issues involved in social science measurement. Specifically, the course will cover topics in basic principles of measurement including Classical Test Theory, Reliability, Validity, and Item Response Theory, as well as related tools for measurement analysis including Exploratory and Confirmatory Factor analysis. In addition, the course will expose students to analytical methods that model measurement error in simultaneous equations including models with mediation and moderation effects. This course involves extensive use of statistical packages including SPSS, LISREL, and EQS. Prereq: Ph.D. standing.

MGMT 573. Applied Multivariate Data Analysis. 3 Units.
The objectives of the seminar are to provide students with an understanding of the substantive and methodological issues involved in applied multivariate data analysis. The seminar aims to expose students to the assumptions, principles and applications of a selected set of multivariate techniques including Logistic Regression, MANOVA/ Discriminant, Profile, Multilevel and Latent Growth Model analysis. This course involves extensive use of statistical packages including SPSS, LISREL, and EQS. Prereq: Ph.D. standing.

MGMT 602. Advanced Topics. 1 - 18 Units.
This is a course of flexible design to meet advanced theoretical and/or methodological needs of doctoral students. Approval is needed from the instructor, and it requires a letter grade.
MGMT 610. Culture and World Politics. 3 Units.
Religion, ethnicity, and nationalism have assumed major political significance in the post Cold-War and post-9/11 eras. The course examines ideas of political democracy and economic liberalism in relation to different cultural and religious ideas and explores relationships among social values, political structures, and economics. Prereq: Must be enrolled in Ph.D in Management: Designing Sustainable Systems track.

MGMT 611. Theory and Practice of Collective Action. 3 Units.
The ability of autonomous and interdependent parties to coordinate actions, or to act cooperatively, affects a wide range of organizational and social problems. This course addresses the theory and practice of collective action in local, national and global contexts. Case studies of collective action problems, such as environmental protection, community revitalization, and the mobilization of interest groups will be discussed. Prereq: Must be enrolled in Ph.D in Management: Designing Systems track.

MGMT 616. Global Economic Systems and Issues. 3 Units.
This course provides a framework and analytical tools for understanding globalization and international economic relations in the context of the global political system. It analyzes the economic and political forces that are shaping global cooperation on economic matters, the role and impact of international economic institutions such as the World Bank, the International Monetary Fund, and the World Trade Organization, and evolving forms of regional governance, such as the European Union. It covers national and international policies and development and the causes and cures of international financial crises. The course revolves around concepts of efficiency, equality, power and institutions in the making of public policy towards globalization of communications and transportation. Prereq: Must be enrolled in Ph.D in Management: Designing Systems track.

MGMT 640. Social Ethics: Contemporary Issues. 3 Units.
The course draws upon intellectual ancestors and current thinkers in moral philosophy and ethics to assist each student in identifying, analyzing, and discussing social and ethical questions pertaining to the definition and purpose of contemporary life, the need for moral coherence, and the meaning of life in a global society. The unifying theme of the course is Tolstoy’s question, “How then shall we live?” The course does not seek to provide answers to the great questions of life. Rather, it tries to expand each student’s capacity to grapple with such questions. Prereq: Must be enrolled in Ph.D in Management: Designing Systems track.

MGMT 641. Qualitative Res Methods II. 3 Units.
This course guides the student in conducting the qualitative research project that was proposed in EDMP 638. Fieldwork and initial analysis is conducted during the summer when data based on semi-structure interviews is collected and analysis begins using inductive coding techniques. A summer residency is held in mid-June to assess progress as final data collection and analysis continues. The aim of the fall semester is to prepare a formal research report on that project, which will be submitted to an academic research conference. The final report includes a revision of one’s conceptual model, integrating new understandings and literature arising from the data collection and analysis. Prereq: Must be enrolled in Ph.D in Management: Designing Sustainable Systems track.

MGMT 643. Measuring Bus Behav & Struc. 3 Units.
This course aims to develop the basic foundations and skills for designing and executing generalizable studies that measure business behaviors and structures. It focuses on building competence in building of measurement systems, construct measurement, research design, data collection methodologies, and application of analytical software commonly involved in quantitative inquiry. Covered topics include framing research questions, reliability and validity of measurement, quasi-experimental research design, and fieldwork for data collection. Classes are designed to balance theory and practice through quantitative research design and will be linked to the participant’s own research project. Prereq: Must be enrolled in Ph.D in Management: Designing Sustainable Systems track.

MGMT 645. Integration of Qualitative and Quantitative Inquiry. 3 Units.
Using the mixed method research toolkit developed in previous courses, this course focuses on critically analyzing selected pieces of published applied and policy research to develop a critical appreciation of issues and debates that have wide applicability and relevance. In particular, it offers students ways to integrate and triangulate using a mixed method approach, different forms of evidence, and related evidence. In addition, this course addresses common method choice and justification issues and related challenges of validity and theory formulation that typically arise during the students’ execution of a series of individual research projects. Application of critical analysis and appreciation approach in justifying mixed methods designs to the student’s own research work is encouraged and supported by sharing and discussing common research and methodology themes and problems. Prereq: Must be enrolled in Ph.D in Management: Designing Sustainable Systems track.

MGMT 646. Advanced Analytical Methods for Generalizing Research. 3 Units.
This course addresses advanced topics in regression and structural equation modeling such as latent growth curve models, partial least squares, logit models, tests for various types of invariance, multiple-group analysis, multilevel analysis, and analyzing qualitative/categorical data. These analytical methods are intended to enhance the student’s toolkit as to facilitate a strong bridge to the academic literature and the application to specific data based problems that arise in applied managerial research. Prereq: Must be enrolled in Ph.D in Management: Designing Sustainable Systems track.

MGMT 647. Causal Analysis of Business Problems I. 3 Units.
Causal Analysis of Business Problems I introduces fundamental concepts in theory-based model building and validation. In this course students will develop, explore, refine a range of models appropriate for addressing their problem of practice including classification models, process models, variance models, and articulating nomological networks. In particular, the course will focus on effective conceptualizations of causation, control, mediation, and moderation. Further, foundational statistical techniques such as tests of assumptions of the data, exploratory factor analysis, and regression and path analysis will be introduced to analyze concepts of causation, control, mediation and moderation. Prereq: Only for students in PhD in Management: Designing Sustainable Systems, or by permission of the Program Director.
MGMT 649. Causal Analysis of Business Problems II. 3 Units.
Building upon the first course in Causal Analysis of Business Problems, this course will guide students through the theoretically-grounded variance models that are required for testing through structural equation modeling (SEM) in the quantitative portion of their research. Fundamental concepts in model testing will be reinforced using path analysis, and will include a deeper exploration of moderation by addressing topics such as moderated mediation and interaction effects. Beyond the analysis the course will emphasize precise and accurate formulation of theoretical models and associated reasoning, as well as careful interpretation of findings. The class will also delve into testing of data assumptions and prepare students for the model testing portion of their capstone assignments. Prereq: Must be enrolled in Ph.D in Management: Designing Sustainable Systems track.

MGMT 664. Knowledge Dissemination to Influence Managerial Practice. 3 Units.
The aim of this course is twofold. First, it supports students organizing and writing their DM thesis overview or their PhD thesis proposal. Also discussed are ways to organize and communicate in scientific genres, their aims and their generic properties. Secondly, students become acquainted with scientific communication and publishing. Effective reviewing, criteria for judging articles and theses, management of review processes, and how to communicate and respond to reviews are topics discussed. The course also addresses publication strategies and ways of managing and communicating scientific and managerial knowledge to different stakeholders. Prereq: Must be enrolled in Ph.D in Management: Designing Sustainable Systems track.

MGMT 677. Designing Sustainable Systems. 3 Units.
Students in teams will recognize and work in practice on a managerial problem that involves dimensions of sustainability and design. They will develop a set of solutions to the problem by generating alternative models and intervention strategies to address the problem. The project results in a short presentation and written communication of the solution in a form of a poster or prototype. The course will also include presentations of intervention and action research approaches and issues of inquiry validation and theory development. Prereq: Only for students in PhD in Management: Designing Sustainable Systems.

MGMT 701. Dissertations Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Must be enrolled in Ph.D. in Management: Designing Sustainable Systems and have predoctoral research consent or advanced to Ph.D. candidacy milestone.

MIDS

MIDS 301. Introduction to Information: A Systems and Design Approach. 3 Units.
This course is an introduction to the concept of information and the uses of information in organizations and social life. The course is for anyone who is interested in the evolution of digital culture and the influence of design, systems, and management in contemporary life. This will involve readings from a variety of disciplines, including mathematics, the social sciences, management and the humanities. We live in an "information ecology": a system of human activities served by a variety of technologies that are often grounded in local environments and with deep ethical implications. The goal of our course is to understand this system and how information has become a medium of human experience in our lives. There will be useful readings, but also exercises and projects that enable students to test and develop their understanding.

MKMR

MKMR 201. Marketing Management. 3 Units.
This is an introductory marketing course designed to provide students with the concepts and theories necessary for understanding the fundamental principles of marketing and its role in any organization. Students will learn concepts such as marketing orientation, marketing-mix, relationship marketing and service logic, as well as behavioral theories of customer response and strategic frameworks of customer brand management. Students develop capabilities for understanding marketing issues in real world situations and to create and implement basic marketing plans. Prereq: At least Sophomore standing.

MKMR 304. Brand Management. 3 Units.
Successful innovation and management of brands and products creates customer, firm, and societal value. This course is designed to help students understand the principles of product and brand development and management such as understanding evolving customer needs; creating and delivering the right products, services, and experiences; and managing the process to enhance brand equity and customer satisfaction. Through text, cases, and simulation this engaging class will cover the branding process from new brand and product development; brand communication and promotion, and brand equity measurement. The course will also discuss specific topics such as global brands, brand extensions, brand revitalization, and social responsibility. Prereq: MKMR 201.

MKMR 308. Measuring Marketing Performance. 3 Units.
Evaluation and control are important strategic marketing processes and without effective and consistent measurement, these processes cannot be performed adequately. In recent years, marketing budgets have been challenged by top managers as the value of these expenditures to an organization's financial well being is not often clear. Marketing activities such as advertising, sales promotions, sales force allocation, new product development, and pricing all involve upfront investments and making these investments now require increasing scrutiny. This course will be about knowing and understanding what to measure, how to measure, and how to report it so the link between marketing tactics and financial outcomes is clearer. The course will include lecture by the instructor, readings, cases, computer based data exercises, and guest lectures. There will also be a team project requirement. Prereq: (ACCT 100 or ACCT 101) and ECON 102 and MKMR 201.

MKMR 310. Marketing Analytics. 3 Units.
To appreciate, design, and implement data-based marketing studies for extracting valid and useful insights for managerial action that yield attractive ROI, five essential processes are emphasized: (a) making observations about customers, competitors, and markets, (b) recognizing, formulating, and refining meaningful problems as opportunities for managerial action, (c) developing and specifying testable models of marketing phenomenon, (d) designing and implementing research designs for valid data, and (e) rigorous analysis for uncovering and testing patterns and mechanisms from marketing data. Prereq: MKMR 201 and OPRE 207.
MKMR 311. Customer Relationship Management. 3 Units.
Customer Relationship Management (CRM) is the strategic process of building and maintaining profitable, sustainable customer relationships through co-creation of value with customers in both business-to-business (B2B) and business-to-consumer (B2C) markets. This course starts with understanding the relationship between an organization’s strategic goals and the structure and dynamics of organization-customer relationships. Topics include assessing CRM system design, implementation and management; the fundamentals of customer profitability analysis; customer portfolio management; B2B relationship management; sales force management and automation; and designing services programs to optimize customer experiences; and expanding customer relationships through services. Additionally, students will explore how one-to-one marketing and social networks enhance customer relationships. Learning will be accomplished through lecture and discussion, critical discussion of case studies and contemporary marketing issues, and interaction with experienced CRM marketing professionals. Prereq: MKMR 201.

MKMR 312. Selling and Sales Management. 3 Units.
Selling and sales management are keys to implementing an organization’s marketing program and customer relationships. This course emphasizes developing an understanding of basic marketing concepts, selling principles, interrelationships among sales force management and other business functions, appropriate strategy for managing a sales force and measurement of sales force productivity. We will use theories of work motivation and explore how individual difference variables influence the choices of sales managers. This course uses a synthesis of sales research and leading practices to focuses on both a strategic and a tactical perspective. Strategic issues include: entrepreneurial strategy, the sales force’s role in company strategy, customer relationship and strategic account management, sales force size and organization and career paths to sales management. Tactical issues include: effective approaches to selling, finding and retaining top sales talent, motivating and compensating the field force, evaluating performance, and aligning sales territories. Prereq: MKMR 201.

MKMR 348. Strategic Internet Marketing. 3 Units.
This course aims to prepare business students to think strategically and make effective marketing decisions in networked business environments. Given the increasing strategic significance of the internet across a broad spectrum of industries, it is imperative that business students develop a deep understanding of the emerging digital marketplace. The course will focus on the following topics: The emerging digital world; individuals and firms online; network technologies; business models on the internet; online branding; customer relationship management and loyalty in electronic markets; internet’s impact on innovation and product management; online retailing; business-to-business e-commerce; multi-channel management; sustainable competitive advantage in the digital marketplace; legal, ethical, and public policy issues related to digital technologies; organizing for online marketing. Prereq: MKMR 201.

MKMR 360. Independent Study. 1 - 3 Units.
This course is offered, with permission, to students undertaking reading and research in an area of their special interest. Prereq: MKMR 201.

MKMR 360. Independent Study. 1 - 3 Units.
This course is offered, with permission, to students undertaking reading and research in an area of their special interest. Prereq: MKMR 201.

MKMR 405. Business Marketing. 3 Units.
This course focuses on concepts and practices of business-to-business marketing of products and services. It also examines how rapid technological change impacts industrial markets. Topics covered include: buyer-seller relationship building, competitive bidding, developing markets for new materials and value-based pricing strategies. Marketing to the government, marketing of intellectual property and marketing-R&D-manufacturing interface issues will also be explored. Prereq: MBAP 407 or MBAC 506 or HSMC 407.

MKMR 408. Marketing Metrics. 3 Units.
Evaluation and control are important strategic marketing processes and without effective and consistent measurement, these processes cannot be performed adequately. In recent years, marketing budgets have been challenged by top managers as the value of these expenditures to an organization’s financial well being is not often clear. Marketing activities such as advertising, sales promotions, sales force allocation, new product development and pricing all involve up-front investments and making these investments now require increasing scrutiny. This course will be about knowing and understanding what to measure, how to measure and how to report it so the link between marketing tactics and financial outcomes is clearer. The course will include lecture by the instructor, readings (no textbook), cases, computer based data exercises and guest lectures. There will also be a team project requirement. Prereq: MBAC 506, MBAP 407 or HSMC 407.

MKMR 410. Marketing Insight Management. 3 Units.
To appreciate, design, and implement data-based marketing studies for extracting valid and useful insights for managerial action that yield attractive ROI. Five essential processes are emphasized: (a) making observations about customers, competitors, and markets, (b) recognizing, formulating, and refining meaningful problems as opportunities for managerial action, (c) developing and specifying testable models of marketing phenomenon, (d) designing and implementing research designs for valid data, and (e) rigorous analysis for uncovering and testing patterns and mechanisms from marketing data. Prereq: MBAC 506 or MBAC 511 or MBAP 403 or MBAP 407.

MKMR 411. Customer Relationship Management. 3 Units.
Customer Relationship Management (CRM) is the strategic process of building and maintaining profitable customer relationships through co-creation of value with customers. This course starts with understanding the relationship between an organization’s strategic goals and customer relationships, including assessing CRM systems, management and implementation, in both B2B and B2C markets. Students will learn the fundamentals of customer profitability analysis, customer portfolio management, B2B relationship/sales force management and automation, designing services to optimize customer experiences, as well as expanding customer relationships through services. Additionally, students will explore how one-to-one marketing and social networks enhance customer relationships. Learning will be accomplished through critical discussion of case studies and contemporary marketing issues, and hands-on group project and presentation, and interaction with experienced CRM marketing professionals. Prereq: MBAP 407 or MBAC 506 or HSMC 407.

MKMR 412. E-Marketing. 3 Units.
Using a combination of lectures, cases, and hands-on projects, the course examines how the Internet influences all the key aspects of marketing, including marketing strategy, pricing, advertising, segmentation, marketing research, retailing, distribution channels, and international marketing. Additionally, the course will cover more Internet specific topics such as privacy, wireless web, sales force automation, and e-marketplace models. The course incorporates both business-to-business and business-to-consumer outlooks. Prereq: MBAC 506 or MBAP 407.
MKMR 421. Marketing Value Creation. 3 Units.
Marketing value creation is the process of creating and managing successful brands through continuous innovation. Successful brand innovation and management requires understanding evolving customer needs; creating and delivering the right products, services, and experiences; and managing the process to enhance brand equity and customer satisfaction. Through text, readings, cases, high-profile guest lectures and team projects, this engaging class will cover the innovation and branding process from discovery of unmet needs, brand and product development, to brand promotion and advertising and brand equity measurement. A sustainability thread will weave through the course, covering topics such as brand’s ecological footprint, product safety, eco-friendly branding, the ethics of advertising, the impact of pricing on consumers and corporate social responsibility. The result of proper sensitivity to customer needs, social concerns and the environment is integral to the process of value creation for customers, companies and society. Prereq: MBAC 506 or MBAP 407.

MKMR 501. Special Problems and Topics. 1 - 18 Units.
This course is offered, with permission, to students undertaking reading or a project in a field of special interest.

MKMR 601. Special Problems and Topics. 1 - 18 Units.
This course is offered, with permission, to Ph.D. candidates undertaking reading or a project in a field of special interest.

MPOD
MPOD 413. Foundations of Positive Organization Development and Change. 3 Units.
This course explores and develops the art of reading and understanding social systems in ways that help us imagine, design and develop organization excellence. First it seeks to show how many of our conventional ideas about organizations are based on discourse and metaphors that lead us to see and understand organizations in partial and often limiting ways. Growing research from the domains of Positive Psychology and Positive Organization Scholarship and the theory and practice of Appreciative Inquiry will be explored to show how we can create new and more positive, strength-based ways of designing and developing social systems. Includes presentations, guest lectures and panel discussions on current topics of interest for the Masters in Positive Organization Development and Change (MPOD) candidates. Led by a faculty member of the Department of Organization Behavior, these dialogues and seminars will be presented in several of the six main residencies of the MPOD program. Reflective essays and integrative papers will enable participants to explore their practice of OD, leadership capacity, application of learnings from the program and deeply held values related to current issues and opportunities in the domain of human systems change and development. Part Two of Two. Prereq: MPOD 413A.

MPOD 414. Managing Organizational Change and Real-World Challenges. 3 Units.
The objective of this course is to familiarize participants with the theory and technique of organization design and corporate change with particular emphasis on helping leaders understand and implement the latest forms of organizing in a customer-focused, electronically mediated and knowledge-driven world. Frameworks presented will be used to explore the impact of the information revolution on organization design and change, and the evolution of traditional vertically integrated and multi-divisional enterprises toward spider web structures, trans-organizational networks and communities of practice. Prereq: Open to MPOD candidates only.

MPOD 416A. Leadership, Executive Assessment and Development. 2 Units.
Leadership with emotional intelligence will be examined by studying a number of topics and applying them to two major case studies: 1) a CEO; and 2) yourself. In this context, coaching the development of leadership will be a major topic throughout the course. This course will explore questions such as: Who are effective leaders? Are they different from effective managers? How do they think and act? What makes us want to follow them? How are leaders developed? What and how can people (you) help/coach others develop their competencies to become more effective leaders? (Part one of a three-section course.) Prereq: Open to MPOD candidates only.

MPOD 416B. Leadership and Executive Assessment and Development. 1 Unit.
Leadership with emotional intelligence will be examined by studying a number of topics and applying them to two major case studies: 1) a CEO; and 2) yourself. This course will explore questions such as: Who are effective leaders? Are they different from effective managers? How do they think and act? What makes us want to follow them? How are leaders developed? What and how can people (you) help others develop their competencies to become more effective leaders? (Part two of three) Prereq: MPOD 416A.
MPOD 416C. Leadership, Executive Assessment and Development. 1 Unit.
Leadership with emotional intelligence will be examined by studying a number of topics and applying them to two major case studies: 1) a CEO; and 2) yourself. In this context, coaching the development of leadership will be a major topic throughout the course. This course will explore questions such as: Who are effective leaders? Are they different from effective managers? How do they think and act? What makes us want to follow them? How are leaders developed? What and how can people (you) help/coach others develop their competencies to become more effective leaders? (Part three of a three-section course.) Prereq: MPOD 416B.

MPOD 418. Flourishing Enterprise. 2 Units.
Global issues such as climate change and food security, as well as heightened expectations for personal health and well-being in the workplace, are introducing greater levels of complexity into business strategy and operations, with far-reaching implications for customer satisfaction and employee engagement. Effective handling of these issues can lead to new sources of revenue generation and cost efficiency, as well as reputational value, while failure to do so can lead to financial and competitive risk. Prereq: Open to MPOD candidates only.

MPOD 431B. Experiential Learning for Individuals, Teams, and Organizations. 1 Unit.
This course focuses on the theory of experiential learning and its application at the individual, team, and organizational levels of analyses. This course offers the chance for students to gain insight into their individual learning and adaptive styles, and how such styles impact the way they interact and have consequence for team. The course also explores how teams and organizations learn, and the effect that cultural determinants have on learning and adaptability. In addition, the course examines how learning theory can be applied to focused institutional development projects and educational processes. The course uses presentations, lectures, research findings, interactive activities, and class discussion. The current topics of interest are for the Masters in Positive Organization and Change (MPOD) candidates. It is led by a faculty member of the Department of Organization Behavior. Reflective essays and integrative papers will enable participants to explore their learning styles and that of their organizations and teams to strengthen the practice of OD and human systems change and development. Part two of two. Prereq: MPOD 431A.

MPOD 432. Interpersonal Skills Building. 3 Units.
Interpersonal and team dynamics. It will help you build more open and effective relationships among peers and clients by improving your ability to cooperate with and lead others to work effectively in today's increasingly team-oriented organizations. The emphasis of this course is on learning about oneself in the context of others and using these insights to facilitate learning in the groups you lead. Prereq: Open to MPOD candidates only.

MPOD 432A. Interpersonal Skills Building. 1 Unit.
The objective of this course is to hone the participant's abilities to use themselves as instruments of change and development in relationships with colleagues and clients. This requires comfort with and practice in intervening in a broad range of interpersonal and group dynamics, and knowledge of how one's unique personal style and character serve as both strengths and weaknesses in dealing with others in a helping relationship. Participants will explore theories of adult development, interpersonal and group dynamics, diagnose their interpersonal needs and styles, and practice techniques for developing generative relationships with clients across the OD (organization development) cycle and as process consultants in group settings. Prereq: Open to MPOD candidates only.

MPOD 432B. Interpersonal Skills Building. 1 Unit.
The objective of this course is to hone the participant's abilities to use themselves as instruments of change and development in relationships with colleagues and clients. This requires comfort with and practice in intervening in a broad range of interpersonal and group dynamics, and knowledge of how one's unique personal style and character serve as both strengths and weaknesses in dealing with others in a helping relationship. Participants will explore theories of adult development, interpersonal and group dynamics, diagnose their interpersonal needs and styles, and practice techniques for developing generative relationships with clients across the OD (organization development) cycle and as process consultants in group settings. (Part two of two.) Prereq: Open to MPOD candidates only.

MPOD 435. Practicum in Appreciative Inquiry and Positive OD. 3 Units.
This course develops participants' consultative skills. Competence in role entry and development, data collection, intervention and evaluation is gained through class exercises and field projects. The focus is on developing a problem-centered approach to intervening in organizations that minimizes reliance on programmed techniques and maximizes collaborative innovation and learning between client and consultant. Prereq: Open to MPOD candidates only.

MPOD 439. Individual Field Project. 3 Units.
The objectives of this course are to: 1) demonstrate the ability to frame and design a clear cut action research project applied to a given organizational development challenge or improvement opportunity; 2) show the ability to engage and mobilize others in a collaborative effort toward a collective outcome; 3) employ a defined change process and use theory from the field of OD (e.g., AI, EI, Sustainability, Organization Design, Strategic Thinking, etc.) to inform practice; 4) evince the ability to maintain momentum during the course of a project, while navigating the complexities that one normally encounters in an effort to complete the action research cycle; 5) provide evidence that the organization development change project has had a positive benefit or impact; and 6) reveal sufficient self-reflection and mindfulness in ways that further your own and others personal or professional development. These six objectives will fundamentally be the same competencies that I will look for in grading Part 1 and Part 2 of your assignment. Toward these ends, you are expected to plan and execute a significant organization development, and/or change project with an ongoing client or employer. Emphasis is placed on the craft of developing projects that are consistent with one's current skills, career plans, and developmental needs that can be combined with the needs, opportunities, readiness, and resources of the client organization. Prereq: Open to MPOD candidates only.

MPOD 440A. Inclusive Leadership in a Global Context. 2 Units.
The purpose of this course is to help you understand the current theories and effective practices of inclusive leadership in a global context, and through this understanding, to help you enhance your own leadership practices and capabilities. We will examine the methods, challenges, trade-offs, and frontiers of inclusive leadership through application of leadership concepts to case studies. Student teams will identify and conduct an at-a-distance project studying a global executive. The course will facilitate the development of personal efficacy for working with and supervising diverse others—those from different nations/cultures, races/ethnicities, genders, age groups, religions and lifestyles who may have different values, perspectives, approaches and abilities. As you gain self-awareness of the impact of your own identity, you will clarify your own approaches and styles and become more authentic as a leader and change agent. You will also develop practical knowledge about enabling team cultures of engagement and inclusion. Part one of two. Prereq: Open to MPOD candidates only.
**MPHD 440B. Inclusive Leadership in a Global Context. 1 Unit.**
The purpose of this course is to help you understand the current theories and effective practices of inclusive leadership in a global context, and through this understanding, to help you enhance your own leadership practices and capabilities. We will examine the methods, challenges, trade-offs, and frontiers of inclusive leadership through application of leadership concepts to case studies. Student teams will identify and conduct an at-a-distance project studying a global executive. The course will facilitate the development of personal efficacy for working with and supervising diverse others—those from different nations/cultures, races/ethnicities, genders, age groups, religions and lifestyles who may have different values, perspectives, approaches and abilities. As you gain self-awareness of the impact of your own identity, you will clarify your own approaches and styles and become more authentic as a leader and change agent. You will also develop practical knowledge about enabling team cultures of engagement and inclusion. Part two of three. Prereq: Open to MPHD candidates only.

**MPHD 440C. Inclusive Leadership in a Global Context. 1 Unit.**
The purpose of this course is to help you understand the current theories and effective practices of inclusive leadership in a global context, and through this understanding, to help you enhance your own leadership practices and capabilities. We will examine the methods, challenges, trade-offs, and frontiers of inclusive leadership through application of leadership concepts to case studies. Student teams will identify and conduct an at-a-distance project studying a global executive. The course will facilitate the development of personal efficacy for working with and supervising diverse others—those from different nations/cultures, races/ethnicities, genders, age groups, religions and lifestyles who may have different values, perspectives, approaches and abilities. As you gain self-awareness of the impact of your own identity, you will clarify your own approaches and styles and become more authentic as a leader and change agent. You will also develop practical knowledge about enabling team cultures of engagement and inclusion. Part three of three. Prereq: Open to MPHD candidates only.

**MPHD 470A. Leading Change from a Complexity Perspective. 1 Unit.**
In this course, we will continuously attempt to answer two questions: (1) What is the process of sustained, desirable change? and (2) What is the role of a leader? Concepts from complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad, team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. In this context, coaching the development of leadership will be a major topic throughout the course. Prereq: MPHD candidates only.

**MPHD 470B. Leading Change from a Complexity Perspective. 2 Units.**
In this course, we will continuously attempt to answer two questions: (1) What is the process of sustained, desirable change? and (2) What is the role of a leader? Concepts from complexity theory will be used, including understanding the multilevel nature of SDC at the individual, dyad, team, organization, community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. In this context, coaching the development of leadership will be a major topic throughout the course. Prereq: MPHD candidates only.

**MPHD 479. Foundations of Strategic Thinking. 3 Units.**
This course will define what constitutes strategic change and what does not. Students will be introduced to a variety of strategic interventions and models from which to interpret, understand and achieve positive organizational change. Opportunity will be provided to apply selected models to the student’s organization and other cases in order to gain insight and appreciation for financial and non-financial factors that influence fundamental organizational growth and development. Prereq: Open to MPHD candidates only.

**MPHD 480. Dynamics of Effective Change Management Strategies. 3 Units.**
This course will: 1) highlight the major current trends and changes that affect the nature of managerial work; 2) describe how OD practitioners and consultants need to factor such trends into their consulting strategies; 3) differentiate between types of interventions, the circumstances in which they apply and their unique strengths; 4) provide background theories that explain the challenges inherent in mobilizing positive change; 5) describe ways to bridge the gap between knowing and doing in order to build organization resilience; and 6) introduce a variety of consulting techniques and skills that the students can add to their repertoire. Prereq: Open to MPHD candidates only.

**MPHD 498. Global Citizenship and Multi-Cultural OD: International Study Tour. 3 Units.**
This course will broaden perspectives and knowledge of how OD principles and technologies are generated and applied in contexts and cultures outside of North America. Selected literature representing global perspectives on the practice of OD and field experiences will provide support and background for personal experience and reflection on cross-cultural issues in organizing. The primary learning context will be an intense, 10-day study tour to some country outside of North America to provide the participants with opportunities for 1) comparative studies of OD practices in different cultural settings; 2) in-depth experiences with OD practitioners and students in a different national, regional and cultural context; 3) co-inquiry with non-North American students also involved in developing OD knowledge and skills; and 4) on-site organization visits outside of North America to observe and learn about on-going dynamic change efforts. Prereq: Open to MPHD candidates only.

**MSBA**

**MSFC**
Course descriptions can be found under FNCE

**MSFI**
Course descriptions can be found under FNCE

**MSOR**
Course descriptions can be found under SCMG
OPMT 350. Project Management. 3 Units.
Project management is concerned with the management and control of a group of interrelated tasks required to be completed in an efficient and timely manner for the successful accomplishment of the objectives of the project. Since each project is usually unique in terms of task structure, risk characteristics and objectives, the management of projects is significantly different from the management of repetitive processes designed to produce a series of similar products or outputs. Large-scale projects are characterized by a significant commitment of organizational and economic resources coupled with a high degree of uncertainty. The objective of this course is to enhance the ability of participants to respond to the challenges of large-scale projects so that they can be more effective as project managers. We study in detail up-to-date concepts, models, and techniques useful for the evaluation, analysis, management, and control of projects. Offered as OPMT 350, OPMT 450 and SCMG 450. Prereq: OPRE 207 and OPRE 301.

OPMT 377A. Business Forecasting. 1.5 Unit.
This course introduces nonmathematical managers to the major quantitative models designed for sound demand and system forecasting in today’s complex and increasingly uncertain supply chains. Topics will also include reliability of historical data sets to forecast future patterns. The course will also cover non-quantitative tools to forecast demand for new products, services and technologies when historical data are not readily available. Emphasis is placed on a general understanding of theory, mechanics, application potential, available software packages, and templates. Offered as OPMT 377A, OPMT 477A and SCMG 477A. Prereq: OPRE 207 and OPRE 301.

OPMT 377B. Enterprise Resource Planning in the Supply Chain. 1.5 Unit.
Enterprise resource planning is the dominant system by which companies translate the needs from their customers into the detailed plans that the company must perform to meet the customer needs, and the resulting support the company will need from its suppliers. As such, it is a central player in the process of supply chain management. In this course, we study both the quantitative and qualitative concepts and techniques to help manage a company’s operations to perform these important translation and planning tasks in order to help the company be successful. A major emphasis during the course is the design of processes and procedures (algorithms) for solving very complex (wicked) problems as a part of both class discussions and while working on case studies, as well as critiquing the designs so as to clearly understand their limitations. Offered as OPMT 377B, OPMT 477B, and SCMG 477B Prereq: OPMT 377A.

OPMT 412. Lean Services Operations. 3 Units.
The course will be delivered over four modules: 1) Service ProcessBlueprints, 2) Managing Capacity in Service Systems, 3) Mapping the Value Stream (current and future state), and 4) Inventory Management in Service Systems. The topics considered are viewed in the context of healthcare management, financial services, insurance firms, call centers, back-office operations, and other applications. Through these topics, the participants will be trained in tools that help them understand customers’ expectations and needs and to identify service system characteristics that can meet these needs. We will learn how to identify errors in service and troubleshoot these problems by identifying the root causes of errors. Subsequently, we will discuss how one can modify the product or service design so as to prevent defects from occurring. Finally, we will establish performance metrics that help evaluate the effectiveness of the Lean system in place. These efforts will result to improved quality. This course is not oriented toward specialists in service management. Its goal is to introduce you to the environments and help you appreciate the problems that operations managers are confronted with. Then, we will typically discuss some system specifics and emphasize the principles and issues that play key role in their management. Offered as HSMC 412 and OPMT 412.

OPMT 420. Experiential Learning with Six Sigma Green Belt. 3 Units.
The Six Sigma process is the standard for quality improvement in organizations around the globe. In this course, we study the details of the five steps in the Six Sigma process: DEFINE, MEASURE, ANALYZE, IMPROVE, and CONTROL (DMAIC). Many tools, concepts, and processes that are often an integral part of Six Sigma projects in companies are included in the course content. They range from the very basic tools of quality (such as cause-and-effect diagrams for brainstorming) to complete processes (such as benchmarking, quality function deployment, failure mode and effects analysis-FMEA). Statistical concepts with software applications that are central to Six Sigma including statistical process control and introduction to design of experiments are also included. Once the Six Sigma process and its various components are understood, we study quality management including quality control, reliability, and troubleshooting these problems by identifying the root causes of errors. Subsequently, we will discuss how one can modify the product or service design so as to prevent defects from occurring. Finally, we will establish performance metrics that help evaluate the effectiveness of the Lean system in place. These efforts will result to improved quality. This course is not oriented toward specialists in service management. Its goal is to introduce you to the environments and help you appreciate the problems that operations managers are confronted with. Then, we will typically discuss some system specifics and emphasize the principles and issues that play key role in their management. Offered as HSMC 412 and OPMT 412.
OPMT 422. Lean Operations. 3 Units.
In this course, students will be taught how to identify inefficiencies associated with overproduction, waiting, transport, extra processing, inventory, motion and defects. One-by-one, areas of inefficiencies are to be identified and improved while educating the workforce towards continual improvement. Similarly, participants will be trained to reduce lead times in areas such as engineering design, order entry, purchasing, order fulfillment, receiving, production, packaging, shipping, invoicing and collection. The above improvements will lead to cost reductions. Students will be trained in costing techniques, target pricing, and cost maintenance. The course will be delivered along the following themes: 1) Mapping the Value Stream (current and future state) 2) Workplace Organization: S5 & Safety, 3) Defect Reduction and Error Proofing, 4) Quick Changeover, 5) Standard Operations, 6) Total Productive Maintenance, 7) Visual management, 8) One-piece flow, 9) Lean Metrics. This course is not oriented toward specialists in operations management. Its goal is to introduce you to the environments and help you appreciate the problems that operations managers are confronted with and the key issues in their management. Offered as OPMT 422 and SCMG 422. Prereq: Not available to Master of Supply Chain Management students.

OPMT 450. Project Management. 3 Units.
Project management is concerned with the management and control of a group of interrelated tasks required to be completed in an efficient and timely manner for the successful accomplishment of the objectives of the project. Since each project is usually unique in terms of task structure, risk characteristics and objectives, the management of projects is significantly different from the management of repetitive processes designed to produce a series of similar products or outputs. Large-scale projects are characterized by a significant commitment of organizational and economic resources coupled with a high degree of uncertainty. The objective of this course is to enhance the ability of participants to respond to the challenges of large-scale projects so that they can be more effective as project managers. We study in detail up-to-date concepts, models, and techniques useful for the evaluation, analysis, management, and control of projects. Offered as OPMT 350, OPMT 450 and SCMG 450. Prereq: MBAC 511 or MBAP 403 or HSMC 457 or HSMC 412 or Requisites Not Met permission.

OPMT 460. Supply Chain Strategy. 1.5 Unit.
Have you ever wondered what it takes to manage a successful supply chain? It all comes down to the right strategy. Supply Chain Management Strategy is the indispensable direction for managing a successful supply chain. This course reviews how organizational strategies can inform operations and supply chain strategies. Several cases in various industries are discussed to illustrate how businesses employ various supply chain business models to achieve higher efficiencies, better quality, faster service, and subsequently promote business objectives. Offered as OPMT 460 and SCMG 460.

OPMT 470. Supply Chain Risk Management. 1.5 Unit.
A Supply Chain comprises firms, organizations, and individuals, linked through material, information, and financial flows, and whose activities enable products and services to be created and reach the consumers. Risk Management is the process of identifying risks, forecasting their impact, devising, mitigation strategies, and applying those strategies in anticipation or in response to adverse events. Supply Chain Risk Management (SCRM) is a set of solutions for identifying, measuring, preparing for, and mitigating adverse events in supply chains. As the widespread use of outsourcing is stretching supply chains further geographically and turning supply networks into intricate, global, and fragile webs, supply disruptions happen more frequently than ever and lead to substantial financial losses. A 2015 National Institute of Standards and Technology study concluded that "the likelihood that a manufacturing organization will not experience a supply chain disruption in a twenty-four month period is a mere 2%." According to research, firms that experienced supply glitches have suffered tremendous erosion in the shareholders’ value (the abnormal return on stock of these companies was negative 40%). Disruptions are only one example of supply risks. From commodity price fluctuations to product adulteration, from cyber security to patent violations, from regulatory compliance to supplier bankruptcies, supply chains are rife with risks and opportunities if you know how to recognize and take advantage of them. In this course, you will learn the best industry practices and be exposed to the most current academic insights on SCRM. You will know the process for SCRM, a variety of well-known and emerging supply risks, and the unique challenges of managing each one. You will also learn advantages and disadvantages of different risk mitigation tools. You will take away a number of useful analysis tools that you can immediately apply at your job. You will know the terminology of the field, the definitions, and the "state of the art" techniques. By the end of the course, you will be able to evaluate companies’ performance with respect to supply risk management, and you will be able to create, contribute to, and run a supply-risk management program at your company. Offered as OPMT 470 and SCMG 470.

OPMT 475. Global Supply Chain Logistics. 3 Units.
The course will attempt to achieve two objectives: (1) to develop your skills in solving specific types of logistics/supply chain problems, and (2) to improve your capabilities in dealing with unstructured problems of the type encountered by intermediate and top managers. Skill development is accomplished through lecturers, case studies, homework, and examinations. These skills are valuable for addressing specific problems where the given technology is useful in treating them. On the other hand, broader analytical skills are enhanced using case studies and class discussion, which allow problem solving to be placed in a larger context. Defining a framework for analysis, applying concepts and principles, and commenting on the analysis of others help to achieve the second objective. Of course, these objectives interplay throughout the course of study. Offered as OPMT 475 and SCMG 475. Prereq: (MBAP 408 or MBAC 507) and (MBAC 511 or MBAP 403) or Requisites Not Met permission.
OPMT 476A. Strategic Sourcing in Supply Chain. 1.5 Unit.
The primary purpose of the course is to provide a comprehensive introduction to supply issues in manufacturing and service organizations. Procurement and supply management has evolved as a strategic function across various industries. Recent volatility in commodity prices has further enhanced the challenges in procurement. This course explores sourcing strategies in global supply chains to reduce cost and enhance the competitiveness of the firm. This course will provide you with a framework for thinking about strategic sourcing and tools to procure commodities and services efficiently. Offered as OPMT 476A and SCMG 476A. Prereq: Not available to Master of Supply Chain Management students.

OPMT 477A. Business Forecasting. 1.5 Unit.
This course introduces nonmathematical managers to the major quantitative models designed for sound demand and system forecasting in today’s complex and increasingly uncertain supply chains. Topics will also include reliability of historical data sets to forecast future patterns. The course will also cover non-quantitative tools to forecast demand for new products, services and technologies when historical data are not readily available. Emphasis is placed on a general understanding of theory, mechanics, application potential, available software packages, and templates. Offered as OPMT 377A, OPMT 477A and SCMG 477A. Prereq: MBAC 511 or MBAP 403 or requisites not met permission.

OPMT 477B. Enterprise Resource Planning in the Supply Chain. 1.5 Unit.
Enterprise resource planning is the dominant system by which companies translate the needs from their customers into the detailed plans that the company must perform to meet the customer needs, and the resulting support the company will need from its suppliers. As such, it is a central player in the process of supply chain management. In this course, we study both the quantitative and qualitative concepts and techniques to help manage a company’s operations to perform these important translation and planning tasks in order to help the company be successful. A major emphasis during the course is the design of processes and procedures (algorithms) for solving very complex (wicked) problems as a part of both class discussions and while working on case studies, as well as critiquing the designs so as to clearly understand their limitations. Offered as OPMT 377B, OPMT 477B, and SCMG 477B Prereq: OPMT 477A.

OPMT 478. Operational Excellence. 3 Units.
This course focuses on the essence, principles, and practices of total quality management (TQM) and Operational Excellence. Students learn management issues of identifying, analyzing, and implementing improvement projects in organizations. Topics are mostly non-quantitative with a focus on challenging aspects of quality management that students need to know beyond green belt certification such as learning to see processes better, defining quality ethically, analyzing side effects of change, and leading Kaizen, benchmarking, and brainstorming sessions. The course involves a rigorous real-world project of continuous improvement. Students will also have an opportunity to visit a local plant to get hands-on experience with a real Kaizen event. Several guest talks are also scheduled to invite Black Belt professionals to discuss their experiences with quality management in Supply Chain. Offered as OPMT 478 and SCMG 478.

OPMT 480. Blockchain Technology in Supply Chain Management. 1.5 Unit.
This course is intended to provide students with a grounding in blockchain basic concepts to enable them to understand potential applications within the supply chain. As the technology continues to develop and evolve, new use cases will emerge. Supply chain leaders need to know the capabilities offered by blockchain along with the potential risks and challenges associated with blockchain’s use and implementation. Students will connect with real world organizations that are pushing ahead with the technology as a way to show its potential. Offered as OPMT 480 and SCMG 480.

OPMT 491. Revenue Management. 3 Units.
This course will focus on the theories and applications of data techniques to analyze demand models, and use optimization techniques to inform strategic decision making upon pricing and revenue management problems. The key ingredients of the class include the use of sophisticated data and optimization tools towards: - Mastering static and dynamic demand models - Understanding consumer choice behaviors - Understanding and formulating firm policies based on price response - Creating optimization toolkits for organizational decision making - Understanding and formulating competitive response The course is “tools agnostic” - you are welcome to use any of the available software packages (like MS Excel, Stata, SPSS) and programming languages (like R, Python or Matlab). Offered as OPMT 491 and SCMG 491. Prereq: OPRE 433 and OPRE 411.

OPMT 501. Special Problems and Topics. 1 - 18 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.

OPRE

OPRE 207. Statistics for Business and Management Science I. 3 Units.

OPRE 301. Operations Research and Supply Chain Management. 3 Units.
Operations research (OR) or management science, is the discipline of applying advanced quantitative methods to make better decisions. Techniques covered include linear programming, queuing models and simulation. The second part of the course focuses on how OR tools are used in managing various aspects of Supply Chain. Topics covered include demand forecasting, design of distribution systems, capacity planning, and inventory management. Recommended preparation: one semester of statistics or consent of instructor. Prereq: OPRE 207.
OPRE 332. Computer Simulation. 3 Units.
Computer Simulation is a process of designing and creating a computerized model that mimics an existing or proposed system so as to better understand the behavior of the system. Many studies have shown that in industry, simulation is most frequently used Operations Research tool due to its ability to deal with complex systems. The first half of this course is designed to give students a basic idea of simulation methodology with the aid of population simulation software. The emphasis of the course is on building simulation models, however, the versatility of the technique will be demonstrated with applications from finance, health care, etc. The second half of the course covers the statistical design and analysis of simulation models. The topics include random number generation, input data analysis, statistical analysis of simulation outputs, variance reduction techniques, and design of simulation experiments. Offered as OPRE 332 and OPRE 432 Prereq: OPRE 301.

OPRE 332A. Spreadsheet and Business Process Simulation - I. 1.5 Unit.
Computer simulation is a process of designing and creating a computer model (video game) that mimics an existing or proposed system so as to better understand the behavior of the system. Many studies have shown that in industry, simulation is most frequently used Operations Research tool due to its ability to deal with complex systems. Another reason for the recent popularity of simulation is the availability of specialized software with animation capabilities. This course is designed to give students basic ideas of simulation methodology with the aid of popular simulation software. The emphasis of the course is on building simulation models, however, the versatility of the technique will be demonstrated with applications from finance, health care, etc. The main focus of the course is on building simulation models using state of the art software (@RISK and ARENA). The grading is based on weekly homework and final exam. Offered as OPRE 332A, OPRE 432A, and SCMG 432A. Prereq: OPRE 301.

OPRE 332B. Spreadsheet and Business Process Simulation - II. 1.5 Unit.
Computer simulation is a process of designing and creating a computer model (video game) that mimics an existing or proposed system so as to better understand the behavior of the system. Many studies have shown that in industry, simulation is most frequently used Operations Research tool due to its ability to deal with complex systems. Another reason for the recent popularity of simulation is the availability of specialized software with animation capabilities. This course is designed to give students basic ideas of simulation methodology with the aid of popular simulation software. The emphasis of the course is on building simulation models, however, the versatility of the technique will be demonstrated with applications from finance, health care, etc. This course builds on 332A/432A (where the main emphasis was to build simulation model using @RISK and ARENA) and focuses on statistical ideas and tools needed in building, analyzing and experimenting with these models. Offered as OPRE 332B, OPRE 432B, and SCMG 432B Prereq: OPRE 301 and OPRE 332A.

OPRE 402. Stochastic Models with Applications. 1.5 Unit.
This course surveys fundamental methods and models in operations research and operations management that incorporate random elements. Topics discussed will include basic results from the theory of stochastic processes, especially Markov chains; an introduction to stochastic dynamic programming; and models in the control of queues and inventories. Offered as OPRE 402 and SCMG 402. Prereq: OPRE 433 and not available to Master of Supply Chain Management students.

OPRE 411. Optimization Modeling. 3 Units.
The first half of the course provides a practical coverage of linear programming, a special type of mathematical model. The art of formulating linear programs is taught through the use of systematic model-building techniques. The simplex algorithm for solving these models is developed from several points of view: geometric, conceptual, algebraic, and economic. The role and uses of duality theory are also presented. Students learn to obtain and interpret a solution from a computer package and how to use the associated output to answer "What-happens-if..." questions that arise in post-optimality analysis. Specific topics include: problem formulation, geometric and conceptual solution procedures, the simplex algorithm (phase 1 and phase 2), obtaining and interpreting computer output, duality theory, and sensitivity analysis. The second half of this course provide a practical approach to formulating and solving combinatorial optimization problems in the areas of networks, dynamic programming, project management (CPM), integer programming, and nonlinear programming. The art of formulating problems, understanding what is involved in solving them, and obtaining and interpreting the solution from a computer package are shown. A comparison with formulating and solving linear programming problems is provided as a way to understand the advantages and disadvantages of some of these problems and solutions procedures. Recommended preparation: Knowledge of Excel, one semester each of undergraduate linear algebra and undergraduate calculus (derivatives); or consent of instructor.

OPRE 427. Convexity and Optimization. 3 Units.
Introduction to the theory of convex sets and functions and to the extremes in problems in areas of mathematics where convexity plays a role. Among the topics discussed are basic properties of convex sets (extreme points, facial structure of polytopes), separation theorems, duality and polars, properties of convex functions, minima and maxima of convex functions over convex set, various optimization problems. Recommended preparation: MATH 327, MATH 427, and OPRE 427. Prereq: MATH 223 or consent of instructor.

OPRE 432. Computer Simulation. 3 Units.
Computer Simulation is a process of designing and creating a computerized model that mimics an existing or proposed system so as to better understand the behavior of the system. Many studies have shown that in industry, simulation is most frequently used Operations Research tool due to its ability to deal with complex systems. The first half of this course is designed to give students a basic idea of simulation methodology with the aid of popular simulation software. The emphasis of the course is on building simulation models, however, the versatility of the technique will be demonstrated with applications from finance, health care, etc. The second half of the course covers the statistical design and analysis of simulation models. The topics include random number generation, input data analysis, statistical analysis of simulation outputs, variance reduction techniques, and design of simulation experiments. Offered as OPRE 332 and OPRE 432 Prereq: Not available to Master of Supply Chain Management students.
OPRE 432A. Spreadsheet and Business Process Simulation - I. 1.5 Unit.
Computer simulation is a process of designing and creating a computer model (video game) that mimics an existing or proposed system so as to better understand the behavior of the system. Many studies have shown that in industry, simulation is most frequently used Operations Research tool due to its ability to deal with complex systems. Another reason for the recent popularity of simulation is the availability of specialized software with animation capabilities. This course is designed to give students basic ideas of simulation methodology with the aid of popular simulation software. The emphasis of the course is in simulating business processes, however, the versatility of the technique will be demonstrated with applications from finance, health care, etc. The main focus of the course is on building simulation models using state of the art software (@RISK and ARENA). The grading is based on weekly homework and final exam. Offered as OPRE 332A, OPRE 432A, and SCMG 432A. Prereq: MBAP 403 or MBAC 511.

OPRE 432B. Spreadsheet and Business Process Simulation - II. 1.5 Unit.
Computer simulation is a process of designing and creating a computer model (video game) that mimics an existing or proposed system so as to better understand the behavior of the system. Many studies have shown that in industry, simulation is most frequently used Operations Research tool due to its ability to deal with complex systems. Another reason for the recent popularity of simulation is the availability of specialized software with animation capabilities. This course is designed to give students basic ideas of simulation methodology with the aid of popular simulation software. The emphasis of the course is in simulating business processes, however, the versatility of the technique will be demonstrated with applications from finance, health care, etc. The main focus of the course is on building simulation models using state of the art software (@RISK and ARENA). The grading is based on weekly homework and final exam. Offered as OPRE 332A, OPRE 432A, and SCMG 432B. Prereq: MBAP 403 or MBAC 511.

OPRE 433. Statistical Data Analytics for Supply Chain. 3 Units.
Data of many kinds are typically available in practice, but the challenge is to use those data to make effective professional decisions. This software-intensive course begins with useful descriptions of data and the probability theory foundation on which statistics rests. It continues to statistics, including the central limit theorem, which explains why data often appear to be normally distributed, and the Palm-Khintchine theorem which explains why data often appear to have a Poisson distribution. The remainder of the course focuses on regression and forecasting, including detecting and overcoming some of the deadly sins of regression, and the surprising flexibility of regression models. Recommended preparation: One semester of undergraduate calculus or consent of instructor. Offered as OPRE 433 and SCMG 433.

OPRE 435B. Integrated Problem Solving in OR and SC. 1.5 Unit.
This project-oriented course uses a variety of software to involve the student in the complete problem-solving process in OR and OM. This process includes problem definition and formulation, data collection, and storage in a database, connecting the database to the solution algorithm, designing and implementing an appropriate user interface, and presenting the final solution. Offered as OPRE 435B and SCMG 435B. Prereq or Coreq: OPRE 411 or requisites not met permission.

OPRE 454. Analysis of Algorithms. 3 Units.
This course covers fundamental topics in algorithm design and analysis in depth. Amortized analysis, NP-completeness and reductions, dynamic programming, advanced graph algorithms, string algorithms, geometric algorithms, local search heuristics. Offered as CSDS 410 and OPRE 454. Prereq: OPRE 435A and OPRE 435C.

OPRE 490. Independent Study in Operations Research. 1 - 36 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.

OPRE 501. Special Problems and Topics. 1 - 36 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.

ORBH

ORBH 250. Leading People (LEAD I). 3 Units.
The principal goals of this course are to help students learn about the context in which managers and leaders function, gain self-awareness of their own leadership vision and values, understand the options they have for careers in management based on their own aptitudes, orientations and expertise, and develop the fundamental skills needed for success in a chosen career. Through a series of experiential activities, assessment exercises, group discussions, and peer coaching, based on a model of self-directed learning and life-long development, the course helps students understand and formulate their own career and life vision, assess their skills and abilities, and design a development plan to reach their objectives. The course enables students to see how the effective leadership of people contributes to organizational performance and the production of value, and how for many organizations, the effective leadership of people is the driver of competitive advantage. Credit for at most one of ORBH 250 and ORBH 396 can be applied to hours required for graduation. Prereq: At least sophomore standing.

ORBH 251. Leading Organizations (LEAD II). 3 Units.
The principal goal of this course is to help students enhance their leadership skills by understanding how organizations function through the lenses of structure, culture, and power/politics. The course enables students to discern how leaders function effectively as they integrate goals, resources and people within these constraints. Students learn about these organizational lenses while developing their own leadership and professional skills. Prereq: ORBH 250 or ORBH 396 and at least Sophomore standing.

ORBH 303. Leading Teams through Interpersonal Relationships. 3 Units.
This course is designed for students who want to increase their understanding of interpersonal and team dynamics. It is designed to help you to build more open and effective relationships and to improve your ability to cooperate with and lead others to work effectively in today's increasingly team-oriented organizations. The emphasis of this course is on learning about oneself in the context of others based on the here-and-now experience of the group. Prereq: At least sophomore standing.
This course is designed to help you develop your leadership skills and capabilities aimed at flourishing, defined as “to grow well, to prosper, to thrive, to live life to the fullest.” It emphasizes the growing desire by people everywhere for greater purpose and well-being through practices that cultivate the self. The goal is changing who leaders are being, not only what they are doing, through daily practices that increase their awareness of how their actions impact others and the world. Through the course, students will learn mindfulness-type practices in an action learning process that allows them to experience a greater connection to self, others, and nature. Recent research shows that such direct-intuitive practices support personal well-being, team collaboration, and organizational resilience as part of an upward spiral in leadership effectiveness and life satisfaction. The most exciting aspect of this class is encouraging students to see themselves as positive change agents, with the ability to make a positive impact on the world through living their most fulfilling and flourishing selves. Offered as ORBH 330 and ORBH 430.

ORBH 360. Independent Study. 1 - 6 Units.
This course is set up individually upon conference between student and Organizational Behavior faculty member designed in consult with the student’s advisor if necessary in order to engage and challenge student with topics in organizational behavior.

ORBH 370. Navigating Gender in Organizations. 3 Units.
The purpose of this course is to prepare students to succeed in the workforce by understanding and exploring the opportunities and challenges of work across the lifespan and developing necessary skills to be effective. The course broadens understanding of gender dynamics and gendered structures in the workplace, intersections of gender with other identities, and the leadership and managerial issues affecting women and men in work organizations. The course helps students create a personal framework for how to develop a successful, happy and integrated work life in the global economy. Offered as ORBH 370 and WGST 370. Counts for CAS Global & Cultural Diversity Requirement.

ORBH 380. Managing Negotiations. 3 Units.
Negotiation is the art and science of securing agreements between two or more interdependent parties. Negotiation skills are critical to influencing others and thus to effective leadership. The good news is that negotiation is a skill that can be developed. In this interactive course, you will learn how to be a more effective negotiator by learning about the theory and processes of negotiation, participating in negotiation simulations, reflecting on your own and others’ negotiation experiences and completing assignments designed to help you hone your negotiation skills. This will be done through a variety of means, including: understanding the theory and processes of negotiation, participating in negotiation simulations, reflecting on your own and others’ negotiation experiences and completing assignments designed to help you hone your negotiation skills. Prereq: At least sophomore standing.

ORBH 391. Leadership in Diversity and Inclusion: Towards a Globally Inclusive Workplace. 3 Units.
This course addresses workforce diversity issues from individual, group, and organizational perspectives. The focus is on innovative ways of utilizing today’s culturally expanding workforce. Emphasis is on the "what and how" for managers in developing a corporate culture that embraces diversity, helping them in learning to work with, supervise and tap the talent of diverse employees within their organizations. Included are methods for modifying systems to attract, retain, develop, and capitalize on benefits of the new workforce demographics. Counts for CAS Global & Cultural Diversity Requirement.

ORBH 396. Professional Development for Engineers. 3 Units.
The overall objective of this course is essentially to help you to learn, grow and change personally and professionally. The course is designed to develop your self-awareness, leadership capability, relationship and collaboration skills. Specific learning objectives are: 1. Develop greater self-awareness around your core values, personal vision, career aspirations, strengths and emotional intelligence. Deepening your self-knowledge and self-awareness on these dimensions is important for setting up your personal path to success. 2. Learn how people develop and grow through a process of intentional change. You will personally apply this insight and create a plan to achieve your learning and development goals. 3. Learn about and experience the impact of personal and peer coaching. Being able to develop, nurture and sustain positive developmental relationships at work is a hallmark of highly effective professionals. 4. Expand your capability to work effectively with a range of people in groups and teams. Understanding and practicing effective communication, giving and receiving feedback and appreciating differences in others are key factors in working well with others. Credit for at most one of ORBH 250 and ORBH 396 can be applied to hours required for graduation. Prereq: Case School of Engineering majors only.

ORBH 403. Developing Interpersonal Skills for Managers. 3 Units.
This course is intended to sharpen students’ skills in the art of relating successfully to other individuals and groups. The course uses an intensive group experience to make students more aware of how their actions affect others, more capable of giving and receiving interpersonal feedback, and more cognizant of processes through which groups work. Several Saturday classes.

ORBH 413. Economics of Negotiation and Conflict Resolution. 3 Units.
Students frequently enroll in a negotiation class with one thought in mind—negotiating a better job offer from an employer. They soon learn, however, that negotiation skills can do far more than improve a paycheck. Negotiations occur everywhere: in marriages, in divorces, in small work teams, in large organizations, in getting a job, in losing a job, in deal making, in decision making, in board rooms, and in court rooms. The remarkable thing about negotiations is that, wherever they occur, they are governed by similar principles. The current wave of corporate restructuring makes the study of negotiations especially important for M.B.A.s. Mergers, acquisitions, downsizing and joint ventures call into question well established business and employment relationships. Navigating these choppy waters by building new relationships requires the negotiation skills that you will learn in this class. Offered as ECON 431 and ORBH 413.
ORBH 430. Quantum Leadership: Creating Value for You, Business, and the World. 3 Units.
This course is designed to help you develop your leadership skills and capabilities aimed at flourishing, defined as “to grow well, to prosper, to thrive, to live life to the fullest.” It emphasizes the growing desire by people everywhere for greater purpose and well-being through practices that cultivate the self. The goal is changing who leaders are being, not only what they are doing, through daily practices that increase their awareness of how their actions impact others and the world. Through the course, students will learn mindfulness-type practices in an action learning process that allows them to experience a greater connection to self, others, and nature. Recent research shows that such direct-intuitive practices support personal well-being, team collaboration, and organizational resilience as part of an upward spiral in leadership effectiveness and life satisfaction. The most exciting aspect of this class is encouraging students to see themselves as positive change agents, with the ability to make a positive impact on the world through living their most fulfilling and flourishing selves. Offered as ORBH 330 and ORBH 430.

ORBH 450. Executive Leadership. 3 Units.
This course explores answers to questions such as: Who are leaders? Are they different than managers, heroes and heroines? How do the effective ones think and act? What situations create leaders, foster their emergence or provide opportunities? What makes us want to follow them? What are the personal pits of being a leader (i.e., sex, drugs, alcohol, insomnia, ulcers, etc.)? How are leaders developed? Case studies, self-study and at-work projects will be the primary methods used in the course.

ORBH 451. Alternative Dispute Resolution. 3 Units.
Students will examine the processes of alternative dispute resolution (ADR) through reading materials, videotapes, guest lectures, and simulation exercises. Particular emphasis will be given to the interaction of lawyers and clients in business negotiations and in litigation. Negotiation, arbitration, mediation, and the mini-trial will be examined. The class will also cover impediments to ADR, such as lack of understanding or hostility on the part of clients or lawyers.

ORBH 460. Women in Organizations. 3 Units.
This course addresses important leadership and management issues concerning women in organizations. The course provides complex understandings of issues pertinent to professional women and work such as sex role typing, sex-based discrimination, equal pay, sexual harassment, work-family balance, women’s leadership and women’s career issues and development. The course helps students increase self-knowledge about their own values and practices as well as enhance their capabilities as leaders and managers. We will examine the opportunities, challenges, trade-offs, and organizational dynamics experienced by women in work settings, as well as the interpersonal, organizational, and societal structures and processes impacting women in organizations. Through a variety of course methods, students gain greater awareness of the gendered nature of work and organizations and learn effective strategies for women’s career progress and effective participation in organizations.

ORBH 491. Leadership in Diversity and Inclusion: Towards a Globally Inclusive Workplace. 3 Units.
This dynamic course addresses how to enhance diversity, equity and inclusion in the global workplace from individual, group, and organizational perspectives. Using highly interactive and experiential methods, the focus is on innovative ways of recognizing, understanding, and maximizing the potential of today’s culturally expanding workforce. The course emphasizes how emerging professionals and managers in organizations can foster a workplace culture that embraces diversity and inclusion, helping them in learning how to most effectively work with, lead, tap the talent of diverse employees within their organizations, and design systems to attract, retain, develop, and capitalize on the benefits of changing global workforce demographics.

ORBH 501. Special Problems and Topics. 1 - 18 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.

ORBH 510. Organizational Behavior Department Seminar. 1.5 Unit.
The OB Department Seminar is organized and managed by the first year PhD students. Seminar sessions will alternate between first year meetings and gatherings of the ORBH community of students, faculty and friends. Community sessions will be organized around research presentations of PhD Qualifying Papers, Dissertation Proposals and Dissertation Defense. Seminar Objectives: 1. To create and sustain an appreciative, intellectually nourishing learning space for the ORBH community that will support, inspire and empower us to explore the frontiers of scholarship in our field; 2. To provide a forum for sharing the ongoing research and scholarship of the department; 3. To develop productive collaborative research relationships; 4. To increase our collective knowledge of the current state of the art in OB and to develop productive collaborative research relationships; 4. To increase our collective knowledge of the current state of the art in OB and related fields.

ORBH 511. Micro Organizational Behavior. 1.5 Unit.
Examines the field of micro-organizational behavior. Specifically, the study of individuals and groups within an organizational context and the study of internal processes and practices as they affect individuals and groups. Major topics include individual characteristics such as beliefs, values and personality. Individual processes such as motivation, emotions, commitment, group and team processes, such as decision-making; organizational processes and practices such as goal setting, performance appraisal and rewards, and the influence of all of these on such individual, group and organizational outcomes as performance, job satisfaction, citizenship behaviors, turnover, justice, absenteeism and employee engagement.

ORBH 513. Appreciative Inquiry and Strength-Based Change. 1.5 Unit.
This course explores and develops the art of understanding social systems in ways that help us imagine, design and develop organization excellence. It seeks to show how many of our conventional ideas about organizations are based on discourse and metaphors that lead us to see and understand organizations in partial and often limiting ways. Growing research from the domains of Positive Psychology and Positive Organization Scholarship and the theory and practice of Appreciative Inquiry will be explored to show how we can create new and more positive, strength-based ways of designing and developing social systems.
ORBH 516. The Scholarship of Coaching. 1.5 Unit.
Coaching is a helping relationship in which one person assists another with change with respect to a person’s behavior, attitudes, mental models, dreams of the future, etc. The popularity of the practice of coaching began to dramatically increase at least 20 years before scholars designed studies to test its efficacy. In this course, we will examine scholarly work in the coaching domain that has emerged. Prereq: Limited to ORBH PhD students only.

ORBH 520. Group and Interpersonal Analysis. 1.5 Unit.
This course is a review of major concepts and research in group dynamics and interpersonal relations. Topics concern face-to-face social interaction such as communication patterns, power, hierarchy, leadership, norms, goals, productivity, social theories of personality, and personal change through group methods. The course combines cognitive emphasis and personal experience-based learning.

ORBH 523. Design for Sustainable Value. 1.5 Unit.
The relationship between business and society—and the search for mutually beneficial advances between industry and the world’s most pressing global issues—has become one of the defining issues of the 21st century. Throughout the world, immense entrepreneurial energy is finding expression, energy whose converging force is in direct proportion to the turbulence, crises, and the call of our times. Factories and buildings are being designed in ways that, surprisingly, give back more clean energy to the world than they use. Bottom-of-the-pyramid strategies and micro-enterprise models are demonstrating how business can eradicate poverty through profitability. Companies are designing products that leave behind no waste—only “food” that becomes input into their biological or technological cycles. And macrowikinomics—everything from telepresence to megacommunity—is rebooting our capacity for human cooperation and global action. Prereq: Limited to ORBH PhD students only.

ORBH 525. Leading Change from a Complexity Perspective. 1.5 Unit.
Change is an enigma and yet sustained, desirable change (SDC) drivers adaptation, growth and life itself. In this course, we will continuously attempt to answer two questions: (1) What is the process of sustained, desirable change? and (2) What is the role of a leader, including their emotional and social intelligence? Concepts from complexity theory will be used, as well as case studies and longitudinal studies including understanding the multilevel nature of SDC at the individual, dyad, team, organization (including family business), community, country, and global levels. Intentional Change Theory (ICT) will be used as the organizing concept for the changes studied. Prereq: Limited to ORBH PhD students only.

ORBH 528. The Dynamics of Managing Effective Change. 1.5 Unit.
This course explores and develops an understanding of how individuals actually effect positive change and outcomes within an organization without the requisite authority or decision making power to do so. It seeks to show how managing a change process appears to follow a path of cumulative activities that in time produce a punctuated equilibrium—one that triggers a step up in performance. Such activities seem to be small episodes or learning cycles geared at converting inert knowledge into action; increasing awareness; reinforcing accountability, and/or attaining results. These findings will be compared and contrasted to existing change models and theories. Prereq: Limited to ORBH PhD students only.

ORBH 533. The Practice Turn in Organizational Research. 1.5 Unit.
In this course, doctoral students will develop an understanding of the role of practice and performativity in organizing. This involves exploring the link between doing and thinking by and between individuals in an effort to address larger issues of group- and organizational-level behavior. Students will examine elements of human behavior in organizational endeavors such as embodied cognition, and the enactment of structures and routines. Methods of “capturing” practice in organizing will also be discussed. By the end of the course, students will be expected to articulate how the practice perspective relates to their own research interests and future projects. Prereq: Limited to ORBH PhD students only.

ORBH 538. Research and Theory on Dynamical Behavior in Groups. 1.5 Unit.
This seminar exposes student to a variety of conversations in the study of group dynamics. Major topics include work on commons dilemmas, communal and exchange relationships, social facilitation, social loafing, social combination, and social creativity drawing deeply on our historical roots. It will also focus on current topical issues such as demographic faultlines, transactional memory, and issues of time and transition. Prereq: Limited to ORBH PhD students only.

ORBH 540. Social Exchange, Social Networks, and Social Capital in Organizations. 1.5 Unit.
In this course we will examine the nature of social exchange relationships in organizations. We will explore how individual perceptions regarding the quality of the relationship they have with their immediate supervisor, their work group, and the organization as an entity can impact their workplace attitudes and behaviors. Additionally, we will learn how the examination of networks of relationships can enhance our understanding of how individuals experience organizational life. The course will also provide a brief introduction to the theory, methods and procedures of social network analysis with an emphasis on applications to individual and organizational social capital.

ORBH 541. Organizational Systems. 1.5 Unit.
This course covers the use of general systems theory as a conceptual base for examining organizations from the macro-perspective. The course examines organizational structure and technology, organizations and interorganizational networks in interaction with their societal environments, and large-scale problems of organizational and social power, conflict and change. It is designed to present a large-scale perspective on organization theory and behavior that is complementary to the micro-perspective of organizational behavior.

ORBH 543. The Practice Turn in Organizational Research. 1.5 Unit.
This course concerns itself with issues associated with the conduct of social research. The primary focus is on learning the "craft" of research and its associated technologies. Among the topics that are addressed are: scientific method; research terminology and definitions; search design; laboratory experiments; simulations; field experiments; field studies; measurement, reliability and validity; and sampling. This course is intended to help students acquire the skills necessary in undertaking dissertation-related research.

ORBH 545. Research Methods I. 3 Units.
This course provides a full range of feminist research methods exploring relationships between feminism and methodology involving a plurality of perspectives for conducting research and creating knowledge with an emphasis on collecting and interpreting qualitative materials. Particular attention is paid to understanding gender and diversity related phenomenon that occurs in the workplace. Classic feminist research from a variety of historical, societal, economic, interpersonal and organizational paradigms are incorporated. Coreq: ORBH doctoral students only.
Supply Chain Management students only.

SCMG 402. Stochastic Models with Applications. 1.5 Unit.
This course surveys fundamental methods and models in operations research and operations management that incorporate random elements. Topics discussed will include basic results from the theory of stochastic processes, especially Markov chains; an introduction to stochastic dynamic programming; and models in the control of queues and inventories. Offered as OPRE 402 and SCMG 402. Prereq: For Master of Supply Chain Management students only.

SCMG 406. Operations Management. 3 Units.
Operations managers, ranging from supervisors to vice presidents, are concerned with the production of goods and services. More specifically, they are responsible for designing, running, controlling and improving the systems that accomplish production. This course is a broad-spectrum course with emphasis on techniques helpful to the practice of management at the analyst level. Its goal is to introduce you to the environments, to help you appreciate the problems that operations managers are confronted with, and provide you with the tools to address these problems. Operations Management spans all value-adding activities of an organization including product and process design, production, service delivery, distribution network and customer order management. As global competition in both goods and services increases, a firm’s survival depends upon how well it structures its operations to respond quickly to changing consumer needs. Thus, it is essential for all business managers to acquire an understanding of operations management to maintain their competitive advantage. This course provides students with the basic tools needed to become an analyst in Supply Chain and Operations Management. This course provides an overview of Process analysis, Capacity management, Queuing system, analysis, Forecasting, Quality management, Material Requirements planning, Inventory management, and Supply Chain management. The emphasis of the course is on both real world applications and technical problem solving. Several manufacturing and non-manufacturing environments will be discussed explicitly, like health care, insurance, hotel-management, airlines and government related operations. Also we will explore the interface of operations management with other functional areas such as marketing, finance, accounting, etc. This coursework includes individual and group assignments, case analyses and experiential learning through simulations and educational games. Prereq: For Master of Supply Chain Management students only.

SCMG 407. Managerial Marketing. 3 Units.
This course will emphasize how to analyze data to support and guide strategic and tactical marketing decisions relevant for supply chain managers for understanding and contributing to marketing decision-making within the firm. Many firms have extensive information, but far fewer have the expertise to act intelligently on such information. Data must be synthesized, analyzed, and interpreted before sound marketing strategies and tactical plans can be developed. The course will emphasize three key themes: (1) Market Opportunity Analysis including competitive analysis, context assessment, and customer analytics (e.g. customer profitability and lifetime value, retention and loyalty), (2) Marketing Mix Analytics including test marketing, pricing, segmentation, and response modeling, and (3) Marketing ROI including the impact of marketing decisions and plans on fundamental financial measures such as return on marketing investment and net contribution to profit. The course uses a combination of lectures, cases, and exercises. Prereq: For Master of Supply Chain Management students only.

PLCY 399. Business Policy. 3 Units.
This course uses case analysis to develop perspective and judgment on business problems through the integration of functional areas. Formulation, development, and implementation of organization goals and policies, the development of strategy in relation to the competitive environment, and applications of quantitative and behavioral decision-making techniques are examined. Prereq: Senior standing.

PLCY 501. Special Problems and Topics. 1 - 18 Units.
This course is offered, with permission, to students undertaking reading in a field of special interest.

PLCY 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

ORBH 570. Learning and Development. 1.5 Unit.
This course provides an exploration of the learning and development paradigm underlying the human potential development approach to human resource development. The origins of this approach in the naturalist epistemologies John Dewey’s pragmatism, Kurt Lewin’s gestalt psychology, the work of James, Follett, Emerson, Piaget, Maslow, Rogers, and others and current research in adult development, biology and brain/ mind research, artificial intelligence, epistemology, moral philosophy and adult learning will be considered. The course will focus on applications of these ideas to current issues in human resource development such as adult learning in higher education, advanced professional development, and large system learning and development. Coreq: ORBH doctoral students only.

ORBH 601. Special Problems and Topics. 1 - 18 Units.
This course is offered, with permission, to candidates undertaking reading in a field of special interest.

ORBH 701. Dissertation Ph.D.. 1 - 9 Units.
(Credit as arranged.) Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.
SCMG 410. Accounting and Financial Management. 3 Units.
This course focuses on learning the language of business, how basic accounting information is reported and analyzed, and how basic financial principles can be applied to understanding how value is created within an enterprise. This course is intended for individuals who have a limited background in accounting, finance and business. Most of the exercises will involve evaluating and building models in Excel. Teaching objectives are fairly straightforward: 1. Provide you with a basic understanding of the key principles of accounting and finance. We will quickly cover material that is typically covered in a three-course sequence (Introductory Accounting and Finance I and II). We will fly at a fairly high level, but we want to make sure you understand the basic concepts. 2. Apply these concepts to real (but straightforward) business situations, to gain a better understanding of how companies utilize accounting and financial information. 3. Time permitting, explore how these concepts can be applied to securities, mergers and acquisitions and leveraged buyout transactions, with a specific emphasis on how these concepts are likely to surface in your role in such transactions. Offered as BUAI 410 and SCMG 410. Prereq: For Master of Supply Chain Management students only.

SCMG 411A. Optimization Analytics for Supply Chain. 1.5 Unit.
The objective of this course is to enable you to use mathematical models to help make better decisions for organizations, which a goal of the Master of Supply Chain Management program. General model building techniques are provided and illustrated with many Supply Chain decision problems. You will also learn to classify your model based on its mathematical properties so that you can identify an appropriate computer package to obtain the solution. Because of their importance, significant time is devoted to formulating linear programming models using a variety of examples. You will see how to obtain and interpret a solution from a computer package in EXCEL and how to use the associated output to answer “What-happens-if” questions that arise after solving the problem. You will also get an introduction to formulating and solving other optimization problems in the areas of integer programming, networks, combinatorial optimization, and nonlinear programming. The art of formulating problems, understanding what is involved in solving them, and obtaining and interpreting the solution from a computer package are shown. A comparison with linear programming problems is provided as a way of understanding the advantages and disadvantages of these other models and their solution procedures. Prereq: For Master of Supply Chain Management students only.

SCMG 420. Experiential Learning with Six Sigma Green Belt. 3 Units.
The Six Sigma process is the standard for quality improvement in organizations around the globe. In this course, we study the details of the five steps in the Six Sigma process: DEFINE, MEASURE, ANALYZE, IMPROVE, and CONTROL (DMAIC). Many tools, concepts, and processes that are often an integral part of Six Sigma projects in companies are included in the course content. They range from the very basic tools of quality (such as cause-and-effect diagrams for brainstorming) to complete processes (such as benchmarking, quality function deployment, failure mode and effects analysis-FMEA). Statistical concepts with software applications that are central to Six Sigma including statistical process control and introduction to design of experiments are also included. Once the Six Sigma process and its various components are understood, we study quality management including quality control, quality planning, quality improvement, strategic quality management, and quality strategy. A major requirement of the course is an action learning component in which the students are assigned in groups to work on unpaid real projects of Six Sigma in local industries. Students meeting the required standards of performance will earn a Green Belt Certification in Six Sigma and Quality Management from the Weatherhead School of Management. Offered as OPMT 420 and SCMG 420. Prereq: SCMG/MSOR 406 and SCMG/MSOR 433 and enrolled in Master of Supply Chain Management program.

SCMG 422. Lean Operations. 3 Units.
In this course, students will be taught how to identify inefficiencies associated with overproduction, waiting, transport, extra processing, inventory, motion and defects. One-by-one, areas of inefficiencies are to be identified and improved while educating the workforce towards continual improvement. Similarly, participants will be trained to reduce lead times in areas such as engineering design, order entry, purchasing, order fulfillment, receiving, production, packaging, shipping, invoicing and collection. The above improvements will lead to cost reductions. Students will be trained in costing techniques, target pricing, and cost maintenance. The course will be delivered along the following themes: 1) Mapping the Value Stream (current and future state) 2) Workplace Organization: SS & Safety, 3) Defect Reduction and Error Proofing, 4) Quick Changeover, 5) Standard Operations, 6) Total Productive Maintenance, 7) Visual management, 8) One-piece flow, 9) Lean Metrics. This course is not oriented toward specialists in operations management. Its goal is to introduce you to the environments and help you appreciate the problems that operations managers are confronted with and the key issues in their management. Offered as OPMT 422 and SCMG 422. Prereq: For Master of Supply Chain Management students only.

SCMG 432A. Spreadsheet and Business Process Simulation - I. 1.5 Unit.
Computer simulation is a process of designing and creating a computer model (video game) that mimics an existing or proposed system so as to better understand the behavior of the system. Many studies have shown that in industry, simulation is most frequently used Operations Research tool due to its ability to deal with complex systems. Another reason for the recent popularity of simulation is the availability of specialized software with animation capabilities. This course is designed to give students basic ideas of simulation methodology with the aid of popular simulation software. The emphasis of the course is in simulating business processes, however, the versatility of the technique will be demonstrated with applications from finance, health care, etc. The main focus of the course is on building simulation models using state of the art software (@RISK and ARENA). The grading is based on weekly homework and final exam. Offered as OPRE 332A, OPRE 432A, and SCMG 432A. Prereq: SCMG 433.
SCMG 432B. Spreadsheet and Business Process Simulation - II. 1.5 Unit.
Computer simulation is a process of designing and creating a computer model (video game) that mimics an existing or proposed system so as to better understand the behavior of the system. Many studies have shown that in industry, simulation is most frequently used Operations Research tool due to its ability to deal with complex systems. Another reason for the recent popularity of simulation is the availability of specialized software with animation capabilities. This course is designed to give students basic ideas of simulation methodology with the aid of popular simulation software. The emphasis of the course is in simulating business processes, however, the versatility of the technique will be demonstrated with applications from finance, health care, etc. This course builds on 332A/432A (where the main emphasis was to build simulation model using @RISK and ARENA) and focuses on statistical ideas and tools needed in building, analyzing and experimenting with these models. Offered as OPRE 332B, OPRE 432B, and SCMG 432B.

SCMG 433. Statistical Data Analytics for Supply Chain. 3 Units.
Data of many kinds are typically available in practice, but the challenge is to use those data to make effective professional decisions. This software-intensive course begins with useful descriptions of data and the probability theory foundation on which statistics rests. It continues to statistics, including the central limit theorem, which explains why data often appear to be normally distributed, and the Palm-Khintchine theorem which explains why data often appear to have a Poisson distribution. The remainder of the course focuses on regression and forecasting, including detecting and overcoming some of the deadly sins of regression, and the surprising flexibility of regression models. Recommended preparation: One semester of undergraduate calculus or consent of instructor. Offered as OPRE 433 and SCMG 433. Prereq: For Master of Supply Chain Management students only.

SCMG 435B. Integrated Problem Solving in OR and SC. 1.5 Unit.
This project-oriented course uses a variety of software to involve the student in the complete problem-solving process in OR and OM. This process includes problem definition and formulation, data collection, and storage in a database, connecting the database to the solution algorithm, designing and implementing an appropriate user interface, and presenting the final solution. Offered as OPRE 435B and SCMG 435B.

SCMG 450. Project Management. 3 Units.
Project management is concerned with the management and control of a group of interrelated tasks required to be completed in an efficient and timely manner for the successful accomplishment of the objectives of the project. Since each project is usually unique in terms of task structure, risk characteristics and objectives, the management of projects is significantly different from the management of repetitive processes designed to produce a series of similar products or outputs. Large-scale projects are characterized by a significant commitment of organizational and economic resources coupled with a high degree of uncertainty. The objective of this course is to enhance the ability of participants to respond to the challenges of large-scale projects so that they can be more effective as project managers. We study in detail up-to-date concepts, models, and techniques useful for the evaluation, analysis, management, and control of projects. Offered as OPMT 350, OPMT 450 and SCMG 450. Coreq: SCMG 433 or Requisites Not Met permission.

SCMG 460. Supply Chain Strategy. 1.5 Unit.
Have you ever wondered what it takes to manage a successful supply chain? It all comes down to the right strategy. Supply Chain Management Strategy is the indispensable direction for managing a successful supply chain. This course reviews how organizational strategies can inform operations and supply chain strategies. Several cases in various industries are discussed to illustrate how businesses employ various supply chain business models to achieve higher efficiencies, better quality, faster service, and subsequently promote business objectives. Offered as OPMT 460 and SCMG 460. Prereq: For Master of Supply Chain Management students only.

SCMG 470. Supply Chain Risk Management. 1.5 Unit.
A Supply Chain comprises firms, organizations, and individuals, linked through material, information, and financial flows, and whose activities enable products and services to be created and reach the consumers. Risk Management is the process of identifying risks, forecasting their impact, devising, mitigation strategies, and applying those strategies in anticipation or in response to adverse events. Supply Chain Risk Management (SCRM) is a set of solutions for identifying, measuring, preparing for, and mitigating adverse events in supply chains. As the widespread use of outsourcing is stretching supply chains further geographically and turning supply networks into intricate, global, and fragile webs, supply disruptions happen more frequently than ever and lead to substantial financial losses. A 2015 National Institute of Standards and Technology study concluded that "the likelihood that a manufacturing organization will not experience a supply chain disruption in a twenty-four month period is a mere 2%." According to research, firms that experienced supply glitches have suffered tremendous erosion in the shareholders’ value (the abnormal return on stock of these companies was negative 40%). Disruptions are only one example of supply risks. From commodity price fluctuations to product adulteration, from cyber security to patent violations, from regulatory compliance to supplier bankruptcies, supply chains are rife with risks and opportunities if you know how to recognize and take advantage of them. In this course, you will learn the best industry practices and be exposed to the most current academic insights on SCRM. You will know the process for SCRM, a variety of well-known and emerging supply risks, and the unique challenges of managing each one. You will also learn advantages and disadvantages of different risk mitigation tools. You will take away a number of useful analysis tools that you can immediately apply at your job. You will know the terminology of the field, the definitions, and the "state of the art" techniques. By the end of the course, you will be able to evaluate companies’ performance with respect to supply risk management, and you will be able to create, contribute to, and run a supply-risk management program at your company. Offered as OPMT 470 and SCMG 470. Prereq: For Master of Supply Chain Management students only.
SCMG 475. Global Supply Chain Logistics. 3 Units.
The course will attempt to achieve two objectives: (1) to develop your skills in solving specific types of logistics/supply chain problems, and (2) to improve your capabilities in dealing with unstructured problems of the type encountered by intermediate and top managers. Skill development is accomplished through lecturers, case studies, homework, and examinations. These skills are valuable for addressing specific problems where the given technology is useful in treating them. On the other hand, broader analytical skills are enhanced using case studies and class discussion, which allow problem solving to be placed in a larger context. Defining a framework for analysis, applying concepts and principles, and commenting on the analysis of others help to achieve the second objective. Of course, these objectives interplay throughout the course of study. Offered as OPMT 475 and SCMG 475. Prereq: SCMG/MSOR 406 and SCMG/MSOR 433 and enrolled in Master of Supply Chain Management program.

SCMG 476A. Strategic Sourcing in Supply Chain. 1.5 Unit.
The primary purpose of the course is to provide a comprehensive introduction to supply issues in manufacturing and service organizations. Procurement and supply management has evolved as a strategic function across various industries. Recent volatility in commodity prices has further enhanced the challenges in procurement. This course explores sourcing strategies in global supply chains to reduce cost and enhance the competitiveness of the firm. This course will provide you with a framework for thinking about strategic sourcing and tools to procure commodities and services efficiently. Offered as OPMT 476A and SCMG 476A. Prereq: For Master of Supply Chain Management students only.

SCMG 477A. Business Forecasting. 1.5 Unit.
This course introduces nonmathematical managers to the major quantitative models designed for sound demand and system forecasting in today's complex and increasingly uncertain supply chains. Topics will also include reliability of historical data sets to forecast future patterns. The course will also cover non-quantitative tools to forecast demand for new products, services and technologies when historical data are not readily available. Emphasis is placed on a general understanding of theory, mechanics, application potential, available software packages, and templates. Offered as OPMT 477A, OPMT 477A and SCMG 477A. Prereq: SCMG 411A and SCMG 433 and enrolled in Master of Supply Chain Management program.

SCMG 477B. Enterprise Resource Planning in the Supply Chain. 1.5 Unit.
Enterprise resource planning is the dominant system by which companies translate the needs from their customers into the detailed plans that the company must perform to meet the customer needs, and the resulting support the company will need from its suppliers. As such, it is a central player in the process of supply chain management. In this course, we study both the quantitative and qualitative concepts and techniques to help manage a company's operations to perform these important translation and planning tasks in order to help the company be successful. A major emphasis during the course is the design of processes and procedures (algorithms) for solving very complex (wicked) problems as a part of both class discussions and while working on case studies, as well as critiquing the designs so as to clearly understand their limitations. Offered as OPMT 477B, OPMT 477B, and SCMG 477B Prereq: SCMG 477A and enrolled in Master of Supply Chain Management program.

SCMG 478. Operational Excellence. 3 Units.
This course focuses on the essence, principles, and practices of total quality management (TQM) and Operational Excellence. Students learn management issues of identifying, analyzing, and implementing improvement projects in organizations. Topics are mostly non-quantitative with a focus on challenging aspects of quality management that students need to know beyond green belt certification such as learning to see processes better, defining quality ethically, analyzing side effects of change, and leading Kaizen, benchmarking, and brainstorming sessions. The course involves a rigorous real-world project of continuous improvement. Students will also have an opportunity to visit a local plant to get hands on experience with a real Kaizen event. Several guest talks are also scheduled to invite Black Belt professionals to discuss their experiences with quality management in Supply Chain. Offered as OPMT 478 and SCMG 478. Prereq: For Master of Supply Chain Management students only.

SCMG 480. Blockchain Technology in Supply Chain Management. 1.5 Unit.
This course is intended to provide students with a grounding in blockchain basic concepts to enable them to understand potential applications within the supply chain. As the technology continues to develop and evolve, new use cases will emerge. Supply chain leaders need to know the capabilities offered by blockchain along with the potential risks and challenges associated with blockchain's use and implementation. Students will connect with real world organizations that are pushing ahead with the technology as a way to show its potential. Offered as OPMT 480 and SCMG 480. Prereq: For Master of Supply Chain Management students only.

SCMG 491. Revenue Management. 3 Units.
This course will focus on the theories and applications of data techniques to analyze demand models, and use optimization techniques to inform strategic decision making upon pricing and revenue management problems. The key ingredients of the class include the use of sophisticated data and optimization tools towards: Mastering static and dynamic demand models - Understanding consumer choice behaviors - Understanding and formulating firm policies based on price response - Creating optimization toolkits for organizational decision making - Understanding and formulating competitive response The course is "tools agnostic" - you are welcome to use any of the available software packages (like MS Excel, Stata, SPSS) and programming languages (like R, Python or Matlab). Offered as OPMT 491 and SCMG 491. Prereq: SCMG 433 and SCMG 411A.
SCMG 492. Foundations of Python Programming. 1.5 Unit.
Python is an object-oriented programming language that can interact with the world wide web as well as Excel and other programming languages like VBA. As such, Python has gained popularity and is becoming an industry standard in many areas, including supply chain management. In addition to assignment, if/then, and for/while statements, in this course you will learn about object-oriented programming and how to implement those ideas with appropriate data structures. You will also learn how to use libraries that others have created, such as Numpy for numerical calculations (like working with vectors, matrices, and solving systems of linear equations). In addition to individual homeworks, you will solve an assigned project in groups and make a final presentation to the class with PowerPoint. Being able to communicate your model and results is part of learning to work effectively with others in an organization, which is a goal of the supply chain program. All of this is designed to enable you to build and solve models that help organizations make good decisions. Offered as BUAI 492 and SCMG 492. Prereq: For Master of Supply Chain Management students only.

BIOS (BIOS)

BIOS 447. Regulatory Affairs for the Biosciences. 1.5 Unit.
This mini-course introduces students to the Food and Drug Administration (FDA) and the laws and regulations it enforces. A scientific regulatory agency with far reaching enforcement authority, FDA is the most powerful consumer protection agency in the world. This course will familiarize students with FDA’s mission, philosophy and organizational structure, as well as policy and procedure it uses to ensure the safety and effectiveness of the food, drugs, biologics, cosmetics, medical devices and radiation-emitting products it regulates. Recommended preparation: Enrollment in the MEM Biomedical Entrepreneurship Track. Offered as BIOS 447, HSMC 447, and IIME 447.
PHYSICAL EDUCATION AND ATHLETICS

Veale Center
http://athletics.case.edu/landing/index

Amy Backus, James C. Wyant Director of Athletics and Chair, Department of Physical Education and Athletics
amy.backus@case.edu

The Department of Physical Education and Athletics (http://studentaffairs.case.edu/athletics/default.html) offers the student a variety of opportunities from challenging academic classes to vigorous recreational activities.

Case Western Reserve University sponsors 19 NCAA Division III varsity sports. Men's sports include football, soccer, cross country, basketball, wrestling, swimming, baseball, tennis and indoor/outdoor track & field. Women's sports include volleyball, basketball, swimming, indoor/outdoor track & field, tennis, cross country, soccer, and softball. Students must be on the roster of the varsity sport to enroll (PHED170-190).

CWRU is a charter member of the University Athletic Association (UAA), sharing in the belief that academic excellence and athletic excellence are not mutually exclusive. The Spartans are joined in the UAA by Brandeis University, Carnegie Mellon University, Emory University, New York University, University of Chicago, University of Rochester and Washington University in St. Louis.

The Spartan football team also maintains affiliate membership in the Presidents' Athletic Conference (PAC).

The department sponsors a variety of intramural and club sport activities, including archery, cheerleading, crew, cycling, fencing, ice hockey, lacrosse, kendo, kung fu, table tennis, tae kwan do, ultimate frisbee, volleyball, and water polo. Sport clubs are available to all students, faculty, and staff. Intramural competition is available in more than 40 activities, and more than one-half of undergraduates participate for relaxation, physical fitness, and a chance to improve skills.

Lifetime Sports Program
The department has designed an instructional program of modern activities and lifetime sports. Each semester, fifteen to twenty-five coeducational lifetime sports classes are offered.

Undergraduates have a one-year physical education requirement to be completed in the first year. Required classes, for zero credits, are offered for either half-semester or full-semester. Others who have completed the requirement may audit classes.

A number of popular, advanced lifetime sports activities are also offered for one hour of academic credit. Advanced skills, strategy, and coaching are taught (PHED 200-299).

Recreational Activities and Intercollegiate Athletics
The intramural program provides a continuous schedule of activities throughout the year. Individual and team sports are available to students in several divisions: university housing, fraternity, women, coed, graduate, and open. Intercollegiate varsity athletic competition is available in ten sports for men and nine sports for women.

Reserve Officers' Training Corps (Army ROTC)
An Army Reserve Officers' Training Corps (ROTC) program is available to Case Western Reserve University students through a partnership agreement with the US Army and a cooperative arrangement with John Carroll University. Some of the first- and second-year ROTC classes are offered on the Case Western Reserve University campus through the Department of Physical Education and Athletics. Participating students may be exempt from the undergraduate physical education requirement. For courses offered at Case Western Reserve (MLSC 101, MLSC 102, MLSC 201, and MLSC 202), students register in the ordinary way. For other Army ROTC classes, students enroll through cross-registration in the Department of Military Science at John Carroll University, which is approximately five miles from Case Western Reserve. For additional information on ROTC programs, see the Undergraduate Collaborative Programs (p. 1303) section of the Bulletin.

Department Faculty
Amy Backus, MEd
(Loyola University Chicago)
Professor
James C. Wyant Director of Athletics & Chair, Department of Physical Education and Athletics
Tianna Cobb, MS, AT, ATC
(West Virginia Wesleyan College)
Instructor
Assistant Athletic Trainer
Greg Debeljak, MA
(John Carroll University)
Associate Professor
Head Football Coach
Matthew Englander, BA
(The College of Wooster)
Instructor
Head Baseball Coach
Karen Farrell, MS
(University of Massachusetts at Amherst)
Associate Professor Isabel Wetmore Lowman Chair for Health Education
Head Women's Volleyball Coach; Associate Athletic Director; Senior Woman Administrator
Brian Ferguson, MA, Business & Organizational Security Management
(Loyola University Chicago)
Instructor
Professor of Military Science
Lieutenant Colonel, US Army
Michael Fitzpatrick, BS
(Arcadia University)
Instructor
Assistant Men's Basketball Coach
James Garfield, MS
(California University of Pennsylvania)
Instructor
Athletic Trainer
Hannah Hagy, MA  
(Trinity College)  
Instructor  
Assistant Coach Swim and Dive

Captain Nathan Hanners, BS  
(University of Texas at Dallas)  
Asst. Prof. Military Science

Josie Henry, MA  
(Minnesota State University)  
Assistant Professor  
Head Fast Pitch Softball Coach

Taylor Jurczynski, MS, AT, ATC  
(Indiana Wesleyan University)  
Instructor  
Assistant Athletic Trainer

Patrick Kennedy, MS  
(University of Maryland)  
Professor  
Associate Athletic Director & Intramural and Club Sports Director

Kathy Lanese, BS  
(Ohio University)  
Instructor  
Head Women's Cross Country Coach and Assistant Men's Track and Field Coach

Ben Lolli, MA  
(Walsh University)  
Instructor  
Assistant Football Coach

Josh Malave, ME  
(University of Findlay)  
Instructor  
Head Wrestling Coach

Todd McGuinness, BA  
(Bethany College)  
Instructor  
Head Men's Basketball Coach

Kirsten G. McMahon, MBA  
(Berry College)  
Assistant Professor  
Head Women's Tennis Coach

Warren Miller, BA  
(Baldwin Wallace University)  
Instructor  
Defensive Coordinator, Football

Doug Millichen, MS  
(Indiana State University)  
Assistant Professor  
Head Men's and Women's Swimming & Diving Coach/Assistant Athletic Director

Thomas Monagan, MS Physical Education, AT, ATC  
(Eastern Illinois University)  
Head Athletic Trainer/Instructor  
Sports Administration/Exercise Physiology

Carter Poe, M.A.  
(University of Mt Union)  
Instructor  
Head Men Soccer Coach

Julie Pratt, BA  
(University of Akron)  
Instructor  
Assistant Softball Coach

Jennifer Reimer, MEd  
(Bowling Green State University)  
Associate Professor  
Head Women's Basketball Coach

Eric Schmuhl, MEd  
(Muskingum College)  
Assistant Professor  
Head Men's and Women's Track Coach

Jennifer Simonetti, BS PT & Exercise Science  
(University of Dayton)  
Instructor  
Head Coach Women Soccer

Dereck Slesh, MBA  
(Cleveland State University)  
Associate Professor  
Offensive Coordinator, Football

Todd Wojtkowski, MBA  
(The Citadel)  
Associate Professor  
Head Men's Tennis Coach

Contact Thomas Monagan, Head Athletic Trainer, for more information at Veale Center, 216.368.2863.

**MLSC Courses**

**MLSC 101. Leadership and Personal Development. 1 Unit.**  
This course establishes a framework for understanding officership, leadership, and Army values. Also addresses personal development skills, including physical fitness and time management. Note: Enrollment in this course by a non-contracted student does not obligate the student to the military or the Army ROTC program.
MLSC 102. Introduction to Tactical Leadership. 1 Unit.
This course focuses on communications, leadership, and problem solving. Introduces students to the duties and responsibilities of an Army lieutenant as well as examining current pay and benefits. Note: Enrollment in this course by a non-contracted student does not obligate the student to the military or the Army ROTC program. Recommended preparation: MLSC 101.

MLSC 201. Innovative Team Leadership. 2 Units.
Use of ethics-based leadership skills to develop individual abilities and contribute to effective team-building. Focus on skills in oral presentations, writing concisely, planning of events, coordination of group efforts, advanced first aid, land navigation, and basic military tactics. Learn the fundamentals of ROTC's Leadership Development Program. Participation in a weekend field training exercise is optional but encouraged. Note: Enrollment in this course by a non-contracted student does not obligate the student to the military or the Army ROTC program. Recommended preparation: MLSC 101, 102.

MLSC 202. Foundations of Tactical Leadership. 2 Units.
Introduction to individual and team aspects of military tactics in small-unit operations. Includes use of radio communications, making safety assessments, movement techniques, planning for team safety/security, and methods of pre-execution checks. Practical exercises with upper-division ROTC students. Techniques for training others as an aspect of continued leadership development. Participation in a weekend exercise is optional but encouraged. Note: Enrollment in this course by a non-contracted student does not obligate the student to the military or the Army ROTC program. Recommended preparation: MLSC 101, 102, 201.

PHED Courses

PHED 10A. Cardio Games (First Half). 0 Unit.
Cardio Games emphasizes conditioning of the aerobic and anaerobic systems through fun and energetic games such as Ultimate Frisbee, Tag, Dodge Ball, Flicker Ball and more. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 10B. Cardio Games (Second Half). 0 Unit.
Cardio Games emphasizes conditioning of the aerobic and anaerobic systems through fun and energetic games such as Ultimate Frisbee, Tag, Dodge Ball, Flicker Ball and more. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 11A. Jump Rope Training (First Half). 0 Unit.
This class is designed to help students develop quickness, agility, balance, strength, power, and endurance through jump rope training. Students will learn rope-handling skills, jumping techniques and training routines to help supplement training for fitness and performance. Workouts and progressions are included for warm-up, cool-down, fitness components and sport-specific training. Prereq: Undergraduate degree seeking student.

PHED 12A. Badminton (First Half). 0 Unit.
This class provides the student with the basic skills, footwork and strategies necessary to play the sport of badminton. Emphasis is placed on skill development through instruction and drills as well as singles and doubles match play. This class is appropriate for all students. Students with special needs can be accommodated. Prereq: Undergraduate degree seeking student.

PHED 12B. Badminton (Second Half). 0 Unit.
This class provides the student with the basic skills, footwork and strategies necessary to play the sport of badminton. Emphasis is placed on skill development through instruction and drills as well as singles and doubles match play. This class is appropriate for all students. Students with special needs can be accommodated. Prereq: Undergraduate degree seeking student.

PHED 13A. Rock Wall Climbing (First Half). 0 Unit.
This course is designed to give students a comprehensive introduction to the skills, safely, terminology and equipment used in the sport of recreational activity of rock climbing. Prereq: Undergraduate degree seeking student.

PHED 13B. Rock Wall Climbing (Second Half). 0 Unit.
This course is designed to give students a comprehensive introduction to the skills, safely, terminology and equipment used in the sport of recreational activity of rock climbing. Prereq: Undergraduate degree seeking student.

PHED 14A. Hatha Yoga (First Half). 0 Unit.
This course provides an introduction to Hatha Yoga, presenting body awareness, basic philosophy, breathwork, postures and meditation techniques. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 14B. Indoor Rowing (Second Half). 0 Unit.
This course introduces the student to basic indoor rowing techniques, skills, and equipment. Students will learn conditioning programs to prepare the student to continue in recreational, fitness or competitive rowing programs. Prereq: Undergraduate degree seeking student.

PHED 21A. Hatha Yoga (First Half). 0 Unit.
This course provides an introduction to Hatha Yoga, presenting body awareness, basic philosophy, breathwork, postures and meditation techniques. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 21B. Hatha Yoga (Second Half). 0 Unit.
This course provides an introduction to Hatha Yoga, presenting body awareness, basic philosophy, breathwork, postures and meditation techniques. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 22A. Intermediate Hatha Yoga (First Half). 0 Unit.
This course utilizes the basics of Hatha Yoga including body awareness, philosophy, breathwork, and postures with emphasis on increased strengthening, increased aerobic segments, and more challenging postures. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 22B. Intermediate Hatha Yoga (Second Half). 0 Unit.
This course utilizes the basics of Hatha Yoga including body awareness, philosophy, breathwork, and postures with emphasis on increased strengthening, increased aerobic segments, and more challenging postures. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 24A. Jogging (Second Half). 0 Unit.
Prereq: Undergraduate degree seeking student.

PHED 25A. Power Volleyball (First Half). 0 Unit.
This class introduces volleyball skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 25B. Power Volleyball (Second Half). 0 Unit.
This class introduces volleyball skills, techniques, strategies, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.
PHED 26A. Racquetball (First Half). 0 Unit.
This course teaches racquetball skills and strategies for team and individual play. Course content includes terminology, skill development, scoring, etiquette and safety. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 26B. Racquetball (Second Half). 0 Unit.
This course teaches racquetball skills and strategies for team and individual play. Course content includes terminology, skill development, scoring, etiquette and safety. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 27A. Indoor Group Cycling (First Half). 0 Unit.
A stationary cycling program set to motivational music. Students will learn how to use and set up the bike and how to create a challenging workout using sprints, jumps and climbs. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 27B. Indoor Group Cycling (Second Half). 0 Unit.
A stationary cycling program set to motivational music. Students will learn how to use and set up the bike and how to create a challenging workout using sprints, jumps and climbs. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 29A. Swimming - Beginning and Intermediate (First Half). 0 Unit.
This class focuses on basic swimming skills and safety. This class is appropriate for non-swimmers to those students with mid-range swimming skills. Students with disabilities may be accommodated. Prereq: Undergraduate degree seeking student.

PHED 29B. Swimming - Beginning and Intermediate (Second Half). 0 Unit.
This class focuses on basic swimming skills and safety. This class is appropriate for non-swimmers to those students with mid-range swimming skills. Students with disabilities may be accommodated. Prereq: Undergraduate degree seeking student.

PHED 30A. Swimming - Endurance (First Half). 0 Unit.
This class is for individuals who have mastered intermediate swimming skills and wish to develop advanced swimming skills and greater swimming endurance. Prereq: Undergraduate degree seeking student.

PHED 30B. Swimming - Endurance (Second Half). 0 Unit.
This class is for individuals who have mastered intermediate swimming skills and wish to develop advanced swimming skills and greater swimming endurance. Prereq: Undergraduate degree seeking student.

PHED 31A. Tennis (First Half). 0 Unit.
Students will learn the tennis skills and strategies necessary for both singles and doubles play. Emphasis is placed on stroke development, rules, scoring and etiquette. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 31B. Tennis (Second Half). 0 Unit.
Students will learn the tennis skills and strategies necessary for both singles and doubles play. Emphasis is placed on stroke development, rules, scoring and etiquette. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 34A. Weight Training (First Half). 0 Unit.
This class focuses on muscular strength and endurance training through individualized weight training programs. Emphasis is placed on appropriate use of equipment and safety procedures. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 34B. Weight Training (Second Half). 0 Unit.
This class focuses on muscular strength and endurance training through individualized weight training programs. Emphasis is placed on appropriate use of equipment and safety procedures. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 39A. Bowling (First Half). 0 Unit.
This class introduces bowling skills, techniques, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 39B. Bowling (Second Half). 0 Unit.
This class introduces bowling skills, techniques, rules and scoring. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 40A. Basketball (First Half). 0 Unit.
This class introduces basketball skills, techniques, rules and basic offense and defense. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 40B. Basketball (Second Half). 0 Unit.
This class introduces basketball skills, techniques, rules and basic offense and defense. This class is appropriate for most students.

PHED 41A. Softball (First Half). 0 Unit.
This class introduces softball skills, techniques, rules and basic offense and defense strategies. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 41B. Softball (Second Half). 0 Unit.
This class introduces softball skills, techniques, rules and basic offense and defense strategies. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 42B. Indoor Soccer (Second Half). 0 Unit.
Students will learn the skills, techniques and strategies to play the sport of indoor soccer. This class is appropriate for most students. Prereq: Undergraduate degree seeking student.

PHED 44A. Core Yoga (1st Half). 0 Unit.
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will combine stretching and strengthening to improve posture and flexibility and create balance in the physical body. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 44B. Core Yoga (2nd Half). 0 Unit.
This course combines Hatha Yoga postures, Pilates exercises, body awareness and breathwork while focusing on deep stabilizing abdominal muscles. Students will combine stretching and strengthening to improve posture and flexibility and create balance in the physical body. Students will learn slow, controlled movements to help tone and condition. Prereq: Undergraduate degree seeking student.

PHED 45A. Introduction to Speed and Agility Training. 0 Unit.
This introductory course is intended for the student with an interest in training of speed and agility specific to their sport interest. The course will focus on the aspects of physical training necessary for the development of speed and agility and improved athletic performance. Prereq: Undergraduate degree seeking student.
PHED 45B. Introduction to Speed and Agility Training. 0 Unit.  
This introductory course is intended for the student with an interest in training of speed and agility specific to their sport interest. The course will focus on the aspects of physical training necessary for the development of speed and agility and improved athletic performance. Prereq: Undergraduate degree seeking student.

PHED 50A. Personal Safety Awareness (First Half). 0 Unit.  
This course focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 50B. Personal Safety Awareness (Second Half). 0 Unit.  
This course focuses on safety and preventative techniques. Emphasis is placed on self-protection. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 55A. Cardio-Fitness (First Half). 0 Unit.  
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 55B. Cardio-Fitness (Second Half). 0 Unit.  
This class presents the components of physical fitness through conditioning activities utilizing equipment such as stairclimbers, treadmills, and elliptical trainers. Students will evaluate their fitness levels and learn how to put together an individualized workout program. This class is appropriate for all students. Prereq: Undergraduate degree seeking student.

PHED 60A. CPR/First Aid (1st half). 0 Unit.  
Students will learn the basic first aid and CPR skills necessary to act in an emergency. Automated external defibrillation training is included. This class involves both lecture and hands-on work. Students will have the opportunity to achieve Basic Rescuer certification at the completion of the class.

PHED 60B. CPR/First Aid (2nd half). 0 Unit.  
Students will learn the basic first aid and CPR skills necessary to act in an emergency. Automated external defibrillation training is included. This class involves both lecture and hands-on work. Students will have the opportunity to achieve Basic Rescuer certification at the completion of this class.

PHED 65B. Team Building, Leadership, and Creative Movement (2nd half). 0 Unit.  
The primary purpose of this course is to provide an opportunity for Orientation leaders to: work as a team and build transferable skills for collaboration, active listening, communication, and motivation; learn dance movement as a form of communication and stress reduction; create the Orientation Leader Boogie Dance (performed at Welcome Days tradition and football game halftime show); understand the value in personal decision making and awareness (stress reduction, drug/alcohol awareness, sexual assault, etc.); learn campus resources; build Orientation Leader esprit de corps and enhance school spirit. This course will develop more effective and competent university ambassadors. In addition, the course will facilitate the development of leadership skills.

PHED 66A. Advanced Rowing (First Half). 0 Unit.  
This course is designed to enhance the rowing technique of the experienced rower. Prereq: Undergraduate degree seeking student.

PHED 66B. Advanced Rowing (Second Half). 0 Unit.  
This course is designed to enhance the rowing technique of the experienced rower. Prereq: Undergraduate degree seeking student.

PHED 100. Independent Activity. 0 - 10 Units.  
This course is designed to allow the student to write individual fitness goals, compose an individual fitness program specific to the goals and execute the individual program. Students are required to participate in a pre- and post-testing program and must achieve a minimum of 75% for each test component (national norms) in order to participate in Independent Activity. The course instructor must approve all programs. The student will be required to maintain a detailed activity log.

PHED 108. Fencing. 0 Unit.  
Fencing is the art of swordsmanship. Students will learn fencing skills such as on guard, lunge, attack, parry and touch. Students will learn the rules of competition and have the opportunity to compete during class time.

PHED 130. Wellness. 0 Unit.  
This lecture class teaches the components of physical fitness as well as evaluation techniques, fitness assessment, body composition, nutrition and weight control information. This class is appropriate for all students.

PHED 131. Personal Fitness. 0 Unit.  
Personal Fitness is a full semester class that teaches the components of physical fitness through both lecture and activity. Students will assess their fitness levels and learn conditioning activities to improve flexibility, cardiovascular endurance, muscular strength and endurance. Nutrition, weight control and concepts of wellness are covered in this class. This class is appropriate for most students.

PHED 141. Dance. 0 Unit.  
This course is designed to introduce the student to dance. Students will be exposed to a variety of dances including contemporary, jazz, folk and formal dancing. Students will learn how choreography is mounted and how dancers remember it. The class is appropriate for beginners as well as students with dance experience.
PHED 170. Varsity Baseball. 0 Unit.
PHED 171. Varsity Basketball (Men). 0 Unit.
PHED 172. Varsity Basketball (Women). 0 Unit.
PHED 174. Varsity Cross Country (Men). 0 Unit.
PHED 175. Varsity Cross Country (Women). 0 Unit.
PHED 178. Varsity Football. 0 Unit.
PHED 180. Varsity Soccer (Men). 0 Unit.
PHED 181. Varsity Soccer (Women). 0 Unit.
PHED 182. Varsity Swimming (Men). 0 Unit.
PHED 183. Varsity Swimming (Women). 0 Unit.
PHED 184. Varsity Tennis (Men). 0 Unit.
PHED 185. Varsity Tennis (Women). 0 Unit.
PHED 186. Varsity Track and Field (Men). 0 Unit.
PHED 187. Varsity Track and Field (Women). 0 Unit.
PHED 188. Varsity Volleyball. 0 Unit.
PHED 189. Varsity Wrestling. 0 Unit.
PHED 190. Varsity Softball (Women). 0 Unit.
PHED 218. Wellness. 1 Unit.
PHED 300. Sports Medicine Independent Study. 3 Units.
This independent studies course will provide sports medicine minors who experience scheduling conflicts with flexibility to complete the minor requirements. This course may be used to complete any of the current minor requirements.

PHED 325. Officiating Basketball. 2 Units.
Administrative procedures, promotion, managerial relationships, scheduling, tournaments, budgeting, scoring systems, and officiating.

PHED 332. Introduction to Sports Medicine. 3 Units.
This class provides a detailed introduction to the foundation of Sports Medicine. Students will understand the complexities of sports medicine and athletic training through classroom lecture, structured laboratory and clinical hours. Topics covered in this class include roles and responsibilities of the sports medicine team, injury pathology, injury prevention, evaluation and management of injury.

PHED 334. Orthopedic Assessment of the Upper Extremity. 3 Units.
This class provides students with hands on experience that prepares them to perform orthopedic assessments within the field of athletic training. Students learn to take medical histories, palpate bony and soft structures, perform range of motion, neurological and circulatory tests. Students will learn to perform orthopedic tests of the upper extremities, head, cervical spine and abdomen. This class involves lectures, laboratory and clinical hours. Prereq: PHED 332 and PHED 342.

PHED 339. Orthopedic Assessment of the Lower Extremity. 3 Units.
This class provides students with hands on experience that prepares them to perform orthopedic assessments within the field of athletic training. Students learn to take medical histories, palpate bony and soft structures, perform range of motion, neurological and circulatory tests; and perform orthopedic special test of the lower extremities, pelvis, and lumbar spine. This class involves lectures, labs, and clinical hours. Prereq: PHED 332 and PHED 342.

PHED 341. Physiology of Exercise. 3 Units.
The classroom and laboratory experiences in this class are intended to provide an understanding of physiological adaptations of the human body to acute and chronic exercise. The classroom portion will focus mainly on the response and adaptation of bodily systems to exercise and the relationship of physiology to sport, health and exercise programs. The laboratory portion will focus on evaluation of the physiological response to exercise. Prereq: PHED 332, PHED 342, PHED 334, PHED 339.

PHED 342. Kinesiology. 3 Units.
The purpose of this course is to present the conceptual ideas and general principles of the science of human movement. It reviews and applies the pertinent aspects of anatomy, physiology and mechanics. Subject matter is drawn from research and clinical findings of widely dispersed kinesiological subdisciplines and professional specializations. Prereq: PHED 332.

PHED 350. Therapeutic Rehabilitation and Modalities. 3 Units.
Topics covered in this class include concepts and practices associated with the conditioning and reconditioning (rehabilitation) of athletic injuries. Principles and practical skills associated with therapeutic modalities used in the treatment and rehabilitation of athletic injuries are also covered. This class involves lectures, labs and clinical hours. Prereq: PHED 332, PHED 334, PHED 339, and PHED 342.
OFFICE OF UNDERGRADUATE STUDIES

Case Western Reserve University confers baccalaureate degrees based on programs offered by the faculties of the Case School of Engineering, the College of Arts and Sciences, the Frances Payne Bolton School of Nursing, and the Weatherhead School of Management. Some major programs are offered in collaboration with the School of Medicine, the Cleveland Institute of Art, and the Cleveland Institute of Music. The faculties and administration are dedicated to offering educational programs that enable undergraduates to achieve disciplinary literacy in one or more major fields; to acquire educational breadth through study across the natural sciences, humanities and arts, and social sciences; and to learn to think critically and to communicate effectively. Overlap among the general education curricula for the various bachelor's degree programs allows students flexibility in the choice of majors and degree program. Furthering the university’s mission, the educational programs aim to foster the development of qualities of integrity, creativity, leadership, and societal engagement.

Advisors for first-year students, major field advisors, other faculty, and navigators in Student Advancement assist students in selecting a field of study suited to each student’s interests and qualifications. Students with broad educational interests and goals may choose to add one or more minor fields of study to their major field of study; may pursue concurrently two or more majors for the Bachelor of Arts degree, two or more majors for the Bachelor of Science in Engineering degree, or two or more majors toward the Bachelor of Science in Management degree; may complete one degree program with a secondary major from another degree program; or may earn two bachelor’s degrees by completing both a Bachelor of Arts degree and a Bachelor of Science degree or by fulfilling the requirements for two Bachelor of Science degrees. The Bachelor of Music degree offered by the Cleveland Institute of Music may be combined with either a Bachelor of Arts or a Bachelor of Science degree at Case Western Reserve University. Qualified students who wish to accelerate their undergraduate and graduate or professional studies may earn the opportunity to begin in the senior year advanced study toward a graduate or professional degree.

The university provides undergraduates with a rich variety of experiential learning opportunities both on and off campus. The location of the university in University Circle, with its outstanding array of cultural, educational, and health care institutions, and the proximity and accessibility of the university’s professional schools and their facilities enable undergraduates to draw upon diverse and distinctive resources to enrich their education. Programs that engage students in curriculum-related employment include the Cooperative Education Program (http://engineering.case.edu/coop/) and the Practicum Program (https://case.edu/postgrad/experiential-education/practicum/). Study abroad (http://www.case.edu/studyabroad/), the exchange program with Fisk University (p. 1303), and the Washington Semester (http://politicalscience.case.edu/undergraduate-programs/washington-center-program/) immerse students in educational environments that build global and national knowledge and perspective. Research opportunities (https://case.edu/source/) for undergraduates abound at the university, in University Circle institutions, and in the greater Cleveland community. Individual departments offer independent study opportunities to motivated and qualified students, and some departments offer courses that incorporate practical field experience or community service.

Mission Statement of the Office of Undergraduate Studies

The Office of Undergraduate Studies collaborates with the schools, academic departments, faculty, and other administrative offices to develop and sustain academic programs and policies that inspire and challenge undergraduates at Case Western Reserve University.

In pursuit of this goal,

- We participate in curricular discussions and reviews within and among the units offering undergraduate courses and academic programs, and coordinate the presentation of undergraduate curricular offerings and policies to students, other members of the CWRU community, and external constituencies.
- We support faculty in their teaching and in their academic advising in the undergraduate majors and minors, administer the academic policies of the faculty, and monitor the progress of undergraduates in completing degree requirements, working closely with the Student Success Initiative.
- We work with the Office of Institutional Research to analyze data to inform the successful progress of undergraduates through the curriculum.

Administration

Jeffrey Wolcowitz, PhD

</table>
Major* - available only as second major for a BA; may be sole major for a BA if also completing a BS (optional)

Major
All students must complete the requirements of a major field of study. A major ordinarily includes a program of 10 or more courses.

Minor
A minor concentration requires no fewer than 15 credit-hours and normally requires no more than 18 credit-hours.

Minors are not required. Students have the option of completing a minor in a discipline other than the major. Students who choose to complete a minor must complete at Case Western Reserve University at least half the requirements for the minor. With the exception of minors offered by the Case School of Engineering, students must earn a minimum cumulative average of 2.000 for all courses taken to satisfy minor requirements and for which grades are averaged. The successful completion of a minor will be indicated on a student’s transcript.

General Education Requirements
For each degree/major a student must complete, in addition to the SAGES and Physical Education requirements (described in the section General Degree Requirements (p. 1212)), the general education and other requirements for that degree/major (described in the sections of this chapter for the College of Arts and Sciences (CAS) BA degree (p. 1273), the College of Arts and Sciences (CAS) BS degrees (p. 1283), the Case School of Engineering (CSE) BS in Engineering degree (p. 1292), the Case School of Engineering (CSE) BS in Computer Science degree (p. 1293), the Case School of Engineering (CSE) BS in Data Science and Analytics degree (p. 1294), the Weatherhead School of Management (WSOM) (p. 1295), and the Francis Payne Bolton School of Nursing (FPB)).

Undergraduate General Degree Requirements
General Requirements for all Bachelor’s Degrees
The bachelor’s degree programs require students to study one field in depth (the major) and to complete general education requirements as appropriate to the major field and degree program selected. There is overlap among general education requirements, which allows students flexibility in the choice of majors and degree programs.

Every candidate for a baccalaureate degree from the university must:

1. complete the requirements of the Seminar Approach to General Education and Scholarship (SAGES), as described below;
2. complete two semesters of physical education through a combination of half and/or full semesters in Physical Education activity courses, as described below;
3. complete the requirements of the major field of study, as described in the relevant sections of this Bulletin;
4. complete the general education requirements of the school and degree program in which the student’s major field of study falls, as described in the relevant section of this chapter of the Bulletin (Arts and Sciences (p. 1273), Engineering (p. 1292), Management (p. 1295), Nursing (p. 1296));
5. complete a course of studies with a cumulative grade point average of no less than 2.000 for work taken at Case Western Reserve University; and
6. earn a minimum of 60 credit-hours in Case Western Reserve University courses, of which at least 15 must be earned after the student has earned a total of 105 credit-hours.

SAGES
The Seminar Approach to General Education and Scholarship (SAGES) provides a foundation in critical thinking, written and oral communication, the use of information, quantitative reasoning, engagement with ethical issues and diversity, and exposure to experimental and theoretical approaches to understanding human culture and behavior, scientific knowledge, and methods of research.

The First Seminar
The First Seminar (4 credit-hours, taken in the first semester of enrollment) introduces students to the seminar format through reading, discussion, and intensive writing, and incorporates activities with University Circle institutions. The course focuses on the development of critical thinking and communication skills through the use of a variety of approaches, media, and perspectives to explore the human mind and the nature of inquiry. This course is designed to strengthen writing and analytical skills while building a foundation in ethics, information literacy, and cultural diversity.

Students select a course from:

- First Seminar: Natural World (FSNA 1xx)
- First Seminar: Social World (FSSO 1xx)
- First Seminar: Symbolic World (FSSY 1xx)

As an alternative to these topical seminars, some students may choose FSCC 110: Foundations of College Writing, designed to provide additional writing support.

Students for whom English is a second language and who would benefit from an initial focus on academic English will enroll in FSAE 100: Academic English (3 credit-hours) during the fall semester and then continue with FSCC 100. First Seminar (4 credit-hours) in the spring to complete their First Seminar requirement. Some students for whom English is a second language will go directly into FSCC 100: First Seminar in the fall semester.

*Transfer Students only. Transfer students who have completed the English composition/expository writing requirement with a grade of C or higher at the college/university at which they previously matriculated will receive transfer credit for FSCC 100-TR (3 – 6 credit-hours) and will be required to complete a supplemental 1-credit-hour SAGES introductory seminar – FSTS 100 SAGES Transfer Supplement.

University Seminars
After completion of the First Seminar with a passing evaluative grade and before the end of the second year, students must complete two University Seminars (3 credit-hours each). University Seminars provide continued experience in critical reading, writing, and oral communication, as well as information literacy, ethics, and cultural diversity. Each University Seminar explores content determined according to the interests of the faculty. A student’s First Seminar and two University Seminars must
include a course from each of the three thematic areas: Natural World, Social World, and Symbolic World.

Students select courses from:

- University Seminar: Thinking About the Natural World (USNA 2xx)
- University Seminar: Thinking About the Social World (USSO 2xx)
- University Seminar: Thinking About the Symbolic World (USSY 2xx)

Students who complete their First Seminar requirement with FSCC 100, FSCC 110, or FSTS 100 may fulfill the University Seminar requirement by choosing courses from any two of the three thematic areas.

University Composition Requirement: The SAGES Writing Portfolio
Students develop a Writing Portfolio comprised of final graded writing assignments from the First Seminar and University Seminars. The Writing Portfolio is due the semester after completing the final University Seminar.

Departmental Seminar
The Departmental Seminar (3 credit-hours), generally taken in the junior year after the completion of the University Seminars, focuses on specific methods and modes of inquiry and communication characteristic of the Departmental Seminar’s discipline. The Departmental Seminar may be taken in the department of the student’s major or in another department. A course used to fulfill the Departmental Seminar requirement may not also be used to fulfill a Breadth Requirement. Courses meeting this requirement include the designation “Approved SAGES Departmental Seminar” in their course descriptions. Some majors include a specific Departmental Seminar as part of their requirements.

Senior Capstone
The Senior Capstone assimilates the knowledge and skills gained throughout the educational process. Students engage in a unique one- or two-semester experience (3 - 6 credit-hours) designed in consultation with a faculty member. Each Senior Capstone must include key elements:

1. Demonstration of critical thinking and writing skills;
2. Regular oversight by the capstone advisor;
3. Periodic reporting of progress;
4. Regular writing (e.g. drafts, progress reports, critiques) throughout the project including a final written report which may be a thesis or equivalent document associated with the project or activity (e.g., such pursuits as performance, experiment, live case analysis, or creative writing), as approved by the department of capstone origin; and
5. Oral reports including a final public presentation at the Senior Capstone Fair, a conference, a performance, a public lecture, a teaching presentation, or another setting, as approved by the department of capstone origin.

Courses meeting this requirement include the designation "Approved SAGES Capstone” in their course descriptions. Some majors include a specific Senior Capstone course as part of their requirements.

Physical Education
All students must complete two full semesters of Physical Education activity courses at zero credit-hours. Students may choose from half-semester and full-semester course offerings. If possible, a student should begin meeting this requirement in the first semester and complete it early in his or her undergraduate years.

Requirements for Specific Degrees
Students are expected to complete a bachelor's degree in a timely fashion and will ordinarily be subject to the degree requirements in place at the time of matriculation at Case Western Reserve University, although they may choose to update their requirements to those included in a later General Bulletin.

If a student extends study towards a bachelor's degree beyond 10 years after first matriculating as an undergraduate student, the major-field department(s) will review the student’s academic record and may update major field requirements. If the student has not already completed the applicable general education requirements in place at the time of matriculation, the appropriate dean in the school offering the major will review the student’s academic record and may update general education requirements.

Double Majors, Secondary Majors, and Dual Undergraduate Degrees

Only one major is required for a student to satisfy degree requirements, and most students complete their degrees having met the requirements for a single major. However, some students wish to complete more than one major in order to address their interests and academic goals. Several opportunities exist for a student to complete more than one major.

Double Majors
A student may double major in two (or more) Arts and Sciences majors for the BA degree, or two (or more) Engineering majors for the BS in Engineering degree, or two (or more) Management majors for the BS in Management degree. No additional credit-hours beyond those ordinarily required for the specific degree are required, but students may need additional credit-hours to meet all requirements of the two (or more) majors. Students pursuing multiple majors within a single degree will receive one diploma corresponding to the degree earned and each major will be noted on the diploma and the transcript.

Secondary Majors
A student whose interests span majors that fall under two different degree programs (the BA degree program and a BS degree program or two different BS degree programs) may complete one degree program, including its general education requirements, and the requirements for the two (or more) majors. The major for which the student does not complete the associated general education requirements will be designated as a “secondary major”. If the field chosen as a secondary major has different requirements for the BA and BS degrees, the requirements to complete the secondary major are those associated with the BA degree. No additional credit-hours are required beyond those ordinarily required for the degree for which the student completed general education requirements, though students may need additional credit-hours to complete all requirements of the two (or more) majors.

The student will receive one diploma corresponding to the degree for which the student completed general education requirements, and that degree will be recorded on the transcript. Each major will be noted on the diploma and the transcript, but a secondary major will be designated in that way.
Dual Degrees
To qualify for two (or more) undergraduate degrees, i.e., a BA and a BS degree or two BS degrees, as a dual degree student, a student must satisfy all requirements for each degree, including each degree’s associated general education requirements, and complete for each additional degree 30 credit-hours of study beyond the hours required for the first degree. Students who seek a dual-degree program that involves the Bachelor of Music degree from the Cleveland Institute of Music must meet Cleveland Institute of Music and Case Western Reserve admission requirements, and must seek approval of both institutions.

FSAE (FSAE)
FSAE 100. Academic English. 3 Units.
This course is designed to improve the fundamental reading, writing, speaking, and listening skills of students for whom English is not their first language. One focus of the course will be refining written academic communication: identifying and producing common types of academic writing; note-taking from reading and listening inputs; understanding and applying principles of academic text structure; summarizing and referencing information; editing and proofreading; and achieving appropriate tone and style. A second focus will be honing spoken academic communication: recognizing the purposes of and differences between spoken and written English in academic contexts; identifying and practicing interactional and linguistic aspects of participation in seminar discussions; discussing issues requiring development and application of creative and critical thinking; and preparing and delivering oral presentations. A third focus will be on enhancing reading and listening skills in academic contexts: understanding the content and structure of information delivered both orally and in print form; and reading and listening for different purposes. A final focus will be improving and extending grammar, vocabulary, and pronunciation.

FSCC (FSCC)
FSCC 100. First Seminar. 4 Units.
This four credit-hour course provides an introduction to various dimensions of academic life. It will be characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources, and will include practice in written and oral communication in small groups. The goals of the course are to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to introduce basic information literacy skills; to continue to provide a foundation for ethical decision-making; to continue to encourage a global and multidisciplinary perspective on the learning process; and to continue to facilitate faculty-student interactions. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, or FSCS. Prereq or Coreq: FSTS 100.

FSCS (FSCS)
FSCS 150. First Seminar Continuing Semester. 3 Units.
This is a continuation of the First Seminar experience for ESL students. The seminar will continue the introduction to various dimensions of academic life. It will be characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources, and will include practice in written and oral communication in small groups. The goals of the seminar are to continue to enhance basic intellectual skills of academic inquiry, such as critical reading, thoughtful analysis, and written and oral communication; to continue to introduce basic information literacy skills; to continue to provide a foundation for ethical decision-making; to continue to encourage a global and multidisciplinary perspective on the learning process; and to continue to facilitate faculty-student interactions. Prereq: 100 level first year seminar in USFS, FSCC, FSNA, FSSO, FSSY, or FSCS. Prereq or Coreq: FSTS 100.

FSNA (FSNA)
FSNA 103. Energy and Society. 4 Units.
This four-credit-hour course provides an introduction to collegiate writing and to various dimensions of academic life, but will focus on the critical appreciation of the world of energy. Currently, most of the world runs on non-renewable resources; this course is designed to help students develop viewpoints about these issues, and to express themselves in a clear, coherent way. The class will involve both literacy and numeracy, and students will learn to become comfortable handling some of the quantitative measures of energy use. The class will be characterized by intense yet open-ended intellectual inquiry, guided by reading, lectures and discussion, and will include practice in written and oral communication individually and in small groups.

FSNA 104. Archaeoastronomy: Monuments and Ideas. 4 Units.
The unifying theme of this course is how astronomical practice and knowledge is central to ancient civilizations and how that emphasis continues today as manifested through scientific endeavor and also as strongly through the power of unifying myth.

FSNA 111. Chemical Aspects of the Aging Mind. 4 Units.
This seminar will focus on three age-related neurological disorders: Alzheimer’s, Parkinson’s and Huntington disease. These diseases pose enormous social and economic impact, and current drug-based therapeutic approaches are limited and may not be suited to deal with the imminent problems. The seminar will examine lifestyle changes (i.e., diet, exercise, vitamins, and other habits such as reading) that are implicated in preventing or slowing down these disorders. The focus on a medical topic with important socioeconomic ramifications will provide a novel approach to enhancing critical thinking and communication skills.

FSNA 112. Talking Brains: The Neuroscience of Language. 4 Units.
J speaks both Italian and English. After suffering a stroke, he finds himself switching to Italian in the middle of a sentence, even when he knows the person he’s talking to doesn’t speak Italian! He can’t stop himself no matter how hard he tries. In this discussion-based seminar, we’ll use cases like J’s to understand how a mass of cells can give rise to something as complicated as human language. We’ll use primary source readings from neuroscience to study topics such as the typical organization of language in the brain, bilingualism, sign language, and problems with language resulting from brain injury.
FSNA 113. Facts and Values in Environmental Decisions. 4 Units.
This four-credit seminar will guide students to critically evaluate the evidence, uncertainties, and value judgments pertinent to some of the world's pressing environmental issues. We will begin by studying climate change. Students will decide the topics of exploration to follow. Through reading, field trips, discussions and writing we will investigate natural environmental processes and how they have changed with the growth in human population and technology. Students will learn about the scientific process and will consider the roll of science and technology and their limits in making decisions about shared resources.

FSNA 116. Cities (Under Construction). 4 Units.
Based on the premise that cities are never "finished," and constantly being remade, we will look at the technological and cultural history of cities from the ancient world to the present day. Students will explore the history of building materials—wood, brick, steel, concrete, and glass—used in the construction of cities. We will also trace the development of city infrastructure such as water and sewage systems; streets, bridges, and subways; electricity, telephone and the internet. Specific technological innovations, such as the elevator and the automobile, will receive special consideration. We will move both geographically and temporally to visit the world's great cities, Athens, Mexico City, Tokyo, and New York City. As we do, we will study the examples of significant building projects, such as the Brooklyn Bridge, the Chicago World's Fair, Washington, DC's Metro, and Cleveland's first skyscraper, the Rockefeller Building. The course will cover the history of the professions—engineering, architecture, and urban planning—that have contributed to the construction of cities, and will review the works of these practitioners, as well as that of artists, reformers, and utopians that have imagined new directions for the city. We will also explore first person narratives of the city, the impact of the city on personal and collective memory, and the possibilities and pitfalls of the "virtual" city. Through lecture, discussion, textual analysis, computer simulations, and writing assignments, Cities (Under Construction) will help students gain a deeper understanding of their role in remaking and sustaining the built environment.

FSNA 120. The Impact of Materials on Societal Development. 4 Units.
This four credit-hour SAGES seminar provides an introduction to various dimensions of academic life through open-ended intellectual inquiry and guided by reading from primary and secondary sources. The course will require practice in written and oral communications in small groups. A primary focus of the seminar will be to examine the impact of engineering materials on societal development through human history using a few specific materials of interest as examples: concrete, steel, and semiconductors. At the conclusion of the course, students will be encouraged to explore the impact of other materials on the development of specific technologies as a group project.

FSNA 126. Urban Ecology. 4 Units.
This course will explore the natural world in an urban context. Urban spaces are defined by the interaction between human creation (the built environment) and the natural world. We will explore how those definitions can be complicated by human innovation meant to re-create nature, such as engineered wetlands. We'll read some classical ecology to understand how ecological issues differ in cities. Some topics we'll cover include: wildlife management; human/organism conflict and interdependence; urban heat islands; watershed, stormwater, and sewer management; and how trees grow in urban conditions. We'll also explore ethical issues such as environmental justice and sustainable development. Our field trips are meant to illuminate how urban planners, park managers, and others deal with such issues to create positive and healthy environments for their communities. Students will apply arguments and concepts learned in the course readings to the sites we visit.

FSNA 129. Engineering Design to Alleviate Extreme Poverty. 4 Units.
Almost half (47%) of the people in Africa have incomes less than $1.25 per day. Most of these people live as subsistence farmers in small villages with no electricity, running water or automobiles (but with cell phones). Through readings, group discussions, writing assignments, and open-ended experiential learning activities, the course will address ways that engineering solutions can improve peoples' lives within these severe economic constraints. A hands-on component of the course will involve designing and building affordable devices to meet specific needs. We have developed interactions with villages in Senegal, Malawi, and Botswana, and the engineering solutions will be explored within the context of these villages.

FSNA 133. Engineering Innovation and Design. 4 Units.
Innovation and design are cornerstones of the engineering profession and are responsible for many of the improvements in the quality of life that have taken place over the last century. Innovation is also viewed as the essential skill that will drive economies and solve many of the challenges facing societies around the globe. This seminar-based course will provide a disciplined approach to engineering innovation and design. The course requires students to engage in written and oral communications as well as working in small teams to complete open-ended design/build-related assignments. The course will culminate in the design, fabrication and validation of a prototype product to meet an identified need. The design, fabrication and validation of these products will be carried out in think[box] 1.0 (Prentke-Romich Collaboratory), and the Reinberger Design Studio.

FSNA 134. Fuel Cells. 4 Units.
Fuel Cells convert hydrogen and other fuels directly to electricity and are viewed as a key technology for non-polluting, oil-independent energy in the future. In this course, we will study and critically analyze the prospects, technical and economic barriers, and impact of broad implementation of fuel cells, focusing on the transportation sector and portable power. Major topics of the course include: (i) World and US energy outlook; (ii) Potential role and impact of fuel-cells; their advantages, principles of operation, design and materials issues, limitations and prospects for improvements; (iii) Special focus on details of a polymer type fuel cells (PEMFCs) for transportation and portable power; (iv) Modeling fuel cell performance and evaluation of controlling mechanisms that limit performance. The course is designed for students from all disciplines. Students will be expected to read assigned texts and articles and critically analyze statements and points of view presented. Qualitative analysis will be encouraged and developed. Student teams will develop a hypothesis to improve fuel cell performance by modifying the design of a component of the fuel cell. The new component design with then be fabricated and tested in an operating prototype fuel cell. Data analysis, hypothesis conclusion, and reporting of results are expected.
BioDesign basics explores the art of finding patient needs. No prior clinical or medical education is required, as we focus on acquiring and refining the underpinning critical thinking skills needed to identify and articulate unmet clinical patient needs in contemporary healthcare settings. Many—if not a majority of—ideas leading to healthcare innovation are derived from issues that arise during the daily activities of caring for patients. Whether it is frustration with the use of a specific surgical instrument, processes that interfere with health care delivery, better waiting rooms for the family, designing more comfortable hospital gowns, or materials inadequate for intended outcomes, patient needs cover a broad range of physical and emotional states. Many students find the idea of identifying a "patient need" quite ambiguous at first, but the BioDesign process for defining patient need is a widely use national model developed at Stanford University that the student will find contains easy-to-follow steps that are simple and appealing. As an interactive and "hands-on" course, students will be engaged in discussions, events and activities to promote a first-hand understanding of "needs finding" to support individual mastery of writing and oral presentation skills. The Fourth Hour will be centered on "walking tours" of local medical institutions around University Circle as well as actual use of medical devices (wheelchairs and crutches) on campus as ways to help your efforts identify a patient need based on those observations. In short, you will create your own experiences leading to stories that make writing fun. The course requires students to engage in written and oral communications as well as working in small teams to complete open-ended assignments.

FSNA 136. Saving the World from Poverty, Disease, Injustice and Environmental Exploitation. 4 Units.
Half of the world's population lives in poverty. The causes of poverty and injustice are complex and the ramifications are numerous and serious and include grave risk to human health and to the environment. Through reading, analysis, writing, and rigorous discussion the class will investigate issues surrounding poverty and disparities in health and opportunity. We will also explore how innovation and engineering design can help address causes of poverty and disparity and meet needs of people at risk. Design teams will work throughout the semester to identify an unmet need to engineer a solution to benefit an under-served or under-resourced population. Fourth-hour activities will include interviewing knowledgeable stakeholders (locally and abroad via teleconference), learning about and volunteering with service organizations, and visiting local institutions and/or companies addressing these issues.

FSNA 144. Is Mind What the Brain Does?. 4 Units.
Together we will explore the nature of the human mind by asking the question, "Is the mind what the brain does?" Through an exploration of neurological and psychological case studies, empirical research studies, direct experimentation, and readings and films about brain structure and function, we will form hypotheses about the relationship between the mind and the brain and gather evidence to test our hypotheses. Writing assignments will explore ideas about your own mind and brain, examples of other individuals with unusual or atypical brains and minds, and a research topic of your choice.

FSNA 145. Hostile Water. 4 Units.
Water is an essential, valuable resource that is protected by a wide variety of social, legal, and technical institutions. However, not all water is desirable. Hostile water is unwanted water from which we seek to protect ourselves. Hostile waters challenge our understanding of the natural world and the social doctrine upon which our understanding is based. This course will examine how historical "hostile water" events have altered our social perceptions and legal institutions, led to structural flood control, "damn" engineering, the National Flood Insurance Program, Landsat satellites, "Wild Rivers," FEMA, wetlands preservation, detention basins, etc., and to homeowner stormwater management options such as rain barrels and rain gardens. The course will begin with a review of the original documentation and modern interpretation of the Johnstown Flood. Students will then conduct research on historical events and prepare written briefing documents and oral presentations focusing on the physical impacts and social consequences of dramatic hostile water events. The course will end with a critical review of the Hurricane Katrina event. Class discussions will examine how hostile water events have impacted U.S. policies and institutions, and appears to be leading to stormwater management obligations for individual homeowners.

FSNA 150. Hobbies - Engineering fun. 4 Units.
This seminar introduces students to the idea that engineering can be found in all sorts of unexpected places, even in our hobbies. To test our hypothesis, we will examine the hobbies enjoyed by the course instructors: baseball and building synthetic coral reef aquariums. Students will then work under the instructors' guidance to analyze how principles of engineering can be used to understand the successes and failures they have encountered in their own hobbies, with the ultimate goal of developing a proposal for improving their experience of these hobbies.

FSNA 154. The Green Energy Transformation in Germany. 4 Units.
This seminar introduces students to the development and successes of green technologies in Germany. We will examine the proactive development of renewable energy and energy conservation technologies, commonly referred to as Energiewende, that was started by the German Green movement and promoted by Germany's innovative renewable energy policies. We will consider such questions as: What are the implications of this German success story, both for the US and the rest of the world? What lessons can be applied to other situations? What factors might limit the utility of those lessons? In the process of our investigation, we will examine such important issues as globalization, resource finiteness, and sustainability challenges, including economic crises, climate change, energy insecurity, and global competition.

FSNA 157. Plastics Recycling: Re-use of Plastic Waste. 4 Units.
About 300 million tons of plastics are produced globally each year, but only about 10 percent of these products are recycled, despite the fact that recycling uses significantly less energy and produces fewer greenhouse gas emissions than does manufacture of the virgin materials. This course will address the scientific, economic, environmental, and political issues involved in plastics recycling. Following an introduction to the chemical structures and properties of commodity plastics, we will discuss the actual recycling of plastics in municipal waste including the problems faced in collection and sorting of plastic waste and recycling economics. Then we will address the commercial applications and properties of recycled plastics and why they generally have inferior properties to virgin materials, which significantly reduces their market value. Finally we will look at biodegradable alternatives to oil-based materials as well as some options to plastics recycling, including land filling, burning for power generation, and monomer reclamation.
FSNA 158. What is Making and Manufacturing Today and Why is Innovation Part of the Story?. 4 Units.
The rise of the creative class into the world of "making" has resulted in new economic models, new definitions of manufacturing, and new ways of working. "Making" is inclusive of a wide variety of activities, from the arts and crafts, to woodworking, to high technology integrating with traditional craftsmanship, to products with embedded sensors in traditional materials, to the use of 3D printing of everything from polymers to metals to chocolate. Within all of these approaches, "innovation" is often the buzzword, the common denominator. What does innovation mean in this context? Are innovators and makers today any different from the innovators and manufacturers of the past? What role does science and math have in making and manufacturing? Through both a hands-on and historical approach, we will explore the commonalities between today's makers and yesterday's manufacturers, and arrive at an understanding of innovation and apply this understanding to a project that could continue throughout your time at CWRU.

FSNA 159. Nanotechnology in Medicine: The Fantastic Voyage. 4 Units.
This course is a freshman seminar designed to introduce students to Nanoscience and Nanotechnology, their application in the world of biomedicine, and the fundamental science and engineering principles that guide the current state-of-art and future approaches. The course will begin with an introduction to the history, science and terminology of 'Nano scale', 'Nanotechnology' and 'Nanomedicine'. It will then focus on the historical advancements in the field and describe why and how the field became an exciting component of medical technologies. The course will draw on a variety of texts including book sections, newspaper articles, editorials, scientific journal articles and internet-sourced information to understand the realm of nanoscience and nanotechnology in various STEM areas and their specific application in biomedicine. The course will also correlate science fiction with reality, pertaining to the Nanomedicine area, via two classic movies: Fantastic Voyage (1966) and Inner Space (1987). The students will be asked to interpret components/sections of the movies in terms of 'conceptual correctness', 'scientific correctness' and 'challenges in nanomedicine'.

FSNA 160. Technological Development and Popular Perception. 4 Units.
The central theme of this seminar is the basic functioning of engineered devices and systems. The devices/systems covered will be 1) automobiles, 2) airplanes, and 3) production of electric power. Material for the seminar will come from a wide range of sources, including a reference book "How Things Work", historical references, popular pseudo-technical periodicals, and technical journal articles. We will discuss topics ranging from a) how to characterize the basic physical principles at work in the devices/systems to 2) how popular opinion can affect the adoption or abandonment of sound technology.

FSNA 162. The Root of All Technology: Natural and Synthetic Materials. 4 Units.
We all rely on technologies such as smartphones, wireless and wired communication, and embedded electronics. But access to these technologies depends on the availability and affordability of the materials used to make them. Rapid technological development and sustainability concerns have created novel demands on the infrastructure that extracts raw materials and converts them into useful devices. As a result, new classes of materials offering unique properties have been developed. This seminar examines the development and life cycle of materials. Key to our analysis will be a framework for understanding materials flow, including the prospect of closed loop production. Topics will include: patterns in raw material extraction around the world, including the north-south divide; shifts in socioeconomic drivers underlying shifts in demand for materials; material properties needed for today's technologies; methods for predicting demand for materials and constraints of meeting that demand.

FSNA 163. Design Thinking: Influence of Art and Engineering on Design. 4 Units.
For designers, the "wicked problem" is the recognition that decision-making is full of contingencies, including multiple perspectives and approaches, and while problems may be solved, elegant solutions are rarely without faults. This course investigates how these contingencies affect the design process in art and engineering, ultimately looking at the overlap between these two disciplines. What are the differences between artistic and engineering approaches to design? How can a hybrid approach that integrates aspects from each discipline solve persistent design challenges? Working with students from the Cleveland Institute of Art (CIA) in a seminar-studio setting, students will experience first-hand the importance of disciplinary diversity and innovative thinking in the design process. Collaboratively and individually, students will reveal and explore ways of design thinking shared by art and engineering in written, digital, and fabricated assignments.
FSNA 165. Silicon and Its Applications. 4 Units.

Silicon is the second most abundant element found on the planet. Over the last century, science has taught us to take this common material and create the products on which our modern society depends. Quantum mechanics gave birth to the electronic age and the computer. The absorption, emission and reflection of quanta of light (photons) underlie solar cells, light emitting diodes, radiation detectors, and optical fibers. The driving forces behind these discoveries are a fascinating. The history of the scientific revolution—the conversion of sand into silicon ingots then into computer chips—is extraordinary. The advancement of computer chips and accessories based on silicon technology now enables your smartphone to direct you to the nearest Taco Bell through its connection to a satellite orbiting the Earth. There are basic processing steps that change an ingot of pure silicon into a practical device such as a chemical sensor or a solar cell. Major topics of this course will include discussion of the history of silicon, from the simple transistor to complex microprocessor, solar cells, and sensors, as well as how the swift changes in computing power and the communications revolution powered by it have impacted our daily modern life. Excellent examples of this silicon-based technology include the use of silicon in solar panels and their place in the green energy revolution, and the expanding role of silicon microsensors as one of the fastest growing areas of technology, especially in the area of biosensors for healthcare. Students in this class will have the opportunity to design and construct a simple device on a silicon chip for their group project. This course is designed and intended for students of all disciplines, and each student is expected to participate actively in a group project to make a silicon device in a clean room.

Students will participate in a laboratory experience where chemicals and reagents will be used for typical silicon technology processing. During Fourth Hour, students will have the chance to visit the University Solar Farm, laboratories at CWRU that are actively involved in silicon research, listen to guest speakers whose research involve silicon, watch films on usage of silicon technology and master oral presentation skills.

FSNA 168. Exploring the Ocean. 4 Units.

Most of our planet is ocean: beautiful, powerful, mysterious, deadly. Why do we risk going to sea? How did people begin to explore the ocean, and how do we explore today? What have we learned, what can we learn, and what questions about the ocean must remain unanswered? In this course we will read scholarly and popular narratives of ocean exploration; learn how sailors found their way at sea, centuries before satellite navigation; consider what it takes to equip a voyage, then and now; and learn about the instruments and submarines that let us probe the ocean depths, and what we find there.

FSSO 119. Philanthropy in America. 4 Units.

This four-credit course provides an introduction to various dimensions of philanthropy and volunteerism. Using the seminar format and an array of interactive activities, we will conduct a broad but intellectual inquiry into the systems and ethics of giving time and money to charitable causes. In four units of inquiry, we will consider the giving traditions that have influenced American culture and society since its colonial days. We will examine the role that the Third Sector (also known as the Independent or Nonprofit Sector) plays as an agent of social change in a functioning democratic republic. We will explore the nature of donors and volunteers and take a critical look at the missions and goals of a cross section of nonprofit organizations. We will wrestle with ethical issues related to philanthropy and consider the giving patterns of different social, religious, and ethnic groups. We will also turn our collective thinking to how the nonprofit sector might better serve the social needs of the nation and the world. At the end of the semester, we will reflect on how our ideas about philanthropy have changed over the course of fifteen weeks.

FSSO 120. Poverty and Social Policy. 4 Units.

This course has two major foci: poverty and social policies designed to ameliorate poverty. Sociologists in the United States and in other countries have made major contributions to studies of poverty. They have primarily focused on income-based poverty, but more recently, have also studied other forms of poverty. In this class, we will examine different conceptualizations and measures of poverty. We will then examine short-term and long-term poverty experiences and their potential consequences. We will then turn to explanations of poverty: why are some individuals more likely to experience periods of low income than others? While the United States will be the focus of the course, we will contrast the experiences of other countries. The second component will be an analysis of social policies designed to ameliorate poverty. In particular, we will examine the development and retrenchment of welfare states and other social policies, the various goals of social policy, and the different impacts social policies have had on individuals, families, other groups, and the country overall. This discussion will reflect on experiences of other countries.

FSSO 128. Movers and Shakers: Leadership. 4 Units.

"Never doubt that a small group of thoughtful, committed citizens can change the world. Indeed, it is the only thing that ever has" (Margaret Mead, 1901-1978). This seminar is about understanding what enables people to make a generative impact on the world. Students will explore the socio-emotional and motivational characteristics of effective leaders and their ability to create positive change. Students will also be encouraged to develop their own theories of leadership and to explore their personal approaches to making a difference. The seminar will profile leaders from different occupations and walks of life. Seminar sessions will feature assigned readings on leaders and change agents, class discussion on what drives movers and shakers, and individual and group presentations on class members’ emergent leadership perspectives. A key objective of the seminar is the development of critical thinking skills, writing skills, and verbal skills. Consequently, the weekly class readings, reflection papers on class readings, class discussions, class presentations (individual and group), and final project are vital features of the seminar experience. Students will be expected to leave the seminar with a grounded perspective on leaders and leadership, and the ability to articulate their own personal views on making a difference in the world.
FSSO 129. Perspectives on Inequality. 4 Units.
We live in a world in which millions of people die every year in developing countries due to poverty-related conditions. Within the United States, where most commentators characterize the population as "middle class," at least 35 million people live in poverty. This course examines social inequality from multiple perspectives. We will discuss the concepts of poverty, discrimination, and social change on a global and national level. The first third of the course assesses several economic, cultural, and environmental theories of inequality. We will then survey a wide range of scholarship that has addressed various types of social inequalities from diverse viewpoints.

FSSO 143. Living With and Making Decisions Concerning Injustice. 4 Units.
Injustice. What do you think of when you hear that word? There are all types of injustice in this world, and chances are that during our lifetime we will either find ourselves in a position or system of power, perpetrating injustice on others; or in a position of supposed impotence, a subject of injustice. What are our choices? How will we respond? In this course we will examine the topic of living with and making decisions concerning injustice using, as an example, the specific injustice of slavery, examining the lives and decisions of both a famous slaveholder and two not-so-famous slaves; and learning from their lives and decisions how we might, ourselves, live with and make decisions concerning injustices we face in our lives.

FSSO 145. Berlin in History, History in Berlin. 4 Units.
From its emergence as a fishing village in the sandy marshes of the eastern frontier of Germany, to its 21st-century role as a cosmopolitan metropolis, Berlin has embodied the arc of change over time in human society. This course uses the history of the city of Berlin as the lens through which to contemplate the complexity of human social and cultural arrangements, their expression in economics and politics (including war), and the imbrication of human cultural and social constrictions with the "natural" world. We will read books and articles about the history, culture, economy, and politics of Berlin, primarily from its establishment as the capital of new German Empire in 1871 to the present. We will view films that introduce us to the manic energy that Berlin represented in the transition to modernity. We will visit local museums that house examples of the material culture of Berlin, from the Cleveland Museum of Art to the Rock and Roll Hall of Fame and Museum. We will listen to the music of Berlin, from the baroque of the Brandenburg Concertos to the heavy metal of the Skorpions. And we will learn its history, from fishing village, to court city, to imperial metropolis and industrial engine, to divided symbol of the Cold War, to de-industrialized center of art, government, education, and incubator of high-technology. This First Seminar will prepare students to pursue their undergraduate degrees grounded in thinking about places in time, about change over time, and about human creativity, while preparing them to write and speak about their arguments with clarity and grace.

FSSO 146. The Past and Future of Art, Architecture and Museums in Cleveland. 4 Units.
During the gilded age, Cleveland became one of this country’s most powerful centers of business, industry, and political power. For example, John D. Rockefeller, who started his business career in Cleveland, became the wealthiest individual in human history, and Mark Hanna, the leader of Cleveland’s Republican political machine, selected and engineered the election of eight Ohio-born Presidents of the United States, setting a state record which is still unbroken. As late as the 1930s, Henry Luce located the headquarters of Time, Life and Fortune magazines in Cleveland; and the Terminal Tower, the nexus of the vast, sprawling railroad and real-estate Empire of the Van Sweringen Brothers, was the country’s highest building outside of New York. This class will examine one of the by-products of this accumulation of power and money: the flowering of art and culture in Cleveland during the early 20th century, and the creation of notable cultural institutions, such as one of this country’s finest symphony orchestras, one of its top ten art museums, a major university, and an array of other notable entities, many of them housed in buildings of architectural distinction. The class will also examine the economic, cultural and intellectual decline of Cleveland in the second half of the 20th century, and recent attempts to reverse this trend through intensive efforts to revitalize University Circle. In addition to classroom sessions, the course will include field trips to the Cleveland Museum of Art, the Western Reserve Historical Society, and the Museum of Contemporary Art, and an architectural tour of downtown Cleveland. The class will be centered on three interrelated questions: What makes a great city? How can the artistic and cultural life of a great city be developed and sustained? How can the social and economic collapse of a great city be reversed?

FSSO 149. Creativity in the Arts, Sciences, and Engineering. 4 Units.
This seminar will have a focus on creativity in the arts, sciences, and engineering. What are the similarities and differences in the creative process in these three different broad fields? How are the creative products different? What are the creative processes involved in these different domains? Are there differences in personalities between scientists and artists? How can we foster creativity in children and adults in these fields? We all read about and discuss the different dimensions of creativity; what makes something creative; what helps people become creative; the role of cognition and emotion in the creative process in the arts and sciences; and mental illness and creativity.

FSSO 152. Decision Making in Everyday Life. 4 Units.
Although social cognition allows us to process vast amounts of information quickly, we are not always aware of the subtle forces that guide our decision making. This course will use a seminar approach to explore rational and irrational forces that influence decision making. We will use a multi-disciplinary approach to decision making, including topics such as personality factors, incentive-based decision making, cognitive biases, automatic information processing, and theories of mind. These topics will be explored using class discussion, writings, and student presentations.
FSSO 153. Reading Social Justice: The Anisfield-Wolf Book Awards. 4 Units.
In this seminar, we will read a selection of poetry, short stories and books and use them as a framework to explore questions related to understanding tolerance, social justice and diversity. We will begin by establishing a definition of and methodology for addressing these issues in our discussion and writing, and build upon them as the semester progresses. Much of the fiction and nonfiction we will read will be by winners of the Anisfield-Wolf Book Awards. In addition to our reading, we will also analyze and discuss a selection of films, art works and music related to our theme. Our Fourth Hour experiences will include attending the Awards ceremony in September, visits to cultural institutions within University Circle, lectures and guest speakers. While the primary goal of the class is to help students develop their critical thinking and writing skills, it is also intended to introduce them to a vital, Cleveland-based literary institution. By engaging the themes, texts, and authors of Anisfield-Wolf, students will have a deeper understanding not only of contemporary literature, but the importance of social justice to a liberal arts education.

FSSO 157. Being in Touch: Animal and Human Considerations. 4 Units.
This is a seminar designed to refine skills of critical thinking and reading, listening, learning, writing and verbal presentation while considering the topic of touch. We will consider touch in different situations and for different purposes - touch in child development, touch in socialization, therapeutic animal touch, touch and violence/harassment, touch in the workplace, touch and technology, taste as a function of touch, healing touch comforting and noxious touch, and things we are afraid to touch.

FSSO 158. The Symphony Orchestra-Cultural Treasure or Outmoded Symbol?. 4 Units.
In measuring the cultural profile of a metropolitan area, the presence of a successful symphony orchestra is often used as a model to determine culture sophistication and refinement. In recent years, however, the model of the orchestra has encountered significant challenges. Using the world-renowned Cleveland Orchestra as a paradigm, this seminar will examine the role of the orchestra in ascertaining a city's cultural health. Topics of discussion, oral presentations, and writing assignments will address the historical legacy of the classical orchestra; traditional concert-going etiquette and its relevance in 21st-century culture; how orchestras have handled recent financial trials; and defining the importance of the orchestra in today's urban society. Students will have the opportunity to attend orchestral concerts during Fourth Hour, and occasional guests from the Cleveland Orchestra and other University Circle institutions will provide a direct cultural perspective.

FSSO 160. Brazil Inside and Out. 4 Units.
In this seminar we will engage in the exploration of Brazil's history, society, and culture from a multidisciplinary and comparative perspective. Host of the latest Soccer Cup and Summer Olympics, Brazil is one of the largest and most diverse countries in the world, as well as one the largest economies and democracies. Known by its natural beauty and resources, tropical climate, vibrant culture and friendly population, the land of soccer and Carnival is also marked by inequality, poverty, corruption, and violence. Due to this complex, challenging and fascinating profile, Brazil defies easy categorizations and provides a unique context for the development of essential academic skills. Over the course of the semester, you will have the opportunity to read, analyze and discuss relevant academic sources, news articles and audiovisual materials, like music and films; learn and experience first-hand basic aspects of Brazilian language and culture, including food and music; and interact with Brazilian students and faculty on campus.

FSSO 164. Social Change, Genes, and Environment. 4 Units.
This seminar will focus on the rapidly expanding understanding of the interaction of biological and social forces—including the interaction of genes and environment. We will explore claims that are made in science and popular culture about the role of genes in development. We will focus on the role that social forces play in shaping the effects of genes in development, and health, through epigenetics and related mechanisms. Adopting a sociology-of-science perspective, we will consider the wider and future implications of gene-environment interactions for politics, the economy, and culture.

FSSO 165. Identities and Social Inequality. 4 Units.
In this course, students examine diversity, privilege, and power in US society. Social categories such as gender, heritage, language, race, religion, and sexuality affect the status of both individuals and groups, at times producing unequal distribution of resources and marginalization. No group or individual belongs to one category; therefore, we will also consider how the intersection of these categories produces their own unique effects. Students are expected to analyze and critique social institutions, belief systems, and practices that promote inequality and social justice through data-based dialogue and writing. Modes of inquiry will include quantitative and qualitative research methods and current scholarly literature. This course is conducted in a seminar format that requires students to engage in active, relevant and insightful discussions regarding the course content. Students have the opportunity to hear from guest experts in the field and participate in off-campus learning activities. Reflective and scholarly writing are major components of the course.

FSSO 169. The History of Your Lifetime: Making Sense of the Last Twenty Years. 4 Units.
No matter when you grow up, adults make assumptions about what you know. "You lived through certain events, didn't you?" Those events are often very important—the basis of political and policy debates or related to subjects that affect daily life—but it's often difficult to make sense of history you've lived through, but only as children. The usual way we learn about the past--in history classes—isn't very helpful because this is a time period that usually goes beyond what your teachers have been able to cover. Even if you could have covered this recent time period in history class, unfortunately, most recent subjects haven't received much attention from historians; the archives aren't yet available and we lack much critical distance in making judgments about what is significant and what isn't. We aren't yet sure which assumed causes of historical change are plausible and which only seemed so at the time. This time period usually constitutes most of the student's lifetime—your lifetime. This class takes these challenges head-on, examining the last 20 years of history. Aside from covering the "what happened" for several selected topics, we will attempt to go further and explore how historians think about contemporary events, place current events into longer historical contexts, develop skills in media literacy to better evaluate the quality of information we receive, and discuss the uses and misuses of historical analogies in public debate. We will also investigate the importance of structural narrative in making sense of historical events and processes: what questions do we ask of the past and why those questions and not others? Why do our questions about the past change over time? How do present circumstances affect our historical work? When do we draw our chronological boundaries; when do our stories start and when do they end?
**FSSO 171. Prediction. 4 Units.**
This course is an interdisciplinary examination of predictions about social events, how we make them, why they go wrong, and how we respond. While some things, like election results, are easy to predict, dramatic events like wars, depressions, and stock market crashes are harder to predict. The course will begin with the basic elements of probability theory to lay the groundwork for the class. Then, we will examine the psychological research on the types of errors people are prone to make regarding probability and the consequences of such biases in perception and estimation. The course will then move on to discuss predicting specific social events, such as elections and stock trends, comparing the empirical research to conventional beliefs. Then the course will address the role of scholarly research more generally, and the empirical work discussing how political scientists, economists, and other scholars often fail to predict the most significant and dramatic events because of their cognitive styles, which vary in the degree to which they rely on simplified models. Finally, the course will discuss how people respond when their predictions go wrong, and their basic tendency to rationalize away errors.

**FSSO 172. Islam in South Asia. 4 Units.**
There are more Muslims in South Asia than in any other region of the world. But within the region, Islam is far from a monolith. What variety of religious practices and traditions of debate have characterized South Asian Muslims? When meshed with different political projects, how do we understand Islam as a deeply contested ideological field? What roles did Muslims play in the history of South Asia? These are some of the questions we will pursue in the seminar. The long history of Muslim presence in the region—which now includes India, Pakistan, Bangladesh, and Afghanistan—will offer opportunities for studying them in a wide range of historical contexts: as actors in cosmopolitan, commercial networks of trade; as rulers consolidating states and empires governing large multi-ethnic and multi-religious populations; as “modernizers” and “traditionalists;” as religious minorities and majorities in different nation-states. Additionally, this seminar will explore Islam in an array of modern settings: from a nation-state created as a “Muslim homeland” to a rejection of religion as an adequate basis of national identity; from democracy to military rule; and, from Cold War politics to the “Global War on Terror.”

**FSSO 176. SAVOR: The Ethics and Politics of Eating. 4 Units.**
Our food choices affect more than our individual health; what we decide to put into our bodies has important consequences for our environment, the livelihood of farmers, and even the general well-being of a society. These choices also reveal moral, cultural, and religious values we deem important. In this seminar, we will examine the environmental and social consequences of our food choices by interrogating both our individual habits as well as current (often controversial) food policy issues. In line with the requirements of a SAGES First Seminar, this course is designed to improve students’ ability to read critically and interpret moral and political arguments. We will analyze a wide range of writings on food-related issues in order to develop sophisticated perspectives on our food choices. Hopefully, this thoughtful consideration will translate to mindful habits when we convene around food with our friends, families, and communities. Class discussions will be accompanied by class visits to urban gardens, restaurants with a sustainability mission, and farmers’ markets. We’ll also meet representatives of community organizations like the Greater Cleveland Food Bank.

**FSSO 178. Crafting Your Own Freedom. 4 Units.**
An abiding task of ancient philosophy was to style your life with wisdom. The Greek and Roman schools of philosophy so common to cities around the Mediterranean two thousand years ago developed all sorts of techniques for people to become self-styled sages-in-training. The modern variant, as Michael Foucault and his student Jacques Rancière noted, was to transpose wisdom into a critical attitude where the goal of style was not sagacity but liberation. In this course, we work as in a lab—a modern philosophical workplace— to style your lives critically, articulating stratagems and ideals of liberation. In particular, we focus on becoming a multi-dimensional human, on finding time and space in the midst of work for utopian dreams, on loving relationships, and on education as a developmental experience.

**FSSO 180. The Tobacco Wars. 4 Units.**
If smoking cigarettes is as deadly as the experts say, why does anyone do it? If reducing cigarette consumption is a vital public health goal, does the fact that the rate of smoking by U.S. adults has fallen by two thirds over the past 50 years mean policies have been a great success, or does the Center for Disease Control and Prevention’s estimate that about 480,000 Americans suffered premature deaths in 2009 that could be attributed to smoking mean policies have been at best inadequate? Why did the political winds turn against tobacco use and sale in the 1990s? And why do both public health advocates and tobacco companies want to restrict vaping? Those are among the questions we will investigate in this course. It will call on perspectives from, among others, the fields of public health, political science, sociology, and economics. We will begin with readings about the research on tobacco’s physiological effects. Next we will consider tobacco’s attractions—both for individual consumption and as a shared activity. The third section of the course will ask what policies to reduce consumption work, how well, and why. We will then focus on the dramatic political battles of the 1990s. What happened and why? There are many different answers, and that makes the story even more interesting. The final section of the course will focus on current policies and politics, ending with the controversies over e-cigarettes. Why were e-cigarettes included in CWRU’s new anti-smoking policy, and should they have been?
FSSO 181. Bicycles: Technology and Everyday Life. 4 Units.
For most of us, the bicycle seems a simple, everyday object, perhaps associated with children's toys or recreational sport. But deeper analysis reveals that the technology of the bicycle has developed in distinct social contexts, and that aspects of its development are closely intertwined with community values. In this seminar, we will trace the history of bicycles in these technological and social contexts. We will note, for example, the importance of bicycles for the feminist movement of the 1890s and beyond. We will also consider cycling in our present environment, paying attention to debates about urban infrastructure as it pertains to cars, bicycles, and pedestrians. We will engage with popular and scholarly sources, and we will consider the significance of bicycles even for non-cyclists. Topics may include the physics and engineering of bicycle design, the aesthetic aspects of the cycling experience, the role of bicycles in our transportation infrastructure, and the varying perceptions of cycling in cultures throughout the world. We will critically examine claims that increased bicycle use can lead to better energy efficiency, less traffic, improved health, better quality of life, and more fun. Fourth-hour classes will include connections with community cycling organizations, such as Case Cycling and bike advocacy nonprofits. Students will write formal critical essays, exploring topics from readings and discussion in greater depth. Students need not possess any cycling experience to take this class—only an interest in questions of how technology interacts with social values, and how these values are expressed in our everyday lives. We will use Cleveland and University Circle as a laboratory for understanding the complexity and challenges of managing city infrastructure for different kinds of users. Optional group rides if interest exists.

FSSO 182. Burning River to City Farms: Transitional Urban Environments. 4 Units.
How does one live sustainably in an urban setting? This emerges as a vital 21st century question, especially since more than 70% of contemporary Americans live in or near densely populated cities. This seminar examines how people in urban geographies forge meaningful relations with the natural world. Cleveland, a city undergoing cultural and economic redefinition, stands as an ideal place to engage the work of contemporary environmental writers, filmmakers, urban planners, and community organizers. While our field experiences will ground us in environmental transitions taking place in Cleveland, we will consider how similar dynamics play out in other Midwestern cities as well as further-flung locales, such as Havana, Toronto, New Orleans, Oakland, Los Angeles, and Boston. This seminar's driving questions include: How have people in urban setting—across lines of social class and ethnicity—forged meaningful relationships with the natural world? How do global histories, carried through immigration and refugee resettlement, affect the ways that current communities interact with urban nature? How might privilege and power factor into the greening of blighted city spaces, through practices such as urban farming, ecological restoration, and community revitalization? Our exploration of these questions will help you form a better understanding of what it means to live mindfully at the intersection of nature and culture.

FSSO 183. The Phoenix Effect: Fire and Revival - Holocaust and Heroism. 4 Units.
The state of Israel’s official Holocaust commemoration day is named: "Yom HaZiqaron LaShoa V’LaG’vura," Memorial Day of the Holocaust and Heroism. Why? What characterizes heroic acts? Is it physical resistance? Spiritual or religious strength? How about writing poetry, diaries, letters never to be mailed? Perhaps drawing or painting? Music and theater? Students will define heroism, and through research and analysis examine different types of heroism of the Holocaust. They will study how people living under the Nazi reign used art as a form of resistance, and how spiritual resistance manifested itself in religious practices (perpetuating religious beliefs at any cost). Music, art, clandestine writings, diaries, poetry, and literature will be explored. Students will present their research both orally and in writing.

FSSO 184. Handmaking in the Age of the Machine. 4 Units.
Our seminar will focus on what counts as hand-made in our society, whose hands do the making, and why this making continues to matter. In order to understand that type of making, we'll investigate the relationship between industry and handicraft, the machine and the human, the mechanically reproduced and the precious original—all expressions of relations among technology, individual bodies, and the imagination. Since the Industrial Revolution, our society has increasingly mechanized its operations to ensure efficient production involving fewer skilled workers. Opposition to industrialization has existed since the earliest moments of the Revolution, expressed both violently by the followers of the mythical Ned Ludd and thoughtfully by people such as Victorian craftsman and philosopher William Morris, who argued for a return to human ingenuity and "handcraft." Today, craft movements supported by Etsy.com and DIY TV shows like Project Runway continue to inspire ingenuity in both machine and handicraft. To investigate these ideas, we will read texts from philosophers, industrialists, and craftspeople concerned with mass production, experience making things by hand, and travel to local museums and maker-spaces. Among other creative activities, we will use CWRU’s letterpress, make books, learn how to knit, and explore think[box]. Students will pursue a handmade project of their choice.
FSSO 185C. Music and Cultural Anxiety in the 20th Century. 4 Units.
The Paris premiere in May 1913 of Igor Stravinsky’s ballet, The Rite of Spring, provoked one of the most infamous crowd reactions in Western music history. The “primitive” choreography and brutally dissonant music scandalized the more conservative attendees, whose protests drowned out the orchestra and threw the dancers into confusion. To its detractors, The Rite of Spring not only threatened the polite domain of classical ballet, it confirmed a view that serious music had gone off the rails and was hastening Europe’s moral and spiritual decline. But The Rite of Spring was also a new beginning, labeled by one prominent historian “the defining moment of Modernism not just in music, but in all the arts.” In this course, Stravinsky’s ballet will provide a starting point for examining cultural anxieties provoked by once-new music, especially with regard to questions of how music relates to identity (social, political, economic, racial/ethnic, sexual, gender). What role does music play in forming, signaling, or challenging popular values or beliefs? What factors explain strong ethical reactions to different kinds of music? How do particular genres tend to reflect social or political status, how are cultural taboos broken through music, and in what ethical terms has musical progress historically been defined? How do we reconcile music we might like with offensive views that its creators might have held? From the early twentieth-century Modernist era, we will proceed to two other disruptive historical moments: the rise of Hitler’s Third Reich and its impact on German music and musicians; and the emergence of rock-n-roll in the 1950s and 60s, which enf massed anxieties about racial, sexual, and generational difference, and provided a soundtrack for unprecedented social upheaval. Seminar discussions will be based on readings and videos that are accessible to non-musicians, and we will also take extracurricular advantage of the Cleveland Museum of Art, the Cleveland Orchestra, and the Rock and Roll Hall of Fame and Museum. Students will help lead class discussions and will write short essays that can be related in unlimited ways to present-day concerns, whether individual or social.

FSSO 185D. Beyond Words: Language, Culture & Society. 4 Units.
Language and communication permeate all aspects of our experience from facial expressions and body language to texting and social media. In this seminar we will engage in the academic and experiential exploration of human languages and communication in connection to a wide range of social practices and cultural meanings. In addition to studying how languages shape human thought, we will investigate linguistic diversity and change both within and across societies and cultures. We will also examine how one’s position in a society with respect to gender, race, ethnicity, class, and age among other dimensions can affect one’s use of language. Over the course of the semester we will learn and apply key concepts, approaches and methods through the discussion of a variety of cases studies and examples. We will also discussed what it takes to achieve linguistic and cultural competency in multicultural settings and situations including various institutions and professional fields.

FSSO 185E. Case Studies in Public Health. 4 Units.
What are the markers of a “healthy” society, and who decides? What should be the government’s role in preserving and protecting our bodies, minds, and communities? Does collective welfare trump the rights of the individual? How the state responds to an ailing citizenry tells us a lot about how it understands health and whose health it deems valuable. This course uses three case studies from U.S. history to illustrate the principles and the practical realities of public-health crisis management. For their final project, students will research a case study of their own choosing and present it as a podcast.

FSSO 185J. Democracy vs Populism in the 21st Century. 4 Units.
A worrying trend seems afoot. Recent studies indicate a persistent global pattern: declining support for representative democratic institutions. This fall is starkest among people under the age of 30. Only a third of individuals in this age group believe it is important to live in a democracy. Generally, there appears a marked preference for forms of direct democracy such as referenda or for rule by figures not associated with traditional forms of democratic government such as military or business leaders. Populism–whether on the political right or left–has grown in support across the globe since the 2008 financial crisis. Twenty-first century populism aims to prevent a so-called corrupt elite from thwarting the will of the people. Populists can express inclusive democratic ideals, but can just as easily build a majority by discriminating on the basis of race, gender, sexuality, religion, class, or immigration. Recent political movements in the UK and USA, for example, reflect populist sentiment, while the rise of authoritarianism in Hungary, Russia, and Turkey also depends upon populist appeal. This course considers the implication of these events for democracy. We will ask whether democracy really is in crisis or whether the current uncertainty is a foreseeable consequence of cultural, economic, and social change.

FSSO 185L. What is College For?. 4 Units.
Why are we here? Not on this planet—that’s another course—but here, at this university? What is the purpose of a university? What do we— as students, as faculty, as different communities—expect of such an institution? And what should those institutions expect from us? In this course we will explore historical and contemporary ideas of the university, and in our seminar discussions we will measure our own experiences against that history and those theories. We will place particular emphasis on the current state of the idea of the university, and the subsequent effects of those ideas on current university students. We will ask, for example, how cultural and societal notions of the university’s purpose affect our expectations for our own time and work there. How and why do debates about the university present a stage for some of our most contentious societal questions? We will acquaint ourselves with the histories and contexts of some of these debates in order to address the complexities of our present moment. We will take up this debate ourselves in our daily seminar conversations, and we will explore them further in Fourth Hour field trips around our university and others in the Cleveland area. We will write and think in a variety of genres, including personal essays, critical analyses, and individual and group oral presentations.
FSSO 185N. Religion in the City: Skyscrapers, Hip-Hop, and Urban Spirituality. 4 Units.

I'll bet that "religion" isn't the first word that comes to mind when you think of LeBron James, Cardi B, Kim Kardashian, or Kanye West. And yet these icons of pop culture embody an urban spirituality infused with elements from American evangelicalism, modern capitalism, and the Latinx and African diasporas. This course examines the social and spiritual reconfigurations that have accompanied globalization and urbanization in the 20th- and 21st-Century United States. Our focus is on the dynamic relationship between faith and place, and especially the ways that migration and urban development have reshaped the American religious landscape. The class is divided into three thematic areas, each of which is accompanied by a corresponding textbook and culminates in a graded writing assignment. (i) We will begin the class with a quick overview of contemporary American religious history, paying specific attention to several religious and cultural institutions in Cleveland. (ii) Equipped with these local case studies, we will zoom out, historically, to consider broader trends in other periods and regions of the United States. (iii) To conclude the semester, we will bring these anthropological and historical backdrops to bear on the role of urban religion in contemporary hip-hop, basketball, and political discourse.

FSSO 185O. Illusions and Confusions: The Cognitive Science of Mistakes. 4 Units.

Much of what we know about how minds work comes from observations about the kinds of mistakes we make. Perceptual illusions reveal things about how our brains process sensory information. Magic tricks teach us about the nature of attention. These sorts of illusions raise questions about why and how we become confused. Why do puzzles seem easier when we know the answer? Why do rare events often seem scarier than everyday dangers? Why is it harder to say whether a word is red or green when that word is YELLOW than when it is BUCKET? In this course we will explore these effects and others to learn not only about cognition but also about the practice of cognitive science--how we can study questions about the human mind by finding and testing this kind of evidence. We will read about famous conceptual and perceptual illusions and confusions; we will learn how to demonstrate them and try them for ourselves; and we will practice describing and discussing these effects in writing and in short formal presentations. Finally, we will also explore how you can learn most effectively from your own mistakes, both as you study and in your creative life.

FSSO 185P. Caskets and Corpses: The American Funeral Industry. 4 Units.

What do you want to happen to your body when you die? In the United States, you can be embalmed and buried in a public cemetery, donated to science, or composted. If you prefer cremation, your ashes can be placed in an urn, added to a coral reef, or pressed into a diamond. Despite this seemingly endless array of options, however, the vast majority of corpses in America have one thing in common: they are processed through the funeral industry, which generates $16 billion a year in revenue. But this is a rather modern development: it was not until the late 1800s that the funeral industry started to replace traditional forms of death care, in which families prepared the body at home before burial in the local churchyard. How and why did this change occur? How did the industry become so powerful and so profitable? How has it been able to withstand critics' accusations that funeral directors exploit the bereaved, favoring profit over people? In a nation that embraces individuality, why do most Americans end up at the funeral home? In this seminar we will examine the origins, evolution, and growth of the American funeral industry, as well as explore some emerging alternatives to its traditional practices to learn how Americans are beginning to use the power of consumer choice to regain control over the business of death.

FSSO 185R. America's Business. 4 Units.

This seminar is concerned with the nature, rationale, and consequences of America's business philosophies and practices as they influence Americans and the world at large. The starting point for our inquiry will be a famous phrase spoken by President Calvin Coolidge in 1925: "the chief business of the American people is business." By this Coolidge meant that Americans were generally motivated by commercial activities like producing, buying, selling, and investing. But he also explained that they were guided by certain ideals: industry, ambition, integrity, and a desire for progress and collective benefit. Taking Coolidge's statement as our starting point, in this seminar we will examine a series of vignettes of American business practices and their consequences, both positive and, occasionally, not so positive. Is Coolidge's assessment still accurate? Are Americans chiefly motivated by business? Are they guided by the principles he identified? These questions are particularly relevant in two ways. First, recently there has been rising discontent about, and vigorous challenges of, American business and the economic and social conditions it has created, such as increased economic inequality, decreased socioeconomic class mobility, a culture cheapened by crass materialism, and a rapidly deteriorating environment. Second, these concerns and critiques are not limited to US business. To the extent that American business practices and philosophies influence economies around the world, we might modify Coolidge's dictum to state that the chief business of the world's people is American business (or at least, American-style business). Given the influence of American business, both domestically and internationally, it is more important than ever to examine critically the extent to which American business is--or is not--fulfilling its ideals.

FSSO 185T. Homelessness in the United States of America. 4 Units.

Despite some positive signs over the past decade, homelessness in the United States remains incredibly high and recently shows signs of worsening. According to the most reliable government report, on a single night in January 2018, 553,000 people were found not to have a safe, permanent place to sleep. When we consider the turnover in the population of people who experience homelessness for at least a few nights during the course of a year, this number could be significantly higher. What causes homelessness? What is the experience of those without a home? And what steps can be taken to address meeting this basic need? In this seminar, we will take an interdisciplinary approach to investigate the intersection of health and housing in order to better understand the phenomenon of homelessness and the people it affects. Using unstructured observations and community assessment approaches, we will consider personal and societal values, ethical dilemmas, and the meaning of "home." We will examine historical, socio-political, and socio-economic factors that shape the lived experience of individuals and families without a permanent home. At the same time, we will study the common and divergent experiences of subgroups within the homeless population. Finally, we will assess the successes and limitations of various interventions and policy responses intended to address the homelessness problem.
FSSO 186B. Decolonization. 4 Units.
Decolonization is the process of returning sovereignty to societies that have been colonized. In addressing the colonial world order created by European nations, decolonization became an explicit focus of international politics by the mid-20th century, long after the American Revolution. Today, it remains potent concerning the remaining nations of the world, including the United States of America, that are considered settler colonial, i.e., where the colonizers live on the land that they have taken, rather than merely extracting resources from it for a home society abroad. Decolonization is more than a matter of sovereignty. It involves creating alternatives for the cultural systems that normalize colonization. This practice of cultural critique is called “decoloniality.” It aims at beginning, carrying through, and closing out decolonization through mental and cultural change. The course blends history, political science, cultural studies, and philosophy. Students learn about the history of decolonization, examples of current struggles against settler colonization, and the discourse of decoloniality, engaging in what is called “decolonial thought.” They achieve a grasp of the history of decolonization struggles, awareness of the complexities of decolonial past and present, and comfort with the complex discourse of decoloniality. Students develop their philosophical outlook on decolonization today.

FSSY (FSSY)

FSSY 112. Shakespeare - Still a Hit. 4 Units.
What is the enduring appeal of the works of William Shakespeare? Not only are the plays themselves popular today; there are also many film versions and adaptations, some recent and some dating back to the early days of cinema. In this First Seminar, students will read approximately six Shakespeare plays, including at least one history, comedy, and tragedy. In addition, they will view at least one film version or adaptation of each play. With the help of Kelvin Smith Library, the films will be made available on streaming video with password-protected access, enabling students to view them when convenient and as often as necessary. Since this class (like all First Seminars) is writing-intensive, students will complete four formal essays as well as frequent in-class writing activities. There will also be in-class readings from the plays, discussions of the various film adaptations, and one or two short oral presentations or activities.

FSSY 113. Movies and Meaning. 4 Units.
This course explores methods for interpreting films. To interpret a film is a more aggressive and creative activity than is simply viewing one. How do critics and researchers of cinema “make meaning”? What strategies do they use? How does one mount a film interpretation that is both novel and persuasive? The course will emphasize close reading of films as, each week, we screen a film and together discuss what meanings we can infer from it. Also each week, we’ll read an essay that offers an interpretation of the film. We’ll analyze the reading in light of our sense of the film under consideration. Students will write short essays, approximately one every two weeks, in which they analyze the rhetorical and interpretive strategies of a given film analysis. Students will share their essays with the class, and these readings will serve as bases for class discussions. Final writing projects will consist of student interpretations of a film. At least twice during the semester, the class will, in substitution for the weekly required evening screening, attend a film off campus—either at the Cleveland Cinematheque or at the Cleveland Museum of Art. The course emphasizes writing instruction and discussion in a seminar format. There will be required evening screenings each week.

FSSY 117. Science and Literature. 4 Units.
This course explores the treatment of scientific themes and the depiction of scientists in literature. This is not a course about science fiction: instead of envisioning future scientific advancements, Science in Literature pays close attention to the ways in which literary texts comment upon ongoing scientific debates and responds to the questionings of science. This four-credit-hour course also provides an introduction to various dimensions of academic life. It will be characterized by intense yet open-ended intellectual inquiry. Throughout the semester, we will foreground critical reading, thoughtful analysis, as well as written and oral communication.

FSSY 135. The Rest is Silence. 4 Units.
The purpose of this course is to examine a widespread yet under-examined agent of the symbolic world: silence. Without the delimiting, shaping power of silence, language would be a lump of indistinguishable sound. The title of the course comes from Shakespeare: specifically, Hamlet’s last words. As we know, the rest (of Hamlet) isn’t silence: the play goes on for many more lines, beginning with Horatio’s well known valediction, “Now cracks a noble heart. Good night sweet prince; And flights of angels sing thee to thy rest!” Hamlet’s last words give us a good view into the ambiguous nature of silence, the strange entanglement it has with boundaries, both formal, and metaphysical. We will study how silence is imbricated in different, even antithetical, practices: in the articulation of creative forms (with special attention to poetry); in methods of religious contemplation and meditation; as agent of ecological and political suppression; as sensory deprivation, or form of torture. Silence continuously challenges and reorients our symbolic projects. As Ana Maria Ochoa Gautier argues, it forces us to question “the binary logic of apparent opposites by dissolving one into the other (presence as absence, emptiness as plenitude, quietness as expressivity, silence as intensity of life).” What we can know or say about silence will emerge from an ongoing discussion of texts that engage its properties—its paradoxes—differently. Our semester-long study (and practice) of silence will draw on your powers of critical inquiry, reflection, and synthesis, as well as your powers of attention and imagination. Seminar-style discussion and writing are the cornerstones of the course, which is designed to help you locate yourself in the surrounding structures and expectations of the academic community, especially its forms of conversation and writing. My hope is that as you explore and refine your relationship with silence, you will begin to identify and conserve it as an important resource in your academic life: as a refuge from information overload, as a ground for ethical decision-making, and as a guide to precision in speech and writing.

FSSY 153. What is Mind?. 4 Units.
This seminar introduces students to the systematic study of the human mind, with a primary focus on general topics as the nature of perception, consciousness, intentionality, mental causation, and free will. In addition, we will take up the more specific topics of the transition from anatomically modern to behaviorally modern human beings, as well as debates over whether mind is identical with the brain, or if mind is an outcome of brains, body, and environment.
FSSY 154. The Imagination Project. 4 Units.
For the first years of our schooling, we are taught to play make-believe. Then, we are taught to understand facts. Whatever happened to the imagination? What is it? What are the theories that help to explain it? And what is its place at a research university? In this class, we will read, talk, think, and write about the purposes and scope of the human imagination, which is often understood as the symbolic realm of images and ideas that exists as part of our mental life. We will look at how the imagination has been understood by various thinkers and artists, and we will consider how the physical world interacts with the imagination in stories, music, film, and scientific ideas. Even though we may think that imagination means “something from nothing,” it is much more complicated and collaborative than that, as we will see in our examination of larger imaginative projects such as the Sistine Chapel, Star Wars, Legos, and Disney World. We will examine the role of the imagination in as many disciplines as possible, including physics, sports, fantasy, politics, and the media. As we interrogate these sources, we will learn the basic tenets of argument and research that will help you in your upcoming SAGES courses. Are there imaginative practices that can help us succeed here at Case? How can we turn our own imaginations into reality?

FSSY 157. Pursuits of Happiness. 4 Units.
What is Happiness? And why do Americans consider its pursuit a self-evident, inalienable right? To what extent is happiness a component of the American Dream? How have writers used stories to illustrate the possibilities and limits of this ideal? This course examines the various ways that thinkers have defined happiness, using both theoretical frameworks and literary examples. Students will carefully analyze the validity and utility of these models, selecting elements to construct their own personal philosophies of happiness.

FSSY 162. The Mind of the Warrior. 4 Units.
This seminar intends to provide students with an understanding of the origins and representation of traditional martial arts through movies, novels, and comics. We will emphasize the moral, historical, and cognitive issues involved in the practice of these older fighting techniques. We will also examine how practitioners might have been forced to compromise some of their tenets to accommodate contemporary life and a broader audience.

FSSY 175. God and the American Writer. 4 Units.
How have American poets, novelists, and essayists thought about God? Do they have anything to teach us about the role of religious belief in a country where religious believers make up the statistical majority? What could a late nineteenth century poet possibly teach us about the ways Americans experience religious belief today? How could a fictional novel help us better understand the unique cultural history of religious belief in the US and its influence on today’s society? This course seeks to address these questions by considering a particular strain of American writing that highly values the role of personal experience in religious faith. For these writers, God is not a philosophical idea hidden away in the abstractions of erudition, or a historical curiosity to be studied alongside ancient civilizations, but something to be experienced in an intense and personal way. For one writer God is the “Tender Pioneer” who Americans would be cowardly not to venture after. Another writer claims that the previous “generations beheld God and nature face to face;” he encourages his readers to ignore others’ opinions and to seek their own “original relation with the universe.” Another proclaims that Americans profess “to love God whom they have not seen, while they hate their brother whom they have seen.” What similarities do these ideas share—what differences separate them? We will use these and other ideas to begin a conversation about why the personal experience of God seems so vital to America writers. We will discuss the ways American writers have created and critiqued the religious value of individuality, as well as how the category of “personal experience” can both hinder and help us in understanding American culture.

FSSY 177. Cosmic Horror. 4 Units.
Cosmic Horror is the literary genre that most powerfully wrestles with the question of humanity’s place in the universe as revealed by modern science. From its shadowy beginnings in the pulp fiction magazines of the nineteen twenties and thirties, Cosmic Horror has come to occupy the center of contemporary literary culture. Prominent philosophers, ecologists, writers, and programmers have taken inspiration from the genre as they seek to discover meaning in a universe no longer centered on humanity. These works explore a physical world indifferent to human life and human meaning, a world in which human action shrivels into insignificance when faced with the abysses of cosmic temporal and spatial scales. In reading writers such as H. P. Lovecraft and Octavia Butler, and philosophers and scientists such as Eugene Thacker and Carlo Rovelli, we will focus on several key questions. How does “cosmic” horror differ from other kinds of terror? What traditions, beliefs, or practices does modern science threaten for these writers? Why have so many thinkers from diverse fields found themselves drawn to these works in recent years? What resources do these works offer for making sense of the environmental crisis? This class, like other First Seminars, is writing-intensive and will follow the seminar format. It is characterized by intense yet open-ended intellectual inquiry, guided by reading from primary as well as secondary sources. This interdisciplinary course (investigating intersections of literature, philosophy, psychology, and science) will help you recognize the different perspectives that can be used to enter into a discussion on a subject, and enable you to make sometimes surprising connections across different fields, times, and genres.
FSSY 182. Mystery and the Art of Storytelling. 4 Units.
It’s hard to resist a good story, and even harder to resist a good mystery story. What is it about mysteries that makes them so enduringly fascinating, so universal? What might they teach us about the nature of storytelling itself? In this course we’ll discuss and write about how narrative works, taking mystery as our guide. In doing so, we’ll also become better readers, viewers, and interpreters. For these stories make detectives out of us all, demanding that we evaluate textual evidence, seek out rhetorical clues, pay keen attention to detail, and even examine our own frameworks of perception. Engaging both classic and less traditional tales of mystery and detection (including a movie or two), we’ll examine the logic of such narratives, the desires and fears that drive them, and the secrets they tell—or try to keep hidden.

FSSY 183. E-Lit: New Media Narrative. 4 Units.
Imagine a book we might read by touching the words, choosing among possible paths or endings, or even by allowing our own faces or voices to be part of the scene. Electronic literature, that is, literary works designed to be read or experienced on a computer, often requires exactly such multisensory engagement, asking readers to make unusual connections between words, images, sounds, or movement, and, sometimes, to put themselves into the story. In this class, we will read, experience, and write critically about electronic literature and experimental print literature, including works of interactive fiction, digital documentary, blogs, cut up and computer-generated poetry, digital games, and geo-locative fiction. The works we read present unfamiliar, often non-linear, modes of writing, storytelling, or of conveying information. Such texts give us insight into how we "read" and how digital spaces influence the way we understand, experience, and respond to ideas, places, and people.

FSSY 185B. Jazz Attitudes. 4 Units.
Despised by the church, reviled by New Orleans society, Jazz was the bad boy music of the early 20th century. But by WWII it was the most popular music style in the US. Since then, jazz has become a minority taste, embraced by the academy, but viewed with an intimidated indifference by the general public. How did this happen? How have views of this odd marriage of European and African musical styles changed through the years? Can jazz regain relevancy? Should jazz musicians even care about relevancy? And if not, what does the future hold for them and their music? In this course, we will examine the history of the development of jazz, what makes the music so important in American culture, and some of the reasons why—despite this importance—few people listen to it anymore. Students need not have prior familiarity with jazz, only a willingness to listen to, and read about, the music.

FSSY 185D. Medieval Mindsets. 4 Units.
Do we get to be modern without first getting medieval? This seminar revisits and reexamines medieval modes of thinking and making. Over the course of the semester, we will sample literary and material artifacts left behind by the medieval world. We will reconsider our obligations to the past and its stuff, are we responsible for/to medieval things and, if so, to what degree? We will take a hands-on approach to our objects of study. Working in special collections and museums, with curators and artists, we will learn to decode medieval archives and artifacts. Together, we will put medieval mindsets to the test.

FSSY 185E. Literary Servants: From Homer to Harry Potter. 4 Units.
Servants have played a surprisingly large role in some of the great works of Western literature, though they often get overlooked in favor of their more noble masters and employers. In "The Odyssey," for example, when Odysseus returns from the Trojan War after 20 years at sea, he first gets recognized, not by his son or his wife, but by a childhood nurse who has served in his household all of his life. Shakespearean-era plays also place servants in surprisingly central roles, having them not only performing tasks for their masters, but sometimes acting as romantic interests and close friends, or emblems of moral behavior. Servants have taken on the role of primary protagonists in many works of 19th- and 20th-century literature, and have played an outsized role in countless other works. Some of the questions that we will ask in this class include: Why do these characters—who occupy the margins of the household and often perform seemingly mundane jobs—play this role in the literary and social imagination? Do servants have unique identities, interests, and value systems or do they adopt the identities and values of the people they serve? To what extent are servants needed to establish the social positions of patriarchs, monarchs and the wealthy? The class will also explore the forms of power that servants are able to exert over those that they serve, and the extent to which this power both complicates and reinforces more commonly recognized systems of inequality like race, class and gender. Readings will include several classic works of literature, and short philosophical works on human rights and the politics of the lower classes. We will also read some philosophical discussions of class and social hierarchy, watch and discuss some film and television representations of service, and visit the Cleveland Museum of Art and the Cleveland Historical Society in order to learn about the history of domestic service.

FSSY 185K. The Greek and Roman Humanities. 4 Units.
The civilizations that developed in ancient Greece and ancient Italy are called collectively “Classical Civilization.” The study of the Greek and Roman humanities (languages, literature, arts, history, and philosophy) is known as “Classics.” The Greeks and Romans have had a profound, widespread, and long-lasting influence on many aspects of subsequent Western Civilization, so studying the Classical Humanities is not only a rewarding endeavor in itself, but also can benefit those who want a deeper understanding of the modern arts and humanities. In this seminar we will read and discuss representative works by Greek and Roman authors in translation and look at artifacts produced in the ancient world in order to come to a better understanding of the foundations of the western humanities. We will also study the impact of Greek and Latin on English in order to understand how language can shape thought—an important thing to learn for anyone who is also trying to become a better writer! The seminar will investigate numerous questions about Classics. Where were the Classical lands? When was the Classical period? Are there connections between Greece or Rome and other ancient civilizations? What were the sounds and sights of Greece and Rome? What remains of the ancient world in terms of language, literature, the arts? How have the Classical Humanities shaped modern concepts and institutions? Where can one find tangible influences of Greek and Roman civilization in modern America? Why and when have modern people turned to Greece and Rome for inspiration?
FSSY 185N. Sacred Space in Monotheistic Religious Traditions. 4 Units.
A significant dilemma facing all three of the major monotheistic religious traditions - Judaism, Christianity and Islam - is how to establish a sacred space on earth for the worship of a deity which cannot be contained. In many ways, architectural and artistic decisions about the location, internal layout, orientation and other features of such sacred spaces reflect deep presuppositions in each religion about the divine and how worship is to be performed in a human context. In what ways do these spaces inspire awe, demand obedience, offer comfort, or teach lessons? How have these spaces inherited features from other times and places, and how have these features changed (or not)? To examine how one might understand and interpret such spaces, we will visit religious buildings in the University Circle area and its surroundings.

FSSY 185P. On the Road in America. 4 Units.
Travel and exploration have long occupied a central role in the American imagination. The idea of the frontier, and the great westward expansion, gave birth to national myths and narratives based on transit and adventure. In recent years, Americans have continued to reflect on the significance of physical journeys, as well as the inner quests that often accompany these modern-day pilgrimages. In this course, we will examine a diverse set of works that explore the long-standing American romance with adventure and movement. We will consider the impact of the open road on America's national identity, the powerful emotions and spiritual longing that lead people onto the road, and the forces that drive them off it.

FSSY 185Q. Death, Mourning, and Immortality. 4 Units.
Although death and loss always have been part of the human experience, poems aching for immortality and mourning losses were especially important to people before the development of modern medicine because of the omnipresence of death in daily life. Poems mourning losses were frequently (but not always) about death, and so we will occasionally consider what it means to mourn a still-living hero or to mourn the passing of a moment in time. A poem can become a "moment's monument" in one apt description. In this seminar, we will examine poetry from the seventeenth to the nineteenth centuries to explore the variety of ways that writers' religious beliefs, gender and sexual identities, and attitudes about desire and emotion informed how they thought about death, loss, mourning, and immortality. How does this poetry represent sadness and despair? In what ways does it affirm the joys of life and the memory of what has been lost? To supplement our investigation, we will also explore expressions of mourning that can be found in other genres of literature, as well as in museums and cemeteries. We will think about what it means to write yourself or others into immortality. No prior experience studying poetry is necessary, only a willingness to read with care and think with an open mind.

FSSY 185R. Children's Picture Books. 4 Units.
Picture books may teach young readers basics like how to read, what sounds animals make, and how to count to ten, but they also shape children's perceptions of the world around them and influence the way they see themselves. In this seminar, we will study how children's picture books communicate social norms and ethics through the depiction of people and places. We will explore questions including: What kinds of places and spaces do picture books depict? How do characters treat others in these places, and how do they interact with non-human objects and the natural environment? Whose voices are heard and whose are silenced in the stories and pictures? Even though these books are written for children, what do they tell us about the adults who create, buy, or read them? How do these older readers understand children's spaces and childhood? By examining the underlying messages in these deceptively simple books, we can uncover surprisingly complicated visions of the world.

FSSY 185U. Conceptions of the Self. 4 Units.
This seminar explores religious and philosophical views about what it means to be human. We will address questions such as: to what extent are we free? Does freedom conflict with traditional authority, our own pasts, our irrational impulses, or our physical natures? What is the relationship between reason and emotion? How well do we know our own motives? And to what extent are we hidden to ourselves? To investigate these questions, we will read, discuss, and write about a range of classical and contemporary religious and philosophical thinkers. Each offers a different perspective about the nature of the human being, human excellence, and what it means to live a life of integrity. They are also enduringly relevant to our lives, inside and outside of the classroom. Together, the texts and thinkers constitute a conversation filled with sometimes competing and sometimes complementary views about who we are, why we do the things we do, and what sorts of lives we ought to lead.

FSSY 185V. Supernatural Encounters in Fantasy: Medieval and Contemporary. 4 Units.
Works of fantasy imagine interactions between humans and other beings. They also present the metamorphosis of humans into other forms. Studying these stories gives us insight into different conceptions of what constitutes the human, perceptions of superiority and inferiority, and opportunities for connections across boundaries. This course examines medieval and contemporary works that engage with these issues and others. Are certain attributes reserved for humans or the other beings in these fantasies? Are such differences in traits stable or do they change within individual works, over time or across societies? What cultural tensions arise within these narratives when characters seek to marry someone outside of their own group? Where do we see continuity or change over time in these narrative dynamics? What does the representation of monsters tell us about the anxieties of the cultures that produced them? We will explore these questions through texts such as Beowulf, other medieval love and adventure stories, and several contemporary works, potentially including fiction by J.R.R. Tolkien, N.K. Jemisin, and Neil Gaiman, and films by Andre Ovredahl and Hayao Miyazaki. This set of works will enable us to focus on strands of the fantastic which engage with themes such as the opposition between humans and the supernatural, the attraction between humans and the supernatural, and forms of heroism.
FSSY 185W. The Body in Art, Literature, and Medicine from Antiquity to Today. 4 Units.

We take our bodies for granted. In some circumstances, the body is a source of joy and wonder. In others, it is a source of suffering. In all cases, it is one of the few things that all people have in common. This seminar will focus on what we conceive the body to be and how our ideas about the body have changed over time, in different fields, and depending on different artistic, scientific, social, and political circumstances. In doing so, we will consider the ways in which our cultural attitudes shape and are shaped by representations of the body, and we question whether anything can be said for sure about what our bodies mean to us. Methodologically, we will consider these subjects primarily through readings in aesthetic theory from ancient and modern sources, in addition to readings in medical history and religion. Our "texts" for the course will also include exhibitions at the Cleveland Museum of Art and Dittrick Museum of Medical History, dance performances, films, poetry, and lyric essays. (While many of our sources will be drawn from so-called "Western Civilization," every attempt will be made to broaden our understanding of the body across cultures and across the spectrum of ability.) In this way, we will develop a deep understanding of the historical and cultural contexts in which we view the body, which will also help us to critically examine the ways that we currently frame and understand the body.

FSTS (FSTS)

FSTS 100. SAGES Transfer Supplement. 1 Unit.

This one-credit course is designed for transfer students who have met the expository writing requirement with grades of C or higher at their previous college or university. In lieu of repeating First Seminar, these students will participate in activities that engage them in Case's unique cultural and intellectual environment in University Circle.

UCAP (UCAP)

UCAP 395. SAGES Capstone Experience. 1 - 6 Units.

UCAP 395 affords students the opportunity to pursue a capstone experience outside the constraints of SAGES capstone courses offered by individual academic departments. Students must identify a project, a mentor and an oversight committee. If the mentor is not a Case faculty member, then the student must also identify a faculty advisor who does hold such an appointment and who will serve as the instructor of record. A capstone experience can take various forms but must include certain elements: critical thinking, regular oversight by the project advisor(s), periodic written and oral reporting of progress, a final written report which describes the project activity (which may be a performance, experiment, student teaching, live case analysis, creative writing endeavor, etc.), and a final public presentation. More details about course policies, including procedures for registering, are available via the SAGES office and web site. UCAP 395 may be taken as a one-semester or a two-semester course for 1-6 credits in any given semester and 3-6 credits total. Permit from Director of SAGES required. Counts as SAGES Senior Capstone.

USNA (USNA)

USNA 204. The Evolution of Scientific Ideas. 3 Units.

Scientific understanding has evolved over the years. There are very few beliefs about the natural world that have remained intact over the past few centuries, or even the past few decades. The chief goal of the course will be to give students an understanding of how scientific ideas change and how newer ideas supersede the old. Questions to be investigated include: What is Science? How do disciplinary scientific communities (physicists, chemists, biologists, etc.) form and identify themselves? How does the community of scientists within a discipline come to a consensus that it is time to adopt a new paradigm: What scientific, social, political, and cultural factors come into play during the periods of transition? The course will be in seminar format. The students will be given opportunities to explicitly develop critical thinking skills (the specific skills to be developed will be selected by the class from an explicit list) and writing and speaking skills. Class meetings will be used to share their research results and to study the assigned texts and papers. The students will be required to demonstrate their understanding in a variety of ways. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 211. Einstein, Space and Time. 3 Units.

This course will explore the profound changes in our conception of space and time brought about by Einstein's theories of special and general relativity. As a University Seminar, it will also integrate writing and discussion about these topics into the class and explore the philosophical and technological context in which the ideas were developed. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 220. Suburban Landscapes: Nature, Technology, and Culture. 3 Units.

This course will examine suburban neighborhoods by focusing on the design of technology and nature in these spaces. The way that people understand and operate in the world is so entangled with values and assumptions that the physical shape of the world cannot be separated from human culture. In this sense, suburban landscapes are not simply neighborhoods but also examples of culture. The form of the land and the technologies in the suburbs are continually reshaped to correspond with the cultures of the people occupying those spaces. By studying suburban landscapes we can see how the ideas in people's heads become part of the physical world in which we live. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 226. Evolution of Human Behavior. 3 Units.
Human behavior is a result of the complex interplay between our genes and the environment, both of which have been shaped by evolutionary forces over millions of years. To what extent does natural selection shape our behavior today? Are humans naturally monogamous? Why do conflicts arise even in our most intimate relationships? Is human behavior ultimately in the service of reproductive success, ensuring that our genes are passed into the next generation? This course reviews the history of evolutionary theories of mind and behavior, as well as current ideas about the ecological and genetic components of behavior. We will examine key principles of neurobiology, sociobiology, and evolutionary psychology to critically evaluate evolutionary interpretations of human behaviors, including those comprising cultural traditions and social institutions. Specific topics to be addressed include human mate choice, parenting strategies, interpersonal conflict, and altruism. The course is structured as a seminar, with emphasis on discussion and formation of logical arguments. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 228. Time. 3 Units.
This seminar course will explore the nature of time from many stances, including those of Psychology, Biology, Technology and Philosophy. Yet time is central to Physics, and in Physics we will orient our explorations of time. Our understanding of time has sharpened a great deal in the last few centuries, the most obvious markers being Newton’s Absolute time, which remains entrenched in modern culture, and its subsequent physical overthrow by Einstein’s relativity. Given the physical primacy of Einstein’s time, many questions arise: How malleable is the concept of time? Is there a fact of time? Can the present be defined? The past? The future? The successes of modern Cosmology lead us to ask: Was there a beginning of time? Will time end? The symmetry of fundamental physical laws with respect to the direction of time, counterpointed by asymmetric phenomena, lead to: Is there a master arrow of time? Is the flow of time an illusion? In this course we will investigate what “Time” is telling us about the natural world and ourselves. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 237. Landscape History and Conservation. 3 Units.
Human history is intimately intertwined with the natural landscape on which it occurred. From coastal preserves and their beach communities to Midwestern farmland and the preserved site of Thoreau’s Walden Pond cabin, and at places like the Grand Canyon, the American landscape itself holds many clues to our country’s natural, ecological, and cultural history. This course will investigate the lived landscape in two ways (which have a multitude of shades to them): as a place where humans shape the natural for their own memorial, productive, and aesthetic uses, or as a natural place that humans set aside or conserve. We will read landscape history and conservation theory, and we will consider global practices of conservation through UNESCO’s World Heritage Sites. Class work will entail a process-oriented project on the Cleveland landscape, which students are encouraged to approach through the lens of their major. We will visit the Wade Oval and the cultural gardens of Rockefeller Park as an example of current conservation practices working to protect the natural and cultural value of the local landscape. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 240. Technologies of the City. 3 Units.
Based on the premise that cities are never “finished,” and constantly being remade, the University Seminar, Technologies of the City, will look at the technological and cultural history of cities from the ancient world to the present day. Students will explore the history of building materials—wood, brick, steel, concrete, and glass—used in the construction of cities. We will also trace the development of city infrastructure such as electricity, water and sewage systems, streets, bridges, and subways. Technological innovations, such as the automobile, will receive special consideration. We will move moth geographically and temporally to visit the world’s great cities, studying examples of significant building projects, such as the Brooklyn Bridge, the Chicago World’s Fair, and Cleveland’s first skyscraper, the Rockefeller Building. The course will cover the history of the professions—engineering, architecture, and urban planning—that have contributed to the construction of cities, and will review the works of these practitioners, as well as that of artists, reformers, and utopians that have imagined new directions for the city. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 247. Epidemics in Human History. 3 Units.
This course will examine the role of epidemics (of all types) in human history. Disease has shaped our society in many ways and continues to do so. Despite the plethora of antibiotic and antiviral drugs since 1940, 90% of the decrease in (First World) infectious disease is due to simple public health measures and better hygiene. But overuse of antibiotics increasingly is causing the rapid evolution of “superbugs” that threaten new plagues and epidemics. Both historical and modern epidemics of plague, smallpox, Salmonella, cholera, tuberculosis, and HIV/AIDS will be examined. The interaction of these epidemics with societies and how the epidemics influence society, cultures, art, and literature will be major topics of discussion. The course is primarily discussion with short student presentations. In addition, 3-4 short “Front Lines” talks by and discussion with CWRU and University Hospital clinicians will explore today’s realities of epidemics, infection, and antibiotic resistance in the United States, Uganda, South Africa and elsewhere. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 249. Restoring the Great Lakes: Opportunities and Challenges. 3 Units.
This seminar will focus on the issues and methods of restoring the Great Lakes, with particular emphasis on public action and decision-making processes. Students will learn about the environmental history of the lakes, as well as current challenges to improving water quality and related aspects of the ecosystem. Technical experts, field trips, and other informational resources will enable seminar participants to engage in lively debates on the best ways to address those challenges. Opportunities for observation of and/or direct collaboration with key stakeholders in the restoration process will enhance students’ understanding of the processes by which key environmental decisions are made and implemented. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 258. Designing Urban Green Space. 3 Units.
In this course, we will investigate the history, theory and practical design of green space in cities. We will focus on types of green space and their community function, relationship to commerce, aesthetics, recreation, ecology, and health in particular. Students will engage in group projects where they locate all underused space in Cleveland (vacant space, gray or brown fields) and will propose a new use for it as green space of some kind. Individual research projects will be related to that site. Lively class discussion and frequent reading responses required. Mandatory field trip to sites in downtown Cleveland. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 260. Life in the Past. 3 Units.
This course will focus on how we learn, discover, and make conclusions about life in the deep past. What types of life were present? And how can we understand their extinction? A principal focus will be how extinctions in North and South America have affected both the land and its animals and, consequently, the course of human development. We will look at megafauna from the local area in conjunction with the "Extreme Mammals" exhibit at the Cleveland Museum of Natural History, read about the fossil boom, study the Dodo, and look at scientific ways in which animals are currently being completely re-imagined via technology (computer bone/muscle articulation, eating habits, climate models, etc.). We will also look at the cultural ways in which we view these "dinosaurs" (movies, children's books, museum exhibits) and see if it helps or hurts our scientific and historical understanding of them. At heart, our main question will be: can you really understand a time, space and creature that has been extinct for millions of years? How? Why? And why do these "monsters" hold such fascination for us? Does their disappearance bode well of the human race? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 262. How I Learned to Love The Bomb. 3 Units.
In this course, we will explore the development of the atom bomb and its historical ramifications. Our guides through this history will be the scientists themselves. Our goal will be to understand their work as well as their motivations, travels, internal conflicts, and the consequences of their achievement. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 265. Thinking National Parks. 3 Units.
This seminar provides students an opportunity to explore U.S. national parks and their history of displaying both nature and culture. This discussion-based, writing- and research-focused class requires students to examine a park system that is both extraordinarily popular and rife with controversy. We begin with several recurring questions: Where did the national parks idea come from? How has the park mission evolved and adapted? Can parks be "read" as texts, and if so, how does our point of view determine what we see? How do parks arrange displays of cultural and natural worlds, and how do they display interactions therein? How can changing park philosophies be reflected in their physical apparatus and infrastructure? Students will participate in regular class discussions, occasionally lead these same discussions, complete formal writing assignments, and develop a final research project. The course readings will alternate between historical and present-day selections, so that we explore the history of U.S. national parks while simultaneously considering challenges and controversies that matter very much today. Early readings will include John Muir and Gifford Pinchot; current trends will be explored in the writings of William Cronon, Alfred Runte, and Jennifer Price, among many others. We will view significant portions of Ken Burns' recent PBS series The National Parks: America's Best Idea. The ultimate "text" for the class, however, is an actual national park. Each student will choose a national park as the basis for their semester-long project. Students will begin with description and history of their park, and then they will explore controversies or other issues in the park, developing their own argument. Next, students will have a chance to play architect/landscaper/park-superintendent, as they propose a change to the park that would address an existing problem or enhance the visitors' experience. Finally, students will gather these pieces into a single coherent project, submitting a 10-15 page final essay as well as producing an engaging class presentation. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 266. Life After the Death of Print. 3 Units.
Around 1439, Johannes Gutenberg invented the movable type printing press, a technological development that altered the world by ushering in an era of mass, reproducible communication. For nearly 500 years, print technologies have dominated communications. Scholars have shown that print's ability to disseminate information led to revolutions in art, science and politics. In short, print technologies have largely defined what it means to be a thinking and communicating human being. The emergence of digital technologies has altered communications in ways that are only now being understood. This course examines how developments in digital technologies impact communication practices by threatening print's historic stronghold. Consequently, the course also explores what impact new technologies have on human identity. We will consider the historical development of display technologies (printed materials and digital screens) to understand what is at stake in the move from print to digital communication. We will then investigate current phenomena associated with Web 2.0, including blogs and social networks, in order to understand how our communication choices construct and allow for our public and private identities. Additionally, the course will examine new display technologies, such as iPhones and Kindles, that allow for the possibly constant dissemination of those identities. Finally, we will hypothesize about how digital technologies force us to conceive of human identity differently from the ways that print invites. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 271. Gene, Environment and Behavior. 3 Units.
The goal of this course is to encourage students to be well informed and critical consumers of the media reports about the influence of genes and environment on human behavior. This course involves the book by Matt Ridley titled, "Genome: The autobiography of a species in 23 chapters." Ridley has a Ph.D. in zoology, worked as a journalist, science editor, and national newspaper columnist. The book devotes a chapter to each pair of human chromosomes. Each chapter focuses on the role of a gene. Ridley's book was published in 1999; therefore, students will conduct their own research to update each of the chapters in Ridley's book. The first few weeks of class will be used to provide a background on genetics research through field trips and guest lectures from CWRU genetic researchers. We will have several writing workshops spread throughout the semester to offer "Just in Time" tips needed to write critical evaluations and literature reviews. Each student will present twice during the semester. The first oral presentation will revolve around a summary, critical evaluation, and an update of the human trait presented in the Ridley book on their assigned chromosome. The presentation will be about 15 minutes with 5 minutes left for questions. Students not presenting will be assigned one of the three chromosomes (chapters) covered that day and they will each write a seminar question to pose to the class. In addition, each student will also serve as a reviewer for one of the presentations to provide constructive feedback to the presenter. The second presentation will consist of new material found by each student about genes on their chromosome. They must find another trait on their chromosome and present the most current information available on that trait. In place of a final exam, each student will turn in a research paper on their assigned chromosome. We will build these papers throughout the semester with a series of graded "checkpoint" assignments. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 272. The Thames Watershed. 3 Units.
In this seminar, we will investigate the London, England-area Thames watershed and its associated concerns, like urban development, watershed management, aquatic species conservation, and habitat engineering and restoration. A critical part of this seminar will be a spring break field trip to London. On the field trip, we will focus on London's rivers and their history and ecology. We will study the Lea River Valley (where the 2012 summer Olympic Village is located), the Fleet River and various water-related constructions, such as Docklands, Regent's Canal, and the Wildfowl and Wetlands Nature Reserve, each from historical and ecological standpoints. Emphasis will be on how humans have treated the watershed historically, from using the rivers as sewers and transportation links, to restoring their ecosystems, as is the current case in the Lea River Valley. Course readings will be a mix of cultural history, London newspapers archives, and scientific studies on riparian corridor management. Students will keep field journals in London and will write an experiential learning essay about how the field trip intersected with the readings we've discussed in the seminar. They will also write a 10-12 page research paper on one of the ecological issues witnessed in London and its significance. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 285. The Science of Madness: An Historical Investigation of Mental Illness. 3 Units.
Since antiquity the western world's understanding of mental illness has continued to evolve. This course will examine the trajectory of that evolution, looking at the medical theories that have influenced assumptions about the causes and treatments of mental illness from the early modern era through the twenty-first century. Examples of questions we will investigate include: How have we defined the normal and the pathological in human mental behavior over time? How do we explain the centuries-old correlation that medicine has made between creativity and mental illness? Which past and present psychiatric treatments have been beneficial and which harmful? How did Darwin's theory of evolution affect theories of mental illness (and how does it continue to do so with the advent of evolutionary psychology)? How have changing philosophies of science affected the research and practice of psychology? How and why do the sciences of the mind--psychiatry, psychoanalysis, clinical psychology, psychopharmacology, the cognitive neurosciences--claim so much scientific authority and exert influence over our lives today? As a frame work for this inquiry, the class will use the concept of paradigm shifts as Thomas Kuhn defines in his classic work, the Structure of Scientific Revolutions. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 286. Science and the Paranormal. 3 Units.
From paranormal television programs to the academic study of parapsychology, claims about the "science" of the paranormal abound. This seminar examines the ways in which people have attempted to scientifically explore questions of life after death, the soul, and anomalous phenomena such as ghosts, telepathy, and ESP. The seminar begins by exploring the emergence of psychical research and parapsychology in the late nineteenth century. We then critically analyze a variety of purportedly scientific approaches to the paranormal and analyze their understandings of nature and science. By exploring the claims of paranormal researchers, parapsychologists, and fringe scientists, we will analyze the constitution of science and its demarcation from pseudoscience. We consider a variety of methodological and heuristic tools to distinguish science from non-science such as falsifiability and Occam's razor and apply them to paranormal claims. We also analyze the criticisms leveled at paranormal research. We ask the following questions. What is science? What distinguishes it from "pseudoscience" or non-science? What is skepticism? Can there be a science of the paranormal? What understanding of the natural world is the paranormal grounded on? What is the relationship among science, religion, and belief? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 287B. Electrical and Electronic Devices in Our Lives. 3 Units.
Electrical circuits and embedded microprocessors control a great many aspects of our daily life including the power grid, medical devices, consumer electronics and infrastructure. This seminar will introduce students to electricity, electrical circuits, measurement, the Arduino microprocessor development platform, the engineering design process and how the above devices work. Laboratory time will allow students to create circuits and programs to interact with and control some aspect of the environment. As part of the course, students will examine how simple errors encountered during laboratory work compare to the errors and oversights which have caused disasters. A project will ask students to design a simple device to address a problem or need and will provide the foundation for writing assignments at the end of the course. Students will make use of the Sears Design Laboratory and the ThinkBox facility. This course cannot be taken by students who previously took FSNA 137 Volts, Amps, Bits and Bytes. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 287C. Animals and Humans: Making Sense of the Human-Animal Bond. 3 Units.
Humans have an incredibly complex relationship with (non-human) animals. We eat some animals and consider other animals members of our family. We worship some animals and vilify others. This class examines the complexities of our relationship with (non-human) animals. Through exploring human emotional, practical, and epistemological ties with animals, this course examines what it means to be animal as well as what it means to be human. We analyze the following questions. How do we come to know and understand animals? What are the issues surrounding the use of animals in scientific speculation, classification and experimentation, such as vivisection, cloning and the human-animal relationship in technoscience? Do some non-human animals possess material culture, social morality, and emotions such as grief and sadness? Why do animals populate our popular culture and art? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 287D. Native American Environmentalism: Sustainability and Contemporary Energy. 3 Units.
This seminar course will focus on three main areas of Native American environmentalism. First, we will learn about Native Cosmologies and historical connections to the land while exposing the controversial relationship of Native Americans to land and wildlife within the myth of the “ecological Indian.” Second, we will examine how Native Americans have responded to toxic pollution of indigenous lands as a result of manufacturing and uranium mining, which some refer to as “environmental racism.” We will also learn about tribes who choose to host nuclear waste facilities as an exercise of their sovereignty and as an avenue of economic development. Finally, we will investigate initiatives by tribes and coalitions in land and water stewardship, investment in “new” energies and technologies, sustainability of lands (prairie and forest restoration), reclamation of waterways (dam removal), and wildlife management, to name a few. Students will inform their critical thinking about Native American environmentalism with a variety of texts and websites of scholarly and public opinion, scientific data, native knowledge, and historic fact. The seminar will include collaborative learning and presentation projects in which students will pursue research topics related to energy development, stewardship and sustainability, or wildlife management and harvesting. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 287E. Evolution and the Modern World. 3 Units.
Modern evolutionary theory has influenced all aspects of biology and the clinical sciences. It has, moreover, resulted in novel ways to think about many of the social sciences. This class will focus on how the concept of evolution has dramatically altered the way we view human anatomy, physiology, and behavior. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 287F. Environment and the Fates of Societies: Guns, Germs, and Steel. 3 Units.
This University Seminar deals with the connections between human societies and landscape, climate, pathogens, and plant and animal species. The main method for this exploration is a close reading of Jared Diamond’s Guns, Germs, and Steel. Diamond explains that Western Europeans came to occupy and dominate large areas of the globe because of natural resources present in certain regions of the Old World since the end of the last Ice Age. For example, Diamond studies ancient patterns of plant diffusion or the place of mountain ranges and deserts in the development of technologies. Seminar participants will also study historical sources from specific times and places - namely North America from European contact to 1850 - and compare them to Diamond’s general environmental explanations and models. Placing Diamond’s broad explanations within specific historical contexts is revealing. A range of alternative methods, perspectives, primary sources from North America, and case studies (especially in environmental history) help develop a critical understanding of the complexities of the fates of societies. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 287G. Genes, Genomes and Society. 3 Units.
2013 marks the 60th anniversary of the discovery of the double helix of DNA and the 10th anniversary of the sequencing of the first human genome. Advances in genetics (the study of individual genes), and genomics (the study of an entire genome) have fundamentally altered our understanding of biology. In this seminar, we will focus on topics covered by the mainstream press. We will explore the science behind the news and discuss the philosophical, ethical and societal concerns raised by these scientific advances. Topics will include: the dangers and benefits of genetically modified crops; genetics and the conservation of endangered species; learning about human biology and disease from yeast, flies, worms and fish; the use and potential misuse of genetic fingerprinting by government agencies; genetic testing; personalized medicine; and issues of genetic privacy. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 287H. Plants in Medicine. 3 Units.
Plants have always been the basis of medicinal treatments, and as they continue to be essential to modern forms of medicine, alternative and traditional alike. In this course, we will consider the history of how humans have used particular plants for medicinal purposes, such as the cinchona tree (Cinchona officinalis) for quinine, willow bark (Salix) for aspirin, and the yew tree (Taxus baccata) for the cancer medication paclitaxel. By investigating how a plant is used medicinally through time, we will also come to understand the culture that used it and how they conceived of health in relationship to nature. We will read texts that show how a plant's medicinal uses can be tied to colonialism and global exploration. For example, the first botanical gardens were collections of medicinal plants cultivated for use and experimentation, often containing non-native plant-based cures discovered through colonial contact. While this is not a course in botany per se, we will be discussing basic plant biology, cultivation practices, and the contemporary science of using plants as the basis for pharmaceutical cures. Students should be active course participants in class discussion and on field trips. Writing instruction will focus on research-based argument, and students will complete a researched essay focusing on a medicinal plant of their choice. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 287J. Transportation in American Life. 3 Units.
We will explore the critical role of transportation in the development of our cities, regions, states, and nation. The course will consider the historic role of transportation, its current role, and what role it might play in the future. Transportation will be viewed in the context of national policies, overall political will, and our culture at large. Since colonial times, transportation, in its many forms, has been the subject of intense debate, governmental policies, as well as the subject of public and private investment. We will see how certain individuals and groups used ego, power, and wealth to use transportation for shaping the nation's commerce, travel patterns, and physical appearance. We'll also see the evolution of government and business in transportation decisions and funding. Finally, because of transportation's daily impact, we will look at current issues as part of every class. We will especially focus on the transportation issues of northeast Ohio, a microcosm of national transportation issues. Some of these issues include funding, decision-making, land use, "suburban sprawl," and economic development. We'll also look at transportation issues specific to the University Circle area such as the Health Line and the proposed "Opportunity Corridor." Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 287K. Human Research Ethics: Scientific Truth vs. Cultural Belief. 3 Units.
Scientific breakthroughs in genetics, neuroscience, and behavioral psychology have allowed us to learn more about ourselves than ever before. But how much do we really want to know - and who gets to decide? Is DNA our destiny? Should the quest for scientific knowledge trump cultural belief? How does society balance risk to a few in the face of the needs of the many? Using a blend of historical documents and literary examples, we will examine the evolution of the ethical standards that govern how doctors experiment on their patients. We will also debate the hard choices that medical researchers make when the quest for scientific truth intersects with cultural belief. Finally, we will apply what we have learned to find solutions to real-world ethical problems in medical research. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 287P. Women and Science: Changing Paradigms. 3 Units.
Is science objectively neutral in that true scientific knowledge would be independent of the discoverer? In this view, the scientific discoverer is more like a midwife that brings forth pre-existing knowledge to the world. Or - is scientific knowledge guided and shaped by the people who practice science, in which case it is influenced by the social context in which it occurs, making the scientist more like a sculptor who creates something new using the tools that are currently available. In this course we will examine this second question by looking specifically at the relationship of gender to science through several lenses. One approach we will use is make case studies of the lives of major women scientists and the way that their gender impacted their work, from the type of scientific research they pursued, the kind of support and encouragement that they obtained as they proceeded in their careers, to the rewards and recognition (or the lack of them) that their work received from their peers. Using a more conjectural line of inquiry, we will also consider the role that gender might have played in developing scientific theories and whether there can be such categories as "masculinist" and "feminist" science. We will conclude this part of our inquiry with an analysis of the current state of science and how well these approaches reflect the way science is pursued today. A third issue involves looking at the relationship of gender and science but from the opposite direction. In other words, we will consider how science has influenced our understanding of gender, rather than how gender has influenced science. Over time, scientific ideas about the physiological and intellectual differences between males and females have changed dramatically several times with major political and sociological ramifications. Consequently, we will examine the science of gender in its cultural and political context from antiquity through the twentieth century. In order to explore these interweaving threads, we will be taking an interdisciplinary approach that will draw on the history and philosophy of science (particularly Thomas Kuhn's The Revolution of Scientific Ideas), as well as on anthropology and cultural theory. By the conclusion of the course we will have examined the scientific evidence that has supported assumptions about gender in various philosophical paradigms, including humanism, rationalism (i.e., Enlightenment philosophy), nineteenth century moralism, modernism, and postmodernism. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 287T. Conflicts and Controversies in American Science and Technology. 3 Units.
How do changes in science and technology affect American life? How do cultural ideas shape scientific practice? Is technological progress inevitable, or do we get to decide what changes we want and which ones we don't? How do we make ethical choices about science and technology in a world with inherent power imbalances? This course provides an introduction to thinking through these questions by presenting works by historians, anthropologists, political scientists, philosophers, journalists, and others to explore a range of social issues in modern science and technology. After two weeks of introduction, the course is divided into four sections: (a) Biology, Biotech, and Biomedicine; (b) Science Policy and the Politics of Science; (c) Problems in Social Science; and (d) Computers and Other Thinking Machines. While the course's content is arranged around these topics, its main purposes are to develop critical thinking skills around ubiquitous and contentious subjects of science, technology, power, culture, and values as well as to hone skills in reading, speaking, research, and essay writing. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 287U. Energy - The Great Challenge Ahead. 3 Units.
Among the greatest challenges we face today is to find means of meeting our energy requirements without jeopardizing the environment or fostering geopolitical conflicts. This course investigates what we can do both individually and collectively to tackle this energy challenge. The questions we will consider include: To what extent is the world aware of the energy challenge and its environmental implications? What is already being done to meet this challenge? What role can technology play in addressing it? What research can we be doing now to help predict the future of our energy needs and potential environmental impacts? By investigating these questions, students will develop a fuller and more precise understanding of the energy challenge, as well as generate possible solutions. Students may not receive credit for both USNA 287U and USNA 288L. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 287Y. Large Scale Energy Storage. 3 Units.
In our wired society, energy storage for the distribution of electric energy is a major “game changer.” Efficient and economic large-scale energy storage will help facilitate the growth of renewable energy in the market, as well as increase the overall efficiency of our current electric energy resources. What does it take to store large amounts of energy efficiently and conveniently? How has the marketplace helped or hindered technological improvement? How might government policy encourage advancements in energy storage technologies? Major topics of the course include the global and US energy outlook; the relationship between energy storage, delivery, and use; the role of energy storage for renewable energy implementation; characteristics and challenges of different energy storage technologies; the potential political, public policy, economic, and environmental impact of large-scale energy storage; and approaches to energy storage in other parts of the world. Although this course is designed for students from all disciplines, all students will be expected to do some quantitative analysis Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 287Z. Simple Harmonies, Complex Meanings: Music, A Human Obsession. 3 Units.
Throughout history and across cultures, the act of creating and enjoying music remains a prominent and defining element of the human species. What is its purpose and role within our lives? To what extent do we actively and passively engage with music on a daily basis? Do perceptions of music differ from individual to individual and culture to culture, or can we consider music to be a universal language? This course will utilize neurological findings and representative case studies to examine the cognitive processes associated with the perception of music and to investigate the basis of our obsession with music. Topics may include the development of musical preference, how societal influences affect our perception of music, and the role of expertise in the consumption of music. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 288B. The Green Energy Transformation in Germany. 3 Units.
This seminar introduces students to the development and successes of green technologies in Germany. We will examine the proactive development of renewable energy and energy conservation technologies, commonly referred to as Energiewende, that was started by the German Green movement and promoted by Germany’s innovative renewable energy policies. We will consider such questions as: What are the implications of this German success story, both for the US and the rest of the world? What lessons can be applied to other situations? What factors might limit the utility of those lessons? In the process of our investigation, we will examine such important issues as globalization, resource finiteness, and sustainability challenges, including economic crises, climate change, energy insecurity, and global competition. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 288C. Physics for Future Innovators & World Leaders. 3 Units.
We live in an increasingly technological society. Advances in technology improve our lives in countless ways, but they sometimes produce problems and challenges that are so complex that the average business or political leader may not understand them—and therefore cannot make effective decisions to address them. Whether the problem is what to do about climate change, deciding on which sources of energy are worthy of investment, updating the electrical grid, or how to deal with terrorist threats, we will be able to find the best solutions only if our leaders have an adequate understanding of the underlying physical principles (e.g., energy, force, space, radiation, electricity, and exponential growth), and where to find credible information that will assist in answering key questions. This course is designed to equip students with that knowledge. We will also explore various "conversation" that will pertain to the above issues with the goal of gaining a better understanding of differing points of view (e.g., reporter, scientist, business person, politician, parent, student, people from different cultures), and how rudimentary understanding of the science behind some of our most pressing technological problems can affect a person’s stance or actions. This seminar is appropriate for undergraduates of any major. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 288G. Sense and Sensibility: Sensing, Information, and Control. 3 Units.
The control of systems has been crucial to technology development since antiquity and has been the key to ushering in some of the biggest transformations of the world including the industrial revolution, the age of aviation, and the modern computer era. Control systems permeate our world and many of the technologies we take for granted and modern life as we know it would not be possible without them. This seminar examines the questions of "What is the role of feedback control in both creating technology and understanding the natural world?" and “How have these roles evolved and interacted with one another?” To this end, beginning with control in antiquity and early industrial control systems and continuing into the present, the design and implementation of feedback to regulate system behavior and control programs to direct processes will be explored. Early industrial control systems corresponding to feedback control systems and control programs, respectively, and their continued evolution will be traced and the impact of their integration in the modern era will be used to expose the roles of observation, information, and computation in achieving control objectives. Finally, this seminar will address the future of control systems including the incorporation of new design paradigms such as biomimetic and biologically-inspired control systems, their application to large scale systems and networks, and the new understanding of biological systems engendered by these new developments and applications. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 288I. Beyond Silicon Valley: Growing Entrepreneurship in Transitioning Economies. 3 Units.
The path for entrepreneurs to grow their companies outside of well-developed entrepreneurial ecosystems like Silicon Valley is challenging. Most markets around the world do not look like Silicon Valley and they never will. But there are other models to support new businesses. In transitioning markets (where entrepreneurs do not have much access to private sector financing), government officials, donors, and business leaders are experimenting with creative approaches to support the growth of entrepreneurs. Cleveland is one such place exploring innovative approaches to support new businesses. For over ten years, there has been a massive intervention of government and donor resources to cultivate this entrepreneurial ecosystem. Has this intervention worked in Cleveland? How should success be measured? How does Cleveland's approach differ from approaches elsewhere around the world? In an unusual twist for a SAGES seminar, the regular classroom discussions will be complemented by your enrollment in a massive open online course (MOOC) that I developed for CWRU. The MOOC is called "Beyond Silicon Valley: Growing Entrepreneurship in Transitioning Economies" and examines the Cleveland case study in depth. The course has attracted over 44,000 students from 190 countries since its launch in April 2014. So, not only will you explore how communities around the world support entrepreneurship, you will also learn about the rapidly developing field of online learning and MOOCs. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 288J. Sustainable Energy: Resources, Technologies and Impact. 3 Units.
We hear about sustainable energy but what does that mean? What energy sources are considered sustainable and why? What fraction of our energy needs is likely to come from sustainable energy in the future? Are these estimates reasonable and what are the technological and societal challenges to broader use of sustainable energy? This seminar will explore these and other questions as we learn about energy resources, technologies and solutions that affect our lives and our planet today and in the future. We will evaluate (from a scientific, mathematical and societal perspective) the trade-offs and uncertainties of various energy systems and explore a framework for assessing possible solutions. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 288K. Burn, Baby, Burn!. 3 Units.
In the title of his novel Fahrenheit 451, Ray Bradbury was referring to the autoignition temperature for paper. But why does cellulose burn at 451 degrees and not some other temperature? Why do other materials ignite at other temperatures? What exactly happens when materials burn? How can we apply an understanding of the chemistry of combustion to various engineering and social challenges? For example, how does one test flammability? How can we use this knowledge to reduce fire accidents, for example by producing less flammable materials? To inform our investigation, we will read about the history of fire and society, experiment with the basics of materials combustion and testing, and observe how this knowledge is applied at a flammability testing facility. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 288M. Spirits and Synapses. 3 Units.
This seminar is designed to explore the exciting new advances in understanding sleep and how nighttime sleep impacts daily activities. The seminar will begin with a brief and general overview of the human brain during sleep and how brain activity varies during sleep. We will then consider various questions related to sleep. Why do we do sleep? What makes sleep so mysterious and interesting to think about? What are dreams? Why do we sleepwalk? How does a basic understanding of neurophysiology help us understand sleep and its importance for health? How does technology influence our sleep? Our discussions will also extend to the ethical and social implications associated with sleep disorders including self-imposed sleep loss and corresponding personal and legal liabilities. Readings and assignments will include overviews of comparative sleep durations between species including humans, and current sleep testing technologies and their application to modern medicine. In addition to reading, discussing, and writing about sleep, this course will use role-playing as an experiential means of understanding the ethical dilemmas associated with sleep loss. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 288N. Engineering Water. 3 Units.
The systems that deliver fresh, clean water and take away dirty water are marvels of engineering. The advancement of societies and improvement in the human condition is intricately linked to our ability to engineer water. Will there be enough drinkable water to satisfy future needs? What is the state of water treatment and delivery, and is it secure? What are the political and social implications of water scarcity? This course will explore the history of water supply, developments in infrastructure, and emerging technologies to meet water needs. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 288O. Our Perplexing Universe: From Pluto to Cosmology. 3 Units.
Varied and extensive observations over the past century have dramatically changed our understanding of the universe and led to the current era of precision cosmology. Despite the immense progress, several key puzzles about the nature and makeup of the universe remain. How do we make sense of our universe? Why do these questions persist, even with our continued efforts and advanced technologies? In this course, we will consider many of the "big questions" about the cosmos, how our views of it have evolved, and speculate on some of the outstanding problems in modern cosmology. Our inquiry will range from Pluto’s planetary status to the Big Bang model and the evidence for dark matter and dark energy, with a special emphasis on the challenge of elucidating these complex phenomena to a wide audience. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 288R. Data Acquisition and the Internet of Things. 3 Units.
The Internet of Things (IoT) is the network of physical objects or "things" embedded with electronics, software, sensors, and network connectivity, which enable these objects to collect and exchange data. Example objects include garage door minders that send texts when we have forgotten to close them or cars that report driving habits to insurance companies. This class proposes to explore the question "What is involved in creating an 'Internet of Things' device and what might the future of the IoT look like?" Virtually everyone benefits from the Internet of Things, but for most individuals the IoT is little understood. The goal here is to demystify the IoT by engaging students in a guided hands-on IoT project that begins with data acquisition and concludes in a working device. Through the project, readings, and discussion, students will be challenged to consider a future world that is even more connected than today and to consider the practical, societal and ethical issues that the IoT creates. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 288S. Sand to Smartphone: Silicon and its Applications. 3 Units.
Silicon is the second most abundant element found on our planet. Over the last century, science has allowed us to figure out how to take something as common as beach sand and to use it to create the sophisticated products on which our modern society depends. In this seminar we will explore the use of silicon in everything from transistors to complex microprocessors to smartphones to solar cells and sensors. We will seek to understand the following sorts of questions: What properties make this element so useful? What are the processes by which we take this material and turn it into the technologically sophisticated devices? How did people figure out that silicon could be used to make these advanced devices? Did they anticipate all these uses? Are there other materials that might in the future replace silicon for these purposes? What are the benefits and drawbacks of silicon relative to other materials? To help students more fully understand how silicon devices work, they will work in groups to design a simple device. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 288W. Medieval Sciences and Human Difference: How Did Medieval Peoples Define Humanity?. 3 Units.
Since the beginning of recorded history, humans have employed different approaches to defining themselves in relation to the natural world. Along with folklore, religion and philosophy, science has been an important means to define concepts we now refer to as race/ethnicity, dis/ability, sexuality, and gender. However, what constituted science and scientific inquiry varied widely based on culture and historical context. Most recently, our advancing understanding of genetics has produced ever more nuanced definitions of human difference, even as we have come to recognize that such explanations often compete with theories that are grounded in social and cultural values, rather than scientific observation. How did people explain human diversity in the 1000 years before the Scientific Revolution unfolded in Europe? In this seminar, we will investigate how different medieval cultures explained humanity and human diversity by sampling examples of medical observation, philosophy, theories about the natural world, cultural prejudice, and religious belief. In particular, we will consider how Greek, Roman, Chinese, Indian, Islamicate, and early European theories of human difference shaped justifications for conquest as, gender roles and sexuality, often in surprising ways. Questions we will ask include: How did medieval people differentiate humans from animals? Did they use the same categories of race, gender, and sexuality that we use? How did scientific thinking evolve to construct these taxonomies of difference? How were ideas shared cross-culturally? To explore these questions, we will read primary texts in translation from the medieval period. Through our discussions, we will consider not only what other approaches to defining human differences can teach us, but how they provide historical insight into frameworks and assumptions about diversity today. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 289A. Antibiotics: From Miracle Drugs to Superbugs. 3 Units.
Since the discovery of penicillin in 1928, antibiotics have become an essential drug in the treatment and prevention of bacterial infections. They are used to cure sexually transmitted diseases, to ward off complications after surgery, and to boost the yield and safety of our food supply. This widespread use has created a significant problem: antibiotic-resistant “superbugs” are emerging at an alarming rate. It has been estimated that the useful lifetime of an antibiotic is only eight years. What can physicians, patients, policy-makers, corporations, and consumers do to address this trend? In this seminar, we will examine the science and history of antibiotics, some of the reasons for their overuse, and possible solutions to the problem of antibiotic resistance. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 289B. Everyday Toxic Chemicals. 3 Units.
Each of us uses hundreds of chemicals every day. While many of these chemicals are designed to make our products safer, cheaper, more convenient to use, and more effective, they can also present risks to ourselves and to the environment. Certainly, there are times when the benefits of using toxic chemicals outweigh the risk. For example, if you were on a ship that had caught fire, you would probably want to use the best possible firefighting foam, even if it were toxic. On the other hand, if you were choosing which microwave popcorn to buy, you might choose the one that did not use a cancer-causing chemical on the bags, even though it made them less grease-proof. How do we determine whether a chemical is toxic? Who decides when the risks outweigh the benefits? In this seminar, we will analyze the lifecycle of everyday products such as food packaging and shampoo, tracing their path from production, to use, to final place in the environment. We will also examine methods to evaluate the risk chemicals present to ourselves and to wildlife, and how these evaluation paradigms inform regulations. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 289C. Gender and Technology. 3 Units.
Technology has become an essential part of our daily life—the way we experience the world and think about it—and, as such, is also central to how we understand our identities and status. This seminar will explore the ways in which gender and technology define and redefine each other, considering both how gender shapes technology and the technological professions, and how technology itself produces ideas and practices of gender and sexuality. While the course will focus on gender and sexuality, we will also examine how they intersect with other categories such as class, race, and ethnicity. How does technology offer possibilities for new social relations? What role have women played in the development of technology? How does technology both challenge and maintain gender, race, and class hierarchies? How does technology shape our understanding of sexuality and gender roles? Why are there so few women in STEM? What is the impact of feminism on technological innovations and can we create a feminist technology? The course will examine these questions through a focus on three thematic units: Gender of Technology, Gender in Technology, and the Technology of Gender, looking at historical and contemporary developments from the nineteenth century to the present. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 289D. The Practice of Environmental Justice. 3 Units.
More than 50 years ago, Rachel Carson published her groundbreaking work Silent Spring, which helped to sound the alarm about the dangers of using certain kinds of petrochemical pesticides on our farms, gardens, and public lands. She showed that the physical environment, far from being a pristine wilderness isolated from human activity, is actually a sphere we need to monitor with care. If we fail to do so, we risk poisoning ourselves. In this class, we use Carson as an introduction to the field of environmental justice, defined as the convergence of social justice and environmental movements. Environmental justice exists today in three broad areas: social and political activism in local and international communities; legal and policy structures and initiatives; and academic contributions across many disciplines. Students will read articles from these perspectives, and we will encounter difficult ethical problems, including the fact that poor and minority communities are disproportionately exposed to toxic sites. Students will collaborate with peers in researching an environmental justice site or problem, and everyone will produce an independently written and researched argument that makes a specific proposal for change. We will use the environment of Cleveland and northeast Ohio as our starting point for studying pollution, recovery, and the many ways that environmental justice might help communities to thrive. Requirements to enroll: 1) Passing letter grade in a First Seminar or concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 289E. Medieval Robots. 3 Units.
The medieval world had robots. Some were housed in medieval churches where altarpieces with angels could move, ascending and descending during celebrations. Others appeared in travel narratives like those of Marco Polo. During his visit to the Mongols, the merchant and explorer described gold peacocks whose wings flapped and mechanical drinking fountains. Still others are detailed in literature. Authors of romances have Arthur’s knights fighting automaton warriors to gain entry into castles and receiving gifts like teleporting brass horses. While machines in the medieval period were not as ubiquitous as they are in our modern lives, they posed many of the same questions and concerns that we have about our own technology. Writers frequently incorporated robots into travel narratives and poetry to identify exotic or foreign cultures, and such details can tell us much about racial and political identity in the period. Further, automats and machines could be used as examples of dangerous luxury or viewed as marvels of engineering that challenged the boundaries between what was created by human hands and by God. This class will use a variety of texts and artifacts—medieval literature, blueprints, and art alongside current writings about the ethics of AI—to think about the role of machines in the medieval world and in our own modern lives. In addition to talking and writing about examples of medieval machines and technology, students will also build their own machines using think[box]. Requirements to enroll: 1) Passing letter grade in a First Seminar or concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 289F. Biology of Sleep and Dreams. 3 Units.
Sleep is a fundamental to human survival, yet the physical and emotional components of sleep are only partially understood. In this seminar, students will investigate unanswered questions about the biology of sleep and dreams, including how sleep impacts and is impacted by wakefulness. We will read about and discuss the meaning of consciousness and the changes that occur in the body during wakefulness, sleep, and dreaming. And we will examine these states primarily from the biological perspective, with attention to the psychological and social influences and effects as well. In applying these perspectives, students will develop familiarity with approaches used to study sleep physiology, including the use of objective measures of altered states of consciousness, as well as narrative descriptions of individuals’ experiences when normal sleep patterns are disrupted. In addition, students will investigate their own sleep and dreams. Requirements to enroll: 1) Passing letter grade in a First Seminar or concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 289G. Exploring the Drivers of FinTech. 3 Units.
The field of finance has experienced a burst of technological advances that have disrupted and transformed the traditional methods of accessing, allocating, and transferring capital. Understanding the evolution of traditional finance methods is increasingly important for meaningfully distinguishing the advantages and disadvantages of traditional versus emerging methods and models. Unfortunately, many people’s exposure to this revolution is limited to two ideas that are prevalent in the media: crypto-currencies and disruption. While these are key pieces of FinTech, to really appreciate the change it is necessary to understand the three pillars of innovation that are driving it. This course will provide the forum to gain an understanding of those three pillars of FinTech innovation: the Internet of Things, Artificial Intelligence, and Blockchain. Armed with this understanding we will explore how they are changing finance broadly, how that may impact the need for regulation, how it is driving change in social acceptance of conducting financial transactions, and how it raises possible concerns in new areas like the need for privacy and security. More technology may not always be the right answer. Requirements to enroll: 1) Passing letter grade in a First Seminar or concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 289N. The Mind's Essential Tension. 3 Units.
The idea that the mind is fundamentally divided has been around from ancient to modern times. Sometimes this division is explicitly claimed to be a critical feature of human nature; other times it is expressed as different ways of being in or experiencing the world; in yet other cases the focus is on contrasting domains that the mind either apprehends or creates. Examples include: yin vs. yang, spiritual vs material, numinous vs. mundane, masculine vs. feminine, mind vs. body/matter, theoretical vs. practical reason, science vs. arts/humanities, reason vs. passion, normative vs descriptive, fact vs. value, poetry vs. prose, to have vs. to be, doing vs. being, left brain vs. right brain, empathizing vs. systemizing, thinking fast vs. slow. There can be no doubt that the notion of a divided mind has proven intuitively appealing to many. However, to what degree is such an idea supported by careful and rigorous scholarship? Each of the claimed divisions listed above has been critiqued, often ferociously and with good reason. However, there is also a compelling case to be made for the presence of a division. Strong examples come from numerous disciplines: from philosophy, work on ethics and aesthetics, in the Continental tradition, and on the problems of consciousness and free will; from psychology, work on decision making (prospect theory) and thinking styles; from neuroscience, work on the network structure of the brain. In this class, we will be focused on asking the following questions: Is there a fundamental division in the mind? If so, what is the nature of the division? Why is it helpful to claim a division–what work does it do? How is it unhelpful? To what degree are apparent divisions products of culture and context, vs. biology? How might a scientific account of the division transform our understanding of historically influential divisions? How might historical and/or philosophical work inform current scientific research? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 289Q. Unsustainable Fashion: The Environmental Impact of Plastics in Textiles. 3 Units.
The emergence of the plastics industry in the 20th century revolutionized textile fabrication. Rayon and Nylon became inexpensive alternatives to silk. Polyester helped keep clothes wrinkle-free and easy to care for. Performance fleece and faux fur provided alternatives to materials harvested from animals. At the same time, however, textile manufacturing is one of the most important polluting industries in the world, producing toxic chemicals that contaminate water, soil, and the plants and animals that we eat. Therefore, the modern fashion industry is unsustainable and is the 2nd largest water-polluting industry and is responsible for 10% of the carbon footprint in the world. Sustainable fashion is a philosophy that involves creating a strategy to make a change in different levels from textile fabrication to design, production of fashion items and consumers’ attitude. What would it take to make fashion more sustainable? Is it possible to re-think textile fabrication and fashion design? Can fashion be "plastic-free?" What role can marketing and consumer behavior play in a more sustainable fashion of the future? In this seminar, we will investigate the history of fashion and textile fabrication, especially how the emergence of plastics revolutionized the industry. We will also examine the social and environmental impacts of the plastics-based fashion industry, considering sustainable solutions, as well as the challenges they face. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 289T. Community Problem Solving: Applications of Design Thinking. 3 Units.
In this seminar, we will evaluate design thinking, a systematic process for developing creative, human-centered solutions. To test our thinking, we will also seek a solution to a real problem in the CWRU/Cleveland community. Design thinking has been embraced by leading tech companies and universities around the world. The inventors of the first Apple mouse and the first e-book, for instance, used design thinking to develop these innovative products. The many proponents of design thinking claim that it can be applied to problems in any field: medicine, politics, the arts. You can even use it to build a well-lived, joyful life! Design thinking also has critics who argue that design thinking is merely a repackaging of old ideas in modern techno-speak. Clearly, human creativity and problem solving existed long before we even had the words "design thinking." Why do we even need a systematic process for something that people do on their own every day? We will examine the theory and practice of design thinking, not only by critiquing the arguments pro and con, but also by applying it to a real-world problem ourselves. Working in teams, we will use a variety of CWRU resources, including faculty and staff expertise, think[box], and other labs, to identify, test, and implement a solution integrating technology and the human experience. Along the way, we will also critically evaluate the design thinking process itself. Does design thinking always lead to the best available solution? If not, why not? What other approaches might work as well or better? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USNA 289U. Pipes, Potholes, and Pathogens: Infrastructure Issues in the USA. 3 Units.
The poor condition of the nation's infrastructure--its roads, railways, bridges, tunnels, drinking water systems, wastewater systems, and more--has been widely reported. In fact, the infrastructure is so bad that fixing it offers a rare opportunity for bipartisanship. And yet, as the grades given by the American Society of Civil Engineers in its quadrennial Report Card indicate, conditions remain dismal. In this seminar, we will study the structures and systems that constitute national infrastructure, the tools used to evaluate its condition, and the challenges of monitoring, maintaining, and repairing it. What metrics are used to grade various infrastructure categories? Do these metrics accurately describe conditions in a meaningful way? What does it mean to say that the condition of bridges, for example, is a "C" or a "D"? How should government agencies use this information when prioritizing spending? Is it better to repair or replace? Are some categories more important than others? Is it better, for example, to address drinking water before dams, or sewers before roads? How should spending be distributed geographically and socially? Should spending be spread evenly, or is it better to target urban, suburban, or rural settings? To answer these questions, we will investigate examples from Northeast Ohio. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.
USNA 289X. Sexual Revolutions. 3 Units.
Modern American society, from the late nineteenth century on, saw major changes to human behavior and understanding of sexuality, often seen as a “revolution.” This course will examine these changes from the late Victorian Period to present day, focusing on the social and technological developments during this time period. In this course, we will explore the rise of sexology as a field of science, the development of reproductive and sexual technologies, as well as the social, cultural, and political forces that shape ideas about sex. By analyzing both primary and secondary documents, we will investigate what is the idea of sexual freedom and how it intersected with categories of race, religion, and class, as well as what constitutes sexual liberation and oppression. By looking at how issues of sexuality were central to political debates during the twentieth century, students will revisit definitions of sex, gender, identities, revolution, and backlash. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USNA; OR Requisites not met permission.

USSO (USSO)

USSO 201. Society and Technology: How Do They Impact One Another?. 3 Units.
This course focuses on a systematic analysis of the relationships between society, and the specific institutional elements of technology and technological innovation. It describes the social aspects of computers and related technologies and explores the ways in which these technologies influence and impact organizations and individuals. The course explores the design, use and cultural significance of technologies and uses a historical focus to assess the integration of technology into all aspects of our society. The restructuring of traditional human interaction by information technology will provide a contemporary focus for the course. Offered in a seminar format, the course will provide opportunities for scholarly discussion, systematic inquiry and written communication. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSNA/USSO; OR Requisites not met permission.

USSO 203. Law in Literature. 3 Units.
An interdisciplinary venture. This seminar will focus on law in literature by examining representations of the legal process in poems, plays, short stories, and novels. It will provide a taste of the vastness and variety of human life—and will broaden and deepen students’ understanding of the role law plays in society. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 209. Face First. 3 Units.
Human beings greet the world face first. In fact, the ability to process facial features seems to be innate. A baby easily recognizes its mother’s face yet the most powerful computers have difficulty using facial features to identify people. This is because all human faces are similar while fine details make each face unique. This course will begin by studying the human face as an anatomic construction of hard and soft tissue skeletal components. We will discuss how we use anatomic facial features to recognize individuals. One homework exercise will be to construct faces using an FBI identikit. Each student will create an FBI composite sketch of their own face. Seminar time will then be used to view each sketch and try to match the sketch with the seminar participant. Discussion will focus on how facial anatomy is similar or different. Following this introduction, the seminar will shift focus from anatomy to sociology. We will discuss facial attractiveness and beauty. Seminar topics will also include manipulation of facial appearance i.e., cosmetics, body piercing, veils, and plastic surgery. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 234. Questions of Identity. 3 Units.
Who we are informs the ways in which we act in the world. How we respond to society in the individual, local, and global community is impacted by the way we see ourselves, the way others see us, and the way we see others. Who am I? How do I look at myself in relationship to others? How does the way in which society views me affect the way I think of myself? How have writers, historians, and philosophers dealt with the challenges of self and group identity? We will explore these issues through readings from the Civil Rights Era, the Holocaust, and the period of decolonization in Africa. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 243. The Art of Fact. 3 Units.
As evidenced by the tragedy that unfolded in New Orleans in the wake of Hurricane Katrina, we ignore the consequences of endemic poverty at our peril. How do you evacuate a city filled with thousands of people too poor to own cars? Where do you house them after they’ve been rescued from their drowned neighborhoods? Although Cleveland won’t likely be erased by flood, it’s one of the poorest big cities in the nation making it vulnerable to disaster in times of crisis and an incubator for a host of thorny social problems. Often, it’s up to journalists to bring attention to these issues, give voice to the voiceless and force policymakers to come up with solutions to seemingly intractable problems. In this seminar, we’ll read and dissect the works of journalists who’ve written stories about complex social problems and have done so using many of the conventions employed by writers of fiction. Writer Ben Yagoda described this literary journalism as “making facts dance.” We’ll spend our time researching numerous social issues and learn to write about them in a clear and compelling voice. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 255. Hinduism. 3 Units.
This course will provide an introduction to Hindu thought and culture. We will read a wide range of texts and secondary sources. Two readings, the Ramayana and Samskara, will focus on issues of ethics and proper dharma. We will also be watching Deepa Mehta’s Fire. There will be a visit to the Shiva-Vishnu Temple in Parma. Heavy emphasis on research and writing. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 266. Framing Our Legal System: Law in the Movies. 3 Units.
This course explores important themes in the study of law, lawyers, and legal institutions by regarding their representations in movies. We will cover such issues as race/class/gender and the law, legal ethics, legal education, the adversarial system, and the image and status of the lawyer in American culture. We will also look at the ways in which law and the legal profession affect popular culture and, conversely, the ways in which popular views of legal problems and lawyers affect law. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 271. Schoolhouse Rocked: Education Reform. 3 Units.
Today, the term "education reform" may bring to mind standardized tests and No Child Left Behind. Many believe that our schools must become more rigorous, with stricter rules and definable goals. "Reform," however, used to be defined differently. John Dewey, Maria Montessori, and Paulo-Freire, for example, struggled to make schools freer and more humane. They hoped not to make the classroom less challenging, but more child-centered. Some disciples of such reformers, discouraged by schools' resistance to change, eventually turned to homeschooling--pulling kids out of school and educating them with real-life learning experiences. In this seminar, we will explore progressive educational theory and connect it with contemporary alternative schools and homeschooling. Visits to nearby Montessori and Waldorf schools and discussions with homeschoolers will make real-life connections to seminar reading and classwork. Challenging assumptions about how well our schools work and raising questions such as, "How do we learn?" and "What is good teaching?" will provoke thought, conversation, and interesting writing. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 275. Psychology of Creativity. 3 Units.
The purpose of this course is to explore how individuals become creative. What are the most important qualities, emotional and cognitive, that are related to creativity? Is there a creative personality? What is the difference between artistic and scientific creativity? How does creativity relate to mental illness? How can we foster creativity in people? The course will study creativity in children and adults and will include research studies as well as descriptions of creativity from creative individuals. We will also discuss how different cultures view and effect creativity and the ethical issues involved. This course is a seminar and will use a discussion format. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 285I. Spectacle in American Culture. 3 Units.
This seminar will examine the topic of spectacle both chronologically and typologically to better understand the power of remarkable visual experiences to awe, entertain, persuade, and create meaning from the colonial period to the present day. In the 17th century, the religious beliefs of the New England community and its need to maintain social cohesiveness gave rise to the spectacle of witch trials and public punishments. As Americans moved westward, the natural world became the focus of the spectacular. In the nineteenth century, the campaigns and debates of presidential candidates became political theater. The latter half of the century gave rise to Consumption as Spectacle as exemplified in the may expositions and World's Fairs. Today, spectacle has reached all facets of our lives. Americans are willing to expose the most intimate details of their personal relationships on television shows like Jerry Springer and The Real World. Although frequently used to maintain power, spectacle also has been employed as a tactic of resistance and as an instrument for creating alternative meaning by subcultures. More recently, spectacle has served as an instrument of terror. Through lectures, discussion, multimedia presentations, and writing assignments, we will have an opportunity to reflect on the many forms and uses of spectacle in American history. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 285J. The Limits of Science. 3 Units.
Can science provide answers to the deeper puzzles of human existence, or do some questions lie beyond the scope of the scientific world view? Specifically, can science explain human consciousness, free will, and morality; and can it reveal the origins of religion? Students cannot, nor will they be expected to, provide a definitive answer to these questions. Instead, this seminar will provide students with an opportunity to engage in a conversation with each other against a backdrop of some of the most interesting and provocative research in cognitive science. In addition to learning about relevant psychological and neuroscientific research, students will engage with philosophical issues and arguments. This course aims to stretch student’s beliefs about what they know now, and what they think can be known. The seminar will aim to cultivate productive and rhetorical skills, especially analytical thought, oral expressiveness, and writing skills, all of which will be useful in future pursuits. It will help students to develop a more nuanced view of human nature and the ability of science to transform our view of it. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 285L. Hollywood Cartoons, American Society. 3 Units.
This class provides a history of mainstream animation produced in the United States during the 20th century, emphasizing in particular the output of the Hollywood animation studios of the 1930s-1950s, the shift to television animation in the 1950s, and the rebirth of animation in the 1980s. In addition to the general history of the field and key periods of creative development in the genre, we will discuss various sub-genres or narrative fads within animation, cultural and social movements of the 20th century and how they are reflected in contemporaneous popular culture, issues of art versus commerce in the creation of popular animation, the intersection of animation and politics, and the representation of race, gender, sexuality and religion. Since this class focuses on visual media, we will also spend a great deal of time both watching films and discussing how to watch animated films with a critical eye. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 285N. Globalization and American Culture. 3 Units.
This course investigates the role of the United States in globalization. The first third examines the claim that globalization entails cultural "Americanization," the middle third covers the resistance of local cultures, and the last part explores the ways in which American invented technologies do, in fact, spread culturally specific ways of working and behavior. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 285T. Why We Believe Weird Things. 3 Units.
How, in such a skeptical age, can people maintain questionable beliefs regarding urban legends, alternative medicine, superstitions, and paranormal phenomena? How do cults manage to attract and maintain large memberships? How can so many seemingly normal people come to the conclusion that they have been abducted by aliens? We will explore the idea that these behaviors are not examples of pathological thought processes, but rather natural consequences of the biases that characterize everyday reasoning. Emphasis will be placed on critical examination of questionable phenomena with a goal of understanding why people might want to hold such beliefs. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 286E. Global Tourism. 3 Units.
Tourism can be viewed as a metaphor for contemporary existence in an increasingly globalizing world where attachments and ties to a concrete place are often temporary. Besides capturing the essence of present-day mobility, tourism is a phenomenon that can be researched both politically and economically. Indeed, 10 percent of global GNP comes from tourism and many poor countries rely on the tourism industry to sustain national economic development. In this class, we will touch on the economic and political significance of tourism, but will spend most of our time thinking of what happens in the tourist encounter, what tourists expect, what drives them, and who loses as well as benefits in the encounter. Some of the specific themes include: the nature of tourist destinations, quest for authentic sites, entertainment tourism (Disneyland, Dracula-Park), tourism to Auschwitz, culinary tourism, sex tourism, and eco-tourism. By reading theoretical works, travel blogs, and literature, we will gain insight to the motivations of tourists, the inhabitants of the places being visited, and international organizations as well as governments who oversee this industry. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 286L. Exploring Non-Profit Organizations. 3 Units.
This seminar is structured to expose students to the opportunities and challenges of working in and running non-profit organizations. Students will explore the importance and significant roles non-profit organizations play in our society. The class will learn how non-profits are organized and regulated and the importance of the organization’s mission is to determining the impact of the non-profit organization in the community. Additionally, the students will learn how non-profits are funded and how these organizations maintain their financial stability and sustainability in the community. These goals will be accomplished through group analysis of non-profit organizational principles, and investigation of existing non-profit organizations. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 286V. Management of Chronic Illness in a Cultural Context. 3 Units.
This course will explore the cross cultural, self-care approaches to health problems. It covers substance-based (e.g., herbs, acupuncture), mind-body (e.g., yoga, qigong), spiritual (e.g., prayer) and social (e.g., communal, family) approaches that have been used to manage chronic diseases and promote wellness in various cultural settings. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 287E. Clash of the Titans: Economic, Industrial and Social Trends in the 21st Century. 3 Units.
Since the beginning of recorded human civilization, locally dominant societies have risen, prospered, decayed and finally ended, with new ones taking their place. Starting in the 15th century, however, Europe established global dominance and maintained it for four centuries, from the age of New World exploration through the Industrial Revolution of the 19th century. Then came the rise of the United States, which in the late 20th century became the world’s only superpower, economically, industrially, militarily and, increasingly, culturally. In the late 20th and early 21st centuries, we are witnessing the “flattening” of the world due to the technological revolution, a phenomenon brought about by the instant and worldwide generation and access to information. Two major consequences of this evolution are: a) Individuals are more empowered than at any time in history and the traditional societal structure is under constant challenge; b) Companies have changed their business structures and practices and have begun to operate on a truly global scale. The main goal of the course is to help students learn the lessons of history and use them to develop an educated argument as to whether the US will continue in its prominent leadership role, or whether one or both of the emerging Asian economic powerhouses, China and India, will supplant it and become dominant. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 287P. Technology and Social Change. 3 Units.
This class examines the reciprocal relationship between material culture (technology) and non-material culture (society and social structure) as they produce social change. The class is organized by major areas in the development of technology as well as chronologically in terms of major epochs of technological and societal development. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 287T. Gender, Visibility and Performance: The Courtesan. 3 Units.
Throughout history, the figure of the courtesan has embodied seduction, performance, and mystery; occupying the private spaces of the real and the imaginary across cultures. The impact of the courtesan on society can be seen in travelogues, poetry, and historical treatises, as well as in texts written specifically about courtesans themselves. Those cultures which had a courtesan class frequently experienced varying degrees of social discomfort. Within the culture, there was tension between those who patronized courtesans and those who considered them a social menace. From without, cultures which had courtesans were believed to be either excessively decadent or highly civilized, depending on the cultural standpoint of the observer. In this seminar, we will study real courtesans as well as examine the figure of the courtesan within the context of literature, religion, music history, and gender theory. The seminar will begin with an overview of the origins of the courtesan, focused on the roles of women and slave musicians in the court and temple in Egypt, India, Greece, and Mesopotamia starting in 3,000 BCE. Then, we will explore factors leading to the development of a courtesan class and compare the roles of courtesans and their place in their culture in Europe, India, Asia, and the Middle East. Readings and class discussion will encompass issues relating to the impact of gender on performance, literary genres, education, and social and legal status, as well as continuing questions related to translation of primary sources, colonialism, and religious movements. In addition to the readings, we will also study images of the courtesan from antiquity to the present, listen to music by and about courtesans, sample some of their writing, and watch films about “real” courtesans. The primary goal is not only to look at the impact of courtesans in history, but also to engage issues related to gender and performance from a variety of different disciplinary and cultural points of view. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 287V. The Public and the Past: History in the Marketplace. 3 Units.
How does one or should one "sell" the past? Our primary encounters with the past are not in the university classroom, but via popular media, museums, theme parks, and historic sites; entities whose survival is increasingly dependent upon market economics. This dependency often demands attention to audience size and the need to avoid controversies that could alienate private and public funders. Complicating this is the issue of heritage—the somewhat mythic pasts which individuals, groups, and nations claim as their right, even when research challenges the underlying myths. What then are the consequences, in terms of ethics and accuracy, or in terms of civic value, when one turns history into a heritage-based commodity? More specifically, how does this affect professional historians? Can they work in history outside of academe without sacrificing integrity and standards? The seminar will debate these critical questions and also take an in-depth look at the growing field (positions, products and potential) of public/applied history. Readings, documentaries, interviews, and on-site visits to public history institutions will provide the basis for our discussions and the written assignments in this seminar as well as serve as an introductory "course" for students interested in a career in public or applied history. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 287Z. Concubines, Soldiers and Field Hands: World Slavery from Antiquity to the Present. 3 Units.
For many Americans, the most familiar type of slavery is plantation slavery of the Americas and the horrific consequences to the indigenous peoples and transplanted peoples from Africa. The longevity of the institution of slavery, and acceptance of the practice by many different cultures and belief systems, however, reaches from antiquity to the present day. In addition to providing physical labor and domestic services, slaves have been used as entertainers, civil servants, led armies and served in temples. Slavery is a complex legal, religious, moral and social institution, and the relationship between slave, state and owner/slaver is equally complicated; so much so that understanding the bond between them, and what the actual boundary was between "free" and "unfree", is still difficult to determine in some cultures. In this seminar, we will use a chronological framework to examine the institution of slavery, uses for slaves, methodologies and sources for studying slavery and the slave trade in world history. Beginning with slavery in the Ancient Near East, Egypt, Greece and Rome, the class will include slavery and the feudal system in medieval Europe, indentured servitude and concubinage, slaves in the early Islamic courts, the Ottoman slave trade, the African slave trade and slavery in the Americas, and the current problem of human trafficking. Within each section, students will read primary texts and recent scholarship examining the social, economic and religious rationales behind slavery. We will also study different methodologies and the impact of gender, race and social class on the study of world slavery. As many slave cultures had different definitions for what it meant to be a slave, we will address questions related to translation, interpretation and perception when dealing with primary sources. The primary goal of the course is to provide a broader context for the institution of slavery in world history as a means not only to understand the impact of slavery has had on American culture, but on other cultures as well. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 288B. Doing Good: How Nonprofits Change Lives. 3 Units.
The American economy is made up of three sectors: government, business, and nonprofit. It's pretty obvious what government and business do, but the activity of nonprofits, while it is everywhere, is much more subtle. A nonprofit is most likely where you were born, went to school, attend church, or adopted your family dog. If you became an Eagle Scout, watched "Sesame Street," attended a benefit concert, or participated in a walk for a cause, you were engaged with a nonprofit. Perhaps you haven't given much thought to the way the organization was structured, where it gets its money, or what kind of an impact it's really having. In this seminar, students will learn what nonprofits are, how they operate, how they influence everyday lives, and their role in advancing social change and a civil society. We will consider the economic impact of nonprofits as well as their role in protecting culture, environment, values, and heritage. We will also look at the key challenges facing nonprofits today and how they are addressing them. Writing assignments will include a grant proposal for a new or existing nonprofit. The seminar will feature guest speakers and class visits to nonprofits in the Cleveland area. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 288C. Green Transformation and Globalization. 3 Units.
This seminar introduces students to the recent major green transformation in China and elsewhere in the world, focusing on the way the green changes took place in relation to globalization, environment and climate protection, technology innovation, income redistribution, domestic consumption, and education, to meet the challenges of financial crisis, climate change, energy insecurity, and international competition. The seminar will also assess the impacts of various aspects of green transformation and globalization on today's and future world and vice versa. This seminar promotes broad knowledge of-and increased appreciation of the importance of diversity in China's cultural past, social frameworks, economic conditions, and natural environment. In a close connection to the primary readings, which include several recent relevant works, the students will be exposed to a variety of related primary and secondary materials (such as texts, photos, film clips, music, songs, and websites). In addition to receiving informative yet concise instruction, the student will also be involved in practice in critical reading and thinking, in writing and orally presenting research papers. In these activities, the students will be introduced to basic methods and concepts critical to the understanding of important economic, social, and cultural developments and changes as products of movements rather than isolated incidents. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 288E. Music in Early Childhood. 3 Units.
This course develops critical thinking, writing, and discussion skills through guided inquiry on the subject of music in early childhood. Researchers in the areas of child development, linguistics, sociology, psychology, and music education have documented children’s musical development and noted the interplay of musical development with many other spheres of child development and interaction. What is the role of music in a child’s holistic development? Could enriching musical experiences provide needed interventions to children considered “at-risk?” What is the “First 2000 Days” movement and how does music enter the equation? What types of music therapy are available for young children in medical, educational, and social settings, and what impact have we seen in these areas? In this course, students will explore these questions through reading, research, guest lectures, and observations of young children. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 288T. Coffee and Civilization. 3 Units.
Whether you enjoy an occasional cup or sip throughout the day from a bottomless mug, did you know that since its introduction in the Western world coffee has been intimately tied to sociability and intellectual life? In this seminar, we will explore coffee’s civilizing history, from eighteenth-century coffee houses buzzing with political dissent, to 1920s establishments crowded with avant-garde artists and our modern bookstore cafes. We will also explore the human and ecological costs of our taste for coffee by investigating the enduring connections between coffee, slavery, North-South geo-political relations, and notions of fair trade. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 288Y. The Secret History of Corporate America. 3 Units.
The corporation is the most powerful economic institution of our time. How did it come to reign, and how does its power affect us economically, politically, and socially? This course will chart the history and impact of corporate capitalism. Topics will include the corporation’s impact on democracy, consumer culture, the environment, and even the university itself. If you have ever wondered why products are purposely designed to wear out (planned obsolescence), why unions are so powerless in America, why the military is as powerful as it is, why it takes special technology from the Diebold corporation to run a simple election, why broadcasting companies are allowed to profit by using the public airwaves for free, why it looks like there are a million publishers of books when in truth giant companies dominate 80 percent of the book market, why the perfect lawn is a marketing ploy to get consumers to buy a lot of chemical inputs, why universities, which are supposed to be bastions of independent thought, are now dominated by an army of administrators who run around talking about return on investment instead of figuring out how to create a culture where students can learn, then this is the course for you. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 289C. Ethics For The Real World: Developing a Code of Ethics to Guide Decisions in Work and Life. 3 Units.
This seminar addresses two major questions: How do the contexts in which we live or work affect ethical behavior? And how can we manage to struggle through personal and organizational challenges if we find they present us with something ethically compromising? In this course, we look to religion, spiritual teaching and cultural upbringing to understand sources of personal values and standards of behavior that might help structure one’s life in the midst of difficult contexts. One way we consider this is through practical exercises including development of your own personal code of ethics, an iterative process designed to help you articulate the principles of your own moral construction. These can serve as a foundation for leadership integrity and moral courage for ethical decisions throughout life and work. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 289H. The Meaning of Difference: Constructions of Diversity in American Culture. 3 Units.
Diversity means different things to different people in the United States and around the world. In the United States, in particular, the meaning of difference is connected to categories of identity, meaning and ideas. In this course, we will focus on discovering and understanding various categories of difference, the ways they are constructed, and by whom. We will look at how language and power operate in culture and how the interactions of language and power affect all of us. We will explore constructions of difference in American culture according to race, ethnicity, sex and gender, social class, sexual orientation/expression, disability, and religion. When we read American culture as a text, what do we see and hear about diversity? How do we make meaning of what we see and hear about diversity? What have scholars/thought leaders/writers written about the topic? How have these definitions of diversity affected your own life? How does diversity shape the stories we tell about ourselves, others, American culture and the culture of other nations? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 289J. Treasure or Trash: Examining Theatrical Credibility. 3 Units.
This seminar is a fundamental study of theatre from the standpoint of developing the critical acumen of a potential audience. It covers each ingredient of the theatrical experience—audience, playwriting, acting, directing, theatre architecture, design and technology—and attempts to help students define a reasonable set of standards to judge that part of the experience as an audience member and to clearly communicate their feelings and thoughts regarding that experience. In addition to class discussions, lectures, and readings, students are also required to attend four live performances—two theater productions offered by Case Western Reserve University’s Department of Theater and two productions at the Cleveland Play House. The students will write critical essays about their experience as an audience member in relation to a particular aspect of the performance. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 289K. Riots and Rituals: Struggles for Justice in a Globalizing World. 3 Units.
This course asks students to explore two broad questions: How might we understand contemporary globalization? And, how do those people marginalized by globalization seek justice? Globalization and social justice have now become household terms. However, today, perhaps more than ever, we must ask precisely what type of globalization we are experiencing and what type of globalization we want for our future. If we are seeking the best possible global future for everyone, then it is crucial that we understand how those left behind by globalization struggle to get their interests heard. This course takes a unique approach to these problems by working with two extended case studies. We start with Cleveland, Ohio in the 1960s, and the beginnings of economic globalization in the United States. Cleveland’s Hough riots of 1966 were one of the most violent political events in the city’s history. We then move to contemporary Madagascar, where global rainforest conservation programs pose a real threat to the cultures of indigenous groups and their rights to land. Here, ritual has become a powerful means by which Malagasy groups assert their interests. With both case studies, important questions arise for classroom consideration: What is the exact nature of the globalization processes at work in both places? What can we learn about the development of globalization between the 1960s and now? Who are the groups most harmed by these processes? And, what can riots and rituals teach us about how groups marginalized by globalization struggle to have their claims for justice heard? The instructor has carried-out long-term research in both Cleveland and Madagascar, and will take an interdisciplinary approach to theories of globalization and justice throughout the course. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 289L. The Roots of the Arab-Israeli Conflict. 3 Units.
This reading- and discussion-based seminar delves into one of the most complicated issues in our world. To begin to understand it takes careful reading and reflection, skills on which this course focuses. It also takes untangling the underlying issues from the trauma, dogma, and violence surrounding them. Seminar participants will learn how the roots of the conflict lie in the Ottoman and British Empires. Course materials include histories of Zionism, pre-Zionist Palestine, the British Mandate years, the British Empire in other Arab lands, and the 1948 war and aftermath. Primary sources from the perspective British officials on the ground in Palestine receive much attention. The histories of engineering and agriculture are highlighted alongside traditional social and political perspectives. Students may not get credit for this course if they have taken HSTY 339. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 289M. The Detective Novel. 3 Units.
Who dunnit? Why do we keep asking this question? You dunnit. Readers have an investment in finding answers to puzzles and to threatening narrative situations. In this course on one of the world’s most popular literary genres, you will not only learn of its origins, but about theories of why you keep reading these stories. The texts begin with the Memoirs of Eugene-Francois Vidocq and stories of Edgar Allan Poe, and run though contemporary novelists such as Sara Paretsky and Natsuo Kirino. Why is this genre appeal so popular in so many cultures? There will be a strong comparativist slant to the course; students will be encouraged to explore the cultural context of Natsuo Kirino’s and Stieg Larsson’s novels which, like many of the classics, provide fertile ground for comparison to film adaptations. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 289P. Polar Regions in History. 3 Units.
This course will explore the effect the polar regions have had on the strategic ambitions, pursuit of wealth, scientific investigations, and heroic imagination of (mainly Western) individuals, nations, and cultures, focusing on the modern and early modern periods (c. 1500-present). It will also familiarize students with the physical geography and ecology of the north and south polar regions, the ways in which Arctic-adapted peoples have responded to the challenges of their environment, and the impact that contact with outsiders has had on these environments and peoples. Students will read books and view videos that recount the personal experiences of polar explorers and others involved in international competition for exploratory “firsts,” describe the efforts nations have made to claim polar resources, and examine debates about climate change. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 289V. To Everest and Back: The Politics and Culture of Mountaineering. 3 Units.
In April 2014, at the start of the climbing season, 16 Sherpas working for commercial operators died in an avalanche on Mount Everest. This event precipitated an unprecedented crisis: after tense negotiations with their Western employers and clients, the Sherpas brought the spring climbing season to an abrupt close. Although this action seemed sudden, it had been a long time coming. Conditions on the mountain had by all accounts been deteriorating for decades: ugly trash heaps, tensions caused by economic disparities between Western guides and their indigenous counterparts, and ever more demanding—yet often under-prepared—Western clients indicated that what had once been the site of adventure and achievement had devolved into crass commercialism and exploitation. What is Everest for anyway? To whom does it belong? This course will chart the history of the “conquest” of Everest. We will ask the following questions: What prompted Westerners to venture into landscapes that their ancestors had previously shunned? When and how did the West’s aesthetic appreciation of high mountains begin? When did this appreciation morph into a competitive drive to scale ever higher peaks in far-away lands? How does this history overlap with that of colonialism? Is mountaineering an ethical endeavor? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 289Y. The Symphony Orchestra and its Place in Contemporary Culture. 3 Units.
In measuring the cultural profile of a metropolitan area, the presence of a successful symphony orchestra is often used as a model to determine cultural sophistication and refinement. In recent years, however, the model of the orchestra has encountered significant challenges. Using the world-renowned Cleveland Orchestra as a paradigm, this seminar will examine the orchestra in contemporary culture and attempt to answer the questions: what will the symphony orchestra be in the near future and what must it become to sustain its cultural importance? In this course, we will focus our seminar-style discussions, formal presentations, and research-based writing on the following six topics: defining orchestral repertoire for tomorrow’s listeners; discovering how technology has affected the institution of the orchestra, including performances, recordings, marketing, and communications; examining the financial challenges and bankruptcies of orchestras in recent years and analyzing their causes; and analyzing changes in fund-raising techniques and searching for ideal future models. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 289Z. China and the World: 19th and 20th Century Encounters. 3 Units.
Although frequently characterized as a country with a past that was marked by insularity and disdain for all things foreign, until the West "opened [it] up," China’s engagement with the world has been long and deep. China–Chinese emperors, Chinese governments, and Chinese people across the social spectrum–have energetically engaged with the broader world, permitting, encouraging, and seeking the circulation of foreign ideas and goods. This course is about how China has taken measure of the world and the goods and ideas that have flowed into and out of China during the past several centuries, from roughly the sixteenth through the twentieth centuries. Students will examine one topic in depth as an historical case study during the semester-long course. Possible topics from which the case study will be drawn include the Opium Wars, meanings of revolution, gender and sexuality, religion and political ideology, the environment, nationalism, history of science and technology, etc. Focus on a single thematic topic serves as a microcosm of social, political, and economic exchanges that highlight the complex ways in which understandings of China and the world have shifted over time. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290B. Contemporary American Rhetoric. 3 Units.
The health of a democratic society depends on an informed electorate. And yet the attack ads, unverified accusations, sound-bites, and carefully scripted and staged media events that fill television and the Internet tend to misinform, confuse, and disengage voters. How might we reverse this trend? How can we meaningfully enter into political conversations? How can we listen to others, form our own beliefs, and then communicate them respectfully and with purpose? To help answer these questions, we will return to modern democracy's ancient roots, using the lens of classical rhetoric to explore contemporary political debate. While the word "rhetoric" is often used today to deride precisely what's wrong with political discourse, as when a policy proposal is dismissed as mere "campaign rhetoric," it more properly denotes the techniques of effective persuasion. By learning how rhetorical devices are used, we can empower ourselves to analyze policy debates and to make our own contributions. As part of this investigation, we will research issues, debate and develop positions, read and evaluate speeches, write about our own positions, participate in public conversations by writing letters to representatives and opinion pieces for newspapers, and prepare an oral presentation. We will also complete a research project in which we analyze the different perspectives on an issue of interest, formulate our own positions on an issue, and reflect on our internal processes as we take on a belief and act on it. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290C. Marginalization & Health. 3 Units.
Even in a free and democratic society such as the US, individuals and even entire groups can be systematically marginalized: they are blocked from various rights, opportunities, and resources that are normally available to others. One especially important consequence of marginalization is diminished health and well-being. This seminar examines the social factors associated with marginalization and health in American society. Why are some individuals and groups at risk for marginalization? How does marginalization produce health inequalities? What can be done about them? Using quantitative and qualitative research methods and careful analysis of current scholarly literature, students will critically examine the current evidence related to these inequalities and generate their own social justice strategies to address them and their causes. In addition, students will have the opportunity to hear from guest experts in the field and participate in off-campus learning activities. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 290D. Help Yourself: Self-Help and the Science of Human Behavior. 3 Units.

Each year, people seeking to improve their lives spend millions of dollars on self-help books, classes, and programs. Why? How are they useful? And if they work so well, why do people continue to need them? This course uses some basic theories and research of human personality and behavior to investigate whether and how self-help works. In addition to using this information to investigate the claims made by self-help gurus, students will provide students with strategies they can apply to their own lives, including how to change unwanted behaviors, how to cope with stress, and how to promote overall health and wellness. The course will be conducted in a seminar-format to allow for scholarly discussion and facilitate critical thinking. Students will demonstrate their knowledge of the course material through the writing of a paper reporting results of a self-experiment and an oral presentation discussing the merits of a self-help program. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290G. A History of Workers in the US. 3 Units.

This course examines the lives of the ethnically and racially diverse women and men, skilled and unskilled, and rural and urban laborers that produce the goods and provide the services that society consumes. At crucial moments, working people have joined social movements in an effort to improve some aspect of their lives. We therefore will assess workers in relation to several known and less known American social movements, such as the eight-hour day movement during the late nineteenth century, the peace movement during WWI, and the Civil Rights movement in the wake of WWII. As we study these social movements through the lens of public policy and government institutions, and the relationship between industrial economies and blue-collar communities. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290J. Touch Throughout the Life Span. 3 Units.

This seminar will consider a variety of topics related to touch throughout the life span. Opportunities are provided to learn from colleagues and resources available to the public about the structure, functions, uses, misuses, and health considerations of touch from birth to old age. Touch as it is conveyed through different venues and with different purposes will be explored; touch for development, touch for socialization, therapeutic animal touch and what are pets need, touch as punishment, touch in the workplace, touch and technology, intimate touch, abusive touch, necessity of touch, healing touch, and comforting and noxious touch. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290L. The Big Story of Small Things. 3 Units.

"The big story of small things" looks at ordinary people, mundane places, single incidents and fleeting moments, and the ways we might interpret micro cases to make sense of macro developments in our world. Spanning the Middle Ages to the present and crisscrossing several continents, this USEM also ranges among history, anthropology and literature. Topics may include a flower, an orphan abduction, a cockfight, a flood, a peasant, a pencil, a miracle, a midwife, a murder, an unfinished stocking and a year. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290M. The Effects of Race, Class and Education: A Dialogue on Current Issues. 3 Units.

Recent decades have seen a growing income and opportunity disparity in America. In our seminar, we will examine a variety of overlapping issues related to this crisis, with special attention to the impact of race, class and educational levels in determining how people fare in society. The larger set of issues includes poverty, income inequality, job loss and its effect on the industrial city, the concept of a "living wage," affordable housing, education, and sentencing and incarceration. Readings, class discussions, and student papers will all explore these topics. In urban communities such as Cleveland and Northeast Ohio, the income and opportunity divide is especially visible and persistent. Recognizing this, we have incorporated a novel approach to experiential learning in our seminar. Case Western Reserve students will interact with a similarly sized group of students incarcerated at a nearby state prison. The two groups will conduct workshops together and will hold joint discussions via teleconference throughout the semester. The incarcerated students will be studying the same material on the same schedule and will be sharing their views with students in the seminar. We believe there are several benefits to this dialogue. We have two Northeast Ohio institutions—our university and the prison—which are neighbors but whose residents are largely from opposite sides of the divide. It will be useful to consider the income and opportunity divide from both perspectives and to share ideas and experiences related to the overall problem of inequality. A bilateral discussion and interaction will not only enhance the students’ educational experience, but also, we hope, will foster greater understanding. Procedures will be in place to ensure strict confidentiality and anonymity in any and all exchanges of views between CWRU students and students at the prison. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 290N. Perspectives on Dying and Death: Normalizing the Inevitable. 3 Units.
The inevitability of death encompasses us all. We are all born with the disease of mortality. We all die. And yet, to many of us the details of dying and death are a mystery. It is an abstraction we would rather not think about. This course aims to create thoughtful and reflective dialogue about dying and death, confronting death as something more than an abstract possibility. We will review the physical, psychological, social, spiritual, cultural, ethical, and economic perspectives of dying in America. Reflective thinking will be carefully guided by an array of faculty and guest speakers, both those who are directly involved in the care of the dying and those who provide services to families of the deceased. We are likely to visit a funeral home, a cemetery, and/or a hospice house to explore opportunities to reflect on our own views of dying and death and to consider others’ cultural beliefs and traditions. Finally, we will discuss the concept of quality of life and examine current evidence related to dying and death in America, such as the 2015 Institute of Medicine Report, Dying in America: Improving Quality and Honoring Individual Preferences Near the End of Life. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290O. Crime, Society, and Culture in Early America. 3 Units.
Since the late seventeenth century, American readers have been endlessly fascinated by the subjects of crime and punishment—and especially by murders and other heinous offenses committed in their own communities. Much as Americans today “consume” crime through movies, television shows, newspapers, magazines, mystery novels, “true crime” books, websites, and popular music, so also did Americans of the 1670s through 1850s “consume” crime through a variety of popular genres, including execution sermons, criminal (auto)biographies, trial reports, and murder ballads. Since most convicted criminals in early America came from nonelite backgrounds (and often belonged to oppressed or otherwise subordinated social groups), such publications not only shed light on crime, punishment, the legal system, normative social values, power relations, and popular culture, but also provided historians with some of their most valuable sources on the day-to-day experiences of ordinary men and women. This seminar explores all of these topics. Each week, students will read topically-related clusters of early crime publications, usually in conjunction with relevant modern scholarship drawn from the fields of social history, legal history, psychology, criminology, and literary studies. The types of crimes explored include witchcraft, piracy, burglary, robbery, and various types of homicide, such as infanticide, familialicide (cases of men murdering their wives and children), and sexual homicide (or courtship murder). Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290S. Cultural Ecology and Sustainability: An Anthropological Approach. 3 Units.
In the modern period, we have witnessed spectacular scientific and technological achievements. We have also experienced devastating climate change and massive biodiversity loss that threaten life on Earth as we know it. Is it possible that the solutions to these problems are not scientific or technological, but rather cultural? How have other cultures, whether from the present or the past, dealt with sustainability challenges? How might an examination of indigenous or traditional cultures, some of which have existed sustainably for thousands of years and even enhanced the biodiversity of their environments, lead to a clearer understanding of the deleterious attitudes and actions of our own modern culture? How can we integrate the wisdom of these cultures to ensure the survival of our own? In this seminar, we will use these questions to enhance our understanding of the relationship between human culture and the natural world, as well as the ways in which a deeper understanding of cultural ecology can promote sustainability. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290T. Making: Innovation, Work, and Competition. 3 Units.
Manufacturing has been an important source of economic growth and innovation. In many countries, it has helped create a middle class by providing both well-paying jobs and cheap goods. In recent decades, however, manufacturing has declined in the US. Should we be concerned about this trend? Does off-shoring of production to places like China threaten or enhance the US standard of living or technological strength? Do efforts to protect manufacturing in the US hurt people in developing countries? How will the development of “maker spaces” (such as CWRU’s ThinkBox) affect the way goods are produced? How does high-wage Germany run a trade surplus in manufacturing? Does environmental regulation help or hurt manufacturing? In this seminar, we will address these questions both practically and theoretically. In addition to reading engineering, historical and literary depictions of manufacturing, we will visit factories and speak with leaders from industry, labor, and government. We will also consider broader economic policy questions by reading the works of prominent economists and political scientists. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290U. Power and Fashion: Dress and Politics in American History. 3 Units.
As clothing is one of the most accessible means through which we express our identities, political and social tensions are often embedded and embodied in dress. As an expressive medium, clothing and appearance became crucial in the construction of political identities and in serving as a means of control, oppression, as well as protest and resistance. This seminar will examine the links between clothing, sartorial practices and political significance. Readings will address the question of sartorial politics from a historical perspective. Special attention will be given to the role of clothes in negotiating and constructing gender, race, class, sexual, and national identities from the 18th century to the present. Students may not earn credit for both this course and HSTY 126. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 290V. Education and Inequality in America. 3 Units.
Guided by the aspiration to provide equal opportunity to all and initiatives like No Child Left Behind, the US educational system has defined itself as a free and open system that rewards accomplishment and nourishes every student's potential. It is based on a philosophy that stands in stark contrast to the foreclosed and explicitly stratified educational systems of many European countries. Why then is it the case that, compared to other advanced postindustrial societies, the US has extraordinary levels of inequality? This course will examine in detail the processes that regulate social inequality and the educational system. We will analyze how differences between students' social, cultural, and economic capital create a stratified educational experience that shapes not only how students are educated, but also the value of that education in the labor market. We will also trace how the inequalities that exist in the US education system from primary school through college play an important role in the reproduction of class inequality, challenging the myth that education is a vehicle for socioeconomic mobility. This course also explores how these inequalities in education run along the axes of race, class, and gender. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290W. Understanding Body Image through Self-Perception. 3 Units.
This course examines the historical, psychological, and cultural approaches to the self-perception of one's own body. We will explore how body standards have changed throughout history and across cultures, and how this is reflected in portraiture. Additionally, we will investigate psychological studies on body image, acknowledging the challenges in an evidence-based approach and considering medical diagnoses when distortion in self-perception occurs. Finally, we will analyze current body standards perpetuated by the media in regards to body size, shape, and gender. Through reading and discussion, students will gain a deeper understanding of healthy body image and strategies for applying it to their own lives. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 290Y. Shrinking the World: Ham Radio and Distance Communication. 3 Units.
Radio operators can talk to each other across the world, launch and use space satellite stations, and bounce their voices off the moon. And yet the Federal Communications Commission still regulates what they may say on the air. Why is that? And why does amateur radio require a license? In this course, we'll discuss the history of long-distance communication methods stretching from the British Penny Post into the modern digital age, viewed particularly through the lens of the Amateur Radio Service. We will also explore the ways that advances in communication technology have changed politics, entertainment and personal interactions. Who makes the rules for a new system of communication? What causes changes in those rules? Was Orson Welles morally, ethically, or legally responsible for causing a mass panic with his reading of "War of the Worlds?" What might the future hold for communications? Students will earn amateur radio licenses, make contacts with other radio amateurs around the world and with each other, and possibly bounce signals off the moon and listen for their return. We will also look at the ham radio culture, from QSL cards to public service and contesting. Students will learn some basic hands-on electronics, but no previous technical background is required. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 291E. Is College Worth It?. 3 Units.
Here you are at CWRU—you probably know how you got here. But what do you expect out of the experience? University education evolved over time to meet certain social and economic needs, and different universities have differing missions of education. Are you curious about the history of higher education? Do you know how universities function? What is the function of a tenured professorate, and is it an antiquated idea? Today, many people are questioning whether the educational models of the past have outlived their utility and need to be replaced by ones that are better aligned with our modern economy and technology. Does a liberal arts education prepare you for the workforce? Should it prepare you for the workforce? By examining these questions, you will gain clearer insight into your own reasons for pursuing a college degree and how to get the most out of your experience. The decisions you make now affect what happens after you graduate. How do you make the best decisions? This course will discuss these topics and students will submit additional topics about higher education for discussion and study. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 291J. Narratives of Immigration. 3 Units.
As one of the most pressing issues of the twenty-first century, immigration has captured the imagination of politicians and authors alike. In this class, we will explore the stories of those who have migrated to the United States. We will analyze how various writers create autobiographical and fictional narratives of migration, addressing issues such as adjusting to different cultures, learning new languages, and adapting to new environments. Through these stories and histories, we will ask broader questions about immigration, including: Is migration a basic human right? Is it ethical to define someone as being "illegal" for peacefully working and living in a different country from where they were born? What are the gender, ethnic, cultural, and racial barriers that exist when migrating between countries? What are the cost(s) of citizenship and embracing a new country as one's home? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 291L. Our Food, Our Lives: Food, Agriculture, Society. 3 Units.
Where does our food come from? Who grows it? What technologies have enabled the emergence of our current food system? In this seminar, we will ask and ponder these similar questions as we address the challenges posed by the global food system. We will explore the ecological consequences of industrial agriculture, the future possibilities, the livelihood of the world's farmers, food waste, and health issues caused by contemporary dietary habits. In our inquiry, we will focus on both neighborhood communities in Cleveland and various geopolitical entities including Latin America, Eastern Europe, and Southeast Asia to observe food corporations' power to control food choices. In the second part of our class, we will examine community organizations' efforts to give these choices back to the people. To this end, we will participate in various food-movement activities on or near campus and visit some local food-related organizations such as farmers markets, soup kitchens, and restaurants. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 291N. Literature of Nation-building in Francophone Africa. 3 Units.
This seminar explores the process of nation-building in former French African colonies by focusing on the impact of literature on the colonizers and the colonized. It is well established that writers in African colonies used their pens as cannons against a dehumanizing colonial system. Nor did they refrain from asking themselves what kind of nations would replace the colonial society once it had been overthrown. More precisely, their works questioned the kind of political, economic, educational, and cultural systems that could help shape the social structures and people that would inhabit these post-colonial nations. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 291O. Empathy, Identity, and the Moral Emotions. 3 Units.
We are often told to be true to ourselves. We are also told to care about others. There are times when it is difficult to do both at the same time. If being myself causes others pain, should I care? Is it possible that caring for others is an important piece of who I am? Or is it a threat to it? In such cases, our separate identities seem to challenge morality's insistence that we should not remain estranged from others or their concerns. Such challenges raise a question about the value of empathy—the ability to share the viewpoints and feelings of others. Empathy seems to explain why we care for one another, and this speaks to who we should be. Yet empathy also seems to be a threat to morality and identity, inasmuch as it might lead us to identify more with some persons than others, and so cause us to be less objective and fair. Likewise, identifying too strongly with others might undermine identity, as Stockholm syndrome and other pathologies of self-loss suggest. In this seminar, we will examine the concepts of identity, empathy, and morality through a variety of philosophical, historical, scientific, and literary texts in a collaborative attempt to understand who we are and who we ought to be. This will be a discussion-driven, writing-intensive course, ranging over religious, historical, philosophical, literary, and scientific literature, as well as music and film. Together we will examine these three concepts in all their historical, cultural, and trans-disciplinary diversity, in a collaborative attempt to understand and evaluate empathy's importance to matters of who we are and who we ought to be. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 291R. Aging Well. 3 Units.
People around the world are living longer. Researchers have examined human aging, and explored factors that contribute to the quality of life for older people. What does it mean for people to age well? Do current explanations about promoting survival, retaining physical and mental abilities, and maintaining family and social connectedness fit people's experiences? In this seminar, students will consider current theoretical explanations regarding the physiological, psychological, sociological, cultural, and spiritual dimensions that contribute to aging well. Students will analyze programs and services available in the present day and dream about programs and services of the future that could support aging well. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 291U. Talking Bodies: An anthropological approach to tattoos, the body, & American culture. 3 Units.
Tattoos, once seen as disgraceful and lowbrow, are undergoing a renaissance. Undoubtedly you have seen a tattoo today; on you, your friends, your parents, someone on the street, or in the media. What explains this increased social acceptance of tattoos? Why are people motivated to get tattoos in the first place? What are they communicating about themselves? How, and why, do segments of American culture view tattoos differently? To answer these questions, we will use anthropology, the study of cultures around the people, as a lens to understand people's use of, and attitudes toward, tattoos in American culture. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 291X. "We're Dying in America": The History of the U.S. AIDS Crisis. 3 Units.
Thirty-seven years have passed since the summer of 1981, when the Centers for Disease Control published a report on the mysterious deaths of five previously-healthy gay men. In that time, more than thirty-nine million people have died of AIDS around the globe. Approximately 600,000 of those people died in the United States; at least 10,000 more Americans will die this year. Why, given the global scope of the crisis and the dramatic impact it has had on US society and culture, do so few students learn about the AIDS crisis in school? Why does it receive less attention than, for example, terrorism? In this course, we will study the first 20 years of the United States’ AIDS crisis, and use what we learn to contemplate the current state of HIV-positive people and people with AIDS. We will examine the origins of AIDS as a biological, political, and cultural phenomenon in the hopes of understanding why the United States experienced the virus as it did. We will also address the myriad responses to the virus by presidents and preachers, artists and activists, doctors and business people. How did this tragedy impact American politics and culture? What lessons did we learn, and what mistakes are we still repeating today? How can (and should) the history of AIDS inform our response to the opioid crisis, or the battle over Obamacare? Are we ready for the next epidemic? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 291Y. Immigration, Identity, and Writing. 3 Units.
For many in Europe and North America, globalization and immigration increasingly present a challenge to cultural identity. British Prime Minister Theresa May articulated this view when she stated in 2016, "If you believe you’re a citizen of the world, you’re a citizen of nowhere." More than expressing misgivings about the consequence of globalization and immigration, May was asserting the importance of belonging to a place and a culture. In contrast to May, the genre of writing known as global literature presents a framework for understanding our globalized world not as a cause for anxiety, but rather as an opportunity to understand how new cultural, social, and national identities take shape. As the writer Adam Kirsch has observed, "individual lives are now lived and conceived under the sign of the whole globe." One example of this more global view is Nigerian author Chimamanda Ngozi Adichie who, in We Should All Be Feminists, uses her experience of immigration to reconcile western feminism with the expectations of her native society. As the popularity and influence of writers like Adichie attest, new voices and cultural phenomenon in the hopes of understanding why the United States experienced the virus as it did. We will also address the myriad responses to the virus by presidents and preachers, artists and activists, doctors and business people. How did this tragedy impact American politics and culture? What lessons did we learn, and what mistakes are we still repeating today? How can (and should) the history of AIDS inform our response to the opioid crisis, or the battle over Obamacare? Are we ready for the next epidemic? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 291Z. Queer Christianity. 3 Units.
We live in a historical moment when the relationship between queerness and Christianity is being reconsidered and hotly debated. To better understand this debate, as well as the differences and potential common ground between members of the queer and Christian communities (including those who belong to both!), this seminar examines the history of Christianity and its relationship to queerness. Is Christianity a force for domination or liberation? Orthodoxy or creative multiplicity? Normativity or queerness? To answer these questions, we will read literature that explores how Christianity has both suppressed and in some sense created queerness, as well as how it has been reclaimed by queer communities. We will also look closely at how these historical tensions are being played out locally today. Special attention also will be given to the range of intersecting identities and communities that have responded to the meeting of faith and sexuality in various ways, drawing from diverse contexts of race, ability/disability, gender, and class. Readings include selections from the Bible, books about theology, and documentaries and memoirs attesting to the experience of LGBT Christians. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 292A. What Makes People Happy. 3 Units.
What makes people happy? What prevents them from achieving happiness and maintaining it over time? Over the past 20 years, psychologists and cognitive scientists been studying these questions. Achieving happiness seems like a simple goal, and most people can readily name many things that make them happy, such as children, chocolate cake, and success at work or school. However, science shows that happiness is more complicated, as many of the things that people think make them happy also make them quite unhappy. Similarly, data suggests that many of the things that make people happy in the short run do not lead to long-term satisfaction with life. Whereas popular self-help books suggest a variety of ways to increase satisfaction with life, scientific researchers argue that our happiness is essentially predetermined by a genetic set-point. The interdisciplinary approach of this seminar will clarify some of this confusion by focusing on happiness from a variety of angles: the role of the brain in the perception of happiness, the effects happiness has on decision making, and the difference between short- and long-term approaches to boosting happiness. Students will not get credit for this course if they previously earned credit for FSSY 157 Pursuits of Happiness. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
**USSO 292E. Many Ways to Be a Woman: Intersectional Traditions of Feminism and Femininity. 3 Units.**

Historically, "feminism" as a word has challenged people's political and personal investments in different ways as they encounter issues such as voting and jobs, marriage and divorce, racism and classism, homophobia and transphobia, healthcare and disability, personal liberties and social protections. Alongside these traditions of feminism, "femininity" has been a concept that seems simultaneously ancient while also under constant revision as women of color, post-colonialism, disability, queer, transgender and intersex thinkers introduce underrepresented perspectives. Facing these reactions and reforms, some people feel disinclined to identify with either word, adding to the list of "F-words" that can raise conflict in polite company. Yet however one feels about these F-words, feminism and femininity have regularly proven important movements in public debates around government, the work-force, education, and art. This seminar seeks to connect students with intersectional and sometimes conflicting traditions in politics and gender theory in order to broaden the horizons of who or what gets to be identified with feminism and femininity. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

**USSO 292G. Creativity and Spirituality. 3 Units.**

Humans have been developing the capacity to understand the supernatural forces that shape the universe and the meaning of our existence within it. This spiritual evolution is powered by people's integral primeval drive to be creative. We tend to look at the arts and sciences as a visible demonstration of creativity, but we all engage that creative instinct, consciously or unconsciously, in every facet of our lives. We draw on creativity whether we are dealing with everyday problems or significant transformative experiences. But what is creativity exactly? How does it work? Is creativity in the arts the same as creativity in the sciences? In this seminar, we will examine a variety of theories that attempt to explain creativity. We will also use research in the field of psychology and creativity studies to explore the relationship between an individual's creativity and their personality, experience, and environment, as well as whether creativity can be an acquired skill (and if so, how?). What role can creativity play in our work and play? What role does creativity play in our sense of selves as spiritual beings? We will investigate these questions using an integrated multi-dimensional methodology that combines theoretical and experiential approaches. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

**USSO 292H. Religion and Human Rights. 3 Units.**

This seminar examines the theories that underwrite human rights, as well as some contemporary human rights issues. We will begin by familiarizing ourselves with the history and theory of human rights. In doing so, we will examine how thinking about human rights is different from the way we think about legal and political rights. Then, we will use this historical and theoretical framework to examine the intersection between human rights issues— including gender rights, minority rights, and religious freedom—and religious belief and practice. We will use a variety of cases, from the place of racial and religious minorities in North American to gender and women's rights in India, to understand how these issues manifest themselves. How far do our historical and theoretical explorations help us understand and perhaps offer solutions to these vexing issues? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

**USSO 292K. The Corpse in America, 1865 to Today. 3 Units.**

When are the dead not really dead? In the twenty-first century, a person's biological death activates a series of rituals to sanitize, memorialize, and dispose of their remains in a timely manner. Yet, American history is filled with exceptions to this rule. Using methodologies from history, anthropology, material culture, and visual culture studies, this course will address how the corpse continues to "live" as active material in American life. We will investigate how the corpse attains new meanings as a commercial object, a specimen, a relic, forensic evidence, or a museum display. We will explore how these shifting meanings are rooted in—and also help to construct—larger historical narratives about political conflict, economic disparity, and social inequality in the United States. The course topics allows us to locate continuities between the past and present, revealing that contemporary Americans are still wrestling with many of the same practical and moral questions about the appropriate place for the dead in our society. Our readings and visual materials, some of which are raw and graphic, will confront us with difficult questions about the value of the human body, the limits of bodily autonomy, and the consequences of social oppression and state violence in the United States. Together, these topics will challenge the existence of any single "American" way of death and will ask us to examine our own position as scholars, witnesses, and perpetrators of uncomfortable truths about the corpse in America. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

**USSO 292N. Pyramids: The Building Blocks of Ancient Egypt. 3 Units.**

One of the first images that springs to mind at the mention of Ancient Egypt is a pyramid. These iconic stone monuments have been studied by generations of astronomers, historians, archaeologists, physicists, architects and mathematicians (to name a few) and yet, they still remain enigmatic. Who built them? What were they for? What did they mean? Although people have tended to focus on the mystery of how Ancient Egyptians built the pyramids, the more interesting question to consider is how pyramids built Ancient Egyptian civilization. In this seminar, we will use archaeological and textual material to explore the development of pyramids across Ancient Egypt's history. More specifically, we will investigate how pyramids shaped kingship and government, economics, architecture, religious ideology and social structure. In doing so, we will interact with, and learn to appreciate, a culture and people with a very different worldview from our own. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSO 292V. Mapping Music Through the Digital Humanities: A Cleveland Atlas. 3 Units.

For all its celebrated preoccupation with rock, Cleveland is home to a wide variety of musical genres: jazz, blues, classical, polka, hip hop, gospel, among many others. Cleveland is also a home on the move, a city of immigration and outmigtration, a city of waterways, bridges and commuter rails. Then again, Cleveland is a city of enclaves, borders and barricades, social distance despite geographic nearness. In this seminar, we will ask a fundamental question: is music like a bridge that connects different people in the city or is it a border that structures divisions? To answer this question, we will put digital mapping tools to use in better understanding the musical patterns that shape city life over time. We will examine the links between dominant and subcultural music; analyze music's relationship to socio-economic forces such as segregation, urban decline, suburban flight, and revitalization; and reflect on how music defines Cleveland's place in the national imagination. In the process, students will contribute to a digital atlas of Cleveland's shifting musical soundscape. Music, at once rooted in identity and as rootless as radio waves, presents an alternate lens for understanding the routes and rifts shaping urban life. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSO 292W. Collectors and Their Collections. 3 Units.

"The passion for accumulation is upon us," The Atlantic Monthly announced a century ago. "We fill our rooms, our walls, our tables, our desks, with things, things, things." This observation acknowledges an urge that is just as prevalent today. Certainly, we see evidence of this collecting behavior everywhere, from pop culture artifacts such as comic books and Magic cards, to "high culture" objects such as artworks and rare books, to esoteric miscellanea such as animal skulls and street-signs. In this seminar, we will examine what motivates people to seek out objects and bring them together, often in creative and surprising ways. What is the difference between building a collection and being a hoarder? Why do some collectors enjoy showing off their collections, while others keep them private? How has digitalization and social media changed collecting? Through these questions we will explore the psychological, social, and historical impulses that drive us to fill our spaces with things, as well as how the act of collecting helps us make sense of the world and our place in it. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.

USSY (USSY)

USSY 201. Mathematical Life and Death in the Ancient Greek World. 3 Units.

A seminar on the earliest mathematical proofs. The Greek Thales studied with Egyptian priests and gave the first geometric proof. Pythagoras went to Egypt, on Thales's advice, then founded a mathematical religious colony in Italy. Plato took much philosophy and mathematics from the Pythagoreans. Aristotle took only mathematics. Their arguments over mathematical science echoed in the world-city of Alexandria, where even slaves were encouraged to be scholars. There Euclid wrote the standard mathematics text for the next 2,000 years. The great Archimedes synthesized Platonic and Aristotelian conceptions. His mathematics inspired Galileo's and Newton's physics. His war machines inspired a Roman soldier to kill him on sight. A woman, Hypatia, later became the leading mathematician and Platonist philosopher of Alexandria and was torn to pieces by a mob for her pagan ideas. What did mathematics mean to these people? What can we learn about religious freedom, or about the science of war? Why do we all accept mathematics form 200 BC whole only specialist scholars remember the physics, biology. or religion of ancient Greece? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSO/USSO; OR Requisites not met permission.
USSY 204. System Thinking. 3 Units.
This is a seminar course in which students critically examine the way that language is used to model and analyze the social world and its organizations. System thinking is used by business leaders, economists, policy analysts and planners to represent the socio-economic world so that they can manage it. During the seminar, students will read and discuss key works that lay the foundations of system thinking and will apply system thinking techniques to a socio-economic situation of interest to them. The emphasis will be on questioning the premises of system thinking, surfacing its strengths and weaknesses, and grappling with its ethical implications. Some key ideas related to system thinking that will be explored include: information theory, cybernetics, system modeling, language, meta language, modeling and intervention in social systems. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 211. Beethoven and the Age of Revolution. 3 Units.
Beethoven's music is symbolic of the age and spirit of change which reached its zenith with the French Revolution. Fuelled by political, social, and emotional reactions, his oeuvre was remarkable in every way. From the early works, imitative of Haydn and Mozart, through his truly unique later compositions, Beethoven was revolutionary in his person and in his music. The course will center around specific Beethoven masterworks which are being presented by University Circle Institutions, and student attendance at these concerts will be required. Class sessions will involve discussions concerning the historical and cultural setting, influences, and analytic investigation into these masterworks. Readings will be taken from Joseph Kaman and Alan Tyson (The New Grove Beethoven), Frida Knight (Beethoven and the Age of Revolution), and George Marek (Beethoven: Biography of a Genius). This course is directed towards the general university student, and no specialized knowledge of music is necessary, although certain rudimentary aspects of musical discourse will be covered. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 227. Travel Writing on Screen. 3 Units.
Through the image of the traveler in a wide range of films, we will examine such issues as border crossing, culture shock, and the nature of memory. Topics include: The Grand Tour, pilgrimage, exile, and imaginary journeys. A group presentation, 5 short-reaction papers, and a take-home final essay are required. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 229. Art Mirrors Art. 3 Units.
At the beginning of the Renaissance, about the year 1400, an important new theme arose in painting, sculpture and printmaking—the theme of art about art. At a time when the status of artists in society was rising, new subjects began to appear in western European art that depicted both the artist and the process of making art. Self portraits of artists, depictions of Saint Luke painting the Virgin Mary, images of women as artists and muses, classical and mythological stories of art making (Pygmalion and Galatea, Apelles painting the mistress of Alexander the Great), depictions of painting and sculpture studios and of art academies and instruction, scenes of art galleries and collections, still lifes about art, all reflected this new cultural interest in art as a topic in itself. This seminar will look at individual works of art and subject types to understand what they tell us about the role of the arts and the changing status of the artist in the Renaissance and early modern period, up to the eve of the French Revolution, about 1789. The works we study will thus be understood as symbolic indicators of social status and ideas about what art meant to European society. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 233. Constructing the Self. 3 Units.
The purpose of this seminar is to explore how individuals construct and present the self. The class will explore what we know of the self from historical, sociological, psychological, and philosophical perspectives. We will examine how the meaning of the self has changed over time. We will also explore where the self comes from, and the role of parents, peers and society in making a person who they are. Finally, we will explore how the self is defined for others, whether through an online presence, fashion choices, or the names that people prefer for themselves. Specific topics will include Freud's view of the self as unavailable to consciousness, the importance and fallacy of high self-esteem, individualist and collective societies, and the ethics of self-presentation. Students should expect to develop their critical thinking as well as writing and oral presentation skills through this class. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 241. The Birth of the Modern: 1905-1925. 3 Units.
"The Birth of the Modern: 1905-1925" will attempt to answer the question "What is the modern?" by exploring some of the breakthrough works of literature, music, art, and scientific theory in the first decades of the twentieth century. We will study what characterizes the new modes of thinking or "language" of modernity, developed in experimental work across the arts, the sciences, and the social sciences. We will be examining some of the major manifestos of and statements about the nature of Modernism in order to see how they illuminate, for example, a novel by James Joyce or a painting by Picasso, a composition by Stravinsky, a scientific theory of Einstein's, or a psychological theory of Freud's. At the conclusion of the seminar, students will present their findings and write a research paper about "the modern" as it relates to a field of particular interest to them. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 249. Paris: From Revolution to Globalization. 3 Units.
This course explores the history of Paris as it became the center of French national life, international culture and politics in the 19th century and a global city in the late 20th. The course acquaints students with the history of Paris as a dynamic environment deeply influenced by industrializing forces during this period. We will study contemporary writings, art and popular culture economic developments, political and military events, and architectural and engineering projects that have profoundly shaped the city and popular responses to it. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 250. Medical Narratives. 3 Units.
This course examines the relationship between medicine and narrative by exploring the representational structures and narrative conventions that have been used to understand and communicate the experience of illness, to tell stories about the human body, and to diagnose and treat disease. The course focuses on literary texts (including novels, plays, short stories and memoirs) written by doctors, patients, nurses and creative writers, as well as on medical case histories from different cultures and historical periods. It examines such topics as the uses of narrative in medical practice; the uses of metaphor in conceptualizing and representing disease; the ethical dilemmas posed by medical research and practice; the therapeutic value of narrative; the structural similarities (and historical links) between detective fiction and medical case histories; the imaginative function of illness in literature; the cultural myths and iconography of disease in different historical periods; the representation of physical and mental illness and the human body in language and art, and cultural responses to major health crises such as bubonic plague, syphilis, and AIDS. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 275. Colors, Capes, and Characters: American Comics Symbolism. 3 Units.
The history of the comic book is a vital site for critical questions about intersections of art and popular culture in America. In this course we will not simply read “funny books,” but will examine a genre that is as unique as its many colorful protagonists: from Popeye to Superman, Wonder Woman to the X-men, comics have given us larger-than-life characters who are often caricatures of dominant (and sometimes subversive) American ideologies. We will learn not only the history of this unique genre, but will interrogate what it means to truly read comics artistically, politically, culturally, and symbolically. At heart, reading comics in an exercise in interpretation: given visual symbols, what meanings can we take from them? What can comics tell us? And how can we write about them in intelligent, critical ways? In this course we will learn to approach comics through critical thinking strategies; that is, questioning what they are, what they say, and where they come from. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 280. Passport to Eastern Europe. 3 Units.
Images and texts shape rather than merely reflect the world and its geopolitical structures. Novels, films, and myths make significant contributions to the varied ways that people make sense of continents, nations, and other (often too conveniently used) geopolitical categories such as the East and West. After considering the ways in which the European continent has been imagined over the centuries, we will explore texts and films that have contributed to the invention of East Central Europe and the Balkans and continue to shape our understanding of the eastern parts of Europe. The class will include analyses of current news coverage of this area to unpack representations disseminated by the media and to reflect on the forces that aim to shape our understanding of geopolitical entities. Ultimately, the course hopes to address geopolitical assumptions, evaluate cultural contexts, and help you think critically about the constructed nature of geopolitical categories. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 284. The Art of Madness. 3 Units.
Taking a historical approach, this course will examine the relationship between the evolution of social and medical attitudes toward mental illness and fictional representations of madness in literature. Beginning with the early modern period, students will compare period sociological and medical narratives on mental illness to fiction works with representations of madness. In so doing, students will consider how the interactive dynamics of art and science contribute to cultural and social thought. Specific areas of inquiry will include: the development of psychology and its effect on societal perceptions of mental illness; cultural developments that occurred in response to changing perceptions of mental illness over the centuries; and the use of representational structures and narrative conventions in understanding and communicating the experience of mental illness. Other interrogations will include the imaginative function of mental illness in literature (e.g., melancholy’s role in creativity); the cultural myths in iconography of mental illness in different historical periods; and ethical dilemmas regarding mental illness as reflected in both medical and literary narratives. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 285V. Castaways and Cannibals: Stories of Empire. 3 Units.
Through a study of texts that exploit “new world” images like the castaway, the cannibal, the wild man, and the exotic woman, this course explores the ideologies that propelled nineteenth-century imperialism, particularly regarding the British in Australia and South Africa. The class will consider how British settlers made “homes” in hostile and unfamiliar climates, how they addressed the problem of unfriendly and unequal contact with indigenous peoples, and how contemporary novelists reevaluate the historical past. The course will work under the premise that contemporary geopolitical realities have been shaped by the imaginative work of British colonialists who, under the principle of terra nullius or “no man’s land,” claimed the land and the resources of these southern territories and dismissed the very existence of the indigenous peoples that populated them. The scope of the course will be broadly historical, exploring works that participated in British imperialism, as well as those that take a modern perspective. Course materials will be drawn from a variety of genres, including fiction, poetry, film, ethnography, natural history, history, and criticism. Ultimately, students will consider how narratives participate in the shaping of reality and of real-world relations of power. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 286S. Shakesploitation of an Icon: Four Hundred Years of Shakespeare Marketing. 3 Units.
Following the interregnum in England, William Shakespeare began a long, sustained trajectory as a cultural icon, first in England, but eventually among all English-speaking cultures. In the process, Shakespeare’s works have been reinterpreted, adapted, re-contexted, commoditized, and re-purposed for the sake of art, educational relevance, and entertainment. In the process, Shakespeare has often become the tool of unabashed commercialism, a practice which has come to be known as “Shakesploitation.” But why is Shakespeare’s work so frequently purloined? Why are we out of context references to him so ubiquitous? Why do people tend to equate the name of Shakespeare with qualities of genius? Why have his works been continually adapted (often shamelessly) not only for the stage, but into other genres, including operas, paintings, novels and films? How do we account for the proliferation of Shakespeare-based self-help books such as Shakespeare on Leadership? Why is the infant stimulation video Baby Shakespeare a best-seller? This course will explore these questions not only by reading a selection of Shakespeare’s most enduring works, but also by examining criticism, adaptations, and marketing strategies that have been applied to Shakespeare’s image and works over the last four centuries. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 286V. Food Craze: (No) Reservations. 3 Units.
The great number of food-related TV-shows indicate an unprecedented interest in questions about and fascination with food; in fact, these TV shows allure viewers with the appeal of a myth: eating involves discovery (Anthony Bourdain’s No Reservations, On the Road Again with Mario Batali, Planet Food), thrill (Bizarre Foods), or “supernatural” competition (Man vs. Food, Top Chef). These television shows and food-related writings that accompany them in earnest “worship” food and often promote ideas of multiculturalism by which exciting and novel locales, foods, and meal preparatory techniques are discovered. The objective of this course is to “indulge” in these shows and food writings and scrutinize them: What explains such fascination with the viewing of and reading about food? How do food-exploration trips expand on ideas of multiculturalism and globalisation? What explains the centrality and “mythical” nature of food in the twenty-first century? To begin these conversations, we will touch on a plethora of food writing works including works motivated by environmental and health concerns such as Michael Pollan’s essays. Then we look at the world of cookbooks (including the cookbooks of Julia Child and Rachel Ray), food blogs and TV-shows, and essays by Bill Buford and Calvin Trillin among many others. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 287M. Literature of 9/11. 3 Units.
Nearly 10 years after the September 11, 2001 terrorist attacks, politicians, economists, artists, and educators continue to use the umbrella term "post-9/11" to describe our general cultural sensibility. Yet, what does it mean, specifically, to live in a "post-9/11" America? How have the cataclysmic events of that day altered our political and intellectual points of view? In this course, we will explore these questions by considering how novelists, poets, and other writers have and continue to represent September 11th. We will analyze techniques used to narrate the story of 9/11, investigating how American cultural values--or critiques of such values--influence the aesthetic choices that writers make. Our course will begin chronologically at "Ground Zero," as we examine representations of the immediate urban trauma while exploring the tensions between memorial and commemoration, spectacle and commercial pursuits. We will then focus on works by both American and international authors addressing the days and months following the attacks. We will examine how America is depicted with respect to its foreign policy and domestic politics, paying particular attention to the space of the "home." In addition to novels, short fiction, and poetry, we will read cultural criticism and some philosophy. Students will be given additional opportunities to explore film and other visual or new media representations of 9/11. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/ USSY; OR Requisites not met permission.

USSY 287T. King Arthur's Days and Knights. 3 Units.
Few legends have remained popular and vital as long as the story of King Arthur has. Beginning with brief references in sixth-century histories, Arthur has risen again and again in medieval adventure stories, Victorian lyrics, and contemporary cinema. Over thirty-five films, in fact, have depicted the adventures of the Round Table. How can we explain this phenomenon? To investigate this question, this seminar will trace the development of the legend from its oldest remaining written manifestations to the present day. A chronological approach will allow us to see how Arthur's story accumulated new elements over time, including the famous love affair between Lancelot and Guinevere and the equally famous quest for the Holy Grail--neither of which appeared in the earliest versions of the story. We will discuss topics such as what Arthur has represented at different periods in time and how his story changes when it is retold in different genres and media. We will also consider how writers have adapted Round Table stories to suit political and social agendas. Finally, to broaden our perspective we will spend a unit exploring legends from a variety of cultures and comparing their presentation of heroism. Texts will include Sir Gawain and the Green Knight, pieces of Sir Thomas Malory's The Death of Arthur, the indispensable Monty Python and the Holy Grail, and portions of its new incarnation, Spamalot. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/ USSY; OR Requisites not met permission.

USSY 287X. Paris in the Arts. 3 Units.
Since the late eighteenth century, Paris has been a favorite subject for visual artists and writers alike, as well as the birthplace of several seminal artistic movements, such as Impressionism, Cubism, and the New Wave. This course will use representations of Paris in the arts as lenses through which the identity and recent history of this major city will come into focus. Further, stories, photographs, and films that stage the city of Paris and its people will also allow us to explore the broader relationship between art, the city, and the plight of modern man. The course will include a wide range of artworks, from mid-nineteenth century photographs documenting the destruction of Medieval Paris and the advent of a rational capital, to stories chronicling the fate of hopeful newcomers, and films where the city is treated either as intimate landscape or impersonal grid. The course will be both discussion based and writing intensive: students will be encouraged to envision class participation and writing assignments as means to analyze collaboratively, as well as individually, the material at hand. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/ USSY; OR Requisites not met permission.

USSY 288C. Fly Fishing: the Sport, the Metaphysics, and the Literature. 3 Units.
According to WorldCat--the world's largest database of library content--the amount of literature on fly fishing dwarfs that of any other sport. What explains this interest? In this seminar, we will examine the appeal and cultural significance of fly fishing, especially as a site for understanding an individual's relationship to the natural world. We will read both fiction and non-fiction works that will help us explore the fundamental nature of sport, how it varies from other forms of recreation, and whether sport can be considered art. We will also investigate what prompts authors to imbue fly fishing with metaphysical, spiritual, or aesthetic dimensions. And we will study how the intent and style of such works differ from traditional academic research writing, as well as how those elements of craft might be integrated into an effective academic writing style. We will also learn by experiencing some of the sport's skills, including fly tying and casting. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/ USSY; OR Requisites not met permission.
USSY 288I. Diversions: Experimental Stories and New Media. 3 Units.
In this course, students will study works in which the authors and artists have experimented with traditional linear forms and created stories that are, for instance, labyrinthine, framed, collaged, geometrical, digressive, and even networked. While both print-based and digital texts offer spaces for diverse and deeply engaging written or visual performances, they also require further critical inquiry into the ways in which they create, reflect, or resist social and cultural values. Our focus in this course will be exploring how stories (and other texts) - in print, on screen, on canvas, in digital formats - that don't follow or that play with conventional rules of order encourage us to participate in making sense of our contemporary world. The goals of the course include: exploring the relationship between form and content in written and visual productions, developing a critical perspective from which to enjoy, assess, and respond creatively to traditional print and multimedia presentations, and making excellent use of research resources at CWRU and cultural resources at University Circle. In addition, students will work to develop their writing and presentation skills and to innovate novel models of research writing. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 288R. Cultural and Ethical Issues in American-Chinese Business Relations. 3 Units.
The American and Chinese economies are the two biggest economies in the world. The Chinese economy is the fastest growing large economy in the world. The dynamic American economy is unique in its combination of large multinational enterprises and small entrepreneurial firms. The American economy is characterized by a vast private sector, the rule of law, and the largest private capital markets in the world. The Chinese economy is 30 years into a period of reform from communist industrial organization to "socialism with Chinese characteristics", which includes a significant role for the private sector. The Chinese economy is still an experiment. The established American business system exists within a democratic political system, where corporate lobbying has a significant influence on the creation of laws and government policy. The Chinese economy is still under the tight control of the Chinese Communist Party, a one-party dictatorship. When Americans go to China to do business, they find the cultural, social, political, and moral systems vastly different than what they are familiar with. Transparency International Ranks China 27 out of 28 of the most corrupt large economies in the world. In China, bribery of government officials and kickbacks to sales and purchasing managers is common. Key questions we will investigate are: 1. In what ways are the two business systems similar and different? 2. What is the nature of Chinese social relations? How do they differ from American social relations? What effect do they have on business? 3. What is the nature of the Chinese political system? What impact does it have on business in China? 4. How do American business people negotiate the Chinese business system? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 288V. Seclusion, Gender and the Exotic: Imagining the Harem. 3 Units.
When the term "harem" is invoked, the first image that comes to mind is of scantily clad women living in sequestered opulence in some exotic, yet vaguely "Eastern" place. This image has been reproduced and perpetuated through art, literature and music to the degree that even today, familiar themes of seduction, passivity and mystery related to the harem can be found throughout popular culture. Historically, gender segregation reaches into antiquity and exists in a variety of forms, cross-culturally. The term "harem" was not used regularly until the 13th century, and then only referred to the specific form of gender segregation used by the Ottoman court. Application of the word "harem" to all women's quarters in other cultures was the result of European contact with the Ottoman Empire, despite the fact that other cultures often had their own, distinct, terminology for women's spaces. In this seminar, we will explore the history and practice of gender segregation as a means to examine how the idea of the harem was constructed in the Eastern and Western imagination. Under what circumstances did women live separately? How were gendered spaces created, justified and maintained? Where did our image of the harem come from? Using primary and secondary sources, we will examine a selection of histories and representations of the harem in literature, slave and travel narratives, and religion. As the Western idea of the harem is part of what Edward Said theorized as "Orientalism", we will explore Said's theory as well as subsequent theories related to gender and the exotic. In addition, we will look at images of women's quarters from antiquity to the present and listen to representations of the exotic in music. Our goal is not only to study the historical fact of the harem, but also to engage issues related to gender, the exotic and representation from different disciplinary and cultural points of view. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 288Y. Shots in the Dark: Investigating Crime Films. 3 Units.
Crime movies and their subgenres (Gangster, film noir, detective, police) are the most enduringly popular of all Hollywood genres. They've been around since the silent era and attest to America's fascination with crime. But another reason we are so attracted to crime films stems from a pair of contradictory narrative projects that underlie the genre. On the one hand, these films valorize the distinctions between the genre's stock characters—criminal, victim and avenger—in order to affirm the social, moral or institutional order. On the other hand, crime movies explore the relations between the three roles in order to mount a critique that challenges that order. In addition to emphasizing film studies, we will study the films for what they say about crime, criminals and criminal law. As most crime films contain an investigation, so too will the organization of the course. There are methods for analyzing film just as there are methods for investigating a crime scene. Investigation requires identifying, collecting, analyzing and interpreting evidence. We'll start by investigating what makes the genre so enduring—its mise-en-scene, intent or characters? You will be reporting your findings in three scholarly papers: a formal analysis on a specific film, a sociological analysis of a specific film and a research paper with documentation. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 289A. Do We Have Free Will?. 3 Units.
Concepts such as freedom, choice, moral responsibility, and autonomy are commonly invoked to describe our sense, as human beings, that our actions and thoughts are really our own. This seems like experiential commonsense-when I choose to read a novel instead of a philosophy text it feels like the decision to do so was made by me, that there was no coercion, or other seen or unseen force, that intervened to make me choose as I did. We extend this logic to the judgment of moral and legal responsibility. If you engage in good behavior, you get the praise; if you do bad things, you are blameworthy. Despite our self-perception that we freely make decisions and choose our actions, we sometimes invoke the notion that certain events are the result of some prior cause or circumstance that determines what occurs in the present. In this instance, we do not appear to be fully free in our choices because we cannot undo the causes that dictate what is taking place here and now. To the extent that we experience current actions as having a cause in the past, we are flouting with the idea that our behavior is not wholly free, but determined or conditioned by what has come before. Determinism, necessity, fate, destiny, predestination: these are terms typically used to describe the sense that our actions and thoughts are the result of unknown forces or circumstances beyond our control. This course uses classic and contemporary texts, taken from multiple cultural traditions, to explore the problem of free will and related issues of body/mind dualism and personal identity. Although the term "free will" does not appear in all cultural contexts, found everywhere are questions of whether we are free to act and think as we wish or whether our thoughts and actions are in some way determined. We also read science fiction short stories as thought experiments in order to help us understand the ramifications of various positions on free will and related problems. This course is discussion-based and writing-intensive. Classes focus on analysis and interpretation of texts and ideas. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in USSY/USSY; OR Requisites not met permission.

USSY 289G. The American West on Film. 3 Units.
Few geographical areas in the United States contain as many tall tales and mythological figures as the American frontier. From an extreme point of view, the West is the only American myth because no other nation can claim the cowboy, the Native American, or the immigrant worker on the transcontinental railroad. And yet, each of these figures remains spectacularly diverse. We celebrate their variety and lionize their individuality in film, popular novels, and cultural criticism. From the visions of the New World to the conquest of the frontier, the color of the American West proliferates and transforms, defining our culture. In this course, we will investigate how critics have understood our fascination with the Western frontier. The class will broadly explore version of the frontier in novels, films, and historical accounts. Reading about the history of the actual west, the course will then examine how the films of the twentieth century alter history in order to express the fantasies and anxieties of their own time. By studying both history and film, we will be able to interrogate manifest destiny and the myth of American exceptionalism. What makes the West such an integral part of our understanding of America? How has its actual history become myth? What does the American fascination with the cowboy, the Native American, or the outlaw imply about our nation? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 289I. The Art of Science. 3 Units.
This is an interdisciplinary course that will explore the intersection between two disparate but often-connected fields, the history of art and the history of science. Although these fields are separated on college campuses today, they share a history that is united by a common philosophical question: how do we evaluate and know the world around us? The documentation of that knowledge is often visual—whether written or painted, tabulated or carved—images play an essential role in the shaping and recording of information. Beginning with the Renaissance revival of Pliny’s Natural History (c. 77-79 BCE) this class will focus on the complex ways in which science and art overlap and enrich one another. Topics explored in this course include: mathematical theory and linear perspective; anatomical dissection and naturalism in figure painting; optics, lenses, and realism; Copernicus, Galileo and religious painting; botany and scientific illustration; natural history and fine art collecting, etc. Classes will be supplemented by visits to the Museum of Natural History, the Cleveland Museum of Art, and the Dittrick Museum of Medical History. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 289J. Beauty Myths Today. 3 Units.
Published just over 20 years ago, Naomi Wolf’s influential study “The Beauty Myth” significantly influenced popular thinking about body image. Analyzing both cultural trends and empirical data, Wolf argued that as women made unprecedented advances in public life in the latter half of the 20th century, they were at the same time held to increasingly unrealistic standards of physical beauty. Wolf’s study not only contributed to extant analyses of sexism in the media, but also introduced to mainstream readers the politics of the representation of women’s bodies in popular culture. This course will examine to what extent Wolf’s original claim hold true today. In other words, what physical standards must one meet in order to be considered professionally and personally successful? In exploring this question, we will look at the origins and current workings of the American beauty industry, considering the changing representation of the ideal body throughout the 20th century. We’ll read texts by historians, philosophers, novelists, poets, cultural critics, and journalists who examine the politics of beauty. To both (re-)define and trace the continuing effects of beauty myths in the 21st century, we’ll consider the rhetoric of ideal womanhood as it shows up in popular texts such as websites promoting anorexia, TV shows about plastic surgery, diet books, magazines, and guides for mothers. Students will have opportunities to define the beauty myth more broadly, exploring its effects on men and its mediating presence in other cultural sites. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 289X. Identity Theft, 1500-1800. 3 Units.
Religious persecution during the early modern period (16th-18th centuries) compelled Jews to attend Mass, Muslims to baptize their children and Protestants to count Hail Marys on a rosary. European exploration of Asia, Africa and the Americas inspired an Englishman to pass himself off as Taiwanese and an African to present himself as a European. The choice between marriage and a convert led one woman to cut off her hair, sew her skirt into britches and make herself into a conquistador in Peru. In pursuit of social mobility, courtiers remade themselves to suit the conventions of the court. Posing, passing and pretending, these early modern Europeans crossed lines of religion, gender, race and class. Today we might call some of these figures impostors but praise others as self-made men and women. What was the difference between lying and self-fashioning in early modern Europe? What forces and phenomena compelled people to remake themselves? Was the early modern period of the age of dissimulation? This course explores these questions by reading memoirs, handbooks, inquisitorial documents and plays from the period in light of contemporary theoretical literature. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 289Y. Reading and Writing Biography. 3 Units.
The study and practice of biography, that is, writing about someone’s life, is an important tool for understanding how meaning is constructed. In this class, we will learn some of the history of biography and what it hopes to accomplish in its various sub-genres. Why are biographies so popular? Why are we so interested in them? What do they do? Is it possible to perfectly represent an objective truth of someone or does the discussion of someone else’s life require a more symbolic interpretation of things? We will engage in reading and discussing some important and contemporary biographies in a variety of styles and genres from autobiography to works of near-fiction. We will learn how researchers use facts to construct more symbolic narratives around an argument that tells a story about someone’s life in a way that engages with important issues of self, audience, and the location of truth. As our final research project, we will undertake our own biographical projects where we will do primary research in order to construct focused narratives of people of our own choosing. To work up to this point, we will work on our own autobiographies, look at the lives of things, and look at some films which foreground the narrative of life. This course will be of great use to writers and researchers who must be able to communicate by any kind of true account in a way that is both engaging and comprehensive. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 290C. Out of Proportion. 3 Units.
In this seminar, we will explore the meaning of things great and small, from the largest buildings and greatest distances, to nanotechnology and the smallest viruses. The seminar’s goal will be to inspire critical thinking by confronting our fascination with things expanding and contracting, growing and shrinking, things speeded up and things slowed down. We will approach the subject from a variety of disciplines - cultural history, psychology, mathematics, philosophy, literature, economics, and the sciences - with the intention of unpacking both the topic itself and the tools that we use to explain our world. We will ask questions about why we find gigantism and dwarfism unsettling; how we define ugliness and beauty; how we understand the odds and statistics of horrific or wonderful things happening to us; and how this determines our behavior. After examining theory and examples of things "out of proportion", students will produce a research project that combines primary and secondary sources and will make an argument in behalf of an example that they find compelling. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 290G. Women and Warfare: Reality and Representation. 3 Units.
Most people do not think of women when they think of war. However, women’s lives have been intimately involved with warfare from ancient times to present. Women have fought in combat, supported war efforts in various capacities, sent their husbands and sons to die in wars, and have been wounded, raped, and killed as civilian targets. Despite women’s varied war experiences, there are a set of cultural symbols and tropes that have consistently been used to represent women in their relationship to war. Some of these include women waiting, women mourning, women as pacifists, women warriors, and promiscuous women. Through an international and interdisciplinary investigation, this seminar will examine both the disjunctions and the resonances between the historical realities and the cultural representations of women’s lives during wartime. Questions it seeks to address are: In what ways have women’s roles during wartime remained the same across history? In what ways have women’s roles during wartime changed? How are women’s wartime roles represented in art, literature, media, and war propaganda? How has women’s entry into the armed forces during the twentieth century disrupted cultural stereotypes of women’s relationship to warfare? Are there differences between male and female writers—and artists—representations of women and warfare? How has digital technology changed both military service members’ and civilians’ relationships to warfare and the public’s exposure and access to war images? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 290N. Django Chained. 3 Units.
To gain a better understanding of the experience and history of slavery from the perspective of the enslaved, we will read the works of Octavia Butler. She knew that the problem with the historical narrative was that slaves did not write it. As a science fiction and fantasy author, Butler spent her career giving voice to the enslaved by recovering their experience and exposing it to the reader through the lens of imagined and symbolic worlds. By reading her work, we will come to understand a different way of viewing history. We will join the historical narrative with the science fiction narrative to arrive at a deeper understanding of the human experience with subjugation and oppression. The class readings will have time travel, vampires, and aliens. However, the most frightening monsters of all will be human. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 2900. Everyone's a Critic! The Play. 3 Units.
Have you ever been to a play and afterwards said to someone, "That was terrible!", or hopefully, "That was incredible!" but found yourself unable to clearly communicate what made it good or bad? In theater, word of mouth is the best advertising and your words have the power to make or break a production. This course will examine the role of "audience as critic," as well as the role of the professional critic, and the influence each has on the success of live theater. The student will learn critical skills that will allow them to clearly identify what made a particular production a rousing success, or a dismal failure. The student will learn the process by which actors, directors and designers bring a play to life, and the analytical skills a critic uses to either keep the play alive, or bring it to an untimely end. The student will have the opportunity to see live productions of the plays we will discuss in class. The student will be required to attend at least five theatrical productions over the course of the semester at CWRU's Eldred Theater, the CWRU/CPH MFA collaboration, The Cleveland Playhouse, and other local theaters. We will compare and contrast these productions with past productions at other regional theaters and on Broadway. Actors, directors and designers of these local productions will come to class to discuss their process and defend their artistic choices. We will speak with local, professional theater critics and discuss their process and what that phrase means is central to the approach we will take toward the various topics covered in class. We will examine cultural attitudes toward mathematicians and mathematics. Similarly, we will investigate the culture of mathematicians themselves, with particular attention to their ideas about community, collaboration, fairness, and merit. We will also look at the ways, from Big Data to high fashion, that the work of mathematicians actively shapes contemporary society. Furthermore, we will consider other ways in which it is useful and interesting to talk about "experiencing mathematics." The question of what that phrase means is central to the approach we will take toward the various topics covered in class. We will examine cultural attitudes toward mathematicians and mathematics. Similarly, we will investigate the culture of mathematicians themselves, with particular attention to their ideas about community, collaboration, fairness, and merit. We will also look at the ways, from Big Data to high fashion, that the work of mathematicians actively shapes contemporary society. In addition, we will practice problem-solving techniques for contest mathematics; this activity requires no more than a pre-calculus background. You will not be asked to memorize formulas or theorems, but rather to think about the problem-solving process. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 290T. Media Responses to 9/11. 3 Units.
For a generation of Americans, 9/11 was a defining event, the kind that slices life into before and after. The reverberations of that singular event continue to dominate our lives today, in ways we can readily recognize, and in ways that we cannot. In this class, we will examine how the discourse around 9/11 has shifted over the course of a decade, from the urgency of screaming newspaper headlines the day after, to the more elegiac responses shaped by novels and films over the years. We will also examine how different media—from graphic novels to films to novels—have responded to the same event and how these responses have shaped, and continue to shape, our collective narrative about the meaning of that event. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 290V. Experiencing Mathematics. 3 Units.
You've studied mathematics, but have you really experienced it? In Love and Math, author and mathematician Edward Frenkel says that, for him, the experience is tantamount to love. Acknowledging that his field suffers from the reputation of being dry and inaccessible, he challenges this negative view by sharing the passion, beauty, and adventure from his career as one of the leading researchers in the groundbreaking Langlands program, the so-called grand unified theory of mathematics. Like Frenkel, we will discuss the appreciation and enjoyment of mathematics. Furthermore, we will consider other ways in which it is useful and interesting to talk about "experiencing mathematics." The question of what that phrase means is central to the approach we will take toward the various topics covered in class. We will examine cultural attitudes toward mathematicians and mathematics. Similarly, we will investigate the culture of mathematicians themselves, with particular attention to their ideas about community, collaboration, fairness, and merit. We will also look at the ways, from Big Data to high fashion, that the work of mathematicians actively shapes contemporary society. In addition, we will practice problem-solving techniques for contest mathematics; this activity requires no more than a pre-calculus background. You will not be asked to memorize formulas or theorems, but rather to think about the problem-solving process. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 290U. Poetry for People Who Hate Poetry. 3 Units.
You don't hate it. In fact, you probably already love poetry, even if you don't know it. You might copy moody indie rock lyrics into your journal or quote the rhymes in a rap verse to your friends. You might hum advertising jingles to yourself; you speak in slang and think in metaphor. Why do we tend to treat only some of these instances of figurative language as poems? Is there a difference between poems and poetry? What can our individual attitudes about poetry reveal about what and whom we value on a cultural scale? In this course we will ask these and other questions about our collective love/hate relationship with poetry. All of this attention to how poems and poetry work will help us understand how our own writing should work. This course also focuses on the development of independent research skills and the creation of complex, analytic, well-supported arguments. We will write in a variety of lengths and genres; our reading and research will culminate in a project challenging students to compile an anthology of essential "poetry" with a critical introduction. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 290Y. Ecotopia: Imagining the Future. 3 Units.
The present environmental crisis has given rise to diverse imaginative visions of the future. Dystopian novelists and directors have created texts that portray a disastrous future in which humanity refuses to deal with global warming, ocean acidification, and overpopulation. For writers like Aldous Huxley, the future involves a grim vision of a depleted Earth and a human population under threat from its own political madness. Alternatively, writers and filmmakers have imagined hopeful visions of a human future in which we collectively remake society in order to live in harmony with nature. Although dystopian thinkers far outnumber utopians, we will investigate both visions of the future. More specifically, we will examine these possible futures as ways of thinking about the inter-generational ethical obligation that we have to leave behind positive and sustainable conditions for future generations living on Earth. This seminar will tackle that challenge by analyzing ecotopian visions of the planet’s future and by defining ways of creating a sustainable society. Possible novels and films include Brave New World, Ecotopia, The Road, Snowpiercer, Cloud Atlas, and Oryx and Crake. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 291B. Science (Fiction) Dystopias. 3 Units.
In 1927 the German science fiction classic Metropolis showed filmgoers a mechanized dystopian nightmare in which humans took on the roles of cogs and levers in a giant machine. Years later, George Orwell's Nineteen Eighty-Four depicted a totalitarian regime reshaping post-war England in a similar way, using surveillance and repetitive activities to turn the population into something less than human. Appropriating science fiction motifs, dystopian narratives have forced us to reconsider how science and technology are used to complicate and at times augment our notion of what it means to be a social animal. In this class, we will consider a range of texts, including novels, short stories, films, and comic books, to explore the interaction between people and the things that they invent. The first half of the course will emphasize traditional utopian texts and readings will include selections from works like Margaret Cavendish’s Blazing World (biological utopia), Yevgeny Zamyatin’s We (mathematical dystopia), and George Orwell’s Nineteen Eighty-Four (technological dystopia). During the second half of the semester we will discuss utopian and dystopian worlds in popular fiction and film, such as science fiction short stories by Harlan Ellison, Alan Moore’s V for Vendetta, and Wall-E, to consider how the utopia/dystopia changed in the latter half of the 20th and the beginning of the 21st century. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 291F. Literary Arcadias: Idealized Landscapes and the Intrusion of Reality. 3 Units.
The literary genre of pastoral has long depicted the simplicity of life in a natural environment—a place situated at a time before environmental exploitation, colonization, and urbanization. These pastoral retreats are often given the generic name “Arcadia.” As many critics and authors have noted, however, literary depictions of Arcadia often expose the delicate balance of conflicting realities: peace and war, rich and poor, rural and urban. In this seminar, we will investigate what happens when external reality disrupts Arcadia’s Edenic space. Is the creation of these idyllic settings a way of masking the disturbing realities of class inequality, political power, and environmental degradation? Or are authors attempting to articulate an alternative to them? As part of our investigation, we will consider how the pastoral genre has evolved over time, noting especially how depictions of Arcadia have responded to various cultural, commercial, and political changes. We will also examine how the idea of Arcadia shapes contemporary culture and our own understanding of the relationship between nature and society in the modern world. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 291G. Revenge, Violence, and Laughter: From Shakespeare to Tarantino. 3 Units.
Why do laughter and revenge so often go hand in hand? In the third act of Shakespeare’s Titus Andronicus, the play’s title character, shortly after learning of several acts of grotesque violence enacted on his family—including the rape of his daughter and the killing of his sons—laughs uncontrollably. When asked why he’s laughing, Titus gives two reasons. First, he says he has ”Not another tear to shed,” and second, he says it’s because continuing to cry would keep him from taking revenge on his enemies. This course will explore a series of artistic works where characters are victims and perpetrators of extraordinary acts of violence and injustice, and the response—either from the characters themselves or the audience—includes a grotesque laughter. We’ll explore the reasons for this odd conjunction of laughter and revenge, asking the following questions: What is the relationship between pleasure and laughter on the one hand, and justice and revenge on the other? Is revenge, despite its violence, something to be cheered rather than mourned? Can laughter, as Titus suggests, help correct and fight injustice, where tears do not? Where is the line between an upright pleasure at justice being done and a sadistic enjoyment of suffering (even when those suffering are wicked)? Is artistic violence, when exaggerated or extreme, ridiculous rather than shocking? Class discussion will focus on the formal, ethical and social implications of art and literature. This is to say, we will not only discuss how authors get audiences to laugh at murder and dismemberment, but also the political and ethical results of inviting laughter at things like violence against women, genocide, and capital punishment. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 291H. From Dr. Seuss to Wild Things: Radical Children's Literature. 3 Units.
What is the first book you remember reading? For most people, their earliest memories are tied to picture books that were read to them or that they encountered in grade school. These books not only introduce children to basic skills, but also to their culture's belief systems. In this course, we will take seemingly simplistic picture books, including Dr. Seuss’ “The Cat in the Hat” and David Wiesner’s “The Three Pigs” and analyze the underlying messages and the “hidden adult” present in their illustrations and text. We will engage with different theoretical approaches towards children's literature, including visual rhetoric, race studies, and adaptation theory, as we analyze their pictures and prose and the history of American children's literature. The key questions we will explore and answer together include: What is “children’s literature?” What assumptions are made about the readers of these books? What function do the adult producers/purchasers/distributors of these books serve in the creation and circulation of these texts? How does adaptation and transmission of cultural beliefs affect the reader’s reaction to picture books? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 291J. Improvisation in Jazz and Beyond. 3 Units.
On the surface it might seem that a jazz concert, a medical procedure, and a religious sermon have little in common, but this course examines how all three in fact share certain significant traits. One of these traits is improvisation—the ability of a performer to respond to unanticipated stimuli and create something new. Another trait is the tension between specialization and integration that develops whenever a highly-trained expert performs with or for non-experts, as in the exchange between musicians and audience, doctors and patients, or clergy and congregants. To answer these questions, we will attend jazz concerts, medical lectures, and church services. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

Risk is everywhere. Some risks are visible and can have potentially significant consequences, such as committing a felony or choosing a life partner. Other risks can have equally serious consequences, but might not be so evident: eating breakfast cereal made from genetically modified crops or ignoring that funny-shaped mole on your shoulder, for example. Sometimes we take risks in situations where we have a lot of control, like deciding to jaywalk when there is no traffic; other times we face risk where we have little control, like choosing a major without being able to predict whether there will be any jobs in that field by the time you graduate. How do we decide what risks are worth taking? Are some methods for assessing risk better than others? How can a better understanding of risk help us improve our decision making, both at the individual and public policy levels? In this course, we will use simple conceptual frameworks from decision theory and behavioral research to show how we measure risk. We will also examine how scientists combine historical records, scientific theories, probability, and expert judgment to assess risk. In addition, we will ask students to respond some of the well-known logical paradoxes, and explain the meaning if their decisions. Finally, we will apply what we learn about risk to a variety of examples from the fields of health, public safety, environmental studies, manufacturing/industrial processes, systems sciences, and finance. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 291Q. P.R., Spin, and Inventing Reality. 3 Units.
Is it reality or is it spin? We all know the terms—"it's spin," "it's P.R.,” "he's a flack"—and none of them are said kindly. Yet, over the past century public relations has become an often invisible multi-billion dollar manipulation of our collective perception of reality. Sometimes this manipulation is benign. But just as often it can weaken our democracy through weapons of words, images, and argument. This seminar will explore the origins and consequences of this silent, symbolic revolution. We will look at the uses of P.R. today in business, politics, and popular culture; examine the tools used to construct and sell those perceptions; and look into the values underlying these activities. We will do so through both academic and media materials, as well as through writing, research, and discussion. All of these are intended to deepen your critical thinking and writing skills, and build your research, discussion, and oral presentation strengths. Students who have received credit for USSO 260 may not receive credit for this course. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 291T. Demystifying the Guerilla Fighter: Imperialism, Race, and Revolution in Latin America. 3 Units.

The image of Ernesto "Che" Guevara is embossed in many a t-shirt, poster, and bumper sticker across college campuses. Guevara's writings and, more specifically, select catchy quotes in websites and popular films for the last couple of decades. In this course we will examine the myths surrounding men like Guevara by tracing the history of conquistadores, nuns, mystics, insurgents, and revolutionaries in Latin America from the colonial to the modern period. Toward this goal we will look at an array of personal letters, diary entries, government documents, religious texts, essays, prose, and works of literature written by women and men who viewed themselves, and were viewed by others, as speaking to, or ushering in, transformative change. As a class we will also examine the connections between imperial projects and calls for action in colonial and early modern Latin America and the Caribbean, explore the relationships between slavery, gender norms, and capitalism, and assess the changing nature of what freedom, reform, and revolution meant to various actors from the late eighteenth century to the late twentieth century. Indeed, our end goal as a class is to map out what some of our assumptions have been regarding what it means to be a guerilla fighter, connect it to how calls for change have manifested themselves across time, unearth the ironies and allure of radical frameworks, and investigate what this understanding can do for us as we tackle questions of change and possibility. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 291W. "Never Such Innocence Again": World War I in Literature and Culture. 3 Units.

As cities around the globe mark the centennial of World War I (1914-1918), this seminar will explore the relationship between that watershed moment and the varieties of literature and art it inspired. In what ways did "the Great War" shape the direction of twentieth-century culture? How was language itself altered, as new vocabularies emerged (e.g., "shell-shock," "the home front") and previously venerable terms such as "honor" and "sacrifice" acquired radically different connotations? What strategies did writers and artists evolve in order to contend with the magnitude of the conflict and its unprecedented human cost? Assessing the war's impact on Western thought, the poet Philip Larkin famously wrote, "Never such innocence again"—yet this loss of innocence also coincided with the birth of new forms of literary and artistic expression. In this course we will discuss and write about such innovations as they occurred in the visual arts—painting, sculpture, film—and in literary works by Ernest Hemingway, Virginia Woolf, and other writers who used the resources of imaginative literature to grapple with the Great War and its consequences. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 291Z. Marriage Plots. 3 Units.

Why do so many stories end with a wedding? Our course will consider the form of the marriage plot: we will look at how stories often begin with young(ish) people meeting and falling in love, and how the process of storytelling denies (or frustrates) their initial connection. Through the telling of the story, however, the young lovers overcome obstacles in myriad forms: controlling parents, financial insecurity or class differences, religious difference, even magical spells. We will think about what these stories do for their readers and viewers. We will also think about how various other stories—of riots, of government, of dissatisfaction with life—get couched in marriage plots. What is it about a marriage plot that ensures stability, satisfies our desires, and gives us such necessary closure? How does the form of "comedy"—for this is the overarching genre that relies so heavily upon marriage plots—work with and reshape the marriage plot over time? We'll also briefly ponder how supporters of marriage equality have used the marriage plot. Finally, our investigation into the marriage plot will look at marriage plot comedies that refuse to conform to the typical marriage plot: dark humor from a novel like Villette to films like Harold and Maude or The War of the Roses. This course investigates the presence of the marriage plot across multiple literary genres: dramas, novels, film, and television. We will also read and view courtship narratives from across historical periods from the Renaissance until today. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 292A. Drama and Social Protest Movements. 3 Units.

The complicated relationship between drama and politics dates back to at least ancient Greece. Today, playwrights continue to use political conflict as the basis for dramatic action, as well as use their plays to spark political protest—at times even risking imprisonment or exile. In this course, we will read a collection of protest plays alongside accounts of the protest movements that the plays and playwrights either depicted or participated in. As part of our investigation, we will ask the following questions: What do these plays tell us about the performative and emotional work done by protest? What role does theatricality play in the acts of persuasion, criticism, and direct action normally associated with political protest? Do these plays simply reproduce the goals and criticisms of protest movements, or does drama invite a style of social critique that sets it apart from other forms of political speech? Do these plays present protest as focused on the personal grievances of characters, or do they criticize larger social systems like class, gender, and racial hierarchy? We will also spend some class time discussing a few more modern anti-war, anti-racist and feminist protest movements, exploring the aesthetics and theatricality of protest and the extent to which they further political change. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 292C. The Moral Suspicion of Money. 3 Units.
Money is morally suspicious—the root of all sorts of evil. This suspicion isn't merely that bad people do bad things with money; it is that somehow the use of money helps make otherwise good people bad. But money is everywhere, pervasive and practical, and so a technology we both need and distrust. Money prices give us reasons when deciding what to do. But we think that money often gives us “good” reasons to do bad things and bad reasons to do good things. And sometimes assigning certain things monetary values at all seems unreasonable. We use money to express our values, yet complain money often distorts them, or has become a value itself. We use money to relate to each other in mutually beneficial commerce and trade, but worry that money degrades our relationships. In this interdisciplinary course we'll investigate the birth of both money and the idea of its badness. We'll survey history, literature, philosophy, sociology, anthropology, film, and the day's news for culturally varied expressions of, and reactions to, this suspicion. We'll first ask, "What is money?" ("How do things like rocks, metals, shells, or data-bits become, and continue to be, money?") and "What is morality?" ("What might we mean when we claim some act, person, situation, or system is morally better or worse?"). We'll then consider specific suspicions and morally evaluate them, along the way raising questions such as: Why can I rent myself out as a landscapeer but not as a prostitute? Is the Iranian kidney market better than U.S. waiting lists, or "bio-violence?" Should Americans with slave ancestors be paid for their family past? Is there a moral difference between a corporate raider and a pirate? What is Aristotle’s explanation for why Capitalists often produce crap? Why might Nietzsche think Wall Street’s Gordon Gekko might be right that "greed is good?? What does Marx mean when he claims money-driven markets are "alienating?" If money expresses our values, ought anything be above money? Is anything beyond price? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 292K. 21st Century American Theater. 3 Units.
With its roots tracing back to Ancient Greece, theater is one of our earliest forms of storytelling and entertainment. However, in the age of streaming video on demand, and massively multiplayer online games, can this venerable art form still be considered relevant, when even our movie multiplexes are going by the wayside? Recent Broadway musicals such as Hamilton have certainly made a powerful case for the theater’s continued relevancy, simultaneously breaking box office records and offering innovative approaches to content and form while appealing to younger and non-traditional theater audiences. In this seminar we will consider a number of major plays and musicals produced on and off Broadway since the year 2000. Among the questions to be considered over the course of the semester: What does it mean to create and experience theater in the context of emerging technologies? Has theater continued to evolve to address the changing needs and sensibilities of 21st century audiences? In what ways does it provide a voice to marginalized social groups? In addition to readings and class discussions, students will also be required to attend live performances (both professional and academic) and compose essays offering informed critiques evaluating particular aspects of the theatrical whole. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 292N. Cli-Fi: Addressing Climate Change in Fact, Fiction, and Film. 3 Units.
This seminar examines the emerging literary genre of Cli-Fi, or climate fiction, which bridges genres such as science fiction and apocalyptic literature as it depicts imagined responses to the damage wrought by global climate change. In the early 1960s, well in advance of compelling scientific evidence of anthropogenic climate change, novelists were already speculating about the effects of global warming. Focusing on fiction, films, and non-fiction writing from the past three decades, we will consider how authors envision the effects of climate change. Specifically, we will read works by historians, journalists, philosophers, scientists, and cultural critics as a foundation for our analysis of several works of fiction. Further, we will consider how visual media, like feature and documentary films, depict the impacts of climate change. Centrally, we will evaluate how climate fiction complements existing popular and academic conversations about our transforming world. Ultimately, responding to the broadening field of narratives about human-generated transformations of the world, we will address climate fiction’s potential to influence ethical paths shaped by those who seek to alter the disastrous trajectory that the genre imagines. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 292I. The Cinema of Otherness. 3 Units.
One way that humans understand themselves is to consider some counterpart entity—an Other—against which the Self can be understood. This Other, though perhaps based on knowledge of a real person or people, is always shaped by the Self’s projected fears and desires. At a cultural level, these projections result in generally held stereotypes that the powerful use to maintain their superior position in a hierarchical relationship. Movies are one place where stereotypes of the Other are created and maintained. Movies shape how we see, think and feel toward the Other. In this course, we will attempt to understand how film manufactures Otherness by studying several key Hollywood movies. We will examine their use of racial and ethnic categories of Otherness, as well as how they position the viewing Self as white. We will also examine other sites of difference, such as gender, sexual orientation, religion, bodily disfigurement, paying special attention to symbolic representations of these differences in the form of robots, monsters and aliens. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 292R. "Hamlet" from Page to Stage to Screen. 3 Units.
This course asks what makes Hamlet recognizable as Hamlet. Is it a story about a man who needs to revenge his father? Is it "To be or not to be?" Is it Laurence Olivier wearing black and holding a skull? Or is it Simba confronting Scar? Over the course of the semester, we'll be studying the changing forms Hamlet has taken. We'll think first about the inspirations for Shakespeare's play in Danish sagas and Roman tragedy, and subsequently read Hamlet alongside a variety of reinterpretations and revisions in different media (from short stories, to films, to videogames) spanning 400 years and hailing from across the globe. We will learn about the cultural, social and political contexts that shape how adaptations are produced and received. We'll also think critically about the elements that constitute a particular work of art in a particular medium, and about the processes through which new works can be made out of old ones. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 292Q. The Secret Lives of Animals. 3 Units.
Animals are instructive. When we study animals, their biological makeups and creaturely habits, we do so with hopes of learning something about them. At the same time, such investigations often betray an interest in our human selves. The study of animals, in scientific and literary laboratories alike, quickly turns to acts of self-discovery: not what it means to be animal, exactly, but what it means to be human-animals. So what more could we learn by cultivating new strategies for listening and new languages for communicating with animals? This seminar invites students to investigate the secret lives of animals as imagined in a sampling of classical, medieval and modern literatures. Thinking with animals past and present—in fables, manuals, and tales—we will examine human-animal relationships in imagined settings. Over the course of the semester, we will read, view, listen, and perform works in which animals are tasked with teaching moral lessons and testing the ethical obligations of their human audiences. Comparing treatments of companion animals past and present, we will reflect on the many ways literature can guide our evolving relationship to the animal kingdom. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 292S. The Meaning of Life: A Novel Idea. 3 Units.
According to the critic Walter Benjamin, while short stories can convey a moral, "the meaning of life is really the center about which the novel moves." Many critics share this view, arguing that the very idea of "the meaning of life" emerges alongside of the novel genre because of the ways novels portray individuals thinking about their lives. Novels characters internally reflect, make choices, and interact with others--often over long periods of time and through many changing circumstances. Furthermore, they depict how characters--personal choices--are influenced by a variety of external, social forces. In doing so, novels have offered their readers ways to think about what they value, and why. This seminar will take up the novel genre as a way to think carefully and deeply about just what the idea of "the meaning of life" involves. We will discuss how various novels have addressed—and continue to address—the desire for fulfillment and purpose. We will begin by examining how it came to be that novels came to be associated with and helped create the very concept of the "meaning of life." Then we will read some classic novels to examine how the novel has portrayed the meaning of life. We will conclude the course with a contemporary novel and ask whether or not contemporary novels are creating experiences of meaning in the same way they did hundreds of years ago. If they are, is that meaning still the same? If not, are novels asking different kinds of big questions? Is "the meaning of life" not as vital as it used to be to how novels work? In addressing these questions we will strive to understand the history of this literary form, its uses for our own personal introspection and ethical thinking, as well as the continuing role of novels in our rapidly evolving society. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 292T. Traditional Martial Arts. 3 Units.
This seminar will provide students with an understanding of the origins and representation of traditional martial arts through movies, novels, and comics. We will emphasize the moral, historical, and cognitive issues involved in the practice of these older fighting techniques. We will also examine how practitioners might have been forced to compromise some of their tenets to accommodate contemporary life and a broader audience. Additionally, we will see how Martial Arts originates in some countries of Asia, but has evolved nowadays with contributions from many other geographical areas. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 292U. The State, Legitimacy, and Insurgency. 3 Units.
This seminar investigates why individuals organize themselves into a political state, as well as what happens when they decide a state no longer has legitimate power over them. What responsibilities does a state have, if it is to maintain its authority? Under what conditions can a state lose its legitimacy? When do individuals have a moral responsibility to resist state power? What forms can such resistance take and still be considered moral? In undertaking these questions, we will read a wide range of texts from different disciplines, periods of history, parts of the world, and cultural and religious backgrounds. The final project will require you to articulate a careful and morally consistent “insurgency in which (i) the form of resistance is appropriate to the nature and degree of the state’s failures, and (ii) the moral justification for the ‘insurgency does not violate the moral reasoning that justified resistance in the first place. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 293H. The Landscape of Memory. 3 Units.

"Never forget" has become an important command of the twentieth century. For survivors of the worst atrocities in recent history, remembering is seen as both a moral and political duty. But how should the memory of these mass traumas be carried forward in the public sphere? And what forms of commemoration are the most effective, accurate, or enduring? In this course, we will examine the remembering of trauma in a range of public "memory sites," including oral testimonies, published memoirs, monuments, museums, and films. We will also consider postmodern forms of "counter-memory" in contemporary photography and conceptual art. While we will discuss a range of "memory sites," we will focus primarily on those that reflect on the Holocaust and 9/11. We will examine how and why different memorial practices have evolved, and reflect on the value of passing on such horrific memories to future generations. We will also discuss how the process of remembering alters the meaning of traumatic events. As a culminating project, students will analyze a memorial site or institution, using existing scholarship to investigate the creation of the site, its sources of funding, its design process, and the controversies it created. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 293I. High Art and Guilty Pleasures. 3 Units.

How, and why, do we draw distinctions between art and entertainment? Lowbrow and highbrow? A crowd-pleasing "flick" and a critic-approved "film?" This seminar will explore the logic of this common sorting process, as well as its consequences. After all, such distinctions historically have been linked with other forms of discrimination—often amplifying or silencing certain voices on the basis of gender, race, or class. In this course we'll investigate these connections between critical evaluation and broader social dynamics, while also engaging critically with our own tastes, values, and received ideas. What makes The Great Gatsby so great? Is there any value in keeping up with the Kardashians? Who determines the criteria that make one work a "classic," the other a "guilty pleasure?" Traversing a range of artworks, novels, comics, and movies, we'll work both the high and the low ends of the cultural spectrum, paying special attention to works that seem to blur or combine the usual categories—compelling us to ask whether great art and guilty pleasures can sometimes be one and the same. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 293N. Global Shakespeares. 3 Units.

The British playwright Ben Jonson famously eulogized his friend and competitor William Shakespeare by saying, "...he was not of an age but for all time." Recently, however, scholars and theater practitioners have been far more engaged with the question of whether Shakespeare is for all nations. In this course, we will consider what it means to read Shakespeare globally. Shakespeare wrote his plays during the first era of British colonial expansion; today, we read those same plays during a supposedly "post-colonial" era. Accordingly, we will ask two related but possibly opposing questions: What did Shakespeare think of the world? and What does the world think about Shakespeare? In order to answer these questions, we will read three plays in which Shakespeare directly engages issues of cultural difference and empire alongside contemporary adaptations of those plays from Asia, Africa, and the Caribbean. How aware was Shakespeare of the specific cultural identities of the Mediterranean or the "New World?" Conversely, is a work "still" Shakespeare when it has been translated into a different cultural setting? In addition to gaining a finer understanding of Shakespeare's work and its historical context, we will examine how and why Shakespeare's drama can be repurposed in different political and national contexts today. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 293O. Monsters and Disability. 3 Units.

Why are monsters everywhere in literature, film, and art? How does disability, mental illness, and medicine find their way into cultural fantasies and anxieties? Who or what are the monsters of our own cultural moment? In what ways do monsters represent and reinforce prejudices related to mental illness, disability, race, gender, religion, or nationality? What are the ethical conflicts and demands made by the monster? In this seminar, we will explore the history, art, and ethics of monsters in western culture. Using selections from disability studies, trauma theory, gender studies, critical race studies, and post-colonial studies, we will examine monsters not merely as super-natural creatures, but as figures that stand in for a wide range of "undesirables" and "others." Readings and films for this class will be drawn from the distant medieval past up to modern horror and fantasy films, and will feature the monsters said to live on the edge of the known world, mystical visionaries, sideshow freaks, hallucinatory apparitions, witches, and even a few vampires and werewolves. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 293P. Music in Time and Place: A Window into the Development of American Identity. 3 Units.
Although American symphonic music grew out of the Western European tradition, it also developed distinct characteristics. Composers marveled at the qualities and character of the young nation, especially the vastness and beauty of its land. An aesthetic sense of the land influenced artists as they sought to capture their perspectives of time and space, as well as the American people themselves, and the role they played in those perspectives. In this course, we will examine a series of symphonic works that specifically reference geographical place in their titles. Through this study we will gain insight into the development of American cultural identity and how the focus of musical works shifted from rural to urban life. To enhance our understanding, we will consider the historical context of these American symphonic works, as well as related works of art. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 293Q. Musical Ethics and Identities from Beethoven to Beyoncé. 3 Units.
In this course we will examine a number of stylistic and social upheavals in Western music since the early nineteenth century, with the goal of understanding their ethical ramifications (past and present) and their impact on perceptions of identity (social, political, economic, racial/ethnic, sexual, gender). Topics will include Ludwig van Beethoven and Richard Wagner, Modernism and avant-gardism, musical expression and repression under totalitarian regimes, the rock and hip-hop revolutions, and the evolving influence of feminist perspectives on popular music. We will give particular attention to cultural anxieties provoked by innovative music, and to the ways in which new historical trends and our own tastes have been shaped by ethical considerations. To what extent do we gravitate toward music that reinforces our existing beliefs, and to what extent can exposure to new music reorient our beliefs, and our sense of identity as a result? What factors explain strong ethical reactions (positive or negative) to different kinds of music? How do particular genres tend to reflect social or political status, how are cultural taboos broken through music, and in what ethical terms has musical progress historically been defined? How do we reconcile music we might like with offensive views that its creators might have held? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 293T. Spaces of the Dead. 3 Units.
The spaces of death—whether garden cemetery or mass grave, cremation urn or Facebook memorial—speak to the values, desires, and conditions of the living. Why do the living commemorate the dead in the way that they do? How do the particularities of these spaces shape the way visitors think about the dead? About the living? In this seminar, we will examine various approaches to representing the often taboo subject of death. The course will begin with an overview of burial practices in the United States, many of which are based on European traditions, while looking at the social and political forces that gave rise to the public cemetery, the funeral industry, and the rituals we currently associate with death in the twenty-first century United States. We will look at American funerary architecture, cross-cultural grief practices, and the documentation of deaths along the US-Mexico border. Students will then consider examples of how spaces of death are written about in contemporary literature. In conjunction, the class will examine how new media projects have changed representations of death in the contemporary imagination. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 293V. Justice and Literary Imagination. 3 Units.
Contemporary popular culture reflects our fascination with a justice system that sometimes does not appear to be just. Documentary TV series such as The People v. O.J. Simpson, The Making of a Murderer, and The Staircase are part of a long literary tradition that asks us to consider what happens when laws are not rational or punishments are unjust—and what, if anything, we can or should do about it. In this seminar, we will read a variety of literary and cinematic works to explore questions related to legal justice, including the difference between the rule of law and equity, the function of evidence and testimony in finding truth, the relationship between justice and punishment, the status of justice in an unequal society, and the various roles that people play within the justice system. In doing so, we will also consider how law and literature overlap in their emphases on storytelling and interpretation, as well as how both cultivate a tolerance for ambiguity and complexity. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 293W. MeToo: Women Writing Violence Against Women in the 18th-Century Novel. 3 Units.
In recent years we have seen a growing public discourse surrounding sexual harassment and sexual assault, driven in part by women’s use of social media to share their stories. While social media may be new, women have long turned to public narratives to respond to the threat of violence that is a part of their lives. The rise of the novel in the 18th century represents a particularly interesting counterpoint to the rise of social media in our own time. Women had very few legal rights and protections, and combined with economic pressures to marry and social expectations that they remained “virtuous,” women had little recourse when they faced sexual harassment or assault. By the end of the 18th century, however, women began to write and publish novels themselves, and in numbers rivaling men. In this class, we will look at a selection of these novels through the lens of current discourse about gender-based violence, sexual harassment, consent, and rape culture. What connections do we find between the 18th century and today? What can we learn from these 18th-century women and these novels? What does this approach reveal about writing, about narrative, and about storytelling? To answer these questions, we will read novels like Charlotte Temple (1791), The Victim of Prejudice (1799), and Northanger Abbey (1817) alongside narratives like Monica Lewinsky’s about her time working in the Clinton White House and Susan Fowler’s about her time working at Uber. Framing our discussion will be Kate Manne’s landmark book Down Girl: The Logic of Misogyny (2017). Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 293Y. Shakespeare, Race, and Othello Over the Centuries. 3 Units.
This course explores artistic representations of race, gender, jealousy and evil by examining Shakespeare’s Othello, Moor of Venice and adaptations of the work from the 19th, 20th and 21st centuries. Shakespeare tells the story of how Othello, the only black man in the Venetian military, gets driven to murder his wife, Desdemona, by his enigmatic officer, Iago. The play raises questions about racism, misogyny, and tragedy which have been taken up by musicians, filmmakers, visual artists, and novelists over the centuries. Each adaptation of Othello makes subtle changes to the story and characters. For example, in his operatic version of the story, Giuseppe Verdi has Iago sing, “I believe in a Cruel God,” imagining the character as a nihilist, while the hero of Tayeb Saleh’s novel, Season of the Migration of the North, rejects Shakespeare, saying, “I am no Othello, Othello was a lie.” The play’s performance history proves equally fascinating because early productions always saw white actors playing the title character while wearing black makeup. Early black actors in the role faced prejudice, and only recently have they been predominantly cast as Shakespeare’s tragic Moor. Thus, our class will examine performances and adaptations of this story, asking: How do different artistic forms like theater, music, art, and literature each create unique forms of meaning? To what extent do or should adaptations be faithful to Shakespeare? What are the different ways of depicting race on stage and in film, and what are the social and political implications of these differences? Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 294A. The Wild Man Within and Without. 3 Units.
There have always been myths about “The Wild Man”, that figure who exists outside of society, as a kind of living rebuttal to the values of the “civilized” world. These primitives, barbarians, savages, or madmen live off of the land, out in the desert or in the woods, and their stories may be told either to horrify or to enchant. These stories are also rich social documents that illuminate how a culture defines itself in relation to those that it excludes or fears. Whether these myths present wild men as heretics, lunatics, or “noble savages”, they exist to tell us something about ourselves and about our animal nature. They also provide a way of understanding, and all too often demonizing, the other. In this class, we will consider myths of wildness across literary history, from the “green men” of Arthurian legend to early colonialist accounts of indigenous peoples to recent portrayals of madmen in contemporary film. How have these myths changed over time, and for what purpose? How have these stories impacted new encounters with foreign cultures? How do they reflect a given culture’s relationship with nature? What might the figure of the “Wild Woman” tell us about how a society views its established gender roles and expressions of sexuality or their transgressions? Perhaps most importantly, in what ways do the myths of wildness continue today? In answering these and related questions, we will examine the ways that cultural norms and values are constructed, reinforced, and challenged both in the past and in the present. As the literary critic Earl Miner suggests, the aim of these narratives is not so much to understand the Wild Man as to understand oneself. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 294B. Transgender Literature: Gender Diversity and Reading Beyond Stereotypes. 3 Units.
Literature and literary genres possess the power to reinforce or revolutionize cultural norms. From love stories to coming-of-age stories, one of the most impactful ways that literary genres reflect and shape society is in the representation of gender and sexuality. Over the generations, literature has evolved with our understanding of human diversity. Contrary to stereotypes that imagine the existence of only two genders, society is increasingly recognizing that there is a wider range of embodiment and identity beyond male and female. Thus, the question arises: how do our books and films on our shelves reflect the experience of transgender, intersex, genderqueer, and other non-binary lives? What texts from the past help us understand the long history of sex and sexuality? What new stories are being told? How is society reflecting and affecting this transgender literature? In this seminar, all people and their questions are welcome as we continue the experiment begun by Edith Anisfield Wolf, who believed that books and reading can transform our world. Following in her mission of social justice and diversity, we will learn how to read beyond stereotypes about gender (and, in the process, about sexuality, disability, class, and race). So let us expand our book shelves together! Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 294D. 20th Century American Music and Cultural Criticism. 3 Units.
We are all familiar with music as a mode of entertainment, an accompaniment to rituals and ceremonies, and as earworms that sell us things. But, have you ever thought about how music works? Not the nuts and bolts of ordering the sounds we call music, but how that same music is implicated in the gendered, racialized, and socioeconomic power structures that order our lives? For example: Is free jazz relevant to the civil rights movement of the 1960s? How and why is disco related to gay pride? What does musical minimalism have to do with capitalism? And how might hip-hop and contemporary beat music be related to racial representation and internet culture? With questions like these in mind, this seminar investigates American vernacular and art musics of the 20th century as phenomena that create, reproduce, and push at the boundaries of structures of cultural power and value. Using conceptual lenses of representation, appropriation, ideology, experimentation, globalization, and modes of resistance, we will weave through American avant-garde to post-bop, free jazz to Afrofuturism, minimalism to EDM, new-age to hip-hop, and more. This seminar does take music as its primary topic, but it is not a music seminar, per se. Rather, music serves here as a jumping-off point to think critically about the role of art in both creating the world we inhabit as well as informing how we navigate that world. As we approach different musics, we will engage with exemplary musical examples and texts from popular and scholarly sources to help frame our discussions and written responses. Furthermore, we will listen to music both in and out of class with the goal of identifying, describing, and contextualizing what we hear. No previous musical training is required; basic concepts and terminology will be explained in class. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 294G. How to Read a Novel. 3 Units.
Henry James infamously called novels "large, loose and baggy monsters," and we might well agree with him. Today novels dominate our library and bookstore shelves but sometimes finding time in our busy lives to sit down and read one seems impossible. However, novels might be exactly what we need. Novels can help us to better understand one another. They can help us to better understand ourselves. They can also allow us to escape. Novels can take us places we might otherwise never go, and they can help us to take a break from the stress of our lives. In this class, we will explore what novels can do for us by reading a sample of great novels from the past and present, some of which will be (or at least might seem) familiar from high school or from pop culture. As we read, we will think critically about the act of reading itself: how we read, what we read, why we read, and what keeps us from reading. We will also explore some techniques, approaches, and philosophical questions that can help us better understand and interpret these complicated works—and, hopefully, find the fun and value in reading novels. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 294H. Mapping Spaces: Representations of Place and Mobility in Literature. 3 Units.
How do our experiences of mobility inform our understanding of the spaces where we live and travel? What barriers or incentives attend the travel of people of diverse socio-economic, national, and ethnic identities? To place such questions, we will study maps and how they represent places, create connections, tell stories about the world, and enforce borders. We will use these maps particularly to help us understand the spatial dynamics of literary texts that tell stories about place and mobility. Class readings, drawn from genres like fiction, essay, film, and digital documentary, will be concerned with issues of spatial justice and the social and political dynamics of migration and border crossing, especially between the Global North and South. Paired with this focus on global mobility, we consider the lived, embodied experience of individuals in local places, including our own University Circle, and try to develop insight into how we shape and are shaped by the spaces over which we travel in our everyday lives. To visualize spaces and practices of travel, we will experiment with digital mapping tools and other platforms that allow for media-rich writing and presentations. We will also continue to develop skills in the conventional and creative processes of research and writing. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 294I. Black Women's Social Thought. 3 Units.
This course offers an introduction to the variety of Black American and Caribbean women's ideas about US politics and culture, with attention to the symbolic significance and difficulty of their position(s) within the power relations of American race, gender, class, and educational standing. Readings from social theory and philosophy by these authors examine basic social controversies such as the meaning of justice, the purpose of government, acceptable standards for private and public liberty, the value of sexuality and kinship ties, gender equality, the dynamics of racism, the relationship of truth to error and systematic deception, and the place of history and memory in knowledge. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.
USSY 294J. The Jazz Age, Revisited: Art & Literature of the 1920s. 3 Units.
Nearly a century later, the 1920s continue to exert their pull on the popular imagination. For many, the decade summons images of what F. Scott Fitzgerald called the Jazz Age: an era of reckless youth, high living, speakeasies and dance crazes, flappers and bootleggers. Of course, this superficial vision of the "Roaring Twenties" hardly tells the full story of that turbulent decade in the United States and beyond. Yet the rebellious spirit it evokes does convey something of the driving force behind the period's often groundbreaking literary and artistic innovations. In New York City, for instance, the Harlem Renaissance witnessed a remarkable flowering of African American art, literature, and music—while downtown the artists of the Dada movement were playfully undermining the very institutions of art. Across the Atlantic, artists and bohemians of all sorts congregated in Paris, Berlin, and other European capitals to mount related revolutions of word, image, and sound. In this course, we'll revisit the 1920s by way of its literature, art, music, and film. Among other things, we'll see what these artifacts can tell us about the period's racial and sexual politics, about the cultural reverberations of World War I (1914-1918), and about the abiding impact of a historical moment when artists and writers thought that art could change the world. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

USSY 294M. Play Anything: Theorizing Videogames. 3 Units.
Videogames are ubiquitous. They seem to be everywhere, on phones, laptops, handheld devices and dedicated consoles, and they are played by all sorts of people, young and old, as both a solitary activity and a shared social experience. In the popular imagination, videogames are often thought of as entertainment, a mindless diversion. But really they are much more than that. Videogames are media texts, cultural artifacts, interactive artworks and also tools used for military recruiting and training. They are systems that structure social engagement virtually, but like other new media, sometimes they simply reproduce the problematic structures we know in real life. Videogames demand our labor in the pursuit of some random objective; playing is fun but achieving goals and following arbitrary rules is also a kind of work. Perhaps when we play videogames, they also play us. In this seminar, we will track the vigorous debates around videogames in the field of game studies through the writings of theorists, designers and critics (all of them gamers). The course provides a critical and theoretical framework for understanding videogames and videogame culture. Students will analyze and critique a range of videogames, from serious and art games to indie and commercial games. Students will also explore game design firsthand by creating a text-based Twine project. Requirements to enroll: 1) Passing letter grade in a First Seminar OR concurrent enrollment in FSTS 100 (if transfer student); AND 2) No previous/concurrent enrollment in FSSY/USSY; OR Requisites not met permission.

College of Arts and Sciences Undergraduate Degree Requirements

Bachelor of Arts Degree
Candidates for the Bachelor of Arts (BA) degree, in addition to meeting the general requirements for bachelor's degrees (p. 1212), including the SAGES and physical education requirements, must also complete the following requirements:

1. A minimum of 120 credit-hours.
2. No more than 42 credit-hours beyond the 100-level in any one department to be applied to the 120 credit-hour total.
3. At least 90 credit-hours in arts and sciences. These credits may be drawn from those offered by the College of Arts and Sciences, as well as those in biochemistry, computer science, economics, neuroscience, and nutrition. (Students completing both a BA and BS degree are exempted from six hours of the 90 credit-hour arts and sciences requirement for the BA.)
4. A minimum of 30 credit-hours of courses at the 300- or 400-level.
5. The General Education Requirements of the College of Arts and Sciences listed below.
6. The requirements for a major listed below as specified in this Bulletin for each department or program. A major requires a minimum of 30 credit-hours, at least 24 of which are taken in the major department or program. At least half the requirements for the major must be completed with Case Western Reserve University courses. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields.
7. For all courses taken to satisfy major requirements and for which grades are averaged, a BA candidate must earn a minimum cumulative average of 2.000.

Major Concentrations Available for the Bachelor of Arts degree:

- Anthropology
- Art History
- Asian Studies
- Astronomy
- Biochemistry
- Biology
- Chemical Biology
- Chemistry
- Chinese
- Classics
- Cognitive Science
- Communication Sciences
- Computer Science
- Dance
- Dean's Approved Major**
- Economics
- English
- Environmental Geology
- Environmental Studies*
- Evolutionary Biology*
- French
- French and Francophone Studies
- Geological Sciences
- German
- Gerontological Studies*
- History
- History and Philosophy of Science
- International Studies
College of Arts and Sciences Undergraduate Degree Requirements

- Japanese Studies
- Mathematics
- Music
- Natural Sciences*
- Nutrition
- Nutritional Biochemistry and Metabolism
- Origins Sciences
- Philosophy
- Physics
- Political Science
- Pre-Architecture*
- Psychology
- Religious Studies
- Sociology
- Spanish
- Statistics
- Teacher Education*
- Theater Arts
- Women's and Gender Studies
- World Literature

* May not be a student's only major.
** Any student interested in developing for the BA a major of their own design should consult with the Dean of Undergraduate Studies about submitting, before the end of the sophomore year, a program proposal for a Dean's Approved Major. The Dean of Undergraduate Studies and the Dean of the College of Arts and Sciences must approve any proposed Dean's Approved Major.

General Education Requirements of the College of Arts and Sciences

These requirements provide a broad foundation for the Bachelor of Arts degree program.

Students pursuing a degree in the College of Arts and Sciences may not fulfill the Departmental Seminar requirement with a course that is being used to fulfill an Arts & Humanities, Social Sciences, or Natural & Mathematical Sciences breadth requirement. A course that has been designated as a Departmental Seminar and that also falls into the Global and Cultural Diversity category may be used to fulfill both requirements.

Course credit earned by Advanced Placement, International Baccalaureate, A-levels, and similar programs offered by high schools; by proficiency exams; and by courses taken at domestic and international universities may be applied to elective credit as determined by the academic departments of the College, and may be used to satisfy some general education requirements as described under each heading below.

Breadth Requirements (minimum of six 3- or 4-credit-hour courses, totaling at least 18 credit-hours)

One-half or more of the breadth requirement courses in each breadth area must be taken on campus, except that students transferring from another college or university with 45 or more transferable credits may fulfill their breadth requirements with transfer credit taken at their previous college or university. Credit earned for Advanced Placement, International Baccalaureate, A-levels and similar programs offered in high schools or by proficiency exams may be used to satisfy up to one-half of this requirement if the credit is equivalent to specific courses taught at CWRU. AP, IB, and A-level credit equivalents ending in "TR" may not be used to satisfy the breadth requirements. Pre-matriculation and post-matriculation transfer credit for work done at other institutions — for example, at colleges or universities prior to matriculating at CWRU, during the summer, or in an approved Study Abroad program — may be applied to satisfy part of this requirement if approved by the appropriate department.

NOTE: Two courses used to fulfill requirements for the major may be used also to fulfill the breadth requirements.

Arts and Humanities (6 - 8 credit-hours)

Two 3- or 4-credit-hour Arts and Humanities courses selected from:

- Akkadian (AKKD)
- Ancient Near East and Egyptian Studies (ANEE)
- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)

Natural and Mathematical Sciences (6 - 8 credit-hours)

Two 3- or 4-credit-hour Natural and Mathematical Science courses selected from:

- Astronomy (ASTR)
- Biochemistry (BIOC)
- Biology (BIOL)
- Chemistry (CHEM)
- Earth, Environmental and Planetary Sciences (EEPS)
- Mathematics (MATH)
- Neuroscience (NEUR)
- Nutrition (NTRN)
• Physics (PHYS)
• Statistics (STAT)

Social Sciences (6 credit-hours)
Two 3-credit-hour Social Science courses selected from:
• Anthropology (ANTH)
• Cognitive Science (COGS)
• Communication Sciences (COSI)
• Economics (ECON)
• Political Science (POSC)
• Psychology (PSCL)
• Sociology (SOCI)

Quantitative Reasoning (3 - 4 credit-hours)
Each student must complete at least one 3- or 4-credit-hour course identified as a Quantitative Reasoning course selected from the list below. The course used to meet this requirement may also be used to fulfill a major, minor, and/or breadth requirement.

Course credit earned by Advanced Placement, International Baccalaureate, A-levels, and similar programs offered by high schools; by proficiency exams; or by courses taken at domestic colleges and universities or in an approved Study Abroad program may be used to satisfy the Quantitative Reasoning Requirement if the credit is equivalent to a specific CWRU course that satisfies the requirement.

- ANTH 319 Introduction to Statistical Analysis in the Social Sciences 3
- BIOL 321 Design and Analysis of Biological Experiments 3
- CSDS 132 Introduction to Programming in Java 3
- ECON 216 Data Visualization in R 3
- ECSE 132 Introduction to Programming in Java 3
- ENGR 101 Engineering for Non-Engineers 3
- ENGR 131 Elementary Computer Programming 3
- MATH 121 Calculus for Science and Engineering I 4
- MATH 123 Calculus I 4
- MATH 125 Math and Calculus Applications for Life, Managerial, and Social Sci I 4
- MATH 150 Mathematics from a Mathematician’s Perspective 3
- PHIL 201 Introduction to Logic 3
- PSCL 282 Quantitative Methods in Psychology 3
- SOCI 307 Social Statistics 3
- STAT 201 Basic Statistics for Social and Life Sciences 3
- STAT 201R Basic Statistics for Social and Life Sciences Using R Programming 3
- SYBB 201R Basic Statistics for Social and Life Sciences Using R Programming 3

Global and Cultural Diversity (3 - 4 credit-hours)
Each student must complete at least one 3- or 4-credit-hour course identified as a Global and Cultural Diversity course selected from the list below. The goal of the Global and Cultural Diversity requirement is to provide students with the opportunity for academic reflection about the variation in human experience. Courses that satisfy this requirement 1) substantively explore one or more cultures outside the United States, or 2) address in a substantive way ethnic, gender, sexual, religious, or other cultural practices within or outside the United States, so as to provide students with fresh perspectives on their own cultural assumptions, traditions, and experiences. The course used to meet this requirement may also be used to fulfill a major, minor, and/or breadth requirement.

Course credit earned by Advanced Placement, International Baccalaureate, A-levels, and similar programs offered at high schools may not be used to satisfy the Global and Cultural Diversity Requirement. Transfer credits for college-level course work done at other institutions — for example, prior to matriculation, during the summer, or in an approved Study Abroad program — may be applied to this requirement if approved by the appropriate department.

- AFST 135 Introduction to Modern African History 3
- AFST 151 Introducing Africana Religions 3
- AFST 201 Introduction to Africana Studies 3
- AFST 202 Race and Ethnic Minorities in The United States 3
- AFST 212 History of Rock and Roll 3
- AFST 258 History of Southern Africa 3
- AFST 260 U.S. Slavery and Emancipation 3
- AFST 261 African-American History 1865-1945 3
- AFST 262 African-American History Since 1945 3
- AFST 265 Malcolm and Martin 3

5. For all courses taken to satisfy major requirements and for which grades are averaged, a candidate for a BS from the College of Arts and Sciences must earn a minimum cumulative average of 2.000.

**Major Concentrations for the Bachelor of Science degree:**

- Applied Mathematics
- Art Education
- Astronomy
- Biochemistry
- Biology
- Chemistry
- Geological Sciences
- Mathematics
- Mathematics and Physics
- Music Education
- Neuroscience
- Nutrition
- Nutritional Biochemistry and Metabolism
- Physics
- Statistics
- Systems Biology

**General Education Requirements of the College of Arts and Sciences**

These requirements provide a broad foundation for the Bachelor of Science degree programs.

Students pursuing a degree in the College of Arts and Sciences may not fulfill the Departmental Seminar requirement with a course that is being used to fulfill an Arts & Humanities, Social Sciences, or Natural & Mathematical Sciences breadth requirement. A course that has been designated as a Departmental Seminar and that also falls into the Global and Cultural Diversity category may be used to fulfill both requirements.

Course credit earned by Advanced Placement, International Baccalaureate, A-levels, and similar programs offered by high schools; by proficiency exams; and by courses taken at domestic and international universities may be applied to elective credit as determined by the academic departments of the College, and may be used to satisfy some general education requirements as described under each heading below.

**Breadth Requirements (minimum of six 3- or 4-credit-hour courses, totaling at least 18 credit-hours)**

One-half or more of the breadth requirement courses in each breadth area must be taken on campus, except that students transferring from another college or university with 45 or more transferable credits may fulfill their breadth requirements with transfer credit taken at their previous college or university. Credit earned for Advanced Placement, International Baccalaureate, A-levels, and similar programs offered in high schools or by proficiency exams may be used to satisfy up to one-half of this requirement if the credit is equivalent to specific courses taught at CWRU. AP, IB, and A-level credit equivalents ending in “TR” may not be used to satisfy the breadth requirements. Pre-matriculation and post-matriculation transfer credit for work done at other institutions — for example, at colleges or universities prior to matriculating at CWRU, during the summer, or in an approved Study Abroad program — may be

**Bachelor of Science Degree**

Candidates for the Bachelor of Science (BS) degree, in addition to meeting the general requirements for bachelor’s degrees (p. 1212), including the SAGES and physical education requirements, must also complete the following requirements:

1. A minimum of 120-133 credit-hours as specified by the requirements for each BS program.
2. A minimum of 30 credit-hours of courses at the 300- or 400-level.
3. The General Education Requirements of the College of Arts and Sciences listed below. For some BS programs, the General Education Requirements of the College Arts and Sciences have been modified and incorporated into the degree requirements as presented in this Bulletin in the section devoted to each department or program.
4. The requirements for a major field listed below as presented in this Bulletin in the section devoted to each department or program. At least half the requirements for the major must be completed with Case Western Reserve University courses. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields.

### General Education Requirements

**Area A: Communication, Critical Thinking, and Information Technology**

1. Written Communication (3 credit-hours)
2. Oral Communication (3 credit-hours)
3. Information Technology (3 credit-hours)

**Area B: Social Sciences and Cultural Diversity**

1. Social Sciences (3 credit-hours)
2. Cultural Diversity (3 credit-hours)
3. Global Context (3 credit-hours)

**Area C: Natural & Mathematical Sciences**

1. Mathematics (3 credit-hours)
2. Natural Sciences (3 credit-hours)
3. Natural & Mathematical Sciences (3 credit-hours)

**Area D: Interdisciplinary**

1. Interdisciplinary (3 credit-hours)

**Area E: Arts & Humanities**

1. Arts & Humanities (3 credit-hours)
2. Literature (3 credit-hours)
3. Fine Arts (3 credit-hours)

**Area F: International, Multicultural, and Gender Studies**

1. International (3 credit-hours)
2. Multicultural (3 credit-hours)
3. Gender (3 credit-hours)

**Area G: Physical Education**

1. Physical Education (2 credit-hours)

### Major Concentrations

- Mathematics and Physics
- Systems Biology
- Applied Mathematics
- Art Education
- Astronomy
- Biochemistry
- Biology
- Chemistry
- Geological Sciences
- Mathematics
- Mathematics and Physics
- Music Education
- Neuroscience
- Nutrition
- Nutritional Biochemistry and Metabolism
- Physics
- Statistics
- Systems Biology

### Bachelor of Science Degree Requirements for Specific Majors

- **Science degree:**
  - Biology
  - Chemistry
  - Geology
  - Mathematics
  - Nutrition
  - Physics
  - Applied Mathematics
  - Mathematics and Physics
  - Systems Biology
  - Geological Sciences
  - Biology
  - Mathematics
  - Mathematics and Physics
  - Music Education
  - Neuroscience
  - Nutrition
  - Nutritional Biochemistry and Metabolism
  - Physics
  - Statistics
  - Systems Biology
applied to satisfy part of this requirement if approved by the appropriate department.

NOTE: Two courses used to fulfill requirements for the major may be used also to fulfill the breadth requirements.

**Arts and Humanities (6 - 8 credit-hours)**
Two 3- or 4-credit-hour Arts and Humanities courses selected from:

- Akkadian (AKKD)
- Ancient Near East and Egyptian Studies (ANEE)
- Arabic (ARAB)
- Art History (ARTH)
- Art Studio (ARTS)
- Chinese (CHIN)
- Classics (CLSC)
- Dance (DANC)
- English (ENGL)
- French (FRCH)
- German (GRMN)
- Greek (GREK)
- Hebrew (HBRW)
- History (HSTY)
- Italian (ITAL)
- Japanese (JAPN)
- Latin (LATN)
- Linguistics (LING)
- Music - General (MUGN)
- Music - History (MUHI)
- Music - Theory (MUTH)
- Philosophy (PHIL)
- Portuguese (PORT)
- Religious Studies (RLGN)
- Russian (RUSN)
- Spanish (SPAN)
- Theater (THTR)
- World Literature (WLIT)

**Natural and Mathematical Sciences (6 - 8 credit-hours)**
Two 3- or 4-credit-hour Natural and Mathematical Science courses selected from:

- Astronomy (ASTR)
- Biochemistry (BIOC)
- Biology (BIOL)
- Chemistry (CHEM)
- Earth, Environmental, and Planetary Sciences (EEPS)
- Mathematics (MATH)
- Neuroscience (NEUR)
- Nutrition (NTRN)
- Physics (PHYS)
- Statistics (STAT)

- Anthropology (ANTH)
- Cognitive Science (COGS)
- Communication Sciences (COSI)
- Economics (ECON)
- Political Science (POSC)
- Psychology (PSCL)
- Sociology (SOCI)

**Quantitative Reasoning (3 - 4 credit-hours)**
Each student must complete at least one 3- or 4-credit-hour course identified as a Quantitative Reasoning course selected from the list below. The course used to meet this requirement may also be used to fulfill a major, minor, and/or breadth requirement.

Course credit earned by Advanced Placement, International Baccalaureate, A-levels, and similar programs offered by high schools, by proficiency exams, or by courses taken at domestic colleges and universities or in an approved Study Abroad program may be used to satisfy the Quantitative Reasoning Requirement if the credit is equivalent to a specific CWRU course that satisfies the requirement.

**Global and Cultural Diversity (3 - 4 credit-hours)**
Each student must complete at least one three- or four-credit-hour course identified as a Global and Cultural Diversity course selected from the list below. The goal of the Global and Cultural Diversity requirement is to provide students with the opportunity for academic reflection about the variation in human experience. Courses that satisfy this requirement 1) substantively explore one or more cultures outside the United States, or 2) address in a substantive way ethnic, gender, sexual, religious, or other cultural practices within or outside the United States, so as to provide
students with fresh perspectives on their own cultural assumptions, traditions, and experiences. The course used to meet this requirement may also be used to fulfill a major, minor, and/or breadth requirement.

Course credit earned by Advanced Placement, International Baccalaureate, A-levels, and similar programs offered at high schools may not be used to satisfy the Global and Cultural Diversity Requirement. Transfer credits for college-level course work done at other institutions — for example, prior to matriculation, during the summer, or in an approved Study Abroad program — may be applied to this requirement if approved by the appropriate department.

**Case School of Engineering Undergraduate Degree Requirements**

**Bachelor of Science in Engineering Degree**

Candidates for the Bachelor of Science in Engineering (BSE) degree, in addition to meeting the **general requirements for bachelor's degrees**, including the SAGES and physical education requirements, must also complete the following requirements:

1. A minimum of 128-133 credit-hours as specified by the requirements for each BSE major.
2. The General Education Requirements of the Case School of Engineering listed below.
3. The requirements for the specific engineering major listed below as presented in this Bulletin in the section devoted to each department or program. At least half the requirements for the major must be completed with Case Western Reserve University courses. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields.

Note that most students pursuing a degree from the Case School of Engineering will complete ENGR 398 and ENGL 398 to fulfill the SAGES Departmental Seminar requirement and will complete an engineering senior project in their major to fulfill the SAGES Senior Capstone requirement.

**Major Fields Available for the Bachelor of Science in Engineering degree:**
- Aerospace Engineering
- Biomedical Engineering
• Chemical Engineering
• Civil Engineering
• Computer Engineering
• Electrical Engineering
• Engineering Physics
• Materials Science and Engineering
• Mechanical Engineering
• Polymer Science and Engineering
• Systems and Control Engineering
• General Engineering

**General Education Requirements of the Case School of Engineering**

These requirements provide a foundation in mathematics and the sciences for programs in engineering leading to the Bachelor of Science degree. The CSE general education requirements are also designed to develop communication skills and to provide breadth beyond mathematics, the sciences, and engineering in each student's education.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy Case School of Engineering general education requirements.

* The chemistry-materials course sequence CHEM 105-CHEM 106-ENGR 145 (or a materials-focused course in chemical engineering for Chemical Engineering majors) may be substituted for the sequence CHEM 111-ENGR 145.

** Computer engineering and the computer-oriented concentrations in biomedical engineering specifically require CSDS 132.

*** Students majoring in Chemical Engineering may substitute an engineering elective for this course.

**** This course is not required for Civil Engineering majors pursuing the Environmental Engineering sequence.

***** Students pursuing a polymer science and engineering major or the biomaterials concentration in the biomedical engineering major may substitute EMAC 351 and EMAC 352 for ENGR 225. Students pursuing majors in aerospace or mechanical engineering may substitute EMAE 251, EMAE 252, and EMAE 353 for ENGR 225. This course is not required for Civil Engineering majors pursuing the Structural Engineering, Geotechnical Engineering, Construction Management, or Pre-Architecture sequence.

**Natural Sciences, Mathematics, or Statistics Requirement (3 credit-hours)**

Course designated by major department.

**Breadth Requirement (15 credit-hours)**

Twelve credit-hours comprised of 3- or 4-credit-hour courses outside of the areas of engineering, natural science, and mathematics offered by the College of Arts and Sciences; the Weatherhead School of Management; the Frances Payne Bolton School of Nursing; the Jack, Joseph, and Morton Mandel School of Applied Social Sciences; the School of Medicine Department of Bioethics; the Cleveland Institute of Music; or the Cleveland Institute of Art. Other courses approved by the School of Engineering’s Undergraduate Studies Committee are also acceptable. The selection of courses to satisfy this requirement should be done in consultation with the student’s academic advisor(s).

Total Units: 15

**Bachelor of Science in Computer Science Degree**

Candidates for the Bachelor of Science in Computer Science degree, in addition to meeting the general requirements for bachelor’s degrees (p. 1212), including the SAGES and physical education requirements, must also complete the following requirements:
1. A minimum of 126 credit-hours.
2. The General Education Requirements of the Case School of Engineering as modified for the Bachelor of Science in Computer Science degree and listed below.
3. The requirements for the computer science Bachelor of Science major as presented in this Bulletin. At least half the requirements for the major must be completed with Case Western Reserve University courses. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields.

Note that most students pursuing a degree from the Case School of Engineering will complete ENGR 398 and ENGL 398 to fulfill the SAGES Departmental Seminar requirement and will complete a senior project in their major to fulfill the SAGES Senior Capstone requirement.

**General Education Requirements of the Case School of Engineering, modified for the Bachelor of Science in Computer Science degree**

These requirements provide a foundation in mathematics and the sciences for the Bachelor of Science program in computer science. The CSE general education requirements are also designed to develop communication skills and to provide breadth beyond mathematics, the sciences, and engineering in each student’s education.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer may be used to satisfy Case School of Engineering general education requirements.

**Mathematics, Sciences, and Engineering Requirements (33 credit-hours)**

Total Units 15

Weatherhead School of Management
Undergraduate Degree Requirements

Bachelor of Science Degree

Candidates for the Bachelor of Science in Accounting degree or the Bachelor of Science in Management degree, in addition to meeting the general requirements for bachelor’s degrees (p. 1212), including the SAGES and physical education requirements, must also complete the following requirements:

1. A minimum of 122 credit-hours.

2. The General Education Requirements of the Weatherhead School of Management listed below.

3. The requirements for a major in accounting or management as presented in this Bulletin in the section devoted to each department or program. At least half the requirements for the major must be completed with Case Western Reserve University courses. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields.

4. For all courses taken to satisfy major requirements and for which grades are averaged, a candidate for a BS from the Weatherhead School of Management must earn a minimum cumulative average of 2.000.

5. A minimum of 30 credit-hours of courses at the 300- or 400-level.

Majors Available for the Bachelor of Science in Management degree:

• Business Management
• Finance
• Marketing
• Dean’s Approved Major*

*Any student interested in developing a major of their own design for the BS in Management should consult with the Office of Undergraduate and Integrated Study Programs in the Weatherhead School of Management.

General Education Requirements of the Weatherhead School of Management (minimum of seven 3- or 4-credit-hour courses, totaling at least 22 credit-hours)

These requirements provide a broad educational foundation for programs in accounting and management, leading to the Bachelor of Science degree.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer credit may be used to satisfy Weatherhead School of Management general education requirements.

Two courses used to fulfill requirements for the major may be used also to fulfill the breadth requirements.

Arts and Humanities (6 - 8 credit-hours)
Two 3- or 4-credit-hour Arts and Humanities courses selected from:

• Akkadian (AKKD)
• Ancient Near East and Egyptian Studies (ANEE)
• Arabic (ARAB)
• Art History (ARTH)
• Art Studio (ARTS)
Frances Payne Bolton School of Nursing Undergraduate Degree Requirements

Bachelor of Science in Nursing Degree
Candidates for the Bachelor of Science in Nursing (BSN) degree, in addition to meeting the general requirements for bachelor's degrees (p. 1212), including the SAGES and physical education requirements, must also complete the following requirements:

1. A minimum of 121.5 credit-hours.
2. The General Education Requirements of the Frances Payne Bolton School of Nursing listed below.
3. The requirements for the major in nursing as presented in this Bulletin. At least half the requirements for the major must be completed with Case Western Reserve University courses. Major requirements include all required and elective work completed in the major department combined with required courses completed in related fields.
4. For all courses specifically required for the major in nursing, a minimum grade of C.

Note that most Nursing students will complete NURS 320 Theoretical and Evidence Bases for Best Practice in Nursing to fulfill the SAGES Departmental Seminar requirement and will complete NURS 373 Population Health Practicum to fulfill the SAGES Senior Capstone requirement. Also, most Nursing students will complete NURS 277 BCLS and First Aid for Health Care Providers upon matriculation to count as a half-semester of Physical Education credit; this course may be used again two years later for a second half-semester of Physical Education credit.

General Education Requirements of the Frances Payne Bolton School of Nursing (minimum of ten 3- or 4-credit-hour courses, totaling at least 30 credit-hours)
These requirements provide a broad educational foundation for the Bachelor of Science in Nursing program.

Course credit earned by Advanced Placement, International Baccalaureate, proficiency examinations, and transfer credit may be used to satisfy School of Nursing general education requirements.

Natural and Mathematical Sciences (18 credit-hours)
Mathematical Reasoning and Analysis

ANTH 319 Introduction to Statistical Analysis in the Social Sciences
PSCL 282 Quantitative Methods in Psychology

• Spanish (SPAN)
• Theater (THTR)
• World Literature (WLIT)

Social Sciences (6 credit-hours)
Any two 3- or 4-credit-hour Social Science courses except ECON 102 Principles of Microeconomics* or ECON 103 Principles of Macroeconomics* selected from:

• Anthropology (ANTH)
• Cognitive Science (COGS)
• Communication Sciences (COSI)
• Economics (ECON)
• Political Science (POSC)
• Psychology (PSCL)
• Sociology (SOCI).

* ECON 102 Principles of Microeconomics and ECON 103 Principles of Macroeconomics are included in accounting, business management, finance, and marketing major requirements, as well as the requirement for a WSOM dean's approved major.
A student granted the senior year in professional studies privilege is permitted to substitute the work of the first year in a professional school for that required during the last year as an undergraduate. Upon the satisfactory completion of the first year’s work in the professional school, the student will be granted the bachelor’s degree from the College of Arts and Sciences.

To be eligible for the senior year in professional studies privilege, a student must:

1. Be accepted for admission to professional studies at Case Western Reserve University.
2. Meet the following degree requirements:
   a. Completion of the SAGES requirements, the General Education Requirements of the College of Arts and Sciences, and the physical education requirement.
   b. Completion of three-fourths of the courses required for the major, including three-fourths of the courses required in the major department. [If the student has not completed major requirements at the time of receiving the BA, the degree will be awarded without a major.]
   c. Completion of 84 credit-hours of arts and sciences courses. These credit-hours may be drawn from those offered by the College of Arts and Sciences, as well as those in biochemistry, computer science, economics, neuroscience, or nutrition.
   d. Completion of at least 90 credit-hours of academic work, of which the final 60 credit-hours must have been in residence. A student may include in that final 60 credit-hours no more than six credit-hours earned in courses completed in other institutions, either by cross-registration in regular sessions or by approved transient registration in summer sessions.

Upon admission to the program, students register in the professional school to which they have been admitted and are subject to the policies, rules and regulations of the professional school. They may, however, continue to receive CWRU undergraduate scholarships and may continue to reside in undergraduate housing during what would normally be their senior year of undergraduate work. They will be considered professional school students with respect to the awarding of need-based aid.

For information, contact the Office of Undergraduate Studies, 447 Sears Bldg., 216.368.2928.

Senior Year in Absentia Privilege for Students of Medicine and Dentistry

Students of outstanding ability and attainment who are candidates for the BA degree and are offered admission to a medical or dental school other than those at Case Western Reserve University at the end of the junior year are eligible to shorten their entire course of studies by one year through the Senior Year in Absentia privilege. Application for this privilege should be made during the second semester of the junior year through the Office of Undergraduate Studies, 447 Sears Bldg.

A student granted the Senior Year in absentia privilege is permitted to substitute the work of the first year in a professional school for that required during the last year in the undergraduate college. Upon the satisfactory completion of the first year’s work in the professional school, the student will be granted the BA from the College of Arts and Sciences. The privilege is extended to qualified students who attend medical

* or approved course in human growth and development.

**Programs Toward Graduate or Professional Degrees**

**Acceleration Toward Professional Degrees**

NOTE: The policies and procedures related to integrated undergraduate and professional degrees described below apply to students who matriculated at Case Western Reserve University before the 2021-2022 academic year. These policies and procedures are under review and may be different for students who matriculate at Case Western Reserve University during the 2021-2022 academic year and thereafter.

**Senior Year in Professional Studies at Case Western Reserve University**

Students of outstanding ability and attainment who are candidates for the BA and who are admitted to professional studies at Case Western Reserve University by the end of the junior year may shorten their entire course of studies by one year through the Senior Year in Professional Studies privilege. Application should be made during the second semester of the junior year through the Office of Undergraduate Studies, 447 Sears Bldg. This privilege is extended to students who are candidates for the BA and who attend the School of Dental Medicine; the School of Law; the Frances Payne Bolton School of Nursing; or the Jack, Joseph and Morton Mandel School of Applied Social Sciences of Case Western Reserve University.
schools in the United States or Canada approved by the Association of American Medical Colleges or dental schools in the United States approved by the American Association of Dental Schools.

To be eligible for the Senior Year in absentia privilege, a student must:

1. Be accepted for admission to professional studies.
2. Attain a cumulative grade point average of at least 3.200 in all courses attempted from the date of admission as an undergraduate.
3. Meet the following degree requirements:
   a. Completion of the SAGES requirements, the General Education Requirements of the College of Arts and Sciences, and the physical education requirement.
   b. Completion of three-fourths of the courses required for the major, including three-fourths of the courses required in the major department. [If the student has not completed major requirements at the time of receiving the BA, the degree will be awarded without a major.]
   c. Completion of 84 credit-hours of arts and sciences courses. These credits may be drawn from those offered by the College of Arts and Sciences, as well as those in biochemistry, computer science, economics, neuroscience, or nutrition.
   d. Completion of at least 90 credit-hours of academic credit, of which the final 60 credit-hours must have been in residence. A student may include in that final 60 credit-hours no more than six credit-hours earned in courses completed in other institutions, either by cross-registration in regular sessions or by approved transient registration in summer sessions.

For information, contact the Office of Undergraduate Studies, 447 Sears Bldg., 216.368.2928.

**Integrated BA/BS and Master of Accountancy**

Undergraduate students at Case Western Reserve University have the opportunity to pursue both the Bachelor of Arts (BA) or Bachelor of Science (BS) degree and the Master of Accountancy (MAcc) degree through the BA/BS and Master of Accountancy Integrated Study Program (https://weatherhead.case.edu/degrees/undergraduate/academics/accounting/integrated-program/). The integrated program is open to students pursuing any undergraduate major, though students majoring in or with a secondary major in accounting are able to complete both degrees in the shortest amount of time, typically nine semesters. CWRU students must apply and be admitted to the MAcc program, though certain requirements are waived. Because the integrated program requires proper planning of coursework, undergraduate students are strongly encouraged to apply for the MAcc in their junior year. A select number of exceptionally well-qualified high school seniors who plan to study accounting are offered places in the Early Admission to the Integrated Study Program in Accountancy (p. 1113).

Based upon the student's professional interests, they will choose between two tracks, the Professional Track and the Analytics Track, that are specifically tailored to develop the ability to prepare, interpret, and communicate accounting information as required by the profession.

The integrated study program is strongly recommended for those students planning to obtain professional certification as a certified public accountant (CPA). Upon completion of the MAcc program, graduates will have satisfied the accounting educational requirements to sit for the CPA examination in the state of Ohio, including the required 150 credit-hours of study at the university level.

For more information, contact Tiffany Schwendeman (tiffany.schwendeman@case.edu), assistant dean of undergraduate and integrated study programs, at 216.368.2058.

**Integrated BA/BS and Master’s Programs in Business Analytics and Intelligence, Finance, Healthcare Management, and Supply Chain Management**

The Integrated Bachelor of Arts or Bachelor of Science and Master of Business Analytics and Intelligence (https://weatherhead.case.edu/degrees/masters/ms-management/business-analytics/), Master of Finance (https://weatherhead.case.edu/degrees/masters/ms-management/finance/), Master of Healthcare Management (https://weatherhead.case.edu/degrees/masters/ms-management/healthcare/), or Master of Supply Chain Management (https://weatherhead.case.edu/degrees/masters/ms-management/operations-research-supply-chain/) program allows qualified CWRU undergraduates to work towards the completion of a specialty master’s degree from the Weatherhead School of Management during their undergraduate studies, thereby enabling completion of both degrees in a shorter period of time. Students admitted to the program may count up to nine credit-hours of graduate level courses taken while an undergraduate towards both the undergraduate degree (as appropriate to the student's undergraduate degree program) and the relevant master's degree. After completion of the BA or BS, the student enrolls as a graduate student in the Weatherhead School of Management to complete any additional coursework required for the master’s degree.

Admission to Weatherhead's specialty master's programs (https://weatherhead.case.edu/degrees/#specialty) is based on academic preparation and achievement (undergraduate coursework and GPA), GMAT/GRE or SAT scores, and genuine interest in business analytics, finance, healthcare, or operations research/supply chain management (determined by application essays, letters of recommendation, and interview).

For more information about these integrated study programs, contact Jim Hurley (james.hurley@case.edu), assistant dean of undergraduate and integrated programs, at 216.368.3856; or Marybeth Keeler (marybeth.keeler@case.edu), program manager of the Master of Finance program, at 216.368.3688; or Eric Grelson (eric.grelson@case.edu), program director for the Master of Business Analytics and Intelligence program, at 216.368.9947. For more information about applying to specialty master’s programs in the Weatherhead School of Management, contact Meredith Richardson (meredith.richardson@case.edu) at 216.368.2069.

**Acceleration Toward Graduate Study**

NOTE: The policies and procedures related to integrated undergraduate and graduate degrees described below apply to students who matriculated at Case Western Reserve University before the 2021-2022 academic year. These policies and procedures are under review and may be different for students who matriculate at Case Western Reserve University during the 2021-2022 academic year and thereafter.

**Integrated Graduate Studies Program**

The Integrated Graduate Studies Program (IGS) is intended for highly motivated undergraduate students who are candidates for the BA degree and whose objective is a degree at the master's or doctoral
level. Qualified students may apply in the junior year to be admitted to graduate study for their senior year and pursue the simultaneous completion of requirements for both the master's and bachelor's degrees. The baccalaureate will normally be awarded upon completion of the requirements for both degrees, unless a student satisfies all BA requirements prior to completing the master's degree requirements. Students in the IGS Program are exempted from the 42-hour limit imposed on BA candidates for work above the 100-level in a single department. However, the exemption is granted only upon completion of the master's degree requirements.

Eligibility requirements for participation in the Integrated Graduate Studies Program are:

1. 90 credit-hours earned of which the last 60 credit-hours must have been in residence at Case Western Reserve University.
2. Completion of the SAGES requirements (including the SAGES Writing Portfolio), the General Education Requirements of the College of Arts and Sciences, and the physical education requirement; students who have fulfilled all SAGES requirements except the Senior Capstone will be required to complete the capstone during their first year in the IGS program.
3. Completion of three-fourths of the requirements for the major, including three-fourths of the courses required in the major department.
4. Admission to a master's or doctoral program offered through the School of Graduate Studies.

Upon admission to the program, IGS students register as students in the School of Graduate Studies and are subject to the policies, rules and regulations of the School of Graduate Studies. They may, however, continue to receive CWRU undergraduate scholarships and may continue to reside in undergraduate housing during what would normally be their senior year of undergraduate work. They will be considered graduate students with respect to the awarding of need-based aid.

For information, contact the Office of Undergraduate Studies, 447 Sears Bldg., 216.368.2928.

**Integrated BS/MS in Nutrition**

Admission to the Integrated BS/MS in Nutrition program is subject to the same process and requirements as admission to the Integrated Graduate Studies Program described above. Upon successful completion of the program, students earn the BS in Nutrition and the MS in Nutrition.

**BS/MS Program for Candidates for the BS in Engineering, Computer Science, Mathematics, Natural Sciences, and Statistics**

The Integrated BS/MS Program is intended for highly motivated candidates for the BS in engineering, computer science, mathematics, natural sciences, or statistics who wish to pursue an advanced degree. Application to the BS/MS program must be made in the junior year and prior to attaining senior status (completion of 90 credit-hours). Generally, this means that a student will submit the application during their sixth semester of undergraduate course enrollment and will have no fewer than two semesters of remaining BS requirements to complete.

A student admitted to the program may, in the senior year, take up to nine credit-hours of graduate courses (400-level and above) that will count towards both BS and MS requirements. The courses to be double-counted must be specified at the time of application. Courses taken prior to admission to the program cannot count towards the MS unless they are in excess of BS degree requirements and permission to use them towards the MS has been granted by the dean of graduate studies and the dean of undergraduate studies.

To be considered for the BS/MS Program, a student must:

1. submit to the School of Graduate Studies an application for admission to the program, and
2. submit to the Office of Undergraduate Studies an MS Planned Program of Study Form, showing the courses to be double-counted.

Students for whom the master’s project or thesis is a continuation and development of the senior project should register for Exxx 651 Thesis (or the appropriate project course) during the senior year and are expected to complete all other courses for the BS before enrolling in further MS coursework and thesis (continuing the senior project). Students for whom the master’s thesis or project is distinct from the senior project will be expected to complete the BS degree before taking further graduate courses for the master's degree.

Applicants in engineering or computer science should consult their departmental BS/MS advisor in the Case School of Engineering. Applicants in mathematics, natural sciences, and statistics should consult the Office of Undergraduate Studies, 447 Sears Bldg., 216.368.2928.

**Conditionally Guaranteed Admission to the University's Professional Schools**

The Pre-Professional Scholars Programs in Medicine and Dentistry grant to a few outstanding entering first-year undergraduates conditional commitments of admission to the corresponding professional school at Case Western Reserve University. These commitments are honored upon successful completion of the requirements established by each professional school. Students admitted to these programs are relieved of much of the anxiety and uncertainty associated with pre-professional studies. Consequently, they feel free to undertake challenging courses of study and pursue a variety of interests as they prepare for professional studies. Pre-Professional Scholars in Medicine are free to choose any of the bachelor's degrees available in the university. Pre-Professional Scholars in Dentistry are not required to complete a bachelor’s degree, but may elect to do so in any of the bachelor's degrees available. Participants who wish to change their career goals or apply for admission to other professional schools are free to do so.

Information for students seeking admission to Case Western Reserve University as part of the Pre-Professional Scholars Program in Medicine or Dentistry is available from the Office of Undergraduate Admission (https://case.edu/admission/), admission@case.edu.

**Pre-Professional Scholars Program in Dentistry**

Each year, approximately 10 exceptionally well-qualified high school seniors who plan to pursue careers in dentistry are offered places in the Pre-Professional Scholars Program in Dentistry. This program requires seven years: three years of successful undergraduate study and four years at the School of Dental Medicine.

Pre-Professional Scholars in Dentistry are not required to complete a major, but if they elect to earn a bachelor's degree they are free to choose a major in an area of interest. Students who elect to complete a bachelor’s degree must either complete all degree requirements by the end of their third year or switch to the Senior Year in Professional Studies (p. 1297) program, which permits them to substitute the work
of the first year in dental school for that required during the last year as an undergraduate pursuing a Bachelor of Arts. Students who switch to the Senior Year in Professional Studies program in order to complete their bachelor’s degree will not lose their conditional admission to the School of Dental Medicine, but they are expected to complete all requirements for the Pre-Professional Scholars Program.

To qualify for the place reserved in the School of Dental Medicine, a Pre-Professional Scholar in Dentistry must achieve the following:

1. A cumulative grade point average of 3.500 or higher for all coursework, as well as for all science coursework taken, including, but not exclusively, biology, chemistry, physics, and mathematics.

2. A Perceptual Ability score of 18 or higher and an Academic Average score of 19 or higher on the Dental Admission Test (DAT) of the American Dental Association. The test must be taken no later than January of the third year.

3. Successful completion of the following courses, with a minimum of 30 credit-hours in biology, chemistry, physics, and mathematics taken at Case Western Reserve University.

   **Biology:**
   - BIOL 214 & 214L **Genes, Evolution and Ecology and Genes, Evolution and Ecology Lab** 4
   - BIOL 215 & 215L **Cells and Proteins and Cells and Proteins Laboratory** 4
   - BIOL 216 & 216L **Development and Physiology and Development and Physiology Lab** 4

   **Chemistry:**
   - CHEM 105 **Principles of Chemistry I** 3
   - CHEM 106 **Principles of Chemistry II** 3
   - CHEM 113 **Principles of Chemistry Laboratory** 2
   - CHEM 223 **Introductory Organic Chemistry I** 3
   - CHEM 224 **Introductory Organic Chemistry II** 3
   - CHEM 233 **Introductory Organic Chemistry Laboratory I** 2
   - CHEM 234 **Introductory Organic Chemistry Laboratory II** 2

   **Mathematics:**
   - MATH 125 **Math and Calculus Applications for Life, Managerial, and Social Sci** 4

   **Physics:**
   - PHYS 115 **Introductory Physics I** 4
   - PHYS 116 **Introductory Physics II** 4

4. Successful completion of a SAGES First Seminar, two University Seminars, a SAGES writing portfolio, at least one course in the arts and humanities, at least one course in the social sciences, and two semesters of physical education.

5. A successful transition interview with faculty representing the School of Dental Medicine's admissions committee, usually scheduled after the receipt of grades from the fall semester of the third year.

---

**Pre-Professional Scholars Program in Medicine**

Each year, 15 to 20 exceptionally well-qualified high school seniors who plan to pursue careers in medicine are offered places in the Pre-Professional Scholars Program in Medicine. Pre-Professional Scholars receive a conditional commitment of admission to the University Program of the Case Western Reserve University School of Medicine to be honored upon successful progress toward and completion of the bachelor’s degree. The Pre-Professional Scholars Program in Medicine requires eight years: four years of successful undergraduate study leading to the bachelor’s degree followed by four years in the University Program of the School of Medicine. Pre-Professional Scholars in Medicine who complete their undergraduate degree requirements in fewer than four years are required to pursue other experiences intended to enhance their professional and personal development during the period following the receipt of their bachelor's degree and until study at the School of Medicine begins.

Pre-Professional Scholars in Medicine are free to choose from among all of the degree and major programs offered in the university but must complete the courses in biochemistry, biology, chemistry, physics, mathematics/statistics, and behavioral sciences listed in the Conditions of Admission letter they received when accepted to the program. Pre-Professional Scholars are expected to demonstrate successful academic progress by meeting the following level of performance: A CWRU cumulative GPA of 3.63 and a cumulative American Medical College Application Service (AMCAS) GPA and AMCAS Biology, Chemistry, Physics and MATH (BCPM) GPA of 3.63 at the time of application and maintained on final graduation transcripts. They are also expected to continue to fulfill expectations for outstanding professional and personal development as outlined in the Conditions of Admission letter. These expectations include, but are not limited to, maintaining academic integrity and adhering to the University’s standards of conduct (all academic integrity and judicial offenses will be reported to the School of Medicine), clinical shadowing, and involvement in undergraduate activities and community programs.

Pre-Professional Scholars in Medicine are not required to take the Medical College Admission Test (MCAT) for the program. However, if they do take the MCAT, they are expected to achieve a score that is above the 94th percentile in order to maintain their position in the Pre-Professional Scholars Program. Program participants who have an interest in applying to other medical schools or who wish to be considered for a dean's merit scholarship at the Case Western Reserve School of Medicine should plan to take this test.

Progress is reviewed with each student at regular intervals in the program. At the end of the third year, Pre-Professional Scholars in Medicine who have met the required levels of performance go through the normal admission procedures for the University Program of the School of Medicine, including submitting an application through the American Medical College Application Service (AMCAS) and an interview.

Successful completion of the Pre-Professional Scholars Program in Medicine guarantees admission only to the University Program of the School of Medicine. Students seeking admission to the Cleveland Clinic Lerner College of Medicine of the Case Western Reserve University School of Medicine must complete a separate application and will be considered in competition with all applicants for that program.
Undergraduate Experiential Learning

Experiential Learning

Case Western Reserve University offers undergraduates a variety of experiences inside and outside the classroom that are built on a process of guided inquiry, preparation, action and reflection. Many research, internship, and employment opportunities are aligned with academic programs. Linguistic and cultural immersion characterize the study abroad experience. In many courses, Case Western Reserve students engage in experiential learning beyond the on-campus classrooms and laboratories. Experiences that form the basis for reflection and synthesis under the guidance of faculty include working with hospitalized children, designing engineering solutions for a problem presented by a municipality, interning at a local media outlet, tutoring in Cleveland’s Hispanic community, gaining experience in public health clinics, studying history with “the city as classroom,” or collecting aquatic specimens from the ponds at the university’s 389-acre farm. Courses that incorporate community service or internships into the curriculum forge links between Case Western Reserve undergraduates and schools, neighborhoods, businesses, and governmental and health care institutions in Cleveland and elsewhere.

International Experience

Case Western Reserve University encourages students to study, research, intern, and participate in service learning experiences abroad. Students benefit personally, academically, and professionally from educational experiences abroad.

Case Western Reserve University partners with overseas institutions to provide a wide selection of courses that students can take abroad. Students of all majors can stay on track to graduate while including studies abroad in their degree timeline. They can choose from traditional semester or academic year programs. Students should determine, in consultation with their academic advisors and study abroad advisors, which study abroad programs meet their academic and personal goals. They can choose from traditional semester or academic year study abroad programs or a shorter programs with CWRU faculty and students. Students should visit www.case.edu/studyabroad (http://www.case.edu/studyabroad/) or contact a study abroad advisor at studyabroad@case.edu to find programs that meet their needs and can explore different program types and offerings online (https://case.edu/international/education-abroad/programs/terms-and-program-types/).

Many study abroad programs cost about the same as studying in Cleveland. Additionally, financial aid can be applied to study abroad, and many students find that they are eligible for study abroad scholarships.

Semester and Academic Year Programs

In order to participate in semester and academic year programs of study or practical experience that immerse them in the culture and language of another country, students must first

- Have completed at least 24 credit-hours of coursework at CWRU,
- Have declared a major,
- Be in good academic and disciplinary standing with no pending judicial actions, and
- Be otherwise eligible to register on campus at CWRU for the proposed semester(s) (no financial holds, e.g.).

After matriculation at Case Western Reserve University, students are permitted to earn at other accredited colleges or universities or through an approved program of study abroad no more than 38 credit-hours toward the totals required for their degree, with no more than 15 credit-hours taken as part of domestic programs or as summer study in a student’s home country; this includes courses taken through the cross-registration program. Any off-campus study beyond 15 credit-hours may only be taken through approved study abroad programs. Any additional credits earned at other institutions after matriculation at Case Western Reserve beyond 15 domestically or as summer study in a student’s home country and beyond a total of 38 including study abroad will raise the total number of credit-hours required for the degree by a corresponding number.

Case Western Reserve does not require students to complete any foreign language prerequisites before studying abroad, though students wishing to study in a country where the native language is not English are advised to develop their language skills to the extent possible. Students studying for at least a semester in a single location where English is not an official language must take a course that advances their skills in a language of the host country during each semester of study abroad, provided such courses are available. This may be a course of language instruction or a course taught in a language of the host country. Students participating in study abroad experiences that are comparative in nature and visit several sites within the same semester are not required to include language study in their academic programs.

Students participating in semester or academic year study abroad must enroll in the equivalent of at least 12 credit-hours each semester in order to maintain full-time student status for the semester abroad. Upon presentation of an official transcript from the study abroad program, transfer credit will be awarded for courses completed with a grade of C or better and determined to be equivalent or comparable to those offered by the appropriate academic department at CWRU.

Students participating in semester or academic year study abroad pay the normal CWRU tuition to Case Western Reserve University and maintain their student status at CWRU during the period of study abroad. Case Western Reserve University will, in turn, pay the tuition costs for the student’s program abroad. Students are responsible for paying all non-tuition costs associated with study abroad to the study abroad program directly (i.e. housing, student fees, excursions, travel costs, etc.). Students retain all of their financial aid while studying abroad. Additional study abroad financial information is available online (https://case.edu/international/education-abroad/financial-information/).

Short-Term Programs

Case Western Reserve University offers a robust portfolio of short-term study abroad options, which allow students to travel as a group with a member of the Case Western Reserve University faculty. These programs are often one to three weeks in duration and are offered over spring break, winter break, and during the summer. Program offerings vary each year, but recent short-term study abroad locations included China, Costa Rica, Cuba, Ecuador, France, Ghana, India, Israel, Italy, Japan, Jordan, Kenya, Namibia, the Netherlands, Norway, Poland, Spain, Uganda, and the United Kingdom. All CWRU students in good academic and disciplinary standing are eligible to participate in short-term study abroad programs.

Summer Programs

All Case Western Reserve University undergraduates in good academic and disciplinary standing are permitted to study abroad during the summer. With approval, up to 15 credit-hours of summer coursework can be transferred to Case Western Reserve University. During the summer, study abroad students pay tuition and fees directly to the study abroad
program. A wide variety of summer programs is available through the Office of Education Abroad.

Research, Service Learning, and Internship Opportunities Abroad
Case Western Reserve University offers international research, service learning, and internship opportunities as part of a semester abroad on many of our approved programs. Through our partnerships with Acadia University (summer programs) and EuroScholars (semester programs), students can experience a research-intensive program abroad. The CWRU study abroad advisors can help students identify and apply to these programs. With the help of the Office of Education Abroad and CWRU faculty, students can also conduct independent research projects abroad.

Research Experience
Undergraduate Research
Case Western Reserve University is a research-intensive community with a tradition of involving undergraduates in research and creative endeavors. Regardless of a student’s major or academic interests, there are numerous opportunities to engage in research either on campus with Case Western Reserve faculty or elsewhere during both the academic year and the summer. SOURCE (https://case.edu/source/) (Support of Undergraduate Research and Creative Endeavors) provides assistance to students throughout the undergraduate educational experience, including:

- helping students identify research and creative project opportunities on or around the university during the academic year and around the world during the summer,
- providing funding for on-campus summer research,
- providing funding for travel for students presenting their work at regional and national conferences,
- providing educational research and informational seminars,
- sponsoring Intersections: SOURCE Symposium and Poster Session for students to present their work to our academic community, and
- advising Discussions: The Undergraduate Research Journal of CWRU.

For more information, email source@case.edu or phone 216.368.8508.

In many cases, students pursuing research under the guidance of a faculty member may earn degree credit by registering for “Undergraduate Research” or “Independent Study” in the appropriate department. These are advanced-level courses and require departmental approval. However, students may not earn both degree credit and pay for the same work. Students may discuss academic credit for research with their major advisor.

Work Experience
The Center for Civic Engagement and Learning
The Center for Civic Engagement and Learning (https://students.case.edu/civicengagement/) (CCEL) works to create an engaged campus by providing and supporting opportunities for community service and collective action while promoting civic awareness and leadership. CCEL offers a variety of programs, services, and resources to accommodate different student interests and schedules. These include one-day Saturdays of Service, flexible weekly opportunities through CCEL Serves, week-long and weekend Alternative Break experiences, and the year-long Civic Engagement Scholars program. CCEL coordinates Cleveland excursions to explore and connect with our community and facilitates educational training about community issues, responsible engagement, voter education/registration, and active citizenship. CCEL also provides community service advising and assists faculty and students in designing and implementing service learning courses and community-based capstone projects. For more information, visit the Center for Civic Engagement and Learning, Tinkham Veale University Center, Suite 165.

Cooperative Education
Cooperative Education (Co-op) (http://engineering.case.edu/coop/) is an academic program that enables students in majors offered by the Case School of Engineering to alternate classroom studies with career-based experiences in industry. It is a learning experience designed to integrate classroom theory with practical experience and professional development. Co-op is a paid full-time work experience designed to enhance the student’s education. Case Western Reserve co-op assignments are typically for two seven-month periods, each period consisting of a summer and a contiguous spring or fall semester. While participating in co-op, students maintain their full-time student status. This program is available to students pursuing majors in all fields of engineering, computer science (BA and BS), and data science. For additional information, contact the Division of Engineering Leadership and Professional Practice Office, Nord Hall, Room 312, 216.368.5119.

Professional Practicum
Practicum is a non-credit experiential education program coordinated through Post-Graduate Planning and Experiential Education that provides students with opportunities to develop and enhance skills, insights, and knowledge related to career development. The desired learning outcome of the practicum experience is intellectual, professional, and personal growth in an area related to a student’s academic and career goals. Undergraduate and graduate students enrolled in the College of Arts and Sciences, the Case School of Engineering, the Frances Payne Bolton School of Nursing, or the Weatherhead School of Management who are pursuing career-related work experience and students pursuing entrepreneurial ventures may participate. (Most Case School of Engineering students participate in experiential education through the Co-op program, but may participate in practicum, depending on the duration of the assignment.) International students are eligible for the practicum program through Curricular Practical Training (CPT).

Practicum students enroll in course sections for the semester in which they are on assignment either full-time (40 hours/week) or part-time (20 hours/week). The duration of the program can range from a minimum of 6 weeks to a maximum of 14 weeks. Full-time practicum students do not enroll in other coursework, but maintain full-time student status during the practicum period; part-time participants are expected to enroll in other credit-bearing coursework. Although no credit is awarded, students who successfully complete the practicum assignment receive transcript notation. Successful completion is determined by the Practicum Coordinator with input from the faculty advisor and employer once the required deliverables are submitted by the student.

Students interested in participating in a practicum should contact Post-Graduate Planning and Experiential Education, 229 Sears Bldg., the semester prior to the intended practicum period.

Entrepreneurship
CWRU LaunchNET is the entrepreneurship gateway on campus to help students in all majors test, validate, and turn their ideas into products and services. LaunchNET connects students to a network of mentors and peers who share an interest in entrepreneurship and innovation.
For additional information, students should contact LaunchNET in 140 Thwing Center.

**Washington Study Program**

The *Washington Study Program* provides students with the opportunity to complete a full-time, research-intensive internship in Washington, D.C. By participating in a semester-length program during the fall or spring (WASH 2A Washington Center Internship), students earn 9 credit-hours; for a summer internship (WASH 2D Washington Center Summer Internship), they earn 3 credit-hours. In addition, students earn 3 credit-hours for participating in a seminar and attending a weekly lecture/discussion group (WASH 2B Washington Center - Politics and Public Policy Course) and 3 credit-hours by developing a portfolio based on their internship experiences (WASH 2C Washington Center - Portfolio). The credits earned can be counted as general electives or applied to a student’s major or minor with the prior consent of the individual department(s).

To be eligible for the program, a student is expected to be a junior or senior and have a GPA of at least 3.000. The program director, the student’s major advisor, and the appropriate dean in the Office of Undergraduate Studies must approve each application. Students must ensure that their participation will not prevent them from meeting on-campus residency or other university requirements.

**Undergraduate Collaborative Programs**

**Collaborative Programs with Other Colleges and Universities**

**Cross-Registration in Northeast Ohio**

Full-time undergraduates in good academic standing may cross-register for one course per semester at no additional tuition cost beyond their Case Western Reserve University tuition at the Cleveland Institute of Art, Cleveland State University, Cuyahoga Community College, or John Carroll University. Cross-registration at other local colleges and universities while enrolled full-time at Case Western Reserve will be considered on a case-by-case basis. Approval to participate in cross-registration is handled by the Office of Undergraduate Studies, 447 Sears Bldg., and is normally limited to courses that are not offered at Case Western Reserve.

To cross-register for studio courses at the Cleveland Institute of Art, a student must have permission from Case Western Reserve University’s director of art studios, 2215 Adelbert Road, 216.368.2714.

**Joint Program in Art Education**

The joint program in art education of Case Western Reserve University and the Cleveland Institute of Art (CIA) enrolls students pursuing the BS in Art Education, combining studio art courses at the Cleveland Institute of Art with liberal arts and education courses at Case Western Reserve University. Admission to the program requires application to Case Western Reserve University and presentation of an art portfolio to the Cleveland Institute of Art. Credentials must be acceptable to both institutions.

**Joint Program in Music**

All programs in music are conducted jointly by Case Western Reserve University and the Cleveland Institute of Music (CIM), and provide the intimacy and specialization of a professional conservatory, together with the resources of a comprehensive university.

Private music lessons can be arranged through the Department of Music in collaboration with the Cleveland Institute of Music. Students interested in pursuing this opportunity must obtain a permit from the Music Department in Haydn Hall to enroll for credit in Applied Music. Charges for private lessons will be covered by the full tuition rate for music and music education majors only. All other students will pay an additional fee.

Students pursuing a major in music or music education take music theory and lessons at the Cleveland Institute of Music, and take music history and other liberal arts and music education courses at Case Western Reserve University. Students pursuing the Bachelor or Arts degree with a major in music or the Bachelor of Science in Music Education degree apply to and enroll in Case Western Reserve University, while students seeking the Bachelor of Music degree apply to and enroll in the Cleveland Institute of Music.

**Reserve Officer Training Corps (ROTC)**

Reserve Officer Training Corps (ROTC) programs are available to Case Western Reserve University students through cooperative arrangements with Kent State University for Air Force ROTC and with John Carroll University for Army ROTC. Each of these universities offers military studies, leadership, and training courses. Participating students may seek transfer credit at Case Western Reserve for these courses, and may be exempted from the undergraduate physical education requirement.

Students who are not recipients of ROTC scholarships may enroll in the first- and second-year ROTC courses without incurring any military obligation. University students enrolling in ROTC programs are eligible to compete for ROTC scholarships awarded by the Air Force or the Army.

**Air Force ROTC**

The Air Force Reserve Officer Training Corps (http://www.kent.edu/afrotc/) (AFROTC) program provided by Kent State University prepares students for service as officers in the United States Air Force. Through courses in history, management, and leadership, and through practical training, students acquire leadership and management skills and learn about Air Force career opportunities, the role of the military in American society, the history of air power, and national defense policy.

An agreement between Case Western Reserve University and Kent State University allows full-time Case Western Reserve students to complete aerospace studies courses at Kent State University, which is approximately 35 miles from Case Western Reserve. Classes are usually scheduled on one or two afternoons during the week. This arrangement allows Case Western Reserve students to participate in either the four- or two-year AFROTC program. Students who wish to enter the two-year program in the junior year must contact the professor of aerospace studies at Kent State University no later than February prior to the academic year of planned entry.

Air Force ROTC scholarships are available on a competitive basis. Information about courses, registration, and scholarships may be obtained from the Air Force ROTC DET 630, 125 Terrace Drive, Kent State University, Kent, Ohio 44242; telephone: 330-672-2182. Case Western Reserve students planning to register for AFROTC courses at Kent State University should consult with the Office of Undergraduate Studies, 447 Sears Bldg., for information regarding registration procedures.
Army ROTC
The Army ROTC (http://www.jcu.edu/rotc/) program is designed to prepare students for service as a commissioned Army officer in either the active duty U.S. Army or the reserve components of the Army Reserve or National Guard. Classes and practical training focus on military skills, officer professionalism, leadership training, and the development of military-related officer and management techniques and procedures.

The Army ROTC program is offered through a partnership agreement with the US Army and a cooperative arrangement with John Carroll University with some of the first- and second-year ROTC classes being offered on the Case Western Reserve University campus. For those courses offered at Case Western Reserve (MLSC 101, MLSC 102, MLSC 201, and MLSC 202), students register in the ordinary way. For other Army ROTC classes, students enroll through cross-registration in the Department of Military Science at John Carroll University, which is approximately five miles from Case Western Reserve.

Army ROTC scholarships are available on a competitive basis. Information about courses, registration, and scholarships may be obtained from the Department of Military Science (ARMY-ROTC), John Carroll University, University Heights, OH 44118-4581; telephone: 216.397.4286. Case Western Reserve students planning to register for Army ROTC courses at John Carroll University should consult with the Office of Undergraduate Studies, 447 Sears Bldg., for information regarding registration procedures.

Fisk University Exchange Program
An exchange program between Fisk University (https://www.fisk.edu/) and Case Western Reserve University enables up to four Case Western Reserve students to spend a semester as visiting students at Fisk each year. Up to four Fisk students may spend a semester at Case Western Reserve each year. Fisk University was founded in 1866 as the first integrated coeducational school in the United States, and, at its founding, focused on providing a quality liberal arts education to the children of former slaves. Fisk University has a distinguished history as a liberal arts institution. It was the first historically black college to have chapters of the Phi Beta Kappa and Mortar Board national honorary societies.

Case Western Reserve students who participate in the Case Western Reserve-Fisk Exchange pay tuition to Case Western Reserve University, pay the Fisk room and board fees, and maintain their CWRU student status during the period of the exchange. Information about the exchange program is available in the Office of Undergraduate Studies, 447 Sears Bldg.

The Dual Degree (3-2) Program in Engineering
Students of superior scholarship who have attended one of a group of select liberal arts colleges with which Case Western Reserve University has a dual degree agreement are eligible to participate in the Dual Degree (3-2) (http://engineering.case.edu/delpp/dualdegree/) program at Case Western Reserve University. This program allows outstanding students to begin their studies at a liberal arts college for three years and pursue an engineering degree at Case Western Reserve University for two years.

Once requirements at both institutions are completed, students will receive a degree from the liberal arts college and a degree from Case Western Reserve University in a designated engineering discipline. For additional information, contact Debbie Fatica (dxf3@case.edu), 312 Nord Hall, 216.368.4449.

Cleveland Humanities Collaborative
The Cleveland Humanities Collaborative (http://chc.case.edu/) is a set of partnerships between Case Western Reserve University and Cuyahoga Community College (Tri-C), Lakeland Community College (Lakeland CC), and Lorain Community College (Lorain CC) charged with promoting student transfer from these local community colleges to CWRU to pursue a liberal arts education through a Bachelor of Arts degree in the humanities. In addition, the program encourages and supports strengthened ties among faculty through programming and academic collaborations. The collaborative also seeks to enrich the cultural life of northeastern Ohio through quality public programming that supports the appreciation of the humanities and its importance in nurturing engaged citizens and building strong communities.

As students pursue their associate’s degree at Tri-C, Lakeland CC, and Lorain CC, they are able to explore many of the humanities disciplines available as majors and minors at CWRU. They are also able to take advantage of the cross-registration program that enables these students to take up to two classes per semester at CWRU while paying home tuition. Once they are on track to earn their associate’s degree, students apply to CWRU as transfer students. Upon acceptance, students become CHC Scholars and participate in a summer bridge program that prepares them for a successful transition to CWRU. At CWRU, CHC Scholars are integrated into humanities programs and are connected to University Circle institutions.

For additional information, contact Allison Morgan (allison.morgan@case.edu), CHC Program Manager at CWRU.

Cleveland STEM Pipeline Program
The Cleveland STEM (science, technology, engineering, and mathematics) Pipeline Program enables students at Cuyahoga Community College (Tri-C) to complete a four-year bachelor’s degree in a STEM discipline at Case Western Reserve University as part of CWRU’s commitment to advancing STEM education and educational outcomes for students in our local community and to establishing ties among STEM faculty members at Tri-C and CWRU.

As students pursue their associate’s degree at Tri-C, they may take advantage of the cross-registration program that enables these students to take up to two classes per semester at CWRU while paying home tuition. This arrangement gives students participating in the program a head-start on their bachelor’s degree and allows them to acclimate to CWRU before they formally enter as degree-seeking students. Once they are on track to earn their associate’s degrees, students apply to CWRU as transfer students.

For additional information, contact Becky Barnes (Becky.barnes@tri-c.edu), Director of Articulation, Transfer and Prior Learning at Tri-C, or the Office of Undergraduate Studies at CWRU.

Undergraduate Academic Advising
Academic advising is an important component of the educational program at Case Western Reserve University. Academic advisors assist students in the exploration of academic opportunities at the university and in the selection of courses. Advisors may refer students to other sources of information and assistance at Case Western Reserve.

The advising model at Case Western Reserve aims to balance generalist and field-specific advising, shifting the balance as students progress through their undergraduate careers. At the beginning, a student’s First Seminar instructor provides generalist advising until the student declares
a major. At the same time, representatives from each major and minor are available to provide field-specific advice as a student decides on an area of focus. Once a student declares a major, the emphasis shifts to major-focused advising with an advisor assigned in that field to guide the student in the construction of an academic plan and to monitor the student's progress in pursuit of that plan. In addition, throughout their undergraduate career, each student has a navigator in Student Advancement who is available to provide general information and advice, to address concerns that fall outside of the pursuit of a specific major, and to help the student place their academic experience in the broader context of opportunities at Case Western Reserve and beyond.

Students are expected to initiate and maintain regular contact with their advisors and navigators to address curricular and career concerns, and to review progress towards graduation. At a minimum, students are expected to meet with academic advisors when declaring a major or minor, before registering for classes each semester, and when making corrections to their academic requirements reports.

**Advising during the First Year**

During a student’s first year at Case Western Reserve, the faculty member teaching the student’s SAGES First Seminar serves as the student’s academic advisor. Each student and their advisor are expected to explore the student’s academic interests and concerns, as well as educational and career goals, and to seek expert information and advice about academic policies and procedures and about specific academic programs from the General Bulletin, newsletters and websites, the academic representatives designated as first year resources in the majors and minors, and other sources of advice and counseling on campus. Navigators and other staff in Student Advancement (https://case.edu/studentsuccess/navigators/), along with staff in the Office of Undergraduate Studies (http://case.edu/ugstudies/), Post-Graduate Planning and Experiential Education (https://case.edu/postgrad/), the Office of Multicultural Affairs (http://studentaffairs.case.edu/multicultural/), the University Health & Counseling Services (http://studentaffairs.case.edu/counseling/), and specialized programs such as Co-op (http://engineering.case.edu/coop/) (co-operative education), the Center for International Affairs (http://case.edu/international/) (study abroad, international student services), and the Center for Civic Engagement and Learning (http://studentaffairs.case.edu/civicengagement/) (community service), are available to support first-year students and their advisors with publications, workshops, websites, experiential learning opportunities, and individual communications.

**Advising in the Majors and Minors**

When a student selects a specific major or minor, the academic representative of that major or minor assigns a faculty advisor to the student. Although some first-year undergraduates enter with definite goals, they are not assigned advisors in the majors until they have declared their major. Students who are ready to declare a major may do so beginning in November of their first year (April for those who matriculate at CWRU in the spring semester). Students engaging in further exploration of majors are expected to declare a major no later than the end of the second year (See Declaring a Major in the section on Academic Policies and Procedures (p. 1307)). Opportunities for exploration of majors and minors include a Choices Fair, departmental information sessions, and individual conversations with faculty and academic advisors.

After the first year, students who have not declared a major should consult their assigned advisor (noted in their online student information) or the academic representative of an academic department of interest for advice and schedule approval.

**Support in the Office of Student Advancement**

Navigators in Student Advancement serve as a hub to provide guidance in all aspects of being an undergraduate student at Case Western Reserve, including academic information related to undergraduate enrollment and degree programs. Each student is able to establish a multi-year relationship with their navigator, who is assigned during the summer before matriculation and continues to work with the student through the completion of degree requirements. Navigators are available to answer student and faculty questions about university rules, practices, programs, and resources and to refer students to other offices and opportunities, as appropriate.

**Undergraduate Grades**

Undergraduate grades at Case Western Reserve University are issued on the following scale, with good standing based on criteria presented in the section on Academic Standing Regulations (p. 1313) and with a cumulative grade point average of 2.000 required for graduation. Academic averages are computed by dividing the number of quality points earned by the number of credit-hours completed, excluding transfer credit, credit based on examinations (AP, IB, proficiency, etc.), and courses graded P/NP.

Grade of Incomplete

Assignment of the Incomplete Grade:
The Incomplete grade (I) is assigned by and at the discretion of the instructor when (a) there are extenuating circumstances, explained to the instructor before the assignment of the grade, which clearly justify an extension of time beyond the requirements established for and met by other students in the class, and (b) the student has been passing the course and only a small segment of the course, such as a term paper, remains to be completed. It is the student's responsibility to notify the instructor of the circumstances preventing completion of all assigned work. In the absence of notification or adequate justification, the instructor should assign the student a final grade that assumes a failing grade for the missing work. An Incomplete grade should not be assigned (a) when a student has been absent for much of the semester and/or has done little of the work required for a course, or (b) because a student is absent from a final examination, unless the dean of undergraduate studies has authorized the grade.

The amount of additional time allowed the student to make up incomplete work should serve to accommodate the student while being fair to other students in the course. It should be proportional to the duration of a student's illness or absence and might be no more than a few days or weeks. At the extreme, it should not extend past the eleventh week of the semester following the one in which the Incomplete grade was received. In cases where the dean of undergraduate studies may establish an earlier date for completion of courses with Incomplete grades.

Changing the Incomplete Grade:
When the student has completed the required work, the instructor shall enter in the Student Information System a final evaluative grade to replace the Incomplete. When a student fails to submit the work required for removing the Incomplete by the date established, the instructor shall enter a final grade that assumes a failing performance for the missing work. In the absence of the assignment of a grade by the instructor, the Registrar will convert the I to F when the deadline for making up Incomplete grades from a previous semester has passed.

Audit
See section on Academic Policies and Procedures (p. 1307).

Pass/No Pass
Undergraduate students (degree candidates and non-degree students enrolled at the undergraduate level), other than students participating in the Pre-College Scholars program, may elect to take one course each fall and spring semester on a Pass/No Pass grading basis, provided they remain enrolled in at least 3 credit-hours of courses for regular evaluative grades. However, all courses to be counted toward major, minor, or SAGES/general education/core requirements must be taken for regular evaluative grades. If a student opts for Pass/No Pass in a course, that course will not be counted toward any of these requirements. The Pass/No Pass option is not available during the summer session or to undergraduate degree candidates enrolled at the graduate or professional levels through the IGS program or Senior Year in Professional Studies. Enrollment in courses that are graded on a Pass/No Pass basis (e.g., PHED 55A Cardio-Fitness (First Half)) does not preclude a student's use of the Pass/No Pass option in another course taken the same term.

Students may submit an online Pass/No Pass Option form at any time in the fall or spring semester after the end of the drop/add period and before 11:59 p.m. on the day of the course withdrawal deadline for that semester (currently the last day of classes for first-year students and the 11th Friday of the semester for all other students, including new transfer students).

A decision to use the Pass/No Pass option is irrevocable unless the student needs that course to complete requirements for a major or minor declared in a subsequent semester. In that event, the student may request that the Office of Undergraduate Studies reveal the grade on the transcript at the start of the student’s final term at Case Western Reserve University.

Instructors are not notified of a student’s use of this option. Instructors submit evaluative grades for all students, and these grades are converted to Pass or No Pass in the Registrar’s Office. Courses elected on a Pass/No Pass basis and completed with a grade of D or higher will be entered on the student’s transcript with the grade P. Courses taken Pass/No Pass for which a grade of F is earned will have NP entered as the final grade on the transcript. Students who earn a P grade will earn credit for the course, while those who earn NP will not. Grades of P and NP are not included in computing the grade point average.

Grade Changes
Instructors should review grades before submitting them to be confident that they are accurate and fair. If a student requests a change of grade or reevaluation of work once final grades have been reported, the instructor should review their grading for possible mistakes. However, in fairness to the whole class, the instructor should then review the work of all students whose grades may be questionable, not just those who come to the instructor with concerns. Similarly, if students who have earned a low grade ask to perform additional work for extra credit in hope of raising their grades, and the instructor agrees, that same opportunity should be offered to all students whose grades are below an A. Most courses are planned for completion within the semester; instructors should avoid extending coursework beyond the semester's limits without good reason.

Instructors should not change grades for students who indicate that they will lose their scholarships or suffer other consequences from a poor grade. Students have numerous opportunities during the semester to seek assistance in improving their performance or to withdraw from the course.

Changes to undergraduate student grades must be submitted through the Student Information System (https://case.edu/sis/). Grade change requests will be forwarded to the department chair for approval and then to the dean of undergraduate studies for review before they are posted.

Grade Reports and Transcripts
Students may view their grades on the Student Information System (https://case.edu/sis/).

Students can request official copies of their transcripts (https://case.edu/registrar/grading-transcripts/request-a-transcript/) from the Registrar’s Office. The university considers the grades earned by a student and other information about the student’s performance at the university confidential and will release such information only upon written request by the student. Transcripts will not be issued to or on behalf of students who have not discharged all obligations to the university.

Course Repetition
See section on Academic Policies and Procedures (p. 1307).

Mid-Semester Grades
Mid-semester grades are assigned in undergraduate courses at the end of the eighth week of each semester. Mid-semester grades are
absence due to Religious Observance

Any student who is unable to attend classes or participate in any examination, study, or work requirement on a particular day because of their religious beliefs is excused from any such activity. The student will be given the opportunity to make up the examination or work that is missed, provided the make-up work does not create any unreasonable burden upon the university. When possible, students should give notice to instructors early in the semester about missing classes because of religious observance.

Extracurricular Life and Class Attendance

As a university, we value students’ total educational experience, including its curricular, co-curricular, and extracurricular components. All departments, academic and other, are encouraged to minimize the scheduling during established class meeting hours of events at which student participation is required or desired, including but not limited to extra class meetings, athletics, arts programs, and other organized activities. When conflicts exist, all parties (students, faculty, and staff) should work together so that the student can meet his or her academic obligations and participate in extracurricular events. If agreement about an appropriate accommodation cannot be reached, the student’s obligations to classes meeting on their posted schedules will take priority.

To facilitate planning, all courses (including ROTC, varsity sports, and music ensembles) should post, to the extent possible, the full set of meeting times in the Student Information System (SIS) before students register for their courses. This will allow students to work with their faculty to resolve conflicts before the start of the semester. Should it be impossible or impractical to record specific obligations in SIS before students register, a student should alert each of his or her instructors before the end of the drop/add period of conflicts that will occur during the semester in order to develop a plan to resolve the conflicts, including the possibility of making adjustments to course enrollments.

The Office of Undergraduate Studies and the Department of Physical Education and Athletics have developed guidelines for coaches, who are themselves members of the faculty, to administer exams for other courses to their team members while the team is traveling to participate in a competition.

Credit by Examination

Advanced Placement/International Baccalaureate/ French Baccalaureate/A-Level Examinations

Students may earn degree credit on the basis of advanced examinations taken while in secondary school. Examinations eligible for credit and/or advanced placement include, but are not limited to, College Board Advanced Placement (AP) Examinations, International Baccalaureate (IB) Higher Level Examinations, French Baccalaureate, and A-Levels. Determination of the criteria for granting credit and/or placement is made by the appropriate department.

See AP/IB Credit Equivalencies (p. 1323) for the credit awarded and recommended placement based on AP and IB scores for students who matriculate at CWRU during the 2021-2022 academic year.

Proficiency Examinations

Departments within each academic unit offering undergraduate programs may choose to offer students the opportunity to earn course credit in specific courses by proficiency examination. To qualify for proficiency examination credit for a course, the student’s examination performance
must demonstrate knowledge and skills at a level no lower than that of an average student who successfully completes the course. Upon notification from the academic department, the Office of Undergraduate Studies will post credit for the course on the transcript. The grade will be recorded as PR, and will not be included in a student's grade point average.

Declaring a Major or Minor

Students matriculating at Case Western Reserve University as first-year students may begin declaring their majors, though they are not required to do so, on November 1 if they matriculate in the fall semester and on April 1 if they matriculate in the spring semester. Transfer students may begin declaring their majors at the start of their first semester at Case Western Reserve.

A choice or change of major or minor is not recorded for any student until the major or minor declaration form, bearing the signature of the student, the name of the advisor, and the signature of the academic representative for the major or minor, has been completed and submitted to the Office of Undergraduate Studies, 447 Sears Bldg., and recorded in the Student Information System (SIS). The student's "requirements term" for a major or minor, indicating the set of requirements the student must satisfy for completion of the major or minor will automatically be set to the semester that the student matriculated at Case Western Reserve University, unless the student indicates that they wish to complete the requirements as updated in a later year.

Students who enroll at Case Western Reserve University as first-year students are expected to declare a major before registering for classes for their fifth semester of enrollment. Transfer students are expected to declare a major before registering for their third semester at Case Western Reserve. Students may later change their majors should their academic interests change.

Students who have not declared a major by the times indicated will have a registration hold placed on their accounts until they have done so. Students who will have earned fewer than 60 credit-hours (including transfer, AP, IB, and proficiency credit) by the end of the fourth semester for students who started as first-year students, or by the end of their second semester for transfer students, may request that their navigator in Student Advancement. An auditor

Course Loads and Overloads

In order to be classified as a full-time student, a student must enroll for a minimum of 12 credit-hours by the end of the drop/add period. Eligibility for many forms of financial aid, participation on intercollegiate varsity sports teams, and maintaining certain visa statuses for international students require full-time enrollment and, in some cases, maintaining at least 12 credit-hours of active enrollment for the entire semester (i.e. no course withdrawals to fewer than 12 credit-hours). Students registering for fewer than 12 credit-hours are classified as part-time and charged tuition on the basis of the number of credit-hours being taken.

The normal full-time load is 14-17 credit-hours during the fall or spring semester. Students ordinarily may not enroll in more than 19 credit-hours in a semester. Continuing students may enroll for 20-21 credit-hours in a semester if they have a cumulative grade point average of 3.200 or better. To register for 22 or 23 credit-hours, a minimum grade point average of 3.500 is required. Any schedule of more than 19 credit-hours that meets these grade point average standards requires approval by the student's navigator in Student Advancement. Graduating seniors may submit a petition to the Office of Undergraduate Studies for overloads within reason if they need such a schedule in order to graduate at the end of the semester in question but do not meet the grade point average standard.

The maximum number of credit-hours in which a student may enroll in the summer session is 12.

Course Placement

No credit will be allowed to count towards degree requirements for foreign language or mathematics courses that duplicate work taken earlier in high school or in another institution. First-year undergraduates who have questions regarding their eligibility to receive credit for foreign language or mathematics courses should see their navigator in the Office of Student Advancement, 340 Sears Bldg.

Course Repetition

Students have the opportunity to repeat a course in order to improve their mastery of the course material. When a course is repeated, the student will earn credit for the course only once, but both the original grade and the grade for the repeated course will be included in the semester and cumulative grade point averages, each weighted by the credit-hours for the course. The student's transcript will show the comment "REPEATED: NO CREDIT AWARDED" directly below the original grade. Similarly, if a student repeats a course for which he or she has already received either test (AP, IB, etc.) or transfer credit, the original credit will be removed and the transcript will show the comment "REPEATED: NO CREDIT AWARDED." credit will instead be awarded for the course taken at Case Western Reserve University. However, if the first attempt of the course resulted in a passing grade but the second attempt results in a failing grade, the student will continue to earn credit for the first attempt, but both grades will be included in the semester and cumulative grade point averages.

The course repeat option may not be exercised after a degree has been awarded.

Audit

A student may audit a course with the consent of the course instructor and the approval of their navigator in Student Advancement. An auditor receives no credit for the course, but the course is included in the total credit-hours of enrollment for that semester. At the beginning of the course, the student and instructor should reach agreement regarding the requirements for a successful audit. If the student achieves a
Students are ordinarily not permitted to withdraw from a course after taking the final exam or completing any other final assignment in the course, or after a grade has been posted.

Withdrawal from the University
To withdraw from the university during a semester or session, a student must complete the online withdrawal form in the Student Information System (SIS) by the last day of classes for that semester or session.

Grades of WD will be assigned in all courses in which a student is registered at the time of withdrawal, provided that the student follows the procedures stated above. Failure to attend classes or notification of instructors only does not constitute withdrawal from the university. A student who ceases to attend or otherwise participate in courses without officially withdrawing will be assigned the grade of F for each course in which they are enrolled.

If the withdrawal is necessary for reasons of health, a statement from the student’s physician to the University Health and Counseling Services may be required as a condition of re-enrollment.

Students who withdraw from the university after the end of the 11th week of the semester may not enroll for the next two academic sessions, including the summer session. Exceptions may be granted by the Academic Standing Board.

Students who complete a semester and have registered for classes for the following semester but do not plan to return for the following semester must similarly complete the on-line withdrawal form in the Student Information System (SIS). If a student has not yet registered for classes for the following semester, they must complete a printed leave of absence form available from the Office of Undergraduate Studies, 447 Sears Bldg.

Final Examinations and Reading Days
Final Examinations
Final examinations normally are required in all courses and must be given during the final examination period at the time assigned by the Registrar. They may not be given during the final week of classes or on Reading Days. Any exception must be approved by the dean of undergraduate studies.

No student will be required to take more than two final examinations on a single calendar day, nor will a student be required to take a final exam in the evening exam period (7:30-10:30 PM) and another final exam in the morning exam period the next day (8:00-11:00 AM). A student who has two final exams at the same time, more than two final exams scheduled for the same calendar day, or a morning exam following an evening exam will be contacted by the Office of Undergraduate Studies about alternative arrangements after the course withdrawal deadline for upper-class students; a student should contact the Office of Undergraduate Studies to obtain the assistance of the dean if the student does not receive notification within a week of the course withdrawal deadline for upper-class students.

A student must explain immediately and in writing to the dean of undergraduate studies an absence from a final examination. If the explanation is acceptable, the dean will authorize the assignment of the grade Incomplete and the administration of a make-up examination by the instructor. In the event of an unexcused absence from a final exam, the instructor will assign the student a final grade that assumes a grade of zero on the final exam and is consistent with the grading policy established for the course.
Reading Days
Prior to and/or during the final examination period, two weekdays are set aside as Reading Days to be used by students for completing assignments and preparing for final examinations. These days are not to be used by faculty for scheduling exams or other course activities that require the attendance of students. They may be used by faculty to schedule review sessions for which attendance is optional.

Graduation and Commencement
Application for Graduation
A student who has completed all graduation requirements in fewer than four years has the choice of graduating early or deferring graduation in order to graduate with his or her class. A student who completes all graduation requirements in four years or more must graduate at that time. The student must file an online application for the degree through the Student Information System (SIS) by October 1 for January graduation, by February 1 for May graduation, and by June 1 for August graduation.

A student must discharge all financial obligations to Case Western Reserve University to receive a diploma and for the University Registrar’s Office to release final transcripts.

Graduation Check
Students must ensure that their Academic Requirements reports reflect accurately their progress toward their degrees. All requested corrections and exceptions must be submitted to the Office of Undergraduate Studies, 447 Sears Bldg., at least one semester prior to graduation. Academic Requirements reports are available online through the Student Information System (SIS).

Participation in Commencement
Students are eligible to participate in May commencement activities if they have completed all degree requirements during that spring semester or the immediately preceding fall semester or summer session, or if they have an appropriate plan to complete their degree requirements in the upcoming summer session or fall semester. A student may participate in commencement only once as a bachelor’s degree candidate, though exceptions are sometimes made for students receiving a second bachelor’s degree at least one year after the first.

Incomplete
See section on Grades.

Pass/No Pass
See section on Grades.

Promotion
The standards for promotion are:

- To the sophomore class, 27 credit-hours completed
- To the junior class, 60 credit-hours completed
- To the senior class, 90 credit-hours completed

These designations may affect access to enrollment in particular courses, but do not by themselves affect priority for course registration for the upcoming semester.

Re-enrollment after an Absence from the University
All re-enrollments after a student has been separated from the university or has withdrawn from the university for part or all of a fall or spring semester or longer are reviewed and processed by the Office of Undergraduate Studies, 447 Sears Bldg.

Re-enrollment after Academic Separation
See section on Academic Standing (p. 1313).

Re-enrollment after Voluntary Withdrawal
Students who have voluntarily withdrawn from the university and have not taken courses elsewhere following their withdrawal may petition to re-enroll in any semester. However, students who withdraw after the end of the 11th week of the semester may not enroll for the next two academic sessions, including the summer session, unless an exception is granted by the Academic Standing Board. If a voluntary withdrawal was necessary for reasons of health, a statement from the student’s physician to the University Health and Counseling Services may be required as a condition of re-enrollment. Students who have taken courses elsewhere following withdrawal must provide official transcripts of their work with their request for re-enrollment.

Upon re-enrollment following a voluntary withdrawal, students retain the credit-hours earned and quality points for courses completed prior to withdrawal. In the first semester of re-enrollment, their academic status is the status in effect at the time of withdrawal, unless that status is changed by action of the Academic Standing Board.

Scholarship Retention
See section on Criteria for Scholarship Retention (p. 1315).

Student Access to Records
The academic records of all students are kept in the Office of Undergraduate Studies, 447 Sears Bldg. Students may review their files in that office by appointment. A student must sign a request and present their ID card at the time of the appointment.

Study at Other Colleges and Transfer Credit
Students may receive transfer credit for work completed at another accredited college, university, or technological institute in the United States or from approved institutions of higher education outside the United States. Credit is not awarded for work done at an unaccredited institution in the United States except by proficiency examination in those departments of Case Western Reserve University offering that opportunity. Students may transfer credit only for courses in which a semester’s work is completed in a minimum of three weeks.

Courses Taken Before Matriculation at CWRU
At the time of admission to Case Western Reserve University and upon presentation of an official transcript from each institution previously attended, credit will be awarded for courses equivalent or comparable to those offered by Case Western Reserve University and completed with a grade of C or better. Any such courses taken prior to the student’s graduation from high school must be listed in the college’s catalog among courses offered for degree credit to the college’s undergraduates, taken in the company of matriculated college students, and organized
and taught by college faculty. In addition, to be considered for transfer credit, such courses must not have been used to fulfill high school graduation requirements. The awarding of transfer credit is determined by the Office of Undergraduate Studies in consultation with the appropriate department.

Courses Taken After Matriculation at CWRU
After matriculation at Case Western Reserve University, students are permitted to earn at other accredited colleges or universities or through an approved program of study abroad no more than 38 credit-hours toward the totals required for their degree, with no more than 15 credit-hours taken as part of domestic programs or as summer study in a student’s home country; this includes courses taken through the cross-registration program. Any off-campus study beyond 15 credit-hours may only be taken through approved study abroad programs. Any additional credits earned at other institutions after matriculation at Case Western Reserve beyond 15 domestically or as summer study in a student’s home country and beyond a total of 38 including study abroad will raise the total number of credit-hours required for the degree by a corresponding number.

Students must be in good standing in order to receive transfer credit for work done at another institution. If a student is placed on probation between receiving permission and the start of off-campus enrollment, the student is no longer eligible to enroll for and receive transfer credit for this work. Students on probation require special approval and should contact a dean in the Office of Undergraduate Studies. A student separated for poor scholarship may not earn transfer credit for courses taken during the period of separation.

Permission of a dean in the Office of Undergraduate Studies must be obtained in advance if a student wishes to enroll elsewhere. The awarding of transfer credit is determined by the Office of Undergraduate Studies in consultation with the appropriate department. Further, if a student wishes to take elsewhere a course to satisfy a major or minor requirement, it must also be approved by the department chair or academic representative. Upon presentation of an official transcript from each institution attended, transfer credit will be awarded for courses equivalent or comparable to those offered by Case Western Reserve University and completed with a grade of C or better. Credit earned elsewhere after matriculation at Case Western Reserve University is not applied toward the requirement of a minimum of 60 credit-hours earned at Case Western Reserve, including at least 15 after a student has earned a total of 105 credit-hours. The Off-Campus Study Request Form is available on the Undergraduate Studies website (http://case.edu/ugstudies/).

Students ordinarily will not be permitted to take anywhere in Cuyahoga County summer courses that are also offered at Case Western Reserve University that summer. Exceptions to this policy will be permitted only in the event of significant extenuating circumstances. Students who desire the opportunity to take elsewhere in Cuyahoga County a course that is being offered at Case Western Reserve must petition the Office of Undergraduate Studies in advance for permission to do so. For enrollment in courses during the fall or spring semester elsewhere in Cuyahoga County, see the section on Cross-Registration in Northeast Ohio (p. 1303).

Grades for courses taken at other institutions will not be entered on the student’s record nor will they be computed in the student’s grade point average.

Academic Integrity

Students, faculty, and administrators share responsibility for the determination and preservation of standards of academic integrity. Not only must they adhere to their own personal codes of integrity and comply with university community standards, but they must also be prepared to educate others about the importance of academic integrity, to take reasonable precaution to discourage violations of academic integrity, and to adjudicate violations.

For students, education about the importance of academic integrity begins during the admissions process. The centrality of integrity to the academic enterprise is reinforced during new student orientation when students engage in discussion about academic integrity. Specific mention of academic integrity and course-specific guidelines should be presented in all classes. Programs and instruction about academic integrity guidelines also should be offered throughout students’ undergraduate careers.

Faculty and students are expected to uphold standards of academic integrity by taking reasonable precaution in the academic arena. Reasonable precaution involves implementing measures that reduce the opportunities for academic misconduct but do not inhibit inquiry, create disruption or distraction in the testing environment, or create an atmosphere of mistrust.

The vitality of academic integrity is dependent upon the willingness of community members to confront instances of suspected wrongdoing. The faculty have a specific responsibility to address suspected or reported violations as indicated below. All other members of the academic community are expected to report directly and confidentially their suspicion of violation to a faculty member or a dean or to approach suspected violators and to remind them of their obligation to uphold standards of academic integrity.

Definition of Violations

All forms of academic dishonesty including cheating, plagiarism, misrepresentation, obstruction, and submitting without permission work to one course that was completed for another course are violations of academic integrity standards.

• Cheating includes but is not limited to copying from another’s work; falsifying problem solutions or laboratory reports; using unauthorized sources, notes or computer programs; or otherwise failing to follow the instructions or procedures in place for a particular testing situation.

• Plagiarism includes but is not limited to the presentation, without proper attribution, of another’s words or ideas from printed or electronic sources.

• Misrepresentation includes but is not limited to forgery of official academic documents, the presentation of altered or falsified documents or testimony to a university office or official, taking an exam for another student, or lying about personal circumstances to postpone tests or assignments.

• Obstruction includes but is not limited to engaging in unreasonable conduct that interferes with another student’s ability to conduct scholarly activity, such as destroying a student’s computer file, stealing a student’s notebook, or interfering with a student’s access to course materials.

• Submitting without the instructor’s consent an assignment in one class previously submitted or being submitted in another class
violates academic integrity standards because it interferes with the
learning expected from the assignment and the course.

**Discussing, Reporting and Adjudicating Violations**

If any member of the university community suspects that an
undergraduate student has violated academic integrity standards, they
shall advise the student and the department chair and consult with
the Dean of Undergraduate Studies about the appropriate course of
action. Before speaking with the student, they also may choose to
consult with the chair or dean about academic integrity standards.
If, in consultation with the dean, it is determined that the evidence is
not adequate to charge the student with a violation, the matter will be
dropped. Otherwise, the following procedures will be followed.

**Reporting Procedures**

If the faculty member and the student agree that a violation has occurred,
the faculty member shall choose either to sanction the student or to refer
the case to the Academic Integrity Board. If the faculty member chooses
to sanction the student, the minimum sanction is failure in the work in
question and the maximum sanction is failure in the course. The faculty
member will be provided with a standard reporting form to be signed by
both the student and faculty member. As the faculty member will not
know whether any prior violations have occurred, all alleged violations
should be treated as if they are first violations. Upon completion, the
reporting form and all documentation should be forwarded to the Office
of Student Conduct and Community Standards.

The case will be referred by the Office of Student Conduct and
Community Standards for Academic Integrity Board action if any of the
following apply:

- The student claims not to have violated academic integrity standards.
- The student disagrees with the sanction imposed by the professor
  (provided that the sanction is greater than the minimum).
- The faculty member believes that the seriousness of the first offense
  warrants presentation to the Academic Integrity Board.
- The faculty member, after consultation with the dean, prefers to have
  the Academic Integrity Board investigate or adjudicate the alleged
  violation, or prefers that the Board sanction the student.
- The case is not the student's first violation of the Academic Integrity
  Policy.
- The student is not enrolled in the faculty member's course.

**First Violations**

If upon receipt by the Office of Student Conduct and Community
Standards the violation is confirmed to be a first violation (the university
has no record of a previous academic integrity violation by the student),
the case will proceed as indicated on the completed reporting form.

Students found responsible for a first violation will be required, in
addition to any other sanctions, accepted or imposed, to attend an ethics
education program or to complete an ethics exercise as assigned by the
Dean of Undergraduate Studies or the Director of the Office of Student
Conduct and Community Standards or their designee.

**Subsequent Violations**

If the university conduct file indicates that the student suspected of a
violation has been responsible for one or more previous violations of
the university’s Academic Integrity Policy, the case will be referred by
the Office of Student Conduct and Community Standards for Academic
Integrity Board action.

**Academic Integrity Board**

The Academic Integrity Board is a pool of student and faculty volunteers
trained to adjudicate academic integrity violations. Prospective
undergraduate student members are identified by already serving
undergraduate student members and approved by the Undergraduate
Student Government. Prospective faculty members are identified by the
Office of Undergraduate Studies and the Office of Student Conduct and
Community Standards and approved by the Faculty Senate Committee on
Undergraduate Education.

If a suspected or known violation of academic integrity standards
warrants consideration by the Academic Integrity Board, the Director of
the Office of Student Conduct and Community Standards or designee will
convene an Academic Integrity Hearing Panel selected from approved
members of the Academic Integrity Board. All Panel members must have
been previously appointed to the Academic Integrity Board as outlined
above.

The Panel will be composed of three students (voting members),
two faculty (voting members), and two administrators (non-voting
members). One administrator will normally be a dean from the Office
of Undergraduate Studies. The other administrator will normally be a
representative of the Office of Student Affairs and will chair the Board. All
members of the Panel may question anyone providing information to the
Panel.

The Panel’s determination of responsibility shall be made on the basis of
whether there is a preponderance of the evidence (defined as whether it
is more likely than not) that the student violated the Academic Integrity
Policy. At least a simple majority of voting members must agree that
there is a preponderance of the evidence supporting responsibility for a
violation.

If any student or faculty member of an Academic Integrity Panel is absent
from a scheduled hearing due to unforeseen reasons, the hearing may
proceed only if all of the following criteria are met:

- The student charged with an alleged academic integrity violation
  agrees to proceed.
- An Undergraduate Studies dean is present and agrees to proceed.
- A Hearing Panel chair is present and agrees to proceed.
- At least three voting members of the scheduled Hearing Panel are
  present, including at least one student and one faculty member.

Should the Panel find the student not responsible for a suspected
violation, the faculty member and the student will be informed in writing,
in a timely manner, of the Panel’s finding and of the reasoning behind
the Panel’s decision. The faculty member will be asked to evaluate the
student's performance on the assignment in question and to issue a
grade based on his or her normal grading practices.

If the Panel finds a student responsible for a violation of academic
integrity standards, the faculty member and the student will be informed in
writing, in a timely manner, of the Panel’s finding and of the reasoning behind
the Panel’s decision. The Panel can sanction violations by issuing
failure in the work in question, failure in the course, university warning,
university disciplinary probation, university separation, or expulsion from
the university.
In cases in which the student does not accept responsibility for a first violation but is found responsible by an Academic Integrity Panel, the Panel may not impose a sanction greater than that originally proposed by the faculty member. In cases in which the student accepts responsibility for a first violation but does not accept the sanction, the Academic Integrity Panel may assign a sanction no greater than the sanction proposed by the faculty member.

In cases in which the Academic Integrity Panel finds a student responsible for a second or subsequent violation, the minimum sanction will be failure in the course; the maximum penalty will be expulsion from the university. Prior violations of the Academic Integrity Policy may be taken into account when determining sanctions. Prior academic integrity allegations for which the student was found not responsible may not be taken into account when determining sanctions.

Misrepresentation and Obstruction
Reports of suspected academic misrepresentation or obstruction occurring in settings other than the classroom will be referred to the Office of Student Conduct and Community Standards for Academic Integrity Board action.

If the Academic Integrity Panel finds a student responsible for an academic integrity violation, the minimum sanction will be university disciplinary probation; the maximum penalty will be expulsion from the university.

Appeals
A decision reached by an Academic Integrity Panel may be appealed by the student within five business days (days the university is open, including student breaks) from the time the hearing decision is made available. Appeal petitions shall be submitted in writing to the Office of Student Conduct and Community Standards.

An appeal shall be limited to review of the appeal petition, information available at the hearing, the verbatim record of the hearing, and supporting documents for one or more of the following grounds:

- There is evidence that established procedures were not followed in a manner that would have significantly affected the hearing outcome.
- There is new information not available at the time of the hearing that would have significantly affected the hearing outcome.
- The sanctions are substantially disproportionate to the severity of the violation.

Three members of the University Student Affairs leadership team will determine whether an appeal falls within any of the above criteria. If it is determined that the appeal petition does not meet these criteria, the appeal will be denied. If it is determined that the appeal petition meets one or more of these criteria, the case will be forwarded to a full appeal panel. An appeal panel shall be chaired by the Vice Provost for Undergraduate Education and consist of two students and two faculty from the Academic Integrity Board with no prior participation in the original Academic Integrity Panel or conflict of interest with anyone involved in the case.

The appeal panel will limit the scope of the review to the grounds outlined above. If an appeal is granted based on either of the first two criteria listed above, the case may be returned to the original Academic Integrity Panel to allow reconsideration of the original decision. If an appeal is granted on the basis of the third criterion above, the appeal panel may render new sanction(s). If an appeal is not granted, the matter shall be considered closed and the original outcome binding on all parties involved.

Violations Reported After Voluntary Withdrawal or Academic Separation
Suspected violations of academic integrity standards reported after a student voluntarily withdraws or is academically separated will be investigated and adjudicated. A student who withdraws or is academically separated during the investigation and adjudication of a suspected violation may be asked to appear at a hearing or, if the student fails to appear, have their case heard in absentia. If the student is found responsible for a violation, sanctions can be imposed.

Violations Reported After Graduation
In the event that a suspected violation of academic integrity standards is reported after graduation, the Dean of Undergraduate Studies or their designee will make a determination as to the feasibility of investigation and adjudication. Graduation will not preempt investigation or adjudication of a suspected violation when those processes are feasible. If a student is found responsible for a violation and the sanction imposed makes the student ineligible to earn his or her degree, the degree may be revoked.

Maintenance of Records
Violations of academic integrity standards are considered violations of the university’s Standards of Conduct and will be recorded in the student’s conduct record. University conduct files are maintained by the Office of Student Conduct and Community Standards in the Division of Student Affairs.

Academic Standing Regulations
The Academic Standing Board monitors the academic performance of all undergraduate degree candidates at the end of each fall and spring semester to ensure that they are making appropriate progress toward earning their degrees in terms of their grades and number of credit-hours earned each semester. All degree candidates begin their academic careers in good standing. Those who fail to meet the requirements to continue in good standing, as defined below, are ordinarily placed on academic probation for the following semester in order to signal the need to improve their academic performance and to help them develop plans for improving their academic performance and returning to good standing. Those who fail to meet a minimum set of academic standards defined below or who have two consecutive semesters in which they do not meet the requirements of good standing are ordinarily separated from the university for a period of two academic sessions, including the summer session.

Good Academic Standing
Full-time First-Year and Transfer Students in the First Semester
In order to maintain good academic standing at the end of the first semester at Case Western Reserve University, a full-time (i.e., enrolled in at least 12 credit-hours at the end of the drop/add period) first-year student or new transfer student must:

1. earn a semester grade point average of 2.000 or higher AND
2. earn a minimum of 9 credit-hours in that semester.
Full-time Students After the First Semester
Following the first semester of the first year, full-time students (i.e., those enrolled in at least 12 credit-hours at the end of the drop/add period) will be in good standing provided they:

1. earn a semester grade point average of 2.000 or higher AND
2. earn a minimum of 12 credit-hours in that semester.

Part-time Students
Part-time students (i.e., those enrolled in fewer than 12 credit-hours at the end of the drop/add period) will be in good standing if they earn a semester grade point average of 2.000 or higher.

NOTE: Any student with incomplete grades at the end of a semester may be placed on "probation (incomplete)" or made "ineligible to register," as described below.

Academic Probation
Students who, at the end of any semester, fail to maintain the standard of performance required for good standing as specified above will be considered for academic probation. Academic probation is meant to provide a supportive framework for helping students improve their academic performance and continue to make progress toward earning their degrees.

While probation is the ordinary response to academic records that do not meet the criteria for good standing but fall short of consideration for separation (see below), it is not an automatic process. Students being considered for probation will be given the opportunity to prepare a statement explaining the circumstances that interfered with their ability to meet the criteria for good standing. This is the student’s opportunity to appeal probation. If a student thinks they should not be placed on probation, the statement should include an explanation of how the final record for the semester reflects responsible behavior by the student (such as withdrawing from courses because of personal circumstances that led to too few credit-hours being earned) and suggests that the student will not need the framework of probation to continue on track toward earning a degree. On the basis of review of the student’s statement and the academic record, the Academic Standing Board will decide to place a student on probation or to take no action.

In order to continue for the next semester, students placed on probation are required to review their course schedules with their navigators in Student Advancement before the end of the drop/add period. While on probation, students are ineligible to represent the university in intercollegiate activities and may not hold an elective or appointed office or chair a committee in any campus organization. In addition, they may not earn degree credit for work completed at another college or university during the period of probation without special permission.

Regardless of whether a student is placed on probation or no action is taken, students who did not meet the criteria for good academic standing will be expected to perform at a level that will return them to good standing at the end of the next semester. If they fail to return to good standing at the end of the following semester, they will be considered for separation from the university for at least two academic sessions, including the summer session.

A full-time student who is considered for academic probation and subsequently enrolls as a part-time student will not be reviewed for further academic action until they have completed sufficient semesters to total at least 12 credit-hours. At that time, the student will be reviewed on the basis of a composite of those semesters.

Similarly, a student who is considered for probation as a part-time student will not be reviewed for further academic action until he or she has completed sufficient semesters to total at least the number of credit-hours attempted in the semester for which the student was initially considered for academic probation. At that time, the student will be reviewed on the basis of a composite of those semesters and will be expected to have earned at least the number of credit-hours attempted in the semester for which they were considered for probation.

The Academic Standing Board’s decision to place a student on academic probation or to take no action is part of a student’s record at Case Western Reserve University recorded on the internal unofficial/advising transcript, but beginning in Fall 2017, is not recorded on the official transcript.

Probation (Incomplete):
A student’s status will be Probation (Incomplete) if they have Incomplete grades which would result in the student’s being placed on academic probation if those Incomplete grades were converted to F’s. Once the Incompletes are converted to final grades, the student shall be restored to good standing or considered for academic probation following the standards and procedures outlined above. In order to continue for the next semester, a student whose status remains Probation (Incomplete) is required to review their course schedule with their navigator in Student Advancement before the end of the drop/add period.

Separation
Students who fail to meet the criteria for good academic standing for two consecutive semesters will be considered for separation from the university for at least two academic sessions, including the summer session.

Also, full-time students at the end of their first semester at Case Western Reserve University will be considered for separation if they:

1. earn a semester grade point average less than 1.000 AND
2. earn fewer than 9 credit-hours in that semester.

After the first semester, full-time students will be considered for separation on the basis of a single semester’s record if they:

1. earn a semester grade point average less than 1.000 OR
2. earn fewer than 9 credit-hours in that semester.

Part-time students will only be reviewed for separation on the basis of two consecutive records that would lead to their consideration for academic probation.

While separation is the ordinary response to academic records of the kind just described, it is not an automatic process. Students being considered for separation will be asked to prepare a statement explaining the difficulties that interfered with their ability to earn a satisfactory record. This is the student’s opportunity to appeal separation. If a student thinks they should not be separated, the statement should include an explanation of why the Academic Standing Board should have confidence in the student’s ability to return to good standing at the end of the next semester and should outline the plan the student has established for ensuring academic success. The Academic Standing Board will decide to separate the student, to place or continue the student on academic probation, or to take no action based on a review of
Undergraduate Criteria for Scholarship Retention

Students who are awarded Case Western Reserve University scholarships based on academic achievement or potential are expected to perform at an appropriate academic level and maintain good conduct in the community. These scholarships will be automatically renewed each semester, provided that the student meets the retention criteria established for their scholarship at the time of initial award.

Full-Tuition (Andrew Squire, Albert W. Smith, Alexander Treuhaft, and Dance, Music, and Theater Performing Arts), University, Michelson-Morley STEM, Bolton, and Tuition Exchange Scholarships

The academic records of scholarship recipients are ordinarily reviewed at the end of each semester. To have a scholarship renewed for the following semester, the student must be in good academic and disciplinary standing.

Full-Tuition (Andrew Squire, Albert W. Smith, Alexander Treuhaft, and Dance, Music, and Theater Performing Arts), University, Michelson-Morley STEM, Bolton, and Tuition Exchange Scholarships

The academic records of scholarship recipients are ordinarily reviewed at the end of each semester. To have a scholarship renewed for the following semester, the student must be in good academic and disciplinary standing.

In exceptional cases, the Academic Standing Board will continue a scholarship for a student whose achievement or whose attendance does not meet the standards outlined above. It is the student’s responsibility to write to the Academic Standing Board, c/o the Office of Undergraduate Studies, within 7 business days of the end of the exam period each semester to request special consideration for continuation of a scholarship. This appeal should inform the committee of any special circumstances which may have affected performance and/or attendance during the preceding academic semester, provide any relevant documentation, and describe a plan for how academic performance will be improved in the future.

Students who lose their scholarships because of unsatisfactory academic or disciplinary standing will have their scholarships automatically reinstated at the start of the next semester if they return to good standing. These students lose a semester of scholarship eligibility for each semester that they fail to achieve good standing; that is, students will not receive these scholarships while on probation or during their first semester back from an academic separation, and the maximum number of semesters for which they can receive their scholarships will be reduced. However, students placed on probation at the end of the spring semester who return to good standing based on summer coursework at Case Western Reserve University (see Academic Standing Regulations (p. 1313)) will continue their scholarships for the fall semester without interruption or loss of a semester of eligibility.

Other Scholarships Awarded by Case Western Reserve University

Recipients of scholarships other than those listed above should refer to their scholarship award letters for specific scholarship retention criteria.

Duration

A student who meets the standards for scholarship retention may receive scholarship assistance for no more than eight semesters of full-time undergraduate study (less any semesters lost due to falling out of good academic or disciplinary standing, as described above). The scholarship is awarded for full-time enrollment in regular (fall and spring) semesters.

A scholarship recipient who does a complete withdrawal during a semester will have used up a semester of scholarship eligibility, but will be eligible to receive the scholarship again when they next enroll, provided that their leave of absence does not last more than one semester (as described below). If a scholarship recipient completes a bachelor’s degree in fewer than eight semesters of full-time study at Case Western Reserve University, the scholarship will be terminated upon completion of the degree.

In the eighth semester (or in the final semester for a student completing the bachelor’s degree in fewer than eight semesters), a recipient may request permission for part-time enrollment with pro-rated scholarship support if completion of the degree does not require full-time enrollment in that final semester.

Semesters spent participating in the Cooperative Education Program, the Practicum Program, or on a leave of absence are not counted against a student’s eight full-time semesters of scholarship eligibility.

Leave of Absence Policy

A scholarship recipient may take a one-semester leave of absence during the student’s undergraduate career and put the scholarship “on hold” for reactivation upon the student’s return to Case Western Reserve University. Requests for a one-semester leave of absence must be

Re-enrollment after Separation

Students who have been separated because of poor academic performance may petition to re-enroll after two academic sessions, including the summer session, have elapsed. Students who re-enroll after academic separation will retain all credits and quality points earned before separation, and the cumulative grade point average will be continued, including all grades earned before and after separation.

Permanent Separation

A second academic separation following review by the Academic Standing Board will ordinarily be permanent.

Ineligible to Register

Students will be declared “ineligible to register” when they have Incomplete grades which would result in the student being considered for separation if those Incomplete grades were converted to F’s. These students will be required to finish the incomplete courses with grades that justify their retention before they will be allowed to continue for the next academic session, unless they successfully petition the Academic Standing Board for permission to enroll.

Summer Enrollment at Case Western Reserve University

Students will not be reviewed for academic action at the end of the summer session, except that a student on academic probation as of the end of their last completed fall or spring semester will be returned to good standing at the end of the summer session if they have completed at least 6 credit-hours at Case Western Reserve University with a summer grade point average of at least 2.000.

In the eighth semester (or in the final semester for a student completing the bachelor’s degree in fewer than eight semesters of full-time study at Case Western Reserve University, the scholarship will be terminated upon completion of the degree.

In the eighth semester (or in the final semester for a student completing the bachelor’s degree in fewer than eight semesters), a recipient may request permission for part-time enrollment with pro-rated scholarship support if completion of the degree does not require full-time enrollment in that final semester.

Semesters spent participating in the Cooperative Education Program, the Practicum Program, or on a leave of absence are not counted against a student’s eight full-time semesters of scholarship eligibility.

Leave of Absence Policy

A scholarship recipient may take a one-semester leave of absence during the student’s undergraduate career and put the scholarship “on hold” for reactivation upon the student’s return to Case Western Reserve University. Requests for a one-semester leave of absence must be

Re-enrollment after Separation

Students who have been separated because of poor academic performance may petition to re-enroll after two academic sessions, including the summer session, have elapsed. Students who re-enroll after academic separation will retain all credits and quality points earned before separation, and the cumulative grade point average will be continued, including all grades earned before and after separation.

Permanent Separation

A second academic separation following review by the Academic Standing Board will ordinarily be permanent.

Ineligible to Register

Students will be declared “ineligible to register” when they have Incomplete grades which would result in the student being considered for separation if those Incomplete grades were converted to F’s. These students will be required to finish the incomplete courses with grades that justify their retention before they will be allowed to continue for the next academic session, unless they successfully petition the Academic Standing Board for permission to enroll.

Summer Enrollment at Case Western Reserve University

Students will not be reviewed for academic action at the end of the summer session, except that a student on academic probation as of the end of their last completed fall or spring semester will be returned to good standing at the end of the summer session if they have completed at least 6 credit-hours at Case Western Reserve University with a summer grade point average of at least 2.000.

In the eighth semester (or in the final semester for a student completing the bachelor’s degree in fewer than eight semesters of full-time study at Case Western Reserve University, the scholarship will be terminated upon completion of the degree.

In the eighth semester (or in the final semester for a student completing the bachelor’s degree in fewer than eight semesters), a recipient may request permission for part-time enrollment with pro-rated scholarship support if completion of the degree does not require full-time enrollment in that final semester.

Semesters spent participating in the Cooperative Education Program, the Practicum Program, or on a leave of absence are not counted against a student’s eight full-time semesters of scholarship eligibility.

Leave of Absence Policy

A scholarship recipient may take a one-semester leave of absence during the student’s undergraduate career and put the scholarship “on hold” for reactivation upon the student’s return to Case Western Reserve University. Requests for a one-semester leave of absence must be

Re-enrollment after Separation

Students who have been separated because of poor academic performance may petition to re-enroll after two academic sessions, including the summer session, have elapsed. Students who re-enroll after academic separation will retain all credits and quality points earned before separation, and the cumulative grade point average will be continued, including all grades earned before and after separation.

Permanent Separation

A second academic separation following review by the Academic Standing Board will ordinarily be permanent.

Ineligible to Register

Students will be declared “ineligible to register” when they have Incomplete grades which would result in the student being considered for separation if those Incomplete grades were converted to F’s. These students will be required to finish the incomplete courses with grades that justify their retention before they will be allowed to continue for the next academic session, unless they successfully petition the Academic Standing Board for permission to enroll.

Summer Enrollment at Case Western Reserve University

Students will not be reviewed for academic action at the end of the summer session, except that a student on academic probation as of the end of their last completed fall or spring semester will be returned to good standing at the end of the summer session if they have completed at least 6 credit-hours at Case Western Reserve University with a summer grade point average of at least 2.000.

In the eighth semester (or in the final semester for a student completing the bachelor’s degree in fewer than eight semesters of full-time study at Case Western Reserve University, the scholarship will be terminated upon completion of the degree.

In the eighth semester (or in the final semester for a student completing the bachelor’s degree in fewer than eight semesters), a recipient may request permission for part-time enrollment with pro-rated scholarship support if completion of the degree does not require full-time enrollment in that final semester.

Semesters spent participating in the Cooperative Education Program, the Practicum Program, or on a leave of absence are not counted against a student’s eight full-time semesters of scholarship eligibility.

Leave of Absence Policy

A scholarship recipient may take a one-semester leave of absence during the student’s undergraduate career and put the scholarship “on hold” for reactivation upon the student’s return to Case Western Reserve University. Requests for a one-semester leave of absence must be
submitted in advance to the Office of Undergraduate Studies. Requests for leaves of absence longer than one semester must be submitted to the Academic Standing Board and will be reviewed on an individual basis.

A scholarship is automatically terminated upon a student’s transfer to another institution or upon permanent separation from the university.

Undergraduate Honors and Awards

Dean's Honors Lists

The Dean’s Honors Lists consist of the names of those undergraduate students who have distinguished themselves by achieving during the previous semester the grade point averages required with a minimum of 12 credit-hours earned and who have no Fs or NPs, during the same period. Students with a grade point average of 3.750 or higher will be placed on the Dean’s High Honors List. Students with a grade point average of at least 3.500 but less than 3.750 will be placed on the Dean’s Honors List. Students whose records include Incompletes become eligible for the Dean’s Honors Lists once all Incompletes have been converted to final grades. Having earned a place on the Dean’s Honors List or Dean’s High Honors List is noted on the transcript.

Latin Commencement Honors

Latin Commencement Honors are awarded to the top 35 per cent of the graduating class based on overall grade point average.

- Top 10 per cent: summa cum laude
- Next 10 per cent: magna cum laude
- Next 15 per cent: cum laude

The specific GPA cutoffs are determined each year after the awarding of August degrees on the basis of the GPAs of students who graduated over the past five years. These cutoffs are then applied to degrees awarded in the following January, May, and August.

To be eligible for Latin commencement honors, candidates must have:

1. Earned a minimum of 54 credit-hours for evaluative grades (A, B, C, D) in residence at the university.
2. Attained the required percentile ranking on the basis of all work for which grades are averaged at the university.

Honors in the Major

Some majors offer outstanding students the opportunity to complete an honors program. Students who participate in an honors program in the major and satisfy the requirements for such a distinction, as specified by the major, may qualify to receive the degree “with honors in the major.” The academic representative for the major can provide information regarding requirements for graduation with honors in the major.

Phi Beta Kappa

Phi Beta Kappa, a national honor society, recognizes outstanding scholarship in the arts and sciences. The Alpha Chapter of Ohio, established at Western Reserve College in 1847, was one of the first ten established nationally. Students may qualify for election to membership in the second semester of the senior year. A few outstanding students may be elected to membership as juniors.

Phi Beta Kappa

Tau Beta Pi

Tau Beta Pi is a national honor society that recognizes full-time engineering students for outstanding scholarship, leadership, and service.

Mortar Board

Mortar Board is a national honor society that recognizes full-time senior students for outstanding scholarship, leadership, and service.

Fellowships and Scholarships

Outstanding students may obtain information about nationally-competitive fellowships and scholarships (Goldwater, Truman, Rhodes, etc.) in the Office of Undergraduate Studies, 447 Sears Bldg.

Departmental and Collegiate Awards

At academic awards assemblies at the end of each spring semester, the university recognizes the outstanding achievements of individual students. Departmental awards are based on achievement in specific academic disciplines. Some departmental and collegiate awards are based on a combination of scholarship, leadership, and service. The collegiate awards for students with the best academic records take into account credit load and grades; students who opt for the Pass/No Pass grading option in a course will not be eligible for best academic record awards unless the original evaluative grades submitted by the instructor to the Registrar’s Office would qualify them.

Accountancy

- The Academic Excellence Award in Accounting
- The Andrew D. Braden Award for Excellence in Auditing and Financial Reporting Studies to a student whose achievement as an undergraduate in auditing and financial reporting subjects is recognized as demonstrating attributes consistent with professionalism and leadership
- The Apple Growth Partners Scholarship Award to a junior, senior, or Master of Accountancy accounting major with a grade point average of 3.250 or higher and who has displayed high ethics and strong leadership skills in student organizations
- The Beta Alpha Psi Award for excellence in accounting
- The Beta Alpha Psi Leadership Award
- The Beta Alpha Psi Scholars Recognition Award for outstanding scholarship among members of the Pi Chapter
- The Cashy Family Scholarship Award
- The Cohen & Co. Award
- The Deloitte Award to an outstanding junior majoring in Accounting
- The EY Award
- The Institute of Management Accountants CMA Scholarship
- The KPMG Award
- The Louis E. Levy Scholars in Accountancy for exceptional undergraduate accounting majors who will be entering professional graduate studies and demonstrate the ability to advance to the accounting profession and provide leadership for future generations of accountants
- The Marcum Award
- The Marvin J. Shamis Award
- The Meaden & Moore Award
- The Plante Moran Award
- The PwC Award
- The Andrew D. Braden Award for Excellence in Auditing and Financial Reporting Studies to a student whose achievement as an undergraduate in auditing and financial reporting subjects is recognized as demonstrating attributes consistent with professionalism and leadership
- The Apple Growth Partners Scholarship Award to a junior, senior, or Master of Accountancy accounting major with a grade point average of 3.250 or higher and who has displayed high ethics and strong leadership skills in student organizations
- The Beta Alpha Psi Award for excellence in accounting
- The Beta Alpha Psi Leadership Award
- The Beta Alpha Psi Scholars Recognition Award for outstanding scholarship among members of the Pi Chapter
- The Cashy Family Scholarship Award
- The Cohen & Co. Award
- The Deloitte Award to an outstanding junior majoring in Accounting
- The EY Award
- The Institute of Management Accountants CMA Scholarship
- The KPMG Award
- The Louis E. Levy Scholars in Accountancy for exceptional undergraduate accounting majors who will be entering professional graduate studies and demonstrate the ability to advance to the accounting profession and provide leadership for future generations of accountants
- The Marcum Award
- The Marvin J. Shamis Award
- The Meaden & Moore Award
- The Plante Moran Award
- The PwC Award
• The Thomas Dickerson Award for Excellence in Professional Accountancy Studies to a student whose high academic achievement and leadership in the integrated studies program in accountancy is recognized as exemplary
• The Wallach-Lee Families Scholarship Award
• The Weatherhead School of Management Award to the most outstanding senior in accounting

Anthropology
• The Callender Memorial Award for outstanding achievement in anthropology
• The James Dysart Magee Award for the senior year to an outstanding student in social and behavioral sciences
• The Jonathan F. Plimpton Award to a graduating senior for outstanding achievement in anthropology
• The Ruth and Newbell Niles Puckett Award to a graduating senior for outstanding achievement in anthropology

Art History
• The Friends of Art Prize to an undergraduate senior art history major for distinction in the field of art history
• The Friends of Art Prize for outstanding contribution to the arts community by an undergraduate art history major or minor
• The Muriel S. Butkin Art History Prize for overall best performance and highest grade point average by an undergraduate art history major
• The Noah L. Butkin Award for the best term paper on an art history topic written by an undergraduate

Art Studio
• The Arnold Philip Award for excellence in art
• The Charles E. Clemens Prize for outstanding talent and accomplishment in art
• The Hazel Gibbs Herbruck Prize for excellence in art education
• The Kennedy Prize for creative work in art, English, or music
• The William Grauer Award for excellence in art studio courses

Astronomy
• The Jason J. Nassau Prize to an outstanding senior student in astronomy

Biochemistry
• The Harland G. Wood Prize for outstanding performance by a graduating senior who is a candidate for the Bachelor of Science in Biochemistry
• The Merton F. Utter Prize to a candidate for the Bachelor of Arts with a major in biochemistry

Biomedical Engineering
• The Bernstein Memorial Award to a senior biomedical engineering major for outstanding achievement in academics and leadership, contributions to research, and service to the university, department or community
• The Biomedical Engineering Chairman's Award for outstanding academic achievement and service to the biomedical engineering community
• The Biomedical Engineering Faculty Award for outstanding academic achievement, and service to the biomedical engineering community
• The Biomedical Engineering Research and Engineering Award for outstanding performance in biomedical engineering research combined with outstanding academic achievement
• The Biomedical Engineering Scholarship Award
• The Cristina A. Camardo Award to a biomedical engineering student in recognition of his or her leadership and service within the university community
• The Gheorghe and Claudia Mateescu Award for Research in Imaging for outstanding research contribution in the area of biomedical imaging
• The J. Thomas Mortimer Cooperative Education Award
• The Jose Ricardo Alcala Memorial Award for biomedical engineering research
• The Outstanding Industrial Experience Award
• The Outstanding Senior Project Award
• The Robert L. Shurter Award to one junior or senior student for outstanding performance in biomedical engineering research

Biology
• The Daniel Burke Prize for excellence in both biology and chemistry
• The Flora Stone Mather Alumnae Award in Biology for outstanding academic performance in biology
• The Francis Hobart Herrick Prize for outstanding biological research and academic excellence in biology
• The J. Paul Visscher Memorial Award of the Cleveland Audubon Society to the senior or graduate student who demonstrates outstanding ability and promise in the field of ecology or environmental science

Chemistry
• The ACS Organic Chemistry Award
• The Analytical Chemistry Award for excellence in analytical chemistry
• The Carl F. Prutton Prize for scholarship in chemistry to a student pursuing the Bachelor of Science degree
• The Charles F. Mabery Prize is awarded to the undergraduate or graduate student presenting the best thesis on a subject connected with research in the Department of Chemistry
• The George A. Olah Award to an outstanding senior pursuing graduate work in chemistry
• The Hippolyte Gruener Award to a student for merit in chemistry
• The Ignacio Ocasio Freshman Chemistry Achievement Award for the highest achievement in freshman chemistry
• The Inorganic Chemistry Award for excellence in inorganic chemistry
• The Iota Sigma Pi/Frank Hovorka Prize to the woman chemistry major with the highest average after three semesters
• The Mateescu Citizenship Award
• The Olin Freeman Tower Prize for excellence in physical chemistry
• The Royal Society of Chemistry Certificate of Excellence
• The W. R. Veazey Prize to a student with the highest academic achievement in physical chemistry courses

Civil and Environmental Engineering
• The Allison C. Neff Memorial Award in recognition of high proficiency in professional studies and participation in professional activities to a member of the junior class majoring in civil engineering
• The Civil Engineering Student Leadership Award to an undergraduate or graduate student who demonstrated excellent leadership to department student organizations
• The Craig J. Miller Memorial Award to an undergraduate or graduate in the general field of civil engineering
• The Harry R. Nara '46 Prize to an undergraduate student in Civil and Environmental Engineering who embodies the dedication and spirit of Professor Harry R. Nara '46
• The Kenneth M. Haber Award to the outstanding student in civil engineering
• The Richard and Opal Vanderhoof Award to an outstanding senior in civil engineering
• The Robert L. Shurter Prize for one junior or senior student for outstanding achievement and leadership in extra-curricular activities
• The Roy Harley Prize to a promising senior or graduate student in civil engineering

Classics
• The Abraham Fuller Prizes for excellence in the study of Greek or Latin
• The Emma Maud Perkins Prize for excellence in classical studies
• The Florence Appelbaum Greenbaum Scholarship for students studying Classics
• The Kathleen S. and Frederick C. Crawford Scholarship to the American School of Classical Studies in Athens

Cognitive Science
• The Award in Cognition and Culture
• The Cognitive Science Award to the graduating senior for outstanding academic achievement in cognitive science

Computer and Data Sciences
• The ACM Award to the senior judged by the student chapter of the Association for Computing Machinery most likely to have an outstanding professional career
• The Andrew R. Jennings Award to a senior for excellence in computer science
• The Chairman's Award to a student in the Department of Computer and Data Sciences who shows exceptional academic or leadership potential
• The Computer and Data Sciences Award for the best senior project
• The Computer and Data Sciences Research Award to the senior demonstrating exceptional research potential

Dance
• The Bradford W. Petot Award for Excellence in Dance to a student minoring in dance
• The Lily Dreyfuss Memorial Award for excellence in dance

Earth, Environmental and Planetary Sciences
• The Carol W. Walker Award for an outstanding senior project in the Department of Geological Sciences
• The Charles S. Bacon Award for outstanding contributions to the department
• The Philip O. Banks Award for outstanding academic achievement in geological sciences

Economics
• The Cheryl A. Casper Economics Prize to a senior for academic excellence
• The Economics Department Achievement Award for excellence in scholarship and leadership in economics
• The Economics Department Award for Service
• The Gardiner Scholarship to a junior majoring in economics and also interested in finance
• The Howard T. McMyler Award to an outstanding junior majoring in economics
• The H. W. Kniesner Prize to an outstanding senior in economics
• The James Dysart Magee Award to an outstanding student in economics for the senior year
• The Marvin J. Barloon Award for outstanding performance in economics
• The Robert N. Baird Award for academic excellence and leadership in extracurricular activities

Electrical, Computer, and Systems Engineering
• The Andrew R. Jennings Award to a senior for excellence in computer engineering
• The Best Senior Project Award
• The Chairman's Award to a student in the Department of Electrical, Computer, and Systems Engineering who shows exceptional academic or leadership potential
• The Donald P. Eckman Award to the outstanding senior in systems and control engineering
• The Electrical, Computer, and Systems Engineering Award for the best senior project in electrical and computer engineering
• The Electrical, Computer, and Systems Engineering Research Award to the senior demonstrating exceptional research potential
• The Electrical Engineering Service Award to the student performing outstanding service to his or her class
• The IEEE/HKN Award to the senior judged by the student chapters of the Institute of Electrical and Electronics Engineers andEta Kappa Nu to possess the qualities necessary for an outstanding professional career in a general field of electrical engineering
• The National Electrical Engineering Consortium William L. Everitt Award to a student who has excelled academically in communications or computers
• The Senior Project Award in Systems and Control Engineering
• The Undergraduate Alumni Capital Award in Systems and Control Engineering to a senior for academic excellence and professional promise.
• The W. Bruce Johnson Award to a senior for an outstanding project in the area of electrical sciences and applied physics

English
• The Arnaud Gelb Journalism Award for best nonfiction story over 500 words
• The Arnaud Gelb Journalism Award for best nonfiction story under 500 words
• The Arnaud Gelb Journalism Award for best sports story
• The Charles E. Clemens Award for talent and accomplishment in writing
• The Edith Garber Krotinger Prize for excellence in creative writing
• The Eleanor Leuser Award for outstanding writing for or about children by a student enrolled in a creative writing course at the university
• The Emily M. Hills Award for the best poem or essay written by a woman in the College of Arts and Sciences
• The Finley Foster/Emily M. Hills Poetry Prize for the best poem or group of poems
• The Harriet Pelton Perkins Prize to an outstanding student majoring in English
• The Helen B. Sharnoff Award for formal poetry submitted by undergraduate students
• The Holden Prize for the best English paper written by an upper-class student
• The Karl Lemmerman Prize for the best paper by a first-year student
• The Kennedy Prize for creative work in Art, English or Music
• The Nemet Scholarship for demonstration of excellence in creative writing

Environmental Studies
• The Henry David Thoreau Award for an outstanding senior in environmental studies

History
• The Annie Spencer Cutter Prize to a senior for outstanding achievement in history
• The Clarence H. Cramer Award for excellence in research and writing of history
• The Donald Grove Barnes Award to a senior for excellence in history
• The History Department Award for outstanding achievement in history
• The John Hall Stewart Prize for excellence in historical studies
• The Sigma Psi Prize for excellence in history

Judaic Studies
• The Eudese and Elmer Paull Prize to one or several undergraduate or graduate students who demonstrate an interest in Jewish studies or Jewish contemporary life
• The Ira and Ruth Bressler Prize to a student who has done outstanding work in the area of Jewish studies

Macromolecular Science and Engineering
• The Hal Loranger Award for Polymer Science to the outstanding senior in polymer science
• The Macromolecular Senior Achievement Award
• The Macromolecular Senior Leadership Award
• The Samuel Maron Memorial Award to an undergraduate for excellence in polymer research

Management
• The Excellence in Business Management Award
• The Excellence in Finance Award
• The Excellence in Marketing Award
• The Financial Executives Institute Award
• The Iris Wolstein Award for Excellence in Business Venture History to a student whose work on projects and/or course work related to the study of Cleveland business venture history is determined to have made a significant contribution to the understanding of the business development in Northeast Ohio and related environs
• The Kevin J. Semelsberger Prize for excellence in management
• The Matthew Leskiewicz Award to a senior in the Weatherhead School of Management for outstanding leadership and service
• The Nellie Chittenden Carlton Prize to a senior in management whose outstanding work in the general field of economics shows the greater promise of leadership
• The Outstanding Business Management Student Award
• The Outstanding Finance Student Award
• The Outstanding Marketing Student Award
• The Robert O. Berger Jr. Award to a junior who demonstrates overall achievement in scholarship, as well as notable community participation and leadership
• The Roulston Performance Award for outstanding performance in management
• The Wolstein Family Award for Excellence in Business Venture Plan Development to a student enrolled in a major or minor in Weatherhead undergraduate programs whose business venture development plan is considered to have the highest promise to be successfully initiated

Materials Science and Engineering
• The Professor Jack F. Wallace Award to the materials science and engineering student who embodies the dedication and spirit of Professor Wallace
• The Robert L. Shurter Prize for one junior or senior student for outstanding achievement and leadership in extra-curricular activities
• The Wesley P. Sykes Prize to a senior majoring in materials science and engineering who shows outstanding ability in scientific research, especially as evidenced by the quality of his or her senior project.

Mathematics, Applied Mathematics, and Statistics
• The Chair’s Award to a student contributing to the intellectual life of the majors’ program
• The Lajos F. Takács Mathematics Prize for academic excellence, research, and leadership
• The Max Morris Prize for excellence in mathematics to a student pursuing the Bachelor of Science
• The Webster Godman Simon Mathematics Award to a student pursuing a Bachelor of Arts degree, for excellence in mathematics
Mechanical and Aerospace Engineering
- The Anish Shah '91 Award to an outstanding senior in mechanical and aerospace engineering based on academic achievement, extracurricular activities, and community service
- The Fred Hale Vose Prize to the student in mechanical engineering who has demonstrated the greatest promise for professional leadership
- The Gustav Kuerti Award to the senior in mechanical and aerospace engineering who has demonstrated the highest level of scholarship
- The Robert and Leona Garwin Prize to a student who has demonstrated theoretical scientific ability with experimental competence and inventive talent

Modern Languages and Literatures
- The Arabic Prize for high achievement in Arabic
- The Chinese Prize for high achievement in Chinese
- The Department of Modern Languages and Literatures Award for outstanding achievement
- The Emile B. DeSauze Award for attaining the highest honors in modern languages and literature
- The Florence Keuerleber Prize to an undergraduate student who has seriously pursued and excelled in the study of a modern language while majoring in another area
- The Folberth German Prize for excellence in German language and literature
- The French Prize for high achievement in French
- The German Prize for high achievement in German
- The Italian Prize for high achievement in Italian
- The Japanese Prize high achievement in Japanese
- The Louise Burke French Prize to an outstanding French student
- The Max Kade Excellence in German Award
- The Russian Prize for high achievement in Russian
- The Spanish Prize for high achievement in Spanish
- The Susie Scott Christopher Prize for excellent contributions to the French program

Music
- The Arthur H. Benade Prize to a senior with a major other than music who has made a notable contribution to music on campus during his or her undergraduate years
- The Charles E. Clemens Prize for talent and accomplishment in music
- The Doris Young Hartsock Prize for outstanding performance in music education
- The Kennedy Prize for creative work in Art, English or Music
- The Lyman Piano Award
- The Ronis Recital Prize to an outstanding undergraduate majoring in music who has made an exceptional contribution to the musical life of the University and has been selected by audition to perform in the Leonard and Joan Ronis Annual Memorial Recital

Nursing
- The Bolton Scholar Award for Excellence in Acute Care Nursing
- The Bolton Scholar Award for Excellence in Community Health Nursing
- The Bolton Scholar Award for Excellence in Critical Care Nursing
- The Bolton Scholar Award for Excellence in Gerontology
- The Bolton Scholar Award for Excellence in Leadership and Community Service
- The Bolton Scholar Award for Excellence in Maternal-Child Nursing
- The Bolton Scholar Award for Excellence in Nursing Informatics
- The Bolton Scholar Award for Excellence in Nursing Research
- The Bolton Scholar Award for Excellence in Pediatric Nursing
- The Bolton Scholar Award for Excellence in Psychiatric/Mental Health Nursing
- The Bolton Scholar Award for Outstanding Capstone Project

Nutrition
- The Mary Eliza Parker Award for excellence in nutrition and dietetics

Philosophy
- The Truman P. Handy Philosophical Prize to an outstanding junior and senior for excellence in philosophy

Physical Education
- The Arthur P. Leary Award to the outstanding freshman, sophomore or junior who has demonstrated leadership, good sportsmanship, maintained good academic standing, and made contributions to the department of physical education and the university
- The Bill Sudeck Outstanding Student-Athlete Award to the student-athlete who has demonstrated and achieved significant athletic accomplishment, academic achievement, and engagement in campus activities, and has shown leadership in athletics and in the classroom
- The Dorothy L. Hoza Award to the outstanding freshman, sophomore or junior who has made a strong contribution to the women's intercollegiate sports program, maintained a high level of academic achievement, shown leadership in the team, and contributed service to the department and university
- The Emily Russell Andrews Award to the senior woman who makes the greatest contribution to the physical education department through scholarship, leadership, participation, and service
- The Patricia B. Kilpatrick Award to the four-year varsity participant with the highest grade point average
- The Philip K. "Nip" Heim Award to the senior man who makes the most outstanding contribution to Case Western Reserve University through the athletic program

Physics
- The Albert A. Michelson Prize awarded upon completion of the junior year to a physics major who has demonstrated superior performance
- The Donald A. Glaser Award to an outstanding mathematics and physics student
- The Donald E. Schuele Award for an outstanding junior majoring in Engineering
- The Elmer C. Stewart Memorial Award to an outstanding senior in Engineering Physics
- The James C. Wyant Award for research accomplishments outside the senior project
- The Leslie L. Foldy Award to the outstanding senior in physics
- The Polypkarp Kusch Prize to an outstanding senior in physics for the best thesis
- The Richard F. Sigal Physics Scholarship to a physics student who has demonstrated excellence in their studies and intends to pursue a career in physics
- The Richard L. Garwin Award for service and scholarship in physics
Political Science
- The Comparative Politics Prize for outstanding academic performance in comparative politics by a graduating senior majoring in political science
- The Flora Stone Mather Alumnae Award for outstanding academic performance in political science
- The International Relations Prize for outstanding academic performance in international relations by a graduating senior majoring in political science
- The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
- The U.S. Politics Prize for outstanding academic performance in U.S. politics by a graduating senior majoring in political science

Psychological Sciences
- The Flora Stone Mather Alumnae Award for outstanding academic performance in psychology
- The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
- The National Student Speech-Language-Hearing Association Award for outstanding leadership and achievement in communication sciences
- The Professor Edwin P. Hollander, Adelbert 1948, and Mrs. Patricia A. Hollander Capstone Research Award
- The Stephen Bednarik Memorial Award to an outstanding senior majoring in psychology

Religious Studies
- The Ratner Family Prize to a graduating senior for the highest academic achievement in the study of religion

Sociology
- The James Dysart Magee Award for the senior year, to an outstanding student in social and behavioral sciences
- The Mark Lefton Award for excellence in sociological studies
- The Robert C. Davis Award for demonstrated commitment to sociological studies
- The Schermanhorn Award for an outstanding student in sociology
- The Stella Berkeley-Friedman Award to a graduating senior for the highest academic achievement in the study of sociology

Theater
- The Barclay Leathem Award to a graduating theater major or minor for creativity and general excellence in theater
- The Henry Kurth Award to a graduating theater major or minor who has demonstrated outstanding achievement in design or technology
- The Nadine Miles award to a graduating theater major or minor who has demonstrated outstanding academic achievement
- The Ronald Wilson Award to a graduating theater major or minor who has demonstrated outstanding achievement in performance, direction, or dramatic writing

Women's and Gender Studies
- The Dr. Rula Quawas Award in Women's and Gender Studies for excellence in coursework and projects related to the academic disciplines of Dr. Quawas
- The George Sand Award in Women's and Gender Studies to a graduating senior majoring or minoring in the field for excellence in academic performance
- The Mary Wollstonecraft Award to a continuing undergraduate student for excellence in Women's and Gender Studies courses
- The Sojourner Truth Award to an outstanding student who combines academic excellence in Women's and Gender Studies with commitment to community service, advocacy of women's and gender-related issues, and activism

Awards for Study Abroad
- The Alice Seagraves Award to outstanding students for study abroad
- The Brookes Friebolin Award to an outstanding student for study in France
- The Eva L. Pancoast Memorial Fellowship for graduating senior women in the College of Arts and Sciences or women students in the School of Graduate Studies interested in extending their education by foreign travel or study

Collegiate Awards
- The Alexandra Piepho Learning and Life Scholarship to the student who demonstrates enthusiasm for experiential learning and life, provides guidance to others, and exhibits a broad scope of learning interests
- The Army ROTC Professor of Military Science Award to the senior ROTC cadet who possesses the highest ideals of leadership, academics, and physical fitness
- The Baker-Nord Center for the Humanities Prize for Excellence
- The Bolton Scholar Award for Excellence in Nursing for the student who has attained the highest academic record at the sophomore level
- The Bolton Scholar Award for Excellence in Nursing for the student who has attained the highest academic record at the junior level
- The Bolton Scholar Award for Academic Excellence
- The Carol and Edward Breznyak '64 Cooperative Education Student of the Year Award to a student in the Case School of Engineering who has demonstrated outstanding performance in the Cooperative Education Program based on industry evaluations, written reports and student initiative
- The Director's Award for Outstanding Frances Payne Bolton School of Nursing Graduate
- The Edward J. “Ted” Corcoran Award to a senior for outstanding leadership, character and service
- The Flora Stone Mather Alumnae Award for outstanding leadership, character and service
- The Flora Stone Mather Alumnae Award for outstanding academic performance in the humanities
- The George T. Hunt Awards to a junior and a senior outstanding in leadership, scholarship, and service
- The Harriet Levison Pullman Award to a sophomore outstanding in leadership, scholarship, and service
- The John L. Fuller to the most outstanding graduating senior of the Case School of Engineering who has served the Case Engineer’s Council and the Case Alumni Association
- The John Schoff Millis Award to the senior with the best academic record
- The Joseph Skigin Memorial Award to an outstanding premedical student for the senior year
- The Louis K. Levy Prize for an outstanding junior in the College of Arts and Sciences
- The Outstanding Junior Awards of the Case School of Engineering to juniors with the best academic records at the end of five semesters in the College School of Engineering
Undergraduate Non-Degree Students

Opportunities exist for individuals who are not seeking a degree from Case Western Reserve University to enroll in undergraduate courses for credit or to audit courses and not receive degree credit.

Enrolling in Courses for Credit

Cross-Registration in Northeast Ohio

Full-time undergraduates in good academic standing at the Cleveland Institute of Art, Cleveland State University, Cuyahoga Community College, or John Carroll University may cross-register for one course per semester at Case Western Reserve University during the fall or spring semester at no tuition cost. Cross-registration from other local colleges and universities will be considered on a case-by-case basis. Students wishing to participate in the cross-registration program should review the procedures at their home institutions. Registration at Case Western Reserve University is handled by the Office of Undergraduate Studies, 447 Sears Bldg., and is normally limited to courses that are not offered at the student’s home institution. Cross-registered students must meet all prerequisite requirements before being admitted to specific courses.

Transient Students

A transient student is one who has begun their education at another college or university and intends to return there. Case Western Reserve University permits full- or part-time study as a transient student during the fall and spring semesters or during the summer session. Enrollment must be for credit-bearing courses.

Applications for enrollment as a transient student may be obtained from the Office of Undergraduate Studies, 447 Sears Bldg. (International exchange students apply through the Office of International Affairs.) As part of the application, the student must present a statement of good standing from the registrar or dean of their home college or university that also indicates that the student is eligible to enroll for that semester at the home institution. Exceptions may be granted by appeal to the Academic Standing Board, c/o the Office of Undergraduate Studies.

Enrollment is limited to a total of 30 credit-hours and is subject to the regulations of the student’s college. Transient students must meet all prerequisite requirements before being admitted to specific courses. Transient students are expected to perform at the same academic standards as degree candidates. In particular, transient students whose records would make them eligible for separation as a degree candidate at Case Western Reserve University may not continue as transient students unless they successfully petition the Academic Standing Board.

Transient students are not eligible to receive financial aid from Case Western Reserve University. If the student’s home institution has entered into a consortium agreement with Case Western Reserve University, the student should inquire of the home institution regarding eligibility to receive aid through the home institution.

Others Who Have Completed High School But Not an Undergraduate or Advanced Degree

Adults who do not already hold an undergraduate or advanced degree may apply through the Office of Undergraduate Studies to enroll for credit in courses for which their education or experience has qualified them, even though they are not pursuing a baccalaureate degree. Case Western Reserve University permits full- or part-time study as a non-degree student during the fall and spring semesters or during the summer session. Enrollment must be for credit-bearing courses. (Persons who already hold undergraduate or advanced degrees and wish to continue their studies without actively pursuing an additional degree should apply to the School of Graduate Studies.)

Applicants are expected to provide a transcript from the most recent college or high school attended. They must meet all prerequisite requirements before being admitted to specific courses. Those who have been degree-seeking students at Case Western Reserve University or have been denied admission to Case Western Reserve as an undergraduate transfer student are not eligible to attend as non-degree undergraduates.

Non-degree students are required to perform at the same academic standards as degree candidates. In particular, non-degree students whose records would make them eligible for separation as a degree candidate at Case Western Reserve University may not continue as transient students unless they successfully petition the Academic Standing Board, c/o the Office of Undergraduate Studies.

A non-degree student who wishes to become a degree candidate must apply through the Office of Undergraduate Admission. Courses taken for
credit as a non-degree student may be applied toward the degree upon acceptance as a degree candidate.

**Pre-College Scholars**

The Pre-College Scholars Program (http://case.edu/ugstudies/pre-college-scholars-program/) at Case Western Reserve University is part of the Ohio statewide College Credit Plus program. It is designed to give highly motivated and able secondary school students from Ohio the opportunity to enroll in challenging college courses prior to graduation from high school, either in the summer or during the academic year. Admission to the Pre-College Scholars Program is selective and competitive. Students must have pursued a rigorous curriculum and achieved academic excellence in all coursework. Additional factors considered in admission are the applicant's standardized test scores (ACT, PSAT, SAT, or other tests of aptitude and/or academic achievement) and the applicant's academic goals and level of maturity. Pre-College Scholars may take a maximum of two courses per term. They attend regularly scheduled classes with undergraduate students at Case Western Reserve and must be able to work well independently at the college level. Questions about the program should be directed to the Office of Undergraduate Studies, 447 Sears Bldg.

**Auditing Courses**

**Special Audit**

The Special Audit Program provides the adult student with the opportunity to attend a regular university course as a serious but informal observer at half the regular tuition. This program is available only to those not enrolled in a degree program at Case Western Reserve University. Special audit students receive no grades and no academic credit for the courses attended. No transcripts will be issued, but a certificate of attendance will be provided if requested. The Office of Undergraduate Studies, 447 Sears Bldg., handles registration for this program. No transcripts are necessary to register.

**Course Audit Program for Senior Citizens**

Case Western Reserve University's Course Audit Program for Senior Citizens (https://case.edu/seniorauditprogram/) (CAPSC) allows senior citizens (age 65 and older) to take on-campus courses at a reduced tuition rate. Additional information is available from the CAPSC Coordinator (lifelonglearning@case.edu).

**College of Arts and Sciences Alumni Audit**

Case Western Reserve University's alumni under the age of 65 may audit courses offered by the College of Arts and Sciences for 10% of regular tuition. Most, but not all, courses are available for audit. Additional information is available from the College of Arts and Sciences Alumni Audit website (http://artsci.case.edu/alumni-audit/).

**AP/IB Credit Equivalencies**

**Advanced Placement (AP) Course Equivalencies for 2021-2022 Academic Year**

Advanced Placement credit may count toward the number of credit-hours required for an undergraduate degree and may be used to replace specific courses for purposes of general education/core curricula, major, or minor requirements. Credit and exemption will be given only for AP examinations taken prior to matriculation. Credit will be posted on a student's record during the first semester of enrollment. If, after matriculation at Case, a student completes a course for which they received credit/exemption on the basis of AP, the AP credit/exemption for that course will be forfeited and will not count toward graduation requirements.

The policies regarding the awarding of credit for Advanced Placement Examinations of The College Board are reviewed annually by departments and are subject to change.

* A student may not receive credit for more than one of Physics 1, Physics B, or Physics C-Mechanics (forfeiting the credit if they subsequently earn credit for PHYS 115, PHYS 121, or PHYS 123) and may not receive credit for more than one of Physics 2 or Physics C-E&M (forfeiting the PHYS 100-TR credit if they subsequently earn credit for PHYS 116, PHYS 122 or PHYS 124). Students who earned a 4 or 5 on their AP Physics exam but who had little or no high school physics laboratory experience should consult with the department about taking PHYS 113A to build their laboratory skills before moving on to PHYS 116 or PHYS 122.

International Baccalaureate (IB) Course Equivalencies for 2020-2021 Academic Year

International Baccalaureate (IB) credit may count toward the number of credit-hours required for an undergraduate degree and may be used to replace specific courses for purposes of general education/core curricula, major, or minor requirements. Credit and exemption will be given only for IB examinations taken prior to matriculation. Case Western Reserve University offers course credit for scores of 5, 6, and 7 for most Higher Level (HL) examinations. Credit will be posted on a student’s record during the first semester of enrollment. If, after matriculation at CWRU, a student completes a course for which they received credit/exemption on the basis of IB, the IB credit/exemption for that course will be forfeited and will not count toward graduation requirements.

The policies regarding the awarding of credit for International Baccalaureate Examinations are reviewed annually by departments and are subject to change.

SCHOOL OF GRADUATE STUDIES

Tomlinson Hall, Room 203
case.edu/gradstudies/ (https://case.edu/gradstudies/)
Phone: 216.368.4390

The Case Western Reserve University School of Graduate Studies (http://case.edu/gradstudies/) (SGS) is the unit through which Case Western Reserve University offers graduate programs and university certificates in the humanities and social sciences, biomedical and natural sciences, engineering, and selected disciplines related to professional fields. These programs lead to the degrees of Master of Arts, Master of Fine Arts (theater and dance), Master of Science, Master of Public Health, Master of Engineering and Management, Master of Engineering, Doctor of Musical Arts, Doctor of Philosophy, and Graduate and Post-baccalaureate Certificates. Several programs offered jointly with the professional schools and local affiliated institutions lead to dual degrees such as MA/JD, MA/PhD, MA/MD, MA/MSN, MS/MBA MS/MD, MS/MPH, MA/MSW, MSW/MPH, MA/MPH, DMD/MPH, MHCM/MPH, PhD/MPH, JD/MPH, MSN/MPH, MBA/MPH, MD/MPH, and MD/PhD. There are also three combined undergraduate and graduate programs, IGS (Integrated Graduate Studies), BS/MS, and BS/ME, which allow undergraduate students to enter graduate study before they complete their undergraduate programs. A complete list of degree programs offered can be found on the Graduate Studies website (https://case.edu/gradstudies/prospective-students/degree-programs-offered/). The School of Graduate Studies, overseeing university-wide standards of quality in admission and performance, presently awards graduate degrees in seventy-six programs: fifty-two with doctoral programs and twenty-four with others in which the highest degree is the MA, ME, MEM, MFA, MPH, or MS. Enrollment in the School of Graduate Studies for Fall 2020, excluding non-degree registrants, totaled 2,645, of which 47% were men, 53% were women, and 26.8% were international. During the academic year 2019-2020, the school awarded 703 master’s degrees and 198 doctorates.

Administration of the School
Charles E. Rozek, PhD
(Wayne State University)
Vice Provost for Graduate Education & Academic & Faculty Affairs
Lynmarie Hamel, JD, M.Ed.
(Case Western Reserve University)
Senior Associate Dean of Graduate Studies

Faculty Senate Committee on Graduate Studies
General responsibility for overseeing postdoctoral affairs, programs of graduate study and for academic and other general regulations applicable to all graduate students and programs is delegated to the Faculty Senate Committee on Graduate Studies (http://case.edu/facultysenate/about/committees-panels/committee-on-graduate-studies/). Each department, school, or interdisciplinary committee is responsible for its particular graduate programs within the framework of the general regulations. The Committee on Graduate Studies consists of the dean of graduate studies, the associate dean of graduate studies, the associate vice president for research, one voting member elected by each constituent faculty Graduate Committee (or its equivalent) from among its members, three members of the University Faculty at-large, at least one of whom must be an elected member of the Faculty Senate, four graduate/professional students, at least one of which will be a professional student, and one post-doctoral scholar/fellow.

Graduate Student Council
All graduate and professional students at CWRU are represented by a Graduate Student Council (GSC). Representatives are elected from each school or college that offers graduate programs as outlined in its constitution. The constitution and bylaws of the GSC are published on their site. (http://gsc.case.edu/)

School of Graduate Studies Academic Policies
Fellowship Tuition Policy for Students in Graduate Studies
The purpose of this policy (https://case.edu/gradstudies/current-students/fellowships-and-awards/) is to allow students pursuing graduate degrees to take courses beyond their degree requirements without additional financial burden to the student and little or no cost to the University. Such courses, referred to as “fellowship” courses, can broaden the educational experience of graduate students by allowing them to pursue studies according to their own intellectual needs.

1. A student pursuing a graduate degree shall be charged tuition at the standard hourly rate for all of the credit hours which are intended to count toward the degree. In the fall and spring semesters for which students are registered for a minimum number (as determined by the school) of credits that will be applied toward the degree, fellowship courses will not incur a tuition charge. In the summer semester, there is no minimum registration required to qualify for the fellowship tuition policy.

2. In order to enroll in a fellowship course, the student must be in good standing, if applicable, have a PPOS on file (check with your department) with the School of Graduate Studies office, meet course prerequisites, and obtain consent of the instructor. A Fellowship Course Application (https://case.edu/gradstudies/sites/case.edu/gradstudies/files/2020-12/Fellowship%20Course%20Application%2020121820.pdf) form must be submitted to School of Graduate Studies; the form must be signed by the instructor, their advisor, and the School of Graduate Studies. Up to eight fellowship courses may be permitted in aggregate (total).

3. Thesis research (651 and 701) and similar courses cannot be taken as fellowship courses and prior rules for 701 (dissertation research) are not changed by this policy.

4. Fellowship courses cannot be audited. The grade that a student receives in the course will not count toward the degree program GPA or total hours.

5. Fellowship courses cannot be used toward a degree program at Case Western Reserve University.

7. Notwithstanding any of the foregoing provisions and policies, the rules, regulations, and terms of tuition and credit enrollments for each school shall remain in full force and effect.
Guidelines for Multidisciplinary Graduate and Graduate Professional Studies

Departments or faculty members may design a joint degree program, which will generally result in two degrees, or a multidisciplinary degree, which will generally result in a single degree that has a broader perspective than similar existing degrees. Such programs should meet challenges of new interdisciplinary knowledge and/or developments requiring new combinations of talent. In addition, such programs or degrees should enhance and not duplicate existing programs in the University. Individual students with specific multidisciplinary interests that desire to pursue them at Case Western Reserve University and faculty members who wish to run pilots for joint degree programs or multidisciplinary degrees are encouraged to do so, even if no official joint or multidisciplinary degree program currently exists, by organizing an individual joint degree or an individual multidisciplinary degree. Such degrees require faculty and departmental support. Guidance (https://students.case.edu/gradstudies/faculty/faculty-guidelines/multidisciplinary-degree-guidelines/) for the design and approval of both such programs and such individual degrees is available from the School of Graduate Studies.

Maintenance of Good Standing

Unless otherwise stated by the department, a minimum cumulative grade point average of 3.00 is required for the awarding of the graduate degrees from the School of Graduate Studies. A student maintains good standing in the School of Graduate Studies by registering each fall and spring semester unless on an official leave of absence which has been approved by the School of Graduate Studies. A student is in good standing who meets the standards set by the academic department and the School of Graduate Studies to ensure normal progress toward graduation. Students whose grade point averages fall below minimum standards will automatically be placed on probation until the minimum standards are achieved. The probationary status will be recorded on the Student Information System (SIS) (https://sis.case.edu/pss/P92SCWR/?cmd=login). In addition, a student will be subject to separation from the University for any of the reasons listed below. Academic separations are recorded on both the unofficial/advising transcript and the official university transcript.

1. Failure to achieve a grade point average of 2.50 or higher at the completion of 12 semester hours or 2 semesters of graduate study.
2. Failure to achieve a grade point average of 2.75 or higher at the completion of 21 semester hours or 4 semesters of graduate study.
3. Failure to receive a grade of S in thesis research 651 or dissertation research 701. A student who receives a grade of U in thesis (Course 651) or dissertation research (Course 701) will be placed on probation and be subject to separation. The student must be removed from probation by the end of the semester immediately following receipt of the grade of U by repeating the course for the same number of credit hours, and achieving a grade of S. The tuition and associated fees for the repeated course may be the responsibility of the student. Although removal from probation restores the student's good standing, the grade of U received will not be canceled or substituted by the grade of S subsequently received. Separation will occur if the student placed on probation receives another grade of U in any following semester, or, if the School of Graduate Studies, in consultation with the academic unit, determines that the student is unlikely to be successful in working independently and productively toward the completion of the thesis or dissertation research.
4. Failure of a conditionally or provisionally admitted student to satisfy the conditions or provisions stated in the letter of acceptance by the end of the first academic year (2 semesters) or after 18 credits of course work.
5. Failure to make progress towards degree completion. If the student is not making progress towards degree completion, and it has been judged that the student is unlikely to be successful in working independently and productively toward the completion of clinical requirements, thesis or dissertation research the department and/or the dean of graduate studies (in consultation with the department) can recommend academic separation.
6. In addition to disciplinary actions based on academic standards, on recommendation of the student’s department or school, the School of Graduate Studies can suspend or separate a student from the University for failure to maintain appropriate standards of conduct and integrity. Such a suspension or separation will be implemented only for serious breaches of conduct that threaten to compromise the standards of a department or create concern for the safety and welfare of others. In the event of such suspension or separation, the student will be entitled to an appeal through the grievance procedure of the Graduate School.

Maintenance of Grade Point Average (GPA)

Unless otherwise stated by the department, a minimum cumulative grade point average of 3.00 is required for the awarding of the graduate degrees from the School of Graduate Studies. Any department, school, or curricular program committee may choose to establish quality standards higher than those stated above if such additional requirements are made known in writing to the students upon matriculation and are recorded with the School of Graduate Studies. In calculating the grade point average, courses taken as a student in the School of Graduate Studies at the 400 level or above as well as any courses accepted toward fulfillment of degree requirements for which quality points are given will be counted, including courses that may need to be repeated. In that case, the departmental standards supersede the minimum standards. Students who do not maintain the minimum grade point average will be placed on academic probation until the minimum standard has been achieved.

Class Attendance Policy

Students are expected to attend all classes for which they are registered. Online students are expected to log on and participate in class at the expected pace outlined by the instructor. If a student is unable to attend class, they must let the instructor know in advance or as soon as possible. The policy regarding attendance should be stated in the course syllabus and students should be informed of the policy at the start of the course. If a student misses a class, the student is responsible for making up any missed work and for obtaining any other information that was disseminated in class. Course requirements are not waived due to absence from class. If a student anticipates an extended absence, they should consult the School of Graduate Studies for assistance in managing their situation.

The School of Graduate Studies adheres to the University policies governing religious holidays and, for students that are registered with the Office of Disability Resources (https://case.edu/studentlife/healthcounseling/disability-resources/), the flexible attendance (https://students.case.edu/academic/disability/policies/attendance.html) policy.
Course Repeat Policy
Graduate students may petition their department chair to repeat a maximum of two courses during their degree program in order to improve their performance. When a course is repeated, the first grade will remain visible on the transcript but will be removed from the calculation of the cumulative grade point average and the grade point average for the semester in which the course was first taken. The new grade will then be used for calculation of the cumulative grade point average and the grade point average for the semester in which it was earned, regardless of whether the new grade is higher or lower than the first grade. The student's transcript will show the comment “Repeated: No credit awarded” directly below the original grade. However, if the first attempt of the course resulted in a passing grade, but the second attempt results in a failing grade, then the original grade will remain. Similarly, if a student withdraws from a course that is being repeated, the Course Repeat Option will not be applied and the original grade will stand. Course repetition may be exercised according to the following conditions:

1. The course repeat option can only be used on a course in which a C or lower was earned. Courses with a grading basis of P/NP are not eligible under this policy.
2. A student may not use the Pass/No Pass Option on a course that is being repeated.
3. A student may only use the repeat option on the same course (name, number, credits).
4. Research based courses (for example, 601, 651, and 701) are exempt from this repeat policy. Thesis research course 651 and dissertation research course 701 grading policies can be found in this bulletin.
5. The course repeat option may not be exercised after a degree has been awarded.
6. A Course Repeat Petition (https://case.edu/gradstudies/sites/case.edu.gradstudies/files/2020-06/CourseRepeatPetition%2005292020.pdf) form must be signed by the student’s advisor and department chair. The form must be submitted to the School of Graduate Studies for approval.
7. The tuition and associated fees for a repeated course may be the responsibility of the student.

Incomplete (I)
Grades of I can only be assigned for letter-graded and Pass/No Pass courses for extenuating circumstances and only when a student who is passing the course fails to complete a small, evalulative segment of the course. Students may not sit in the same course in a later semester to complete the work required for the original course. All work for the incomplete grade must be made up and the change of grade recorded in the Student Information System (SIS) (https://sis.case.edu/psp/P92SCWR/?cmd=login&LanguageCd=ENG) by the date specified by the instructor, but no later than the 11th week of class in the semester following the one in which the I grade was received.

In exceptional circumstances, a student may petition for an extension of the incomplete deadline of no more than one additional semester. The petition should be submitted by the original deadline date and must contain the reasons for the extension, a proposed new completion date and a letter from the instructor supporting the extension.

When a student fails to submit the work required for removing the Incomplete by the date established, the instructor will enter a final grade that assumes a failing performance for the missing work. In the absence of the assignment of a grade by the instructor, the Registrar will convert the I to F when the deadline for making up Incomplete grades from a previous semester has passed.

Periodic Review and Evaluation of Doctoral Student Progress
In order to achieve excellence in student mentoring in doctoral programs within the School of Graduate Studies at Case Western Reserve University, an annual review of student progress toward the degree is required for every doctoral student. This review has two purposes: i) to support mentoring of students by providing regular and timely feedback that will enhance their success at CWRU and their career goals and professional development, and ii) to evaluate progress toward completion of the degree. To achieve these goals, the review should evaluate the previous year's progress, detail the student's strengths and areas that need improvement, and make recommendations for future action to complete the degree.

Each doctoral program shall develop its own annual review format and timing within these minimal guidelines:

1. Every doctoral student will submit an annual progress report to their program, department, or school. The report should describe progress toward the degree in the past year, future plans for completing the degree, career goals and progress toward professional development.
2. Faculty of the program, department, or school will review the student reports to evaluate student progress in the program. The review process shall include at least two faculty members, such as the faculty advisor, dissertation or thesis chair or committee, graduate student director, or other subset of faculty designated by the department. Additional faculty members may be asked to provide input to help the review process.
3. The findings of the evaluation shall be communicated to the student in a written report and, whenever possible, discussed in person, that details the student's current status in the program, progress towards completion, career goals and professional development, and makes concrete suggestions for future actions.
4. Master's level students may be evaluated in a similar fashion at the discretion of the program, department, or school.

If a doctoral program already has an annual review policy in place, the program shall inform the School of Graduate Studies of what form that review takes. For programs that do not have an annual review policy, the School of Graduate Studies requests that they create an annual review policy within a year from the approval of the policy. This policy does not mandate the use of one student review format. For some programs, the annual report can be coordinated with other reporting needs (e.g. NIH grants) so as to eliminate redundancy in reporting for the student.

Compliance with this policy will be monitored by School of Graduate Studies. Programs shall provide an annual list of names of students who have been reviewed by June 30th each year. A template of the department review form shall be provided to School of Graduate Studies. Copies of an individual student’s annual reviews will be made available to School of Graduate Studies upon request.

Residency Requirement
The doctoral residency requirement is intended to ensure a period of intensive academic interaction with faculty and peers and sustained independent research. Graduate students are considered to be in residence when they are fully engaged in academic work. As resident students, they may teach at the University, take graduate courses, assist in course development, and engage in research or in other scholarly
activities at the University. Regardless of the nature of the work, the student’s regular presence at the University is expected during fulfillment of the residency requirement.

The formal fulfillment of residency requires continuous registration in at least six consecutive academic terms (fall, spring and/or summer) from matriculation to a period not exceeding five years after the first credited hour(s) of dissertation research (701). The period while students are on a leave of absence does not count towards fulfilling the residency requirement. Within the context of continuity of registration, departments may erect other restrictions. In such instances, the departmental requirements take precedence and must formally be disclosed to the student at matriculation. This is meant to be a reflection of the appropriate reality that departments and fields have different norms and traditions of graduate study.

**Time Limitation**

Requirements for the master’s degree must be completed within five consecutive calendar years after matriculation as a graduate student, including any leaves of absence. Requirements for the PhD degree must be completed within five consecutive calendar years from the semester of the first credited 701 registration, including any leaves of absence. Any graduate student who fails to complete the requirements within the five year limit for their degree program will be subject to separation from further study unless granted an extension by the School of Graduate Studies with the recommendation of their program. An extension may be granted if the student and their advisor work out a plan of action for degree completion within a specified time frame which must be endorsed by the department chair or graduate program director. Students will be expected to meet all the specified deadlines outlined in the plan of action. The minimum acceptable registration during this extended period for each semester until graduation is three credit hours of 651 (Master’s thesis students) or 701 (PhD). DMA students, and non-thesis, project, and course-focused master’s students must register for at least three credits of appropriate course work.

---

**Graduate Student Holiday, Vacation, Parental Leave and Sick Leave Policies**

These policies apply to graduate students in the School of Graduate Studies who receive stipends that support their effort toward earning a degree during the period when they receive support. They represent the minimum to which graduate students are entitled.

If a graduate student receives a stipend, they will receive support for holidays, parental leave, sick leave, unpaid leave, unused leave, and vacations, as set forth below. The stipend support for those days will be at the same rate as for normal work days. For all anticipated leaves longer than two weeks, appropriate departmental approvals must be obtained and paperwork submitted to the School of Graduate Studies prior to the start of the leave.

These policies do not supersede other University policies concerning attendance or residence at the University (e.g. participating in classroom activities as a student or teaching assistant). These policies only apply to student effort toward earning a degree.

**Holidays**

Graduate students are entitled to observe all University closings for holidays and other recognized events.

**Parental Leave**

Graduate students are entitled to paid parental leave for the adoption or birth of a child. The primary caregiver is entitled to 6 weeks leave and the other parent or domestic partner is entitled to 3 weeks leave. When both parents are supported graduate students, the leave may be used consecutively or together. The leave must be used within 12 months of birth or adoption. Parental leave must be approved in advance in writing by the Program. It is permissible to add parental leave and sick leave together for the adoption or birth of a child.

**Sick Leave**

Graduate students are entitled to two weeks (10 traditional work days) of sick leave per year, with no year-to-year accrual. Sick leave may be used for medical conditions related to pregnancy and childbirth. Under exceptional circumstances, additional sick leave days may be granted following receipt of a written request from a physician, and prior written approval by the program and Graduate Studies. If applicable, medical documentation should be sent to the School of Graduate Studies and the Equity Office if it relates to pregnancy or childbirth issues.

**Unpaid Leave**

Students who require additional leave beyond what is stipulated above must seek prior written approval from the School of Graduate Studies for an unpaid Leave of Absence (LOA) (https://case.edu/gradstudies/sites/case.edu.gradstudies/files/2020-06/Leave%20of%20Absence%2005292020.pdf). Approval for a leave of absence must be requested in advance by the student and the student should provide documentation for the leave request and obtain approval. Conditions for the leave and approval must be submitted to the School of Graduate Studies. Continued coverage of health insurance is allowable as permitted within the guidelines of University Health Services and with written approval by the program and School of Graduate Studies.

**Vacations**

Graduate students are allowed two weeks of vacation per calendar year (10 traditional work days) if they receive full support during a 12-month period. Students who receive less than 12 months of support are not entitled to vacation during the period of support. The dates of vacations must be approved in advance by the student’s research mentor to ensure that time-sensitive work is not disrupted.

Vacation days can be accrued from one year to the next year only with the prior written approval of the program and only up to a maximum of 20 traditional work days, to allow for international travel, for example. There is no terminal leave.

The times between academic terms and the summer are considered part of the active training period and are not to be regarded as vacation time.

**Disclaimers**

These policies do not supersede any HR policy. In addition, these policies do not create a contractual relationship with any student and the policies may be amended at any time by the Faculty and the School of Graduate Studies.

The School of Graduate Studies policies regarding continuous registration and leave of absence still apply.
Maintenance of leave records is the responsibility of the academic department.

**Leave of Absence from Graduate Study**

Students in the School of Graduate Studies are expected to maintain continuous registration in the Fall and Spring terms, unless on an approved leave of absence. If a student wishes to request a leave, they must do so in writing by submitting the Leave of Absence (https://case.edu/gradstudies/sites/case.edu.gradstudies/files/2020-06/Leave%20of%20Absence%20052920.pdf) form, found at the School of Graduate Studies website. The request must not exceed two consecutive academic semesters. The reason for the leave must be stated clearly, and the request must be submitted to the School of Graduate Studies with the written endorsement of the student’s academic department. International students must check with International Student Services (https://case.edu/international/international-student/) before petitioning for a leave of absence, as such a leave can affect their visa status. In exceptional circumstances, the leave can be extended for another two semesters. However, the maximum amount of leave permitted per graduate program is four semesters.

During a leave of absence, a student may complete outstanding/missing work in courses (subject to the established Graduate Studies policy on Incomplete Grades (p. 1333)), but may not fulfill other degree requirements. Students also may not take comprehensive or qualifying exams or defend a thesis or dissertation. A leave of absence does not extend the maximum time permitted for the completion of degree requirements, and a leave cannot be taken while students are on extension of the five-year limit. At the expiration of the leave, the student must resume registration unless formally granted an extension of the leave by submitting a new leave of absence form.

A student who is granted a parental leave of absence related to infant care, as well as those who must fulfill military duty obligations, can petition to extend the five-year time limit associated with completion of the degree. The length of this extension may not exceed two years.

**Return from Leave of Absence**

Students should contact their program and Graduate Studies prior to their return to request reactivation of their record. Retroactive leaves are not permitted. A student who fails to obtain a leave of absence, or who fails to register following an official leave, will be withdrawn from graduate study and must petition the School of Graduate Studies for reinstatement in order to resume work as a student in good standing at the University.

**Changes in Registration (Drop/Add)**

To add or withdraw from individual courses or to change registration from credit to audit, a student must submit a Drop/Add (https://case.edu/gradstudies/sites/case.edu.gradstudies/files/2020-06/DropAdd_Fillable_053120_0.pdf) form signed by their advisor, to the School of Graduate Studies in accordance with the dates and deadlines (https://case.edu/gradstudies/current-students/dates-deadlines/) published each academic term for such actions to be taken. Students must make appropriate changes to their schedules by the end of the second week of classes in order to avoid paying full tuition for a dropped course. When making changes in registration, an international student must be aware of the pertinent requirements regarding full-time status. Students who add a course after the start of the semester are responsible for any work missed and are expected to speak with the instructor to learn the consequences of any work missed and whether there are opportunities for making up missed work.

**Course Loads and Overloads**

Full-time status requires registration for a minimum of 9 semester hours per semester (or 1 semester hour of 651 or 701). Students’ finances by federal loans must remain registered for at least 6 semester hours (defined as half-time) each semester to maintain continued eligibility for that funding or to initiate such a loan.

The maximum course load is 17 semester hours. Students wishing to take an overload must receive approval from their graduate program. The program should then send the overload request to Graduate Studies for final approval and processing.

**Withdrawals and Reinstatement**

**From All Courses**

Only completing a term withdrawal for the semester entitles a student to a percentage refund of the withdrawn courses after the second week of classes. Failure to attend class or merely giving notice to the instructor will not be regarded as official notice of withdrawal or change. Such an unofficial withdrawal normally will result in the student being assigned the grade of F.

**From The University**

To withdraw from the university during a semester or session, a student must send written notice to their program and to Graduate Studies. Grade of WD will be assigned in all courses in which a student is registered at the time of withdrawal, provided that a student follows the procedures stated above. Failure to attend classes or notification of instructors only does not constitute withdrawal from the university. A student who ceases to attend or otherwise participate in courses without officially withdrawing will be assigned the grade of F for each course in which they are enrolled.

Students must maintain continuous registration in the fall and spring semesters throughout their degree programs unless granted an official leave of absence. Students who fail to register for any academic term will be withdrawn from their programs. Students who are withdrawn from their programs must petition for reinstatement in order to continue graduate study. The petition must be approved by both the student’s department and the School of Graduate Studies before the student may register for further course work as a student in full standing. If more than 24 months have elapsed since the last registration, students may have to resubmit Admissions materials if requested by the program or the School of Graduate Studies.

**Waiver of Registration**

It is a requirement of the School of Graduate Studies that a student be registered for credit in the semester in which they complete all the requirements to graduate in accordance with established deadlines for that semester. For a student engaged in thesis or dissertation research, the completion of all requirements to graduate is not easily predicted, making it difficult to adhere to scheduled deadlines. If a student will not be able to meet the degree requirements to graduate in one semester, but will finish before the next semester begins, students can apply for a waiver of the requirement to be registered in the semester of graduation. To be granted a waiver of registration, students must be registered for the appropriate thesis or dissertation credit hours in the semester (or summer session) immediately preceding the semester of graduation, complete all degree requirements including a current application to graduate, and submit all required materials to the School.
of Graduate Studies by the end of the Drop/Add period (https://case.edu/gradstudies/current-students/dates-deadlines/) of the next semester, including the Waiver of Registration (https://case.edu/gradstudies/sites/case.edu/gradstudies/files/2021-03/WaiverReg%20031121.pdf) form.

A student who qualifies for the waiver will be awarded the degree at the next graduation without the need to be registered. If a student fails to meet the waiver deadline, they will be required to register for the appropriate thesis or dissertation credit hours in the next semester, and to reapply for graduation in that semester.

Transfer of Credit
Transfer of credit from another university toward master’s and doctoral degree requirements is awarded for appropriate course work (not applied to another degree program) taken prior to admission. Transfer of credit must be requested in the student’s first academic year and must be appropriate for the student’s planned program of study. For master’s candidates, transferred credit is limited to six semester hours of graduate-level courses, and no credit for master’s thesis may be transferred from another university. No transfer of credit will be awarded towards the PhD degree except by petition, and no credit for the doctoral dissertation may be transferred from another university. Such courses must have been taken within five years of first matriculation at Case Western Reserve University and passed with grades of B or better.

Students who wish to receive credit for courses taken outside the University once they are enrolled must petition for approval before taking the classes. All transfer of credit requires approval from the student’s advisor, the departmental chair or graduate committee, the department for which credit is being granted, and the School of Graduate Studies. The Transfer of Credit Request (https://case.edu/gradstudies/sites/case.edu/gradstudies/files/2020-06/Petition%20for%20Transfer%20Credit%2005292020_0.pdf) form can be found on the School of Graduate Studies website.

Transfer of credit does not include the transfer of grades and therefore can not be used to fulfill GPA or percentage of graded coursework policies.

Internal Transfer of Credit
Students of exceptional ability in the undergraduate programs of Case Western Reserve University who have the approval of the Office of Undergraduate Studies and the School of Graduate Studies may apply to receive credit for graduate courses completed in excess of the undergraduate degree requirements.

Graduate students who internally transfer to another degree program may seek approval to transfer coursework from the original degree program by a Petition for Transfer of Program (https://case.edu/gradstudies/sites/case.edu/gradstudies/files/2020-06/Petition%20for%20Transfer%20of%20Program%20061020.pdf) form. Dual degree or nondegree students transferring into a graduate degree program must provide the School of Graduate Studies with written approval from their department.

Internal transfer of credit does include the transfer of grades and can be used to fulfill GPA or percentage of graded coursework policies.

Graduation
A candidate for a degree or university certificate awarded by the School of Graduate Studies must submit an application for graduation in the Student Information System SIS (https://sis.case.edu/pss/P92SCWR/?cmd=login) by the deadline established for that semester. Students are encouraged to visit the School of Graduate Studies website at the beginning of the semester in which they intend to graduate to obtain graduation materials for either the Master’s (http://case.edu/gradstudies/current-students/graduation/) or Doctoral (http://case.edu/gradstudies/current-students/graduation/) degree. The candidate must meet all the deadlines for completion of degree requirements set forth in the calendar (https://case.edu/gradstudies/current-students/dates-deadlines/). All candidates must be registered for credit (unless they have an approved Waiver of Registration (https://case.edu/gradstudies/sites/case.edu/gradstudies/files/2021-03/WaiverReg%20031121.pdf)) and in good standing during the semester in which the degree is awarded. The diploma and official transcript reflecting the conferral of degree will not be released to the candidate until all outstanding tuition, fees, and fines are resolved.

Exceptions to Regulations
Students have the right to petition for exceptions to these regulations. Such a petition should be addressed to the School of Graduate Studies. In most cases the student’s department or program committee must endorse the petition.

Departmental Responsibility for Requirements
Requirements for master’s and doctoral degrees beyond those set forth in these regulations may be established by departments or curricular program committees with the approval of the dean of graduate studies. Individual students may be required to take courses beyond the published requirements in order to successfully complete their degree programs. In such instances, the student must be notified in writing upon matriculation by the chair of the department or curricular program, with a copy to be filed in the School of Graduate Studies.

Graduate Student Rights and Responsibilities
It is the responsibility of the student to become familiar with the general rules and regulations of the University, not just those of the School of Graduate Studies. These are including but not limited to the University Policies (https://students.case.edu/policy/) and University Code of Conduct (https://case.edu/studentlife/conduct/university-code-conduct/). A member of the University community who is accused of violating any of these rules and regulations is subject to University disciplinary action. Due process procedures of adequate notice of all charges and a fair hearing will apply. Case Western Reserve University has established a mechanism whereby students may express a grievance against the actions of other students or members of the faculty and staff. The Academic Integrity Policies and Procedures (https://case.edu/gradstudies/about-school/policies-procedures/) to be followed in the case of academic infractions by graduate students may be obtained through the School of Graduate Studies. The policies and procedures governing all other infractions are detailed in the University’s Case Student Handbook (http://studentaffairs.case.edu/handbook/). The University Office of Student Affairs (http://students.case.edu/) should be consulted for non-academic infractions.

It is also the responsibility of the student to become acquainted with the general regulations and administrative procedures governing graduate study, together with the departmental or school regulations which apply to the student’s course of study, and, in consultation with the faculty advisor or advisory committee of the supervising unit, to plan the
program and carry out the work in accordance with these regulations and procedures.

Graduate Student Grievance Procedure

It is the responsibility of the School of Graduate Studies to ensure that all students enrolled for graduate credit at Case Western Reserve University have adequate access to faculty and administrative consideration of their grievances concerning academic issues. A three-step procedure has been established for graduate students to present complaints about academic actions they feel are unfair.

1. Students with complaints should first discuss their grievances with the person against whom the complaint is directed.
2. In those instances in which this discussion does not resolve a grievance to the student's satisfaction, a complaint should be presented in writing to the department chairperson. If the complaint is against the department chair and is not resolved with this individual, the complaint should be presented to the dean of the school/college.
3. In the event that a decision still appears unfair to the student, the student may bring the matter to the attention of the dean of graduate studies. The dean may ask the student to put the complaint in writing. The dean will then discuss the case with the student and the department chair to evaluate the particulars and to make a ruling on it. As the situation warrants, the dean may appoint a Grievance Committee to recommend what action should be taken. In this event, the Committee will be composed of two faculty members selected from the Committee on Graduate Studies (https://case.edu/facultysenate/about/committees-and-panels/committee-graduate-studies/) of the Faculty (https://case.edu/facultysenate/) Senate and two graduate students selected either from the Executive Committee of the Graduate Student Council (https://case.edu/gradstudents/about-the-school/graduate-student-council/) or from the student members of the Committee on Graduate Studies.

The dean of graduate studies has the responsibility for the final decision, and the ruling from the School of Graduate Studies will be considered final and binding on the persons involved in the grievance.

It should be understood that this grievance procedure relates solely to graduate student complaints concerning academic issues. Other issues including student conduct, community standards or sexual misconduct are covered through different policies.

Procedures and Sanctions for Graduate Student Academic Infractions

Graduate students accused of violating the University's standards of conduct, which are detailed in this Academic Integrity Policy (https://case.edu/gradstudents/about-school/policies-procedures/), are entitled to adequate notice of all charges and to a fair hearing and may subsequently be subject to disciplinary action. The process that is outlined in the Academic Integrity Policy will apply to academic infractions, e.g., cheating on examinations, plagiarism, and other forms of dishonesty in academic activities. Additional information is available from the School of Graduate Studies.

School of Graduate Studies Academic Requirements

Academic Requirements for Master's Degrees

In recognition that the objectives of master's degrees differ for various departments and for individual students, especially in the importance given to research, two general plans for master's degrees may be followed. Master's Thesis option is for MA or MS degrees with a thesis based on individual research and a final oral examination. Master's Non-Thesis options is for MA, ME, MEM, MFA, MPH, MSA, or MS degrees without a thesis but requiring a comprehensive examination, major project or other culminating experience to be administered by the academic unit.

Within the framework of these general regulations, it is expected that a relevant program of study will be planned for each candidate for the master's degree by the student and the faculty advisor or advisory committee. If applicable, a planned program of study (PPOS) must be submitted to the School of Graduate Studies by the end of the second semester. Check with your program to determine if a PPOS is required.

Such a program should include appropriate courses, thesis, and/or project hours, and may also include, where relevant, such experiences as field work or practicum. Guides to submitting and updating the PPOS (https://case.edu/registrar/generalsis-resources/faculty-planned-program-of-study/) through the Student Information System (SIS) (https://sis.case.edu/psp/P92SCWR/?cmd=login&languageCd=ENG) are available from the University Registrar (https://case.edu/registrar/).

Some departments have the degree requirements coded in the Student Information System and do not require a PPOS. The academic requirements report in the Student Information System replaces the PPOS.

Master's Thesis Option

Unless otherwise stated by the department, a minimum cumulative grade point average of 3.00 is required for the awarding of the graduate degrees from the School of Graduate Studies. The master's degree under the thesis option requires a minimum of 30 total semester hours, with 18-21 regular hours of course work, plus a thesis equivalent to at least 9-12 semester hours of registration. At least 18 hours of coursework must be at the 400-level or higher. Courses taken at the 300 level should only be allowed when no 400 level course is available, or under unusual circumstances, both of which must be approved in advance via a petition to Graduate Studies. At least 12 semester hours of course work must be graded. Once registered for thesis credit (Course 651), a student must continue 651 registration each succeeding regular semester until graduation. However, if a student is registered for course work or research toward the doctorate in the semester in which the thesis examination is expected to occur, concurrent registration for 651 is not required.

Each student must prepare an individual thesis. Joint theses are not permitted. The written thesis must conform to regulations concerning format, quality, and time of submission as established by the School of Graduate Studies. Detailed instructions (https://case.edu/gradstudents/current-students/electronic-theses-and-dissertation-guidelines/) can be obtained from the School of Graduate Studies website.

For completion of master's degrees under the thesis option, an oral examination (defense) of the master's thesis is required. This examination is conducted by a committee of at least three members.
of the University faculty. The candidate's thesis advisor customarily serves as the chair of the examining committee. The other members of the committee are appointed by the chair of the department or curricular program faculty supervising the candidate's course of study. The examining committee must agree unanimously that the candidate has passed the thesis examination. When the research relates to proprietary material, the student and advisor are responsible for making preliminary disclosures to the sponsor sufficiently in advance to permit timely release of the thesis, and these plans should be disclosed when the thesis is submitted to the School of Graduate Studies. These arrangements, and any requests for delayed publication, must be disclosed when the thesis is submitted to the School of Graduate Studies on the Electronic Thesis and Dissertation (ETD) Document Approval and Certification Form (https://case.edu/gradstudies/sites/default/files/2020-06/ETD%20Document%20Approval%20Form%2006012020.pdf) in the graduation packet (https://case.edu/gradstudies/current-students/graduation/masters-thesis-graduation/).

Master's Non-Thesis Options

Unless otherwise stated by the department, a minimum cumulative grade point average of 3.00 is required for the awarding of the graduate degrees from the School of Graduate Studies. The minimum requirements for the master's degree under the non-thesis option are 30 semester hours of course work with at least 12 semester hours of letter-graded course work, and a comprehensive examination, approved project or other culminating experience. At least 18 semester hours of course work must be at the 400 level or higher. Courses taken at the 300 level should only be allowed when no 400 level course is available or under unusual circumstances, both of which must be approved in advance via a petition to Graduate Studies.

The Case School of Engineering offers a non-thesis, course focused master’s degree. The minimum requirements for the course only masters are 30 semester hours of coursework with at least 12 hours of letter-graded coursework and at least 24 hours at the 400 level or above.

Each candidate for the master's degrees under the non-thesis option must pass satisfactorily a comprehensive examination, project or other culminating experience to be administered by the department or curricular program committee. The examination may be written or oral or both. A student must be registered during the semester in which any part of the comprehensive examination is taken. If not registered for other courses, the student will be required to register for one semester hour of EXAM 600 Master's Comprehensive Exam before taking the examination.

Academic Requirements for Graduate Certificates

Case Western Reserve University awards University Certificates as a credential for completing a set of courses (possibly in combination with other learning experiences) that focus on a specific topic or theme. A graduate certificate program contains courses taught at the graduate or professional level. The program must include a minimum of 15 credit hours. The student must earn a minimum GPA of 3.00 in order for the graduate certificate to be awarded. Certificate programs may be embedded within degree programs and offered as an option for degree-seeking students, or can be stand-alone programs to which students apply and are granted admission. Courses taken as part of a certificate program may be double counted for degree programs. Certificates are recorded in the Student Information System and will appear as awarded on the student's official University transcript upon final confirmation from the School of Graduate Studies.

Academic Requirements for the Doctor of Philosophy and Doctor of Musical Arts Degrees

The degrees of Doctor of Philosophy and Doctor of Musical Arts are awarded in recognition of in-depth knowledge in a major field and comprehensive understanding of related subjects together with a demonstration of ability to perform independent investigation and to communicate the results of such investigation in an acceptable dissertation.

Curricular Requirements

Within the framework of these general regulations, it is expected that a relevant program of study will be planned for each candidate for the doctorate by the student and the faculty advisor or advisory committee. This planned program of study (PPOS), if applicable, must be submitted to the School of Graduate Studies before the end of the second semester. Guides to submitting and updating the PPOS (https://case.edu/registrar/general/sis-resources/faculty-planned-program-of-study/) through the Student Information System (SIS) (https://sis.case.edu/psp/P92SCWR/?cmd=login&languageCd=ENG&) are available from the University Registrar. Some departments have the degree requirements coded in the Student Information System and do not require a PPOS. The academic requirements report in the Student Information System replaces the PPOS.

Academic Requirements for the Doctor of Philosophy

Unless otherwise stated by the department, a minimum cumulative grade point average of 3.00 is required for the awarding of the graduate degrees from the School of Graduate Studies. Although specific requirements vary among departments, students entering with a bachelor's degree will satisfactorily complete a minimum of 36 semester hours of courses (which may include independent study/research, course 601), tutorials, and seminars. All course work must be at the 400 level or higher, and at least 24 semester hours of course work must be graded. For students entering with an approved master's degree, completion of at least 18 semester hours of 400-level or higher course work and at least 12 semester hours of this course work must be graded. A minimum of 18 semester hours of dissertation research (Course 701) is required for all PhD students.

Academic Requirements for the Doctor of Musical Arts Degree

Unless otherwise stated by the department, a minimum cumulative grade point average of 3.00 is required for the awarding of the graduate degrees from the School of Graduate Studies. A minimum of 36 credit hours of course work (at least 24 hours must be graded work and at the 400 level or above) is required for the DMA, together with a minimum of 18 hours of applied music and 6 hours of lecture-recital/document preparation. Students are also required to give a recital, to pass a jury and qualifying examinations, and to demonstrate proficiency in two foreign languages relevant to their field of study. Students should contact the Department of Music for additional details.

Advanced dissertation research

For students matriculating in Summer 2019 and later, in order to accurately reflect the time and effort accrued in completing the dissertation, 36 hours of advanced dissertation research will be posted to the PhD/DMA student's record upon successful completion of the dissertation defense and submission of final certification paperwork.
Examination Requirements

In order to meet the requirements for the doctorate, a student must pass satisfactorily a general examination (or a series of examinations covering different fields) specified and administered by the student's department or supervising committee. The examination generally precedes advancement to candidacy. A student must be registered during the semester in which any part of the general or qualifying examination is taken. If not registered for other courses, the student will be required to register for one semester hour of EXAM 700 PhD General/Qualifier Exam, before taking the examination. A student who fails the examination on the first attempt may be permitted to take the examination a second time within one year at the discretion of the department. Except in unusual circumstances, a student who fails the examination a second time will be separated from further graduate study within the same department or program.

Advancement to Candidacy

The formal acceptance of a student as a candidate for the doctoral degree is the responsibility of the student's department or the committee supervising the doctoral program in accordance with the written procedures of the academic unit. Once a student has advanced to candidacy, notification to the School of Graduate Studies should be submitted using the Advancement to Candidacy (https://case.edu/gradstudies/sites/case.edu.gradstudies/files/2020-06/AdvanceCandidacy%2006012020.pdf) form. Generally, advancement to candidacy allows the student to enter the dissertation research phase of the degree program, and occurs after all course work and exam requirements are satisfied. At its discretion the supervising unit may require a student to pass qualifying examinations before candidacy is granted. Students are expected to make regular and continuous progress toward the degree. Advancement to candidacy in a PhD program should occur within a maximum of 6 years post-matriculation with a bachelor's degree (no later than at the completion of 36 semester hours of graduate study) and 4 years post-matriculation with a master's degree (no later than at the completion of 18 semester hours of graduate study). Students may continue in pre-candidacy status beyond this time on a limited basis by means of a petition to the School of Graduate Studies by the student and program director, based on evidence of student progress toward the degree. Individual programs can require advancement to candidacy before the time limit set in this policy.

The School of Graduate Studies must promptly be notified in writing of the decision concerning a student's advancement to candidacy, and a copy of the notification must be sent to the student concerned. A student who is refused candidacy status may not undertake further study for credit toward the doctoral degree within the same department or supervising unit. With the approval of both the department concerned and the School of Graduate Studies, such a student may:

1. Take additional courses, if required, in order to complete an approved master's degree in that department.
2. Seek admission to the graduate program of another department.

Course 701 Requirements (Dissertation Research, Pre- and Post-Candidacy)

When a student has been advanced to candidacy, they may begin dissertation research by formally registering for course 701 credits. At the point at which students begin registering for course 701, the department must identify a University faculty member who will serve as the doctoral student's principal research advisor and formally notify the School of Graduate Studies. Students who have been advanced to candidacy may register for 1-9 credits of course 701 each fall and spring semester (or up to 6 credits for the summer when needed).

In certain cases, students who have not advanced to candidacy may be given predoctoral standing status at the discretion of the department and upon submission of the Predoctoral Standing (https://case.edu/gradstudies/sites/case.edu.gradstudies/files/2020-06/PredoctoralStanding%2006012020.pdf) form to the School of Graduate Studies. These students may register for up to a total of 6 credit hours of course 701 over a maximum of two regular semesters. Pre-Candidacy 701 hour(s) may be taken concurrently with coursework.

Once a student begins registration of 701 hours, they must register for at least one credit hour of 701 each semester until graduation. Doctoral students have five consecutive calendar years from the semester of the first credited 701 registration, including leaves of absence, to complete all requirements for the doctorate.

Dissertation Requirements

All candidates for the PhD degree must electronically submit a dissertation as evidence of their ability to conduct independent research at an advanced level. The dissertation must represent a significant contribution to existing knowledge in the student's field, and at least a portion of the content must be suitable for publication in a reputable professional journal or as a book or monograph. Students must prepare their own dissertations. Joint dissertations are not permitted. The dissertation must conform to regulations concerning format, quality, and time of submission as established by the School of Graduate Studies, see the Electronic Theses and Dissertation Guidelines here (https://case.edu/gradstudies/current-students/electronic-theses-and-dissertation-guidelines/). Research work connected with a dissertation is to be carried out under the direct supervision of a member of the University faculty selected by the student in consultation with departmental faculty and approved by the chair of the department.

When the research relates to proprietary material, the student and advisor are responsible for making preliminary disclosures to the sponsor in advance to permit timely release of the dissertation. These arrangements, and any requests for delayed publication, must be disclosed when the dissertation is submitted to the School of Graduate Studies on the Electronic Thesis and Dissertation (ETD) Document Approval and Certification Form (https://case.edu/gradstudies/sites/case.edu.gradstudies/files/2020-06/ETD%20Document%20Approval%20Form%2006012020.pdf) in the graduation packet (https://case.edu/gradstudies/current-students/graduation/doctoral-graduation/). Once approved by the School of Graduate Studies, dissertations are to be uploaded to OhioLINK (http://etd.ohiolink.edu/) before certification for the doctorate. Because dissertations are made public immediately upon acceptance, they should not contain proprietary or classified material.

Dissertation Research Advisor

Each doctoral student is responsible for becoming sufficiently familiar with the research interests of the department or program faculty to choose a timely manner a faculty member who will serve as the student's research advisor. The research advisor is expected to provide mentorship in research conception, methods, performance, and ethics, as well as focus on development of the student's professional communication skills, building professional contacts in the field, and fostering the professional behavior standard of the field and research in general. The research advisor also assists with the selection of the other faculty to serve as members of the dissertation advisory and defense committee.
Dissertation Advisory and Defense Committee

The composition of each student’s dissertation committee must have formal approval by the School of Graduate Studies on recommendation of the chair of the department, division, or curricular program committee.

The dissertation committee includes:

- a minimum of four members of the University faculty (any tenured or tenure-track Case Western Reserve University faculty member, and any CWRU full-time faculty member whose primary duties include research who is authorized to serve on a PhD dissertation committee by the school or college through which they are affiliated with the University).
- at least one of these CWRU faculty must hold a primary appointment that is outside of the student’s department, program, or school.
- the chair of the committee must be a CWRU tenured or tenure-track faculty member in the student’s program.
- the student’s dissertation research advisor must be a member of the committee and may serve as chair if consistent with departmental policy.
- persons who are not members of the University faculty may serve as additional members of the defense committee, subject to approval by the School of Graduate Studies. A petition with the rationale for the request must be submitted to the School of Graduate Studies along with the proposed member’s curriculum vitae.
- under special conditions, a former faculty member whose time of leaving the University has not exceeded 18 months may be approved as a committee member by the School of Graduate Studies.

Throughout the development and completion of the dissertation, members of the dissertation advisory committee are expected to provide constructive criticism and helpful ideas generated by the research problem from the viewpoint of their particular expertise. Each member will make an assessment of the originality of the dissertation, its value, the contribution it makes, and the clarity with which concepts are communicated, especially to a person outside the field. The doctoral student is expected to arrange meetings and maintain periodic contact with each committee member. A meeting of the full committee for the purpose of assessing the student’s progress should occur at least once a year until the completion of the dissertation.

Final Oral Examination (Defense of Dissertation)

Each doctoral candidate is required to pass a final oral examination in defense of the dissertation. The examination may also include an inquiry into the candidate’s competence in the major and related fields.

The defense must be scheduled with the School of Graduate Studies no later than three weeks before the date of the examination. The chair of the examining committee should give approval to schedule the defense when the written dissertation is ready for public scrutiny. The candidate must provide to each member of the committee a copy of the completed dissertation at least ten days before the examination so that the committee members have an opportunity to read and discuss it in advance.

Scheduled defenses are publicized by the School of Graduate Studies, and any member of the University may be present at that portion of the examination pre-designated as public by the chair of the dissertation defense committee. Others may be present at the formal defense only by invitation of that chair.

It is expected that all members of the dissertation defense committee be present at the defense. Exceptions to this rule: a) must be approved by petition to the School of Graduate Studies and only under extraordinary circumstances; b) no more than one voting member can ever be absent; c) the absent member must participate through real-time video conferencing at the department’s expense; however, if such video conferencing is not available, the absent member may participate through telephone conferencing; and d) the student must always be physically present.

The dissertation defense committee is responsible for certifying that the quality and suitability of the material presented in the dissertation meet acceptable scholarly standards. A student will be certified as passing the final oral examination if no more than one of the voting members of the committee dissents.

Institutional Review Board (IRB)

The promotion of scholarship and the discovery of new knowledge through research are among the major functions of Case Western Reserve University. If this research is to be meaningful and beneficial to humanity, involvement of human subjects as experimental participants is necessary. It is imperative that investigators in all disciplines strive to protect human subjects. University policy and federal regulations demand compliance. Per federal regulations (45 CFR 46), all research involving human subjects requires submission of an IRB application (https://case.edu/research/faculty-staff/compliance/institutional-review-board-cwru-irb/human-research-protection-program-hrpp/) prior to initiation of research to the Case Western Reserve IRB.

Each IRB application must have a faculty member noted as the Responsible Investigator. Applications that are not fully completed as instructed will not be accepted. See the University IRB Policies and Procedures (https://case.edu/research/faculty-staff/compliance/cwru-policies-and-procedures/) on the involvement of human participants in research for guidelines under which investigations involving human subjects may be pursued.

Foreign Language Requirements

Although there is no general foreign language requirement for the doctorate, each department or supervising committee may set such requirements as are appropriate to the student’s program of study. It is the student’s responsibility to ascertain the foreign language requirements approved by the supervising unit.

Course Designations

Courses numbered 100 to 399 are undergraduate-level courses. Courses numbered 400 and higher are graduate-level courses.

Graduate Students are expected to take courses at the 400-level or above. Some departments do allow courses at the 300-level to be used for master’s programs, however, this should only occur when no graduate-level course is available or under unusual circumstances, both of which require a petition to Graduate Studies. Departments are strongly encouraged to create cross-listed graduate-level courses to accommodate this need. Graduate-level versions of courses must require additional work beyond that which is assigned to the undergraduate students in the course.
Grading System

See the University Registrar (p. 1344) section of this Bulletin for a list of valid grades for the School of Graduate Studies and their appropriate use in assigning to graduate students. The only grades that can be changed after they have been assigned by the instructor are Incompletes (I). All others will remain permanently on the student's academic record. Additional work cannot be done to change an existing grade to a higher grade.

There are some grading schemes in the School of Graduate Studies that have important policy implications. They are:

Incomplete (I)

Grades of I can only be assigned for letter-graded and Pass/No Pass courses for extenuating circumstances and only when a student who is passing the course fails to complete a small, evaluative segment of the course. Students may not sit in the same course in a later semester to complete the work required for the original course. All work for the incomplete grade must be made up and the change of grade recorded in the Student Information System (SIS) (https://sis.case.edu/psp/P92SCWR/?cmm=login&languageCd=ENG& by the date specified by the instructor, but no later than the 11th week of class in the semester following the one in which the I grade was received.

In exceptional circumstances, a student may petition for an extension of the incomplete deadline of no more than one additional semester. The petition should be submitted by the original deadline date and must contain the reasons for the extension, a proposed new completion date, and a letter from the instructor supporting the extension.

When a student fails to submit the work required for removing the Incomplete by the date established, the instructor will enter a final grade that assumes a failing performance for the missing work. In the absence of the assignment of a grade by the instructor, the Registrar will convert the I to F when the deadline for making up Incomplete grades from a previous semester has passed.

Pass/No Pass (P/NP)

Some graduate courses are graded on a Pass/No Pass basis, and students need to be aware of the regulations governing letter graded and Pass/No Pass credits. Of the minimum credit hours required beyond the bachelor’s degree to complete course work requirements, at least 12 credits must be letter graded for the master’s degree, and at least 24 credits must be letter graded for the PhD degree. For students with approved master’s degrees who are admitted to PhD programs, at least 12 credits of the required minimum of 18 credits of course work must be letter graded. Letter graded courses should be the courses most central to the student's plan of study. Additional credit hours of letter graded course work may be specified by departmental policy. Performance evaluation for course 601 (Independent Study/Research) is limited to Pass/No Pass grading. Students in the School of Graduate Studies do not have the option to change a graded course to Pass/No Pass.

Satisfactory/Unsatisfactory (S/U)

Grades of Satisfactory (S) and Unsatisfactory (U) are to be used exclusively for 651 thesis research and 701 dissertation research. Satisfactory indicates an acceptable level of progress towards completion of the research required for the degree, and Unsatisfactory indicates an unacceptable level of progress towards completion of the research for the degree. Any student who receives a grade of U will automatically be put on academic probation, and if a second U is received, the student will be separated from further study in their degree program. Students who receive a U must repeat the course for the same number of credits the following semester. The M.S. Project course (695) in the School of Engineering is also graded on a S/U basis.

Admission and Financial Aid

Financial Aid

Tuition payments and fees (https://case.edu/studentaccounts/tuition-fees/graduateprofessional-tuition-fees/school-of-graduate-studies/) are administered through Student Financial Services (https://case.edu/studentaccounts/). For more information about financial assistance, students should contact the Office of Financial Aid (http://financialaid.case.edu/).

Admission

Applicants with good academic records from fully accredited universities and colleges will be considered for admission to graduate study at Case Western Reserve University. Admission must be recommended by the department or professional school of the university in which the applicant proposes to study and must be approved by the dean of graduate studies. Prospective students apply for admission (https://case.edu/gradstudies/prospective-students/instructions-requirements/) through the School of Graduate Studies. The full list of programs offered through the School of Graduate Studies can be found here (https://case.edu/gradstudies/prospective-students/degree-programs-offered/).

Admission of International Students

The admissions criteria for international students (https://case.edu/gradstudies/prospective-students/international-applicant-resources/) are the same as U.S. residents and permanent residents except for the following:

1. Applicants whose first language is not English must be able to speak, read, write, and comprehend English. English proficiency must be demonstrated by taking the Test of English as a Foreign Language (http://www.ets.org/toefl/) (TOEFL). The minimum score to be considered for admission, depending on the format of the examination, is 577 (paper-based) or 90 (internet-based). IELTS test scores (http://www.ielts.org) are also accepted with a minimum score requirement of 7.0, as well as the Pearson Test of English-Academic (https://pearsonpte.com/) (PTE) with a minimum score of 61. Note that some programs have higher minimum language scores to gain admission. For only Course Focused Masters Programs within the School of Engineering, the minimum language scores to be considered for admission are an 80 TOEFL or a 6.5 IELTS.

Applicants are exempt from the TOEFL requirements if they:

• speak English as their native language
• have completed a bachelor's degree or higher at a foreign university where the instruction was in English
• have earned a bachelor's degree or higher at a U.S. college or university

Please note that we are not able to offer "conditional admission" to students who do not meet the English language requirement.

International Student Visas

1. To obtain a (https://case.edu/international/international-student-services/arrival/obtaining-visa/) student visa, international students
must demonstrate financial sufficiency by submitting bank statements and other financial documents indicating sufficient funds to support the tuition and living expenses for one academic year.

2. For those students who are to receive financial aid from the department, the amount of funds required will depend on the amount of the aid award. In some cases, it will be living expenses, and in others, more funds will be required.

Only after an applicant accepts their offer of admission, International Student Services (http://case.edu/international/international-student-services/) will process the I-20 and send it to the student who must then obtain a student visa in order to begin study in the U.S.

**Acceleration Toward Graduate Study (BS/MS and IGS)**

Students admitted to the School of Graduate Studies through the IGS, BS/MS, or BS/ME program should refer to the Acceleration Toward Graduate Study (http://bulletin.case.edu/undergraduates/gradprofessional/#accelerationtowardgraduatedegreestext) page, maintained by the Office of Undergraduate Studies, or the Integrated Programs (https://case.edu/gradstudies/prospective-students/integrated-programs-bsms-and-igs/) page maintained by the School of Graduate Studies, for additional requirements for the completion of their degrees.

The policies and procedures related to integrated undergraduate and professional degrees are under review and may be different from what is described on the pages linked above for students who matriculate at Case Western Reserve University during the 2020-2021 academic year and thereafter.

**Non-Degree Students**

Individuals with earned bachelor’s degrees who want to enroll in classes for personal enrichment or to satisfy prerequisite course requirements for later admission to graduate programs must enroll as non-degree students through the School of Graduate Studies. Prospective non-degree students should apply for admission through the School of Graduate Studies and submit an official transcript to verify their bachelor’s degree. Students may enroll in undergraduate and graduate level courses. Continuation in non-degree status is at the discretion of the School of Graduate Studies. Non-degree students are not permitted to enroll in more than 21 hours of coursework in one program. In order to continue taking courses in that program, the student must apply and be accepted into the graduate degree program. More information about enrolling as a non-degree student can be found at the School of Graduate Studies website (https://case.edu/gradstudies/prospective-students/non-degree-certificates/). (http://gradstudies.case.edu/prospect/nondegree.html)

**Transferring Non-degree Coursework**

Applicants who are interested in transferring course work into graduate degree programs are encouraged to seek early advice from the departments to which they intend to apply to ensure that courses taken as non-degree students will satisfy departmental requirements. Non-degree students cannot assume that they will be admitted to any graduate degree program, or that all course work taken will transfer into the program. Courses transferred from non-degree status must have been taken within five years of the first term of matriculation as a degree seeking student and passed with a grade of B or better. Students considering transfer into a degree program will need to meet a minimum matriculation requirement of two semesters and six semester hours of course work.

**Postgraduate Audit Program**

A Postgraduate Audit Program (https://case.edu/postdoc/current-postdoctorates/benefits-program/) allowing registration for coursework is available to individuals who hold a doctoral degree such as MD, DNP, DDS, or PhD and are involved in research or clinical programs at Case Western Reserve University. Auditors pay only 10% of regular graduate tuition (https://case.edu/studentaccounts/tuition-fees/graduateprofessional-tuition-fees/school-graduate-studies/), plus the cost of books and materials. Additional information is available on the Office of Postdoctoral Affairs website (https://case.edu/postdoc/).

**Office of Postdoctoral Affairs**

Tomlinson Hall, Room 215
postdoc.case.edu (http://postdoc.case.edu)
Phone: 216.368.0947; Fax: 216.368.4250

The Office of Postdoctoral Affairs, located within the School of Graduate Studies, is responsible for the appointment of postdoctoral scholars and fellows, as well as the development, implementation and monitoring of all university policies applicable to these positions. Additional information is available on the Postdoctoral Affairs website (http://postdoc.case.edu/).

**Services**

The following are some of the services that are offered by the Office of Postdoctoral Affairs:

- Employment-related activities including letters of appointment
- Extension and termination of appointments for postdoctoral scholars and fellows
- Orientation
- Administration of the Postdoctoral Benefits Program
- Coordination of all grievance procedures

**Definition of Postdoctoral Scholar**

A postdoctoral scholar is defined as a special class of employee who:

- holds a PhD or equivalent
- works on scholarly projects funded by grants obtained by others at the University or is funded by department funds
- is engaged in a mentored training relationship with a member of the University faculty, and
- actively pursues fellowship/grant funding for their own research project in order to develop their future professional career.**

Postdoctoral scholars are not to be confused with postdoctoral fellows who are not employees of the University and receive their funding from training grants, fellowships, or grants they have applied for and obtained from outside sources and not faculty-sponsored research grants.

**Once such funding has been obtained, the postdoctoral scholar becomes a postdoctoral fellow.

**Definition of Postdoctoral Fellow**

A postdoctoral fellow is defined as a trainee (not an employee) who:

- holds a PhD or equivalent
- works on scholarly projects funded by training grants, fellowships, or grants they have applied for and obtained from outside sources
is engaged in a mentored training relationship with a member of the University faculty, and
actively pursues fellowship/grant funding for their own research project in order to develop their future professional career.

Criteria for Postdoctoral Scholars and Fellows

- The postdoctoral scholar/fellow was recently (normally within 5 years) awarded a PhD or equivalent degree in an appropriate field.
- The appointment is temporary and postdoctoral scholars/fellows are expected to complete their mentored training within 5 years.
- The time devoted to this appointment as well as the specific scholarly training activities will be decided in collaboration with the mentor and committed in writing in the form of a training plan. All postdoctoral scholars/fellows will be encouraged to pursue additional training and other opportunities in the respective areas up to 25% of their time.
- The appointee will train under the supervision of a senior scholar (faculty mentor).

Salary/Stipend Guidelines

CWRU uses the current year NIH NRSA scale (https://www.niaid.nih.gov/grants-contracts/salary-cap-stipends/) as the minimum salary/stipend guidelines for all Postdoctoral Scholars and Postdoctoral Fellow positions. These guidelines apply regardless of funding source.

Postdoctoral Benefits Program

Postdoctoral scholars/fellows are eligible to participate in the Postdoctoral Benefits Program (http://case.edu/postdoc/current-postdoctorates/benefits-program/) but are excluded from participating in all other CWRU benefits including employee retirement and benefit plans. The postdoctoral benefits program offers medical, dental, vision and life insurance plans, in addition to an Employee Assistance Program.

SIS Postdoctoral Appointment System

The Student Information System (SIS) postdoctoral appointment component allows for all appointment information and documentation (including visa, CV, diploma, and other documents) to be submitted electronically through SIS. It allows for electronic approval flow. Information on the Appointment and Renewal process and documents required (https://case.edu/postdoc/administrators-mentors/appointments-renewals-terminations/).

Postgraduate Audit Program

A Postgraduate Audit Program (https://case.edu/postdoc/current-postdoctorates/benefits-program/) allows registration for coursework and is available to individuals who hold a doctoral degree such as MD, DNP, DDS, or PhD and are in training positions (e.g., fellows, etc.) in research or clinical programs at Case Western Reserve University. Auditors pay only 10% of regular graduate tuition (https://case.edu/studentaccounts/tuition-fees/graduateprofessional-tuition-fees/school-graduate-studies/), plus the cost of books and materials. Additional information is available on the Office of Postdoctoral Affairs (http://case.edu/postdoc/) website.

UNIVERSITY REGISTRAR

135 Yost Hall
http://www.case.edu/registrar
Phone: 216.368.4310; Fax: 216.368.8711
Amy Hammett, University Registrar and Director of Student Information Systems and Services
registrar@case.edu

Registration

Students register at the time indicated by the University Registrar (http://www.case.edu/registrar/), as shown in the Student Information System (http://www.case.edu/sis/) (SIS) or as indicated by individual graduate/ professional schools. Undergraduate student registration for fall begins in April and continues through the beginning of classes in August; undergraduate student registration for spring begins in November and continues through the start of classes in January. Students who have outstanding financial obligations to the university will not be eligible to register. The Office of Student Financial Services will bill those students who have registered for the next semester. The tuition payment will be due in full by the last day of the drop/add period. The schedule of classes (https://www.case.edu/erp/sis/courses.html) is available electronically and can be accessed through SIS. (http://www.case.edu/sis/)

The University Registrar’s website includes the academic calendar (https://case.edu/registrar/dates-deadlines/academic-calendar/) and the dates for late registration and drop/add (http://www.case.edu/registrar/registration/lastday/). SIS contains a complete real-time listing of courses offered. Students use SIS to register for classes; refer to the listing of registration start dates for each school (https://case.edu/registrar/registration-classes/when-can-i-register/) to determine registration eligibility. No zero-credit only registrations (e.g., zero-credit physical education courses) are allowed unless approved as part of ongoing degree programs.

Registration deadlines will be strictly enforced. Only students officially registered, according to the official SIS class roster, are permitted to attend that class. Instructors may permit students to sit in on occasional classes at their discretion, but students who wish to attend class regularly without receiving credit should register as auditors. Unregistered students are not permitted to take part in laboratory activities.

Courses of Instruction

All courses at the university, except courses in the Medical School, Law School, and School of Dental Medicine are numbered according to the following plan:

- 100-199 Elementary courses
- 200-299 Intermediate courses
- 300-399 Advanced undergraduate courses
- 400-499 Lower level graduate courses (some are open to undergraduates; consult with the appropriate department)
- 500 and above Advanced graduate courses

Roman numerals (I, II, etc.) after course titles indicate segments of a multi-course sequence. Arabic numerals in parentheses after course titles indicate the semester credit hours for each course.

Veterans Education Benefits

School Certifying Official
The School Certifying Official, housed in the Office of the University Registrar, 135 Yost Hall, administers the regulations governing the educational benefits and opportunities open to veterans under various federal laws. For more information see our Veterans Education Benefits page (https://case.edu/registrar/forms-services/veterans-education-benefits/), call 216.368.4310 or email vabenefits@case.edu.

Veterans Benefits and Transition Act
On December 31, 2018, the Veterans Benefits and Transition Act of 2018 was signed into law and provides additional assistance for students using Post 9/11 G.I. Bill (Chapter 33) or Vocational Rehabilitation and Employment (Chapter 31) benefit entitlements.

Case Western Reserve University permits any covered individual utilizing Chapter 33 or Chapter 31 to attend or participate in their course of education during the period beginning on the date on which the individual provides a Certificate of Eligibility (COE) for entitlement to educational assistance and ending on the earlier of the following dates:

- The date on which payment from the VA is made to the institution;
- 90 days after the date the institution certified tuition and fees following the receipt of the COE.

While payment is pending to the institution from the Department of Veterans Affairs (VA), Case Western Reserve University shall not prevent enrollment; impose a penalty or assess a late fee; require that a covered individual secure additional or alternative funding in order to meet their financial obligation to the institution due to delayed disbursement funding from the VA; or deny access to classes, libraries, or other institutional facilities.

Exceptions to Policies

Requests for exceptions to any academic or administrative policy must be submitted within three months of the end of the semester for which the exception is sought.

Course Audit Program for Senior Citizens

Case Western Reserve University’s Course Audit Program for Senior Citizens (https://case.edu/seniorauditprogram/) (CAPSC) allows senior citizens (age 65 and older) to take on-campus courses at a reduced tuition rate. For more information, contact the CAPSC Coordinator in the Laura and Alvin Siegal Lifelong Learning Program at caps@case.edu.

University Certificates and Professional Certifications

Case Western Reserve University awards University Certificates as a credential for completing a set of courses (possibly in combination with other learning experiences) that focus on a specific topic or theme. For more information related to definitions and standards, please see Guidelines to Create a University Certificate and Professional Certification (https://case.edu/registrar/general/policy/guidelines-to-create-a-university-certificate-and-professional-certification/).
Family Educational Rights and Privacy Act of 1974 (FERPA)

Background

The Family Educational Rights and Privacy Act of 1974 (FERPA) contains several provisions that are important to students. First, the university may not release personally identifiable student records to a third party, with certain specific exceptions, unless the third party has requested the information in writing and the student has consented, again in writing, to its release. The university may release directory information about a student, however, unless the student submits a written request that any or all such information not be released. Second, a student may request, in writing, an opportunity to inspect and review the student’s official files and records maintained by the university and may, if appropriate, challenge the accuracy of those records. The university is permitted a reasonable time, not to exceed 45 days, to respond to such a request. Third, a student may file with the Family Policy Compliance Office of the U.S. Department of Education a complaint concerning what he or she believes to be the university’s failure to comply with FERPA. Finally, a student may obtain from the Registrar a copy of this policy, which the university has adopted to meet the requirements of FERPA. The information below is presented in compliance with the provisions of FERPA, which require the university to notify students annually of their rights and the university’s policies and procedures. Specific procedures may vary slightly among the schools and colleges of the university, and each student is encouraged to inquire at his or her own dean’s office if any question arises.

Definitions

Educational records - Education Records are those records, files, documents, and other materials which (i) contain information directly related to a student; and (ii) are maintained by an educational agency or institution or by a person acting for such agency or institution.

Access to Files

A student may request, in writing, an opportunity to review the contents of the student's educational file. Certain materials are excluded from review as specified in FERPA. Among these are:

- Records kept in the sole possession of faculty, staff, and other personnel, used only as a personal memory aid, and not accessible to any other person except a temporary substitute for the maker of the record.
- Records created and maintained by law enforcement units solely for law enforcement purposes that are not maintained by persons other than law enforcement officials.
- Records created and maintained by a physician, psychiatrist, psychologist, or other professional or paraprofessional acting in that capacity in connection with the provision of treatment to a student. Such records can, of course, be reviewed by a physician or other appropriate professional of the student’s choice.
- Employment records of a student made and maintained in the normal course of business. Such employment records may be obtained in the Student Employment Office or Human Resources under the policies applicable to those offices.
- Financial records of a student’s parents, or any information contained therein.
- Confidential letters and statements of recommendation placed in the file before January 1, 1975.
- Records for which the student previously waived his or her right of access.
- Records that contain only information about a person after that person is no longer a student, such as alumni records.

Procedures for Inspection and Review

The office to which the request is made will arrange an appointment within a reasonable period of time (not to exceed 45 days) for the student to review the file in the presence of a member of the office staff.

FERPA affords students certain rights with respect to their educational records. Students may ask the university to amend a record that the student believes is inaccurate or misleading. The student should write to the university official responsible for the record, clearly identifying the part of the record the student wants changed, and specify why it is inaccurate or misleading. If the university decides not to amend the record as requested by the student, the university will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

The student may request copies of those records to which he or she has access under the terms of FERPA. The student will be charged a nominal fee per page for these copies.

Release of Personally Identifiable Records

FERPA affords the student the right to consent to disclosures of personally identifiable information contained in the student’s educational records, except to the extent that FERPA authorizes disclosure without consent. One exception, which permits disclosure without consent, is disclosure to school officials with legitimate educational interests. A school official is defined as a person employed by the university in an administrative, supervisory, academic, or support staff position (including law enforcement unit and health staff); a person or company with whom the university has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or assisting another school official in performing his or her tasks. A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her professional responsibility.

Upon request, the university may disclose education records without consent to officials of another school in which a student seeks or intends to enroll. The university may also disclose education records to organizations conducting studies for educational agencies or institutions under certain circumstances.

Directory Information

For the convenience of faculty and fellow students, FERPA provides for a category known as directory information which may be released without requesting the eligible student’s specific prior consent. Rather, the act requires that students be notified annually of the types of information included in this category and be given an appropriate period in which to express, in writing, any preference that such information about themselves not be released. For this purpose, directory information is defined to include:

- Name (including both maiden name and married name, where applicable)
- Address, telephone listing, and electronic mail address
- Date and place of birth
- Major field of study
• Anticipated graduation date
• Enrollment Status (undergraduate or graduate, full-time or part-time)
• Dates of attendance
• Degrees and awards received
• Participation in officially recognized sports and activities
• Weight and height (members of athletic team)

Any student who would prefer that the university not release such information about himself or herself can update their FERPA Restriction by going to the Student Information System (SIS). For more information on how to update a FERPA Restriction, please visit the Office of the University Registrar’s SIS Resources webpage - FERPA/Directory Restrictions (https://case.edu/registrar/general/sis-resources/ferpdirectory-restrictions/).

Student Right to Know

The Student Right to Know and the Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Act requires that universities throughout the country produce statistics and/or information on the following subjects:

1. retention and graduation rates;
2. financial assistance available to students and requirements and restrictions imposed on Title IV aid;
3. athletic program participation rates and financial support;
4. other institutional information including: the cost of attendance, accreditation and academic program data, facilities and services available to students with disabilities, and withdrawal and refund policies;
5. Family Educational Rights and Privacy Act Policy; and
6. crime statistics on campus.

The university makes this information available in the following ways. Printed reports are available on request.

- Retention and Graduation Rates: Data is available in the Office of the Provost in Adelbert Hall (216.368.4389) and posted on the websites of the University Registrar (https://click.communications.case.edu/?qs=a8042be2817f10a4a3e832270455967c81634c43785f1b2672f34b8c) and SIS Resources Research (https://click.communications.case.edu/?qs=a8042be2817f10a44cf7ace4b122f59dfcf7e1e286445ced50a2e26868f523).
- Financial Assistance: Obtain financial assistance information, including descriptions of application procedures and forms and refund policies, from the Office of University Financial Aid (https://click.communications.case.edu/?qs=a8042be2817f10a49621330820e5c9680d4f6eb061361b3dc23c8e43153edc313470f05590d) at Yost Hall (216.368.4530).
- Athletic Program Participation and Financial Support: The Department of Physical Education and Athletics in the Veale Convocation, Recreation and Athletic Center (216.368.2867) can provide further information, or search for CWRU’s information on the U.S. Office of Postsecondary Education’s Equity in Athletics website (https://click.communications.case.edu/?qs=a8042be2817f10a41558b1737b885b35282a4d9d145d5786925d06ec3805f1d927f98d24b8c).
- Other Institutional Information: Follow the links below, or contact the University Financial Aid, Provost, Student Affairs and University Registrar offices for more details. Additional consumer disclosures are available through the Student Consumer Information website (https://click.communications.case.edu/?qs=a8042be2817f10a42679a2281c1ea0af1c2f2ac67594e06e5d3ac7d7a29) of the Office of Institutional Research.
- Undergraduate Cost of Attendance (https://click.communications.case.edu/?qs=a8042be2817f10a4a3e832270455967c81634c43785f1b2672f34b8c)
- Graduate Cost of Attendance (https://click.communications.case.edu/?qs=a8042be2817f10a49621330820e5c9680d4f6eb061361b3dc23c8e43153edc313470f05590d)
- Accreditation and Academic Program Data (https://click.communications.case.edu/?qs=575f42720d7797469b169459737f1d1c1d50f4a0f789f9f3e6a418)
- State Authorization and Compliance Information: Obtain the university’s State Authorization and Compliance website (https://click.communications.case.edu/?qs=575f42720d7797469b169459737f1d1c1d50f4a0f789f9f3e6a418) and the Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Act (https://click.communications.case.edu/?qs=785a42f1a0355b681a01b74b5b0a8aa61a7413a8c4e00caca821e7f6).
- Drug-Free Schools Notification: In accordance with the Drug-Free Schools and Communities Act Amendments of 1989, this notification to Case Western Reserve University students is an annual reminder of the health risks associated with drug and alcohol abuse; of university policies related to the illegal possession, use or distribution of drugs or alcohol; of the availability of treatment for drug or alcohol problems through University Health and Counseling Services (https://click.communications.case.edu/?qs=575f42720d7797469b169459737f1d1c1d50f4a0f789f9f3e6a418) and inpatient or outpatient treatment; and of the legal penalties that may result from the illegal sale, distribution or dispersion of a controlled substance.
- The Family Educational Rights and Privacy Act (FERPA): Find the policy on the registrar’s website (https://click.communications.case.edu/?qs=1343)
- Annual Security and Fire Report: Case Western Reserve University’s annual security and fire report is updated annually and is available on the Public Safety website (https://click.communications.case.edu/?qs=785a42f1a0355b681a01b74b5b0a8aa61a7413a8c4e00caca821e7f6). A full print copy of the report is available for download (PDF) (https://click.communications.case.edu/?qs=785a42f1a0355b681a01b74b5b0a8aa61a7413a8c4e00caca821e7f6).

Annual Security and Fire Report: Case Western Reserve University’s annual security and fire report is updated annually and is available on the Public Safety website (https://click.communications.case.edu/?qs=785a42f1a0355b681a01b74b5b0a8aa61a7413a8c4e00caca821e7f6). A full print copy of the report is available for download (PDF) (https://click.communications.case.edu/?qs=785a42f1a0355b681a01b74b5b0a8aa61a7413a8c4e00caca821e7f6).

The report includes:
• Statistics for the previous three years concerning certain categories of reported crimes—including hate crimes in
certain categories, domestic violence, dating violence, and stalking—that occurred on campus, in off-campus buildings or properties owned or controlled by the university, and on public property within or immediately adjacent to and accessible from campus.

- Summaries of institutional policies and education and prevention programs regarding safety and security, reporting of crimes, sexual misconduct, drug and alcohol use, timely warnings and missing persons investigations. The university maintains a daily crime log that can be accessed on the Crime and Security Reports page (https://click.communications.case.edu/?qs=785a42f1a0358b6881b82e902d7f8e960766e6abf246c2854949c68039a718093c779ab0f0847beafa8e39d573a088beddeb2dca79acff5).

- Information on emergency notification, emergency response, and evacuation procedures. Emergency procedures for students, faculty, staff, and visitors can be reviewed on the Emergency Preparedness page (https://click.communications.case.edu/?qs=785a42f1a0358b6885b8f0604ba7b498198e6683fa7f24375fac6ad51453ed366b83394e69d447ee43de660e479b7937757cfa71549dbf93a).

- Fire statistics for on-campus housing, summaries of fire policies and evacuation procedures. The university maintains a fire log for all fires that occur in on-campus housing.

- **Emergency Reporting:** Any emergency on campus should be reported to CWRU Division of Public Safety at 216.368.3333. This number is staffed 24 hours a day.

**Grading System**

The grading system shown below is used at Case Western Reserve University. For a listing of historical grading systems, visit Grading +

**Explanation of Grades**

The responsibility for assigning grades rests exclusively with the instructor of a course or section, who must communicate the general method of grading to his/her class at the beginning of the course. Final grades in all courses are reported to the University Registrar at the end of each semester for all students and mid-semester grades are reported to the University Registrar for undergraduate students. The purpose of mid-semester grades is advisory; the grades are not part of a student’s official academic record or transcript. Changes to student grades must be reported to the University Registrar and must have all required approvals.

**Incomplete (I)**

The grade of incomplete is assigned by the instructor according to academic regulations that are established by each school. For additional information regarding incomplete grades, please see individual school information on grading and academic regulations.

**Satisfactory (S)**

The grade of S given graduate students in the School of Graduate Studies indicates satisfactory progress in evaluating exclusively thesis and dissertation research. The grade S is not counted in determining quality averages. The alternative to a grade of S is U (Unsatisfactory). The grade of I (Incomplete) may not be used in evaluating thesis and dissertation research. In other graduate/professional schools, the grade of S may indicate passing performance in designated courses and advanced seminars.

**Conditional (R)**

The grade of R is used for work, such as undergraduate thesis and project laboratories, that extends more than one semester and, upon completion of the thesis or project, will be changed to the letter grade awarded for the completed work.

**Audit (AD) and Unsuccessful Audit (NG)**

The grade of AD (audit) will be given when a student has officially registered to audit a course and has satisfied the requirements specified by the instructor for this grade. The grade of NG (unsuccessful audit, graduate, and professional schools only) will be given when a student has officially registered to audit a course and has not satisfied the requirements specified by the instructor.
Undergraduate Students
A student may audit a course with the dean’s or advisor’s approval and the consent of the instructor of the course. An auditor receives no credit for the course.

Registration in a course cannot be changed from audit to credit or the reverse after the end of the drop/add period. At the beginning of the course, the student and instructor should reach an agreement regarding the requirements to be met for a grade of AD. The grade of AD is entered on the student’s transcript if approved by the instructor of the course. If the instructor does not approve the grade AD, the enrollment is not posted on the transcript. A student may take for credit a course he or she audited in an earlier semester.

Graduate/Professional Students
Dental students: Courses toward degree programs in the School of Dental Medicine may not be audited.

The following statements apply to the Schools of Graduate Studies and Management: The instructor may designate that the student has not completed all requirements for auditing the course and that NG (Unsuccessful Audit) be recorded on the student’s transcript. A course once audited may not be repeated for credit, nor may any course for which credit has been given be repeated for credit toward degree requirements. Students will be permitted to change their registration in a course from credit to audit (AD), or the reverse, with the written consent of their advisor and the instructor only if the change is officially made on or before the date specified in the academic calendar for the given term.

Other graduate and professional schools: Please refer to individual school sections of this publication, or to individual school student handbooks.

Partial Withdrawal (W)
The grade of W will be given if a student officially withdraws from a course on or before the date specified in the academic calendar for the given term. After this date, the grade as determined by the instructor will be posted.

Complete Withdrawal (WD)
The grade WD is assigned by the University Registrar for complete withdrawal from all coursework for the semester. All withdrawal requests are to be submitted to the University Registrar prior to the last day of class.

Grade Point Averages
Grade-point averages are calculated by multiplying the number equivalent of the letter grade by the number of credit hours for the course. The semester grade-point average is computed by dividing the total number of grade points earned at the university during a given semester by the sum of the credit hours for all courses in which the student received letter grades of A, B, C, D, or F taken at the university during that same semester. (Not all of these grades are given by all schools.)

For the purpose of semester grade calculations, grade points earned when a grade of Incomplete is replaced by the appropriate course grade are credited to the semester in which the incomplete grade was received, but status action (separation, probation, or restoration to good standing) taken at the end of that semester is not affected unless the grade change occurs by the first day of classes of the following semester. Qualification for honors is based on the same terms.

The cumulative grade-point average is computed by dividing the total grade points earned at the university by the sum of the credit hours for all courses included in the grade-point calculation.

Pass-No Pass
See specific colleges and schools for information about courses that may be taken on a pass-no pass basis and similar options.

Definition of a Credit-Hour
Program Integrity Rules issued by the U.S. Department of Education require institutions to establish a definition of “credit hour.” CWRU’s definition was approved by the Faculty Senate on 4/25/12 and applies to all degree programs (undergraduate through graduate/professional):

1. The assignment of credit-hours to a course occurs through a formal review process conducted at the appropriate levels of faculty governance.

2. For courses in lecture format, one credit-hour represents the subject content that can be delivered in one academic hour of contact time each week for the full duration of one academic semester, typically fourteen weeks along with a final examination period. For undergraduate courses, one credit-hour also includes associated work that can be completed by a typical student in 2-3 hours of effort outside the classroom. For graduate and professional courses taught in lecture format, 3-4 hours of outside work is expected for each academic hour of contact time.

3. For courses taught in other than lecture format (e.g., seminars, laboratories, independent study, clinical work, research, etc.), one credit-hour represents an amount of content and/or student effort that in aggregate is no less than that described in (2) above.
