DEPARTMENT OF BIOMEDICAL ENGINEERING

340 Wickenden Building
http://bme.case.edu
Phone: 216.368.4063; Fax: 216.368.4969
Robert F. Kirsch, Chair
bmdept@case.edu

The Department of Biomedical Engineering was established in 1968 at Case Western Reserve University, founded on the premise that engineering principles provide an important basis for innovative and unique solutions to a wide range of biomedical and clinical challenges. As one of the pioneering programs in the world, the department has established rigorous yet flexible educational programs that are emulated by many other institutions and is a national leader in cutting-edge research in several important areas. The cornerstone of the program is quantitative engineering and analytic methods for biomedical applications, a feature that distinguishes Biomedical Engineering from other biomedical science programs. The department's educational programs provide training in cellular and subcellular mechanisms for understanding fundamental physiological processes, in dealing with biomedical problems at the tissue and organ system level, and in integrating this knowledge in systems approaches to solving clinical problems.

Current degree programs include the BSE, MS, ME, combined BS/MS, PhD, MD/MS, and MD/PhD in Biomedical Engineering. In all of the BME programs at Case, the goal is to educate engineers who can apply engineering methods to problems involving living systems. The Case School of Engineering and the School of Medicine are in close proximity on the same campus, and Biomedical Engineering faculty members carry joint appointments in both of these two schools, participating in the teaching, research, and decision-making committees of both. The department is also tightly linked with several major medical centers (University Hospitals, Cleveland Clinic, VA Medical Center, and MetroHealth Medical Center) that are nearby. As a result, there is an exceptional free flow of academic exchange and collaboration in research and education among the two schools and the four medical institutions. All of Case Western Reserve's BME programs take full advantage of these close relationships, which adds significant strength to the programs.

Mission
To educate leaders who will integrate principles of both engineering and medicine to create knowledge and discoveries that advance human health and well-being. Our faculty and students play leading roles ranging from basic science discovery to the creation, clinical evolution, and commercialization of new technologies, devices, and therapies. In short, we are "Engineering Better Health."

Background
Graduates in biomedical engineering are employed in industry, hospitals, research centers, government, and universities. Biomedical engineers also use their undergraduate training as a basis for careers in business, medicine, law, consulting, and other professions.

Research
Several research thrusts are available to accommodate various student backgrounds and interests. Strong research collaborations with clinical

and basic science departments of the university and collaborating medical centers bring a broad range of opportunities, expertise, and perspective to student research projects.

Biomaterials/Tissue Engineering/Drug and Gene Delivery
Fabrication and analysis of materials for implantation, including neural, orthopaedic, and cardiovascular tissue engineering, biomimetic materials, liposomal and other structures for controlled, targeted drug delivery, and biocompatible polymer surface modifications. Analysis of synthetic and biologic polymers by AFM, nanoscale structure-function relationships of biomaterials. Applications in the nervous system, the cardiovascular system, the musculoskeletal system, and cancer.

Biomedical Imaging
MRI, PET, SPECT, CT, ultrasound, acoustic elastography, optical coherence tomography, cardiac electrical potential mapping, human visual perception, image-guided intervention, contrast agents. In vivo microscopic and molecular imaging, and small animal imaging.

Biomedical Sensing
Optical sensing, electrochemical and chemical fiber-optic sensors, chemical measurements in cells and tissues, endoscopy. Wearable sensor systems analytics and machine learning algorithm development for sports health and cardiovascular applications. Internet of Things (IoT) smart sensor and smart speaker systems translational research in support of medication management, dementia, and related patient care.

Big Data Analytics and Health Informatics
Radiomics, Radiogenomics, computer-assisted diagnosis, digital pathology, co-registration, cancer detection, decision making, precision medicine, bioinformatics, image informatics, machine learning, pattern recognition, artificial intelligence, deep learning.

Neural Engineering and Neural Prostheses
Neuronal mechanisms; neural interfacing for electric and magnetic stimulation and recording; neural dynamics, ion channels, second messengers; neural prostheses for control of limb movement, bladder, bowel, and respiratory function; neuromodulation systems for movement disorders, epilepsy, pain mitigation, visceral functions; computational modeling and simulation of neural structures.

Transport and Metabolic Systems Engineering
Modeling and analysis of tissue responses to heating (e.g., tumor ablation) and of cellular metabolism related to organ and whole-body function in health (exercise) and disease (cardiac).

Biomechanical Systems
Computational musculoskeletal modeling, bone biomechanics, soft tissue mechanics, control of neoprostheses for motor function, neuromuscular control systems, human locomotion, cardiac mechanics.

Cardiovascular Systems
Normal cardiac physiology, pathogenesis of cardiac diseases, cardiac development, therapeutic technologies, including cardiac regeneration, electrophysiological techniques, imaging technologies, mathematical modeling, gene regulation, molecular biology techniques, cardiac bioelectricity, and cardiac biomechanics.
Primary Appointments

Robert F. Kirsch, PhD
(Northwestern University)
Professor and Chair; Executive Director, Functional Electrical Stimulation Center
Restoration of movement using neuroprostheses; neuroprosthesis control system design; natural control of human movements; brain-computer interfacing; biomechanics of movement; computer-based modeling; and system identification

A. Bolu Ajiboye, PhD
(Northwestern University)
Elmer Lincoln Associate Professor; Associate Chair-Undergraduate Programs
Development and control of brain-computer-interface (BCI) technologies for restoring function to individuals with nervous system injuries

Jay Alberts, PhD
(Arizona State University)
Assistant Professor
Research into how the brain controls skilled movements and how changes in brain function affect movement performance

James M. Anderson, MD (Case Western Reserve University), PhD (Oregon State University)
Professor of Pathology, Macromolecular Science and Biomedical Engineering; Distinguished University Professor
Blood and tissue/material interactions as they relate to implantable devices and biomaterials

Suneel Apte, PhD
(Bombay University & University of Oxford)
Associate Professor
Examine how mutations in ADAMTS proteases cause birth defects that affect the heart, blood vessels, neural tube, eyes, palate and limbs

James P. Basilion, PhD
(The University of Texas)
Professor of Biomedical Engineering and Radiology
High resolution imaging of endogenous gene expression; definition of "molecular signatures" for imaging and treatment of cancer and other diseases; generating and utilizing genomic data to define informative targets; strategies for applying non-invasive imaging to drug development; and novel molecular imaging probes and paradigms

Jillian Beveridge, PhD
(University of Calgary)
Assistant Professor
Investigate joint biomechanics and injury, especially anterior cruciate ligament tear, with a combination of traditional marker-based motion capture, force data, and electromyography

Jeffrey Capadona, PhD
(Georgia Institute of Technology)
Leonard Case, Jr. Professor in Engineering; Associate Chair-Graduate Programs
Advanced materials for neural interfacing; biomimetic and bio-inspired materials; host-implant integration; anti-inflammatory materials; and novel biomaterials for surface modification of cortical neuroprostheses

Margot Damaser, PhD
(University of California at Berkeley)
Professor
Conduct regenerative medicine, tissue engineering and device development research aimed at improving the health of individuals with pelvic floor dysfunction, including urinary and fecal incontinence and pelvic organ prolapse

Kathleen Derwin, PhD
(University of Michigan)
Assistant Professor
Investigating the factors that influence clinical outcomes following rotator cuff repair, including extracellular matrix scaffold technologies to enhance healing

Colin Drummond, PhD (Syracuse University), MBA (Case Western Reserve University)
Professor and Assistant Chair
Medical device design; wearable sensor systems in sports health, urology and cardiology; advanced simulation for clinical decision support systems; and, clinical information systems for patient-centered care.

Dominique M. Durand, PhD
(University of Toronto, Canada)
Elmer Lincoln Lindseth Professor and Distinguished University Professor; Associate Chair-MS Program Development; Director, On-line MS Programs; Director, Neural Engineering Center
Neural engineering; neural interfacing with peripheral nervous system; electric and magnetic field interaction with neurons; neural prostheses for restoring motor function; neurophysiology and computational neuroscience of neural activity generation and propagation; neuromodulation; electrical stimulation and control of epilepsy; bioelectric medicine.

Steven J. Eppell, PhD
(Case Western Reserve University)
Associate Professor
Biomaterials; instrumentation; nanoscale structure-function analysis of orthopaedic biomaterials; and scanning probe microscopy and spectroscopy of skeletal tissues

Ahmet Erdemir, PhD
(Pennsylvania State University)
Assistant Professor
Developing state-of-the-art computational representation of the human body to determine how movement patterns and loads on the joints affect tissues and cells

Stephen Fening, PhD
(Ohio University)
Associate Professor
Patient care through translational research and commercialization

Aaron Fleischman, PhD
(Case Western Reserve University)
Assistant Professor
Research into the application of micro and nano technology, including how to shrink high-functioning large systems into small computer-like chips for implantation or minimally invasive procedures
Kiyotaka Fukamachi, PhD
(Kyushu University)
Professor
Pioneering surgical and device treatments for heart failure; investigating mechanical support devices, such as implantable heart pumps, the total artificial heart, and advanced heart valves

Emily L. Graczyk, PhD
(Case Western Reserve University)
Assistant Professor
Cortical and peripheral neurostimulation to restore and augment human sensation; brain-computer interfacing; cognitive neuroscience; sensory neuroscience; computational modeling of neurostimulation; neuroprostheses for upper limb sensorimotor function

Linda Graham, MD
(University of Michigan)
Professor
Investigating how oxidized lipids contribute to the build-up of scar tissue and block the movement of endothelial cells into an area of injury or onto a bypass graft

Miklos Gratzl, PhD
(The Technical University of Budapest, Hungary)
Associate Professor
Biomedical sensing and diagnostics in vitro and in vivo; electrochemical and optical techniques; BioMEMS for cellular transport; cancer multi-drug resistance at the single cell level; and sliver sensor for multi-analyte patient monitoring

Kenneth Gustafson, PhD
(Arizona State University)
Associate Professor
Neural engineering; neural prostheses; neurophysiology and neural control of genitourinary function; devices to restore genitourinary function; and functional neuromuscular stimulation

Vincent Hascall, PhD
(Rockefeller University)
Professor
Investigate how the sugar molecule hyaluronan forms normal and abnormal matrices that are required everywhere, from successful fertilization, to the protection and repair of tissues, to cancer development

Michael Jenkins, PhD
(Case Western Reserve University)
Associate Professor, Pediatrics, Biomedical Engineering
Development of new technology and therapies for investigating and treating autonomic dysfunction and congenital heart defects. Advancements fall into several categories - infrared neuromodulation, imaging, and drug development.

Efstathios (Stathis) Karathanasis, PhD
(University of Houston)
Associate Professor, Associate Chair School of Medicine
Fabricating multifunctional agents that facilitate diagnosing; treating and monitoring of therapies in a patient-specific manner

Vijay Krishna, PhD
(University of Florida)
Assistant Professor
Leveraging nanotechnology to design next-generation nano-engineered materials for non-invasive therapies and prevention of cancer, especially skin cancer

Linda Graham, MD
(University of Michigan)
Professor
Investigating how oxidized lipids contribute to the build-up of scar tissue and block the movement of endothelial cells into an area of injury or onto a bypass graft

Miklos Gratzl, PhD
(The Technical University of Budapest, Hungary)
Associate Professor
Biomedical sensing and diagnostics in vitro and in vivo; electrochemical and optical techniques; BioMEMS for cellular transport; cancer multi-drug resistance at the single cell level; and sliver sensor for multi-analyte patient monitoring

Kenneth Gustafson, PhD
(Arizona State University)
Associate Professor
Neural engineering; neural prostheses; neurophysiology and neural control of genitourinary function; devices to restore genitourinary function; and functional neuromuscular stimulation

Vincent Hascall, PhD
(Rockefeller University)
Professor
Investigate how the sugar molecule hyaluronan forms normal and abnormal matrices that are required everywhere, from successful fertilization, to the protection and repair of tissues, to cancer development

Michael Jenkins, PhD
(Case Western Reserve University)
Associate Professor, Pediatrics, Biomedical Engineering
Development of new technology and therapies for investigating and treating autonomic dysfunction and congenital heart defects. Advancements fall into several categories - infrared neuromodulation, imaging, and drug development.

Efstathios (Stathis) Karathanasis, PhD
(University of Houston)
Associate Professor, Associate Chair School of Medicine
Fabricating multifunctional agents that facilitate diagnosing; treating and monitoring of therapies in a patient-specific manner

Vijay Krishna, PhD
(University of Florida)
Assistant Professor
Leveraging nanotechnology to design next-generation nano-engineered materials for non-invasive therapies and prevention of cancer, especially skin cancer

Vinod Labhasetwar, PhD
(Nagpur University)
Professor
Explore the use of nanotechnology, such as nanoparticles that can find their way into specific cells or tissues to treat various diseases, including cancer, stroke, and cardiovascular conditions

Zheng-Rong Lu, PhD
(University of California at Berkeley)
Assistant Professor
Leveraging nanotechnology to design next-generation nano-engineered materials for non-invasive therapies and prevention of cancer, especially skin cancer

Anant Madabhushi, PhD
(University of Pennsylvania)
Professor
Quantitative image analysis; Multi-modal, multi-scale correlation of massive data sets for disease diagnostics, prognostics, theragnostics; cancer applications, health disparities, computational pathology, radiomics, pathomics, digital pathology, radiogenomics, oncology, cardiovascular, nephrology, ophthalmology

Paul Marasco, PhD
(Vanderbilt University)
Investigating sensory integration with prosthetic devices to develop translational approaches for providing natural touch and movement feedback for artificial limbs
Edward Maytin, MD, PhD  
(University of Rochester)  
Associate Professor  
Study wound healing to learn how the extracellular matrix can regulate inflammation and fibrosis in healing wounds; also study skin cancer to improve photodynamic therapy for thicker and more serious skin cancers

Debra McGivney, PhD  
(Case Western Reserve University)  
Assistant Professor  
Magnetic resonance imaging, magnetic resonance fingerprinting, mathematical modeling, inverse problems.

George F. Muschler, MD  
(Northwestern University)  
Professor  
Focus is on advancing the field of tissue engineering through development of new strategies for preservation, repair, regeneration, augmentation, or replacement of musculoskeletal tissues

Ela Plow, PhD  
(University of Minnesota)  
Assistant Professor  
Utilize functional neuroimaging to discern substrates of movement control and movement relearning-related plasticity in the healthy vs. post-stroke brain for rehabilitation

Andrew M. Rollins, PhD  
(Case Western Reserve University)  
Professor; Faculty co-director, Center for Engineering Action  
Biomedical optics; biomedical optical imaging; optical coherence tomography; cardiovascular and ophthalmic applications

Gerald M. Saidel, PhD  
(The Johns Hopkins University)  
Professor; Director, Center for Modeling Integrated Metabolic Systems  
Mass and heat transport and metabolism in cells, tissues, and organ systems; mathematical modeling and simulation of dynamic and spatially distributed systems; optimal nonlinear parameter estimation and design of experiments

Anirban Sen Gupta, PhD  
(The University of Akron)  
Professor  
Targeted drug delivery; targeted molecular imaging; image-guided therapy; platelet substitutes; novel polymeric biomaterials for tissue engineering scaffolds

Sam Senyo, PhD  
(University of Illinois)  
Assistant Professor  
Cardiovascular regeneration; microenvironment; stable isotopes; biomaterials, microfabrication; and drug delivery

Andrew Shoffstall, PhD  
(Case Western Reserve University)  
Assistant Professor  
Development of minimally invasive neural interfaces; biomaterials; drug delivery; blood-brain barrier permeability

Pallavi Tiwari, PhD  
(Rutgers University)  
Assistant Professor  
Developing Image Analysis and Machine Learning Tools for Neuroimaging applications

Ronald J. Triolo, PhD  
(Drexel University)  
Professor, Orthopaedics, University Hospitals-Case Medical Center, VA Medical Center, MetroHealth Medical Center  
Neural prostheses, rehabilitation engineering and restoration of lower extremity function, biomechanics of human movement quantitative analysis and control of gait, standing balance and seated posture

Dustin J. Tyler, PhD  
(Case Western Reserve University)  
Kent Hale Smith Professor for the Case School of Engineering II  
Neuromimetic neuroprostheses; laryngeal neuroprostheses; clinical implementation of nerve electrodes; cortical neuroprostheses; minimally invasive implantation techniques; and modeling of neural stimulation and neuroprostheses

D. Geoffrey Vince, PhD  
(University of Liverpool)  
Professor  
Developing a tool that will predict which patients are at increased risk of stroke to help physicians determine the best treatment approach

Satish Viswanath, PhD  
(Rutgers University)  
Assistant Professor  
Medical image analysis, radiomics, and machine learning schemes for imaging data. Focused on designing unique image analytics tools that capture biologically relevant measurements and conducting cross-scale associations across imaging, pathology, and -omics. Applications explored in computer-aided diagnosis & disease characterization, decision support for treatment and targeting, as well as quantitative evaluation of response to treatment in vivo; for gastrointestinal cancers and digestive diseases.

Horst A. von Recum, PhD  
(University of Utah)  
Professor and Executive Vice Chair  
Affinity-based delivery of small molecule drugs and biomolecules for applications in device infection, HIV, orthopedics, cardiovascular, ophthalmology and cancer; directed differentiation of stem cells for tissue engineering applications, such as endothelial cells, cardiomyocytes, motor neurons and T-cells

Matthew R. Williams, PhD  
(Case Western Reserve University)  
Assistant Professor  
Experiential education including engineering design, programming, and fabrication; control of prosthetics and assistive technology for stroke and spinal cord injury

David L. Wilson, PhD  
(Rice University)  
Robert J. Herbold Professor of Biomedical Engineering  
Biomedical image processing; machine/deep learning; multiple modalities including OCT, CT, MRI, microscopy, and ultrasound; applications in cardiology, ophthalmology, and cancer
Xin Yu, ScD  
( Harvard-MIT )  
F. Alex Nason Professor II  
Development and application of magnetic resonance imaging and spectroscopy methods for understanding cardiovascular and metabolic diseases, including diabetes, stroke, and cardiomyopathy.

Maciej Zborowski, PhD  
(Warsaw University)  
Associate Professor  
Investigating novel methods of cell separation for medical applications, including rapid screening for cancer cells in blood and isolation of blood-forming stem cells

Secondary Appointments

Ozan Akkus, PhD  
(Case Western Reserve)  
Professor, Mechanical Aerospace Engineering  
Development of novel biomaterials that will substitute bone and soft tissues, bioinspired from the synthesis of bone such that ductile biocompatible polymer matrices are subjected to mineralization. Tendon replacement strategy involves alignment of collagen monomers by a novel electrochemical method to obtain strong bundles

Harihara Baskaran, PhD  
(Pennsylvania State University)  
Professor, Chemical and Biomolecular Engineering  
Biotransport, Tissue/Cell metabolism, Cell transport, Microvascular tissue engineering, Cartilage tissue engineering

Jonathan Baskin, MD  
(New York University)  
Associate Professor, Section Chief Otolaryngology-Head & Neck Surgery, Cleveland VA Medical Center and faculty, University Hospitals-Cleveland Medical Center  
Peripheral Neuromodulation, Bioengineering of bone substitutes using nanotechnology

Martin Bocks, MD  
(Wayne State University School of Medicine)  
Associate Professor, Pediatrics, Division of Pediatric Cardiology  
Pediatric medical device development, including biosorbable stents, wireless implantable pressure sensors, pediatric ECMO cannula

Kath Bogie, D.Phil  
(Oxford University)  
Associate Professor, Orthopaedics  
Primary and secondary prevention of chronic wounds through novel clinically-focused approaches. Translational clinical research includes studies to determine why some people experience a continuous cycle of pressure injuries while others remain pressure injury free, looking at both biomarkers and bioinformatics, complemented with smart technology development to address these issues.

Dennis Bourbeau, PhD  
(University of Pittsburgh)  
Assistant Professor, Physical Medicine and Rehabilitation, MetroHealth System  
Neuroprosthetics for restoring bladder and bowel function after spinal cord injury

Arnold Caplan, PhD  
(Johns Hopkins University)  
Professor, Biology  
Development and medical use of the technology involving the mesenchymal stem cell (MSC), now called Medicinal Signaling Cells

M. Cenk Cavusoglu, PhD  
(University of California, Berkeley)  
Nord Professor of Engineering in Electrical, Computer, and Systems Engineering  
Robotics, systems and control theory, human-machine interfaces emphasizing medical robotics, haptics, virtual environments, surgical simulation, and bio-system modeling and simulation

John Chae, MD  
(Rutgers University - New Jersey Medical School)  
Professor and Chair, Physical Medicine and Rehabilitation, VP for Research and Sponsored Programs, MetroHealth System  
Neuromuscular Electrical Stimulation for motor relearning and neuroprostheses in stroke; peripheral nerve stimulation for musculoskeletal pain; stroke rehabilitation

Hillel J. Chiel, PhD  
(Massachusetts Institute of Technology)  
Professor, Biology  
Biomechanical and neural basis of feeding behavior in the marine mollusk Aplysia californica, neuromechanical system modeling, analysis of neural network dynamics

Isabelle Deschenes, PhD  
(Laval University)  
Professor, Cardiology, MetroHealth Medical Center  
Molecular mechanisms of cardiac arrhythmias, ion channels structure-function

William J. Dupps, Jr., MD, PhD  
(The Ohio State University)  
Professor, Ophthalmology, Cleveland Clinic's Lerner College of Medicine  
Corneal and ocular biomechanics, finite element modeling of the eye, simulation-based medicine

Agata Exner, PhD  
(Case Western Reserve University)  
Professor, Radiology, University Hospitals-Case Medical Center  
Development of contrast agents for ultrasound molecular imaging and image-guided drug delivery.

Christopher Flask, PhD  
(Case Western Reserve University)  
Professor, Radiology  
Develops quantitative MRI techniques for both basic science and translation imaging research in multiple diseases including cancer, neurological diseases, cystic fibrosis, and chronic kidney and liver diseases

Roger French, PhD  
(Massachusetts Institute of Technology)  
Professor, Materials Science and Engineering, Macromolecular Science and Engineering, Physics  
Lifetime and degradation science, photovoltaics, OLED and LED lighting and displays, polymer degradation
Michael J. Fu, PhD
(Case Western Reserve University)
Assistant Professor, Dept. of Electrical, Computer, and Systems Engineering
Virtual environments, human-computer interfaces, and functional electrical stimulation for neurorehabilitation

Mark Griswold, PhD
(University of Wuerzburg, Germany)
Professor, Radiology, University Hospitals-Case Medical Center
Rapid magnetic resonance imaging, image reconstruction and processing and MRI hardware/instrumentation

Umut A Gurkan, PhD
(Purdue University)
Warren E. Rupp Associate Professor, Mechanical and Aerospace Engineering, Orthopaedics
Micro/nano engineered systems, biosensing, clinical Microfluidics, point-of-care diagnostics, microcirculation, sickle cell disease

Alex Y. Huang, MD, PhD
(Johns Hopkins University)
Professor, Pediatrics, Pathology, General Medical Sciences, University Hospitals Cleveland Medical Center/UH Rainbow Babies & Children's Hospital
Tumor Immunity, immune landscape and behavior in tissue microenvironment, cellular adhesion and migration

Michael W. Keith, MD
(The Ohio State University)
Professor, Orthopaedic Surgery, Physical Medicine and Rehabilitation
MetroHealth Medical Center
Restoration of motor function in hands

Kevin L. Kilgore, PhD
(Case Western Reserve University)
Peckham & Picha Professor, Orthopaedics and Physical Medicine and Rehabilitation
MetroHealth System
Neuroprosthetics for spinal cord injury and electrical nerve conduction block.

Shanina C. Knighton, PhD, RN
(Case Western Reserve University)
Instructor
Co-instructs multidisciplinary BioDesign course, senior advisor to undergraduate and graduate biomedical engineering students, research interests in technology-based self-management interventions and wearable sensors

Kandice Kottke-Marchant, MD, PhD
(Case Western Reserve University)
Professor and Chair, Molecular Medicine, Cleveland Clinic Lerner College of Medicine (Lerner Research Institute)
Thrombosis, hemostasis and vascular disease, hypercoagulable states, bleeding disorders, endothelial cell function, atherosclerosis

Kenneth R. Laurita, PhD
(Case Western Reserve University)
Associate Professor, Cardiology, MetroHealth Medical Center
Determining mechanisms of and therapy for cardiac arrhythmias, using innovative optical and electrical technologies

Zhenghong Lee, PhD
(Case Western Reserve University)
Professor, Radiology, University Hospitals Cleveland Medical Center
Quantitative PET and SPECT imaging, molecular and cellular imaging of cancer, metabolism, infectious diseases and cell-based therapies

Kenneth Loparo, PhD
(Case Western Reserve University)
Arthur L. Parker Professor, Electrical, Computer and Systems Engineering
Faculty Director, ISSACS: Institute for Smart, Secure and Connected Systems
Stability and control of nonlinear and stochastic systems; physiological data analysis and signal processing

Andrei Maiseyeu, PhD
(M. V. Lomonosov Moscow State University, Russia)
Assistant Professor, Medicine & Biomedical Engineering
Cardiovascular drug development and delivery, immunometabolism, mechanisms of metabolic disease, imaging of atherosclerosis, MRI contract agents, controlled release nanomaterials, microfluidics

Mehran Mehregany, PhD
(Massachusetts Institute of Technology)
Professor, Electrical Engineering & Computer Science
Micro/nano-electromechanical systems, silicon carbide semiconductor technology and microsystems, wireless health

Pedram Mohseni, PhD
(University of Michigan)
Goodrich Professor of Engineering Innovation, Electrical, Computer, and Systems Engineering
Biomicrosystems, microelectronics for neurotechnology, wireless integrated sensing/actuating systems, point-of-care diagnostic platforms for personalized health

Raymond F. Muzic, Jr., PhD
(Case Western Reserve University)
Professor, Radiology, Biomedical Engineering, Oncology; University Hospitals-Case Medical Center
Quantitative analysis of biomedical imaging data, physiologic modeling, optimal experiment design, assessment of new radiopharmaceuticals, imaging response to therapy, radiation oncology applications of imaging, and artificial intelligence

Tarun Podder, PhD
(University of Hawaii)
Professor, Radiation Oncology
Medical robotics; medical device design; system dynamics and control; image-guided radiotherapy; stereotactic body radiotherapy; brachytherapy; image-guided surgical intervention; application of AI in radiation therapy

Julie Renner, PhD
(Purdue University)
Assistant Professor
Development of protein engineered materials for use in and study of electrochemical systems

Clare Rimmac, PhD
(Lehigh University)
Distinguished University Professor, Mechanical and Aerospace Engineering
Orthopaedic implant performance and design, mechanical behavior of hard biological tissues
Steve Schomisch, PhD
(Cleveland State University)
Assistant Professor, Surgery
Minimally Invasive Surgical Innovation

Aasef G. Shaikh, MD (Maharaja Sayajirao University), PhD (Wayne State University)
Associate Professor, Penni and Stephen Weinberg Chair in Brain Health and Vice Chair for Research, Department of Neurology, University Hospitals and Case Western Reserve University
Balance and Visuo-spatial navigation, Visual scanning patterns, Cerebellar disorders, Deep Brain Stimulation for Parkinson’s Disease, tremor and dystonia

Dawn Taylor, PhD
(Arizona State University)
Associate Professor, Molecular Medicine, Cleveland Clinic Lerner College of Medicine (Lerner Research Institute)
Brain-controlled neuroprosthetics; Deep brain stimulation for Parkinson’s disease; Neural signal processing

Jeffrey Ustin, MD
(Stanford University School of Medicine)
Assistant Professor, Anesthesiology, University Hospitals
Synthetic platelet technology, robot assisted atrial fibrillation ablation, endotracheal tube technology

Albert L. Waldo, MD
(State University of New York College of Medicine, Downstate)
Walter H. Pritchard Professor of Cardiology, Professor of Medicine, University Hospitals-Cleveland Medical Center
Cardiac electrophysiology and cardiac excitation mapping

Russell Wang, DDS, MSD
(Indiana University)
Professor, Comprehensive Care, School of Dental Medicine
Dental implant design, instrumentation, bone regeneration, 3D printing of biomaterials, biomechanics of bone fracture, biomaterials for maxillofacial reconstruction

Gary Wnek, PhD
(University of Massachusetts, Amherst)
Professor, Chair, Macromolecular Science and Engineering
Bio-mimicking macromolecular constructs with attention to the design and irritable systems; Artificial cells; Advanced films and smart packaging systems; New approaches to impart fire resistance to common polymers

Xiong (Bill) Yu, PhD, P.E.
(Purdue University)
Professor, Civil and Environmental Engineering
Smart infrastructure for healthy built-Environment, sensors and non-invasive testing, smart multifunctional materials, 3D printing, data-driven decisions, machine learning

Nicholas P. Ziats, PhD
(Case Western Reserve University)
Professor, Pathology, Biomedical Engineering & Anatomy
Biomaterials and Biocompatibility, Biomaterial Implant Retrieval and Analysis, Cardiovascular Disease and Devices, Vascular Biology

Christian Zorman, PhD
(Case Western Reserve University)
Leonard Case Jr Professor of Electrical Engineering & Computer Science
Development of enabling materials and processing techniques for micro- and nanosystems

Research Appointments

Mehdi Ailiou, PhD
(Case Western Reserve University)
Research Assistant Professor
Development of machine learning and computer vision tools for detection, quantification, diagnosis and prognosis of lung cancer on chest CT scans

Musa L. Audu, PhD
(Case Western Reserve University)
Research Professor
Human musculoskeletal modeling and development of control systems for rehabilitation of individuals with spinal cord injury and other balance disorders, design of rehabilitation devices for physically challenged individuals

Hamid Charkhkar, PhD
(George Mason University)
Research Assistant Professor
Neuroprostheses to restore sensorimotor function in people with limb loss or neuromusculoskeletal impairment; Sensory-enabled assistive devices to improve balance; Translational Neuroengineering

Andrew Janowczyk, PhD
(Case Western Reserve University)
Assistant Research Professor

Cheng Lu, PhD
(University of Alberta, Canada)
Research Assistant Professor
Development of histomorphometric and path-genomics tools for prognosis, prediction in the context of Breast cancer, Lung cancer, and Head & neck cancer

Grant A. McCallum, PhD
(Case Western Reserve University)
Research Assistant Professor
Neural engineering; neural interfacing; neuromodulation; neurophysiology, application specific integrated circuits (ASICs) and wireless implantable systems

Rakesh Shiradkar, PhD
(National University of Singapore)
Research Assistant Professor
Development of Artificial Intelligence assisted cancer diagnostic and prognostic tools with Medical Imaging modalities
Amrita Vaidya, PhD  
(University of Rochester)  
Research Assistant Professor  
Development of theranostic strategies by integrating biomarker-based molecular imaging, molecular characterization of tumors, and adaptive gene therapy interventions for neoplastic indications

Xinning Wang, PhD  
(The Chinese University of Hong Kong)  
Research Assistant Professor  
Development of novel molecular image probes for the diagnosis of cancer, development of molecular cancer therapeutic approaches

Mei Zhang, PhD  
(Wuhan University)  
Research Scientist, School of Medicine  
Nanotechnology for cancer diagnosis and treatment, imaging and manipulation of tumor microenvironment, cancer immunotherapy, adoptive T-cell immunotherapy

Adjunct Faculty

Eben Alsberg, PhD  
(University of Michigan)  
Adjunct Professor (University of Illinois, Chicago)  
Innovative biomaterials, microenvironments and bioactive factor delivery vehicles for functional tissue engineering, regenerative medicine and disease therapeutics; control of stem cell fate decision; precise temporal and spatial presentation of signals to regulate cell function; mechanotransduction and the influence of mechanics on cell behavior and tissue formation; organoids and organogenesis; therapeutic angiogenesis; and cell-cell interactions

Kenneth B. Baker, PhD  
(University of Arizona)  
Adjunct Assistant Professor (Lerner Research Institute, Cleveland Clinic)  
Neuromodulation, Deep Brain Stimulation, Neurophysiology, Neural plasticity, Stroke, Parkinson's disease

Niloy Bhadra, MD, PhD  
(Case Western Reserve University)  
Associate Professor (PM&R, MetroHealth Medical Center)  
Experimental and computational studies of high frequency waveforms for reversible conduction block of peripheral nerves, design, testing and implementation of neuropsychotic systems for the upper limb

Michael Bruckman, PhD  
(University of South Carolina)  
Adjunct Assistant Professor (Haima Therapeutics LLC)  
Instructor for Masters of Engineering and Management (MEM) program

Scott Bruder, MD, PhD  
(Case Western Reserve University)  
Adjunct Professor  
Product Development and Regulatory Affairs in Regenerative Medicine, and Advising Students Regarding Careers in Industry

Richard C. Burgess, MD, PhD  
(Case Western Reserve University)  
Adjunct Professor of Biomedical Engineering (Neurological Computing, Cleveland Clinic)  
Magnetoencephalography, electrophysiological monitoring, EEG processing, medical informatics

Andrew Cornwell, PhD  
(Case Western Reserve University)  
Adjunct Assistant Professor  
Education and training for faculty, staff, and students of commercializing research technology through startups or licensing

Evon Ereifej, PhD  
(Wayne State University)  
Adjunct Associate Professor of Biomedical Engineering (VA Medical Center)  
University of Michigan  
Improved integration of cortical prosthesis and brain tissue; nanoarchitecture approaches for neural interfacing, understanding of neuroinflammatory mechanisms and advanced mitigation strategies

Hossein Ghassemi, PhD  
(McGill University)  
Adjunct Assistant Professor  

Vikas Gulani, MD, PhD  
(University of Illinois)  
Adjunct Professor (University of Michigan)  
Diffusion tensor imaging and diffusion anisotropy, MRI microscopy, body MRI, and functional MRI

Elizabeth C. Hardin, PhD  
(University of Massachusetts)  
Adjunct Assistant Professor of Biomedical Engineering, (VA Medical Center)  
Gait mechanics and performance in health and disability, virtual reality, rehabilitation, prosthetics and orthotics, neural prostheses, modeling and simulation

Thomas Hering, PhD  
(Case Western Reserve University)  
Adjunct Associate Professor  
Cartilage biochemistry and molecular biology, alternative mRNA splicing, proteoglycans and neurotrauma

Allison Hess-Dunning, PhD  
(Case Western Reserve University)  
Adjunct Assistant Professor (Louis Stokes VA Medical Center)  
Micro- and nano-fabrication strategies for developing advanced neural interfaces aimed at long-term functionality

Joseph Jankowski, PhD, MBA  
(Case Western Reserve University)  
Adjunct Professor  
Administration of multi-party translation and commercialization programs, intellectual property management, technology-based opportunity assessment, commercialization
Fehmida Kapadia, PhD  
(The Ohio State University)  
Adjunct Assistant Professor  
Teaching innovation and commercialization, strategy and business development

Nicola Lai, PhD  
(University of Pisa, Italy)  
Adjunct Associate Professor (University of Cagliari)  
Quantitative understanding of regulation of energy transfer and metabolism

Mary Laughlin, MD  
(State University of New York)  
Adjunct Professor (Cleveland Cord Blood Center)  
Development of monocytes, hematopoietic stem cells

Yajuan Li, PhD  
(University of Rhode Island)  
Adjunct Assistant Professor  
Research, development and commercialization of peptide-based pharmaceutical imaging drugs and therapeutics, regulatory affairs, formulation development.

John McDaniel, PhD  
(University of Utah)  
Adjunct Associate Professor, Kent State University  
Vascular health and blood flow regulation in individuals with spinal cord injuries

Matthew Moorman, (Colonel), MD, MBA  
(Ohio State University)  
Adjunct Assistant Professor (Clinical Associate Professor of Surgery, Clinical Assistant Professor, Medical Sciences, Case Western Reserve University School of Medicine)  
Trauma resuscitation, emergency surgery, and critical care, focusing on implementing quality, safety, and high-reliability health care behaviors in the early years of medical training. Special interest in high-fidelity, simulation-based medical education.

Aaron S. Nelson, MD  
(Medical College of Ohio)  
Adjunct Assistant Professor, Chief Medical Officer, MIM Software Inc.  
Multimodality and quantitative imaging for neurologic and cardiac disorders, oncology and radiation oncology

Marc Penn, MD, PhD, FACC  
(Case Western Reserve University)  
Adjunct Professor (Director of Research, Summa Cardiovascular Institute, Summa Health System)  
Strategies for cardiovascular cell therapy to treat cardiac dysfunction

Suguna Rachakonda, PhD, MBA  
(University of Hyderabad)  
Adjunct Assistant Professor, Cleveland Global Cardiovascular Innovation Center  
Consultation on technology commercialization

Todd Ritzman, MD  
(The Ohio State University)  
Adjunct Associate Professor  
Pediatric orthopaedic surgery

Akhil Saklecha, MD, MBA  
(Northeastern Ohio University of Medicine)  
Adjunct Professor  
Consultation in technology commercialization, Teaching, Student mentoring, Faculty collaboration

Ahlam Salameh, PhD  
(Case Western Reserve University)  
Adjunct Assistant Professor (Clinic Res. Association)  
Two major thrusts: [1] exploring the therapeutic effect of implementing a myoelectrically controlled arm orthosis into acute stroke rehabilitation programs on the clinical outcomes of subjects with severe arm deficit and [2] understanding the underlying neuroplastic mechanisms that guide the improvement in upper limb motor control during acute stroke rehabilitation. Also involved in research to enhance gait motor control for subject with chronic stroke by combining virtual reality with non-invasive brain stimulation

Nicole Seiberlich, PhD  
(Universitat Wurzburg, Germany)  
Associate Professor, Radiology, University of Michigan  
Quantitative MRI, image reconstruction, pulse sequence development, cardiac imaging

Robert T. Ssekitoleko, EngD  
(University of Strathclyde, Glasgow)  
Adjunct Assistant Professor, Dept. of Biomedical Engineering (Lecturer and Biomedical Engineering Program Lead in College of Health Sciences at Makerere University)  
Advisor to the student design teams in the CWRU Global Health Design Collaborative. Hosts CWRU’s study abroad course in Uganda, Global Health Design. Collaborates on research with BME faculty

Antonie van den Bogert, PhD  
(University of Utrecht)  
Adjunct Associate Professor (Cleveland State University)  
Biomechanics, Mechanics, and control of human motion

Tina Vrabec, PhD  
(Case Western Reserve University)  
Adjunct Assistant Professor (Physical Medicine and Rehabilitation MetroHealth)  
Novel waveforms, electrode designs, and electrode materials for control of the nervous system as applied to motor block, pain, and the autonomic system

Sean Zuckerman, PhD  
(University of Wisconsin-Madison)  
Adjunct Instructor  
Teaching, mentoring students, early stage commercialization and product development

Fredy R. Zypman, PhD  
(Case Western Reserve University)  
Adjunct Professor (Professor and Chairman, Department of Physics, Yeshiva University, New York)  
Theoretical and computational applied physics, reconstruction of forces at the nanoscale from experimental atomic force microscopy measurements, and applications to electric and mechanical phenomena in soft matter including interactions in electrolytes; friction at the nanoscale; random systems
Emeritus Faculty

Patrick E. Crago, PhD
(Case Western Reserve University)
Professor Emeritus
Control of neuroprostheses for restoration of motor function; neuromechanics; and modeling of neuromusculoskeletal systems

J. Thomas Mortimer, PhD
(Case Western Reserve University)
Professor Emeritus
Neural control and prostheses; electrical activation of neural tissue; and membrane properties and electrodes

P. Hunter Peckham, PhD
(Case Western Reserve University)
Professor Emeritus
Rehabilitation engineering in spinal cord injury; neural prostheses; and functional electrical stimulation and technology transfer

W. Sanford Topham, PhD
(University of Utah)
Associate Professor Emeritus
Cardiovascular system, primarily on the control of cardiac output

Undergraduate Programs

The Case Western Reserve undergraduate program leading to the Bachelor of Science in Engineering degree program with a major in Biomedical Engineering was established in 1972 and has been accredited since its inception.

Some BS graduates are employed in industry and medical centers. Others continue graduate or professional studies in biomedical engineering and other fields. Students with strong quantitative skills and an interest in medicine may consider the undergraduate biomedical engineering program as an exciting alternative to conventional premedical programs. In addition to the University general education requirements, the undergraduate program has three major components: (1) Engineering Core, (2) BME Core, and (3) An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics

• BME Specialty Tracks. The Engineering Core provides a fundamental background in mathematics, physics, chemistry, and engineering. The BME Core provides fundamentals in biology and integrates engineering with biomedical science to solve medical problems. Hands-on experience in BME is developed through undergraduate laboratory and project courses. In addition, by choosing a BME Track, the student can study a specific area of interest in depth. Appropriate choice of elective courses can lead to a minor in a related engineering discipline without taking extra classes beyond those needed for the BME major. This integrated program is designed to ensure that BME graduates are competent engineers with credentials that are well recognized by potential employers.

The Bachelor of Science in Engineering degree program with a major in Biomedical Engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

Program Educational Objectives

At the undergraduate level, we direct our efforts toward two educational objectives that describe the performance of alumni 3-6 years after graduation.

a. Our graduates will successfully enter and complete post-baccalaureate advanced degree programs, including those in biomedical engineering.

b. Our graduates will obtain jobs in the biomedical arena and advance to positions of greater responsibility.

Student Outcomes

As preparation for achieving the above educational objectives, the Bachelor of Science in Engineering with a major in Biomedical Engineering is designed so that students attain:

• An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics

• An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors

• An ability to communicate effectively with a range of audiences

• An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts

• An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

• An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions

• An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Bachelor of Science in Engineering

Major in Biomedical Engineering

In addition to engineering general education requirements (http://bulletin.case.edu/undergraduatetime/csedegree/) and university general education requirements (http://bulletin.case.edu/undergraduetime/degreeprograms/), the major requires the following courses:

Required Courses

<table>
<thead>
<tr>

<td><strong>55-57</strong></td>
</tr>
</tbody>
</table>

**Natural Sciences, Mathematics or Statistics Elective**

Candidates for the Bachelor of Science in Engineering degree must fulfill a Natural Sciences, Mathematics or Statistics requirement as part of the Engineering Core, which is designated by the major department. Note that this is distinct from the engineering, mathematics or natural science elective required by the BME major and mentioned above. Biomedical Engineering majors may meet this requirement by taking one of the following statistics courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>STAT 312</td>
<td>Basic Statistics for Engineering and Science</td>
<td>3</td>

<tr>
<td>STAT 333</td>
<td>Uncertainty in Engineering and Science</td>
<td>3</td>
</tr>
</tbody>
</table>

**Biomedical Engineering Specialty Tracks**

Majors in Biomedical Engineering choose a specialization track, with track specific courses.

Required courses for these tracks are presented in the tables below. These tracks provide the student with a solid background in a well-defined area of biomedical engineering. To meet specific educational needs, students may choose alternatives from among the suggested electives or design unique specialties. These options are flexible and subject to departmental guidelines and faculty approval.

Approval of technical electives (TE): Pre-approved TE (listed below) need no further approval. 300-400 level courses offered by a department in the Case School of Engineering may be approved as a TE by a student's academic advisor. Any other course must be approved by petition to the BME Undergraduate Education Committee. Transfer and study abroad courses must be approved by the BME Program Academic Representative. In all cases, courses should be chosen as TE's that are consistent with the track and consistent with student's career plans. Students are encouraged to choose electives that form a thematic depth.

Approved Tech Elective | 3
Approved Tech Elective | 3
Conjoiner course: choose one of the following courses: | 3
- EMBE 320 | Biomedical Imaging
- EMBE 327 | Bioelectric Engineering

The following courses are pre-approved, technical electives for the Biomedical Devices and Instrumentation track.

**Electronics:**

- ECSE 321 | Semiconductor Electronic Devices
- ECSE 322 | Integrated Circuits and Electronic Devices
- ECSE 371 | Applied Circuit Design | 4

**Software:**

- (note many of these courses require CSDS 132 instead of ENGR 131)
  - CSDS 233 | Introduction to Data Structures
  - ECSE 313 | Signal Processing
  - CSDS 337 | Compiler Design
  - CSDS 338 | Intro to Operating Systems and Concurrent Programming
  - CSDS 310 | Algorithms
  - ECSE 351 | Communications and Signal Analysis
  - ECSE 354 | Digital Communications
  - ECSE 324 | Modeling and Simulation of Continuous Dynamical Systems
  - ECSE 346 | Engineering Optimization
  - EMBE 478 | Computational Neuroscience

**Modeling/Simulation:**

- EMBE 401D | Biomedical Instrumentation and Signal Processing
- EMBE 407 | Neural Interfacing
- EMBE 421 | Bioelectric Phenomena
- EMBE 307 | Biomechanical Prosthetic Systems
- EMBE 320 | Biomedical Imaging
- EMBE 421 | Bioelectric Phenomena
- ECSE 304 | Control Engineering I with Laboratory
- CSDS 341 | Introduction to Database Systems
- CSDS 313 | Introduction to Data Analysis | 3

Please click here to download the example program of study for the Devices and Instrumentation Track. (http://bulletin.case.edu/schoolofengineering/biomedicalengineering/Devices_Track_Template_2018.xls)

*Requirements for a minor in Electrical Engineering can be found here (http://bulletin.case.edu/schoolofengineering/eleccompsyseng/#undergraduatetext). These can usually be satisfied by judiciously selecting technical electives. Consult your advisor.*

**Total Units in Sequence:** 133

- University general education requirement
- Engineering general education requirement
- This optional course is limited to first-year students and is not required.
- Courses chosen depending on the BME specialty track as listed above
- At least one engineering, math or natural science elective
- SAGES BME Department Seminar, ENGL 398 Professional Communication for Engineers Professional Communication for Engineers and ENGR 398 Professional Communication for Engineers Professional Communication for Engineers must be taken together
- STAT 312 Basic Statistics for Engineering and Science, STAT 313 Statistics for Experimenters, STAT 332 Statistics for Signal Processing, STAT 333 Uncertainty in Engineering and Science fulfill the statistics requirement. Consult your advisor to determine the most appropriate class. This course satisfies the Natural Sciences, Mathematics, or Statistics Requirement of the Engineering Core.
- Biomedical Computing and Analysis track requires CSDS 132 Introduction to Programming in Java.
- There are four required Breadth Electives. Depending on the specific specialty track, a fifth Breadth Elective may be taken.

**Co-op and Internship Programs**

Opportunities are available for students to alternate studies with work in industry or government as a co-op student, which involves paid full-time employment over seven months (one semester and one summer). Students may work in one or two co-ops, beginning in the third year of study. Co-ops provide students the opportunity to gain valuable hands-on experience in their field by completing a significant engineering project while receiving professional mentoring. During a co-op placement, students do not pay tuition but maintain their full-time student status while earning a salary. Learn more at engineering.case.edu/coop (http://engineering.case.edu/coop/). Alternatively or additionally, students may obtain employment as summer interns.

**BS/MS Program**

The BS/MS program is designed to allow highly qualified undergraduate students from the Case BME program to integrate BS courses and project work with MS courses and research. Nominally, the combined program can be completed in 5 years including 3 summers starting after the junior year. The BS/MS program can reduce the time required to receive an MS degree because up to three courses taken during the undergraduate program at Case can be "double counted" towards MS requirements and because a research project can begin before the completion of the BS degree. Review the Office of Undergraduate Studies BS/MS program requirements here (http://bulletin.case.edu/undergraduatestudies/gradprofessional/#accelerationtowardgraduatedegreestext).

Admission to the BS/MS program is typically open to BME juniors from Case with a grade point average of 3.2 or higher. Students with slightly lower GPA but with significant research experience and a strong faculty champion can petition the GEC for admission. To be most effective, applications to the BS/MS program should be submitted before the end of Spring semester in the junior year. The final deadline for BS/MS admissions is August 1 before the senior year. This will enable the GEC sufficient time to review the application and allow students to make any required changes to their program of study for fall semester.

In general, the following steps should be taken to apply to the BS/MS program:

1. See Advisor to discuss interests (typically in junior year or earlier).
2. Contact Navigator to discuss intentions.
3. Complete a School of Graduate Studies application and submit to the Graduate Studies office for the program of interest (BME).
4. Complete a BS/MS Planned Program of Study (PPOS) form.

Additional information for BME students:

1. An eligible BME faculty member (primary or secondary) must agree to serve as the MS research advisor and a primary BME faculty member (who might be the same person as the research advisor) must agree to be the academic advisor. Obtaining this agreement is the responsibility of the applying student. The BS/MS application must include letters of recommendation from both the research and academic advisor that states that they agree to serve in these roles and that they support the BS/MS application.
2. The BME department does not guarantee financial support during the MS portion of this program. However, the GEC requires students and potential research advisors to discuss and agree to some financial arrangement. The letter of recommendation from the proposed research advisor must, therefore, indicate that the issue of financial support has been discussed and that some arrangement has been agreed upon. The details of this arrangement do not need to be included in the letter.

3. Complete a standard application to the School of Graduate Studies via the online application system.

4. Complete the BS/MS Planned Program of Study (PPOS) form. Make sure to check the “BS/MS” box and to indicate which courses are to be double-counted (by checking the “double count” box next to the relevant courses on the POS).

5. Obtain an approval signature from the School of Undergraduate Studies on the proposed POS prior to submitting the package (below) to the department.

6. Prepare the application package that includes the following:

- A current transcript
- The proposed MS Program of Study. Make sure that the Program of Study specifies both the academic and research advisors and includes both of their signatures. This form also needs to indicate the courses that are intended to be “double counted”.
  - Only graduate-level courses (400 or higher) can be double counted. This typically means that students should register for 400 level courses to satisfy undergraduate technical electives.
  - It is possible to “double count” three credit hours of EBME 398 Biomedical Engineering Research Experience I. To do this, three credit hours of EBME 651 Thesis M.S. (Thesis-Focused Track) or EBME 695 Project M.S. (Project-Focused Track) should replace EBME 398 Biomedical Engineering Research Experience I in the fall or spring of the senior year. You should register for EBME 651 Thesis M.S. or EBME 695 Project M.S. (but NOT EBME 398 Biomedical Engineering Research Experience I). However, you must attend the meetings of EBME 398 Biomedical Engineering Research Experience I and also fulfill all of the course requirements for EBME 398 Biomedical Engineering Research Experience I.
  - A maximum of nine (9) credit hrs can be double counted. Typically, these are two 3-credit courses (400 level or high) + 3 credits of EBME 651 Thesis M.S. or EBME 695 Project M.S. (in place of EBME 398 Biomedical Engineering Research Experience I).
  - Three (3) reference reports (in sealed envelopes), including letters from your proposed academic and research advisor(s).

7. Submit the proposed POS, transcript, and letters of recommendation to the BME Graduate Coordinator.

No admission decision will be made until the POS is approved by the GEC. After a positive recommendation by the GEC, a letter of conditional admission will be sent. The condition for admission is the submission of GRE scores within 2 months of completing the BS requirements. The student cannot graduate from the BS/MS program without official GRE scores. This is a BME requirement and not a CSE requirement. Note that it is strongly recommended that students plan to take the GRE exam in the Fall semester of their senior year to be eligible for pre-doctoral fellowships from the National Science Foundation or other sources.

**BS-MS Thesis-Focused Track**

21-hrs of course work and 9-hrs of EBME 651 Thesis M.S.

Requirement for completion: 30-hrs and thesis defense / bulletin.case.edu/schoolofgraduatestudies/academicrequirements/

Students can double count 9 credits (up to 3 credits can be at the 300 level)

**BS-MS Non-Thesis Options**

1. **BS-MS Course-Focused Track**

   30-hrs of course work

   Requirement for completion: 30-hrs and ENGR 400

   Students can double count 9 credits (up to 3 credits can be at the 300 level)

2. **BS-MS Project-Focused Track**

   24 to 27-hrs of course work and 3 to 6-hrs of EBME 695 Project M.S.

   Students can double count 9 credits (up to 3 credits can be at the 300 level)

3. **BS-ME Practice Oriented Option**

   18-hrs in engineering (5 courses and capstone projects)

   EPOM 400 Leadership and Interpersonal Skills

   EPOM 401 Introduction to Business for Engineers

   EPOM 403 Product and Process Design and Implementation

   EPOM 405 Applied Engineering Statistics (can be double-counted)

   EPOM 407 Engineering Economics and Financial Analysis

   EPOM 409 Master of Engineering Capstone Project

   12-hrs (4 BME technical Courses)

   Graduation requirement: 30-hrs and a comprehensive examination

   Students can double-count 9 credits (up to 3 credits can be at the 300 level)

**Minor in Biomedical Engineering**

A minor in biomedical engineering is offered to students who have taken the Engineering (technical) Core requirements. The minor consists of an approved set of five EBME courses.

**Required Courses**

<table>
<thead>
<tr>

** Total Units 15 **

* EBME 306 Introduction to Biomedical Materials, EBME 308 Biomedical Signals and Systems (Coreq: EBME 358 Biomedical Signals and Systems Laboratory), EBME 309 Modeling of Biomedical Systems (Coreq: EBME 359 Biomedical Computer Simulation Laboratory), EBME 310 Principles of Biomedical Instrumentation (Coreq: EBME 360 Biomedical Instrumentation Laboratory)

** If a student has credit for ECSE 246 Signals and Systems Signals and Systems, EBME 308 Biomedical Signals and Systems (Coreq: EBME 358 Biomedical Signals and Systems Laboratory) will not satisfy a BME minor requirement.

** Graduate Programs **

The objective of the graduate program in biomedical engineering is to educate biomedical engineers for careers in industry, academia, health care, and government and to advance research in biomedical engineering. The department provides a learning environment that encourages students to apply biomedical engineering methods to advance basic scientific discovery; integrate knowledge across the spectrum from basic cellular and molecular biology through tissue, organ, and whole-body physiology and pathophysiology; and to exploit this knowledge to design diagnostic and therapeutic technologies that improve human health. The unique and rich medical, science, and engineering environment at Case enables research projects ranging from basic science through engineering design and clinical application.

Numerous fellowships and research assistantships are available to support graduate students in their studies.

** Master of Science in Engineering **

The MS program in biomedical engineering provides breadth in biomedical engineering and biomedical sciences with depth in an engineering specialty. In addition, students are expected to develop the ability to work independently on a biomedical research or design project. While there is no set of core required courses, the MS requires a minimum of 30 credit hours. Every program of study must be approved by the graduate education committee.

With an MS Thesis-Focused Track, a minimum of 18 to 21 credits hours is needed in regular course work and 9 to 12 hours of thesis research (EBME 651 Thesis M.S.), is needed.

With an MS Project-Focused Track a minimum of 24 to 30 credit hours is needed in regular course work, and 0 to 6 hours of project research (EBME 695 Project M.S.) is needed.

The MS Course-Focused Track requirements consist of the completion of 30 hours of approved coursework at the 400 level or higher, including satisfactory completion of the culminating course focused experience such as:

- EBME 471: Principles of Medical Devices Design and Innovation or
- ENGR 600: Independent Study

Students should consult with their academic advisor and/or department to determine the detailed requirements within this framework.

** Online Master Degree in Biomedical Engineering **

The BME department offer BME MSc entirely on-line:

https://case.edu/online-learning/courses-and-programs/online-masters-degrees-and-certificates-engineering/

The online program is course-only or project-focused and must include:

- EPOM 400: Leadership and interpersonal skills
- EBME 695: Project M.S.

or EBME 471: Principles of medical device design and innovation or ENGR 600: Independent study

Visit http://online-engineering.case.edu/biomedical/ for more details.

** Master of Science in Engineering with Specialization Translational Health Technology **

This Master's degree in Biomedical Engineering is designed to develop expertise in translating biomedical ideas into clinical implementation. This degree can be completed in one year for full-time students. It is offered by the Biomedical Engineering department in the Case School of Engineering and takes advantage of the large pool of expertise in Biotechnology on the campus of Case Western Reserve University. It combines aspects of bioengineering, marketing, entrepreneurship, and bioregulatory affairs with ethics and experimental design. The program will require students to take a minimum of 30 credits including a design project.

Visit http://engineering.case.edu/Translational-Health-Technology/program-features/

** Prerequisite:** Biomedical Engineering Degree or equivalent or consent of program director.
Special Features:

- 26 credit hours plus 4 hours of project
- Portions available through Distance Learning
- Flexible program to accommodate a professional's schedule
- Lock-Step Program; Duration 1 year: August to August
- Projects can be done within the place of work

Course curriculum is as follows:

<table>

Total Units 24

For the remaining 6 credit hours, students can choose from any 400 level engineering course or biomedical engineering course for which prerequisites are met and approved by the student's advisor or a program director.

**MD/MS Program**

The MD/MS program is available to qualified medical students from the Case School of Medicine and the Cleveland Clinic Lerner College of Medicine of Case Western Reserve University. Students in this program receive some credit for their medical school studies in completing the MS degree. There are specific admission requirements.

The MD/MS degree is open to Case School of Medicine students in the Cleveland Clinic Lerner College of Medicine (CCLCM) or the University Program (UP), which will award the MD component of the dual degree. An undergraduate degree in engineering is desirable for students entering this program, but other students with adequate undergraduate preparation (calculus with differential equations, physics, chemistry, and electronic circuits) will be helpful. Students with an insufficient background will be admitted conditionally until they take the remedial undergraduate courses. Remedial courses will not count toward the MS requirements.

Interested students should submit their applications through the BME department, as the department taking responsibility for program management. Students will normally apply to the program during their first year of medical school. Students should submit their medical school application instead of a separate graduate school application, including MCAT scores instead of GRE scores. The application should include a letter specifying the intended track, the department/major field designation, and a statement of purpose for seeking the combined degree.

The MS requirements are the same as the rest of the Case School of Engineering Thesis-Focused Track MS degree, i.e., 30 credit hours including nine to twelve hours of thesis registration (EBME 651 Thesis M.S.). Please note that only the Thesis-Focused Option is available to MS/MD students. Students must complete the normal MD requirements in either the UP or CCLCM Program. Portions of the medical school curriculum earn graded credit toward the MS portion of this degree. Specifically, students in the University Program register for Integrated Biological Science courses (IBIS 401 Integrated Biological Sciences I), as in the MD/PhD program. Students in the CCLCM Program enroll in the 6-credit IBIS 434 Integrated Biological Sciences in Medicine Process of Discovery course in the second year of the CCLCM curriculum. Six credit hours of these medical school courses are applied to the MS component of the dual degree. The balance of required formal courses (12-15 hours or 4-5 courses) must be graduate level engineering concentration courses that provide rigor and depth in a field of engineering relevant to the area of research. All courses must be listed on the BME Program of Study, which must be submitted and formally approved by the BME Graduate Education Committee and subsequently transmitted to the School of Graduate Studies. The Program of Study must be approved prior to registration for the second engineering course. Students must earn a minimum of a B grade in each graduate engineering course, and have a minimum overall GPA of 3.25.

Summary of the requirements

- 6 hrs Life science courses (medical school curriculum)
- 12 hrs (4 courses) in biomedical engineering
- 12 hrs of thesis research (EBME 651 Thesis M.S.)
- Graduation requirement: 30 hrs, Thesis defense

For more detailed information on this program, please see

http://engineering.case.edu/ebme/academics/graduate/current-students/

**PhD Program in Biomedical Engineering**

The PhD program requires a minimum of 36 credit hours of courses beyond the BS degree. A student’s overall Program of Study must clearly demonstrate adequate depth in a field of biomedical engineering relevant to the student’s research area. There are 11 credit hours of required core courses, which include the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>EBME 401D</td>
<td>Biomedical Instrumentation and Signal Processing</td>

The Neural Engineering Center is a major facility for basic research and the Center for Computational Imaging & Personalized Diagnostics. The Case Center for Imaging Research (CCIR), the Center for Biomaterials, Major interdisciplinary centers include: the Neural Engineering Center, and laboratories in the various medical centers in Cleveland. Building and the Wolstein Building. In addition, many faculty also have and laboratories in the School of Medicine in the Biomedical Research facilities and centers. Also, a number of faculty have their offices for the majority of faculty, as well as extensive non-clinical research schools. The Department of Biomedical Engineering has major facilities in both the School of Engineering, the Wickenden Building provides office space for the majority of faculty, as well as extensive non-clinical research laboratories and centers. Also, a number of faculty have their offices and laboratories in the School of Medicine in the Biomedical Research Building and the Wolstein Building. In addition, many faculty also have Major interdisciplinary centers include: the Neural Engineering Center, the Case Center for Imaging Research (CCIR), the Center for Biomaterials, and the Center for Computational Imaging & Personalized Diagnostics. The Neural Engineering Center is a major facility for basic research and preclinical testing, with a focus on neural recording and controlling neural activity to increase our understanding of the nervous system and to develop neural prostheses. The Case Center for Imaging Research, located in the Department of Radiology at University Hospitals, has capabilities in imaging structure and function from the molecular level to the tissue-organ level, using many modalities, including ultrasound, MRI, CT, PET, SPECT, bioluminescence, and light. The CCIR has the ability for full translation of discoveries along a continuum from molecules to mice to man. The Center for Biomaterials includes laboratories for biomaterials microscopy, biopolymer and biomaterial interfaces, and molecular simulation. The Center for Computational Imaging & Personalized Diagnostics develops, evaluates, and applies novel quantitative image analysis, computer vision, signal processing, segmentation, multi-modal co-registration tools, pattern recognition, and machine learning tools for disease diagnosis, prognosis, and theragnosis in the context of breast, lung, prostate, head and neck, and brain tumors. The center is also developing new radiogenomic and radio-path-omic approaches to study correlations of disease markers across multiple length scales, modalities, and functionalities - from gene and protein expression to spectroscopy to digital pathology and to multi-parametric radiographic imaging. Also available are biomedical sensing laboratories that include facilities for electrochemical sensing, chemical measurements in individual cells, and minimally invasive physiological monitoring. High-fidelity patient simulation and clinical decision-making research are done in collaboration with the School of Nursing's simulation center.

The FES (Functional Electrical Stimulation) Center, with laboratories at CWRU and in three medical centers, develops techniques for restoration of movement in paralysis, control of the nervous system, and implantable technology. The APT (Advanced Platform Technology) Center develops advanced technologies that serve the clinical needs of veterans and others with motor and sensory deficits, limb loss, and other disabilities.

The Case-Coulter Translational Research Partnership (CCTR) is an endowed program that promotes translational research and supports collaborative translational research projects to address unmet or poorly met clinical needs. The overarching goal of the program is to improve patient care and accelerate the delivery of healthcare technology from academia to the marketplace. The CCTR in particular, fosters collaborations between clinicians and the CWRU Biomedical Engineering faculty to achieve its goals.

The Biomedical Engineering faculty and students have access to the many facilities and major laboratories of both the Case School of Engineering and School of Medicine. In addition, faculty have numerous collaborations at University Hospitals, MetroHealth Medical Center, Louis Stokes Cleveland VA Medical Center, and the Cleveland Clinic. These provide extensive research resources in a clinical environment for both undergraduate and graduate students.

### Facilities

The Department of Biomedical Engineering has major facilities in both the Case School of Engineering and the School of Medicine. In the Case School of Engineering, the Wickenden Building provides office space for the majority of faculty, as well as extensive non-clinical research laboratories and centers. Also, a number of faculty have their offices and laboratories in the School of Medicine in the Biomedical Research Building and the Wolstein Building. In addition, many faculty also have major laboratory activities in the various medical centers in Cleveland.

Major interdisciplinary centers include: the Neural Engineering Center, the Center for Imaging Research (CCIR), the Center for Biomaterials, and the Center for Computational Imaging & Personalized Diagnostics. The Neural Engineering Center is a major facility for basic research.

---

### MD/PhD Programs

Students with outstanding qualifications may apply to either of two MD/PhD programs. Students interested in obtaining a combined MD/PhD, with an emphasis on basic research in biomedical engineering, are strongly encouraged to explore the Medical Scientist Training Program (MSTP), administered by the School of Medicine. The MD/PhD programs require approximately 7-8 years of intensive study after the BS. Interested students should apply through the MSTP office in the Medical School.

The remaining courses can be chosen with significant flexibility to meet the career goals of the student and to satisfy the departmental requirements of depth and breadth. Programs of study must include one graduate level course in biomedical sciences and one course whose content is primarily mathematical, in addition to at least two courses with significant engineering content. More details on these requirements and accepted depth and breadth courses can be found in the Department of Biomedical Engineering's Graduate Education Committee Handbook. Eighteen hours of EBME 701 Dissertation Ph.D. are also required. PhD programs of study are reviewed and must be accepted by the Graduate Education Committee, the department chair and the School of Graduate Studies.

## MD/PhD Programs

Students with outstanding qualifications may apply to either of two MD/PhD programs. Students interested in obtaining a combined MD/PhD, with an emphasis on basic research in biomedical engineering, are strongly encouraged to explore the Medical Scientist Training Program (MSTP), administered by the School of Medicine. The MD/PhD programs require approximately 7-8 years of intensive study after the BS. Interested students should apply through the MSTP office in the Medical School.

## Facilities

Major interdisciplinary centers include: the Neural Engineering Center, the Center for Imaging Research (CCIR), the Center for Biomaterials, and the Center for Computational Imaging & Personalized Diagnostics. The Neural Engineering Center is a major facility for basic research
Courses

EBME 105. Introduction to Biomedical Engineering. 3 Units.
This course introduces students to a wide variety of biomedical engineering fields including: biomaterials, biomechanics, biomedical devices & instrumentation, and biomedical computing & analysis. Emphasis is given to recognizing the difference between medical technology as a subject area vs. career tracks within which this subject area is: imagined, designed, fabricated and used. Students learn to distinguish the difference between how a scientist, an engineer, and a clinician are trained and interact with medical technology. Foundational topics like: engineering design, structure-function relationship, biomimicry, and biocompatibility are presented at an introductory level. Students well served by this course include: freshmen trying to decide if they want to major in biomedical engineering, freshman who know they want to major in biomedical engineering but are not certain which track they wish to pursue, and upper classmen in non-biomedical engineering majors who are looking for deeper insight into what this fast growing field is about.

EBME 201. Physiology-Biophysics I. 3 Units.
Fundamental concepts of physiology from the cells to organ systems. Cell structure and function: DNA-RNA related enzyme/protein synthesis, membrane permeation (receptors/channels/gates), cellular biochemistry and energetic metabolic functions. Essential systems-level concepts include endocrinology, immunology, cellular/capillary/interphase transport, regulation of fluid volume, solutes, and pH. Liver, renal and respiratory physiology. Basic concepts in thermodynamics, transport and kinetics provide a framework for quantitative analysis and modeling of systems physiology. Prereq: Must have declared major or minor in Biomedical Engineering.

EBME 202. Physiology-Biophysics II. 3 Units.
This course is an extension of EBME 201 that will include structure and function of (1) the nervous system, including vision, somatic and proprioceptive sensation, and control of movement, (2) skeletal and smooth muscle, (3) cardiac muscle and the cardiovascular system, and (4) the metabolic system. The material will be taught from a quantitative and functional perspective, with some examples of human pathophysiology. Prereq: EBME 201.

EBME 300. Dynamics of Biological Systems: A Quantitative Introduction to Biology. 3 Units.
This course will introduce students to dynamic biological phenomena, from the molecular to the population level, and models of these dynamical phenomena. It will describe a biological system, discuss how to model its dynamics, and experimentally evaluate the resulting models. Topics will include molecular dynamics of biological molecules, kinetics of cell metabolism and the cell cycle, biophysics of excitability, scaling laws for biological systems, biomechanics, and population dynamics. Mathematical tools for the analysis of dynamic biological processes will also be presented. Students will manipulate and analyze simulations of biological processes, and learn to formulate and analyze their own models. This course satisfies a laboratory requirement for the biology major. Offered as BIOL 300 and EBME 300.

EBME 303. Structure of Biological Materials. 3 Units.
Structure of proteins, nucleic acids, connective tissue and bone, from molecular to microscopic levels. An introduction to bioengineering biological materials and biomimetic materials, and an understanding of how different instruments may be used for imaging, identification and characterization of biological materials. Recommended preparation: EMAC 270. Offered as: EBME 303 and EMAC 303. Prereq: EBME 201, EBME 202, and EBME 306.

EBME 305. Materials for Prosthetics and Orthotics. 3 Units.
A synthesis of skeletal tissue structure and biology, materials engineering, and strength of materials concepts. This course is centered on deepening the concept of biocompatibility and using it to pose and solve biomaterials problems. We cover: fundamental concepts of materials used for load bearing medical applications, wear, corrosion, and failure of implants. Structure and properties of hard tissues and joints are presented using a size hierarchy motif. Tools and analysis paradigms useful in the characterization of biomaterials are covered in the context of orthopedic and dental applications. Prereq: EBME 306 and EBME 370 or Requisites Not Met permission.

EBME 306. Introduction to Biomedical Materials. 3 Units.
Biomaterials design and application in different tissue and organ systems. The relationship between the physical and chemical structure of biomaterials, functional properties, and biological response. Prereq: EBME 201 and EBME 202.

EBME 307. Biomechanical Prosthetic Systems. 3 Units.
Introduction to the basic biomechanics of human movement and applications to the design and evaluation of artificial devices intended to restore or improve movement lost due to injury or disease. Measurement techniques in movement biomechanics, including motion analysis, electromyography, and gait analysis. Design and use of upper and lower limb prostheses. Principles of neuroprostheses with applications to paralyzed upper and lower extremities. Recommended preparation: Consent of instructor and senior standing. Prereq: EBME 308.

EBME 308. Biomedical Signals and Systems. 3 Units.

EBME 309. Modeling of Biomedical Systems. 3 Units.
Mathematical modeling and computational methods applied to biomedical systems. Spatially lumped and distributed models of electrical, mechanical, and chemical processes applied to cells, tissues, organ, and whole-body systems. Prereq: EBME 202 and EBME 308. Coreq: EBME 359.

EBME 310. Principles of Biomedical Instrumentation. 3 Units.
Physical, chemical, and biological, and system principles for biomedical measurements. Modular blocks and system integration. Sensors for displacement, force, pressure, flow, temperature, biopotentials, chemical composition of body fluids and biomaterial characterization. Patient safety related to instrumentation will also be covered. Prereq: EBME 308. Coreq: EBME 360.

EBME 316. Biomaterials for Drug Delivery. 3 Units.
The teaching objective is to provide students with a basic understanding of the principles of design and engineering of well-defined molecular structures and architectures intended for applications in controlled release and organ-targeted drug delivery. The course will discuss the therapeutic basic of drug delivery based on drug pharmacodynamics and clinical pharmacokinetics. Biomaterials with specialized structural and interfacial properties will be introduced to achieve drug targeting and controlled release. Offered as EBME 316 and EBME 416. Prereq: EBME 306.
EBME 317. Fundamentals of Biomechanics. 3 Units.
Fundamentals of biomechanics will teach students how to apply basic principles of mechanics to understand, explain and model biological processes at across the relevant length-scales (cell-tissue-organism), and over a broad range of physiological systems (respiratory, ocular, circulatory, and musculoskeletal). Physiology of organs and tissues that are involved in biomechanical functions will also be covered. Offered as EMAE 307 and EBME 317. Prereq: ENGR 200.

EBME 318. Biomedical Engineering Laboratory. 1 Unit.
Experiments for measurement, assisting, replacement, or control of various biomedical systems. Students choose a few lab experiences from a large number of offerings relevant to all BME sequences. Experiments are conducted primarily in faculty labs with 3-8 students participating. Recommended preparation: ENGR 210. Prereq: BME Major, EBME 201, EBME 202 and Prereq or Coreq: EBME 308.

EBME 320. Biomedical Imaging. 3 Units.
General principles, instrumentation, and applications of biomedical imaging. Topics include: x-ray, ultrasound, computed tomography, magnetic resonance imaging, nuclear imaging, image reconstruction, and image quality. Recommended preparation: ENGR 210 and EBME 202 or equivalent. Prereq: EBME 308 or EECES 246.

EBME 325. Introduction to Tissue Engineering. 3 Units.
The goal of this course is to present students with a firm understanding of the primary components, design principles, and engineering concepts central to the field of tissue engineering. First, the biological principles of tissue formation during morphogenesis and wound repair will be examined. The cellular processes underlying these events will be presented with an emphasis on microenvironment regulation of cell behavior. Biomimetic approaches to controlling cell function and tissue formation via the development of biomaterial systems will then be investigated. Case studies of regeneration strategies for specific tissues will be presented in order to examine the different tissue-specific engineering strategies that may be employed. Special current topics in tissue engineering will also be covered. Recommended preparation: EBME 306, BIOL 362, and CHEM 223.

EBME 327. Bioelectric Engineering. 3 Units.

EBME 328. Biomedical Engineering R&D Training. 1 Unit.
This course will provide research and development in the laboratory of a mentoring faculty member. Varied R&D experiences will include activities in biomedical instrumentation, tissue engineering, imaging, drug delivery, and neural engineering. Each Student must identify a faculty mentor, and together they will create description of the training experience prior to the first class. Prereq: EBME 201 and EBME 202.

EBME 329. Tissue Biomechanics. 3 Units.
Building on prior coursework in the mechanical behavior of skeletal biological tissues and systems, this course will expand students’ understanding of the biomechanics of tissue and the influence of material properties on the structure and function of organs and organisms. Specific course topics will include structure and functional relationships in tissues and organs; the response of the heart, vasculature, and tissue scaffolds to mechanical loads, including characteristics such as nonlinearity, viscoelasticity, and orthotropy. Emphasis is placed on integrating basic analytical, experimental, and computational methods for a more complete understanding of the biomechanics of organs and tissues. Prereq: EBME 201 and EBME 202.

EBME 330. Clinical Correlates in Biomedical Engineering. 1 Unit.
Clinical correlations in biomedical engineering enable synthesis of basic engineering concepts around applications in medical practice. In course, students will draw upon prior training in biophysics, anatomic structure and function, and mathematical modeling of physiologic systems in a weekly case-based critical care scenario. Blending engineering and clinical concepts in this fashion will expand student’s medical expertise. This eight-week course will feature six critical care cases designed to associate and translate engineering concepts into relevant medical knowledge. Course didactic components will be posted on Canvas, and students will be expected to read and prepare arguments for each case to be discussed in class. Successful students will conclude this course with enhanced systems thinking and insight on prior biomedical knowledge and innovation, as well as having demonstrated measurable improvement in their critical thinking skills in the field of medicine. Prereq: EBME 202.

EBME 350. Quantitative Molecular, Cellular and Tissue Bioengineering. 3 Units.

EBME 356. Introduction to Biomaterials Engineering - Laboratory. 1 Unit.
This is a core BME Laboratory course directed at providing Biomedical Engineering undergraduate students ‘hands on’ experience in a component of biomaterials engineering, specifically, biocompatibility. To that end, the course will focus on blood compatibility (hemocompatibility) of biomaterials, by teaching students how to analyze the interaction of blood components (proteins, platelets, RBCs) on biomedical relevant coated versus uncoated polymer surfaces. The students will learn important characterization techniques like contact angle measurement, UV-Vis spectroscopy and optical microscopy in the context of characterizing blood interactions with materials. Prereq: EBME 201 and EBME 202. Prereq or Coreq: EBME 306.

EBME 358. Biomedical Signals and Systems Laboratory. 1 Unit.
Computational laboratory experiences with biomedical applications. Numerical methods with MATLAB applications in biomedical engineering. Coreq: EBME 308.

EBME 359. Biomedical Computer Simulation Laboratory. 1 Unit.

EBME 360. Biomedical Instrumentation Laboratory. 1 Unit.
A laboratory which focuses on the basic components of biomedical instrumentation and provides hands-on experience for students in EBME 310, Biomedical Instrumentation. The purpose of the course is to develop design skills and laboratory skills in analysis and circuit development. Coreq: EBME 310.

EBME 361. Biomedical Image Processing and Analysis. 3 Units.
Principles of image processing and analysis with applications to clinical and biomedical research. Topics include image filtering, registration, morphological processing, segmentation, classification, and 3D image visualization. There will be interesting, realistic computer projects in Matlab. Offered as EBME 361 and EBME 461. Prereq: EBME 308.
EBME 370. Principles of Biomedical Engineering Design. 3 Units.
Students learn and implement the design process to produce working prototypes of medical devices with potential commercial value to meet significant clinical needs. Critical examination of contemporary medical problems is used to develop a specific problem statement. The class is divided into teams of 3 to 4 students. Each team integrates their knowledge and skills to design a device to meet their clinical need. Project planning and management, including resource allocation, milestones, and documentation, are required to ensure successful completion of projects within the allotted time and budget. Formal design reviews by a panel of advisors and outside medical device experts are required every four weeks. Every student is required to give oral presentations at each formal review and is responsible for formal documentation of the design process, resulting in an executive summary and complete design history file of the project. The course culminates with a public presentation of the team's device to a panel of experts. This course is expected to provide the student with a real-world, capstone design experience. Recommended preparation: EBME 310 Prereq: Senior standing or requisites not met permission.

EBME 380. Biomedical Engineering Design Experience. 3 Units.
This course is the culmination of the BME educational experience in which the student will apply acquired skills and knowledge to create a working device or product to meet a medical need. Students will learn how to apply engineering skills to solve problems and physically realize a project design. The course structure includes regular meetings with a faculty project advisor, regular reports of accomplished activity, hands on fabrication of devices, and several lectures from leading engineers from industry and academia that have first hand experience in applying the principles of design to Biomedical Engineering. Students will also provide periodic oral progress reports and a final oral presentation with a written design report. Counts as SAGES Senior Capstone. Prereq: EBME 370 and Senior standing or requisites not met permission.

EBME 398. Biomedical Engineering Research Experience I. 1 - 3 Units.
Biomedical engineering students doing independent research in a laboratory of a Primary or Adjunct BME Faculty may obtain credit for their research effort if they register for EBME 398 before they begin their research. The total number of credits is limited to three with a minimum of 1 credit per semester. Earning one credit requires about 4 hours of work per week. This is split between actual research in the lab (2-3 hours) and communication of results (1-2 hours). The communication component requires preparation of oral presentations and written reports. Grades are jointly determined by the research supervisor and the instructor. Students are encouraged to work with others in the faculty laboratory, but they must make a major contribution to the project. A research project is expected to include a significant engineering component, such as design and/or analysis. A design project must include a significant research component, such as applying the developed design to solve an actual biomedical problem. In advance of registration, all students must submit a course proposal (see FORMS on the BME web site). This proposal must be approved by their research mentor and submitted via email for approval by the course instructor. This course can qualify as a technical elective if the project includes material pertinent to the student's BME track and is approved in advance by the BME faculty member responsible for the BME track. To be approved as a technical elective, the project proposal should identify the new technical material the student will master, and a plan for assessing mastery.

EBME 399. Biomedical Engineering Research Experience II. 1 - 3 Units.
The project can be a continuation of the EBME 398 project but performed more independently, or a new project that is more challenging than the first project. As with EBME 398, the course may be taken for 1-3 credits, and repeated up to a total of 3 credits. Consent of Instructor is required. Prereq: EBME 398.

EBME 400T. Graduate Teaching I. 0 Unit.
This will provide the Ph.D. candidate with experience in teaching undergraduate or graduate students. The experience is expected to consist of direct student contact, but will be based upon the specific departmental needs and teaching obligations. This teaching experience will be conducted under the supervision of the faculty member who is responsible for the course, but the academic advisor will assess the educational plan to ensure that it provides an educational opportunity for the student. Recommended preparation: UNIV 400, BME Ph.D. student.

EBME 401D. Biomedical Instrumentation and Signal Processing. 3 Units.
Graduate students with various undergraduate backgrounds will learn the fundamental principles of biomedical measurements that integrate instrumentation and signal processing with problem-based hands-on experience. Recommended preparation: Undergraduate circuit and signal processing class.

EBME 401L. Biomedical Instrumentation and Signal Analysis Laboratory. 1 Unit.
This course accompanies EBME401D, Biomedical Instrumentation and Signal Analysis, an introductory graduate course for MS and PhD BME students. Students in the PhD section are required to take this course to gain hands-on experience with each of the three areas of this course: measurement circuits/electronics, signal analysis, and transducers. The course involves the design, realization and testing of a device proposed by each student team. A final oral presentation and report on the results of the projects are graded and combined in one letter grade. Coreq: EBME 401D.

EBME 402. Organ/Tissue Physiology and Systems Modeling. 4 Units.
Graduate students with various undergraduate backgrounds will learn the fundamental principles of organ and tissue physiology as well as systems modeling. Prereq: Graduate Status.

EBME 406. Polymers in Medicine. 3 Units.
This course covers the important fundamentals and applications of polymers in medicine, and consists of three major components: (i) the blood and soft-tissue reactions to polymer implants; (ii) the structure, characterization and modification of biomedical polymers; and (iii) the application of polymers in a broad range of cardiovascular and extravascular devices. The chemical and physical characteristics of biomedical polymers and the properties required to meet the needs of the intended biological function will be presented. Clinical evaluation, including recent advances and current problems associated with different polymer implants. Recommended preparation: EBME 306 or equivalent. Offered as EBME 406 and EMAC 471. Prereq: Graduate Standing.
EBME 407. Neural Interfacing. 3 Units.
Neural interfacing refers to the principles, methods, and devices that bridge the boundary between engineered devices and the nervous system. It includes the methods and mechanisms to get information efficiently and effectively into and out of the nervous system to analyze and control its function. This course examines advanced engineering, neurobiology, neurophysiology, and the interaction between all of them to develop methods of connecting to the nervous system. The course builds on a sound background in Bioelectric Phenomenon to explore fundamental principles of recording and simulation, electrochemistry of electrodes in biological tissue, tissue damage generated by electrical stimulation, materials and material properties, and molecular functionalization of devices for interfacing with the nervous system. Several examples of the state-of-art neural interfaces will be analyzed and discussed. Recommended preparation: EBME 401. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 410. Medical Imaging Fundamentals. 3 Units.
Physical principles of medical imaging. Imaging devices for x-ray, ultrasound, magnetic resonance, etc. Image quality descriptions. Patient risk. Recommended preparation: EBME 308 and EBME 310 or equivalent. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 411. Underpinnings of the Extracellular Matrix. 3 Units.
Collagen is the most plentiful protein in the body. Every tissue that lays down basement membrane utilizes collagen to attach cells to the extracellular matrix. Collagen is a primary structural element of tissues ranging from bone, cartilage and tendon to arterial wall, sclera and skin. Many of the mechanisms currently under consideration to describe how mechanical forces are transduced into cellular activity require the forces to travel through collagenous structures on their way to the cells. Fundamentals of collagenous tissues are presented in a combined lecture/seminar format. Details at the molecular, fibrillar and whole tissue levels are presented. Applications ranging from how to obtain collagen molecules, to synthesizing gels for use in tissue engineering, to design and creation of collagen based materials for replacement and/or augmentation of several tissues are presented. A series of guest lectures by researchers currently using and/or developing collagen based materials are presented. The course concludes with a series of in-class presentations by the students who pick a specific application of interest to them and then demonstrate how the fundamentals presented in the first portion of the class play out in their application. While not required, it is recommended that students have an undergraduate course in biomaterials, two semesters of undergraduate biology, and organic chemistry. Prereq: Graduate Student standing.

EBME 416. Biomaterials for Drug Delivery. 3 Units.
The teaching objective is to provide students with a basic understanding of the principles and design of engineering of well-defined molecular structures and architectures intended for applications in controlled release and organ-targeted drug delivery. The course will discuss the therapeutic basic of drug delivery based on drug pharmacodynamics and clinical pharmacokinetics. Biomaterials with specialized structural and interfacial properties will be introduced to achieve drug targeting and controlled release. Offered as EBME 316 and EBME 416. Prereq: EBME 306 and PHRM 309 or graduate standing.

EBME 419. Applied Probability and Stochastic Processes for Biology. 3 Units.
Applications of probability and stochastic processes to biological systems. Mathematical topics will include: introduction to discrete and continuous probability spaces (including numerical generation of pseudo random samples from specified probability distributions), Markov processes in discrete and continuous time with discrete and continuous sample spaces, point processes including homogeneous and inhomogeneous Poisson processes and Markov chains on graphs, and diffusion processes including Brownian motion and the Ornstein-Uhlenbeck process. Biological topics will be determined by the interests of the students and the instructor. Likely topics include: stochastic ion channels, molecular motors and stochastic ratchets, actin and tubulin polymerization, random walk models for neural spike trains, bacterial chemotaxis, signaling and genetic regulatory networks, and stochastic predator-prey dynamics. The emphasis will be on practical simulation and analysis of stochastic phenomena in biological systems. Numerical methods will be developed using a combination of MATLAB, the R statistical package, MCell, and/or URDME, at the discretion of the instructor. Student projects will comprise a major part of the course. Offered as BIOL 319, ECSE 319, MATH 319, SYBB 319, BIOL 419, EBME 419, MATH 419, PHOL 419, and SYBB 419.

EBME 421. Bioelectric Phenomena. 3 Units.
The goal of this course is to provide working knowledge of the theoretical methods that are used in the fields of electrophysiology and bioelectricity for both neural and cardiac systems. These methods will be applied to describe, from a theoretical and quantitative perspective, the electrical behavior of excitable cells, the methods for recording their activity and the effect of applied electrical and magnetic fields on excitable issues. A team modeling project will be required. Recommended preparation: differential equations, circuits. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 425. Tissue Engineering and Regenerative Medicine. 3 Units.
This course will provide advanced coverage of tissue engineering with a focus on stem cell-based research and therapies. Course topics of note include stem cell biology and its role in development, modeling of stem cell function, controlling stem cell behavior by engineering materials and their microenvironment, stem cells’ trophic character, and state-of-the-art stem cell implementation in tissue engineering and other therapeutic strategies. Prereq: PhD student in an engineering program or EBME 325 or requisites not met permission.

EBME 426. Nanomedicine. 3 Units.
EBME 427. Movement Biomechanics and Rehabilitation. 3 Units.
Introduction to the basic biomechanics of human movement and applications to the design and evaluation of artificial devices intended to restore or improve movement lost due to injury or disease. Measurement techniques in movement biomechanics, including motion analysis, electromyography, and gait analysis. Design and use of upper and lower limb prostheses. Principles of neuroprostheses with applications to paralyzed upper and lower extremities. Term paper required. Recommended preparation: Consent of instructor and graduate standing. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 431. Physics of Imaging. 3 Units.
Description of physical principles underlying the spin behavior in MR and Fourier imaging in multi-dimensions. Introduction of conventional, fast, and chemical-shift imaging techniques. Spin echo, gradient echo, and variable flip-angle methods. Projection reconstruction and sampling theorems. Bloch equations, T1 and T2 relaxation times, rf penetration, diffusion and perfusion. Flow imaging, MR angiography, and functional brain imaging. Sequence and coil design. Prerequisite may be waived with consent of instructor. Recommended Preparation: PHYS 122 or PHYS 124 or EBME 410. Offered as EBME 431 and PHYS 431.

EBME 432. Quantitative Analysis of Physiological Systems. 3 Units.

EBME 433. Advanced Topics for Physiological Systems Analysis. 4 Units.

EBME 440. Translational Research for Biomedical Engineers. 3 Units.
Translational Research (TR) in the Biomedical Engineering context means translating laboratory discoveries or developments into improved health care. Topics and activities include: Interdisciplinary teamwork and communication; Research ethics and human subjects protection; Regulation and oversight of human subjects and animal research; Clinical validation study design and biostatistics; Intellectual property, technology transfer and commercialization; Physician shadowing; Attending Grand Rounds and Morbidity-Mortality conferences; Preparing IRB and IACUC protocols; Final integrative project. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 450. Biomedical Engineering Entrepreneurship. 3 Units.
Biomedical engineering entrepreneurship is a unique in its interdisciplinary and multidisciplinary scope. In this course we examine medical technology innovations in the context of (A) identifying unmet clinical needs, (B) the process of conducting an opportunity analysis for an investable concept, and (C) subsequent translation of these advances into the market. This course will emphasize and explore a variety of issues related to innovation and entrepreneurship, demonstrating that there are not many "absolute truths," but there are numerous best practices and processes that create value. Successful students will conclude this course with new knowledge and insight on biomedical technology and innovation, as well as having demonstrated measurable improvement in their critical thinking skills. Prereq: Graduate student standing.

EBME 451. Molecular and Cellular Physiology. 3 Units.
This course covers cellular and molecular basics for graduate students with little or no prior biology background. The emphasis of EBME 451 is on the molecular and cellular mechanisms underlying physiological processes. Structure-function relationship will be addressed throughout the course. The primary goal of the course is to develop understanding of the principles of the physiological processes at molecular and cellular level and to promote independent thinking and ability to solve unfamiliar problems. This course is no longer a core course of the Biomedical Engineering graduate curriculum but serves as a fundamentals course to prepare students for the graduate cellular and molecular physiology core. Prereq: Graduate standing.

EBME 454. Introduction to Grant and Fellowship Writing. 1 Unit.
This course is intended for first and possibly second year graduate students to learn how to write proposals, such as NSF Graduate Fellowship proposals. Students will be instructed on how to plan their proposal, will go through a mentored proposal writing exercise, and will participate in peer review of their proposals. The course will take place only in the first half of the semester, at twice the normal frequency, since proposals are due in mid-semester (e.g. October). Prereq: Graduate standing.

EBME 460. Advanced Topics in NMR Imaging. 3 Units.
Frontier issues in understanding the practical aspects of NMR imaging. Theoretical descriptions are accompanied by specific examples of pulse sequences, and basic engineering considerations in MRI system design. Emphasis is placed on implications and trade-offs in MRI pulse sequence design from real-world versus theoretical perspectives. Recommended preparation: EBME 431 or PHYS 431. Offered as EBME 460 and PHYS 460. Prereq: Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above.

EBME 461. Biomedical Image Processing and Analysis. 3 Units.
Principles of image processing and analysis with applications to clinical and biomedical research. Topics include image filtering, registration, morphological processing, segmentation, classification, and 3D image visualization. There will be interesting, realistic computer projects in Matlab. Offered as EBME 361 and EBME 461. Prereq: EBME 401.

EBME 465. Biomedical Optical Imaging. 3 Units.
Fundamentals of biomedical optics (biophotonics) with a focus on concepts and instrumentation behind light-based imaging of biological tissues. Topics include: essentials of optics and photonics, light-tissue interactions, optical imaging, conventional and advanced microscopies, optical coherence tomography. Course will include hands-on labs and demonstrations. Prereq: EBME 308 and (Graduate standing or Undergraduate with Junior or Senior standing and a cumulative GPA of 3.2 or above) or Requisites Not Met permission.
EBME 467. Commercialization and Intellectual Property Management. 3 Units.
This interdisciplinary course covers a variety of topics, including principles of intellectual property and intellectual property management, business strategies and modeling relevant to the creation of start-up companies and exploitation of IP rights as they relate to biomedical-related inventions. The goal of this course is to address issues relating to the commercialization of biomedical-related inventions by exposing law students, MBA students, and Ph.D. candidates (in genetics and proteomics) to the challenges and opportunities encountered when attempting to develop biomedical intellectual property from the point of early discovery to the clinic and market. Specifically, this course seeks to provide students with the ability to value a given technological advance or invention holistically, focusing on issues that extend beyond scientific efficacy and include patient and practitioner value propositions, legal and intellectual property protection, business modeling, potential market impacts, market competition, and ethical, social, and healthcare practitioner acceptance. During this course, law students, MBA students, and Ph.D. candidates in genomics and proteomics will work in teams of five (two laws students, two MBA students and one Ph.D. candidate), focusing on issues of commercialization and IP management of biomedical-related inventions. The instructors will be drawn from the law school, business school, and technology-transfer office. Please visit the following website for more information: fusioninnovate.com. Offered as LAWS 5341, MGMT 467, GENE 367, GENE 467, EBME 467 and ECSE 467.

EBME 471. Principles of Medical Device Design and Innovation. 3 Units.
Translational research leading to medical device innovation is highly interdisciplinary, requiring a systematic, structured approach to bringing new medical technologies to market. This course provides the fundamental principles of the Biodesign innovation process, providing the student the essential tools to (A) identify unmet clinical needs, (B) create innovative medical device concepts that respond to a primary unmet need, and (C) understand the process for translating these concepts into the market. In short, the student learns the fundamental principles for the process of identify, invent, implement in the field of Biodesign. Students taking EBME 471 (distance learning) cannot register for EBME 472 Biodesign (on-site) as the core content is substantially similar.

EBME 472. BioDesign. 3 Units.
Medical device innovations that would have been considered science fiction a decade ago are already producing new standards of patient care. Innovation leading to lower cost of care, minimally invasive procedures and shorter recovery times is equally important to healthcare business leaders, educators, clinicians, and policy-makers. Innovation is a driver of regional economic development and wealth creation in organizations units ranging in size from the start-up to the Fortune 500 companies. In a broader context, requiring the pace of translational research leading to product and service innovation is highly interdisciplinary, thus, new products and services result from team efforts, marked by a systematic, structured approach to bringing new medical technologies to market and impacting patient care. In this course we examine medical technology innovations in the context of (A) addressing unmet clinical needs, (B) the process of inventing new medical devices and instruments, and (C) subsequent implementation of these advances in patient care. In short, the student learns the process of "identify, invent, implement" in the field of BioDesign. Offered as EBME 472, IIME 472 and SYBB 472.

EBME 473. Fundamentals of Clinical Information Systems. 3 Units.
Technology has played a significant role in the evolution of medical science and treatment. While we often think about progress in terms of the practical application of, say, imaging to the diagnosis and monitoring of disease, technology is increasingly expected to improve the organization and delivery of healthcare services, too. Information technology plays a key role in the transformation of administrative support systems (finance and administration), clinical information systems (information to support patient care), and decision support systems (managerial decision-making). This introductory graduate course provides the student with the opportunity to gain insight and situational experience with clinical information systems (CIS). Often considered synonymous with electronic medical records, the "art" of CIS more fundamentally examines the effective use of data and information technology to assist in the migration away from paper-based systems and improve organizational performance. In this course we examine clinical information systems in the context of (A) operational and strategic information needs, (B) information technology and analytic tools for workflow design, and (C) subsequent implementation of clinical information systems in patient care. Legal and ethical issues are explored. The student learns the process of "plan, design, implement" through hands-on applications to select CIS problems, while at the same time gaining insights and understanding of the impacts placed on patients and health care providers. Offered as EBME 473, IIME 473 and SYBB 421.

EBME 474. Biotransport Processes. 3 Units.
Biomedical mass transport and chemical reaction processes. Basic mechanisms and mathematical models based on thermodynamics, mass and momentum conservation. Analytical and numerical methods to simulate in vivo processes as well as to develop diagnostic and therapeutic methods. Applications include transport across membranes, transport in blood, tumor processes, bioreactors, cell differentiation, chemotaxis, drug delivery systems, tissue engineering processes. Recommended preparation: EBME 350 or equivalent. Offered as EBME 474 and ECHE 474.

EBME 478. Computational Neuroscience. 3 Units.
Computer simulations and mathematical analysis of neurons and neural circuits, and the computational properties of nervous systems. Students are taught a range of models for neurons and neural circuits, and the computational properties of nervous systems. The course introduces students to dynamical systems theory for the analysis of neurons and neural learning, models of brain systems, and their relationship to artificial and neural networks. Term project required. Students enrolled in MATH 478 will make arrangements with the instructor to attend additional lectures and complete additional assignments addressing mathematical topics related to the course. Recommended preparation: MATH 223 and MATH 224 or BIOL 300 and BIOL 306. Offered as BIOL 378, COGS 378, MATH 378, BIOL 478, CSDS 478, EBME 478, ECSE 478, MATH 478 and NEUR 478.

EBME 480A. Introduction to Wireless Health. 3 Units.
Study of convergence of wireless communications, microsystems, information technology, persuasive psychology, and health care. Discussion of health care delivery system, medical decision-making, persuasive psychology, and wireless health value chain and business models. Understanding of health information technology, processing of monitoring data, wireless communication, biomedical sensing techniques, and health monitoring technical approaches and solutions. Offered as ECSE 480A and EBME 480A.
EBME 480B. The Human Body. 3 Units.
Study of structural organization of the body. Introduction to anatomy, physiology, and pathology, covering the various systems of the body. Comparison of elegant and efficient operation of the body and the related consequences of when things go wrong, presented in the context of each system of the body. Introduction to medical diagnosis and terminology in the course of covering the foregoing. Offered as ECSE 480B and EBME 480B.

EBME 480C. Biomedical Sensing Instrumentation. 3 Units.
Study of principles, applications, and design of biomedical instruments with special emphasis on transducers. Understanding of basic sensors, amplifiers, and signal processing. Discussion of the origin of biopotential, and biopotential electrodes and amplifiers (including biotelemetry). Understanding of chemical sensors and clinical laboratory instrumentation, including microfluidics. Offered as ECSE 480C and EBME 480C. Prereq: EECS/EBME 480A, EECS/EBME 480B

EBME 480D. The Health Care Delivery Ecosystem. 3 Units.
Health care delivery across the continuum of care in the United States, including health policy and reform, financing of care, comparative health systems, population health, public health, access to care, care models, cost and value, comparative effectiveness, governance, management, accountability, workforce, and the future. Discussions of opportunities and challenges for wireless health, integrated into the foregoing topics. Perspective on health care delivery in other countries. Offered as ECSE 480D and EBME 480D.

EBME 480E. Wireless Communications and Networking. 3 Units.
Essentials of wireless communications and networking, including teletraffic engineering, radio propagation, digital and cellular communications, wireless wide-area network architecture, speech and channel coding, modulation schemes, antennas, security, networking and transport layers, and 4G systems. Hands-on learning of the anatomy of a cell phone, and a paired wireless health device and its gateway. Offered as ECSE 480E and EBME 480E.

EBME 480F. Physicians, Hospitals and Clinics. 3 Units.
Rotation through one or more health care provider facilities for a first-hand understanding of care delivery practice, coordination, and management issues. First-hand exposure to clinical personnel, patients, medical devices and instruments, and organizational workflow. Familiarity with provider protocols, physician referral practices, electronic records, clinical decision support systems, acute and chronic care, and inpatient and ambulatory care. Offered as ECSE 480F and EBME 480F.

EBME 480G. Regulatory Policy and Regulations. 3 Units.
Introduction of wireless health technologies: spectrum, licensed versus unlicensed; personal area networks; body area networks; ultra-wideband low energy level short-range radios; wireless local area networks; wide area networks. The Federal system: separation of powers; the executive branch and its departments; the House of Representatives and its committees; the Senate and its committees; the FCC; policy versus regulatory versus legislative. What is a medical device: FDA; classification system; radiation-emitting products; software; RF in medical devices; converged medical devices; international aspects. Regulation of health information technology and wireless health: American Recovery and Reinvestment Act; Patient Protection and Affordable Care Act; FCC/ FDA MoU; CMS and Reimbursement; privacy and security. Offered as ECSE 480Q and EBME 480Q.

EBME 480R. User Experience Engineering. 3 Units.
Social, cognitive, behavioral, and contextual elements in the design of healthcare technology and systems. User-centered design paradigm from a broad perspective, exploring dimensions of product user experience and learning to assess and modify the design of healthcare technology. Practical utilization of user centered design method and assessment techniques for approaching a design problem. Offered as ECSE 480R and EBME 480R.

EBME 480S. Wireless Health Product Development. 3 Units.
Integrating application requirements, market data, concept formulation, design innovation, and manufacturing resources for creating differentiated wireless health products that delight the user. Learning user-centric product development best practices, safety, security and privacy considerations, and risk management planning. Understanding the regulatory process. Identifying and managing product development tradeoffs. Offered as ECSE 480S and EBME 480S. Prereq: EBME 480R.

EBME 491. Introduction to Translational Health Technology. 2 Units.
Introduction to Translational Health Technology serves to orient students to the field of translational health and highlight specific product development philosophy, projects, and careers in the field. This course of study is particularly helpful for those students enrolled in lock-step translational health specialty degree programs, so they are adequately coached and prepared for the "road ahead" in the translation of leading-edge research into patient care. In addition to providing specific instructional elements, this course also helps students frame the type of capstone project they may wish to pursue as part of their degree program. The course of study includes invited presentations by the existing graduate students to enable: (A) graduate students a chance to reflect on their research and project work and, (B) for new students to develop first-hand experience with the process of inquiry and debate relating to the field of translational health technology.

EBME 500T. Graduate Teaching II. 0 Unit.
This course will provide the Ph.D. candidate with experience in teaching undergraduate or graduate students. The experience is expected to consist of direct student contact, but will be based upon the specific departmental needs and teaching obligations. This teaching experience will be conducted under the supervision of the faculty member who is responsible for the course, but the academic advisor will assess the educational plan to ensure that it provides an educational opportunity for the students. Recommended preparation: EBME 400T, BME Ph.D. student.
EBME 515. Grant Writing II. 2 Units.
This course introduces students to writing research proposals. Students will be asked to write a short, concise proposal written according to a funding mechanism. Students are expected to become familiar with the NIH R21 format and should include all of the required components. Prereq: EBME 510.

EBME 570. Graduate Professional Development for Biomedical Engineers. 1 Unit.
Students will be trained in topics including public speaking, grant writing, notebook management, professionalism, etc. Prereq: Graduate standing.

EBME 600T. Graduate Teaching III. 0 Unit.
This course will provide the Ph.D. student with experience in teaching undergraduate or graduate students. The experience is expected to consist of direct student contact, but will be based upon the specific departmental needs and teaching obligations. Students will be evaluated on presentation and performance, as well as weekly participation. Between this course and EBME 610 students must earn a minimum of 1 credit (two semesters) and can take up to 4 credits over eight different semesters. Prereq: Graduate standing.

EBME 601. Pre-candidacy Ph.D. Research. 1 - 18 Units.
Credit as arranged.

EBME 602. Special Topics. 1 - 18 Units.
Credit as arranged.

EBME 611. BME Departmental Seminar I. .5 Unit.
Lectures by invited speakers on subjects of current interest in biomedical engineering. Students will be evaluated on preparation and performance. Questions for select speakers, as well as weekly participation. Between this course and EBME 610 students must earn a minimum of 1 credit (two semesters) and can take up to 4 credits over eight different semesters.

EBME 612. BME Departmental Seminar II. .5 Unit.
Lectures by invited speakers on subjects of current interest in biomedical engineering. Students will be evaluated on preparation and performance. Questions for select speakers, as well as weekly participation. Between this course and EBME 610 students must earn a minimum of 1 credit (two semesters) and can take up to 4 credits over eight different semesters.

EBME 613. Topic Seminars for NeuroEngineering Students. .5 Unit.
Lectures by invited speakers on subjects of current interest to biomedical engineering students in NeuroEngineering. Students will be evaluated on presentation and performance, as well as weekly participation. Between this course and EBME 610 students must earn a minimum of 1 credit (two semesters) and can take up to 4 credits over eight different semesters. Prereq: Graduate standing.

EBME 614. Topic Seminars for NeuroEngineering Students. .5 Unit.
Lectures by invited speakers on subjects of current interest to biomedical engineering students in NeuroEngineering. Students will be evaluated on presentation and performance, as well as weekly participation. Between this course and EBME 610 students must earn a minimum of 1 credit (two semesters) and can take up to 4 credits over eight different semesters. Prereq: Graduate standing.

EBME 615. Topic Seminars for Imaging Students. .5 Unit.
Lectures by invited speakers on subjects of current interest to biomedical engineering students in Imaging. Students will be evaluated on presentation and performance, as well as weekly participation. Between this course and EBME 610 students must earn a minimum of 1 credit (two semesters) and can take up to 4 credits over eight different semesters. Prereq: Graduate standing.

EBME 616. Topic Seminars for Imaging Students. .5 Unit.
Lectures by invited speakers on subjects of current interest to biomedical engineering students in Imaging. Students will be evaluated on presentation and performance, as well as weekly participation. Between this course and EBME 610 students must earn a minimum of 1 credit (two semesters) and can take up to 4 credits over eight different semesters. Prereq: Graduate standing.

EBME 617. Topic Seminars for Biomaterials Students. .5 Unit.
Lectures by invited speakers on subjects of current interest to biomedical engineering students in Biomaterials. Students will be evaluated on presentation and performance, as well as weekly participation. Between this course and EBME 610 students must earn a minimum of 1 credit (two semesters) and can take up to 4 credits over eight different semesters. Prereq: Graduate standing.

EBME 618. Topic Seminars for Biomaterials Students. .5 Unit.
Lectures by invited speakers on subjects of current interest to biomedical engineering students in Biomaterials. Students will be evaluated on presentation and performance, as well as weekly participation. Between this course and EBME 610 students must earn a minimum of 1 credit (two semesters) and can take up to 4 credits over eight different semesters. Prereq: Graduate standing.

EBME 619. Topic Seminars for Miscellaneous Biomedical Engineering Students. .5 Unit.
Lectures by invited speakers on subjects of current interest to biomedical engineering students in outside of NeuroEngineering, Imaging, and Biomaterials. Students will be evaluated on presentation and performance, as well as weekly participation. Between this course and EBME 620 students must earn a minimum of 1 credit (two semesters) and can take up to 4 credits over eight different semesters. Prereq: Graduate standing.
EBME 620. Topic Seminars for Miscellaneous Biomedical Engineering Students. .5 Unit.
Lectures by students in the seminar series on subjects of current interest to biomedical engineering students on topics outside of NeuroEngineering, Imaging, and Biomaterials. Students will be evaluated on presentation preparation and performance, as well as weekly participation. Between this course and EBME 619 students must earn a minimum of 1 credit (2 semesters) and can take up to 4 credits over eight different semesters. Prereq: Graduate standing.

EBME 651. Thesis M.S.. 1 - 18 Units.
(Credit as arranged.)

EBME 695. Project M.S.. 1 - 9 Units.
Research course taken by Plan B M.S. students. Prereq: Enrolled in the EBME Plan B MS Program.

EBME 700. Oral Qualifying Exam for Ph.D. Candidates. 0 Unit.
The objective of this course is to track: 1) the eligibility of students to take the exam, 2) the students’ registration to take the exam, and 3) their results on the exam. Prereq: EBME 401D and EBME 433 with B or higher.

EBME 701. Dissertation Ph.D.. 1 - 9 Units.
Ph.D. candidates only. Prereq: Predoctoral research consent or advanced to Ph.D. candidacy milestone.

EBME 702. Research Competency: Research Proposal and Defense. 0 Unit.
The objective of this course is to track: 1) the eligibility of students to take the exam, 2) the students’ registration to take the exam, and 3) their results on the exam. Prereq: EBME 700.
